SAMPLE PRIORITY PROJECT APPROVAL

REPORTING PERIOD FROM

JULY 1, 2008 THROUGH JUNE 30, 2009

CARLSBAD PASEO (MS 07-02, CUP 07-03, CDP07-07)

PLANNING COMMISSION RESOLUTION NO. 6437

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF CARLSBAD, CALIFORNIA, RECOMMENDING APPROVAL OF A COASTAL DEVELOPMENT PERMIT TO CONSTRUCT A 7,511 SQUARE FOOT STAND ALONE RESTAURANT, A 44,391 SQUARE FOOT COMMERCIAL RETAIL CENTER, AND A VACANT PAD FOR A FUTURE STAND ALONE RESTAURANT ON A 6.96 ACRE PARCEL GENERALLY LOCATED ON THE WEST SIDE OF PASEO DEL NORTE, NORTH OF KING'S FISH HOUSE, SOUTH OF CAR COUNTRY DRIVE, AND EAST OF THE INTERSTATE 5 FREEWAY, WITHIN THE MELLO II SEGMENT OF THE LOCAL COASTAL PROGRAM AND LOCAL FACILITIES MANAGEMENT ZONE 3.

CASE NAME: CARLSBAD PASEO
CASE NO.: CDP 07-07

WHEREAS, **Strategic Property Advisors, Inc.,** "Developer," has filed a verified application with the City of Carlsbad regarding property owned by **CPT/SC Title Holding Corporation,** "Owner," described as

Portions of Parcel 2 and 3 of Parcel Map No. 11284, filed in the Office of the County Recorder of San Diego County, May 11, 1981 and lot 4 of Carlsbad Tract No. 92-7 (Carlsbad Ranch Unit 1 And Unit 2), according to map thereof No. 13078, filed in the Office of the County Recorder of San Diego County, December 28, 1993, all in the City of Carlsbad, County of San Diego, State of California, more particularly described as follows:

Beginning at the northeasterly corner of said Parcel 3, said corner being the most northerly corner of said Lot 4, said corner being the point of beginning; thence southerly along the easterly line of said Lot 4, south 22°29'26" east (south 22°29'26" east per said Map No. 13078) 925.00 feet to the beginning of a tangent curve concave northeasterly having a radius of 557.00 feet; thence southeasterly along said curve through a central angle of 11°20'36" a distance of 110.27 feet to a point on said easterly line, a radial through said point bears south 56°09'58" west; thence leaving said easterly line south 55°50'26" west 343.71 feet to the westerly line of said Parcel 2; thence northwesterly along the westerly line of said Parcels 2 and 3, north 26°48'03" west (north 26°47'14" west per said Parcel Map 11284) 738.65 feet to an angle point corner of said Parcel 3; thence continuing along said westerly line north 25°12'24" west 300.01 feet (north 25°11'47" west 300.01 feet per said parcel map) to an angle point corner of said parcel map; thence continuing along said westerly line north

26°15'29" west 68.05 feet (north 26°15'48" west 68.03 feet per said parcel map) to the northwest corner of said Parcel 3 of said parcel map; thence easterly along the northerly line of said Parcel 3, north 67°31'12" east 399.93 feet (north 67°31'17" east 400.00 feet per said parcel map) to the point of beginning.

Said land is also described as Parcel A in that certain Certificate of Compliance for Adjustment Plat, dated October 1, 2002, and recorded October 18, 2002, as Document No. 2002-0913260, Official Records of San Diego County, California.

("the Property"); and

WHEREAS, said verified application constitutes a request for a Coastal Development Permit as shown on Exhibits **"A" – "NN"** dated **July 16, 2008**, on file in the Planning Department, **CARLSBAD PASEO - CDP 07-07,** as provided by Chapter 21.201.040 of the Carlsbad Municipal Code; and

WHEREAS, the Planning Commission did, on **July 16, 2008**, hold a duly noticed public hearing as prescribed by law to consider said request; and

WHEREAS, at said public hearing, upon hearing and considering all testimony and arguments, if any, of all persons desiring to be heard, said Commission considered all factors relating to the CDP.

NOW, THEREFORE, BE IT HEREBY RESOLVED by the Planning Commission of the City of Carlsbad as follows:

A) That the foregoing recitations are true and correct.

B) That based on the evidence presented at the public hearing, the Commission **RECOMMENDS APPROVAL** of **CARLSBAD PASEO - CDP 07-07** based on the following findings and subject to the following conditions:

Findings:

1. That the proposed development is in conformance with the **Mello II Segment of the** Certified Local Coastal Program and all applicable policies in that **the proposed uses are consistent with the Travel Service (TS) LCP Land Use designation; there is no historic evidence of agricultural use of the property; the development does not obstruct views of the coastline as seen from any public lands or public rights-of-way; the project is consistent with the City of Carlsbad's HMP, which has been**

developed so as to implement and be consistent with all provisions of the LCP; the project has been designed to reduce the amount of runoff to the maximum extent practicable, utilizes Low Impact Design (LID), and has been conditioned to implement the National Pollution Discharge Elimination System (NPDES) standards; and the site is geologically stable.

2. The proposal is in conformity with the public access and recreation policies of Chapter 3 of the Coastal Act in that **the site is located on the east side of the first public street and no coastal access areas or water-oriented recreational activities exist on or near the project site.**

3. The project is consistent with the provisions of the Coastal Resource Protection Overlay Zone (Chapter 21.203 of the Zoning Ordinance) in that the project will adhere to the City's Master Drainage Plan, Grading Ordinance, Storm Water Ordinance, Standard Urban Storm Water Mitigation Plan (SUSMP), and Jurisdictional Urban Runoff Management Program (JURMP) to avoid increased urban runoff, pollutants, and soil erosion. No steep slopes or native vegetation is located on the subject property and the site is not located in an area prone to landslides, or susceptible to accelerated erosion, floods, or liquefaction.

4. The Planning Commission has reviewed each of the exactions imposed on the Developer contained in this resolution, and hereby finds, in this case, that the exactions are imposed to mitigate impacts caused by or reasonably related to the project, and the extent and the degree of the exaction is in rough proportionality to the impact caused by the project.

Conditions:

Note: Unless otherwise specified herein, all conditions shall be satisfied prior to **issuance of a grading permit or building permit, whichever occurs first.**

1. If any of the following conditions fail to occur, or if they are, by their terms, to be implemented and maintained over time, if any of such conditions fail to be so implemented and maintained according to their terms, the City shall have the right to revoke or modify all approvals herein granted; deny or further condition issuance of all future building permits; deny, revoke, or further condition all certificates of occupancy issued under the authority of approvals herein granted; record a notice of violation on the property title; institute and prosecute litigation to compel their compliance with said conditions or seek damages for their violation. No vested rights are gained by Developer or a successor in interest by the City's approval of this **Coastal Development Permit.**

2. Staff is authorized and directed to make, or require the Developer to make, all corrections and modifications to the **Coastal Development Permit** documents, as necessary to make them internally consistent and in conformity with the final action on the project. Development shall occur substantially as shown on the approved Exhibits. Any proposed development, different from this approval, shall require an amendment to this approval.

3. Developer shall comply with all applicable provisions of federal, state, and local laws and regulations in effect at the time of building permit issuance.

4. If any condition for construction of any public improvements or facilities, or the payment of any fees in-lieu thereof, imposed by this approval or imposed by law on this Project are challenged, this approval shall be suspended as provided in Government Code Section 66020. If any such condition is determined to be invalid, this approval shall be invalid unless the City Council determines that the project without the condition complies with all requirements of law.

5. Developer/Operator shall and does hereby agree to indemnify, protect, defend, and hold harmless the City of Carlsbad, its Council members, officers, employees, agents, and representatives, from and against any and all liabilities, losses, damages, demands, claims and costs, including court costs and attorney's fees incurred by the City arising, directly or indirectly, from (a) City's approval and issuance of this **Coastal Development Permit**, (b) City's approval or issuance of any permit or action, whether discretionary or nondiscretionary, in connection with the use contemplated herein, and (c) Developer/Operator's installation and operation of the facility permitted hereby, including without limitation, any and all liabilities arising from the emission by the facility of electromagnetic fields or other energy waves or emissions. This obligation survives until all legal proceedings have been concluded and continues even if the City's approval is not validated.

6. This approval is granted subject to the approval of **the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and CUP 07-03** and is subject to all conditions contained in Planning Commission Resolutions No. **6435 and 6436** for those other approvals incorporated herein by reference.

7. This approval is granted subject to the approval of the **Minor Subdivision (MS 07-02)** and is subject to all conditions contained **in the City Engineer's approval letter** for this other approval incorporated herein by reference.

8. Developer shall implement, or cause the implementation of, the **CARLSBAD PASEO – CUP 07-03/CDP 07-07/MS 07-02** Project Mitigation Monitoring and Reporting Program.

9. The applicant shall apply for and be issued building permits for this project within two (2) years of approval or this coastal development permit will expire unless extended per Section 21.201.210 of the Zoning Ordinance.

10. Prior to the issuance of building permits, the applicant shall apply for and obtain a grading permit issued by the City Engineer.

NOTICE

Please take **NOTICE** that approval of your project includes the "imposition" of fees, dedications, reservations, or other exactions hereafter collectively referred to for convenience as "fees/exactions."

You have 90 days from date of final approval to protest imposition of these fees/exactions. If you protest them, you must follow the protest procedure set forth in Government Code Section 66020(a), and file the protest and any other required information with the City Manager for processing in accordance with Carlsbad Municipal Code Section 3.32.030. Failure to timely follow that procedure will bar any subsequent legal action to attack, review, set aside, void, or annul their imposition.

You are hereby FURTHER NOTIFIED that your right to protest the specified fees/exactions DOES NOT APPLY to water and sewer connection fees and capacity charges, nor planning, zoning, grading, or other similar application processing or service fees in connection with this project; NOR DOES IT APPLY to any fees/exactions of which you have previously been given a NOTICE similar to this, or as to which the statute of limitations has previously otherwise expired.

PASSED, APPROVED, AND ADOPTED at a regular meeting of the Planning Commission of the City of Carlsbad, California, held on **July 16, 2008**, by the following vote, to wit:

AYES: Commissioners Baker, Boddy, Dominguez, Douglas, Montgomery, and Chairperson Whitton

NOES:

ABSENT: Commissioner Cardosa

ABSTAIN:

FRANK H. WHITTON, Chairperson
CARLSBAD PLANNING COMMISSION

ATTEST:

DON NEU
Planning Director

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. HYDROLOGY AND WATER QUALITY - Would the project:				
a) Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐
b) Substantially deplete groundwater supplies or interfere substantially with ground water recharge such that there would be a net deficit in aquifer volume or a lowering of the local ground water table level (i.e., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?	☐	☐	☐	☒
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the flow rate or amount (volume) of surface runoff in a manner, which would result in flooding on- or off-site?	☐	☐	☒	☐
e) Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
f) Otherwise substantially degrade water quality?	☐	☐	☒	☐
g) Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood delineation map?	☐	☐	☐	☒
h) Place within 100-year flood hazard area structures, which would impede or redirect flood flows?	☐	☐	☐	☒
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j) Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒

k) Increase erosion (sediment) into receiving surface waters.	☐	☐	☒	☐
l) Increase pollutant discharges (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, nutrients, oxygen-demanding substances and trash) into receiving surface waters or other alteration of receiving surface water quality (e.g. temperature, dissolved oxygen or turbidity?	☐	☐	☒	☐
m) Change receiving water quality (marine, fresh or wetland waters) during or following construction?	☐	☐	☒	☐
n) Increase any pollutant to an already impaired water body as listed on the Clean Water Act Section 303(d) list?	☐	☐	☒	☐
o) Increase impervious surfaces and associated runoff?	☐	☐	☒	☐
p) Impact aquatic, wetland, or riparian habitat?	☐	☐	☒	☐
q) Result in the exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?	☐	☐	☒	☐

a) Less Than Significant Impact. Federal, state and local agencies have established goals and objectives for storm water quality in the region. The proposed project prior to the start of construction, will comply with all federal, state and local permits including the Storm Water Management Plan (SWMP) required under the County of San Diego Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Section 67.871), the City of Carlsbad's Standard Urban Storm Water Management Plan (SUSMP), and the National Pollution Discharge Elimination System (NPDES) from the Regional Water Quality Control Board (RWQCB). The project will develop and implement specific erosion control and best management practices to protect downstream water quality. These plans will ensure that acceptable water quality standards will be maintained both during construction as well as post-development.

b) Less Than Significant Impact. The project does not propose to directly draw any groundwater; instead it will be served via existing public water distribution lines within the public right-of-way adjacent to the site. Existing water lines will adequately serve the project's water demands. Rainwater infiltration is needed to provide adequate groundwater recharge. Therefore, the project incorporates Low Impact Development (LID) design features, which promote infiltration of storm water run-off by proposing to minimize impervious surface areas, directing run-off to landscape areas, and proposing a detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives. The project will not significantly deplete groundwater supplies or quality. Therefore, impacts are considered to be less than significant.

c) No Impact. There are no streams or rivers within or adjacent to the site. Therefore, no impact is assessed.

d) Less Than Significant Impact. A Preliminary Hydrology Report dated March 17, 2008, and a Preliminary Storm Water Management Plan (SWMP) dated March 19, 2008, was prepared for the project by Aquaterra Engineering Inc. According to the reports, the proposed project does not substantially alter the existing drainage pattern of the site. The amount of discharge and velocity of run-off will not significantly exceed pre-development levels, and therefore will not cause substantial erosion or flooding. Project grading is designed to maintain the existing drainage pattern. The project incorporates LID design features, which promote infiltration of storm water run-off by proposing to minimize impervious surface areas, directing run-off to landscape areas, and proposing a

detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives.

e) Less Than Significant Impact. According to the Preliminary Hydrology Report dated March 17, 2008, and the Preliminary Storm Water Management Plan (SWMP) dated March 19, 2008, which was prepared for the project by Aquaterra Engineering Inc., the project will not significantly impact the existing or planned storm water systems, nor will the total post development run-off significantly exceed the pre-development levels. The project is proposing a detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives.

f) Less Than Significant Impact. The project will not substantially degrade the water quality as demonstrated in the Preliminary Hydrology Report dated March 17, 2008, and the Preliminary Storm Water Management Plan (SWMP) dated March 19, 2008, which was prepared for the project by Aquaterra Engineering Inc. The project incorporates LID design features, which promote infiltration of storm water run-off by proposing to minimize impervious surface areas, directing run-off to landscape areas, and proposing a detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives.

g-j) No Impact. The project site is not located within a 100-year flood hazard area according to the Flood Insurance Rate Map, Map No. 06073C1027F, June 19, 1997; and according to the City of Carlsbad Geotechnical Hazards Analysis and Mapping Study, Catastrophic Dam Failure Inundation, Tsunami and Seiche Hazard Zone Maps, September 1992, the project site is not located within an area affected by tsunami, seiche, or mudflow, nor is the site located within a Catastrophic Dam Failure Inundation Area. Therefore, no impact is assessed.

k) Less Than Significant Impact. The project does not significantly increase erosion into receiving surface waters as demonstrated in the Preliminary Hydrology Report dated March 17, 2008, and the Preliminary Storm Water Management Plan (SWMP) dated March 19, 2008, that were prepared for the project by Aquaterra Engineering Inc. According to these reports, the amount of discharge and velocity of run-off will not significantly exceed pre-development levels, and therefore will not cause substantial erosion into receiving surface waters. The project incorporates LID design features, which promote infiltration of storm water run-off by proposing to minimize impervious surface areas, directing run-off to landscape areas, and proposing a detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives. In addition, the project will be required to comply with the current NPDES requirements. A Storm Water Pollution Prevention Plan (SWPPP) will be required during construction phase to prevent short-term water quality impacts during or immediately after construction when graded areas are exposed to rain and storm water run-off.

l-p) Less Than Significant Impact. Storm water run-off drains from the site into the Agua Hedionda Lagoon and ultimately the Pacific Ocean. According to the California 2006 Clean Water Act Section 303(d) list published by the San Diego Regional Water Quality Control Board, Agua Hedionda Lagoon and the Pacific Ocean are listed as impaired water bodies by bacteria indicators. To address water quality of the project, BMP's will be implemented during construction and post construction phases, which specifically address bacteria and will also address sedimentation/siltation. In addition, other pollutants typically associated with the type of proposed development (i.e., nutrients from fertilizers, trash and debris, oxygen demanding substances, oil and grease from paved areas, and pesticides from landscaping) will be addressed through BMP's. As demonstrated in the project's Preliminary Storm Water Management Plan (SWMP), by Aquaterra Engineering Inc., dated March 19, 2008, the project will not significantly increase pollutant discharges and will not alter the water quality of the receiving surface waters, and the amount of discharge and velocity of run-off will not significantly exceed pre-development levels. The project is incorporating LID design features, which promote infiltration of storm water run-off by proposing to minimize impervious surface areas, directing run-off to landscape areas, and proposing a detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives.

q) Less Than Significant Impact. The project will not result in the exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses as demonstrated in the Preliminary Hydrology Report dated March 17, 2008, and the Preliminary Storm Water Management Plan (SWMP) dated March

19, 2008, which were prepared for the project by Aquaterra Engineering Inc. The project incorporates LID design features, which promote infiltration of storm water run-off by proposing to minimize impervious surface areas, directing run-off to landscape areas, and proposing a detention/infiltration "Storm Chamber" system, which reduces the amount of discharge and velocity of run-off to pre-development levels, and serves as a treatment BMP to attain water quality objectives.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. LANDUSE AND PLANNING - Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒

a-c) No Impact. The project is proposing commercial development, which is consistent with the existing and surrounding land uses. The site does not physically divide an established community, nor does the project conflict with any existing or proposed land use plans or policies of the City of Carlsbad. The proposed two-story retail center and two stand alone restaurants are appropriate land uses that are consistent with the Local Coastal Program land use designation of Travel Service (T-S). The project is consistent with the City of Carlsbad General Plan Land Use designation of Travel/Recreation Commercial (T-R), which designates areas for commercial uses that serve the travel and recreational needs of tourists, residents and employees of the business and industrial centers. The proposed two-story retail center and two stand alone restaurant uses will serve the travel and recreational needs of tourists, residents and employees of the surrounding businesses and industrial centers. The project is compatible with the City of Carlsbad Habitat Management Plan (see Section IV above). Therefore, no impact is assessed.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
X. MINERAL RESOURCES - Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the State?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

a-b) No Impact. There is no indication that the subject property contains any known mineral resources that would be of future value to the region or the residents of the State. Therefore, no impact is assessed.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. NOISE - Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies?	☐	☒	☐	☐
b) Exposure of persons to or generation of excessive groundbourne vibration or groundbourne noise levels?	☐	☐	☒	☐
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☐	☐
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

a) Potentially Significant Unless Mitigation Incorporated. An acoustical analysis was prepared for the proposed project by Urban Crossroads on December 11, 2007 (JN:05471-03) to determine compatibility with the City of Carlsbad's Noise Guidelines Manual. The report identifies vehicle noise from Interstate 5 and Paseo del Norte as the primary noise source in the vicinity of the project site. Building facade noise levels were found to be approximately 75 dBA or less at all buildings on the project site. The design of the buildings will be required to provide a minimum noise reduction of 20 dBA CNEL in order to comply with the City's interior Leg(h) standard of 55 dBA CNEL. According to the report, new construction will generally produce a "windows closed" noise reduction ranging from 25 dBA to 30 dBA. Therefore, with typical building construction, including a means of mechanical ventilation for all buildings onsite, the project will comply with the City of Carlsbad's 55 dBA CNEL interior noise standard for commercial uses. The following mitigation measure has been applied to the project and will reduce impacts to a level considered less than significant:

Mitigation Measure #1:

Mechanical ventilation shall be provided for all buildings as specified in the acoustical analysis prepared for the project by Urban Crossroads on December 11, 2007, to achieve a 55 dBA CNEL interior noise level. Prior to issuance of a building permit, the developer shall submit a supplemental acoustical analysis from the acoustical consultant stating that the architectural plans have been designed in compliance with the recommendations stated in the acoustical report.

The acoustical analysis also analyzed exterior noise impacts as they relate to the outdoor dining area proposed along the north side of Restaurant A (P.F. Chang's). In order to block the transmission path of the roadway noise to the outdoor dining area, a 4-foot high noise barrier is required along the northern edge of the dining area, which will mitigate noise levels to a "conditionally acceptable" noise level of between 68.6 dBA CNEL and 70.2 dBA CNEL. The noise barrier may be constructed of masonry block; stucco veneer over wood framing (or foam core), or 1 inch thick tongue and groove wood of sufficient weight per square foot; glass (¼-inch thick), or other transparent material with sufficient weight per square foot; earthen berm; or any combination of these materials. Restaurant A is designed with a 4-foot high wall consisting of a combination of ¼-inch thick tempered glass mounted on top of a masonry block wall with a stucco finish. With the 4-foot high noise barrier, the exterior noise levels at the outdoor dining area will fall between the City of Carlsbad's "normally acceptable" policy goal of 65 dBA CNEL and the "conditionally acceptable" 75 dBA CNEL goal for exterior areas. The following mitigation measure has been applied to the project and will reduce impacts to a level considered less than significant:

Mitigation Measure #2:

The project is required to include a 4-foot high noise barrier along the northern edge of the outdoor dining area of Restaurant A (P.F. Chang's). The barrier must have a surface density of at least 3.5 pounds per square foot of face area and shall have no decorative cutouts or line-of-site openings between shielded areas and the roadways. The noise control barrier may be constructed of masonry block; stucco veneer over wood framing (or foam core), or 1 inch thick tongue and groove wood of sufficient weight per square foot; glass (¼-inch thick), or other transparent material with sufficient weight per square foot; earthen berm; or any combination of these materials.

b & d) Less Than Significant Impact. The anticipated grading operation associated with the proposed project will result in a temporary and minor increase in groundborne vibration and ambient noise levels. Following the conclusion of grading, ambient noise level and vibrations are expected to return to pre-existing levels.

c) No Impact. The project is located on an infill lot surrounding by existing urban development and the Interstate 5 freeway. The proposed commercial retail center and restaurants are not expected to increase the ambient noise levels in the project vicinity above levels existing without the project. Therefore, no impact is assessed.

e-f) No Impact. The subject site is located approximately 1.9 miles west of the McClellan-Palomar Airport runway and approximately 270 feet below the surface of the runway. The project site is located within the Airport Influence Area as identified in the Airport Land Use Compatibility Plan (ALUCP) for the McClellan-Palomar Airport. The proposed retail center and restaurant uses fall into Land Use Category No. 8 of the ALUCP Noise/Land Use Compatibility Matrix (Commercial-Retail, Shopping Centers, Restaurants, and Movie Theaters). According to the ALUCP, the southern half of the project site is located within the 60 CNEL noise contour with the northern half located just outside. The types of uses proposed with the project are considered "compatible" according to the ALUCP with the aircraft noise exposure at the site. Therefore, no impact is assessed.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. POPULATION AND HOUSING - Would the project:				
a) Induce substantial growth in an area either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a-c) No Impact. The proposed project is located on an infill site surrounded by vehicle storage for Ken Grody Ford to the north, a stand alone restaurant (King's Fish House) to the south, Carlsbad Premium Outlets to the east, and Interstate 5 to the west. The area surrounding the proposed development is designated for Travel/Recreation Commercial (T-R) and Regional Commercial (R) General Plan land uses. The intensity of the proposed development is consistent with the surrounding land uses and is also consistent with the Travel/Recreation Commercial (T-R) General Plan Land Use designation for the site. The project is anticipated to capture the existing residential community along with servicing the retail needs of tourists visiting the area. The project will not induce substantial growth in area, thereby necessitating the need for new housing, the extension of roads or other infrastructure; nor will it displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere. Therefore, no impact is assessed.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, a need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☐	☒
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☐	☒
iv) Parks?	☐	☐	☐	☒
v) Other public facilities?	☐	☐	☐	☒

a.i.-a.v.) No Impact. The proposed Carlsbad Paseo project will not effect the provision and/or availability of public facilities (i.e., fire protection, police protection, schools, parks, etc.). The proposed project shall be subject to the conditions and facility service level requirements within the Local Facilities Management Plan for Zone 3, therefore no significant public service impacts will occur.

XIV. RECREATION	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a-b) No Impact. The proposed project is not considered a use that would increase the use of existing neighborhood and regional parks, nor does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment. Therefore, no impact is assessed.

XV. TRANSPORTATION/TRAFFIC - Would the project:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	☐	☒	☐	☐
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	☐	☐	☒	☐
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
e) Result in inadequate emergency access?	☐	☐	☐	☒
f) Result in insufficient parking capacity?	☐	☐	☐	☒
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turn-outs, bicycle racks)?	☐	☐	☐	☒

a) Potentially Significant Impact Unless Mitigation Incorporated. A Traffic Impact Analysis was prepared for the project by Darnell & Associates, Inc., dated March 2008. The project will generate 3,752 Average Daily Trips (ADT), 71 AM peak hour trips and 300 PM peak hour trips. This traffic will utilize the following key roadways: Cannon Road, Palomar Airport Road, Paseo del Norte, and Interstate 5 (I-5). Existing traffic, design capacity(ies), project traffic, and percent of the existing traffic volume and the design capacity respectively on these arterials are listed in the table below:

Roadway	Existing Vol. (ADT)	Capacity (ADT)	Project Vol. (ADT)	% of Existing / % of Capacity
Palomar Airport Road	52,936	60,000	1,313	2.5 / 2.2
Cannon Road	28,237	40,000	1,313	4.5 / 3.2
Paseo del Norte	10,831	30,000	2,251	20.7 / 7.5

According to SANTEC/ITE Guidelines for Traffic Impact Studies in the San Diego Region, LOS D is an acceptable level of service for roadways and intersections. Traffic Impact on a roadway segment or intersection is considered significant and a mitigation measure must be provided if one of the following criteria is met:

1. The addition of trips generated by the proposed project results in a change of LOS from an acceptable level of service to unacceptable level of service.

2. When the intersection or roadway segment is operating at an acceptable level of service and the addition of the proposed project traffic results in a change in volume to capacity ratio of more than 2% (0.02), or results in an increase in delay of more than 2.0 seconds at a deficient intersection.

For freeway segments, an increase of more than .01 in volume to capacity ratio is considered significant.

Direct Impacts:

Under the Existing plus Project scenario, the traffic impact analysis indicates that the proposed project has no significant direct impacts to key roadway segments and/or intersections. All affected roadway segments will operate at LOS A (see Table 11 of the said traffic impact analysis). For the analyzed segments of Interstate 5 Freeway (Tamarack Avenue to Cannon Road, Cannon Road to Palomar Airport Road, and Palomar Airport Road to Poinsettia Lane), the increases in volume to capacity ratio are within the allowable 0.01 per SANTEC/ITE guidelines. All analyzed intersections will continue to operate at an acceptable LOS D or better.

Near Term Impacts:

The proposed project will have cumulative indirect impacts at the following intersections under the Near Term Cumulative plus Project scenario:

- Palomar Airport Road/Paseo del Norte,
- Palomar Airport Road/I-5 Northbound Ramp,
- Paseo del Norte/Carlsbad Company Stores Driveway,
- Eastbound Left Turn Queue at Palomar Airport Road/Paseo del Norte,
- Southbound I-5/Westbound Palomar Airport Road Ramp

Mitigation No. 1 & 2:

Palomar Airport Road/Paseo del Norte & Palomar Airport/I-5 Northbound Ramp .

To mitigate impacts to the Palomar Airport Road/Paseo del Norte intersection, the developer shall pay Traffic Impact Fee based on Section 18.42 of the City of Carlsbad Municipal Code prior to approval of a building permit.

The TIF program identifies the future addition of a westbound through lane at the Palomar Airport Road/Paseo del Norte intersection. If this improvement is completed, the Palomar Airport Road/Paseo del Norte intersection will operate at LOS D under the near term cumulative plus project scenario. The TIF improvements to the Palomar Airport Road/Paseo del Norte Road intersection will also result in improvements in delay at the Palomar Airport Road/I-5 northbound ramp intersection.

The LOS at Palomar Airport Road/I-5 northbound ramp intersection will still operate at LOS E even with the said TIF improvements. However, the peak AM peak hour delay increase is only 25.5 seconds, less than a 2 minute increase allowed by SANTEC/ITE standards.

Mitigation Measure No. 3:

Paseo del Norte/Carlsbad Company Stores Driveway.

Prior to recordation of the parcel map, developer shall execute a Traffic Signal Subdivision Improvement Agreement to design and install and post appropriate security as provided by law, a traffic signal constructed to the satisfaction of the City Engineer. The improvements consist of.

A. Design and construct a new fully actuated traffic signal including all appurtenances and traffic signal interconnect conduit and cable, at the intersection of Paseo Del Norte and Carlsbad Company Store Driveway at the entryway of the project. Developer acknowledges the necessity of this signal is to serve only this project and Developer will bear all costs associated with the design and construction of this signal, if warrants are met. The signal shall be interconnected with

adjacent signals to facilitate signal coordination.

Developer shall post security for the design and construction of said improvements. The traffic signal shall be installed only when written approval is received by the City Engineer. The Agreement shall be kept in force and security kept valid for a period of 5-years after the last building permit has been issued within this Development.

Mitigation Measure No. 4:

Eastbound Left Turn Queue at Palomar Airport Road/ Paseo del Norte

The queuing analysis for this intersection found that the 95th percentile queue is projected to exceed the 250 feet of available storage during the PM peak hour under the near term cumulative without project scenario. Prior to recordation of the parcel map. The developer shall pay a fair-share contribution for the lengthening of the eastbound Palomar Airport Road left turn pocket on the west leg of the intersection of Palomar Airport Road and Paseo del Norte, based on a pro-rata share, all the satisfaction of the City Engineer.

Mitigation Measure No. 5:

Palomar Airport Road/I-5 Northbound Ramp & Southbound I-5/Westbound Palomar Airport Road Ramp Meter:

The project resulted in the delay of over two minutes at Palomar Airport Road/I-5 Northbound Ramp & Southbound I-5/Westbound Palomar Airport Road Ramp. SANTEC/ITE standard allows an increase of up to two minutes. The proposed mitigations for this impact is to increase the ramp meter flow rate to reduce the number of vehicles entering Interstate 5 freeway. California Department of Transportation has reviewed the proposed mitigation and found it to be acceptable (see letter from Caltrans dated March, 28, 2008). The above future mitigation will only be installed if Caltrans determine that the traffic volume warrants the installation.

Mitigation Measure No. 6:

Future Impacts:

Per SANTEC/ITE guidelines, under a year 2030 scenario, the project will be part of the future impact at the following locations:

- Paseo Del Norte/Carlsbad Company Stores Driveway
- Northbound I-5/Cannon Road Ramp Meter
- Northbound I-5/Cannon Road Ramp Meter

Paseo Del Norte/Carlsbad Company Stores Driveway.

Prior to recordation of the parcel map, developer shall execute a Traffic Signal Subdivision Improvement Agreement to design and install and post appropriate security as provided by law, a traffic signal constructed to the satisfaction of the City Engineer. The improvements consist of.

B. Design and construct a new fully actuated traffic signal including all appurtenances and traffic signal interconnect conduit and cable, at the intersection of Paseo Del Norte and Carlsbad Company Store Driveway at the entryway of the project. Developer acknowledges the necessity of this signal is to serve only this project and Developer will bear all costs associated with the design and construction of this signal, if warrants are met. The signal shall be interconnected with adjacent signals to facilitate signal coordination.

Developer shall post security for the design and construction of said improvements. The traffic signal shall be installed only when written approval is received by the City Engineer. The Agreement shall be kept in force and security kept valid for a period of 5-years after the last building permit has been issued within this Development.

Northbound I-5/Cannon Road Ramp Meter & Northbound I-5/Cannon Road Ramp Meter

Mitigation Measure No. 7:

The project resultes in the delay of over two minutes at Palomar Airport Road/I-5 Northbound Ramp & Southbound I-5/Westbound Palomar Airport Road Ramp. The SANTEC/ITE standard allows an increase of up to two minutes. The proposed mitigations for these impacts are to increase the ramp meter flow rates to reduce the number of vehicles entering Interstate 5 freeway. California Department of Transportation has reviewed the proposed mitigation and found it to be acceptable (see letter from Caltrans dated March, 28, 2008). The above future mitigation will only be installed if Caltrans determine that the traffic volume warrants the installation.
.

b) Less Than Significant Impact. SANDAG acting as the County Congestion Management Agency has designated three roads (Rancho Santa Fe Rd., El Camino Real and Palomar Airport Rd.) and one highway segment in Carlsbad as part of the regional circulation system. The existing LOS on these designated roads and highway in Carlsbad is:

	LOS
Rancho Santa Fe Road	"A-D"
El Camino Real	"A-D"
Palomar Airport Road	"A-D"
SR 78	"F"

The Congestion Management Program's (CMP) acceptable Level of Service (LOS) standard is "E", or LOS "F" if that was the LOS in the 1990 base year (e.g., SR 78 in Carlsbad was LOS "F" in 1990). Accordingly, all designated roads and highway 78 is currently operating at or better than the acceptable standard LOS.

Achievement of the CMP acceptable Level of Service (LOS) "E" standard assumes implementation of the adopted CMP strategies. Based on the design capacity(ies) of the designated roads and highway and implementation of the CMP strategies, they will function at acceptable level(s) of service in the short-term and at buildout.

c) No Impact. The proposed project does not include any aviation components. The project is consistent with the Airport Land Use Compatibility Plan (ALUCP) for the McClellan-Palomar Airport. It would not, therefore, result in a change of air traffic patterns or result in substantial safety risks. Therefore, no impact is assessed.

d) No Impact. All project circulation improvements will be designed and constructed to City standards; and, therefore, would not result in design hazards. The proposed project is consistent with the City's general plan and zoning. Therefore, it would not increase hazards due to an incompatible use. Therefore, no impact is assessed.

e) No Impact. The proposed project has been designed to satisfy the emergency requirements of the Fire and Police Departments. Therefore, no impact is assessed.

f) No Impact. The proposed project is not requesting a parking variance. Additionally, the project would comply with the City's parking requirements to ensure an adequate parking supply. Therefore, no impact is assessed.

g) No Impact. The project is located on the west side of Paseo del Norte between Cannon Road to the north and Palomar Airport Road to the south. The project is served by the North County Transit District (NCTD) with Bus Route 321 serving Paseo del Norte. The project has been designed to include a new bus turnout along Paseo del Norte and bicycle parking onsite. A condition of approval will be added to the project requiring secure bicycle racks to be installed at each bicycle parking area within the project. Therefore, no impact is assessed.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. UTILITIES AND SERVICES SYSTEMS - Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☐	☐
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects?	☐	☐	☐	☐
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☐
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	☐	☐	☐	☐
e) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☐
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☐	☐	☐
g) Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☐	☐

a-g) No Impact. The proposed project will be required to comply with all Regional Water Quality Control Board Requirements. In addition, the Zone 3 LFMP anticipated that the project site would be developed with travel/recreation commercial uses and therefore wastewater treatment facilities were planned and designed to accommodate this future use. All public facilities, including water facilities, wastewater treatment facilities and drainage facilities, have been planned and designed to accommodate the growth projections for the City at build-out. The project does not result in development that will require expansion or construction of new water facilities/supplies, wastewater treatment or storm water drainage facilities. Therefore, no impact is assessed.

XVII. MANDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects?)	☐	☐	☒	☐
c) Does the project have environmental effects, which will cause the substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

b) Less Than Significant Impact. The San Diego Association of Governments (SANDAG) projects regional growth for the greater San Diego area, and local General Plan Land Use policies are incorporated into SANDAG projections. Based upon those projections, region-wide standards, including storm water quality control, air quality standards, habitat conservation, congestion management standards, etc., are established to reduce the cumulative impacts of development in the region. All of the City's development standards and regulations are consistent with the region wide standards. The City's standards and regulations, including grading standards, water quality and drainage standards, traffic standards, habitat and cultural resource protection regulations, and public facility standards, ensure that development within the City will not result in a significant cumulatively considerable impact.

There are two regional issues that development within the City of Carlsbad has the potential to have a cumulatively considerable impact on. Those issues are air quality and regional circulation. As described above, the project would contribute to a cumulatively considerable potential net increase in emissions throughout the air basin. However, the air quality would be essentially the same whether or not the development is implemented.

The County Congestion Management Agency (CMA) has designated three roads (Rancho Santa Fe Rd., El Camino Real and Palomar Airport Rd.) and two highway segments in Carlsbad as part of the regional circulation system. The CMA had determined, based on the City's growth projections in the General Plan, that these designated roadways will function at acceptable levels of service in the short-term and at build-out. The project is consistent with the City's growth projections, and therefore, the cumulative impacts from the project to the regional circulation system are less than significant.

With regard to any other potential impacts associated with the project, City standards and regulations will ensure that development of the site will not result in any significant cumulatively considerable impacts.

c) Less than Significant Impact. Based upon the fact that future development of the site will comply with all City standards, the project will not result in any direct or indirect substantial adverse environmental effects on human beings. However, the project site is located in an area where human beings are exposed to significant levels of noise

generated by traffic on the surrounding streets. As discussed above, any potential impacts from noise can be mitigated to a level less than significant. Those mitigation measures will be incorporated as conditions of project approval. Development of the site and structures will be required to comply with all applicable Federal, State, Regional and City regulations, which will ensure that development of the site will not result in adverse impacts on human beings, either directly or indirectly.

XVIII. EARLIER ANALYSES

Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case a discussion should identify the following on attached sheets:

a) Earlier analyses used. Identify earlier analyses and state where they are available for review.

b) Impacts adequately addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

c) Mitigation measures. For effects that are "Less Than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

EARLIER ANALYSIS USED AND SUPPORTING INFORMATION SOURCES

The following documents were used in the analysis of this project and are on file in the City of Carlsbad Planning Department located at 1635 Faraday Avenue, Carlsbad, California, 92008.

1. Final Master Environmental Impact Report for the City of Carlsbad General Plan Update (MEIR 93-01). City of Carlsbad Planning Department, March 1994.

2. Carlsbad General Plan, City of Carlsbad Planning Department, March 1994.

3. City of Carlsbad Municipal Code, Title 21 Zoning, City of Carlsbad Planning Department, as updated.

4. Habitat Management Plan for Natural Communities in the City of Carlsbad, City of Carlsbad Planning Department, final approval dated November 2004.

5. Airport Land Use Compatibility Plan for McClellan Palomar Airport, Carlsbad, California, San Diego County Regional Airport Authority, as amended October 4, 2004.

6. Geotechnical Engineering Investigation Report (Contract No. 148028), Testing Engineers San Diego, Inc., September 26, 2006.

7. Carlsbad Paseo Galleria Preliminary Noise Study (JN: 05471-03), Urban Crossroads, December 11, 2007.

8. Preliminary Vegetation Assessment, Carlsbad Paseo, Planning Systems, May 16, 2007.

9. Wetland Delineation for the Carlsbad Paseo, Planning Systems, May 16, 2007.

13.

LIST OF MITIGATING MEASURES (IF APPLICABLE)

APPLICANT CONCURRENCE WITH MITIGATION MEASURES

THIS IS TO CERTIFY THAT I HAVE REVIEWED THE ABOVE MITIGATING MEASURES AND CONCUR WITH THE ADDITION OF THESE MEASURES TO THE PROJECT.

Date

Signature

August 21, 2008

Strategic Property Advisers, Inc.
3250 Vista Diego Road
Jamul, CA 91935

MS 07-02, CARLSBAD PASEO MINOR SUBDIVISION

The City Engineer has made a preliminary decision, pursuant to Section 20.24.120 of the City of Carlsbad Municipal Code, to approve the Tentative Parcel Map of the subject minor subdivision, subject to the conditions listed below.

NOTE: Unless specifically stated in the condition, all of the following conditions, upon the approval of this proposed Tentative Parcel map, must be met prior to approval of a Parcel Map, building permit, or grading permit, whichever occurs first.

General

1. Prior to hauling dirt or construction materials to or from any proposed construction site within this project, Developer shall apply for and obtain approval from, the City Engineer for the proposed haul route.

2. This approval is granted subject to the approval of the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, **CUP 07-03, and CDP 07-07** and is subject to all conditions contained in Planning Commission Resolutions No. **6435, 6436, and 6437** for those other approvals incorporated herein by reference.

3. Developer shall submit to the City Engineer, a reproducible 24" x 36", mylar copy of the tentative map and a digital copy of said map (in AutoCAD format, latest version) reflecting the conditions approved by the final decision making body and any applicable coastal commission approvals. The reproducible shall be submitted to the City engineer, reviewed and, if acceptable, signed by the City's project engineer and project planner prior to submittal of the building plans, parcel map, improvement or grading plans, whichever occurs first. The digital file copy shall be submitted in a format as approved by the City Engineer.

4. Developer shall provide to the City Engineer, an acceptable means, CC&Rs and/or other recorded document, for maintaining the private easements within the subdivision and all the private improvements such as storm drain facilities and storm water Best Management Practice facilities, parking lot, sidewalks, etc. located therein and to

1635 Faraday Avenue • Carlsbad, CA 92008-7314 • (760) 602-2720 • FAX (760) 602-8562

distribute the costs of such maintenance in an equitable manner among the owners of the properties within the subdivision.

5. **The developer shall provide proof of a recorded private reciprocal access agreement with the adjacent property owner to the South.**

6. Developer shall and does hereby agree to indemnify, protect, defend and hold harmless the City of Carlsbad, its Council members, agents, officers, and representatives, from and against any and all liabilities, losses, damages, demands, claim and costs, including court costs and attorney's fees incurred by the City arising, directly or indirectly, from (a) City's approval and issuance of this Tentative Parcel Map, (b) City's approval or issuance of any permit or action, whether discretionary or non-discretionary, in connection with the use contemplated herein, including an action filed within the time period specified in Government Code Section 66499.37 and (c) Developer's installation and operation of the facility permitted hereby, including without limitation, any and all liabilities arising from the emission by the facility of electromagnetic fields or other energy waves or emissions.

7. Developer shall install sight distance corridors at all street intersections and driveways in accordance with City Engineering Standards.

8. **Developer shall apply for and obtain Right-of Way Permit from Caltrans for any work proposed within Caltrans' right-of-way.**

Fees/Agreements

9. Developer shall cause property owner to execute and submit to the City Engineer for recordation, the City's standard form Geologic Failure Hold Harmless Agreement.

10. Developer shall cause property owner to execute and submit to the City Engineer for recordation the City's standard form Drainage Hold Harmless Agreement.

11. Prior to approval of any grading or building permits for this project, Developer shall cause Owner to give written consent to the City Engineer to the annexation of the area shown within the boundaries of the site plan into the existing City of Carlsbad Street Lighting and Landscaping District No. 1 and/or to the formation or annexation into an additional Street Lighting and Landscaping District. Said written consent shall be on a form provided by the City Engineer.

12. Developer shall cause property owner to process, execute and submit an executed copy to the City Engineer for recordation a City standard Permanent Storm Water Quality Best Management Practice Maintenance Agreement for the perpetual maintenance of all treatment control, applicable site design and source control, post-construction permanent Best Management Practices prior to the issuance of a grading permit or building permit, whichever occurs first for this Project.

13. **Prior to issuance of a grading permit or building permit, whichever occurs first, the developer shall pay the existing Planned Local Drainage Area (PLDA) fee and enter into an agreement to pay the incremental increase in the PLDA fee as such fee may be established in the forthcoming revised Drainage Master Plan.**

14. **Developer shall cause property owner to execute and submit to the City Engineer for recordation, the City's standard Encroachment Agreement for the required enhanced paving for pedestrian crosswalk at the intersection of Paseo Del Norte and Carlsbad Company Store driveway.**

Grading

15. Based upon a review of the proposed grading and the grading quantities shown on the Site Plan, a grading permit for this project is required. Developer shall apply for and obtain a grading permit from the City Engineer prior to issuance of a building permit for the project.

16. This project requires off site grading. No grading for private improvements shall occur outside the limits of this approval unless Developer obtains, records and submits a recorded copy to the City Engineer a grading or slope easement or agreement from the owners of the affected properties. If Developer is unable to obtain the grading or slope easement, or agreement, no grading permit will be issued. In that case Developer must either apply for and obtain an amendment of this approval or modify the plans so grading will not occur outside the project and apply for and obtain a finding of substantial conformance from both the City Engineer and Planning Director.

17. **Developer shall verify infiltration rate by large-scale infiltration testing at each of the proposed storm water detention/infiltration system locations per the recommendations of the Soil's Engineer. Developer shall provide the design of the drainage systems to the satisfaction of the City Engineer.**

18. Prior to the issuance of grading permit or building permit, whichever occurs first, Developer shall submit for City approval a "Storm Water Management Plan (SWMP)." The SWMP shall demonstrate compliance with the City of Carlsbad Standard Urban Storm water Mitigation Plan (SUSMP), Order 2007-01 issued by the San Diego Region of the California Regional Water Quality Control Board and City of Carlsbad Municipal Code. The SWMP shall address measures to avoid contact or filter said pollutants from storm water, to the maximum extent practicable, for the post-construction stage of the project. At a minimum, the SWMP shall:

    a. Identify existing and post-development on-site pollutants-of-concern.

    b. Identify the hydrologic unit this project contributes to and impaired water bodies that could be impacted by this project.

c. **Incorporate Low Impact Development in the project design.**

d. Recommend source controls and treatment controls that will be implemented with this project to avoid contact or filter said pollutants from storm water to the maximum extent practicable before discharging offsite.

e. Establish specific procedures for handling spills and routine cleanup. Special considerations and effort shall be applied to resident education on the proper procedures for handling cleanup and disposal of pollutants.

f. Ensure long-term maintenance of all post-construction BMPs in perpetuity.

g. Identify how post-construction runoff rates and velocities from the site will not exceed the pre-construction runoff rates and velocities to the maximum extent practicable.

19. Prior to the issuance of a grading permit, Developer shall submit to the City Engineer receipt of a Notice of Intention from the State Water Resources Control Board.

20. **Prior to the issuance of grading permit or building permit, whichever occurs first, Developer shall submit for City approval a Tier 3 Storm Water Pollution Prevention Plan (TIER 3 SWPPP). The TIER 3 SWPPP shall be in compliance with current requirements and provisions established by the San Diego Region of the California Regional Water Quality Control Board and City of Carlsbad Requirements. The TIER 3 SWPPP shall address measures to reduce to the maximum extent practicable storm water pollutant runoff during construction of the project.**

Dedications/Improvements

21. Developer shall cause Owner to make an offer of dedication to the City for

a. **The public water easement shown on the Tentative Parcel Map.**

b. **The public street and utility easement for the proposed bus turnout along Paseo Del Norte as shown on the Tentative Parcel Map.**

c. **The pedestrian access easements for the proposed pedestrian ramps at the project's north and south driveway entrances along Paseo Del Norte as shown on the Tentative Parcel Map.**

The offer shall be made by a certificate on the Parcel Map or separate recorded document. All land so offered shall be free and clear of all liens and encumbrances and without cost to the City. Streets that are already public are not required to be rededicated.

22. Developer shall cause Owner to execute covenants of reciprocal private easements for **private access and parking, drainage, storm drain facilities, and best management practices (BMP) facilities for storm water treatment on each Parcel for the benefit of the other two parcels, as shown on the Tentative Parcel Map.** The obligation to execute and record the covenants of reciprocal private easements shall be shown and recording information called out on the Parcel Map. Developer shall provide City Engineer with proof of recordation prior to issuance of building permit.

23. Developer shall cause the property owner to process, execute and submit to the City Engineer for recordation the City's standard deed restriction on the property which relates to the cross-lot drainage as shown on the Tentative Parcel Map. The deed restriction shall be in a form acceptable to the City Engineer and shall:

    a. Clearly delineate the limits of the drainage course;

    b. State the drainage course is to be maintained in perpetuity by the underlying property owner; and

    c. State that all future use of the property along the drainage course will not restrict, impede, divert or otherwise alter drainage flows in a manner that will result in damage to the underlying and adjacent properties or the creation of public nuisance.

24. Developer shall provide to the City Engineer, an acceptable means, CC&Rs and/or other recorded document, for maintaining the private easements within the subdivision and all private improvements: paving, sidewalks, parking, street lights, storm water quality treatment BMPs, and storm drain facilities located therein and to distribute the costs of such maintenance in an equitable manner among the owners of the properties within the subdivision.

25. Additional drainage easements may be required. Developer shall dedicate and provide or install drainage structures, as may be required by the City Engineer, prior to or concurrent with any grading or building permit.

26. Drainage systems shall be inspected by the City. Developer shall pay the standard improvement plan check and inspection fees.

27. **The proposed 10' x 24' ADA boarding area at the proposed bus stop shown on the tentative map must be moved to the far south end of the turnout berth area parallel to the road to the satisfaction of NCTD.**

28. **The proposed ADA path that connects to the above mentioned 10'x24' ADA boarding pad must be extended to the east to join the new proposed sidewalk to the satisfaction of NCTD.**

31. **Developer shall pay a fair-share contribution for the lengthening of the eastbound to northbound left turn pocket at the intersection of Palomar Airport Road and Paseo Del Norte, based on a pro-rata share equivalent to thirteen percent of the actual cost to the satisfaction of the City Engineer.**

Parcel Map Notes

32. Add the following notes to the final map as non-mapping data.

A All improvements are privately owned and are to be privately maintained with the exception of the following:

a. **Full half width improvements of Paseo Del Norte, along the project frontage, to secondary arterial standard, including but not limited to driveways, paving, curb and gutter, sidewalk, stripping, under grounding or relocation of utilities, water & sewer services, drainage structures, all necessary transitions to existing improvements as shown on Tentative Parcel Map.**

b. **Onsite potable water lines and appurtenances as shown on the tentative parcel map.**

c. **Modification of the existing signalized intersection, including traffic signal and stripping, at Paseo Del Norte and Car Country Drive to include the proposed north access driveway of the project as the fourth leg of the intersection.**

B **Developer shall prepare and process improvement plans and, prior to approval, shall execute a City standard Subdivision Improvement Agreement to install and secure with appropriate security as provided by law, public traffic signal improvements shown on the tentative map. Said improvements shall be installed to City Standards to the satisfaction of the City Engineer. More specifically, these signal improvements include but are not limited to constructing a new fully actuated traffic signal including all appurtenances, traffic signal interconnect conduit and cable, and enhanced paving for pedestrian crosswalk at the intersection of Paseo Del Norte and Carlsbad Company Store driveway. The signal shall be interconnected with adjacent signals to facilitate signal coordination. Developer shall install the traffic signal only with written authorization from the City Engineer. Developer shall pay the standard improvement plan check and inspection fees. The improvements shall be constructed within 18 months of approval of the development improvement agreement or such other time as provided in said agreement.**

C **Developer shall pay a fair-share contribution for the lengthening of the eastbound to northbound left turn pocket at the intersection of Palomar Airport Road and Paseo Del Norte, based on a pro-rata share equivalent to thirteen percent of the actual cost**

to the satisfaction of the City Engineer.

D Building permits will not be issued for development of the subject property unless the appropriate agency determines that sewer and water facilities are available.

E The owner of this property on behalf of itself and all of its successors in interest has agreed to hold harmless and indemnify the City of Carlsbad from any action that may arise through any diversion of waters, the alteration of the normal flow of surface waters or drainage, or the concentration of surface waters or drainage from the drainage system or other improvements identified in the City approved development plans; or by the design, construction or maintenance of the drainage system or other improvements identified in the City approved development plans.

F Geotechnical Caution:

a. The owner of this property on behalf of itself and all of its successors in interest has agreed to hold harmless and indemnify the City of Carlsbad from any action that may arise through any geological failure, ground water seepage or land subsidence and subsequent damage that may occur on, or adjacent to, this subdivision due to its construction, operation or maintenance.

G No structure, fence, wall, tree, shrub, sign, or other object may be placed or permitted to encroach within the area identified as a sight distance corridor as defined by City of Carlsbad Engineering Standards.

Utilities

33. Prior to approval of improvement plans or final map, Developer shall meet with the Fire Marshal to determine if fire protection measures (fire flows, fire hydrant locations, building sprinklers) are required to serve the project. Fire hydrants, if proposed, shall be considered public improvements and shall be served by public water mains to the satisfaction of the District Engineer.

34. The Developer shall design and construct public facilities within public right-of-way or within minimum 20-foot wide easements granted to the District or the City of Carlsbad. At the discretion of the District Engineer, wider easements may be required for adequate maintenance, access and/or joint utility purposes.

35. The Developer shall design landscape and irrigation plans utilizing recycled water as a source and prepare and submit a colored recycled water use map to the Planning Department for processing and approval by the District Engineer.

36. Prior to issuance of building permits, Developer shall pay all fees, deposits, and charges for connection to public facilities. Developer shall pay the San Diego County Water Authority capacity charge(s) prior to issuance of Building Permits.

37. The Developer shall install potable water and recycled water services and meters at a locations approved by the District Engineer. The locations of said services shall be reflected on public improvement plans.

38. The Developer shall install sewer laterals and clean-outs at a location approved by the District Engineer. The locations of sewer laterals shall be reflected on public improvement plans.

Code Reminders

The project is subject to all applicable provisions of local ordinances, including but not limited to the following:

A. The tentative parcel map shall expire two years from the date of approval by the City engineer.

B. The Average Daily Trips (ADT) and floor area contained in the staff report and shown on the Site Plan are for planning purposes only. Developer shall pay traffic impact and sewer impact fees based on Section 18.42 and Section 13.10 of the City of Carlsbad Municipal Code, respectively.

The City Engineer has reviewed each of the exactions imposed on the developer contained in these conditions of approval, and hereby finds, in this case, that the exactions are imposed to mitigate impacts caused by or reasonably related to the project, and the extent and degree of the exaction is in rough proportionality to the impact caused by the project.

If you have any questions, you may contact Tecla Levy at (760) 602-2733.

3. PROJECT DESCRIPTION

Project Location: The site, comprised of 6.96 acres, is situated on the north side of Palomar Airport Road between Paseo del Norte and Highway 5. A Vicinity Map and a USGS Map are attached for review on the following pages.

Project Description: The project site is currently vacant.

The proposed project will develop the site for 2 restaurants and a 2-story retail center. Access to the site will be from 2 driveways off Paseo del Norte. The building site has the following coverages:

Proposed Impervious Surfaces
Including Building footprint and parking areas **258,746 s.f. (5.94 ac.)**
85% coverage of impervious surface

Physical Features: The site is an existed graded pad with topography that slopes in the northwesterly direction with mild slope gradients. The development will not alter the existing drainage patterns from the existing pre-development condition. All drainage flows shall be collected via ribbons gutters and catch basins. Then transported via piping, and then detained in an underground storage system and outlet at existing flow levels.

Surrounding Land Use: The surrounding adjacent lands have been developed with a major retail center, a hotel, automobile retail center, and restaurants.

Proposed Project Land Use: The subject application will use the existing C-T-G designation. No land use or zoning change is required for approval of this project.

Hydrologic Unit: This project is located within Carlsbad Watershed and the Hydrologic Area numbered 904.3 (Agua Hedionda). The Carlsbad Hydrologic unit is approximately 210 square miles. This project is a minute portion of this hydrologic area at less than 0.000001% of the total area.

4. SITE PLAN (SEE ATTACHED)

5. POLLUTANTS OF CONCERN IN RECEIVING WATERS

WATERSHED

Please check the watershed(s) for the project.

__San Juan 901	__Santa Margarita 902	__San Luis Rey 903	X Carlsbad 904
__San Dieguito 905	__Penasquitos 906	__San Diego 907	__Sweetwater 909
__Otay 910	__Tijuana 911	__Whitewater 719	__Clark 720
__West Salton 721	__Anza Borrego 722	__Imperial 723	

Please provide the hydrologic sub-area and number(s)

Number	Name
904.31	Agua Hedionda Lagoon

Please provide the beneficial uses for Inland Surface Waters, Coastal Waters and Ground Waters. Beneficial Uses can be obtained from the Water Quality Control Plan for the San Diego Basin, which is available at the Regional Board office or at http://www.waterboards.ca.gov/sandiego/water issues/programs/basin plan/docs/update102207/chapters2 042507.pdf
This project drains directly to the Agua Hedionda Lagoon and does not impact any inland surface waters.

Coastal Waters	Hydrologic Unit Basin Number	IND	NAV	REC 1	REC 2	COMM	BIOL	EST	RWILD	RARE	MAR	AQUA	MIGR	SPWN	WARM	SHELL	MUN	AGR
Agua Hedionda Lagoon	904.31	X		X	X	X	X	X	X	X	X	X	X	X		X		
Ground Waters	904.31		X														X	X

X Existing Beneficial Use
0 Potential Beneficial Use

The project location and watersheds have been compared to the current published 303d list of impaired water bodies. The Agua Hedionda Lagoon is experiencing impairments to beneficial uses due to excessive coliform and sediment from upstream sources.

The project site drains directly to the Agua Hedionda Lagoon via impaired unnamed improved and unimproved drainage courses and therefore potentially contributes to the pollutants of concern.

Bacteria and Sedimentation are pollutants of concern anticipated from the proposed development as noted in Section 6 below. Adequate and appropriate BMPs, will be incorporated in to project design to maximize removal of bacteria and sedimentation to the Maximum Extent Practicable

6. CONDITIONS OF CONCERN

Using Table 1, identify pollutants that are anticipated to be generated from the proposed priority project categories. Pollutants associated with any hazardous material sites that have been remediated or are not threatened by the proposed project are not considered a pollutant of concern.

Table 6.1 Anticipated and Potential Pollutants Generated by Land Use Type

	General Pollutant Categories								
Priority Project Categories	Sediments	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P(1)	P(2)	P	X
Commercial Development >100,000 ft2	P(1)	P(1)		P(2)	X	P(5)	X	P(3)	P(5)
Automotive Repair Shops			X	X(4)(5)	X		X		
Restaurants					X	X	X	X	
Hillside Development >5,000 ft2	X	X			X	X	X		X
Parking Lots	P(1)	P(1)	X		X	P(1)	X		P(1)
Streets, Roads Highways & Freeways	X	P(1)	X	X(4)	X	P(5)	X		

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

The above shaded rows indicate this project's General Pollutant Categories.

**** VALUES AFTER DETENTION AND INFILTRATION*

Note: If other monitoring data that is relevant to the project is available. Please include as Attachment C.

NOTES ON POLLUTANTS OF CONCERN:

In Table 6.2, Pollutants of Concern are grouped as gross pollutants, pollutants that tend to associate with fine particles, and pollutants that remain dissolved:

Table 6.2

Pollutant	Course Sediment and Trash	Pollutants that tend to associate with fine particles during treatment	Pollutants that tend to be dissolved following treatment
Sediments	X	X	
Nutrients		X	X
Heavy Metals		X	
Organic Compounds		X	
Trash & Debris	X		
Oxygen Demanding		X	
Bacteria		X	
Oil & Grease		X	
Pesticides		X	

EXPECTED DISCHARGES

There are no sampling data available for the existing site condition. In addition, the project is not expected to generate significant amounts of non-visible pollutants. However, the following constituents are commonly found on similar developments and could affect water quality:

- Sediment
- Nutrients
- Trash & Debris.
- Oxygen Demanding Substances
- Oil & Grease
- Bacteria & Viruses
- Pesticides from Landscaping use.

Pre and Post Development Runoff

The following pages list the Hydrologic Calculations for the Pre and Post Runoff values for the Q(100) – 6 hr. storm.

CONSTRUCTION BMPs

The following selected BMPs will be used in the Construction phase of this project and will be

CONSTRUCTION BMPs

The following selected BMPs will be used in the Construction phase of this project and will be shown on the Erosion Control Map included in the SWPPP (Tier 3).

_X_ Silt Fence

__ Fiber Rolls

_X_Street Sweeping and Vacuuming

__ Storm Drain Inlet Protection

_X_ Stockpile Management

_X_ Solid Waste Management

_X_ Stabilized Construction Entrance/Exit

__Dewatering Operations

__ Vehicle and Equipment Maintenance

__ Desilting Basin

_X_ Material Delivery and Storage

___ Spill Prevention and Control

_X_ Concrete Waste Management

___Water Conservation Practices

_X_ Paving and Grinding Operations

__Any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval.

7. SITE & DESIGN BMPs

SITE DESIGN

To minimize stormwater impacts, site design measures must be addressed. The following checklist provides options for avoiding or reducing potential impacts during project planning. If YES is checked, it is assumed that the measure was used for this project. If NO is checked, please provide a brief explanation why the option was not selected in the text box below.

Table 7.1

	OPTIONS		YES	NO	N/A
1.	Can the project be relocated or realigned to avoid/reduce impacts to receiving waters or to increase the preservation of critical (or problematic) areas such as floodplains, steep slopes, wetlands, and areas with erosive or unstable soil conditions?				X
2.	Can the project be designed to minimize impervious footprint?		X		
3.	Conserve natural areas where feasible?		X		
4.	Where landscape is proposed, can rooftops, impervious sidewalks, walkways, trails and patios be drained into adjacent landscaping?		X		
5.	For roadway projects, can structures and bridges be designed or located to reduce work in live streams and minimize construction impacts?				X
6.	Can any of the following methods be utilized to minimize erosion from slopes:				
	6.a.	Disturbing existing slopes only when necessary?	X		
	6.b.	Minimize cut and fill areas to reduce slope lengths?	X		
	6.c.	Incorporating retaining walls to reduce steepness of slopes or to shorten slopes?	X		
	6.d.	Providing benches or terraces on high cut and fill slopes to reduce concentration of flows?	X		
	6.e.	Rounding and shaping slopes to reduce concentrated flow?	X		
	6.f.	Collecting concentrated flows in stabilized drains and channels?	X		

LOW IMPACT DEVELOPMENT (LID)

Each numbered item below is a LID requirement of the WPO. Please check the box(s) under each number that best describes the Low Impact Development BMP(s) selected for this project.

Table 8

1. Conserve natural Areas, Soils, and Vegetation-County LID Handbook 2.2.1
☐ Preserve well draining soils (Type A or B)
☐ Preserve Significant Trees
☐ Other. Description:
✓ 1. Not feasible. State Reason: This is a infill project. Thre are no well draining soils or significant trees on site.
2. Minimize Disturbance to Natural Drainage-County LID Handbook 2.2.2
☐ Set-back development envelope from drainages
☐Restrict heavy construction equipment access to planned green/open space areas
☐ Other. Description:
✓ 2. Not feasible. State Reason: There are no natural drainage features associated with this site.
3. Minimize and Disconnect Impervious Surfaces (see 5) –County LID Handbook 2.2.3
✓ Clustered Lot Design
✓ Items checked in 5?
☐ Other. Description:
☐ 3. Not feasible. State Reason
4. Minimize Soil Compaction-County LID Handbook 2.2.4
Restrict heavy construction equipment access to planned green/open space areas
✓ Re-till soils compacted by construction vehicles/equipment
✓Collect & re-use upper soil layers of development site containing organic materials
☐ Other. Description:
4. Not Feasible. State Reason:
5. Drain Runoff from Impervious Surfaces to Pervious Areas- LID Handbook 2.2.5

LID Street & Road Design
☐ Curb-cuts to landscaping
☐ Rural Swales
☐ Concave Median
☐ Cul-de-sac Landscaping Design
☐ Other. Description:
LID Parking Lot Design
☐ Permeable Pavements
☐ Curb-cuts to landscaping
☑ Other. Description: underground detention system.
LID Driveway, Sidewalk, Bike-Path Design
☐ Permeable Pavements
☐ Pitch pavements toward landscaping
☐ Other. Description:
LID Building Design
☐ Cisterns & Rain Barrels
✓ Downspout to swale
☐ Vegetated Roofs
☐ Other. Description: ☐ Not feasible. State Reason:
LID Landscaping Design
☐ Soil Amendments
☐ Reuse of Native Soils
✓ Smart Irrigation Systems
☐ Street Trees
☐ Other. Description:
☐ Not feasible. State Reason:

8. SOURCE CONTROL BMPs

. Design Outdoor Material Storage Areas to Reduce Pollution Introduction

- Non Applicable

Design Trash Storage Areas to Reduce Pollution Introduction

- Trash storage are shall be paved with an impervious surface, designed not to allow run-on from adjoining areas, screened or walled to prevent off-site transport of trash; or
  (1) Attached lids shall be provided on all trash containers that exclude rain;

Employ Integrated Pest Management Principles

- We shall eliminate and/or reduce the need for pesticide use in the project design by:
  (1) Planting pest-resistant or well adapted plant varieties such as native plants; and
  (2) Discourage pests by modifying the site and landscaping design. Pollution prevention is the primary "first line of defense" because pollutants that are never used do not have to be controlled or treated (methods which are inherently less efficient).
- We shall distribute IPM educational materials to future site residents/tenants. Minimally, educational materials must address the following topics:
  (1) Keeping pests out of the buildings and landscaping using barriers, screens and caulking;
  (2) Physical pest elimination techniques, such as, weeding, squashing, trapping, washing, or pruning out pests;
  (3) Relying on natural enemies to eat pests;
  (4) Proper use of pesticides as a last line of defense

Use Efficient Irrigation Systems & Landscape Design

- The following methods to reduce excessive irrigation runoff shall be considered, and incorporated and implemented where determined applicable and feasible:
  (1) Employing rain shutoff devises to prevent irrigation after precipitation;
  (2) Designing irrigation systems to each landscape area's specific water requirements;
  (3) Using flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.

Provide Storm Drain System Stenciling and Signage

- Provide Concrete stamping, or equivalent, of all storm water conveyance system inlets and catch basins within the project area with prohibitive language (e.g. "No Dumping – I live Downstream), satisfactory to the City Engineer. Stamping may also be required in Spanish.

- Post signs and prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area, trailheads, parks and building entrances.

- Post signs and prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area, trailheads, parks and building entrances.

9. BMPs FOR INDIVIDUAL PROJECTS

Private Roads

- Non Applicable

Residential Driveways & Guest Parking

- Not Applicable

Dock Areas

Loading/unloading dock areas shall include the following:

- Cover loading dock areas, or design drainage to preclude urban run-on and runoff.
- Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

Vehicle Wash Areas

- Non Applicable

Outdoor Processing Areas

- Non Applicable

Surface Parking Areas

- Where landscaping is proposed in surface parking areas (both covered and uncovered), landscape areas shall be incorporated into the drainage design.
- Overflow parking (parking in excess of project's minimum parking requirements) may be constructed with permeable paving.

Non Retail Fueling Area

- Non Applicable

Restaurants

A grease interceptor will be installed for the restaurants. Specifcations are included in Attachment "A".

10. STRUCTURAL TREATMENT CONTROL BMPs

To select a structural treatment BMP using Treatment Control BMP Selection Matrix (Table 10.1), each priority project shall compare the list of pollutants for which the downstream receiving waters are impaired (if any), with the pollutants anticipated to be generated by the project (as identified in Table 10.1). Any pollutants identified by Table 10.1, which are also causing a Clean Water Act section 303(d) impairment of the receiving waters of the project, shall be considered primary pollutants of concern. Priority projects that are anticipated to generate a primary pollutant of concern shall select a single or combination of stormwater BMPs from Table 11, which **maximizes pollutant removal** for the particular primary pollutant(s) of concern.

Table 10.1. Treatment Control BMP Selection Matrix

Pollutants of Concern	Bioretention Facilities (LID)*	Settling Basins (Dry Ponds)	Wet Ponds and Wetlands	Infiltration Facilities or Practices (LID)*	Media Filters	High-rate biofilters	High-rate media filters	Trash Racks & Hydro -dynamic Devices
Coarse Sediment and Trash	H	H	H	H	H	H	H	H
Pollutants that tend to associate with fine particles during treatment	H	H	H	H	H	M	L	L
Pollutants that tend to be dissolved following treatment	M	L	M	H	L	L	L	L

Please check the box(s) that best describes the Treatment BMP(s) selected for this project.

Biofilters
___ Bioretention Swale
Vegetated filter strip
___Stormwater Planter Box (open-bottomed)
___Stormwater Flow- Through planter (sealed bottom)
___ Bioretention Area
Vegetated Roofs/Modules/Walls
Detention Basins
___Extended/dry detention basin with grass/vegetated lining
_X_ Extended/dry detention basin with impervious lining
Infiltration Basins
___Infiltration basin
Infiltration trench
___Dry well
___Permeable asphalt
___Gravel
Permeable asphalt
Pervious concrete
___ Unit pavers, ungrouted, set on sand or gravel
Subsurface reservoir bed
Wet Ponds or Wetlands
Wet pond/basin (permanent pool)
Constructed wetland
Filtration
_X_ Media filtration
___Sand filtration
Hydrodynamic Separator Systems
Swirl Concentrator
Cyclone Separator
Trash Racks and Screens

note: Catch basin inserts and storm drain inserts are excluded from use on County maintained right-of-way and easements.

The Treatment BMPs selected for this project are Underground Detention Pipes (Storm Tank) with pre-treatment Baffle Boxes (Suntree) and the Water Polisher. These Treatment Control BMPs were selected for there efficiency (high) at removing the main pollutants of concern, bacteria, nutients and sediments, from the runoff water generated by this project. The Underground Storage Pipes, Baffle boxes & Water Polisher (Bioclean) are also easy to maintain and therefore will ensure the efficiency of the project long term. Other Treatment BMPs that were considered, Wet Pond and Filtration Trench did not provide the appropriate storage capacity and therefore the Storage Pipes with Pretreatment Baffle Boxes were chosen.

The Water Polisher will treat offsite water that drains from Paseo del Norte through the project and to the drainage swale adjacent Highway 5. The Pretreatment Baffle Boxes and Underground Detention Pipes will treat the onsite water and detain the difference between the pre- and post development flows.

SEE HYDROLOGY REPORT BY AQUATERRA ENG'G. dated Feb. 24, 2009. FOR NUMERIC SIZING OF STRUCTURAL BMPS.

11. BMP MAINTENANCE PROVISIONS

Please check the box that best describes the maintenance mechanism(s) for this project. 13

CATEGORY	SELECTED	
	YES	NO
First	X	
Second[1]		X
Third[1]		X
Fourth		X

Note:

1. Project in Category 2 or 3 may choose to establish or be included in a Stormwater Maintenance Assessment District for the long-term maintenance of treatment BMPs. Please briefly describe the long-term fiscal resources for the selected maintenance mechanism(s).

These Treatment BMPs (Underground Detention Pipes, Baffle Boxes & Water Polisher) are Category 1 BMPs and will be maintained by the owner as part of their normal maintenance routine. Please see Attachment "B" for the Maintenance Program and Costs.

The following person will be responsible for the Maintenance :

Name: **Matt Herril**

Address: **4529 Angeles Crest Highway**
Suite PH-B
La Canada, CA 91011

Phone: **888-832-5863**

SPECIFICATIONS

Water Polisher – Up Flow Media Filter Offsite

I. Specifications

Coverage: The Water Polisher provides full coverage of incoming stormwater such that all influent, at rated flows, is conveyed to the filter. The filter will retain all windblown and swept debris entering separation and filtration chambers.

Non-Corrosive Materials: All components of the filter system, including mounting hardware, fasteners, support brackets, filtration material, and support frame are constructed of non-corrosive materials: 316 stainless steel and aluminum. Fasteners are stainless steel. Primary filter screen is ¾" flattened expanded aluminum metal and 316 stainless steel welded 10 x 10 mesh screen.

Durability: The structure of the box will be precast concrete. The concrete will be 28 day compressive strength fc = 5,000 psi. Steel reinforcing will be ASTM A – C857. Structure will support an H20 loading as indicted by AASHTO. The joint between the concrete sections will ship lap and joint sealed with ram-nek. Filter (excluding oil absorbent media) and support structures are of proven durability, with an expected service life of 15 to 20 years. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when the filter is full, with no slippage, breaking, or tearing. All filters are warranted for a minimum of five (5) years.

The Water Polisher Filter Housing is constructed of an all aluminum frame and stainless steel screens backed by ¾" flattened expanded aluminum metal. Filter (excluding oil absorbent media) and support structures are of proven durability, with an expected service life of 10 to 15 years. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when full without breaking, or tearing. All filters are warranted for a minimum of five (5) years.

Oil Absorbent Media: The Water Polisher is fitted with an absorbent media (BioMediaGREEN) for removal of pollutants from influent, and so placed in the filter assembly to treat influent at rated flow. Absorbent media is easily replaceable in the filter, without the necessity of removing fixed mounting brackets or mounting hardware. The media is placed in the filter housing of the unit which is suspended of the floor of the sedimentation chamber. The media encompasses the total horizontal area is front of the weir area of the unit and lie horizontal for maximum absorption. No polypropylene, monofilament netting or fabrics shall be used in the product.

Overflow Protection: The Water Polisher is designed so that it does not inhibit larger storm flows entering the concrete structure.

Filter Bypass: *Water will not bypass the filter at low flows, nor bypass through contact surfaces at low flows.*

Pollutant Removal Efficiency: The Water Polisher is designed to capture high levels of trash and litter, grass and foliage, sediments, hydrocarbons, grease and oil, metals, bacteria, and nutrients. The filter has a multistage filtration system, which incorporates durable screen and steel mesh filtering along with the media filtration (BioMediaGREEN). *The BioMediaGREEEN filter media capable of removing over 85% of super fine TSS based on a 20-micron particle size.* This performance information is based upon the results of extensive third party independent testing of the media. Following are tested removal efficiencies.

POLLUTANT	Removal Efficiency
TPH	99%
Oil & Grease	90%
Super Fine TSS	85%
Dissolved Cooper	79%
Dissolved Lead	98%
Dissolved Phosphorus	69%
Dissolved Zinc	78%

II. Installation

Installation: The Water Polisher Filter and Housing will be securely installed within the concrete structure, with contact surfaces sufficiently joined together so that no filter bypass can occur at low flow. All anchoring devices and fasteners are installed within the interior of the concrete structure. The Water Polisher is constructed according to the sizes shown on

the drawings and as specified herein. Install at elevations and locations shown on drawings or as otherwise directed by engineer. Place the pre-cast base unit on a granular subbase of minimum thickness of six inches (152mm) after compaction or of greater thickness and compaction if specified elsewhere. The granular subbase shall be checked for level at all four corners after it is set. If the slope from any corner to any other corner exceeds 0.5%, the base section shall be removed and the granular subbase material re-leveled.

Installation Notes:

1. Bio Clean Environmental Services, Inc. Water Polisher shall be installed pursuant to the manufacturer's recommendations and the details on this sheet.
2. Water Polisher Media Filter shall provide coverage of entire concrete structure to direct all flow through the filter.
3. Attachments to the concrete walls shall be made of non-corrosive hardware.
4. Placing filter in concrete structure, attach the scribe strips to the filter with pop rivets, and then attach the same scribe strips with concrete drive pins to the side of the wall.
5. Place filter media in media housing which is suspended of the bottom of the unit in a horizontal manner.
6. Close lid and latch when applicable.
7. Attachments to inlet walls shall be made of non-corrosive hardware.
8. Filtration basket fine screen and coarse containment screen shall be manufactured of stainless steel.
9. Prior to setting subsequent sections place bitumen sealant in conformance with ASTM C 990 along the construction joint in the section that is already in place.
10. Any holes made in the concrete sections for handling or other purposes shall be plugged with a non-shrink grout or by using grout in combination with concrete plugs.
11. Where holes must be cut in the pre-cast sections to accommodate pipes, do all cutting before setting the sections in place to prevent any subsequent jarring, which may loosen the mortar joints. The contractor shall make all pipe connections.

III. Maintenance

Maintenance: The Water Polisher is designed to allow for the use of vacuum removal of captured materials in the filter screens and sediment chambers, serviceable by centrifugal compressor vacuum units without causing damage to the filter or during normal cleaning and maintenance. Filters can be cleaned and vacuumed from the standard manhole access. The Water Polisher Media Filter is readily serviceable without removing. The filter's influent screen should be inspected and cleaned if necessary to maintain proper flow through the filter. This screen can easily be cleaned by brushing of its surface with a broom. To service the filter media, open the top hatch, clean and inspect and/or replace filter media.

Maintenance Notes:

1. Bio Clean Environmental Services, Inc. recommends cleaning and debris removal maintenance a minimum of twice a year, and replacement of filter media a minimum of once per year.
2. Following maintenance and/or inspection, the maintenance operator shall prepare a maintenance/inspection record. The record shall include any maintenance activities performed, amount and description of debris collected, and condition of filter.
3. The owner shall retain the maintenance/inspection record for a minimum of five years from the date of maintenance. These records shall be made available to the governing municipality for inspection upon request at any time.
4. Remove all trash, debris, organics, and sediments collected in front of the filter, then open the lid and remove trash and debris within the filter.
5. Evaluation of the filter media shall be performed at each cleaning. If the media is filled with pollutants it should be replaced. Remove media and replace.
6. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.
7. The media boom is classified as hazardous material and will have to be picked up and disposed of as hazardous waste. Hazardous material can only be handled by a certified hazardous waste trained person (minimum 24-hour hazwoper).

BIO CLEAN ENVIRONMENTAL SERVICES, INC.

STORMWATER FILTRATION AND BIO-AUGMENTATION SPECIALISTS

Nutrient Separating Baffle Box

The 2nd generation Baffle Box design removes sediment, foliage and litter without head loss. It separates nutrients from stormwater and prevents bacterial build-up. Sediments settle to the bottom. The box can be made of either concrete construction or fiberlass in any size. In addition, it easily retrofits to existing pipe and is easy to clean.

Schematic Drawing - During Storm Event

- The inflow pipe is the same size as the ouflow.
- Turbulence deflectors prevent captured sediment from re-suspending.
- Hydrocarbons collect in front of skimmer and are absorbed by Storm Boom.

Patented

Patented

Schematic Drawing - After Storm Event

- Nutrient pollutant load is not lost to static water and flushed out at the next storm event.
- Separating organic matter from the static water prevents bacterial buildup.

To view installation photos of Nutrient Separating Baffle Boxes - CLICK HERE.

Size Determination

Because the entire flow is always treated and head loss is so minimal, determining the appropriate size of Nutrient Separating Baffle Box for a project is more an element of pipe size than treated cfs.

Model #	Inside Width	Inside Length	Standard Height *	Recommended Pipe Sizes
4-8	4'	8'	7'	12"-18"
5-10	5'	10'	7'	12"-24"
6-12	6'	12'	7'	18"-36"
8-12	8'	12'	8'	36"-48"
8-14	8"	14'	8'	40"-54"

Custom sizes are available. * Height can vary as needed.

- Because water flow is not ducted off line for treatment, head loss is minimal and comparable to a large square catchbasin. Because of this, existing stormwater systems can be retrofitted with a Nutrient Separating Baffle Box, without compromising the original design specifications of the existing stormwater system.
- All structures are load rated for at least H-20. Standard wall construction of the structure is 6" thick steel re-enforced concrete. Concrete wall thickness can be thicker upon request.
- Manhold lids, hatches, and dampers to block off water flow during servicing can be incorporated into the structure.
- Screen systems have stainless steel screens bolted into a heavy duty aluminum framework. The screen systems are hinged to give easy access to the lower chambers and have a wide range of adjustments to accommodate unforeseen variables during installation.

STORMTANK STORMWATER STORAGE MODULES

StormTank™

Stormwater Storage Modules are a high-void, strong, affordable alternative to crushed stone, concrete structures, or pipe chambers for sub-surface stormwater detention or infiltration basins.

BRENTWOOD INDUSTRIES

STORMTANK STORMWATER STORAGE SYSTEM

Brentwood's StormTank™ Stormwater Storage System is a high-void, strong, affordable alternative to crushed stone, concrete structures, or pipe chambers for sub-surface stormwater detention or infiltration basins.

HIGH VOID, HIGH STRENGTH Our modules offer the largest void space of any underground stormwater storage units currently on the market (97%), and are load-rated for use under parking lots, athletic fields, parks, etc. (Designed to exceed H-25 loading criteria)!

EASY TO INSTALL The entire StormTank Storage System is built on-site from Top/Bottom Panels and Side Panels made of rugged, lightweight polypropylene and 2-3/8" diameter PVC columns. Combinations of these three components create all the module configurations needed for a fully-functioning underground system (see example at top). To minimize shipping costs, the StormTank components are delivered unassembled, but on-site assembly is a snap! No special equipment, tools, or bonding agents are needed to assemble or install the modules. All components easily attach with a secure concentric pressure fit.

EASY TO CLEAN The open tops/bottoms and sides of the modules makes flushing and cleaning easy ... a great advantage over storage systems where access is limited.

SAVES SPACE AND MONEY Because of its 97% void space, stackability, and H-25 strength, a StormTank system offers significant space and cost savings when compared to conventional stormwater storage solutions. For example:

- A StormTank installation requires a much smaller footprint than a crushed rock system with the same amount of stormwater storage capacity. And less space used also means less expense for excavation, geotextile, liner, installation, and backfill.
- Because a StormTank system is installed underground, it frees up surface space for uses that would be otherwise unavailable with a typical detention pond.
- StormTank's stackability and variable column height (18"-36") can maximize the use of a site with limited surface area.

The Brentwood AccuPier Support System (above) has been in use for several years and is installed in over 50 biological oxidation towers throughout the U.S. and Canada. Each PVC AccuPier column, fitted with upper and lower base caps, can hold 7000 lbs. and has been compression-tested to 24,000 lbs. All the technology, materials, and experience gained from the AccuPier System have been applied to our new StormTank Modules.

SPECIFICATIONS

Water Polisher – Up Flow Media Filter (Offsite Drainage Treatment)

I. Specifications

Coverage: The Water Polisher provides full coverage of incoming stormwater such that all influent, at rated flows, is conveyed to the filter. The filter will retain all windblown and swept debris entering separation and filtration chambers.

Non-Corrosive Materials: All components of the filter system, including mounting hardware, fasteners, support brackets, filtration material, and support frame are constructed of non-corrosive materials: 316 stainless steel and aluminum. Fasteners are stainless steel. Primary filter screen is ¾" flattened expanded aluminum metal and 316 stainless steel welded 10 x 10 mesh screen.

Durability: The structure of the box will be precast concrete. The concrete will be 28 day compressive strength fc = 5,000 psi. Steel reinforcing will be ASTM A – C857. Structure will support an H20 loading as indicted by AASHTO. The joint between the concrete sections will ship lap and joint sealed with ram-nek. Filter (excluding oil absorbent media) and support structures are of proven durability, with an expected service life of 15 to 20 years. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when the filter is full, with no slippage, breaking, or tearing. All filters are warranted for a minimum of five (5) years.

The Water Polisher Filter Housing is constructed of an all aluminum frame and stainless steel screens backed by ¾" flattened expanded aluminum metal. Filter (excluding oil absorbent media) and support structures are of proven durability, with an expected service life of 10 to 15 years. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when full without breaking, or tearing. All filters are warranted for a minimum of five (5) years.

Oil Absorbent Media: The Water Polisher is fitted with an absorbent media (BioMediaGREEN) for removal of pollutants from influent, and so placed in the filter assembly to treat influent at rated flow. Absorbent media is easily replaceable in the filter, without the necessity of removing fixed mounting brackets or mounting hardware. The media is placed in the filter housing of the unit which is suspended of the floor of the sedimentation chamber. The media encompasses the total horizontal area is front of the weir area of the unit and lie horizontal for maximum absorption. No polypropylene, monofilament netting or fabrics shall be used in the product.

Overflow Protection: The Water Polisher is designed so that it does not inhibit larger storm flows entering the concrete structure.

Filter Bypass: Water will not bypass the filter at low flows, nor bypass through contact surfaces at low flows.

Pollutant Removal Efficiency: The Water Polisher is designed to capture high levels of trash and litter, grass and foliage, sediments, hydrocarbons, grease and oil, metals, bacteria, and nutrients. The filter has a multistage filtration system, which incorporates durable screen and steel mesh filtering along with the media filtration (BioMediaGREEN). The BioMediaGREEEN filter media capable of removing over 85% of super fine TSS based on a 20-micron particle size. This performance information is based upon the results of extensive third party independent testing of the media. Following are tested removal efficiencies.

POLLUTANT	Removal Efficiency
TPH	99%
Oil & Grease	90%
Super Fine TSS	85%
Dissolved Cooper	79%
Dissolved Lead	98%
Dissolved Phosphorus	69%
Dissolved Zinc	78%

II. Installation

Installation: The Water Polisher Filter and Housing will be securely installed within the concrete structure, with contact surfaces sufficiently joined together so that no filter bypass can occur at low flow. All anchoring devices and fasteners are installed within the interior of the concrete structure. The Water Polisher is constructed according to the sizes shown on

the drawings and as specified herein. Install at elevations and locations shown on drawings or as otherwise directed by engineer. Place the pre-cast base unit on a granular subbase of minimum thickness of six inches (152mm) after compaction or of greater thickness and compaction if specified elsewhere. The granular subbase shall be checked for level at all four corners after it is set. If the slope from any corner to any other corner exceeds 0.5%, the base section shall be removed and the granular subbase material re-leveled.

Installation Notes:

1. Bio Clean Environmental Services, Inc. Water Polisher shall be installed pursuant to the manufacturer's recommendations and the details on this sheet.
2. Water Polisher Media Filter shall provide coverage of entire concrete structure to direct all flow through the filter.
3. Attachments to the concrete walls shall be made of non-corrosive hardware.
4. Placing filter in concrete structure, attach the scribe strips to the filter with pop rivets, and then attach the same scribe strips with concrete drive pins to the side of the wall.
5. Place filter media in media housing which is suspended of the bottom of the unit in a horizontal manner.
6. Close lid and latch when applicable.
7. Attachments to inlet walls shall be made of non-corrosive hardware.
8. Filtration basket fine screen and coarse containment screen shall be manufactured of stainless steel.
9. Prior to setting subsequent sections place bitumen sealant in conformance with ASTM C 990 along the construction joint in the section that is already in place.
10. Any holes made in the concrete sections for handling or other purposes shall be plugged with a non-shrink grout or by using grout in combination with concrete plugs.
11. Where holes must be cut in the pre-cast sections to accommodate pipes, do all cutting before setting the sections in place to prevent any subsequent jarring, which may loosen the mortar joints. The contractor shall make all pipe connections.

III. Maintenance

Maintenance: The Water Polisher is designed to allow for the use of vacuum removal of captured materials in the filter screens and sediment chambers, serviceable by centrifugal compressor vacuum units without causing damage to the filter or during normal cleaning and maintenance. Filters can be cleaned and vacuumed from the standard manhole access. The Water Polisher Media Filter is readily serviceable without removing. The filter's influent screen should be inspected and cleaned if necessary to maintain proper flow through the filter. This screen can easily be cleaned by brushing of its surface with a broom. To service the filter media, open the top hatch, clean and inspect and/or replace filter media.

Maintenance Notes:

1. Bio Clean Environmental Services, Inc. recommends cleaning and debris removal maintenance a minimum of twice a year, and replacement of filter media a minimum of once per year.
2. Following maintenance and/or inspection, the maintenance operator shall prepare a maintenance/inspection record. The record shall include any maintenance activities performed, amount and description of debris collected, and condition of filter.
3. The owner shall retain the maintenance/inspection record for a minimum of five years from the date of maintenance. These records shall be made available to the governing municipality for inspection upon request at any time.
4. Remove all trash, debris, organics, and sediments collected in front of the filter, then open the lid and remove trash and debris within the filter.
5. Evaluation of the filter media shall be performed at each cleaning. If the media is filled with pollutants it should be replaced. Remove media and replace.
6. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.
7. The media boom is classified as hazardous material and will have to be picked up and disposed of as hazardous waste. Hazardous material can only be handled by a certified hazardous waste trained person (minimum 24-hour hazwoper).

SPECIFICATIONS

Nutrient Separating Baffle Box (Onsite Drainage Treatment)

I. Specifications

Track Record: The Nutrient Separating Baffle Box is manufactured by a company whom is regularly engaged in the engineering design and production of treatment systems for stormwater. The Nutrient Separating Baffle Box has been installed and in use as designed in field locations for a duration of over 10 years.

Coverage: The nutrient separating baffle box is of inline design and has the ability to treat the entire storm event. One hundred percent of low and high flows are treated. Thus, no bypass system is required.

Non-Corrosive Materials: Aluminum will be 6061-T6. The screen used to span the aluminum frame is described as follows: Flattened expanded stainless steel sheet ¾ No. 13; Open area = 75%; Grade = 304 Stainless Steel. The screen will be attached to the screen system frame by sandwiching the screen to the aluminum frame between a series of 1 ¼" x 1 ¼" x 3/16" aluminum angle beams and welded in place. A turbulence deflector will be attached near the top of each of the baffles with ½" stainless steel through bolts and stainless steel fender washers. The turbulence deflectors will be made of laminated fiberglass.

Durability: The structure of the box will be precast concrete. The concrete will be 28 day compressive strength fc = 5,000 psi. Steel reinforcing will be ASTM A – C857. Structure will support an H20 loading as indicted by AASHTO. The joint between the concrete sections will ship lap and joint sealed with ram-nek. Filter (excluding oil absorbent media) and support structures are of proven durability, with an expected service life of 15 to 20 years. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when the filter is full, with no slippage, breaking, or tearing. All filters are warranted for a minimum of five (5) years.

Oil Absorbent Media: A skimmer and boom system will be positioned near the outflow end of the structure between the second baffle and the end wall of the concrete structure. The skimmer will consist of a steel reinforced concrete structure via keyways in the walls of the structure. The bottom of the skimmer will be positioned so that it is 6" below the static water level. Two storm booms type 4 will float in front of the skimmer and serve to capture hydrocarbons. The storm boom will be contained in an aluminum framed stainless steel screened basket with a hinged lid. The storm boom basket will be attached to the concrete skimmer with stainless steel fasteners.

Overflow Protection: The design of the Nutrient Separating Baffle Box allows the system to treat one-hundred percent of the flow at any level; therefore, no overflow protection is necessary.

Filter Bypass: Water will not bypass the Nutrient Separating Baffle Box at any flow rate.

Pollutant Removal Efficiency: The Nutrient Separating Baffle Box is capable of removing over 90% of the net annual total suspended solids (TSS) load based on a 380-micron particle size. Annual TSS removal efficiency models are based on documented removal efficiency performance from full-scale laboratory tests. Annual TSS removal efficiency models can be considered valid since they are corroborated by independent third party field-testing. Field-testing included influent composite samples from three or more storms at one location. The Nutrient Separating Baffle Box separates solids (e.g. floatable organic matter and trash) from static water within the system.

POLLUTANT	NSBB
Trash & Litter	90 to 95%
Oil & Grease	54% to 96%
Sediments/TSS	95%
Organics	90%
Total Nitrogen	47 to 71.65%
Total Phosphorus	53 to 60%
Total Metals	22 to 66%

Non-Scouring: During heavy storm events the filter water turbulence deflection shield prevents washout of debris and floatables in the filter basket. The system will not re-suspend solids at design flows.

II. Installation

Installation: The Nutrient Separating Baffle Box is constructed according to the sizes shown on the drawings and as specified herein. Install at elevations and locations shown on drawings or as otherwise directed by engineer. Place the pre-cast base unit on a granular subbase of minimum thickness of six inches (152mm) after compaction or of greater thickness and compaction if specified elsewhere. The granular subbase shall be checked for level at all four corners after it is set. If the slope from any corner to any other corner exceeds 0.5%, the base section shall be removed and the granular subbase material re-leveled.

Installation Notes:

1. The Nutrient Separating Baffle Box shall be installed pursuant to the manufacturer's recommendations and the details on this sheet.
2. Attachments to inlet walls shall be made of non-corrosive hardware.
3. Filtration basket fine screen and coarse containment screen shall be manufactured of stainless steel.
4. Prior to setting subsequent sections place bitumen sealant in conformance with ASTM C 990 along the construction joint in the section that is already in place.
5. Any holes made in the concrete sections for handling or other purposes shall be plugged with a non-shrink grout or by using grout in combination with concrete plugs.
6. *Where holes must be cut in the pre-cast sections to accommodate pipes, do all cutting before setting the sections in* place to prevent any subsequent jarring, which may loosen the mortar joints. The contractor shall make all pipe connections.

III. Maintenance

Maintenance: The Nutrient Separating Baffle Box is designed to allow for the use of vacuum removal of captured materials in the filter screens and sediment chambers, serviceable by centrifugal compressor vacuum units without causing damage to the filter or during normal cleaning and maintenance. Filters can be cleaned and vacuumed from the standard manhole access.

Maintenance Notes:

1. Bio Clean Environmental Services, Inc. recommends the Nutrient Separating Baffle Box be inspected a minimum of once every six months. The cleaning and debris removal maintenance a minimum of once year and replacement of hydrocarbon booms once a year. The procedure is easily done with the use of any standard vacuum truck.
2. Following maintenance and/or inspection, the maintenance operator shall prepare a maintenance/inspection record. The record shall include any maintenance activities performed, amount and description of debris collected, and condition of filter.
3. The owner shall retain the maintenance/inspection record for a minimum of five years from the date of maintenance. These records shall be made available to the governing municipality for inspection upon request at any time.
4. Any person performing maintenance activities must have completed a minimum of OSHA 24-hour hazardous waste worker (hazwoper) training.
5. Remove access manholes lid to gain access to filter screens and sediment chambers. Where possible the maintenance should be performed from the ground surface. Note: entry into an underground stormwater vault such as an inlet vault requires certification in confined space training.
6. Remove all trash, debris, and organics from the Nutrient Separating Screen with the vacuum hose.
7. The Nutrient Separating Screen has 3 hinged panels which will open into an upright position. This will expose the baffles. Using a vacuum hose, remove the sediment in the baffle chambers.
8. Evaluation of the hydrocarbon boom shall be performed at each cleaning. If the boom is filled with hydrocarbons and oils it should be replaced. Place new booms properly in media cage.
9. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.
10. The hydrocarbon boom is classified as hazardous material and will have to be picked up and disposed of as hazardous waste. Hazardous material can only be handled by a certified hazardous waste trained person (minimum 24-hour hazwoper).

STORMTANK

StormTank General Maintenance Guidelines

Brentwood industries StormTank Stormwater Storage System is a component in an overall stormwater collection, treatment, detention or infiltration system. Stormwater systems come in varying shapes sizes and configurations. Some systems offer pre-treatment to remove sediment and/or contaminants prior to entering the StormTank storage area and some do not. Systems without pre-treatment require greater attention to system functionality. In order to maximize the storage capacity of the StormTank for years to come, pre-treated or not, we offer the following general maintenance guidelines:

Determining if Maintenance is Required

1. Visual Inspection
   A visual inspection of the system should be performed semi-annually looking for any visual deficientcy in the system in the form of sedimentation and debris.

   Inspect the following:
   a. Man-holes before and/or after the StormTank
   b. Inlet and Outlet Pipe
   c. Discharge Area

2. System Operation
   a. Inspect the system while in operation making sure inlets remain open and the system doesn't back-up.
   b. If the system has a flow metering device confirm flow rates are not reduced or have changed drastically.

Maintenance Frequency

1. During Construction
   Care should be taken to avoid siltation of the system during the construction process.

2. Project Completion
   At completion of installation and all project related excavation the system should be flushed to rid the StormTank of any construction related debris and/or sedimentation.

3. Regular Maintenance
   Maintenance to the system shall be performed based on the findings of the semi-annual inspection or decrease in system performance as observed in the system operation.

fax: (610)-376-6022
accupac.dot

STORMTANK

Maintenance Procedures

1. Determine if maintenance is required. If maintenance is required proceed with the following steps. (If an upstream pretreatment system is being used and requires maintenance, follow maintenance guidelines for that particular product)
2. Using a vacuum pump truck evacuate debris from manholes, inlet and outlet piping and the discharge area.
3. Flush system with clean water (fire hydrant, tanker truck, etc.) forcing debris from the system.
4. Evacuate additional debris as in step 2.
5. Re-flush system
6. Repeat steps 2 and 3 until no additional debris is evident.

Maintenance Precautions

1. Be sure to conform to all safety regulations when performing maintenance.
2. Avoid extreme direct water pressure when flushing the system.

These Maintenance Guidelines were written by Brentwood Industries, Inc. with the express purpose of providing helpful hints. These Guidelines are not to be construed as the only Brentwood approved methods for StormTank system maintenance or the final authority in system maintenance. Check with the storm water system owner/ project engineer for their contract/specification requirements and or recommendations. Contact your local StormTank distributor or Brentwood Industries for additional technical support if required.

ATTACHMENT C

FISCAL RESOURCES

The following is a discussion from the SUSMP manual to describe how each of the BMPs will be maintained via "Mechanisms to Assure Maintenance" and "Funding".

FIRST CATEGORY:

The City will have only minimal concern for ongoing maintenance. The proposed BMPs inherently "take care of themselves", or property owners can naturally be expected to do so as an incident of taking care of their property

Project BMPs

Underground Detention Pipes & Baffle Boxes & Water Polisher

Mechanisms to Assure Maintenance:

1. Stormwater Ordinance Requirement: The WPO requires this ongoing maintenance. In the event that the mechanisms below prove ineffective, or in addition to enforcing those mechanisms, civil action, criminal action or administrative citation could also be pursued for violations of the ordinance.
2. Public Nuisance Abatement: Under the WPO failure to maintain a BMP would constitute a public nuisance, which may be abated under the Uniform Public Nuisance Abatement Procedure. This provides an enforcement mechanism additional to the above, and would allow costs of maintenance to be billed to the owner, a lien placed on the property, and the tax collection process to be used.
3. Notice to Purchasers. Section 67.819(e) of the WPO requires developers to provide clear written notification to persons acquiring land upon which a BMP is located, or others assuming a BMP maintenance obligation, of the maintenance duty.
4. Conditions in Ongoing Land Use Permits: For those applications (listed in SO Section 67.804) upon whose approval ongoing conditions may be imposed, a condition will be added which requires the owner of the land upon which the stormwater facility is located to maintain that facility in accordance with the requirements specified in the SMP. Failure to perform maintenance may then be addressed as a violation of the permit, under the ordinance governing that permit process.
5. Subdivision Public Report: Tentative Map and Tentative Parcel Map approvals will be conditioned to require that, prior to approval of a Final or Parcel Map, the subdivider shall provide evidence to the Director of Public Works, that the subdivider has requested the California Department of Real Estate to include in the public report to be issued for the sales of lots within the subdivision, a notification regarding the maintenance requirement. (The requirement for this condition would not be applicable to subdivisions which are exempt from regulation under the Subdivided Lands Act, or for which no public report will be issued.)

Funding:

None Required.

SUNTREE TECHNOLOGIES MODEL NO. NSBB-3-6-72

FLOW & BY-PASS SPECIFICATIONS FOR THE BIOMASS SEPARATING SCREEN SYSTEM, SEDIMENT STORAGE, AND SKIMMER SPCIFICATIONS.

1. Inflow Pipe Area (12" RCP AS DRAWN) ——— 0.79 sq.ft.

SCREEN SPECIFICATIONS:
2. Open orifice area in screen system ——— 9.10 sq.ft.
3. Open orifice area in screen system with 50% blockage ——— 4.5 sq.ft.
4. Open orifice area in screen system with 75% blockage ——— 2.26 sq.ft.
5. By-pass through screen system ——— 1.24 sq.ft.
6. Minimum by-pass around screen system ——— 1.56 sq.ft.
7. Screen system storage volume ——— 8.5 cu.ft.

SEDIMENT STORAGE:
8. Volume of first chamber ——— 18.00 cu.ft.
9. Volume of second chamber ——— 18.50 cu.ft.
10. Volume of third chamber ——— 18.00 cu.ft.
11. Volume of total sediment storage ——— 52.50 cu.ft.

SKIMMER SPECIFICATIONS:
12. Flow area under skimmer ——— 2.28 sq.ft.
13. Area of pipe in line with skimmer ——— 0.79 sq.ft.
14. Area of between skimmer and outflow pipe parallel with the surface of the pipe ——— 2.35 sq.ft.

CERTIFICATION SHEET

This Stormwater Management Plan has been prepared under the direction of the following Registered Civil Engineer. The Registered Civil Engineer attests to the technical information contained herein and the engineering data upon which recommendations, conclusions, and decisions are based.

The combination of proposed construction and post-construction BMPs will reduce, to the maximum extent practicable, the expected pollutants and will not adversely impact the beneficial uses or water quality of the receiving waters.

LID & SITE DESIGN NOTES

SITE DESIGN AND SOURCE CONTROL BMPs HAVE BEEN SHOWN ON THIS PERMANENT BMP PLAN. ADDITIONAL BMPs ARE AS FOLLOWS:

SITE DESIGN BMPs ARE DESIGNED TO MAINTAIN PRE-DEVELOPMENT RUNOFF CHARACTERISTICS. THE FOLLOWING CONCEPTS WERE APPLIED TO THIS PROJECT IN THE FOLLOWING MANNER:

1. MINIMIZE IMPERVIOUS FOOTPRINT BY DESIGNING NEW STRUCTURES IN MULTIPLE STORIES. LANDSCAPE AREAS HAVE BEEN ADDED TO MAXIMIZE INFILTRATION.

2. MINIMIZE DIRECTLY CONNECTED IMPERVIOUS AREA BY ALLOWING THE DRIVEWAY RUNOFF TO FLOW OVER PERVIOUS PAVING. ROOF DRAINS WILL DRAIN TO LANDSCAPED AREAS.

SOURCE CONTROL NOTES

NO HOSING OF PAVED AREA - PARKING SURFACES AND DRIVEWAYS WILL NOT BE CLEANED BY 'HOSING DOWN', BUT WILL INSTEAD BE SWIPED, CLEAN OR VACUUMED, WITH COLLECTED WASTE DISPOSED OF IN A COVERED CONTAINER. OIL STAINS WILL NOT BE CLEANED VIA AN ACID WASH OF THE DRIVEWAY. INSTEAD, OIL STAINS AND LEAKS WILL BE CLEANED USING RAGS OR ABSORBENTS, THEN SWEPT USING GRANULAR SOLVENT MATERIAL, AND FINALLY MOPPED. MOP WATER SHALL BE DISPOSED OF INTO A SANITARY SEWER FACILITY.

TRASH - NO, RUBBISH, TRASH, GARBAGE OR OTHER WASTE MATERIAL SHALL BE KEPT ON-SITE OR ON ANY PRIVATE STREET ABUTTING THE PROPERTIES, EXCEPT IN SANITARY CONTAINER LOCATED IN APPROPRIATE AREAS (TRASH CONTAINERS).

DRAINAGE - THERE SHALL BE NO INTERFERENCE WITH OR ALTERATION OF THE ESTABLISHED DRAINAGE PATTERN ON THE SITE UNLESS AN ADEQUATE ALTERNATIVE PROVISION IS MADE FOR PROPER DRAINAGE WITH THE PRIOR WRITTEN APPROVAL OF THE COUNTY.

OUTSIDE STORAGE - STORAGE OF MATERIALS WILL NOT BE ALLOWED OUTSIDE THE MAIN BUILDINGS UNLESS AUTHORIZED BY THE GOVERNING AGENCIES. A REVISED WQTR WILL BE ISSUED IN THIS EVENT DETAILING THE BMPs ASSOCIATED WITH OUTDOOR STORAGE.

PET WASTE - PET WASTE WILL BE DISPOSED OF IN TRASH CONTAINERS OR SEWERS AND NOT BE ALLOWED IN PUBLIC GUTTERS.

BMP MAINTENANCE - OWNER SHALL ASSIGN A PERSON WHO WILL BE RESPONSIBLE FOR IMPLEMENTATION OF EACH NON-STRUCTURAL BMP AND SCHEDULED CLEANING OF SLL STRUCTURAL BMP FACILITIES.

RUNOFF-MINIMIZING LANDSCAPE DESIGN - PLANTS WITH SIMILAR WATER REQUIREMENTS SHALL BE GROUPED IN ORDER TO MINIMIZE THE AMOUNT OF EXCESS WATER FLOW.

POLLUTANTS OF CONCERN

THE FOLLOWING ARE A LIST OF POLLUTANTS OF CONCERN FOR THIS PROJECT INCLUDING HILLSIDE DEVELOPMENT AND DRIVEWAY DEVELOPMENT:

SEDIMENTS
NUTRIENTS
HEAVY METALS
ORGANIC SUBSTANCES
TRASH & DEBRIS
OXYGEN DEMANDING SUBSTANCES
OIL & GREASE
BACTERIA & VIRUS'
PESTICIDES

STORMWATER MANAGEMENT PLAN SITE MAP

EXCERPTS FROM HYDROLOGY REPORT.

Project Description

The 7± acre project site is currently vacant. The site topography generally is mildly sloping to the northwest due to previous grading. The adjacent land on the north has been developed as an automobile sales operation. Southerly of the site has been improved as a restaurant. Interstate 1-5 borders the site along the westerly edge and Paseo del Norte is along the easterly side.

The project is proposed to be developed for retail space and two restaurants with parking and driving surfaces. The proposed drainage pattern approximates the existing condition and outlets to an existing concrete drainage channel located along the west property line within the Caltrans right of way.

Purpose of Study

The purpose of this study is to identify the proposed method for capture of silt and debris from the storm drainage run off after the site has been improved. The attached hydrology map and calculations are provided to support the design for construction. Our selected approach to mitigate the increased peak of storm water leaving the site utilizes underground detentions storage systems located at six locations within the project site limits. The storage systems will mitigate the increased peak runoff and will reduce the post-construction run off values to be less than the pre-development level. The required storage volume for the storage systems has been calculated and the results for each basin are included in this report. To limit the transportation of silt and debris to downstream drainage systems a pre-treatment box shall be installed at the upstream end of the storage tubes to cleanse the flow before it enters the tubes. To evaluate the effectiveness of the detention systems, the discharge from the six drainage basins have been combined at two confluence locations. The following shows the comparative results of the storm discharge.

Basin	Pre-construction	Post-construction	Difference
D and E	Q100=1.25cfs	Q100=0.83cfs	<0.4cfs>
A, B, C. and F	Q100=3.33cfs	Q100=1.75cfs	<1.6cfs>

The post- construction values are less than the pre-construction values.

Pollution Control

The program to eliminate polluting elements from downstream drainage systems includes the above referenced permanently constructed detention I storage systems which have pre-treatment devices to remove both silt and debris. Additional Best Management Practices (BMP) shall be used during the construction phase of the site improvements. The BMP devices installed and maintained during the construction period shall include gravel bag berms around each drainage inlet or catch basin and gravel bag chevrons check dams at locations to control drainage flows which may generate silt, erosion and debris.

Post construction BMP's shall include fossil fuel filter inserts in the drainage catch basins to accept and trap silt and hydrocarbon pollutants. The filtration design of the fossil fuel filter shall be based on the "Flow based Criteria" using the established flow rate of 0.2" per hour intensity,

The proposed slopes are less than 4' in height, however shall be covered with irrigated landscaping material to control the erosion.

Low Impact Development

We have incorporated site elements in the project design for compliance with the requirements of the Regional Water Quality Control Board. The elements are landscaped areas near the building structures to filter the roof drainage and underground detention and infiltration devices (Storm Tank Stormwater Storage Systems) for the total site drainage. The site has been divided into six drainage sub-basins. The detention devices have been numerically sized to maintain the peak discharge at the 100 year frequency from each sub-basin to be less than the discharge level in the pre-developed condition.

In order to verify that the detention systems meet the requirements of Low Impact Development, we have applied the 40/0 ratio standard. Within this report, we have provided the summary of results that shows that the design meets or ' exceeds the LID strategies.

Water Table Clearance

The SUSUMP specifies that the filtration device and the ground water level must be separated by 10' unless it can be shown that beneficial uses of the groundwater are over 100 feet from the site. We have researched the adjacent parcels through the San Diego County Environmental Health Department and found that no domestic water wells exist within 100 feet from the site. Consequently, the subject clearance may be reduced to less than the 10' minimum. During the construction design phase and after additional soil testing has been completed, we will determine the calculated clearance at each detention I filtration device

We befieve that the above described design elements and programs will provide satisfactory drainage control to meet agency established requirements.

