- Store hazardous material such as paint or solvents in closed containers and protect from rain. Recycle at appropriate hazardous waste facilities.
- Always rinse or wash materials and equipment in an area where water cannot flow to landscape drains, street, gutter or storm drain.
- If materials such as dirt must be temporarily stored onsite, protect them from the rain and irrigation runoff.

Vehicle maintenance

Pollutants from vehicles such as oil and grease, copper and dirt can enter our storm drain system. It is estimated that 180 million gallons of oil enter waterways each year through urban runoff.

- Leaking vehicles cannot be parked on city streets.
- Vehicle maintenance cannot be performed on city streets. NEVER let any automotive fluids flow to the street or storm drain.
- Use rags or drip pans when repairing vehicles, or under leaking vehicles.

CARLSBAD, CA 92008

Re: Rainy Season Preparations

Dear CAREN SIPIORA,

The San Diego Regional Water Quality Control Board issued the City of Carlsbad, as well as other cities in San Diego County, a Municipal Storm Water Permit in January 2007, in an effort to reduce or eliminate pollutant discharges into the storm drain system. Storm drains are not connected to sanitary sewer systems or treatment plants, so the untreated water and the pollutants it carries flow directly into our creeks, lagoons, and ocean. There is increasing focus on the protection of our inland waters, creeks, and lagoons, as well as a growing awareness of the need to reduce pollutant discharges to the ocean.

The City of Carlsbad would like to remind you to implement and maintain appropriate Best Management Practices (BMPs) as we enter the rainy season:

- Storm drains, swales, ditches, culverts, catch basins, etc. should be inspected and cleaned if necessary. Protective measures should be taken to prevent potential discharges of waste such as trash, sediments or landscaping debris to the storm drain system.
- Outside storage areas should be inspected and cleaned and/or covered as needed to prevent pollutants from washing to the storm drain.
- Parking lots and boundary areas should be given particular attention to ensure that wastes have been removed to the maximum extent practicable.
- Dumpsters should be kept closed and the dumpster area clean and free of trash.
- Additional spill cleanup materials (absorbents, mops and buckets) should be kept in the loading bays and trash and/or grease storage areas. Employees should be trained in spill response procedures and the proper disposal of waste materials (such as mop water to the sanitary sewer).
- Regular visual inspections of the storm drain should be performed to identify unauthorized discharges or pollutants and cleaned as needed. Labeling a storm drain reminds people that anything discharged to the drain flows untreated to our surface waters (creeks, lagoons, and ocean). The City has storm drain stencils for loan, or you may develop your own signs.

If you would like more information or to report illegal discharges to the storm drain system, please contact the City's **Storm Water Hotline at 760-602-2799**. The City's website also has brochures and Fact Sheets available, by going to www.carlsbadca.gov, and clicking on Environmental Programs. The City of Carlsbad's Storm Water Pollution Protection Program thanks you for your concern with the health of our creeks, lagoons, and ocean.

Sincerely,

City of Carlsbad, Storm Water Pollution Protection Program
Enclosure

Executive Summary

Executive Summary

Section 1: Introduction

The City of Carlsbad's (City) Jurisdictional Urban Runoff Management Plan (JURMP) Annual Report addresses the implementation of the Municipal Storm Water Permit Order No. R9-2007-0001, issued January 24, 2007 and effective March 24, 2008. This Annual Report is covering Order No. R9-2007-0001 from July 1, 2011 to June 30, 2012, hereby listed as Fiscal Year 2011-12.

In the Fiscal Year 2011-12 (FY 2011-12), many procedures have been updated or streamlined to efficiently manage data, monitor sites, track inspections and investigations, and manage other storm water related activities. Planning, Construction, and Existing Development activities have implemented improved processes to further incorporate storm water pollution prevention practices into internal activities as well as activities enforced by City departments. Highlights of each major component of the JURMP are listed below, and correspond to Section headings in this JURMP Annual Report.

The City has defined Notable Activities as those that are above and beyond compliance requirements, and are highlighted in Sections 2, 3, 4, 5, 6, as well as 15 Conclusions. Section 7 Notable Activities will be included in the December submittal of that section.

The City has included a Compliance Reference Table located in Appendix 1.2 that links permit requirements with corresponding sections in the report where they are referenced.

Section 2: Development Planning

Permit Order No. R9-2007-0001 requires the City to describe amendments to the General Plan, evaluate land use planning policies and principles, revise the environmental review processes, and develop an approval process to minimize the impacts of development activities on receiving water quality. Land-use planning gives the community an opportunity to comment on and shape policies that guide community development and interests. The City has developed goals that balance environmental protection with smart, long-term economic growth. By laying out a vision for local growth and coastal development, projects are consistent with the state and federal regulatory requirements and the City's land-use planning efforts.

The City continued to implement the Standard Urban Stormwater Mitigation Plan (SUSMP), and all applicable projects were subject to a thorough discretionary and plan check review process to ensure compliance. During FY 2011-12, the Carlsbad SUSMP requirements were applied to 64 private development/redevelopment projects and 10 City Capital Improvement Program (CIP) projects. Of the 64 private development/redevelopment projects, 12 were subject to Priority Development Project requirements which required site design, source control and treatment control requirements and 52 were subject to Standard Stormwater requirements subject only to site design and source control BMP requirements. Of the 26 City CIP projects, one project was subject to Priority Development Project Requirements but all other projects were subject to Standard Stormwater requirements.

During FY 2009-10, the City implemented the new development processing fees for the plan review and inspection of Construction Storm Water Pollution Prevention Plans and post-construction Storm Water Management Plans.

Section 3: Construction

Order No. R9-2007-0001 requires the City to implement activities that address and minimize short and long-term impacts on receiving water quality related to runoff from new construction sites. The City requires, prior to approval of a construction or grading permit, that project proponents implement measures to ensure that pollutants will be reduced to the maximum extent practicable and will not cause or contribute to an exceedance of water quality objectives. The City met these requirements by amending or conditioning existing permits, procedures and ordinances.

During FY 2011-12, the City updated the construction inventory, inspected all high priority sites, conducted outreach and education to developers, engineers, contractors, and City staff, and used enforcement actions to obtain compliance when necessary. All active grading permits were ranked as high, medium, or low priority and inspected as required during the rainy season. The required number of inspections was exceeded during this fiscal year. The City continued to distribute the "*Pollution Prevention Guide to the Construction Industry*" brochure.

Section 4: Municipal

The City's municipal facilities and their activities have the potential to contribute to water pollution if Best Management Practices (BMPs) are not properly implemented. City facilities include administration buildings, recreational areas, maintenance and storage yards, water reservoirs, water pump stations, sewer lift stations, a road system, parking facilities, the storm drain system, pressure regulator vaults, and fire stations. Municipal facilities maintain the City's infrastructure that supports Carlsbad's quality of life.

The Storm Water Committee comprised of various City departments including Public Works, Fire Department, Parks and Recreation, and the Building Department continued to meet and discuss municipal storm water BMPs and pollution prevention issues. The intent of the committee is to communicate problems and solutions among the group in order to share knowledge, discuss training opportunities, enhance compliance with the Permit, and to pass along any new information from the Regional Water Quality Control Board (Regional Board). SWPPPs were updated for High Priority municipal facilities, as needed.

The City of Carlsbad's City Manager continued support for the Storm Water Leadership Team (SWLT). Periodic meetings were conducted and attendees included Senior Management of the City's major service areas and Directors. Agenda items covered all areas of the City's compliance with Order No. R9-2007-001.

The City's street sweeping program exceeded both Permit requirements throughout FY 2011-12 with twice weekly downtown sweeping routes.

High Priority Municipal facility inspections were conducted by both internal City staff and external consultants. The combination of annual inspections by the State Department of Pesticide Regulations, municipal inspections by internal and external inspectors, and staff training on storm water BMPs, personnel are more aware of the required maintenance practices in preventing storm water pollution. During FY 2011-12 Annual Municipal Inspections, there were no NPDES violations noted.

Municipal facilities and departments also continued to implement Integrated Pest Management practices to reduce the City's use of pesticides.

Section 5: Industrial/Commercial

The City currently maintains an inventory of industrial and commercial sites and sources within its jurisdiction. Major industry types include airport services, refuse and sewage management, pharmaceutical research and development, high technology and electronics, golf apparel and equipment manufacturers, and several light industry parks. Major commercial types include automobile maintenance, restaurants, pressure washing, masonry and concrete work, carpet cleaning, and landscaping activities. The City continued to implement a comprehensive program to reduce urban runoff originating from existing sites and sources since industrial and commercial activities have the potential to contribute to water pollution, if BMPs are not implemented properly.

During this reporting period, the City updated the industrial/commercial inventory, mapped all facilities, provided education and outreach on BMPs, inspected 100% of fixed high threat to water quality facilities, and conducted 120 enforcement activities to ensure compliance.

The Storm Water Protection Program continues to use *Knowledge and BMP Effectiveness Assessment* measures for inspected sites and sources.

Section 6: Residential

The residential community has a significant potential to contribute to water quality degradation. Beyond year 2010, there will be nearly 54,599 residential units, housing approximately 135,000 residents. The focus of the City's pollution prevention strategy is a proactive information and education program that utilizes public presentations, fact sheets, direct mailers, brochures, website, and other media to increase knowledge and awareness of storm water pollution prevention efforts.

Targeted activities for residential areas include vehicle washing, storage and maintenance, lawn and garden care, home improvement projects, pet waste disposal, swimming pool maintenance, household hazardous waste (HHW) disposal, and trash and debris cleanup and disposal. The Storm Water Protection Program continued to distribute educational information addressing these residential BMPs and required several minimum BMPs to be implemented.

Between July 1, 2011 to June 30, 2012 the City distributed storm water educational information for residential activities, continued an advertising campaign, hosted or participated in multiple residential outreach events, responded to 93 reports of illegal discharge, and issued 22 enforcement actions to achieve compliance.

Educational material was included on Utility bills, in bill stuffers, City newsletters and direct mailers sent to targeted communities. The Storm Water Protection Program continues to work closely with the City's Water Conservation Specialist to address runoff due to overirrigation.

Section 7: Illegal Discharge Detection and Elimination

The City continued to conduct a comprehensive and proactive program for detecting and eliminating illegal discharges to the storm drain system. The City's program actively seeks to identify and eliminate

illicit discharges and connections by conducting investigations, responding to spills and sewage overflows, conducting monitoring, and performing routine cleaning and maintenance activities on the sewer and MS4.

The Illegal Discharge Detection and Elimination (IDDE) report will be submitted in December 2012, as per Addendum #2, Order No. R9-2007-0001, and will include Notable Activities in that section.

Section 8: Outreach and Education

The Storm Water Protection Program collaborated locally and regionally to ensure outreach efforts and messages for storm water pollution prevention were consistent, though these messages often took varied forms. During FY 2011-12, the City continued to be actively involved in outreach and education at the local level, the watershed level, and at the regional level with the Project Clean Water Outreach Workgroup and the Think Blue campaign.

The City sent storm water educational information to all city employees distributed via paychecks in FY 2011-12, participated in EPA webcasts as training opportunities, collaborated with local non-governmental organizations, hosted or participated in outreach events, presented urban runoff and watershed concepts to 1058 school-aged children, and distributed information through various media. The City also distributed promotional items such as coloring books, pens, and pet waste Bags on Board with pollution prevention messages.

Section 9: Public Participation

The City led or assisted with several public participation opportunities this reporting period. During the reporting period, citizens, business owners and representatives, and other interested parties were invited to attend public meetings, outreach events, workshops, City Council meetings, and other events related to storm water pollution prevention at the local and watershed levels.

During this reporting period, the City conducted a Public Opinion Survey of 1,000 residents that included questions about storm water pollution, and held 6 community events.

Section 10: Fiscal Analysis

The total operating costs to fund the Storm Water Protection Program activities for FY 2011-12 was $2,449,072. This includes actual expenditures for personnel, operating costs, and capital outlay from the Storm Water Protection Program budget, Storm Drain Maintenance budget, Storm Water Engineering budget, and income from Engineering Plan Checks related to storm water, but does not include the *Storm Water Capital Improvement Program* costs.

Section 11: Effectiveness Assessment

Information collected in surveys, public comments, inspections, investigations, monitoring and other activities during the year were assessed on a full fiscal year basis to identify any trends and determine new or modified courses of action.

The City continued to make progress with effectiveness assessment measures during FY 2011-12, using the Watershed Treatment Model to assess the effectiveness of storm water pollution prevention.

Assessment of each significant activity, each component, and an integrated assessment of the overall jurisdictional program is provided in Section 11 of this report.

Section 12: Special Investigations

There were no Special Investigations during FY 2011-12.

Section 13: Non-Emergency Fire-Fighting

The Carlsbad Fire Department (CFD) developed this section to meet the requirements of Order No. R9-2007-0001. Several BMPs have been developed and incorporated at all 6 of the City's Fire Stations. Each station has a storm water manual, spill response equipment, regular cleanup and removal of organic debris from parking lots, and portable or permanent BMPs to contain and collect equipment and vehicle wash water. Training is conducted on property with no runoff or discharge potential into the MS4, or at the City's Reclaimed Water Facility where water is collected into the Reclaimed Water reservoirs. Fire Prevention activities were also continued during this reporting period.