Frequently Asked Questions About Treatment Control Best Management Practices

Background

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. As rainfall flows over the ground, it picks up a variety of pollutants which flow directly to our creeks, lagoons, and ocean. Storm water pollution comes from a variety of sources including oil and fluid leaks from vehicles and equipment, trash, lawn clippings, pet waste, pesticides, fertilizers, and improper erosion control. The City of Carlsbad is committed to improving water quality and reducing the amount of pollutants that enter our waterways.

On January 24, 2007, the City of Carlsbad (City) was issued a Municipal Storm Water Permit (Municipal Permit) by the California Regional Water Quality Control Board. The Municipal Permit requires the City to prevent storm water pollution during all three phases of urban land use planning: new development, construction, and existing development. The Municipal Permit also requires the City to improve the quality of the water flowing into the storm water conveyance system through the implementation and maintenance of treatment control best management practices (TCBMPs).

What are TCBMPs?

As land is developed, vegetation is replaced with paved surfaces and rooftops which results in a higher potential for storm water pollution to runoff into waterways. **Treatment Control Best Management Practices** or TCBMPs are structures that help to prevent pollutants from entering our storm drains. The intent of TCBMPs is to assure that storm water runoff from developed areas does not impact waterways.

What are some examples of TCBMPS?

TCBMPs fall into one of two categories - non-structural or structural. **Non-structural BMPs** are preventative actions that involve policies, ordinances, maintenance programs, requirements, practices, and standards that help prevent storm water pollution. Examples include directing urban growth to already developed areas, protecting, maintaining, and/or increasing open spaces, providing buffers zones along sensitive areas, minimizing impervious surfaces, and encouraging public education programs to reduce water quality impacts. **Structural BMPs** are designed to provide treatment of storm water either through storage, filtration, or infiltration. The most common types of TCBMPs found in Carlsbad include:

- Dry Extended Detention Basin (TC-22)
- Infiltration Basins (TC-11)
- Drain Inserts (MP-52)
- Media filters (TC-40 and MP-40)
- Vortex Separators (MP-51)
- Wet Vaults (MP-50)
- Vegetated Swales (TC-30)

Who is responsible for maintaining TCBMPs?

Maintenance of TCBMPs is a shared responsibility between the City and the community. TCBMPs and other storm drain structures on ***public*** streets, property, and some easements are monitored and maintained by the City. Private property owners are responsible for maintaining TCBMPs on their properties including keeping their portion of the storm drain system free of trash, sediments, excessive vegetation, and other materials that may contribute to storm water pollution.

Why is the City requiring private property owners to maintain TCBMPs?

The Municipal Permit requires the City to develop, implement, and enforce a program to inspect and verify maintenance of all privately owned TCBMPs. Inspection and verification of TCBMPs is a partnership between the City and private property owners, **however, private property owners are solely responsible for maintaining all TCBMPs on their property**. Routine inspection and maintenance is an efficient way to prevent potential nuisance situations (odors, mosquitoes, weeds, etc.), reduce the need for repairs, and decrease the potential for storm water runoff. Failure to properly maintain TCBMPs could result in enforcement actions such as citations, fines, nuisance declaration, and summary abatement.

Isn't the developer required to maintain the TCBMPs?

Often there is no long-term responsibility for the developer to assume maintenance of TCBMPs. For example, a developer builds a residential subdivision, installs TCBMPs, and then sells the lots. The roads and infrastructure are usually taken over by the City, but long term maintenance of TCBMPs becomes the responsibility of the homeowners association or the individual landowner. Private property owners are responsible for performing and verifying all maintenance activities on privately owned TCBMPs. The City will also conduct annual compliance inspections to ensure BMPs are maintained as required.

Is this covered under my maintenance agreement with the City of Carlsbad?

Maintenance agreements or covenants are legally binding agreements between public agencies and private property owners that ensure storm drainage systems are constructed and maintained in accordance with approved plans and development standards. Maintenance agreements identify the party responsible for maintaining the TCBMP(s) and outline a schedule for maintenance activities. The designation of a responsible party (i.e., property management company, homeowner associations, etc.) to maintain the TCBMP(s) does not relieve the private property owner of any compliance obligations.

The City has an easement on my property, does that include TCBMP maintenance?

Easements usually only allow the City to access private property to conduct inspections or provide emergency service/repairs to the storm drain system. In most cases, granting of an easement does not necessarily confer any responsibility for the City to maintain that portion of the storm drain system located on private property.

How do I know if my TCBMPs have been maintained?

If you are not sure if your TCBMPs have been maintained check with your HOA, property management company, facility maintenance staff, or landscaper to see if storm drain maintenance is a part of their routine operations. Be sure to save all receipts, maintenance schedules, inspection reports/forms, and other documentation that shows TCBMPs have been maintained. It is important that routine maintenance of TCBMPs is done according to schedule or as soon as a problem is discovered. Many TCBMPs are rendered ineffective if not installed and maintained properly. In some cases, TCBMP neglect can have detrimental effects that increase the potential for erosion and pollutant discharge.

Will the City be inspecting my property?

The City has developed an inventory of all privately owned TCBMPs and will be conducting storm water compliance inspections on an annual basis. These compliance inspections may include a meeting with the responsible party, visual observation of the structure(s), evaluation of the TCBMP(s), and recommendations for additional measures or corrective actions required to comply with the storm water regulations. During each inspection, the inspector will also document whether the TCBMP is performing correctly, if there is any damage since the last inspection, and if the TCBMP has been maintained as required.

What are the City's requirements for verifying the effective operation and maintenance of TCBMPs?

All TCBMPs should be regularly inspected by the property owner or responsible party to ensure continued effectiveness and structural integrity. In addition, the City will require private property owners to verify the maintenance of TCBMPs on an annual basis. The City has developed a verification form for private property owners and responsible parties to use. Verification of maintenance includes a signed statement from the property owner or responsible party confirming that the TCBMP(s) have been maintained as required. Generally, TCBMPs should be checked prior to and after each storm event in addition to regularly scheduled inspections. The verification form can be submitted by fax, email or mail to the City and can also be downloaded from the City's webpage at www.carlsbadcagov.

What are the minimum maintenance requirements for TCBMPs?

There are several things you can do to help maintain the TCBMPs and storm drains on your property. Before and after a heavy rain, please remember to:

- Check and clean the TCBMPs on property. Blockages can cause water to pond and damage your property and parking lots.
- Remove leaves, branches, roadside litter, weeds or any material that can block TCBMPs.
- NEVER use a hose to clean a storm drain or TCBMPs. Avoid using blowers that only displace residue. Dispose of waste and trash properly.
- Check the storm drains inlets to be sure they are free of any materials and debris. Check the drainage path and remove any debris.
- Report any unauthorized access or illegal dumping into drainage systems. Call the Storm Water Hotline at 760-602-2799 to report spills or illegal discharges.

How do I get more information about TCBMP maintenance, verification, and inspection?

City staff is available to assist you throughout program implementation. To schedule an appointment with a City inspector please call 760-602-2780 x7111. You can also find information about the TCBMP maintenance verification and inspection program at www.carlsbadca.gov/cmi. Storm water technologies are constantly changing and being improved. The City of Carlsbad recommends that you be proactive and stay informed about these changes, developments, and improvements in storm water pollution prevention and compliance.

Verification and Inspection of Treatment Control BMPs

All storm water BMPs should be regularly inspected by the property owner or responsible party to ensure continued effectiveness and structural integrity. In addition, the City will require private property owners to verify the maintenance of treatment control BMPs on an annual basis. The City has developed a verification form for private property owners and responsible parties to use. Verification includes a signed statement from the property owner or responsible party confirming that treatment control BMP(s) have been maintained as required. The verification form can be submitted by fax or mail to the City and can also be downloaded from the City's webpage at www.carlsbadca.gov. Please note that all private property owners are required to maintain their treatment control BMPs and comply with all applicable regulations outlined in the Carlsbad Municipal Code.

STENCIL A STORM DRAIN

Storm drain stenciling is an educational, interactive tool to engage people of all ages in community involvement for watershed pollution prevention. It is a ***pollution solution*** project for students and community involvement for adults. Stencil the storm drains that drain to the treatment control BMP on your private property. It's a great way to educate neighbors, residents, contractors, and visitors about pollution prevention. Distinguish your property as being environmentally conscious. The City has storm drain stencils for loan or you may develop your own signs.

Treatment Control BMPs

City of Carlsbad Storm Water Compliance Guidelines for Treatment Control Best Management Practices

A Clean Environment Is Important to all of Us!

What are Treatment Control BMP's?

Treatment control best management practices (BMPs) are structures or devices that help to prevent pollutants from entering our storm drain system. They are primarily designed to provide treatment of storm water either through storage, filtration, or infiltration. As land is developed, vegetation is replaced with paved surfaces and rooftops which results in a higher potential for storm water pollution. The intent of treatment control BMPs is to assure that storm water runoff from developed areas does not impact waterways.

Treatment Control BMPs can help protect our waters ways from:

Sediments
Trash and Debris
Oil and Grease
Bacteria and Viruses

Who is responsible for maintaining treatment control BMPs?

Maintenance of treatment control BMPs is a shared responsibility between the City and the community. Treatment control BMPs and other storm drain structures on ***public*** streets and property are maintained by the City. Private property owners are responsible for maintaining treatment control BMPs on their properties including keeping their portion of the storm drain system free of trash, sediments, excessive vegetation, and other materials that may contribute to storm water pollution.

What are the most common treatment control BMPS are found in Carlsbad?

- **Dry Extended Detention Basins**: Also known as dry ponds, dry extended detention basins are designed to hold storm water runoff while allowing pollutants to settle out.
- **Infiltration Basins:** An infiltration basin is a shallow pond that uses the natural filtering ability of the soil to remove pollutants in storm water runoff. Infiltration basins store runoff until it gradually filters through the soil and eventually into the water table. These basins have high pollutant removal efficiency and can also help recharge groundwater
- **Media Filters**: Storm water media filters are usually two-chambered pretreatment settling devices that include a sand filter or other absorptive filtering media. As storm water flows into the first chamber, large particles settle out, and then finer particles are removed as storm water flows through the filter in the second chamber.
- **Wet Vaults:** A wet vault is generally 3 to 5 feet deep and allows storm water flows in while constricting it at the outlet. This causes a temporary rise of the water level and slowly releases water while holding back pollutants.
- **Vortex Separator**: This treatment control BMP uses gravity to help separate pollutants from storm water. Vortex separators move water in a circular motion , rather than a straight line making, it possible to remove a significant amount of suspended sediments and pollutants
- **Drain Inserts**: They are filters or fabric placed in a storm drain inlets to help remove sediment and debris. There are a three main types of drain inserts; **fabric socks** attached to a frame or grate of the storm drain and filter out pollutants; boxes are plastic or wire mesh screens that filter out large particles; and trays hold different types of media filters that collect trash and debris.

Be Part of the Pollution Solution!

There are several things you can do to help maintain the treatment control BMPs on your property. Before and after a heavy rain, please remember to:

- ✓ Check and clean the gutters and drainage ditches around your property. Blockages can cause water to pond and damage your property and parking lots.
- ✓ Remove leaves, branches, roadside litter, weeds or any material that can block treatment control BMPs.
- ✓ NEVER use a hose to clean a storm drain or treatment control BMP. Avoid using blowers that only displace residue. Dispose of waste and trash properly.
- ✓ Check the storm drains inlets to be sure they are free of any materials and debris. Check the drainage path and remove any debris.
- ✓ Report any unauthorized access or illegal dumping into drainage systems. Call the Storm Water Hotline at 760-602-2799 to report spills or illegal discharges.
- ✓ You can also find information about the treatment control BMP maintenance verification and inspection program at www.carlsbadca.gov.

SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR TREATMENT CONTROL BEST MANAGEMENT PRACTICES	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 2 OF 9	

Purpose

The purpose of this procedure is to define the process for inspecting, tracking, and enforcing compliance with Treatment Control Best Management Practices (TCBMP) structures listed on the Construction Management and Inspection (CMI) active TCBMP Inventory List. CMI inspectors must have a basic understanding of the requirements of the NPDES inspection program. Please refer to procedure #CMI-310 for the creation, revision and maintenance of the active TCBMP Inventory List and procedure #CMI-320 for the TCBMP Verification of Maintenance Program.

Policy

The Construction Management and Inspection Department will conduct NPDES compliance inspections for structures listed on the active Treatment Control Best Management Practices Inventory List to assess their threat to water quality, potential to contribute to storm water pollution, applicability to the NPDES permit issued by the Regional Water Quality Control Board of the State of California, and compliance with the Carlsbad Municipal Code.

Scope

This procedure applies to the **Construction Management and Inspection Department** personnel and consultants at the City of Carlsbad, Public Works Department located in Carlsbad, CA.

Overview

The City of Carlsbad is committed to inspecting structures listed on the active TCBMP inventory list to evaluate compliance with applicable storm water regulations, SWPPP, SWMP, JURMP, General Construction Permit, and the CMC. TCBMP inspections are conducted using the inspection form referenced in Appendix A and pictures are taken when necessary.

Treatment Control Best Management Practices Inspections Procedure:

Step	Who	What	When
1.	SCI	Prioritizes TCBMPs on the inventory and sets an inspection schedule using the criteria and frequencies outlined in the "*Other Procedural Considerations*" section of this procedure.	By May 1
2.	SCI	Merges inspection report forms with the TCBMP inventory list, prints the inspection reports, and conducts/schedules inspections as required. Inspection forms can also be completed in the field as inspections are conducted. Please refer to Appendix A for inspection form and instructions.	By May 15
3.	SCI	Provides CON and/or PWI with inspection forms for TCBMPs requiring NPDES inspections.	During the Dry Season
4.	PWI CON SCI	Performs TCBMP inspection(s) using the procedures outlined in CMC 15.12.095, 15.12.100, 15.12.110, in this procedure, and in Section D.2.d.(6) of the Permit.	During the Dry Season
5.	PWI CON SCI	After completion of the inspection(s), returns to the office and provides the completed inspection reports to the SCI.	During the Dry Season
6.	SCI CM	Verifies accuracy of the information on the inspection reports and updates the TCBMP inventory. The SCI will maintain inspection reports filed by BMP ID#.	Within 30 days of receipt
7.	PWI CON SCI CM	Completes appropriate compliance documents including Warning Notices, Notice to Clean, Notice of Violation, Administrative Citations, Summary Abatement, Compliance Schedule and other related NPDES compliance actions. If an enforcement action is issued, the SCI will also update the Inventory List.	As needed
8.	SCI CM DCE	Reviews compliance documents for completeness and accuracy. All Notice of Violations and above must be reviewed by the SCI, CM and/or DCE before issuance.	As needed
9.	SCI SOS	Ensures all compliance documents are mailed and filed as required. If the document requires a response, the SOS will return the file to the SCI. If the correspondence does not require a response, the file is returned to the appropriate filing location.	As needed
10.	PWI CON SCI	Follow up per findings and corrective action schedule submitted by RP. Actions that require tracking should be provided to the SCI.	As needed

Other Procedural Considerations

- If immediate corrective action is required, the CMI inspector should contact the RP by phone or mail for a prompt response. A copy of the inspection report can be faxed, mailed, or emailed to the RP.

- After notifying the RP of the violation verbally or in writing, the CMI inspector should document the violation and notification in the TCBMP file and note any time frames given for corrective action or follow-up inspections. In judging the degree of severity, the CMI inspector may also take into account the compliance history of the RP.
- Each fiscal year, structures on the TCBMP Inventory List will be reviewed as time and resources permit. "High" threat to water quality structures will be treated with priority each year for scheduling inspections.
- When developing the annual TCBMP inspection schedules, inspections should be prioritized in the following order:
    1. All high priority structures.
    2. Medium priority structures found to be in "poor" condition during the last inspection.
    3. Medium priority structures that have not been previously inspected.
    4. Medium priority structures found to be in "fair" condition during the last inspection.
    5. All other medium priorities structures until the minimum inspection frequencies are achieved.
    6. Low priority structures found to be "poor" condition during the last inspection.
    7. Low priority structures that have not been inspected.
    8. All other low priority structures, as needed.
- Annual inspection goals per fiscal year are as follows:

Priority	Inspection Goal
High	100%
Medium	50%
Low	As Needed

Recordkeeping and Reporting

The SCI is responsible for maintaining all aspects of the TCBMP inspection and correspondence hardcopy filing system. Inactive or removed TCBMP structure files will be maintained for a minimum of 3 years.

On an annual basis, the SCI will provide a JURMP Annual Report submission to the CM and DCE that includes the following information:

- An updated treatment control BMP inventory.
- The number of treatment control BMPs inspected, including a summary of inspection results and findings.
- A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.
- The number of violations and enforcement actions (including types) taken for development projects (TCBMPS only), including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

All inspection related forms are located on the shared drive at:

K:\NPDES/TCBMP/Forms

Equipment List

In preparation for conducting TCBMP inspections and investigations, CMI inspectors should have the following equipment:

- Metal clip board
- Inspection forms
- Enforcement forms (Field memos, Stop Work Orders, etc.)
- Digital camera
- Pens and pencils
- Sharpie markers
- City identification
- Business cards
- Field notebook
- Thomas Guide
- If appropriate, applicable site plans and documents
- Copies of the CMC, Municipal Permit, and General Construction Permit
- Outreach materials
- If necessary, photos or copies of previous inspection reports

Safety Considerations

Hazards may exist at the various sites inspectors visit. These hazards could include sharp edges, falling objects, flying sparks, chemicals, noise, uneven pavement, and other potentially dangerous situations. Inspectors must be aware of their environment and take the appropriate precautions to protect themselves from potential hazards and injuries. Personal protective equipment, commonly referred to as "PPE", may be required at certain sites and in certain situations to minimize exposure to a variety of hazards. The following PPE should be available to the inspector during site visits:

- hard hat
- flashlight
- safety glasses
- ear plugs
- steel-toed boots
- rubber gloves
- storm drain puller
- safety vest
- orange traffic cones
- hand sanitizer
- leather work gloves
- first aid kit

Appendices

Appendix A: TCBMP Inspection Form and Instructions

Appendix A

NPDES Inspection Report Form and Instructions

Inspector: The last name and first initial of the person conducting the inspection.

Date: The date the inspection occurred.

Time: The time the inspection occurred.

Priority: The threat priority assigned to the TCBMP.

BMP Type: The type of BMP structure as defined by CASQA.

BMP Description: A description of the BMP type.

BMP ID#: The unique identification number assigned to the TCBMP structure.

Location: A description of where the TCBMP is located.

Address: If applicable, the physical address where the TCBMP is located.

BMP Manufacturer: The name of the company or person that manufactured or designed the TCBMP.

TREATMENT CONTROL BMP INSPECTION REPORT

Inspector:		Date		Time		Priority	
BMP Type		BMP Description				BMP ID#	
Location			Address				
BMP Manufacturer		Last Inspection				Last Condition	
BMP Status		APN					
Responsible Party							
Contact Name			Contact Phone				
Weather Conditions	☐ Heavy Rain ☐ Light Rain ☐ Sunny ☐ Cloudy ☐ Partly Cloudy ☐ Rain Expected at ___% chance						

BMP IMPLEMENTATION AND COMPLIANCE

BMP/Activity	YES	NO	N/A	Corrective Action Required	CORRECTIVE ACTION REQUIRED
Has the BMP been installed?					☐ BMP needs to be replaced.
Has the BMP been replaced?					☐ Provide additional erosion control.
Does the BMP need maintenance?					☐ Keep desilitation/ retention basin free of litter.
Has trash and/or debris accumulated in or around the BMP?					☐ Provide additional protection at storm drain inlets.
Is the BMP area overgrown?					☐ BMP needs to be maintained.
Is the BMP operating as designed?					☐ Remove trash and debris from BMP.
Are there signs of illegal dumping?					☐ Immediately discontinue washing or hosing.
Are there strong odors of gas, oil, or sewage?					☐ Clean in and around storm drains.
Is the BMP easily accessed?					☐ Properly store hazardous materials.
Is there standing water?					☐ Train responsible parties in pollution prevention.
Are there signs of invasive species?					☐ Other:_____
Are natural areas and open spaces protected?					☐ Other:_____
Are non-storm water discharges (wash water, irrigation, etc.) properly maintained?					Implement corrective actions by _____. A City Inspector will return on or after the correction date to verify that corrective actions were completed as required and/or BMPs implemented. If you have any questions or comments, please contact 760-602-2780 x7111
Were there any discharges observed during the inspection?					

Overall Condition:	☐ Good	☐ Fair	☐ Poor	☐ Could Not Locate/Inspect

Comments:

Inspector Signature:	Date	Inspection Report Provided to RP: ☐ Yes ☐ No ☐ Mailed ☐ Fax ☐ Hand Delivered
Enforcement Required	☐ Verbal Warning ☐ Written Warning ☐ Notice of Violation ☐ Stop Work Order ☐ Referred for Action	
BMP Assessment (circle one)	5 4 3 2 1	Knowledge Assessment (circle one) 5 4 3 2 1 ☐ Contact not available

Last Inspection: The date of the last inspection of the TCBMP.

Last Condition: The last known condition from the previous inspection.

BMP Status: The known status of the TCBMP as listed on the Inventory List.

APN: Assessor parcel number where the TCBMP is located.

Responsible Party: The name of the person or company responsible for the maintenance of the TCBMP.

Contact Name: The primary contact name of the person, company, or agency responsible for the maintenance of the TCBMP.

Contact Phone: The phone number of the contact name.

Weather Conditions: The inspector should note the weather conditions.

BMP IMPLEMETATION AND COMPLIANCE: The inspector should use this section to evaluate the condition of the TCBMP, its functionality, potential sources of pollution, and assess compliance with the CMC, JURMP, and Permit. The BMP/Activity questions should be answered using the appropriate responses in the column to the right.

CORRECTIVE ACTION REQUIRED: If the TCBMP requires maintenance or corrective action, the inspector should check the appropriate box. If the corrective action is not listed among the choices, the inspector can use the "Comments" area to list the specific BMP requirements. In addition, the inspector should note the date corrective actions must be completed.

Overall Condition: The inspector must use their best professional judgment to determine the condition of the TCBMP using the following criteria:

- **Good:** Currently no maintenance or corrective action is required for the TCBMP. No trees, large plants, excessive trash, stagnant water, blockages, or other major sources of pollutants were observed. The TCBMP appears to be functioning as designed. Re-inspect in one year.
- **Fair:** Light to minor maintenance required within the next year. Small amounts of trash, weeds, plants, debris, and/or silt has accumulated, but the TCBMP is functioning as designed. The structure should be re-inspected within one year by the RP or the City.
- **Poor:** Maintenance and/or repairs are required on the structure. Excessive trash, weeds, vegetation, stagnant water, trees, silt, and/or other pollutants were observed during the inspection. The TCBMP is blocked, needs repaired, and/or is not functioning as required. The RP should be notified and corrective actions implemented within six months of inspection. The structure should be re-inspected within six months by the RP or the City.
- **Could Not Locate/Inspector:** The inspector was not able to locate or gain access to the TCBMP for inspection.

Comments: The inspector can note additional information about the inspection or investigation including but not limited to specific BMPs needed, additional requirements, observations, etc.

Inspector Signature: The inspector must sign the inspection report.

Date: The date the inspection report was completed by the CMI inspector.

Inspection Report Provided to RP: The inspector should select the applicable box:

- Yes: The inspection report has been provided to the RP in the following manner:
  - ○ Mailed ○ Fax ○ Hand Delivered
- No: The inspection report was not provided to the RP.

Enforcement Required: If during the inspection, violations are observed the inspector can note the following types of enforcement actions that should follow the inspection:

- Verbal Warning: Note taken that verbal instruction requiring immediate corrective action was issued during the inspection.
- Written Warning: A Written Warning that corrective action must be completed by the specific date on the inspection report.
- Notice of Violation: A Notice of Violation should be issued.
- Stop Work Notice: A Stop Work Notice that corrective action must be completed by the specific date should be issued.
- Referred for Action: If the RP had violations that require notification to other City departments, RWQCB, or other agency the inspector should check this box. The CM and SCI are responsible for ensuring notifications are completed as required.

BMP Assessment: Numeric value field assessing the overall level of compliance with storm water pollution prevention. This assessment will be conducted during the inspection with or without contact with a RP.

- Level 5: All BMPs implemented effectively. No violations noted during the inspection.
- Level 4: BMPs implemented effectively, however minor violations associated with communal areas or good housekeeping practices were noted during the inspection.
- Level 3: BMPs have been implemented throughout the site, but not properly or adequately maintained. Violations were noted during the inspection and a verbal warning was issued. A detailed inspection report or written Warning Notice may follow.
- Level 2: BMPs have not been implemented. Several violations were noted during the inspection, however an illegal discharge was not observed. A detailed inspection report and/or enforcement action was issued.
- Level 1: **An illegal discharge was noted during the inspection**. Enforcement action (Stop Work Notice, NOV, or Administrative Citation, etc.) is required.

Knowledge Assessment: Numeric value assessing the overall level of knowledge of the RP related to storm water pollution prevention. This assessment will only be conducted during the inspection when there is contact with the RP.

- Level 5: Individual demonstrated an in depth knowledge of the storm water program and BMPs consistent with the structures' operations.
- Level 4: Individual has a clear understanding of BMPs but may not have a clear awareness of the connection between pollution prevention and water quality.
- Level 3: Individual has a general understanding of storm water issues ("*I've heard something about that*"), but not specific storm water requirements or BMPs required for the structure.
- Level 2: Individual has a general awareness of water quality issues, but does not understand the requirements of the storm water program, BMPs, or pollution prevention.
- Level 1: Individual has never heard of the storm water program, requirements, or BMPs. This individual does know what BMPs are or understand how to implement them.

Purpose

The purpose of this procedure is to define the process for managing and updating the Construction Management and Inspection Department's Treatment Control Best Management Practices Inventory List (Inventory List). The Inventory List is updated and reviewed for inspection applicability on a monthly basis, within each fiscal year. Please refer to procedure #CMI-300 for the procedure for inspecting TCBMPs and procedure #CMI-320 for the Treatment Control Best Management Practices Verification of Maintenance program.

Policy

The City of Carlsbad's Construction Management and Inspection Department will maintain a Treatment Control Best Management Practices Inventory List of structures to be inspected as required by the NPDES permit issued by the Regional Water Quality Control Board of the State of California and the Carlsbad Municipal Code.

Scope

This procedure applies to the **Construction Management and Inspection Department** personnel and consultants at the City of Carlsbad, Public Works Department located in Carlsbad, CA.

Associated Documents

Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS0108758

City of Carlsbad Jurisdictional Urban Runoff Management Program (JURMP) from March 2008

City of Carlsbad Engineering Inspection Manual

City of Carlsbad Municipal Code Chapter 15.12

City of Carlsbad Municipal Code Chapter 15.16

City of Carlsbad Municipal Code Chapter 6.08

Definitions and Acronyms

BMP	Best Management Practices
CON	Consultant designated by awarded City contract
CMC	Carlsbad Municipal Code
CM	Construction Manager
DCE	Deputy City Engineer
ET	Engineering Technician I/II
ESA	Environmentally Sensitive Area
DS	Dry Season - May 1 to September 30
ET	Engineering Technician II
GIS	Geographical Information Systems
Inspection	Refers to onsite evaluation or investigation to determine the effectiveness and adequacy of BMPs – please refer to Appendix A for a copy of the inspection form.
PWI	Public Works Inspector I/II
JURMP	Jurisdictional Urban Runoff Management Program from March 2008
NPDES	National Pollutant Discharge Elimination System
RP	Responsible Party
RWQCB	Regional Water Quality Control Board
SCI	Senior Construction Inspector
SOS	Senior Office Specialist
SWPPP	Storm Water Pollution Prevention Plan
SWMP	Storm Water Management Plan
TCBMP	Treatment Control Best Management Practices
Wet Season	October 1 to April 30

Overview

The intent of the Inventory List is to satisfy the NPDES requirements as outlined in Section 4 of the 2008 JURMP update and Section D.1.e. of the Permit. The City of Carlsbad is required to track, assess, and prioritize all approved TCBMPs within its jurisdiction to determine their potential threat to water quality, applicability of storm water regulations (including NPDES requirements), and compliance with the Permit and CMC.

Threat Prioritization

Prioritization of TCBMPs includes a review and consideration of the TCBMP type, size, location, proximity to an ESA, past record of compliance by the RP, and potential to discharge non-storm water or pollutants. Typically, the following types of TCBMPs should be prioritized as follows:

BMP Detail	BMP Type	Within ESA	High	Medium	Low
Media filters	MP-40	◆		✓	
Wet Vaults	MP-50	◆	✓		
Vortex Separators	MP-51	◆	✓		
Drain Inserts	MP-52	◆		✓	
Sediment Basin	SE-2	✓	✓		
Sediment Basin	SE-2			✓	
Infiltration Trench	TC-10	✓	✓		
Infiltration Trench	TC-10			✓	
Infiltration Basins	TC-11	✓	✓		
Infiltration Basins	TC-11			✓	
Dry Extended Detention Basin	TC-22	✓	✓		
Dry Extended Detention Basin	TC-22			✓	
Vegetated Swales	TC-30	✓		✓	
Vegetated Swales	TC-30				✓
Water Quality Inlet	TC-50	◆		✓	
Multiple Systems	TC-60	◆	✓	✓	✓

◆ Proximity of ESA is not a consideration because of the maintenance frequency required and/or type of structure.

Inventory Management Procedure:

Step	Who	What	When
1.	SCI	Requests via email a TCBMP update from Public Works – Planning and Programs Department.	October 1 January 15
2.	ET	Downloads the current information from the GIS database, prepares an Excel formatted version of the inventory, and emails file to the SCI.	Within 30 days of the request
3.	SCI	TCBMPs are prioritized using the criteria outlined in this procedure, JURMP, and the Permit. GIS and RealQuest databases are used to verify property ownership and proximity to the ESA. TCBMPs located within 200 feet of an ESA will also be evaluated to determine if the ESA is a 303(d) listed water body and if the structure has the potential to generate pollutants for which the water body is impaired. If the TCBMP is not located within an ESA, "No" is entered into Column "AI" of the Inventory List.	Before May 1

Step	Who	What	When
4.	SCI	Updates the Inventory List. Updates can include removing duplicates and publicly owned structures, prioritizing TCBMPs, changing the status of TCBMPs, and adding new structures to the inventory.	Before May 15
5.	SCI	Sorts the Inventory List by column "I" - "Responsible Party" and merges it with the TCBMP inspection report merge file. Reviews the merged records for line shifts, makes corrections, and prints the inspection reports.	Before May 15
6.	SCI	Provides the inspector with pre-printed TCBMP inspection forms.	May 15 thru Sept. 15
7.	CON SCI PWI	Performs the inspection(s) using the procedures outlined in CMC 15.12.095, 15.12.100, 15.12.110, in this procedure, and in Section D.2.d.(6) of the Municipal Permit. TCBMP inspection reports are provided to the SCI upon completion.	Prior to October 1
8.	SCI CM	Reviews and verifies accuracy of the information on the inspection reports and updates the Inventory List.	Within 30 days of receipt
9.	SCI SOS	Files and maintains records of all TCBMP inspection reports.	Within 30 days of receipt
11.	SCI CM	At the end of each fiscal year (July 1 – June 30), closes and archives the current fiscal year inventory list and creates the new fiscal year inventory list. Please see "End of Year and Beginning of Year" procedures section.	By July 15

End of Year (EOY) and Beginning of Year (BOY) Procedures

Step	Who	What	When
1.	SCI	Ensures all updates and entries to the Inventory List are accurate and complete.	By July 15
2.	SCI	Saves and moves the EOY (as of June 30) to the appropriate archive folder. The EOY Inventory List will be used to develop the JURMP Annual Report.	By July 15
3.	SCI	The EOY inventory is copied, moved to the appropriate archive folder, and renamed for the new fiscal year (BOY). The Inventory List is sorted by "Status." Only those TCBMPs that are "Permanent", "Temporary, "or "Future" (see Appendix A) will be carried forward to the next fiscal year's Inventory List. All other entries will be deleted.	By July 15
4.	SCI PWI	Reviews the Inventory List to ensure that priority and status is current for the fiscal year. The SCI will update the Inventory List to reflect any changes.	By August 1
5.	SCI	Column "U" through "Y" will be deleted when the current fiscal year is two years greater and replaced with the information from the previous inspection year.	By July 15

Step	Who	What	When
6.	SCI	Five new columns will be inserted with headers that duplicate the titles of "U" though "Y", but for the current inspection year.	By July 15
7.	SCI	Saves the BOY Inventory List in the appropriate folder. The active Inventory List is moved to: K:/NPDES/TCBMP/Inventory/TCBMP '*FY*'	By July 15

Other Procedural Considerations

- For the purposes of the procedure the term "Inventory List" is used to describe the Excel spreadsheet maintained by CMI of all privately owned TCBMPs. The term database is used to describe the master database maintained by GIS that includes all publicly and privately owned TCBMPs. The Inventory List is created using the information from the GIS department database.
- On a quarterly basis the SCI will notify the ET and/or GIS, via email, of modifications and retirements of private owned TCBMP facilities using the form in Appendix B.
- Because the DS occurs over two fiscal years, this procedure uses the term "inspection year" to define the time when the dry season inspection occurred.

Recordkeeping and Reporting

- The SCI is responsible for maintaining all aspects of the Inventory List. Including information entered, changed, or deleted within columns and cells.
- Hard copies of records from retired TCBMP files will be maintained for a minimum of 3 years. Previous fiscal year Inventory Lists will be maintained electronically in an "Archive" file on the community drive.
- On an annual basis, the SCI will provide a JURMP Annual Report submission to the CM and DCE that includes the following information:
  - An updated treatment control BMP inventory.
  - The number of treatment control BMPs inspected, including a summary of inspection results and findings.

All Inventory List related information are located on the shared drive at:

K:\NPDES/TCBMP/Inventory/

Appendices

Appendix A: Inventory List Column Headings and Definitions

Appendix B: Modification and Retirements Form

APPENDIX A

Inventory List Column Headings and Definitions

A. UNIT ID#: The unique identification number assigned to the TCBMP structure by Development Services. This is downloaded from the master GIS database. This number does not change and cannot be modified by CMI.

B. STATUS: The current status of the TCBMP. Initially this information is downloaded from the master GIS database, but can be changed during the updating process. Only the following can be entered into this field.
- **Permanent**: The TCBMP has been installed as an approved permanent structural BMP.
- **Temporary**: The TCBMP was been installed as an approved temporary structural BMP.
- **Future**: The TCBMP has been approved, but has not been installed.
- **Removed**: Upon inspection the TCBMP has been verified as removed.
- **Excluded**: The TCBMP has been excluded from further inspection.

C. PRIORITY: The threat to water quality based on the prioritization criteria listed in JURMP and Permit. This field can only be populated with the following responses:
- High
- Medium
- Low

D. PROJECT NO.: The project number associated with the TCBMP. This is downloaded from the master GIS database. This number does not change and cannot be modified by CMI.

E. Drawing Sheet No.: The drawing number associated with the TCBMP. This is downloaded from the GIS master database and cannot be modified by CMI.

F. APN: The assessor parcel number where the TCBMP is located.

G. LOCATION: A descriptive location of where the TCBMP is located. Initially this information is downloaded from the master GIS database, but can be changed during the updating process.

H. Address: The physical address of where the BMP is located. This can only include the street number and street name.

I. Responsible Party: The name of the person, company, or agency responsible for the maintenance of the TCBMP.

J. Contact Name**:** The primary name of the person, company, or agency responsible for the maintenance of the TCBMP.

K. Contact Phone**:** The phone number of the person, company, or agency responsible for the maintenance of the TCBMP.

L. Mailing Address: The mailing address of the person, company, or agency responsible for the maintenance of the TCBMP.

M. Mail City/Zip: The city, state, and zip code associated with the mailing address of the person, company, or agency responsible for the maintenance of the TCBMP.

N. BMP Type**:** The type of BMP structure as defined by CASQA. Initially this information is downloaded from the master GIS database, but can be changed during the updating process.

O. BMP Detail: The specific description of the BMP that corresponds with the type of BMP structure.

P. BMP Description: Additional descriptive information about the BMP type and detail.

Q. BMP Manufacturer: The name of the company or person that manufactured or designed the TCBMP.

R. BMP Manufacturer Code: The manufacturing or design code assigned to the TCBMP.

S. BMP Maintenance Frequency: The minimum recommended frequency for maintenance as defined by CASQA, the manufacturer, or the SWMP.

T. BMP Inspection Frequency: The minimum recommended frequency for inspection as defined by the City, CASQA, the manufacturer, or the SWMP.

U. '*Previous Inspection Year'* DS Condition: The known condition the BMP was found to be in during the last DS inspection year. This is usually for the previous inspection year.

V. '*Previous Inspection Year* DS Inspection Date: The date the DS inspection occurred for that year. This is usually for the previous inspection year.

W. '*Previous Inspection Year*' DS Verification Received: The date the required maintenance verification form was received by the City for that DS inspection year.

X. '*Previous Inspection Year* DS Verification Letter Sent: The date the required maintenance verification form was mailed to the RP.

Y. '*Previous Inspection Year*' DS Second Verification Sent: The date the second or reminder maintenance verification letter was mailed to the RP.

Z. '*Current Inspection Year'* DS Condition: The known condition the TCBMP was found to be in during the current DS inspection year.

AA. '*Current Inspection Year*' DS Inspection Date: The date the inspection occurred for the current DS inspection year.

AB. '*Current Inspection Year*' DS Verification Received: The date the required maintenance verification form was received by the City for the current DS inspection year.

AC. '*Current Inspection Year*' DS Verification Letter Sent: The date the required maintenance verification form was mailed to the RP for the current DS inspection year.

AD. '*Current Inspection Year*' DS Second Verification Sent: The date the second or reminder maintenance verification letter/form was mailed to the RP.

AE. NTC Sent: The date the last Notice to Clean was sent to the RP.

AF**.** Last Cleaned/Maintained: The last known date maintenance of the TCBMP occurred.

AG. CHU: The water body or watershed with the Carlsbad Hydrologic Unit that receives run off from the TCBMP. Only the following can be entered into this field:

- **904.21:** Buena Vista Lagoon
- **904.31:** Agua Hedionda Lagoon
- **904.40:** Encinas Creek
- **904.51:** Batiquitos Lagoon

AH. PROXIMITY: Is the TCBMP within 200 feet of an ESA (as defined in Attachment C of the Permit)? This is determined by GIS mapping. The following entries are acceptable in this field:

- Yes: The TCBMP is located within 200 feet of an ESA.
- No: The TCBMP is not located within 200 feet of an ESA.

AI. Engineering ID: The identification number assigned to the TCBMP by the Engineering Department. This is downloaded from the master GIS database and cannot be modified by CMI.

AJ. BMP Maintenance Agreement: If a BMP maintenance agreement exists for the structure the GIS master database will provide that information in this field. This can also be updated by CMI.

AK. As Built: The date the as-built plans were signed by the City. This is downloaded from the master GIS database.

AL. Approved/Signed Date: The date the project and/or TCBMP was approved by the City. This is downloaded from the master GIS database.

APPENDIX A

STORM WATER STANDARDS QUESTIONNAIRE

INSTRUCTIONS:

This questionnaire must be completed by the applicant in advance of submitting for a development application (subdivision and land use planning approvals and construction permits). The results of the questionnaire determine the level of storm water pollution prevention standards applied to a proposed development or redevelopment project. Many aspects of project site design are dependent upon the storm water pollution protection standards applied to a project.

Applicant responses to the questionnaire represent an initial assessment of the proposed project conditions and impacts. City staff has responsibility for making the final assessment after submission of the development application. A staff determination that the development application is subject to more stringent storm water standards, than initially assessed by the applicant, will result in the return of the development application as incomplete.

If applicants are unsure about the meaning of a question or need help in determining how to respond to one or more of the questions, they are advised to seek assistance from Engineering Department Development Services staff.

A separate completed and signed questionnaire must be submitted for each new development application submission. Only one completed and signed questionnaire is required when multiple development applications for the same project are submitted concurrently. In addition to this questionnaire, applicants for construction permits must also complete, sign and submit a Construction Activity Storm Water Standards Questionnaire.

To address pollutants that may be generated from new development, the City requires that new development and significant redevelopment priority projects incorporate Permanent Storm Water Best Management Practices (BMPs) into the project design, which are described in Chapter 2 of the City's Storm Water Standards Manual This questionnaire should be used to categorize new development and significant redevelopment projects as priority or non-priority, to determine what level of storm water standards are required or if the project is exempt.

*1. Is your project a **significant redevelopment**?*

Definition:

***Significant redevelopment** is defined as the creation, addition or replacement of at least 5,000 square feet of impervious surface on an already existing developed site.*

***Significant redevelopment** includes, but is not limited to: the expansion of a building footprint; addition to or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction remodeling; replacement of an impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction.*

Note: If the Significant Redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in Table 3 of 2.3.3.4 applies only to the addition, and not to the entire development.

*2. If your project **IS** considered significant redevelopment, then please skip Section 1 and proceed with Section 2.*

*3. If your project **IS NOT** considered significant redevelopment, then please proceed to Section 1.*

SECTION 1

NEW DEVELOPMENT

PRIORITY PROJECT TYPE **Does you project meet one or more of the following criteria:**	**YES**	**NO**
1. *Home subdivision of 100 units or more.* Includes SFD, MFD, Condominium and Apartments		
2. *Residential development of 10 units or more.* Includes SFD, MFD, Condominium and Apartments		
3. *Commercial and industrial development greater than 100,000 square feet including parking areas.* Any development on private land that is not for heavy industrial or residential uses. Example: Hospitals, Hotels, Recreational Facilities, Shopping Malls, etc.		
4. *Heavy Industrial / Industry greater than 1 acre* (NEED SIC CODES FOR PERMIT BUSINESS TYPES) SIC codes 5013, 5014, 5541, 7532-7534, and 7536-7539		
5. *Automotive repair shop.* SIC codes 5013, 5014, 5541, 7532-7534, and 7536-7539		
6. *A New Restaurant where the land area of development is 5,000 square feet or more including parking areas.* SIC code 5812		
7. *Hillside development* (1) greater than 5,000 square feet of impervious surface area and (2) development will grade on any natural slope that is 25 or greater		
8. *Environmentally Sensitive Area (ESA).* Impervious surface of 2,500 square feet or more located within, directly adjacent[2] to (within 200 feet), or discharging directly to[3] receiving water within the ESA[1]		
9. *Parking lot.* Area of 5,000 square feet or more, or with 15 or more parking spaces, and potentially exposed to urban runoff		
10. *Retail Gasoline Outlets – serving more than 100 vehicles per day* Serving more than 100 vehicles per day and greater than 5,000 square feet		
11. *Streets, roads, driveways, highways, and freeways.* Project would create a new paved surface that is 5,000 square feet or greater.		
12. *Coastal Development Zone.* Within 200 feet of the Pacific Ocean and (1) creates more than 2500 square feet of impermeable surface or (2) increases impermeable surface on property by more than 10 .		

1 Environmentally Sensitive Areas include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and Count of San Diego; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees.

2 Directly adjacent means situated within 200 feet of the environmentally sensitive area.

3 Discharging directly to means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flow from adjacent lands.

Section 1 Results:
If you answered **YES** to **ANY** of the questions above you have a **PRIORITY** project and **PRIORITY** project requirements **DO** apply. A Storm Water Management Plan, prepared in accordance with City Storm Water Standards, must be submitted at time of application. Please check the MEETS PRIORITY REQUIREMENTS box in Section 3.

If you answered **NO** to **ALL** of the questions above, then you are a **NON-PRIORITY** project and **STANDARD** requirements apply. Please check the DOES NOT MEET PRIORITY Requirements box in Section 3.

SECTION 2

SIGNIFICANT REDEVELOPMENT:	YES	NO
1. Is the project redeveloping an existing priority project type? (Priority projects are defined in Section 1)		
If you answered **YES**, please proceed to question 2. If you answered **NO**, then you **ARE NOT a** significant redevelopment and you **ARE NOT** subject to **PRIORITY** project requirements, only **STANDARD** requirements. Please check the DOES NOT MEET PRIORITY Requirements box in Section 3 below.		
2. Is the project solely limited to one of the following:		
a. Trenching and resurfacing associated with utility work?		
b. Resurfacing and reconfiguring existing surface parking lots?		
c. New sidewalk construction, pedestrian ramps, or bike lane on public and/or private existing roads?		
d. Replacement of existing damaged pavement?		
If you answered **NO** to **ALL** of the questions, then proceed to Question 3. If you answered **YES** to **ONE OR MORE** of the questions then you **ARE NOT** a significant redevelopment and you **ARE NOT** subject to **PRIORITY** project requirements, only **STANDARD** requirements. Please check the DOES NOT MEET PRIORITY Requirements box in Section 3 below.		
3. Will the development create, replace, or add at least 5,000 square feet of impervious surfaces on an existing development or, be located within 200 feet of the Pacific Ocean and (1)create more than 2500 square feet of impermeable surface or (2) increases impermeable surface on property by more than 10 ?		
If you answered **YES**, you **ARE** a significant redevelopment, and you **ARE** subject to **PRIORITY** project requirements. Please check the MEETS PRIORITY REQUIREMENTS box in Section 3 below. If you answered **NO**, you **ARE NOT** a significant redevelopment, and you **ARE NOT** subject to **PRIORITY** project requirements, only **STANDARD** requirements. Please check the DOES NOT MEET PRIORITY Requirements box in Section 3 below.		

SECTION 3

Questionnaire Results:

- ❑ MY PROJECT **MEETS PRIORITY REQUIREMENTS,** MUST COMPLY WITH PRIORITY PROJECT STANDARDS AND MUST PREPARE A STORM WATER MANAGEMENT PLAN FOR SUBMITTAL AT TIME OF APPLICATION**.**
- ❑ MY PROJECT **DOES NOT MEET PRIORITY REQUIREMENTS** AND MUST ONLY COMPLY WITH STANDARD STORM WATER REQUIREMENTS.

Project Threat Assessment Worksheet for Determination of Construction SWPPP Tier Level

Project Storm Water Threat Assessment Criteria*	Construction SWPPP Tier Level
Significant Threat Assessment Criteria ❑ My project includes clearing, grading or other disturbances to the ground resulting in soil disturbance totaling one or more acres including any associated construction staging, equipment storage, stockpiling, pavement removal, refueling and maintenance areas; or, ❑ My project is part of a phased development plan that will cumulatively result in soil disturbance totaling one or more acres including any associated construction staging, equipment storage, refueling and maintenance areas; or, ❑ My project is located inside or within 200 feet of an environmentally sensitive area (see City ESA Proximity map) and has a significant potential for contributing pollutants to nearby receiving waters by way of storm water runoff or non-storm water discharge(s).	Tier 3
Moderate Threat Assessment Criteria My project does not meet any of the Significant Threat Assessment Criteria described above and meets one or more of the following criteria: ❑ Project requires a grading plan pursuant to the Carlsbad Grading Ordinance (Chapter 15.16 of the Carlsbad Municipal Code); or, ❑ Project will result in 2,500 square feet or more of soils disturbance including any associated construction staging, stockpiling, pavement removal, equipment storage, refueling and maintenance areas and project meets one or more of the additional following criteria: • located within 200 feet of an environmentally sensitive area or the Pacific Ocean; and/or, • disturbed area is located on a slope with a grade at or exceeding 5 horizontal to 1 vertical; and/or • disturbed area is located along or within 30 feet of a storm drain inlet, an open drainage channel or watercourse; and/or • construction will be initiated during the rainy season or will extend into the rainy season (Oct. 1 through April 30).	Tier 2
Low Threat Assessment Criteria ❑ My project does not meet any of the Significant or Moderate Threat criteria, is not an exempt permit type (see City's list of Permit Types Exempt from Construction SWPPP requirements) and project meets one or more of the following criteria: • results in some soil disturbance; and/or • includes outdoor construction activities (such as roofing, saw cutting, equipment washing, material stockpiling, vehicle fueling, waste stockpiling)	Tier 1
No Threat Project Assessment Criteria ❑ My project is in a category of permit types exempt from City Construction SWPPP requirements (see City's list of Permit Types Exempt from Construction SWPPP requirements) and/or does not meet any of the High, Moderate or Low Threat criteria described above.	Exempt

* The City Engineer may authorize minor variances from the Storm Water Threat Assessment Criteria in special circumstances where it can be shown that a lesser or higher Construction SWPPP Tier Level is warranted in the opinion of the City Engineer

Construction Threat Assessment Worksheet for Determination of a Project's Perceived Threat to Storm Water Quality

Construction SWPPP Tier Level	Construction Threat Assessment Criteria*	Perceived Threat to Storm Water Quality
Tier 3	Tier 3 – High Construction Threat Assessment Criteria ❑ Project site is 50 acres or more and grading will occur during the rainy season ❑ Project site is 1 acre or more in size and is located within the Buena Vista or Agua Hedionda Lagoon watershed, inside or within 200 feet of an environmentally sensitive area (ESA) or discharges directly to an ESA ❑ Soil at site is moderately to highly erosive (defined as having a predominance of soils with USDA-NRCS Erosion factors k_f greater than or equal to 0.4) ❑ Site slope is 5 to 1 or steeper ❑ Construction is initiated during the rainy season or will extend into the rainy season (Oct. 1 through April 30). ❑ Owner/contractor received a Storm Water Notice of Violation within past two years	High
	Tier 3 – Medium Construction Threat Assessment Criteria ↑ All projects not meeting Tier 3 High Construction Threat Assessment Criteria	Medium
Tier 2	Tier 2 High Construction Threat Assessment Criteria ❑ Project is located within the Buena Vista or Agua Hedionda Lagoon watershed, inside or within 200 feet of an environmentally sensitive area (ESA) or discharges directly to an ESA ❑ Soil at site is moderately to highly erosive (defined as having a predominance of soils with USDA-NRCS Erosion factors k_f greater than or equal to 0.4) ❑ Site slope is 5 to 1 or steeper ❑ Construction is initiated during the rainy season or will extend into the rainy season (Oct. 1 through April 30). ❑ Owner/contractor received a Storm Water Notice of Violation within past two years ❑ Site results in one half acre or more of soil disturbance	High
	Tier 2 – Medium Construction Threat Assessment Criteria ❑ All projects not meeting Tier 2 High Construction Threat Assessment Criteria	Medium
Tier 1	Tier 1 - Medium Inspection Threat Assessment Criteria ❑ Project is located within the Buena Vista or Agua Hedionda Lagoon watershed, within or directly adjacent to an environmentally sensitive area (ESA) or discharges directly to an ESA ❑ Soil at site is moderately to highly erosive (defined as having a predominance of soils with USDA-NRCS Erosion factors k_f greater than or equal to 0.4) ❑ Site slope is 5 to 1 or steeper ❑ Construction is initiated during the rainy season or will extend into the rainy season (Oct. 1 through April 30). ❑ Owner/contractor received a Storm Water Notice of Violation within past two years ❑ Site results in one half acre or more of soil disturbance	Medium
	Tier 1 - Low Inspection Threat Assessment Criteria ❑ All projects not meeting Tier 1 Medium Construction Threat Assessment Criteria	Low
Exempt	- Not Applicable -	Exempt

* The City Engineer may authorize minor variances from the Construction Threat Assessment Criteria in special circumstances where it can be shown that a lesser or higher amount of storm water compliance inspection is warranted in the opinion of the City Engineer

NPDES INSPECTION REPORT

Construction Management and Inspection

Pursuant to CMC 15.12.100

Inspector		**Date**		**Project**	
		Time		**GR Permit**	
Inspection Type	☐ **Compliance** ☐ **Follow Up**	**Weather**	☐ **Heavy Rain** ☐ **Light Rain** ☐ **Sunny** ☐ **Cloudy** ☐ **Partly Cloudy** ☐ **Rain Expected at** ☐☐☐☐ **chance**		

BMP IMPLEMENTATION AND COMPLIANCE

BMP and Compliance Activity	YES	NO	N/A
Are all inactive slopes properly stabilized?			
Are areas flatter than 3:1 covered or protected?			
Are gravel bags, waddles, silt fences, and other erosion control BMPs in place and functioning properly?			
Do basins appear to be maintained as required?			
Are perimeter control BMPs maintained?			
Is the entrance stabilized to prevent tracking?			
Are storm drain inlets protected and BMPs maintained?			
Are all material and equipment handling, storage and repair areas clean and maintained?			
Are dumpsters and trash receptacles covered?			
Has trash and debris accumulated throughout the site?			
Are stockpiles and spoils protected from runoff?			
Are landscaped areas protected from erosion?			
Are natural areas and open spaces protected?			
Are washout areas maintained and protected?			
Were there any discharges observed during the inspection?			
Is the SWPPP wall map up to date and accurate?			
Was the SWPPP reviewed during this inspection?			
Other:			
Other:			

CORRECTIVE ACTION REQUIRED

- ☐ Provide additional erosion control.
- ☐ Repair/replace erosion control BMPs.
- ☐ Replace broken rock/sand bags.
- ☐ Desiltation/retention basin(s) requires maintenance.
- ☐ Provide additional perimeter controls.
- ☐ Repair/replace perimeter controls.
- ☐ Impervious surfaces need to be swept.
- ☐ Prevent sediment tracking on to street.
- ☐ Clean in and around storm drains.
- ☐ Provide additional protection at storm drain inlets.
- ☐ Discard unusable equipment and materials.
- ☐ Remove trash and debris from project site.
- ☐ Properly store hazardous materials.
- ☐ **Immediately** clean up spills and leaks.
- ☐ Maintenance required for washout areas.
- ☐ Protect/Cover materials stored outdoors.
- ☐ Provide spill kit(s) in equipment storage areas.
- ☐ Provide cover for dumpster and trash receptacles.
- ☐ **Immediately** discontinue washing or hosing.
- ☐ Train staff on pollution prevention.
- ☐ Other:_____

Implement corrective actions by _____. A City Inspector will return on or after the correction date to verify that corrective actions were completed and/or BMPs implemented as required. If you have any questions or comments, please contact your inspector.

Comments:

❒ **NO VIOLATIONS OBSERVED DURING THE INSPECTION.**

❒ **VIOLATIONS WERE NOTED DURING THE INSPECTION.**

- ❒ 15.12.050 Prohibited Discharge
- ❒ 15.12.080(E) Reduction of Pollutants
- ❒ 15.12.090 Storm Water Conveyance System Protection
- ❒ 15.12.110 Failure to Implement Corrective Actions
- ❒ 1512.120 Containment, cleanup, and notification of spills
- ❒ 15.16.170 Unlawful Acts
- ❒ 6.08.030 Receptacles Generally
- ❒ 6.08.040 Cleanliness of Solid Waste Receptacles
- ❒ 6.08.050 Solid Waste Receptacles to be Kept Covered
- ❒ 6.08.090 Unlawful Placement of Solid Waste

BMP IMPLEMENTATION AND COMPLIANCE

BMP and Compliance Activity	YES	NO	N/A
Are all inactive slopes properly stabilized?			
Are areas flatter than 3:1 covered or protected?			
Are gravel bags, waddles, silt fences, and other erosion control BMPs in place and functioning properly?			
Do basins appear to be maintained as required?			
Are perimeter control BMPs maintained?			
Is the entrance stabilized to prevent tracking?			
Are storm drain inlets protected and BMPs maintained?			
Are all material and equipment handling, storage and repair areas clean and maintained?			
Are dumpsters and trash receptacles covered?			
Has trash and debris accumulated throughout the site?			
Are stockpiles and spoils protected from runoff?			
Are landscaped areas protected from erosion?			
Are natural areas and open spaces protected?			
Are washout areas maintained and protected?			
Were there any discharges observed during the inspection?			
Is the SWPPP wall map up to date and accurate?			
Was the SWPPP reviewed during this inspection?			
Other:			
Other:			

CORRECTIVE ACTION REQUIRED

- ☐ Provide additional erosion control.
- ☐ Repair/replace erosion control BMPs.
- ☐ Replace broken rock/sand bags.
- ☐ Desiltation/retention basin(s) requires maintenance.
- ☐ Provide additional perimeter controls.
- ☐ Repair/replace perimeter controls.
- ☐ Impervious surfaces need to be swept.
- ☐ Prevent sediment tracking on to street.
- ☐ Clean in and around storm drains.
- ☐ Provide additional protection at storm drain inlets.
- ☐ Discard unusable equipment and materials.
- ☐ Remove trash and debris from project site.
- ☐ Properly store hazardous materials.
- ☐ **Immediately** clean up spills and leaks.
- ☐ Maintenance required for washout areas.
- ☐ Protect/Cover materials stored outdoors.
- ☐ Provide spill kit(s) in equipment storage areas.
- ☐ Provide cover for dumpster and trash receptacles.
- ☐ **Immediately** discontinue washing or hosing.
- ☐ Train staff on pollution prevention.
- ☐ Other:_____

Implement corrective actions by _____. A City Inspector will return on or after the correction date to verify that corrective actions were completed and/or BMPs implemented as required. If you have any questions or comments, please contact your inspector.

Comments:

Carlsbad Municipal Code - Storm Water Violations

- ❒ **CMC 15.12.050** - Prohibited Discharges. The discharge of non-storm water to the storm water conveyance system or to any other conveyance system which discharges into receiving water is prohibited.

- ❒ **CMC 15.12.080(E)** - Reduction of Pollutants. Any person engaged in development, grading or construction in the City of Carlsbad shall utilize best management practices to prevent pollutants from entering the storm water conveyance systems by complying with City Standards, all applicable local ordinances, including Chapter 15.16 of the CMC, the standard specifications for public works construction, when performing public work, and required provisions of all applicable NPDES Permits.

- ❒ **CMC 15.12.090** - Storm Water Conveyance System Protection. Every person owning property though which a storm water conveyance system passes, and such person's lessee or tenant, shall keep and maintain that part of the system within the property free of trash, debris, excessive vegetation, and other obstacles which would pollute, containment or significantly retard the flow of water through the system.

- ❒ **CMC 15.12.110** - Inspection Procedures: Additional Requirements. If corrective action is required, then the occupant, facility owner, and/or facility operator shall implement corrective action plan based upon a written corrective action plan. The corrective action plan shall be submitted to the enforcement agency for review and approval and should state the corrective actions to be taken and the dates of completion.

- ❒ **CMC 15.12.120** - Containment, Cleanup, and Notification of Spills. Any person owning or occupying any premises who has knowledge of any release of significant quantities of materials, pollutants, or waste which may result in pollutants or non-storm water discharges entering the city's storm water conveyance system shall immediately take all reasonable action to contain, minimize, and clean up such release. Such person shall notify the city of Carlsbad of the occurrence and any other appropriate agency of the occurrence as soon as possible, but no later than twenty-four hours from the time of the incident's occurrence

- ❒ **CMC 15.16.170** Unlawful Acts. It is unlawful to grade without application of appropriate storm water best management practices in accordance with the provisions of Title 15, City Standards and Municipal Permit.

- ❒ **CMC 6.08.030** - Receptacles Generally. No person shall deposit, keep or accumulate any solid waste in or upon any public or private premises unless enclosed in watertight receptacles designed to contain solid waste, which shall be of a type and size approved by the Public Work's Director.

- ❒ **CMC 6.08.040** - Cleanliness of Solid Waste Receptacles. No person shall allow grease to accumulate in the interior or on the exterior of a solid waste receptacle.

- ❒ **CMC 6.08.045** - Cleanliness of Solid Waste Receptacle Areas or Enclosures. No person shall allow pollutants or liquids to accumulate around solid waste enclosures or around and/or under solid waste receptacles such that storm water will carry these pollutants or liquids to the storm water conveyance system.

- ❒ **CMC 6.08.050** - Solid Waste Receptacles to be Kept Covered. No person shall permit a solid waste receptacle to remain uncovered or open, or in such condition that flies or vermin may obtain access thereto, except when necessary to place solid waste therein or remove solid waste there from.

- ❒ **CMC 6.08.090** - Unlawful Placement of Solid Waste. No person shall deposit or place any solid waste anywhere other than in an approved solid waste receptacle under his or her control.

- ❒ Other_____

Best management practices (BMP) *means scheduled activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants directly or indirectly to storm water conveyance system and/or receiving waters.* Future violations may result in fines and/or penalties. Any business or individual that violates any provision of the storm water/trash ordinance or fails to implement corrective actions as directed by the enforcement official shall be punished, upon conviction, by a fine not to exceed one thousand dollars for each day in which such violation occurs.

CHANGE HISTORY

REV A

04/27/09 Initial creation of document

06/24/09 Completion and approval of Revision A

Publisher: Shawnetta Grandberry			Date: 06-24-09		
Critical Review By	Signature	Date	Approved By	Signature	Date
Shawnetta Grandberry			Casey Arndt		
Approved By	Signature	Date			
John Maashoff			Patrick Vaughan		

Purpose

The purpose of this procedure is to define the process for inspecting, tracking, and enforcing grading and construction sites listed on the Construction Management and Inspection (CMI) Active Grading Permit and Construction Site Inventory List (Inventory List). CMI inspectors and consultants must have a basic understanding of the requirements of the NPDES inspection program. Please refer to procedure #CMI-120 for the creation, revision and maintenance of the Active Grading Permit and Construction Site Inventory List and #CMI-110 for the NPDES inspection procedure for sites on the Building Permit Inventory List.

Policy

The Construction Management and Inspection Department will conduct NPDES compliance inspections at construction sites listed on the Active Grading Permit and Construction Site Inventory List to assess their threat to water quality, potential to contribute to storm water pollution, applicability to the NPDES permit issued by the Regional Water Quality Control Board of the State of California, and compliance with the Carlsbad Municipal Code.

Scope

This procedure applies to the **Construction Management and Inspection Department** personnel and consultants at the City of Carlsbad, Public Works Department located in Carlsbad, CA.

Associated Documents

Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS0108758

City of Carlsbad Jurisdictional Urban Runoff Management Program (JURMP) from March 2008

City of Carlsbad Engineering Inspection Manual

City of Carlsbad Municipal Code Chapter 15.12

City of Carlsbad Municipal Code Chapter 15.16

City of Carlsbad Municipal Code Chapter 6.08

Acronyms and Definitions

BMP	Best Management Practices
CON	Consultant designated by awarded City contract
CMC	Carlsbad Municipal Code
CM	Construction Manager
DCE	Deputy City Engineer
ESA	Environmentally Sensitive Area
Dry Season	May 1 to September 30
GIS	Geographical Information Systems
Inspection	Refers to onsite evaluation or investigation to determine the effectiveness and adequacy of BMPs – please refer to Appendix A for a copy of the inspection form.
PWI	Public Works Inspector I/II
JURMP	Jurisdictional Urban Runoff Management Program from March 2008
NPDES	National Pollutant Discharge Elimination System
RP	Responsible Party
RWQCB	Regional Water Quality Control Board
SCI	Senior Construction Inspector
SOS	Senior Office Specialist
SWPPP	Storm Water Pollution Prevention Plan
Wet Season	October 1 to April 30

Overview

The City of Carlsbad is committed to inspecting sites and sources listed on the Inventory List to evaluate compliance with applicable storm water regulations, JURMP, General Construction Permit, and the CMC. Site inspections are conducted using the inspection form referenced in Appendix A and pictures are taken when necessary.

City of Carlsbad		CMI - 100	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR ACTIVE GRADING AND CONSTRUCTION SITES	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 4 OF 13	

Active Grading and Construction Site Inspections Procedure:

Step	Who	What	When
1.	SCI	Downloads a Permits Plus report of all active grading and construction sites. Saves the report as an excel file.	Last week of each month
2.	SCI	Reviews monthly active grading and construction site report and updates the active Inventory List. Updates can include removing duplicates and closed projects, prioritizing projects, changing the status of projects, and adding new construction sites to the inventory.	Last week of each month
3.	SCI	Provides PWIs with an updated NPDES inspection list (by inspector) and blank inspection forms for active construction sites requiring NPDES inspections for the current month (see format in Appendix B).	First week of each month
4.	PWI CON SCI	Prepares the NPDES inspection form(s), if necessary. Inspection forms can also be completed in the field as inspections are conducted. Please refer to Appendix A for inspection form and instructions.	At the required frequencies
5.	PWI CON SCI	Performs NPDES inspection(s) using the procedures outlined in CMC 15.12.100, 15.12.110, in this procedure, and in Section D.2.d.(6) of the Permit. A copy of the inspection report must be provided to the RP after the inspection or mailed when corrective actions are required.	At the required frequencies
6.	PWI CON SCI	After completion of the inspection(s), returns to the office and provides the completed inspection reports (white copy only) to the SCI.	End of the month
7.	SCI CM	Verifies accuracy of the information on the inspection reports, updates the Inventory List and Permits Plus. The SOS may also update the Permits Plus database. The SCI will maintain NPDES inspection reports by month for a period not to exceed one year.	Within 30 days of receipt
8.	PWI CON SCI CM	Completes appropriate compliance documents including Warning Notices, Stop Work Orders, Notice of Violation, Administrative Citations, Summary Abatement, and other related compliance actions. Some enforcement actions may also be issued in the field during the inspection. If an enforcement action is issued, the SCI will also update the Permits Plus database.	As needed
9.	PWI SCI CM	Reviews compliance documents for completeness and accuracy. All enforcement actions above a Stop Work Order must be reviewed by the SCI, CM and/or DCE before issuance.	As needed
10.	SCI	Ensures all compliance documents are mailed as required. Provides file to SOS for filing and/or mailing. If the document requires a response, the SOS will return the file to the SCI. If the correspondence does not require a response, the file is returned to the appropriate filing location.	As needed
11.	PWI SCI CM	Follow up per findings and corrective action schedule submitted by contractor of other construction site representative. Actions that require tracking should be provided to the SCI for Permits Plus updates.	As needed

Other Procedural Considerations

- If immediate corrective action is required and there is no staff onsite, the CMI inspector should use the emergency contact list to contact the RP for prompt response. A copy of the inspection report can be faxed or scanned and emailed to the RP. The yellow copy of the inspection report should be mailed to the RP.
- After notifying the RP of the violation, the CMI inspector should document the violation and notification in the project file and note any time frames given for corrective actions or follow-up inspections. In judging the degree of severity, the CMI inspector may also take into account any history of similar or repeated violations at the site. Follow-up activities will be conducted as deemed necessary by the enforcement official or contracted staff, and may be necessary for any enforcement action. After the site visit, the inspector should note the type, if any, of additional enforcement required for the site. This must also be noted in Permits Plus.
- During the rainy season the SCI will monitor the weather on a daily basis. When there is a storm event predicted at 40% or greater, the SCI will send a "Rain Event Alert" to all CMI inspectors and managers that includes the following language:

  There is a predicted 40% or greater chance of rain for Saturday night thru Tuesday morning. It looks like the heaviest part of the storm will start on Sunday night. Please continue to work with your job sites to ensure all areas are protected during the storm.
- Each fiscal year, sites on the Inventory List will be reviewed as time and resources permit. "High" threat to water quality sites and sources will be treated with priority each year for scheduling inspections.

Inspection goals for sites on the Inventory List per fiscal year are as follows:

Season	Frequency	Threat Priority	Inspection Goal
Wet Season	Bi-Weekly	High	100%
Dry Season	Monthly	High	100%
Wet Season	Monthly	Medium	50%
Dry Season	As Needed	Medium	50%
Wet Season	Monthly	Low	25%
Dry Season	As Needed	Low	25%

Inspection goals for sites on the active Inventory List per fiscal year for CMI are as follows:

Priority	Minimum Inspections Required												Minimum Wet Season Inspections	Minimum Dry Season Inspections	Minimum Required Inspections
	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun			
High	1	1	1	2	2	2	2	2	2	2	1	1	14	5	19
Medium	1	0	1	1	1	1	1	1	1	1	0	1	6	3	9
Low	0	0	1	0	0	1	0	0	1	0	0	1	2	2	4

RWQCB Notifications

As required by the Permit and the JURMP, City staff will notify the RWQCB when a construction sites activities endangers health or the environment and when Stop Work Notices or higher enforcement actions are issued. The RWQCB should be notified by email using the form in Appendix D. For those violations that have the potential to endanger health or the environment, the RWQCB must be notified within 24 hours of the time the City becomes aware of the incident. In addition, the City must follow up with a written report of the incident and efforts taken to abate to violation. The CM and SCI are responsible for ensuring notifications are completed as required. The following RWQCB staff should be notified when required:

Laurie A. Walsh
California RWQCB – San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123-4340
858-467-2970
lwalsh@waterboards.ca.gov

Eric Becker
California RWQCB – San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123-4340
858-467-1785
ebecker@waterboards.ca.gov

In addition the following City staff should also be notified:

Public Works Director
City Engineer
Deputy City Engineer
Public Works Manager – Administration and Environmental Programs
Construction Manager

Recordkeeping and Reporting

The SCI and SOS are responsible for maintaining all aspects of the inspection and correspondence hardcopy filing system. Inactive grading permits and projects will be maintained for a minimum of 3 years. On an annual basis, the SCI will provide a JURMP Annual Report submission to the CM and DCE that includes the following information:

- Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.
- For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.
- A description of the general results of the inspections.
- Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.
- The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

All inspection related forms are located on the shared drive at:

Equipment List

In preparation for conducting site inspections and investigations, CMI inspectors should have the following equipment:

- Metal clip board
- Inspection and enforcement forms
- Digital camera
- Pens and pencils
- City identification
- Business cards
- Field notebook
- Thomas Guide
- If appropriate, applicable site plans and documents
- Copies of the CMC, Municipal Permit, and General Construction Permit
- If necessary, photos or copies of previous inspection reports

Safety Considerations

Hazards may exist at the various construction sites inspectors visit. These hazards could include sharp edges, falling objects, flying sparks, chemicals, noise, uneven pavement and a myriad of other potentially dangerous situations. Inspectors must be aware of their environment and take the appropriate precautions to protect themselves from potential hazards and injuries. Personal protective equipment, commonly referred to as "PPE", may be required at certain sites and in certain situations to minimize exposure to a variety of hazards. The following PPE should be available to the inspector during site visits:

- hard hat
- flashlight
- safety glasses
- ear plugs
- steel-toed boots
- storm drain puller
- safety vest
- hand sanitizer
- leather work gloves
- first aid kit

Appendices

Appendix A: Storm Water Inspection Form and Instructions
Appendix B: Sample Monthly NPDES Inspection List Format
Appendix C: NPDES Inspection Form
Appendix D: RWQCB Notification Form

Appendix A

NPDES Inspection Report Form and Instructions

Inspector: The last name and first initial of the person conducting the inspection.

Date: The date the inspection occurred. Must be entered in the following format:

Project #: The project number or building permit number used in Permits Plus to track the inspection.

Time: The time the inspection occurred.

GR Permit #: The grading permit number(s) assigned to the project. The GR Permit number(s) must be directly associated with the Project Number.

Inspection Type: The type of inspection or investigation conducted as follows:

- Compliance: Inspection conducted at the minimum required frequency necessary to verify compliance.
- Follow Up: An inspection, other than a compliance inspection, conducted to verify if corrective actions have been completed as required by the City.

Weather Conditions: The inspector should note the weather conditions while conducting an inspection.

BMP IMPLEMENTATION AND COMPLIANCE

BMP and Compliance Activity	YES	NO	N/A	CORRECTIVE ACTION REQUIRED
Are all inactive slopes properly stabilized?				☐ Provide additional erosion control.
Are areas flatter than 3:1 covered or protected?				☐ Repair/replace erosion control BMPs.
Are gravel bags, waddles, silt fences, and other erosion control BMPs in place and functioning properly?				☐ Replace broken rock/sand bags.
Do basins appear to be maintained as required?				☐ Desiltation/retention basin(s) requires maintenance.
Are perimeter control BMPs maintained?				☐ Provide additional perimeter controls.
Is the entrance stabilized to prevent tracking?				☐ Repair/replace perimeter controls.
Are storm drain inlets protected and BMPs maintained?				☐ Impervious surfaces need to be swept.
Are all material and equipment handling, storage and repair areas clean and maintained?				☐ Prevent sediment tracking on to street.
Are dumpsters and trash receptacles covered?				☐ Clean in and around storm drains.
Has trash and debris accumulated throughout the site?				☐ Provide additional protection at storm drain inlets.
Are stockpiles and spoils protected from runoff?				☐ Discard unusable equipment and materials.
Are landscaped areas protected from erosion?				☐ Remove trash and debris from project site.
Are natural areas and open spaces protected?				☐ Properly store hazardous materials.
Are washout areas maintained and protected?				☐ **Immediately** clean up spills and leaks.
Were there any discharges observed during the inspection?				☐ Maintenance required for washout areas.
Is the SWPPP wall map up to date and accurate?				☐ Protect/Cover materials stored outdoors.
Was the SWPPP reviewed during this inspection?				☐ Provide spill kit(s) in equipment storage areas.
Other:				☐ Provide cover for dumpster and trash receptacles.
Other:				☐ **Immediately** discontinue washing or hosing.
				☐ Train staff on pollution prevention.
				☐ Other:_____

Implement corrective actions by _____. A City Inspector will return on or after the correction date to verify that corrective actions were completed and/or BMPs implemented as required. If you have any questions or comments, please contact your inspector.

Comments:

☐ NO VIOLATIONS OBSERVED DURING THE INSPECTION.

☐ VIOLATIONS WERE NOTED DURING THE INSPECTION.

- ☐ 15.12.050 Prohibited Discharge
- ☐ 15.12.080(E) Reduction of Pollutants
- ☐ 15.12.090 Storm Water Conveyance System Protection
- ☐ 15.12.110 Failure to Implement Corrective Actions
- ☐ 1512.120 Containment, cleanup, and notification of spills
- ☐ 15.16.170 Unlawful Acts
- ☐ 6.08.030 Receptacles Generally
- ☐ 6.08.040 Cleanliness of Solid Waste Receptacles
- ☐ 6.08.050 Solid Waste Receptacles to be Kept Covered
- ☐ 6.08.090 Unlawful Placement of Solid Waste
- ☐ Other_____ _____

The Notice Serves As:	☐ Verbal Warning	☐ Written Warning	☐ Field Memo	☐ Referred for Action		
BMP Assessment (circle one)	5 4 3 2 1	Knowledge Assessment (circle one)	5 4 3 2 1	☐ Contact not available		

White: CMI Yellow: Job Site

BMP IMPLEMETATION AND COMPLIANCE: The inspector should use this section to evaluate potential sources of pollution from the construction site activities and operations to assess compliance. The activity questions should be answered using the appropriate responses in the column to the right. If the BMP compliance activity is not listed among the choices, the inspector can use the "Other" space to identify the specific BMP requirements.

CORRECTIVE ACTION REQUIRED: If the construction site is required to implement corrective action as a result of the inspection or investigation, the inspector should check the appropriate box. If the corrective action is not listed among the choices, the inspector can use the "Comments" area to list

the specific BMP requirements. In addition, the inspector should note the date corrective actions must be completed by in order for the site to be in compliance.
COMMENTS: The inspector can note additional information about the inspection or investigation including but not limited to, specific BMPs needed, additional requirements, observations, etc.

NO VIOLATIONS OBSERVED DURING THE INSPECTION: If no violations were observed during the inspection, the inspector should check this box.

VIOLATIONS WERE OBSERVED DURING THE INSPECTION: When violations of the CMC are noted the inspector should check the applicable boxes related the CMC citation.

Inspector Signature: The inspector must sign the inspection report.

Received By –Please Print: The inspector must print the name of the job site representative that received the report.

Received By – Signature: The signature of the job site representative that received the inspection report. If a representative is not available to receive the report or refuses to sign the report, the "Mailed" box should be checked and the report will be mailed to the job site primary contact.

Date: The date the inspection report was completed by the CMI inspector.

The Notice Serves As: If during the inspection, violations are observed the inspector can also note that the inspection report service as one of the following types of enforcement actions:

- Verbal Warning: Note taken that verbal instruction requiring immediate corrective action was issued during the inspection.
- Written Warning: Notice that the inspection report serves as Written Warning that corrective action that must be completed by the specific date noted on the report.
- Field Memo: An informal written reminder that BMPs must be maintained and/or that minor violations were noted during the inspection.
- Referred Action: If the construction site had violations that require notification to other City departments, RWQCB, or other agency, the inspector should check this box. The CM and SCI are responsible for ensuring notifications are completed as required.

BMP Assessment: Numeric value field assessing the overall level of BMP implementation for storm water pollution prevention. This assessment will be conducted during the inspection with or without contact with a site representative.

- Level 5: All BMPs implemented effectively. No violations noted during the inspection.
- Level 4: BMPs implemented effectively, however minor violations associated with communal areas or good housekeeping practices (i.e., dumpsters open, leaves in the parking lot, etc.) were noted during the inspection.
- Level 3: BMPs have been implemented throughout the site, but not properly or adequately maintained. Violations were noted during the inspection and a verbal warning was issued. A detailed inspection report or written Warning Notice may follow.

- Level 2: BMPs have not been implemented. Several violations were noted during the inspection, however an illegal discharge was not observed. A detailed inspection report and/or enforcement action was issued.
- Level 1: **An illegal discharge was noted during the inspection**. Enforcement action (Stop Work Notice, NOV, or Administrative Citation, etc.) is required.

Knowledge Assessment: Numeric value assessing the overall level of knowledge of the employee related to storm water pollution prevention. This assessment will only be conducted during the inspection when there is contact with a job site representative.

- Level 5: Individual demonstrated an in depth knowledge of the storm water program and BMPs consistent with the site's activities and operations.
- Level 4: Individual has a clear understanding of BMPs but may not have a clear awareness of the connection between pollution prevention and water quality.
- Level 3: Individual has a general understanding of storm water issues (*I've heard something about that*), but not specific storm water requirements or BMPs required for the site.
- Level 2: Individual has a general awareness of water quality issues, but does not understand the requirements of the storm water program, BMPs, or pollution prevention.
- Level 1: Individual has never heard of the storm water program, requirements, or BMPs. This individual does know what BMPs are or understand how to implement them.

Are washout areas maintained and protected?				☐ **Immediately** clean up spills and leaks.
Were there any discharges observed during the inspection?				☐ Maintenance required for washout areas.
Is the SWPPP wall map up to date and accurate?				☐ Protect/Cover materials stored outdoors.
Was the SWPPP reviewed during this inspection?				☐ Provide spill kit(s) in equipment storage areas.
Other:				☐ Provide cover for dumpster and trash receptacles.
Other:				☐ **Immediately** discontinue washing or hosing.
				☐ Train staff on pollution prevention.
				☐ Other:_____

Implement corrective actions by _____. A City Inspector will return on or after the correction date to verify that corrective actions were completed and/or BMPs implemented as required. If you have any questions or comments, please contact your inspector.

Comments:

☐ NO VIOLATIONS OBSERVED DURING THE INSPECTION.

☐ VIOLATIONS WERE NOTED DURING THE INSPECTION.

- ☐ 15.12.050 Prohibited Discharge
- ☐ 15.12.080(E) Reduction of Pollutants
- ☐ 15.12.090 Storm Water Conveyance System Protection
- ☐ 15.12.110 Failure to Implement Corrective Actions
- ☐ 1512.120 Containment, cleanup, and notification of spills
- ☐ 15.16.170 Unlawful Acts
- ☐ 6.08.030 Receptacles Generally
- ☐ 6.08.040 Cleanliness of Solid Waste Receptacles
- ☐ 6.08.050 Solid Waste Receptacles to be Kept Covered
- ☐ 6.08.090 Unlawful Placement of Solid Waste
- ☐ Other_____ _____

INCIDENT NOTIFICATION

CMI Incident Notification No. CB081283

Type of Notice Issued: Stop Work Notice **Date Issued:** April 10, 2009

Date of RWQCB Notification: April 13, 2009

Project: 1850 Tule Court – Baykal Residence (Single family lot remodel of existing dwelling)

Reason for Notice: Trash and construction waste and debris once again piled in the back yard and around the east side yard. Concrete washout and some type of resin was on the ground in the back yard. No washout facility available. Track out from the west entrance. Wet saw stored near the west opening in the wall was set on plastic but there were no BMPs in place to prevent any potential discharges. No discharge to the storm drain was observed.

Follow Up Actions: The project will be completely shut down until corrective actions are implemented. CMI inspectors are working with the property owner and contractor to ensure BMPs are adequately implemented in an expeditious manner.

Sent to RWQCB via: ■ **Email** ☐ **Fax** ☐ **Mailed Letter** ☐ **Phone**

City of Carlsbad		CMI - 110	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR BUILDING PERMITS	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 2 OF 7	

Purpose

The purpose of this procedure is to define the process for inspecting, tracking, and enforcing building sites listed on the Construction Management and Inspection building permit inventory list. CMI inspectors need to have a basic understanding of the background and requirements of the NPDES inspection program to conduct effective site evaluations and investigations. Procedure #CMI-130 covers the creation, revision and maintenance of the building permit inventory list and will be developed in FY 09-10. All forms related to this procedure can be found in procedure #CMI-100.

Policy

The Construction Management and Inspection Department and Building Department will conduct storm water compliance inspections at and building sites listed on the active building permit inventory to assess their threat to water quality, potential to contribute to storm water pollution, applicability to the NPDES permit issued by the Regional Water Quality Control Board of the State of California, and compliance with the Carlsbad Municipal Code.

Scope

This procedure applies to the **Construction Management and Inspection Department and Building Department** personnel and consultants at the City of Carlsbad, Public Works Department, located in Carlsbad, CA.

Associated Documents

Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS0108758

JURMP	Jurisdictional Urban Runoff Management Program from March 2008
NPDES	National Pollutant Discharge Elimination System
RP	Responsible Party
RWQCB	Regional Water Quality Control Board
SCI	Senior Construction Inspector
SOS	Senior Office Specialist
SWPPP	Storm Water Pollution Prevention Plan
Wet Season	October 1 to April 30

Overview

The City of Carlsbad is committed to inspecting sites and sources listed on the active building permit inventory list to evaluate compliance with applicable storm water regulations, JURMP, and the CMC. Site inspections are conducted using the inspection form and instructions referenced in procedure #CMI-100.

City of Carlsbad		CMI - 110	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR BUILDING PERMITS	☐ POLICY ☐ PROCESS X PROCEDURE	NUMBER	REVISION
		PAGE 4 OF 7	

Building Site Inspections Procedure:

Step	Who	What	When
1.	CM SCI	Downloads a Permits Plus report of all "finaled" and new building permits issued within the previous month (e.g. July 1 through August 1).	First week of the month
2.	CON BI PWI SCI	Reviews building permit report and updates the active building permit inventory. Only those permits categorized as "Residential Building Sites" and "Tenant Improvements" will be considered for inspection. Updates can include removing duplicates and closed permits, prioritizing permits, changing the status of permits, and adding new building permits.	First week of the month
4.	CON BI PWI	Prepares the NPDES inspection form(s) prior to the site visit. Inspection forms can also be completed in the field as inspections are conducted. Please refer to Appendix A from procedure #CMI-100 for inspection form and instructions.	At the required frequencies
5.	CON BI PWI	Performs the NPDES inspection using the procedures outlined in CMC 15.12.100, 15.12.110, in this procedure, and in Section D.2.d.(6) of the Permit. The yellow copy of the inspection report must be provided to the RP after the inspection or mailed when corrective actions are required.	At the required frequencies
6.	CON BI PWI	After completion of the inspection(s), returns to the office and updates the building permit inventory.	At the required frequencies
8.	CON BI PWI SCI	Completes appropriate compliance documents including: inspection reports, Warning Notices, Stop Work Orders, Notice of Violation, Administrative Citations, Notice to Clean, and other related NPDES compliance actions. Some of these compliance actions (i.e. Stop Work Order, NOV, etc.) may also be issued in the field after the inspection.	As needed
9.	BI PWI SCI	Reviews compliance documents for completeness and accuracy. All enforcement actions above a Stop Work Order must be reviewed by the SCI, CM and/or DCE before issuance.	As needed
10.	CON BI SCI	Ensures all compliance documents are mailed as required. Provides file to SOS for filing and/or mailing. If the document requires a response, the SOS will return the file to the SCI. If the correspondence does not require a response, the file is returned to the appropriate filing location.	As needed
10.	CON BI PWI	Follow up per findings and corrective action schedule submitted by the RP. Updates building permits inventory.	As needed

Other Procedural Considerations

- If immediate corrective action is required for a building site and there is no staff onsite, the inspector should use the emergency contact list to contact the RP for prompt response. A copy of the inspection report can be faxed or scanned and emailed to the RP. The yellow copy of the inspection report should be mailed to the RP.

- During the rainy season the SCI will monitor the weather on a daily basis. When there is a storm event predicted at 40% or greater, the SCI will send a "Rain Event Alert" to all CMI staff that could include the following message:

  There is a predicted 40% chance or greater of rain for Saturday night thru Tuesday morning. It looks like the heaviest part of the storm will start on Sunday night. Please continue to work with your job sites to ensure all areas are protected during the storm.
- Each fiscal year, sites on the building permit inventory list will be regularly reviewed as time and resources permit. "High" threat to water quality sites and sources will be treated with priority each year for scheduling inspections until complete.
- After notifying the RP of a violation, the inspector should document the violation and notification in the inspection file. In judging the degree of severity, the inspector may also take into account any history of similar or repeated violations at the site. After the site visit, the inspector should note the type, if any, of additional enforcement required for the site.
- Inspection frequencies for sites on the building permits inventory list are as follows:

Inspection Frequencies by Month

Priority	Minimum Inspections Required												Minimum Wet Season Inspections	Minimum Dry Season Inspections	Minimum Required Inspections
	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun			
High	1	1	1	2	2	2	2	2	2	2	1	1	14	5	19
Medium	1	0	1	1	1	1	1	1	1	1	0	1	6	3	9
Low	0	0	1	0	0	1	0	0	1	0	0	1	2	2	4

RWQCB Notifications

As required by the Permit and the JURMP, City staff will document observations of violations and will notify the RWQCB when non-compliance endangers health or the environment. Additionally, the SCI and/or CM will notify the RWQCB when Stop Work Notices or higher enforcement actions are issued. The RWQCB should be notified by email using the form in Appendix D from procedure #CMI-100. The RWQCB must be notified within 24 hours of the time the City becomes aware of the incident. In addition, the City must follow up with a written report of the incident and efforts taken to abate the violation. The CM and SCI are responsible for ensuring notifications are completed as required.

The following RWQCB staff should be notified when required:

Laurie A. Walsh
California RWQCB – San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123-4340
858-467-2970
lwalsh@waterboards.ca.gov

Eric Becker
California RWQCB – San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123-4340
858-467-1785
ebecker@waterboards.ca.gov

In addition the following City staff should also be notified:

Public Works Director
City Engineer
Deputy City Engineer
Public Works Manager – Administration and Environmental Programs
Construction Manager

Recordkeeping and Reporting

The CON and SCI are responsible for maintaining all aspects of the inspection and correspondence hardcopy filing system for the building permit inventory. Inactive building permits will be maintained for a minimum of 3 years. On an annual basis, the CM and SCI will provide a JURMP Annual Report submission to the DCE that includes the following information:

- Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.
- For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.
- A description of the general results of the inspections.
- Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.
- The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

All inspection related forms are located on the shared drive at:

K:/NPDES/Approved Procedures/CMI 110 NPDES Inspections – Building Permits

Equipment List

In preparation for conducting site inspections and investigations, inspectors should have the following equipment:

- Metal clip board
- Inspection and enforcement forms
- Digital camera
- Pens and pencils
- City identification
- Business cards
- Field notebook
- Thomas Guide
- If appropriate, applicable site plans and documents
- Copies of the CMC, Municipal Permit, and General Construction Permit
- If necessary, photos or copies of previous inspection reports

Safety Considerations

City of Carlsbad		CMI - 110	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR BUILDING PERMITS	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 7 OF 7	

Hazards may exist at the various sites throughout the City. These hazards could include sharp edges, falling objects, flying sparks, chemicals, noise, uneven pavement and a myriad of other potentially dangerous situations. Inspectors must be aware of their environment and take the appropriate precautions to protect themselves from potential hazards and injuries. Personal protective equipment, commonly referred to as "PPE", may be required at certain sites and in certain situations to minimize exposure to a variety of hazards. The following PPE should be available to the inspector during site visits:

- hard hat
- flashlight
- safety glasses
- ear plugs
- steel-toed boots
- storm drain puller
- safety vest
- leather work gloves
- first aid kit

Purpose

The purpose of this procedure is to define the process for managing and updating data on the Construction Management and Inspection Department's Active Grading Permit and Construction Site Inventory List (Inventory List). The Inventory List is updated and reviewed for inspection applicability on a monthly basis, within each fiscal year.

Policy

The City of Carlsbad's Construction Management and Inspection Department will maintain an Active Grading Permit and Construction Site Inventory List of sites and sources within its jurisdiction that will be inspected as required by the NPDES permit issued by the Regional Water Quality Control Board of the State of California and the Carlsbad Municipal Code.

Scope

This procedure applies to the **Construction Management and Inspection Department** personnel and consultants at the City of Carlsbad, Public Works Department located in Carlsbad, CA.

Associated Documents

Definitions and Acronyms

BMP	Best Management Practices
CMC	Carlsbad Municipal Code
CM	Construction Manager
ESA	Environmentally Sensitive Area
Dry Season (DS)	May 1 to September 30
GIS	Geographical Information Systems
Inspection	Refers to onsite visit of a construction site by City personnel – please refer to Appendix A of procedure #CMI-100 for a copy of the inspection form.
PWI	Public Works Inspector I/II
JURMP	Jurisdictional Urban Runoff Management Program from March 2008
NPDES	National Pollutant Discharge Elimination System
Permit	Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS0108758
RWQCB	Regional Water Quality Control Board
SCI	Senior Construction Inspector
SOP	Standard Operating Procedure
SOS	Senior Office Specialist
SWPPP	Storm Water Pollution Prevention Plan
Wet Season (WS)	October 1 to April 30

Overview

The intent of the Inventory List is to satisfy the NPDES requirements as outlined in Section 5 of the JURMP and Section D.2 of the Permit. The City of Carlsbad is required to track, assess, and prioritize active grading permit and construction sites and sources within its jurisdiction to determine their potential threat to water quality, applicability of NPDES regulations, and compliance with the CMC. These assessments include a review and consideration of project size, planned period of grading, proximity of the project to an ESA, past record of compliance by the operators of the construction site, and potential to discharge non-storm water or pollutants. Please refer to JURMP for description of the applicable threat prioritization criteria.

City of Carlsbad		CMI - 120	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION ACTIVE GRADING PERMIT AND CONSTRUCTION SITE INVENTORY LIST MANAGEMENT	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 4 OF 9	

Inventory Management Procedure:

Step	Who	What	When
1.	SCI	Downloads a Permits Plus report of all active grading and construction sites. Saves the report as an excel file.	Last week of the month
2.	SCI	Reviews the monthly active grading and construction site report and updates the current Inventory List. Updates can include removing duplicates and closed project, prioritizing projects, changing the status of projects, and adding new sites to the Inventory List.	Last week of the month
3.	SCI	New grading permits are screened and prioritized using the prioritization criteria outlined in JURMP and the Permit. GIS is used to verify property ownership, lot size, and proximity to the ESA. Construction sites located within 200 feet of an ESA will also be evaluated to determine if the ESA is a 303(d) listed water body and if the site has the potential to generate pollutants for which that water body is impaired. If the construction site is not located within 200 feet of an ESA, "No" is entered into Column "AG" on the Inventory List.	Last week of the month
4.	SCI	Sorts the Inventory List by "Inspector", "Priority", and "Status". Uses the excel format to develop an updated NPDES inspection list (see procedure #CMI-100 Appendix B). The updated inspection list is compared to the previous month's inspection list for consistency.	Last week of the month
5.	SCI	Provides each PWI with an updated NPDES inspection list (by inspector) and blank inspection forms for sites requiring inspection.	First week of each month
6.	PWI	Conducts the required inspections. Completed NPDES inspection reports are provided to the SCI for the previous month.	First of every month
7.	SCI	Reviews completed NPDES inspection reports from the PWIs for the previous month. White hard copies are sorted by inspector and grading permit number. Yellow copies of inspection reports are mailed as time and resources are available.	Within 30 days of receipt
8.	SCI CM SOS	Verifies accuracy of the inspection reports and updates the Inventory List and Permits Plus database. When a required inspection report is missing, the data will be noted in red for the appropriate month and the inspector and/or CM notified. The SOS may also update the Permits Plus database. The SCI will maintain NPDES inspection reports by month for a period not to exceed one year.	Within 30 days of receipt
9.	SCI SOS	Files and maintains records of all NPDES inspection reports.	Within 30 days of receipt
10.	SCI CM	At the end of each fiscal year (July 1 – June 30), closes and archives the current fiscal year inventory list and creates the new fiscal year inventory list. Please see "End of Year and Beginning of Year" procedures section.	By July 15

City of Carlsbad		CMI - 120	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION ACTIVE GRADING PERMIT AND CONSTRUCTION SITE INVENTORY LIST MANAGEMENT	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 5 OF 9	

End of Year (EOY) and Beginning of Year (BOY) Procedures

Step	Who	What	When
1.	SCI	Ensures all updates and entries to the Inventory List are accurate and complete.	By July 15
2.	SCI	Saves and moves the EOY (as of June 30) to the appropriate archive folder. The EOY Inventory List will be used to calculate the NPDES inspection activities for the fiscal year.	By July 15
3.	SCI	The EOY inventory is copied, moved to the appropriate archive folder, and renamed for the new fiscal year (BOY). The inventory list is sorted by "Status." Only those grading permits that are "Active" (see Appendix A) will be carried forward to the next fiscal year's Inventory List. All other entries will be deleted.	By July 15
4.	SCI PWI	Reviews each active grading permit to ensure that priority and status is current. The SCI will update the Inventory List to reflect any changes.	By August 1
5.	SCI	The information in Columns "H" and I" will be changed to reflect the expected inspection frequencies for the current fiscal year. A complete fiscal year usually includes 30 wet season weeks and 22 dry season weeks.	By July 15
6.	SCI	The information in Columns "J" through U" will be deleted for the current fiscal year.	**By July 15**
7.	SCI	The name of column "X" will be updated for the current fiscal year.	**By July 15**
8.	SCI	The information in columns "Y" and "Z" will be changed to reflect the expected inspection frequencies for the current fiscal year. See the required "Inspection Frequencies by Month" table found in the ***Other Procedural Considerations*** section.	**By July 15**
9.	SCI	Saves the BOY Inventory List in the appropriate folder.	**By July 15**

Other Procedural Considerations

- If a grading permit is finaled, withdrawn, or the priority changes before the end of the fiscal year, the appropriate inactive months are shaded in columns "J' through "U" on the Inventory List. In addition columns "H", "I", "Y", and "Z" of the Inventory List must be updated to reflected the changes in the frequencies of required inspections.

Inspection frequencies for sites on the Inventory List per fiscal are as follows:

Priority	Minimum Inspections Required												Minimum Wet Season Inspections	Minimum Dry Season Inspections	Minimum Required Inspections
	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun			
High	1	1	1	2	2	2	2	2	2	2	1	1	14	5	19
Medium	1	0	1	1	1	1	1	1	1	1	0	1	6	3	9
Low	0	0	1	0	0	1	0	0	1	0	0	1	2	2	4

- The priority of active permits can be changed if the project is completed but not yet finaled. When the priority of an active grading permit changes, columns “H”, “I”, “Y”, and “Z” of the Inventory List must be updated to reflected the changes in the frequencies of required inspections.
- Column headings that are noted in “Red” will remain so and are used for wet season delineation.

Recordkeeping and Reporting

The SCI is responsible for maintaining all aspects of the Inventory List, including information to be entered, changed, or deleted within cells, changes to column headings, definitions, or additions/deletions of columns.

Hard copies of records from “Finaled” and “Withdrawn” files will be maintained for a minimum of 3 years. Finaled “High Threat” sites and sources with a history of compliance problems will be maintained for no less than five years. Previous fiscal year Inventory Lists will be maintained electronically in an “Archive” file on the shared drive.

On an annual basis, the SCI will provide a JURMP Annual Report submission to the CM and DCE that includes the following information:

- Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.
- For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.
- A description of the general results of the inspections.

All Inventory List related information is located on the shared drive at:

K:/NPDES/Approved Procedures/CMI-120 NPDES Active Grading Inventory Management

Appendices

Appendix A: Inventory List Column Headings and Definitions

APPENDIX A

Inventory List Column Headings and Definitions

A. STATUS: Status of grading permit based on information from Permits Plus. Only the following can be entered into this field.
- **Active**: The grading permit has been verified as active and will inspected at the required frequencies by CMI.
- **Finaled**: The grading permit has been closed. The project has been completed and the bonds released. No additional NPDES inspections are required.
- **Withdrawn**: The grading permit application has been withdrawn. No additional NPDES inspections are required until further notice.
- **Expired**: The grading permit has expired and must be renewed before active grading or construction can begin. NPDES inspections are not required until further notice.

B. PRIORITY: The threat to water quality prioritization based on the criteria listed in JURMP and Permit. This field can only be populated with the following responses:
- High
- Medium
- Low

C. PROJECT #: The project number associated with the grading permit. This information can be found in Permits Plus.

D. GRADING PERMIT#: The grading permit number assigned to the project. This number is generated in Permits Plus.

E. INSPECTOR: The name of the inspector assigned to the project.

F. ISSUE DATE: The date the grading permit was issued. This information corresponds with Permits Plus.

G. INACTIVE DATE: The date the grading permit was "Finaled" or "Withdrawn". This information corresponds with Permits Plus.

H. WEEKS ACTIVE – WS: The number of weeks the grading permit is expected to be active during the wet season (WS). For an average fiscal year that number equals 30.

I. WEEKS ACTIVE – DS: The number of weeks the grading permit is expected to be active during the dry season (DS). For an average fiscal year that number equals 22.

J-U. INSPECTIONS CONDUCTED: The total number of inspections conducted for each month of the fiscal year. Those months with the wet season are noted in red. See the ***Other Procedural Considerations*** section for guidance on dealing with permits that are finaled or withdrawn before the end of the fiscal year.

V. TOTAL WS INSPECTIONS: Auto-formatted cell that quantifies the numeric values of columns "M" through "S", the total number of wet season inspection conducted.

W. TOTAL DS INSPECTIONS: Auto-formatted cell that quantifies the numeric values of columns "J" through "L" and columns "T" and "U", the total number of dry season inspections conducted.

X. TOTAL '*FY*' INSPECTIONS: Auto-formatted cell that quantifies the numeric values of columns "V" through "W", the total number of inspections conducted for the fiscal year.

Y. TOTAL WS REQUIRED: The total number of wet season inspections required for the FY. For the minimum required frequencies see the "Inspection Frequencies by Month" table found in the ***Other Procedural Considerations*** section of procedure #CMI-100.

Z. TOTAL DS REQUIRED: The total number of dry season inspections required for the fiscal year. For the minimum required frequencies see the "Inspection Frequencies by Month" table found in the ***Other Procedural Considerations*** section of procedure #CMI-100.

AA. TOTAL REQUIRED: Auto-formatted cell that quantifies the numeric values of columns "Y" through "Z", the total number of required inspections for the fiscal year.

AB. APN: The assessor parcel number associated with the grading permit.

AC. LOCATION: A descriptive physical location of the project.

AD. PROJECT DESCRIPTION: The primary project name as defined by Permits Plus.

AE. CHU: The water body or watershed within the Carlsbad Hydrologic Unit that receives run off from the construction site. Only the following can be entered into this field:

- **904.21:** Buena Vista Lagoon
- **904.31:** Agua Hedionda Lagoon
- **904.40:** Encinas Creek
- **904.51:** Batiquitos Lagoon

AF. ACRES: The approximate size of the construction project.

AG. PROXIMITY: Is the construction site within 200 feet of an ESA (as defined in Attachment C of the Permit), including receiving waters, habitat management areas, wildlife corridors, etc. (as determined by GIS mapping)? The following entries are acceptable in this field:

- Yes: The construction site is located within 200 feet of an ESA.
- No: The construction site is not located within 200 feet of an ESA.

AH. TRIBUTARY TO 303(d) LISTED: Is the site a tributary to a 303(d) listed receiving water (within an ESA buffer) and generates pollutants for which the water body is impaired? The following entries are acceptable in this field:

- Yes: The site discharges to a tributary to a 303(d) listed receiving water and generates pollutants for which the water body is impaired.
- No: The site does not discharge to a tributary to a 303(d) listed receiving water and/or does not generate pollutants for which the water body is impaired.

The following is a list of 303(d) listed water bodies in Carlsbad.

Receiving Waterbody	Pollutant Impairment
Agua Hedionda Creek	Manganese

Receiving Waterbody	Pollutant Impairment
	Selenium
	Sulfates
	TDS
Agua Hedionda Lagoon	Bacteria
	total coliform
	fecal coliform
	enterococcus
	Sedimentation/Siltation
Buena Vista Creek	Sediment Toxicity
Buena Vista Lagoon	Bacteria
	total coliform
	fecal coliform
	enterococcus
	Nutrients
	Sedimentation/Siltation
Pacific Ocean at Buena Vista Creek	Bacteria
Buena Vista Creek	total coliform
Carlsbad Village Drive	fecal coliform
Pine Avenue	enterococcus
Encinitas Creek	Phosphorus
Escondido Creek	DDT
	Mn
	Phosphate
	Se
	Sulfates
	TDS
San Marcos Creek	DDE
	Phosphorus
	Sediment Toxicity

City of Carlsbad

Construction Management and Inspections

September 3, 2008

MEMORANDUM

To: Property Owners/Developers/Contractors - All Active Construction Sites in the City of Carlsbad

From: Shawnetta Grandberry, Senior Construction Inspector, Storm Water Compliance

RAINY SEASON PREPARATION AND STORM WATER COMPLIANCE

The City of Carlsbad (City) would like to take this opportunity to remind you that the rainy season begins on **October 1, 2008**. As you are aware, additional storm water pollution prevention measures are required during the rainy season, which ends on May 1, 2009. Pursuant to Carlsbad Municipal Code (CMC) Chapter 15.16.120, the California Regional Water Quality Control Board (RWQCB) Order 2007-0001, and the City of Carlsbad 2008 Jurisdictional Urban Runoff Management Plan (JURMP) all erosion and sedimentation control measures shall be installed prior to and regularly maintained during the rainy season.

Property Owners/Developers/Contractors at all active construction sites in Carlsbad are required to comply with all applicable storm water regulations and implement BMPs to the maximum extent practicable. It is the City's goal to obtain your voluntary compliance with the applicable regulations and requirements. The following measures are required for all active construction sites during the rainy season:

- **All** exposed disturbed areas must have erosion protection BMPs properly installed. This includes all building pads, unfinished roads, and slopes.
- Perimeter protection and sediment control BMPs will be upgraded, if necessary, to provide sufficient protection from runoff during the rainy season.
- Adequate physical or vegetation erosion control BMPs will be installed and maintained for all completed slopes prior to the start of the rainy season.
- All disturbed areas that are not completed, but that are not being actively graded, must be fully protected from erosion if left for 10 or more days. The ability to install BMP materials in a prompt manner is **NOT** sufficient for these areas. **BMP's will actually need to be installed for these areas.**
- Deployment of physical or vegetation erosion control BMP's will commence as soon as slopes are completed for any portion of the site.
- When a ***Rain Event Action Plan*** is required it must updated on a weekly basis. The plan shall include, in detail, any and all actions to be taken in advance (40% chance or greater) of a rain event in the five (5) day forecast by the National Weather Service. A copy of each updated action plan shall be placed in the project SWPPP.
- All (temporary and permanent) treatment control BMPs must be inspected weekly and prior to a forecasted rain event of greater than 40%.
- Inspections of each site shall be conducted by the responsible party or designee prior to a forecasted event, during and after a rain event, at least bi-weekly during the rainy season, and as necessary to ensure site compliance.
- All construction employees must be strained on the importance of storm water pollution prevention and BMP maintenance prior to the rainy season.
- All construction and grading projects are required to emphasize erosion prevention as the most important measure for keeping sediment on-site during construction. Sediment controls are to be used as a supplement to erosion prevention never as the single or primary method.

The City will continue to conduct scheduled and unscheduled inspections to verify compliance with storm water regulations. Please keep in mind that compliance is dependent on the continued use of BMPs to prevent storm water pollution and the consistent implementation of an employee-training program. Please contact your Project Inspector to review your specific project requirements. Thank you in advance for your cooperation and compliance efforts.

Storm Water Compliance Inspections

The City of Carlsbad has developed an inventory of special events. These special events have been prioritized according to type of event, number in attendance, proximity to the nearest water body, and potential threat to water quality. Based on this prioritization, the City will be conducting storm water compliance inspections of most **special events** within the City. These compliance inspections will include a pre-event inspection where storm water BMPs are evaluated. An event inspection is required to determine the effectiveness of BMPs, and a post-event inspection to ensure the site is properly cleaned. Compliance inspections may also include recommendations for additional measures that may be required to comply with the storm water regulations. Please note that all special events in the City of Carlsbad are required to implement all of the minimum special event BMPs and comply with all applicable regulations outlined in the Carlsbad Municipal Code.

City of Carlsbad
5950 El Camino Real
Carlsbad, CA 92008

Sanitary Sewer vs. Storm Drain What's the difference?

The water that drains down a sink or toilet flows to the sanitary sewer and is treated at a wastewater treatment plant before being discharged to the ocean. The storm drain system, on the other hand, is designed to carry rainwater away from streets, parking lots, and driveways to help prevent flooding during rain events. Water entering the storm drain system does not receive any treatment and flows directly to our creeks, lagoons, and ocean.

Construction Management and Inspection
760-602-2780

Best Management Practices

SPECIAL EVENTS

City of Carlsbad Storm Water Compliance Guidelines for Special Events

Only Rain in the Storm Drain!

Preventing Pollution Is Up To US!

Did you know that storm drains are NOT connected to sanitary sewer systems or other treatment plants? As rainfall flows over the ground, it picks up a variety of pollutants that flow directly to our creeks, lagoons, and ocean.

Special Event Pollutants o

- Sediments
- Metals
- Detergents
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

Best Management Practices Work!

Best Management Practices (BMPs) are procedures and practices that all special event organizers **are required** to implement to prevent pollutants from entering our storm drains. Once sources of pollution have been identified, the next step is to select BMPs that eliminate or reduce storm water pollution. Storm Water Compliance staff can work with you to develop BMPs for your specific special event.

Protection for All Seasons

Even when rain is not expected, event organizers are required to implement the designated BMPs. Depending on the size, location, number of participants, and other relevant factors, Storm Water Pollution Prevention Plan (SWPPP) may need to be developed. The SWPPP is intended to help demonstrate that appropriate measures are being actively implemented before, during, and after the event to reduce and prevent pollutants from leaving the event venue. The SWPPP must be approved by the City prior to Special Event Permit issuance.

Good House Keeping

- **Use dry clean-up methods first!** Never use a water hose or pressure washing system to clean up spills. Use mops, brooms, or wire brushes to clean sidewalks, pavement, and other impervious surfaces. Wash water must be disposed of to the sanitary sewer and never the storm drain.
- Minimize the use of cleaning solutions and chemical agents. Dispose of waste properly.
- Keep site free of litter. Place trash and recycling receptacles around the site to minimize litter.

Preventive Maintenance

- Inspect equipment and vehicles frequently and clean up leaks and spills immediately.
- Prior to the event, locate and protect all drainage points using storm drain protection devices such as sand bags, fabric filters, berms, containment booms, etc.
- Label or place signs at, around, or adjacent to storm drains with the following wording: *"No Dumping"* or other pollution prevention message.
- Regularly inspect storm drains during the event to prevent pollutants from accumulating.

Waste Management

- Reduce, Reuse, Recycle.
- Frequently inspect trash and recycling receptacles to ensure they do not overflow. Place trash inside dumpsters or plastic bags until it can be removed.
- Dumpsters must be kept closed when not in use.
- Never place liquid waste, leaky bags, or hazardous waste in dumpsters or trash bins.

Materials Storage and Handling

- Store materials in covered areas not exposed to rain.
- Keep outdoor storage areas clean.
- Clean around stored materials so that pollutants do not accumulate.

Food Preparation

- Food vendors must have spill kits in or adjacent to their work area. Spill kits include: towels, kitty litter, and/or clean-up materials. All spilled materials must be promptly cleaned up and disposed of properly.

Temporary Relief Stations

- Relief stations must be placed away from locations that have the potential to impact the storm drain system.
- All relief stations are required to have a secondary containment or additional BMPs to contain possible overflows.

Staff and Vendor Training

- Discuss and distribute information about storm water pollution prevention during staff (including contractor) training and vendor registration.

Post Event Clean Up

- All streets, sidewalks, and public areas must be cleaned (sweeping, litter pickup, etc.) and returned to the pre-event condition.
- Remove temporary public art (chalk, paint, charcoal, clay, etc) using dry clean-up methods only.

- If a street sweeper will be used , ensure they are onsite promptly after the event.
- Assign an appropriate number of staff to promptly and adequately clean-up after the event.
- After the site has been cleaned, storm drain containment and protection devices must be removed.

For more information or assistance, please call 760-602-2780

OBSERVATIONS

❒ **No violations observed during the inspection.**	❒ **No violations observed during the inspection.**
❒ **Violations observed during the inspection**	❒ **Violations observed during the inspection**
❒ **Implement Corrective Actions As Required Below**	❒ **Implement Corrective Actions As Required Below**

CORRECTIVE ACTION REQUIRED: ☐ Photos Taken

1	2		1	2	
☐	☐	Prevent trash/recycling from overflowing.	☐	☐	Sweep up trash and debris.
☐	☐	**Immediately** clean up oil/grease spills and leaks.	☐	☐	**Immediately** discontinue outdoor washing or hosing.
☐	☐	Post-event street sweeping required.	☐	☐	Dumpsters and trash receptacles must be covered during rain events.
☐	☐	Provide immediate protection for storm drain inlets.	☐	☐	Provide spill kit(s) in required areas.
☐	☐	Clean in and around storm drains.	☐	☐	Provide secondary containment for portable restroom(s).
☐	☐	Train staff, vendors, and participants on pollution prevention.			

Other _____

Implement corrective actions by_____. A City Inspector will return to verify that corrective actions implemented as required. If you have any questions or comments, please contact the Storm Water Inspector at 760-602-2780 x7111.

Comments/Notes

Carlsbad Municipal Facility Inspections - Corrective Actions FY 08-09

Tier	Facility	Corrective Action(s)	BMPs
1	AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	Keep pervious surfaces free of sediment and organic debris to maximum extent practicable.	Weekly scheduled sweeping, blowing, and raking underway
		Consider the addition of directional flow arrows to site map in SWPPP	SWPPP has been revised to show directional arrows indicating water flow
1	CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	Consider providing lids for trash cans in picnic area.	All metal cans removed from Park site
1	CARLSBAD RECYCLED WATER FACILITY	Keep discharge locations free of organic debris and sediment to maximum extent practicable.	Periodic site inspections conducted.
		Prevent over irrigation to the maximum extent practicable	Adjustments made by landscape company
1	FIRE STATION 1	Control erosion from landscaped areas to MEP	Adjustments made with irrigation timer on 06/08/09
		Provide annual training &/or update SWPPP with training	Training records placed in station SWPPP on 05/20/09
1	FIRE STATION 2	Provide annual training &/or update SWPPP with training	Training records placed in station SWPPP on 05/20/09
1	FIRE STATION 3	Keep parking area and catch basins free of sediment and debris to MEP	Noted on station daily maintenance routine
		Provide annual training &/or update SWPPP with training	Training records placed in station SWPPP on 05/20/09
1	FIRE STATION 4	Keep outdoor areas free of sediment and debris to MEP	Noted on station daily maintenance routine
		Promptly treat any spills	Noted on station daily maintenance routine
		Provide annual training &/or update SWPPP with training	Training records placed in station SWPPP on 05/20/09
1	FIRE STATION 5	Ensure no water from washing activities is discharging to the storm drain. Consider containing and collecting wash water closer to the wash area before it reaches the storm drains, rather than trying to redirect the water around the storm drains with sandbags as it flows across the site.	Additional sandbags set up to contain water before it reaches the storm drain inlet. Water can then evaporate or be removed by personel.
		Ensure storm water training is provided at least once a year and keep logs of employees who attended training in SWPPP	Training records placed in station SWPPP on 05/20/09
		Keep the dumpster area free of spills and debris	Noted on station daily maintenance routine
		Follow-up Inspection	Completed
1	FIRE STATION 6	Ensure storm water training is provided at least once a year and keep logs of employees who attended training in SWPPP	Training records placed in station SWPPP on 05/20/09
1	FLEET MAINTENANCE FACILITY AND PARKING LOT	Ensure storm water training is provided at least once a year and keep logs of employees who attended training in SWPPP. Provide an updated site map in the SWPPP.	Training is now in calendar and training schedule, attendance sheets are ready and placed in SWPPP, site map updates are in processto reflect all changes to the area
		Prevent fluids from vehicles and equipment in need of repair from contacting pavement to maximum extent practicable and treat vehicles/equipment and spills promptly.	The two fresh fluid spills were cleaned up after vehicle was moved into shop for service (both areas were aprox 10" dia), some area spots were from auctioned units that leaked before last years inspection, treatment of those areas is on going.
		Control erosion along eastern border of site to maximum extent practicable	Gravel bags are placed at area leading to the drain path to aid in erosion control where the curbing is broken and allows silt into parking area.
		Ensure that any spills from loading/ unloading activities are promptly addressed.	Promptly addressing spills will be topic items in daily practices for tailgate and safety meetings.
		Keep site free of sediment and debris accumulation, especially around storage areas to the maximum extent practicable.	Metal storage area is to be cleaned and transported on 05/21/09, box and debris near roof drain are moved out of drain area

Carlsbad Municipal Facility Inspections - Corrective Actions FY 08-09

Tier	Facility	Corrective Action(s)	BMPs
1	LANDSCAPE MAINTENANCE AND REPAIR	No corrective actions	N/A
1	M&O OPERATIONS YARD AND PARKING LOT	Keep pavement free of vehicle and equipment leaks by implementing proper BMPs until maintenance can be performed.	The vehicle has been sent outto auction and staff is trained to address spills.
		Update the facility s SWPPP and site map to reflect recent BMP additions.	The one item was added to the map.
1	MAERKLE DAM RESERVOIR/PUMP/ CHLORINATION STAT	Keep discharge locations free of sediment and debris to the maximum extent practicable.	Sediment & organic debris removed from ditch 06/09
		Ensure structural BMPs are regularly inspected and maintained as needed.	Gravel bags replaced.
		Implement appropriate material storage BMPs for all stockpiles onsite.	Responsible contractor removed pile and brushed away concrete staining.
		Ensure no water from washing activities is discharging to the MS4.	Contractor removed hose and wash down area to an approved site.
		Follow-up Inspection	Completed
1	MS4 MAINTENANCE	No corrective actions	N/A
1	OAK OPERATIONS YARD AND PARKING LOT	No corrective actions	N/A
1	PARKS MAINTENANCE/STORAGE/ PARKING LOT	No corrective actions	N/A
1	POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	Consider providing cover for trash cans in lower soccer field area.	Trash lids supplied for cans
		Consider adding directional flow arrows to SWPPP.	SWPPP has been revised to show directional arrows indicating water flow
1	POWER WASHING	No corrective actions	N/A
1	SANITARY SEWER MAINTENANCE AND OPERATIONS	No corrective actions	N/A
1	STAGECOACH COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOT	Consider providing cover for trash bins in picnic areas.	Lids provided for trash cans
1	SWIM AND RECREATION COMPLEX	Consider adding directional flow arrows to the facility s site map.	SWPPP has been revised to show directional arrows indicating water flow
		Keep parking area and catch basins free of sediment and debris to maximum extent practicable.	Regularly scheduled sweeping, blowing, and raking underway
		Prevent irrigation water from discharging to the storm drain to the maximum extent practicable.	Irrigation controller monitored to prevent runoff
2	CADENCIA PARK	Consider providing cover for trash can at playground area.	Trash lid provided
2	CALAVERA PUMP STATION	No corrective actions	N/A
2	CARRILLO RANCH AND PARKING LOT	Keep all discharge locations free of sediment and debris to the maximum extent practicable.	Areas inspected weekly, cleaned as needed.
		Control erosion along slopes to maximum extent practicable.	Straw wattles installed to minimize runoff
		Maintain structural BMPs as needed.	Structural BMP's repaired as needed
2	HIDDEN CANYON PARK (LARWIN) AND PARKING LOT	Ensure structural BMPs are installed properly as needed to prevent debris from entering catch basins to maximum extent practicable.	Rock bags re-installed around perimeters as needed

Carlsbad Municipal Facility Inspections - Corrective Actions FY 08-09

Tier	Facility	Corrective Action(s)	BMPs
2	HOLIDAY PARK AND PARKING LOTS	Keep parking and trash areas free of leaf litter, organic debris and trash to maximum extent practicable.	Three times a week scheduled sweeping, blowing, and raking underway
		Consider providing cover for all trash cans.	Lids provided for trash cans
2	HOSP GROVE PARK AND PARKING LOT	Keep parking areas and storm drains free of organic debris and sediment and control erosion on sloped areas to maximum extent practicable.	Weekly scheduled sweeping, blowing, and raking underway
		Consider providing cover for trash cans in playground and picnic area.	Lids provided for trash cans
		Consider providing secondary containment for portable restroom, if feasible	Sand bags and drain "socks" being considered
2	LA COSTA CANYON PARK AND PARKING LOT	Consider providing No Dumping signage for catch basin in parking area.	Appropriate signage has been applied
2	LAGUNA RIVIERA PARK	Keep drainage channels free of trash and debris to maximum extent practicable	Weekly inspections, cleaned as needed.
		Consider providing cover for trash cans in horseshoe pit area near tennis courts.	Lids provided for trash cans
		Control over- irrigation to maximum extent practicable.	Irrigation times have been changed to short "cycle & soak" periods
2	MAGEE PARK AND PARKING LOT	Keep outdoor areas free of sediment and debris to maximum extent practicable.	Twice a week scheduled sweeping, blowing, and raking underway
2	MAXTON BROWN PARK	Consider providing recycling bins at this location.	One can has been ordered and will be placed upon arrival.
2	PINE PARK AND PARKING LOT	Keep sediment contained in landscape areas to maximum extent practicable	Weekly scheduled sweeping, blowing, and raking underway. Sediment cleared as needed.
2	RESERVOIR C	No corrective actions	N/A
2	RESERVOIR ELM	No corrective actions	N/A
2	RESERVOIR LA COSTA HI	Keep site free of debris and leaves to the maximum extent practicable.	Periodic inspections conducted and removal made as needed.
2	RESERVOIR LA COSTA LO	Keep paved and discharge areas of the site free of sediment and organic debris to the maximum extent practicable.	Periodic inspections conducted and removal made as needed.
		Control erosion along un-landscaped slopes to maximum extent practicable.	Adjustments made by landscape company
2	SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Keep and discharge locations free of organic debris to the maximum extent practicable.	Parking lot is swept semi monthly with a mechanical sweeper and the discharge points will be inspected and cleaned as needed, quarterly.
		Consider providing cover for trash can near building.	Trash can has new cover installed
2	TAP PUMP STATION	Keep site free of sediment and debris to maximum extent practicable.	Periodic inspections conducted and removal made as needed.
3	CARLSBAD SENIOR CENTER PARKING LOT	Keep discharge points free of sediment and debris to the maximum extent practicable.	Parking lot is swept semi monthly with a mechanical sweeper and the discharge points will be inspected and cleaned as needed, quarterly
		Consider providing lids for trash cans located in western parking area.	All metal trash cans to be removed and concrete receptacles installed.
3	CITY HALL FACILITY PARKING LOT	No corrective actions	N/A
3	COLE LIBRARY PARKING LOT	Keep parking lot free of sediment and organic debris to the maximum extent practicable.	Parking lot is swept semi monthly with a mechanical sweeper and the discharge points will be inspected and cleaned as needed, quarterly
		Control erosion and over-irrigation along slopes to the maximum extent practicable.	Irrigation controller monitored to prevent runoff

Carlsbad Municipal Facility Inspections - Corrective Actions FY 08-09

Tier	Facility	Corrective Action(s)	BMPs
3	DOVE LIBRARY PARKING LOT	Keep outdoor areas free of trash and debris to maximum extent practicable.	Maintenance contractor to clean parking lot per the terms of the maintenance agreement.
3	FARADAY CENTER PARKING LOT	No corrective actions	N/A
3	FARMERS BUILDING PARKING LOT	Keep outdoor areas and storm drain inlets free of trash and debris to maximum extent practicable.	Parking lot is swept semi monthly with a mechanical sweeper and the discharge points will be inspected and cleaned as needed, quarterly
		Minimize irrigation runoff from landscaped areas to maximum extent practicable.	Irrigation controller monitored to prevent runoff
3	HARDING COMMUNITY CENTER PARKING LOT	Keep all trash areas free of litter and debris to maximum extent practicable	Maintenance contractor to clean parking lot per the terms of the maintenance agreement.
3	ADULT LEARNING PROGRAM PARKING LOT	Keep outdoor areas and discharge locations free of litter and debris to maximum extent practicable.	Parking lot is swept semi monthly with a mechanical sweeper and the discharge points will be inspected and cleaned as needed, quarterly
		Control over irrigation to maximum extent practicable.	Irrigation controller monitored to prevent runoff
3	RAILROAD DEPOT VISITORS CENTER PARKING LOT	Keep outdoor areas and storm drains free of trash and debris to maximum extent practicable.	Parking lot is swept semi monthly with a mechanical sweeper and the discharge points will be inspected and cleaned as needed.
		Reduce runoff from over-irrigation to maximum extent practicable.	Irrigation controller monitored to prevent runoff
2 - In House	AGUA HEDIONDA SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debris and disposed into trash bin.
2 - In House	BATIQUITOS SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debris and disposed into trash bin.
2 - In House	BUENA VISTA SEWER LIFT STATION	N/A	N/A
2 - In House	CANNON SEWER LIFT STATION	Need to install hose reels.	Hose reels installed
2 - In House	CHINQUAPIN SEWER LIFT STATION	N/A	N/A
2 - In House	FOXES LANDING LIFT STATION	Need to build a berm around generator for fuel spill containment.	Installed 6 inch roll berm with asphalt material. Cleaned area where work was completed.
2 - In House	GATESHEAD SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debri and disposed into trash bin.
2 - In House	HOME PLANT SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debri and disposed into trash bin.
2 - In House	KNOTS SEWER LIFT STATION	N/A	N/A
2 - In House	LA GOLONDRINA SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debris and disposed into trash bin.
2 - In House	POINSETTIA SEWER LIFT STATION	Parking lot needs repair.	Contacted CM&I about slurry repair, awaiting answer. Installed filter rock bags at exits points of conveyance system.
2 - In House	SAND SHELL SEWER LIFT STATION	N/A	N/A
2 - In House	SIMSBURY SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debris and disposed into trash bin.
2 - In House	TERRAMAR SEWER LIFT STATION	N/A	N/A
2 - In House	VANCOUVER SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debris and disposed into trash bin.
		Need to install trash can.	Trash bin purchased and installed.
2 - In House	VILLAS SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up debris and disposed into trash bin.

SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR SPECIAL EVENTS	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 2 OF 10	

Purpose

The purpose of this procedure is to define the process for inspecting, tracking, and enforcing NPDES compliance at special events on the Construction Management and Inspection (CMI) Special Events Inventory List. CMI inspectors must have a basic understanding of requirements of the NPDES inspection program to conduct effective site evaluations and inspections. Please refer to procedure #CMI-210 for the creation, revision, and maintenance of the Special Events Inventory List.

Policy

The Construction Management and Inspection Department will conduct NPDES compliance inspections at special event venues listed on the Special Events Inventory List to assess their threat to water quality, potential to contribute to storm water pollution, and compliance with the Carlsbad Municipal Code.

Scope

This procedure applies to the **Construction Management and Inspection Department** personnel and consultants at the City of Carlsbad, Public Works Department located in Carlsbad, CA.

Associated Documents

- Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS0108758 (Permit)

City of Carlsbad		CMI-200	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR SPECIAL EVENTS	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 3 OF 10	

Acronyms and Definitions

BMP	Best Management Practices
CON	Consultant designated by awarded City contract
CMC	Carlsbad Municipal Code
CM	Construction Manager
DCE	Deputy City Engineer
ESA	Environmentally Sensitive Area
Dry Season	May 1 to September 30
GIS	Geographical Information Systems
Inspection	Refers to onsite visit of facility with facility personnel – please refer to Appendix A for a copy of the inspection form.
JURMP	Jurisdictional Urban Runoff Management Program from March 2008
NPDES	National Pollutant Discharge Elimination System
Permit	Municipal Storm Water Permit (January 2007)
PWI	Public Works Inspector I/II
RWQCB	Regional Water Quality Control Board
SCI	Senior Construction Inspector
SEC	Special Events Coordinator
SEOP	The Special Event Operation Plan outlines the City staff and activities the City will implement during the event. The operation plan also includes the contact numbers for all City personnel and organizers involved in the event.
SWPPP	Storm Water Pollution Prevention Plan
Wet Season	October 1 to April 30

Overview

Periodically the City is host to special events directly as City functions and indirectly as permitted events hosted by outside event organizers. Examples of typical special events held in Carlsbad include:

- Street Festivals and Carnivals
- Athletic/Recreation Events (Marathon, Triathlon, etc.)
- Art Exhibits
- Concerts/Performances
- Farmers/Outdoor Market
- Parades/Processions/Marches

City of Carlsbad		CMI-200	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION NPDES INSPECTIONS FOR SPECIAL EVENTS	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 4 OF 10	

The City of Carlsbad is committed to inspecting special event venues and sources listed on the prioritized Special Events Inventory List (Inventory List) to evaluate compliance with applicable storm water regulations, JURMP, Permit, and the CMC. All event promoters and venues are required to implement the minimum BMPs outlined in the JURMP and the City's "*Best Management Practices for Special Events*" brochure. Site inspections are conducted using the inspection form referenced in Appendix A and pictures are taken when necessary.

Special Event Inspection Procedure:

Step	Who	What	When
1.	SEC	Provides SCI with the special event application package that includes pertinent information about the proposed event.	60 days prior to the event.
2.	SCI	Reviews the application and updates the Inventory List. If the special event is new, the SCI must prioritize the event using the criteria outlined in procedure #CMI-210, the JURMP, and the Permit.	As needed
3.	SCI SEC	Provides a copy of the minimum BMPs and additional required BMPs to the SEC using the Departmental Approval Form (Appendix B). The SCI may also request information directly from the promoter.	60 days prior to the event.
4.	SEC	Forwards the NPDES compliance requirements to the event promoter. Schedules pre-event planning meetings with the promoter(s) and Special Events Committee.	At least 60 days prior to the event.
5.	SCI	If required, reviews the SWPPP. If the SWPPP is found to be adequate, the Departmental Approval Form is signed and sent to the SEC for final processing. If the SWPPP is found to be incomplete or inadequate, it will be returned to the promoter with comments. Return to Step 4.	At least 15 days prior to the event.
6.	SEC	The special event application will be reviewed and approved by the Special Events Committee prior to permit issuance. Once approved, prepares the SEOP and provides to all relevant City staff.	At least 5 days prior to the event.
7.	SCI CON PWI	Prepares the Special Event NPDES inspection form(s). Please refer to Appendix A for inspection form and instructions.	As needed
8.	SCI CON PWI	Performs the NPDES inspection using the procedures outlined in CMC 15.12.100, 15.12.110, in this procedure, SEOP, and in Section D.3.b.(3) of the Permit.	Day of event
9.	SCI	After completion of the inspection, updates the Special Events Inventory List and files documents in the appropriate location.	As needed
10.	SCI	Provides inspection results to the SEC regarding any deficiencies or violations noted during the event.	As needed
11.	SEC	Provides written feedback to the event promoter and schedules follow up meetings to discuss the event and begin planning for next year (for annual events only).	As needed

Step	Who	What	When
12.	SCI CM	Completes appropriate compliance documents Warning Notices, Notice of Violation, Administrative Citations, etc. If an enforcement action is issued, the SCI will notify the SEC.	Within 2 weeks after the event
13.	SCI CM	Provides updates, follow up information, inspections findings, and corrective actions to the Special Events Committee during regularly scheduled meetings.	Monthly

Other Procedural Considerations

- High priority special events may be required to implement additional event specific BMPs which may include, but are not limited to:
  - **SWPPP**: Depending on the size, location, number of participants, and other relevant factors, high priority special events may be required to develop a Storm Water Pollution Prevention Plan. The SWPPP includes a list of BMPs to be implemented by the event organizer before, during, and after the event to reduce and/or prevent pollutants from leaving the event venue. The SWPPP must be approved by the City prior to Special Event Permit issuance. A copy of the sample SWPPP can be found in Appendix C.
  - **Storm Drain Site Map**: Event organizers must submit a site plan that identifies all of the drain inlets and/or discharge points. The storm drain map can also be included as a part of the SWPPP or requested separately. The storm drain map should include the following minimum elements:
    - An outline of the event venue including the names of all streets or areas that are part of the event and the surrounding area.
    - The location of all portable toilets, trash and recycling containers, and dumpsters.
    - Location of all storm drain inlets, including curb inlets, grates, and other discharge points. In addition, include all locations of storm drain protection devices and/or run-off containment features.
    - A detail of the food and/or cooking area and location of spill kits.
    - Fuel storage and/or generator locations.
    - Placement of vehicles and/or trailers.
    - Details of any inflatable rides, carnival or mechanical rides, and animals attractions.
    - The location of activities and materials that have the potential to contribute to pollution must be depicted.
  - **Street Sweeping**: Certain high priority events may be required to hire a professional mechanical street sweeper to remove accumulated trash and debris from City streets following an event. If the special event organizer fails to adequately clean the venue, the City will clean the site and seek reimbursement for all associated costs. The City has developed criteria based on the events potential threat to water quality. The criteria will be considered when determining whether an event is requires street sweeping. If an event meets two or more of the following criteria, street sweeping may be required:
    - Does the event have the potential to generate a significant amount of trash and debris?
    - Does the event occur during the rainy season?
    - Has the event had NPDES compliance problems within the last two years?
    - Does the event occur on Carlsbad Blvd. or within the Downtown area?

- Does the event occur within an ESA or ESA buffer zone?

- The SCI and/or CM will represent CMI at the monthly Special Events Committee meeting usually held on the 4th Thursday of every month. The SCI and/or CM will also attend pre- and post-event planning meetings, as needed.
- Special events held during the rainy season may need to prepare a Rain Event Action Plan when there is a storm event predicted at 40% or greater for the day of the event. When there is a storm event predicted at 40% or greater, the SCI will send a "Rain Event Alert" to the event organizer and SEC reminding them to be prepared to implement additional BMPs for prevailing weather conditions.

Inspection goals for events on the Special Events Inventory List are as follows:

Threat Priority	Minimum Inspection Frequency		Season	Inspection Goal
	Pre-Event	Post-Event		
High	✓	✓	Wet Season	100%
High	✓		Dry Season	100%
Medium	✓		Wet Season	As Needed
Medium		✓	Dry Season	As Needed
Low		✓	Wet Season	As Needed
Low		✓	Dry Season	As Needed

Recordkeeping and Reporting

The SCI is responsible for maintaining all aspects of the inspection and correspondence hardcopy filing system. Inactive special event files will be maintained for a minimum of 3 years. On an annual basis, the SCI will prepare a report to be included in the JURMP Annual Report to the CM:

- Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.
- Identification of the number of special events requiring inspections, the number of special events inspected, and the frequency of the inspections.
- A description of the general results of the inspections.
- Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Time spent working on special events must be reported on timesheets using the following codes:

Project Code	Activity Code	Description
Special Event	TRG	Training, conferences, education, including travel time if applicable.
Special Event	INS	Preparing for and conducting inspections including SWPPP reviews and travel time.
Special Event	ADM	Correspondence, filing, forms, procedures, mail, email, outreach and education, etc.
Special Event	MTG	Special event coordination meetings, including travel time.
Special Event	JURMP	JURMP and Annual Report preparation and review.

All inspection related forms are located on the shared drive at:

K:\NPDES\Special Events\Forms and Applications

Equipment List

In preparation for special event inspections, inspectors should have the following equipment:

- Metal clip board
- Inspection forms
- Digital camera
- Pens and pencils
- Sharpie markers
- City identification
- Business cards
- Field notebook
- Thomas Guide
- Operation Plan

Safety Considerations

Hazards may exist at the various event venues. These hazards could include sharp edges, falling objects, flying sparks, chemicals, noise, uneven pavement and other potentially dangerous situations. Inspectors must take the appropriate precautions to protect themselves from potential hazards and injuries. Personal protective equipment (PPE) may be required at in certain situations to minimize exposure to a variety of hazards. The following PPE should be available to the inspector:

- hard hat
- flashlight
- ear plugs
- steel-toed boots
- rubber gloves
- storm drain puller
- safety vest
- orange traffic cones
- hand sanitizer
- first aid kit

APPENDIX A
Special Events Inspection Form and Instructions

Inspector: The name of the person conducting the inspection.

Date: The date the inspection occurred.

Season: The season in which the event occurs – Wet (October 1 to April 30) or Dry (May 1 – September 30).

Priority: The priority assigned to the event – High, Medium, or Low.

Event Name: The name of the event.

Event Type: The type of event (i.e. athletic, concert, etc.).

Event Location: A description of the location of the event.

Event Address: The physical address of where the event is held.

Contact Name: Name of the "day of event" contact.

Contact Phone: Phone number of the "day of event" contact.

Weather Conditions: The inspector should note the weather conditions while conducting the inspection.

OBSERVATIONS

☐ No violations observed during the inspection.	☐ No violations observed during the inspection.
☐ Violations observed during the inspection	☐ Violations observed during the inspection
☐ Implement Corrective Actions As Required Below	☐ Implement Corrective Actions As Required Below

CORRECTIVE ACTION REQUIRED: ☐ Photos Taken

1	2		1	2	
☐	☐	Prevent trash/recycling from overflowing.	☐	☐	Sweep up trash and debris.
☐	☐	Immediately clean up oil/grease spills and leaks.	☐	☐	Immediately discontinue outdoor washing or hosing.
☐	☐	Post-event street sweeping required.	☐	☐	Dumpsters and trash receptacles must be covered during rain events.
☐	☐	Provide immediate protection for storm drain inlets.	☐	☐	Provide spill kit(s) in required areas.
☐	☐	Clean in and around storm drains.	☐	☐	Provide secondary containment for portable restroom(s).
☐	☐	Train staff, vendors, and participants on pollution prevention.			

Other _____

Implement corrective actions by_____. A City Inspector will return to verify that corrective actions implemented as required. If you have any questions or comments, please contact the Storm Water Inspector at 760-602-2780 x7111.

Inspector Signature:	Received By – Please Print	Received By - Signature ☐ Mailed	Date

Pre-Event (1) and Post- Event (2): This section is used to evaluate potential sources of pollution and assess compliance. The inspector should also note the time each inspection occurred in the space provided. The columns headings to the right are be used to evaluate potential pollutant sources:

- NA (Not Applicable): This activity does not apply to this event.
- Containment: This potential source of pollution needs containment (secondary or otherwise) in order to prevent an illegal discharge.
- Cover: This potential source of pollution needs to be covered in order to prevent an illegal discharge or protect materials from run-off.
- Cleaning: The area in or around this potential source of pollution needs to be cleaned (secondary sweeping, litter removal, etc.) in order to prevent an illegal discharge.

- Training: Employees, volunteers, and/or event organizers need to be trained on the proper implementation of BMPs for this potential source of pollution.
- Other BMP: This potential source of pollution needs a specific BMP (structural or otherwise) in order to prevent an illegal discharge or protect materials from run-off. The inspector should note the specific BMPS required in the comments section.
- Adequate: BMPs have been adequately implemented.
- ID Observed: An illegal discharge was observed from this source or activity.
- Comments: The inspector can note additional information about the inspection or investigation including but not limited to, specific BMPs needed, additional requirements, observations, etc.

Observations: When violations are noted pre-event and/or post-event, the inspector should check the applicable boxes. If no violations were observed the inspector should check the appropriate box.

Corrective Action Required: If the event is required to implement corrective action as a result of the inspection, the inspector should check the appropriate box(es). If the corrective action is not listed among the choices the inspector can use the "Other" space to list the specific BMP requirements. In addition, the inspector should note if photographs of the violations were taken and also the date the corrective actions must be completed.

Inspector Signature: The inspector must sign the inspection report.

Received By –Please Print: If the inspection report is to be signed and left onsite, the inspector must print the name of the event representative that received the report.

Received By – Signature: The signature of the person who received the inspection report. If a representative is not available to receive the report, the "mailed" box should be checked and the report will be mailed to the primary event contact.

Date: The date the inspection report was completed.

The back of the inspection report may be used to draw diagrams, make comments or recommendations, and document information relevant to the event.

SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION SPECIAL EVENT INVENTORY LIST MANAGEMENT	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 2 OF 9	

Purpose

The purpose of this procedure is to define the process for managing and updating data on the Construction Management and Inspection Department's Special Event Inventory List (Inventory List). The Inventory List is updated and reviewed for inspection applicability on a regular basis, within each fiscal year.

Policy

The City of Carlsbad's Construction Management and Inspection Department will maintain the Special Event Inventory List of events within its jurisdiction that will need to be or have been inspected as required by the NPDES permit issued by the Regional Water Quality Control Board of the State of California.

Scope

This procedure applies to the **Construction Management and Inspection Department** personnel and consultants at the City of Carlsbad, Public Works Department, located in Carlsbad, CA.

Associated Documents

- Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS0108758 (Permit)
- City of Carlsbad Jurisdictional Urban Runoff Management Program (JURMP) from March 2008
- City of Carlsbad Municipal Code Chapter 8.17
- City of Carlsbad Municipal Code Chapter 15.12
- City of Carlsbad Municipal Code Chapter 6.08
- City of Carlsbad Special Events Application and Instructions

Definitions and Acronyms

BMP	Best Management Practices
CON	Consultant designated by awarded City contract.
CMC	Carlsbad Municipal Code
CM	Construction Manager
DCE	Deputy City Engineer
ESA	Environmentally Sensitive Area
Dry Season	May 1 to September 30
GIS	Geographical Information Systems
Inspection	Refers to onsite inspection of the event and its associated activities – please refer to Appendix A of procedure CMI-200 for a copy of the inspection form.
JURMP	Jurisdictional Urban Runoff Management Program from March 2008
NPDES	National Pollutant Discharge Elimination System
Permit	Municipal Storm Water Permit (January 2007)
PWI	Public Works Inspector I/II
RWQCB	Regional Water Quality Control Board
SCI	Senior Construction Inspector
SEC	Special Events Coordinator
SWPPP	Storm Water Pollution Prevention Plan
Wet Season	October 1 to April 30

Overview

The intent of the Inventory List is to satisfy the municipal storm water requirements as outlined in Section 6 of the 2008 JURMP update and Section D.3 of the Permit. The City is required to track, assess, and prioritize special events and venues within its jurisdiction to determine their potential threat to water quality, applicability of storm water regulations, and compliance with the CMC.

Prioritization of Events

Prioritization of events includes a review and consideration of event size, number in attendance, location of event, type of event, activities during the event, season the event occurs, proximity of the event to an ESA, past record of compliance by event promoters, and potential to discharge significant non-storm water or pollutants to the storm water conveyance system. Potential sources of pollution from special events could include:

- Setup and teardown of equipment and booths
- Surface and equipment cleaning
- Booth operation
- Trash storage and disposal
- Food/drink preparation and consumption
- Setup, operation, and teardown of mechanical and hydraulic rides
- Temporary portable restrooms
- Hydration stations

Typically, the priority types for special events generally have three or more of the following potential threat characteristics:

Priority	Potential Threat Characteristics								
	> 1000 people in attendance	Occur 200 feet from an ESA	Occur during the wet season	Food Prepared Onsite	Compliance History	Portable Restrooms	Have mechanical rides	Include Animal Attractions	Significant trash generation
High	✓	✓	✓	✓	✓	✓	✓	✓	✓
Medium	✓		✓	✓	✓	✓			✓
Low			✓	✓		✓			

Annual high priority events include:

- Carlsbad Marathon
- Carlsbad Junior
- Carlsbad 5000
- Carlsbad Village Spring Street Faire
- TGIF Jazz in the Parks
- CVBA's Art in the Village
- ArtSplash
- Carlsbad Village Fall Street Faire

City of Carlsbad		CMI - 210	A
SUBJECT: CONSTRUCTION MANAGEMENT AND INSPECTION SPECIAL EVENT INVENTORY LIST MANAGEMENT	[ ] POLICY [ ] PROCESS [X] PROCEDURE	NUMBER	REVISION
		PAGE 5 OF 9	

Inventory Management Procedure:

Step	Who	What	When
1.	SCI	Receives new special event application from the SEC and adds the event to the inventory or updates the inventory with the most current information about the event. Updates can include removing duplicates and discontinued events, prioritizing events, changing the status of events, and adding new events to the inventory. All relevant fields within the Inventory List are updated as necessary.	As needed
2.	SCI	The special event application is screened and prioritized using the threat to water quality prioritization criteria outlined in in this procedure, the JURMP, and the Permit. Special events located within 200 feet of an ESA will also be evaluated to determine if the ESA is a 303(d) listed water body and if the event has the potential to generate pollutants for which the water body is impaired. If the event is not located within 200 feet of an ESA, "No" is entered into Column "O" on the Inventory List.	As needed
3.	SCI	Prepares inspection report and gathers other necessary documents (maps, operation plan, etc.) for the event.	At least 1 day before the event
4.	SCI CON CM	Performs the on-site NPDES inspection(s) using the procedures outlined in CMC 15.12.100, 15.12.110, in this procedure, and in Section D.3.a.(7) of the Permit.	Day of event
5.	SCI	If a consultant conducts the inspection, completed inspection reports are provided after the inspection.	Within 3 days after the event
6.	SCI	Verifies accuracy of the information on the inspection report and updates the Inventory List.	Within 30 days of the event
7.	SCI	Files and maintains records of all special event inspection reports.	Within 30 days of the event
8.	SCI CM	At the end of each fiscal year (July 1 – June 30), closes and archives the current fiscal year Inventory List and creates the new fiscal year Inventory List. Please see "End of Year and Beginning of Year" procedures section.	Annually
9.	SCI	On an annual basis the inventory list is merged with the inspection report format and saved. Inspection reports are printed as needed.	Annually

End of Year (EOY) and Beginning of Year (BOY) Procedures

Step	Who	What	When
1.	SCI	Ensures all updates and entries to the inventory are accurate and complete.	By July 15
2.	SCI	Saves and moves the EOY (as of June 30) to the appropriate archive folder. The EOY Inventory List is the final list that will be used to prepare the JURMP annual report for the fiscal year.	By July 15
3.	SCI	Saves the BOY Inventory list in the appropriate folder. The active Inventory List is moved to the shared drive.	By July 15

Recordkeeping and Reporting

The SCI is responsible for maintaining all aspects of the Inventory List, including information to be entered, changed, or deleted within cells and columns. On an annual basis, the SCI will provide a report to be included in the JURMP Annual Report to the CM:

- Identification of the number of special events requiring inspections, the number of special events inspected, and the frequency of the inspections.
- A description of the general results of the inspections.
- Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Please refer to procedure CMI-200 NPDES Inspections for Special Events for detailed instructions in conducting inspections. The Special Events Inventory List is located on the shared drive at:

K:\NPDES\Special Events\Special Events Inventory

Appendices

Appendix A: Inventory List Column Headings and Definitions

APPENDIX A

Inventory List Column Headings and Definitions

A. PRIORITY: The threat to water quality prioritization based on the criteria listed in JURMP, Permit, and this procedure. This field can only be populated with the following responses:
- High
- Medium
- Low

B. EVENT TYPE: The event type listed on the special events application. Only the following can be entered into this field.
- Athletic
- Concert
- Exhibit
- Festival
- Parade
- Fireworks
- Other

C. STATUS: Denotes stage of the special events permitting process. Only the following can be entered into this field.
- Pending: Event application received and reviewed, however the event has not occurred.
- Completed: Event application was reviewed, approved, and the event has occurred.
- Cancelled: The event application was received but was cancelled.

D. EVENT NAME: The name of the event as listed in the special event application.

E. LOCATION: A description of where the event will occur. Usually an area (e.g., Cannon Park), a street or cross streets (e.g., El Camino Real and Palomar Airport Road), or a quadrant of the City (e.g., the southeast quadrant).

F. LOCATION ADDRESS: If applicable, the physical location of the event including the street number and name.

G. LOCATION ZIP: The zip code where the event occurs.

H. BEGIN DATE: The date the event begins.

I. END DATE: The date the event ends. It may be the same day as the begin date.

J. SEASON: The season in which the event occurs.
- Wet (October 1 to April 30)
- Dry (May 1 – September 30)

K. INSPECTION REQUIRED: Is a NPDES compliance inspection required for this event?

L. PRE-EVENT INSPECTION DATE: The date the pre-event inspection occurred.

M. POST-EVENT INSPECTION DATE: The date the post-event inspection occurred.

N. HYDROLOGIC AREA: The watershed with the Carlsbad Hydrologic Unit that receives run off from the construction site. Only the following can be entered into this field:

- **904.21:** Buena Vista Lagoon
- **904.31:** Agua Hedionda Lagoon
- **904.40:** Encinas Creek
- **904.51:** Batiquitos Lagoon

O. PROXIMITY: Does the event occur within 200 feet of an ESA, including receiving waters, habitat management areas, wildlife corridors, etc.? This will be determined by GIS mapping. The following entries are acceptable in this field:
- Yes: The event is located within 200 feet of an ESA.
- No: The event is not located within 200 feet of an ESA.

P. TRIBUTARY TO 303(d) LISTED: Does the event venue occur in an area that discharges to a tributary to a 303(d) listed receiving water (within an ESA buffer) and generates pollutants for which the water body is impaired? The following entries are acceptable in this field:
- Yes
- No

Q. # OF PARTICIPANTS: The estimated number of people expected to participate in the event. This information can be found on the special event application.

R. ADDITIONAL CONTROLS REQUIRED: Are additional BMP controls required, in addition to the minimum BMPs, for this event?

S. BACTERIA*: Does the event or associated activities have the potential to generate bacteria? If so "X" is entered into the field. If not, the field is left blank.

T. GROSS POLLUTANTS*: Does the event or associated activities have the potential to generate gross pollutants? If so "X" is entered into the field. If not, the field is left blank.

U. METALS*: Does the event or associated activities have the potential to generate metals? If so "X" is entered into the field. If not, the field is left blank.

V. NUTRIENTS*: Does the event or associated activities have the potential to generate nutrients? If so "X" is entered into the field. If not, the field is left blank.

W. OIL & GREASE*: Does the event or associated activities have the potential to generate oil and grease? If so "X" is entered into the field. If not, the field is left blank.

X. ORGANICS*: Does the event or associated activities have the potential to generate organics? If so "X" is entered into the field. If not, the field is left blank.

Y. PESTICIDES*: Does the event or associated activities have the potential to generate pesticides? If so "X" is entered into the field. If not, the field is left blank.

Z. SEDIMENTS*: Does the event or associated activities have the potential to generate sediments? If so "X" is entered into the field. If not, the field is left blank.

AA. TRASH*: Does the event or associated activities have the potential to generate trash? If so "X" is entered into the field. If not, the field is left blank.

**(Potential Pollutants: Columns S through AA denote the potential pollutants. Initially the pollutants are selected based on the type of activities that are expected at the event. After inspection the actual pollutants generated are entered into the following fields).*

Water Conservation

Tips for Residents

THE CITY OF CARLSBAD Environmental Programs Division is committed to working together with the citizens of Carlsbad to effectively reduce our water consumption and conserve this precious resource. We encourage you to get involved:

8 Ways to Save Water Inside

- Check your toilets, faucets and pipes for leaks.
- Stop using your toilet as an ashtray or wastebasket.
- Take shorter showers.
- Install water-saving shower heads or flow restrictors.
- Take baths. (A partially filled tub uses less water than all but the shortest of showers).
- Turn off the water while brushing your teeth or while shaving.
- Use your automatic dishwasher or washing machine only for full loads.
- If you wash dishes by hand, turn off the water between rinsing.

9 Ways to Save Water Outside

- Water your lawn only when it needs it.
- Water during the cool part of the day, before 6 a.m. and after 8 p.m.
- Turn off sprinklers during rainstorms.
- Don't water the gutter, sidewalk or street.
- Plant drought-resistant trees and plants.
- Put a layer of mulch around trees and plants.
- Use a broom instead of a hose to clean driveways and sidewalks.
- Turn off the hose while washing your car.
- Check for leaks in pipes, hoses, faucets and couplings.

Water Use Audits Offered
Carlsbad Municipal Water District customers can call (760) 602-7585

Rebates for Residents

Carlsbad Environmental Programs, *www.carlsbadconserves.org*

Residents, get money back on clothes washers, toilets, smart controllers, sprinkler nozzles and synthetic turf!

- It just got easier through the new SoCal-Water$mart program launched by Metropolitan Water District and its member public agencies on July 1, 2008. Learn more by visiting *www.bewaterwise.com* and click on the Rebates tab.
- High-Efficiency Clothes Washers (HEW) use 65% less water, 55% less energy, and less detergent; clean better; and are gentler on clothes than standard clothes washers. The above rebate program offers a rebate of up to $185.
- High-efficiency Toilets save more than 60% every time you flush. Pre-1981 toilets use five to seven gallons of water per flush, compared to the 1.28 to 1.6 gallons per flush used by HETs. The above rebate program offers a rebate of up to $200 and up to $30 for a high-efficiency toilet upgrade. For more detailed information call 1-888-376-3314.
- A "Smart" or Weather-based Irrigation Controller can be an effective technology for reducing water usage outdoors. The "smart" controller uses weather data and site information such as plant type and sprinkler system output to adjust watering times and frequency. Professional installation is recommended. The rebate amount for single-family sites less than one acre is $230 and $630 for one acre or larger.
- Synthetic Turf can replace irrigated vegetation and may significantly reduce your outdoor watering needs. A 50¢ per spare foot incentive is available.
- Rotating Nozzle rebates are offered through this program at a rate of up to $4 per rotating nozzle for single-family properties.

Storm Water Protection

Conserving water helps protect our storm drains…

MANY WATER CONSERVING ACTIONS also help protect our storm drains which in turn help to keep our creeks, lagoons, and ocean pollution-free. The majority of water pollution comes from common materials such as oil, fuel, and fluids leaked from cars, soaps from washing our cars, lawn and garden fertilizers, and sediments from a lack of erosion control. YOU have the power!

You could avoid over-irrigating lawns and gardens. Excessive watering washes fertilizers and pesticides into gutters and storm drains AND wastes water.

You could use a broom, not a hose. Rather than hosing off sidewalks, parking areas and garages which forces pollutants into our storm drains AND wastes water, sweep up yard waste and debris and dispose of them in appropriate trash receptacles.

You could take your car to a commercial car wash that recycles water. Washing vehicles at home results in soap in our storm drains AND wastes water.

…THEN ACT!

YOUR EVERYDAY ACTIONS IMPACT OUR ENVIRONMENT!

Storm drains flow directly into our creeks, lagoons and ocean without filtration. Storm drains and sewers are not connected. Prevent soap suds, pet waste, paint and pesticides from entering storm drains or soon they will be contaminating our water ways. For a clean environment, keep it out of the street! Think about it – rainwater should be the only thing going down in this town.

Recycling Tips

SINGLE FAMILY RESIDENTS are supplied with green and blue crates for the separation of their recyclable materials. The following materials can be placed in the green recyclable bin:

- Aluminum: beverage cans and foil
- Plastic: Beverage containers with recycling symbols #1-7, and non-beverage containers with #1, 2 and 7.
- Glass: jars and bottles
- Tin: food cans

All material needs to be emptied, clean and/or rinsed.

Additional containers for curbside service may be requested by calling Waste Management, Inc. at (760) 929-9400. Waste Management has a buyback center located at 5960 El Camino Real. Hours are Tuesday – Saturday, 8 a.m. to 4 p.m. Redeemable items include newspaper, CRV aluminum, glass, plastic 1-7 and bi-metal cans. The buyback center is closed for lunch.

Water Conservation Tips

Household Hints to Conserve Water and Money

Why Conserve?

Water conservation is the most cost-effective and environmentally sound way to reduce our demand for water. This stretches our supplies further, and protects places like our lagoons and ocean. The entire U.S. uses less water than it did 25 years ago, even though there are more people! Using less water also puts less pressure on our sewage treatment facilities, and uses less energy for water heating.

What Can I Do?

There are many effective ways to conserve water in and around your home. Many of these tips were gleaned from materials published by the Metropolitan Water District of Southern California (MWD). Indoor savings are based on a family of two adults and one child.

How Much Will I Save?

1. Water your lawn only when it needs it. Step on your grass. If it springs back, when you lift your foot, it doesn't need water. So set your sprinklers for more days in between watering. **Saves 750-1,500 gallons** per month. Better yet, especially in times of drought, water with a hose.
2. Fix leaky faucets and plumbing joints. **Saves 20 gallons** per day for every leak stopped.

3. Install water-saving shower heads or flow restrictors. **Saves 500 to 800 gallons** per month.
4. Run only full loads in the washing machine and dishwasher. **Saves 300 to 800 gallons** per month.
5. Shorten your showers. Even a one or two minute reduction can **save up to 700 gallons** per month.
6. Use a broom instead of a hose to clean driveways and sidewalks. **Saves 150 gallons** or more each time. At once a week, that's **more than 600 gallons** a month.
7. Use an ashtray or wastebasket instead of the toilet. **Saves 400 to 600 gallons** per month.
8. Capture tap water. While you wait for hot water to come down the pipes, catch the flow in a watering can to use later on house plants or your garden. **Saves 200 to 300 gallons** per month.
9. Adjust your sprinklers so that water lands on your lawn or garden where it belongs – and only there, instead of the sidewalks, driveway or gutter. **Saves 500 gallons** per month.
10. Set sprinkler timers to a shorter winter schedule to water less often and you will save **1,000s of gallons** of water every month!

Household Hazardous Waste

Oceanside HHW Facility
Free Drop Off, By Appointment Only
(760) 929-9400, 2880 Industry Street, Oceanside, Alternating Saturdays, 9 am-1 pm

Vista HHW Facility

753529

Bulky Item Pick Up 2009 Schedule

Call Waste Management, Inc. at (760) 929-9400 or visit their website at *http://northcounty.wm.com* to schedule; limit of 2 bulky items per Carlsbad resident per quarter at no charge.

Saturday, January 24
Appointments accepted January 5-12 ONLY

Saturday, March 21
Appointments accepted March 2-9 ONLY

Saturday, June 20
Appointments accepted June 1-8 ONLY

Saturday, September 19h
Appointments accepted August 31- September 7 ONLY

Saturday, November 7
Appointments accepted October 19-26 ONLY

Please go to *www.carlsbadconserves.org* to find out which of your household items qualify for bulky item pickup.

Yard Waste Decals Available

Yard Waste should be placed in a separate trash container, not plastic bags. The yard waste can/container should be labeled with a yard waste decal.

Yard waste decals are available by contacting Waste Management at (760) 929-9400 or by calling the City of Carlsbad Environmental Programs at (760) 602-4646. On collection day, place container with decal facing the street. Please remember that there is a ten can/container limit.

Storm Water Protection

Learn how to protect our lagoons and ocean and pass your knowledge on so future generations can enjoy a clean and safe ocean!

Ten Simple Ways You Can Help Protect the Ocean

1. Use non-toxic or less hazardous products around the house.
2. Properly dispose of hazardous waste and avoid disposing in the in the trash, sewer system, or storm drains.
3. Conserve water. Install and use water saving plumbing fixtures.
4. Collect cooking grease in a can and throw away. Grease down the drain hardens in the city sewer lines and can cause sewer overflow that can pollute the ocean.
5. Minimize disposal of food waste and trash down the drain. Excessive food waste and other items can cause blockage to sewer lines and cause sewer overflow that can pollute the ocean.
6. Limit use of yard chemicals.
7. Check your car regularly for oil leaks and fix immediately. Remember only rain in the storm drain!
8. Pick up trash, cigarette butts or debris around your yard and streets. Rain can wash them down to the ocean where they can harm marine animals.
9. Pick up after your pets.
10. Take your expired medications to a Household Hazardous Waste Facility.

Only Rain in the Storm Drain!

The City of Carlsbad supports the implementation of environmental laws and regulations issued by the Environmental Protection Agency and the California Regional Water Quality Control Board. These regulations are put in place to protect and preserve our environment, specifically water quality.

Storm Drains are not connected to the Sanitary Sewer and therefore, have no treatment prior to discharge to our creeks, lagoons, and the ocean. The primary purpose of storm water drains is to carry rainwater away from developed areas to prevent flooding.

Pollutants generated from various sources and activities include oil, grease, trash, cigarette butts, excess fertilizers and pesticides, bacteria from pet waste, sediment, and hazardous materials. If these pollutants find their way through storm drains, initially or over time, these pollutants can cause beach closures, increase sediment into creeks and lagoons, reduce oxygen levels in the water, cause changes in water temperature and clarity, and can increase plant and algae growth which can create a toxic environment for aquatic life.

Pollutants must be reduced and/or removed BEFORE they enter the storm drain system.

Tips

- Use non-toxic products.
- Limit use of yard chemicals.
- Eliminate water run off from irrigation.
- Use the Household Hazardous Waste Facilities to dispose of hazardous materials.

Each of us can do small things to help clean up our environment and that adds up to a pollution solution! For more information on Storm Water Protection go to *www.carlsbadconserves.org*. Storm Water HOTline (760) 602-2799

Make Spring Cleaning Easy on the Environment

HHW One Day Event Coming Soon!

Saturday, April 18, 2009, 9 a.m. – 1 p.m.
2480 Impala Drive, Carlsbad

Appointments required:
www.carlsbadca.gov/waste/hhwsched.html **or call (760) 602-7559**
Appointment bookings will begin March 30.

As the long winter months wane and spring approaches, people everywhere are preparing for the season's ritual – spring cleaning.

Did you know that many common products used daily require special handling for disposal and may not be discarded in sinks, storm drains or household trash? These items are classified as "household hazardous waste" (HHW) and are typically labeled Caution, Warning, Danger, Poison, Toxic, Flammable or Corrosive.

For a list of common HHW items, please go to *www.carlsbadca.gov/waste/index.html*

Carlsbad offers many ways to dispose of HHW items, such as the upcoming Annual HHW Collection One Day Event. Limited space available. FREE to Carlsbad residents with proof of residency.

Carlsbad residents have several ongoing options for properly disposing of HHW.

Door-to-Door HHW Collection
By Appointment Only
(800) 444-4244
Clean Harbors
$10 copayment per pickup

2880 Industry Street, Oceanside

Will Winter Rain and Snow Impact the Drought?

Snowfall in the Sierra Nevada mountain range is a primary source of water for the state, but is down to about two-thirds of normal precipitation so far this year. Reservoirs are well below normal levels and conditions reflecting an oceanic and atmospheric condition known as La Niña are appearing, creating a high-pressure system that could keep storms out of California. In essence, the forecast is another dry year.

The state is encouraging individuals and businesses to restrict outdoor water use and to buy water-efficient products. The City of Carlsbad has recently adopted a Water Conservation Ordinance which contains four levels of response, depending on the severity of the water shortage. A number of conservation measures will be in force at all times.

- Washing down paved surfaces is allowed only when necessary for safety or sanitation.
- Eliminate water waste from inefficient landscape irrigation, and repair any water leaks as soon as possible.
- Wash vehicles with a bucket and hose equipped with a shut-off nozzle.
- Serve water in restaurants only on request.
- Offer hotel guests the option of not laundering towels and linens daily.

For more information on Water Conservation Programs go to *www.carlsbadconserves.org.*

Keeping the Environment Clean

Pet Waste Disposal

Pet waste is a health risk to pets and people, especially children. It's a nuisance in our neighborhoods. Pet waste is full of bacteria that can make people sick. This bacteria gets washed into the storm drain and **ends up in our creeks, lagoons and ocean**. The bacteria ends up in shellfish living in these water bodies. People who eat those shellfish may get very sick.

Having a clean environment is of primary importance for our health and economy. Clean waterways provide commercial opportunities, recreation, fish habitat and adds beauty to our landscape. YOU can help keep our creeks, lagoons and ocean clean by applying these tips:

- **Carry a plastic bag when walking pets and be sure to pick up after them.**
- **Clean up pet waste in your yard frequently.**

The best way to dispose of pet waste is to flush it down the toilet because it gets treated by a sewage treatment plant.

Other disposal methods for pet waste include sealing it in a bag and placing it in the trash or burying small quantities in your yard to decompose. Be sure to keep it away from vegetable gardens.

The 3 R's

Reduce, Reuse, Recycle

Tips & Facts

✔ **Why should you recycle?**
- Recycling saves energy.
- Recycling saves our clean air and clean water.
- Recycling conserves our natural resources.
- Recycling saves landfill space.
- Recycling saves money and creates jobs.

✔ **Before you throw it away, ask yourself: Can this be recycled? Almost always, the answer will be yes.**

✔ **Nearly every beverage you drink comes in a container that can be recycled!**

✔ **Reduce means finding ways to decrease the amount of garbage we throw away.**

✔ **Buy bulk products or items that use little packaging. Cardboard is recyclable.**

✔ **Use a reusable lunch box or bag.**

✔ **Buy products that are durable and long-lasting.**

✔ **Try renting items you don't use very often.**

✔ **Use reusable bags when shopping.**

✔ **Find alternative ways to wrap gifts, such as a reusable cloth, a reusable decorative box or a reusable bag.**

✔ **Use reusable plastic containers for food instead of plastic bag.**

City of Carlsbad held 16th Annual Water Awareness Poster Contest

All 4th grade students in the Carlsbad Municipal Water District were invited to participate in the City of Carlsbad's Water Conservation Poster contest and the North County Water Agencies 2010 Calendar contest. This year's theme was "Water is Life."

Posters allowed each student to creatively interpret the use of water. We received many wonderful portraits and Carlsbad's top 20 will be on display at the Dove Library during the month of June 2009. These portraits give us insight on how we can conserve water. Here is a sneak peak at Carlsbad's First, Second and Third place winner's entries.

Second Place (above): Zach Lynch,
Hope Elementary School, Mrs. Miller

"WITH WATER...COMES LIFE"

- ✔ Plant native plants during the spring or fall when watering requirements are lower.
- ✔ Install a rain shut-off device on your automatic sprinklers to eliminate unnecessary watering.
- ✔ Use a layer of organic mulch around plants to reduce evaporation and save hundreds of gallons of water a year.

First Place (above): Olivia McLaughlin
St Patrick Parish School, Mrs. Richardson

"EVERYONE NEEDS WATER!"

- ✔ Pets need drinking water too!
- ✔ Turn the faucet off between rinses.
- ✔ Water your garden by hose, before 10 a.m. or after 6 p.m.
- ✔ Use discarded aquarium water for plants and flowers.

Third Place (right): Danielle Tweedy
St. Patrick Parish School, Mrs. Decottes

"DON'T WASTE WATER"

- ✔ Check your toilets for leaks and make sure it doesn't continue to run.
- ✔ Taking a shower uses less water than using the bathtub.
- ✔ Use a bucket to capture cold water from the shower while it's warming up and use on plants and flowers.

Welcome to the City of Carlsbad

This brochure provides guidelines and helpful hints on the environmental services available to Carlsbad residents.

Solid Waste Collection

The Solid Waste section will assist residents in understanding the services provided for refuse, recycling and yard waste collection in the City of Carlsbad. The Additional Waste Services section of this flyer instructs residents how and where to properly dispose of household hazardous waste, electronic waste and used oil.

Water Conservation

This section provides residents with cost saving options that will aid them in their efforts to conserve water. Resources such as toilet and clothes washer voucher programs and free on-site water audits are available.

Storm Water Protection

Storm water pollution affects everyone who lives, works and plays in the City of Carlsbad. Litter, fertilizers, pet waste, oil and soap can be washed from our yards, driveways and streets into the storm drain system and directly into our creeks, lagoons, and onto our beaches. This pollutes our water and endangers wildlife. The Storm Water section of this flyer identifies some preventative measures residents can take to minimize the source of these pollutants and the number to call to report illegal discharges in the storm drain system.

Brought to you in partnership by the City of Carlsbad and Waste Management, the City´s refuse and recycling provider.

Storm Water Protection

Did you know that storm drains are NOT connected to sanitary sewer systems and treatment plants? The primary purpose of storm drains is to prevent flooding by carring rainwater away from developed areas . Untreated storm water flows directly into our creeks, lagoons and the ocean, carrying any pollutants from the roads.

Storm water pollution comes from a variety of sources, including:

- Oil from vehicles
- Excess pesticides and fertilizer from landscaping
- Bacteria from pet waste
- Sediment from construction and landscaping projects
- Soap from car washing
- Litter
- Lawn and garden debris
- Improperly disposed home improvement products (paint, stucco, grout, cement, solvent)
- Washing driveways and sidewalks

Pollution prevention is up to YOU!

Please help us protect OUR environment. Here are some tips to help keep creeks, lagoons and the ocean clean:

- Bag and dispose of pet waste in a trash can, not a yard waste container
- Use fertilizers and pesticides sparingly
- Adjust sprinklers to prevent over-watering
- When possible, take your car to a commercial car wash

- Keep automobiles properly maintained to prevent fluid leaks
- Properly dispose of trash and cigarette butts
- Volunteer at cleanup events in Carlsbad

"Only rain in the storm drain"

To report an illegal discharge or for more information, call our hotline at (760) 602-4646.

www.carlsbadconserves.org

Water Conservation

The Carlsbad Water Ethic promotes responsible and efficient water use in our arid city. Our residents should follow this Water Ethic even when we are not in a drought situation. We encourage residents to adopt these behaviors as a way of life.

- Incorporate drought-tolerant plant materials and micro-irrigation (drip) systems wherever possible into new landscaping
- Water should not leave the user´s property due to over-irrigation of landscape
- Water during the early morning or evening hours to minimize evaporation
- Investigate and repair all leaks
- Water cannot be used to clean paved surfaces, such as sidewalks, driveways, parking areas, etc., except to alleviate immediate safety or sanitation hazards
- Recycled water shall be used wherever and whenever possible.

Residential Voucher Programs

Carlsbad participates in a voucher/rebate program with other San Diego County Water Agencies. The goal of this program is to reduce the amount of water residents use - thus increasing the available supply to all residents. Vouchers are available for money off of the purchase and installation of water saving devices like ultra low flow toilets, high-efficiency clothes washers, landscaping and Weather-Based Irrigation Controllers.
Interested residents and Home Owners Associations can contact the Voucher Processing Center at (800) 986-4538. The center is open Monday through Friday from 8:00 a.m. to 5:00 p.m., and Saturday from 8:00 a.m. to 3:00 p.m.

Residential Survey

Carlsbad residents can receive a free, on-site water conservation survey. This will include a review of indoor and outdoor water saving opportunities, a leak check, and an irrigation system and water schedule review. Customers are also shown how to read their water meter and are given literature promoting other conservation programs.
For ideas on water conservation at home refer to www.h2ouse.org

Holiday Schedule

Waste Management does not offer service on the following holidays:

- New Year's Day
- Memorial Day
- Independence Day
- Labor Day
- Thanksgiving Day
- Christmas Day

When a holiday falls on a weekday, collection will be delayed one day for the remainder of the week.

Holiday announcements will be published in your local newspaper.

www.carlsbadconserves.org

Buyback Center

Redeemable items

- Newspaper
- CRV aluminum cans
- CRV glass bottles
- CRV plastic bottles
- CRV bi-metal cans

CRV = California Redemption Value. Ready-to-drink beverage containers which are packaged in aluminum, glass, plastic, bi-metal or any combination of these materials.

Also accepted:

- Electronic devices
- Household batteries

(For more information see Household Hazardous Waste)

Donation items

- Non CRV aluminum
- Non CRV glass
- Non CRV plastic
- Tin cans
- White ledger paper
- Computer paper
- Mixed paper
- Corrugated cardboard

Hours: Tuesday - Saturday
8:00 a.m. - 4:00 p.m.
Closed:
1:00 p.m. - 1:40 p.m.
(760) 929-9400

Bulky Item Pickup

Need to dispose of such items as furniture (couch, chair, dresser, cabinet, bookshelf, mattress) or appliances (toilet, washer, stove, sink)? FREE bulky item collection days are scheduled periodically in your community. Residents may dispose of two items per event. Special pickups are available for a fee. Call Waste Management at (760) 929-9400 to schedule an appointment or for additional information.

Electronic Waste

What is E-Waste?

The rapid advances in new technology and demand for new electronic equipment have increased the disposal of outdated electronic equipment known as "E-Waste."

Proper disposal of "E-Waste" through recycling and reuse prevents them from reaching landfills. This also helps to minimize waste, and provide usable items to organizations that need them as well as recapture valuable resources.

- Cell phones
- Computers
- Televisions
- VCRs/DVDs
- Stereos
- Printers
- Fax machines
- Monitors
- Microwaves ovens

Universal Waste

(Including household batteries)

As of February 9, 2006, it is now illegal in the State of California to dispose of common household items such as alkaline batteries*, mercury thermometers and thermostats, and fluorescent light bulbs into the trash. These items are now classified as Universal Waste, and must be disposed of properly through the Household Hazardous Waste (HHW) program. However, in an effort to make the disposal of common household batteries including re-chargeable ones, more efficient, the City has partnered with Waste Management to allow residents to drop off the batteries at the Waste Management Recycling Center located at 1145 East Taylor St., Vista, free of charge. The City recommends storing your used fluorescent light bulbs in a safe place until they can be brought to the HHW facilities or scheduled for a home pick-up.

**Note - rechargeable batteries can also be brought to a participating retail store that provides free drop-off bins for proper disposal.*

Where to recycle Electronic and Universal waste

Door-to-door: Call (800) 444-4244

Waste Management
5960 El Camino Real, Carlsbad
Hours: Tuesday - Saturday 8:00 a.m. - 4:00 p.m.
Closed: 1:00 p.m. - 1:40 p.m.
For additional information please call (760) 929-9400
COST: CRTs (television, laptops, monitors): no charge
All others electronic devices fee at drop-off.

Household Hazardous Waste Collection Facility
1145 East Taylor Street, Vista
Hours: Saturdays 9:00 a.m. - 3:00 p.m.
For additional information please call (800) 714-1195
COST: Currently there is no cost to Carlsbad residents.

www.carlsbadconserves.org

Household Hazardous Waste

MATERIALS ACCEPTED:

- Used motor oil and filters
- Pool cleaners
- Automobile fluids (antifreeze, gasoline, brake, transmission)
- Household cleaners
- Landscaping chemicals
- Automotive batteries
- Mercury thermostats
- Mercury thermometers
- Non-empty aerosol cans
- Lamps with fluorescent tubes, sodium vapor lamps
- Household batteries
- Paint
- Mercury switches(automotive or non-automotive light switches)
- Novelties such as some singing greeting cards or flashing athletic shoes

Drop-off

Residents may bring up to 15 gallons or 125 pounds per visit.

A proof of residency required (California driver license, utility bill or other).

No charge to residents at either location.

Door-to-door collection

The City has implemented a door-to-door program that allows residents to make an appointment to have their HHW picked up at their residence for a small co-pay of $10. This door-to-door program is available to all residents. For more information on this program, or to set up an appointment, call (800) 444-4244.

PUT TOXIC WASTE IN ITS PLACE

Drop-off locations

VISTA
Hours: Saturdays:
9:00 a.m.- 3:00 p.m.
No appointment necessary
(800) 714-1195

OCEANSIDE
Hours: Alternating Saturdays:
9:00 a.m. - 1:00 p.m.
Appointment ONLY.
For additional information, please call
(760) 929-9400.

Funded by a grant from the California Integrated Waste Management Board.

Overflow Trash

PALOMAR TRANSFER STATION
(760) 603-0153

Residents can dispose of overflow trash at the Palomar Transfer Station. A fee will be charged at the time of disposal. For additional information please call the Palomar Transfer Station at (760) 603-0153.

No hazardous or regulated waste is accepted at this facility including batteries, paint, tires, liquids and electronic waste.

Open to residents
Saturday & Sunday
7:30 a.m. to 4:00 p.m

Holiday Trees

The City, in partnership with Waste Management, has a holiday tree recycling and collection program that allows residents to drop off their trees for recycling or be picked up at the curb for collection. This service is free to all Carlsbad residents and it operates the day after Christmas through the first two weeks in January. For locations where residents may drop-off the trees for recycling check the City's website or the Community Services Guide.

For curbside pick-up remove stands, tinsel and ornaments from trees, cut in sections no longer than 4 feet and place out on the curb for collection. Flocked trees are not recyclable and will be collected by the trash drivers.

Holiday schedule announcements will be published.

www.carlsbadconserves.org

City of Carlsbad

Storm Water Protection Program

March 2, 2009

Carlsbad Resident

Dear Carlsbad Resident:

In compliance with the City's National Pollutant Discharge Elimination System Municipal Permit, and in consideration of the current drought in California, the City of Carlsbad is asking for your voluntary participation in an Irrigation Runoff Reduction Watershed Pilot Program in your neighborhood.

Irrigation water that runs off your property not only wastes our precious water, but can also contain pollutants such as fertilizer, pesticides, sediment, and bacteria. Once in the storm drain system, these pollutants are transported directly to our creeks, lagoons and ocean in Carlsbad. Through the end of April, we will be offering free onsite assessments in your neighborhood to review opportunities for irrigation runoff reduction.

While this is a voluntary project, the City will also be contacting you if there is evidence of irrigation runoff due to over-watering, leaks, or misaligned/broken sprinkler heads on your property. Our Water Conservation Specialist will work with you to develop recommended Best Management Practices to ensure pollution prevention and water conservation are practiced daily on your property. To sign up for your free assessment, please call our Storm Water Hotline at (760) 602-2799.

Like you, the City of Carlsbad ***is committed*** *to preventing pollution, improving water quality, and conserving water in our region. By working together we'll provide a cleaner and healthier environment for Carlsbad residents, businesses, and visitors. For more information about the City's Storm Water Protection or Water Conservation programs, please contact us at (760) 602-2799. You may also find additional storm water information on the City's website at* ***www.carlsbadconserves.org*** *or at* ***www.carlsbadca.gov****.*

Sincerely,

Glenn T. Pruim P.E.
Public Works Director

1635 Faraday Avenue • Carlsbad, CA 92008-3009 • 760-602-2799 •FAX 760-602-8562

City of Carlsbad

Environmental Programs

March 19, 2009

Dear Carlsbad Resident:

The City of Carlsbad's Storm Water Program works to protect the City's creeks, lagoons, and ocean from urban pollution. Through recent field investigations, there is evidence in your neighborhood of erosion and sedimentation issues in the storm drain system. During rain events, sediment from eroding slopes, garden edges, and other areas can wash off into the street, brow ditches, gutters, and storm drain system.

Sedimentation can create blockages in the storm drain system, increasing the possibility of flooding. In addition, it raises the level of suspended solids in our lagoons, which harm aquatic and marine life. Excess sediment from erosion also contributes to the infill of creeks and lagoons.

To reduce erosion from your property:

- Place sand bags, straw wattles, or silt fences along any slopes, lots, or other areas where erosion might occur, particularly along brow ditches, gutters, and any other storm water structure.
- Consider installing more permanent structures, such as retaining walls, brick, or stone in locations where erosion might consistently occur.
- Plants are a natural, inexpensive and highly effective means of controlling runoff, and can also act as a filter to remove pollutants from storm water. Consider using vegetation to protect slopes from runoff.

To reduce other pollutant discharges from your property:

- Frequently and properly dispose of grass, leaves, shrubs, and other green yard waste to prevent it from washing to the storm drain. Consider recycling yard waste or starting your own compost pile.
- Decrease the use of lawn and garden care products such as pesticides, insecticides, weed killers, fertilizers, herbicides, and other chemicals. Consider using organic fertilizers or non-toxic alternatives.
- During the rainy season, from November to March, alter your irrigation system to water less frequently and for shorter durations.

If you have any questions or would like additional information, please call me at the City's Storm Water Department at (760) 602-7583 or visit our website at www.carlsbadconserves.org. Thank you for doing your part to keep only rain in the storm drain.

Sincerely,

Hallie Thompson

Hallie Thompson
Environmental Specialist

City of Carlsbad

Environmental Programs

October 30, 2008

Dear Carlsbad Resident:

The City of Carlsbad's Storm Water Protection Program works to protect the City's creeks, lagoons, and ocean from urban pollution. Through water quality monitoring and/or field investigations, there is evidence in your neighborhood of over-irrigation. Over-irrigation not only wastes precious water during our current drought, but can also wash fertilizers and pesticides from landscaping activities off your property into the City's streets and storm drain system.

Untreated storm water transports pollutants directly into our creeks, lagoons, and ocean. Pollutants carried in irrigation water include landscape debris, pet waste, detergents or soaps from outdoor washing, and pesticides and fertilizers.

To reduce over-irrigation:

- Consider breaking up the irrigation cycles into 5-minute intervals which allow water to soak into the earth instead of running off.
- Look for leaks or misaligned sprinklers to reduce overspray.
- Contact the City for a consultation with our Water Conservation Specialist at (760) 602-4646.

To reduce other pollutant discharges from your property:

- Frequently and properly dispose of grass, leaves, shrubs, and other green yard waste to prevent it from washing to the storm drain. Consider recycling yard waste or starting your own compost pile.
- Decrease the use of lawn and garden care products such as pesticides, insecticides, weed killers, fertilizers, herbicides, and other chemicals. Consider using organic fertilizers or non-toxic alternatives.

For additional information on the City's Environmental Programs Department, please call us at 760-602-4646 or visit our website at **www.carlsbadconserves.org**.

The Environmental Programs Department
City of Carlsbad

City of Carlsbad

Environmental Programs

December 26, 2008

Dear Carlsbad Resident:

The City of Carlsbad's Storm Water Program works to protect the City's creeks, lagoons, and ocean from urban pollution. Through field investigations, there is evidence in your neighborhood of erosion and sedimentation issues. During rain events, sediment from eroding slopes, garden edges, and other areas can wash off into the street and storm drain system.

Sedimentation increases the level of suspended solids in our lagoons. This increase in suspended solids and turbidity can block light from reaching lower depths of creeks and lagoons, which can inhibit growth of submerged aquatic plants and consequently decrease oxygen levels, as well as disrupt the natural balance of aquatic and marine ecosystems. Excess sediment from erosion also contributes to the infill of creeks and lagoons.

To reduce erosion from your property:

- Place sand bags, straw wattles, or silt fences along any slopes, lots, or other areas where erosion might occur.
- Consider installing more permanent structures, such as retaining walls, brick, or stone in locations where erosion consistently occurs.
- Plants are a natural, inexpensive and highly effective means of controlling runoff, and can also act as a filter to remove pollutants from storm water. Consider using vegetation to protect slopes from runoff.

To reduce other pollutant discharges from your property:

- Frequently and properly dispose of grass, leaves, shrubs, and other green yard waste to prevent it from washing to the storm drain. Consider recycling yard waste or starting your own compost pile.
- Decrease the use of lawn and garden care products such as pesticides, insecticides, weed killers, fertilizers, herbicides, and other chemicals. Consider using organic fertilizers or non-toxic alternatives.
- During the rainy season, from November to March, alter your irrigation system to water less frequently and for shorter durations.

If you have any questions or would like additional information, please call the City's Storm Water Department at (760) 602-2799 or visit our website at www.carlsbadconserves.org. Thank you for doing your part to keep only rain in the storm drain.

The Storm Water Department
City of Carlsbad

2009 Water Quality Report

Conserve Water and Promote a Sustainable Lifestyle

Carlsbad Municipal Water District – A subsidiary district of the City of Carlsbad

Este informe contiene informacion muy importante sobre su agua potable.
Traduzcalo o hable con alguien que lo entienda bien.

What You Can Do To Help

Sweep or Rake

Sweep up debris and put it in a trash can. Hosing off sidewalks, parking areas and garages is not permitted. Rake up yard waste and start a compost pile.

Dispose of Yard Waste More Frequently

By disposing of grass, leaves, shrubs and other organic matter more frequently, less will wash into storm drains.

Reduce Use of Landscape Chemicals

Decrease the use of lawn and garden care products such as pesticides, insecticides, weed killers, fertilizers, herbicides and other chemicals. Over-irrigation is not permitted under the water conservation ordinance, and doing so can wash landscape chemicals into gutters and storm drains.

Use Soap Sparingly

When washing your car at home, use soap sparingly, divert wash water to landscaped areas, and pour your bucket of soapy water down the sink. Washing your car in the street is not permitted.

Clean up After Your Pets

Take a bag when you walk your pets and be sure to always clean up after them. Flush pet waste down the toilet or seal it in a plastic bag and throw it in the trash.

Buy Non-Toxic Products

When possible, use non-toxic products in household cleaning. If you must use a toxic cleaning product, buy small quantities, use it sparingly and properly dispose of unused portions. For the household hazardous waste collection facility nearest you, call: 800-CLEANUP or 760-602-4646.

Appendix 7 ILLICIT DISCHARGE DETECTION AND ELIMINATION (IDDE)

The City s Illicit Discharge Detection and Elimination (IDDE) and Appendices will be submitted in December 2009 as approved by the Regional Board in Addendum 2, Order 2007-0001.

Only Rain in the Storm Drain!

Storm Water Protection... It's OUR Business!

Appendix 8.1

What You Need to Know...

The City of Carlsbad's storm water conveyance system consists of pipes, concrete ditches, basins, drains and inlets, as well as natural drainage areas, such as creeks, canyons, gullies and streams. The purpose of the system is to carry rainwater away from developed or urbanized areas to prevent flooding.

The storm water system is ***not*** connected to sanitary sewer systems or treatment plants. Rainwater and the pollutants it carries flow directly to our creeks, lagoons and ocean. Possible pollutants to storm water include:

- Sediments
- Organic Compounds
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses
- Pesticides
- Metals
- Fertilizers
- Detergents

How does urbanization affect the environment?

Urbanization increases impervious, or impenetrable, surfaces with parking lots, streets, and other developments. Rainwater no longer percolates into the soil, but runs off through the storm drain system, often increasing water volume and flood peaks. Effects include reduction in dissolved oxygen and clarity levels, changes in the water temperature, clogged breathing apparati of marine life, infill of creeks and lagoons, and amplified algae growth. These negative impacts can close beaches and degrade water quality over longer periods of time.

What is the Storm Water Protection Program?

The City's Storm Water Protection Program regulates storm water activities for existing residential, commercial, and industrial developments, investigates illegal discharges to the storm water system, educates the public about pollution prevention, and oversees the water quality monitoring program.

What does the Municipal Permit require?

The Municipal Permit requires the City to prevent storm water pollution during all three phases of urban development: construction, new development, and existing development.

The Permit also requires the City - ***employees, residents, and businesses*** - to improve the quality of the water flowing into the storm water system to the maximum extent practicable. In addition, the Municipal Permit requires the City to investigate and eliminate illegal discharges, develop an outreach and education program, and implement BMPs at municipal facilities.

I've heard the term NPDES. What does it mean?

NPDES stands for ***National Pollutant Discharge Elimination System*** created under the 1972 Federal Clean Water Act. The 1987 amendments to this Act required municipalities discharging storm water runoff into surface waters (i.e., ocean, lagoon, etc.) to obtain a permit. In California, these permits are issued and enforced by the Regional Water Quality Control Board.

Our current municipal storm water permit was issued on January 24, 2007 and applies to all 18 cities in San Diego County, the Unified Port District, the San Diego County Regional Airport Authority, and the County of San Diego. To view a copy of the Permit, please go to http://www.swrcb.ca.gov/rwqcb9/programs/sd_stormwater.html, or visit http://www.carlsbadca.gov/stormwater/conserve.html.

Who is responsible for protecting storm water?

EVERYONE! Storm water pollution prevention is a shared duty between the City of Carlsbad and the community. Storm drains on ***public*** streets, property, or easements are monitored and cleaned by the City. Everyone plays a part in keeping our storm drains free of trash, debris, and other materials that may pollute, contaminate or block the flow of water through the storm drain system:

- **City Employees**
- **Residents**
- **Business Community**
- **Developers and construction workers**
  - **YOU!!**

Storm Water Hotline: 760-602-2799

Only Rain in the Storm Drain!

What are Best Management Practices?

Best Management Practices (BMPs) are methods, measures, or practices designed to prevent or reduce water pollution. Once potential and existing sources of pollution have been identified, the next step is to select proper BMPs to eliminate or reduce storm water pollution.

What are some BMPs I can use?

- Instead of using a hose or pressure washing system, **try a dry clean up method!** Use mops, brooms or wire brushes to clean dumpsters, sidewalks, buildings, and other impervious surfaces. Never wash anything to the storm drain.
- Washwater should be dumped to indoor drains or to landscaping whenever possible.
- When possible, store materials indoors or under covered areas not exposed to rain. If materials cannot be stored under cover, place materials on pallets and cover with a tarp to avoid contact with storm water run-on and runoff.
- Dumpsters should always be kept closed to prevent rainwater from entering. Never place liquid waste, leaky garbage bags or hazardous waste in a dumpster or trash bin.
- Recycle whenever possible.
- Wash vehicles at a commercial car wash, whenever possible. City employees and/or mobile detailers cannot wash vehicles on public streets.
- Consider using safe, non-toxic products to reduce the use of hazardous products.
- Consider planting native vegetation whenever possible to reduce irrigation and water use and to conserve native habitats and wildlife.
- Regularly inspect storm drains for any accumulated trash, sediment, debris, or other materials that could pollute the storm drain system. Contain and clean any potential discharges immediately.

How do I report a storm water violation?

The Storm Water Protection Program operates a hotline and e-mail address to receive referrals about storm water pollution and illegal discharges. If you see someone dumping or washing waste or pollutants to the street or storm drain, please call the **hotline** at **760-602-2799** or send an email to stormwater ci.carlsbad.ca.us. This information is then routed to the appropriate person for response.

Storm Water Hotline
760-602-2799

What is the City doing to comply with the new Permit?

- A Jurisdictional Urban Runoff Management Plan (JURMP) has been developed and is being implemented.
- The Carlsbad Municipal Code cites regulations for storm water protection and pollution prevention.
- An extensive education and inspection program has been implemented to ensure the community is aware of and complying with the storm water requirements.
- Reports of illegal discharges are fully investigated and resolved to the maximum extent practicable.
- Storm water pollution prevention plans (SWPPP) have been developed and implemented at applicable high priority municipal facilities throughout the City.
- City employees have been and will continue to be trained on the requirements of the storm water program.
- The General Plan and Environmental Review process includes storm water pollution prevention requirements.
- Water quality monitoring is being conducted ocean outlets within the City s jurisdiction.
- The storm drain conveyance system has been mapped in GIS format.
- The City employs a Water Conservation Specialist to consult with residents regarding water use reduction and irrigation practices.
- The City seeks to purchase cleaner City vehicles such as hybrids to reduce fuel consumption and pollution and is researching alternative fuels and traffic reduction methods.
- The City has implemented a Waste Reduction Strategy to increase recycling while reducing waste generated. A partnership has also been created with Waste Management to encourage businesses to properly maintain trash areas.
- A Watershed Urban Runoff Management Plan (WURMP) has been developed and implemented in association with other North County cities within the Carlsbad watershed.

Be A Part of the Pollution Solution!!

Storm Water Training for Municipal Employees
July 1, 2008 - June 30, 2009

DATE	DEPT. DIV.	EMPLOYEES ATTENDING	TRAINING TYPE	NAME OF TRAINING OR TOPICS	LOCATION	SPONSOR PRESENTER

09/04/2008	PARKS	6	HAND-OUT	ILLEGAL DUMPING CONTROL	STAGECOACH	J. PIMENTEL
09/05/2008	Construction Management Association of America	1	Seminar	Seminar: Construction Storm Water Compliance	San Diego, CA	Jeremy Riddle
09/08/2008	New Employees	8	Workshop	First Mondays - General Storm Water Training	Faraday	Storm Water
09/11/2008	Engineering DS	4	Staff Meeting	Discussion regarding draft order for construction	1635 Faraday	Steve Bobbett
09/18/2008	Engineering DS	6	Staff Meeting	Announcement regarding rainy season; letter from RWQCB; encouragement to properly condition all projects. Review of FY 07-08 stormwater priority determinations for discretionary approvals	1635 Faraday	Steve Bobbett
09/25/2008	Engineering DS	6	Staff Meeting	Discussion of use of underground PCC settling basing for treatment of parking lot runoff; proper BMPs for deli's, and review of La Costa Oaks 3.2 project	1635 Faraday	Steve Bobbett
10/02/2008	PARKS	6	DVD	XERISCAPE	POINSETTIA	C. SHANKEY
10/02/2008	Engineering DS	6	Staff Meeting	Discussed removal of post-construction BMPs (temporary basins) as construction advances. Reviewed handling of driveway ramp runoff into below ground parking garage area drains, perimeter french drains, all connected to sump pump.	1635 Faraday	Steve Bobbett
10/09/2008	Engineering DS	6	Staff Meeting	Announcement of regulation training, new legislation and internet implementation links. Discussed tracking mechanisms for temporary construction BMPs. Reviewed treatment of stormwater runnoff from Quarry Creek project prior to merging with stream flow.	1635 Faraday	Steve Bobbett
10/16/2008	PARKS	33	DVD	XERISCAPE	PARK YARD	G. DAUSS
10/16/2008	Engineering DS	4	Staff Meeting	Discussion of need to include engineered BMPs, not just numerically sized, format of list of treatment control BMPs, and determine BMP maitenaince schedule (manufacturer's recommendation or other).	1635 Faraday	Glen Van Peski

10/20/2008	Engineering DS	6	Staff Meeting	Review of changes in new Drainage Master Plan, effect of LID in reducing post development Q, and single sheet BMP plan sheet	1635 Faraday	Steve Bobbett
10/23/2008	Engineering DS	6	Staff Meeting	Discussion of new model SUSMP requirements; Reviewed and discussed BMP requirements for proposed projects.	1635 Faraday	Jeremy Riddle
10/28/2008	CM&I	10	Presentation	NPDES Compliance and Enforcement	M&O	Shawn Grandberry
10/28/2008	Engineering, Planning, Redevelopment, Construction Maintenance / Inspection and Engineering Design	32	Consultant	Presentation covering overview of training program, urban runoff, laws and regulations, requirements of R9-2007-0001, City's JURMP, general principals, general BMPs, WURMP, RURMP, and land use.	1635 Faraday	Miikhail Ogawa
10/29/2008	Facilities	13	Presentation	local municipal codes and NPDES comlpliances and BMP maintenance	Safety Center	Clayton Dobbs
10/29/2008	Streets	23	Staff Training	non storm water discharges; water law; bmp's	Safety Center	Clayton Dobbs
10/29/2008	Engineering, Planning, Redevelopment, Construction Maintenance / Inspection and Engineering Design	23	M Ogawa	StormWater Training for Land Dev 1	1635 Faraday	Steve Bobbett
10/30/2008	Engineering DS	7	Staff Meeting	Announcement of upcoming NPDES training; discussion of adding standard BMP best practices conditions for	1635 Faraday	Steve Bobbett
11/03/2008	New Employees	9	Workshop	First Mondays - General Storm Water Training	Faraday	Storm Water
11/06/2008	Engineering DS	7	Staff Meeting	Announcement of City Council approval of Drainage Master Plan, associated revisions and implementation of LID concepts; Review of request for LID on Lutheran Church submittal; Discussion of TIER 1 SWPPP for landscape plans and routing to inspection.	1635 Faraday	Steve Bobbett
11/13/2008	PARKS	29	HAND-OUT	ILLEGAL DUMPING CONTROL	PARK YARD	G. DAUSS
11/13/2008	Engineering DS	6	Staff Meeting	Announcement of co-permittee committee review of Carlsbad's single sheet SWMP with matrix and location of all BMPs constructed by improvement plans, grading [plans, building plans, etc.	1635 Faraday	Steve Bobbett
11/20/2008	Recreation	47	Presentation	Recreation All Hands Meeting, General Storm Water Training	Recreation Administration	Storm Water
12/04/2008	Engineering DS	7	Staff Meeting	No announcements, discussions, or project reviews.	1635 Faraday	Steve Bobbett
12/10/2008	water dept	40	Presentation	BMP maintenance	CMWD	Clay Dobbs
12/11/2008	PARKS	31	DVD	LANDSCAPE IRRIGATION MAINT.	PARK YARD	G. DAUSS
12/11/2008	Engineering DS	6	Staff Meeting	Discussion of hydromodification issues and retention basin BMP for CT 06-09 and review of CUP extention conditioned to submit SWMP prior to approval of extension	1635 Faraday	Steve Bobbett
01/05/2009	New Employees	9	Workshop	First Mondays - General Storm Water Training	Faraday	Storm Water
01/08/2009	Engineering DS	7	Staff Meeting	Discussed process to scan, record and track record copies of SWMPs and SWPPPs and discussed PRE 08-39s proposed wetlands, raingardens, bioswales, permeable pavement, and Filtera units.	1635 Faraday	Steve Bobbett
01/15/2009	Engineering DS	7	Staff Meeting	Review of grading plan for project adjacent to Aqua Hediondia Lagoon and appropriated BMPs.	1635 Faraday	Steve Bobbett
01/22/2009	Engineering DS	6	Staff Meeting	Discussion of process for implementation of revised drainage fees and review of RP 08-61 as a priority project.	1635 Faraday	Steve Bobbett
01/29/2009	Engineering DS	7	Staff Meeting	Announced GIS link to ESA map; Discussed permanent vs. interim hydromod criteria, dates for implementation of hydromod, model SUSMP and SUSMP; Reviewed proposed change to catch basin filter insert, high capacity sand filter in an underground basin to acheive LID, and an increase to impervious area for a 35 unit senior condo project.	1635 Faraday	Steve Bobbett
02/05/2009	water dept	41	Presentation	Pollution prevention	CMWD	Clay Dobbs
02/05/2009	Engineering DS	6	Staff Meeting	Discussed implementation of hydromod criteris, specifically Board review and approval of rainfall data.	1635 Faraday	Steve Bobbett
02/08/2009	PARKS	29	DVD	INTEGRATED PEST MANAGEMENT	PARK YARD	G. DAUSS

02/12/2009	Engineering DS	8	Staff Meeting	Announced rejection of stormwater fees by City Manager, discussed process to assign and link SWMP and SWPPP numbers	1635 Faraday	Steve Bobbett

...THEN ACT!

YOUR EVERYDAY ACTIONS IMPACT OUR ENVIRONMENT!

Storm drains flow directly into our creeks, lagoons and ocean without filtration. Storm drains and sewers are not connected. Prevent soap suds, pet waste, paint, and pesticides from entering storm drains or soon they will be contaminating our water ways. For a clean environment, keep it out of the street! Think about it – rainwater should be the only thing going down in this town.

To report an illegal discharge or for more information call our hotline at 760-602-4646.

think globally. act neighborly.

Water connects us all,
from our homes and streets to our beaches and lagoons.

One way Carlsbad keeps local beaches and lagoons clean is by keeping motor oil off streets and out of the storm drains.

- Keep your car well maintained to prevent and fix leaks.
- Check for oil leaks regularly.
- Put a pan under your car if you have a leak.
- Dispose of used motor oil at household hazardous waste facilities or at certified sites.

Learn more about how you can join your neighbors in keeping our oceans and lagoons clean at

Permit Annual Reporting Requirement Section J.3.a.(3).(f)	Section
i. Correction of any inaccuracies in either the MS4 map or Dry Weather Field Screening and Analytical Monitoring Stations Map.	Section 7.6
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order NO. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	Section 7.4, Separate attachment
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	Attachment
iv. A brief description of any other investigation and follow-up activities for illicit discharges and connections.	Section 7.5. Appendix 7.3
v. The number and brief description of illicit discharges and connections identified.	Section 7.5
vi. The number of illicit discharges and connections eliminated	Section 7.5
vii. Identification and description of all spills to the MS4 and response to the spills.	Section 7.3
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	Section 7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	Section 7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	Section 7.2
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges	Section 7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	Section 7.5
xiii. A description of notable activities conducted to manage illicit discharges and connections.	Section 7.7

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

7.1 Introduction

The City continued to conduct a proactive program for detecting and eliminating illegal discharges and illicit connections into the MS4. This section describes the activities of the City with respect to implementation of the Illicit Discharge Detection and Elimination Component of the JURMP for FY 2008-09. The City's program actively seeks to identify and eliminate illicit discharges and connections by conducting illegal discharge investigations, responding to spills and sewage overflows, conducting monitoring, and performing routine cleaning and maintenance activities on the sewer and storm drain systems. Several additional activities occurred between July 1, 2008 and June 30, 2009 and are described below.

- Continued operation of a storm water hotline and complaint response 24 hour spill response for wastewater and storm drain emergencies
- Updated the Dry Weather Program Stations
- Conducted the Dry Weather Program from May 1 September 30, 2009
- Conducted the MS4 Monitoring Program

7.2 Public Reporting of Illicit Discharges and Connections

The City continued to publicize and facilitate public reporting of illicit discharges and water quality impacts. Methods to publicize and facilitate public reporting include the following:

- Brochures and Publications
- Outreach events
- The City's Website for both outgoing information and incoming requests from the public
- Internal training
- Operation of a Storm Water Hotline
- Operation of an Environmental Programs Hotline
- Operation of a Storm Water email account

All outreach methods utilized are described in detail in Sections 8.0 and 9.0, the Education and Public Participation Sections of the previously submitted report.

The City operated a Storm Water Hotline and email account; storm water staff answered the storm water hotline and checked email to the storm water account during regular office hours, 8 am to 5 pm, Monday through Friday. After office hours calls to the hotline were directed to voicemail or to an after hour duty phone in the case of emergency. The message provided information in English and Spanish. Figure 7.1 illustrates the types of storm water related complaints received in FY 2008-09.

Figure 7.1 Storm Water Complaints FY 2008-09

New methods to track calls were implemented on July 1, 2008. In FY 2008-09 there were a total of 564 calls to the storm water hotline. Comparison of total calls to previous years is not possible because the actual number of calls was not tracked in previous years, just complaints of potential storm water violations. In FY 2008-09 there were 195 storm water related complaints received, 106 of which were via the hotline. Other calls to the hotline ranged from information requests, to solid waste inquiries, to other City business. Compared to previous reporting periods, call volume decreased marginally. In FY 2007-08, there were 226 storm water related calls and 154 in FY 2006-07. Figure 7.2 illustrates FY 2008-09 storm water complaints by reporting mechanism. Potential storm water violations were reported by several categories of people including Storm Water Inspector, other City Staff, Outside Agency and the public. Figure 7.3 illustrates the storm water complaints by reporting party. Most of the 195 storm water related complaints in FY 2008-09 were related to washing or dumping to the storm drain.

Figure 7.2 Storm Water Complaints by Reporting Mechanism FY 2008-09

Figure 7.3 Storm Water Complaints by Reporting Party FY 2008-09

7.3 Spill Reporting, Response, and Prevention

Spill Response

City employees are trained to follow the City s Sewer Overflow Prevention Plan/Response Plan. Staff training was conducted semi-annually, either by tailgate or all-hands class format. All spill response incidents were tracked in the Hansen system or in spill reports. Sanitary sewage overflow responses were documented as required on the Sanitary Sewer Overflow Report Form, which was sent via fax to the Regional Board, County Health Department, and the Storm Water Protection Program. During this reporting period of July 1, 2008 to June 30, 2009, the City responded to 4 sewage overflows or spills of approximately 6,125 gallons, 98 of which was recovered. The overflow reports are found in Appendix 7.1.

The City Public Works Maintenance and Operations Division (M&O) continued to respond and coordinate sewage spill response with the Leucadia Waste Water District (LWWD) and Vallecitos Water District (VWD) for spills that occurred outside the M&O jurisdiction. During normal business hours, calls were dispatched by M&O to field units for immediate response and evaluation. After working hours, phone numbers were routed through police dispatch to M&O standby personnel.

A portion of the LWWD collection system is located within the City limits. LWWD is responsible for operating and maintaining their system, including responding to overflows and spills. However, M&O responds or provides assistance when requested. During this reporting period, LWWD responded to zero sewage overflows in Carlsbad.

A portion of the VWD sewage collection system is also located within the City limits. VWD is responsible for operating and maintaining their system, including responding to overflows and spills. However, M&O responds or provides assistance when requested. During this reporting period, Vallecitos Water District reported zero sewage overflows in the City of Carlsbad.

The City continued to actively prevent and respond to sewage spills and other spills, and to limit discharges from the sanitary sewer system to the MS4. This occurred through public education and outreach, inspections, preventive maintenance, complaint response, and spill response (containment and remediation). The City operated 283.5 miles of sewer mains, and City staff maintained 253 miles of 12 and under sewer mains. Large sewer trunk mains are maintained by both City staff and contract work. City staff maintained 14 sewer pump stations.

The City also added an additional Smart Cover to the existing nine, for a total of ten, to monitor flow levels in problem sewer manholes. Smart Cover alarms saved the City from one spill during this reporting period. The City entered into a joint project with Encina Wastewater Authority and installed new ADS Intelliserve flow monitoring systems to monitor sanitation flow rates 24 hours a day at selected areas.

Table 7.1 contains a summary of information associated with miles of sewer mains and spills.

Table 7.1 Summary

Time Period	Number of Reportable Spills[1]	Reportable Gallons Spilled	Total Miles of Sewer Mains
July 1, 2008 June 30, 2009	4	6125	283.5

[1] Includes all spills caused by a failure in the sewer system (excludes recycled water spills and/or spills from sewer laterals).

The following inspection and preventive maintenance activities were conducted during this reporting period.

Inspections

From Monday through Friday, all 14 sewer pump stations were inspected daily. The ten largest pump stations were also inspected on Saturdays and Sundays. The operator inspected the electrical systems quarterly and the pumps and shafts were serviced annually. In addition, outside services were contracted to inspect the electrical services annually. The wet wells were cleaned every six weeks or more frequently if necessary.

Eleven pump stations are equipped with telemetry which was inspected daily. This included checking the 24-hour history records, pump gallons per minute, wet well on-off cycles and pump alternating cycles. The City conducted most pump repair work; although any needed machine work was performed by outside services. In the case of emergencies, the City has a 24-hour duty person, and cell phones were issued to each member of the Wastewater Operations staff, and Supervisor. In the case of power failures, ten of the stations have onsite generators and three stations can be powered by the City s two trailer mounted generators. The remaining station has 24 hours of storage capacity and can be maintained by a vacuum or pumper truck.

Education

Educating the public on the proper disposal of fats, oils and grease is one of the BMPs used to prevent sewage spills. The City continued to distribute the Water Environment Federation brochure entitled *Fat-Free Sewers.* These brochures were distributed at various public events and during field visits. Workshops were conducted in FY 2008-09.

A new Fats, Oils and Grease (FOG) Program was implemented during FY 2008-09. A contractor was hired to conduct site inspections at restaurants in the City s sewer service area and a database was developed which details the type and size of the grease control device at each site. This program will be expanded in FY 2009-10 to include follow-up inspections and enforcement as necessary.

A doorhanger was developed in FY 2008-09 and distributed to a certain neighborhood that was flushing debris into the gravity sewer system, causing the lift station pumps to bind up and fail. This outreach, along with pump replacement, has eliminated the pump failures.

Preventive Maintenance

During this reporting period, the City performed routine preventative maintenance and inspections of the sanitary sewer system, which included video inspections, 4,200 manhole

inspections, semi-annual inspections of three major trunk lines, and routine cleaning of sewer mains. Regular monitoring of the sewer system was achieved with routine cleaning and manhole inspections. Sewer system surveillance was conducted on a regular basis. Flow monitoring was performed to compare the flows in dry and wet seasons. Anything unusual was reported and followed up on.

Approximately 273 miles of sewer lines were cleaned from July 1, 2008 to June 30, 2009. The maintenance schedule is designed to provide more frequent cleaning for identified trouble areas, with siphons being cleaned annually, low flow and flat lines cleaned semi-annually, and grease problem areas cleaned quarterly. City staff also performs checks of the Buena Vista Force Main every other day, walking the line from the lift station to I-5.

Complaint Response

The Storm Water Protection Program occasionally depends on other City departments to assist with investigations and remediation during field reviews. M&O and the Storm Drain Maintenance Division were key to prompt, effective responses to investigations involving spills and clean ups. Regular meetings and discussions about compliance issues facilitated this interdepartmental coordination effort.

In response to complaints, structural defects or obstructions of pipelines, the Storm Drain Maintenance crews conducted Closed Circuit Television (CCTV) inspections of the storm drain infrastructure. During FY 2008-09, approximately one mile of pipeline was videotaped.

M&O personnel responded to 69 sewer stoppage complaints during this reporting period. These requests and the City s response were tracked electronically in the Accela, Hansen systems, and the CIWQS website. The City responds to all emergencies where sewage has the potential to enter the storm drain system, regardless of whether the sewer stoppage originates from private structures such as private laterals, private lift stations or from the City s sewer system. The data shown in Table 7.1 represents overflows originating from the City s sewer system and does not reflect all sewer stoppage complaints that occurred during the reporting period.

Other Spills

The City s Emergency Services (Fire/Police Departments) continued to respond to reports of hazardous materials spills and discharges in Carlsbad. Fire Department personnel were trained in hazardous material emergency response and identification of hazardous materials and other City departments relied on the Fire Department to assume command during hazardous materials incidents. Emergency services may request assistance from the Streets Department or Storm Drain Maintenance Division (SDMD) to contain discharges that have the potential to endanger life, property, and/or the City right-of-way, control traffic, and provide secondary perimeter boundaries as directed by Emergency Services staff.

During this reporting period, the City s Spill Response Procedures continued to be used to detail the roles and responsibilities of Emergency Services, Streets Department, M&O, and the Storm Water Protection Program. If Emergency Services was first on the scene of an unidentified spill, and the Incident Commander suspected the substance to be of a hazardous nature, emergency response procedures were implemented. Incident Commanders retained a copy of the Department of Transportation s *Emergency Response Guidebook* which lists classifications of hazardous materials and recommendations for handling materials.

The San Diego County DEH HIRT, through a Joint Powers Agreement, was involved in any significant spills of a hazardous nature. The County maintains these records, as does the State OES. Minor petroleum or other small spills on City streets were handled by the Streets Department or SDMD using absorbents, sweeping, and proper waste disposal. These cleanup requests were documented in the City s RFA or work order systems. During this reporting period, there were 14 other spills (non-sewage related) in Carlsbad as reference in Appendix 7.2.

PREVENTION MEASURES OF SEWAGE INTRUSION INTO MS4

The City of Carlsbad s Engineering Standards have several measures to prevent sewage intrusion into municipal separate storm sewer systems (MS4).

1. All gravity sewer pipes and laterals are required to have gasketed joints, which create water tight joints (Volume 1, Chapter 6, Item 3.A, 3.C, and 3.F). The water tight joints are tested using the methods indicated in Standard Specifications for Public Works Construction (SSPWC) section 306-1.4. The water tight test methods include a post-installation closed circuit television (CCTV) inspection and an air pressure test where the sewer line must sustain 2.5 to 3.5 psi gage pressure for at least 2 minutes after being pressurized to 3.0 psi.

2. All gravity sewer lines are required to follow engineering standard for the amount of flow they can carry. During peak hour dry weather season the pipe shall be designed to carry a flow depth of 0.5 (or 0.75 depending on the pipe size) the diameter of the pipe (Volume 1, Chapter 6, Item 4.C). This design requirement prevents the pipe from becoming full, which would pressurize the pipe and potentially cause a leak.

3. Per Carlsbad s Engineering Standard GS-6 and GS-6A, the sewer lines are typically located at an elevation deeper than the storm drain line, which further prevents sewage intrusion into MS4. In the event of a sewage pipe leak, the leakage flow will naturally gravitate below the sewer line rather than up to the storm drain line.

4. The standard horizontal separation between sewer and storm drain is 13 feet, which further prevents sewage intrusion into MS4.

5. In special cases where storm drain lines are installed at a depth greater than that of sewer lines, additional design standards are required such as water tight joints or encasements (Volume 1, Chapter 5, Item 1.G).

Preventative maintenance of the sanitary sewer system, as described above is also effective at preventing infiltration from sanitary sewer lines into the MS4. Continued preventative maintenance prevents exfiltration of sewer water from the pipelines by ensuring that flow is maintained in the system and pressure does not build up causing water to leave the system.

In the storm drain system, ammonia test kits are utilized as part of the dry weather program, primarily to test for the presence of sewage. These tests are taken once per year at various points strategically placed throughout the MS4 to provide adequate coverage. Exceedances for ammonia may trigger source investigations, which may detect sewage infiltration, if present. The City s maintenance program also includes Closed Circuit Television (CCTV) inspections of the sewer system. During FY 2008-09, 28.5 miles of sewer pipelines were inspected.

7.4 Urban Runoff Monitoring

Dry Weather Monitoring

The Dry Weather Monitoring Program was implemented between May 1 and September 30, 2009. The program was designed to detect and eliminate illicit connections and illegal discharges to the MS4. This was accomplished by performing field screening at all monitoring locations and performing analytical monitoring at 25 of the locations. This program included monitoring at up to 60 MS4 locations throughout the City. The program continued an assessment for trash at each location, as required per Order No. R9-2007-0001.

All results and investigations are included under separate cover in the City s Dry Weather Monitoring Report for 2009. This report includes the Dry Weather Field Screening and Analytical Monitoring Map.

Water quality at almost 70 of sites had no exceedances. The most common field constituent to exceed action levels were nitrate-nitrogen. The most common analytical constituents to exceed action levels were bacteria. All follow up activities were performed as required under Order 2007-0001. Follow-up activities performed after the initial sampling efforts are described in the Dry Weather Report under separate cover. Required follow up actions were taken for all sites where water quality exceeded established action levels as described in the permit.

MS4 Outfall Monitoring

The MS4 Outfall Monitoring Program is part of the Regional Monitoring required in Order No. R9-2007-0001. During the summer of 2009, the monitoring program was performed in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan. This workplan was developed by the Regional Copermittees and was implemented within the region as required. Sites were monitored in all watersheds throughout the County. Monitoring results will be summarized in the County of San Diego Storm Water Monitoring Annual Report, to be submitted in January 2010.

The objective of this monitoring program is to assess MS4 discharge water quality throughout the county and assess the relative contributions to receiving waters within each defined watershed management area.

The monitoring design is based on a combination of random and targeted sampling of MS4 outfalls in each watershed. Random sampling will be conducted to assess countywide conditions of MS4 outfall water quality. Targeted sampling will be conducted to assess the relative contribution of particular MS4 outfalls to receiving waters.

A detailed description of the program was submitted to the Regional Board prior to July 1, 2008 as required by the Order. The description includes monitoring locations, frequencies, analytes, sampling and analysis methods, procedures, and reporting strategies.

Targeted samples will be collected during FY 2008-09 and during subsequent years by the individual jurisdictions, independent of the regional group. The targeted approach includes six locations within the City of Carlsbad. These locations were selected based on criteria developed in the Regional Monitoring Workgroup. Table 7.2 lists the targeted locations, hydrologic area, and analytes to be monitored for the program.

Table 7.2 Targeted monitoring locations

Site ID	Hydrologic Area	Analytes
1D-21	904.2	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
1D-20	904.2	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
1C-21	904.2	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
16C-61	904.3	Bacteria, TSS
21C-14	904.3	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
19C-1	904.3	Bacteria, TDS, TSS, Manganese, Selenium, Sulfates

In 2009, MS4 Outfall sampling took place concurrently with the City of Carlsbad Dry Weather Monitoring Program. The goal of the MS4 Outfall Monitoring Program is to assess the quality of urban runoff at the targeted monitoring locations for high priority pollutants and over time, assess trends in the results to prioritize future monitoring efforts. Results will be summarized and submitted to the County of San Diego to be included in the Regional Monitoring Report submitted by the County of San Diego each year.

Coastal Storm Drain Monitoring

As required under the Permit, the City continued to monitor storm drains discharging to coastal waters. In FY 2008-09 the City began using engineering asset IDs for the Coastal Storm Drain Monitoring Program. This created a consistent labeling system across all monitoring programs. Table 7.3 summarizes the City Coastal Storm Drain Monitoring activities during FY 2008-09.

Table 7.3 Coastal Storm Drain Monitoring

Ocean Outfalls Monitored	Frequency	Total Site Visits	Routine Samples Collected		Sites With Exceedances		Findings
			Pairs	Singles	Storm Drain	Receiving Water	
8	Monthly	96	0	5	1	0	No flow was observed at the site when staff returned to collect confirmation samples. No further action

Results from this year of monitoring show that most of sites do not have sufficient flow to sample the majority of the time during dry weather. In FY 2008-09, 96 routine site visits were made and samples were collected on five of the visits, or only 6 of the time. Upstream investigations are performed at the time of sampling. During these five site visits, the storm drain flow did not reach the receiving water; therefore samples were only collected from the storm drain. Of the five monitoring events where samples were collected, one of the initial samples had exceedances of water quality criteria in the storm drain sample. On the follow-up visit there was no flow at the site.

All data collected and a full analysis of the Coastal Storm Drain Monitoring Program will be submitted in the San Diego County Storm Water Quality Monitoring Annual Report to be submitted in January 2010.

7.5 Follow-up and Enforcement

The City used one or any combination of education, inspections, complaint response or enforcement to achieve compliance. The ultimate goal is to eliminate the discharge or connection and to prevent future occurrences.

In FY 2008-09 the Storm Water Protection Program received 195 complaints of potential illegal discharges. As illustrated in Figure 7.3, 74 of the complaints involved alleged washing or dumping to the storm drain, totaling 144 of the 195 complaints. These types of complaints are representative of illegal discharges reported to the program. All reports were investigated, however not all reports of washing or dumping to the storm drain were illicit discharges. Of the 195 storm water related complaints, there were 86 illicit discharges and 1 illicit connection discovered. Table 7.4 provides a breakdown of illicit discharges and connections by source component. All 86 illicit discharges identified were eliminated as required. There was one illicit connection identified; it was eliminated as well.

Table 7.4 Illicit Discharges and Connections

Source Component	Number of Illicit Discharges	Number of Illicit Connections
Industrial/Commercial	16	0
Mobile Source	30	0
Residential	35	1
Municipal	0	0
Unknown	5	0
Total	**86**	**1**

All complaints were addressed according to the City s Enforcement Procedures as described in the 2008 JURMP, Section 2.4. In utilizing this escalating enforcement process, all illicit discharges and illicit connections were eliminated. Table 7.5 and Table 7.6 summarize the enforcement actions taken to eliminate illicit discharges and illicit connections. Ten illicit discharges were referred for action because the responsible party could not be found, or the issue was under the jurisdiction of another department. A complete summary of the storm water related complaints is provided in Appendix 7.3.