Section 14: JURMP Revisions

The City's 2008 JURMP was developed in response to the issuance of Order No. R9-2007-0001. The City began implementing the 2008 JURMP on March 24, 2008 as required under the new permit. There were a few minor changes to the City's 2008 JURMP during FY 2011-12 and they are discussed in Section 14.

Section 15: Conclusion

The City successfully implemented the Permit requirements and the program activities described in the JURMP. Information from JURMP activities, WURMP activities, as well as the 303(d) List indicated that bacteria, sediment, and nutrients are high priority pollutants in the Carlsbad Watershed. The City proposes to continue addressing these pollutants through a number of existing or new activities, which include education, inspections, monitoring and maintenance through implementation of Order No. R9-2007-0001.

This Section also highlights Notable Activities conducted over and above permit requirements.

1.0 INTRODUCTION

1.1 Background

The San Diego Regional Water Quality Control Board issued the Municipal Storm Water Permit Order No. R9-2007-0001, NPDES No. CAS018758 on January 24, 2007 to control waste discharges in urban runoff from the Municipal Separate Storm Sewer System (MS4) draining the watersheds of the County of San Diego, the Incorporated Cities of San Diego County and the San Diego Unified Port District Copermittees.

The Regional Board issued this Permit to specify the requirements necessary to reduce the discharge of pollutants in urban runoff to the maximum extent practicable (MEP). Pollutants in urban runoff discharging to downstream water bodies can be prevented and controlled by effective implementation of best management practices (BMPs). The Permit requires the submittal of a Jurisdictional Urban Runoff Management Plan (JURMP) to the Regional Board in the first year of the permit, and an Annual Report each remaining year of the permit to document the progress and implementation of the JURMP.

The Permit requires the City of Carlsbad (City) to protect water quality during the three major phases of urban development: (1) land use planning for new development; (2) construction; and (3) the "use" or existing development phase.

In 2008, the City prepared a JURMP that addresses the requirements of Water Quality Order No. R9-2007-0001. The City officially began implementing the 2008 JURMP on March 24, 2008. The following report covers the implementation of the JURMP for Fiscal Year 2011-12 (July 1, 2011 to June 30, 2012).

1.2 Overview of the City of Carlsbad

The City encompasses just over 39 square miles and borders 6 miles of coastline. The entire city is contained within the Carlsbad Hydrologic Unit (Watershed) and encompasses four smaller hydrologic areas. These include Buena Vista Creek, Agua Hedionda, Encinas, and San Marcos. Major water bodies within the city are Buena Vista Creek, Buena Vista Lagoon, Agua Hedionda Creek, Agua Hedionda Lagoon, San Marcos Creek, and Batiquitos Lagoon. Several waterbodies within the city are listed as impaired under Section 303(d) of the Federal Clean Water Act.

The City is a municipal corporation, following the Council-Manager form of government. During FY 2008-09, the City changed from a General Law City to a Charter City. While the City created the Storm Water Protection Program to help implement the Permit, program implementation is carried out by several departments throughout the City. This allows for program implementation and new requirements to be incorporated into daily activities of City employees, instead of being viewed as completely new requirements without a connection to on-going services.

The City has an Environmental Management Department which brings together Storm Water, Habitat Management, energy and other environmental activities to promote a more sustainable approach for the City.

1.3 Purpose and Objectives

The purpose of the City's JURMP Annual Report is to provide a comprehensive account of activities conducted by the City to meet the requirements of Water Quality Order No. R9-2007-0001. In addition, the reporting process allows the City to evaluate the effectiveness of the program and make any changes necessary to improve the implementation and effectiveness of the JURMP.

1.4 Report Organization

This Annual Report was prepared in accordance with the requirements of the Permit. It contains a comprehensive description of the activities conducted by the City of Carlsbad to meet the requirements of the Permit; an accounting of illicit discharges reported, inspections conducted, enforcement actions taken, education efforts conducted; a description of the public participation mechanisms utilized during the JURMP implementation process; identification of management measures proven to be effective in reducing urban runoff pollutants and flow; identification of water quality improvements or degradation; and a fiscal analysis. A list of acronyms is provided in Appendix 1.1.

The organization of this report follows the Table of Contents agreed to and submitted by the Regional Copermittees to the Regional Board. The Annual Report is divided into sections matching major sections in the Permit and the JURMP. As with the JURMP, many of the activities described in separate JURMP sections overlap with one another, so an activity may be referenced in more than one report section. The Annual Report is organized as follows:

Section 1	Introduction
Section 2	Development Planning Component
Section 3	Construction Component
Section 4	Municipal Component
Section 5	Industrial/Commercial Component
Section 6	Residential Component
Section 7	Illicit Discharge Detection and Elimination Component
Section 8	Outreach and Education Component
Section 9	Public Participation Component
Section 10	Fiscal Analysis Component
Section 11	Assessment of JURMP Effectiveness Component
Section 12	Special Investigations Component
Section 13	Non Emergency Fire Fighting Flows
Section 14	JURMP Revisions
Section 15	Conclusions and Recommendations

Appendix 1.2 contains the JURMP Annual Report Requirements Checklist which shows the reporting requirements from the Permit and where each requirement can be found in the City's 2011-12 JURMP Annual Report.

Section 2

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 Introduction

This section outlines the Development Planning actions implemented by the City under San Diego Municipal Permit Order No. R9-2007-001 (the "2007 Municipal Permit") and covers the portion of the annual reporting period from July 1, 2011 through June 30, 2012. During this reporting period, the City maintained compliance with all land-use planning requirements of the 2007 Municipal Permit. During the current reporting period, the City continued to implement the comprehensive development planning changes put into place during previous fiscal years.

Throughout FY 2011-12, the City also performed several development planning process changes to both enhance our internal/external communications regarding storm water and ensure the City's compliance with the 2007 Municipal Permit as more fully discussed and detailed in the following sections below.

During the reporting period, many items, including documents and procedures, were updated and placed on the city's website. In an effort to save paper, this annual report includes several hyperlinks to these updated documents. If there is a need to have a paper copy, please inform us and we will accommodate your request.

2.2 Land Use Planning

2.2.1 Background

In July 1986, the City adopted a "*Growth Management Plan"* into its General Plan to guide development and anticipate the types and numbers of facilities needed to accommodate the Carlsbad community at build out. Those facilities include: sewer plant capacity, sewage pipelines, reclaimed water system, and storm drain system that included flood and pollution control basins.