Table 7.5 Enforcement Action Related to Illicit Discharges

Enforcement Action	Number	Percentage
Verbal Warning	33	38
Informational Letter	20	23
Written Warning	3	3
Notice of Violation	17	20
Administrative Citation	1	1
Notice to Clean	2	2
Referred for Action	10	12
Total	**86**	**100**

Table 7.6 Enforcement Actions Related to Illicit Connections

Enforcement Action	Number	Percent
Verbal Warning	1	100

7.6 Effectiveness Assessment

Level 1: Compliance with Activity Based Permit Requirements

Overall, the City is compliant with activity based permit requirements.

- The City implemented a program to actively seek and eliminate illicit discharges and connections to the MS4: As described above in Sections 7.1-7.5.

- The City continued to verify the accuracy of its MS4 map and update it at least annually: The accuracy of the City s MS4 map is verified continually by field staff and updated with new information or as existing information is updated. A 2009 MS4 map is provided in Appendix 7.5.

- The City performed Dry Weather Screening and Analytical Monitoring: The City conducted a Dry Weather Monitoring Program inclusive of 71 monitoring locations throughout the drainage area in the City. The Dry Weather Report for 2008 is included under separate cover with this submission.

- Investigations and follow-up actions were performed in accordance with the Permit: Indications of illicit discharges and/or connections to the MS4 were investigated and followed up accordingly. Follow-up investigations to dry weather field screening exceedances were usually performed immediately and always within two business days of the field screening. Any results of analytical parameters were investigated within two business days of receipt of results from the laboratory.

- All illicit discharges and connections were investigated and eliminated.

- The City implemented and enforced the City s ordinances to prevent or eliminate illicit discharges and connections to the MS4: The City implemented an escalating enforcement process as described in its 2008 JURMP, Section 2. Enforcement actions related to illicit discharges are described above in Table 7.5.

- The City prevented and responded to sewage spills, including from private laterals and failing septic systems, and other spills: The City responded to all reported spills as described above in Section 7.3.

- The City facilitated public reporting of illicit discharges and connections via a public hotline: A storm water hotline was staffed year round. Complaints received via the storm water hotline are summarized above in Section 7.2.

Overall, the City s IDDE program is compliant with permit requirements.

Level 2: Changes in Knowledge/Awareness

Educational material is distributed in response to nearly all storm water related complaints, whether to residents or businesses within the City. Additionally, educational information is distributed to entire neighborhoods throughout the year, most often in response to complaints or

dry weather exceedances. Often, exceedances of nutrient action levels in residential areas will trigger the need for larger scale distribution of outreach materials. These efforts are described in Section 6 of the City's JURMP Annual Report for FY 2008-09, submitted in September 2009. While the City does not currently measure the changes in knowledge, educational materials provide a good source of information to citizens and businesses about the connection between their activities and water quality.

Level 3: Behavioral Change/BMP Implementation

Behavioral changes and BMP implementation are continually obtained through the IDDE program. Over the Fiscal Year 2008-09, 195 storm water related complaints were responded to by City staff. Of these, 144 pertained to illegal dumping or washing. In all cases, the discharges were discontinued immediately. Some of the incidents were one time occurrences, however, many were routine activities performed by the responsible parties. In these cases, through education and enforcement actions, BMPs were implemented and behavioral changes were evident. Follow-up inspections confirmed BMP implementation and behavioral changes.

Level 4: Load Reductions

Load reductions are difficult to estimate in relation to the IDDE program. Estimates of sewage recovered during spills can provide the number of gallons of raw sewage prevented from entering the environment. If correlated with bacteria data, rough estimates of load reductions of bacteria may be generated. Of an estimated 6125 gallons spilled during FY 2008-09 due to municipal infrastructure failure, 6015 gallons were recovered. If a conservative estimate of 1,000,000 cfu/100 ml of fecal coliform is used for raw sewage, a total of 22 trillion colony forming units of fecal coliform were prevented from entering the environment.

Level 5: Changes in Discharge Water Quality

<u>Dry Weather Field Screening and Analytical Monitoring Program</u>

The City has conducted an annual *Dry Weather Field Screening and Analytical Monitoring Program* since 1995. The purpose of the monitoring program is to detect and eliminate illicit connections and illegal discharges to the storm drain system. The Dry Weather Monitoring Program report for 2009 and follow-up activities are provided under separate cover. The following discussions summarize current and past dry weather results in order to assess changes in MS4 water quality, through the 2009 dry weather season.

Since 2002, no exceedances have been measured in water temperature, cadmium, copper, lead or zinc.

Fecal coliform concentrations have generally decreased since 2003, while enterococcus concentrations are slightly higher in recent years. In comparison to dry weather action levels, fecal coliform and enterococcus mean values are well below the established action levels across all years of data. With many variable factors unaccounted for, it is unclear if the recent results are due to improvements and BMP implementation or to the variable nature of bacteria concentrations.

The City has conducted field testing of surfactants since 1995. During this time, data shows a downward trend in detergent levels found in the MS4; however, a slight increase in results over the action level was found in 2009 over the previous three years.

The average pH levels have also shown a downward trend since 1995, with results generally below action levels.

Ammonia and nitrate concentrations have continued to indicate a decreasing trend. With the exception of 2002, all recent years have averaged well below the established action level for ammonia-nitrogen.

Lower in recent years, all orthophosphate averages are well below established dry weather action levels.

Over the course of the past seven years of dry weather programs, water quality parameters have been repeatedly analyzed at the same sites allowing for a comparison of data. In general, water quality within the MS4 is good, with concentrations of bacteria, nutrients, pH, and surfactants generally decreasing and below Action Levels. Efforts continue to focus on bacteria concentrations in the MS4 and their sources. In the future, increased efforts to understand bacteria concentrations and sources will be made through various TMDL activities. With an enhanced understanding of bacteria, the City will be better prepared to address and abate sources within the watershed.

Coastal Storm Drain Outfall Monitoring Program

The City continued to collect samples from various storm drain outfalls as part of the *Coastal Outfall Monitoring Program*. If water was flowing from a storm drain outfall, samples were collected and analyzed for total coliform, fecal coliform and enterococci. Storm drain sample results were compared to the 95th percentile criteria established in the previous year s annual report for the CSDM Program. Where required, a paired receiving water sample was collected to assess the impacts of the storm drains on the receiving waters. However, the majority of the time, storm drain flows, when present, did not reach the receiving water and only a single storm drain sample was collected. The receiving water samples were compared to Rec-1 standards to determine exceedances. Where storm drain bacteria concentrations exceeded 95th percentile criteria or receiving water samples exceeded Rec-1 objectives, follow-up sampling and/or investigations were performed.

Recent years indicate a decrease in storm drain exceedances for all three bacterial indicators, showing improvements in outfall water quality. In FY 2008-09 there was only one exceendance. In all cases, the flow from outfalls was non-existent, intermittent, low volume and/or did not actually reach the receiving waters but dissipated into the sand or sediment. The City will continue to conduct the Coastal Outfall Monitoring Program and to conduct follow-up investigations as detailed in the Monitoring Plan per permit requirements.

Level 6: Changes in Receiving Water Quality

It is important to note that receiving water quality reflects considerably more than the quality of the City s MS4 discharges. In addition, receiving water quality can be adversely impacted by other events that are not under the control of the City, such as other permitted NPDES discharges, wildlife (impacting bacteria levels), atmospheric deposition, and other events and activities.

Coastal Outfall Monitoring Program Receiving Waters

During FY 2008-09 sampling events, storm drain flows did not reach receiving waters and therefore no ocean samples were taken.

Overall, the City has remained in compliance with all permit requirements of the IDDE program. With full program implementation, evidence of knowledge and behavior changes is evident, although difficult to measure. Program implementation also results in immediate load reductions, through complaint response efforts, whether related to urban runoff, sewer overflows, or other spills. It is difficult to quantify these reductions at this time; however, the City will continue to develop assessment measures related to load reductions. Changes in discharge water quality are also evident, most often showing improvements during dry weather. While not fully attributable solely to the IDDE program, implementation of the monitoring programs provides useful data to make this assessment. As more data is collected in discharge waters and in receiving waters, assessments will show a more accurate picture of the changes in water quality and relationships to MS4 programs.

7.7 Notable Activities

As mentioned in the Executive Summary, the City considers a notable activity to be any activity above compliance requirements.

Notable activities for FY 2008-09 include:

- MS4 water quality continued to follow an overall trend of improvement as seen from the Dry Weather Monitoring Program, the Coastal Storm Drain Monitoring Program and the MS4 Monitoring Program.
- The City responded to 4 sewage overflows or spills of approximately 6,125 gallons of which 98 was recovered.
- The City added an additional Smart Cover this FY for a total of ten City-wide, to monitor flow levels in problem sewer manholes.
- The City entered into a joint project with Encina Wastewater Authority and installed ADS Intellliserve flow monitoring systems to monitor sanitation flow rates 24 hours a day at selected areas.
- Of 96 visits to coastal storm drain outfalls, there was only one outfall exceedance as part of the Coastal Storm Drain Monitoring Program.
- All illegal discharges were discontinued immediately upon discovery.

7.8 JURMP Revisions

The City s 2008 JURMP was developed in response to the issuance of Order No. R9-2007-0001. The City began implementing the 2008 JURMP on March 24, 2008 as required under the new permit. Section 14 of the previously submitted FY 2008-09 Annual Report summarizes revisions to the City s JURMP.

No changes were made to the IDDE Section of the JURMP.

Sanitary Sewer Overflows
July 1, 2008 to June 30, 2009

Date	Source	Substance	Volume	Enter	Enter RW?	Response
05/18/2009	Private Lateral	Sewage	100	No	Yes	City Crew Responded To 2598 Jefferson St. And Contained Spill Wash Down Sidewalk And Crub And Sucked Up All Waste And Wash down Water. Knocked on doors several times. Called Water Dept for contact phone number. No one available for contact. Left lateral policy and Water Dept door hanger, locked out water meter to eliminate any continued spill.
05/12/2009	Private Lateral	Sewage	10	No	Yes	Set Up Vactor And Made Dirt Berm To contain Spill, Waited For Plumber To clear Lateral.
04/21/2009	Private	Sewage	400	No	Yes	City crews damed upper spill site with
04/04/2009	Private Lateral	Sewage	50	No	No	Jetted sewer main, main clear. Told resident to call plumber to clear lateral.
03/27/2009*	Sewer MH	Sewage	75	No	Yes	Recapture overflow and CCTV sewer main to investigate cause
03/26/2009	Private Lateral	Sewage	10	No	No	Jetted and televised main line - clear. Lower lateral clear. Gave property
03/26/2009*	Sewer MH	Sewage	125	Yes	Yes	Set up vacuum and protect MS4 from additional spill. Balls of concrete or rocks blocked flow on sewer main causing overflow. Jet main to clear stoppage. Wash down roadway and CCTV main. Captured approximately 115 gallons of spill.
03/12/2009	Private Lateral	Sewage	6	No	No	Plumber on scene on arrival and cleared stoppage.
02/10/2009	Private Lateral	Sewage	75	Yes	Yes	City responded with 3 vac. trucks cleaned strom drain box and 600 feet of lines. also 300 feet of gutter line.blocked outfall down stream and cleaned all lines upstream. PRIVATE contractor cleared PRIVATE cleanout and lines.
01/27/2009	Private Lateral	Sewage	8	No	No	Jetted and CCTVed sewer main - all clear. CCTV showed roots in private lateral.
01/15/2009	Private Lateral	Sewage	20	No	No	Responded to investigate possible sewer spill. Found spill contained within residence. Resident complained that spill continued after water use stopped in residence. Found guest house shared sewer lateral. TV sewer main to find all clear, but residents lateral fully impacted by root intrusion.

01/16/2009	Private Lateral	Sewage	20	No	Yes	City crew cleaned up along gutter.
12/24/2008	Private Lateral	Sewage	75	No	No	Private lateral overflowed causing spill into alley. Contained spill on private
12/23/2008*	Sewer Force Main	Sewage	300	Yes	Yes	8" PVC force main failed causing overflow. Contained part of spill and vacuumed. Created capture area downstream, set up pumps and vacuumed spill. Repaired force main.
12/12/2008	Private Lateral	Sewage	50	Yes	Yes	Private sewer lateral clean out within driveway area of private property spilled to gutter where it was stopped and captured. Ran sewer main to assure clear; all clear. Wah down public areas with 125 gallons water, vacuum and remove debris.
12/11/2008	Private Lateral	Sewage	15	Yes	Yes	Small amount spilled out of cleanout, went down curb to storm drain box where crew recaptured.
12/09/2008	Private Lateral	Sewage	240	Yes	Yes	Closed portion of parking lot, dammed catch basin area, placed sanbags in downstream catch basin, vacuumed at private lateral cleanout. Ran City sewer main to assure good flow, no problems found. Shut off water and had restaraunt close, cleaned private storm drain system, standby until plumber cleared blockage. Had restaurant replace cleanout cap on clean out.
12/05/2008	Private Lateral	Sewage	150	No	Yes	Created dirt dam in downstream gutter. City crew vacuumed until plumber cleared stoppage. City crew washed down public right-of-way.
10/31/2008	Private Lateral	Sewage	50	No	No	City Crew vacuumed and washed down area. Contained spill on private property.
10/01/2008	Private Lateral	Sewage	45	No	No	City crews cleaned up overflow. Plumber cleared blockage.
08/07/2008	Private Lateral	Sewage	75	No	No	Contained spill and mitigated spill area with wash down and capture, standby until plumber cleared lateral.
8/4/2008*	Sewer Force	Sewage	5625	Yes	No	Plug and bypass operation to complete repair.
07/18/2008	Private Lateral	Sewage	20	No	Yes	Created spill capture area in gutter area, wash down and vacuum all entire spill area. Notified resident to call plumber.

07/19/2008	Private Lateral	Sewage	3	No	Yes	Water Duty person arrived first at 19:10 and shut off water. Collections Duty person picked up Vactor at 20:20 PM and cleaned area and performed partial vacuum and clean of intercepter. Sr Center manager advised to call plumber to clear lateral.
07/17/2208	Private Lateral	Sewage	5	No	No	Resident not home, turned off water, called plumber - on scene at 7:12 PM, stand-by until lateral cleared. Restored water, resident returned.
07/09/2008	Private Lateral	Sewage	75	No	Yes	City staff recaptured overflow. City staff recaptured overflow.
07/05/2008	Private Lift Station	Sewage	50	No	Yes	City crews responded with vactor truck and cleaned up overflow and also pumped out the wet well/sand.

*These spills were from the City of Carlsbad maintained sewer main.

Other Spills July 1, 2008 – June 30, 2009

Issue Type	RFA Number	Date Opened	Issue Description	Action History - Closed Action
Storm Drain-Dumping to Storm Drain	7TDP7A	06/26/2009	Report of Dumping to the Storm Drain - Four inch blue pipe draining swimming pool from resident's back yard. Pipe runs down the driveway and into the gutter line where it is discharging the pool water.	6/26/2009 Previous No issue / No violation
Storm Drain-Washing to Storm Drain	7TGVNS	06/29/2009	SW1 Surface Cleaning Report that resident wash driveway after vehicle fire. Report of Washing to the Storm Drain	6/29/2009 Verbal Notice
Storm Drain-Dumping to Storm Drain	7THSGS	06/30/2009	New neighbors have been draining waste into storm drain - water runs off the way down Porta Place nad the water turns on Porta Lotta and exits by two canals. They just built a pool so it's not a pool draining. Report of Dumping to the Storm Drain	7/7/2009 Gutterline sufficiently cleaned.
Storm Drain-Dumping to Storm Drain	7THUZ8	06/30/2009	SW28 Miscellaneous Incidents Report that day laborers that hang out in parking lot use drainage channel behind nursery as a restroom. Report of Dumping to the Storm Drain	7/2/2009 Referred for Action (Code Enforcement)

City of Carlsbad
Municipal Separate Storm Sewer System (MS4) with Urban Runoff Monitoring Program Stations

Produced by City of Carlsbad GIS Department June 2009 (4056253_09)

Jurisdictional Urban Runoff Management Program Annual Report

Section 7 - IDDE

July 1, 2009 – June 30, 2010

Signed Certification Statement

City of Carlsbad

Jurisdictional Urban Runoff Management Plan

IDDE Section of the Annual Report for July 1, 2009 – June 30, 2010

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

7.1 Introduction

The City continued to conduct a proactive program for detecting and eliminating illegal discharges and illicit connections into the MS4. This section describes the activities of the City with respect to implementation of the Illicit Discharge Detection and Elimination Component of the JURMP for FY 2009-10, including the following:

- Actively identified and eliminated illicit discharges and connections by conducting illegal discharge investigations
- Responded to spills and sewage overflows
- Conducted monitoring
- Performed routine cleaning and maintenance activities on the sewer and storm drain systems
- Continued operation of a storm water hotline and complaint response
- Provided 24 hour spill response for wastewater and storm drain emergencies
- Updated the Dry Weather Program Stations
- Conducted the MS4 Monitoring Program

The Dry Weather Monitoring Program was performed during the permit defined dry season (May 1 – September 30, 2010) and all information pertaining to this program is reported for this date range.

7.2 Public Reporting of Illicit Discharges and Connections

The City continued to promote and facilitate public reporting of illicit discharges and water quality impacts. Methods to promote and facilitate public reporting include the following:

- Brochures and Publications
- Outreach events
- The City's Website for both outgoing information and incoming requests from the public
- Internal training
- Operation of a Storm Water Hotline
- Operation of an Environmental Programs Hotline
- Operation of a Storm Water email account

All outreach methods utilized are described in detail in Sections 8.0 and 9.0, the Education and Public Participation Sections of the previously submitted report.

The City operated a Storm Water Hotline and email account; storm water staff answered the storm water hotline and checked email to the storm water account during regular office hours, 8 am to 5 pm, Monday through Friday. After office hours calls to the hotline were directed to voicemail or to an after hour duty phone in the case of emergency. The message provided information in English and Spanish. Figure 7.1 illustrates the types of storm water related complaints received in FY 2009-10.

In FY 2009-10 there were 178 storm water related complaints received, 99 of which were via the hotline. Compared to previous reporting periods, call volume decreased marginally. In FY 2008-09, there were 195 storm water related calls and 226 in FY 2007-08. Figure 7.2 illustrates FY 2009-10 storm water

complaints by reporting mechanism, including SW Hotline, phone, field discovery, web, email or walk-in. Figure 7.3 illustrates the storm water complaints by reporting party, including SW Inspector, City Staff, Outside Agency, Public or other. Most of the 178 storm water related complaints in FY 2009-10 were related to washing or dumping to the storm drain.

Figure 7.1 Storm Water Complaints FY 2009-10

Figure 7.2 Storm Water Complaints by Reporting Mechanism FY 2009-10

Figure 7.3 Storm Water Complaints by Reporting Party FY 2009-10 *

*Data was only collected for 166 of the 178 complaints.

7.3 Spill Reporting, Response, and Prevention

Spill Response

City employees are trained to follow the City's Sewer Overflow Prevention Plan/Response Plan. Staff training was conducted semi-annually, either by tailgate or all-hands class format. All spill response incidents were tracked in the Hansen system or in spill reports. Sanitary sewage overflow responses were documented as required on the Sanitary Sewer Overflow Report Form, which was sent via email to the Regional Board, County Health Department, and the Storm Water Protection Program. During this reporting period of July 1, 2009 to June 30, 2010, the City responded to 6 sewage overflows or spills of approximately 4697 gallons, 98% of which was recovered. The overflow reports are found in Appendix 7.1.

The City Utilities Maintenance and Operations Division (M&O) continued to respond and coordinate sewage spill response with the Leucadia Waste Water District (LWWD) and Vallecitos Water District (VWD) for spills that occurred outside the M&O jurisdiction. During normal business hours, calls were dispatched by M&O to field units for immediate response and evaluation. After working hours, phone numbers were routed through police dispatch to M&O standby personnel.

A portion of the LWWD collection system is located within the City limits. LWWD is responsible for operating and maintaining their system, including responding to overflows and spills. However, M&O responds or provides assistance when requested. During this reporting period, LWWD responded to five sewage overflows in Carlsbad.

A portion of the VWD sewage collection system is also located within the City limits. VWD is responsible for operating and maintaining their system, including responding to overflows and spills. However, M&O responds or provides assistance when requested. During this reporting period, Vallecitos Water District reported one public and one private sewage overflow in the City of Carlsbad.

The City continued to actively prevent and respond to sewage spills and other spills, and to limit discharges from the sanitary sewer system to the MS4. This occurred through public education and outreach, inspections, preventive maintenance, complaint response, and spill response (containment and remediation). The City operated 283.5 miles of sewer mains, and City staff maintained 253 miles of 12" and under sewer mains. Large sewer trunk mains are maintained by both City staff and contract work. City staff maintained 15 sewer pump stations.

The City maintains 10 Smart Covers to monitor flow levels in problem sewer manholes. Smart Cover alarms saved the City from one spill during this reporting period. The city also keeps one lid on standby for special situations. The City also participates in a joint project with Encina Wastewater Authority and using ADS Intelliserve flow monitoring systems to monitor sanitation flow rates 24 hours a day at selected areas.

Table 7.1 contains a summary of information associated with miles of sewer mains and spills.

Table 7.1 Summary

Time Period	Number of Reportable Spills[1]	Reportable Gallons Spilled	Total Miles of Sewer Mains
July 1, 2009 – June 30, 2010	6	4697	283.5

[1] Includes all spills caused by a failure in the sewer system (excludes recycled water spills and/or spills from sewer laterals).

The following inspection and preventive maintenance activities were conducted during this reporting period.

Inspections

Fifteen lift stations are inspected at least twice a week. The 10 largest pump stations were also inspected on Saturdays and Sundays. The operator inspected the electrical systems quarterly and the pumps and shafts were serviced annually. In addition, outside services were contracted to inspect the electrical services annually. The wet wells were cleaned every six weeks or more frequently if necessary.

Eleven pump stations are equipped with telemetry which was inspected daily. This included checking the 24-hour history records, pump gallons per minute, wet well on-off cycles and pump alternating cycles. The City conducted most pump repair work; although any needed machine work was performed by outside services. In the case of emergencies, the City has a 24-hour duty person, and cell phones were issued to each member of the Wastewater Operations staff, and Supervisor. In the case of power failures, 10 of the stations have onsite generators and three stations can be powered by the City's two trailer mounted generators. The remaining station has 24 hours of storage capacity and can be maintained by a vacuum or pumper truck.

Education

Educating the public on the proper disposal of fats, oils and grease is one of the BMPs used to prevent sewage spills. The City continued to distribute the Water Environment Federation brochure entitled "*Fat-Free Sewers.*" These brochures were distributed at various public events and during field visits. Workshops were conducted in FY 2009-10.

The Wastewater Division continued to collaborate with a consultant inspector to conduct site inspections at restaurants in the City's sewer service area. The database was updated and details the type and size of the grease control device at each site. This program was expanded in FY 2009-10 to include follow-up inspections and enforcement as necessary. The Wastewater Division also utilized volunteers to further address FOG Program compliance. Communication in the form of letters and phone calls assisted with obtaining FOG compliance.

Preventive Maintenance

During this reporting period, the City performed routine preventative maintenance and inspections of the sanitary sewer system, which included video inspections, 4,200 manhole inspections, semi-annual inspections of three major trunk lines, and routine cleaning of sewer mains. Regular monitoring of the sewer system was achieved with routine cleaning and manhole inspections. Sewer system surveillance

was conducted on a regular basis. Flow monitoring was performed to compare the flows in dry and wet seasons. Anything unusual was reported and followed up on.

Approximately 284 miles of sewer lines were cleaned from July 1, 2009 to June 30, 2010. The maintenance schedule is designed to provide more frequent cleaning for identified trouble areas, with siphons being cleaned annually, low flow and flat lines cleaned semi-annually, and grease problem areas cleaned quarterly. City staff also performs checks of the Buena Vista Force Main by walking the line from the lift station to I-5 three times per week.

Complaint Response

The Storm Water Protection Program occasionally depends on other City departments to assist with investigations and remediation during field reviews. M&O, the Storm Drain Maintenance Division and Carlsbad Fire Department were key to prompt, effective responses to investigations involving spills and clean ups. Regular meetings and discussions about compliance issues facilitated this interdepartmental coordination effort.

In response to complaints, structural defects or obstructions of pipelines, the Storm Drain Maintenance crews conducted Closed Circuit Television (CCTV) inspections of the storm drain infrastructure. During FY 2009-10, approximately three miles of pipeline was videotaped.

M&O personnel responded to 64 sewer stoppage complaints during this reporting period. These requests and the City's response were tracked electronically in the Accela, Hansen systems, and the CIWQS website. The City responds to all emergencies where sewage has the potential to enter the storm drain system, regardless of whether the sewer stoppage originates from private structures such as private laterals, private lift stations or from the City's sewer system. The data shown in Table 7.1 represents overflows originating from the City's sewer system and does not reflect all sewer stoppage complaints that occurred during the reporting period.

Other Spills

The City's Emergency Services (Fire/Police Departments) continued to respond to reports of hazardous materials spills and discharges in Carlsbad. Fire Department personnel were trained in hazardous material emergency response and identification of hazardous materials and other City departments relied on the Fire Department to assume command during hazardous materials incidents. Emergency services may request assistance from the Streets Department or Storm Drain Maintenance Division (SDMD) to contain discharges that have the potential to endanger life, property, and/or the City right-of-way, control traffic, and provide secondary perimeter boundaries as directed by Emergency Services' staff.

During this reporting period, the City's Spill Response Procedures continued to be used to detail the roles and responsibilities of Emergency Services, Streets Department, M&O, and the Storm Water Protection Program. If Emergency Services was first on the scene of an unidentified spill, and the Incident Commander suspected the substance to be of a hazardous nature, emergency response procedures were implemented. Incident Commanders retained a copy of the Department of Transportation's "*Emergency Response Guidebook*" which lists classifications of hazardous materials and recommendations for handling materials.

The San Diego County DEH HIRT, through a Joint Powers Agreement, was involved in any significant spills of a hazardous nature. The County maintains these records, as does the State OES. Minor petroleum or other small spills on City streets were handled by the Streets Department or SDMD using absorbents, sweeping, and proper waste disposal. These cleanup requests were documented in the City's RFA or work order systems. During this reporting period, there were 14 other spills (non-sewage related) in Carlsbad.

PREVENTION MEASURES OF SEWAGE INTRUSION INTO MS4

The City of Carlsbad's Engineering Standards have several measures to prevent sewage intrusion into municipal separate storm sewer systems (MS4).

1. All gravity sewer pipes and laterals are required to have gasketed joints, which create water tight joints (Volume 1, Chapter 6, Item 3.A, 3.C, and 3.F). The water tight joints are tested using the methods indicated in Standard Specifications for Public Works Construction (SSPWC) section 306-1.4. The water tight test methods include a post-installation closed circuit television (CCTV) inspection and an air pressure test where the sewer line must sustain 2.5 to 3.5 psi gage pressure for at least two minutes after being pressurized to 3.0 psi.

2. All gravity sewer lines are required to follow engineering standard for the amount of flow they can carry. During peak hour dry weather season the pipe shall be designed to carry a flow depth of 0.5 (or 0.75 depending on the pipe size) the diameter of the pipe (Volume 1, Chapter 6, Item 4.C). This design requirement prevents the pipe from becoming full, which would pressurize the pipe and potentially cause a leak.

3. Per Carlsbad's Engineering Standard GS-6 and GS-6A, the sewer lines are typically located at an elevation deeper than the storm drain line, which further prevents sewage intrusion into MS4. In the event of a sewage pipe leak, the leakage flow will naturally gravitate below the sewer line rather than up to the storm drain line.

4. The standard horizontal separation between sewer and storm drain is 13 feet, which further prevents sewage intrusion into MS4.

5. In special cases where storm drain lines are installed at a depth greater than that of sewer lines, additional design standards are required such as water tight joints or encasements (Volume 1, Chapter 5, Item 1.G).

Preventative maintenance of the sanitary sewer system, as described above is also effective at preventing infiltration from sanitary sewer lines into the MS4. Continued preventative maintenance prevents exfiltration of sewer water from the pipelines by ensuring that flow is maintained in the system and pressure does not build up causing water to leave the system.

In the storm drain system, ammonia test kits are utilized as part of the dry weather program, primarily to test for the presence of sewage. These tests are taken once per year at various points strategically placed throughout the MS4 to provide adequate coverage. Exceedances for ammonia may trigger source investigations, which may detect sewage infiltration, if present. The City's maintenance program also includes Closed Circuit Television (CCTV) inspections of the sewer system. During FY 2009-10, 59.3 miles of sewer pipelines were inspected.

7.4 Urban Runoff Monitoring

Dry Weather Monitoring

The Dry Weather Monitoring Program was implemented between May 1 and September 30, 2010. The program was designed to detect and eliminate illicit connections and illegal discharges to the MS4. This was accomplished by performing field screening at all monitoring locations and performing analytical monitoring at 25% of the locations. This program included monitoring at up to 60 MS4 locations throughout the City. The program continued an assessment for trash at each location, as required per Order No. R9-2007-0001.

All results and investigations are included under separate cover in the City's Dry Weather Monitoring Report for 2010. This report includes the Dry Weather Field Screening and Analytical Monitoring Map.

Water quality at almost 60% of sites had no exceedances. The most common field constituent to exceed action levels were ammonia-N. The most common analytical constituents to exceed action levels were bacteria. All follow up activities were performed as required under Order No. R9-2007-0001. Follow-up activities performed after the initial sampling efforts are described in the Dry Weather Report under separate cover. Required follow up actions were taken for all sites where water quality exceeded established action levels as described in the permit.

MS4 Outfall Monitoring

The MS4 Outfall Monitoring Program is part of the Regional Monitoring required in Order No. R9-2007-0001. During the summer of 2010, the monitoring program was performed in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan. This workplan was developed by the Regional Copermittees and was implemented within the region as required. Sites were monitored in all watersheds throughout the County. Monitoring results will be summarized in the County of San Diego Storm Water Monitoring Annual Report, to be submitted in January 2011.

The objective of this monitoring program is to assess MS4 discharge water quality throughout the county and assess the relative contributions to receiving waters within each defined watershed management area.

The monitoring design is based on a combination of random and targeted sampling of MS4 outfalls in each watershed. Random sampling will be conducted to assess countywide conditions of MS4 outfall water quality. Targeted sampling will be conducted to assess the relative contribution of particular MS4 outfalls to receiving waters.

A detailed description of the program was submitted to the Regional Board prior to July 1, 2008 as required by the Order. The description includes monitoring locations, frequencies, analytes, sampling and analysis methods, procedures, and reporting strategies.

Targeted samples were collected by the individual jurisdictions, independent of the regional group. The targeted approach includes six locations within the City of Carlsbad. These locations were selected based on criteria developed in the Regional Monitoring Workgroup. Table 7.2 lists the targeted locations, hydrologic area, and analytes to be monitored for the program.

Table 7.2 Targeted monitoring locations

Site ID	Hydrologic Area	Analytes
1D-21	904.2	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
1D-20	904.2	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
1C-21	904.2	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
16C-61	904.3	Bacteria, TSS
21C-14	904.3	Bacteria, TSS, Total Nitrogen-N, Total Phosphate-P
19C-1	904.3	Bacteria, TDS, TSS, Manganese, Selenium, Sulfates

In 2010, MS4 Outfall sampling took place concurrently with the City of Carlsbad Dry Weather Monitoring Program. The goal of the MS4 Outfall Monitoring Program is to assess the quality of urban runoff at the targeted monitoring locations for high priority pollutants and over time, assess trends in the results to prioritize future monitoring efforts. Results will be summarized and submitted to the County of San Diego to be included in the Regional Monitoring Report submitted by the County of San Diego each year.

Coastal Storm Drain Monitoring

As required under the Permit, the City monitored storm drains discharging to coastal waters. In FY 2009-10 the City continued to use engineering asset IDs for the Coastal Storm Drain Monitoring Program, which creates a consistent labeling system across all monitoring programs. Table 7.3 summarizes the City Coastal Storm Drain Monitoring activities during FY 2009-10.

Table 7.3 Coastal Storm Drain Monitoring

Ocean Outfalls Monitored	Frequency	Total Site Visits	Routine Samples Collected		Sites With Exceedances	
			Pairs	Singles	Storm Drain	Receiving Water
8	Monthly	96	0	6	1	0

Results from this year of monitoring show that most of the sites do not have sufficient flow to sample the majority of the time during dry weather. In FY 2009-10, 96 routine site visits were made and samples were collected on six of the visits, or only 6% of the time. All six samples were taken at the same outfall. Upstream investigations are performed at the time of sampling. During these six site visits, the storm drain flow did not reach the receiving water; therefore samples were only collected from the storm drain. Of the six monitoring events where samples were collected, five of the initial samples had exceedances of water quality criteria in the storm drain sample. During the upstream investigation, the flow was traced to one business. The City worked with this business over several months to verify there were no illegal connections or unknown sources of flow entering the system. The City also required the business to clean and tv their private lines. The City continues to work with this

business to ensure BMPs are used properly and no non-exempt discharges entered the MS4 from their activities.

All data collected and a full analysis of the Coastal Storm Drain Monitoring Program will be submitted in the San Diego County Storm Water Quality Monitoring Annual Report to be submitted in January 2011.

7.5 Follow-up and Enforcement

The City used one or any combination of education, inspections, complaint response or enforcement to achieve compliance. The ultimate goal is to eliminate the discharge or connection and to prevent future occurrences.

In FY 2009-10 the Storm Water Protection Program received 178 complaints of potential illegal discharges. As illustrated in Figure 7.1, 78% of the complaints involved alleged washing or dumping to the storm drain, totaling 139 of the 178 complaints. All reports were investigated, however not all reports of washing or dumping to the storm drain were illicit discharges. Of the 178 storm water related complaints, there were 46 illicit discharges and one illicit connection discovered. Table 7.4 provides a breakdown of illicit discharges and connections by source component. All 46 illicit discharges identified were eliminated as required. There was one illicit connection identified and eliminated.

Table 7.4 Illicit Discharges and Connections

Source Component	Number of Illicit Discharges	Number of Illicit Connections
Industrial/Commercial	10	1
Mobile Source	19	0
Residential	17	0
Municipal	0	0
Unknown	0	0
Total	**46**	**1**

All complaints were addressed according to the City's Enforcement Procedures as described in the 2008 JURMP, Section 2.4. In utilizing this escalating enforcement process, all illicit discharges and illicit connections were eliminated. Table 7.5 and Table 7.6 summarize the enforcement actions taken to eliminate illicit discharges and illicit connections. Ten illicit discharges were "referred for action" because the responsible party could not be found, or the issue was under the jurisdiction of another department. A complete summary of the storm water related complaints is provided in Appendix 7.2.

Table 7.5 Enforcement Action Related to Illicit Discharges

Enforcement Action	Number	Percentage
Verbal Warning	15	33%
Informational Letter	12	26%
Written Warning	4	9%
Notice of Violation	12	26%
Administrative Citation	1	2%
Notice to Clean	0	0%
Referred for Action	2	4%
Total	**46**	**100%**

Table 7.6 Enforcement Actions Related to Illicit Connections

Enforcement Action	Number	Percent
Written Warning	1	100

7.6 Effectiveness Assessment

Level 1: Compliance with Activity Based Permit Requirements

Overall, the City is compliant with activity based permit requirements.

- The City implemented a program to actively seek and eliminate illicit discharges and connections to the MS4: As described above in Sections 7.1-7.5.

- The City continued to verify the accuracy of its MS4 map and update it at least annually: The accuracy of the City's MS4 map is verified continually by field staff and updated with new information or as existing information is updated. A 2010 MS4 map is provided in Appendix 7.3.

- The City performed Dry Weather Screening and Analytical Monitoring: The City conducted a Dry Weather Monitoring Program monitoring 60 locations throughout the drainage area in the City. The Dry Weather Report for 2010 is included under separate cover with this submission.

- Investigations and follow-up actions were performed in accordance with the Permit: Indications of illicit discharges and/or connections to the MS4 were investigated and followed up accordingly. Follow-up investigations to dry weather field screening exceedances were usually performed immediately and always began within two business days of the field screening. Any results of analytical parameters were investigated within two business days of receipt of results from the laboratory.

- All illicit discharges and connections were investigated and eliminated.

- The City implemented and enforced the City's ordinances to prevent or eliminate illicit discharges and connections to the MS4: The City implemented an escalating enforcement process as described in its 2008 JURMP, Section 2. Enforcement actions related to illicit discharges are described above in Table 7.5.

- The City prevented and responded to sewage spills, including from private laterals and failing septic systems, and other spills: The City responded to all reported spills as described above in Section 7.3.

- The City facilitated public reporting of illicit discharges and connections via a public hotline: A storm water hotline was staffed year round. Complaints received via the storm water hotline are summarized above in Section 7.2.

Overall, the City's IDDE program is compliant with permit requirements.

Level 2: Changes in Knowledge/Awareness

Educational material is distributed in response to nearly all storm water related complaints, whether to residents or businesses within the City. Additionally, educational information is distributed to entire neighborhoods throughout the year, most often in response to complaints or dry weather exceedances. Often, exceedances of nutrient action levels in residential areas will trigger the need for larger scale distribution of outreach materials. These efforts are described in Section 6 of the City's JURMP Annual Report for FY 2009-10, submitted in September 2010. While the City does not currently measure the changes in knowledge, educational materials provide a good source of information to citizens and businesses about the connection between their activities and water quality.

Level 3: Behavioral Change/BMP Implementation

Behavioral changes and BMP implementation are continually obtained through the IDDE program. Over FY 2009-10, 178 storm water related complaints were responded to by City staff. Of these, 78% pertained to illegal dumping or washing. In all cases, the discharges were discontinued immediately. Some of the incidents were one time occurrences, however, many were routine activities performed by the responsible parties. In these cases, through education and enforcement actions, BMPs were implemented and behavioral changes were evident. Follow-up inspections confirmed BMP implementation and behavioral changes.

Level 4: Load Reductions

Load reductions are difficult to estimate in relation to the IDDE program. Estimates of sewage recovered during spills can provide the number of gallons of raw sewage prevented from entering the environment. If correlated with bacteria data, rough estimates of load reductions of bacteria may be generated. Of an estimated 4695 gallons spilled during FY 2009-10 due to municipal infrastructure failure, 4595 gallons were recovered. If a conservative estimate of 1,000,000 cfu/100 ml of fecal coliform is used for raw sewage, a total of > 4.6 trillion colony forming units of fecal coliform were prevented from entering the environment.

Level 5: Changes in Discharge Water Quality

<u>Dry Weather Field Screening and Analytical Monitoring Program</u>

The City has conducted an annual *Dry Weather Field Screening and Analytical Monitoring Program* since 1995. The purpose of the monitoring program is to detect and eliminate illicit connections and illegal discharges to the storm drain system. The Dry Weather Monitoring Program report for 2010 and follow-up activities are provided under separate cover. The following discussions summarize current and past dry weather results in order to assess changes in MS4 water quality, through the 2010 dry weather season.

Since 2002, no exceedances have been measured in water temperature, cadmium, copper, lead or zinc.

Fecal coliform concentrations have generally decreased since 2003, while enterococcus concentrations are slightly higher in recent years. In comparison to dry weather action levels, fecal coliform and enterococcus mean values are well below the established action levels across all years of data. With

many variable factors unaccounted for, it is unclear if the recent results are due to improvements and BMP implementation or to the variable nature of bacteria concentrations.

The average pH levels have also shown a downward trend since 1995, with results generally below action levels.

Ammonia and nitrate concentrations have continued to indicate a decreasing trend. With the exception of 2002, all recent years have averaged well below the established action level for ammonia-nitrogen.

Lower in recent years, all orthophosphate averages are well below established dry weather action levels.

Over the course of the past eight years of dry weather programs, water quality parameters have been repeatedly analyzed at the same sites allowing for a comparison of data. In general, water quality within the MS4 is good, with concentrations of bacteria, nutrients, pH, and surfactants generally decreasing and below Action Levels. Efforts continue to focus on bacteria concentrations in the MS4 and their sources. In the future, increased efforts to understand bacteria concentrations and sources will be made through various TMDL activities. With an enhanced understanding of bacteria, the City will be better prepared to address and abate sources within the watershed.

Coastal Storm Drain Outfall Monitoring Program

The City continued to collect samples from various storm drain outfalls as part of the *Coastal Outfall Monitoring Program*. If water was flowing from a storm drain outfall, samples were collected and analyzed for total coliform, fecal coliform and enterococci. Storm drain sample results were compared to the 95th percentile criteria established in the previous year's annual report for the CSDM Program. As required, a paired receiving water sample would be collected to assess the impacts of the storm drains on the receiving waters. However, the storm drain flows, when present, did not reach the receiving water, therefore only storm drain samples were collected. The receiving water samples were compared to Rec-1 standards to determine exceedances. Where storm drain bacteria concentrations exceeded 95th percentile criteria or receiving water samples exceeded Rec-1 objectives, follow-up sampling and/or investigations were performed.

Recent years indicate a decrease in storm drain exceedances for all three bacterial indicators, showing improvements in outfall water quality. In FY 2009-10 there was only one exceendance. In all cases, the flow from outfalls was non-existent, intermittent, low volume and/or did not actually reach the receiving waters but dissipated into the sand or sediment. The City will continue to conduct the Coastal Outfall Monitoring Program and to conduct follow-up investigations as detailed in the Monitoring Plan per permit requirements.

Level 6: Changes in Receiving Water Quality

It is important to note that receiving water quality reflects considerably more than the quality of the City's MS4 discharges. In addition, receiving water quality can be adversely impacted by other events that are not under the control of the City, such as other permitted NPDES discharges, wildlife (impacting bacteria levels), atmospheric deposition, and other events and activities.

Coastal Outfall Monitoring Program – Receiving Waters

During FY 2009-10 sampling events, storm drain flows did not reach receiving waters and therefore no ocean samples were taken.

Overall, the City has remained in compliance with all permit requirements of the IDDE program. With full program implementation, evidence of knowledge and behavior changes is evident, although difficult to measure. Program implementation also results in immediate load reductions, through complaint response efforts, whether related to urban runoff, sewer overflows, or other spills. It is difficult to quantify these reductions at this time; however, the City will continue to develop assessment measures related to load reductions. Changes in discharge water quality are also evident, most often showing improvements during dry weather. While not fully attributable solely to the IDDE program, implementation of the monitoring programs provides useful data to make this assessment. As more data is collected in discharge waters and in receiving waters, assessments will show a more accurate picture of the changes in water quality and relationships to MS4 programs.

7.7 Notable Activities

As mentioned in the Executive Summary of the previously submitted report, the City considers a notable activity to be any activity above compliance requirements.

Notable activities for FY 2009-10 include:

- Under the CSDM program, there were no storm drain flows that reached the ocean. The City has been successful at decreasing illegal discharges in areas where outfalls discharge directly to the beach during dry weather.
- MS4 water quality continued to follow an overall trend of improvement as seen from the Dry Weather Monitoring Program, the Coastal Storm Drain Monitoring Program and the MS4 Monitoring Program.
- The City maintains ten Smart Covers City-wide, to monitor flow levels in problem sewer manholes.
- The City continued a joint project with Encina Wastewater Authority using ADS Intellliserve flow monitoring systems to monitor sanitation flow rates 24 hours a day at selected areas.

7.8 JURMP Revisions

The City's 2008 JURMP was developed in response to the issuance of Order No. R9-2007-0001. The City began implementing the 2008 JURMP on March 24, 2008 as required under the new permit. Section 14 of the previously submitted FY 2009-10 Annual Report summarizes revisions to the City's JURMP.

No changes were made to the IDDE Section of the JURMP.

Sanitary Sewer Overflows
July 1, 2009 - June 30, 2010

Date	Source	Substance	Volume	Enter MS4?	Enter RW?	Response
06/28/2010	Lateral	Sewage	20	Yes	No	Set up vacuum at downstream catch basin. Washed down public right-of-way areas. Large amount of additional roadside debris caused greater wash down and vacuum requirement.
05/06/2010	Lateral	Sewage	100	No	No	Contacted property owner to call plumber, renter left and water was turned off to assure no more sewer spill.
01/26/2010	Lateral	Sewage	20	No	No	Unknown blockage in private sewer lateral clean out in driveway. City stopped spill in curb line in front of residence, captured and cleaned area with 30 gals fresh water, remained monitoring spill until plumber cleared stoppage.
04/28/2010	Lateral	Sewage	300	Yes	No	Turned off building water to control spill, then captured all spill. Notified Via Sat of reoccurring issue and to call plumber.
03/11/2010	Public Main/Lateral	Sewage	40	No	No	Cleared stoppage, CCTV main to determine root blockage, ran main several times, called flood service for residence, cleaned private yard spill area.
02/22/2010	Public Manhole	Sewage	1000	Yes	Yes	Cleaned up public right-of-way areas affected by spill.
01/31/2010	Lateral	Sewage	5	No	No	Private lateral cleanout in residents garage backed up due to roots. Created dam in street and washed down public right-of-way and vacuumed.
01/29/2010	Lateral	Sewage	10	Yes	No	Private sewer lateral cleanout on private property, resident washed spill into street. Spill contained in storm drain catch basin. Crew created dam at catch basin entrance, clean public right-of-way and catch basin.
01/22/2010	Public Main/Lateral	Sewage	2	No	No	Contained very small spill to driveway, wash down and vacuumed spill area. City had developer install diversion manholes upstream to lower volume of wastewater flowing through this neighborhood.
01/21/2010	Lateral	Sewage	50	Yes	Yes	Attempted to dam spill flow, but heavy rains washed spill over and around dams. Clean sidewalk area and vacummed a small amount of debris.
01/07/2010	Lateral	Sewage	25	No	No	Ran sewer main, clear. Notified property of City policy and told owner to call plumber.
12/29/2009	Public Main/Lateral	Sewage	80	No	No	Cleared sewer line and restored flow. And recoverd all waste water and washed down street and back yard.
11/26/2009	Lateral	Sewage	500	Yes	Yes	Vacuumed at overflow cleanout until plumber cleared blockage. Created dams near storm drain catch basin to stop flow into storm drain. Began street/public right-of-way clean up. Created dam in tributary, vacuumed and flushed storm drain.
11/18/2009	Public Manhole	Sewage	75	Yes	No	Crew went to site with two Vactors; one to clear stoppage and one to capture spill. Will return to CCTV and locate storm drain outfall.
10/29/2009	Private Manhole	Sewage	100	Yes	No	Property manager notified to call sewer service company to clear blockage, wash and surface area, storm drain system affected and vacuum all debris and wash down.
10/06/2009	Lateral	Sewage	5	No	No	City crew created dirt dam to capture spill and wash water at north end of block. All debris and wash water captured.
09/29/2009	Public Manhole	Sewage	3500	No	No	Containment set in place, lift stations diverted, debris removed from manhole
09/25/2009	Lateral	Sewage	20	No	No	City Crew Responed And Contained Spill Maint-Man Responded And Clean Up Area.
09/15/2009	Lateral	Sewage	3	No	No	Owner notified to stop water usage, crew ran sewer main - clear. Owner called plumber.
08/31/2009	Lateral	Sewage	75	Yes	No	Crew set up vacuum at private cleanout to capture spill, backup crews followed storm drain system to locate the travel of sewage and mitigated spill prior to creek discharge.

*These spills were from the City of Carlsbad maintained sewer main.

Detailed Issue Report

July 1 2009-June 1, 2010

Appendix 7.2

Issue Type	RFA Number	Date Opened	Issue Description	Action History - Closed Action
Storm Drain- Dumping to Storm Drain	7TKRTD	07/02/2009	Allowable Discharge;water running down storm drain groundwater	7/2/2009 No issue / No violation
Storm Drain- Dumping to Storm Drain	7TQPZY	07/07/2009	Pool / Spa / Fountain Discharge; Emptying pool; water tested - high chlorine content	7/8/2009 No issue / No violation
Storm Drain- Dumping to Storm Drain	7TWNZQ	07/13/2009	Pool unattended - black from lacking of cleaning - mosiquitos	7/14/2009 Referral for Enforcement SD County Vector Control.
Storm Drain - Vehicles Leaking Oil/Fluids	7TWLKT	07/13/2009	Vehicle and equipment leaking Blue SUV Leaking Oil in street	7/20/2009 Informational Letter
Storm Drain- Dumping to Storm Drain	7TYMKX	07/15/2009	Miscellaneous Incidents Cigarette buts on ground	8/26/2009 Informational Letter
Storm Drain-Dirt/Debris - Piles	7TZPN5	07/16/2009	Miscellaneous Incidents Trash and debris stored outside and uncovered comm/ind no ID	7/30/2009 Follow-up in Permits Plus
Storm Drain- Dumping to Storm Drain	7TZPMZ	07/16/2009	Paint / Stucco Discharge Popcorn ceiling residue in gutter and storm drain after being scraped from home at above address over weekend.	7/30/2009 Notice of Violation
Storm Drain- Dumping to Storm Drain	7U6K8Y	07/21/2009	Complaint Not Found	7/21/2009 Complaint Not Found
Storm Drain- Dumping to Storm Drain	7U8ULL	07/23/2009	Pool / Spa / Fountain Discharge	11/30/2009 Verbal Notice
Storm Drain - Vehicles Leaking Oil/Fluids	7UDVZN	07/28/2009	Vehicle and equipment leaking Car continually leaking oil.	8/6/2009 Referral for Enforcement
Storm Drain - Vehicles Leaking Oil/Fluids	7UDVZN	07/28/2009	Vehicle and equipment leaking Car continually leaking oil.	4/30/2010 Informational Letter
Storm Drain - Vehicles Leaking Oil/Fluids	7UFN7M	07/30/2009	Vehicle Washing Mobile washer washing car and water running to storm drain.	7/30/2009 Informational Letter
Storm Drain - Washing to Storm Drain	7UKSUY	08/03/2009	Miscellaneous Incidents Mobile Washer Detailing interior of vehicle in ROW no ID observed	8/3/2009 No issue / No violation
Storm Drain - Washing to Storm Drain	7ULSG2	08/04/2009	Surface Cleaning	8/4/2009 Follow-up in Permits Plus
Storm Drain - Washing to Storm Drain	7UPQ4X	08/07/2009	Vehicle Washing Mobile Detailing	8/7/2009 Informational Letter

Storm Drain - Washing to Storm Drain	7USKEP	08/10/2009	Surface Cleaning; Pressure washing into street.	11/6/2009 Verbal Notice
Storm Drain - Washing to Storm Drain	7USKEP	08/10/2009	Surface Cleaning Pressure washing into street.	12/21/2009 No issue / No violation
Storm Drain - Washing to Storm Drain	7USKEP	08/10/2009	Surface Cleaning Pressure washing into street.	8/10/2009 Verbal Notice added to Inv
Storm Drain- Dumping to Storm Drain	7UTSVD	08/11/2009	Tracking Soil Dirt Driveway Alleged Soil Tracking not verifiedn	10/13/2009 Verbal Notice
Storm Drain - Washing to Storm Drain	7UTN8W	08/11/2009	Surface Cleaning Power washing sidewalks	8/11/2009 Notice to Clean
Storm Drain- Dumping to Storm Drain	7UUSR4	08/12/2009	Saw Cutting Slurry Resident saw cutting ID observed	8/20/2009 Verbal Notice
Storm Water - General Information/Questions	7UUKDV	08/12/2009	Is it allowed to power wash his underground garage?	8/12/2009 Question Answered
Storm Drain - Washing to Storm Drain	7UVPS3	08/13/2009	Vehicle Washing Mobile Detailer in business park no ID observed	8/13/2009 Verbal Notice
Storm Drain - Washing to Storm Drain	7UVQLC	08/13/2009	Surface Cleaning Mobile Business in business park window cleaning;no ID observed	8/14/2009 No issue / No violation
Storm Drain- Dumping to Storm Drain	7UZN3Z	08/17/2009	Draining Swimming Pool	8/17/2009 Verbal Notice/Information Letter
Storm Drain- Dumping to Storm Drain	7UZTD6	08/17/2009	Planes being detailed at Jet Source at Palomar Airport	8/17/2009 Closed-activities did not impact storm drain. Misinformation from original complaint.
Storm Drain- Dumping to Storm Drain	7UZNZW	08/17/2009	Illicit Connection	11/2/2009 Follow-up in Permits Plus
Storm Drain - Washing to Storm Drain	7UZKUB	08/17/2009	Paint / Stucco Discharge Washing white residue from home across sidewalk and into storm drain	8/18/2009 Notice to Clean
Storm Drain- Dumping to Storm Drain	7V2NX9	08/18/2009	Complaint Not Found Motor home was parked overnight and resident saw them dumping something into the street before they left.	8/18/2009 No issue / No violation
Storm Drain- Dumping to Storm Drain	7V4PCV	08/20/2009	Carpet Cleaning Discharge Carpet cleaner dumped materials into the storm drain	8/20/2009 Informational Letter
Storm Drain- Dumping to Storm Drain	7V5MFY	08/21/2009	Paint / Stucco Discharge Paint is running down fthe storm drian.	8/24/2009 Notice to Clean

Storm Drain- Dumping to Storm Drain	7V9SGG	08/25/2009	Water Line Break Resident reports clear water is running all day down Tamarack Avenue (Heading West)	8/25/2009 Referred for Action
Storm Water - General Information/Questions	7V9TRX	08/25/2009	Was told a year or so ago by a City employee that he could not pressure wash his parking lot at his business and could get a □10,000.00 fine. Wants to know if this is true and if so where can he see it in writing.	8/31/2009 Spoke with caller and answered all applicable questions.
Storm Drain - Washing to Storm Drain	7V9M59	08/25/2009	Complaint Not Found Request for handicap parking space on street - recent car bombings on street - chemicals from fire down dfrain?	8/26/2009 No issue / No violation
Storm Drain - Washing to Storm Drain	7V9M2A	08/25/2009	Saw Cutting Slurry White/Grey Residue ID to SD from commercial property busisness owner conducting tennant inprovement	8/28/2009 Verbal Notice
Storm Drain - Washing to Storm Drain	7VASST	08/26/2009	Saw Cutting Slurry White sediment in the parking lot	8/31/2009 Notice to Clean
Storm Drain- Dumping to Storm Drain	7VBS7P	08/27/2009	Pool / Spa / Fountain Discharge Report of water flowing from a curb drain into the storm drain	8/27/2009 No issue / No violation
Storm Drain - Washing to Storm Drain	7VBPNF	08/27/2009	Complaint Not Found Power washing driveway□	8/27/2009 Complaint Not Found
Storm Drain - Washing to Storm Drain	7VCMAT	08/28/2009	Vehicle Washing Report that Mobile detailer regularly discharges to various storm drains in Carlsbad. no ID observed	8/28/2009 Complaint Not Found
Storm Drain- Dumping to Storm Drain	7VGVJE	09/01/2009	Pool / Spa / Fountain Discharge No ID observed resident emptied pool into storm drain.	9/3/2009 No issue / No violation
Storm Drain - Washing to Storm Drain	7VGNYJ	09/01/2009	Allowable Discharge No ID Residential Vehicle Washing	9/2/2009 No issue / No violation
Storm Drain- Dumping to Storm Drain	7VJRST	09/03/2009	Anti Freeze is pooling in the curb near this address.	9/3/2009 No issue / No violation - Proper BMPs in place. No discharge to street or storm drain.

Storm Drain- Dumping to Storm Drain	7VJSG8	09/03/2009	Anti freeze pooling in front of curb dumping to storm drain.	9/3/2009 Duplicate..see RFAV-7VJRST
Storm Drain- Dumping to Storm Drain	7VJMMR	09/03/2009	Saw Cutting Slurry ID of saw cutting slurry from Mobile Business (Tile Contractor)	9/4/2009 Verbal Notice - RP cleaned street 9/4/09
Storm Drain- Dumping to Storm Drain	7VK259	09/03/2009	RV Waste Discharge ID from Motor home leaking waste on City street	9/9/2009 Notice of Violation
Storm Drain - Washing to Storm Drain	7VJTCB	09/03/2009	Someone at the apt complex is hosing off the trash can area and black water is running into the storm drain in front of 5166 Whitman Way.	9/3/2009 Verbal Notice
Storm Drain - Washing to Storm Drain	7VJVQZ	09/03/2009	Report of Washing to the Storm Drain - unknown green-blue fluid coming from french drain	9/3/2009 Informational Letter
Storm Drain- Dumping to Storm Drain	7VKTUK	09/04/2009	Dumpster Discharge	9/16/2009 Verbal Notice - PM disposed of paint after phone call
Storm Drain - Washing to Storm Drain	7VKS5J	09/04/2009	Vehicle Washing	9/4/2009 Verbal Notice
Storm Drain- Dumping to Storm Drain	7VPKUL	09/08/2009	Miscellaneous Incidents Outdoor shower and alleged vehicle washing.	9/10/2009 Referred for Action - Outside agency
Storm Drain - Vehicles Leaking Oil/Fluids	7VVN46	09/14/2009	Vehicle and equipment leaking Vehicle leaking oil in street for several months.	9/21/2009 Informational Letter
Storm Drain - Washing to Storm Drain	7VVNJD	09/14/2009	Allowable Discharge Condensation water flowing across concrete. No ID observed	9/15/2009 No issue / No violation
Storm Drain - Washing to Storm Drain	7VVSVD	09/14/2009	SW1 Surface Cleaning Report of Washing to the Storm Drain Power washing surfaces without BMPs	9/14/2009 Verbal Notice
Storm Drain- Dumping to Storm Drain	7VYMKX	09/17/2009	landscapers blowing debris into storm drain	9/17/2009 Follow-up in Permits Plus - added to inventory
Storm Drain- Dumping to Storm Drain	7VZ6CM	09/17/2009	Miscellaneous Incidents No ID observed at residence. Items temporarily kept in swale	10/19/2009 Informational Letter

Storm Drain - Washing to Storm Drain	7VYL4M	09/17/2009	Surface Cleaning Painting, sanding and grinding outside and fumes and dust entering neighbors office bldg. Workers hose down back area to storm drain every evening. Commercial business ID not verified.	9/17/2009 Follow-up in Permits Plus
Storm Drain Needs Cleaning - Private Property	7W4RPR	09/21/2009	SD outfall may require cleaning.	9/22/2009 Referred for Action
Storm Drain - Vehicles Leaking Oil/Fluids	7W5UG5	09/22/2009	Vehicle and equipment leaking Alleged that black truck leaking oil - parked on street everyday around 3 PM. Small oil stain	10/8/2009 Informational Letter
Storm Drain - Washing to Storm Drain	7W5L3G	09/22/2009	Paint in gutter line - from this weekend, children painted it - about 8 foot swath.	9/22/2009 Referred for Action to Streets
Storm Drain - Washing to Storm Drain	7W5PRQ	09/22/2009	Draining pool - chlorine in water	9/22/2009 Verbal Notice
Storm Drain - Washing to Storm Drain	7W6LLC	09/23/2009	Miscellaneous Incidents Grass clippings clogging storm drain. County says no mosquito problem.	12/4/2009 Notice to Clean

Storm Drain - Washing to Storm Drain	7WEUGH	10/01/2009	Vehicle Washing Report of Washing to the Storm Drain	10/1/2009 Verbal Notice

Storm Drain- Dumping to Storm Drain	7WFLB4	10/02/2009	Large volume of water continously flowing from curb drains into street and storm drain	10/2/2009 Informational Letter
Storm Drain - Washing to Storm Drain	7WJKVC	10/05/2009	Complaint Not Found Washed car and washed out garage and water ran down street to storm drain. Call came in on 10-3-09.	10/7/2009 Informational Letter
Storm Water - General Information/Questions	7WMV9H	10/08/2009	Info request on draining water heater	10/8/2009 Information given
Storm Drain - Washing to Storm Drain	7WSNLJ	10/13/2009	Concrete being washed out to stormdrain	10/14/2009 No issue / No violation - No concrete activity. Stain in street from groundwater pump-out (allowable discharge).
Storm Drain-Dirt/Debris - Piles	7WUSAE	10/15/2009	Two large dirt piles at the end of College Blvd. On private property	10/15/2009 No issue / No violation Dirt and gravel piles placed on pervious surface sloped away from street.
Storm Drain- Dumping to Storm Drain	7WVTQ2	10/16/2009	Miscellaneous Incidents	12/14/2009 Verbal Notice
Storm Drain - Vehicles Leaking Oil/Fluids	7WVS8X	10/16/2009	Vehicle and equipment leaking Report of leaking oil or fluids White Land Rover leaking oil. Vehicle present from 11pm-7am according to caller.	10/16/2009 Referred for Action SDMC used absorbant and cleaned up fresh oil stain.
Storm Drain - Vehicles Leaking Oil/Fluids	7WVS8X	10/16/2009	Vehicle and equipment leaking White Land Rover leaking oil. Vehicle present from 11pm-7am according to caller.	6/10/2010 Complaint Not Found
Storm Drain - Washing to Storm Drain	7WZVW4	10/20/2009	Pool / Spa / Fountain Discharge	10/20/2009 Complaint Not Found
Storm Drain - Washing to Storm Drain	7X2LSK	10/21/2009	White residue in gutter coming from above address. Happened a couple days ago	10/26/2009 Referred for Action - SDMD
Storm Drain - Vehicles Leaking Oil/Fluids	7X3VZJ	10/22/2009	Vehicle and equipment leaking Green Plymouth Van leaking oil residential street significant staining ID	10/28/2009 Informational Letter

Storm Drain - Washing to Storm Drain	7X4LCB	10/23/2009	Allowable Discharge - emergency fire suppression Vehicle and vegitation fire at Lake Calavera by dam.	10/27/2009 No issue / No violation
Storm Drain- Dumping to Storm Drain	7X7M4Z	10/26/2009	Cement Discharge White substance coming out of drain at above address and running down Tulip to Daisy and then into storm drain. Street is now a mess. Happened on Saturday	10/27/2009 Verbal Notice
Storm Drain- Dumping to Storm Drain	7X8SS3	10/27/2009	Fire Suppresion System Discharge of water from fire suppression system at Cabrillo Power Station	10/27/2009 Follow-up in Permits Plus
Storm Drain- Dumping to Storm Drain	7XAW5M	10/29/2009	Carpet Cleaning Discharge	11/2/2009 Complaint Not Found - No evidence of discharge
Storm Drain - Washing to Storm Drain	7XENFF	11/02/2009	Washing down pump area to storm drain.	11/2/2009 Notice of Violation
Storm Drain Needs Cleaning - Public Property	7XHUHP	11/05/2009	Dumping - Non-hazardous Materials Empty spray paint cans in drainage channel	11/5/2009 Referred for Action
Storm Drain - Washing to Storm Drain	7XHPN2	11/05/2009	Runoff from landscaping drains into street..black water?	12/9/2009 Notice of Violation
Storm Drain - Washing to Storm Drain	7XHPAR	11/05/2009	Cement? residue washed down street....dried now	11/9/2009 Informational Letter
Storm Drain- Dumping to Storm Drain	7XJMGS	11/06/2009	Washing awnings and pouring waste water down storm drain	11/6/2009 Referred for Action - RFAV-7USKEP
Storm Drain- Dumping to Storm Drain	7XMMRP	11/09/2009	Oily substance floating on the water	11/9/2009 No issue / No violation Sheen not caused by oil or petroleum product
Storm Drain-Dirt/Debris - Piles	7XQPVJ	11/12/2009	Blowing leaves off sidewalk into storm drain	12/1/2009 Complaint Not Found
Storm Drain- Dumping to Storm Drain	7XQRQX	11/12/2009	stucco, paint, concrete debris in storm drain.	11/16/2009 Informational Letter Street will be swept tomorrow (Tamarack) and Tuesday Nov. 24 (Adams)
Storm Drain- Dumping to Storm Drain	7XQPTA	11/12/2009	SW26 Accidental Spill dried Blue Paint spill in middle of road . No SW issue referred to streets	11/12/2009 Referred for Action

Storm Drain - Erosion from Existing Development	7Y4QCB	11/24/2009	Yard is all dirt, no bmps, starting to leave the site	12/30/2009 Verbal Notice - Homeowner has installed BMPs at location most likely to discharge sediment.
Storm Drain- Dumping to Storm Drain	7YALX3	11/30/2009	Allowable Discharge Water running from the slope across manhole and into the storm drain. Possible erosion or algae growth associated.	12/2/2009 Referred for Action to Mike Fairbanks
Storm Drain- Dumping to Storm Drain	7YCS7K	12/02/2009	LEFT OVER DEEP FRIED TURKEY REMAINS DOWN STORM DRAIN	12/7/2009 Informational Letter
Storm Drain Needs Cleaning - Private Property	7YCR5Z	12/02/2009	Report of clogged storm drain.	12/4/2009 Complaint Not Found
Storm Drain - Washing to Storm Drain	7YCPHY	12/02/2009	Fire Suppresion System Water coming from westfield shopping center, running across parking lot and going into street and drains.	12/2/2009 Follow-up in Permits Plus
Storm Drain- Dumping to Storm Drain	7YENUU	12/04/2009	Miscellaneous Incidents White material in drainage channel. Appeared to be paint. Unable to find RP SDMD conducted cleanup.	12/4/2009 Referred for Action

Executive Summary

Executive Summary

Section 1: Introduction

The City of Carlsbad's (City) Jurisdictional Urban Runoff Management Plan (JURMP) Annual Report addresses the implementation of the Municipal Storm Water Permit Order No. R9-2007-0001, issued January 24, 2007 and effective March 24, 2008. This Annual Report is covering Order No. R9-2007-0001 from July 1, 2010 to June 30, 2011, hereby listed as Fiscal Year 2010-11.

In the Fiscal Year 2010-11 (FY 2010-11), many procedures have been updated or streamlined to efficiently manage data, monitor sites, track inspections and investigations, and manage other storm water related activities. Planning, Construction, and Existing Development activities have implemented improved processes to further incorporate storm water pollution prevention practices into internal activities as well as activities enforced by City departments. Highlights of each major component of the JURMP are listed below, and correspond to Section headings in this JURMP Annual Report.

The City has defined Notable Activities as those that are above and beyond compliance requirements, and are highlighted in Sections 2, 3, 4, 5, 6, as well as 15 Conclusions. Section 7 Notable Activities will be included in the December submittal of that section.

The City has included a Compliance Reference Table located in Appendix 1.2 that links permit requirements with corresponding sections in the report where they are referenced.

Section 2: Development Planning

Permit Order No. R9-2007-0001 requires the City to describe amendments to the General Plan, evaluate land use planning policies and principles, revise the environmental review processes, and develop an approval process to minimize the impacts of development activities on receiving water quality. Land-use planning gives the community an opportunity to comment on and shape policies that guide community development and interests. The City has developed goals that balance environmental protection with smart, long-term economic growth. By laying out a vision for local growth and coastal development, projects are consistent with the state and federal regulatory requirements and the City's land-use planning efforts.

The City continued to implement the Standard Urban Stormwater Mitigation Plan (SUSMP), and all applicable projects were subject to a thorough discretionary and plan check review process to ensure compliance. During FY 2010-11, the Carlsbad SUSMP requirements were applied to 70 private development/redevelopment projects and 10 City Capital Improvement Program (CIP) projects. Of the 70 private development/redevelopment projects, 6 were subject to Priority Development Project requirements which required site design, source control and treatment control requirements and 64 were subject to Standard Stormwater requirements subject only to site design and source control BMP requirements. Of the 10 City CIP projects, there were no projects subject to Priority Development Project Requirements but all projects were subject to Standard Stormwater requirements.

During FY 2009-10, the City implemented the new development processing fees for the plan review and inspection of Construction Storm Water Pollution Prevention Plans and post-construction Storm Water Management Plans.

Section 3: Construction

Order No. R9-2007-0001 requires the City to implement activities that address and minimize short and long-term impacts on receiving water quality related to runoff from new construction sites. The City requires, prior to approval of a construction or grading permit, that project proponents implement measures to ensure that pollutants will be reduced to the maximum extent practicable and will not cause or contribute to an exceedance of water quality objectives. The City met these requirements by amending or conditioning existing permits, procedures and ordinances.

During FY 2010-11, the City updated the construction inventory, inspected all high priority sites, conducted outreach and education to developers, engineers, contractors, and City staff, and used enforcement actions to obtain compliance when necessary. All active grading permits were ranked as high, medium, or low priority and inspected as required during the rainy season. The required number of inspections was exceeded during this fiscal year. The City continued to distribute the "*Pollution Prevention Guide to the Construction Industry*" brochure.

Section 4: Municipal

The City's municipal facilities and their activities have the potential to contribute to water pollution if Best Management Practices (BMPs) are not properly implemented. City facilities include administration buildings, recreational areas, maintenance and storage yards, water reservoirs, water pump stations, sewer lift stations, a road system, parking facilities, the storm drain system, pressure regulator vaults, and fire stations. Municipal facilities maintain the City's infrastructure that supports Carlsbad's quality of life.

The Storm Water Committee comprised of various City departments including Public Works, Fire Department, Parks and Recreation, and the Building Department continued to meet and discuss municipal storm water BMPs and pollution prevention issues. The intent of the committee is to communicate problems and solutions among the group in order to share knowledge, discuss training opportunities, enhance compliance with the Permit, and to pass along any new information from the Regional Water Quality Control Board (Regional Board). SWPPPs were updated for High Priority municipal facilities, as needed.

The City of Carlsbad's City Manager continued support for the Storm Water Leadership Team (SWLT). Periodic meetings were conducted and attendees included Senior Management of the City's major service areas and Directors. Agenda items covered all areas of the City's compliance with Order No. R9-2007-001.

The City's street sweeping program exceeded both Permit requirements throughout FY 2010-11 with twice weekly downtown sweeping routes.

High Priority Municipal facility inspections were conducted by both internal City staff and external consultants. The combination of annual inspections by the State Department of Pesticide Regulations, municipal inspections by internal and external inspectors, and staff training on storm water BMPs, personnel are more aware of the required maintenance practices in preventing storm water pollution. During FY 2010-11 Annual Municipal Inspections, there were no NPDES violations noted.

Municipal facilities and departments also continued to implement Integrated Pest Management practices to reduce the City's use of pesticides.

Section 5: Industrial/Commercial

The City currently maintains an inventory of industrial and commercial sites and sources within its jurisdiction. Major industry types include airport services, refuse and sewage management, pharmaceutical research and development, high technology and electronics, golf apparel and equipment manufacturers, and several light industry parks. Major commercial types include automobile maintenance, restaurants, pressure washing, masonry and concrete work, carpet cleaning, and landscaping activities. The City continued to implement a comprehensive program to reduce urban runoff originating from existing sites and sources since industrial and commercial activities have the potential to contribute to water pollution, if BMPs are not implemented properly.

During this reporting period, the City updated the industrial/commercial inventory, mapped all facilities, provided education and outreach on BMPs, inspected 100% of fixed high threat to water quality facilities, and conducted 41 enforcement activities to ensure compliance.

The Storm Water Protection Program continues to use *Knowledge and BMP Effectiveness Assessment* measures for inspected sites and sources.

Section 6: Residential

The residential community has a significant potential to contribute to water quality degradation. Beyond year 2010, there will be nearly 54,599 residential units, housing approximately 135,000 residents. The focus of the City's pollution prevention strategy is a proactive information and education program that utilizes public presentations, fact sheets, direct mailers, brochures, website, and other media to increase knowledge and awareness of storm water pollution prevention efforts.

Targeted activities for residential areas include vehicle washing, storage and maintenance, lawn and garden care, home improvement projects, pet waste disposal, swimming pool maintenance, household hazardous waste (HHW) disposal, and trash and debris cleanup and disposal. The Storm Water Protection Program continued to distribute educational information addressing these residential BMPs and required several minimum BMPs to be implemented.

Between July 1, 2010 to June 30, 2011 the City distributed storm water educational information for residential activities, continued an advertising campaign, hosted or participated in residential outreach events, offered five oil recycling drop-off sites and two HHW collection sites for residential use, continued a door-to-door residential HHW pick up program, hosted a HHW drop-off disposal day for Carlsbad residents, responded to 119 reports of illegal discharge, and issued 23 enforcement actions to achieve compliance.

Two mailers were sent out to a total of 905 households regarding storm water pollution issues. Educational material was included on Utility bills, in bill stuffers and City newsletters. The Storm Water Protection Program continues to work closely with the City's Water Conservation Specialist to address runoff due to overirrigation.

Section 7: Illegal Discharge Detection and Elimination

The City continued to conduct a comprehensive and proactive program for detecting and eliminating illegal discharges to the storm drain system. The City's program actively seeks to identify and eliminate illicit discharges and connections by conducting investigations, responding to spills and sewage overflows, conducting monitoring, and performing routine cleaning and maintenance activities on the sewer and MS4.

The Illegal Discharge Detection and Elimination (IDDE) report will be submitted in December 2011, as per Addendum #2, Order No. R9-2007-0001, and will include Notable Activities in that section.

Section 8: Outreach and Education

The Storm Water Protection Program collaborated locally and regionally to ensure outreach efforts and messages for storm water pollution prevention were consistent, though these messages often took varied forms. During FY 2010-11, the City continued to be actively involved in outreach and education at the local level, the watershed level, and at the regional level with the Project Clean Water Outreach Workgroup and the Think Blue campaign.

The City sent storm water educational information to all city employees distributed via paychecks in FY 2010-11, participated in EPA webcasts as training opportunities, collaborated with local non-governmental organizations, hosted or participated in outreach events, presented urban runoff and watershed concepts to 1058 school-aged children, and distributed information through various media. The City also distributed promotional items such as coloring books, pens, and pet waste Bags on Board with pollution prevention messages.

Section 9: Public Participation

The City led or assisted with several public participation opportunities this reporting period. During the reporting period, citizens, business owners and representatives, and other interested parties were invited to attend public meetings, outreach events, workshops, City Council meetings, and other events related to storm water pollution prevention at the local and watershed levels.

During this reporting period, the City conducted a Public Opinion Survey of 1,000 residents that included questions about storm water pollution, and held 6 community events.

Section 10: Fiscal Analysis

The total operating costs to fund the Storm Water Protection Program activities for FY 2010-11 was $2,449,072. This includes actual expenditures for personnel, operating costs, and capital outlay from the Storm Water Protection Program budget, Storm Drain Maintenance budget, Storm Water Engineering budget, and income from Engineering Plan Checks related to storm water, but does not include the *Storm Water Capital Improvement Program* costs.

Section 11: Effectiveness Assessment

Information collected in surveys, public comments, inspections, investigations, monitoring and other activities during the year were assessed on a full fiscal year basis to identify any trends and determine new or modified courses of action.

The City continued to make progress with effectiveness assessment measures during FY 2010-11, using the Watershed Treatment Model to assess the effectiveness of storm water pollution prevention. Assessment of each significant activity, each component, and an integrated assessment of the overall jurisdictional program is provided in Section 11 of this report.

Section 12: Special Investigations

There were no Special Investigations during FY 2010-11.

Section 13: Non-Emergency Fire-Fighting

The Carlsbad Fire Department (CFD) developed this section to meet the requirements of Order No. R9-2007-0001. Several BMPs have been developed and incorporated at all 6 of the City's Fire Stations. Each station has a storm water manual, spill response equipment, regular cleanup and removal of organic debris from parking lots, and portable or permanent BMPs to contain and collect equipment and vehicle wash water. Training is conducted on property with no runoff or discharge potential into the MS4, or at the City's Reclaimed Water Facility where water is collected into the Reclaimed Water reservoirs. Fire Prevention activities were also continued during this reporting period.

Section 14: JURMP Revisions

The City's 2008 JURMP was developed in response to the issuance of Order No. R9-2007-0001. The City began implementing the 2008 JURMP on March 24, 2008 as required under the new permit. There were a few minor changes to the City's 2008 JURMP during FY 2010-11 and they are discussed in Section 14.

Section 15: Conclusion

The City successfully implemented the Permit requirements and the program activities described in the JURMP. Information from JURMP activities, WURMP activities, as well as the 303(d) List indicated that bacteria, sediment, and nutrients are high priority pollutants in the Carlsbad Watershed. The City proposes to continue addressing these pollutants through a number of existing or new activities, which include education, inspections, monitoring and maintenance through implementation of Order No. R9-2007-0001.

This Section also highlights Notable Activities conducted over and above permit requirements.

Section 1

1.0 INTRODUCTION

1.1 Background

The San Diego Regional Water Quality Control Board issued the Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS018758 on January 24, 2007 to control waste discharges in urban runoff from the Municipal Separate Storm Sewer System (MS4) draining the watersheds of the County of San Diego, the Incorporated Cities of San Diego County and the San Diego Unified Port District Copermittees.

The Regional Board issued this Permit to specify the requirements necessary to reduce the discharge of pollutants in urban runoff to the maximum extent practicable (MEP). Pollutants in urban runoff discharging to downstream water bodies can be prevented and controlled by effective implementation of best management practices (BMPs). The Permit requires the submittal of a Jurisdictional Urban Runoff Management Plan (JURMP) to the Regional Board in the first year of the permit, and an Annual Report each remaining year of the permit to document the progress and implementation of the JURMP.

The Permit requires the City of Carlsbad (City) to protect water quality during the three major phases of urban development: (1) land use planning for new development; (2) construction; and (3) the "use" or existing development phase.

In 2008, the City prepared a JURMP that addresses the requirements of Water Quality Order No. R9-2007-0001. The City officially began implementing the 2008 JURMP on March 24, 2008. The following report covers the implementation of the JURMP for Fiscal Year 2010-11 (July 1, 2010 to June 30, 2011).

1.2 Overview of the City of Carlsbad

The City encompasses just over 42 square miles and borders 6 miles of coastline. The entire city is contained within the Carlsbad Hydrologic Unit (Watershed) and encompasses four smaller hydrologic areas. These include Buena Vista Creek, Agua Hedionda, Encinas, and San Marcos. Major water bodies within the city are Buena Vista Creek, Buena Vista Lagoon, Agua Hedionda Creek, Agua Hedionda Lagoon, San Marcos Creek, and Batiquitos Lagoon. Several waterbodies within the city are listed as impaired under Section 303(d) of the Federal Clean Water Act.

The City is a municipal corporation, following the Council-Manager form of government. During FY 2008-09, the City changed from a General Law City to a Charter City. While the City created the Storm Water Protection Program to help implement the Permit, program implementation is carried out by several departments throughout the City. This allows for program implementation and new requirements to be incorporated into daily activities of City employees, instead of being viewed as completely new requirements without a connection to on-going services.

The City has an Environmental Management Department which brings together Storm Water, Habitat Management, energy and other environmental activities to promote a more sustainable approach for the City.

1.3 Purpose and Objectives

The purpose of the City's JURMP Annual Report is to provide a comprehensive account of activities conducted by the City to meet the requirements of Water Quality Order No. R9-2007-0001. In addition, the reporting process allows the City to evaluate the effectiveness of the program and make any changes necessary to improve the implementation and effectiveness of the JURMP.

1.4 Report Organization

This Annual Report was prepared in accordance with the requirements of the Permit. It contains a comprehensive description of the activities conducted by the City of Carlsbad to meet the requirements of the Permit; an accounting of illicit discharges reported, inspections conducted, enforcement actions taken, education efforts conducted; a description of the public participation mechanisms utilized during the JURMP implementation process; identification of management measures proven to be effective in reducing urban runoff pollutants and flow; identification of water quality improvements or degradation; and a fiscal analysis. A list of acronyms is provided in Appendix 1.1.

The organization of this report follows the Table of Contents agreed to and submitted by the Regional Copermittees to the Regional Board. The Annual Report is divided into sections matching major sections in the Permit and the JURMP. As with the JURMP, many of the activities described in separate JURMP sections overlap with one another, so an activity may be referenced in more than one report section. The Annual Report is organized as follows:

Section 1	Introduction
Section 2	Development Planning Component
Section 3	Construction Component
Section 4	Municipal Component
Section 5	Industrial/Commercial Component
Section 6	Residential Component
Section 7	Illicit Discharge Detection and Elimination Component
Section 8	Outreach and Education Component
Section 9	Public Participation Component
Section 10	Fiscal Analysis Component
Section 11	Assessment of JURMP Effectiveness Component
Section 12	Special Investigations Component
Section 13	Non Emergency Fire Fighting Flows
Section 14	JURMP Revisions
Section 15	Conclusions and Recommendations

Appendix 1.2 contains the JURMP Annual Report Requirements Checklist which shows the reporting requirements from the Permit and where each requirement can be found in the City's 2010-11 JURMP Annual Report.

Section 2

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 Introduction

This section outlines the Development Planning actions implemented by the City under San Diego Municipal Permit Order No. R9-2007-001 (the "2007 Municipal Permit") and covers the portion of the annual reporting period from July 1, 2010 through June 30, 2011. During this reporting period, the City maintained compliance with all land-use planning requirements of the 2007 Municipal Permit. During the current reporting period, the City continued to implement the comprehensive development planning changes put into place during previous fiscal years.

Throughout FY 2010-11, the City also performed several development planning process changes to both enhance our internal/external communications regarding storm water and ensure the City's compliance with the 2007 Municipal Permit as more fully discussed and detailed in the following sections below.

During the reporting period, many items, including documents and procedures, were updated and placed on the city's website. In an effort to save paper, this annual report includes several hyperlinks to these updated documents. If there is a need to have a paper copy, please inform us and we will accommodate your request.

2.2 Land Use Planning

2.2.1 Background

In July 1986, the City adopted a "*Growth Management Plan"* into its General Plan to guide development and anticipate the types and numbers of facilities needed to accommodate the Carlsbad community at build out. Those facilities include: sewer plant capacity, sewage pipelines, reclaimed water system, and storm drain system that included flood and pollution control basins.

In September of 1994, the City adopted a Comprehensive Update of its General Plan. The General Plan includes goals that balance environmental protection with smart, long-term economic growth. By laying out a clear vision for environmentally sensitive development within this coastal community, development projects are required to be consistent with various City ordinances (i.e. Grading and Erosion Control, Storm Water Management, Hillside Development, Coastal Resource Protection) and other regulatory requirements.

The General Plan is reviewed annually and revised as necessary to ensure that the public facilities are considered and City goals are met. On February 19, 2002, the City Council adopted General Plan Amendment GPA 01-15. This General Plan Amendment revised and supplemented various policies regarding storm water quality protection in the Open Space and Conservation Element of the General Plan. The revised and supplemented policies reflect all storm water quality and watershed protection principles found in the 2007 Municipal Permits pertaining to storm water pollution prevention.

City staff reviewed the storm water protection policies of the General Plan in FY 2010-11 and no revisions were made. The existing General Plan storm water protection policies are listed below:

a) Develop and implement a JURMP consistent with the Permit and any amendments thereof.

b) Adopt and implement a Master Drainage Plan and a local Standard Urban Storm Water Mitigation Plan (SUSMP) consistent with the 2007 Municipal Permit and any amendments thereof.

c) Prior to making land use decisions, utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. The City requires development projects to incorporate structural and non-structural BMPs to mitigate any anticipated increases in pollutant loads.

d) Implement storm water pollution prevention methods to the maximum extent practicable, supplemented by pollutant source controls and treatment control measures. Use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants offsite and into the municipal separate storm sewer system (MS4).

e) Post-development runoff from a site shall not contain pollutant loads which cause or contribute to an exceedance of receiving water quality objectives or which have not been reduced to the maximum extent practicable.

f) Developments shall implement appropriate recommendations to protect water quality found in the San Diego Association of Government's (SANDAG's) Water Quality Element of its Regional Growth Management Strategy.

g) Development projects should be designed to comply with the following site design principles:

- Protect slopes and channels to decrease the potential for slopes and/or channels from eroding and impacting storm water runoff.
- To the extent practicable, cluster development on the least environmentally sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands and buffer zones. Encourage land acquisition of such areas.
- Provide buffer zones for natural water bodies.
- Minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment.
- Where feasible implement site design/landscape features to slow runoff and maximize on-site infiltration of runoff.
- Properly design outdoor material storage areas (including the use of roof or awning covers) to minimize the opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids and other pollutants from entering the storm water conveyance system.
- Incorporate roof or awning covers over trash storage areas to prevent off-site transport of trash and other pollutants from entering the storm water conveyance system.
- Limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways and bridges.
- Design streets and circulation systems to reduce pollutants associated with vehicles and traffic resulting from development.

In addition to the General Plan, the City has adopted various storm water protection policies in other land use planning documents including the City's Local Coastal Program and Habitat Management Plan.

The Carlsbad Local Coastal Program (LCP) covers that part of the City lying within the coastal zone. The Carlsbad City Council adopted a Zone Code Amendment (ZCA 01-08), Local Coastal Program Amendment (LCPA 01-15) and Municipal Code Amendments (MCA 01-05, 01-06, and 02-01) to revise/add new policies, standards, procedures and requirements regarding water quality and watershed protection to the LCP Land Use Plans, Chapters 21.203 (Coastal Resource Protection Overlay Zone) and 21.205 (Coastal Resource Overlay Zone Mello I LCP Segment Local Coastal Program) of the Zoning Ordinance of Carlsbad's Municipal Code. One of the notable storm water requirements of the LCP is the inclusion of an additional criterion for determining a priority development project. Per the amended LCP, any project located within 200 feet of the Pacific Ocean that creates more than 2500 square feet of impervious surface or increases the project impervious area more than 10% over the existing impervious area is to be considered a priority development project.

Under the California Natural Community Conservation Program (NCCP), the City and six other cities in north San Diego County participated in the preparation of the Multiple Habitat Conservation Program (MHCP). The MHCP is a comprehensive planning program designed to develop an extensive ecological preserve in northwestern San Diego County. The City has prepared a subarea plan, called the Carlsbad Habitat Management Plan that was adopted in November 2004. The HMP contains the specific conservation, management, facility planning, land use, and other actions the City will take to implement the goals, guidelines, and standards of the MHCP plan. This HMP prohibits development in or near natural habitat areas including creeks and lagoons. Those areas act as a buffer between urban development pollutants and receiving waters. They also protect a significant percentage of natural areas that are pervious, leading to natural groundwater recharge and reduction in peak run off rates.

On November 1, 2002, the revised Zoning Ordinance, Municipal Code, and LCP Amendments were submitted to the California Coastal Commission. In August, 2006, the California Coastal Commission approved these municipal code amendments. All requirements of these documents continued to be implemented in FY 2010-11and previous years including the years the City waited for Coastal Commission approval. The LCP and Habitat Management Plan were evaluated during FY 2010-11 and no revisions were made.

2.2.2 Source Characterization

Land Use Planning is the process whereby the City determines appropriate land use designations for a property consistent with the City's General Plan requirements. As such, source characterization of pollutants is generally addressed in association with the type of land use proposed (i.e. low density residential, high density residential, commercial, and industrial, etc). Each land use decision made during FY 2010-11 was found consistent with the storm water protection policies as contained in the City's General Plan, Local Coastal Program (if applicable) and Habitat Management Plan.

In many cases, land use planning applications are accompanied by specific project development applications. In such cases, the project was required to identify specific project pollutant sources consistent with the City's Standard Urban Storm Water Mitigation Plan (SUSMP) and to identify project specific BMPs to eliminate or minimize any negative impacts to storm water quality.

In January 2011, the Carlsbad SUSMP was updated to incorporate hydromodification requirements. The SUSMP update included new information on hydromodification thresholds, criteria, application, and methodologies. In conjunction with the SUSMP update, processing forms for project submittals were also updated including the Storm Water Management Plan guidelines and Storm Water Standards Questionnaire (SWSQ) that applicants complete when submitting projects to the City.

By completing the SWSQ, applicants assess the level of storm water requirements that apply to their project. Upon application, city staff reviews the SWSQ and verify that it reflects the appropriate project characteristics and outcome. If the form is filled out incorrectly, it is returned to the applicant to be corrected and returned to the City before proceeding with further reviews. The updated SWSQ can be found at http://www.carlsbadca.gov/business/building/Documents/E-34.pdf.

For more specifics on source characterization applied to development projects during the project approval and verification process refer to Section 2.4.2.

2.2.3 Best Management Practice Requirements

To assist applicants, the Carlsbad SUSMP includes guidelines and design criteria to help applicants assess the effectiveness of BMPs they are considering for their project. Selecting the appropriate BMPs will vary from project to project depending on the physical site constraints, downstream impairments, development category, types of soil, and target pollutant(s) generated by their specific project.

The Carlsbad SUSMP includes integrated low impact design (integrated LID) technique for applicants to select and size BMPs for projects. The Carlsbad SUSMP also provides several treatment control BMP options that applicants may choose for their projects including raised planters, bio-retention facilities, pervious pavements, infiltration trenches, cisterns, and more.

During FY 2010-11, the City developed a brochure on low impact development (LID). The LID brochure is a tool to educate developers, contractors and homeowners regarding different types of LID features on a typical project. The brochure includes different LID features, what their purpose is, and where it could be employed on a project site. Refer to Appendix 2.1 for a copy of the LID brochure.

2.2.4 Program Implementation

Every General Plan Amendment and land use planning application approved by the City during FY 2010-11 was found in conformance with all applicable storm water protection policies of the Carlsbad General Plan, Local Coastal Program (as appropriate), Habitat Management Plan and the Carlsbad Municipal Code (CMC). This includes compliance findings for all the storm water quality goals and objectives of the City's Grading and Drainage Ordinances (Title 15 of the CMC) and the Carlsbad SUSMP.

During this reporting period, the typical land use planning review process began with the submittal of a planning application at the City's development services counter. Concurrent with the land use application the city requires submittal of the SWSQ which, once completed, determined if the project was subject to Priority Development Project or Standard Storm water requirements. Each project was then reviewed for conformance with the storm water protection policies, requirements of the Carlsbad SUSMP, the General Plan, any applicable Local Coastal Plan, the Habitat Management Plan and all applicable City Codes.

2.3 Environmental Review Process

The City's environmental review process begins with the Initial Study Checklist (CEQA Guidelines). Based on the results of the checklist, the City requires the project applicant to provide additional studies to elaborate on the environmental impacts or recommend denial of the permit that the project applicant is seeking.

The Initial Study Checklist provides an expanded section on potential water quality impacts for each project. Table 2.1 shows an excerpt of the updated Initial Study Checklist that includes specific hydrology and water quality analysis the City uses during the environmental review process.

Table 2.1: Hydrology and Water Quality Analysis Checklist

HYDROLOGY AND WATER QUALITY. *Could the project:*
a. Violate any water quality standards or waste discharge requirements?
b. Substantially deplete groundwater supplies or interfere substantially with ground water recharge such that there would be a net deficit in aquifer volume or a lowering of the local ground water table level (i.e., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the flow rate or amount (volume) of surface runoff in a manner, which would result in flooding on- or off-site?
e. Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?
f. Otherwise substantially degrade water quality?
g. Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood delineation map?
h. Place within 100-year flood hazard area structures, which would impede or redirect flood flows?
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?
j. Inundation by seiche, tsunami, or mudflow?
k. Increase erosion (sediment) into receiving surface waters?
l. Impact aquatic, wetland, or riparian habitat?
m. Change receiving water quality (marine, fresh or wetland waters) during or following construction?
n. Increase any pollutant to an already impaired water body as listed on the Clean Water Act Section 303(d) list?
o. Increase impervious surfaces and associated runoff?
p. Impact aquatic, wetland, or riparian habitat?
q. Result in the exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?

2.4 Development Project Approval and Verification Process

2.4.1 Background

The City uses integrated administrative and regulatory tools required to implement the Land-Use Planning requirements of the Carlsbad SUSMP and 2007 Municipal Permit. During the development review process, the City requires that new development and redevelopment projects evaluate their project against the required project SUSMP thresholds to determine the level of storm water requirements that apply to their project. To evaluate projects, applicants are required to fill out and submit a Storm Water Standards Questionnaire (SWSQ) to the City. City staff then reviews each SWSQ to evaluate the accuracy of the thresholds that may apply to the project and to ensure the proper outcome of the SWSQ and compliance with the Carlsbad SUSMP.

In general, the Carlsbad SUSMP requires applicants to incorporate storm water concepts at the initial design phase of a project prior to submittal to the City. Once the applicant submits the development application, the City reviews the application and development plans to ensure the project has appropriately considered storm water objectives and selected the appropriate BMPs and that it satisfies the applicable storm water requirements as outlined in the SUSMP.

During this reporting period, the City also developed or updated the following storm water program elements and/or procedures:

1. During FY 2010-11, the City continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, and transfer of information during the approval process, and other issues related to treatment control BMP compliance. As a result of these meetings, the City will establish a Storm Drain Inventory Management Committee that will meet quarterly to discuss issues related to storm drain maintenance, treatment control BMP inventory, GIS mapping, and other topics related to tracking and managing structures within the City's storm drain conveyance system.

2. During FY 2010-11, the City updated the Carlsbad SUSMP, Storm Water Management Plan (SWMP) guidelines, single sheet post construction BMP plan, and Storm Water Standards Questionnaire (SWSQ) per the 2007 Municipal Permit. Here the following links to each updated document:
    a. SUSMP - http://www.carlsbadca.gov/business/building/Documents/EngStandsw-stds-vol4-ch2.pdf
    b. SWMP guidelines - http://www.carlsbadca.gov/business/building/Documents/E-35.pdf
    c. SSPCBMP plan - http://www.carlsbadca.gov/business/building/Documents/BMP_Plan_Sheet.zip
    d. SWSQ - http://www.carlsbadca.gov/business/building/Documents/E-34.pdf

3. During FY 2010-11, similar to final drawings, the City began scanning storm water management plans into our digital management system (DMS). This allows these water quality reports to be accessed by others (inspectors, reviewers, researchers, etc.). This allows for more improved access and archiving of the water quality requirements for which a project was approved.

2.4.2 Source Characterization

Development project approval is the stage of the development process where storm water quality impacts are assessed and the project is designed to eliminate or minimize potential sources of storm water pollutants. Each "Priority Development Project" submitted during this reporting period, was required to prepare and submit a Storm Water Management Plan (SWMP) consistent with the Carlsbad SUSMP concurrent with any discretionary or ministerial permit application. Source identification is a required component of each SWMP.

During the FY 2010-11, project proponents for Priority Development Projects were required to identify potential pollutant sources generated by their particular land use and development design in accordance with the procedures outlined in the Carlsbad SUSMP. Table 2.1 of the Carlsbad SUSMP is used to assist applicants to identify potential pollutant sources for various project categories. These potential sources are discussed in the SWMP for each for Priority Development Project. Additionally, project proponents were required to identify the pollutants of concern or impairment for the receiving waters into which the project runoff contributes During the reporting period, the 2006 303(d) list of water quality impairments for receiving waters was used to review projects.. The project proponent was then required to determine if the project included any land use activity or development design that generated or potentially added to any water quality impairment within the receiving waters.

If projects were found to drain into one of the 303(d) listed receiving waters, they were required to analyze the potential for contributing the identified pollutants to the water body. If a potential source was identified, then the applicants were required to select an appropriate source control, site design or treatment control BMP measure and demonstrate how the selected BMP(s) eliminate or reduce the pollutant of concern to the MEP and that the project does not cause or contribute to an exceedance of receiving water quality objectives.

2.4.3 Best Management Practice Requirements

The Carlsbad SUSMP is incorporated into the Carlsbad Engineering Standards. The Carlsbad SUSMP is located in volume 4 which is entitled the "Storm Water Standards Manual". The Storm Water Standards Manual was originally designed to meet the requirements of the 2001 Municipal Permit, but has been revised to meet the requirements of the 2007 Municipal Permit. Among other things, the Carlsbad SUSMP addresses how projects are classified and which steps they must follow to meet storm water requirements. The Carlsbad SUSMP includes a clearly defined process to help applicants understand how projects trigger certain storm water requirements and how to comply with stormwater standards. Projects are either subject to "Standard Stormwater" or "Priority Development Project" requirements. For projects subject to Priority Development requirements, the Carlsbad SUSMP includes integrated LID criteria that allow applicants to satisfy multiple facets of the SUSMP including site design, treatment control, hydromodification and low impact development requirements.

The 2007 Municipal Permit required the City and other Copermittees to develop hydromodification criteria and measures to address how urban runoff affects erosion downstream of projects. To satisfy this requirement, the City and Copermittees developed the final Hydromodification Plan (final HMP). For a copy of the final HMP, refer to
http://www.projectcleanwater.org/images/stories/Docs/LDS/HMP/0311_SD_HMP_wAppendices.pdf

Once the final HMP was approved, the City worked with the other Copermittees to develop an updated Countywide Model SUSMP to incorporate the final HMP requirements. The model SUSMP was updated by the Copermittees January, 2011.

During FY 2010-11, the City modified its local SUSMP to incorporate the updated Countywide Model SUSMP and adopt the final HMP. As part of the update, the Carlsbad SUSMP includes background, objectives, thresholds and implementation requirements that address hydromodification. For those projects subject to the final HMP, the City added the web-based county BMP sizing calculator to the SUSMP. The calculator allows applicants to select and size BMPs that satisfies both treatment control and HMP requirements. The SUSMP also allows for applicants to use alternative approaches provided they address the final HMP requirements. A copy of the updated Carlsbad SUSMP can be found at the following City of Carlsbad web link
http://www.carlsbadca.gov/business/building/Documents/EngStandsw-stds-vol4-ch2.pdf.

Per the Carlsbad SUSMP, all projects subject to Standard Stormwater requirements are required to incorporate both site design and select from a list of applicable source control BMPs into their project design. The SUSMP includes a checklist of site design and source control BMPs that may apply to a project depending on the project use/ type. These include but are not limited to providing disconnects into the project design so runoff drains from impervious surfaces over landscape or pervious areas, minimizing the use of impervious surfaces, encouraging the use of vegetated swales or landscape planters, using trash enclosures with covered lids, using efficient irrigation control systems with rain sensors, etc.

In addition to complying with Standard Stormwater requirements, all projects subject to Priority Development Project requirements are also required to prepare a SWMP. The SWMP is a document where the applicant identifies project conditions, pollutants of concern, impairments to water bodies, site design BMPs, source control BMPs and, in accordance with the 2007 Municipal Permit, are also required to select, size and incorporate treatment control BMPs into the project design. After the SUSMP update (January 14, 2011) SWMP's must also demonstrate how the project satisfies hydromodification requirements. The SWMP's also include maintenance requirements for treatment control BMP/hydromodification controls to assure owners/tenants maintain post development BMPs for the life of the project.

During FY 2010-11, the City updated the requirements checklist for SWMP's to include applicable hydromodification requirements. This checklist is provided for applicants and engineers when preparing SWMP's and outlines all the required elements to include in the SWMP. The checklist is also used by staff when reviewing SWMP's for compliance against the SUSMP and consistency against the other associated development plans. This updated SWMP requirements checklist can be found on the City's webpage at: http://carlsbadca.gov

During this reporting period, the City participated in the development of the regional final HMP. The final HMP was submitted to the Regional Board on December 29, 2009 and was accepted by the RWQCB July 14, 2010. In accordance with the 2007 municipal permit, the City updated our local SUSMP on January 14, 2011 to incorporate the new requirements of the final HMP. Because the local SUSMP was updated during the reporting period, some projects were evaluated against the previous SUSMP requirements and others were reviewed against the updated SUSMP (after January 14, 2011). After

January 14, 2011, depending on project thresholds, Priority Development Projects may be subject to final HMP requirements.

During this reporting period, there have been several Regional meetings that the City has attended with other Copermittees. The Land Development Engineering Division has participated and will continue to participate in these meetings that include but are not limited to: the land development workgroup, the HMP technical advisory committee, and the reporting and assessment Workgroup.

Each development project was assessed for its potential to generate urban pollutants using the SWSQ. Those specific types of projects (or project components) identified as having a high potential to generate pollutants in accordance with the 2007 Municipal Permit and Local Coastal Program requirements were classified as a "Priority Development Projects". Each Priority Development Project was associated with one or more of the general pollutants categories as described in Table 2.1 of the Carlsbad SUSMP. Additional pollutant categories were then determined based upon their potential of being generated by the specific proposed Priority Development Project.

Each project subject to Priority Development Project requirements was then required to incorporate site design, source control, treatment control BMPs and applicable hydromodification features into the project design as specified in the Carlsbad SUSMP including the new applicable low impact design and meet interim hydromodification requirements, if applicable. Projects subject to Standard Stormwater Standards were required to incorporate site design and source control BMPs into their project design. The following is a brief listing and description of the types of BMPs incorporated into project designs during the reporting period:

Site design BMP features incorporated into development projects during the reporting period include the following:

- Incorporating disconnects so runoff from impervious surfaces drain across landscape or pervious surfaces to encourage evapo-transpiration, percolation, vegetative contact, and to reduce the downstream effects of development runoff.
- Minimization of building footprints and incorporation of impervious surfaces such as pervious pavements.
- Conservation of natural area by clustering of development and preservation of natural drainage systems.
- Directing flows from impervious surfaces across pervious pavements or landscape areas.
- Preservation of existing trees and planting of new trees to maintain and increase canopy coverage.
- Conveying of drainage away from slopes or provision of appropriate slope down drains.
- Vegetating slopes and open space areas with drought tolerant plants.
- Stabilization of permanent channel crossings and installation of energy dissipaters at drainage outlets.

Source Control BMP features incorporated into Carlsbad developments during the reporting period include the following:

- Enclosure of outdoor material storage areas.
- Trash enclosures that have impervious surfaces and do not allow drainage to flow through the enclosure and use of trash bins with lids that exclude rain.
- Use of efficient irrigation systems with moisture sensors and properly designed flow control systems.
- Stenciling and/or placement of tiles at every applicable storm drain inlet.

As with the previous reporting period, during FY 2010-11, for projects subject to Priority Development Project requirements, through the development review process, applicants could not select treatment control BMPs with low efficiency removal ratings (e.g.: hydrodynamic separator systems and filter inserts) without being subject to additional scrutiny by the City. Per the Carlsbad SUSMP, applicants may choose low efficiency treatment control BMPs, but only after providing additional analysis and backup information subject to approval by the City. In this circumstance, the applicant must provide a detailed analysis to demonstrate how all the other (more efficient) treatment control BMPs in the SUSMP could not be employed with the project. However, during the reporting period, there were no projects that were approved that solely used BMPs with low efficiency removal rates.

The development approvals processed during FY 2010-11 encompassed multiple project categories including residential, commercial and industrial projects. Each project subject to Priority Development Project requirements included appropriate treatment control BMPs from the list of allowable treatment controls included in Table 2-2 of the Carlsbad SUSMP. The types of treatment control BMPs approved for projects during the reporting period included bioretention areas, vegetated swales, vault structures, and bio-filtration basins.

Throughout FY 2010-11, all projects subject to Priority Development Project and Standard Stormwater requirements, including City Capital Improvement Program (CIP) projects, complied with the Carlsbad SUSMP.

2.5 SUSMP Program Implementation

2.5.1 Urban Runoff Approval Process

In FY 2010-11, all new development and redevelopment projects including public CIP projects were required to undergo the City's urban runoff approval process in accordance with the requirements of the Carlsbad SUSMP, 2007 Municipal Permit and Carlsbad JURMP.

The City has a comprehensive set of storm water pollution prevention activities which are incorporated into the project development approval and BMP installation verification process. The measures include everything from the development of urban runoff land use planning policies, development processing procedures, project submittal and review checklist, educational pamphlets, engineering standards, City Codes, database inventory control, monitoring requirements, staff and developer training and project tracking and reporting. Each activity has been carefully designed to help eliminate or reduce storm water pollution on projects to the maximum extent practicable (MEP) and to not cause or contribute to an exceedance of receiving water quality objectives.

The development process has many stages from concept review on through to construction completion and project operation and maintenance. The City conducts many activities meant to ensure development project compliance with the City's urban runoff management policies and requirements. Table 2.2 presents a brief description of the SUSMP activities undertaken at each stage of the development process. Also included in the table are a listing of the City reference materials and implementation documents available to developers and City staff which are applicable to each stage in the process.

Project compliance was tracked through a variety of paper and computer tracking systems. Conditions of Approval specify whether the project must comply with the Priority Development Project (PDP) or Standard Stormwater requirements of the Carlsbad SUSMP.

The City maintains a database of both private and public project approvals that are subject to Carlsbad SUSMP. For private development projects, the results of this database for FY 2010-11 include project name, approval date, approving authority, appropriate resolution numbers and the storm water standards (Priority Development Project, Standard Stormwater) that applied to each project. A list of the private development projects approvals for the reporting period is included as Appendix 2.2.

For the public projects, the results of this database for FY 2010-11 is called the 'CIP Project Approvals' which includes the project name, approval date, and the storm water standards (Priority Development Project, Standard Stormwater) that applied to each project. For the list of CIP Project Approvals subject to the Carlsbad SUSMP refer to Appendix 2.3.

As part of project development processing, during the construction plan review stage, a final design SWMP is submitted to the City for approval. In addition, each project's required treatment control BMPs are incorporated into the project construction drawings. The City created templates for title sheets that include a treatment control BMP table that is to be filled out for project subject to Priority Development Project requirements. For PDP projects, the table is located on the title sheet identifying each treatment control facility including information and BMP maintenance frequencies and specifying which plan sheet contains the additional details where each required treatment control BMP is installed within the project. A separate table is included on the detail sheet providing additional information including the number of BMP units located on that particular plan sheet. The tables are used to highlight the treatment control BMP requirements to the contractor, property owner, project inspector and are used for future inspections. The table also makes it easier for City GIS staff to locate treatment control BMPs for entry/confirmation with the City's GIS database.

Table 2.2 Development Process and SUSMP Activities

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Conceptual Project Design	Developer uses the Carlsbad SUSMP and Storm Water Standards Questionnaire to determine project priority and begins project layout and design. For priority projects the City recommends to developers that a preliminary SWMP should be prepared.	• Storm Water Standards Questionnaire • Storm Water Standards Manual which includes the Carlsbad SUSMP • 303(d) List
Pre-application Review	Developer submits the preliminary project proposal to staff to obtain input on conceptual project layout including storm water compliance issues.	• Preliminary site plan checklist • SWMP Fact Sheet
Application for Discretionary Review	City staff review application package at front Counter for completeness of submittal including storm water compliance documents. Project is logged into the City database for tracking. A completed Environmental Initial Assessment (EIA) form is submitted with the application package.	• Project Application Submittal Checklist • City review letter
Application Review	City staff reviews application, site plans and accompanying reports and documents including any SWMP, geotechnical and hydrology/hydraulic reports. Project is reviewed for consistency with General Plan, Local Coastal Plan (LCP), Habitat Management Plan (HMP1), Carlsbad SUSMP and City Codes and other Standards including all storm water protection policies and requirements including new LID and interim hydromodification requirements. Project location is reviewed for proximity to environmentally sensitive areas and to determine if project drains to a water body on the 303(d) list. Project EIA is reviewed and appropriate environmental review documents are requested and reviewed in compliance with California Environmental Quality Act (CEQA) requirements.	• Site plan review checklist • SWMP checklist • 303(d) List • General Plan • Local Coastal Plan • Habitat Management Plan • City Codes • Environmental Assessment Form • CEQA Guidelines • City review letter (if any)

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Discretionary Approval	City denies project or approves with conditions including storm water compliance conditions. Applicable standard conditions of approval are applied to the project together with any special conditions of approval as City staff determines necessary to reduce or eliminate the projects storm water pollution impacts to the MEP. Approving authority makes required findings that project complies with the General Plan, LCP, HMP1, SUSMP, City Codes and any other appropriate land use planning documents. Environmental documents are certified and any mitigation monitoring requirements are noted in the project approval.	• City's standard conditions of approval • Project Conditions of Approval • Environmental mitigation and monitoring plan (if any)
Final Project Design	Developer prepares project construction plans including grading, improvement, landscape and building detailing required BMPs. Construction SWPPP is prepared and SWMP is finalized. A single sheet post construction BMP site plan is prepared.	• Storm Water Standards Manual • Project Conditions of Approval • Environmental mitigation and monitoring plan (if any)
Construction Plan Check Application Submittal	City staff review application package for completeness of submittal including storm water compliance documents. Applicant completes and submits Project Storm Water Threat Assessment Worksheet included as part of the Storm Water Requirements Applicability Checklist.	• Plan Check Application Submittal Checklist • Project Threat Assessment Worksheet • Project Conditions of Approval
Construction Plan Check Review	City staff reviews construction plans and accompanying reports and documents including any SWMP, single sheet post construction BMP site plan, Construction SWPPP, geotechnical and hydrology/hydraulic reports. All storm water pollution prevention requirements are checked against construction plan checklist, SWMP checklist, Construction SWPPP checklist and project conditions of approval. Construction cost estimates are approved for bonding costs including costs for structural BMPs. For priority projects a BMP Maintenance Agreement is prepared.	• Construction Plan Checklist • SWMP Checklist • Construction SWPPP Checklist • Project conditions of approval • Project Threat Assessment • City Engineering plan review procedures • Environmental mitigation and monitoring plan (if any) • Cost estimates

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Construction Plan Approval	City approves construction plans and accompanying Construction SWPPP and SWMP including single sheet post construction BMP site plan. The executed BMP Maintenance Agreement is recorded and entered into the City's document management system database. All treatment control BMPs are noted on the construction plans and forwarded to the GIS group for entry into the BMP inventory. Any project design changes that differ from the approved site plan or project conditions of approval are reviewed in compliance with the City's Substantial Conformance Procedures to ensure that the project remains in compliance with all land use planning findings. Secured agreements to construct project improvements are obtained backed up with cash and/or other securities. Developer is required to note the WDID number on the project plans	• Plan check completion letter • BMP Maintenance Agreement • BMP Inventory update procedures • Substantial Conformance Procedures • Environmental mitigation and monitoring plan (if any) • Cost estimates • Secured Agreements • Single sheet post construction BMP site plan
Ministerial (Construction) Permit Issuance	City issues permit(s) for construction activities including grading, improvement, building, demolition and blasting. Any special storm water compliance requirements are noted on permit. City staff review plan check completion letter for any special storm water compliance requirements. Copies of the permit, construction plans, Construction SWPPP, single sheet post construction BMP site plan and SWMP are forwarded to the Construction Management and Inspection Division. A construction inspection level (low, medium or high) is assigned in accordance with the project's threat assessment form. The project tracking database is updated with the project threat assessment construction level and permit issuance status.	• Plan check completion letter • Project SWMP • Project Construction SWPPP • Construction Threat Assessment Worksheet • Pollution Prevention Guide for the Construction Industry • Construction SWPPP Fact Sheet • Single sheet post construction BMP site plan
Preconstruction Meeting	City staff meets with contractor and other parties to review project construction issues, schedule, and storm water BMP implementation, monitoring and testing requirements. Contractor is informed of storm water inspection and enforcement procedures and reminded to maintain compliance with the City's storm water pollution prevention requirements. City inspector verifies the NOI has been filed with the Regional Board and a WDID number has been assigned to the project.	• Preconstruction checklist • Construction SWPPP • SWMP • Construction plans • Pollution Prevention Guide for the Construction Industry • Single sheet post construction BMP site plan

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Construction and Inspection	Developer constructs project including temporary and permanent BMPs. City inspectors enforce compliance with SWPPP, SWMP and Municipal Permit. During construction City project inspector reviews construction for compliance with all plans, the Construction SWPPP, SWMP and City Standards. Regular storm water compliance inspections are scheduled and tracked per City procedures and the requirements of the 2007 JURMP. Enforcement actions are taken as necessary in accordance with City inspection and enforcement procedures. City inspector reviews and approves any minor construction revisions. Major construction revisions are referred to the Engineering Development Services Division for review and approval.	• Construction SWPPP • SWMP • Construction plans • City inspection and enforcement procedures • Pollution Prevention Guide for the Construction Industry • Inspection reports • Enforcement action reports • Secured Agreements • Single sheet post construction BMP site plan
Project Completion	Construction plans are "as-built", securities released, and BMP construction verified. As-Built plans prepared and forwarded to the GIS Group to update the BMP inventory. City inspector reviews project site to verify installation of permanent BMPs prior to occupancy permit and/or project acceptance using the single sheet post construction BMP site plan. Public Improvements are accepted for maintenance including any public structural control BMPs.	• Construction SWPPP • SWMP • Construction plans • Pollution Prevention Guide for the Construction Industry • Punch list • Secured Agreements • Project Acceptance Forms • Single sheet post construction BMP site plan
Post Construction Annual Treatment Control BMP Inspections	BMP owners maintain BMPs in accordance with recommended and regulatory maintenance schedules. Treatment Control BMP owners submit annual verification of effective operation and maintenance of installed treatment control BMPs. City staff inspects project sites with installed treatment control BMPs to verify compliance with storm water requirements. (New requirement was implemented in FY 2008-09).	• SWMP • BMP Inventory List • Site BMP Inspection Report • BMP Maintenance Agreement

The City process includes a single-sheet post construction BMP (SSPCBMP) plan that includes a project site plan and shows the comprehensive locations of each required BMP such as site design, source control, low impact development technique, treatment controls, and hydromodification features. The SSPCBMP plan contains a table that contains cross-references summarizing the selected BMPs together with the appropriate construction document (e.g.: grading, improvement, building or landscape) that is responsible to build each particular post-construction BMP. Upon permit issuance, a copy of the SSPCBMP plan is signed and distributed with the construction drawings for reference by the contractor and inspector. At the conclusion of the project and prior to issuance of an occupancy permit or acceptance of the improvements, the inspector uses the SSPCBMP plan to help ensure all required post-construction BMPs are installed as required. After verification, the inspector initials the plan and places a copy in the project inspection file. During FY 2010-11, the City updated the SSPCBMP plan procedure.

The SSPCBMP is required content for a SWMP. During FY 2010-11, the City updated the template for the SSPCBMP plan. The update added project information and other tables to help organize and present the different types of post construction BMPs for a project. The SSPCBMP serves as a comprehensive document displaying the project and the location of different post construction BMPs that are be installed along with calling out which construction document (grading, improvement, building, landscape plan, etc) that is responsible to install each listed BMP. The template is found on the City's website for use by applicants when preparing SWMP's. For a copy of the template SSPCBMP plan, refer to http://www.carlsbadca.gov/business/building/Documents/BMP_Plan_Sheet.zip.

In addition to the City's post-development storm water requirements, the City has integrated the review of construction BMPs into each stage of the development review process. At the project permitting stage, the applicant is required to submit a completed Construction Threat Assessment Worksheet for Determination of a Project's Perceived Threat to Storm Water Quality (Construction Threat Assessment Worksheet). The Construction Threat Assessment Worksheet is used to determine the inspection frequency level pursuant to the 2007 Municipal Permit requirements (low, medium or high). The required inspection level is entered into the City's Permits Plus software program for automated tracking. The Permits Plus program links the various ministerial construction permits (building, right-of-way, blasting and grading) to the "master" development project. The Permits Plus program is used to automatically generate storm water inspection requests for development projects with active permits. The program is also used to track inspection results and follow-up enforcement inspections.

2.5.2 SUSMP Requirements for Development Projects

During FY 2010-11, the Carlsbad SUSMP requirements were applied to 70 private development/redevelopment projects and 10 City Capital Improvement Program (CIP) projects. Of the 70 private development/redevelopment projects, 6 were subject to Priority Development Project requirements which required site design, source control and treatment control requirements and 64 were subject to Standard Stormwater requirements subject to site design and source control BMP requirements. Of the 10 City CIP projects, there were no projects subject to Priority Development Project requirements, but all were subject to Standard Stormwater requirements. Copies of the private development and CIP project approval list showing the type of storm water standards that were applied to each project are included in Appendices 2.2 and 2.3, respectively.

2.5.2.1 Confirmation that all applicable Carlsbad SUSMP BMP requirements were applied to all priority development projects, including a description of how the information was tracked

The City requires submittal of a completed SWSQ for every discretionary and non-discretionary application made to the City to establish how storm water requirements apply to each project. The submittal of a completed SWSQ signed by the applicant is part of the submittal requirements for both discretionary and plan check applications. Projects that are submitted without a completed SWSQ are considered incomplete and the applicant must respond before the City proceeds with project processing. If the outcome of the SWSQ shows the project is subject to Priority Development Project requirements the City required the applicant of these PDP projects to submit a preliminary SWMP and implement additional BMP measures as required by the Carlsbad SUSMP. All applicable requirements of the Carlsbad SUSMP were applied to all priority development projects. These application checklists also require that for those projects subject to Priority Development Project requirements also require the submittal of a SWMP to the City for review and approval. These process requirements help the City ensure that projects are evaluated against project criteria in the SWSQ and that the appropriate storm water requirements are applied as required by the Carlsbad SUSMP.

On projects that are approved at the discretionary stage, the City uses standard conditions that are included in the project conditions-of-approval for each project. These standard conditions are used by staff and are modified as required to address the unique merits of each project. The standard conditions include storm water-related conditions that help both the applicant and City staff understand how the project complies with the Carlsbad SUSMP. The conditions document whether the project is subject to Priority Development Project or Standard Stormwater requirements. For a copy of the standard conditions of approval that staff apply to discretionary projects refer to Appendix 2.4.

For discretionary projects subject to Priority Development Project requirements, a preliminary SWMP is prepared detailing all proposed site design, source control, low impact design and treatment control BMPs. Structural site design, source control and treatment control BMPs, including the low impact development and interim hydromodification requirements (if applicable) are also outlined in the preliminary SWMP and reflected on the site plan or tentative map. The tentative map/site plan, conditions of approval and preliminary SWMP document are used at the construction plan review and ministerial permitting stage of the project to ensure compliance with the appropriate storm water requirements. Although a preliminary SWMP is provided at the discretionary stage, during final design, the applicant submits the final SWMP and it is reviewed and approved together with the construction documents to ensure the project conforms against the tentative map/site plan and also meets the current SUSMP requirements before permit issuance.

The City maintains a database of both discretionary and ministerial project approvals which includes project approval date, approving authority, applicable resolution numbers and the project storm water standards (i.e.: Priority Development Project requirements, Standard Stormwater requirements). A list of the private development project approvals is included as Appendix 2.2.

Additionally, the City requires preparation of a single sheet post construction BMP (SSPCBMP) plan for all priority development projects that includes a project site plan and calls out the location of each required LID site design, source control, treatment control BMP, and applicable hydromodification facility. The single sheet post construction plan contains a matrix cross referencing the required BMP with the appropriate construction plan (grading, improvement, building or landscape) where the

specified BMP construction is detailed. A copy of the SSPCBMP plan is signed and distributed with each construction drawing for reference by the contractor and inspector. At the conclusion of the project and prior to issuance of an occupancy permit or acceptance of the improvements, the inspector uses the single sheet post construction to help ensure all required BMPs were installed as required. After verification, the inspector initials the plan and places a copy in the project inspection file.

2.5.3 SUSMP Implementation for FY 2010-11 – Priority Development Project

2.5.3.1 Example Priority Development Project that was conditioned to meet SUSMP requirements and a description of the required BMPs

Appendix 2.5 includes an example project subject to Priority Development Project requirements (Example PDP Project). The sample project is called Poinsettia Properties, CT 05-10. This project received discretionary approval in 2006, but received design approval during FY 2010-11. Therefore, the project was subject to SUSMP requirements in effect during FY 2010-11. This project includes 29 small lot single-family dwellings on a 5.12 acre lot. Based on project thresholds per the SWSQ, the project is subject to Priority Development Project requirements and a SWMP was required to address the storm water requirements for the project. The project involves grading, retaining walls, surface and utility improvements. Public street and utility access is provided by Lowder Lane and Poinsettia Lane. The site is located in Hydrologic Unit 904.51, and is tributary to the Batiquitos Lagoon. However, per the 2006 303(d) list, the Batiquitos lagoon is not impaired. Based on table 2-1 of the SUSMP, the project matches two land use categories: 1) Detached residential, and 2) Streets. Therefore, the anticipated and potential pollutants generated by the project include sediments, nutrients, heavy metals, organic compounds, trash and debris, oxygen demanding substances, oil and grease, bacteria and viruses, and pesticides. Per the project conditions, the following BMPs were selected for this project:

1. Optimize Site layout
    a. Minimized Directly Connected Impervious Areas
        i. Roof drains directed to landscape areas
        ii. Clustered lot design (small lot)
    b. Use of efficient irrigation system
    c. Re-tilling of soils compacted by construction equipment
2. Use of Pervious surfaces
    a. The access road in the northwest corner will use a pervious surface (Grass Pave 2)
3. Dispersal of runoff to pervious surfaces
    a. Portions of roof runoff will be discharged over landscaped areas.
    b. Streets with non-contiguous sidewalks. Runoff from sidewalks discharge over pervious landscaped area to slow/filter runoff.
4. Integrated Management Practice (IMP)
    a. Project selected a treatment train approach using three (3) BMPs.
    b. A pre-treatment (bay separator) is the first BMP to remove coarse sediment, trash and debris.
    c. Then runoff enters a detention facility to slow the runoff rate from the site. The below grade detention facility uses a small orifice to ensure a drawdown time of 24-hours.
    d. After the detention facility runoff enters a bioretention basin before leaving the site. This bioretention basin provides runoff treatment through landscaping. This provides additional detention allowing water to pond, percolate through soil and encouraging

evapotranspiration . The basin includes overflows that allow for larger storm events to be conveyed.

5. Source Control
    a. Trash receptacles to be stored under cover and designed not to allow run-on water to enter enclosure
    b. Efficient irrigation with rain and water loss shut-off devices for landscaped areas
    c. All storm drain inlets in the project area to be stenciled
    d. Integrated pest management practices to be used

2.5.3.2 A listing of the priority development projects which were allowed to solely use treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible

No projects subject to Priority Development Project requirements were approved solely using treatment control BMPs with low removal efficiency rankings as the sole method of treatment control during FY 2010-11.

2.5.4. SUSMP Waivers

2.5.4.1 A description of any SUSMP waiver mitigation program

The Carlsbad SUSMP includes a waiver process (see Section 1 of the SUSMP). For projects subject to Priority Development Project requirements, the applicant may submit a SUSMP waiver request to the City Engineer. As part of the request, the applicant must clearly demonstrate how numerically-sized BMPs cannot be employed with the project and outline the infeasibility with using each available BMP and discuss why the project should not be required to meet the SUSMP requirements. Based on the information provided in the waiver request, the City Engineer may either approve or deny the SUSMP waiver request.

During the reporting period, no SUSMP waivers were requested or granted.

2.6 Hydromodification Management Plan

2.6.1 A description of Hydromodification Management Plan development collaboration and participation

During the reporting period, in accordance with the 2007 Municipal Permit, hydromodification standards were updated. The final HMP became effective into the Carlsbad SUSMP January 14, 2011. As a result, during FY 2010-11, there were two standards for hydromodification. All development projects were evaluated against either *interim* or final hydromodification requirements. Therefore, *interim* hydromodification requirements applied to projects for a portion of the reporting period (July 1, 2010-January 14, 2011). Final hydromodification requirements applied to projects from January 14, 2011 to June 30, 2011.

Per the *interim* hydromodification criteria, *interim* hydromodification requirements affect those projects that disturb more than 50-acres of land.

During this reporting period, city staff also attended numerous regional meetings to address SUSMP and HMP implementation. The City also participated in cost sharing for the consultant firms retained to address San Diego regional HMP issues. Once the final HMP was incorporated into the SUSMP (January 14, 2011), the city required development projects to evaluate their project against final HMP requirements.

If subject to final HMP, applicants must select and incorporate strategies and BMPs into their design to maximize infiltration and mimic pre-project hydrologic characteristics.

2.6.2 A listing of Priority Development Projects required to meet hydromodification requirements, including a description of hydrologic control measures implemented

During the reporting period from July 1, 2010 - January 13, 2011, there were no projects that met the 50 acre minimum requirement for implementation of the *interim* hydromodification requirements. Therefore, there were no projects subject to *interim* hydromodification requirements.

Final HMP requirements were adopted into the SUSMP January 14, 2011. During the reporting period from January 14, 2011 – June 30, 2011, there were no projects required to meet final HMP requirements.

2.6.3 A listing of priority development projects not required to meet the hydromodification requirements, including a description of why the projects were found to be exempt from the requirements

In FY 2010-11, one (1) Priority Development Project was approved subject to final HMP; however, the project was found to be exempt from the requirements. The following project along with the exemption criteria that was met is:

Project Name	HMP exemption criteria met
Poinsettia Properties, CT 05-10	-project discharges into a tidally influenced lagoon and includes a report from biologist stating impacts of hydromodification from the development offer no measurable impact.

2.6.4 A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project

During the reporting period from July 1, 2010 - January 13, 2011, there no projects that met the 50 acre minimum requirement for implementation of the *interim* hydromodification requirements. Therefore, there were no projects subject to *interim* hydromodification requirements.

2.7. Treatment Control BMP Program

2.7.1 Inventory Management

The City maintains a watershed-based inventory of publicly and privately owned treatment control BMPs. The inventory has been used to track and document information about each of these structures including BMP type, inspection dates and findings, maintenance frequencies and requirements, verifications, and other information as required by the 2007 Municipal Permit. Development of the inventory is an ongoing process, as new structures are researched, verified, and added on a continual basis.

During this reporting period, the City updated the watershed-based inventory and prioritized all verified structures into high, medium, and low categories as required by the 2007 Municipal Permit using BMP type, location, and proximity to the nearest ESA as prioritization criteria.

During FY 2010-11, the City verified 594 privately owned treatment control BMPs on the inventory, which includes 99 high priority, 391 medium priority, and 104 low priority structures (Appendix 2.6).

For privately owned treatment control BMPs, staff continued to confirm the accuracy of the inventory, research certifications and maintenance requirements, verify ownership and responsible parties, update inspection forms, and distribute outreach materials. The City continues to implement procedures that consistently define the process for managing and updating the privately owned treatment control BMP Inventory List (procedure #CMI-310). A copy of the procedure can be found in Appendix 2.4 of the FY 09-10 annual report.

The City continued to have internal meetings to discuss treatment control BMP program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance. As a result of these meetings, the City will establish a Storm Drain Inventory Management Committee that will meet quarterly to discuss issues related to storm drain maintenance, treatment control BMP inventory, GIS mapping, and other topics related to tracking and managing structures within the cities storm drain conveyance system. The committee will begin quarterly meetings in FY 2011-12. The results of this effort will be reported in the next annual report.

See Section 4 of this report for detailed information about the inspection and maintenance program for publicly owned treatment control BMPs.

2.7.2 Treatment Control BMP Inspection Program

During this reporting period, the City conducted compliance inspections of privately owned treatment control BMPs throughout the year and conducted inspections of high priority treatment control BMPs during the dry season only. During the 2010 dry season (May 1, 2010 through September 30, 2010), the City inspected 100% of the high priority, 83.64% of the medium priority, and 75% of the low priority privately owned treatment control BMPs (see Section 2.7.2.1).

During FY 2010-11, the City inspected 85.95% of the privately owned treatment control BMP inventory (see Section 2.7.2.2). Inspection of high priority privately owned treatment control BMPs identified on the updated inventory will continue to be conducted as required by the 2007 Municipal Permit through October 1, 2011 and results of those inspections will be reported in the FY 2011-12 annual report.

Inspectors continue to use the *Treatment Control BMP Inspection Form* developed in FY 2007-08 to determine the effectiveness of privately owned structures. During inspections, the inspector uses their best professional judgment to determine the condition of the treatment control BMP. The condition of each structure is rated using the following criteria:

- **Good:** Currently no maintenance or corrective action is required for the treatment control BMP. No trees, large plants, excessive trash, stagnant water, blockages, or other major sources of pollutants were observed. The treatment control BMP appears to be functioning as designed. Re-inspect in one year.
- **Fair:** Light to minor maintenance required within the next year. Small amounts of trash, weeds, plants, debris, and/or silt has accumulated, but the treatment control BMP is functioning as designed. The structure should be re-inspected within one year by the responsible party and/or the City.
- **Poor:** Maintenance, installation, replacement and/or repairs are required on the structure. Excessive trash, weeds, vegetation, stagnant water, trees, silt, and/or other pollutants were observed during the inspection. In addition, a treatment control BMP could be rated as "Poor" if the structure was blocked, needed repair, or is not functioning as required.

2.7.2.1 2010 Dry Season (May 1, 2010 – September 30, 2010) Treatment Control BMP Inspections

For the 2010 dry season, all high priority privately owned treatment control BMPs were inspected as required. In addition, all minimum inspection goals for privately owned treatment control BMPs were met or exceeded during the 2010 dry season inspections. Please note the number of structures as of October 1, 2010 is different from the total number of structures reported for FY 2010-11 because of the updates made to the inventory throughout the year. Table 2.3 includes a summary of the inspections and findings of the 2010 dry season inspections.

Table 2.3: Summary of 2010 Dry Season (May 1, 2010 – September 30, 2010) Inspections and Findings for Privately Owned Treatment Control BMPs

Classification	Total on Inv List	Condition	Total	Total Verified	% of Inventory Inspected 2010 Dry Season
High	139	Good	48		
		Fair	11		
		Poor	19		
		Future	9		
		Excluded	46		
		Removed	6		
		Not Inspected	0		
		Total High Inspected		**139**	**100%**

		Removed	0		
		Excluded	6		
		Not Inspected	22		
		Total Low Inspected		**66**	**75.00 %**
Total	**655**[1]			**563**	**85.95%**

[1] Please note the number of structures as of October 1, 2010 is different from the total number of structures reported for FY 2010-11 because of the updates made to the inventory throughout the year.

2.7.2.2 Treatment Control BMP Inspections FY 2010-11 (July 1, 2010 – June 30, 2011)

The City conducted inspections of privately owned treatment control BMPs throughout FY 2010-11. During this reporting period, the treatment control inventory was updated and additional structures were verified and added. Inspections of privately owned treatment control BMPs on the updated inventory will continue as required by the Permit. Complete inspection results for the 2011 dry season will be reported in the FY 2011-12 annual report. Table 2.4 includes a complete summary of the inspections and findings for FY 2010-11.

Table 2.4: Summary of July 1, 2010 – June 30, 2011 Inspections and Findings for Privately Owned Treatment Control BMPs

Classification	Total on Inv List	Condition	Total	Total Verified	% of Inventory Inspected FY 2010-11
High	99	Good	56		
		Fair	12		
		Poor	19		
		Future	6		
		Removed	2		
		Excluded	3		
		Not Inspected	1

		Total Low Inspected		**78**	**75.00%**
Total	**594**			**465**	**78.28%**

2.7.3 Treatment Control BMP Verification of Maintenance Program

During FY 2010-11, the City mailed verification of maintenance forms to all responsible parties on the treatment control BMP inventory list. The verification of maintenance form was revised during FY 2010-11 to help responsible parties more accurately provide information about the treatment control BMP maintenance. The form now includes new fields that clearly show the inspection findings for the current and previous year, along with the inspection dates and last known date of maintenance. The verification of maintenance form, along with a cover letter, were mailed to all private property owners and other responsible parties identified on the updated inventory during the FY 2010-11 as required by the 2007 Municipal Permit. A copy of the revised verification form can be found in Appendix 2.7.

Outreach materials were also included with the verification mailers. The "*What You Need to Know About Privately Owned Treatment Control BMPs*" brochure and the "*Frequently Asked Questions About Treatment Control BMPs*" factsheet were included in mailers to help responsible parties understand their maintenance responsibilities. In addition, the "*Treatment Control BMP Verification Form and Instructions*" handout was also included in the mailer to provide step by step and line by line instructions for the responsible parties to help ensure accuracy when completing the required verification of maintenance form(s).

The City continued to use the email address created in FY 2007-08 for the treatment control BMP verification program. Owners and responsible parties can send questions, verification forms, and other requests to the tcbmp@carlsbadca.gov email address, which is monitored by the Senior Construction Inspector. The City also continued to use and updated the treatment control BMP email list for responsible parties. The email list has been useful in providing information about treatment control BMP compliance program and notices about upcoming deadlines for maintenance verification submittals.

For 2010 dry season, mailers were sent out between May 3 and September 15, 2010. In addition to the first notification, those who did not comply with the initial request were sent reminder notices. As a result of the 2010 dry season effort,94.14% of the verification forms were returned as required prior to October 1, 2010. This return rate was higher than the FY 2009 dry season 71% rate of return.

For FY 2010-11, the first notifications were sent to all responsible parties listed on the updated treatment control BMP inventory on May 2, 2011, with a second reminder notice mailed on June 9, 2011. As of June 30, 2011, 69.83% of the verification forms were returned, which is nearly equal to the response rate reported at the end of FY 2009-10. The City will continue to work with the responsible parties through October 1, 2011 to ensure verifications are returned as required. In the event that a responsible party does not respond, the City will use its enforcement authority to escalate efforts.

2.7.4 Treatment Control BMP Verification of Installation Prior to Occupancy

During FY 2010-11, the installation of all structural BMPs required for priority projects were verified prior to occupancy. The process is initiated when the contractor/developer requests a pre-construction meeting with City inspectors. During the pre-construction meetings, the contractor/developer is notified of the BMP installation requirements and issued a copy of the memo outlining the City's requirements

for occupancy. In addition, the Pre-Construction Meeting Agenda Packet was revised to state that occupancy will not be granted until the engineer of work provides a letter verifying that all treatment control BMPs have been installed according to the plans and SWMP. Each contractor/developer is provided with a copy of the agenda packet during the pre-construction meeting.

When a request for occupancy is made to the City by the contractor or developer, City inspectors are notified of the request for occupancy and final inspections are scheduled. The CMI Division modified its Grading Partial Site Release checklist to include a checkbox to remind inspectors to review BMP installations prior to releasing the pad to for building. Inspectors review the project site for compliance with all City requirements including verification of BMP installation. If all the requirements are satisfactory the inspector signs off on the occupancy permit and occupancy is granted. The City maintains a copy of the signed occupancy permit in the building permit file. A copy of the updated Grading Partial Site Release checklist can be found in Appendix 2.8.

During FY 2010-11, similar to final drawings, the City began scanning storm water management plans into our digital management system (DMS). This allows these water quality reports to be accessed by CM&I inspectors, reviewers, researchers when to help identify the types and locations of approved post construction treatment control BMPs.

In addition, the City modified its inspection process in FY 2009-10 to require documentation on BMP installations prior to occupancy. This process requires written verification from the developer, engineer of work, or other responsible party that BMPs were installed in accordance with the SWMP. This verification must be submitted before a request for occupancy is made. After receiving the written verification, the City reviews the SWMP, maintenance responsibilities, and confirms that the BMP installation is in compliance. On May 2, 2011, an updated memorandum was sent to all developers and contractors with active grading permits informing them of the prior to occupancy verification procedure. A copy of the "*BMP Verification of Installation Required Prior to Occupancy*" memorandum can be found in Appendix 2.9.

2.8. Enforcement

In FY 2010-11, the City continued to escalate enforcement actions against treatment control BMP owners and other responsible parties that were not in compliance with the maintenance and/or verification requirements of the CMC, including not returning the verification forms. The City's CMI Division is responsible for implementing all enforcement actions related to treatment control BMP compliance. The City's goal is to obtain voluntary compliance with the CMC and 2007 Municipal Permit requirements through public education, outreach and inspections. However, enforcement actions may become necessary when these measures fail to result in compliance.

Appropriate enforcement actions used to achieve compliance should be proportional to the compliance issue, reflective of the responsible party's compliance history, and protective of human health and the environment. In addition, an appropriate enforcement action, which in some cases may include a civil penalty and recovery of economic benefit, sends a message of deterrence to the regulated community. To ensure fairness, the City will remain receptive to good-faith arguments - based on fact, law, or policy - that a given situation is different and should be treated differently, that a site is in fact in compliance, or that a severe penalty is not warranted given the specific circumstances of the violation. Table 2.5

includes a summary of all enforcement actions related to the privately owned treatment control BMP inspection, maintenance, and verification program.

Table 2.5: Summary of Treatment Control BMP Enforcement Actions for FY 2010-11

Type of Enforcement Action	Number Issued per Structure
Warning Notice	206
Notice of Violation	52
Administrative Citation - Warning	36
TOTAL	**294**

The City also achieved compliance with the updated Carlsbad SUSMP through the permitting process. Development approvals are not granted until the project shows complete compliance with the City's storm water standards. The City will not issue a construction permits until all applicable site design, source control and treatment control BMP requirements are incorporated into the project plans. For projects involving grading and/or street and utility improvements, the City requires that the developer enter into secured agreements to guarantee developer performance on the grading or improvement work including associated structural BMPs. City inspectors review the project sites during construction to ensure that all work is being done in compliance with the construction plans, City Standards and procedures. Prior to issuance of a certificate of occupancy or release of any security, the City inspector reviews the project site to ensure that all applicable structural BMPs have been installed per the approved plans and specifications. Only when the BMP installations have been verified will the certificate of occupancy be issued or any security is released.

2.9 Notable Activities

As mentioned in the Executive Summary, the City considers Notable Activities to be any activity above compliance requirements.

- During FY 2010-11, the City developed an informational brochure on low impact development (LID Brochure). The LID Brochure is a tool to educate developers, contractors and homeowners about low impact design and how water quality features can be incorporated into projects. The brochure includes different LID features, what their purpose is, and where it could be employed on a project site.

- In November 2010, CMI staff attended the annual CASQA conference in Palm Springs, Ca. This year's conference theme was "Rethinking Stormwater Management". The conference featured over 80 sessions and presentations covering a variety of topics including the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Stormwater Treatment, and other related topics.

- On April 6, 2011, Development Services and CMI staff attended the "Maintaining LID in San Diego: Best Management Practice Inspection and Maintenance Workshop" held in San Diego. The workshop was hosted by the City of San Diego and included up to date information about new and proposed LID regulations, stormwater management devices including treatment control BMPs, inspection and maintenance requirements for BMPS, and design and implementation strategies for minimizing BMP maintenance requirements.

- On December 14, 2011 and on March 8, 2011 Development Services staff attended training seminars regarding the countywide BMP sizing calculator. This training served to train both private engineers and municipal staff on how the BMP calculator could be utilized to satisfy the new stormwater requirements, including hydromodification.

- During FY 2010-11, the City updated the Carlsbad SUSMP. On January 14, 2011 the update added final hydromodification criteria, thresholds and requirements. The City incorporated the countywide BMP sizing calculator to facilitate applicants when sizing BMPs that satisfy both numeric and hydromodification requirements. The updated Carlsbad SUSMP was made available on the City's website and emails were sent to those listed on the email notification list from the City's website. The City updated the SWSQ and SWMP guidelines.

- In January 2010, the Carlsbad City Council accepted the Carlsbad Community Vision, which was the result of a citywide community visioning process (Envision Carlsbad Phase 1). The Carlsbad Community Vision identifies the community's core values for the future, which include a strong desire to protect open space and the natural environment, both for its visual beauty, and for its ecological functions (clean air and water, habitats, animal movement corridors). As stated in the Carlsbad Community Vision, "Community members look forward to continued enjoyment of clean, healthy, and accessible lagoons, beaches, and natural habitat areas due to ongoing conservation, restoration, and active maintenance efforts." Carlsbad residents are very cognizant and proud of the ocean and lagoons, and how important it is to keep them clean.

- During FY 2010-11, the City continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance.

- During FY 2010-11, the City updated the template for the SSPCBMP plan for applicants and engineers that prepare SWMP's. A SSPCBMP plan is required content for a SWMP. The SSPCBMP serves as a comprehensive document displaying the project and the location of different BMPs that are be installed along with calling out which construction document (grading, improvement, building, landscape plan, etc) that is responsible to install each listed BMP. The template was also added to the City's website for use by applicants when preparing SWMP's. For a copy of the template SSPCBMP plan, refer to http://www.carlsbadca.gov/business/building/Documents/BMP_Plan_Sheet.zip.

- During FY 2010-11, similar to final drawings, the City began scanning storm water management plans into our digital management system (DMS). The SWMP is a useful document as it is used to help identify the types and locations of approved post construction treatment control BMPs. It also contains maintenance obligations that are required for the post-construction BMPs located on the project. Scanning to DMS allows these water quality reports to be more readily accessed digitally by CM&I inspectors, homeowners, reviewers, researchers.

- During FY 2010-11, the City updated forms and uploaded them to the City's website. These forms are frequently used by applicants to evaluate projects for storm water requirements on projects. For a copy of the City's webpage showing the storm water forms, see http://www.carlsbadca.gov/business/building/permitting-process/Pages/Engineering_Applications.aspx.

Section 3

3.0 CONSTRUCTION COMPONENT

3.1 Introduction

The City of Carlsbad continues to stress the importance of storm water pollution prevention throughout the implementation of the construction component. This section of the annual report identifies those activities which occurred from July 1, 2010 through June 30, 2011 and will cover the requirements of the Permit No. R9-2007-0001 (2007 Municipal Permit).

The City has implemented activities that address and minimize impacts to receiving water quality from construction sites. During this reporting period, the City updated the construction inventory on a monthly basis, inspected all construction sites at the required frequencies, responded to construction related inquiries and complaints, provided outreach and education to developers, engineers, contractors and City staff, and when necessary used escalated enforcement mechanisms to obtain compliance.

3.2 Source Characterization

All construction sites were required to undergo the City's construction urban runoff approval process and meet the applicable construction requirements. The City uses the Permits Plus database to update the watershed based inventory of all construction sites that required grading and/or construction permits. The Development Services Division updates the Permits Plus database until the project is ready to begin construction. The Construction Management and Inspection (CMI) Division then issues the permit and updates the database during the "active construction" phase of the project. The CMI inspectors are primarily responsible for conducting storm water compliance inspections during the active construction phase.

Construction sites with grading permits may include sites where activities such as grading, excavation, clearing, road construction, structure construction, or demolition results in the disturbance of soil. Construction permits that do not require a grading permit may include sites such as single family residence remodels or additions, home demolitions, tenant improvements, or commercial/industrial buildings that are constructed resulting in the need for water quality protection. An inventory of all active construction sites requiring a grading permit can be found in Appendix 3.1. At the end of FY 2010-11, there were 127 grading permits on the grading construction site inventory, of which 96 were active and 31 were inactive (finaled, expired, or withdrawn). Table 3.1 is a summary of the FY 2010-11 active grading permit inventory.

Table 3.1: Summary of the FY 2010-11 Active Grading Construction Site Inventory

Priority	Active	Finaled	Withdrawn	Expired	Total
High	33	1	0	0	34
Medium	15	6	0	0	21
Low	48	24	0	0	72
Total	**96**	**31**	**0**	**0**	**127**

3.3 Updates to Ordinances and Approval Processes

In FY 2010-11, all new development and redevelopment projects including CIP projects were required to undergo the City's urban runoff approval process in accordance with the requirements of the 2007 Municipal Permit and 2008 JURMP.

In January 2011, the Carlsbad SUSMP was updated to incorporate hydromodification requirements. The SUSMP update included new information on hydromodification thresholds, criteria, application, and methodologies. In conjunction with the SUSMP update, processing forms for project submittals were also updated including the Storm Water Management Plan guidelines and Storm Water Standards Questionnaire (SWSQ) applicants complete when submitting projects. The City also modified its local SUSMP to incorporate the new Countywide Model SUSMP and adopt the final HMP. As part of the update, the Carlsbad SUSMP includes objectives, thresholds and implementation requirements that address HMP. For those projects subject to HMP, the SUSMP adopted the web-based county BMP sizing calculator that allows applicants to select and size BMP's that satisfies both treatment control and hydromodification requirements. The SUSMP also allows for applicants to use alternative approaches provided they address the final HMP requirements.

The City updated the single-sheet BMP plan to include a revised project site plan and call out the comprehensive locations of each required site design, source control, low impact development technique, and treatment control BMP. The plan contains a cross referencing table that shows the selected BMPs, grading, improvements, building, and/or landscape. A copy of the plan is attached to each construction drawing for reference by the contractor and inspector. At the conclusion of the project and prior to issuance of an occupancy permit or acceptance of the improvements, the inspector uses the single-sheet BMP plan to help ensure all required BMPs are installed as required.

In addition to the City's post-development storm water requirements, the City has integrated the review of construction BMPs into the development review process. At the project permitting stage, the applicant is required to submit a completed Construction Threat Assessment Worksheet for Determination of a Project's Perceived Threat to Storm Water Quality (Construction Threat Assessment Worksheet).

During FY 2010-11, the installation of all structural BMPs required for priority projects continued to be verified prior to occupancy. When a request for occupancy is made to the City by the contractor or developer, City inspectors were notified of the request for occupancy and final inspections were scheduled. The CMI Division modified its Grading Partial Site Release checklist to include a checkbox to remind inspectors to review BMP installations prior to releasing the pad for building. Inspectors reviewed the project site for compliance with all City requirements including verification of BMP installation. If all the requirements were satisfactory the inspector signed off on the occupancy permit and occupancy was granted. The City maintains a copy of the signed occupancy permit in the building permit file. A copy of the updated Grading Partial Site Release checklist can be found in Appendix 2.8.

During this reporting period, the ordinances were reviewed and found to be adequate; therefore, no ordinance changes were made. Below is a complete listing of the grading and construction approval process and procedural changes made during FY 2010-11:

1. The City updated the Carlsbad SUSMP and Storm Water Standards Questionnaire (SWSQ) to comply with the requirements of the 2007 Municipal Permit. A link to the updated SUSMP and SWSQ can be found in Section 2.4.1 of this report.
2. The CMI Division modified its Grading Partial Site Release checklist to include a checkbox to remind inspectors to review BMP installations prior to releasing the pad for building. Inspectors reviewed the project site for compliance with all City requirements including verification of BMP installation. If all the requirements were satisfactory the inspector signed off on the occupancy permit and occupancy was granted.
3. The Building Division developed a new procedure to help inspectors effectively conduct NPDES inspections at sites covered by an active building permit. The "SWPPP Permit and Process Procedures" guides each building inspector and engineering tech through a step by step process to ensure NPDES compliance at each building site. A copy of the new procedure can be found in Appendix 3.2.
4. The Building Division, in coordination with the City's IT Department, modified the Permits Plus database to track NPDES inspections at building sites. NPDES inspection information about all permitted building sites is maintained in the database and inspectors are able to not only schedule inspections, but also track information about compliance, enforcement, and other relevant NPDES information.

3.4 Best Management Practice Requirements

SWPPPs and Erosion Control Plans are reviewed prior to commencement of construction activities to ensure that the required minimum BMPs will be implemented for all construction sites. The City has required the minimum BMPs be implemented, as identified in the 2008 JURMP and Carlsbad Municipal Code, for all construction sites. The seven required minimum BMPs include components that address the following:

1. Erosion control methods for graded slopes;
2. Erosion control method for graded flat areas (slope <5%);
3. Sediment control for perimeter boundaries;
4. Offsite tracking control of sediment;
5. Materials management control;
6. Waste management control; and
7. Non-storm water management control.

The City continues to utilize the pollution prevention measures contained in the Storm Water Best Management Practice Handbooks, published by the California Storm Water Quality Association (CASQA), Caltrans Storm Water Quality Handbooks, and Standards for Design & Construction of Public Works Improvements in the City of Carlsbad. All CMI staff are trained on construction site BMPs and their appropriate application.

Pollution prevention consists of procedures and practices that eliminate or reduce the pollutants at the source. The City has identified and required implementation of the following pollution prevention controls for all applicable construction sites:

- SWPPPs and Erosion Control Plans are required for grading permits and appropriate construction projects. These plans are checked by the City to ensure they adequately address

the provisions of the General Construction Permit.

- CMI inspectors enforce the implementation and effectiveness of BMPs described in approved erosion control plans and SWPPPs.

To address each of the required BMPs, the City ensures the SWPPPs and/or erosion control plans include implementation of several types of BMPs as applicable, depending on site-specific requirements. The list of BMPs can be referenced in the 2008 JURMP.

3.4.1 Maximum Allowed Disturbed Areas

Grading sites were held to the maximum allowable disturbed areas on all applicable sites.

3.4.2 Advanced Treatment Requirement

There were no projects that triggered the advanced treatment requirements.

3.5 Program Implementation

During FY 2010-11, the City continued to monitor and enforce storm water regulations by dividing construction compliance into three areas – Capital Improvement Projects (CIP), Building Construction Permits, and Grading Permits. For FY 2010-11, CMI continued to oversee the inspection of active grading sites and CIPs, while the Building Division ensured sites covered under active building permits (construction sites without a grading permit) were compliant. In addition, one Senior Construction Inspector has been designated with full responsibility for storm water compliance for all NPDES activities for CMI.

During FY 2010-11, the installation of all structural BMPs required for priority projects were verified prior to occupancy. The process is initiated when the contractor/developer requests a pre-construction meeting with City inspectors. During the pre-construction meetings, the contractor/developer is notified of the BMP installation requirements and issued a copy of the memo outlining the City's requirements for occupancy. In addition, the Pre-Construction Meeting Agenda Packet was revised to state that occupancy will not be granted until the engineer of work provides a letter verifying that all treatment control BMPs have been installed according to the plans and SWMP. Each contractor/developer is provided with a copy of the agenda packet during the pre-construction meeting.

3.5.1 Grading Construction Sites

3.5.1.1 Inventory Management

During FY 2010-11, all active grading sites continued to be prioritized into high, medium, and low categories and inspected at the minimum frequencies required by the 2007 Municipal Permit. All inspection protocols outlined in the 2007 Municipal Permit, 2008 JUMRP, CMI procedures, and the CMC were followed and implemented as required. The active grading permit inventory is maintained by CMI and updated on a monthly basis. The inventory helps to track each active grading site within each priority category (high, medium, and low) and identify the period of time (weeks) the site was active within the wet season, the number of inspections conducted during the wet season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all

active grading sites. A copy of the active grading permit inventory can be found in Appendix 3.3. For a complete description of how the grading construction site inventory is maintained please refer to procedure #CMI-120 found in the FY 2009-10 annual report.

3.5.1.2 Inspections and Compliance

Storm water compliance continues to be the focus of CMI inspectors during this reporting period, especially during the wet season. All required inspections were documented and placed in the project files. During required site visits, inspectors generally found sites to be compliant with SWPPPs, Erosion Control Plans, and BMP implementation. Most observed deficiencies were found with BMP maintenance (i.e. broken gravel bags, silt fences, etc.). These deficiencies were immediately brought to the attention of the site superintendent or other responsible party who was directed by the project inspector to immediately implement corrective action. This interaction has proven to be productive in correcting minor deficiencies.

Prior to the wet season, CMI inspectors hand delivered a memo to all site superintendents reminding them of the NPDES requirements and informing them to ensure all sites are in compliance by and throughout the wet season. A copy of the *Rainy Season Preparation and Storm Water Compliance* memorandum, issued on September 1, 2010, can be found in Appendix 3.4.

In addition, the City continued to verify the validity of a project's Notice of Intent (NOI) prior to issuance of a grading permit or Notice to Proceed for CIP projects. Prior to the pre-construction meeting and issuance of a grading permit, the Construction Manager reviews the State's online database to ensure a NOI, for applicable projects, had been issued prior to assigning the project to an inspector for grading permit issuance.

In an effort to identify and implement BMPs in a more effective manner, the City revised the NPDES inspection report in September 2009. The inspection form facilitates efficient inspector use, clarifies required corrective actions, tracks the numbers and types of violations, and identifies any necessary escalated actions. The NPDES inspection report covers all administrative requirements including inspection and evaluation of SWPPPs, wall maps, desiltation basins, materials and waste management, temporary BMPs, slope protection, and site conditions and interactions. A copy of the inspection report can be provided directly to the site representative upon completion of an inspection. This process has proven to be time saving, cost effective, and successful in attaining compliance from construction sites. If corrective actions were required, follow-up inspections were conducted to verify compliance.
All active grading sites were prioritized and inspected as required during this reporting period. CMI inspectors verified proper BMP implementation on a weekly, sometimes daily basis. Table 3.2 is a summary the grading permit inspections conducted during this reporting period:

Table 3.2: Inspections Required and Conducted for Sites Requiring a Grading Permit – FY 2010-11

Wet Season Inspections Required	Wet Season Inspections Conducted	Dry Season Inspections Required	Dry Season Inspections Conducted	**Total** Inspections Required	**Total** Inspections Conducted
624	**669**	**316**	**333**	**940**	**1002**

3.5.2 Building Construction Sites

On July 1, 2010, the City completed the transition of NPDES inspections at sites covered by an active building permit from outsourced contract services managed by CMI to the City's Building Division inspection staff. Inspections were conducted using the procedures outlined in the 2008 JURMP and CMC. In addition, the Building Division developed a new procedure to help inspectors effectively conduct NPDES inspections. The "SWPPP Permit and Process Procedures" guides each building inspector and engineering tech through a step by step process to ensure NPDES compliance at each building site. A copy of the new procedure can be found in Appendix 3.2. Building Division inspection staff also received additional training during this reporting period and developed departmental procedures to ensure compliance with the inventory, inspection, and reporting requirements of the 2007 Municipal Permit.

During this reporting period, the Building Division issued 478 SWPPP permits and began requiring pre-construction meetings for all projects prior to the commencement of building activities. As part of the divisions' outreach program, the pre-construction meeting allows the inspector to review the BMP's outlined on the Storm Water Compliance Form for Tier 1 Construction SWPPP (E-29) with the contractor and/or homeowner.

3.5.2.1 Inventory Management

The Building Division maintains an inventory of building permits in both a computer tracking system and on paper records. The inspector is responsible for maintaining copies of all NPDES information related to building permits, inspection results, and comments. The Building Division, in coordination with the City's IT Department, modified the Permits Plus database to track NPDES inspections at building sites. NPDES inspection information about all permitted building sites is maintained in the database and inspectors are able to schedule inspections, track information about compliance, issue enforcement actions, and document other relevant NPDES information. When new building permits are added to the database, they are prioritized into low, medium, or high categories and scheduled for inspection using the criteria outlined in the 2008 JURMP. In general, low priority sites were classified as sites that had only interior work and minimal to no material storage areas outside of the site..

3.5.2.2 Inspections and Compliance

Storm water compliance remained the focus of inspectors during this reporting period, especially during the wet season. All required inspections were documented and placed in the project files. NPDES building inspection requests are automatically generated by Permits Plus software based on the required inspection frequency during the wet and dry seasons. During the wet season high priority sites were inspected bi-weekly. All medium and low priority sites were inspected as needed. Building inspectors also reviewed site BMPs each time they performed inspections required by the California Building Code. As part of the new building permit inspection procedures, any additional inspections are recorded in Permits Plus using Form B-49 which specifies compliance issues related to the building permit. A copy of Form B-49 can be found in Appendix 3.5. In addition, the CMI NPDES inspection form was slightly modified for building permit site inspection use (Appendix 3.6). The total number of site inspections Form B-50 (Appendix 3.7) generated by the Building Division resulted in 283 total project inspections during the wet season and 109 total inspections during the dry season. 461 pre-construction meetings and 1745 routine site contacts were preformed and allowed inspectors to maintain a high level of oversight and was key in resolving compliance issues in an expeditious manner.

During site contacts, notable improvements were observed of the general condition of sites related to storm water compliance of most building sites. Contractors and owner builders appeared to be much more proactive in managing runoff from their sites as well as containment of pollutants within the site. The most noted compliance issue continues to be the maintenance of stucco and concrete washout areas. Through the City's educational program and other compliance efforts this issue continues to be addressed during follow up inspections and escalated enforcement actions.

3.5.3 Capital Improvement Projects

3.5.3.1 Inventory Management

During FY 2010-11, CIPs continued to be prioritized into high, medium, and low categories and inspected at the minimum frequencies required by the Permit. All inspection protocols outlined in the 2007 Municipal Permit, 2008 JUMRP, CMI procedures, contracts, and the CMC were followed and implemented as required. The active CIP inventory is maintained by CMI and updated on a monthly basis. The inventory helps to track each CIP within each priority category and identify the period of time (weeks) the site was active within the wet season, the number of inspections conducted during the wet season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all CIP sites. A copy of the CIP inventory can be found in Appendix 3.8.

3.5.3.2 Inspections and Compliance

Daily inspections were conducted for CIP project sites. These inspections cover a number of construction-related and storm water compliance issues. All medium and low priority sites were inspected as needed. Table 3.3 is a summary the CIP inspections conducted during this reporting period:

Table 3.3: Inspections Required and Conducted for CIP Sites for FY 2010-11

Wet Season Inspections Required	Wet Season Inspections Conducted	Dry Season Inspections Required	Dry Season Inspections Conducted	**Total** Inspections Required	**Total** Inspections Conducted
183	**190**	**73**	**73**	**256**	**263**

3.6 Enforcement

There were no changes in the City's enforcement escalation procedures as described in the 2008 JURMP during this reporting period. Table 3.4 is a summary of enforcement actions taken by the City from July 1, 2010 to June 30, 2011.

Table 3.4 Summary of Violations and Enforcement Actions at Construction and Building Sites

Actions Taken	Number of Actions CMI	Number of Actions Building Division	TOTAL
Verbal Notices	192	266	458
Written Warning	39	0	39
Stop Work Notice	0	0	0
Notice to Clean	0	93	93
Total Actions	231	359	590

If a site was found to have deficiencies in storm water compliance, it was generally corrected at the time of the inspection. If a verbal or written warning was issued, a specific deadline for correction action was noted on the inspection report. Follow up inspections were conducted to ensure construction sites complied with the required corrective actions. Most sites were found to have completed corrective actions and were in compliance at the time of the follow up inspection.

If a site was found to be out of compliance to the point where major deficiencies were noted, a Stop Work Notice was issued. Stop Work Notices prevent the contractor from continuing any construction related work until the corrective actions have been implemented. Stop Work Notices were found to be an immediate and effective mechanism to ensure non-compliance was corrected in an expeditious manner. There were zero Stop Work Notices issued during this reporting period.

On May 9, 2011, the City responded to a report of a water line break at The Tides (WDID: 9-37C359990) construction site located in Carlsbad. During a scheduled grading operation an unmarked and unknown 10 inch water line was inadvertently struck which caused water and sediment to be discharged off site. The discharge flowed into a nearby storm drain and eventually to Batiquitos Lagoon. The developer, contractor, the California Department of Transportation, and City inspectors immediately responded by shutting off the water main, blocking the storm drain inlets, and removing sediments from the road and storm drain system. The City estimates that approximately 350,000 gallons of water was discharged during the incident. A contractor retained by the developer was able to remove approximately 6,500 gallons of water and sediment from the storm drain system between the project site and Batiquitos Lagoon. Because the developer was proactive and expeditious in their response, no enforcement actions were pursued by the City. On May 12, 2011, the City as required by the Municipal Permit, submitted a written report to the RWQCB summarizing all efforts to respond to and mitigate the discharge.

3.7 Notable Activities

As mentioned in the Executive Summary, the City considers Notable Activities to be any activity above compliance requirements. The City has continued its strong stance on storm water pollution prevention and inspectors have obtained a high awareness among field personnel (superintendents, field labor, etc.) regarding the importance and application of BMPs for construction sites. Notable activities for FY 2010-11 include:

- The Building Division developed a new procedure to help inspectors effectively conduct NPDES inspections at sites covered by an active building permit. The "SWPPP Permit and Process Procedures" guides each building inspector and engineering tech through a step by step process to ensure NPDES compliance at each building site.

- In November 2010, CM&I staff attended the annual CASQA conference in Palm Springs, Ca. This year conference theme was "Rethinking Stormwater Management". The conference featured over 80 sessions and presentations covering a variety of topics including the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Stormwater Treatment, and other related topics.

- In FY 2010-11, the required number of inspections for active construction sites was exceeded. CMI conducted 1,002 inspections, which exceeds the 940 inspections required for the wet and dry seasons.

Section 4

4.0 MUNICIPAL COMPONENT

4.1 Introduction

Municipal facilities are required to implement the minimum BMPs identified and described in the 2008 JURMP (good housekeeping, preventive maintenance, material handling and storage, employee training, solid waste handling, record keeping, self-inspection, and spill response), as applicable. Specific BMPs are identified in SWPPPs and/or inspection reports. Specific pollution prevention measures may vary from one site to another and are evaluated separately at each facility. The City implements and assesses the effectiveness of BMPs through regular staff training, self-inspections, third party inspections by a contractor, and SWPPP implementation. The following includes a description of specific pollution prevention activities and storm water BMPs implemented from July 1, 2010 to June 30, 2011 per Order R9-2007-0001 by various City departments. All BMPs were implemented as required by the 2008 JURMP.

Municipal areas and activities are subdivided by categories in the sections below. Prioritization of these municipal areas is presented in the High Priority column of the Municipal Inventory located in Appendix 4.1. Municipal facilities are mapped using GIS and can be found in Appendix 4.2.

4.2 Minimum BMP Requirements

The following minimum BMPs were implemented at the facilities in the Municipal Inventory provided in Appendix 4.1, where appropriate.

4.2.1 Employee Training

Municipal departments provided training at least annually to all employees with responsibility for actions that have a potential to cause storm water pollution. A list of all Municipal storm water training is included in Appendix 8.1. Training generally addresses, among other topics, the following:

- Storm water awareness
- Applicable regulations
- Discharge prohibitions
- Importance of pollution prevention practices (good housekeeping, recycling, waste management, source control, etc.)
- Applicable best management practices (including those called out in the facility storm water pollution prevention plan [SWPPP]), where applicable
- Integrated pest management
- Self-inspections
- Record keeping

Documentation of training is maintained on-site at the location(s) where operations or activities are conducted. Where the operations are covered in a SWPPP, training records are filed with the SWPPP.

4.2.2 Pollution Prevention

The City implements urban runoff pollution prevention practices that are generally recognized for that facility's activity as being effective.

Pollution prevention is defined in Order No. R9-2007-0001 "*as practices and processes that reduce or eliminate the generation of pollutants. Recycling, use of different types of products or chemicals, and altering operational procedures are all types of pollution prevention practices that reduce the amounts of pollutants generated by a facility.*"

The City's approach is to promote pollution prevention as an activity for all municipal employees and locations. Since 1991, the City has implemented a procurement policy that directs the purchase and use of recycled products. Purchasing staff are encouraged to use "*Green Purchasing*" principles. This refers to buying products and services with reduced effects on human health and the environment (also called "*Environmental Purchasing*"). While some of these products are office and janitorial supplies, the policy also applies to construction supplies, landscape materials and equipment, automotive, road and highway supplies.

Specific pollution prevention measures may vary from one site to another, so they are evaluated separately at each facility. Where appropriate, High Priority municipal facilities implemented site specific Storm Water Pollution Prevention Plans (SWPPP) and associated training programs. Furthermore, the pollution prevention BMPs identified in the JURMP were implemented at all municipal facilities. These pollution prevention BMPs include:

- Affirmative Procurement – Use alternative, safer, or recycled products.
- Reduce the amount of hazardous materials used by implementing natural controls.
- Redirect storm water flows away from areas of concern.
- Reduce use of water.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.

In addition, the City required the following minimum pollution prevention practices (detailed in SWPPPs or inspection reports) at all municipal facilities where appropriate:

- <u>Reduce use of water or use dry cleanup methods:</u> Employees used dry cleanup methods when possible (sweeping, etc.). Any washing activities required containment and recovery, with no discharge to the storm drain system. These BMPs are also required for City contractors.
- <u>Conduct storm drain maintenance:</u> Employees performed regular visual inspections of the storm drains to identify unauthorized discharges and clean as needed.
- <u>Recycle:</u> City departments recycled appropriate items and implemented the City procurement policy to purchase and use recycled products.
- <u>Move or cover potential pollution sources from storm water contact:</u> Corporate yards protected materials and products that could potentially contribute to storm water pollution by storing them indoors, or covering them, and providing them with secondary containment as needed.

4.2.3 Good Housekeeping

Good housekeeping practices employed simple common sense in creating and maintaining a clean, orderly environment that reduced the risk of accidents and urban runoff contamination.

- **Routine Housekeeping Inspections.** Locations with higher risk of impacting storm water quality (e.g., storm water outfalls, loading and unloading areas, materials, products and wastes storage areas, equipment and vehicle maintenance and cleaning areas) were inspected regularly. Inspections focused on leaks or conditions that may have led to discharges of pollutants to the Storm Water Conveyance System or Receiving Waters.

- **Maintenance of Clean Grounds Surfaces.** Sweeping of all paved areas exposed to precipitation or storm water was conducted on a regular basis. Litter controls of all exposed surface were conducted on a regular basis. The frequency of sweeping and litter control is based on site conditions.

- **Waste Management.** Each facility conducted regular pickup and disposal of garbage and waste materials/products to prevent overfill of waste storage containers.

- **Equipment Inspection.** Each facility conducted routine inspection of equipment to ensure proper functioning. Where problems were identified during inspection, proper and prompt maintenance or repair is conducted.

- **Storage.** Raw materials, intermediate products, finished products, byproducts and waste products were stored in covered areas or sealed containers unless the materials or products were not a threat to urban runoff quality. To prevent accidental spills, materials or products are stored away from direct traffic routes. All containers were stacked according to applicable federal, state, and city regulations as well as manufacturers' instructions to avoid damage from improper weight distribution. Pallets or similar devices were used to prevent corrosion of the containers that can result when containers come in contact with moisture on the ground.

- **Limitations on Handling Hazardous Materials.** Each facility limited the handling of hazardous materials to those personnel specially trained to handle these materials.

- **Employee Training.** All good housekeeping practices were incorporated into a facility's employee-training program.

In addition to the BMPs listed above, good housekeeping was addressed as a site specific BMP for each category of facilities listed below. See BMP SC-60 for site specific information on implementation.

4.2.4 Spill Response and Prevention

Municipal staff implemented BMPs at all fixed facilities and field programs to prevent, control and clean up spills. The following are general BMPs that were implemented:

- BMPs listed in SC-11, Spill Prevention, Control and Cleanup (City of Carlsbad JURMP 2008).
- Spill cleanup materials were readily available and in known locations.

- Spills were cleaned up immediately and dry methods are used where possible.
- Spill cleanup material was disposed of properly.

Spill response and prevention was also addressed as a site specific BMP for each category of facilities listed in Sections 4.3 – 4.14 of this report. See SC-11 for site specific information on implementation.

4.3 Roads, Streets, Highways, Parking Facilities

4.3.1 Background

This section includes BMPs and an inventory of roads, streets, highways, and parking facilities which are deemed High Priority according to Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's 2008 JURMP. This section also includes information on the City's street sweeping program and BMPs for the City's street maintenance program.

4.3.2 Source Characterization

The table below lists the 10 High Priority roads, streets, highways, and parking facilities on the City's municipal inventory as updated in the 2008 JURMP.

Table 4.1 Roads, Streets, Highways, and Parking Facilities

1	ADULT LEARNING PROGRAM PARKING LOT	3368 EUREKA PL
2	CARLSBAD SENIOR CENTER PARKING LOT	799 PINE AVE
3	CITY HALL FACILITY PARKING LOT	1200 CARLSBAD VILLAGE DR
4	CITY STREETS	CITY WIDE
5	COLE LIBRARY PARKING LOT	1250 CARLSBAD VILLAGE DR
6	DOVE LIBRARY PARKING LOT	1775 DOVE LN
7	FARADAY CENTER PARKING LOT	1635 FARADAY AV
8	FARMERS BUILDING PARKING LOT	FARADAY & EL CAMINO RL
9	HARDING COMMUNITY CENTER PARKING LOT	3096 HARDING ST
10	RAILROAD DEPOT VISITORS CENTER PARKING LOT	400 CARLSBAD VILLAGE DR

4.3.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.2 were implemented at the 10 High Priority facilities listed above.

Table 4.2 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-70 Road and Street Maintenance
SC-71 Plaza and Sidewalk Cleaning
SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.3.4 Program Implementation

Each of the applicable BMPs listed above in Table 4.2 were implemented at the facilities listed in Table 4.1 and are described below:

- SC-11 – Spill Prevention, Control, and Cleanup: Spill kits were located in all vehicles.
- SC-33 – Outdoor Storage of Raw Materials: Plastic tarps covered raw materials in the yard, equipment was covered by canopies, and the material was covered by a permanent overhead structure or stored indoors. Materials associated with street maintenance activities were stored at the Maintenance and Operations Facility.
- SC-34 – Waste Handling and Disposal: Paint waste was returned to the maintenance yard where it was transferred directly from the generating vehicle to secured storage containers. This was done within a proper containment area in case of any accidental spillage. These containers were clearly marked and stored until arrangements were made for a certified waste management company to remove them and transfer them to an approved facility.
- SC-41 – Building and Grounds Maintenance: In the event that any pressure washing was necessary, all wash water was recovered for proper disposal. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevents any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking and Storage Area Maintenance: Parking lots and storage areas were swept biweekly.
- SC-60 – Housekeeping Practices: All maintenance vehicles are equipped with spill kits. Work sites were swept and all debris was removed upon completion of any asphalt or concrete repair.
- SC-70 – Road and Street Maintenance: Storm drain inlets were protected using rock bags prior to the start of any maintenance activities. Concrete wash out was performed on a plastic tarp and contained to prevent any discharge to the storm drain. Street sweeping was performed for all curbed streets and municipal parking lots in the City. Table 4.3 below indicates the distance swept in curb miles, frequency, and amount of materials removed as a result of the street sweeping activities. In total, there were approximately 19,440 curb miles of streets swept from July 1, 2010 to June 30, 2011.

Table 4.3 Street Sweeping Data

Priority[1]	Description	Distance	Minimum Frequency	Material Removed
High[2]	Arterials/seawall/Downtown	54.5 curb miles	Four times Monthly	993 tons/ Annually
Medium	Residential	695 curb miles	Twice Monthly	
Low	Alleys	6.5 curb miles	Twice Monthly	
Parking Lots	54 lots	27 acres	Twice Monthly	

[1]Priority is based on the volume of trash and debris generated at these types of streets - streets which generate high volumes of trash are High Priority; streets which generate moderate and low volumes of trash are medium and low priority respectively.
[2]Downtown streets were swept twice weekly

- SC-71 – Plaza and Sidewalk Cleaning: A self-contained wet sweeper was used on all tile sidewalks in the downtown area on a scheduled basis.

- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers were stored inside and used sparingly in accordance with required application practices.
- SC-75 – Waste Handling and Disposal: All materials were hauled directly to the transfer station and were covered.

4.4 Flood Management Projects/Flood Control Devices

4.4.1 Background

This section includes BMPs and an inventory of the City's Flood Management Projects and Flood Control Devices which are deemed High Priority areas according to Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's 2008 JURMP. This section also includes a description of the Storm Drain Maintenance Program activities.

4.4.2 Source Characterization

The municipal separate storm sewer system is the only High Priority Flood Management Projects and Flood Control Devices on the City's municipal inventory, as updated for the 2008 JURMP. The municipal separate storm sewer system is inclusive of the City's flood management projects and flood control devices.

4.4.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.4 were implemented throughout the City's MS4.

Table 4.4 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-21 Vehicle and Equipment Cleaning
SC-34 Waste Handling and Disposal
SC-60 Housekeeping Practices
SC-74 Drainage System Maintenance
SC-75 Waste Handling and Disposal

4.4.4 Program Implementation

Each of the applicable BMPs listed above in Table 4.4 were implemented where applicable pertaining to the municipal separate storm sewer system and are described below.

- SC-11 – Spill prevention, Control, and Cleanup: All vehicles have spill kits and key vehicles carry hydrocarbon booms. All trash was placed in 55 gallon trash bags. The maintenance sweeper truck was called out to assist in spill cleanup when necessary.
- SC-21 – Vehicle and Equipment Cleaning: All vehicles used in flood control device cleaning were washed at fleet maintenance using an enclosed pressure wash system. The system has a secondary water and oil separator plumbed into the sanitary sewer system.

- SC-34 – Waste Handling and Disposal: Trash was hauled to transfer station. Debris and other organic material were transferred and deposited at 2400 Tamarack Avenue in three concrete covered bins. The material was then tested for contaminants and hauled to a landfill or appropriate facility upon receipt of permissible test results.
- SC-60 – Housekeeping Practices: Trash was removed from these areas of the MS4 on a routine basis.
- SC-74 – Drainage System Maintenance: A small self-contained vacuum with pressure washer was used to clean the inlets. All material in the drain box was removed by the vacuum. Disposal of the water and material occurred using a filter sock, allowing water to be decanted into the sanitary sewer system. The solid material was taken to the Tamarack site described above. All trash was removed from the MS4, placed in 55 gallon trash bags, and placed in a 40 cubic yard roll off dumpster that is covered. The material was then transported to Palomar Transfer Station for disposal. Data pertaining to maintenance activities of the MS4 is in Table 4.5 below.

Table 4.5 MS4 Maintenance

Structure	Inspected	Exceeding Cleaning Criteria	Cleaned	Amount of Material Removed (tons)
Catch Basin/Inlet	3476 units	234	Anthropogenic trash removed 100%	32
MS4 miles	4,000 linear feet	N/A	4,000 linear feet	0.25
Open Channel miles	32,000 linear feet	N/A	638 linear feet	2

- SC-75 – Waste Handling and Disposal: Described under SC-34 and SC-74 above.
- BMPs to limit infiltration from sanitary sewer to storm drain system: a preventive maintenance schedule was implemented that includes jet rodding, and vactoring the sanitary lines throughout the city of Carlsbad. Closed circuit television was used for investigations in sewer lines. In addition, engineering standards described below prevent infiltration of sewage to the MS4.

  The City of Carlsbad's Engineering Standards employed several measures to prevent sewage intrusion into municipal separate storm sewer systems (MS4).

  1. All gravity sewer pipes and laterals are required to have gasketed joints, which create water tight joints (Volume 1, Chapter 6, Item 3.A, 3.C, and 3.F). The water tight joints are tested using the methods indicated in Standard Specifications for Public Works Construction (SSPWC) section 306-1.4. The water tight test methods include a post-installation closed circuit television (CCTV) inspection and an air pressure test where the sewer line must sustain 2.5 to 3.5 psi gage pressure for at least 2 minutes after being pressurized to 3.0 psi.
  2. All gravity sewer lines are required to follow engineering standard for the amount of flow they can carry. During peak hour dry weather season the pipe shall be designed to carry a flow depth of 0.5 (or 0.75 depending on the pipe size) the diameter of the pipe (Volume 1, Chapter 6, Item 4.C). This design requirement prevents the pipe from becoming full, which would pressurize the pipe and potentially cause a leak.
  3. Per Carlsbad's Engineering Standard GS-6 and GS-6A, the sewer lines are typically located at an elevation deeper than the storm drain line, which further prevents sewage intrusion into MS4.

In the event of a sewage pipe leak, the leakage flow will naturally gravitate below the sewer line rather than up to the storm drain line.

4. The standard horizontal separation between sewer and storm drain is 13 feet, which further prevents sewage intrusion into MS4.
5. In special cases where storm drain lines are installed at a depth greater than that of sewer lines, additional design standards are required such as water tight joints or encasements (Volume 1, Chapter 5, Item 1.G).

- BMPs and Treatment Control BMPs: Storm Drain Inserts including fossil filters and rapid flow BMPs are in place at various storm drain locations throughout the City. Fossil filters removed trash and hydrocarbons, while debris catchers were installed to prohibit anthropogenic trash and debris from entering the storm drain system. City maintained desiltation basins were inspected annually prior to the rainy season and maintained as necessary. Table 4.6 lists the BMP or TCBMP, location, quantity, inspections required and inspections completed.

Table 4.6 Public BMPs and TCBMPs

Type	Location	Number	Inspections Required	Inspections Completed
Debris Catcher	Carlsbad Boulevard	9	9	9
	State Street	4	4	4
	Grand Avenue	3	3	3
	Carlsbad Village Drive	4	4	4
	Ocean Street	4	4	4
	Rancho Santa Fe	1	1	1
	Celinda Drive	1	1	1
Fossil Filter	Oak Avenue	4	4	4
	Chestnut Avenue	6	6	6

	Fleet Maintenance	4	4	4
	Ocean Street	2	2	2
	Paseo del Norte	3	3	3
	Cannon Road	5	5	5
	Faraday Avenue	3	3	3
	Recycled Water Plant	4	4	4
	M&O Yard	2	2	2
Debris Filter at inlet entrance	Oak Avenue	3	24	24
	Valencia Avenue	1	24	24
	Chestnut Avenue	4	24	25
	Orion Street	3	52	52

Table 4.6 Public BMPs and TCBMPs (Cont.)

Type	Location	Number	Inspections Required	Inspections Completed
Desiltation Basins	SW End Faraday Avenue	1	1	1
	SW Corner Marron and Monroe	1	1	1
	NO of Via de Canto	1	1	1
	Gateway @ ECR	1	1	1
	Avenida Soledad @ RSF	1	1	1
CDS UNITS	Cannon Rd w/of Hemingway	1	1	1
	Alicante Rd	1	1	1
	El Fuerte @ Poinsetta Ln	1	1	1
	Calle Conifera @ Corte Brezo	1	1	1
	Sand Shell w/end	1	1	1
Total		**85**	**198**	**199**

Inspection results and findings for the Publicly owned BMPs and TCBMPs showed that 90 % were in good condition and approximately 11 tons of anthropogenic trash was removed during the reporting period.

4.5 Fire Stations

4.5.1 Background

There are six fire stations in the City, which are high priority areas according to the City's JURMP. The inventory and BMPs for these facilities are described below.

4.5.2 Source Characterization

Table 4.7 below lists the High Priority Fire Stations on the City's 2008 JURMP inventory.

Table 4.7 Fire Stations

1	FIRE STATION #1	1275 CARLSBAD VILLAGE DR
2	FIRE STATION #2	1906 ARENAL RD
3	FIRE STATION #3	3701 CATALINA DR
4	FIRE STATION #4	6885 BATIQUITOS DR
5	FIRE STATION #5	2540 ORION WY
6	FIRE STATION #6	7201 RANCHO SANTA FE ROAD

4.5.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.8 were implemented at the High Priority facilities listed above.

SC-75 Waste Handling and Disposal

4.5.4 Program Implementation

Each of the applicable BMPs listed above in Table 4.8 were implemented at the facilities listed in Table 4.7 and are described below. In addition, training and pollution prevention BMPs specific to the Fire Department are described below.

Training:

- The City's Reclaimed Water Facility continued to be utilized for fire engineer training and testing. A training trailer facilitated engineer operations, pump testing, and other wet training opportunities. The Facility allowed for wet training and testing opportunities while ensuring that no water is discharged to the MS4.
- Conduct training and testing at other fire agencies Training Facilities which recycles the water that is being discharged (i.e. Rancho Santa Fe and San Marcos Fire Departments).Suitable locations were selected to provide "wet" training opportunities for personnel, while ensuring that appropriate BMPs were in place to protect the storm drains and eliminate discharges to the MS4. These sites were generally located on pervious surfaces with no potential for discharge to the storm drain system.
- A representative from the Fire Department attended and participated in the City's Storm Water Committee meetings when available.

Pollution Prevention:

- Dry cleanup methods were used to reduce water use. The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations. Awareness was heightened at fire scenes to minimize the potential for excessive water flow.
- Materials were recycled where possible.
- Storm Water Manuals were developed for each station which include SWPPPs with site maps, inspection reports, facility specific spill response procedures, training records, and department policies.
- SC-11 – Spill Prevention, Control, and Cleanup: Spill response equipment and materials are clearly identified and staged in accessible locations at each station. Awareness was heightened at incident scenes to contain potential discharges (once the scene had been stabilized) to prevent pollutants from entering the MS4. The Department continued implementation of the City's spill response procedure for incidents that occur on City streets. Absorbent materials are kept on all engines. The spill response plan is to apply absorbent, sweep material, place in bags, and remove from site for proper disposal.

- SC-21 – Vehicle and Equipment Cleaning: The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Vacuum equipment was purchased to recover and contain all wash water from vehicle washing activities occurring at the Fire Stations. Fire Station 5 currently has a pressure washer for vehicle and equipment cleaning to minimize the amount of water being used. Five more pressure washers have been approved and purchased for the other five fire stations. Pressure washers are now installed and in service at all six fire stations.
- SC-34 – Waste Handling and Disposal: Waste containers were inspected regularly for leaks and to ensure that lids remained closed. Waste container areas were inspected and swept as necessary to keep area free of trash and litter.
- SC-43 – Parking/Storage Area Maintenance: Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations.
- SC-60 – Housekeeping Practices: Fire stations are kept clean and orderly. Wash water was disposed of properly. Sweeping material was disposed of properly. Training on storm water and spill response was provided regularly.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping are used wherever possible; pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-75 – Waste Handling and Disposal: Solid waste was collected and disposed of properly at appropriate disposal facilities (Palomar Transfer Station, Waste Management) in accordance with all applicable laws and regulations. Waste containers were inspected regularly for leaks and to ensure that lids remained closed. Waste container areas were inspected and swept as necessary to keep area free of trash and litter. Liquids were not disposed of in waste containers. Recycling was implemented where possible; bins were provided.

4.6 Recreation Facilities

4.6.1 Background

The Monroe Street Pool is the only Recreation facility on the City's municipal inventory listed as a High Priority area. This is primarily due to the chemicals stored on-site. The pool's chemical systems are liquid chlorine (sodium hypochlorite) and muriatic (hydrochloric) acid/carbon dioxide, with 500 and 300 gallon double wall containers, respectively. BMPs implemented at this facility are described below.

4.6.2 Source Characterization

The only High Priority Recreation facility on the City's 2008 JURMP inventory was the Monroe Street Pool.

4.6.3 Site Specific BMP Requirements

The site specific BMPs, listed below in Table 4.9, were implemented at the Monroe Street Pool.

Table 4.9 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-31 Outdoor Container Storage
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-60 Housekeeping Practices
SC-72 Fountains & Pools Maintenance
SC-73 Landscape Maintenance

4.6.4 Program Implementation

BMPs listed in Table 4.9 above were implemented at the Monroe Street Pool. BMPs implemented specific to this facility and its activities are described below.

- SC-11 – Spill Prevention, Control, and Cleanup: Commercial spill kits are kept onsite. A facility specific SWPPP was developed and is kept onsite. The SWPPP includes a spill response plan.
- SC-31 – Outdoor Container Storage: The majority of materials stored on-site are kept inside sheds. These areas were cleaned up and maintained regularly.
- SC-34 – Waste Handling and Disposal: Trash bins and containers are enclosed and covered. Lids remain closed and locked at all times and serviced weekly.
- SC-41 – Building and Grounds Maintenance: Staff performed daily parking lot inspections looking for litter, debris, and leaking vehicles. In the event that any pressure washing was necessary, all wash water was recovered for proper disposal. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-60 – Housekeeping Practices: Cleaning of pool decks was performed by sweeping in most cases. Occasionally, wash down was necessary and all wash water was directed to a daylighted sediment blocking maze swale.
- SC-72 – Fountains and Pools Maintenance: Water was de-chlorinated if discharging to the storm drain was necessary; however, this was a rare occurrence. All filter back wash was discharged to sewer. Overflow from pool decks was directed to the daylighted sediment blocking maze swale.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off. Soil testing was utilized to assess need for fertilizers and irrigation. Timing improvements on irrigation system have reduced water usage. Blowing and sweeping were used wherever possible. Pesticide, herbicide, and fertilizers were not stored onsite and used sparingly in accordance with required application practices.

4.7 Publicly Owned Treatment Works

4.7.1 Background

The City of Carlsbad is a member agency of the Encina Wastewater Authority which treats raw sewage to the secondary treatment level. The Carlsbad Water Recycling Facility intakes secondary treated water and treats it again to the tertiary level of treatment which is used as recycled water throughout the City

of Carlsbad. This facility was determined to be High Priority as required in Order No. R9-2007-0001, Section D.3.a.(7)(a). The BMPs listed below were implemented at the Carlsbad Recycled Water Facility.

4.7.2 Source Characterization

The Carlsbad Recycled Water Facility is the only High Priority Publicly Owned Treatment Works on the City's 2008 JURMP inventory.

4.7.3 Site Specific BMP Requirements

The site specific BMPs listed in Table 4.10 were implemented at the Recycled Water Facility.

Table 4.10 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-60 Housekeeping Practices

4.7.4 Program Implementation

Each of the applicable BMPs listed above were implemented at the Carlsbad Recycled Water Facility and are described below.

- Employee Training: Employees were informed of activities that could potentially cause contamination of storm water and the importance of carefully conducting these activities in areas that do not discharge/drain to storm drains. Storm water pollution prevention and BMP brochures were available to everyone who works at the materials storage area. Subcontractors were informed about the storm water requirements and their responsibilities. Training consisted of informal "tailgate" meetings, formal classroom training, or self-guided training activities. Employees in targeted positions were trained annually on the requirements of the SWPPP. Employee training, at a minimum, included: SWPPP requirements; spill response and reporting; good housekeeping; BMP updates and implementation; and materials and waste handling and storage procedures.
- SC-11 – Spill Prevention, Control, and Clean-up: A current spill response plan was provided in the SWPPP. The spill response plan addressed measures to clean, abate, and prevent spills and leaks from entering the storm drain. Employees were trained on the elements of the plan. Rags and absorbents were readily accessible. Waste was disposed of properly. Dry cleanup methods were used whenever possible. Spills on dirt areas were cleaned up by digging up and properly disposing of contaminated soil. Spills over 10 gallons were reported to the Storm Water Protection Program and/or the appropriate spill response agencies immediately. Employees were trained to routinely check for leaks and spills.
- SC-22 – Vehicle and Equipment Repair: All vehicle repairs were performed off-site. When equipment repair was necessary, work was performed in covered, contained areas that were not susceptible to storm water runoff.
- SC-31 – Outdoor Container Storage: There were several chemical storage tanks stored outside under cover and in full secondary containment structures. See SC-33 below for more information.

- SC-33 – Outdoor Storage of Raw Materials: Secondary containment was implemented where materials are stored outside. Examples of temporary BMPs utilized are: a dike, berm, or filter on the down slope sides of any stockpiles. All containment devices used around stockpiles were maintained to work effectively and were replaced when necessary. The chemical storage tanks were contained within a concrete parapet wall enclosure. Spills within the chemical storage areas were contained within the concrete walls and drain to a sump. Where chemical deliveries occurred, a concrete pad conveyed flow to a curb inlet. From the curb inlet, flow was controlled by plug valves, directing the flow to the sump.
- SC-34 – Waste Handling and Disposal: Dumpsters were covered and maintained and checked frequently for leaks. Lids were kept closed at all times. Dumpsters were never cleaned out using water**.** When cleaning the containers, all rinse water from cleaning was routed to the sanitary sewer system. All wastes and construction debris were disposed of properly. Many materials and wastes were recycled including broken asphalt and concrete, cleared vegetation, scrap metals, aluminum cans, and plastic bottles. Materials and debris that could not be recycled were taken to an appropriate landfill or disposed of as hazardous waste. The waste storage area was swept or otherwise cleaned frequently using dry methods to collect all loose solids for proper disposal. If the amount of waste accumulated appeared to frequently exceed the capacity of the dumpster**,** then another container was obtained and utilized or collection frequency was increased. Green waste consisting of clippings, cuttings and droppings of leafy and woody materials was disposed of properly at an approved composting location or permitted landfill.
- SC-60 – Housekeeping Practices: Site was kept free of litter and debris. Trash cans and recycling receptacles were located around the site to minimize litter. Material moving and transfer activities were scheduled during dry weather periods, where possible. Heavy equipment was maintained in good working condition. Areas were inspected frequently for leaks and repaired as needed. Major equipment repairs were performed away from the storage area. Paved surfaces were swept that drain to storm drains, creeks, or channels. Cleanup materials such as brooms, shovels, dustpans, and sweepers are stocked near the storage area. Paved storage areas were swept weekly for collection and disposal of loose solid materials, and were not hosed into a storm drain or conveyance ditch. Information was distributed on good housekeeping practices during employee training sessions and discussed at employee meetings. Good housekeeping tips and reminders were posted on employee bulletin boards.
- Source Control BMPs (specific to the Recycled Water Facility):
  - Flo-Guard inlet baskets at all curb inlets on site to collect oil and grease and debris from site.
  - Vegetated swale (approximately 400 feet) collects and treats runoff from a portion of the site.
  - Roof over chemical storage area.
  - Permanent secondary containment is in place around all chemical storage areas.
  - By-pass valves are installed at containment areas to divert rain water.

4.8 Sanitary Sewer Facilities

4.8.1 Background

The facilities listed in Table 4.11 are sewer lift stations owned and operated by the City. The table also includes the City's collection system. These have been determined to be High Priority areas according to Order No. R9-2007-0001 and the City's 2008 JURMP, primarily due to the presence of sewage and potential for contamination of surface waters resulting from sewer overflows. BMPs implemented at these facilities and BMPs applicable to maintenance of the collection system are described below.

4.8.2 Source Characterization

Table 4.11 below lists the High Priority Sanitary Sewer Facilities on the City's JURMP inventory.

Table 4.11 Sanitary Sewer Facilities

1	AGUA HEDIONDA SEWER LIFT STATION*	SDGE PLANT SITE
2	BATIQUITOS SEWER LIFT STATION	7382 GABBIANO LN
3	BUENA VISTA SEWER LIFT STATION*	JEFFERSON ST

16	VANCOUVER SEWER LIFT STATION	2690 VANCOUVER ST
17	VILLAS SEWER LIFT STATION	2860 WINTHROP AV

*Operation and maintenance performed by Encina Wastewater Authority

4.8.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.12 were implemented at all Sanitary Sewer Facilities.

Table 4.12 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-34 Waste Handling and Disposal
SC-60 Housekeeping Practices
SC-75 Waste Handling and Disposal
SC-76 Sewer Utility Maintenance

4.8.4 Program Implementation

Each of the BMPs listed above were implemented at the facilities listed in Table 4.11 and are described below.

- SC-11 – Spill Prevention, Control, and Cleanup: Hazmat plans were drawn up and located in the SWPPP at each location. Spill kits are kept inside at all facilities. Secondary containment structures were implemented around generator fuel cells and around all chemicals stored on-site. Overflow response included immediate Vactor response, containment, and cleanup. For more details see City of Carlsbad SSORP spill mitigation and clean-up. All vehicles have spill kits.

- SC-20 – Vehicle and Equipment Fueling: Small equipment fueling was performed in secondary containment areas or over pervious surfaces. All locations have secondary containment for fuel spills or oil leaks. Fuel deliveries were performed by an outside contractor. Documentation is kept onsite.
- SC-22 – Vehicle and Equipment Repair: Pump repair occurred indoors Wet wells were cleaned every 6 weeks with Vactor equipment and staff ensured that there were no leaks or spills at the facilities.
- SC-31 – Outdoor Container Storage: The 55-gallon trash cans are covered with a liner.
- SC-34 – Waste Handling and Disposal: Trash and debris were removed on a regular basis.
- SC-60 - Good Housekeeping: Sweep and vacuuming were implemented instead of washing down. Blowers were used to clean off concrete and asphalt. All hoses are rolled up and stored off the ground.
- SC-75 – Waste Handling and Disposal: Trash and debris were removed on a regular basis. All trash cans or other containers are covered or closed.
- SC-76 – Sewer Utility Maintenance: All stations were inspected and cleaned daily. Vactors were checked for leaks during pre-trip inspections. All materials were discharged at Encina Wastewater Authority: solids into grit bin, liquids at headworks. Recently the City began to implement FOG requirements as per Order 2006-003, including revision of ordinances, public outreach, and inspections of FOG generating facilities.

4.9 Water Facilities

4.9.1 Background

There are seven High Priority water facilities on the City's JURMP inventory. The sites are High Priority facilities due to chemical storage on-site or due to their location in the watershed. BMPs implemented at the sites according to the JURMP are described below.

4.9.2 Source Characterization

The table below lists the High Priority Water Facilities on the City's JURMP inventory.

Table 4.13 Water Facilities

1	MAERKLE DAM RESERVOIR/ PUMP/ CHLORINATION STATION	5203 SUNNY CREEK RD
2	RESERVOIR C	CALAVERA DR
3	RESERVOIR ELM	CARLSBAD VILLAGE DR & DONNA DR
4	RESERVOIR LA COSTA HI	ALGA RD
5	RESERVOIR LA COSTA LO	ALGA RD
6	CALAVERA PUMP STATION	3600 BLOCK COLLEGE DR
7	TAP PUMP STATION	6400 BLOCK OF EL CAMINO REAL

4.9.3 Site Specific BMP Requirements

The site specific BMPs listed in Table 4.14 were implemented at the water facilities listed above.

Table 4.14 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-60 Housekeeping Practices
Water Operations and Maintenance

4.9.4 Program Implementation

Each of the BMPs listed above were implemented at the facilities listed in Table 4.13 and are described below.

- Pollution Prevention: Automatic shut-off valves have been installed.
- SC-11 – Spill Prevention, Control, and Cleanup: At facility 1, specialized equipment has been implemented to mitigate a chlorine release; chlorine gas detectors, vacuum regulators, automatic shut-off valves, and chlorine scrubber systems. In addition to the equipment, all chemicals are stored in containment structures designed to contain stored amount. All chemicals are inspected prior to off-loading for containment defects and returned if any defects are noted. Operations Staff have the necessary hazardous materials training to be considered "qualified" to assess the severity of a chlorine leak. A site specific SWPPP was developed for Maerkle Reservoir.
- SC-20 – Vehicle and Equipment Fueling: Diesel deliveries were performed by outside contractors, following all required BMPs.
- SC-22 – Vehicle and Equipment Repair: All storm drain collectors were regularly inspected and cleaned accordingly. All building floor drains were inspected and verified to be isolated from discharge system.
- SC-31 – Outdoor Container Storage: The 55-gallon trash cans with liners were utilized and trash was removed on a regular basis.
- SC-33 – Outdoor Storage of Raw Materials: No raw materials are stored outdoors.
- SC-60 - Good Housekeeping – Increased sweeping schedule of asphalted areas was implemented. Chemicals supplies are kept at a minimum to reduce potential releases.
- Water Operations and Maintenance:
    - Repairs and New Line Installation: All flushing requirements follow established BMP's regarding de-chlorination and related sediment recovery concerns.
    - Reservoir Cleaning and Dewatering: All reservoir de-watering follows pre-established BMP's addressing daily water volume discharge amounts, de-chlorination, monitoring of chlorine residuals and sediment removal and disposal

4.10 Municipal Yards

4.10.1 Background

Table 4.15 below lists the City's municipal yards that were determined to be High Priority areas as required per Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's JURMP. Site specific BMPs implemented at each facility are listed and described below.

4.10.2 Source Characterization

The table below lists the High Priority Municipal Yards on the City's JURMP inventory.

Table 4.15 MUNICIPAL YARDS

1	FLEET MAINTENANCE FACILITY AND PARKING LOT	2480 IMPALA DR
2	M&O OPERATIONS YARD AND PARKING LOT	5950 EL CAMINO REAL
3	OAK OPERATIONS YARD AND PARKING LOT	405 OAK AV
4	PARKS MAINTENANCE/STORAGE/PARKING LOT	1166 CARLSBAD VILLAGE DR

4.10.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.16 were implemented at Municipal Yards, where applicable. For example, vehicle and equipment repair is not performed at all facilities; therefore SC-22 does not apply to all yards.

Table 4.16 Best Management Practices

Storm Water Pollution Control Plan
SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-21 Vehicle and Equipment Cleaning
SC-22 Vehicle and Equipment Repair

SC-72 Fountains & Pools Maintenance
SC-73 Landscape Maintenance
SC-74 Drainage System Maintenance
SC-75 Waste Handling and Disposal

4.10.4 Program Implementation

BMPs listed in Table 4.16 were implemented specific to each facility and are described below.

<u>FLEET MAINTENANCE YARD</u>

- Employee Training – Storm water protection was covered as part of safety meetings.
- Pollution Prevention – Recycling containers were provided at the ends of the fuel pump inlands.
- Storm Water Pollution Control Plan: A site specific SWPPP was developed and is maintained on-site.
- SC-11 – Spill Prevention: Spill kits containing absorbents and booms are located at the fuel island and south west of the fuel island within the yard, including the shop area.

- SC-20 – Vehicle and Equipment Fueling: Spill kits are located adjacent to the vehicle fueling area.
- SC-21 – Vehicle and Equipment Cleaning: All vehicle washing was performed on the wash rack, inside the wash bay. This included pressure washing and hand washing of vehicles and equipment. Wash waste water is treated prior to release to the sewer system.
- SC-22 – Vehicle and Equipment Repair: All maintenance and repairs to Fleet vehicles were performed inside the shop bays whenever possible. Any vehicle on the dead line that had a leak had a drip pan put under it until it is brought into the shop. Any leaks or spills were handled immediately, with either the drip pans or an absorbent. The absorbent was picked up immediately and stored in the drums labeled for waste absorbent. Damaged equipment and wrecked vehicles with a potential for discharge were covered with tarps.
- SC-31 – Outdoor Container Storage: Outdoor containers that include full coverage and containment of materials are utilized for storage of tires and motorcycles (two 40 yard containers) and for storage of fire extinguisher service items, used batteries, and oil filters for recycling (sheds).
- SC-33 – Outdoor Storage of Materials: All materials stored outside are kept under one of the provided canopies or in the shed. City-generated hazardous waste is stored in the hazardous waste shed (covered) in an appropriate container and on a pallet. This includes batteries and waste metals. A chain link fence was installed to prevent unauthorized dumping at the Facility. Signage was also in place to inform citizens that materials were not to be left at the Facility and provided information on proper disposal facilities.
- SC-34 – Waste Handling and Disposal: Waste oil was drained into the waste oil containers or into a drip pan and then into a waste oil container. The containers were emptied as needed into the waste oil in-ground tank as needed. Used batteries were stored in the provided container inside the shed. Used antifreeze was drained into one of the large drip pans, then transferred to the poly drums inside the shed. Scrap metal is stored in the provided container and covered. Used tires are stored in the covered tire storage bunker.
- SC-41 – Building and Grounds Maintenance: Language was included in contracts requiring storm water compliance and allowing the City to implement BMPs as needed with all associated costs recovered from the contractor. In the event that any pressure washing was necessary, all wash water was recovered for proper disposal. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: The Fleet Yard was swept via Sweeper-truck on a monthly schedule, clean ups of spills were done with dry absorbent and picked up directly, all leaks were captured with drip pans and brought into the shop for service.
- SC-60 – Housekeeping Practices: The shop was either swept or mopped. All debris was either picked up and put into appropriate containers or, in the case of wet mopping, all water was directed to the drains inside the shop that flow to our separator. All contaminated floor sweep was stored in labeled containers and removed by our hazardous waste contractor. The Fleet yard was inspected regularly as well as before and after storm events. Areas inspected were the shed and tire storage area at the north end of the shop, the waste tire and hazardous waste bunker along the north fence line, the two large dumpsters, the two trash and two recyclables cans at the fuel pumps, the spill kits for the fuel island, the storm drains on-site and the paved lot and dirt area at the east end (which is now fenced). Inspection criteria: all waste drums/containers are to have secondary containment, all materials are to be stored in covered areas. Appropriate areas included a shed and two canopies plus the hazardous waste container and waste metal containers. The dumpsters, trash cans, recyclables cans and metal storage were kept closed and no trash fell out of them. The filters at the

storm drains were inspected for cleaning or replacement. The lot was inspected for spills and cleaned up as needed. Vehicles in the lot were inspected for leaks; action was taken to contain leaks as needed. The wash rack area, trash containers area, and drains were inspected for clogging from debris. All employees always took immediate action to correct any issues found during inspections of the Fleet yard directly.

- SC-71 – Sidewalk Cleaning: Where power washing was necessary, wash water was not allowed to drain to the storm drain system and was directed to sanitary sewer or to pervious surfaces where possible.
- SC-72 – Fountain and Pools Maintenance: Not applicable.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off. Soil testing was utilized to assess need for fertilizers and irrigation. Timing improvements on irrigation system have reduced water usage; blowing and sweeping are used wherever possible. Pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-74 – Drainage System Maintenance: Fossil filters have been installed at storm drain inlets in yard and were inspected and maintained regularly.
- SC-75 – Waste Handling and Disposal: Signage for proper Household Hazardous Waste disposal is posted on site.

MAINTENANCE AND OPERATIONS YARD

- Pollution Prevention – Native soils were used whenever possible to backfill trenches: the amount of dirt and soil stockpiled on site was minimized; filtration socks were used to dewater trenches.
- Storm Water Pollution Control Plan: A site specific SWPPP is kept on-site and maintained regularly.
- SC-11 – Spill Prevention, Control, and Cleanup: Secondary containment where fuel and oil are stored, also yard has spill kits in each vehicle. A hazmat plan has been implemented and is located in the SWPPP.
- SC-20 – Vehicle and Equipment Fueling: Small equipment fueling was performed in the secondary containment area or over pervious surfaces.
- SC-21 – Vehicle and Equipment Cleaning: Trash was removed daily from the work trucks, otherwise no cleaning or washing was allowed at M&O yard.
- SC-22 – Vehicle and Equipment Repair: No repairs were performed at yard.
- SC-31 – Outdoor Container Storage: Container storage areas are covered using overhead canopies.
- SC-33 –Outdoor Storage of Materials: Where necessary, plastic tarps cover raw materials in the yard; equipment is covered by canopies; material is covered by a permanent overhead structure or stored indoors.
- SC-34 – Waste Handling and Disposal: All material was put into a covered roll-off container.
- SC-41 – Building and Grounds Maintenance: The grounds and parking lot were swept twice a month by street sweeper and weekly by hand when necessary. Trash was removed daily. Erosive areas and slopes were protected by hydroseed, coconut mats, sand bags, and fiber rolls. Where painting, scraping, or sandblasting were necessary, all material was disposed of properly and drop cloths were used where possible. Where feasible, work was performed under cover and over pervious areas. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. Parking lots are spot cleaned for all spills weekly. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: The parking lot was swept twice a month by a street sweeper; ingress/egress to unpaved area of yard was protected by rocks and shaker plates.
- SC-60 – Housekeeping Practices: Recycle bins, dumpsters, and cans were covered and kept closed.

- SC-61 – Safer Alternative Products: Used less hazardous cleaning materials and water-soluble paints for mark outs.
- SC-70 – Road and Street Maintenance: Not Applicable
- SC-71 – Sidewalk Cleaning: Sweep and/or vacuum sidewalks.
- SC-72 – Fountain and Pools Maintenance: Contractor maintained fountain at facility. No water was discharged during maintenance activities; all filter material was retained on-site for proper disposal. Due to water restrictions to the fountain was turned off in August 2009
- SC-73 – Landscape Maintenance: All material was cut and carried off by hand in burlap bags; no residue remains on site. Irrigation systems were checked regularly to avoid run-off; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-74 – Drainage System Maintenance: Rapid Flow filters and storm drain structures were cleaned annually. A pilot program was implemented using the innovative "Drivable Grass" which drains the parking lot through subsurface drainage system to reduce storm water flowing directly into MS4. In March, 2011 we refurbished the storage lot with 10 yards of crushed rock and three tons of 3 inch minus rock at the ingress and egress. We also upgraded the drainage runoff area with straw waddles and installed silt fence around the perimeter of the lot.
- SC-75 – Waste Handling and Disposal: All material was handled properly and covered in yard roll-off dumpsters, or other appropriate containers. Also new paper recycling bins were installed.

<u>OAK YARD</u>

- Storm Water Pollution Control Plan (SWPPP description): A site specific SWPPP was implemented at the Oak Yard.
- SC-11 – Spill Prevention, Control, and Cleanup: All liquids and hazardous materials are stored in locked containment lockers. These are located within secondary containment areas. Large spill containment kits are strategically located within the yard. MSDS binders are strategically placed throughout the yard.
- SC-20 – Vehicle and Equipment Fueling: Small equipment fueling was done only in the secondary containment area.
- SC-21 – Vehicle and Equipment Cleaning: Trash was removed daily from the work trucks. No cleaning or washing was allowed in the Oak yard
- SC-22 – Vehicle and Equipment Repairs: No repairs were done at the Oak yard.
- SC-31 – Outdoor Container Storage: Oak yard has storage areas covered with overhead canopies.
- SC-33 – Outdoor Storage of Raw Materials: No raw materials are stored at the Oak yard.
- SC-34 – Waste Handling and Disposal: Paint waste was returned to the maintenance yard where it was transferred directly from the generating vehicle to secured storage containers. This was done within a proper containment area in case of any accidental spillage. These containers are clearly marked and stored until arrangements were made for a certified waste management company to remove them and transfer them to an approved facility. Any other debris was placed in a canopy covered 40 yd roll-off. Dumpsters were covered and all other trash receptacles had lids.
- SC-41 – Building and Grounds Maintenance: The Oak yard was swept twice a month by a self-contained street sweeper and weekly by hand. Trash was removed daily. SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control and lot was swept regularly.
- SC-60 – Housekeeping Practices: Recycle bins, dumpsters, and cans are covered. Yard clean-up was performed by-weekly with monthly site inspections.
- SC-61 – Safer Alternative Products: Not Applicable

- SC-70 – Road and Street Maintenance: Not Applicable
- SC-71 – Sidewalk Cleaning: Not Applicable
- SC-72 – Fountain and Pools Maintenance: Not Applicable
- SC-73 – Landscape Maintenance: Not Applicable
- SC-74 – Drainage System Maintenance: Debris was captured prior to entry into the vegetated swale.

PARKS MAINTENANCE YARD

- Storm Water Pollution Control Plan (SWPPP description): Site specific SWPPPs were developed and implemented at each of these sites.
- SC-11 – Spill Prevention, Control, and Clean-up; Spill kits are located on-site; drip pans were placed under all equipment kept on-site; spill kits are located in all vehicles; spill response plan is updated and kept on-site.
- SC-20 – Vehicle and Equipment Fueling: No vehicle or equipment fueling was performed on-site.
- SC-21 – Vehicle and Equipment Cleaning: Most equipment was dry-cleaned in designated areas located away from storm drains; where wet cleaning was necessary, it was performed over pervious surfaces in a manner that allowed all water to percolate, generating no runoff to the storm drain system.
- SC-22 – Vehicle and Equipment Repair: All equipment was repaired in designated areas away from storm drains; no vehicle repair was performed on-site.
- SC-31 – Outdoor Container Storage: All chemical products are kept in locked storage bins with overhead coverage and containment.
- SC-33 – Outdoor Storage of Raw Materials: All bagged materials are stored on pallets and covered with canopies; canopies are also used to cover scrap metals and equipment.
- SC-34 – Waste Handling and Disposal: All waste containers are covered.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. Where painting, scraping, or sandblasting were necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevents any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control.
- SC-60 – Housekeeping Practices: Weekly yard clean-up and litter removal and monthly site inspections were conducted.
- SC-61 – Safer Alternative Products: IPM practices and green waste applications were in use; artificial turf and permeable surfaces were implemented where feasible; organics from tree trimming were mulched or composted and used for landscaping.
- SC-70 – Road and Street Maintenance: Not applicable at yard sites.
- SC-71 – Plaza and Sidewalk Cleaning: In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
- SC-72 – Fountains and Pools Maintenance: Not applicable at park sites.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on downtown

irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored in secure lockers and used sparingly in accordance with required application practices and only by qualified applicators.

- SC-74 – Drainage System Maintenance: Storm drain inlets were maintained by City's Storm Drain Maintenance Division on an annual basis.
- SC-75 – Waste Handling and Disposal: All non-recyclable waste was disposed of properly.
- Site Design - Parks Maintenance/Storage Yard drains to a pervious area allowing low flows to infiltrate into the soils instead of running into the storm drain.

4.11 Parks Facilities

4.11.1 Background

The table below lists City parks facilities that were determined to be High Priority areas based on the criteria established in Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's JURMP. High Priority parks facilities were defined as developed park sites containing landscaping, building(s), and parking lot(s) and developed park sites within an Environmentally Sensitive Area.

Site specific BMPs implemented at each facility are listed and described below.

4.11.2 Source Characterization

The table below lists facilities on the inventory that are high priority and includes 16 parks and recreation facilities.

Table 4.17 Parks

1	AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	6425 AMBROSIA LN
2	BEACH BLUFF TRIANGLE/PARK	CARLSBAD BLVD AT PINE
3	CADENCIA PARK	3310 CADENCIA ST
4	CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	2997 GLASGOW DR
5	CARRILLO RANCH AND PARKING LOT	5200 FLYING LC LANE
6	CHASE FIELD	3349 HARDING ST
7	HIDDEN CANYON PARK (LARWIN) AND PARKING LOT	2685 VANCOUVER STREET
8	HOLIDAY PARK AND PARKING LOTS	3200 PIO PICO DR
9	HOSP GROVE PARK AND PARKING LOT	JEFFERSON & MONROE
10	LA COSTA CANYON PARK AND PARKING LOT	3020 PUEBLO ST
11	LAGUNA RIVIERA PARK	4900 KELLY DR
12	MAGEE PARK AND PARKING LOT	258 BEECH AVE
13	PINE PARK AND PARKING LOT	3333 HARDING ST
14	POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	6600 HIDDEN VALLEY RD
15	STAGECOACH COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOT	3420 CAMINO DE LOS COCHES
16	ZONE 5 PARK	CAMINO HILLS AND FARADAY AVE

4.11.3 Site Specific BMP Requirements

Site specific BMPs listed below were implemented at Parks Facilities.

Table 4.18 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-21 Vehicle and Equipment Cleaning
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-61 Safer Alternative Products
SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.11.4 Program Implementation

Each of the BMPs listed above were implemented at the facilities listed in Table 4.17 and are described below.

- SWPPP: Aviara, Poinsettia, and Stagecoach Parks also house small maintenance yards. Because of the added potential to contribute to storm water pollution, SWPPPs were required by the City for these facilities. Aviara, Poinsettia and Stagecoach Parks have developed and fully implemented SWPPPs. .
- SC-11 – Spill Prevention, Control, and Cleanup; Spills kits are located on-site; spill response plan was updated and kept on-site
- SC-20 – Vehicle and Equipment Fueling: Minor equipment fueling was performed over pervious surfaces when necessary.
- SC-21 – Vehicle and Equipment Cleaning: Most equipment was dry-cleaned in designated areas located away from storm drains; where wet cleaning was necessary, it was performed over pervious surfaces in a manner that allowed all water to percolate, generating no runoff to the storm drain system.
- SC-22 – Vehicle and Equipment Repair: Equipment was repaired in designated areas away from storm drains; no vehicle repair is performed on-site.
- SC-31 – Outdoor Container Storage: Chemical products are kept in locked storage bins with overhead coverage and containment.
- SC-33 – Outdoor Storage of Raw Materials: All bagged materials are stored on pallets and covered with canopies; canopies were also used to cover scrap metals and equipment.
- SC-34 – Waste Handling and Disposal: All waste containers are covered; pet waste bag dispensers and containers were provided at all parks where dogs are allowed.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious

surface to ensure that no water was allowed to enter the storm drain system. Where painting, scraping, or sandblasting were necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were are always cleaned in a way that prevents any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.

- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control.
- SC-60 – Housekeeping Practices: Park sites are kept clean and orderly; all debris was removed in a timely fashion and hard-scape areas were swept or blown daily; wash water, sweepings, and sediments were disposed of properly; recyclable materials were recycled; spill response plans were reviewed as part of routine training with staff.
- SC-61 – Safer Alternative Products: Integrated Pest Management Practices (IPM) practices and green waste applications were in use and are described below.

In conjunction with the Integrated Pest Management (IPM) program, the Parks Maintenance Division continues to utilize slow release fertilizers in an effort to reduce the frequency of applications while minimizing the potential of fertilizer runoff. In some cases, staff reduced the recommended amount of fertilizer per 1,000 square feet by 50% to minimize flush of growth on turf which in turn reduces the amount of clippings. To help monitor fertilizer applications, the Parks Maintenance Division instituted a soil testing program which defines soil properties, allowing the correct monitoring of fertilization applications for proper use and desired outcome. In accordance with the new IPM , pesticide and herbicide applications were applied sparingly. Staff continues to search for alternative methods for pest control applications that are proven to be safe and effective.

As required by the Department of Pesticide Regulation, all chemical applications are reported to the County Agriculture Department on a monthly basis. As identified in the JURMP, all applicable BMPs were implemented to address pesticide, herbicide, and fertilizers for sources of pollution.

Specific BMPs implemented during FY 2010-11 include:

- **Education:** A training program for identifying and defining chemicals, proper handling, application, storage, disposal, irrigating, and using non-synthetic alternatives was implemented. At many of the training seminars, new (IPM) methods were often presented for consideration by the department. All training information including BMPs were provided to personnel to keep in personalized folders for individual use. In addition, a master application manual that includes all Storm Water BMPs, training, and inspections was also prepared.

- **Non-chemical applications:** Some pest problems can be eliminated or controlled by handpicking, pruning, or high pressure spraying with water. Many pest problems can be reduced or eliminated by removing affected leaves or plant parts. During FY 2010-11, efforts were made to improve upon our (IPM) system in the City's Parks and Downtown Village areas. The release of lady-bird beetles at City Parks and the Downtown Fountain areas to combat infestations of aphids have proven successful in eradicating the pests. Other methods used to decrease the department's dependency on chemical sprays during FY 2010-11 include:

    - Increased mulching of planter beds to smother weed germination
    - Increased tilling of planter beds to kill young weed sprouts

  - The use of organic plant derivative pesticide sprays such as Safer brand Products
  - The use of water to spray plants infested with giant whitefly
  - The removal of dying or diseased plant material to decrease the presence of harmful organisms.
  - Hand weeding when feasible
- Pesticide application was performed on an as needed basis and was performed internally or by an outside pest control contractor after diagnosis.

- **Native Vegetation:** The Parks Maintenance Division continued to explore opportunities to use native vegetation to control pests, reduce chemical application, and maintain the aesthetic values of the Parks and Downtown Village areas.

- **Schedules for Irrigation and Application** – Irrigation systems were monitored and inspected on a weekly basis in an effort to minimize water loss. In addition, the use of evapo-transpiration (ET) gauges for controlling the irrigation system helped to reduce watering times based on evaporation and transpiration of moisture from plants and turf. ET gauges were installed at Poinsettia, Stagecoach, Pine, Aviara and Calavera Park. These gauges also helped staff to adjust watering times at other locations that were not connected to the gauge. Most large community parks are controlled by a Central Command Irrigation Program (CAlSense). During FY 2010-11, all irrigation systems were inspected weekly and repaired as necessary to prevent excess runoff. At Poinsettia, Aviara, Stagecoach and Pine Parks, synthetic turf has been installed on the soccer and sports fields, which requires no fertilization, weeding, or watering. The synthetic turf has proven to be particularly successful in eliminating the use of water for irrigation.

- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilization ; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside secure lockers and used sparingly in accordance with required application practices only by qualified applicators. Refer to description of (IPM) practices in SC-61 above.
- SC-75 – Waste Handling and Disposal: All non-recyclable waste was disposed of at an appropriate landfill or transfer station.
- Site Design – Desiltation basin was retrofitted at La Costa Canyon Park; pervious concrete was installed at Pine Park.

4.12 Administrative Areas

4.12.1 Background

One administrative building was determined to be a high priority facility based on its proximity to an environmentally sensitive area (ESA). This facility is the Safety Center, which includes a parking lot, police and fire department headquarters, and a skatepark.

4.12.2 Source Characterization

The only administrative building on the inventory that is a High Priority is the Safety Center.

4.12.3 Site Specific BMP Requirements

Site specific BMPs listed below were implemented at the Safety Center.

Table 4.19 Best Management Practices

SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-71 Plaza and Sidewalk Cleaning
SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.12.4 Program Implementation

Each of the BMPs listed above were implemented at the Safety Center and are described below.

- SC-34 – Waste Handling and Disposal: Dumpsters were covered and maintained and checked frequently for leaks. Lids were kept closed at all times.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control.
- SC-60 – Housekeeping Practices: Site was kept clean and orderly; all debris was removed in a timely fashion and hardscape areas were swept or blown routinely; wash water, sweepings, and sediments were disposed of properly; recyclable materials were recycled.
- SC-71 – Plaza and Sidewalk Cleaning: In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-75 – Waste Handling and Disposal: All non-recyclable waste was disposed of properly.