In September of 1994, the City adopted a Comprehensive Update of its General Plan. The General Plan includes goals that balance environmental protection with smart, long-term economic growth. By laying out a clear vision for environmentally sensitive development within this coastal community, development projects are required to be consistent with various City ordinances (i.e. Grading and Erosion Control, Storm Water Management, Hillside Development, Coastal Resource Protection) and other regulatory requirements.

The General Plan is reviewed annually and revised as necessary to ensure that the public facilities are considered and City goals are met. On February 19, 2002, the City Council adopted General Plan Amendment GPA 01-15. This General Plan Amendment revised and supplemented various policies regarding storm water quality protection in the Open Space and Conservation Element of the General Plan. The revised and supplemented policies reflect all storm water quality and watershed protection principles found in the 2007 Municipal Permits pertaining to storm water pollution prevention.

City staff reviewed the storm water protection policies of the General Plan in FY 2011-12 and no revisions were made. The existing General Plan storm water protection policies are listed below:

a) Develop and implement a JURMP consistent with the Permit and any amendments thereof.

b) Adopt and implement a Master Drainage Plan and a local Standard Urban Storm Water Mitigation Plan (SUSMP) consistent with the 2007 Municipal Permit and any amendments thereof.

c) Prior to making land use decisions, utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. The City requires development projects to incorporate structural and non-structural BMPs to mitigate any anticipated increases in pollutant loads.

d) Implement storm water pollution prevention methods to the maximum extent practicable, supplemented by pollutant source controls and treatment control measures. Use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants offsite and into the municipal separate storm sewer system (MS4).

e) Post-development runoff from a site shall not contain pollutant loads which cause or contribute to an exceedance of receiving water quality objectives or which have not been reduced to the maximum extent practicable.

f) Developments shall implement appropriate recommendations to protect water quality found in the San Diego Association of Government's (SANDAG's) Water Quality Element of its Regional Growth Management Strategy.

g) Development projects should be designed to comply with the following site design principles:

- Protect slopes and channels to decrease the potential for slopes and/or channels from eroding and impacting storm water runoff.
- To the extent practicable, cluster development on the least environmentally sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands and buffer zones. Encourage land acquisition of such areas.
- Provide buffer zones for natural water bodies.
- Minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment.
- Where feasible implement site design/landscape features to slow runoff and maximize on-site infiltration of runoff.
- Properly design outdoor material storage areas (including the use of roof or awning covers) to minimize the opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids and other pollutants from entering the storm water conveyance system.
- Incorporate roof or awning covers over trash storage areas to prevent off-site transport of trash and other pollutants from entering the storm water conveyance system.
- Limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways and bridges.
- Design streets and circulation systems to reduce pollutants associated with vehicles and traffic resulting from development.

In addition to the General Plan, the City has adopted various storm water protection policies in other land use planning documents including the City's Local Coastal Program and Habitat Management Plan.

The Carlsbad Local Coastal Program (LCP) covers that part of the City lying within the coastal zone. The Carlsbad City Council adopted a Zone Code Amendment (ZCA 01-08), Local Coastal Program Amendment (LCPA 01-15) and Municipal Code Amendments (MCA 01-05, 01-06, and 02-01) to revise/add new policies, standards, procedures and requirements regarding water quality and watershed protection to the LCP Land Use Plans, Chapters 21.203 (Coastal Resource Protection Overlay Zone) and 21.205 (Coastal Resource Overlay Zone Mello I LCP Segment Local Coastal Program) of the Zoning Ordinance of Carlsbad's Municipal Code. One of the notable storm water requirements of the LCP is the inclusion of an additional criterion for determining a priority development project. Per the amended LCP, any project located within 200 feet of the Pacific Ocean that creates more than 2500 square feet of impervious surface or increases the project impervious area more than 10% over the existing impervious area is to be considered a priority development project.

Under the California Natural Community Conservation Program (NCCP), the City and six other cities in north San Diego County participated in the preparation of the Multiple Habitat Conservation Program (MHCP). The MHCP is a comprehensive planning program designed to develop an extensive ecological preserve in northwestern San Diego County. The City has prepared a subarea plan, called the Carlsbad Habitat Management Plan that was adopted in November 2004. The Habitat Management Plan contains the specific conservation, management, facility planning, land use, and other actions the City will take to implement the goals, guidelines, and standards of the MHCP plan. This Habitat Management Plan prohibits development in or near natural habitat areas including creeks and lagoons. Those areas act as a buffer between urban development pollutants and receiving waters. They also protect a significant percentage of natural areas that are pervious, leading to natural groundwater recharge and reduction in peak run off rates.

On November 1, 2002, the revised Zoning Ordinance, Municipal Code, and LCP Amendments were submitted to the California Coastal Commission. In August, 2006, the California Coastal Commission approved these municipal code amendments. All requirements of these documents continued to be implemented in FY 2011-12 and previous years including the years the City waited for Coastal Commission approval. The LCP and Habitat Management Plan were evaluated during FY 2011-12 and no revisions were made.

2.2.2 Source Characterization

Land Use Planning is the process whereby the City determines appropriate land use designations for a property consistent with the City's General Plan requirements. As such, source characterization of pollutants is generally addressed in association with the type of land use proposed (i.e. low density residential, high density residential, commercial, and industrial, etc). Each land use decision made during FY 2011-12 was found consistent with the storm water protection policies as contained in the City's General Plan, Local Coastal Program (if applicable) and Habitat Management Plan.

In many cases, land use planning applications are accompanied by specific project development applications. In such cases, the project was required to identify specific project pollutant sources

consistent with the City's Standard Urban Storm Water Mitigation Plan (SUSMP) and to identify project specific BMPs to eliminate or minimize any negative impacts to storm water quality.

By completing the Storm Water Standards Questionaire (SWSQ), applicants assess the level of storm water requirements that apply to their project. Upon application, city staff reviews the SWSQ and verifies that it reflects the appropriate project characteristics and outcome. If the form is filled out incorrectly, it is returned to the applicant to be corrected and returned to the City before proceeding with further reviews. The updated SWSQ can be found at http://www.carlsbadca.gov/business/building/Documents/E-34.pdf.

The Carlsbad SUSMP includes procedures for applicants to assess whether hydromodification (flow-control) requirements apply to a project. When a project is subject to hydromodification, the SUSMP includes information on hydromodification thresholds, criteria, application, screening and other methodologies to address potential impacts to natural downstream channels.

For more specifics on source characterization applied to development projects during the project approval and verification process refer to Section 2.4.2.

2.2.3 Best Management Practice Requirements

To assist applicants, the Carlsbad SUSMP includes guidelines and design criteria to help applicants assess the effectiveness of BMPs they are considering for their project. Selecting the appropriate BMPs will vary from project to project depending on the physical site constraints, downstream impairments, development category, types of soil, and target pollutant(s) generated by their specific project.

The Carlsbad SUSMP includes integrated low impact design (integrated LID) technique for applicants to select and size BMPs for projects. The Carlsbad SUSMP also provides several treatment control BMP options that applicants may choose for their projects including raised planters, bio-retention facilities, pervious pavements, infiltration trenches, cisterns, and more.

During FY 2011-12, the City continued to use the low impact development (LID) brochure developed in FY 2010-11. The LID brochure is a tool to educate developers, contractors and homeowners regarding different types of LID features on a typical project. The brochure includes different LID features, what their purpose is, and where it could be employed on a project site.

2.2.4 Program Implementation

Every General Plan Amendment and land use planning application approved by the City during FY 2011-12 was found in conformance with all applicable storm water protection policies of the Carlsbad General Plan, Local Coastal Program (as appropriate), Habitat Management Plan and the Carlsbad Municipal Code (CMC). This includes compliance findings for all the storm water quality goals and objectives of the City's Grading and Drainage Ordinances (Title 15 of the CMC) and the Carlsbad SUSMP.

During this reporting period, the typical land use planning review process began with the submittal of a planning application at the City's development services counter. Concurrent with the land use application the city requires submittal of the SWSQ which, once completed, determined if the project was subject to Priority Development Project or Standard Storm water requirements. Each project was

then reviewed for conformance with the storm water protection policies, requirements of the Carlsbad SUSMP, the General Plan, any applicable Local Coastal Plan, the Habitat Management Plan and all applicable City Codes.

2.3 Environmental Review Process

The City's environmental review process begins with the Initial Study Checklist (CEQA Guidelines). Based on the results of the checklist, the City requires the project applicant to provide additional studies to elaborate on the environmental impacts or recommend denial of the permit that the project applicant is seeking.

The Initial Study Checklist provides an expanded section on potential water quality impacts for each project. Table 2.1 shows an excerpt of the updated Initial Study Checklist that includes specific hydrology and water quality analysis the City uses during the environmental review process.

Table 2.1: Hydrology and Water Quality Analysis Checklist

HYDROLOGY AND WATER QUALITY. *Could the project:*
a. Violate any water quality standards or waste discharge requirements?
b. Substantially deplete groundwater supplies or interfere substantially with ground water recharge such that there would be a net deficit in aquifer volume or a lowering of the local ground water table level (i.e., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the flow rate or amount (volume) of surface runoff in a manner, which would result in flooding on- or off-site?
e. Create or contribute runoff water, which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?
f. Otherwise substantially degrade water quality?
g. Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood delineation map?
h. Place within 100-year flood hazard area structures, which would impede or redirect flood flows?
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?
j. Inundation by seiche, tsunami, or mudflow?
k. Increase erosion (sediment) into receiving surface waters?
l. Impact aquatic, wetland, or riparian habitat?
m. Change receiving water quality (marine, fresh or wetland waters) during or following construction?
n. Increase any pollutant to an already impaired water body as listed on the Clean Water Act Section 303(d) list?
o. Increase impervious surfaces and associated runoff?
p. Impact aquatic, wetland, or riparian habitat?
q. Result in the exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?

2.4 Development Project Approval and Verification Process

2.4.1 Background

The City uses integrated administrative and regulatory tools required to implement the Land-Use Planning requirements of the Carlsbad SUSMP and 2007 Municipal Permit. During the development review process, the City requires that new development and redevelopment projects evaluate their project against the required project SUSMP thresholds to determine the level of storm water requirements that apply to their project. To evaluate projects, applicants are required to fill out and

submit a Storm Water Standards Questionnaire (SWSQ) to the City. City staff then reviews each SWSQ to evaluate the accuracy of the thresholds that may apply to the project and to ensure the proper outcome of the SWSQ and compliance with the Carlsbad SUSMP.

In general, the Carlsbad SUSMP requires applicants to incorporate storm water concepts at the initial design phase of a project prior to submittal to the City. Once the applicant submits the development application, the City reviews the application and development plans to ensure the project has appropriately considered storm water objectives and selected the appropriate BMPs and that it satisfies the applicable storm water requirements as outlined in the SUSMP.

During this reporting period, the City also implemented the following storm water program elements and/or procedures:

1. During FY 2011-12, the City continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, and transfer of information during the approval process, and other issues related to treatment control BMP compliance.

2. During FY 2011-12, the City ensured development projects met the requirements of the Carlsbad SUSMP. Priority Development Projects were required to comply with Storm Water Management Plan (SWMP) guidelines, single sheet post construction BMP plan (SSPCBMP plan), and Storm Water Standards Questionnaire (SWSQ) per the 2007 Municipal Permit. Here the following links to each document:
    a. SUSMP - http://www.carlsbadca.gov/business/building/Documents/EngStandsw-stds-vol4-ch2.pdf
    b. SWMP guidelines - http://www.carlsbadca.gov/business/building/Documents/E-35.pdf
    c. SSPCBMP plan - http://www.carlsbadca.gov/business/building/Documents/BMP_Plan_Sheet.zip
    d. SWSQ - http://www.carlsbadca.gov/business/building/Documents/E-34.pdf

3. During FY 2011-12, similar to final drawings, the City continues to scan Storm Water Management Plans into our digital management system (DMS). This allows these water quality reports to be accessed by interested parties (inspectors, reviewers, property owners, researchers, etc.). This allows for more improved access and archiving of the water quality requirements for which a project was approved.

2.4.2 Source Characterization

Development project approval is the stage of the development process where storm water quality impacts are assessed and the project is evaluated to maximize site design measures that promote LID techniques. These LID techniques include minimizing impervious areas, having impervious areas drain to landscape areas and installing integrated management practices (IMP's). All these features allow runoff from the urban development to slow down, which allows for settling out of sediment, while encouraging infiltration, percolation, evapo-transpiration, root uptake, etc. This evaluation includes identifying potential sources of storm water pollutants and selecting BMP measures that either 1) avoid pollutant contact with storm water, or 2) are well-suited to filter/remove the target pollutants-of-concern specific to the project under review. Each "Priority Development Project" submitted during this reporting period, was required to prepare and submit a Storm Water Management Plan (SWMP) consistent with

the Carlsbad SUSMP concurrent with any discretionary or ministerial permit application. Source identification is a required component of each SWMP.