4.13 Activities

4.13.1 Background

Four municipal activities were determined to be High Priority activities based on their potential to generate pollutants. These operations occur throughout the City and are required to implement BMPs as described in the JURMP.

4.13.2 Source Characterization

The table below lists the activities on the inventory that are considered High Priority.

Table 4.20 ACTIVITIES

1	LANDSCAPE MAINTENANCE AND REPAIR	CITYWIDE
2	MS4 MAINTENANCE	CITYWIDE
3	POWER WASHING	CITYWIDE
4	SANITARY SEWER MAINTENANCE AND OPERATIONS	CITY SERVICE AREA

4.13.3 Site Specific BMP Requirements

Each of the BMPs listed were implemented for the activities listed in Table 4.20 and are described below.

Table 4.21 Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-61 Safer Alternative Products
SC-71 Plaza and Sidewalk Cleaning
SC-73 Landscape Maintenance
SC-74 Drainage System Maintenance
SC-75 Waste Handling and Disposal
SC-76 Sewer Utility Maintenance

4.13.4 Program Implementation

- SC-11 – Spill Prevention, Control & Cleanup: Spill kits are kept in all vehicles. Employees were trained in spill response as applicable to their activities. Absorbents were used for spill cleanup where possible and disposed of properly.
- SC-20 – Vehicle and Equipment Fueling: Minor equipment fueling was performed over pervious surfaces when necessary; larger equipment was fueled at the fleet maintenance facility (BMPs are described above for Fleet Yard).
- SC-34 – Waste Handling and Disposal:
    - Landscape Maintenance: All non-recyclable waste was disposed of properly.
    - MS4 Maintenance: Trash was hauled to transfer station. Debris and other organic material were transferred and deposited at 2400 Tamarack Avenue in three concrete covered bins. The material was then tested for contaminants and disposed of properly upon receipt of permissible test results.

  - Powerwashing: All wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
  - Sewer Utility Maintenance: Waste was contained in Vactor truck tanks and disposed of properly to sanitary sewer.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-61 – Safer Alternative Products: IPM practices and green waste applications were in use. These practices are described in detail above.
- SC-71 – Plaza and Sidewalk Cleaning: In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside secure lockers and used sparingly in accordance with required application practices only by qualified applicators.
- SC-74 – Drainage System Maintenance: A small self-contained vacuum with pressure washer was used to clean the drainage system. All material in the drain box was removed by the vacuum. Disposal of the water and material occurs using a filter sock, allowing water to be decanted into the sanitary sewer system through a permit from Encina Wastewater Authority. The solid material was taken to the Tamarack site described above. All trash was removed from the MS4, placed in 55 gallon trash bags, and placed in a 40 cubic yard roll off dumpster that is covered. The material was then transported to Palomar Transfer Station for disposal.
- SC-75 – Waste Handling and Disposal: See SC-34 above.
- SC-76 – Sewer Utility Maintenance: All lift stations were inspected and cleaned as needed; Vactors were checked for leaks during pre-trip inspections; all materials were discharged at Encina Wastewater Authority: solids into grit bin, liquids at head-works; recently the City has begun to implement FOG requirements as per Order 2006-003 including revision of ordinances, public outreach, and inspections of FOG generating facilities.

The collections system maintenance schedule is designed to provide more frequent cleaning for identified trouble areas, with siphons being cleaned annually, low flow and flat lines cleaned semi-annually, and grease problem areas cleaned quarterly.

4.14 Areas and Activities Categorized as Not High Priority

4.14.1 Background

The Municipal Inventory found in Appendix 4.1 lists City owned areas and activities that were determined NOT to be High Priority based on the criteria established in Order No. R9-2007-0001, Section D.3.a.(7)(a). Basic minimum BMPs were implemented at each facility listed below as per the City's JURMP.

4.14.2 Source Characterization

The Municipal Inventory found in Appendix 4.1, lists facilities that are NOT High Priority and includes 46 facilities that are administrative, small parks, medians, and water/wastewater stations that are small or out of service. These facilities are located outside of ESAs and do not generate significant pollutant loads.

4.14.3 Site Specific BMP Requirements

a. Employee Training
b. Pollution Prevention
c. Good Housekeeping
d. Spill Response and Prevention

4.14.4 Program Implementation

The BMPs listed above were implemented City wide at all facilities, including the facilities. A description of these BMPs and how each was implemented is provided in Section 4.2.

4.15 Special Events

4.15.1 Background

The City of Carlsbad hosts a multitude of events each year from major invitational sporting events to community based festivals. A Special Event Permit and SWPPP is required for any organized event involving 50 or more people on public property that travel or assemble together, cause a change in normal traffic flow or controls, and is not within the scope of a Facility Use Permit, other land use approval, or a private property permit. The City has organized a Special Events Committee to ensure events are held in a manner that is safe and does not adversely impact the Carlsbad community or the environment.

4.15.2 Source Characterization

The City manages an updated inventory of special events. These special events have been prioritized according to type of event, number in attendance, proximity to the nearest water body, and potential threat to water quality. During FY 2010-11, there were 28 special events on the inventory, which included 19 high priority, 2 medium priority, and 7 low priority events. Based on this prioritization, the City conducted storm water compliance inspections at all of the high and medium priority events. During this reporting period, there were 37 inspections conducted which included 19 pre-event inspections and 18 post-event inspections. In some cases inspectors were onsite for the duration of the event. A copy of the special events inventory can be found in Appendix 4.3.

4.15.3 BMP Requirements

All special events were required to implement the designated minimum special event BMPs and comply with all applicable regulations outlined in the Carlsbad Municipal Code. Event organizers were notified of the minimum BMPs during the event planning process, in outreach materials, and at pre-event

meetings. All special events, regardless of priority, submitted a SWPPP or BMP plan for City review and approval in FY 2010-11. The SWPPP/BMP Plan are intended to help demonstrate that appropriate measures and BMPs are being implemented before, during, and after the event to reduce and/or prevent pollution. All SWPPPs were approved by the City prior to Special Event Permit issuance. During compliance inspections, the City confirmed that the designated and specific BMPs were implemented as required.

The City continued to distribute the "Best Management Practices for Special Events" brochure during FY 2010-11, which was provided to all event promoters during the applications and planning process. A copy of the brochure can be found in Appendix 4.4 of the FY 2009-10 annual report.

4.15.4 Program Implementation

Generally, the City found that event organizers implemented BMPs as required. Event venues were well managed, BMPs were installed, and the impacted areas were cleaned as required. The City will continue to work closely with event organizers to ensure compliance.

Storm water compliance inspections include a pre-event inspection where storm water BMPs were evaluated, a during-event inspection to determine the effectiveness of BMPs, and a post-event inspection to ensure the site is properly cleaned. Compliance inspections may also include recommendations for additional measures that may be required to comply with the storm water regulations. The Special Events Inspection Form developed at the end of FY 2007-08 continued to be used throughout FY 2010-11.

During FY 2010-11, there were only a few minor violations noted at the 19 inspected events, all of which were immediately corrected. There were no enforcement actions for special events issued during FY 2010-11.

CMI continues to use NPDES inspections and inventory management procedures for special events. Procedure #CMI-200 defines the process for inspecting, tracking, and enforcing special events and procedure #CMI-210 defines the process for managing and updating information on the special events inventory. All special events are prioritized into high, medium, and low categories and inspected at the minimum frequencies required by the 2007 Municipal Permit. All inspection protocols outlined in the 2007 Municipal Permit, JURMP, CMI procedures, and the CMC were implemented as required.

4.16 Inspection of Municipal Facilities

4.16.1 Background

All High Priority municipal facilities were formally inspected during this fiscal year as required by the Permit. In addition, many departments will perform inspections of their facilities more frequently. Inspections of these facilities addressed all required inspection steps according to the Section D.3.b.(3)(a) including:

- Review of BMP implementation plans, if the site uses or is required to use such a plan;
- Review of facility monitoring data, if the site monitors its runoff;
- Coverage under the General Industrial Permit and NOI filing is checked;
- Compliance with the City of Carlsbad ordinances related to urban runoff is assessed;

- BMP implementation, maintenance, and effectiveness is assessed;
- Visual observations for non-storm water discharges, potential illicit connections, and potential discharges of pollutants in storm water are made;
- And education and training on storm water pollution prevention is performed as warranted.

4.16.2 Source Characterization

In total, there were 64 High Priority municipal areas and activities on the City's inventory list. These areas and activities included:

- Roads, Streets, Highways, and Parking facilities;
- Flood Management Projects and Flood Control Devices;
- Fire Stations;
- Recreation Facilities;
- Publicly Owned Treatment Works;
- Sanitary Sewer Faciliites;
- Water Facilities;
- Municipal Yards;
- Parks Facilities;
- Administrative Facilities; and
- Activities*.

*the activities include: landscape maintenance and repair, power washing, MS4 maintenance, and sanitary sewer maintenance.

Refer to Appendix 4.1, the City's Municipal Inventory, for a list of the City's High Priority municipal areas and activities.

4.16.3 BMP Requirements

All areas and activities implement site specific BMP requirements as per the City's JURMP, Appendix 6-A. The preceding sections include table of site specific BMPs required to be implemented for each area and activity listed above. For facilities that are not High Priority, minimum BMPs are required that are tailored specifically to those sites and activities occurring there. Required BMPs have been implemented at all City areas and activities as described it the City's JURMP.

4.16.4 Program Implementation

A total of 64 inspections were performed at high priority municipal facilities. Of the 64, 43 were performed by a third party contractor and 21 performed in-house. Third party inspections were performed at larger, more complex facilities such as Fire Stations, Fleet Maintenance, Parks Maintenance and Operations as well as simple parks, and parking lots. Facilities that are not High Priority are inspected on an as needed basis.

Of the 64 high priority facilities inspected, minor recommendations at some sites involved addressing the accumulation of sediment and organic debris and general housekeeping. One site required

corrective actions due to erosion and sediment issues. Corrective actions were implemented by the end of the fiscal year and a maintenance schedule was established to maintain compliance.

All four High Priority activities were inspected during field activities and were found to be in compliance with permit requirements and City ordinances. The contracted power washing services required corrective actions but all recommendations were implemented during the fiscal year.

For a listing of all corrective actions identified during inspections and their implementation, refer to Appendix 4.4. There were no violations of the Carlsbad Municipal Code observed during municipal inspections; therefore there were no necessary enforcement actions.

4.17 Notable Activities

As mentioned in the Executive Summary, the City considers a Notable Activity to be any activity above compliance requirements. Notable Activities for FY 2010-11 include:

- No signs of over-irrigation were noted at Municipal Facilities during inspection.

Section 5

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 Introduction

The City of Carlsbad's Industrial and Commercial program is intended to reduce industrial and commercial discharges of pollutants from the MS4 to the maximum extent practicable, and prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards. This section covers activities occurring from July 1, 2010 to June 30, 2011 under the Permit Order No. R9-2007-0001.

5.2 Fixed Industrial and Commercial Sites / Sources Element

5.2.1 Background

Storm water inspectors identify pollution sources, assess the potential threat to water quality, and require BMP implementation to eliminate pollution sources from industrial and commercial businesses. Major industrial types in Carlsbad include high technology, multimedia and biomedical businesses, electronics, golf apparel and equipment manufacturers and several light industry parks. Fixed commercial types in Carlsbad consist of restaurants, automobile maintenance, gas stations, golf courses, and resorts, among others. Many of these industrial and commercial sites and their activities have the potential to generate significant amounts of pollutants, if proper BMPs are not implemented.

5.2.2 Source Characterization

Each year hundreds of new businesses are established in Carlsbad. During this reporting period, the Storm Water Protection Program worked closely with the Finance Department to obtain information about new businesses, including activities, SIC codes and descriptions, business types, and contact names and numbers. The Storm Water Protection Program downloaded, sorted, mapped, and prioritized new businesses by SIC, business type and other criteria per Investigative Order No. R9-2007-0001.

These new businesses were screened, evaluated, prioritized, and then added to the inventory list and scheduled for inspection. In some cases information provided on business license applications was not correct and a pre-inspection evaluation was necessary. Pre-inspection evaluations helped determine if a business' activities were subject to storm water requirements. Two types of pre-inspection source evaluations were used:

1. Reviews: During the review process, the inspector evaluated the source and activity using relevant information from other City departments, databases, or licensing programs to determine whether the site/source should be inspected and tracked by the Storm Water Protection Program. A business could be excluded during the review process if it was found that their activities are not regulated by the City or General Permit. The most common reason businesses were excluded was because of an incorrect SIC code designation or they were not a high threat to water quality.
2. Telephone Contacts: If the review failed to provide enough information, the inspector contacted the business by phone to determine its status and scheduled an inspection if necessary.

After physical inspections, reviews, or telephone contacts, any changes to a business' priority or status were recorded on the Storm Water Inventory List and/or in the Permits Plus database. New businesses

were also found by referral from other agencies, field discovery, complaint investigations, or business directories.

The City's Commercial/Industrial inventory is located in Appendix 5.1 (Fixed) and 5.2 (Mobile). A map of the fixed facilities is located in Appendix 5.3.

As required by the permit, the following applicable fixed sites/sources are included in the inventory:

1. Commercial Sites/Sources:
    - Automobile repair, maintenance, fueling, or cleaning;
    - Airplane repair, maintenance, fueling, or cleaning;
    - Boat repair, maintenance, fueling, or cleaning;
    - Equipment repair, maintenance, fueling, or cleaning;
    - Automobile and other vehicle body repair or painting;
    - Automobile (or other vehicle) parking lots and storage facilities;
    - Retail or wholesale fueling;
    - Pest control services;
    - Eating or drinking establishments, including food markets;
    - Cement mixing or cutting;
    - Masonry;
    - Painting and coating;
    - Botanical or zoological gardens and exhibits;
    - Landscaping;
    - Nurseries and greenhouses;
    - Golf courses, parks and other recreational areas/facilities;
    - Cemeteries;
    - Marinas;
    - Portable sanitary services;
    - Building material retailers and storage;
    - Animal facilities

2. Industrial Sites/Sources:
    - Industrial Facilities, as defined at 40 CFR § 122.26(b)(14), including those subject to the General Industrial Permit or other individual NPDES permit;
    - Operating and closed landfills;
    - Facilities subject to SARA Title III; and
    - Hazardous waste treatment, disposal, storage and recovery facilities.

3. All other commercial or industrial sites/sources tributary to a CWA Section 303(d) impaired water body segment, where the site/source generates pollutants for which the water body segment is impaired.

4. All other commercial or industrial sites/sources within or directly adjacent to or discharging directly to coastal lagoons or other receiving waters within environmentally sensitive areas.

5. All other commercial or industrial sites/sources that the Copermittee determines may contribute a significant pollutant load to the MS4.

Potential threats to water quality at each commercial and industrial site/source were determined by evaluating a variety of site-specific factors including the criteria outlined in the Permit. Commercial and industrial facilities will continue to be reviewed annually and prioritizations will be reviewed and updated annually in conjunction with the watershed-based inventory to reflect any changes in industrial and commercial uses. Individual prioritization criteria are described below in further detail:

Prioritization Criteria: Prioritization for high threat sites and sources involved two steps: (1) initially classifying a facility as being a high threat to water quality based on site information; and (2) subsequently confirming or reclassifying the facility based on field observations and additional information. Initial classification of sites/sources was accomplished administratively using the data provided in the existing industrial and commercial inventory. The confirmation and/or reclassification, when necessary, were and will be completed following the initial inspection of each site/source. In addition to the minimum criteria listed above, the City also considered the following site/source attributes to evaluate the potential threat to water quality:

i. Type of activity (SIC code): Standard Industrial Classification (SIC) codes were used primarily to prioritize and identify specific commercial and industrial activities/sites that have the potential to contribute to storm water pollution. In addition, the NPDES General Industrial Permit (General Permit) defines specific SIC codes such that (1) coverage under the General Permit is mandatory (as defined in Categories ii, iii, vi, and viii of the General Industrial Permit) or (2) coverage under the General Permit is conditional, required only if material, machinery, or products are exposed to storm water (as defined in Category 10 of the General Permit). Industries not listed with an SIC code were directly contacted and assigned an appropriate code based on a description of business activities.
ii. Materials used at the facility: Materials, including hazardous materials, used at industrial and commercial sites have the potential to contribute significant pollutant loads to receiving waters if transported by storm water. These materials and associated activities were considered during the prioritization process.
iii. Wastes generated: If not properly disposed of, industrial and commercial wastes have the potential to degrade receiving waters when transported by storm water. Types of wastes generated or stored onsite were considered during the prioritization process. Industrial Waste Permits issued by Encina Wastewater Authority may also be examined.
iv. Pollutant discharge potential: When evaluating a commercial or industrial site/source's potential to discharge pollutants, the inspector took into account all material handling equipment or activities, raw materials, intermediate products, final products, waste material, by-products, or industrial machinery exposed to storm water.
v. Non-storm water discharges: Authorized non-storm water discharges can contribute to water quality degradation by transporting pollutants into receiving waters. Non-storm water discharges were evaluated to determine whether they were a significant source of pollutants and whether the discharges may continue to be exempted from the prohibitions of Section B.1 of the Permit.
vi. Size of facility: Size of the facility affects the amount of runoff and pollutant loads generated from the industry. The size of a facility was taken into consideration during the threat evaluation process.

vii. Proximity to receiving water bodies: The potential for pollutant transport to sensitive receiving water bodies was evaluated by determining the proximity and sensitivity of receiving water bodies using the ESA definitions from the Permit.

viii. Sensitivity of receiving water bodies: All facilities directly discharging to or within 200 feet of an ESA were considered high priority. This criterion will be reviewed in FY 2010-11, to ensure that all sites/sources within an ESA are included on the current business inventory.

ix. Whether the facility is subject to the General Industrial Permit or an individual NPDES permit: A listing of facilities located in Carlsbad that have filed a Notice of Intent (NOI) and are covered under the General Permit were classified as high priority threats to water quality.

x. Whether the facility has filed a No Exposure Certification/Notice of Non-Applicability: Those facilities that were identified as "Conditional" (NONA and NEC filers) were evaluated using the "prioritization flowchart" included in the Threat to Water Quality Procedure and prioritized accordingly.

xi. Facility design: The design of a facility, including whether structural BMPs has been installed and maintained, or there are outdoor activities, was considered during the threat to water quality evaluation process.

xii. Total area of the site, area of the site where industrial or commercial activities occur, percentage of pervious surface, and area of the site exposed to rainfall and runoff was considered during the Threat to Water Quality evaluation process.

xiii. The facility's compliance history: Inspectors reviewed the compliance history of each commercial and industrial site and considered any relevant enforcement actions in determining the threat potential on activities conducted onsite.

xiv. Any other relevant factors: The City reserved the authority to consider any other relevant factors specific to the facility to utilize in the prioritization process.

5.2.3 Best Management Practice Requirements

5.2.3.1 Pollution Prevention

Pollution prevention eliminates or reduces polluted storm water runoff. Specific pollution prevention procedures and management guidelines may vary from one industrial or commercial facility to another, and the City informed these facilities of pollution prevention opportunities during site inspections. Nevertheless, the following pollution prevention principles applied to most industrial and commercial facilities:

- Affirmative Procurement – Use alternative, safer, or recycled products.
- Redirect storm water flows away from areas of concern.
- Reduce use of water or use dry methods.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.
- Provide on-going employee training in pollution prevention.
- Regular maintenance of on-site BMPs.

5.2.3.2 Minimum BMPs

Described below are minimum BMPs required to be implemented, during this reporting period, by fixed commercial and industrial facilities, as applicable:

1. Good housekeeping

   Specifically fixed facilities are required to:

   - Protect materials and products that could potentially pollute storm water from rain, run-on, runoff, and wind dispersal by storing them indoors or covering them, and providing them with secondary containment as needed. For industries with conditional SIC codes, moving stored materials indoors may allow an exemption from the General Permit requirements.
   - Use dry cleanup methods (mops, brooms, rags or wire brushes to clean pavement, buildings and equipment as much as possible) instead of using water hose or pressure washing system to conduct washing or cleaning activities.
   - Sweep up around dumpsters and other areas to prevent trash and debris from accumulating. Dumpsters must be kept closed when not in use. All trash must be kept in appropriate sized containers until it can be hauled away. When inspecting solid waste collection areas, inspectors will note if recyclable materials (cardboard, green waste, etc.) are placed in dumpsters.

2. Preventive maintenance

   Preventive maintenance includes the regular inspection and maintenance of storm water structures (drains, catch basins, etc.) as well as other facility equipment and systems. Structures should be maintained in good working order and cleaned as needed to prevent discharge of pollutants into the storm water system. Facility equipment or systems should be properly maintained to prevent leaks or discharges of pollutants into the storm water system.

3. Material Storage and Handling

   This includes all procedures to minimize exposure of significant materials to storm water and to minimize the potential for spills and leaks from storage, loading, unloading and transfer of materials.

4. Employee training

   Appropriate personnel should be trained in good housekeeping, preventive maintenance, materials storage and handling, solid waste handling and recycling, and spill response as applicable to the facility. Records should be retained of employees attending storm water training sessions and the topics covered.

5. Solid waste (non-hazardous) handling and recycling

   This includes the procedures or processes to handle, store, or dispose of waste or recyclable materials. Waste disposal areas should be kept free of litter and debris and waste and recyclable receptacles must have a cover or lid to prevent the contents from being dispersed by the wind or coming in contact with storm water.

6. Spill response

   Spills and leaks can be a major contributor to storm water pollution. Facilities should identify potential locations and quantities of significant materials that may spill or leak, and should write and implement a response plan addressing spill containment, clean up and

notification procedures. Appropriate spill clean-up equipment should be readily accessible to trained spill response personnel.

7. Record keeping
   This includes the procedures to ensure that all records of inspections, spills, maintenance activities, corrective actions, visual observations, etc., are developed, retained, and provided, as necessary, to the appropriate facility personnel. Record keeping and internal reporting represent good operating practices as they increase the efficiency of the facility and the effectiveness of BMPs.

8. Self inspection/quality assurance
   This includes, in addition to the preventative maintenance inspections identified above, an inspection schedule of all potential pollutant sources. Tracking and follow-up procedures should be described to ensure adequate corrective actions are taken. Quality assurance includes the procedures to ensure that all elements of any required SWPPPs or monitoring plans are adequately conducted.

BMP information was made available during inspections, in printed materials and direct mailings, on the storm water website and hotline, during presentations and at outreach events. A listing of education and outreach events held during this reporting period can be found in Section 8 of this report.

5.2.3.3 BMP and Knowledge Assessment Tools

During this reporting period, the Storm Water Protection Program continued to use the *BMP and Knowledge Assessment* to measure knowledge of storm water issues and assess the implementation of BMPs onsite. The assessment tool rated a commercial operator and site using the following criteria:

Overall Knowledge Assessment:
Inspectors ranked personnel from 1-5 per the following *Knowledge Assessment* scale:

Level 1: Individual has never heard of the storm water program, requirements, or BMPs. This individual does not know what BMPs are or understand how to implement them.

Level 2: Individual has a general awareness of water quality issues, but does not understand the requirements of the storm water program, BMPs, or pollution prevention.

Level 3: Individual has a general understanding of storm water issues ("*I've heard something about that*"), but not specific storm water requirements or BMPs required for the facility.

Level 4: Individual has a clear understanding of BMPs but may not have a clear awareness of the connection between pollution prevention and water quality.

Level 5: Individual demonstrated an in-depth knowledge of the storm water program and BMPs consistent with the facility's activities and operations.

Overall BMP Assessment

Inspectors ranked the facility per the following 1-5 *BMP Assessment* scale:

Level 1: An illegal discharge was noted during the inspection. Enforcement actions such as a NOV and/or citation are required.

Level 2: BMPs have not been implemented. Several violations were noted during the inspection, however an illegal discharge was not observed. A detailed inspection report and/or written warning were issued.

Level 3: BMPs have been implemented throughout the site, but not properly or adequately maintained. Violations were noted during the inspection and a verbal warning was issued. A detailed inspection report or written Warning Notice may follow.

Level 4: BMPs implemented effectively, however minor violations associated with communal areas or good housekeeping practices (i.e., dumpsters open, leaves in the parking lot, etc.) were noted during the inspection.

Level 5: All BMPs implemented effectively. No violations noted during the inspection.

Table 5.1: HTTWQ Facilities Rated for Each Score – July 1, 2010 to June 30, 2011

Rating	Knowledge Assessment (raw score)	Knowledge Assessment (%)	BMP Implementation (raw score)	BMP Implementation (%)
1	7	2%	3	1%
2	69	19%	23	4%
3	100	27%	84	14%
4	91	25%	224	38%
5	101	27%	251	43%
TOTAL	368	100%	585	100%

Table 5.1 shows the number of instances in raw score and percentage that active HTTWQ businesses rated for each score, with 5 being the highest score possible. The number of *BMP Assessments* collected is usually higher than the number of *Knowledge Assessments* collected, because at some facilities, a company representative is not available to complete the *Knowledge Assessment*. BMP implementation results show that the City has been successful in ensuring that businesses implement BMPs throughout the sites at least 81% of the time during this reporting period. The City will continue to work with businesses to not only educate them about storm water issues, but also ensure BMPs are implemented and maintained.

5.2.4 Program Implementation

5.2.4.1 Inspections

The City conducted inspections at fixed Industrial and Commercial facilities to verify BMP implementation, Permit compliance, and municipal code compliance. Table 5.2 summarizes the inspections performed at active fixed Industrial and Commercial Businesses in FY 2010-11.

Table 5.2 Summary of Inspections Performed

	Total Number on Inventory	Number Inspected	Percentage of Total Inspected	In Compliance?
HTTWQ	585	585	100%	Yes
Not HTTWQ	12	1	1%	Yes
Total on Inventory	597	586	98%	Yes

The City conducted scheduled, unscheduled, follow-up, and compliance inspections at commercial and industrial sites/sources at the frequencies required by the Permit. During site visits, the inspector:

a. Reviewed the SWPPP or BMP implementation plans, if the site used or was required to use such a plan;
b. Reviewed facility monitoring data, if the site monitored its runoff
c. Checked for coverage under the General Industrial Permit (Notice of Intent (NOI), Waste Discharge Identification No., or No Exposure Certification), if applicable;
d. Assessed compliance with ordinances and permits related to urban runoff;
e. Assessed BMP implementation, maintenance and effectiveness;
f. Conducted visual observations for non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff; and
g. Evaluated education and training on storm water pollution prevention, as conditions warrant.

Copies of inspection reports and correspondence are maintained by the Storm Water Protection Program. No inspections were performed by a third party.

5.2.4.2 Enforcement

In cases where violations were noted and follow-up necessary, the City conducted follow-up inspections to determine compliance with corrective actions outlined in the inspection report or enforcement notices. When a storm water complaint was received about an industrial or commercial site/source or an illegal discharge was observed or suspected, the City conducted a storm water compliance inspection or investigation. If a significant and/or immediate threat to water quality was observed, appropriate actions were taken to require the responsible party to immediately cease the discharge and/or correct the situation. In judging the degree of severity, City inspectors also took into account any history of similar incidents or discharges. Table 5.3 includes a summary of businesses that received NOVs from July 1, 2010, to June 30, 2011.

Table 5.3: Summary of NOVs Issued during FY 2010-11

Business Name	SIC	Date of NOV	CMC Violations		Findings	Compliance Achieved
Ramada Inn & Suites	7011	7/28/10	15.12.050		Wash water discharged to storm drain	Yes
Casa de Bandini	5812	7/28/10	15.12.050		Grease spill to storm drain	Yes
Buca Di Beppo	5812	7/29/10	15.12.050		Soapy water dumped to storm drain	Yes
S.D. International Floral Trade Center		7/30/10	15.12.110		Did not correct previous violations outlined in a corrective action plan. Admin Citation issued for continued violations.	Yes
Nozomi #3	5812	8/4/10	15.12.080	6.08.030	Buckets of grease uncovered. Open grease bin. Materials not disposed of properly. Disposal area needs cleaning.	Yes
Lotus Thai Bistro	5812	8/4/10	15.12.080	6.08.030	Buckets of grease uncovered. Open grease bin. Materials not disposed of properly. Disposal area needs cleaning.	Yes
Senor Grubby's	5812	8/23/10	15.12.080 15.12.090		Private SD filled with water and greasy discharge. Sump pump not working, therefore did not discharge to City SD. Unusable materials stored indefinitely and debris around facility.	Yes
Coyote Bar and Grill	5812	8/24/10	15.12.050		Strip drain and area adjacent to building wet with wash water and food debris.	Yes
Alejandro's Mexican Food	5812	10/21/10	15.12.080	6.08.030	Grease bin caked with spills. Verbal warning issued in previous year.	Yes
SHAPELL HOMES (ROBERTSTON RANCH)	8181	12/22/10	15.12.050 15.12.080		Discharge of sediment to street and storm drain from significant rain event	Yes

Business Name	SIC	Date of NOV	CMC Violations		Findings	Compliance Achieved
Firestone Complete Auto Care	7538	1/10/11	15.12.080 15.12.110		Discolored water in a basin stored outdoors without cover. Unusable materials stored incorrectly. Failure to implement corrective actions.	Yes
Cessy's Taco Shop	5812	1/25/11	15.12.050 15.12.080		Wash water dumped to gutter.	Yes
NO FEAR INC	5136	2/15/11	15.12.050 15.12.081		EMPLOYEES HAD WASHED FLOOR RUGS BEHIND BUILDING ALLOWED WASH WATER TO ENTER STORM DRAIN	Yes
Carlsbad Muffler and Brakes	7533	3/1/11	15.12.050		Wash water dumped to storm drain.	Yes
S.D. International Floral Trade Center	6531	4/6/11	15.12.050		ID from dumping flower buckets in rear of building	Yes
Sheraton Carlsbad Resort & Spa	7011	6/9/11	15.12.050		Wash water flowing unabated to SD. Power washing parking lot.	Yes
Life Technologies		6/21/11	15.12.080		Leaking Trash Compactor. Poor housekeeping	Yes
Carlsbad Premium Outlets	6512	6/21/11	15.12.080 15.12.090	6.08.030 6.08.040 6.08.045	Evidence of leaking dumpsters. Grease spills not immediately cleaned up. Secondary containers impacted with grease and debris. Evidence of grease discharge to storm drains. Storm drains heavily impacted by grime and debris. SWPPP not implemented.	Yes

The Enforcement procedures outlined in the 2008 JURMP continued to be used by inspectors to identify, document, and respond to storm water violations.

For this reporting period, the Storm Water Protection Program had three full-time Environmental Specialists and one part-time intern. Environmental Specialists are continually trained on code enforcement, inspection procedures, applicable laws and regulations, and investigation techniques. These training courses, in addition to the Enforcement Response Plan, helped the Storm Water Protection Program appropriately identify and respond to storm water violations. The City took a total of 41 enforcement actions against industrial and commercial businesses during FY 2010-11. The types and numbers of enforcement actions for fixed industrial/commercial businesses are listed in Table 5.4.

Table 5.4 Enforcement Actions during FY 2010-11

Action	Total
Verbal Warning	22
Written Warning	0
Notice of Violation	18
Notice to Clean	0
Cease and Desist Order	0
Administrative Citation	1
TOTAL	**41**

During inspections and investigations completed during this reporting period, there were 15 illegal discharges found and eliminated at fixed businesses. All of the discharges were transient sources as shown in Table 5.3 and there was no evidence of the discharges reaching a receiving water during the inspection.

5.2.4.3 Third Party Inspections

There were no third party inspections conducted on any industrial or commercial facilities during FY 2010-11.

5.2.4.4 Industrial Non-Filers

The City takes the following steps to identify non-filers under the General Industrial Permit

- <u>During the threat to water quality prioritization</u>
  - <u>Facilities were checked for whether they are subject to the General Industrial Permit or an individual NPDES permit</u>: A listing of facilities located in Carlsbad that have filed a Notice of Intent (NOI) and are covered under the General Permit were classified as high priority threats to water quality.
- During inspection of high threat to water quality facilities:
  - The city Checked for coverage under the General Industrial Permit (Notice of Intent (NOI), Waste Discharge Identification No., or No Exposure Certification), if applicable;

In FY 2010-11 the City identified Life Technologies as a potential non-filer under the general industrial permit and provided applicable information to the facility.

5.3 Mobile Sources Element

5.3.1 Background

The City has participated in the development of a Regional Mobile Outreach and Education Strategy. The City will work with the Copermittees to ensure the implementation and success of this strategy. A copy of the *Regional Mobile Outreach and Education Strategy*, which includes a discussion of Carlsbad's jurisdictional efforts, can be found in the City's JURMP.

5.3.2 Source Characterization

A large percentage of businesses on the industrial and commercial inventories are mobile businesses, which include carpet cleaning, power washing, etc. Because site inspections are not required for mobile businesses, many were reviewed by City inspectors. During the review process the inspector evaluated a commercial business using any relevant information available in other City departments, databases, or licensing programs. A business could be excluded during a review if it was found that their activities were not regulated by the City or Permit. The most common reason businesses were excluded during the review process was because of an incorrect SIC code designation.

Telephone surveys continued to be used to determine the status of certain types of mobile businesses on the inventory. In most cases, this screening procedure determined that the wrong SIC code had been applied during the business license application process.

5.3.3 Best Management Practice Requirements

Implementing BMPs is a priority for all mobile businesses. Dry cleanup methods, diverting wash water, and covering or blocking drains are all required practices. The regional Industrial/Commercial Workgroup finalized a list of minimum BMPs that must be used by all mobile businesses in the region. Mobile facilities are notified of the requirements through mailings or onsite investigations/inspections.

5.3.4 Program Implementation

Inspections of mobile businesses were conducted based on complaints and field discovery of non-compliance. Upon arrival onsite to investigate a complaint of non-compliance, City staff conducted the following activities:

- Requested stop work if discharge was entering or had potential to enter the MS4 system.
- Requested to speak to the manager of the responsible party or property owner as necessary.
- Took photos and made observations.
- Educated the responsible party or person onsite as necessary regarding the City's NPDES permit, Federal and State requirements, Carlsbad Municipal Code (CMC), and required BMPs in order to continue work.
- Enforced the CMC as necessary.
- Followed up with documentation in Permits Plus Database and with written correspondence to the responsible party with a CC to the property owner.

In FY 2010-11 there were 18 storm water violations by mobile businesses. Table 5.5 summarizes the enforcement actions on mobile sources.

Table 5.5 Enforcement Actions on Mobile Sources

Action	Total
Informational Letter	6
Verbal Warning	5
Written Warning	
Notice of Violation	7
Notice to Clean	0
Cease and Desist Order	0
Administrative Citation	0
TOTAL	18

5.4 Notable Activities

As mentioned in the Executive Summary, the City considers a Notable Activity to be any activity above compliance requirements.

There were no Notable Activities for the Industrial and Commercial Program during FY 2010-11.

Section 6

6.0 RESIDENTIAL COMPONENT

#

6.1 Introduction

This section describes the activities of the City for the reporting period for FY 2010-11 with respect to implementation of the Residential Component of the JURMP. The program is intended to: (1) reduce residential discharges of pollutants from the MS4 to the maximum extent practicable, and; (2) prevent residential discharges from the MS4 from causing or contributing to a violation of water quality standards.

6.2 Source Characterization

In accordance with Order No. R9-2007-0001 and the City's JURMP, the City focused on all the high priority activities and areas outlined in the JURMP (March 2008). Since writing the JURMP, no amendments were made to source characterization or areas of focus.

6.3 Best Management Practice Requirements

In accordance with the City's JURMP, required BMPs were implemented in residential areas in compliance with the permit. The minimum BMPs addressing residential activities and areas, as detailed in various outreach materials, are the following:

- Residential auto repair, maintenance, washing and parking. Leaking vehicles must be parked in the residential driveway with BMPs in place to prevent oil and other liquids from leaking onto the street. No leaking vehicles can be parked on the street or right-of-way. No automotive repairs are permitted to be conducted in the street or right-of-way. Residents are allowed to wash vehicles in the driveway, and are encouraged to use soap sparingly, and to divert wash water to landscaping.
- Home and garden care activities and product use. Decrease the use of lawn and garden care products such as pesticides, weed killers and chemical fertilizers. Consider using non-toxic pest control methods. Avoid over-irrigation which washes these chemicals into the storm drain system. Avoid applying fertilizers and pesticides 3-5 days before any predicted rain event.
- Disposal of trash. All trash must be kept in appropriate sized containers until it can be hauled away. Frequently dispose of grass, debris, leaves, and other waste materials. Composting green waste is encouraged.
- Recycle, Reduce and Reuse. Recycle cans, bottles, paper and cardboard whenever possible.
- Disposal of pet waste. Clean up after pets. Use a bag to pick up waste when walking pets. Flush pet waste down the toilet or dispose of in a sealed plastic bag and deposit in the trash.
- Disposal of household hazardous waste. Residents are encouraged to properly dispose of household hazardous waste through the city's household hazardous waste pickup and disposal program.
- Move or cover potential pollution sources from storm water contact. Protect materials that could potentially contribute to storm water pollution by storing them indoors or covering them.
- Use dry cleanup methods. Instead of washing or hosing, use dry cleanup methods such as mops, brooms, rags or wire brushes to clean surfaces.

6.4 Program Implementation

The residential component of Carlsbad's Storm Water Program continued to address residential activities and pollutants through the implementation of outreach and education on proper BMPs, the household hazardous waste program and complaint investigations.

6.4.1 Regional Residential Education Program

The City of Carlsbad continued to participate in the regional workgroup targeting residential areas. Notable activities during this fiscal year include participation at the Hi-Tech High Fair in February 2011 and at the San Diego County EnviroFair during June 2011, PSA distribution at UltraStar cinemas, and continued development of the regional brand Think Blue San Diego Region.

6.4.2 BMP Implementation

During FY 2010-11 the City continued to implement its residential program aimed at reducing contaminants in urban runoff originating from residential areas and activities. BMP information was made available to residents via the following:

- Storm water website and hotline
- Outreach events
- Direct mailings
- During investigations of suspected storm water violations.

Outreach and Education activities for FY 2010-11 are further detailed in Section 8 of this report. Discussion of investigations and enforcement actions for residential areas and activities are discussed in Section 6.4.5 and Section 7 of this report.

Mass Media, Website and Hotline

A Public Service Announcement titled "Ants in Your Plants" that was developed through the regional outreach education workgroup Think Blue San Diego is now on the city's local television channel. The PSA discusses the use of pesticides and insecticides and storm water pollution, and displays the Storm Water Hotline telephone number and email at the end, encouraging residents to report illegal discharges to the storm drain system.

Information about water conservation, trash management, and storm water is located on the Environmental Programs web page accessed through the city's updated website at www.carlsbadca.gov. During FY 2010-11 there were a total 39,035 visits to the Environmental Programs site, with 1,160 visits to the Storm Water web pages.

The Environmental Programs and Storm Water hotlines provided information about storm water, trash, and water conservation for the public. The hotline was answered by the Storm Water Protection Program during business hours and provided a detailed voice message with information on reporting violations to a duty phone after hours.

Outreach Events

The City hosted or participated in several public events, which provided opportunities for residents to learn about pollution prevention and storm water BMPs. During these events residents had the opportunity to pick up printed materials, and to speak directly to storm water representatives. See Table 6.1 for a summary of outreach events occurring during FY 2010-11.

Table 6.1: Outreach Events for Residential Community (FY 2010-11)

Date	Event	Type	Audience	Attendance
09/25/2010	Beach Cleanup - California Coastal Cleanup Day	Event	Residents	102
01/01/2011	Storm Water Calendar in Spanish distribution	Outreach	Spanish-speaking residents	200
02/09/2011	High Tech Fair	Event	middle/high school students	2407
03/26/2011	Kids Day at the Flower Fields	Event	Residents	7000
04/30/2011	Household Hazardous Waste	Event	Residents	360
06/04/2011	Beach Fest	Event	Residents	3500

Direct Mailings

Table 6.2 outlines several direct mailings that were sent to Carlsbad Residents during FY 2010-11. Examples of the mailings can be found in Appendix 6.1, 6.2, 6.3, and 6.4.

Table 6.2: Direct Mailings for Residential Community (FY 2010-11)

Date	Type	Topic	Audience
Varies	Environmental Programs Guide	Solid Waste, Storm Water BMPS	All New Trash Customers
August 2010	Carlsbad Currents newsletter	Coastal Cleanup Day	All residents
September 2010	residential mailer	Storm Water BMPs	645 residents
October 2010	Carlsbad Currents newsletter	Household Haz. Waste/Used Oil	All residents
January 2011	Informational Letter	Storm Water BMPs	260
February 2011	Carlsbad Currents newsletter	Storm Water BMPs	All residents
March 2011	Utility Bill Message	Household Haz. Waste	All residents
June 2011	Carlsbad Currents newsletter	Pool BMPs	All residents

The "Environmental Programs Guide" was sent to all new customers requesting trash service during FY 2010-11. This publication offers information about proper disposal of many types of waste including trash, recycling, and household hazardous waste (HHW). Information also included ways to conserve water and how to protect Carlsbad water quality by preventing storm water pollution.

An informational letter was sent to a total of 645 residences, as part of monitoring investigations in residential areas where inspectors found multiple possible sources of storm water pollution. Issues addressed included erosion control, irrigation runoff, proper landscape and garden care and proper storm water BMPs. A copy of this letter can be found in Appendix 6.5.

Printed Materials

The residential storm water brochure was updated during this fiscal year. A copy of this brochure is

available in Appendix 6.6. Written materials were also distributed to residents through complaint investigations, outreach events and informational mailers. These materials included brochures and fact sheets on various residential activities and pollutants and appropriate BMPs.

Promotional Items

The Storm Water Protection Program distributed various promotional items with the storm water hotline and pollution prevention messages, such as crayons and coloring books, pencils, funnels for automotive oil and stickers. All items carried program contact information and environmental messages. In addition, numerous copies of "All the Way to the Ocean," a book illustrating storm water pollution, were raffled off at several outreach events.

6.4.3 HHW, Used Oil, Bulky Items, and Environmental Programs Hotline

The City continued to operate the Household Hazardous Waste (HHW) and used oil recycling program outlined in the JURMP.

On April 30, 2011, the City sponsored a free HHW disposal day during which Carlsbad residents could dispose of up to 15 gallons or 125 pounds of HHW materials. The City collected and disposed of 27,628 pounds of HHW during this event. Table 6.3 shows the types and quantities of HHW collected.

Table 6.3: Items Collected During April 30, 2011 HHW Event

Type of Material	Weight In Pounds
1. Flammable & Poison	10,600
2. Acid	200
3. Base	1,000
4. Oxidizer	0
5. PCB-containing	0
6. Reclaimable	10,850
7. Asbestos	0
8. Universal Waste	2,858
9. Other	2,120
Grand Total	**27,628**

Carlsbad residents may dispose of two large bulky household items at no charge five times per year. In FY 2010-11 bulky item pick-up days were August 28, 2010, November 20, 2010, January 29, 2011, March 19, 2011 and June 25, 2011.

Residents used the Solid Waste hotline and e-mail address to request information about the HHW program, trash, and recycling.

6.4.4 Oversight of Residential Areas

The Water Conservation Specialist continued to conduct patrols of different residential areas within the City. Evidence of excess runoff from irrigation was investigated on a case-by-case basis. Door hangers were left and a follow-up phone call or a site visit conducted to evaluate irrigation systems.

6.4.5 Enforcement in Residential Areas

Storm Water staff handled all residential complaints and subsequent enforcement actions in accordance with the City's existing procedures and Carlsbad Municipal Code. Each reported and observed violation was documented using the RFA database.

During FY 2010-11, the Storm Water Protection Program received 119 storm water related complaints. Of those complaints, 62 occurred in residential areas, with 17 of those complaints involving mobile business and/or sources. Of the 28 complaint investigations conducted in residential areas from residential pollutant sources, one complaint was not found, and two did not have an issue or violation. Three complaints were referred for action, meaning that the investigation or resolution of the issue was not covered by the Storm Water Protection Program's jurisdiction. Examples included wastewater discharge or cleanup of street or storm drain. Of the remaining 22 complaints investigated, inspectors issued 10 informational letters, eight verbal notices and five notices of violation. Table 6.4 and Figure 6.1 show a summary of residential enforcement actions. A summary of all complaints responded to can be found in Section 7, to be submitted in December 2011.

Table 6.4: Summary of Residential Enforcement Actions FY 2010-11

Enforcement Action	Number
Informational Letter	10
Verbal Warning	8
Notice of Violation	5
Total	**23**

Figure 6.1: Residential Complaint Types FY 2010-11

6.5 Notable Activities

As mentioned in the Executive Summary, the City considers a notable activity to be any activity above compliance requirements.

Notable activities for FY 2010-11 include:

- An informational letter was sent to 645 households that addressed storm water pollution issues in the neighborhood, in response to monitoring investigations.
- There was increased use of the website and mass media, with the launch of a PSA on the city TV channel and continuous updates of the city's website.

Section 7

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION (IDDE)

The City's Illicit Discharge Detection and Elimination (IDDE) will be submitted in December 2011 as approved by the Regional Board in Addendum 2, Order 2007-0001.

Appendix 8

8.0 OUTREACH AND EDUCATION COMPONENT

8.1 Introduction

Outreach and education are fundamental to the success of Carlsbad's urban runoff management program. The city continues to increase awareness about pollution prevention and promote behavioral changes and environmental stewardship. The Storm Water Protection Program collaborated locally and regionally to ensure outreach efforts and messages for storm water pollution prevention were consistent. The city continues to be actively involved in outreach and education efforts at the local level, the watershed level, and the regional level (Project Clean Water – Outreach Workgroup). These efforts are further discussed in the following subsections by target audience.

8.2 Staff Training Element

Storm water training for municipal employees included general training and job specific training for designated departments and personnel. The objectives of the employee training programs are as follows:

- Promote a clear understanding of the urban runoff and water quality issues, including activities that can potentially pollute receiving water bodies.
- Identify and implement BMPs.
- Promote employee understanding and response.
- Integrate employee feedback into training and BMP implementation.

8.2.1 General Employee Training

During FY 2010-11, city employees received storm water training covering issues such as the causes of storm water pollution, how it affects the environment, and the overall structure of the storm water program. Messages may include, where applicable, the topics listed in the Permit. City staff received information and general storm water training through various communication methods including:

1. Storm Water Web Page: Employees were able to download BMP brochures and the JURMP directly from the city's website.
2. Intranet: The city's intranet was used to post messages and inform employees of various events and opportunities for participation, such as the Coastal Cleanup Day and Earth Day activities.
3. Employee Outreach: During FY 2010-11 the Carlsbad Currents newsletter was issued to all employees. Car window decals and notepads with the storm water hotline were available for employee use in the field.
4. First Mondays: During FY 2010-11, all new employees attended an orientation training called First Mondays. The training session included general information about the city, as well as NPDES regulations, the city's JURMP and Storm Water Pollution Prevention BMPs applicable to municipal personnel.

8.2.2 Job Specific Training

General, Development Planning, Construction and Environmental Management employees and relevant contractors are trained annually on Storm Water laws and regulations, BMPs, Runoff Concepts and other Storm Water related topics. See Appendix 8.1 for further details.

8.2.3 Storm Water Committee

The Storm Water Committee continued to meet on a regular basis to discuss storm water BMPs, activities for staff, coordinate inspections, compliance activities, documentation and reporting.

8.2.4 Storm Water Leadership Team

In FY 2010-11, the City of Carlsbad's City Manager continued the Storm Water Leadership Team (SWLT). Periodic meetings of the SWLT were conducted and attendees included Senior Management of the city's major service areas and Directors. Agenda items covered areas of the city's compliance with Order No. R9-2007-0001.

8.2.5 Utility Coordinating Committee Meeting

Engineering and Construction Management and Inspection (CMI) staff attended the bi-monthly Utility Coordinating Committee meetings with various utility agencies (SDGE, Cox Cable, ATT, etc.) throughout North County to discuss ongoing and upcoming projects that impact utilities in Carlsbad. As a standing agenda item, storm water and NPDES compliance are discussed at each meeting to ensure outside agencies understand their role in pollution prevention.

8.2.6 Special Events Committee

Construction Management and Inspection (CMI) staff and Utilities staff attended the monthly Special Events Committee meeting to coordinate upcoming event operations and activities. As a standing agenda item, storm water and NPDES compliance were discussed at each meeting to ensure staff understand their role in pollution prevention.

8.2.7 Other Committees and Meetings

During the reporting period, the city continued to participate in the regional outreach education workgroup meetings, held every other month. The city has participated and will continue to participate in these meetings that include but are not limited to: Technical Advisory Committee (TAC) and Development, Reporting and Assessment and watershed management meetings.

During this reporting period, there have been several regional meetings that the City has attended with other Copermittees. The Development Services Division has participated and will continue to participate in these meetings that include but are not limited to: the land development workgroup, the HMP technical advisory committee, and the reporting and assessment Workgroup.

During FY 2010-11, the City continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of

maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance. As a result of these meetings, the City will establish a Storm Drain Inventory Management Committee that will meet quarterly to discuss issues related to storm drain maintenance, treatment control BMP inventory, GIS mapping, and other topics related to tracking and managing structures within the cities storm drain conveyance system.

8.3 Educational Outreach Element

8.3.1 New Development and Construction Communities

The city continued to educate the new development and construction communities throughout FY 2010-11. CMI staff worked with new contractors, homeowners, developers, and others in the construction industry during inspections and investigations to identify storm water compliance issues, detail corrective actions and assess the appropriateness of BMPs. CMI continues to require pre-construction meetings with contractors and developers prior to the issuance of a new grading permit. The process is initiated when the contractor/developer requests a pre-construction meeting with City inspectors. During the pre-construction meetings, the contractor/developer is notified of the City's NPDES requirements and compliance efforts. In addition, the Pre-Construction Meeting Agenda Packet was revised to state that occupancy will not be granted until the engineer of work provides a letter verifying that all treatment control BMPs have been installed according to the plans and SWMP. Each contractor/developer is provided with a copy of the agenda packet during the pre-construction meeting.

Development and Planning Services provided information and education to applicants and developers during one-on-one or small group meetings, inspections, complaint investigations, and during pre-construction meetings. They also provided sample SWPPPs and SWMPs for engineers, developers, and applicants to use as guides when preparing documents for proposed development projects. Copies of these documents and the SUSMP are available at the city's permits counter. The SUSMP is also available through the city's website.

On April 6, 2011, City staff attended the "Maintaining LID in San Diego: Best Management Practice Inspection and Maintenance Workshop" held in San Diego. The workshop was hosted by the City of San Diego and included up-to-date information about new and proposed LID regulations, storm water management devices including treatment control BMPs, inspection and maintenance requirements, and design and implementation strategies for minimizing BMP maintenance requirements.

Outreach handouts designed to assist developers, contractors, and private property owners in understanding and complying with the new annual treatment control BMP verification program continued to be used throughout FY 2010-11. These include the "*What You Need to Know about Privately Owned Treatment Control BMPs*" brochure, "*Frequently Asked Questions About Treatment Control BMPs*" factsheet and the "*TCBMP Verification Form and Instructions*" handout.

In addition, the City continued to use the email address developed in FY 2007-08 for the treatment control BMP verification program. Owners and responsible parties can send questions, verification forms, and other requests to the tcbmp@carlsbadca.gov email address, which is monitored by the Senior Construction Inspector. The City has also developed an email address list for TCBMP responsible

parties. The email mailing list has been useful in providing immediate information about treatment control BMP compliance and other educational information.

The City modified its inspection process to require documentation on BMP installations prior to occupancy. Annually the City mails a memorandum to all developers and contractors working in the City educating them on the BMP installation prior to occupancy requirement. On May 2, 2011, an updated memorandum was sent to all developers and contractors with active grading permits informing them of the prior to occupancy verification procedure. A copy of the "*BMP Verification of Installation Required Prior to Occupancy*" memorandum can be found in Appendix 2.9.

8.3.2 Construction Site Owners and Developers

The greatest strength of Carlsbad's efforts to educate construction site owners and developers is its motivated and well-informed project review and inspection staff. The project review and CMI inspection staff holds staff meetings where issues of storm water requirements are discussed including issues of new regulatory requirements, new and evolving BMP standards, updates from training seminars, inventory collection and reporting, LID application in new development design and BMP effectiveness (a list of the Land Development Engineering staff training meetings is included in Appendix 8.1).

Prior to the wet season, CMI inspectors hand delivered a memo to all site superintendents reminding them of the NPDES requirements and informing them to ensure all sites are in compliance by and throughout the wet season. A copy of the *Rainy Season Preparation and Storm Water Compliance* memorandum, issued on September 1, 2010, can be found in Appendix 3.4.

During FY 2010-11, the City developed a brochure on low impact development (LID). The LID brochure is a tool to educate developers, contractors and homeowners regarding different types of LID features on a typical project. The brochure includes different LID features, what their purpose is, and where it could be employed on a project site. Refer to Appendix 2.1 for a copy of the LID brochure.

In November 2010, CMI staff attended the annual CASQA conference in Palm Springs, CA. This year the conference theme was "Rethinking Storm Water Management". The conference featured over 80 sessions and presentations covering a variety of topics including the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Storm Water Treatment, and other related topics.

The City of Carlsbad is committed to working with developers and contractors to ensure that BMPs are implemented at all construction sites. The "*Pollution Prevention Guide for the Construction Industry*" brochure continued to be distributed at pre-construction meetings. In addition, storm water and NPDES compliance were a part of the regular agenda for each of the meetings. Pre-construction meetings are required for all new development, CIP, and major construction projects in Carlsbad.

The Storm Water Protection Program also continued to distribute the "*Pollution Prevention Guide for the Construction Industry*" brochure. This brochure was developed to provide BMP and pollution prevention information related to materials storage, perimeter controls, building and staging areas, dumpsters and port-a-potty services, tracking controls, concrete trucks and pumpers, washout areas, dirt and grading, earthmoving equipment, and storm drain protection. The brochure was distributed to commercial businesses that conduct small remodeling or home improvement projects.

The city continued to conduct and participate in workshops to educate external parties, which include project applicants, developers, contractors, and property owners on the implementation of the storm water program and requirements for construction sites.

8.3.3 Commercial and Industrial Owners and Operators

The city continued to educate commercial and industrial owners and operators through various methods. This included the distribution of printed materials, participation at workshops, presentations to business community groups, direct mailings, inspections and site visits. Accomplishments are detailed below.

1. Printed Material

During FY 2010-11, several printed materials were sent to industrial and commercial facilities in Carlsbad. The "*Best Management Practices for Mobile Service Providers*" brochure continued to be provided to residents and mobile business operators during complaint investigations related to mobile service provider discharges. The "*Best Management Practices for Businesses – Commercial and Industrial*" brochure was distributed to businesses during inspections and by direct mail. The industrial commercial facility brochure was updated during this fiscal year and will be distributed next fiscal year. Various Storm Water Protection Program brochures continued to be stocked at city kiosks and display racks.

In addition, 71 rainy season mailers for industrial and commercial sites were sent out prior to the beginning of the rainy season. Table 8.1 cites the publication and the number. A copy of the mailer can be found in Appendix 8.2.

2. Website and Hotline

The website and hotline are listed on all printed materials distributed by the city. The city launched an updated website in October 2009. During this fiscal year, there were 39,035 and 1,160 visits to the Environmental Programs and Storm Water web pages, respectively. All brochures also continued to be available through the city website.

The storm water hotline continued to be used to request information and report violations.

3. Inspections and Site Visits

City inspectors worked with businesses, construction sites, and special event promoters during inspections and investigations to educate, identify storm water compliance issues, detail corrective actions, and assess the appropriateness of BMPs.

4. Workshops

The City conducted a workshop on May 19, 2011, for the automotive industry. Nine representatives from various dealerships, service facilities and repair shops attended the hour-long workshop on storm water pollution and appropriate BMPs. In addition, two representatives who were unable to attend received a copy of the presentation via email.

8.3.4 Quasi-Government Agencies/Districts (i.e. Educational Institutions, Water Districts, Sanitation Districts, etc.)

The city continued to educate these communities during this reporting period through the distribution of printed materials in person and through the mail, as well as through website postings.

The city meets bi-monthly with agencies within the Carlsbad jurisdiction to discuss construction projects that impact various utility operations. As a standing item on the Utility Coordination Committee Meeting agenda, storm water and NPDES are discussed to ensure other agencies that work in Carlsbad understand the requirements of the Permit, JURMP, and CMC.

During this reporting period, the city inspected seven water and sanitation facilities as part of the industrial inspection program. Educational information was provided during the inspections, as well as in written inspection reports.

8.3.5 Residential Community, General Public, and School Children

Carlsbad continued its ongoing outreach to the residential community, school children, and the general public during this reporting period. This included the development and distribution of printed materials, public outreach events, presentations, published articles, videos, website access, and direct interaction with the public. Carlsbad actively pursued a comprehensive environmental education and outreach program, combining the activities of storm water, solid waste and water conservation under the umbrella of Environmental Programs. The purpose was to create a unified message, better educate the public, and allow easy access to information. These accomplishments are described below, and in Section 6 in more detail.

1. <u>Printed Material</u>

Since the spring of 2006, the City of Carlsbad has been offering a door-to-door Household Hazardous Waste(HHW) collection program. Residents gather their HHW and call for an appointment to have these items collected and disposed of properly. The city created a new Household Hazardous Waste brochure during this reporting period. This brochure contains information related to household hazardous waste, bulky item, electronic waste, and composting programs offered to Carlsbad residents. Staff has distributed this brochure at a Citizen's Academy, Beach Fest, and the annual Household Hazardous Waste collection event.

A storm water informational advertisement was placed in the Jazz in the Parks guide distributed during this summer's event. A copy of the ad can be found in Appendix 6.1.

Most of the storm water protection printed materials were available for download from the city's website and Environmental Programs website. There were 39,035 and 1,160 visits to the Environmental Programs and Storm Water web pages, respectively, during this reporting period.

Various Storm Water Protection Program brochures continued to be stocked at city kiosks and display racks.

2. <u>Direct Mailings</u>

"*Carlsbad Currents*", a newsletter on city issues and activities, was mailed to all residents four times

during FY 2010-11. The newsletter informs residents of environmental issues in Carlsbad, services provided by the city, tips on how to protect the environment, including storm water BMPs, and a calendar of important environmental dates (household hazardous waste disposal, bulky item pick up, etc.). Table 8.2 lists all direct mailings sent during FY 2010-11. Examples of the newsletter can be found in Appendices 6.2, 6.3 and 6.4.

Table 8.1 Direct Mailings

Date	Type	Topic	Audience
Varies	Environmental Programs Guide	Solid Waste, Storm Water BMPS	All New Trash Customers
August 2010	Carlsbad Currents newsletter	Coastal Cleanup Day	All residents
September 2010	Residential mailer	Storm Water BMPs	645 residents
October 2010	Carlsbad Currents newsletter	Household Haz. Waste/Used Oil	All residents
October 2010	Informational Letter	Rainy Season Preparations	71 businesses
January 2011	Informational Letter	Storm Water BMPs	260
February 2011	Carlsbad Currents newsletter	Storm Water BMPs	All residents
March 2011	Utility Bill Message	Household Haz. Waste	All residents
June 2011	Carlsbad Currents newsletter	Pool BMPs	All residents

The "Environmental Programs Guide" was sent to all new customers requesting trash service. This publication offers information about proper disposal of many types of waste including trash, recycling, and household hazardous waste (HHW). Information also included ways to conserve water and how to protect Carlsbad water quality by preventing storm water pollution.

3. Underserved Target Audiences, High Risk Behaviors, and "Allowable Behaviors and Discharges"

During this reporting period, the City of Carlsbad offered several brochures in the Spanish language, providing important information on Automotive Service and Repair Shops, Lawn and Garden Care and Restaurants. These brochures were developed to raise awareness in the Spanish-speaking community about the difference between storm water conveyance systems and sanitary sewer systems, the connection of storm drains to local waterways, and common residential sources of urban runoff. The brochures include BMPs, the city's logo, website address and the city's storm water phone number. These materials are available at various city facilities, through public events and the city's storm water web page.

Staff continued to collaborate with the Regional Education and Residential Sources workgroup focusing on the development of outreach and education materials targeting underserved target audiences. A 2011 calendar in Spanish was developed and 200 copies were distributed at the Housing and Neighborhood Services building, Library Learning Center and Dove Library.

4. Classroom Education

During this reporting period, the Solana Center for Environmental Innovation (Solana Center) continued to conduct the storm water education program for school children in the city. The Solana Center used the *EnviroScape* interactive model to teach students about watershed stewardship and pollution prevention. Outreach materials and workbooks were provided to the students and teachers. Storm water fliers announcing the free presentations were distributed to teachers.

Each classroom was given a watershed poster, handouts on ten simple ways to help protect the ocean, sponges, pencils and stickers. Each school received a book titled "All the Way to the Ocean," illustrating storm water pollution.

In addition, quizzes on watershed and storm drain systems were distributed before and after presentations. Table 8.3 lists all of the schools and the number of classrooms and students that attended the watershed classroom presentation during this reporting period.

Table 8.2 Carlsbad Elementary Schools Watershed Awareness Programs

Date	Elementary School	Number of Students
10/13/2010	Buena Vista Elementary	45
10/26/2010	Calavera Hills Elementary	72
10/27/2010	Calavera Hills Elementary	49

3/1/2011 3/8/2011 3/9/2011	Pacific Rim Elementary	144
4/18/2011 4/19/2011	La Costa Meadows Elementary	107
5/3/2011	Aviara Oaks Elementary	19
	Total	**1058**

City Stuff is an outreach program that evolved through a partnership between the City of Carlsbad and the Junior Achievement program. The program reaches over 50 third-grade classrooms in Carlsbad (across district lines) and information filters home to the parents/residents. Students learn how cities are planned, operated, and what services are offered. They also learn about important businesses in a city. Out of the six lessons taught, three of the lessons are Carlsbad specific, and one lesson is focused on municipal programs, including reference to Storm Water Pollution Prevention.

5. Website and Hotline

Most of the printed materials were available for download from the city's website and Environmental Programs website. There were 39,035 and 1,160 visits to the Environmental Programs and Storm Water web pages, respectively. Monthly tips were regularly updated on the city's website with storm water pollution prevention tips. When calls are queued on the storm water hotline, a continuous on-hold message provides residents with information about events in the city. Staff used the information line to inform residents of the Environmental Programs web page, telephone number, upcoming outreach events, city services, Bulky Item Collection Day, and HHW collection facilities.

6. Mass Media

A Public Service Announcement titled "Ants in Your Plants" developed through the regional outreach education workgroup Think Blue San Diego, is now on the city's local television channel. The PSA discusses the use of pesticides and insecticides and storm water pollution, and displays the Storm Water Hotline telephone number and email at the end, encouraging residents to report illegal discharges to the storm drain system.

7. Kiosks/Display Racks

Various Storm Water Protection Program brochures continued to be stocked at city kiosks and display racks.

8. Targeted Neighborhood Outreach Campaign

Table 8.4 summarizes outreach conducted to specific neighborhoods. A mailer was sent to 645 households during FY 2010-11 addressing residential storm water BMPs and proper pollution prevention.

Table 8.3 Targeted Neighborhood Education

Date	Number of Homes	Information Distributed
September 2010	645	Residential Storm Water BMPs

9. Prompts and Promotional items

Pencils, stickers and pet waste bag dispensers were purchased this fiscal year to distribute at all city events. In addition, copies of a children's book titled *All the Way to the Ocean* were purchased and raffled off at city events.

10. Public Events

The city hosted or participated in several public events, which provided opportunities for residents, school children, and the general public to learn about storm water pollution prevention. During most of these events, a staffed booth was set up, and residents and children had the opportunity to pick up printed materials, view an *EnviroScape* model demonstration, and speak directly with city storm water representatives. Table 8.5 includes a summary of these public events for FY 2010-11.

Table 8.4 Outreach Events for Residents, General Public, and School Children

Date	Event	Type	Audience	Attendance
09/25/2010	Beach Cleanup - California Coastal Cleanup Day	Event	Residents	102
01/01/2011	Storm Water Calendar in Spanish distribution	Outreach	Spanish-speaking residents	200
02/09/2011	High Tech Fair	Event	middle/high school students	2407
03/26/2011	Kids Day at the Flower Fields	Event	Residents	7000
04/30/2011	Household Hazardous Waste	Event	Residents	360
06/04/2011	Beach Fest	Event	Residents	3500

11. Direct Interactions

Residents were also educated about pollution prevention and BMPs during complaint investigations. During complaint investigations, city inspectors met with residents whenever possible to explain storm water regulations and pollution prevention. When a resident was not available, a door hanger and other outreach materials were left to provide information about the reported discharge, or follow-up informational letters were sent to homeowners and/or contractors after an investigation. These correspondences included brochures and fact sheets about storm water. Additional information on residential outreach and education is provided in Section 6.

Section 9

9.0 PUBLIC PARTICIPATION

9.1 Introduction

This section describes the activities of the City for the FY 2010-11 reporting period with respect to the implementation of the Public Participation component of the JURMP.

9.2 Public Meetings and Hearings

The public had numerous opportunities to attend meetings at the local, watershed and regional levels, in order to learn about the City's implementation of the Permit and to have their concerns addressed.

City Council Meetings were held in the Council Chambers at Carlsbad City Hall and were open to the public. The City of Carlsbad also offered residents and visitors the opportunity to view City Council meetings via the Internet and local cable channel, Time Warner channel 24 or 126. Regularly scheduled Carlsbad Council meetings aired live on Tuesday evenings at 6 pm. Each meeting and agenda was posted online approximately two hours after the conclusion of each meeting. Past meetings were available for up to a year on the City's own archive video portal. Users could conveniently "keyword search" through the audio/video content and "jump to" meeting discussion items in real-time by using a drop down menu. Agendas from previous meetings could also be accessed through the City's Document Management System.

During FY 2010-11, the Planning Commission was comprised of seven members appointed by the City Council. This commission made recommendations to the City Council regarding implementation and updating of the General Plan. When needed, they also provided recommendations to the Council regarding policy issues that affect long-range planning. They reviewed development projects, provided recommendations to the City Council, provided reports to the City Council on the Local Facilities Management Plan, reviewed the annual CIP for consistency with the Growth Management Program, identified potential problems and opportunities facing the City, made findings which conformed to Storm Water compliance, and suggested special studies when appropriate. During this reporting period the City also provided live streaming of Planning Meetings, typically held on the first and third Wednesday of each month at 6 p.m.

Residents could also become representatives on various City committees. The City Clerk's office maintained a list of City Boards, Commissions, and Committees, current vacancies, meeting dates and times, and coordinated all appointments to these positions.

In addition, the public could attend various Municipal Storm Water Copermittee meetings, such as the Management Committee Meetings, Outreach Workgroup, Regional Monitoring Workgroup, Coastal Storm Drain Monitoring Sub-Workgroup, and Dry Weather Monitoring Sub-Workgroup. Notices of these meetings were available from the Project Clean Water website at www.projectcleanwater.org.

9.3 Feedback Mechanisms

In addition to the public participation opportunities available through public meetings and hearings, numerous other feedback mechanisms promoted public involvement.

9.3.1 Hotline and e-mail address

The public was encouraged to provide input and feedback on the Storm Water Protection Program implementation. In addition to the public meeting opportunities detailed above, the public could call the storm water hotline to request information, provide comments, or make illegal discharge reports. The public could also send e-mails directly to the Storm Water Protection Program at stormwater@carlsbadca.gov. There were several other public contact phone numbers and City e-mail addresses available for public use. Other City departments forwarded comments and questions to the Storm Water Protection Program as needed. The public accessed the Storm Water Protection Program web page through the City's website, which provided information about storm water requirements and BMPs.

The public used the Solid Waste Services hotline and e-mail address to obtain information about HHW, trash, and recycling programs.

9.3.2 Direct interaction

The City relied on interactions between City staff and the public to convey messages about storm water and pollution prevention. City staff received targeted training to increase their understanding of urban runoff issues. Staff interaction with the public also provided additional opportunities for the City to obtain direct feedback about BMPs, ordinances, and pollution prevention efforts.

9.3.3 General outreach

Efforts through printed ads, newspapers, press releases, media interviews, PSA's, the Community Calendar, City guides, brochures, water bill stuffers, and other publications were used to keep the public informed of storm water requirements, updates, and public participation opportunities. Specific outreach efforts are discussed in section eight of this report.

9.3.4 Storm drain stenciling

Stenciling storm drain inlets with "*No Dumping – Drains to Ocean*" messages reminded citizens and businesses not to pollute waterways. Stencils were available upon request to businesses and residents who were interested in stenciling private storm drains. Public inlets were marked by the Streets Department.

9.3.5 Public surveys

The BW Research Partnership, on behalf of the City, conducted an annual *Public Opinion Survey* of Carlsbad residents. The city-wide telephone survey of residents was administered from September 8 through 16, 2010 and averaged 20 minutes in length. In total, a statistically representative sample of 1,000 Carlsbad residents 18 years and older completed a telephone survey, resulting in a maximum margin of error +/- 3.08 percent (at the 95 percent level of confidence) for questions answered by all 1,000 respondents. There were three questions related to storm water quality on the 2010 survey. The results of these questions are summarized in Section 11 of this report. The entire report was available for download from the City's website. Surveys helped the City understand how the public perceives storm water which can help foster better planning and management programs.

9.4 Community Events and Volunteer Efforts

The City's Community Volunteer Coordinator administered outreach and involvement programs for Carlsbad residents. This position continued to find volunteers to assist the Storm Water Protection Program with various activities. The City participated in several community events held in Carlsbad and other locations across the county. These events are summarized in Table 9.1.

Table 9.1: Community Events FY 2010-11

Date	Event	Type	Audience	Attendance
09/25/2010	Beach Cleanup - California Coastal Cleanup Day	Event	Residents	102
01/01/2011	Storm Water Calendar in Spanish distribution	Outreach	Spanish-speaking residents	200
02/09/2011	High Tech Fair	Event	middle/high school students	2407
03/26/2011	Kids Day at the Flower Fields	Event	Residents	7000
04/30/2011	Household Hazardous Waste	Event	Residents	360
06/04/2011	Beach Fest	Event	Residents	3500

Section 10

10.0 FISCAL ANALYSIS

10.1 Introduction

This section provides a Fiscal Analysis of the Storm Water Pollution Prevention activities in the City of Carlsbad. This methodology was developed by the Copermittees in January 2009 in accordance with sections, G, J.1 a(3)(k) and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The data provided in this section is based on actual expenditures for the period from July 1, 2010 through June 30, 2011.

10.2 General Budget Information

In FY 02-03 and 03-04, the City conducted a fee study to evaluate possible financing mechanisms for the Storm Water Protection Program. The new financing mechanism was detailed in the "*City of Carlsbad Storm Water Pollution Protection Program Regulatory Fee Study Report*", dated September 12, 2003. The report recommended funding the storm water program through an increase in the City's Solid Waste Service fees and new development processing fees. Nearly all of the pollutants discharged into the MS4 are classified as solid waste under state and local codes. Based on this information and other findings, the City implemented a *Solid Waste Service* fee increase for residential and commercial service users to fund certain Storm Water Protection Program activities. The amount of the fee increase is calculated based upon the apportioned costs to the business and residential service users and their contribution to the pollutant loading. This fee was last reviewed in June 2007, and updated to reflect current workloads. The current fee is $3.46 per month for residential customers, and 23.09% of the base trash rate for commercial customers.

The total operating costs to fund the storm water program activities related to existing development for FY 10-11 were budgeted at $3,098,977. This is a slight decrease from FY 09-10, due to a decrease in estimated costs for outside contracted services. A summary of expenditures for the City of Carlsbad's Storm Water Program is included as Appendix 10.1.

10.3 Fiscal Analysis Methods

The data presented here was derived from the City of Carlsbad's financial reporting system, IFAS. Some estimates are made where specific activities are not clearly delineated in the budget.

10.4 Fiscal Analysis Results

10.4.1 Expenditures

For FY 10-11 ending June 30, 2011, a total of $2,449,072 was spent, with $2,311,672 spent on JURMP activities, $51,369 spent on WURMP activities, and $86,031 spent on RURMP activities. A breakdown of expenses is reported in Appendix 10.1.

10.4.2 Funding Sources

The Permit requires the City to secure the resources necessary to meet the requirements of the Permit and the JURMP, and to conduct an annual fiscal analysis. The analysis must evaluate the expenditures necessary to accomplish the activities identified in the JURMP and describe the sources of the funds used to meet the expenditures. The Storm Water Protection Program is comprised of numerous

program activities funded from a variety of sources. Table 10.1 summarizes the storm water protection program activities and identifies the current funding source:

Table 10.1. Summary of Program Activities and Current Funding Sources

Program/Activity	Funding Source(s)
Storm Water Facility Capital Improvement Program	Developer Impact Fees, Developer Exactions, General Fund, Gas Tax, TransNet Sales Tax, Federal and State Grants
Storm Water Facility Maintenance and Operation Program including Street Sweeping, Litter Removal and Storm Event Readiness and Patrolling	Solid Waste Service Fees, General Fund
Storm Water Program Administration	Solid Waste Service Fees
Illicit Detection and Illegal Discharge Enforcement Program	Solid Waste Service Fees
Commercial/Industrial SWPPP Inspection Program	Solid Waste Service Fees (charged to commercial service customers only)
Construction Related SWPPP Review and Inspection Program	Developer Fees

Section 11

11.0 EFFECTIVENESS ASSESSMENT

The effectiveness assessment is based on data for FY 2010-11 and focuses on the assessment of three areas, as required in Section I.1.a.(1) of Order No. R9-2007-0001: significant activities, components, and an integrated assessment.

- Section 11.1 assesses the significant activities as listed in the City's JURMP. Each significant activity has an associated measure and targeted outcome. These measures relate to various levels in the range of Levels 1-4 outcome levels, assessing permit compliance, changes in knowledge and awareness, changes in behavior/BMP implementation, and load reductions.

- Section 11.2 assesses each component identified in Section I.1.a.(1)(b). The components include Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education. Each component assessment uses various levels in the range of Levels 1-4 outcome levels where measures have been developed applicable to the component.

- Section 11.3 provides an integrated assessment, combining conclusions from the individual component assessments and water quality data. At this time, it is not always feasible to link jurisdictional activities and components to changes in discharge and receiving water quality. This assessment draws conclusions where possible and may be further developed as more water quality data is collected in future years.

11.1 Significant Activity Assessment

The identification of significant activities was performed during the development of the JURMP. These significant activities targeted measurable outcomes, and results for FY 2010-11 are listed in Table 11.1. Some of the measurable goals are related to Levels 1-4 of the Effectiveness Assessment Outcomes as defined in Attachment C of Order No. R9-2007-0001.

Level 1: Compliance with Activity Based Permit Requirements

Where required during this fiscal year, all compliance based permit activities were completed successfully at or above 100% compliance. These measures are effective at determining the City's compliance with the permit.

The compliance measure for the Land Development Category is a new permit requirement that must be completed prior to the onset of the rainy season, October 1 each year. All required inspections were performed prior to October 1, 2010 for the 2010 Dry Season. For 2011 Dry Season, 99% of the High Priority inspections were conducted prior to June 30, 2011. Other measures appear to be appropriate for assessing compliance this year and the City was in compliance on all counts.

Level 2: Changes in Knowledge/Awareness

Changes in knowledge and awareness of storm water requirements were assessed using two significant activities or measures as described in Table 11.1.

As a part of the business inspection program, the City implemented a rating system to assess the general knowledge of storm water requirements during inspections. This measure has been used for several years in the industrial and commercial inspection programs. For this measure, data collected during FY 2010-11 was compared to data collected during FY 2009-10. As shown in the table, the average knowledge/awareness at these businesses remains consistent this year. Slight variances from year to year may reflect the difference in assessments by the various inspectors.

The second method to assess changes in knowledge and awareness compares quiz scores that are administered before and after class room presentations to school aged children. In general, the knowledge base before the presentation is low. Quizzes administered this year showed 11.1% of the children had an awareness of storm water prior to the presentation. After the presentation, the number of children aware of storm water issues rose to 70.5% of the children. This demonstrates an increase in storm water awareness in 59.4% of the students that were tested. By measuring this change, it appears that the presentations are effective at increasing the children's knowledge of storm water issues.

Level 3: Behavioral Change/BMP Implementation

The mechanism the City used to assess behavior change is the BMP inspection ratings for industrial and commercial businesses, assessed during site inspections.

As a part of the business inspection program, the City used the one to five rating system to assess BMP implementation (i.e. behavior change) at the establishments during industrial and commercial inspections. Because this measure has been used for several years data collected during FY 2010-11 was compared to data collected during FY 2009-10. As shown in Table 11.1, the average measured BMP implementation at these businesses was consistent with previous years. In general, BMP implementation remained relatively high this fiscal year. A comparison of the changes over the past four years is discussed below in Section 11.2.

Level 4: Load Reductions

There are two significant activities that provide direct load reductions of various pollutants. These include storm drain cleaning and street sweeping activities, providing estimations of the removal of trash, sediments, and debris from these facilities. These activities account for the removal of 34.25 tons of trash, sediment, and debris from the storm drain system and 993 tons from street sweeping activities.

Additionally, the City uses two estimations of load reductions related to residential outreach and education activities in an attempt to quantify the amount of nutrients and bacteria prevented from entering the MS4. These estimations are dependent on the types of education and outreach utilized and relate this education to reductions in fertilizer usage (i.e. nitrogen and phosphorous reductions) and reductions in pet waste (i.e. bacteria) entering the MS4.

Table 11.1 contains relevant information pertaining to the significant activities defined in the City's JURMP. These data are used to determine if these activities are considered effective.

Table 11.1 Significant Activity Assessment Table

Component	Significant Activity	Method	Measure	Level	Targeted Outcome	Data	Result	Program Effective? YES/NO			
								Compliance	Knowledge Change	Behavior Change	Load Reduction
								Level 1	Level 2	Level 3	Level 4
Land Development	1. Post construction BMP inspection: inspections performed/inspections required.[1]	Confirmation	Performed /Required	Compliance (1)	05/01/10 to 09/30/10 100% High Priority 50% Medium Priority	139/139 H 358/428 M	100% H 83.6% M	Yes	N/A	N/A	N/A
					05/01/11 to 06/30/11 *40% High Priority 20% Medium Priority	98/99 H 289/391 M	99% H 74% M	Yes	N/A	N/A	N/A
Construction	1. Were all required inspections performed during the wet season?	Confirmation	Performed /Required	Compliance (1)	100%	677 /624	108.5 %	Yes	N/A	N/A	N/A

Municipal	1. Were all required facility inspections performed under Order 2007-0001?	Confirmation	Performed/ Required	Compliance (1)	100%	64/64	100%	Yes	N/A	N/A	Yes
	2. Were all required catch basin inspections performed?	Confirmation	Performed /Required	Compliance (1)	100%	3476/ 3476	100%				
	3. How much debris was removed from the MS4?	Direct Measure	Tons	Load Reduction (4)	N/A	34.25	N/A				
	4. How much debris was removed from street sweeping activities?	Direct Measure	Tons	Load Reduction (4)	N/A	993	N/A				
	5. Were all special events applications reviewed for potential coverage under City requirements?	Confirmation	# Reviewed /Total	Compliance (1)	100%	28/28	100%				
Commercial-Industrial	1. Were all inspections performed as required?	Confirmation	Performed /Required	Compliance (1)	100%	585/585	100%	Yes	Yes	Yes	N/A
	2. Were knowledge scores, on average, for current fiscal year higher than previous fiscal year? [2]	Analysis	Average Score	Knowledge Change (2)	Upward Average	3.55 FY09-10, 3.57 FY 10-11	0.6%				
	3. Were behavioral change/BMP implementation scores, on average, for current fiscal year higher than previous fiscal year? [2]	Analysis	Average Score	Behavior Change (3)	Upward Average	4.08 FY09-10, 4.19 FY 10-11	2.7%				

IDDE	1. Were all urban runoff related complaints responded to and resolved?	Confirmation	# Responses /Total Complaints	Compliance (1)	100%	119/119	100%	Yes	N/A	N/A	N/A
Education	1. Were changes in knowledge demonstrated or verified (i.e. quizzes?)[3]	Analysis	Average Score Before/ After	Knowledge Change (2)	%Change	11% aware in pre-test, 71% aware in post test	59%	N/A	Yes	N/A	Yes
	2. How much nutrient load reduction occurred as a result of the "Lawn Care Education" Program?	WTM	Tons	Load Reduction (4)	N/A	N=5.2, P=0.11	N/A				
	3. How much bacteria load reduction occurred as a result of the "Pet Waste Education" Program?	WTM	billion/year	Load Reduction (4)	N/A	45,946	N/A				

[1]During the Dry Season of 2010 inspections performed met and exceeded Permit requirements and were conducted in FY 2010-11. For Dry Season 2010, a targeted outcome of 40% for High Priority and 20% for Medium Priority was used since only two months of the Dry Season was included in FY 2010-11.

[2]See Section 11.2.4 and 11.2.7 for trends over time and explanations of these results.

[3]Quiz results based on acquisition of knowledge or not, as opposed to based on a raw score.

11.2 Component Assessment

11.2.1 Development Planning

During FY 2010-11, the City has experienced measurable changes in outcome levels 1, 2, and 3 regarding compliance with the Development Planning Component.

Level 1: Compliance with Activity Based Permit Requirements

Outcome Level 1 improvements included the updating of procedures for acquisition and management of the City's private treatment control BMP inventory and annual inspection and verification program.

Level 2: Changes in Knowledge/Awareness

The Outcome Level 2 improvements included the ongoing raising of awareness of existing and new storm water compliance requirements among City development review staff, developers and the City's Planning Commission. Through a combination of training during weekly staff meetings, webinars and outside training courses, City staff significantly increased their knowledge and understanding of the updated SUSMP requirements, LID designs, hydromodification principles and City storm water compliance processes. Developers were seen to increase their knowledge of the updated SUSMP requirements, LID designs, and City storm water compliance requirements through revised plan review checklists, City plan review comments, the City's Storm Water Standards Manual and outside training courses.

Level 3: Behavioral Change/BMP Implementation

Outcome Level 3 improvements were seen in the development community. An increased number of development project submittals included acceptable LID, source control and treatment control measures with the initial submittal resulting in fewer project re-designs. The LID designs submitted by developers are showing increased sophistication, effectiveness and cover more significant portions of the project design.

11.2.2 Construction

During FY 2010-11, the City has experienced measurable changes in outcome levels 1 and 3 regarding compliance with the Construction Component.

Level 1: Compliance with Activity Based Permit Requirements

Overall, the Construction, Management, and Inspections Division (CMI) was successful at maintaining full compliance with the permit requirements during FY 2010-11. Table 11.2 contains examples of permit requirements and confirmation that these requirements were met.

Table 11.2 Examples of Construction Related Permit Requirements and Compliance

Permit Requirements	Requirement	Performed
Ordinance updates to comply with order	As necessary	Yes
Designate a set of minimum BMPs	In JURMP	Yes
Require implementation of designated minimum BMPs	All sites	Yes
Maintain and update a watershed based inventory	Monthly	Yes
Require advanced treatment	Sites determined to be an exceptional threat to water quality	Yes, none identified.
Inspections of sites meeting criteria in D.2.d.(1)	Every 2 weeks during wet season	Yes
Implement follow-up actions	As needed based on inspection results	Yes
Inspect according to requirements in Section D.2.d.(6)	Each inspection	Yes
Track number of inspections for the inventoried sites	Continuous	Yes
Develop escalating enforcement process	JURMP	Yes
Implement escalating enforcement process	As needed based on inspections	Yes
Report non-compliant sites to Regional Board	Stop work order or higher level of enforcement	Yes

Level 3: Behavioral Change/BMP Implementation

Changes in behavior and implementation of BMPs on construction sites are evident throughout the City. In general, contractors are more aware of the BMP requirements and are more willing to cooperate with inspectors, resulting in timely and proper implementation of the required BMPs. If a site was found to have deficiencies in storm water compliance, it was generally corrected at the time of the inspection. If a verbal or written warning was issued, a specific deadline for correction action was noted on the inspection report. Follow up inspections were conducted to ensure construction sites complied with the required corrective actions. Most sites were found to have completed corrective actions and were in compliance at the time of the follow up inspection.

Table 11.3 contains enforcement actions for FY 2010-11.

Table 11.3 Enforcement Actions on Construction Sites

	FY 2010-11		
Enforcement Actions	Number	Total Inspections	Percentage
Verbal Notices	458	1285	35.6%
Written Warning / Correction Notice	39		3.0%
Notice to Clean	93		7.2%
Stop Work	0		0%

Staff will continue to develop ideas and implement those deemed appropriate in the future to assist in assessing the changes in knowledge and awareness in the construction community.

11.2.3 Municipal

During FY 2010-11, the City has experienced measurable changes in outcome levels 1 and 3 regarding compliance with the Municipal Component.

Level 1: Compliance with Activity-Based Permit Requirements

This level of effectiveness assessment is based on compliance with Activity Based Permit Requirements. The City was in compliance with all municipal requirements of Order No. R9-2007-0001 during the past fiscal year. Table 11.4 tracks some of the City's Municipal Program activity measures, which are discussed in detail in the previous report sections. Tracking of many of these activities was useful in assessing compliance with the program, but is not yet tied to long-term assessment or improved water quality.

Table 11.4: FY 10-11 Program Activity Measures

	Permit Requirements	Requirement	Performed
	Develop Inventory of Areas and Activities	Update with JURMP	Yes
	Develop and Implement Minimum BMPs	Update with JURMP	Yes
Special Events	Require Minimum BMPs	Establish and Require Implementation	Yes
	Inspections	Inspect all Special Event venues following events	Yes
MS4 Maintenance	Catch Basins	Inspect all, clean those exceeding 33% criteria	3476 inspections, cleaned all trash and 234 exceeding 33% criteria
	Pipelines (miles)	As needed	Cleaned 0.95 miles.

	Permit Requirements	Requirement	Performed
	Open Channels (miles)	Inspect all and clean in a timely manner	Inspected and removed trash from 6 miles
	Desilting Basins	Inspect all, clean as needed	Inspected 3, removed all trash from 3
	Treatment Controls	Inspection and Maintenance	Annually
	High Volumes of Trash	Inspection between May 1 and September 30	Yes
	Tracking of Quantities of Waste Removed	Track Quantities	Yes
Integrated Pest Management	Implement Program	Develop and Implement	Yes
Street Sweeping	High Volume Streets (miles)	2 times/month	4 times/month
	Moderate Volume Streets (miles)	monthly	Twice/month
	Low Volume Streets (miles)	annual	Twice/month
	Parking Lots (acres)	Depends on volume, see above	Twice/month
Infiltration from Sanitary Sewer to MS4	Preventative Maintenance of Sanitary Sewer	Perform	Yes
	Preventative Maintenance of MS4	Perform	Yes
	High Priority Facilities	Inspect all facilities	64 of 64 inspected

Based on the permit requirements presented above in Table 11.5, the municipal program remains in compliance with the requirements of Order No. R9-2007-0001. Several of the measures will continue to be developed, and improved with better tracking mechanisms and improved coordination between departments.

Level 3: Behavioral Change / BMP Implementation

One way to assess the amount of behavioral change and the actual implementation of BMPs for storm water is to look at the results of the municipal inspections. In general, all facilities have improved over the years. There were no violations at Municipal facilities during the 2011 Annual Inspections.

In addition, several departments and facilities have invested in new BMPs and continue to maintain BMPs at their sites which are effective at mitigating potential pollutants at the sites. Examples of these BMPs include:

- All of the City's Fire Stations purchased and use high pressure nozzles to reduce runoff and use vacuum equipment, if necessary, to recover and contain wash water from vehicle washing activities.
- Site specific SWPPPs were maintained for municipal facilities including fire stations, maintenance yards, pump stations, and the Carlsbad Recycled Water Facility.
- A new training video was developed with City staff participating in the filming activities.

Level 4: Load Reductions

As described in Table 11.1, there are several methods of calculating load reductions available from data collected in the municipal program. Refer to Section 11.1 and Table 11.1 for more detail on estimated load reductions resulting from activities performed in the municipal program. Examples of these load reductions include working to eliminate discharges from beach outfalls so that no flow reaches the beach and a street sweeping and catch basin cleaning program which removed approximately 1027 tons of debris.

11.2.4 Industrial and Commercial

During FY 2010-11, the City has experienced measurable changes in outcome levels 1 and 2 regarding compliance with the Industrial and Commercial component.

Level 1: Compliance with Activity Based Permit Requirements

As seen in Table 11.5, inspections completed during FY 2010-11 exceeded the requirements set forth by Order No. R9-2007-0001.

Table 11.5 Inspections of sites/sources FY 2010-11

Order No. R9-2007-0001 (July 1, 2010 to June 30, 2011)				
High Threat to WQ	**Inventory**	**# Inspected**	**Target Percentage**	**Percent Completed**
Ind/Comm Sites/Sources	585	585	100%	100%

Level 2: Changes in Knowledge / Awareness

For Knowledge Assessment, inspectors rank personnel from one to five. Refer to Section 5 of this report for details on the rating scale.

Since the implementation of the rating system, the majority of businesses have ranked at three or better for storm water knowledge and awareness. Figure 11.1 illustrates that on average the majority of the sites inspected had a relatively high knowledge of storm water and ranked greater than or equal to 3.

11.2.5 Residential

During FY 2010-11, the City has experienced measurable changes in outcome levels 1, 2, 3 and 4 regarding compliance with the Residential component.

Level 1: Compliance with Activity-Based Requirements

Residential activities outlined in the March 2008 JURMP were completed as described in Section 6 of this report. Activities include various outreach events and activities, used oil and waste collection services, and complaint response followed by enforcement action.

Level 2: Changes in Knowledge/ Awareness

City of Carlsbad Public Opinion Survey

An annual public telephone survey was conducted this year by the City, as part of the *Performance Measurement Program* and "*State-of-Effectiveness Report.*" Carlsbad households were selected using *Random-Digit-Dial* methodology with a minimum sample size of 1,000. This survey had a margin of error of +/- 3% at the 95% confidence level. Storm water pollution was addressed briefly in this survey. The City survey asked, "*Have you seen or heard any information about how residents can prevent the pollution of creeks, lagoons, and the ocean?*" This question was used to gauge the public's perception of ocean water pollution and was asked previously in 2003, 2006 to 2009. The results, with Don't Know or N/A factored out, are presented in Table 11.6 below.

Table 11.6: Results of Environmental Question 1

Answer:	2003 (%)	2006 (%)	2007 (%)	2008 (%)	2009 (%)	2010 (%)
1. Yes	58.1	64.6	61.1	59.2	75.3	65.2
2. No	41.9	35.4	38.9	40.8	24.7	33.9

The percentage of residents that had heard information in the past year about preventing the pollution of local creeks, lagoons, and the ocean decreased from 2009, but was statistically higher than 2008 and 2007 An additional question was asked again this year to assess the most effective educational methods by asking, "*Where do you recall seeing or hearing about ways to prevent pollution?"* The top three responses were TV, newsletters and newspaper, respectively comprising over 72% of the total responses. Other significantly higher responses included brochures, water or utility bills, curb signs, radio, and website.

Level 3: Behavioral Change/BMP Implementation

The City asked a behavioral question during the survey to those who answered affirmatively to the question, "*Have you seen or heard any information about how residents can prevent the pollution of creeks, lagoons, and the ocean?*" The 65.2% who answered this question affirmatively were asked the follow-up question, "*Given what you have seen or heard, what have you done, if anything, to reduce the amount of pollution in our creeks, lagoons, and oceans?*" Results for this question are presented in Table 11.7.

Table 11.7: Top Responses to follow-up question.

Answer:	Percent
1. Properly disposing of hazardous waste.	22.3
2. Used a commercial carwash	14.5
3. Using environmentally friendly soaps, pesticides, etc.	13.8
4. Cleaned up trash at Beach, Roadside, Etc.	9.2
5. Recycled	9.1
6. No longer dump down storm drain	6.9
7. Reduced water usage/used water more efficiently	6.7
8. Cleaned up animal waste	5.7
9. Did nothing.	20.1
10. Other (ex. don't litter, reduced runoff)	24.3
11. Don't know.	6.2

Continued survey data should help to show if long-term behavior change has occurred. Over eighty percent of residents who answered question one affirmatively, consciously chose an environmentally friendly method over others in certain instances.

Level 4: Load Reduction

The primary goal of BMP implementation is to reduce pollutant loads in storm water discharges. An important emphasis of annual program assessments is to estimate the load reductions resulting from various program activities. Assuming that such reductions are properly targeted to existing or potential water quality problems, load reductions should in turn result in improvements to discharge and receiving water quality. Quantifying load reductions represents an important intermediate endpoint for assessments. The Regional Board wrote the following in October 2004:

Program effectiveness can be assessed by quantifying the pollutant load reductions attributable to various program activities. An effective program will compare pollutant load reductions of various program activities and implement those activities which result in the largest pollutant load reductions. It is expected that by implementing program activities which maximize pollutant load reductions, Copermittees will be implementing effective programs which will improve receiving water quality.

The City used the Watershed Treatment Model (WTM) as a tool for rapid assessment of effectiveness of the storm water programs. The WTM (version 3.1) was prepared by Deb Caraco of the Center for Watershed Protection for the U.S. EPA Region V - Office of Wetlands, Oceans and Watersheds. The 2008 WURMP identified bacteria, sediment, and nutrients as water quality problems. The WTM estimates the pollutant loading reductions for sediment, bacteria and nutrients for various program activities, such as residential education, erosion and sediment control programs, and street sweeping, among others. The results of some of these storm water management programs are discussed below. Complete explanations and assumptions are found in the WTM book. Land Use amounts are from 2009 and provided by SANDAG and the City GIS department.

Public Education

A variety of public education programs may help to reduce the concentration of nutrients, sediment and bacteria in urban streams. The model currently focuses only on a few of these, including programs to address lawn care, septic system maintenance, and pet waste. Several other residential pollution prevention programs improve water quality, but have little effect on nutrients, suspended solids, and bacteria. For example, HHW programs are effective at reducing toxics but do not have a quantifiable impact on pollutants such as suspended solids, nutrients, or bacteria.

Lawn Care: The ideal pollutant removal associated with lawn care would be achieved if all of the additional fertilizer applied to turf were eliminated. The model uses equations to estimate optimal nutrient load reduction from a lawn care program combined with a calculation of the residential lawn area. The model calculates the residential lawn area based on the City's input of residential acres taken from GIS. The user inputs the information on how the education campaign was conducted. Default values were given for the fraction of the audience willing to change behavior based on nationwide data. The City conducted lawn care education through brochure distribution, workshops and newspaper ads.

The model allows the user to input the media type, which determines the portion of the population that *remembers* the message ("Awareness of Message"). This number is largest with television (0.4), followed by newspaper (0.3), radio (0.25), billboard (0.13), brochures (0.08) and workshops (0.07). Because residents have been exposed to five of these mechanisms in FY 2010-11, the input value entered was an average for brochures, workshops and newspaper, radio, and television (0.22). This results in an annual nutrient load reduction of 10,480 pounds of nitrogen and 210 pounds of phosphorus (Table 11.8).

Table 11.8: Loading Reduction from Existing Lawn Care Education

	N (lbs/year)	P (lbs/year)
Lawn Care Education	10,480	210

Pet Waste: The Storm Water Protection Program also conducted a *Pet Waste Education Program* during FY 2010-11. In the urban watershed, dogs are a significant contributor of bacteria and nutrients. Ideally, a *Pet Waste Education Program* would reduce this source to zero, with all homeowners properly

disposing of waste. The model provides estimated values for the fraction of households with a dog, the fraction of owners who walk their dog, the fraction of owners who cleanup after their dog, and the fraction willing to change their behavior. As with the lawn care education, the portion of the population that remembers the message is based on the media used for the education. This past year, the City delivered this message through brochures and the newspaper. Residents were also exposed to regional education efforts on television and radio. In addition, the City distributed free pet waste bag dispensers at local events and provided animal care facilities with these dispensers. These activities were considered similar to a workshop, so an averaged value of 0.22 was used for this calculation. This results in an annual pollutant loading removal of 5,284 pounds of nitrogen, 689 pounds of phosphorus, and 45,946 billion bacteria per year (Table 11.9).

Table 11.9: Loading Reduction from Existing Pet Waste Education Program

	N (lbs/year)	P (lbs/year)	Bacteria (billion/year)
Pet Waste Education	5,284	689	45,946

The overall assessments of these education programs show that the media significantly affected the associated pollutant removal due to the increased audience that *remembers* the message. For instance, if the City had the financial resources to use mass media (television and radio), the estimated pollutant reduction would be increased significantly. The City's annual phone survey confirms that most people recall hearing these messages through mass media. However, mass media is significantly more expensive than brochures and workshops. Large campaigns for mass media may be best conducted on a regional basis with Copermittees sharing the expense or pursuing grant funds for these expensive activities. Due to an increase in mass media educational tools used at the Regional level this year, it is expected that many of the residents in Carlsbad were exposed to these campaigns, accounting for the increase in load reductions associated with lawn care and pet waste.

11.2.6 Illicit Discharge Detection and Elimination

Effectiveness assessment for the IDDE Program will be submitted with Section 7 of this year's Annual Report to be submitted to the Regional Board by December 15, 2011.

11.2.7 Outreach and Education

During FY 2010-11, the City has experienced measurable changes in outcome levels 1, 2 and 3 regarding compliance with the Outreach and Education component.

Level 1: Compliance with Activity Based Permit Requirements

Table 11.10 below illustrates examples of the permit requirements in the outreach and education section and what activities the City implemented to comply with each.

Table 11.10 Outreach and Education Permit Requirements

Municipal Training	Compliance Activity
• Development Planning	Staff training specific to development planning activities referenced in Appendix 8.1
• Construction	Various staff training events specific to construction activities referenced in Appendix 8.1
• Inspection Staff (industrial/commercial)	Various training events specific to inspections of businesses referenced in Appendix 8.1
• Other Activities	Various activity specific training events for water, wastewater, and parks departments
New Development and Construction	Various outreach activities as described in Section 8.
Residential	
General Public	
School Children	

Level 2: Changes in Knowledge/Awareness

Measurably increase the knowledge/awareness of target communities:

- Municipal Departments and Personnel

  During FY 2010-11, a detailed municipal training program continued to be implemented to ensure compliance with Order No. R9-2007-0001. This training program assessed each position within the City to determine the applicable (i.e. required) training and groups the positions into separate modules to make training easier for the various departments. Staff will continue to determine ways to assess the changes in knowledge and awareness of municipal personnel throughout the permit cycle.

  In June 2007, the City implemented a new internal waste reduction strategy as a pilot program. This included the purchase and distribution of larger single stream recycling containers and a small trash can for employee work stations. There were also several new larger recycling containers placed in public meeting areas throughout the City. Seen as an effective program, the City implemented new waste reduction programs, promoted double siding copies and print jobs, and distributed reusable beverage containers at all City facilities. Rollout of these new programs included the development of posters, fact sheets and a presentation to educate and inform employees about the importance and benefits of recycling, reducing and reusing.

- Construction Site Owners and Developers

  The City conducts outreach activities specific to construction site owners and developers as described in Section 8.3. The activities occur throughout the development process.

- Industrial and Commercial Owners and Operators

  The City uses a program to assess changes in knowledge at industrial and commercial facilities based on a numeric ranking from one to five, with one representing a lack of

knowledge and five representing adequate knowledge of storm water BMPs and requirements as applicable to their facility. The results are compiled each year and reported in the industrial/commercial section of the Annual Reports. Results are also presented in Figure 11.2 of this section. Over time, these site assessments can be compiled and compared.

- Residential Community, General Public, and School Children

There are various outreach efforts in place to increase storm water knowledge and awareness for residents, the general public, and for school children. Changes in the knowledge and awareness of the residents and general public are assessed and tracked via an annual telephone survey of the citizens of Carlsbad. The survey includes several questions used to assess these changes in awareness. Survey results, tracked over the past three surveys are described above in Section 11.6.

Level 3: Changes in Behavior/BMP Implementation

Measurably change the behavior of target communities:

- Municipal Departments and Personnel

Behavior changes are evident throughout municipal departments and personnel and can be attributed to targeted outreach and training for municipal staff. Awareness of Storm Water issues is evidenced by calls from City staff to the storm water hotline. All levels of staff are continually seeking advice from the Storm Water Program on how to implement BMPs allowing them to continue to perform their necessary activities. There have also been programmatic changes in the Development Services Division, ensuring that required BMPs and submittals are provided on all projects, and are tracked and approved. In FY 2010-11, there were no NPDES violations noted during Municipal Inspections.

- Construction Site Owners and Developers

Changes in behavior on construction sites and by developers are also evident throughout the development community. These changes are manifested throughout the development process, from submitting appropriate BMPs on plans and better Storm Water Management Plans, to installation and maintenance of proper BMPs during construction, to the development, installation, and maintenance of BMPs on projects after construction is complete.

- Industrial/Commercial Owners and Operators

Industrial and commercial owners and operators are continually educated on storm water issues during inspections, mailers, and interactions during outreach events. Behavioral changes at industrial and commercial sites are most evident through assessment of proper BMP implementation during inspections and site visits. Using the rating system of one through five, with one being no implementation of BMPs and five being effective implementation of all BMPs, businesses have on average scored close to

four, as shown in Figure 11.2. These results indicate that business owners and operators have altered and maintained behavior consistent with storm water rules and regulations. This method of assessment will continue to be used to measure behavior changes among industrial and commercial sites.

- Residential Community, General Public, and School Children

Outreach to the residential community, general public, and school children continues to be effective in conveying storm water information. At this time, it is difficult to measure the changes in BMP implementation in these target audiences. Several methods have been discussed previously and will continue to be utilized. One of the best feedback mechanisms that the City has in place is its annual citizen survey. Answers to the question, "What things are you doing to reduce water pollution?" helps the Storm Water Program track BMP implementation over time and changes in the community, as discussed previously in the report.

The Storm Water Protection Program collaborated locally and regionally to ensure outreach efforts and messages for storm water pollution prevention were consistent. The messages were delivered by various means including presentations, workshops, inspections, investigations, and outreach events, in addition to use of direct mail, the website and newspaper advertisements.

The City conducted the annual (telephone) Public Opinion Survey in FY 2010-11, which included questions on storm water pollution prevention. The results from this survey provide important information on the public's awareness and knowledge of storm water pollution prevention issues and activities. This information can help focus future

education and outreach messages and events, and is also used on a *Performance Measure* to gauge the effectiveness of the outreach and education program.

The Storm Water Protection Program and Environmental Programs staff worked with the Communications Department and the Information Technology Department to continually revise the web pages and provide updated information about pollution prevention, including a tip of the month section.

Staff collaborated regionally with the Storm Water Regional Education and Residential Sources Workgroup, consisting of 21 Copermittees, throughout the year. During FY 2008-09, the workgroup developed a Regional Residential Education Plan that was implemented in FY 2009-10 and continued in FY 2010-11.

In addition to the development and completion of the documents, the workgroup also continued to focus on the development of a regional brand, a regional website, mass media and public relations, materials development and distribution, underserved target audience, market research and assessment tools, partnership development and regional events during FY 2010-11. Staff will continue to participate in these areas with accomplishments reported in the annual reports.

11.3 Integrated Assessment

11.3.1 Changes in MS4 Discharge Water Quality

Dry Weather Field Screening and Analytical Monitoring Program

The City has conducted an annual *Dry Weather Field Screening and Analytical Monitoring Program* since 1995. The purpose of the monitoring program is to detect and eliminate illicit connections and illegal discharges to the storm drain system.

Historically, the results for field analyses indicate a decreasing trend in ammonia-nitrogen concentrations. No discernable trend is apparent for other field constituents. Bacteria levels have varied over the years, with a slight upward trend in Enterococcus counts. Diazinon and chlorpyrifos have only been detected once and oil and grease exceedances have been infrequent.

Over the course of the Dry Weather Monitoring Program, repeated testing at the same sampling sites can allow for a historical comparison of certain water quality parameters. While any trends or historical analysis of this data can be useful for current and future evaluations of potential pollutant sources to the MS4, this is not the stated purpose of the Dry Weather Monitoring Program. This program is designed to detect and eliminate illicit connections and/or acute discharges through sampling. Following a confirmed exceedance, an investigation is performed within two business days to determine and abate, if possible, the source of the exceedance.

The Dry Weather Monitoring Program report for FY 2010-11 and follow-up activities will be provided under separate cover, due to the Regional Board by December 15, 2011.

Coastal Outfall Monitoring Program

The City continued to collect samples from various storm drain outfalls as part of the *Coastal Outfall Monitoring Program*. As stated in the *Adaptive Monitoring Plan*, if water was flowing from a storm drain

outfall, samples were collected and analyzed for total coliform, fecal coliform and enterococci and sample results were compared to the 95th percentile criteria. Where storm drain flow reaches the receiving water, protocol states to collect a paired receiving water sample to assess the impacts of the storm drains on the receiving waters. The receiving water samples would then be compared to Rec-1 standards to determine exceedances. Where storm drain bacteria concentrations exceeded 95th percentile criteria or receiving water samples exceeded Rec-1 objectives, follow-up sampling and/or investigations would be performed.

Recent years indicate a decrease in storm drain exceedances for all three bacterial indicators, showing possible improvements in storm drain water quality. In all cases, the flow from outfalls was intermittent, low volume and did not actually reach the receiving waters but dissipated into the sand or sediment. The City will continue to conduct the Coastal Outfall Monitoring Program and to conduct follow-up investigations as detailed in the Adaptive Plan.

During FY 2010-11, there were no storm drain flows that reached the ocean. The City has been successful at decreasing illegal discharges in areas where outfalls discharge directly to the beach during dry weather.

11.3.2 Level 6: Changes in Receiving Water Quality

It is important to note that receiving water quality reflects considerably more than the quality of the City's MS4 discharges. In addition, receiving water quality can be adversely impacted by other events that are not under the control of the City, such as other permitted NPDES discharges, wildlife (impacting bacteria levels), atmospheric deposition, and other events and activities.

<u>Coastal Outfall Monitoring Program – Receiving Waters</u>

During FY 2010-11, there were no samples collected in the receiving waters as part of the Coastal Outfall Monitoring Program, since no storm drain outfall discharges reached the receiving water.

11.3.3 Overall Assessment

Program implementation in areas of construction, residential, MS4 maintenance, and street sweeping are properly targeted for protection of and improvement of water quality, as evidenced by direct load reductions in these programs.

Other program implementation in areas of industrial and commercial inspections, municipal, residential, construction, and outreach and education appear to be properly targeted for the protection of and improvement of water quality, as evidenced by changes in knowledge and awareness and in behavior.

In addition, the City has had a steady revenue source to fund the Storm Water Protection Program over the past year. City Staff will continue to monitor revenue and expenditures to determine if adjustments are needed in future years.

In FY 2009-10, the City implemented the development processing fees for the plan review and inspection of Construction Storm Water Pollution Prevention Plans and post-construction Storm Water Management Plans.

Section 12

12.0 SPECIAL INVESTIGATIONS

12.1 Introduction

There were no special investigations conducted by the City of Carlsbad in FY 2010-11.

Section 13

13.0 NON-EMERGENCY FIRE-FIGHTING

13.1 Introduction

The Carlsbad Fire Department (CFD) has developed the Non-Emergency Fire Fighting Program to meet the requirements of Order No. R9-2007-0001, as written in the City's 2008 JURMP. This section describes the City's program to reduce pollutants from non-emergency fire-fighting flows (i.e., flows from controlled or practice blazes and maintenance activities) conducted in FY 2010-11 from July 1, 2010 to June 30, 2011.