During the FY 2011-12, project proponents for Priority Development Projects were required to identify potential pollutant sources generated by their particular land use and development design in accordance with the procedures outlined in the Carlsbad SUSMP. Table 2.1 of the Carlsbad SUSMP is used to assist applicants to identify potential pollutant sources for various project categories. These potential sources are discussed in the SWMP for each for Priority Development Project. Additionally, project proponents were required to identify the pollutants of concern regarding impairment for the receiving waters into which the project runoff contributes. During the reporting period, the 2006 303(d) list of water quality impairments for receiving waters was used to review projects until October 2011. From November 2011, the 2011 303(d) list was used to review projects. The project proponent then determines if the project included any land use activity or development design that generates or potentially adds to any water quality impairment within the receiving waters.

If projects drain to one of the 303(d) listed receiving waters, they were required to analyze the potential for contributing the identified pollutants to the water body. If a potential source was identified, then the applicants were required to avoid the source or select an appropriate source control, site design or treatment control BMP measure and demonstrate how the selected BMP(s) eliminate or reduce the pollutant of concern to the MEP. With these efforts, the applicant demonstrates that the project does not cause or contribute to an exceedance of receiving water quality objectives. These explanations on source controls for a project are included in the Storm Water Management Plan.

2.4.3 Best Management Practice Requirements

The Carlsbad SUSMP is incorporated into the Carlsbad Engineering Standards. The Carlsbad SUSMP is located in volume 4 which is entitled the “Storm Water Standards Manual”. The Storm Water Standards Manual was originally designed to meet the requirements of the 2001 Municipal Permit, but has been revised to meet the requirements of the 2007 Municipal Permit. Among other things, the Carlsbad SUSMP addresses how projects are classified and which steps they must follow to meet storm water requirements. The Carlsbad SUSMP includes a clearly defined process to help applicants understand how projects trigger certain storm water requirements and how to comply with storm water standards. The SUSMP also educates applicants on how to design their projects using effective BMP’s that also match the characteristics of the project. Projects are either subject to “Standard Storm water” or “Priority Development Project” requirements. For projects subject to Priority Development requirements, the Carlsbad SUSMP includes integrated LID criteria that allow applicants to satisfy multiple facets of the SUSMP including site design, treatment control, hydromodification and low impact development requirements. The SUSMP, as an option, also allows for applicants to use alternative approaches. However, the applicant must still demonstrate how their project satisfies each category for site design, treatment control, hydromodification and LID techniques.

Per the 2007 Municipal Permit, the City and other Copermittees developed hydromodification criteria and measures to address how urban runoff affects erosion downstream of projects. To satisfy this requirement, the City and Copermittees developed the final Hydromodification Plan (final HMP). For a copy of the final HMP, refer to
http://www.projectcleanwater.org/images/stories/Docs/LDS/HMP/0311_SD_HMP_wAppendices.pdf

Once the final HMP was approved, the City worked with the other Copermittees to develop an updated Countywide Model SUSMP to incorporate the final HMP requirements into local SUSMP's. The model SUSMP was updated by the Copermittees January, 2011.

During FY 2010-11, the City modified its local SUSMP to incorporate the updated Countywide Model SUSMP and adopt the final HMP. As part of the update, the Carlsbad SUSMP includes background, objectives, thresholds and implementation requirements that address hydromodification. For those projects subject to the final HMP, the City added the web-based county BMP sizing calculator to the SUSMP. The calculator allows applicants to select and size BMPs that satisfies both treatment control and HMP requirements. A copy of the Carlsbad SUSMP can be found at the following City of Carlsbad web link
http://www.carlsbadca.gov/business/building/Documents/EngStandsw-stds-vol4-ch2.pdf.

Per the Carlsbad SUSMP, all projects subject to Standard Storm water requirements are required to incorporate both site design and applicable source control BMPs into their project design. The SUSMP includes a checklist of site design and source control BMPs that may apply to a project depending on the project use/type. These include but are not limited to providing disconnects into the project design so runoff drains from impervious surfaces over landscape or pervious areas, minimizing the use of impervious surfaces, encouraging the use of vegetated swales or landscape planters, using trash enclosures with covered lids, using efficient irrigation control systems with rain sensors, etc.

In addition to complying with Standard Storm water requirements, all projects subject to Priority Development Project requirements are also required to prepare a SWMP. The SWMP is a document where the applicant identifies project conditions, infiltration opportunities, pollutants of concern, impairments to water bodies, site design BMPs, source control BMPs and, in accordance with the 2007 Municipal Permit, are also required to select, size and incorporate treatment control BMPs into the project design. Since January 14, 2011, SWMP's must also demonstrate how the project satisfies hydromodification requirements. The SWMP's also include maintenance requirements for treatment control BMP/hydromodification controls to assure owners/tenants maintain post development BMPs for the life of the project.

During FY 2011-12, the City used the requirements checklist for SWMP's to include applicable hydromodification requirements. This checklist is provided for applicants and engineers when preparing SWMP's and outlines all the required elements to include in the SWMP. The checklist is also used by staff when reviewing SWMP's for compliance against the SUSMP and consistency against the other associated development plans. This updated SWMP requirements checklist can be found on the City's webpage at: http://carlsbadca.gov.

During this reporting period, there have been several Regional meetings that the City has attended with other Copermittees. The Land Development Engineering Division participates in these meetings that include but are not limited to the land development workgroup and the HMP technical advisory committee.

Each development project was assessed for its potential to generate urban pollutants using the SWSQ. Those specific types of projects (or project components) identified as having a high potential to generate pollutants in accordance with the 2007 Municipal Permit and Local Coastal Program requirements were classified as a "Priority Development Projects". Each Priority Development Project was associated with

one or more of the general pollutants categories as described in Table 2.1 of the Carlsbad SUSMP. Additional pollutant categories were then determined based upon their potential of being generated by the specific proposed Priority Development Project.

Each project subject to Priority Development Project requirements was then required to incorporate site design, source control, treatment control BMPs and applicable hydromodification features into the project design as specified in the Carlsbad SUSMP including the new applicable low impact design and meet interim hydromodification requirements, if applicable. Projects subject to Standard Storm water Standards were required to incorporate site design and source control BMPs into their project design. The following is a brief listing and description of the types of BMPs incorporated into project designs during the reporting period:

Site design BMP features incorporated into development projects during the reporting period include the following:

- Incorporating disconnects so runoff from impervious surfaces drain across landscape or pervious surfaces to encourage evapo-transpiration, percolation, vegetative contact, and to reduce the downstream effects of development runoff.
- Minimization of building footprints and incorporation of pervious surfaces such as pervious pavements.
- Conservation of natural area by clustering of development and preservation of natural drainage systems.
- Directing flows from impervious surfaces across pervious pavements or landscape areas.
- Preservation of existing trees and planting of new trees to maintain and increase canopy coverage.
- Conveying of drainage away from slopes or provision of appropriate slope down drains.
- Vegetating slopes and open space areas with drought tolerant plants.
- Stabilization of permanent channel crossings and installation of energy dissipaters at drainage outlets.

Source Control BMP features incorporated into Carlsbad developments during the reporting period include the following:

- Enclosure of outdoor material storage areas.
- Trash enclosures that have pervious surfaces and do not allow drainage to flow through the enclosure and use of trash bins with lids that exclude rain.
- Use of efficient irrigation systems with moisture sensors and properly designed flow control systems.
- Stenciling and/or placement of tiles at every applicable storm drain inlet.

As with the previous reporting period, during FY 2011-12, for projects subject to Priority Development Project requirements, through the development review process, applicants were not permitted to select treatment control BMPs with low efficiency removal ratings (e.g.: hydrodynamic separator systems and filter inserts) without being subject to additional scrutiny by the City. Per the Carlsbad SUSMP,

applicants may choose low efficiency treatment control BMPs, but only after providing additional analysis (in the SWMP) and backup information subject to approval by the City. In this circumstance, the applicant must provide a detailed analysis to demonstrate how all the other (more efficient) treatment control BMPs in the SUSMP could not be employed with the project. However, during the reporting period, there were no projects that were approved that solely used BMPs with low efficiency removal rates.

The development approvals processed during FY 2011-12 encompassed multiple project categories including residential, commercial and industrial projects. Each project subject to Priority Development Project requirements included appropriate treatment control BMPs from the list of allowable treatment controls included in Table 2-2 of the Carlsbad SUSMP. The types of treatment control BMPs approved for projects during the reporting period included bioretention areas, vegetated swales, vault structures, and bio-filtration basins.

Throughout FY 2011-12, all projects subject to Priority Development Project and Standard Storm water requirements, including City Capital Improvement Program (CIP) projects, complied with the Carlsbad SUSMP.

2.5 SUSMP Program Implementation

2.5.1 Urban Runoff Approval Process

In FY 2011-12, all new development and redevelopment projects including public CIP projects were required to undergo the City's urban runoff approval process in accordance with the requirements of the Carlsbad SUSMP, 2007 Municipal Permit and Carlsbad JURMP.

The City has a comprehensive set of storm water pollution prevention activities which are incorporated into the project development approval and BMP installation verification process. The measures include everything from the development of urban runoff land use planning policies, development processing procedures, project submittal and review checklist, educational pamphlets, engineering standards, City Codes, database inventory control, monitoring requirements, staff and developer training and project tracking and reporting. Each activity has been carefully designed to help eliminate or reduce storm water pollution on projects to the maximum extent practicable (MEP) and to not cause or contribute to an exceedance of receiving water quality objectives.

The development process has many stages from concept review on through to construction completion and project operation and maintenance. The City conducts many activities meant to ensure development project compliance with the City's urban runoff management policies and requirements. Table 2.2 presents a brief description of the SUSMP activities undertaken at each stage of the development process. Also included in the table are a listing of the City reference materials and implementation documents available to developers and City staff which are applicable to each stage in the process.

Project compliance was tracked through a variety of paper and computer tracking systems. Conditions of Approval specify whether the project must comply with the Priority Development Project (PDP) or Standard Storm water requirements of the Carlsbad SUSMP.

The City maintains a database of both private and public project approvals that are subject to Carlsbad SUSMP. For private development projects, the results of this database for FY 2011-12 include project name, approval date, approving authority, appropriate resolution numbers and the storm water standards (Priority Development Project, Standard Storm water) that applied to each project. A list of the private development projects approvals for the reporting period is included as Appendix 2.1.

For public projects, the database for FY 2011-12 is called the 'CIP Project Approvals' which includes the project name, approval date, and the storm water standards (Priority Development Project, Standard Storm water) that applied to each project. For the list of CIP Project Approvals subject to the Carlsbad SUSMP refer to Appendix 2.2.

As part of project development processing, during the construction plan review stage, a final design SWMP is submitted to the City for approval. In addition, each project's required treatment control BMPs are incorporated into the project construction drawings. The City created templates for title sheets that include a treatment control BMP table that is to be filled out for project subject to Priority Development Project requirements. For PDP projects, the table is located on the title sheet identifying each treatment control facility including information and BMP maintenance frequencies and specifying which plan sheet contains the additional details where each required treatment control BMP is installed within the project. A separate table is included on the detail sheet providing additional information including the number of BMP units located on that particular plan sheet. The tables are used to highlight the treatment control BMP requirements to the contractor, property owner, project inspector and are used for future inspections. The table also makes it easier for City GIS staff to locate treatment control BMPs for entry/confirmation with the City's GIS database.

Table 2.2 Development Process and SUSMP Activities

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Conceptual Project Design	Developer uses the Carlsbad SUSMP and Storm Water Standards Questionnaire to determine project priority and begins project layout and design. For priority projects the City recommends to developers that a preliminary SWMP should be prepared.	• Storm Water Standards Questionnaire • Storm Water Standards Manual which includes the Carlsbad SUSMP • 303(d) List
Pre-application Review	Developer submits the preliminary project proposal to staff to obtain input on conceptual project layout including storm water compliance issues.	• Preliminary site plan checklist • SWMP Fact Sheet
Application for Discretionary Review	City staff review application package at front Counter for completeness of submittal including storm water compliance documents. Project is logged into the City database for tracking. A completed Environmental Initial Assessment (EIA) form is submitted with the application package.	• Project Application Submittal Checklist • City review letter
Application Review	City staff reviews application, site plans and accompanying reports and documents including any SWMP, geotechnical and hydrology/hydraulic reports. Project is reviewed for consistency with General Plan, Local Coastal Plan (LCP), Habitat Management Plan, Carlsbad SUSMP and City Codes and other Standards including all storm water protection policies and requirements including new LID and interim hydromodification requirements. Project location is reviewed for proximity to environmentally sensitive areas and to determine if project drains to a water body on the 303(d) list. Project EIA is reviewed and appropriate environmental review documents are requested and reviewed in compliance with California Environmental Quality Act (CEQA) requirements.	• Site plan review checklist • SWMP checklist • 303(d) List • General Plan • Local Coastal Plan • Habitat Management Plan • City Codes • Environmental Assessment Form • CEQA Guidelines • City review letter (if any)