13.2 Overall Program Definition

The CFD is a dedicated team of professionals whose mission is to enhance the quality of life in our community by delivering exceptional services in safeguarding lives, property and the environment. By default, the definition of non-emergency fire-fighting flows, are flows generated by the Fire Department other than in emergency situations. The duration of an emergency exists from alarm notification until, in the opinion of the Incident Commander, the emergency has concluded and equipment is returned to service. Outside of this duration of time, Fire Department flows are considered non-emergency.

13.3 BMP Implementation

In order to reduce pollutant discharges from non-emergency fire-fighting flows, the City of Carlsbad's Fire Department has implemented several BMPs. During this reporting period, the CFD maintained a Storm Water Manual specific to each fire station to serve as a central location for all storm water documents, training, and BMP descriptions, as well as departmental policies related to storm water. The BMPs incorporated at Fire Stations are listed below:

Pollution Prevention

- Storm Water Manuals were developed for each station which include SWPPPs with site maps, inspection reports, facility specific spill response procedures, training records, and department policies. Training on storm water and spill response was provided regularly.
- Dry cleanup methods were used to reduce water use. The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations. Awareness was heightened at fire scenes to minimize the potential for excessive water flow.
- Materials were recycled where possible.
- Spill Prevention, Control, and Cleanup: Spill response equipment and materials are clearly identified and staged in accessible locations at each station. Awareness was heightened at incident scenes to contain potential discharges (once the scene had been stabilized) to prevent pollutants from entering the MS4. The Department continued implementation of the City's spill response procedure for incidents that occur on City streets. Absorbent materials are kept on all engines and at all the stations. The spill response plan is to apply absorbent, sweep material, place in bags, and remove from site for proper disposal.
- Vehicle and Equipment Cleaning: The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Vacuum equipment is used to recover and contain all wash water from washing activities occurring at Fire

Stations 1-5. Fire Station 6 is equipped with a strip drain in the driveway which allows Fire Department employees to wash Fire vehicles onsite, with any excess wash water diverted to sewer. All Fire Stations currently have a pressure washer for vehicle and equipment cleaning to minimize the amount of water being used.

- Waste Handling and Disposal: Waste containers were inspected regularly for leaks and to ensure that lids remained closed. Waste container areas were inspected and swept as necessary to keep area free of trash and litter. Recycling was implemented where possible; bins were provided.
- Parking/Storage Area Maintenance: Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations.
- Housekeeping Practices: Fire stations were kept clean and orderly. Wash water was disposed of properly. Sweeping material was disposed of properly.
- Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; timing improvements on irrigation system have reduced water usage; blowing and sweeping are used wherever possible; pesticides, herbicides, and fertilizers are stored inside and used sparingly in accordance with required application practices.

13.4 Training and Education

The CFD continued to communicate with other City departments to improve coordination and education with regards to storm water. The CFD's Storm Water Committee met quarterly to address new and ongoing storm water topics and how they relate to the responsibilities of the Fire Department, and included personnel from each Fire Department rank. Other activities CFD participated in are as follows:

- A representative from the Fire Department attended and participated in the City's Storm Water Committee meetings as available.
- The CFD worked closely with the Storm Water Protection Program to conduct a series of meetings to review BMP implementation and perform one-on-one training;
- The City's Reclaimed Water Facility continued to be utilized for fire engineer training and testing. A training trailer facilitated engineer operations, pump testing, and other wet training opportunities. The Facility allowed for wet training and testing opportunities while ensuring that no water is discharged to the MS4;
- The CFD conducted training and testing at other fire agencies and training facilities which recycle the water that it is being discharged (i.e. Rancho Santa Fe and San Marcos Fire Departments). Suitable locations were selected to provide "wet" training opportunities for personnel, while ensuring that appropriate BMPs were in place to protect the storm drains and eliminate discharges to the MS4. These sites were generally located on pervious surfaces with no potential for discharge to the storm drain system;
- The CFD explored CIP opportunities for potential funding for permanent structural BMPs at the fire stations to serve wash areas;
- The CFD worked extensively with the design and construction committee for new fire stations to ensure that storm water requirements were 1) addressed early in the process and 2) met during and after construction.
- The CFD continued current annual training levels to ensure that all CFD personnel were versed in storm water as it relates to fire stations and fire-fighting activities.

13.5 Fire Prevention Program

Fire Prevention is itself, a Best Management Practice (BMP). During this reporting period, fire prevention activities included those activities not directly associated with emergency scene operations, post fire scene or mop-up operations.

Perhaps the most effective way to eliminate water runoff from fires is to eliminate or reduce the magnitude of fires. The CFD has shown that an aggressive Fire Prevention Program has a significant impact on the number and magnitude of fires. Procedures or actions that lead to early fire detection/notification, automatic suppression, confinement, or enhanced suppression capabilities can reduce or control fires and ultimately reduce water runoff. The installation and maintenance of these procedures, devices, or features can significantly reduce potential flows in the event of an emergency.

An example of this type of prevention was weed abatement which included the encouragement of mowing. When mowing was not practical for perimeter breaks, and after considering topography, roughing the slope in a manner that would not increase soil or sediment releases was utilized, such as disking.

The City of Carlsbad continued its Fire Prevention Program during this reporting period.

Section 14

14.0 JURMP REVISIONS

The City's 2008 JURMP was developed in response to the issuance of Order No. R9-2007-0001. The City began implementing the 2008 JURMP on March 24, 2008 as required under the new permit.

There were a few minor changes to the City's 2008 JURMP during FY 2010-11 and they are discussed below.

In Section 2 of this Annual Report, the Treatment Control BMP inventory was updated in accordance with the Permit.

In Section 3 of this JURMP Annual Report, changes were made to the Construction program including updating the construction site inspection inventory, updating the inspection and inventory management procedure, and revising the Construction Inspection Form.

In Section 4 of this Annual Report, the municipal inventory and Special Events inventory were updated.

In Section 5 of this Annual Report, the Industrial/Commercial inventory was updated in accordance with the Permit and the City's procedures.

Section 15

15.0 CONCLUSIONS AND RECOMMENDATIONS

15.1 Overview

From July 1, 2010 to June 30, 2011, the City continued to implement Permit Order No. R9-2007-0001. This section of the JURMP Annual Report describes activities that the City undertook to reduce discharges of pollutants and urban runoff flow to the MS4 to the maximum extent practicable. It also provides an overall account of the activities conducted and the programs implemented to address the new Permit requirements for major components: Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education.

Several highlights are listed below, including specific discussion of activities conducted per Permit requirements, as well as those that exceeded requirements and are considered notable activities. Note that these are highlights only and do not represent all activities conducted by the City to maintain compliance. Comprehensive details are reported in the applicable preceding sections.

15.2 Highlighted Activities Performed to Meet Permit Requirements

The City continued activities that were consistent with Permit Order No. R9-2007-0001. For comprehensive details, please refer to the applicable preceding sections of the report. Highlights for July 1, 2010 to June 30, 2011 are listed below.

The City:

- continued updating and revising the Treatment Control BMP (TCBMP) database of private and public TCBMPs.
- continued to distribute a copy of the Pollution Prevention Guide to the Construction Industry with each construction related permit application.
- inspected all high priority construction sites at required frequencies, conducted outreach to project proponents and City staff, and issued 590 enforcement actions to obtain compliance during 1285 inspections.
- continued to review inventory management, prioritization practices, inspection and enforcement procedures, training programs, record-keeping, and reporting procedures related to construction activities.
- updated and mapped the municipal inventory and inspected high priority municipal facilities.
- conducted cleaning and maintenance activities to reduce pollutant discharges from the MS4.
- inspected 100% of catch basins.
- continued evaluating and inspecting Special Events.
- updated and revised the Special Events inventory.
- updated and mapped the High Threat to Water Quality Industrial/Commercial inventory, and conducted 541 inspections, or 100% of the total inventory. The City issued 18 enforcement actions to obtain compliance from July 1, 2010 to June 30, 2011.
- continued using the *Knowledge and BMP Assessment*s at commercial and industrial facilities.
- continued distributing the brochure for mobile service providers, including carpet cleaners, plumbers, pressure washers, mechanics, porta-potty services, and any other mobile businesses that provide services at various off-site locations. This brochure was designed for mobile service providers, their employees, and anyone that hires a mobile service provider.

- distributed educational information for residential activities, continued an advertising campaign, hosted or participated in community outreach events, and collaborated in offering five oil recycling and two HHW drop-off sites for residential use.
- collaborated with other internal departments to assist with investigations and remediation during field incidents. The Storm Drain Maintenance Division was key to prompt, effective responses to complaints involving clean ups of incidents on public streets. Regular meetings and discussions about compliance issues and consistent contact facilitates this inter-departmental coordination.
- conducted a proactive program to detect and eliminate illegal discharges to the MS4. The public continued to use the storm water hotline and e-mail address to report illegal discharges to the storm drain system. The Storm Water Protection Program responded to 119 reports of illegal discharges to the storm drain system and issued 23 enforcement actions.
- continued implementation of the *Dry Weather Field Screening and Analytical Program*, analyzing conditions and samples from up to 60 sites in the MS4.
- continued implementation of the *Coastal Outfall Program* by routinely monitoring 8 "active" outfall sites on a regular basis, and "inactive" sites semi-annually.
- continued involvement in outreach and education at the local level, the watershed level, and the regional level with the Project Clean Water Outreach Workgroup, and the Think Blue campaign.
- continued distributing storm water educational brochures.
- distributed information through direct mail, during inspections and investigations, on the website, at workshops, during presentations, training seminars, and other public outreach events.
- conducted a Public Opinion Survey of 1,000 residents and included questions on storm water.
- distributed promotional items such as coloring books, pens, and Bags on Board with pollution prevention messages.

15.3 Notable Activities in Addition to Permit Requirements

The City implemented several initiatives in addition to the requirements of the Permit Order No. R9-2007-0001 which are considered Notable Activities. Some of these are internal program goals and should not be viewed as enforceable under the Permit, and will be continued and enhanced as resources allow. For comprehensive details on all City activities, please refer to the applicable preceding sections of this report. Notable Activities for FY 2010-11 are as follows:

The City:

- developed an informational brochure on low impact development (LID Brochure). The LID Brochure is a tool to educate developers, contractors and homeowners about low impact design and how water quality features can be incorporated into projects. The brochure includes different LID features, what their purpose is, and where it could be employed on a project site.

- sent CMI staff to attended the annual CASQA conference in Palm Springs, Ca. in November 2010. This year's conference theme was "Rethinking Stormwater Management". The conference featured over 80 sessions and presentations covering a variety of topics including the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Stormwater Treatment, and other related topics.

- sent Development Services and CMI staff to attend the "Maintaining LID in San Diego: Best Management Practice Inspection and Maintenance Workshop" held in San Diego in April 2011. The workshop was hosted by the City of San Diego and included up to date information about new and proposed LID regulations, stormwater management devices including treatment control BMPs, inspection and maintenance requirements for BMPS, and design and implementation strategies for minimizing BMP maintenance requirements.

- sent Development Services staff to attend training seminars regarding the countywide BMP sizing calculator on December 14, 2010 and March 8, 2011. This training served to train both private engineers and municipal staff on how the BMP calculator could be utilized to satisfy the new stormwater requirements, including hydromodification.

- updated the Carlsbad SUSMP. On January 14, 2011 the update added final hydromodification criteria, thresholds and requirements. The City incorporated the countywide BMP sizing calculator to facilitate applicants when sizing BMPs that satisfy both numeric and hydromodification requirements. The updated Carlsbad SUSMP was made available on the City's website and emails were sent to those listed on the email notification list from the City's website. The City updated the SWSQ and SWMP guidelines.

- accepted through Council action the Carlsbad Community Vision, which was the result of a citywide community visioning process (Envision Carlsbad Phase 1). The Carlsbad Community Vision identifies the community's core values for the future, which include a strong desire to protect open space and the natural environment, both for its visual beauty, and for its ecological functions (clean air and water, habitats, animal movement corridors). As stated in the Carlsbad Community Vision, "Community members look forward to continued enjoyment of clean, healthy, and accessible lagoons, beaches, and natural habitat areas due to ongoing conservation, restoration, and active maintenance efforts." Carlsbad residents are very cognizant and proud of the ocean and lagoons, and how important it is to keep them clean.

- continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance.

- updated the template for the SSPCBMP plan for applicants and engineers that prepare SWMP's. A SSPCBMP plan is required content for a SWMP. The SSPCBMP serves as a comprehensive document displaying the project and the location of different BMPs that are to be installed along with calling out which construction document (grading, improvement, building, landscape plan, etc) that is responsible to install each listed BMP. The template was also added to the City's website for use by applicants when preparing SWMP's. For a copy of the template SSPCBMP plan, refer to the following site: http://www.carlsbadca.gov/business/building/Documents/BMP_Plan_Sheet.zip.

- began scanning storm water management plans into our digital management system (DMS), similar to the process for final drawings. The SWMP is a useful document as it is used to help identify the types and locations of approved post construction treatment control BMPs. It also

contains maintenance obligations that are required for the post-construction BMPs located on the project. Scanning to DMS allows these water quality reports to be more readily accessed digitally by CM&I inspectors, homeowners, reviewers, researchers.

- updated forms and uploaded them to the City's website. These forms are frequently used by applicants to evaluate projects for storm water requirements on projects. For a copy of the City's webpage showing the storm water forms, see http://www.carlsbadca.gov/business/building/permitting-process/Pages/Engineering_Applications.aspx.

- developed a new procedure in the Building Division to help inspectors effectively conduct NPDES inspections at sites covered by an active building permit. The "SWPPP Permit and Process Procedures" guides each building inspector and engineering tech through a step by step process to ensure NPDES compliance at each building site.

- exceeded the required number of inspections for active construction sites. CMI conducted 1,002 inspections, which exceeds the 940 inspections required for the wet and dry seasons.

- had no signs of over-irrigation at Municipal Facilities during inspection.

- had no violations of the permit or local ordinances, during inspections conducted at all high priority municipal inspections,

- used hand weeding techniques where feasible in place of chemical application during Parks maintenance,

- sent an informational letter to 645 households that addressed storm water pollution issues in the neighborhood, in response to monitoring investigations.

- increased our use of mass media, with the launch of a PSA on the city TV channel and continuous updates of the city's website.

15.4 Recommendations for Improvements

As the City continued to implement the 2008 JURMP in this reporting period, some areas for improvement were noted for the future:

The City will:

- continue to research, observe, and evaluate the performance of various types of BMPs.
- continue to evaluate and update internal procedures for Industrial/Commercial inventory prioritization and management and revise as appropriate.
- continue to develop effectiveness assessment mechanisms for each significant activity, for each major component, as well as an integrated assessment of the overall program.
- continue to work at the watershed level and help focus activities on high priority pollutants.

15.5 Water Quality Improvements or Degradation

The complete 2011 Dry Weather report and the full IDDE Section of the Annual Report will be submitted in December of 2011. Please refer to the *Carlsbad Watershed 2011 WURMP* for data trends supporting the focus on *High Priority Pollutants* on a watershed basis. The following text highlights some of the observations on water quality.

MS4 Water Quality

The MS4 program continued in this fiscal year. This program was implemented to characterize pollutant discharges from MS4 outfalls. Data was collected this year as required and will be submitted with the Regional Monitoring Report.

Exceedances of bacteria 95th percentile criteria in the *Coastal Storm Drain Monitoring Program* have stabilized or declined in recent years. During FY 2010-11, there were no storm drain flows that reached the ocean. The City has been successful at decreasing illegal discharges in areas where outfalls discharge directly to the beach during dry weather.

Receiving Water Quality

In FY 2010-11, programs assessing receiving water quality included the Coastal Storm Drain Monitoring Program and mass loading station monitoring under the Regional program.

No receiving water samples were collected as part of the Coastal Monitoring Program because in most cases, the outfalls were dry and had no discharge. If flow was observed, it was intermittent, low volume and did not actually reach the receiving waters but dissipated into the sand or sediment.

Data related to the Mass Loading Station will be submitted with the Copermittees' Regional Monitoring Annual Report in January 2012.

15.6 Conclusion

The Storm Water Protection Program continues to evolve over time in response to the iterative process of implementing BMPs, assessing effectiveness, and evaluating results. As more procedures, programs and activities are implemented, there is a clear need for better databases to track and report activities and BMPs being implemented. Tying these activities to changes in water quality still presents a considerable challenge. This is part of the long-term assessment strategy that will take time to develop trends and to determine cause and affect relationships between pollution prevention and water quality management. The City will continue to work individually and with the Copermittees to further develop existing compliance programs and create new opportunities for improvement.

This section of the Annual Report demonstrated the City's compliance with Permit Order No R9-2007-0001 and continued implementation of the 2008 JURMP. Other sections of this report show that knowledge has increased in target communities, BMP implementation and behavior changes are improving, pollutant loadings are being reduced from storm water management programs, the MS4 water quality is improving, and pollutant loads to receiving waters are being reduced. These are encouraging signs worth noting. The City recognizes that measurable changes occur over time and that continued program improvements and effectiveness measures are needed for long-term success.

2.0 Development Planning Component

Permit Annual Reporting Requirement Section J.3.a.(3).(a)	Section
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2.1, 2.2.3, 2.3, 2.4.1
ii. Confirmation that all development projects were required to undergo the Copermittee s urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.5.1
iii. A listing of the development projects to which SUSMP requirements were applied.	2.5.1
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	2.5.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.5.3
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.5.3.2
vii. An updated treatment control BMP inventory.	2.7.2
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.7.2, 2.7.3
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.7.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.3
xi. A listing of any projects which received a SUSMP waiver.	2.5.4.1
xii. A description of implementation of any SUSMP waiver mitigation program.	2.5.4.1
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.6.1
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	2.6.2
xv. A listing of priority development projects not required to meet HMP require ments, including a description of why the projects were found to be exempt from the requirements.	2.6.3
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.6.4
xvii. The number of violation and enforcement action (including types) taken for development projects, including information on any necessary follow-up action taken. The discussion should exhibit that compliance has been achieved, or describe action that are being taken to achieve compliance.	2.8
xviii. A description of notable activities conducted to manage urban runoff from development projects.	2.5

3.0 Construction

Permit Annual Reporting Requirement Section J.3.a.(3).(b)	Section
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.2
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
ii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iii. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.4
iv. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.4.1
v. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.4.2
vi. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix 3.1
vii. A description of the general results of the inspections.	3.5
viii. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5
ix. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.6
x. A description of notable activities conducted to manage urban runoff from construction sites.	3.7

4.0 Municipal

Permit Annual Reporting Requirement Section J.3.a.(3).(c)	Section
i. Any updates to the municipal inventory and prioritization.	4.16.2, App 4.1
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4, 4.8.4, 4.9.4, 4.10.4, 4.11.4, 4.12.4, 4.13.4, 4.14.4, 4.15.4, 4.16.4

iii. A description of inspections and maintenance conducted for municipal treatment controls.	4.4.4
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.4
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.4
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding .	N/A
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal are as and activities.	4.11.4
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently gene rating the highest volumes of trashand/or debris, as well as the frequency of s weeping conducted for such roads,streets, and highways.	4.3.4
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4
xiii. Identification of the total distance of curb-miles swept.	4.3.4
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, App. 4.1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.4.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.16.4, App 4.7
xviii. A description of the general results of the inspections.	App 4.7

xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	App 4.7
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.16.4, App 4.7
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	4.17

5.0 Industrial and Commercial

Permit Annual Reporting Requirement Section J.3.a.(3).(d)	Section
i. Any updates to the industrial and commercial inventory.	App 5.1
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.3, App 5.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.3.2
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.4.1, Table 5.2
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.2
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4.1
vii. Identification of the number of third party inspections conducted.	5.2.4.1
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4.1
ix. A description of efforts implemented to address mobile businesses.	5.3
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4.2
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4.4
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	5.4

6.0 Residential

Permit Annual Reporting Requirement Section J.3.a.(3).(e)	Section
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2, 6.3
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.3,6.4.2

iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4.3
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4.3
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4.4
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4.5
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4.1
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.5

7.0 IDDE

Permit Annual Reporting Requirement Section J.3.a.(3).(f)	**Section**
i. Correction of any inaccuracies in either the MS4 map or Dry Weather Field Screening and Analytical Monitoring Stations Map.	To be submitted in December 2011
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order NO. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	To be submitted in December 2011
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	To be submitted in December 2011
iv. A brief description of any other investigation and follow-up activities for illicit discharges and connections.	To be submitted in December 2011
v. The number and brief description of illicit discharges and connections identified.	To be submitted in December 2011
vi. The number of illicit discharges and connections eliminated	To be submitted in December 2011
vii. Identification and description of all spills to the MS4 and response to the spills.	To be submitted in December 2011

viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	To be submitted in December 2011
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	To be submitted in December 2011
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	To be submitted in December 2011
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges	To be submitted in December 2011
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	To be submitted in December 2011
xiii. A description of notable activities conducted to manage illicit discharges and connections.	To be submitted in December 2011

8.0 Education

Permit Annual Reporting Requirement Section J.3.a.(3).(g)	Section
i. A description of education efforts conducted for each target community.	8.2, 8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and allowable behaviors and discharges.	8.3.5
iii. A description of education efforts conducted for municipal departments and personnel.	8.2
iv. A description of education efforts conducted for the new development and construction communities.	8.3.1, 8.3.2
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3.5

9.0 Public Participation

Permit Annual Reporting Requirement Section J.3.a.(3).(h)	Section
i. A description of public participation efforts conducted.	9.2 to 9.5

10.0 Fiscal Analysis

Permit Annual Reporting Requirement Section J.3.a.(3).(j)	Section
i. A fiscal analysis of the Copermittees urban runoff management programs which meets all requirements of section G of this Order.	10.1 to 10.4

11.0 Effectiveness Assessment

Permit Annual Reporting Requirement Section J.3.a.(3).(i)	Section
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11.1 to 11.3

12.0 Special Investigations

Permit Annual Reporting Requirement Section J.3.a.(3).(k)	Section
i. A description of any special investigations conducted.	12.1

13.0 Non-Emergency Firefighting

Permit Annual Reporting Requirement Section J.3.a.(3).(l)	Section
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	13.1 to 13.5

14.0 JURMP Revisions

Permit Annual Reporting Requirement Section J.3.a.(3).(m)	Section
i. A description of any proposed revisions to the JURMP.	14.0

Appendix 2

HOMEOWNER'S GUIDE TO

Standard Storm Water Requirements (Low Impact Development)

CITY OF CARLSBAD

Low Impact Development (LID)

Low impact development aims to protect pollution in our environment, emphasizing the use of existing natural site features and small scale storm water facilities to more closely mimic natural rainfall runoff patterns.

Keys to low impact development

Conserve and restore vegetation and soil

- Retain existing vegetation
- Restore vegetation on previously cleared land, where feasible
- Reduce runoff through vegetated surfaces that capture rainfall
- Look for opportunities to install rain gardens or bioretention cells

Minimize hardscaped/impervious area

- Avoid or minimize the use of impervious surfaces—like concrete or asphalt—in favor of permeable surfaces
- Use pavers or stepping stones for paths, driveways and patios
- Use permeable concrete and asphalt for driveways
- Create a vegetated roof

Disconnect hardscaped/impervious areas

- Route rain gutter and drain run off into a landscaped area, so rain water run off can soak in before flowing to the street
- Install gravel or landscaped areas under the drip line of your eaves, if you don't have a rain gutter

Harvest rain water

- Use rain barrels or underground cisterns to capture rainfall
- Create a rain garden to allow water to soak into the ground

Schematic Diagrams:

Bioretention cell:

Cistern:

Pavers:

CITY OF CARLSBAD

Low Impact Development (LID) Techniques

in Residential Development

1) Vegetated roof:

The benefits of a vegetated roof include reduced volume and improved quality of storm water runoff, increased energy efficiency, improved air quality, reduced temperatures, noise reduction and improved aesthetics. (LID fact sheet 29)

2) Rain water harvesting:

Cisterns and rain barrels capture roof runoff from roof downspouts and provide an effective way to store and slowly release run-off into the ground. Stored water can be used for irrigation and provides an opportunity for water conservation and reducing water utility costs. They can be located below ground or above ground. (LID fact sheet 26)

3) Bioretention cell or rain garden:

Landscape depressions that contain soil amendments that promote healthy vegetation and infiltration of storm water. Amended soil enriched with organic materials and sand increases capacity of soil to soak into the ground.
(LID fact sheets 1, 2, 7, 25, 30)

4) Preserve natural vegetation and natural drainage flow:

Enhances the aesthetic quality of community and improves the evaporation rate of storm water runoff. Reduces the need for grading and construction of drainage facilities.

5) Downspout to landscaped area or flow-through planters:

Discharging downspouts to landscaped areas allows for retention and treatment of runoff. (LID fact sheets 4, 28)

6) Pervious pavement:

Pervious pavements such as pervious concrete, pervious asphalt concrete and pavers can be used to infiltrate storm water, replenish groundwater and reduce runoff volume. Base course must be designed to provide a stable load-bearing surface for the intended loads.
(LID fact sheets 8-13, 17, 21-24)

7) Flow-through planter/ vegetated or rock drip line:

Runoff from eaves of non-guttered roofs can cause significant erosion and resulting moisture can harm foundations. Vegetated or rock drip line protection slows runoff and promotes infiltration. The ground must slope away from home's foundation.
(LID fact sheets 1, 27, 30, 32)

8) Vegetated swales / rock swales:

Swales act as linear biofilters along the perimeter of the lot or along the street front. Storm water travels slowly over rocks and vegetated surfaces allowing pollutants to settle and slowing runoff velocities. Check dams or gravel weirs can be added to further slow and spread concentrated flows.
(LID fact sheet 4)

To: [PLANNER NAME], Project Planner
From: [YOUR NAME], Project Engineer

Subject : **[INSERT PROJECT ID, PROJECT NAME (APN NO.)]**

The engineering department has completed its review of the project. The engineering department is recommending that the project be approved, subject to the following conditions:

DO NOT USE FOR MS CONDITIONS..... USE PRELIMINARY DECISION LETTER!! [CLICK TO DELETE]

PROJECT ENGINEER INSTRUCTIONS: For items in (PARENTHESIS), once you have chosen an option make sure it is reformatted in lower case and the other options are eliminated. Special conditions should be typed in bold. [CLICK TO DELETE]

PROJECT ENGINEER INSTRUCTIONS: If you modify or add to a standard condition, bold type ONLY that portion of the condition modified or added. Do not use strikeout to remove words from a standard condition. Just simply remove them. [CLICK TO DELETE]

Engineering Conditions

NOTE: Unless specifically stated in the condition, all of the following conditions, upon the approval of this proposed (DEVELOPMENT OR SUBDIVISION), must be met prior to approval of a (FINAL MAP, BUILDING OR GRADING PERMIT WHICHEVER OCCURS FIRST).

General

1. Prior to hauling dirt or construction materials to or from any proposed construction site within this project, developer shall apply for and obtain approval from, the city engineer for the proposed haul route.

[USE FOR ALL PROJECTS]

2. This project is approved upon the express condition that building permits will not be issued for the development of the subject property, unless the district engineer has determined that adequate water and sewer facilities are available at the time of permit

issuance and will continue to be available until time of occupancy.

[USE IF LLA NEEDED TO CURE SUBDIVISION BOUNDARY CONCERNS OR LAND SWAPPING PROPOSED]

3. Prior to the approval of a (FINAL MAP, GRADING PERMIT, BUILDING PERMIT), the developer shall complete processing of a lot line adjustment between lot [NUMBER OR LETTER] and lot [NUMBER OR LETTER] as shown on the (SITE PLAN/TENTATIVE MAP).

[USE WHEN YOU NEED MORE THAN SITE PLAN FOR CONFORMING MYLAR]

4. Developer shall submit to the city planner, a reproducible 24" x 36", mylar copy of the Site Plan and (**CONCEPTUAL GRADING PLAN, PRELIMINARY UTILITY PLAN)** reflecting the conditions approved by the final decision making body. The reproducible shall be submitted to the city planner, reviewed and, if acceptable, signed by the city's project engineer and project planner prior to submittal of the building plans, improvement plans, grading plans, or final map, whichever occurs first.

5. Developer shall submit to the city engineer an acceptable instrument, via CC&R's and/or other recorded document, addressing the maintenance, repair, and replacement of shared private improvements within this subdivision, including but not limited to private (STREETS, UTILITIES, STREET TREES, SIDEWALKS, LANDSCAPING, STREET LIGHTING, RAISED MEDIANS, ENHANCED PAVING, WATER QUALITY TREATMENT MEASURES, LOW IMPACT DEVELOPMENT FEATURES, STORM DRAIN FACILITIES, etc.) located therein and to distribute the costs of such maintenance in an equitable manner among the owners of the properties within this subdivision.

[USE ONLY WHEN DRAINAGE CONDITIONS WARRANT]

6. Developer shall include rain gutters on the building plans subject to the city engineer's review and approval. Developer shall install rain gutters in accordance with said plans.

7. Developer shall prepare, submit and process for city engineer approval a final map to subdivide this project. There shall be one Final Map recorded for this project.

[USE NEXT TWO CONDITIONS FOR MULTIPLE/PHASED MAPS]

8. This project is approved for up to **[INSERT NUMBER OF MAPS]** Final Maps for the purposes of recordation in the order of phasing shown on the tentative map.

9. If developer desires to record a Final Map out of the phase approved on the tentative map, the new phasing may be approved or conditionally approved by the city engineer and city planner via substantial conformance exhibit.

10. Developer shall install sight distance corridors at all street intersections and driveways in accordance with City Engineering Standards. The property owner shall maintain this condition.

[USE IF PROJECT ABUTTING OR ADJACENT TO ARTERIAL STREETS WHERE BUS STOPS MAY BE NEEDED]

11. Prior to approval of Improvement Plans, Grading Plans or Final Map, developer shall submit to the city engineer written approval from North County Transit District (NCTD) demonstrating mass-transit improvement requirements for this project have been satisfied.

Fees/Agreements

12. Developer shall cause property owner to execute and submit to the city engineer for recordation, the city's standard form Geologic Failure Hold Harmless Agreement.

13. Developer shall cause property owner to execute and submit to the city engineer for recordation the city's standard form Drainage Hold Harmless Agreement.

14. Developer shall cause property owner to execute and submit to the city engineer for recordation, the city's standard form Panhandle Lot Hold Harmless Agreement.

15. Developer shall cause property owner to process, execute and submit an executed copy to the city engineer for recordation a city standard Permanent Stormwater Quality Best Management Practice Maintenance Agreement for the perpetual maintenance of all treatment control, applicable site design and source control, post-construction permanent Best Management Practices prior to the issuance of a grading permit or building permit, or the recordation of a (FINAL/PARCEL) map, whichever occurs first for this project.

16. Developer shall cause property owner to execute, and submit to the city engineer for recordation, a city standard deed restriction on the property which relates to the proposed cross lot drainage as shown on the (TENTATIVE MAP/SITE PLAN). The deed restriction document shall:

    A. Clearly delineate the limits of the drainage course; and
    B. State that the drainage course is to be maintained in perpetuity by the underlying property owner; and
    C. State that all future use of the property along the drainage course will not restrict, impede, divert or otherwise alter drainage flows in a manner that will result in damage to the underlying and adjacent properties or the creation of a public nuisance.

17. Developer shall cause property owner to apply for, execute, and submit, to the city engineer for recordation, an Encroachment Agreement covering private [LIST ENCROACHMENT(S)] located over (EXISTING OR PROPOSED) public right-of-way or easements as shown on the (TENTATIVE MAP/SITE PLAN). Developer shall pay

processing fees per the city's latest fee schedule.

[USE CONDITION FOR SUBDIVISION OR LOT LINE ADJUSTMENT WITHIN AN EXISTING ASSESSMENT DISTRICT]

18. Developer shall cause property owner to apply for and obtain reapportionment of the assessments imposed on the subject project in accordance with law governing the associated [INSERT NAME OF DISTRICT eg: Assessment District 2002-01 (Poinsettia Lane East)] Assessment District, or the assessments must be paid in full. Developer shall pay all associated costs of said reapportionment. The application shall be submitted to the city engineer with the application for the final map.

[USE CONDITION IF PROJECT WITHIN AD 2002-01]

19. The subject property is within the boundaries of Assessment District No. 2002-01 (Poinsettia Lane East). The owner of this property has previously executed a Special Assessment District Disclosure Agreement with the city. Said Agreement contains provisions requiring the current owner and any subsequent owner(s) to provide notice to potential buyers of the amount of the assessment and other provisions and requires owner to have each buyer receive, execute and deposit into escrow a Notice of Special Assessment and Prepayment Option Agreement. In the event that owner does not have the buyer execute the Notice of Special Assessment and Prepayment Option Agreement prior to close of escrow, the assessment on the subject property must be paid off in full by owner.

[TO DEFER IMPROVEMENTS ON "CT" PROJECTS ON COMPATIBLE DESIGN STREETS]

20. Developer shall cause property owner to enter into a lien contract with the city for the future public improvement of **[INSERT STREET NAME]** along the subdivision frontage for a half street width of **[INSERT DIMENSION]-**feet. Public improvements shall include but are not limited to (PAVING, BASE, SIDEWALKS, CURBS AND GUTTERS, MEDIANS, GRADING, CLEARING AND GRUBBING, UNDERGROUNDING OR RELOCATION OF UTILITIES, SEWER, WATER, FIRE HYDRANTS, STREET LIGHTS, RETAINING WALLS AND RECLAIMED WATER).

[TO DEFER IMPROVEMENTS ON TITLE 18 PROJECTS "BLDG PERMIT" ON ALTERNATIVE DESIGN STREETS]

21. Developer shall cause property owner to enter into a Neighborhood Improvement Agreement with the city on a city standard form for the future public improvement of **[INSERT STREET NAME]** along the property frontage for a half street width of **[INSERT DIMENSION]**-feet. Public improvements shall include but are not limited to (PAVING, BASE, SIDEWALKS, CURBS AND GUTTERS, MEDIANS, GRADING, CLEARING AND GRUBBING, UNDERGROUNDING OR RELOCATION OF UTILITIES, SEWER, WATER, FIRE HYDRANTS, STREET LIGHTS, PEDESTRIAN RAMP, RETAINING WALLS AND RECLAIMED WATER).

[USE CONDITION BELOW IF FINANCE DETERMINES YOUR PROJECT IS NOT TO BE ANNEXED INTO

SL&LD #2]

22. Prior to approval of any grading or building permits for this project, developer shall cause owner to give written consent to the city engineer for the annexation of the area shown within the boundaries of the (SUBDIVISION OR SITE PLAN) into the existing City of Carlsbad Street Lighting and Landscaping District No. 1 and/or to the formation or annexation into an additional Street Lighting and Landscaping District. Said written consent shall be on a form provided by the city engineer.

[USE CONDITION BELOW ONLY IF FINANCE DETERMINES YOUR PROJECT MUST BE ANNEXED INTO SL&LD #2]

23. This project shall be annexed into City of Carlsbad Street Lighting and Landscaping District No. 2 (SL&LD #2). Prior to approval of any grading, building permits or final map for this project, developer shall cause owner to execute an Agreement to annex the subject property into SL&LD #2. The Agreement shall be in a form approved by the assistant city finance director. Developer shall pay all fees necessary to annex the property into SL&LD #2.

[USE CONDITION BELOW ONLY IF PROJECT CONSTRUCTS STREET TREES IN CITY PARKWAYS]

24. Developer shall cause property owner to execute and submit to the city engineer for recordation the city's standard form Street Tree Maintenance Agreement.

[USE CONDITION BELOW ONLY IF PROJECT SUBDIVIDING WITHIN ZONE 11]

25. Prior to approval of the Final Map, developer shall cause property owner to execute and submit to the city for recordation a Prepayment Agreement with the city for prepayment of the obligation for funding to improve Rancho Santa Fe Road, which will satisfy the special condition in the Zone 11 LFMP requiring a financing plan guaranteeing construction of Rancho Santa Fe Road. The Prepayment Agreement shall be in a form to the satisfaction of the city attorney and city engineer.

[USE IF PROJECT FRONTS PUBLIC STREET, BUT IS LESS THAN 600-FT TO TRIGGER U/G]

26. Prior to issuance of building permits, or grading permit, whichever occurs first, developer shall cause owner to execute, for recordation, a city standard Local Improvement District Agreement to pay fair share contributions for undergrounding of all existing overhead utilities and installation of street lights, as needed, along the subdivision frontage, should a future district be formed.

Grading

[USE IF GRADING PERMIT REQUIRED]

27. Based upon a review of the proposed grading and the grading quantities shown on the (TENTATIVE MAP/SITE PLAN), a grading permit for this project is required. Developer shall prepare and submit plans and technical studies/reports, for city engineer review, and shall pay all applicable grading plan review fees per the city's latest fee schedule.

[USE IF GRADING PERMIT REQUIRED]

28. Developer shall apply for and obtain a grading permit from the city engineer. Developer shall pay all applicable grading permit fees per the city's latest fee schedule and shall post security per City Code requirements.

[USE ON RESIDENTIAL CT'S TO GET PRECISE GRADING PLANS]

29. Supplemental grading plans are required for precise grading associated with this project. Developer shall prepare, and submit for approval, grading plans for the precise grading as shown on the (TENTATIVE MAP/SITE PLAN) all subject to city engineer approval.

[USE FOLLOWING IF THE SOILS REPORT CALLS OUT SIGNIFICANT GEOLOGIC ISSUES]

30. Upon completion of grading, developer shall file an "as-graded" geologic plan with the city engineer. The plan shall clearly show all the geology as exposed by the grading operation, all geologic corrective measures as actually constructed and must be based on a contour map which represents both the pre and post site grading. The plan shall be signed by both the soils engineer and the engineering geologist, and shall be submitted on a 24" x 36" mylar or similar drafting film format suitable for a permanent record.

31. This project requires off site grading. No grading for private improvements shall occur outside the project unless developer obtains, records, and submits a recorded copy, to the city engineer, a temporary grading, construction or slope easement or agreement from the owners of the affected properties. If developer is unable to obtain the temporary grading or slope easement, or agreement, no grading permit will be issued. In that case developer must either apply for and obtain an amendment of this approval or modify the plans so grading will not occur outside the project and apply for and obtain a finding of substantial conformance and/or consistency determination from both the city engineer and city planner.

32. Developer shall comply with the city's Stormwater Regulations, latest version, and shall implement best management practices at all times. Best management practices include but are not limited to pollution control practices or devices, erosion control to prevent silt runoff during construction, general housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices or devices to prevent or reduce the discharge of pollutants to stormwater, receiving water or stormwater conveyance system to the maximum extent practicable. Developer shall notify prospective owners and tenants of the above requirements.

[USE NEXT TWO CONDITIONS ONLY IF PROJECT QUALIFIES AS TIER 3 SWPPP]

33. Prior to the issuance of a grading permit, developer shall submit to the city engineer receipt of a Notice of Intent from the State Water Resources Control Board.

34. Prior to the issuance of grading permit or building permit, whichever occurs first, developer shall submit for city approval a Tier 3 Storm Water Pollution Prevention Plan

(TIER 3 SWPPP). The TIER 3 SWPPP shall comply with current requirements and provisions established by the San Diego Regional Water Quality Control Board and City of Carlsbad Requirements. The TIER 3 SWPPP shall identify and incorporate measures to reduce storm water pollutant runoff during construction of the project to the maximum extent practicable. Developer shall pay all applicable SWPPP plan review and inspection fees per the city's latest fee schedule.

[USE NEXT CONDITION ONLY IF UNSURE WHICH TIER SWPPP IS NEEDED FOR PROJECT]

35. Developer shall complete and submit to the city engineer a Project Threat Assessment Form (PTAF) pursuant to City Engineering Standards. Concurrent with the PTAF, developer shall also submit the appropriate Tier level Storm Water Compliance form and appropriate Tier level Storm Water Pollution Prevention Plan (SWPPP) as determined by the completed PTAF all to the satisfaction of the city engineer. Developer shall pay all applicable SWPPP plan review and inspection fees per the city's latest fee schedule.

[USE NEXT CONDITION ONLY IF MEETS PRIORITY PROJECT DESIGNATION]

36. This project is subject to 'Priority Development Project' requirements. Developer shall prepare and process a Storm Water Management Plan (SWMP), subject to city engineer approval, to demonstrate how this project meets new/current storm water treatment requirements per the city's Standard Urban Storm Water Management Plan (SUSMP), latest version. In addition to new treatment control BMP selection criteria in the SUSMP, the developer shall use low impact development (site design) approaches to ensure that runoff from impervious areas (roofs, pavement, etc) are drained through landscaped (pervious) areas prior to discharge. Developer shall pay all applicable SWMP plan review and inspection fees per the city's latest fee schedule.

37. Developer acknowledges upcoming hydromodification (runoff reduction) requirements may impact how this project treats and/or retains storm runoff. Hydromodification involves detailed site design and analysis to reduce the amount of post-development run-off by mimicking the natural hydrologic function of the site, preserving natural open-spaces and natural drainage channels, minimizing use of new impervious surfaces, and promoting onsite infiltration and evaporation of run-off. During final design, developer shall demonstrate compliance with storm water requirements to the satisfaction of the city engineer.

38. Developer is responsible to ensure that all final design plans (grading plans, improvement plans, landscape plans, building plans, etc) incorporate all source control, site design, treatment control BMP, applicable hydromodification measures, and Low Impact Design (LID) facilities.

[USE FOR PROJECTS SUBJECT TO STANDARD STORMWATER REQUIREMENTS]

39. Developer shall incorporate measures with this project to comply with Standard Stormwater Requirements per the city's Standard Urban Stormwater Management Plan

(SUSMP). These measures include, but are not limited to: 1) reducing the use of new impervious surfaces (e.g.: paving), 2) designing drainage from impervious surfaces to discharge over pervious areas (e.g.: turf, landscape areas), 3) and designing trash enclosures to avoid contact with storm runoff, all to the satisfaction of the city engineer.

[USE IF PROJECT REQUIRES HYDROMODIFICATION THRESHOLDS]

40. Developer shall submit documentation, subject to city engineer approval, demonstrating how this project complies with Interim Hydromodification requirements per the city's SUSMP, latest version. Documentation shall be included within the Storm Water Management Plan (SWMP).

[USE NEXT TWO CONDITIONS FOR CONDITONAL USE PERMIT EXTENSIONS AS APPLICABLE]

41. Within 6 months of approval of this Conditional Use Permit extension, developer shall submit and receive approval for a Storm Water Management Plan (SWMP) to the City of Carlsbad Engineering Department. This project qualifies as a "Priority Development Project" as defined by City of Carlsbad Standard Urban Storm Water Mitigation Plan (SUSMP), and therefore, the project is required to capture and reduce pollutants to a level of insignificance. The organization and content of the SWMP shall be prepared in accordance with the guidelines established by the City of Carlsbad. The SWMP shall address the anticipated pollutants of concern associated with the project. The SWMP shall also suggest the type(s) of post-construction (structural) Best Management Practices (BMP's) required to capture and filter said pollutants of concern and establish maintenance provisions for said BMP's. Developer shall pay all applicable SWMP plan review and inspection fees per the city's latest fee schedule.

42. Prior to the next annual review of this Conditional Use Permit, developer shall have constructed the BMP measures necessary to capture and filter the anticipated pollutants of concern associated with the project in accordance with the SWMP.

Dedications/Improvements

43. Developer shall cause owner to submit to the city engineer for recordation a covenant of easement for private **[STATE PURPOSE:]** (SEWER, POTABLE WATER, DRAINAGE, PARKING, RECIPROCAL ACCESS, ETC.) purposes as shown on the (TENTATIVE MAP/SITE PLAN). Developer shall pay processing fees per the city's latest fee schedule.

[USE FOR STREETS THAT WILL BE EXTENDED IN THE FUTURE]

44. Developer shall install a barricade at the end of **[INSERT STREET NAME]**. A sign shall be placed on said barricade informing the public that the dead end is temporary. Specifications for said barricade and sign are subject to the city engineer's approval.

[USE WHEN IOD NEEDED AND CITY TO REJECT FOR FUTURE USE]

45. Developer shall cause owner to make an Irrevocable Offer of Dedication to the city and/or other appropriate entities for the **[STATE PURPOSE:]** (PUBLIC STREET & PUBLIC

UTILITY, ETC.) purposes as shown on the (TENTATIVE MAP/SITE PLAN). The offer shall be made by a (CERTIFICATE ON THE FINAL MAP OR SEPARATE RECORDED DOCUMENT). All land so offered shall be free and clear of all liens and encumbrances and without cost to the city. Additional easements may be required at final design to the satisfaction of the city engineer.

[USE WHEN DEDICATION NEEDED]

46. Developer shall cause owner to dedicate to the city and/or other appropriate entities for the **[STATE PURPOSE:]** (PUBLIC STREET & PUBLIC UTILITY, SEWER, DRAINAGE, TRAIL, ETC.) purposes as shown on the (TENTATIVE MAP/SITE PLAN). The offer shall be made by a (CERTIFICATE ON THE FINAL MAP OR SEPARATE RECORDED DOCUMENT). All land so offered shall be free and clear of all liens and encumbrances and without cost to the city. Streets that are already public are not required to be rededicated. Additional easements may be required at final design to the satisfaction of the city engineer.

47. Developer shall design the private streets, as shown on the (TENTATIVE MAP/SITE PLAN) to the satisfaction of the city engineer. The structural section of all private streets shall conform to City of Carlsbad Standards based on R-value tests. All private streets shall be inspected by the city. Developer shall pay the standard improvement plan check and inspection fees for private streets.

48. Developer shall design the private drainage systems, as shown on the (TENTATIVE MAP/SITE PLAN) to the satisfaction of the city engineer. All private drainage systems (12" diameter storm drain and larger) shall be inspected by the city. Developer shall pay the standard improvement plan check and inspection fees for private drainage systems.

[USE FOR PUBLIC IMPROVEMENTS OTHER THAN TRAFFIC SIGNALS (streets, sewer, water, storm drain, etc.]

49. Developer shall prepare and process public improvement plans and, prior to city engineer approval of said plans, shall execute a city standard (SUBDIVISION/DEVELOPMENT) Improvement Agreement to install and shall post security in accordance with C.M.C. Section 20.16.070 for public improvements shown on the (TENTATIVE MAP/SITE PLAN). Said improvements shall be installed to city standards to the satisfaction of the city engineer. These improvements include, but are not limited to:

    A. [LIST ALL IMPROVEMENTS HERE].

    B. .

    Developer shall pay the standard improvement plan check and inspection fees. Improvements listed above shall be constructed within 36 months of approval of the subdivision or development improvement agreement or such other time as provided in said agreement.

[USE PROPOSED TRAFFIC SIGNALS ONLY. PROVIDE SEPARATE CONDITION FOR EACH SEPARATE SIGNAL]

50. Developer shall prepare and process improvement plans and, prior to approval, shall execute a city standard (SUBDIVISION/DEVELOPMENT) Improvement Agreement to install and shall post security in accordance with C.M.C. Section 20.16.070 for public signal improvements shown on the (TENTATIVE MAP/SITE PLAN). Said improvements shall be installed to city standards to the satisfaction of the city engineer. More specifically, these signal improvements include but are not limited to constructing a new fully actuated traffic signal including all appurtenances and traffic signal interconnect conduit and cable, at the intersection of **[INSERT STREET NAME]** and **[INSERT STREET NAME]**. Developer shall install the traffic signal only with written authorization from the city engineer. Developer shall pay the standard improvement plan check and inspection fees. Improvements listed above shall be constructed within 18 months of approval of the subdivision or development improvement agreement or such other time as provided in said agreement.

[USE ONLY FOR 5-YEAR TRAFFIC SIGNALS. EACH SIGNAL REQUIRES A SEPARATE CONDITION]

51. Developer shall execute a city standard Traffic Signal Development Improvement Agreement for the design and construction of a traffic signal constructed to the satisfaction of the city engineer. Developer shall submit an construction cost estimate with contingency, subject to city engineer approval, for the design and construction of a new fully actuated traffic signal including all appurtenances and traffic signal interconnect conduit and cable, at the intersection **[INSERT STREET NAME]** and **[INSERT STREET NAME]**. Developer shall post security in accordance with C.M.C. Section 20.16.070 for the design and construction of said improvements. Developer shall bear all costs associated with the design and construction of this signal, if warrants are met. The Agreement shall be kept in force and security kept valid for a period of 5-years after the last building permit has been issued within this development. The traffic signal shall be installed only when written approval is received by the city engineer.

[USE IF PROJECT HAS MINOR FRONTAGE IMPROVEMENTS THAT DO NOT JUSTIFY AN IMPROVEMENT PLAN]

52. Developer shall design all proposed public improvements including but not limited to (sewer laterals, streetlights, pedestrian ramps, driveways, sidewalk, water services/meters, curb drains, etc.) as shown on the (TENTATIVE MAP/SITE PLAN). These improvements shall be shown on one of the following, subject to city engineer approval:
    A. Grading plans processed in conjunction with this project; or
    B. Construction Revision to an existing record public improvement drawing

    Developer shall pay plan check and inspection fees using improvement valuations in accordance with the city's current fee schedule. Developer shall apply for and obtain a right-of-way permit prior to performing work in the city right-of-way.

53. Prior to issuance of building permits, developer shall install separate sewer services to each unit proposed by this tentative parcel map. Sewer services shall be provided to the satisfaction of the city engineer.

54. Developer shall cause owner to waive direct access rights (ON THE FINAL MAP/PARCEL MAP/BY SEPARATE DOCUMENT PRIOR TO THE ISSUANCE OF A BUILDING PERMIT) for all lots abutting **[INSERT NAME OF STREET]**.

[USE IF STREET FRONTAGE MORE THAN 600-FT OR PER CMC]

55. Prior to issuance of building permits, developer shall underground all existing overhead utilities (ALONG/WITHIN) the (PROJECT/SUBDIVISION) boundary.

[USE FOR SMALL PROJECTS THAT REQUIRE DEDICATION]

56. **[INSERT NAME OF STREET]** shall be dedicated by owner along the project frontage based on a street center line to right-of-way width of **[INSERT DIMENSION]**-feet and in conformance with City of Carlsbad Standards.

57. Developer shall design, and obtain approval from the city engineer, the structural section for the access aisles with a traffic index of 5.0 in accordance with city standards due to truck access through the parking area and/or aisles with an ADT greater than 500. Prior to completion of grading, the final structural pavement design of the aisle ways shall be submitted together with required R-value soil test information subject to the review and approval of the city engineer.

58. Developer shall provide all-weather maintenance access roads to the public drainage facilities (e.g.: headwalls, rip-rap field, etc.) for this project to the satisfaction of the city engineer. Where maintenance access roads are not practical and/or permitted, developer shall incorporate low-maintenance design features to the satisfaction of the city engineer.

Non-Mapping Notes

59. Add the following notes to the final map as non-mapping data:

    A. Developer has executed a city standard (SUBDIVISION/DEVELOPMENT) Improvement Agreement and has posted security in accordance with C.M.C. Section 20.16.070 to install public improvements shown on the (TENTATIVE MAP/SITE PLAN). These improvements include, but are not limited to:

        1) [LIST ALL IMPROVEMENTS HERE].
        2) .

    B. Developer has executed a city standard (SUBDIVISION/DEVELOPMENT) Improvement Agreement and has posted security in accordance with C.M.C. Section 20.16.070 to install public signal improvements shown on the (TENTATIVE MAP/SITE PLAN). These signal improvements include but are not limited to constructing a new fully actuated traffic signal including all appurtenances and traffic signal interconnect conduit and cable, at the

intersection of **[INSERT STREET NAME]** and **[INSERT STREET NAME]**.

C. This subdivision contains a remainder parcel. No building permit shall be issued for the remainder parcel until it is further subdivided pursuant to the provisions of Title 20 of the Carlsbad Municipal Code.

D. Building permits will not be issued for development of the subject property unless the appropriate agency determines that sewer and water facilities are available.

E. Geotechnical Caution:
   1) Slopes steeper than two parts horizontal to one part vertical exist within the boundaries of this subdivision.
   2) The owner of this property on behalf of itself and all of its successors in interest has agreed to hold harmless and indemnify the City of Carlsbad from any action that may arise through any geological failure, ground water seepage or land subsidence and subsequent damage that may occur on, or adjacent to, this subdivision due to its construction, operation or maintenance.

F. No structure, fence, wall, tree, shrub, sign, or other object may be placed or permitted to encroach within the area identified as a sight distance corridor as defined by City of Carlsbad Engineering Standards or line-of-sight per Caltrans standards.

G. The owner of this property on behalf of itself and all of its successors in interest has agreed to hold harmless and indemnify the City of Carlsbad from any action that may arise through any diversion of waters, the alteration of the normal flow of surface waters or drainage, or the concentration of surface waters or drainage from the drainage system or other improvements identified in the city approved development plans; or by the design, construction or maintenance of the drainage system or other improvements identified in the city approved development plans.

Utilities

60. Developer shall meet with the fire marshal to determine if fire protection measures (fire flows, fire hydrant locations, building sprinklers) are required to serve the project. Fire hydrants, if proposed, shall be considered public improvements and shall be served by public water mains to the satisfaction of the district engineer.

61. Developer shall design and construct public facilities within public right-of-way or within minimum 20-foot wide easements granted to the district or the City of Carlsbad. At the

discretion of the district or city engineer, wider easements may be required for adequate maintenance, access and/or joint utility purposes.

62. Prior to issuance of building permits, developer shall pay all fees, deposits, and charges for connection to public facilities.

63. The developer shall design landscape and irrigation plans utilizing recycled water as a source and prepare and submit a colored recycled water use map to the Planning Department for processing and approval by the district engineer.

64. Developer shall install potable water and/or recycled water services and meters at locations approved by the district engineer. The locations of said services shall be reflected on public improvement plans.

65. The developer shall install sewer laterals and clean-outs at locations approved by the city engineer. The locations of sewer laterals shall be reflected on public improvement plans.

66. The developer shall design and construct public water, sewer, and recycled water facilities substantially as shown on the (TENTATIVE MAP/SITE PLAN) to the satisfaction of the district engineer and city engineer.

67. The developer shall provide separate potable water meters for each separately owned unit within this subdivision.

[USE IF MASTER WATER METERS PROPOSED - SEE CMWD ORD 45]

68. Prior to using one potable water meter to serve a multi-ownership building, developer shall apply for and receive approval from the utilities director. Upon application for and good cause shown, the utilities director may allow a single potable water service connection and meter to a multi-ownership building within this (SUBDIVISION/PROJECT) provided:

    A. Developer shall record a deed restriction or other such document as approved by the public works director and general counsel placing future owners on notice that each and every residential or commercial/office unit is served by a single service connection and meter, and in the event that the water bill is not paid by the party or entity responsible for paying the monthly water service charges to CMWD for the respective building occupied by the multi-ownership , CMWD may at its direction shut off the water service to such multi-ownership building in accordance with CMWD adopted rules and regulations.

    B. Developer shall install a private sub-meter for each separately established residence or business within a multi-ownership building having a single potable water service connection and meter.

If denied, developer shall revise all design drawings to provide separate potable water meters for each separately owned unit within this (SUBDIVISION/PROJECT) per district requirements.

[EVALUATE USE OF NEXT THREE CONDITIONS WHEN PROJECT WITHIN OTHER SERVICE BOUNDARIES]

69. The developer shall meet with and obtain approval from the (LEUCADIA WASTEWATER DISTRICT/ VALLECITOS WATER DISTRICT) regarding sewer infrastructure available or required to serve this project.

70. The developer shall meet with and obtain approval from the (OLIVENHAIN MUNICIPAL WATER DISTRICT/VALLECITOS WATER DISTRICT) regarding potable water infrastructure available or required to serve this project.

71. The developer shall meet with and obtain approval from the Olivenhain Municipal Water District regarding recycled water infrastructure available or required to serve this project.

[USE IF PROJECT PROPOSES SIGNIFICANT SEWER DEMANDS OR CAPACITY ISSUES]

72. The developer shall submit a detailed sewer study, prepared by a registered engineer, that identifies the peak flows of the project, required pipe sizes, depth of flow in pipe, velocity in the main lines, and the capacity of the existing infrastructure. Said study shall be submitted concurrently with the improvement plans for the project and the study shall be prepared to the satisfaction of the district engineer.

[USE IF PROJECT PROPOSES SIGNIFICANT WATER DEMANDS OR CAPACITY ISSUES]

73. The developer shall submit a detailed potable water study, prepared by a registered engineer that identifies the peak demands of the project (including fire flow demands). The study shall identify velocity in the main lines, pressure zones, and the required pipe sizes. Said study shall be submitted concurrently with the improvement plans for the project and the study shall be prepared to the satisfaction of the district engineer.

[USE IF PROJECT PROPOSES SIGNIFICANT RECYCLED WATER DEMANDS OR CAPACITY ISSUES]

74. The developer shall submit a detailed recycled water study, prepared by a registered engineer that identifies the peak demands of the project. The study shall identify velocity in the main lines and the required pipe sizes. Said study shall be submitted concurrently with the improvement plans for the project and the study shall be prepared to the satisfaction of the district engineer.

75. The developer shall submit detailed design drawings and studies prepared by a registered engineer for the construction of a (SEWER LIFT STATION, POTABLE/RECYCLED WATER BOOSTER PUMP STATIONS, PRESSURE REDUCING STATION, ETC.) required to serve the project. Said drawings and studies shall be prepared to the satisfaction of the district engineer.

Cellular Antenna Sites

76. The Telecommunications Facility or related appurtenances shall not be constructed on any easement without the easement holder's permission.

77. The Telecommunications Facility or related appurtenances shall not be constructed in any drainage area or over any drainage structure.

Code Reminders
[CHOOSE APPLICABLE REMINDERS BELOW]
The project is subject to all applicable provisions of local ordinances, including but not limited to the following:

[USE ON CT'S - IF APPROVED AFTER 6/2/12, USE TWO YEAR APPROVAL TERM]

78. This tentative map shall expire three years from the date on which the (PLANNING COMMISSION OR CITY COUNCIL) voted to approve this application.

79. Some improvements shown on the tentative map and/or required by these conditions are located offsite on property which neither the city nor the owner has sufficient title or interest to permit the improvements to be made without acquisition of title or interest**.** The developer shall immediately initiate negotiations to acquire such property. The developer shall use its best efforts to effectuate negotiated acquisition. If unsuccessful, developer shall demonstrate to the city engineer its best efforts, and comply with the requirements of the Carlsbad Municipal Code Section 20.16.095 to notify and enable the city to successfully acquire said property by condemnation.

80. Developer shall pay traffic impact and sewer impact fees based on Section 18.42 and Section 13.10 of the City of Carlsbad Municipal Code, respectively. The Average Daily Trips (ADT) and floor area contained in the staff report and shown on the (SITE PLAN/TENTATIVE MAP) are for planning purposes only.

PLANNING COMMISSION RESOLUTION NO. 6096

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF CARLSBAD, CALIFORNIA, APPROVING A TENTATIVE TRACT MAP TO GRADE AND SUBDIVIDE A 5.12-ACRE SITE INTO 29 SMALL LOTS FOR SINGLE-FAMILY HOMES, 2 OPEN SPACE LOTS, AND 1 DRIVEWAY LOT ON PROPERTY GENERALLY LOCATED ON THE SOUTHWEST CORNER OF LOWDER LANE AND POINSETTIA LANE, IN THE MELLO II SEGMENT OF THE LOCAL COASTAL PROGRAM AND LOCAL FACILITIES MANAGEMENT ZONE 4.

CASE NAME: POINSETTIA PROPERTY
CASE NO.: CT 05-10

WHEREAS, **Cottage Development Company**, "Developer," has filed a verified application with the City of Carlsbad regarding property owned by **Eugene Boyland and Shelley Thayer**, "Owner," described as

> **Lot 171, of Carlsbad Tract No. 73-24, in the City of Carlsbad, County of San Diego, State of California, According to Map thereof No. 7996, filed in the Office of the County Recorder of San Diego County, August 2, 1974**

("the Property"); and

WHEREAS, said verified application constitutes a request for a Tentative Tract Map as shown on Exhibits **"A" – "BB"** dated **May 17, 2006**, on file in the Planning Department **POINSETTIA PROPERTY - CT 05-10,** as provided by **Chapter 20.12** of the Carlsbad Municipal Code; and

WHEREAS, the Planning Commission did, on the **17th** day of **May 2006**, hold a duly noticed public hearing as prescribed by law to consider said request; and

WHEREAS, at said public hearing, upon hearing and considering all testimony and arguments, if any, of persons desiring to be heard, said Commission considered all factors relating to the Tentative Tract Map.

NOW, THEREFORE, BE IT HEREBY RESOLVED by the Planning Commission of the City of Carlsbad as follows:

A) That the foregoing recitations are true and correct.

B) That based on the evidence presented at the public hearing, the Commission **APPROVES POINSETTIA PROPERTY – CT 05-10,** based on the following findings and subject to the following conditions:

Findings:

1. That the proposed map and the proposed design and improvement of the subdivision as conditioned, is consistent with and satisfies all requirements of the General Plan, any applicable specific plans, Titles 20 and 21 of the Carlsbad Municipal Code, and the State Subdivision Map Act, and will not cause serious public health problems, in that **the project is consistent with all requirements of the General Plan, and Titles 20 and 21 governing subdivisions and the design of planned developments.**

2. That the proposed project is compatible with the surrounding future land uses since surrounding properties are designated for **residential** development on the General Plan, in that **the proposed project consists of 29 small lot, single-family homes at densities similar and compatible with the surrounding residential land uses.**

3. That the site is physically suitable for the type and density of the development since the site is adequate in size and shape to accommodate residential development at the density proposed, in that **all required development standards and design criteria required by the applicable zoning standards are incorporated into the project with the exception of the "private rear yard" on lots 1-15, for which an approval of a Variance (V 05-01) is required.**

4. That the design of the subdivision or the type of improvements will not conflict with easements of record or easements established by court judgment, or acquired by the public at large, for access through or use of property within the proposed subdivision, in that **the project has been designed and conditioned such that there are no conflicts with established easements.**

5. That the property is not subject to a contract entered into pursuant to the Land Conservation Act of 1965 (Williamson Act).

6. That the design of the subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, in that structures are oriented **in a manner that allows for solar exposure and will take advantage of shade and receive prevailing breezes.**

7. That the Planning Commission has considered, in connection with the housing proposed by this subdivision, the housing needs of the region, and balanced those housing needs against the public service needs of the City and available fiscal and environmental resources.

8. That the design of the subdivision and improvements are not likely to cause substantial environmental damage nor substantially and avoidably injure fish or wildlife or their habitat, in that **the proposed development is not within an existing or proposed**

preserve area of the adopted Habitat Conservation Plan and the site is a previously graded site.

9. That the discharge of waste from the subdivision will not result in violation of existing California Regional Water Quality Control Board requirements, in that **the project has been designed in accordance with the Best Management Practices for water quality protection in accordance with the City's sewer and drainage standards and the project is conditioned to comply with the National Pollutant Discharge Elimination System (NPDES) requirements.**

10. The **Planning Commission** finds that the project, as conditioned herein, is in conformance with the Elements of the City's General Plan based on the facts set forth in the staff report dated **May 17, 2006,** including, but not limited to, the following:

    a. Land Use - **The project is consistent with the City's General Plan since the proposed density of 5.66 du/ac is within the Residential Medium density range of 4 – 8 du/ac specified for the site as indicated in the Land Use Element of the General Plan. The project's proposed density of 5.88 du/ac is slightly below the Growth Management Control Point density (6 du/ac) used for the purpose of calculating the City's compliance with Government Code Section 65584. However, consistent with Program 3.8 of the City's certified Housing Element, all of the dwelling units which were anticipated toward achieving the City's share of the regional housing need that are not utilized by developers in approved projects are deposited in the City's Excess Dwelling Unit Bank. These excess dwelling units are available for allocation to other projects. Accordingly, there is no net loss of residential unit capacity and there are adequate properties identified in the Housing Element allowing residential development with a unit capacity, including second dwelling units, adequate to satisfy the City's share of the regional housing need.**

    b. Circulation – **The project will take access off of Lowder Lane and the project is required to construct full street improvements. On-site circulation consists of a private driveway which will be designed in accordance with City standards.**

    c. Noise - **The project is required to construct a six-foot masonry sound attenuation barrier along the north and west property lines fronting Interstate 5 and Poinsettia Lane and provide an acoustical analysis to ensure adequate interior noise attenuation below 45 dBA CNEL will be achieved.**

    d. Housing – **The project is consistent with the Housing Element of the General Plan and the Inclusionary Housing Ordinance as the applicant is proposing to purchase five affordable housing credits in the Villa Loma housing project.**

11. The project is consistent with the Citywide Facilities and Improvements Plan, the Local Facilities Management Plan for Zone **4,** and all City public facility policies and ordinances. The project includes elements or has been conditioned to construct or provide funding to ensure that all facilities and improvements regarding sewer collection

and treatment; water; drainage; circulation; fire; schools; parks and other recreational facilities; libraries; government administrative facilities; and open space, related to the project will be installed to serve new development prior to or concurrent with need. Specifically,

a. The project has been conditioned to provide proof from the **Carlsbad Unified** School District that the project has satisfied its obligation for school facilities.

b. Park-in-lieu fees are required by Carlsbad Municipal Code Chapter 20.44, and will be collected prior to issuance of building permit.

c. The Public Facility fee is required to be paid by Council Policy No. 17 and will be collected prior to the issuance of building permit.

12. The project has been conditioned to pay any increase in public facility fee, or new construction tax, or development fees, and has agreed to abide by any additional requirements established by a Local Facilities Management Plan prepared pursuant to Chapter 21.90 of the Carlsbad Municipal Code. This will ensure continued availability of public facilities and will mitigate any cumulative impacts created by the project.

13. This project has been conditioned to comply with any requirement approved as part of the Local Facilities Management Plan for Zone **4**.

14. The **Planning Commission** of the City of Carlsbad does hereby find:

a. It has reviewed, analyzed, and considered Mitigated Negative Declaration and **Mitigation Monitoring and Reporting Program Poinsettia Property – CT 05-10/PUD 05-08/CDP 05-23/V 05-01**, the environmental impacts therein identified for this project and said comments thereon, and the Program, on file in the Planning Department, prior to **APPROVING** the project.

b. The Mitigated Negative Declaration and **Mitigation Monitoring and Reporting Program** have been prepared in accordance with requirements of the California Environmental Quality Act, the State Guidelines, and the Environmental Protection Procedures of the City of Carlsbad.

c. They reflect the independent judgment of the **Planning Commission** of the City of Carlsbad.

d. Based on the EIA Part II and comments thereon, the **Planning Commission** finds that there is no substantial evidence the project will have a significant effect on the environment.

15. The Planning Commission has reviewed each of the exactions imposed on the Developer contained in this resolution, and hereby finds, in this case, that the exactions are imposed to mitigate impacts caused by or reasonably related to the project, and the extent and the degree of the exaction is in rough proportionality to the impact caused by the project.

Conditions:

Note: Unless otherwise specified herein, all conditions shall be satisfied prior to **final map recordation or issuance of grading permit, whichever occurs first**.

1. If any of the following conditions fail to occur, or if they are, by their terms, to be implemented and maintained over time, if any of such conditions fail to be so implemented and maintained according to their terms, the City shall have the right to revoke or modify all approvals herein granted; deny or further condition issuance of all future building permits; deny, revoke, or further condition all certificates of occupancy issued under the authority of approvals herein granted; record a notice of violation on the property title; institute and prosecute litigation to compel their compliance with said conditions or seek damages for their violation. No vested rights are gained by Developer or a successor in interest by the City's approval of this **Tentative Tract Map.**

2. Staff is authorized and directed to make, or require the Developer to make, all corrections and modifications to the **Tentative Tract Map** documents, as necessary to make them internally consistent and in conformity with the final action on the project. Development shall occur substantially as shown on the approved Exhibits. Any proposed development different from this approval, shall require an amendment to this approval.

3. Developer shall comply with all applicable provisions of federal, state, and local laws and regulations in effect at the time of building permit issuance.

4. If any condition for construction of any public improvements or facilities, or the payment of any fees in-lieu thereof, imposed by this approval or imposed by law on this Project are challenged, this approval shall be suspended as provided in Government Code Section 66020. If any such condition is determined to be invalid, this approval shall be invalid unless the City Council determines that the project without the condition complies with all requirements of law.

5. Developer/Operator shall and does hereby agree to indemnify, protect, defend, and hold harmless the City of Carlsbad, its Council members, officers, employees, agents, and representatives, from and against any and all liabilities, losses, damages, demands, claims and costs, including court costs and attorney's fees incurred by the City arising, directly or indirectly, from (a) City's approval and issuance of this **Tentative Tract Map**, (b) City's approval or issuance of any permit or action, whether discretionary or nondiscretionary, in connection with the use contemplated herein, and (c) Developer/Operator's installation and operation of the facility permitted hereby, including without limitation, any and all liabilities arising from the emission by the facility of electromagnetic fields or other energy waves or emissions. This obligation survives until all legal proceedings have been concluded and continues even if the City's approval is not validated.

6. Developer shall submit to **the Planning Department** a reproducible 24" x 36" mylar copy of the **Tentative Map** reflecting the conditions approved by the final decision-making body.

7. Prior to the issuance of a building permit, the Developer shall provide proof to the Director from the **Carlsbad Unified** School District that this project has satisfied its obligation to provide school facilities.

8. This project shall comply with all conditions and mitigation measures which are required as part of the Zone **4** Local Facilities Management Plan and any amendments made to that Plan prior to the issuance of building permits.

9. Building permits will not be issued for this project unless the local agency providing water and sewer services to the project provides written certification to the City that adequate water service and sewer facilities, respectively, are available to the project at the time of the application for the building permit, and that water and sewer capacity and facilities will continue to be available until the time of occupancy. **A note to this effect shall be placed on the Final Map.**

10. Developer shall implement, or cause the implementation of, the **Poinsettia Property** Project Mitigation Monitoring and Reporting Program.

11. Developer shall submit and obtain Planning Director approval of a Final Landscape and Irrigation Plan showing conformance with the approved Preliminary Landscape Plan and the City's Landscape Manual. Developer shall construct and install all landscaping as shown on the approved Final Plans, and maintain all landscaping in a healthy and thriving condition, free from weeds, trash, and debris.

12. The first submittal of Final Landscape and Irrigation Plans shall be pursuant to the landscape plan check process on file in the Planning Department and accompanied by the project's building, improvement, and grading plans.

13. Developer shall establish a homeowner's association and corresponding covenants, conditions, and restrictions. Said CC&Rs shall be submitted to and approved by the Planning Director prior to final map approval. Prior to issuance of a building permit the Developer shall provide the Planning Department with a recorded copy of the official CC&Rs that have been approved by the Department of Real Estate and the Planning Director. At a minimum, the CC&Rs shall contain the following provisions:

    a. <u>General Enforcement by the City</u>. The City shall have the right, but not the obligation, to enforce those Protective Covenants set forth in this Declaration in favor of, or in which the City has an interest.

    b. <u>Notice and Amendment</u>. A copy of any proposed amendment shall be provided to the City in advance. If the proposed amendment affects the City, City shall have the right to disapprove. A copy of the final approved amendment shall be transmitted to City within 30 days for the official record.

c. Failure of Association to Maintain Common Area Lots and Easements. In the event that the Association fails to maintain the "Common Area Lots and/or the Association's Easements" as provided in Article_____, Section _____ the City shall have the right, but not the duty, to perform the necessary maintenance. If the City elects to perform such maintenance, the City shall give written notice to the Association, with a copy thereof to the Owners in the Project, setting forth with particularity the maintenance which the City finds to be required and requesting the same be carried out by the Association within a period of thirty (30) days from the giving of such notice. In the event that the Association fails to carry out such maintenance of the Common Area Lots and/or Association's Easements within the period specified by the City's notice, the City shall be entitled to cause such work to be completed and shall be entitled to reimbursement with respect thereto from the Owners as provided herein.

d. Special Assessments Levied by the City. In the event the City has performed the necessary maintenance to either Common Area Lots and/or Association's Easements, the City shall submit a written invoice to the Association for all costs incurred by the City to perform such maintenance of the Common Area Lots and or Association's Easements. The City shall provide a copy of such invoice to each Owner in the Project, together with a statement that if the Association fails to pay such invoice in full within the time specified, the City will pursue collection against the Owners in the Project pursuant to the provisions of this Section. Said invoice shall be due and payable by the Association within twenty (20) days of receipt by the Association. If the Association shall fail to pay such invoice in full within the period specified, payment shall be deemed delinquent and shall be subject to a late charge in an amount equal to six percent (6%) of the amount of the invoice. Thereafter the City may pursue collection from the Association by means of any remedies available at law or in equity. Without limiting the generality of the foregoing, in addition to all other rights and remedies available to the City, the City may levy a special assessment against the Owners of each Lot in the Project for an equal pro rata share of the invoice, plus the late charge. Such special assessment shall constitute a charge on the land and shall be a continuing lien upon each Lot against which the special assessment is levied. Each Owner in the Project hereby vests the City with the right and power to levy such special assessment, to impose a lien upon their respective Lot and to bring all legal actions and/or to pursue lien foreclosure procedures against any Owner and his/her respective Lot for purposes of collecting such special assessment in accordance with the procedures set forth in Article _____ of this Declaration.

e. Landscape Maintenance Responsibilities. The HOAs and individual lot or unit owner landscape maintenance responsibilities shall be as set forth in Exhibit _____.

f. Balconies, trellis and decks. The individual lot or unit owner allowances and prohibitions regarding balconies, trellis, and decks shall be as set forth in Exhibit _____.

14. This approval is granted subject to the approval of **the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, Planned Development Permit, Coastal Development Permit, and Variance** and is subject to all conditions contained

in Planning Commission Resolutions No. **6096, 6097, 6098, and 6099** for those other approvals incorporated herein by reference.

15. Prior to the approval of the final map for any phase of this project, or where a map is not being processed, prior to the issuance of building permits for any lots or units, the Developer shall enter into an Affordable Housing Agreement with the City to purchase **5** housing credits in the **Villa Loma housing project** to satisfy the project's affordable housing requirement, in accordance with the requirements and process set forth in Chapter 21.85 of the Carlsbad Municipal Code. The draft Affordable Housing Agreement shall be submitted to the Planning Director no later than 60 days prior to the request to final the map. The recorded Affordable Housing Agreement shall be binding on all future owners and successors in interest.

16. Prior to occupancy of the first dwelling unit, the Developer shall provide all required passive and active recreational areas per the approved plans, including landscaping and recreational facilities.

17. Developer shall report, in writing, to the Planning Director within 30 days, any address change from that which is shown on the permit application.

18. Prior to the issuance of the **Final Map**, Developer shall submit to the City a Notice of Restriction to be filed in the office of the County Recorder, subject to the satisfaction of the Planning Director, notifying all interested parties and successors in interest that the City of Carlsbad has issued a **Tentative Tract Map, Planned Development Permit, Coastal Development Permit, and Variance** by Resolutions No. **6096, 6097, 6098, and 6099** on the property. Said Notice of Restriction shall note the property description, location of the file containing complete project details, and all conditions of approval as well as any conditions or restrictions specified for inclusion in the Notice of Restriction. The Planning Director has the authority to execute and record an amendment to the notice which modifies or terminates said notice upon a showing of good cause by the Developer or successor in interest.

19. Developer shall submit a street name list consistent with the City's street name policy subject to the Planning Director's approval prior to final map approval.

20. Developer shall pay the citywide Public Facilities Fee imposed by City Council Policy #17, the License Tax on new construction imposed by Carlsbad Municipal Code Section 5.09.030, and CFD #1 special tax (if applicable), subject to any credits authorized by Carlsbad Municipal Code Section 5.09.040. Developer shall also pay any applicable Local Facilities Management Plan fee for Zone 4, pursuant to Chapter 21.90. All such taxes/fees shall be paid at issuance of building permit. If the taxes/fees are not paid, this approval will not be consistent with the General Plan and shall become void.

21. If satisfaction of the school facility requirement involves a Mello-Roos Community Facilities District or other financing mechanism which is inconsistent with City Council Policy No. 38, by allowing a pass-through of the taxes or fees to individual home buyers, then in addition to any other disclosure required by law or Council policy, the Developer shall disclose to future owners in the project, to the maximum extent possible, the

existence of the tax or fee, and that the school district is the taxing agency responsible for the financing mechanism. The form of notice is subject to the approval of the Planning Director and shall at least include a handout and a sign inside the sales facility stating the fact of a potential pass-through of fees or taxes exists and where complete information regarding those fees or taxes can be obtained.

22. Developer shall display a current Zoning and Land Use Map, or an alternative, suitable to the Planning Director, in the sales office at all times. All sales maps that are distributed or made available to the public shall include but not be limited to trails, future and existing schools, parks, and streets.

23. Developer shall post a sign in the sales office in a prominent location that discloses which special districts and school district provide service to the project. Said sign shall remain posted until ALL of the units are sold.

24. Prior to the recordation of the first final **tract** map or the issuance of building permits, whichever occurs first, the Developer shall prepare and record a Notice that this property may be subject to noise impacts from the proposed or existing Transportation Corridor **(Interstate 5 and Poinsettia Lane)**, in a form meeting the approval of the Planning Director and City Attorney (see Noise Form #1 on file in the Planning Department).

25. Prior to the recordation of the first final **tract** map or the issuance of building permits, whichever occurs first, the Developer shall prepare and record a Notice that this property is subject to overflight, sight, and sound of aircraft operating from McClellan-Palomar Airport, in a form meeting the approval of the Planning Director and the City Attorney (see Noise Form #2 on file in the Planning Department).

26. Developer shall post aircraft noise notification signs in all sales and/or rental offices associated with the new development. The number and locations of said signs shall be approved by the Planning Director (see Noise Form #3 on file in the Planning Department).

27. Developer shall submit and obtain Planning Director approval of an exterior lighting plan including parking areas. All lighting shall be designed to reflect downward and avoid any impacts on adjacent homes or property.

Engineering

NOTE: Unless specifically stated in the condition, all of the following conditions, upon the approval of this proposed tentative map, must be met prior to approval of a final map, building or grading permit whichever occurs first.

General

28. Prior to hauling dirt or construction materials to or from any proposed construction site within this project, Developer shall apply for and obtain approval from, the City Engineer for the proposed haul route.

29. Developer shall provide to the City Engineer an acceptable means, CC&Rs, and/or other recorded document, for maintaining the private easements within the subdivision and all the private improvements: streets, sidewalks, street lights, and storm drain facilities located therein and to distribute the costs of such maintenance in an equitable manner among the owners of the properties within the subdivision.

30. Prior to occupancy, Developer shall install rain gutters to convey roof drainage to an approved drainage course or street to the satisfaction of the City Engineer.

31. There shall be one Final Map recorded for this project.

32. Developer shall install sight distance corridors (see below for types) at all street intersections in accordance with Engineering Standards and shall record the following statement on the Final Map (and in the CC&Rs):

"No structure, fence, wall, tree, shrub, sign, or other object above the street level may be placed or permitted to encroach within the area identified as a sight distance corridor in accordance with City Standard Public Street-Design Criteria, Section 8.B.3. The underlying property owner shall maintain this condition."

The limits of these sight distance corridors shall be reflected on any improvement, grading, or landscape plan prepared in association with this development.

Fees/Agreements

33. Developer shall cause property owner to execute and submit to the City Engineer, for recordation, the City's standard form Geologic Failure Hold Harmless Agreement.

34. Developer shall cause property owner to execute and submit to the City Engineer for recordation the City's standard form Drainage Hold Harmless Agreement regarding drainage across the adjacent property.

35. Prior to approval of any grading or building permits for this project, Developer shall cause Owner to give written consent to the City Engineer to the annexation of the area shown within the boundaries of the subdivision into the existing City of Carlsbad Street Lighting and Landscaping District No. 1 **and/or to the formation or annexation into an additional Street Lighting and Landscaping District. Said written consent shall be on a form provided by the City Engineer**.

Grading

36. Prior to the issuance of a grading permit or building permit, whichever occurs first, Developer shall submit to the City Engineer proof that a Notice of Intention for the start of work has been submitted to the State Water Resources Control Board.

37. This project requires offsite grading. No grading for private improvements shall occur outside the limits of this approval unless Developer obtains, records, and submits a recorded copy to the City Engineer a grading or slope easement or agreement from the

owners of the affected properties. If Developer is unable to obtain the grading or slope easement, or agreement, no grading permit will be issued. In that case, Developer must either apply for and obtain an amendment of this approval or modify the plans so grading will not occur outside the project and apply for and obtain a finding of substantial conformance from both the City Engineer and Planning Director.

38. Based upon a review of the proposed grading and the grading quantities shown on the tentative map, a grading permit for this project is required. Developer shall apply for and obtain a grading permit from the City Engineer prior to issuance of a building permit for the project.

Dedications/Improvements

39. Developer shall cause Owner to make an offer of dedication to the City and/or other appropriate entities for all **public** easements shown on the tentative map. **More specifically, a public sewer and water easement shall be recorded over Driveway "A," "B," and "C." A public sewer easement shall be placed over Lot 6. All easements shall be deeded as shown on the tentative map unless otherwise directed by the City Engineer.** The offer shall be made by a certificate on the final map and/or separate recorded document. All land so offered shall be offered free and clear of all liens and encumbrances and without cost. Streets that are already public are not required to be rededicated.

40. Unless otherwise noted, the proposed storm drain system shall be privately owned and maintained within the boundaries of the subdivision.

41. Stop signs and related pavement graphics shall be added at the project exit points identified as **Driveways "A" and "C"** on the Tentative Tract Map.

42. Additional drainage easements may be required. Developer shall dedicate and provide or install drainage structures, as may be required by the City Engineer, prior to or concurrent with any grading or building permit.

43. Developer shall provide the design of all private streets and drainage systems to the satisfaction of the City Engineer. The structural section of all private streets shall conform to City of Carlsbad Standards based on R-value tests. All private streets and drainage systems shall be inspected by the City. Developer shall pay the standard improvement plancheck and inspection fees.

44. Developer shall execute and record a City standard Subdivision Improvement Agreement to install and secure with appropriate security as provided by law, public improvements shown on the tentative map and the following improvements including but not limited to grading, clearing and grubbing, relocation of utilities, sewer, water, fire hydrants, street lights, retaining walls, and reclaimed water, to City Standards to the satisfaction of the City Engineer. The improvements are:

a. **Installation of public potable and reclaimed water pipe, fire hydrants, and related appurtenances within Driveways "A – C" as shown on the tentative tract map and connections to Paseo Del Norte water mains.**
b. **Installation of public sewer pipe and appurtenances within Driveways "A - C" as shown on the tentative tract map, a portion of Lot 6 and a connection within Poinsettia Lane public right-of-way.**
c. **Any modifications to public street signs and/or striping necessary to accommodate the proposed development.**
d. **Modification to the traffic signal at the intersection of Paseo Del Norte and Poinsettia Lane, including signing and striping revisions, to convert the traffic signal to split-phase for north/south traffic movements.**

A list of the above shall be placed on an additional map sheet on the Final Map per the provisions of Sections 66434.2 of the Subdivision Map Act. Improvements listed above shall be constructed within 18 months of approval of the subdivision or development improvement agreement or such other time as provided in said agreement.

45. **Applicant will work with the City Engineer to accommodate an additional 4 feet in street width in the portion of Lowder Lane (Paseo Del Norte) from its intersection with Poinsettia Lane to midway between the project's two entrances. If additional street width cannot be provided by restriping and red curb, the applicant agrees to move the curb line back up to 4 feet within the City right-of-way to provide the necessary additional 4 feet in street width.**

46. **Prior to working within the CalTrans right-of-way, the developer shall submit to the City written approval from CalTrans for said work.**

47. Developer shall comply with the City's requirements of the National Pollutant Discharge Elimination System (NPDES) permit. Developer shall provide improvements constructed pursuant to best management practices as referenced in the "California Storm Water Best Management Practices Handbook" to reduce surface pollutants to an acceptable level prior to discharge to sensitive areas. Plans for such improvements shall be submitted to and subject to the approval of the City Engineer. Said plans shall include but not be limited to notifying prospective owners and tenants of the following:

a. All owners and tenants shall coordinate efforts to establish or work with established disposal programs to remove and properly dispose of toxic and hazardous waste products.
b. Toxic chemicals or hydrocarbon compounds such as gasoline, motor oil, antifreeze, solvents, paints, paint thinners, wood preservatives, and other such fluids shall not be discharged into any street, public or private, or into storm drain or storm water conveyance systems. Use and disposal of pesticides, fungicides, herbicides, insecticides, fertilizers, and other such chemical treatments shall meet Federal, State, County, and City requirements as prescribed in their respective containers.
c. Best Management Practices shall be used to eliminate or reduce surface pollutants when planning any changes to the landscaping and surface improvements.

48. Prior to the issuance of grading permit or building permit, whichever occurs first, Developer shall submit for City approval a "Storm Water Pollution Prevention Plan (SWPPP)." The SWPPP shall be in compliance with current requirements and provisions established by the San Diego Region of the California Regional Water Quality Control Board and City of Carlsbad Requirements. The SWPPP shall address measures to reduce to the maximum extent practicable storm water pollutant runoff during construction of the project. At a minimum, the SWPPP shall:

a. Include all content as established by the California Regional Water Quality Control Board requirements.
b. Include the receipt of "Notice of Intent" issued by the California Regional Water Quality Control Board.
c. Recommend source control and treatment control Best Management Practices (BMPs) that will be implemented with this project to avoid contact or filter said pollutants from storm water to the maximum extent practicable before discharging to City right-of-way or natural drainage course.
d. Establish specific procedures for handling spills and routine cleanup. Special considerations and effort shall be applied to employee education on the proper procedures for handling cleanup and disposal of pollutants.

49. Prior to the issuance of grading permit or building permit, whichever occurs first, Developer shall submit for City approval a "Storm Water Management Plan (SWMP)." The SWMP shall demonstrate compliance with the City of Carlsbad Standard Urban Stormwater Mitigation Plan (SUSMP), Order 2001-01 issued by the San Diego Region of the California Regional Water Quality Control Board and City of Carlsbad Municipal Code. The SWMP shall address measures to avoid contact or filter said pollutants from storm water, to the maximum extent practicable, for the post-construction stage of the project. At a minimum, the SWMP shall:

a. Identify existing and post-development on-site pollutants-of-concern.
b. Identify the hydrologic unit this project contributes to and impaired water bodies that could be impacted by this project.
c. Recommend source controls and treatment controls that will be implemented with this project to avoid contact or filter said pollutants from storm water to the maximum extent practicable before discharging to City right-of-way.
d. Establish specific procedures for handling spills and routine cleanup. Special considerations and effort shall be applied to resident education on the proper procedures for handling cleanup and disposal of pollutants.
e. Ensure long-term maintenance of all post-construction BMPs in perpetuity.
f. Identify how post-development runoff rates and velocities from the site will not exceed the pre-development runoff rates and velocities to the maximum extent practicable.

50. Prior to occupancy, Developer shall install street lights along all public and private street frontages abutting and/or within the subdivision boundary in conformance with City of Carlsbad standards.

51. Prior to occupancy, Developer shall install wheelchair ramps at the public street corners abutting the subdivision in conformance with City of Carlsbad Standards.

52. Prior to building permit or grading permit issuance, whichever occurs first, Developer shall have design, apply for and obtain approval of the City Engineer, for the structural section for the access aisles with a traffic index of 5.0 in accordance with City Standards due to truck access through the **sewer access easement over Lot 6**. The structural pavement design of the aisle ways shall be submitted together with required R-value soil test information and approved by the City Engineer as part of the building or grading plan review, whichever occurs first.

Final Map Notes

53. Developer shall show on Final Map the net developable acres for each parcel.

54. Note(s) to the following effect(s) shall be placed on the map as non-mapping data:

a. All improvements are privately owned and are to be privately maintained with the exception of the following:

1. **Installation of public potable and reclaimed water pipe, fire hydrants, and related appurtenances.**
2. **Installation of public sewer pipe and appurtenances.**

b. Building permits will not be issued for development of the subject property unless the appropriate agency determines that sewer and water facilities are available.

c. Geotechnical Caution:

The owner of this property, on behalf of itself and all of its successors in interest, has agreed to hold harmless and indemnify the City of Carlsbad from any action that may arise through any geological failure, ground water seepage, or land subsidence and subsequent damage that may occur on, or adjacent to, this subdivision due to its construction, operation, or maintenance.

d. No structure, fence, wall, tree, shrub, sign, or other object above the street level may be placed or permitted to encroach within the area identified as sight distance corridors.

Water

55. Prior to approval of improvement plans or final map, Developer shall meet with the Fire Marshal to determine if fire protection measures (fire flows, fire hydrant locations, building sprinklers) are required to serve the project. Fire hydrants, if proposed, shall be considered public improvements and shall be served by public water mains to the satisfaction of the District Engineer.

56. The Developer shall design and construct public facilities within public right-of-way or within minimum 20-feet-wide easements granted to the District or the City of Carlsbad.

At the discretion of the District Engineer, wider easements may be required for adequate maintenance, access, and/or joint utility purposes.

57. Prior to issuance of building permits, Developer shall pay all fees, deposits, and charges for connection to public facilities. Developer shall pay the San Diego County Water Authority capacity charge(s) prior to issuance of Building Permits.

58. The Developer shall prepare a colored recycled water use map and submit this map to the Planning Department for processing and approval by the District Engineer.

59. The Developer shall design landscape and irrigation plans utilizing recycled water as a source. Said plans shall be submitted to the satisfaction of the District Engineer.

60. The Developer shall install potable water and recycled water services and meters at a location approved by the District Engineer. The locations of said services shall be reflected on public improvement plans.

61. The Developer shall install sewer laterals and clean-outs at a location approved by the District Engineer. The locations of sewer laterals shall be reflected on public improvement plans.

62. The Developer shall design and construct public water, sewer, and recycled water facilities substantially as shown on the (Tentative Map/Site Plan) to the satisfaction of the District Engineer. Proposed public facilities shall be reflected on public improvement plans.

63. The Developer shall provide separate potable water meters for each separately owned unit.

64. Prior to Final Map approval or issuance of building permits, whichever is first, the entire potable water, recycled water, and sewer system shall be evaluated in detail to ensure that adequate capacity, pressure, and flow demands can be met to the satisfaction of the District Engineer.

65. The Developer shall coordinate with the District Engineer regarding the looped system and easements.

66. The Developer shall submit a detailed sewer study, prepared by a Registered Engineer, that identifies the peak flows of the project, required pipe sizes, depth of flow in pipe, velocity in the main lines, and the capacity of the existing infrastructure. Said study shall be submitted concurrently with the improvement plans for the project and the study shall be prepared to the satisfaction of the District Engineer.

67. The Developer shall submit a detailed potable water study, prepared by a Registered Engineer that identifies the peak demands of the project (including fire flow demands). The study shall identify velocity in the main lines, pressure zones, and the required pipe sizes. Said study shall be submitted concurrently with the improvement plans for the project and the study shall be prepared to the satisfaction of the District Engineer.

68. The Developer shall submit a detailed recycled water study, prepared by a Registered Engineer that identifies the peak demands of the project. The study shall identify velocity in the main lines and the required pipe sizes. Said study shall be submitted concurrently with the improvement plans for the project and the study shall be prepared to the satisfaction of the District Engineer.

Code Reminders

The project is subject to all applicable provisions of local ordinances, including but not limited to the following code requirements:

69. The tentative map shall expire twenty-four (24) months from the date this tentative map approval becomes final.

70. Developer shall exercise special care during the construction phase of this project to prevent offsite siltation. Planting and erosion control shall be provided in accordance with Carlsbad Municipal Code Chapter 15.16 (the Grading Ordinance) to the satisfaction of the City Engineer.

71. Approval of this request shall not excuse compliance with all applicable sections of the Zoning Ordinance and all other applicable City ordinances in effect at time of building permit issuance, except as otherwise specifically provided herein.

72. Premise identification (addresses) shall be provided consistent with Carlsbad Municipal Code Section 18.04.320.

73. Any signs proposed for this development shall at a minimum be designed in conformance with the City's Sign Ordinance and shall require review and approval of the Planning Director prior to installation of such signs.

74. Developer shall pay park-in-lieu fees to the City, prior to the approval of the final map as required by Chapter 20.44 of the Carlsbad Municipal Code.

75. Developer shall pay a landscape plan check and inspection fee as required by Section 20.08.050 of the Carlsbad Municipal Code.

76. Developer shall exercise special care during the construction phase of this project to prevent offsite siltation. Planting and erosion control shall be provided in accordance with Carlsbad Municipal Code Chapter 15.16 (the Grading Ordinance) to the satisfaction of the City Engineer.

. . .

. . .

NOTICE

Please take NOTICE that approval of your project includes the "imposition" of fees, dedications, reservations, or other exactions hereafter collectively referred to for convenience as "fees/exactions."

You have 90 days from date of approval to protest imposition of these fees/exactions. If you protest them, you must follow the protest procedure set forth in Government Code Section 66020(a), and file the protest and any other required information with the City Manager for processing in accordance with Carlsbad Municipal Code Section 3.32.030. Failure to timely follow that procedure will bar any subsequent legal action to attack, review, set aside, void, or annul their imposition.

You are hereby FURTHER NOTIFIED that your right to protest the specified fees/exactions DOES NOT APPLY to water and sewer connection fees and capacity charges, nor planning, zoning, grading or other similar application processing or service fees in connection with this project; NOR DOES IT APPLY to any fees/exactions of which you have previously been given a NOTICE similar to this, or as to which the statute of limitations has previously otherwise expired.

PASSED, APPROVED AND ADOPTED at a regular meeting of the Planning Commission of the City of Carlsbad, California, held on the **17th** day of **May 2006**, by the following vote, to wit:

AYES: Chairperson Montgomery, Commissioners Baker, Cardosa, Dominguez, Segall, and Whitton

NOES:

ABSENT: Commissioner Heineman

ABSTAIN:

MARTELL B. MONTGOMERY, Chairperson
CARLSBAD PLANNING COMMISSION

ATTEST:

DON NEU

STORM WATER MANAGEMENT PLAN
FOR
POINSETTIA PROPERTIES
(THE TIDES)

REVISION PAGE
April 5, 2011

This storm water management plan presents a revision to the January 26, 2010 report pursuant to plan check comments.

The following summarizes the plan check comments and how/if they have been addressed:

- Pg 9 & 10 – The text has been updated to include a brief summary of the biological evaluation results for the project and make reference to the copy of the biological evaluation letter, located in Appendix F of this report.
- App F – A copy of the biological evaluation letter, prepared by a biologist/wetland specialist (Glenn Lukos Associates, Inc.) to address the plancheck comments.

Revisions pursuant to the plan check comments are included within this revised SWMP.

STORM WATER MANAGEMENT PLAN
FOR
POINSETTIA PROPERTIES
(THE TIDES)

REVISION PAGE
January 26, 2011

This storm water management plan presents a revision to the November 17, 2010 report pursuant to plan check comments and a revised site plan layout.

The following summarizes the plan check comments and how/if they have been addressed:

- Title Page – The project title has been updated to "Poinsettia Properties (The Tides)." The text has been updated to reflect the change.
- Pg 1 – The text has been updated to address minor comments to reference the updated City of Carlsbad SUSMP date, January 14, 2011.
- Pg 9 – The text has been updated and elaborated to include additional description per the plancheck comments and to explain how the project meets hydromodification exemption from the final hydromodification management plan (HMP) requirement per the City of Carlsbad SUSMP, dated January 14, 2011, and final HMP, dated January 13, 2011.
- Pg 10 – The text has been updated to address minor comments.
- Pg 14 – The geotechnical supplemental letter has been revised by the geotechnical engineer (Earth-Strata, Inc.) to address the plancheck comments. A copy of the revised supplemental letter, prepared by the geotechnical engineer (Earth-Strata, Inc.), dated January 25, 2011, has been included in Appendix E of this report. The text has been revised to reference the revised date.
- Pg 24 – The Owner's Certification has been signed and dated.
- App A – The Applicant Information and Signature Box has been completed.

- App E – A copy of the revised supplemental letter, prepared by the geotechnical engineer (Earth-Strata, Inc.), dated January 25, 2011, has been included.
- Map Pocket 1 – The exhibit has been updated accordingly based on the redline comments and a revised site plan layout.
- Map Pocket 2 – The exhibit has been updated accordingly based on the redline comments and a revised site plan layout.
- Map Pocket 3 – A copy of Master Drainage Plan exhibit (Sheet 3 of 4) in the City of Carlsbad "Master Drainage and Storm Water Quality Management Plan," dated March 1994, has been included.

The plan check comments and revisions pursuant to the revised site plan are included within this revised SWMP.

STORM WATER MANAGEMENT PLAN
FOR
POINSETTIA PROPERTIES
(THE TIDES)

REVISION PAGE
November 17, 2010

This storm water management plan presents a revision to the September 20, 2010 report pursuant to first plan check comments and a revised site plan layout.

The following summarizes the plan check comments and how/if they have been addressed:

- Title Page – The project title has been updated to "La Marea" in lieu of "Carlsbad Tract CT 05-10." The text has been updated to reflect the change.
- Pg 1 – Page 1 of the report has been included to address project setting.
- Pg 9 – An explanation has been included to address how the project will be exempt from Hydromodification Criteria. Based on the as-built drawings, the project discharges into underground storm drains and directly discharges to Batiquitos Lagoon, which is located approximately 4000 feet south of the project.
- Pg 12 – The text has been updated to address minor comments.
- Pg 14 – A supplemental letter prepared by the geotechnical engineer (Earth-Strata, Inc.), dated November 11, 2010, explains that storm water is controlled and not allowed to infiltrate throughout the site. Therefore, infiltration approach was not utilized for the project. A copy of the supplemental letter has been included in Appendix E of this report. The text has been revised to include the explanation.
- Pg 15 – A brief description of the cistern with bioretention sizing has been included.
- Pg 18 – There will be two access points (i.e. inlet and outlet locations) for maintenance. An explanation has been included.
- Pg 24 – The owner's certification statement has been included. The signed certification sheet will be provided upon approval of the SWMP.

- App C – Due to the revised detention system (i.e. StormTrap), the IMP sizing calculations, rating curve, and HEC-1 analyses have been updated accordingly. A hand written backup calculation is provided on the IMP sizing calculation sheet to verify that the required water quality volume for cistern is correct.
- App D – In addition to the Cistern with Bioretention Facility details, the StormTrap detail also has been included in the Appendix.
- Map Pocket 1 – The exhibit has been updated accordingly based on the redline comments and a revised site plan layout.
- Map Pocket 2 – The exhibit has been updated accordingly based on the redline comments and a revised site plan layout.

The plan check comments and revisions pursuant to the revised site plan are included within this revised SWMP.

1.0 INTRODUCTION

This Storm Water Management Plan (SWMP) summarizes the post-construction storm water requirements for the Poinsettia Properties (The Tides) project (herein referred to as "the project") in support of final engineering. The project is located east of Interstate 5, at the southwest intersection of Poinsettia Lane and Lowder Lane in the City of Carlsbad. Please see the Vicinity Map at the end of Section 1.0 for the location of the project. The planned development consists of converting a vacant parcel that has been previously graded into a 31-lot development with roadway and utility improvements.

For the purposes of post-construction storm water quality management, the project will follow the guidelines and requirements set forth in the City of Carlsbad's "Standard Urban Storm Water Management Plan (SUSMP)," adopted January 14, 2011 (herein "SUSMP"). Based on the City of Carlsbad Storm Water Standards Questionnaire, the project is a "Priority Development Project." The following Priority Development Project category applies to the project: "Housing subdivisions of 10 or more dwelling units," "Streets, roads, highways, and freeways," and "More than 1-acre of disturbance." A copy of the City of Carlsbad Storm Water Standards Questionnaire for the project is located in Appendix A of this SWMP.

In the pre-project condition, storm water runoff from the site is conveyed in a westerly direction to an existing storm drain system under Interstate 5. As similar to the pre-project condition hydrologic characteristics, storm water runoff from the proposed site will be directed towards the northwest corner of the site prior to discharging to the existing storm drain system within Interstate 5 (I-5). The existing storm drain travels approximately 4000 feet south of the project site, where it ultimately discharges to Batiquitos Lagoon.

Constraints and opportunities for site design and selection of treatment and flow-control facilities have been identified for the project. Constraints to locating vegetated drainage facilities include a steep slope from east to west across the project site and slopes and walls along the front and sides of a majority of lots. Opportunities include utilizing non-contiguous sidewalks, landscaping within lots, and incorporating landscape/vegetated areas in the northwest corner lot that is proposed as a residential park for the project. This northwest park location provides a great opportunity as it is the lowest point of the project site and adjacent to the project discharge point.

An integrated Low Impact Development (LID) approach will be utilized to provide a long-term solution to water quality at the project site. This SWMP is also intended to ensure the effectiveness of the BMPs or IMPs through proper maintenance that is based on long-term fiscal planning.

Please refer to the DMA/IMP exhibit located in Map Pocket 1 of this report for locations of the drainage facilities and storm water LID/IMP facilities, including tributary drainage areas and flow patterns for the site. In addition, a copy of the Single-sheet BMP exhibit for the project has been provided in Map Pocket 2, which is intended for City use to verify construction and maintenance of the storm water facilities.

VICINITY MAP

VICINITY MAP

NO SCALE

2.0 IDENTIFICATION OF POLLUTANTS & CONDITIONS OF CONCERN

Section 2 of the City of Carlsbad's SUSMP outlines the procedure for the selection of stormwater treatment facilities. The procedure begins with identification of pollutants with type of project/use, followed by identification of watershed and hydrologic unit basin number and receiving waters, list of impaired water bodies per the latest 303(d) List, and summary of primary pollutants of concern.

2.1 Identify Pollutants from the Project Area

Table 2-1 of the SUSMP, "Anticipated and Potential Pollutants Generated by Land Use Type" identifies general pollutant categories that are either anticipated or potential pollutants for general project categories. The following general project categories listed in Table 2-1 apply to the project: "Detached Residential Development" and "Streets, Highways & Freeways" categories shall be used to describe the anticipated or potential pollutants for the project. Table 2-1 of the SUSMP is reproduced on the following page, with the Priority Development Project categories applicable to the project highlighted.

Table 2-1. Anticipated and Potential Pollutants Generated by Land Use Type

	General Pollutant Categories								
Priority Project Categories	Sediments	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P(1)	P(2)	P(1)	X
Commercial Development > 100,000 ft^2	P(1)	P(1)		P(2)	X	P(5)	X	P(3)	P(5)
Heavy Industry /Industrial Development	X		X	X	X	X	X		
Automotive Repair Shops			X	X(4)(5)	X		X		
Restaurants					X	X	X	X	
Steep Hillside Development >5,000 ft^2	X	X			X	X	X		X
Parking Lots	P(1)	P(1)	X		X	P(1)	X		P(1)
Retail Gasoline Outlets			X	X	X	X	X		
Streets, Highways & Freeways	X	P(1)	X	X(4)	X	P(5)	X		

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

Source: City of Carlsbad Standard Urban Storm Water Mitigation Plan, 2010.

Based on the highlighted rows, the anticipated pollutants from the project include sediments, nutrients, heavy metals, organic compounds, trash & debris, oxygen demanding substances, oil and grease, bacteria and viruses, and pesticides.

2.2 Identify Pollutants of Concern in Receiving Waters

Based on Section 2 of the SUSMP, to identify pollutants of concern in receiving waters, the following analysis shall be conducted and reported in the project's SWMP: (1) for each of the proposed project discharge points, identify the receiving water(s), including hydrologic unit basin number(s), as identified in the most recent version of the "Water Quality Control Plan for the San Diego Basin," prepared by the SDRWQCB; and (2) identify any receiving waters, into which the developed area would discharge to, included in the "2006 CWA Section 303(d) List of Water Quality Limited Segments" approved by the SWRCB on October 25, 2006. List any and all pollutants for which the receiving waters are impaired.

Identification of Receiving Waters

According to the "Water Quality Control Plan for the San Diego Basin," dated September 8, 1994, prepared by the SDRWQCB, the project is located in the following hydrologic unit basin: Batiquitos Subarea in the San Marcos Hydrologic Area within the Carlsbad Hydrologic Unit. The corresponding hydrologic unit basin number designation is 904.51 (Region '9', Hydrologic Unit '04', Hydrologic Area '5', and Hydrologic Subarea '1'). An exhibit has been provided in Appendix B of this report titled, "Hydrologic Unit for Poinsettia Properties (The Tides)" which shows the project location within Hydrologic Unit 904.51. Project runoff discharges to an existing storm drain system in the I-5 corridor and ultimately discharges into Batiquitos Lagoon.

Identification of Receiving Water Impairments

On October 25, 2006, the SWRCB adopted the "2006 CWA Section 303(d) List of Water Quality Limited Segments" (2006 303(d) List). According to the 2006 303(d) List, several creeks within HU 904.51 are identified as an impaired water body, however, each is upstream of Batiquitos Lagoon and not a receiving water for this particular project. The Pacific Ocean Shoreline, specifically at Moonlight State Beach is listed for indicator bacteria.

Pollutants of Concern for the Project

Based on Table 2 and the 2006 CWA Section 303(d) List of Water Quality Limited Segments, the following are the project's pollutants of concern: sediments, nutrients, heavy metals, organic compounds, trash and debris, oxygen demanding substances, oil and grease, bacteria and viruses, and pesticides. The Integrated Low Impact Development (LID) design approach and source control BMPs will be utilized to treat these pollutants to the maximum extent practicable (MEP).

3.0 SELECTION OF TREATMENT CONTROL BMPs

Treatment control BMPs are designed to remove pollutants contained in storm water runoff. Methods of pollutant removal include sedimentation settling, filtration, plant uptake, ion exchange, adsorption, and bacterial decomposition. Treatment control facilities may need to be used in series as a "Treatment Train" to achieve the desired level of pollutant removal for different pollutants.

In order to achieve compliance with the criteria in the SUSMP, the integrated Low Impact Development (LID) design approach has been selected for this project to size Integrated Management Practices (IMPs). Therefore, selection of treatment control BMPs is not required. The integrated LID design strategies are discussed in Section 6.0 of this report.

4.0 HYDROMODIFICATION STUDY AND FINDINGS

In accordance with the Municipal Permit and final hydromodification management plan (HMP), Section 2 of the SUSMP states that projects subject to Priority Development Project requirements might be required to implement measures so that post-development runoff rates and durations do not exceed pre-project conditions (hydromodification controls). The following methods may be used to meet HMP mitigation requirements: Design BMPs pursuant to standard sizing and specification criteria detailed in the SUSMP and the HMP/LID Sizing Calculator, use the automated sizing calculator (San Diego Sizing Calculator) that will allow project applicants to select and size IMP treatment devices or flow control basins, use a continuous simulation model to compare pre-project and mitigated post-project runoff and durations until compliance to flow control standards can be demonstrated, or identify a specified exemption defined in the SUSMP and final HMP.

The project discharges to a stabilized conveyance system that extends to a tidally-influenced area (Section 6.1 – Node 7 & 8 of the final Hydromodification Management Plan of San Diego County). Specifically, the project discharges into an existing storm drain system that ultimately discharges to Batiquitos Lagoon, located approximately 4000 feet south of the project site.

According to Section 6.1 of the final HMP, the project may be exempt from HMP criteria if the proposed project discharges to a hardened conveyance system that extends to the Pacific Ocean, San Diego Bay, a tidally-influenced area, an exempt river reach or reservoir. In order to qualify for this exemption (per Nodes 7 and 8), the SUSMP states that the existing hardened or rehabilitated conveyance system must continue uninterrupted to the exempt system. To help define the criteria, the final Hydromodification Management Plan (HMP) was referenced since Page 29 of the SUSMP states that the final HMP be referenced when more detailed information is needed. The alignment and continuation of the existing storm drain system was verified based on the City of Carlsbad Master Drainage Plan, titled "Master Drainage and Storm Water Quality Management Plan," dated March 1994. A copy of the exhibit from the Master Drainage Plan is included in Map Pocket 3 of this report for reference purposes.

In order to meet the exemption criteria per Node 7 and 8, the project proponent must demonstrate that the hardened or rehabilitated conveyance system has capacity to convey the 10-year ultimate condition flow through the conveyance system. According to Chapter 3 of the Master Drainage Plan, all existing storm drain lines were analyzed with respect to this criteria and recommendation made accordingly. Excerpts from the Master Drainage Plan are also included in Map Pocket 3 of this report for reference. As shown on the MDP Exhibit, the downstream system for this project was not identified as requiring improvements.

In addition to the exemption criteria for Node 7 and 8, the City of Carlsbad has requested that the project also meet the exemption criteria per Node 6. Therefore, a biological evaluation letter, titled "Biological Evaluation of Potential Effects to Biological Resources in Batiquitos Lagoon Associated with Increase in Stormwater Discharge to a Tributary Upstream of Batiquitos Lagoon Originating with the Carlsbad 27 project, Located in the City of Carlsbad; San Diego, California," dated April 1, 2011, was prepared by Glenn Lukos Associates, Inc. to identify and analyze any potential biological effects of the projects. The copy of the letter is included in Appendix F of this report. Based on the letter, it was determined that the increase in urban runoff leaving the project site will not have detrimental effect upon, or result in habitat conversion of, the receiving water body, Batiquitos Lagoon. Therefore, the project will be exempt from the final Hydromodification Management Criteria.

5.0 DRAINAGE STUDY

Pursuant to the Storm Water Management Plan (SWMP) Requirements Checklist, a drainage study is not required to compare pre-and post-development runoff rates since the project incorporates the integrated LID approach to meet the criteria in the SUSMP. However, a drainage study was prepared to compute storm water runoff from the project area and size proposed storm drains. A drainage study, titled "Drainage Study for Poinsettia Properties (The Tides)," dated January 26, 2011 or any revision thereafter (prepared by Rick Engineering Company, Job No. 14826-C), presents hydrologic and hydraulic analyses for the project.

6.0 INTEGRATED LOW IMPACT DEVELOPMENT (LID) DESIGN STRATEGIES

The following discussion addresses requirements of Section 4 of the SUSMP. As listed in the section, projects subject to Priority Development Project requirements, at minimum, must implement an integrated low impact development (LID) approach to develop and size Integrated Management Practices (IMPs) or "Alternatives to LID Design," which requires you to show how you satisfy each stormwater objective separately.

The project will implement an integrated LID approach to meet criteria described in the SUSMP. As an approach to Integrated LID design, the following sections will discuss LID strategies for managing runoff from the project.

6.1 Optimization of Site Layout

The project is located on the previously mass-graded lot and there are no creeks, wetlands and riparian habitats that the project needs to be set back from. Therefore, the project is not disturbing natural areas.

Wherever feasible, landscape and vegetated areas will be utilized to minimize directly connected impervious areas. In order to maximize canopy interception and water conservation, the project will provide native or drought tolerant vegetation for proposed landscape areas and include trees for canopy interception.

6.2 Use of Pervious Surfaces

The access road in the northwest corner of the project will utilize a pervious surface, specifically Grass Pave 2 (or equivalent).

6.3 Dispersal of Runoff to Pervious Areas

Where feasible, the project site incorporates landscaping areas on the site that collect runoff from impervious surfaces prior to collection into the storm drain system. Portions of roof top runoff will be discharged to the adjacent landscaping area before getting into the storm drain system. Also, the sidewalk is designed as non-contiguous, thereby allowing sidewalk runoff to flow across the vegetated parkway prior to conveyance within the street.

6.4 Use of Integrated Management Practices

The term "Integrated Management Practice" (IMP) refers to a facility that provides small-scale treatment, retention, and/or detention and is integrated into site layout, landscaping and drainage design. Following tables of the City SUSMP have been evaluated to determine appropriate IMPs for treatment of runoff potentially containing most pollutants of concern. The tables are renamed as Table 6-1 and 6-2 and reproduced below.

Table 6-1. Grouping of Potential Pollutants of Concern by Fate during Stormwater Treatment

Pollutants of Concern	*Bioretention Facilities (LID)	Settling Basins (Dry Ponds)	Wet Ponds and Wetlands	Infiltration Facilities or Practices (LID)	Media Filters	High-rate biofilters	High-rate media filters	Trash Racks & Hydro-dynamic Devices
Coarse Sediment and Trash	High	High	High	High	High	High	*High	High
Pollutants that tend to associate with fine particles during treatment	High	High	High	High	High	Medium	*Medium	Low
Pollutants that tend to be dissolved following treatment	Medium	Low	Medium	High	Low	Low	*Low	Low

Source: City of Carlsbad Standard Urban Storm Water Mitigation Plan, 2010.

Table 6-2. Groups of Pollutants and Relative Effectiveness of Treatment Facilities

Pollutant	Coarse Sediment and Trash	Pollutants that tend to associate with fine particles during treatment	Pollutants that tend to be dissolved following treatment
Sediment	X	X	
Nutrients		X	X
Heavy Metals		X	
Organic Compounds		X	
Trash & Debris	X		
Oxygen Demanding		X	
Bacteria		X	
Oil & Grease		X	
Pesticides		X	

Source: City of Carlsbad Standard Urban Storm Water Mitigation Plan, 2010.

Following Integrated Management Practices (IMPs) are considered appropriate for treatment of runoff potentially containing most pollutants of concern and listed in Section 4 of the SUSMP:

- **Bioretention facilities**, which can be configured as swales, free-form areas, or planters to integrate with your landscape design – **Not Selected**
- **Flow-through planters**, which can be used near building foundations and other locations where infiltration to native soils is not desired – **Not Selected**
- **Dry wells**, which can be used only where soils are permeable – **Not Selected**
- **Cisterns**, in combination with a bioretention facility – **SELECTED**

In order to determine the most appropriate IMP (or combination thereof) for the project, several design alternatives were considered, including locating bioretention areas within each lot and within the parkway for the street; utilizing pervious pavement within the street; and utilizing the northwest corner of the project as a combined park and IMP location. The grades from east to west are steep and slopes along the front and side of the majority of lots made bioretention on each lot difficult to achieve. The street slopes allowed for pervious pavement along the north-south private driveway, however, a supplemental letter prepared by the geotechnical engineer (Earth-Strata, Inc.), dated January 25, 2011, explains that storm water should be controlled and not allowed to infiltrate throughout the site. A copy of the supplemental letter is included in Appendix E of this report. The northwest location is the low point for the project, therefore, it was determined as the most practical location for an IMP. The project layout required sump locations and did not allow for surface runoff of the entire 5-acre site to reach the park. As a result, an onsite storm drain system was needed, resulting in the selected IMP approach to utilize an underground cistern below the park, with an adjacent bioretention facility to treat the water quality storm event over approximately 24-hours of drawdown from the cistern.

Pursuant to the above descriptions of each category of IMPs, along with the constraints and opportunities that were evaluated with the project design, **cistern with bioretention facility** is the most suitable IMP for the project.

7.0 DOCUMENTATION OF DRAINAGE DESIGN

As stated in Section 4 of the SUSMP, the design documentation procedures begin with delineation of Drainage Management Areas (DMAs) prior to sizing each Integrated Management Practice (IMP). A brief description of the cistern with bioretention facility sizing is discussed below. For additional documentation of Drainage Management Areas (DMAs) and Integrated Management Practices (IMPs), please refer to the IMP sizing calculations in Appendix C and DMA/IMP exhibit in Map Pocket 1 of this report. A copy of the Single-sheet BMP exhibit has been included in Map Pocket 2 of this report for reference purposes.

Cistern with Bioretention Facility

- The cistern includes an orifice design at the outlet to restrict flow to provide a 24-hour drawdown time.
- Based on an orifice opening of 1.50 inches, the maximum discharge rate from the orifice is approximately 0.126 cfs.
- The minimum area of the bioretention facility is provided to treat the maximum discharge rate from the orifice based on a percolation rate of 5" per hour through the engineered soil.
- The outlet pipe from the cistern to the bioretention facility is 6" in diameter, which is greater than the minimum 2" requirement based on page 93 of the City SUSMP.
- The bioretention portion of the facility includes a perforated PVC underdrain and a 12"x12" atrium drain to adequately convey the maximum discharge rate entering the bioretention area.
- Since an orifice opening of 1.50 inches can be prone to clogging due to debris, several design features are included:
    - pre-treatment device upstream of cistern facility to help collect trash and debris
    - two (2) access points at the inlet and outlet locations of the cistern
    - a bypass system that ensures low-flows are conveyed to the cistern with bioretention facility; however, allows overflow and larger storm events to bypass directly to the downstream storm drain system.

8.0 SOURCE CONTROL BMPs

The term "source control BMP" refers to land use or site planning practices, or structures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff. The following discussion identifies the source control BMPs for the project.

Table 8-1. Permanent and Operational Source Control Measures

Potential source of runoff pollutants	Permanent source control BMPs	Operation source control BMPs
On-site storm drain inlets	• Mark all inlets with the words "No Dumping! Flows to Bay" or similar (i.e. Lagoon/Ocean)	• Maintain and periodically repaint or replace inlet markings. • Provide stormwater pollution prevention information to new site owners, lessees, or operators. • See applicable operation BMPs in Fact Sheet SC-44, "Drainage System Maintenance in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
Landscape / Outdoor Pesticide Use	• Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides. • Consider using pest-resistant plants. • To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	• Maintain landscaping using minimum or no pesticides. • See applicable operation BMPs in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com • Provide IPM information to new owners, lessees and operators.

9.0 OPERATION AND MAINTENANCE

The owner will ensure the ongoing maintenance for the permanent stormwater facilities proposed for the project. The owner will be responsible for properly disposing of waste material from their assumed areas within the project site, maintaining landscaping throughout those areas in a manner that will prevent soil erosion and minimize sediment transport, and maintaining drainage facilities located throughout the project area in a clean manner and in good repair. In addition, the owner will be responsible for maintaining all stormwater facilities

Typical Maintenance Procedures for Stormwater Facilities

The following stormwater facilities require permanent maintenance: pre-treatment facility (i.e. BaySeparator 4x4 System), underground detention facility as cistern (i.e. StormTrap - SingleTrap), and bioretention facility. The discussions below provide inspection criteria, maintenance indicators, and maintenance activities for the stormwater facilities.

Pre-treatment Facility (i.e. BaySeparator FS 4x4 Low-flow System)

The pre-treatment facility is intended only as pre-treatment purposes such as collecting sediments and large debris. The pre-treatment facility should require inspection, general maintenance and cleaning so it can remain free of litter, debris and sediment.

The following are typical maintenance activities for pre-treatment facility:

- Remove accumulated sediment, trash and debris from the vault. Remove any accumulated material obstructing inlet or outlet facilities.
- Inspect inlet and outlet facilities and/or other internal parts as applicable for structural integrity, and repair or replace if necessary.
- Refer to the manufacturer's specifications for maintenance procedures.

Underground Detention Facility (i.e. StormTrap – SingleTrap)

The underground detention facility is not intended as a treatment facility, however it will require maintenance. The underground detention system should require inspection, general maintenance and cleaning so it can remain free of litter, debris and sediment.

The following are typical maintenance activities for underground detention facility:

- Remove accumulated sediment, trash and debris from the vault. The vault can be accessed using two access points: at the inflow and outflow locations. Remove any accumulated material obstructing inlet or outlet facilities.
- Inspect inlet and outlet facilities and/or other internal parts as applicable for structural integrity, and repair or replace if necessary. This includes the restrictor plate located in the downstream cleanout structure of the detention system.
- For manufactured modular detention products, adhere to the manufacturer's specifications for maintenance procedures.

Refer to StormTrap for more information on maintenance activities.

Bioretention Facility

- Inspect bioretention areas at least twice annually for erosion, damage to vegetation, and sediment and debris accumulation, preferably at the start and end of the wet season to be sure the area is ready for winter and to schedule follow-up maintenance, if necessary. Inspection should also occur after periods of heavy runoff to ensure continued functionality of each system (i.e. – 0.5 inch storm events or greater).
- Grass height and mowing frequency (if appropriate) may not have a large impact on pollutant removal. Consequently, mowing may only be necessary once or twice a year for safety or aesthetics or to suppress weeds and woody vegetation.

- Trash tends to accumulate in bioretention areas. The need for litter removal is determined through periodic inspection, but litter should always be removed prior to mowing.
- Sediment accumulating in bioretention areas should be removed when it builds up to 75 mm (3 in.) at any spot, or covers vegetation.
- Regularly inspect bioretention areas for pools of standing water. Bioretention areas can become a nuisance and promote mosquito breeding in standing water if obstructions develop (e.g. debris accumulation, invasive vegetation) and/or if proper drainage is not implemented and maintained.
- Outfall locations that enter or exit facilities should be checked for erosion, ponding, trash/debris, and other structural damage.

In addition to the stormwater facilities intended as part of the IMP design, the following identifies additional LID and source control BMPs that required routine inspection and maintenance:

Landscaped Areas

Inspection and maintenance of the vegetated areas may be performed by the landscape maintenance contractor.

During inspection, the inspector shall check for the maintenance indicators given below:

- Erosion in the form of rills or gullies
- Ponding water
- Bare areas or less than 70% vegetation cover
- Animal burrows, holes, or mounds
- Trash

Routine maintenance of vegetated areas shall include mowing and trimming vegetation, and removal and proper disposal of trash.

If erosion, ponding water, bare areas, poor vegetation establishment, or disturbance by animals are identified during the inspection, additional (non-routine) maintenance will be required to correct the problem. For ponding water or erosion, see also inspection and maintenance measures for irrigation systems. In the event that any non-routine maintenance issues are persistently encountered such as poor vegetation establishment, erosion in the form of rills or gullies, or ponding water, the party responsible to ensure that maintenance is performed in perpetuity shall consult a licensed landscape architect or engineer as applicable.

As applicable, IPM procedures must be incorporated in any corrective measures that are implemented in response to damage by pests. This may include using physical barriers to keep pests out of landscaping; physical pest elimination techniques, such as, weeding, squashing, trapping, washing, or pruning out pests; relying on natural enemies to eat pests; or proper use of pesticides as a last line of defense. More information can be obtained at the UC Davis website (http://www.ipm.ucdavis.edu/WATER/U/index.html).

Concrete Stamping

Inspection/maintenance of the concrete stamping may be performed by the building/facilities maintenance contractor or other employees of the project owner, as applicable. In addition, there may be storm drain maintenance contractors who will perform this service for a fee.

During inspection, the inspector(s) shall check for the maintenance indicators given below:

- Faded, vandalized, or otherwise unreadable concrete stamping

There are no routine maintenance activities for the concrete stamping. If inspection indicates the concrete stamping is intact, no action is required.

If inspection indicates the concrete stamping is not legible, the concrete stamping shall be repaired or replaced as applicable.

Irrigation Systems

Inspection and maintenance of the irrigation system may be performed by the landscape maintenance contractor.

During inspection, the inspector shall check for the maintenance indicators given below:

- Eroded areas due to concentrated flow
- Ponding water
- Refer to proprietary product information for the irrigation system for other maintenance indicators, as applicable

Refer to proprietary product information for the irrigation system for routine maintenance activities for the irrigation system, as applicable. If none of the maintenance indicators listed above are identified during inspection of the irrigation system, no other action is required.

If any of the maintenance indicators listed above are identified during the inspection, additional (non-routine) maintenance will be required to restore the irrigation system to an operable condition. If inspection indicates breaks or leaks in the irrigation lines or individual sprinkler heads, the affected portion of the irrigation system shall be repaired. If inspection indicates eroded areas due to concentrated flow from the irrigation system, the eroded areas shall be repaired and the irrigation system shall be adjusted or repaired as applicable to prevent further erosion. If inspection indicates ponding water resulting from the irrigation system, the irrigation system operator shall identify the cause of the ponded water and adjust or repair the irrigation system as applicable to prevent ponding water. Refer to proprietary product information for the irrigation system for other non-routine maintenance activities as applicable.

Inspection and Maintenance Frequency

Typically, maintenance requirements are site and product specific, and will depend on the particular land use activities and the amount of gross pollutants and sediment generated within the drainage areas. If it is determined during the regularly scheduled inspection and routine maintenance that the BMPs/IMPs require more frequent maintenance to remove accumulated sediment, trash or debris, it may be necessary to increase the frequency of inspection and routine maintenance.

The Table below lists the stormwater facilities to be inspected and maintained and the minimum frequency of inspection and maintenance activities.

Table 9-1. Summary Table of Inspection and Maintenance Frequency (Minimum)

BMP / IMP	Inspection Frequency	Maintenance Frequency
Pre-treatment Facility (i.e. BaySeparator FS 4x4 Low-flow System)	Twice a year, and after major storm events	Routine maintenance to remove accumulated materials such as trash and debris: twice a year, on or before September 30th As-needed maintenance based on maintenance indicators in this section
Underground Detention Facility (i.e. StormTrap – SingleTrap)	Twice a year, and after major storm events	Routine maintenance to remove accumulated materials such as trash and debris: twice a year, on or before September 30th As-needed maintenance based on maintenance indicators in this section
Bioretention Facility	Twice a year, and after major storm events	Routine maintenance to remove accumulated materials such as trash and debris: twice a year, on or before September 30th As-needed maintenance based on maintenance indicators in this section
Landscaped Areas	Monthly	Routine mowing and trimming and trash removal: monthly Non-routine maintenance as-needed based on maintenance indicators in this section
Concrete Stamping	Annual	As-needed based on maintenance indicators in this section
Irrigation Systems	Monthly	As-needed based on maintenance indicators in this section

Qualifications of Maintenance Personnel

The LID and treatment control BMPs or IMPs are features that are integrated into site layout, landscaping and drainage design. The typical maintenance activities for landscaped areas and bioretention facility can generally be accomplished by typical landscape maintenance personnel. However, maintenance of the pre-treatment device and underground detention facility (i.e. StormTrap SingleTrap) may involve handing of potentially hazardous material; therefore, the maintenance operator must be trained in handling and disposing of hazardous waste. The contracting of additional services may be necessary if non-routine cleaning, disposal or repair is required for any of the project's stormwater facilities.

If evidence of illegal dumping of hazardous materials is identified in a stormwater facility, the illegally dumped materials shall be cleaned up and property disposed of. Specialized clean up and disposal of illegally dumped hazardous materials may be outside of the owner expertise. In this event, the owner shall contract for additional cleaning and disposal services as necessary if non-routine cleaning and disposal is required.

Record Keeping Requirements

The owner is responsible to ensure implementation and funding of maintenance of permanent BMPs and shall maintain records documenting the inspection and maintenance activities. Parties responsible for the operation and maintenacne shall retain records for at least 5 years.

10.0 SWMP CERTIFICATION STATEMENTS

Preparer's Certification

The selection, sizing, and preliminary design of stormwater treatment and other control measures in this plan meet the requirements of Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments.

APPENDIX A

City of Carlsbad
Storm Water Standards Questionnaire

CITY OF CARLSBAD

STORM WATER STANDARDS QUESTIONNAIRE E-34

Development Services
Land Development Engineering
1635 Faraday Avenue
760-602-2750
www.carlsbadca.gov

INSTRUCTIONS:

To address post-development pollutants that may be generated from development projects, the City requires that new development and significant redevelopment priority projects incorporate Permanent Storm Water Best Management Practices (BMP's) into the project design per the City's Standard Urban Stormwater Management Plan (SUSMP). To view the SUSMP, refer to the Engineering Standards (Volume 4, Chapter 2) at www.carlsbadca.gov/standards.

Initially this questionnaire must be completed by the applicant in advance of submitting for a development application (subdivision, discretionary permits and/or construction permits). The results of the questionnaire determine the level of storm water standards that must be applied to a proposed development or redevelopment project. Depending on the outcome, your project will either be subject to 'Standard Stormwater Requirements' or be subject to additional criteria called 'Priority Development Project Requirements'. Many aspects of project site design are dependent upon the storm water standards applied to a project.

Your responses to the questionnaire represent an initial assessment of the proposed project conditions and impacts. City staff has responsibility for making the final assessment after submission of the development application. If staff determines that the questionnaire was incorrectly filled out and is subject to more stringent storm water standards than initially assessed by you, this will result in the return of the development application as incomplete. In this case, please make the changes to the questionnaire and resubmit to the City.

If you are unsure about the meaning of a question or need help in determining how to respond to one or more of the questions, please seek assistance from Land Development Engineering staff.

A separate completed and signed questionnaire must be submitted for each new development application submission. Only one completed and signed questionnaire is required when multiple development applications for the same project are submitted concurrently. In addition to this questionnaire, you must also complete, sign and submit a Project Threat Assessment Form with construction permits for the project.

Please start by completing Section 1 and follow the instructions. When completed, sign the form at the end and submit this with your application to the city.

SECTION 1	NEW DEVELOPMENT	
Does your project meet one or more of the following criteria:	**YES**	**NO**
1. ***Housing subdivisions of 10 or more dwelling units.*** Examples: single family homes, multi-family homes, condominium and apartments	✓	
2. ***Commercial – greater than 1-acre.*** Any development other than heavy industry or residential. Examples: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities.		✓
3. ***Heavy Industrial / Industry- greater than 1 acre.*** Examples: manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.).		✓
4. ***Automotive repair shop.*** A facility categorized in any one of Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, and 7536-7539		✓
5. ***Restaurants.*** Any facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirements and hydromodification requirements.		✓

CITY OF CARLSBAD

STORM WATER STANDARDS QUESTIONNAIRE E-34

Development Services
Land Development Engineering
1635 Faraday Avenue
760-602-2750
www.carlsbadca.gov

6.	***Hillside development.*** Any development that creates more than 5,000 square feet of impervious surface and is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent (25%) or greater.		✓
7.	***Environmentally Sensitive Area (ESA)***[1]. All development located within or directly adjacent[2] to or discharging directly[3] to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet or more of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site 10% or more of its naturally occurring condition.		✓
8.	***Parking lot***. Area of 5,000 square feet or more, or with 15 or more parking spaces, and potentially exposed to urban runoff		✓
9.	***Streets, roads, highways, and freeways***. Any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles	✓	
10.	***Retail Gasoline Outlets.*** Serving more than 100 vehicles per day and greater than 5,000 square feet		✓
11.	***Coastal Development Zone.*** Any project located within 200 feet of the Pacific Ocean and (1) creates more than 2500 square feet of impervious surface or (2) increases impervious surface on property by more than 10%.		✓
12.	***More than 1-acre of disturbance.*** Project results in the disturbance of 1-acre or more of land and is considered a Pollutant-generating Development Project[4].	✓	

1 Environmentally Sensitive Areas include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and County of San Diego; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees.

2 "Directly adjacent" means situated within 200 feet of the Environmentally Sensitive Area.

3 "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flow from adjacent lands.

4 Pollutant-generating Development Projects are those projects that generate pollutants at levels greater than background levels. In general, these include all projects that contribute to an exceedance to an impaired water body or which create new impervious surfaces greater than 5000 square feet and/or introduce new landscaping areas that require routine use of fertilizers and pesticides. In most cases linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered Pollutant-generating Development Projects if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces.

INSTRUCTIONS:

Section 1 Results:

If you answered **YES** to **ANY** of the questions above, your project is subject to **Priority Development Project** requirements. Skip Section 2 and please proceed to Section 3. Check the "meets PRIORITY DEVELOPMENT PROJECT requirements" box in Section 3. Additional storm water requirements will apply per the SUSMP.

If you answered **NO** to **ALL** of the questions above, then please proceed to Section 2 and follow the instructions.

CITY OF CARLSBAD

SECTION 2	SIGNIFICANT REDEVELOPMENT	
INSTRUCTIONS: Complete the questions below regarding your project	**YES**	**NO**
1. Project results in the disturbance of 1-acre or more of land and is considered a Pollutant-generating Development Project *?		
INSTRUCTIONS: If you answered **NO**, please proceed to question 2. If you answered **YES**, then you **ARE** a significant redevelopment and you **ARE** subject to **PRIORITY DEVELOPMENT PROJECT** requirements. *Please check the "meets PRIORITY DEVELOPMENT PROJECT requirements" box in Section 3 below.*		
2. Is the project redeveloping an existing priority project type? (Priority projects are defined in Section 1)		
INSTRUCTIONS: If you answered **YES**, please proceed to question 3. If you answered **NO**, then you **ARE NOT a** significant redevelopment and your project is subject to **STANDARD STORMWATER REQUIREMENTS.** Please check the "does not meet PDP requirements" box in Section 3 below.		
3. Is the work limited to trenching and resurfacing associated with utility work; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk; bike lane on existing road and/or routine maintenance of damaged pavement such as pothole repair? Resurfacing/reconfiguring parking lots is where the work does not expose underlying soil during construction.		
INSTRUCTIONS: If you answered **NO**, then proceed to question 4. If you answered **YES**, then you **ARE NOT** a significant redevelopment and your project is subject to **STANDARD STORMWATER REQUIREMENTS.** Please check the "does not meet PDP requirements" box in Section 3 below.		
4. Will your redevelopment project create, replace, or add at least 5,000 square feet of impervious surfaces on existing developed property **or** will your project be located within 200 feet of the Pacific Ocean and (1) create 2500 square feet or more of impervious surface or (2) increases impervious surface on the property by more than 10%? Replacement of existing impervious surfaces includes any activity that is not part of routine maintenance where impervious material(s) are removed, exposing underlying soil during construction.		
INSTRUCTIONS: If you answered **YES**, you **ARE** a significant redevelopment, and you **ARE** subject to **PRIORITY DEVELOPMENT PROJECT** requirements. Please check the "meets PRIORITY DEVELOPMENT PROJECT requirements" box in Section 3 below. Review SUSMP to find out if SUSMP requirements apply to your project envelope or the entire project site. If you answered **NO**, then you **ARE NOT a** significant redevelopment and your project is subject to **STANDARD STORMWATER REQUIREMENTS.** Please check the "does not meet PDP requirements" box in Section 3 below.		

**for definition see Footnote 4 on page 2*

SECTION 3	QUESTIONNAIRE RESULTS
☑	My project meets **PRIORITY DEVELOPMENT PROJECT (PDP)** requirements and must comply with additional stormwater criteria per the SUSMP and I understand I must prepare a Storm Water Management Plan for submittal at time of application. I understand flow control (hydromodification) requirements may apply to my project. Refer to SUSMP for details.
☐	My project **does not meet PDP** requirements and must only comply with **STANDARD STORMWATER REQUIREMENTS** per the SUSMP. As part of these requirements, I will incorporate low impact development strategies throughout my project.

Integrated Management Practice (IMP) Sizing Calculations

Cistern with Bioretention Facility

DMA Name	DMA (ft^2)	Surface Type	Runoff Factor	Area X Weighted Runoff Factor						
A-1	112603	Impervious Area (55%) - Roof, Sidewalk, Street	1.0	112603						
A-2	92129	Pervious Area (45%) - Landscaped/Vegetated Area, Grasscrete, Park	0.1	9213	85th Percentile Rainfall (inches)	Required WQ Volume for Cistern (ft^3)	Discharge Orifice Opening Size per HEC-1 Analyses (inches)	Maximum Outflow Q_{max} from the Orifice (cfs [1])	Minimum Size [2] (ft^2)	Size Planned (ft^2)
Total	204732			121816	0.60	6091	1.50	0.126	1089	1115

Note:

1. "cfs" = cubic feet per second
2. The calculation assumes areas from the northwest corner of the project (Lot 6) to drain to the IMP; however, in reality, runoff from this area will be collected by the downstream cleanout location. Therefore, this area will be considered as "self-treating" area. Areas from Lot 12 and 31 are also "self-treating" areas, but not considered in the sizing calculation.

Note: 121816 ft^2 x 0.60 in x (1 ft / 12 in) = 6091 ft^3

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.
THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

*** WARNING *** MODIFIED PULS ROUTING MAY BE NUMERICALLY UNSTABLE FOR OUTFLOWS BETWEEN        0. TO       20.
                THE ROUTED HYDROGRAPH SHOULD BE EXAMINED FOR OSCILLATIONS OR OUTFLOWS GREATER THAN PEAK INFLOWS.
                THIS CAN BE CORRECTED BY DECREASING THE TIME INTERVAL OR INCREASING STORAGE (USE A LONGER REACH.)

APPENDIX D

Details
for
Cistern with Bioretention Facility
(Including Bayseparator, StormTrap, and Bioretention)

Cistern with Bioretention Facility

A cistern in series with a bioretention facility can meet treatment requirements where space is limited. In this configuration, the cistern is equipped with a flow-control orifice and the bioretention facility is sized to treat a trickle outflow from the cistern.

Best Uses

- In series with a bioretention facility to meet treatment requirement in limited space.
- Management of roof runoff
- Dense urban areas

Advantages

- Storage volume can be in any configuration

Limitations

- Somewhat complex to design, build, and operate
- Requires head for both cistern and bioretention facility

▶ CRITERIA

Cistern. The cistern must detain the volume calculated by Equation 4-8 and must include an orifice or other device designed for a 24-hour drawdown time.

Bioretention facility. See the design sheet for bioretention facilities. The area of the bioretention facility must be sized to treat the maximum discharge flow, assuming a percolation rate of 5" per hour through the engineered soil.

Use with sand filter. A cistern in series with a sand filter can meet treatment requirements. See the discussion of treatment facility selection in Section 2 and the design guidance for sand filters in Section 4.

▶ DETAILS

Flow-control orifice. The cistern must be equipped with an orifice plate or other device to limit flow to the bioretention area.

Preventing mosquito harborage. Cisterns should be designed to drain completely, leaving no standing water. Drains should be located flush with the bottom of the cistern. Alternatively—or in addition—all entry and exit points, should be provided with traps or sealed or screened to prevent mosquito entry. Note mosquitoes can enter through openings 1/16" or larger and will fly for many feet through pipes as small as 1/4".

Exclude debris. Provide leaf guards and/or screens to prevent debris from accumulating in the cistern.

Ensure access for maintenance. Design the cistern to allow for cleanout. Avoid creating the need for maintenance workers to enter a confined space. Ensure the outlet orifice can be easily accessed for cleaning and maintenance.

► APPLICATIONS

Shallow ponding on a flat roof. The "cistern" storage volume can be designed in any configuration, including simply storing rainfall on the roof where it falls and draining it away slowly. See the County of San Diego's 85th percentile isopluvial diagrams for required average depths.

Cistern attached to a building and draining to a planter. This arrangement allows a planter box to be constructed with a smaller area.

Vault with pumped discharge to bioretention facility. In this arrangement, runoff from a parking lot and/or building roofs can be captured and detained underground and then pumped to a bioretention facility on the surface. Alternatively, treatment can be accomplished with a sand filter. See the discussion of selection of stormwater treatment facilities in Section 2.

Water harvesting or graywater reuse. It may be possible to create a site-specific design that uses cisterns to achieve stormwater flow control, stormwater treatment, and rainwater reuse for irrigation or indoor uses (**water harvesting**). Facilities must meet criteria for capturing and treating the volume specified by Equation 4-8. This volume must be allowed to empty within 24 hours so runoff from additional storms, which may follow, is also captured and treated. Additional volume may be required if the system also stores runoff for longer periods for reuse. Indoor uses of non-potable water may be restricted or prohibited. Check with municipal staff.

Design Checklist for Cistern

- ❒ Volume meets or exceeds minimum.
- ❒ Outlet with orifice or other flow-control device restricts flow and is designed to provide a 24-hour drawdown time.
- ❒ Outlet is piped to a bioretention facility designed to treat the maximum discharge from the cistern orifice.
- ❒ Cistern is designed to drain completely and/or sealed to prevent mosquito harborage.
- ❒ Design provides for exclusion of debris and accessibility for maintenance.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.

NOTES:
1. DESIGNER SHALL ACCOUNT FOR AND ACCOMODATE FOR POSSIBLE OVERFLOW.
2. OVERFLOW OUTLET CAPACITY SHALL EQUAL OR EXCEED POTENTIAL RUNOFF VOLUME AND RATE.
3. CISTERN PROVIDES FLOW CONTROL ONLY. USE IN COMBINATION WITH TREATMENT IMP.
4. PROVIDE ACCESS FOR CLEAN OUT OF OUTLET ORIFICE. SEE FLOW-THROUGH PLANTER OUTLET DETAIL.
5. PREVENT MOSQUITO BREEDING BY SEALING OR SCREENING ALL OPENINGS TO THE WATER SURFACE AND/OR ENSURE COMPLETE DRAINAGE.

BIORETENTION PORTION

Bioretention Facilities

Bioretention facility configured for treatment-only requirements. Bioretention facilities can rectangular, linear, or nearly any shape.

Bioretention detains runoff in a surface reservoir, filters it through plant roots and a biologically active soil mix, and then infiltrates it into the ground. Where native soils are less permeable, an underdrain conveys treated runoff to storm drain or surface drainage.

Bioretention facilities can be configured in nearly any shape. When configured as linear **swales**, they can convey high flows while percolating and treating lower flows.

Bioretention facilities can be configured as in-ground or above-ground planter boxes, with the bottom open to allow infiltration to native soils underneath. If infiltration cannot be allowed, use the sizing factors and criteria for the Flow-Through Planter.

► CRITERIA

For development projects subject only to runoff treatment requirements, the following criteria apply:

Parameter	Criterion
Soil mix depth	18 inches minimum
Soil mix minimum percolation rate	5 inches per hour minimum sustained (10 inches per hour initial rate recommended)
Soil mix surface area	0.04 times tributary impervious area (or equivalent)

Best Uses

- Commercial areas
- Residential subdivisions
- Industrial developments
- Roadways
- Parking lots
- Fit in setbacks, medians, and other landscaped areas

Advantages

- Can be any shape
- Low maintenance
- Can be landscaped

Limitations

- Require 4% of tributary impervious square footage
- Typically requires 3-4 feet of head
- Irrigation typically required

Parameter	Criterion
Surface reservoir depth	6 inches minimum; may be sloped to 4 inches where adjoining walkways.
Underdrain	Required in Group "C" and "D" soils. Perforated pipe embedded in gravel ("Class 2 permeable" recommended), connected to storm drain or other accepted discharge point.

► DETAILS

Plan. On the surface, a bioretention facility should be one level, shallow basin—or a series of basins. As runoff enters each basin, it should flood and fill throughout before runoff overflows to the outlet or to the next downstream basin. This will help prevent movement of surface mulch and soil mix.

Use check dams for linear bioretention facilities (swales) on a slope.

In a linear swale, check dams should be placed so that the lip of each dam is at least as high as the toe of the next upstream dam. A similar principle applies to bioretention facilities built as terraced roadway shoulders.

Inlets. Paved areas draining to the facility should be graded, and inlets should be placed, so that runoff remains as sheet flow or as dispersed as possible. Curb cuts should be wide (12" is recommended) to avoid clogging with leaves or debris. Allow for a minimum reveal of 4"-6" between the inlet and soil mix elevations to ensure turf or mulch buildup does not block the inlet. In addition, place an apron of stone or concrete, a foot square or larger, inside each inlet to prevent vegetation from growing up and blocking the inlet.

Recommended design details for bioretention facility inlets (see text).

Where runoff is collected in pipes or gutters and conveyed to the facility, protect the landscaping from high-velocity flows with energy-dissipating rocks. In larger installations, provide cobble-lined channels to better distribute flows throughout the facility.

Upturned pipe outlets can be used to dissipate energy when runoff is piped from roofs and upgradient paved areas.

Soil mix. The required soil mix is similar to a loamy sand. It must maintain a minimum percolation rate of 5" per hour throughout the life of the facility, and it must be suitable for maintaining plant life. Typically, on-site soils will not be suitable due to clay content.

Storage and drainage layer. "Class 2 permeable," Caltrans specification 68-1.025, is recommended. Open-graded crushed rock, washed, may be used, but requires 4"-6" washed pea gravel be substituted at the top of the crushed rock gravel layers. **Do not use filter fabric** to separate the soil mix from the gravel drainage layer or the gravel drainage layer from the native soil.

Underdrains. No underdrain is required where native soils beneath the facility are Hydrologic Soil Group A or B. For treatment-only facilities where native soils are Group C or D, a perforated pipe must be bedded in the gravel layer and must terminate at a storm drain or other approved discharge point.

Outlets. In treatment-only facilities, outlets must be set high enough to ensure the surface reservoir fills and the entire surface area of soil mix is flooded before the outlet elevation is reached. In swales, this can be achieved with appropriately placed check dams.

The outlet should be designed to exclude floating mulch and debris.

Vaults, utility boxes and light standards. It is best to locate utilities outside the bioretention facility—in adjacent walkways or in a separate area set aside for this purpose. If utility structures are to be placed within the facility, the locations should be anticipated and adjustments made to ensure the minimum bioretention surface area and volumes are achieved. Leaving the final locations to each individual utility can produce a haphazard, unaesthetic appearance and make the bioretention facility more difficult to maintain.

Emergency overflow. The site grading (construction) plan shall include details that demonstrate the bioretention basin can handle larger (up to 100-year) storm events and address potential clogging of the overflow and route emergency overflows safely.

Trees. Bioretention areas can accommodate small or large trees. There is no need to subtract the area taken up by roots from the effective area of the facility. Extensive tree roots maintain soil permeability and help retain runoff. Normal maintenance of a bioretention facility should not affect tree lifespan.

The bioretention facility can be integrated with a tree pit of the required depth and filled with structural soil. If a root barrier is used, it can be located to allow tree roots to spread throughout the bioretention facility while protecting adjacent pavement. Locations and planting elevations should be selected to avoid blocking the facility's inlets and outlets.

Bioretention facility configured as a tree well.
The root barrier is optional.

Subject: Revised Geotechnical Evaluation of Storm Water Management and Recommendations for Side Yard Drainage for the Proposed 31-Lot Residential Development, Located on the Southwest Corner of Poinsettia Lane and Pasceo Del Norte, City of Carlsbad, San Diego County, California

Pursuant to your request, Earth-Strata has reviewed the storm water management plan for the subject property. The review consisted of evaluating the plans for the single cistern/bio-retention concept within Lot 6 and Sheets No. 1 through 8, for the "Storm Trap Precast Concrete Modular Storm Water Management Systems" dated September 29, 2010. The design utilizes the concept that the majority of the storm water should only be allowed to infiltrate in designated areas.

We recommend that the minimum distance from the proposed house to the flow line of the adjacent swale as indicated in the Typical Side Yard w/ Retaining Wall Detail be increased from 3 to 4 feet.

In addition, it is our opinion that the proposed infiltration system in the revised plans noted above should not be detrimental to the long term stability of the proposed slopes and appurtenant structures. Additionally, any substantial alterations to the plans to include infiltration throughout the site is not recommended. As noted within the referenced geotechnical reports, we are concerned from a geotechnical point of view if storm water is not controlled and allowed to infiltrate throughout the site. After the site is rough graded geological contacts will exist between the native earth materials and the various artificial fill materials. If water is encouraged to infiltrate at numerous locations throughout the site, the groundwater could be considerably detrimental to the long term stability of the slopes and appurtenant structures.

We hope that this further clarifies the need for controlling and limiting areas where infiltration is permitted.

The opportunity to be of service is appreciated. Should you have any questions or require further clarification, please notify our office at your earliest convenience.

Respectfully submitted,

Biological Evaluation

GLENN LUKOS ASSOCIATES
Regulatory Services

April 1, 2011

Mr. Christopher Courtney
K. Hovnanian Companies, Inc.
1500 South Haven Avenue
Suite 100
Ontario, California 91761

SUBJECT: Biological Evaluation of Potential Effects to Biological Resources in Batiquitos Lagoon Associated with Increase in Stormwater Discharge to a Tributary Upstream of Batiquitos Lagoon Originating with the Carlsbad 27 Project, Located in the City of Carlsbad; San Diego County, California.

Dear Mr. Courtney:

A biologist from Glenn Lukos Associates, Inc. (GLA) visited the above mentioned tributary and adjacent areas of Batiquitos Lagoon on March 28, 2011 to identify and analyze any potential biological effects of the proposed Carlsbad 27 Project (also known as The Tides) [Project] relevant to the new Standard Urban Storm Water Management Plan (SUSMP). During several telephone calls with Martin Rasnick during the past two weeks, K. Hovnanian companies (KHOV) has requested that GLA prepare a letter report documenting the potential effect that the Project will have upon the Lagoon and its habitat. Based upon the information provided by KHOV, GLA conducted a one-day biological site review of the proposed discharge point extending from the discharge point to where the discharge would enter the Lagoon. This site review documents existing biological conditions beginning at the discharge point, extending to the lagoon.

Exhibit 1 is a site location map and Exhibit 2 depicts the proposed Carlsbad 27 Project area. Exhibit 3 consists of site photographs documenting the current biological conditions at the Study Area of the proposed discharge.

I. PROJECT DESCRIPTION

K. Hovnanian Companies, Inc. (KHOV) is processing a grading permit for the Carlsbad 27 Project (also known as The Tides) [Project] located in the City of Carlsbad (City); San Diego County, California. The Tides property consists of approximately 5.12 acres and is located offsite to the subject tributary, and is bounded by Interstate 5 to the west, Poinsettia Lane to the north, Lowder Lane to the east, and existing residential development to the south. The storm drain where

29 Orchard ▪ Lake Forest ▪ California 92630-8300
Telephone: (949) 837-0404 Facsimile: (949) 837-5834

stormwater originating on the Tides project site would discharge is located at the uppermost reach of a tributary of Batiquitos Lagoon, which is also located in the City of Carlsbad (City); San Diego County, California. The tributary to Batiquitos Lagoon includes areas of willow riparian habitat along with freshwater marsh which, combined cover approximately 1.79 acres. The slopes above the tributary are vegetated with a mosaic of native scrub and ornamental vegetation, which is bounded by existing residential development to the north, east, and west, and open salt marsh associated with Batiquitos Lagoon to the south (Exhibits 1 and 2). The tributary to the Batiquitos Lagoon extends from the outfall structure to the south and carries the discharge downstream for approximately 843 linear feet to where it exists the tributary and enters the saltwater marsh in the Batiquitos Lagoon.

Under existing conditions, freshwater discharge from the tributary drainage's watershed into Batiquitos Lagoon during a 100-year storm event totals 197 cfs. The Tides project site currently contributes 12.65 cfs of this 197 cfs total under existing conditions. With construction of the Tides project, the amount of fresh water discharge into the tributary during a 100-year storm event would be increased by approximately 1.37 cfs, or only a 0.7 percent (less than one percent) increase. As discussed below, this increase would not have a measurable impact on the biological resources within Batiquitos Lagoon.

Project Design Standards

The City has recently adopted a new Standard Urban Storm Water Management Plan (SUSMP) and will not issue a grading permit for the Project until it has been documented that the urban runoff originating on the Tides project site will not have a detrimental effect upon, or result in habitat conversion of, the receiving water body, Batiquitos Lagoon.

The Project Engineer, Rick Engineering (Rick), and KHOV have provided the hydrological data to assist GLA with the preparation of this letter report. Pre-project hydrologic calculations for the 5.12-acre project location indicate that currently, the site would generate approximately 12.65 cfs of freshwater discharge during a 100-year event. Post-project hydrologic calculations for discharge collection are estimated to increase by 1.37 cfs, for a combined total of 14.02 cfs at the proposed discharge location. Rick's information confirms that the Project will only add flows of 1.37 cfs, or 0.7 percent (less than one percent) to Batiquitos Lagoon during a 100-year event.

II. METHODOLOGY

In order to evaluate the potential impacts of the increased storm water discharge, GLA Senior Biologist Tony Bomkamp visited the site on March 28, 2011 to evaluate the conditions within

the tributary, which discharges into Batiquitos Lagoon as well as the conditions in the lagoon at the tributary/lagoon confluence. Exhibit 2 depicts the relationship of the outfall location, tributary, and Batiquitos Lagoon.

Upon arriving on site, the upper reach of the tributary was examined on foot, beginning at the outfall and moving downstream, past a channelized portion of the drainage, and into the lower area of southern arroyo willow forest. Because of the density of the willow, it was not possible to reach the area of dense cattails that dominates the lower 300+ feet of the tributary. These areas as well as the adjacent portions of Batiquitos Lagoon were evaluated from the adjacent slopes.

In order to conduct the evaluation, the wetland/riparian vegetation communities within the tributary were mapped as well as the adjacent areas of the Lagoon as depicted on Exhibit 2.

III. RESULTS

Site Conditions Between Existing Outfall Structure and Lagoon

As mentioned above, the field investigation focused on the characteristics of the tributary, which would receive discharge from the Tides project that would be co-mingled with other sources of discharge from surrounding areas. The tributary supports approximately 1.49 acres of freshwater riparian and wetland habitats dominated by willow forest and cattail marsh. From the discharge point of the outfall structure, the tributary extends for approximately 843 linear feet to where it discharges to Batiquitos Lagoon. The proposed Tides project will discharge storm flows and nuisance water to a storm drain that ultimately discharges to a tributary of Batiquitos Lagoon.

The outfall leaving the storm drain originates from adjacent housing development and fresh water storm flow. Discharge observed along the tributary bottom consists of fresh water habitat. The most common plant species observed within 150 feet downstream from the outfall include previously maintained giant reed (*Arundo donax*), white water cress (*Rorippa nasturtium-aquaticum*), and prickly sow thistle (*Sonchus asper*).

Immediately downstream of the area where the giant reed has been cut, the understory appears sparse from storm scour, while the canopy remains lush with arroyo willow (*Salix lasiolepis*) as the dominant species. Additional vegetation within the channel area includes non-native African umbrella sedge (*Cyperus involucratus),* and southern cattail (*Typha domingensis*). Below the first stand of willows, occurs a second stand that is much more dense and includes a dense understory. Downstream of the lower stand of willows is dense stands of southern cattail, which

extend to where there is an abrupt transition to salt marsh habitat within Batiquitos Lagoon. As noted, all of the vegetation observed within 843 linear feet downstream from the outfall, is freshwater species and is depicted on Exhibit 4.

The transition from freshwater habitat to saltwater habitat is observed at approximately 843 linear feet south of the drainage outfall. Salt marsh vegetation observed at the confluence is dominated by cord grass (*Spartina foliosa*) within the lower elevations and common pickleweed (*Salicornia virginica*) and other salt marsh species, such as salt grass (*Distichlis spicata*), at the higher elevations. It is noteworthy that the dominant vegetation at the transition from cattail marsh to salt marsh is the cord grass, which is highly tolerant of inundation but not tolerant of high salt contents (i.e., above the 35 parts per thousand) which is typical of seawater. Conversely, common pickleweed is tolerant of higher salinity concentrations, typical of salt marsh areas that do not receive regular tidal flushing or freshwater storm discharge (though pickleweed does need freshwater for germination).

Given that the tributary drainage contains 197 cfs of freshwater discharge during a 100-year storm event and the change in hydrology from 12.65 cfs that currently reaches the site during a 100-year event as compared to the 14.02 cfs that would be contributed to the area in the post-project 100-year storm event (0.7 percent of the total cfs, or less than one percent of the overall flow), there would be no change either to the freshwater riparian and marsh species that currently occupy the tributary or the salt marsh habitat at the confluence, given the dominance of cord grass at the transition area.

In conclusion, after completion of the biological site review, GLA has determined that proposed increase in urban fresh water runoff flows leaving the proposed Project site will not have a detrimental effect upon, or result in habitat conversion of, the receiving water body, Batiquitos Lagoon (Lagoon).

Should you have any questions regarding this proposal please call Tony Bomkamp (949) 837-0404.

Sincerely,

GLENN LUKOS ASSOCIATES, INC.

Tony Bomkamp

CHAPTER 3

METHODOLOGY

A. Study Approach

The approach of this project was to utilize previous hydrology studies for the major water courses and to analyze tributary areas where storm drain deficiencies occur. Storm drain facilities are recommended where existing facilities are inadequate or where projected development will require drainage facilities.

B. Hydrologic Design Criteria

The design criteria, as found in the County of San Diego Department of Public Works Flood Control Division Hydrology Manual, specifies the design runoff conditions within the San Diego County Flood Control District will be based on the 100 year storm frequency as follows:

1. Design for areas over 1 square mile will be based on the 100 year frequency storm.

2. For areas under 1 square mile -

a) The storm drain system shall be designed so that the combination of storm drain system capacity and overflow both inside and outside the right of way will be able to carry the 100 year frequency storm without damaging adjacent existing buildings or potential building sites.

b) The storm drain system shall be designed so that the combination of storm drain system capacity and allowable street overflow will be able to carry the 50 year frequency storm within the street right-of-way.

c) Where a storm drain is required under headings 1 or 2 above, then as a minimum, the storm drain shall be designed to carry the 10 year frequency storm.

3. Sump areas are to be designed for a sump capacity or outfall of a 100 year frequency storm.

For this study, existing drainage systems were analyzed with respect to the above criteria and recommendations made accordingly. In undeveloped areas, where future street alignments and grades are unknown, the recommended storm drain lines are sized for 100 year flow capacity, based on the grades of existing flowlines. However, when these areas are developed the drainage system may actually carry the 10 year storm underground, the 50 year storm to top of curb, and the 100 year storm within the street right-of-way. Drains at sumps should convey 100 year storm flows.

The design flows were computed based on the following assumptions and data:

1. Ground cover was derived from the Soil Conservation Service 1969 survey maps updated with ultimate development data corresponding to the 1000 scale city of Carlsbad General Plan Map dated April 1987 and future land use densities projected in the City's Growth Management Program.

BMP VERIFICATION AND MAINTENANCE

BMP ACTIVITY	YES	NO	DON'T KNOW	N\A	COMMENTS
Has the BMP been installed?					
Has the BMP been removed?					
Is the BMP operating properly?					
Has the BMP been replaced? If so when?					
Is BMP covered under a maintenance agreement?					
Is the BMP on a regular maintenance schedule?					
Has the BMP been inspected during the last year?					
Has the BMP been maintained or cleaned during the last year?					

TCBMP Verification of Maintenance Records Requirement

If the 2010 or 2011 Condition of the TCBMP is **POOR**, you will need to submit documentation that the structure has been maintained since the last inspection. The structure was found to in POOR condition because of one or more of the following:

- **BMP has not been installed**
- **Accumulation of trash and debris**
- **BMP could not be accessed**
- **BMP needs repair**

Failure to submit the requested information could result in the issuance of a Notice of Violation and the assessment of administrative fines.

Certification Statement

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system to assure that the responsible party gathered and evaluated the information submitted. Based on my inquiry of the person or person who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief true, accurate and complete, I am aware that there are significant penalties for submitting false information including the possibility of fines and other enforcement actions.

CITY OF CARLSBAD
GRADING INSPECTION CHECKLIST
FOR PARTIAL SITE RELEASE

PROJECT INSPECTOR:_____ DATE:_____

PROJECT ID_____ GRADING PERMIT NO._____

LOTS REQUESTED FOR RELEASE:_____
N/A □ NOT APPLICABLE
√ □ COMPLETE
0 □ Incomplete or unacceptable

1st	2nd.		
		1.	Site access to requested lots adequate and logically grouped
		2.	Site erosion control measures adequate.
		3.	Overall site adequate for health, safety and welfare of public.
		4.	Letter from Owner/Dev. requesting partial release of specific lots, pads or bldg.
		5.	8□" x 11" site plan (attachment) showing requested lots submitted.
		6.	Compaction report from soils engineer submitted. (If soils report has been submitted with a previous partial release, a letter from soils engineer referencing the soils report and identifying specific lots for release shall accompany subsequent partial releases).
		7.	EOW certification of work done with finish pad elevations of specific lots to be released. Letter must state lot (s) is graded to within a tenth (.1) of the approved grading plan.
		8.	Geologic engineer's letter if unusual geologic or subsurface conditions exist.
		9.	Fully functional fire hydrants within 500 feet of building combustibles and an all weather roads access to site is required.
		10.	Letter from EOW that TCBMP□s are installed.

□ □ Partial release of grading for the above stated lots is approved for the purpose of building permit issuance. Issuance of building permits is still subject to all normal City requirements required pursuant to the building permit process.

□ Partial release of the site is denied for the following reasons:

MEMORANDUM

TO: Property Owners/Developers/Contractors - All Active Construction Sites in the City of Carlsbad
FROM: Shawnetta Grandberry, Senior Construction Inspector, Construction Management and Inspections

RE: **BMP Verification of Installation Required Prior to Occupancy**

In order to comply with Regional Water Quality Control Board Order R9-2007-0001, the City has adopted an approach for ensuring verification that all permanent best management practices (BMPs), including LID, source control, and treatment control best management practices are installed and constructed per the requirements of approved plans prior to occupancy of the project. This requirement applies to all priority development projects subject to SUSMP requirements, including phased development projects. As a result of this requirement, project applicants must certify that constructed BMPs are in compliance with all specifications, plans, permits, ordinances, and are ready for inspection by the City. Verification of BMP installation can be certified by one of the following:

1. A California registered civil engineer;
2. A California registered geologist;
3. A California registered landscape architect;
4. A professional hydrologist registered through the American Institute of Hydrology;
5. A certified professional soil scientist registered through the Soil Science Society of America;
6. A certified professional in erosion and sediment control registered through Certified Professional in Erosion and Sediment Control, Inc.;
7. A certified professional in storm water quality registered through Certified Professional in Erosion and Sediment Control, Inc.; or
8. A certified professional in erosion and sediment control registered through the National Institute for Certification in Engineering Technologies.

The City requires each project applicant to verify all treatment and flow-control facilities are adequately maintained. Facilities that are installed as part of the project will be verified for effectiveness and proper performance. Operation and maintenance of storm water BMP facilities is a six-stage process:

1. Determine who will own and be responsible for the maintenance of treatment facilities. Identify the means by which ongoing maintenance will be assured.
2. Identify anticipated maintenance requirements and allow for these requirements in project planning and preliminary design.
3. Prepare a maintenance plan incorporating detailed requirements for each treatment and flow-control facility.
4. Maintain the facilities from the time they are constructed until ownership and maintenance responsibility is formally transferred.
5. Formally transfer operation and maintenance responsibility to the site owner or occupant.
6. Maintain the facilities in perpetuity and keep records for self-inspection and verification requirements.

Project applicants in the City of Carlsbad are required to comply with all applicable storm water regulations and implement BMPs to the maximum extent practicable. It is the City's goal to obtain your compliance with the applicable regulations and requirements. Please contact your Project Inspector to review your specific project requirements. Thank you in advance for your cooperation and compliance efforts.

STORM WATER PERMIT COUNTER PROCEDURES

Storm Water Permits

1. Storm Water Permit initialized with building permit by Building techs:

1.1 Verify in Permits Plus that the address does not have an "active" SWPPP. If it has a previously issued SWPPP for the property site, DO *not* proceed to (b). If an active SWPPP is attached to the address then initialize only a Building permit (CB) but attach the new building permit to the SW permit through the "relates" button in Permits Plus.

1.2 Initialize an SW permit when the CB permit is initialized, linking the two permits.

1.3 Enter a brief description of the project on the SWPPP and complete the emergency contact information (Owner, if no other name is known at this time. Owner name & (cell # if possible). Phone # is now **mandatory.** Owner will be the "default emergency contact" (if a good field contact # is not available at permit initialization).

1.4 Write the SW permit number on the Application and route to Engineering.

1.5 Review by **Engineering techs** when they do building plancheck:

1.6 Open up the SW permit in Permits Plus and verify the Tier and threat levels. For Tier levels other than Tier 1, check with the Senior Civil Engineer to see if adjustment is warranted.

1.7 Enter the hydrologic unit, check for proximity to an ESA, etc.

1.8 In cases where a grading permit has been issued for the pad being built upon and there is an existing active Tier 3 SWPPP document, a new Tier 1 or 2 permit will be created and issued. Only inspection fees charged, since the SWPPP document has already been reviewed and approved. Tier level is based on the *building* permit application, not any previous grading permit application. Relate the building permit and SWPP through the "relates" button on either permit.

1.9 Verify that the emergency contact on the Tier 1 and SW permit are the same. (*This individual will be contacted by the Building Inspector for a pre-con meeting so if a suitable person (i.e. general contractor) has not yet been named by the owner then the owner will be listed as the emergency contact.)*

1.10 If the building permit application is exempt from a SWPPP, the SW permit will be voided.

STORM WATER PERMIT COUNTER PROCEDURES

1.11 On LARGE commercial projects or residential tracts a SWPPP (Tier 2 or 3) was already created with the grading permit. A new SWPPP permit is required and related to the CB permit for the individual buildings.
If something slipped through the cracks and a SW permit is required but somehow didn't get initialized, one will be initialized and related to the CB at this stage.

1.12 When applicant pulls building permit, **Building Tech's** verify that the SW permit relates to the CB permit.

1.13 Check that emergency contact is filled in, and verify it is the same as the information entered on the Tier 1 form. (*This individual will be contacted by the Building Inspector for a pre-con meeting.)*

1.14 At issuance, change status to "ISSUED" in Permits Plus and print both the SW and CB receipts to the cashier.

1.15 After payment, cashier will print both the CB and the SW permits and insert a copy of each in the permit folder. File will then be placed in the basket for Building Admin to collect.

STORM WATER PERMIT ADMINISTRATIVE PROCEDURES

2. Storm Water Permit Administrative Procedures

2.1 Gather permits from cashier's basket. Sort the files that have SWPPP permits.

2.2 Confirm that the Emergency contact name and number on the SWPPP permit match the information on the SWPPP Inspection Request form and the Tier 1 form.
Make a copy of the SWPPP permit and the CB permit, 3 hole punch.

2.3 Print daily email (Issued SWPPP's Summary)

2.4 Schedule a Pre-Con meeting for each of the SWPPP for the next business day.

2.5 On the scheduled inspection date. Give the Senior Inspector the SWPPP Summary page as well as the photo copies of the CB's and SW's (paper clip together with the inspection request. (SI will take these to the next scheduled morning inspectors meeting and distribute to the appropriate inspectors), adding the Inspectors initials to the Daily SWPPP Issued Permits Summary,

2.6 The daily SWPPP Issued Permits Summary is then given to Admin support to assign the inspector to the permit number (CB) and the SW number in Permits Plus.

2.7 The Inspector will complete the SWPPP Inspection Request form after making contact and a site visit with the ER Contact including all necessary comments / actions, SWPPP Inspection Codes (B-50) Exhibit 1, and date the property will need to be re-inspected based on the tier / priority listed on the SWPPP permit. This information is entered into Permits Inspections / Access database. The form is then given back to the Building Inspector to place in his Storm Water Binder. The building inspector will also confirm the Emergency Contact information is correct. If a change needs to be made, he will write the new information the request form and Christine or I will update the information in Permits Plus.

2.8 Inspectors should complete the NPDES Inspection Report when in the inspector's judgments a verbal direction to correct the violation is not adequate to gain compliance. NPDES Inspection Reports are a tool to convey & educate to the applicant the need for BMP implementation and compliance.

2.9 B-49 Unscheduled SWPPP Inspection Form (Exhibit 2) can be filled out for any additional inspections that were not scheduled. This form will then be placed in the building file.

2.10 Once all construction work has been completed and signed off by all other departments, the building inspector will FINAL the CB permit. The SWPPP

permit will not be finaled if the property has other active CB's. The file will then be given to Laura to prepare for scanning.

Exhibit 1. SWPPP Inspection Codes (B-50)
Exhibit 2. Unscheduled SWPPP Inspection Form (B-49)
Exhibit 3. NPDES Inspection Report

STORM WATER PERMIT ADMINISTRATIVE PROCEDURES

3. Building Inspectors Storm Water Procedures

Each construction site must be inspected by City staff for compliance with Storm Water Standards at the minimum frequency as shown in Table 8 below. The need for additional inspections may vary depending upon several factors including:

- *Site conditions*
- *Previous violations*
- *History of developer or contractor past performance*
- *Grading during rainy season*
- *Weather patterns*

****EACH INSPECTOR IS RESPONSIBLE FOR CHECKING THEIR JOB SITES WHEN A 40% CHANCE OF A STORM EVENT OR GREATER IS EXPECTED!****

Table 8

		Inspection Frequency	
Site Threat to water Quality **Tier**		**Rainy Season** **Oct 1st – April 30th**	**Dry Season** **May 1st – September 30th**
2,3	**High**	**Bi-weekly**	**As – needed**
1,2,3	**Medium**	**Monthly**	**As – needed**
1	**Low**	**As - needed**	**As - needed**

3.1 Pre-Con meetings will be automatically scheduled for the next business day. Inspectors will call / meet with the emergency contact (EC) and discuss site BMP's and storm water protection. <u>The inspector will tell the Emergency Contact (EC) to request a follow up inspection at the time construction is commenced. The inspector will use code 603 to document this inspection.</u>

3.2 The next SWPPP inspection will be done as part of the **first initial building inspection**, using the appropriate codes from form B-50, attached

STORM WATER PERMIT ADMINISTRATIVE PROCEDURES

. The inspector shall write the SWPPP number, inspection code, result and re-check date on his building inspection request paper. (**Note**: The SWPPP number will be **highlighted** on the unassigned building request to remind the inspector to do the SWPPP inspection.)

3.3 Routine inspections should be scheduled every **2 months** during the "**Dry Season**" and **monthly** during the "**Rainy Season**". (**Note:** A permit issued during the rainy season is at least a Tier 1-Medium Threat, requiring a Monthly inspection during the rainy season and As-needed inspections during the dry season. If a permit is issued in the dry season and construction is commenced after October 1st, the priority will change to medium threat, per form E-33.)

3.4 If the inspector detects BMP *non-compliance* during a scheduled building inspection, use form B-49 "Unscheduled Inspection" form to document inspection or write the SWPPP number, the appropriate code (605, 610 etc), result and re-check date on the building inspection request paperwork.

3.5 If a Notice to Clean (Code 605) Verbal Warning (Code 610) etc. is used during any scheduled or unscheduled inspection, then a Follow-up inspection (Code 603) should be scheduled within **48 hours** to confirm compliance.

3.6 Use "NPDES INSPECTION REPORT" form to document and as a tool to communicate in writing any correction action that is required when verbal direction, in the judgment of the inspector, would be inadequate. Use code 607 when you use this form.

3.7 All inspection requests and unscheduled forms will be entered into the Access program and returned to the inspector to place in his Storm Water Binder.

3.8 Storm Water binders shall remain intact until the end of the fiscal year.

STORM WATER PERMIT ADMINISTRATIVE PROCEDURES

Form B-50 Codes

600	PRE-CON	Use this code for the first initial inspection of the job site.
601	NPDES	NPDS
602	ROUTINE INSPECTION	Use this code for standard everyday inspections. After Pre-Con Inspection.
603	FOLLOW-UP INSPECTION	Use this code if you are following up on a Insp. Report, notice to clean, verbal warning or Ill. discharge.
604	COMPLAINT INSPECTION	Use this code when you have received a complaint about the job site.
605	NOTICE TO CLEAN	Use this code when the site needs to be cleaned.
606	ILLEGAL DISCHARGE	Use this code when there is discharge coming from the site.
607	WRITTEN WARNING	Use this code when you write a NPDES Inspection Report.
608	STOP WORK NOTICE	Use this code when you issue a Stop Work Notice.
609	NOTICE OF VIOLATION	Use this code when you issue a Notice of Violation.
610	VERBAL WARNING	Use this code when you give a verbal warning.

Example of Fiscal Year Inspections

NOTE: DO NOT THROW OUT FINAL SWPPP PERMITS UNTIL THE ANNUAL JURMP REPORT IS COMPLETE!

MEMORANDUM

To: Property Owners/Developers/Contractors - All Active Construction Sites in the City of Carlsbad

From: Shawnetta Grandberry, Senior Construction Inspector, Construction Management and Inspections

RAINY SEASON PREPARATION AND STORM WATER COMPLIANCE

The City of Carlsbad (City) would like to take this opportunity to remind you that the rainy season begins on **October 1, 2010**. As you are aware, additional storm water pollution prevention measures are required during the rainy season, which ends on May 1, 2011. Pursuant to Carlsbad Municipal Code (CMC) Chapter 15.16.120, the California Regional Water Quality Control Board (RWQCB) Order 2007-0001, and the City of Carlsbad 2008 Jurisdictional Urban Runoff Management Plan all erosion control measures must be installed prior to and regularly maintained during the rainy season.

Property Owners/Developers/Contractors working at active construction sites in Carlsbad are required to comply with all applicable storm water regulations and implement BMPs to the maximum extent practicable. It is the City's goal to obtain your voluntary compliance with the applicable regulations and requirements. The following measures are required for all active construction sites during the rainy season:

- **All** exposed disturbed areas must have erosion protection BMPs properly installed. This includes all building pads, unfinished roads, and slopes.
- Perimeter protection and sediment control BMPs will be upgraded, if necessary, to provide sufficient protection from runoff during the rainy season.
- Adequate physical or vegetation erosion control BMPs will be installed and maintained for all completed slopes prior to the start of the rainy season.
- All disturbed areas that are not completed, but that are not being actively graded, must be fully protected from erosion if left for 10 or more days. The ability to install BMP materials in a prompt manner is **NOT** sufficient for these areas. **BMP's will actually need to be installed for these areas.**
- Deployment of physical or vegetation erosion control BMP's will commence as soon as slopes are completed for any portion of the site. BMPs must also be stockpiled and ready for deployment whenever there is a 40% chance or greater of a rain event within a five (5) day forecast.
- When a ***Rain Event Action Plan*** is required it must be updated on a weekly basis. The plan shall include, in detail, any and all actions to be taken in advance (40% chance or greater) of a rain event in the five (5) day forecast by the National Weather Service. A copy of each updated action plan shall be placed in the project SWPPP.
- All treatment and erosion control BMPs must be inspected weekly and prior to a forecasted rain event of greater than 40%. In addition, treatment control BMPs must be inspected and serviced, if necessary, prior to October 1.
- Inspections of each site shall be conducted by the responsible party or designee prior to a forecasted event, during and after a rain event, at least bi-weekly during the rainy season, and as necessary to ensure site compliance.
- All construction employees must be trained on the importance of storm water pollution prevention and BMP maintenance prior to the rainy season.
- All construction and grading projects are required to emphasize erosion prevention as the most important measure for keeping sediment on-site during construction. Sediment controls are to be used as a supplement to erosion prevention never as the single or primary method.

The City will continue to conduct scheduled and unscheduled inspections to verify compliance with storm water regulations. Please keep in mind that compliance is dependent on the continued use of BMPs to prevent storm water pollution and the consistent implementation of an employee-training program. Please contact your Project Inspector to review your specific project requirements. Thank you in advance for your cooperation and compliance efforts.

Inspection Type	☐ Compliance ☐ Follow Up	Weather	☐ Heavy Rain ☐ Light Rain ☐ Sunny ☐ Cloudy ☐ Partly Cloudy ☐ Rain Expected at ___% chance		

BMP IMPLEMENTATION AND COMPLIANCE

BMP and Compliance Activity	YES	NO	N/A
Are all inactive slopes properly stabilized?			
Are areas flatter than 3:1 covered or protected?			
Are gravel bags, waddles, silt fences, and other erosion control BMPs in place and functioning properly?			
Do basins appear to be maintained as required?			
Are perimeter control BMPs maintained?			
Is the entrance stabilized to prevent tracking?			
Are storm drain inlets protected and BMPs maintained?			
Are all material and equipment handling, storage and repair areas clean and maintained?			
Are dumpsters and trash receptacles covered?			
Has trash and debris accumulated throughout the site?			
Are stockpiles and spoils protected from runoff?			
Are landscaped areas protected from erosion?			
Are natural areas and open spaces protected?			
Are washout areas maintained and protected?			
Were there any discharges observed during the inspection?			
Is the SWPPP wall map up to date and accurate?			
Was the SWPPP reviewed during this inspection?			
Are portable restrooms located away from the storm drain and on level ground?			
Do portable restrooms have secondary containment?			
Are BMPs stockpiled for emergency deployment?			
Other:			

CORRECTIVE ACTION REQUIRED

- ☐ Provide additional erosion control.
- ☐ Repair/replace erosion control BMPs.
- ☐ Replace broken rock/sand bags.
- ☐ Desiltation/retention basin(s) requires maintenance.
- ☐ Provide additional perimeter controls.
- ☐ Repair/replace perimeter controls.
- ☐ Impervious surfaces need to be swept.
- ☐ Prevent sediment tracking on to street.
- ☐ Clean in and around storm drains.
- ☐ Provide additional protection at storm drain inlets.
- ☐ Discard unusable equipment and materials.
- ☐ Remove trash and debris from project site.
- ☐ Properly store hazardous materials.
- ☐ **Immediately** clean up spills and leaks.
- ☐ Maintenance required for washout areas.
- ☐ Protect/Cover materials stored outdoors.
- ☐ Provide spill kit(s) in equipment storage areas.
- ☐ Provide cover for dumpster and trash receptacles.
- ☐ **Immediately** discontinue washing or hosing.
- ☐ Relocate portable restrooms away from storm drains and/or to level areas.
- ☐ Provide secondary containment for portable restrooms.
- ☐ Provide additional emergency BMPs.
- ☐ Train staff on pollution prevention.
- ☐ Other:_____

THIS SERVES AS A WARNING NOTICE. Implement corrective actions by _____. A City Inspector will return on or after the correction date to verify that corrective actions were completed and/or BMPs implemented as required. If you have any questions or comments, please contact your inspector.

Comments:

☐ **NO VIOLATIONS OBSERVED DURING THE INSPECTION.**

☐ **VIOLATIONS WERE NOTED DURING THE INSPECTION.**

- ☐ 15.12.050 Prohibited Discharge
- ☐ 15.12.080(E) Reduction of Pollutants
- ☐ 15.12.090 Storm Water Conveyance System Protection
- ☐ 15.12.110 Failure to Implement Corrective Actions
- ☐ 1512.120 Containment, cleanup, and notification of spills
- ☐ 15.16.170 Unlawful Acts
- ☐ 6.08.030 Receptacles Generally
- ☐ 6.08.040 Cleanliness of Solid Waste Receptacles
- ☐ 6.08.050 Solid Waste Receptacles to be Kept Covered
- ☐ 6.08.090 Unlawful Placement of Solid Waste
- ☐ Other_____ _____

City of Carlsbad

Municipal Facilities Inspection - Corrective Actions

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
3	ADULT LEARNING PROGRAM PARKING LOT	1	Keep dumpster area free of trash and other debris. It may be helpful to keep the area locked.	Custodial staff will clean dumpster area on a regular schedule. Contract will be let to address powerwashing enclosures.
1	AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	1	Keep brow ditch free of excessive sediment and leaf litter.	debris removed, bi-weekly inspections scheduled
		2	Ensure landscaping debris is prevented from entering all inlets and catch basins onsite.	noted as an existing BMP
		3	Keep current training log in SWPPP onsite.	current and onsite
		4	Maintain secondary containment free of rainwater.	water removed, cleanout after rains scheduled
		5	Replace gravel bags around Recreation Center catch basin.	replaced and monitored as needed
2	BATIQUITOS SEWER LIFT STATION	1	Sweep up trash and debris in outdoor areas.	swept up trash & debris
2	BEACH BLUFF TRIANGLE/PARK	1	Keep sidewalk drains free of excessive trash and organic debris.	drains are cleaned of litter and organic debris weekly
		2	Consider reapplying storm drain signage to inlet at Carlsbad Boulevard/Pine Avenue intersection and applying “no dumping” stencil to west sidewalk drains.	appropriate signage applied
2	BUENA VISTA SEWER LIFT STATION	2	No Corrective actions	NA
2	CADENCIA PARK	1	No corrective actions are recommended for this site.	N/A
1	CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	1	Remove gravel from northeast catch basin.	removed and monitored
		2	Keep baseball field catch basin free of landscaping debris.	daily cleaning scheduled
		3	Keep parking lot inlet and southwest swale free of leaf litter accumulation.	daily cleaning scheduled
		4	Keep dumpster enclosures free of trash, sediment, and debris.	weekly cleaning scheduled
		5	Replace sand bags along northwest swale and fiber rolls along southwest swale.	removed and will be replaced for Winter
		6	Consider storm drain signage for northwest and southwest corner drains and for northeast sidewalk catch basin.	appropriate signage applied
2	CALAVERA PUMP STATION	1	None	N/A
2	CANNON SEWER LIFT STATION	1	None	N/A
1	CARLSBAD RECYCLED WATER FACILITY	1	Keep inlet inserts free of leaf litter and organic debris accumulation.	Ongoing

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
		2	Ensure that a current storm water training log is kept onsite in SWPPP.	Complete
		3	Keep dumpster enclosure free of sediment and organic debris.	Initial cleanup done and ongoing maintenance will be performed.
3	CARLSBAD SENIOR CENTER PARKING LOT	1	No corrective actions are recommended for this site.	n/a
2	CARRILLO RANCH AND PARKING LOT	1	Keep discharge locations free of excessive sediment and leaf litter.	area cleaned weekly
		2	Continue to stabilize and maintain exposed soil areas to prevent soil from eroding during rain events.	mulch and straw wattles utilized as necessary
		3	Keep most recent storm water training log and spill plan on site.	monthly updates as needed
		4	Keep dumpster enclosure free of sediment, trash, and debris.	area cleaned weekly
		5	Regularly inspect structural BMPs and move or replace as necessary to effectively protect drains.	rock bags replaced as needed
		6	Consider applying storm drain signage to remaining brow ditch inlets and to parking lot catch basins.	appropriate signage applied
2	CHASE FIELD	1	Keep bleacher areas free of food waste debris.	daily cleaning scheduled
		2	Provide permanent cover for all trash cans onsite.	lids supplied
		3	Keep dumpster enclosure free of trash and leaf litter.	weekly cleaning scheduled
2	CHINQUAPIN SEWER LIFT STATION	1	None	N/A
3	CITY HALL FACILITY PARKING LOT	1	Keep dumpster enclosure free of sediment and organic debris.	Custodial staff will clean dumpster area on a regular schedule. Contract will be let to address powerwashing enclosures.
3	COLE LIBRARY PARKING LOT	1	Ensure that all vehicle leaks are promptly addressed.	Parking lot is swept semi monthly. Reported vehicle oil leaks are addressed immediately by City staff.
		2	Keep the dumpster enclosure free of trash and leaf litter.	Custodial staff will clean dumpster area on a regular schedule. Contract will be let to address powerwashing enclosures.
		3	Control erosion to Carlsbad Village Drive sidewalk at the southwest area of site.	Parks staff will address the erosion control issues
3	DOVE LIBRARY PARKING LOT	1	Keep outdoor areas and discharge locations free of excessive leaf litter,trash, and sediment.	Parks and Facilties staff will keep the outdoor areas free of debris

City of Carlsbad
Municipal Facilities Inspection - Corrective Actions

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
		2	Consider reapplying storm drain signage to dumpster enclosure catch basin and applying signage to southwest base of brow ditch.	Utilities staff will reapply the signage to catch basin and brow ditch
2	El FUERTE LIFT STATION	1	None	N/A
3	FARADAY CENTER PARKING LOT	1	Keep all outdoor areas and discharge locations free of excessive sediment and leaf litter.	Parks staff will keep the discharge locations free of sediment
3	FARMERS BUILDING PARKING LOT	1	Keep dumpster area free of trash and sediment.	Custodial staff will clean dumpster area on a regular schedule. Contract will be let to address powerwashing enclosures.
		2	Keep all outdoor areas and discharge locations free of excessive sediment, litter, and landscaping debris.	Parking lot is swept semi monthly. Reported vehicle oil leaks are addressed immediately by City staff. Parks staff will keep all other landscape areas free of debris
1	FIRE STATION #1	1	Store rusty materials to prevent contact with storm water.	Rusty material removed and disposed of.
1	FIRE STATION #2	1	No corrective actions are recommended for this site.	N/A
1	FIRE STATION #3	1	Consider applying “no dumping” signage to catch basin on site.	Clayton Dodds contacted on 6/27. His crews will handle.
1	FIRE STATION #4	1	Keep outdoor areas free of excessive sediment, focusing on west perimeter curb.	Added to the Stations weekly preventitive maintenance schedule.
1	FIRE STATION #5	1	Keep discharge location free of excessive sediment and leaf debris.	Added to the Stations weekly preventitive maintenance schedule.
1	FIRE STATION #6	1	Ensure all trash cans have permanent cover to protect from contact with storm water.	New lids in place
		2	Keep dumpster enclosure free of excessive leaf litter and debris.	Added to the Stations weekly preventitive maintenance schedule.
		3	Consider applying storm drain or specific informational signage to the trench storm drain with optional sewer diversion.	Station Captain ordered the sign through the city work order system.
1	FLEET MAINTENANCE FACILITY AND PARKING LOT	1	Ensure that annual storm water training is completed by employees.	SWPPP and Spills information (training)

City of Carlsbad

Municipal Facilities Inspection - Corrective Actions

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
		2	Control erosion along northern border and prevent any sediment from discharging over curb.	After rains completed, staff swept area clear of sediment washing over curb at north end of lot fence line.
		3	Store rusty materials to prevent contact with storm water.	Auction Items with rust moved of pavement
		4	Keep spill plan on site and accessible.	Adopted spill plan from APCD & copied to binder
		5	Ensure trailers are part of routine vehicle washing to prevent sediment discharge to parking lot.	Discussed condition of vehicles left for service to inspect for dirt and contaminates with staff. Staff inspects condition of vehicles parked in the "service due" area for debris from use on trailers or equipment. Staff then report to equipment users for correction.
2	FOXES LANDING LIFT STATION	1	None	N/A
2	GATESHEAD SEWER LIFT STATION	1	None	N/A
3	HARDING COMMUNITY CENTER PARKING LOT	1	Provide permanent cover for entry/exit trash can.	Trash can lids have been installed
		2	Keep site free of excessive leaf litter and trash debris.	Parking lot is swept semi monthly and Parks staff will address the leaf litter
2	HIDDEN CANYON PARK (LARWIN) AND PARKING LOT	1	Keep discharge locations free of excessive landscape debris, mulch,and sediment.	burlap covers applied to drains when mowing
		2	Replace broken gravel bags at northeast catch basin. Provide berms to protect southeast and southwest drains if necessary.	rock bags replaced
		3	Consider applying storm drain signage to parking lot drain and to catch basins within park.	appropriate signage in place
2	HOLIDAY PARK AND PARKING LOTS	1	Keep dumpster enclosures free of trash and debris.	area cleaned weekly
		2	Ensure prompt clean up of oil leaks in parking areas.	absorbents used on visible oil stains
2	HOME PLANT SEWER LIFT STATION	1	None	N/A
2	HOSP GROVE PARK AND PARKING LOT	1	Keep discharge locations along Marron Road free of excessive sediment, organic debris, and trash. Consider applying storm drain signage to the brow ditch drains.	areas cleaned, new gravel bags in place, weekly monitoring scheduled
		2	Control erosion from slope along Marron Road, and control sediment transport from Monroe Street parking lot to the road.	weekly cleaning scheduled
		3	Keep sidewalks and parking lots free of excessive sediment, leaf debris,and trash.	weekly cleaning scheduled

Appendix 4.4

City of Carlsbad

Municipal Facilities Inspection - Corrective Actions

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
		4	Ensure that gravel bags along brow ditch provide effective drain protection. Inspect and replace structural BMPs as necessary, including fiber rolls in Jefferson lot.	gravel bags and straw wattles will be monitored for structural integrity and replaced as needed
		5	Provide secondary containment for portable toilet unless this would prevent ADA compliance.	not feasible due to ADA requirements
		6	Clear debris surrounding Monroe Street picnic area drain.	area cleaned weekly
2	KNOTS SEWER LIFT STATION	1	None	N/A
2	LA COSTA CANYON PARK AND PARKING LOT	1	Keep discharge locations free of excessive sediment and organic debris.	area cleaned weekly
		2	Control erosion along tennis and basketball court slopes to minimize sediment transport to concrete ditch.	straw wattles installed, Hydroseeding applied to bare areas
		3	Regularly inspect structural BMPs and replace or move as necessary.	new rock bags installed
		4	Consider reapplying storm drain signage to parking lot catch basin.	appropriate signage applied
2	LAGUNA RIVIERA PARK	1	Consider reapplying “no dumping” signage to concrete ditch drain and applying to park catch basin.	appropriate signage applied
1	LANDSCAPE MAINTENANCE AND REPAIR	1	No corrective actions are recommended.	N/A
1	M&O OPERATIONS YARD AND PARKING LOT	1	No corrective actions are recommended for this site.	N/A
1	MAERKLE DAM RESERVOIR/PUMP/CHLORINATION STAT	1	Control slope erosion on eastern side of reservoir and prevent sediment discharge to concrete ditch. Continue to regularly remove any sediment accumulation in concrete ditch.	Ongoing
		2	Keep a current log of most recent storm water training in SWPPP on site.	Complete
		3	Consider storm drain signage for those catch basins that lack stenciling.	Complete
2	MAGEE PARK AND PARKING LOT	1	Keep dumpster enclosure free of excessive leaves and debris.	area cleaned weekly
		2	Consider applying “no dumping” signage to park catch basin.	appropriate signage applied
1	MS4 MAINTENANCE	1	No corrective actions are recommended.	N/A
1	OAK OPERATIONS YARD AND PARKING LOT	1	Keep inlet inserts free of excessive sediment.	Bi-weekly site inspections
1	PARKS MAINTENANCE/STORAGE/PARKING LOT	1	Keep trash area free of excessive sediment and organic debris.	area is cleaned after every dumpster removal

City of Carlsbad

Municipal Facilities Inspection - Corrective Actions

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
2	PINE PARK AND PARKING LOT	1	Keep discharge locations within parking lot and within park catch basins free of excessive sediment, leaf debris, and trash.	areas cleaned and swept daily
		2	Control erosion at dirt lot west of soccer fields to prevent sediment transport to alley.	straw wattles in place
		3	Inspect and maintain structural BMPs; ensure that gravel bags and fiber rolls are effectively placed.	areas inspected weekly
		4	Consider applying storm drain signage to park catch basins, as is feasible.	appropriate signage applied
1	POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	1	Keep discharge locations free of excessive sediment.	area is cleaned weekly
		2	Remove broken glass from northeast parking lot drain.	glass removed
		3	Consider reapplying “no dumping” signage to northwest drain and to park catch basins.	signage applied
		4	Maintain vegetation around swale drain next to tennis courts.	vegetation monitored monthly
2	POINSETTIA SEWER LIFT STATION	1	Seal/Redo Parking Lot	continue to install a filter rock bags to contain residue on asphalt parking lot which is disintegrating
		2	Clean in and around storm drains.	Cleaned in and around storm drains
1	POWER WASHING		Ensure all contractors are provided with storm water training rergarding surface cleaning and proper techniques for spill containment and cleanup.	CMI conducts meetings with all contractors prior to the commencement of contracted work. During these meetings, contractors are provided with information about the City's NPDES requirements, including surface cleaning and proper clean up techniques. In addtion, all contracts include the following language "*Contractor will incorporate and comply with all appilcable Best Managemnent Practices (BMPs)....* ". Inspectors conduct daily site visits to ensure BMPs are implemented to the maximum extent practicable.
			Implement structural BMPs and dry cleanup prior to wet cleaning activity.	Inspectors ensure all required and necessary BMPs are in place proir to and during all contracted work activites.
			Provide labels for fuel containers and any other hazardous materials.	Contractors are responsible for ensuring all containers are properly labeled. During inspections, City staff will continue to monitor, whenever possible, the labeling and storage of hazardous materials.

City of Carlsbad
Municipal Facilities Inspection - Corrective Actions

Tier	AREA/NAME	#	Corrective Action(s)	BMP's
			Refer to section SC-71 of the City of Carlsbad Municipal BMPs for training purposes and maintain a training log or similar method to document training.	CMI conducts meetings with all contractors prior to the commencement of contracted work. During these meetings, contractors are provided with information about the City's NPDES requirments. The City maintains a log/sign in for all persons in attendance. Contractors are asked to pass training materials on to their staff.
3	RAILROAD DEPOT VISITORS CENTER PARKING LOT	1	Keep outdoor areas and discharge locations free of excessive sediment, organic debris, and litter.	Parks staff will keep the discharge locations free of sediment
2	RESERVOIR C	1	None	N/A
2	RESERVOIR ELM	1	None	N/A
2	RESERVOIR LA COSTA HI	1	Drainage culvert around reservior requires periodic cleaing	Ongoing
2	RESERVOIR LA COSTA LO	1	None	N/A
2	SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	1	Keep outdoor areas free of excessive cigarette butts and leaf debris.	Custodial staff will keep areas clean of cigarette butts and Parks staff will address the leaf debris
		2	Keep discharge locations free of excessive sediment and organic debris.	Parks staff will keep the discharge locations free of sediment
		3	Control erosion along concrete ditch to prevent sediment transport.	Parks staff will address the erosion control issues
		4	Provide permanent cover for all trash cans on site.	Trash can lids have been installed
		5	Consider applying “no dumping” signage to skate park catch basins.	Utilities staff will apply "no dumping" signage at skate park
2	SAND SHELL SEWER LIFT STATION	1	None	N/A
1	SANITARY SEWER MAINTENANCE AND OPERATIONS	1	No corrective actions are recommended.	N/A
2	SIMSBURY SEWER LIFT STATION	1	None	N/A
1	STAGECOACH COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOT	1	No corrective actions are recommended for this site.	N/A
1	MONROE STREET POOL	1	Consider structural modification of the drainage layout from pool deck areas to reduce potential for pollutant discharge.	Sandbags and gravel were placed within the drainage basin and chennel to slow flow and trap sediments.
		2	Keep discharge locations free of excessive sediment and landscape debris.	All drains were cleaned.

Appendix 4.4

CITY OF CARLSBAD

CARLSBAD *Currents*

August 2010

*Welcome to Carlsbad Currents, an at-a-glance resource for the latest city news, issues and events. Want more information? Visit the City of Carlsbad website at **www.carlsbadca.gov**.*

Stay and play this summer

Summer is prime time for visitors to our great city, but who says tourists get to have all the fun? There is still time to take advantage of the warm weather, beautiful beaches and natural open spaces, all right here in our own backyard – not to mention all the new shops and restaurants that have recently popped up around town.

- **Explore city trails** – A new online trails map makes it easier than ever to explore the city's more than 40 miles of trails. Whether you're looking for an easy stroll or challenging hike, the city's trails system has something for you.
- **Enjoy a beach sunset** – Sure, beaches get a little crowded during the summer, but daylight saving time means there's still plenty of time to take in some sea air and a beautiful sunset from one of several scenic vantage points. Pine Avenue, South Ponto? Where's your favorite spot?
- **Shop 'til you drop** – Looking for a national retailer or is a specialty boutique more your style? Even in the down economy, Carlsbad has seen many new stores open in recent months, and more are on the way. An added bonus? Patronizing local shops means your tax money supports your own city services like libraries, parks, roads, police and fire.
- **Restaurant boom continues** – Carlsbad continues to attract new restaurants, from fine dining to more casual fare, in all parts of the city. Have a dining adventure this summer by trying some of these popular new eateries. Or, simply revisit an old favorite.
- **Art in the city** – Did you know that the village has become a center for arts and culture, featuring galleries, live music and hands on demonstrations? Have you ever visited the city's own sculpture garden and art gallery? Learn why Carlsbad is quickly becoming an art lover's paradise.

Ask the City of Carlsbad

The city answers questions from residents.

Is the cancer rate in Carlsbad higher than normal?

Some residents have expressed concern about what they believe could be a higher than normal rate of cancer in Carlsbad. The San Diego County Health and Human Services Agency and the California Cancer Registry have taken an active role in investigating these concerns, working closely with families who have been affected by cancer. After looking at cancer rates in the city as a whole and in specific neighborhoods where residents have expressed concern, state cancer experts have not found any indication of a cancer cluster. In other words, cancer rates in Carlsbad are not higher than normal. Because some residents continue to believe there could be a problem, health officials are conducting additional studies, with the goal of providing the most comprehensive, factual and reliable information to the public. The county has established a website with links to all the latest information: http://www.sdcounty.ca.gov/hhsa/programs/phs/cancer_concerns_in_carlsbad/

Residents with questions are encouraged to call the county at 619-515-6620 for more information.

Beat the summer sizzle

When the mercury soars this summer, take advantage of one of the city's Cool Zones. Cool Zones are free, air conditioned public gathering places where members of the community, particularly those with health problems aggravated by the heat, can gather free of cost.

Carlsbad City Library, 1775 Dove Lane
760-602-2049

- Monday to Thursday, 9 a.m. to 9 p.m.
- Friday and Saturday, 9 a.m. to 5 p.m.
- Sunday, 1 p.m. to 5 p.m.

Carlsbad Senior Center, 799 Pine Ave.
760-602-4650

- Monday to Thursday from 8 a.m. to 5:30 p.m.
- Friday, 8 a.m. to 5 p.m.

Free and fun city events

- **Friday, Aug. 6, 13 and 20, 6 to 8 p.m.**
  TGIF Jazz in the Parks

  Calavera Hills Park
  760-434-2904

  This year TGIF Jazz returns for its 25th season. Get ready to dance, picnic and listen to music all summer long! For more information, visit www.carlsbadca.gov/arts.

- **Friday Sept. 3, 10, 17 and 24, 6 to 10 p.m.**
  Leo Carrillo Film Festival

  Leo Carrillo Ranch Historic Park

  See rare, historic films from the Golden Age of Hollywood, featuring Leo Carrillo, at the star's legendary ranch. Films start promptly at sunset.

- **Thursday, Sept. 16, 7 p.m.**
  An Evening with Poet Laureate Kay Ryan

  The seventh annual Carlsbad Music Festival offers adventurous music that crosses many boundaries, blending traditional classical music with experimental composition and new sound technologies.

- **Saturday, Sept. 25, 9 a.m. to noon**
  California Coastal Cleanup Day

  Tamarack State Beach

  Last year volunteers removed 3090 cigarette butts, 643 food wrappers, and 488 plastic caps and lids from Tamarack State Beach alone. Trash bags and gloves will be provided, and Tamarack Surf Beach parking fees will be waived for the duration of the event. For more information please visit the city's website at www.carlsbadca.gov or www.cleanupday.org.

CITY OF CARLSBAD

CARLSBAD *Currents*

October 2010

*Welcome to Carlsbad Currents, an at-a-glance resource for the latest city news, issues and events. Want more information? Visit the City of Carlsbad website at **www.carlsbadca.gov**.*

Halloween on Elm *serves up family friendly fun*

Get ready for a spooktacular time at the city's first ever Halloween on Elm (did you know Carlsbad Village Drive used to be called Elm Avenue?). Taking place in the city's downtown Village, the family friendly event will feature a wide array of fun activities for the community—and even pets!

"Halloween on Elm is a great place for people to meet their neighbors and enjoy an afternoon of fun and activities in the heart of the Village," said Housing & Neighborhood Services Director Debbie Fountain. "From carnival games and costume contests to the outdoor movie and the farmers' market, there is something for everyone."

Halloween on Elm takes place on **Saturday, Oct. 30**, 2 p.m. to 9 p.m., at locations throughout the Village, but activities are primarily located on State and Roosevelt streets.
For more information on the event, visit the city's website, **www.carlsbadca.gov**, or call **760-434-2815**.

Free activities

- Halloween-themed carnival games and jump houses
- Costume contests for people and pets
- Safe trick or treat at local businesses
- Outdoor Halloween movie
- Food
- Safe costume checks
- Halloween "how-to" makeup demonstrations
- Live music and entertainment
- Farmers' market with Halloween activities (pumpkin patch, jumping for apples, pie baking contest)
- Haunted House at the Boys & Girls Club
- Themed storefront decorating contest

Be prepared: Create an EMERGENCY KIT

October is prime wildfire season in San Diego County and a perfect time to make sure you are prepared for emergencies, whether it be a fire, earthquake or other disaster.

A good first step is to assemble a home emergency supply kit, including:

- Water: one gallon of water per person, per day for at least three days for drinking and sanitation
- Food: at least a three-day supply of non-perishable food for each person
- Battery powered or hand crank radio and a NOAA weather radio
- Flash light
- Extra batteries
- First aid kit
- Dust mask, plastic sheeting and duct tape
- Moist towelettes, garbage bags and plastic ties for personal sanitation
- Wrench or pliers to turn off utilities
- Local maps
- Important documents, like insurance policies and passports, and a small supply of cash
- Pet food and other supplies

For a complete list of emergency preparedness kit items and other emergency planning information, visit www.ready.gov. You can also watch a video about how to put together a kit on the city's YouTube channel, www.youtube.com/cityofcarlsbadca.

Remember to check smoke detectors

Batteries don't last forever, and the change to standard time (coming up on Nov. 7) provides the perfect reminder to make sure that home smoke detectors are in working condition. A working smoke detector provides one of the best ways for people to be protected from fires.

Library Literacy Program changes lives

Does this sound familiar?

"I don't have time to complete this form. Can I take it home?"

"I forgot my glasses. Can you read this for me?"

"I hurt my hand. Can you fill out this form for me?"

Approximately one in five San Diego County residents cannot read and write well enough to get a job, help their children with homework or participate in community activities. There is help! The Carlsbad City Library Learning Center offers free tutoring in basic reading and writing for English-speaking adults. For more information, call **760-931-4510** or visit **www.carlsbadlibrary.org**. Services are friendly, confidential and free.

Free & fun city events

The World of Adonna Khare: Beasts, Backpacks and Curious Creatures

Now through Sunday, Nov. 7, Tuesday through Saturday, 11 a.m. to 5 p.m, and Sunday, 1 to 5 p.m.

William D. Cannon Art Gallery, Carlsbad City Library (Dove Lane)
760-602-2021

Los Angeles artist Adonna Khare is wild about animals. Her delightful works display both a stunning technical ability and a wild and woolly imagination.

Chilling Tales

Thursday, Oct. 28, 7 p.m.
Gowland Meeting Room,
Carlsbad City Library (Dove Lane)
760-602-2026

Just in time for Halloween, teens and adults are invited to an evening with storyteller Steven Henegar.

Halloween on Elm

Saturday, Oct. 30, 2 to 9 p.m.
Carlsbad Village, 760-434-2815

Dress up a day early and celebrate Carlsbad's first Halloween on Elm. (See page one for details.)

The Lighter Side of Aging

Saturday, Nov. 6, 11 a.m.
Georgina Cole Library, 760-602-2026

Based on his book *A Treasury for Seniors*, Richard Lederer will share his insights into the great adventure of becoming chronologically gifted.

Science Saturday

Saturday, Nov. 20, 2 p.m.
Carlsbad City Library (Dove Lane), 760-602-2047

Kids and their families are invited to a special program: The Science of Cooking at Your Library.

Keep the beaches clean, recycle used motor oil

Recycling used motor oil keeps it out of the city's creeks, lagoons, ocean and ground water. Help keep Carlsbad clean by disposing of used motor oil at one of the following facilities:

Door-to-door collection program

The city's contractor, PSC, can pick up used oil and other household hazardous waste at Carlsbad residences.
800-714-1195

A $10 co-payment is required. By appointment only.

Free drop off programs

Waste Management Recycling Facility
2880 Industry St., Oceanside
760-929-9400

Open alternating Saturdays, 9 a.m. – 1 p.m.
(by appointment only) www.northcounty.wm.com

PSC
1145 East Taylor St., Vista
800-714-1195

Saturdays, 9 a.m. – 3 p.m.

Other recyclables

Waste Management Buyback Center
5960 El Camino Real, Carlsbad
760-929-9400

Tuesday to Saturday, 8 a.m. – 4 p.m.
(closed noon – 12:40 p.m.)

This facility does not accept used motor oil or other household hazardous waste; however, it does accept recyclables such as aluminum, glass and plastic in exchange for cash. E-waste and household batteries are also accepted at this facility.

For more information on disposal locations and types of items that can be recycled, visit **www.carlsbadca.gov**.

New meters $ave water, money

The Carlsbad Municipal Water District is installing new automated water meters at homes and businesses throughout the city.

Using advanced wireless technology to keep track of water use, the new meters detect leaks more quickly than the existing system of manually checking meters.

The new meters detect leaks more quickly than the existing system of manually checking meters.

Before installing the new meters, water district staff will leave a door hanger at the residence several days in advance with information about what week the meter will be installed.

During the installation of the new meter, water will be turned off for approximately 30 minutes. A water district representative will alert the resident by knocking on the door prior to turning off the water. Residents do not need to be home during the installation (water meters are outside).

For more information, visit www.carlsbadca.gov/water or call 760-438-2722.

Watch it!

Watch the city's new "virtual water audit," a short video walking residents through water saving tips, indoors and out, just like the popular in person home water survey program.

www.youtube.com/cityofcarlsbadca

Ask the City

The city answers questions from residents.

Is I-5 going to be widened through Carlsbad?

A project is being proposed to widen I-5 by up to six additional lanes from La Jolla Village Drive to Harbor Drive in Oceanside. The project also includes building sound walls and new bridges. In most cases, Caltrans is proposing to use its right of way, but in some locations, particularly around onramps and off ramps, some private property will be affected.

The City of Carlsbad and all the other affected cities are providing input about what is being proposed, but cities do not have the final decision making power. Caltrans, a state agency, the Federal Highway Administration and SANDAG, our regional association of governments, will ultimately make the decision about how to proceed with this project. For more information and to provide your feedback, visit **www.KeepSanDiegoMoving.com** or call Caltrans at **619-688-6670**.

City programs for adults 50+ *good for mind and body*

Active adults can exercise their minds and bodies through a wide variety of specialized programs offered by the City of Carlsbad:

- Why not try a fitness class at one of the city's three community centers? Those interested in a high-energy workout can try cardio sculpt, Jazzercise or Zumba Fitness, which incorporates Latin beats and dance moves. Several unique, free or low-cost classes, like laughter yoga and soccer golf, are regularly offered at the Carlsbad Senior Center.
- Looking for something to strengthen body, mind and spirit? Tai Chi, yoga and qi-gong are more meditative forms of exercise that work to improve balance and flexibility.
- The city also offers a variety of adult dance classes, from country line dancing, to belly dancing, to salsa and meringue and traditional Hawaiian dance. No partner required!
- The Carlsbad Senior Center features a modern 1,202 square-foot fitness room exclusively for adults 50 and older. Day passes are $4 for Carlsbad residents; monthly, quarterly or annual passes are also available.
- Looking for a great read and lively discussions? Join one of the library's five book clubs.
- Need to brush up your computer skills? Take a free basic Internet, Beginning Word or MS Office basics class at the library, or try more specialized classes at the Carlsbad Senior Center, like Brain Fitness or digital photography.
- Learn about your family history and meet new friends through the city's popular genealogy program, offered through the Carlsbad City Library.
- Finally, sit back, relax and be entertained by attending a Carlsbad Playreaders event or one of the library's free Wednesday night movies.

For more information on these programs and classes, visit www.carlsbadca.gov or call the city's Parks & Recreation Department at **760-602-4650** or the Carlsbad City Library at **760-602-2038**.

Learn more about your city: *sign up for Citizens Academy*

Want to get a behind the scenes look at how your city operates? Sign up for Citizens Academy, a free seven week course that allows participants to:

- Meet City Council members, department heads and staff
- Learn how decisions are made, how city funds are allocated and how departments operate
- Enjoy comprehensive overviews of departments and programs and services
- Discover the current status and future plans for Carlsbad's development, traffic, growth management, recreation, the environment and other topics
- Tour city facilities
- Become an informed, involved citizen

Applications are being accepted for the next session, starting March 24. Classes meet Thursday evenings and for one daytime bus tour. Space is limited. Call 760-434-2800 today for information and registration.

Ask the City ?

The city answers questions from residents.

How can I get rid of stuff too big for my trash cans?

The City of Carlsbad provides free curbside pick up five times a year for large and bulky items.

The next date is:
Pick up: **Saturday, March 19**
Reservations: Feb. 28 to March 7

Call Waste Management, the city's trash contractor, at **760-929-9400**, or go online, http://northcounty.wm.com/, for a reservation.

For additional dates and a list of items accepted please visit www.carlsbadca.gov/environmental or call **760-602-4646**.

Fun and free city events

Here's a sampling of the many fun and interesting city events and activities. For a complete, searchable calendar of events and meetings, visit the city's website, www.carlsbadca.gov.

2011 Juried Biennial Exhibition

Now through March 18
Tuesday-Saturday, 11 a.m. – 5 p.m., Sunday, 1 – 5 p.m.
William D. Cannon Art Gallery, Carlsbad City Library (Dove Lane), 760-602-2021

Open to artists who live, work or have a studio in San Diego County, this exhibition, juried by Peter Frank, senior curator at the Riverside Museum of Art, and Larry Baza, co-director of Noel-Baza Art Gallery in San Diego, includes work by 61 regional artists.

This Is Jazz!

Saturday March 5, April 9 and May 21, 4 p.m.
Ruby G. Schulman Auditorium, Carlsbad City Library (Dove Lane), 760-434-2920

Jazz expert Dirk Sutro and guest performers trace the history of America's great contribution to music.

Community Play Date

Saturday, March 5, 10 a.m. – noon
Stagecoach Community Center, 760-602-4690

Sample classes, camps and activities offered at your community center.

Cinema Society of Carlsbad

Saturday, March 12, 2 p.m.
Carlsbad City Library (Dove Lane), 760-602-2012

Free screening of the award-winning foreign film *The Necessities of Life.*

Carlsbad Reads Together

April 2011
All three Carlsbad City Library locations, 760-602-2012

A communitywide reading event featuring Julia Child's *My Life in France*, with book discussions, foodie films, French music and more.

Village event has international flair, fun for the whole family

It's a small world in the Carlsbad Village on Saturday, March 19! The City of Carlsbad, Village businesses and community partners will celebrate world cultures through activities for all ages:

- Live music and performances
- Story telling
- Hands-on art
- Shopping
- Jump houses and other children's activities
- World cuisine, available at local restaurants

Experience the World in the Village

Saturday, March 19
1 to 5 p.m.

For more information, visit the city's website, ww.carlsbadca.gov, or call 730-434-2815.

Save time, pay utility bills online https://waterbill.carlsbadca.gov

Signing up is easy: A valid e-mail address and your bill in hand—it only takes a few minutes!

- Check your billing and usage history
- Pay your bill
- Have your blue City of Carlsbad bill ready and click "sign up now" on the Web page
- Enter your information exactly how it appears on your bill
- Use a valid e-mail address
- Use the ZIP code from the mailing address
- If you need help, call **760-602-2420**

New street lights
save energy and money

The city is in the process of switching out all 7,000 of its street lights with new energy efficient bulbs, which will save nearly $300,000 a year in taxpayer money from lower energy and maintenance costs. Once the new lights are in place, the city will see a reduction of 1,240 tons a year of greenhouse gas emissions, the equivalent of taking 170 cars off the road for a year, or planting 124,000 trees.

City of Carlsbad

Environmental Programs

September 2010

Dear Carlsbad Resident:

The City of Carlsbad's Storm Water Protection Program strives to protect our creeks, lagoons, and ocean from urban pollution. During rain events, untreated storm water, and the pollutants it carries, flow directly into our creeks, lagoons and ocean. Residential pollutants include everyday things like pet waste, wash water from cleaning sidewalks and cars, oil from leaking vehicles, and decomposing landscape debris, pesticides and fertilizers washed away by rain or over-irrigation.

The Storm Water Protection Program conducts regular water quality monitoring throughout Carlsbad to assess and identify potential sources of pollution. To do your part to protect water quality, please:

- Clean up after pets. Bring bags when walking pets. Flush pet waste down the toilet or dispose of it in a sealed plastic bag and throw into the trash.
- Ensure proper application of lawn and garden care products such as pesticides, insecticides, weed killers, fertilizers, herbicides, and other chemicals, and do not apply within three to five days prior to any forecast rain event.
- Avoid over-irrigation, which can wash lawn and garden chemicals into the gutter and storm drains, or carry other pollutants in the street to our creeks, lagoons and ocean.
- Regularly check for leaks on vehicles. If your vehicle is leaking, keep it off the street and use ground cloths or drip pans to prevent oil or other automotive fluids from entering the storm drain.
- Frequently and properly dispose of grass, leaves, shrubs, and other green yard waste to prevent it from washing to the storm drain.
- Use mops, brooms or wire brushes instead of a water hose to clean trashcans, sidewalks, buildings, driveways, or other impervious surfaces.
- Use brooms and absorbents such as cat litter, sawdust or vermiculite to clean up small spills before they reach the storm drain.

For additional information on pollution prevention, visit the City website at **www.carlsbadca.gov** and click on the Environmental Programs homepage. To report illegal discharges to the storm drain, please call the Storm Water Hotline at 760-602-2799.

Sincerely,

The Environmental Programs Department
City of Carlsbad

Car washing

Most soaps contain chemicals that can negatively affect water quality. The soap, together with dirt, metal, and oil washed off a car, flow into nearby storm drains and ultimately into our creeks, lagoons and ocean.

- Car washing is not allowed on city streets.
- Consider washing your vehicle at a commercial car wash.
- If you wash your car at home, try to prevent soap and water from running to the street or storm drain by washing your car over a pervious surface such as a lawn, and by using water sparingly.
- Use a hose with a nozzle that automatically turns off when left unattended.
- Wash water should be dumped to landscaped areas or to the sanitary sewer, never to the street or storm drain.

Pets

Pet waste is a threat to both human and environmental health. One gram of dog waste can harbor more than 23 million microorganisms of bacteria.

- Carry a bag when walking pets and be sure to pick up after them.
- Keep your pet on a leash for the health of our environment and for your pets' safety.

Pool, spa and fountain maintenance

- Only dechlorinated, pH-neutral water is allowed to be drained to the street and storm drain system.
- Ensure that the flow of water is controlled to prevent erosion.
- Do not backflush filters or filter materials to street or storm drain.

CITY OF CARLSBAD

Storm Water Protection Program

Residential Guide to **Pollution Prevention**

The City of Carlsbad's storm water conveyance system is made up of streets, gutters, curb inlets, pipes, ditches, basins and drains, as well as natural drainage such as creeks and lagoons.

The storm water drainage system is not connected to sanitary sewer or treatment facilities. Rainwater and urban runoff transport pollutants directly into our creeks, lagoons and ocean.

Here are some simple best management practices to help keep pollutants out of our waterways.

For additional information, please visit the Storm Water Protection Program page on our website **www.carlsbadca.gov**.

General housekeeping

Some simple housekeeping methods can not only prevent storm water pollution, but can also conserve water and resources:

- Use a broom, wire brush, mop or other methods to clean outdoor surface areas. Never hose or wash anything to the street or storm drain.
- Dump wash water to landscaping or to the sanitary sewer. Check with your local water treatment facility if you have questions about what can be discharged to the sewer system.
- A good rule of thumb is to consider any outdoor drain as connected to the storm drain system, which flows directly into our creeks, lagoons and ocean.

Lawn and garden care

Landscaped areas can pollute our local waterways with fertilizers, pesticides, insecticides, sediment and green waste that run off from overwatering or during rain events.

- Do not apply fertilizers, pesticides or insecticides three to five days before any forecasted rain event. Always follow manufacturer's directions and apply sparingly.
- Consider using environmentally friendly approaches to pest management.
- Use mulch, edging or appropriate plantings to keep dirt and sediment from running off during rain events.
- Compost yard waste or place it in a curbside recycling container.
- Check irrigation systems frequently for leaks and overspray, and minimize watering times.
- Native, drought-tolerant plants reduce the need for water, fertilizers and other additives.

Home improvement projects

Do-it-yourself projects should be properly maintained to prevent illegal discharges to the storm drain system.

- Locate all landscape drains and storm drains within the project area. Consider covering them to ensure nothing flows to the street or storm drain.