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Discretionary Approval	City denies project or approves with conditions including storm water compliance conditions. Applicable standard conditions of approval are applied to the project together with any special conditions of approval as City staff determines necessary to reduce or eliminate the projects storm water pollution impacts to the MEP. Approving authority makes required findings that project complies with the General Plan, LCP, Habitat Management Plan, SUSMP, City Codes and any other appropriate land use planning documents. Environmental documents are certified and any mitigation monitoring requirements are noted in the project approval.	• City's standard conditions of approval • Project Conditions of Approval • Environmental mitigation and monitoring plan (if any)
Final Project Design	Developer prepares project construction plans including grading, improvement, landscape and building detailing required BMPs. Construction SWPPP is prepared and SWMP is finalized. A single sheet post construction BMP site plan is prepared.	• Storm Water Standards Manual • Project Conditions of Approval • Environmental mitigation and monitoring plan (if any)
Construction Plan Check Application Submittal	City staff review application package for completeness of submittal including storm water compliance documents. Applicant completes and submits Project Storm Water Threat Assessment Worksheet included as part of the Storm Water Requirements Applicability Checklist.	• Plan Check Application Submittal Checklist • Project Threat Assessment Worksheet • Project Conditions of Approval
Construction Plan Check Review	City staff reviews construction plans and accompanying reports and documents including any SWMP, single sheet post construction BMP site plan, Construction SWPPP, geotechnical and hydrology/hydraulic reports. All storm water pollution prevention requirements are checked against construction plan checklist, SWMP checklist, Construction SWPPP checklist and project conditions of approval. Construction cost estimates are approved for bonding costs including costs for structural BMPs. For priority projects a BMP Maintenance Agreement is prepared.	• Construction Plan Checklist • SWMP Checklist • Construction SWPPP Checklist • Project conditions of approval • Project Threat Assessment • City Engineering plan review procedures • Environmental mitigation and monitoring plan (if any) • Cost estimates

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Construction Plan Approval	City approves construction plans and accompanying Construction SWPPP and SWMP including single sheet post construction BMP site plan. The executed BMP Maintenance Agreement is recorded and entered into the City's document management system database. All treatment control BMPs are noted on the construction plans and forwarded to the GIS group for entry into the BMP inventory. Any project design changes that differ from the approved site plan or project conditions of approval are reviewed in compliance with the City's Substantial Conformance Procedures to ensure that the project remains in compliance with all land use planning findings. Secured agreements to construct project improvements are obtained backed up with cash and/or other securities. Developer is required to note the WDID number on the project plans	• Plan check completion letter • BMP Maintenance Agreement • BMP Inventory update procedures • Substantial Conformance Procedures • Environmental mitigation and monitoring plan (if any) • Cost estimates • Secured Agreements • Single sheet post construction BMP site plan
Ministerial (Construction) Permit Issuance	City issues permit(s) for construction activities including grading, improvement, building, demolition and blasting. Any special storm water compliance requirements are noted on permit. City staff review plan check completion letter for any special storm water compliance requirements. Copies of the permit, construction plans, Construction SWPPP, single sheet post construction BMP site plan and SWMP are forwarded to the Construction Management and Inspection Division. A construction inspection level (low, medium or high) is assigned in accordance with the project's threat assessment form. The project tracking database is updated with the project threat assessment construction level and permit issuance status.	• Plan check completion letter • Project SWMP • Project Construction SWPPP • Construction Threat Assessment Worksheet • Pollution Prevention Guide for the Construction Industry • Construction SWPPP Fact Sheet • Single sheet post construction BMP site plan
Preconstruction Meeting	City staff meets with contractor and other parties to review project construction issues, schedule, and storm water BMP implementation, monitoring and testing requirements. Contractor is informed of storm water inspection and enforcement procedures and reminded to maintain compliance with the City's storm water pollution prevention requirements. City inspector verifies the NOI has been filed with the Regional Board and a WDID number has been assigned to the project.	• Preconstruction checklist • Construction SWPPP • SWMP • Construction plans • Pollution Prevention Guide for the Construction Industry • Single sheet post construction BMP site plan

Development Process Stage	SUSMP Activity Description	Process Review Documents/References
Construction and Inspection	Developer constructs project including temporary and permanent BMPs. City inspectors enforce compliance with SWPPP, SWMP and Municipal Permit. During construction City project inspector reviews construction for compliance with all plans, the Construction SWPPP, SWMP and City Standards. Regular storm water compliance inspections are scheduled and tracked per City procedures and the requirements of the 2007 JURMP. Enforcement actions are taken as necessary in accordance with City inspection and enforcement procedures. City inspector reviews and approves any minor construction revisions. Major construction revisions are referred to the Engineering Development Services Division for review and approval.	• Construction SWPPP • SWMP • Construction plans • City inspection and enforcement procedures • Pollution Prevention Guide for the Construction Industry • Inspection reports • Enforcement action reports • Secured Agreements • Single sheet post construction BMP site plan
Project Completion	Construction plans are “as-built”, securities released, and BMP construction verified. As-Built plans prepared and forwarded to the GIS Group to update the BMP inventory. City inspector reviews project site to verify installation of permanent BMPs prior to occupancy permit and/or project acceptance using the single sheet post construction BMP site plan. Public Improvements are accepted for maintenance including any public structural control BMPs.	• Construction SWPPP • SWMP • Construction plans • Pollution Prevention Guide for the Construction Industry • Punch list • Secured Agreements • Project Acceptance Forms • Single sheet post construction BMP site plan
Post Construction Annual Treatment Control BMP Inspections	BMP owners maintain BMPs in accordance with recommended and regulatory maintenance schedules. Treatment Control BMP owners submit annual verification of effective operation and maintenance of installed treatment control BMPs. City staff inspects project sites with installed treatment control BMPs to verify compliance with storm water requirements. (New requirement was implemented in FY 2008-09).	• SWMP • BMP Inventory List • Site BMP Inspection Report • BMP Maintenance Agreement

The City process includes a single-sheet post construction BMP (SSPCBMP) plan that includes a project site plan and shows the comprehensive locations of each required BMP such as site design, source control, low impact development technique, treatment controls, and hydromodification features. The SSPCBMP plan contains a table that contains cross-references summarizing the selected BMPs together with the appropriate construction document (e.g.: grading, improvement, building or landscape) that is responsible to build each particular post-construction BMP. Upon permit issuance, a copy of the SSPCBMP plan is signed and distributed with the construction drawings for reference by the contractor and inspector. At the conclusion of the project and prior to issuance of an occupancy permit or acceptance of the improvements, the inspector uses the SSPCBMP plan to help ensure all required post-construction BMPs are installed as required. After verification, the inspector initials the plan and places a copy in the project inspection file.

The SSPCBMP is required content for a SWMP. The SSPCBMP includes project information and other tables to help organize and present the different types of post construction BMPs for a project. The SSPCBMP serves as a comprehensive document displaying the project and the location of different post construction BMPs that are be installed along with calling out which construction document (grading, improvement, building, landscape plan, etc) that is responsible to install each listed BMP. The template is found on the City's website for use by applicants when preparing SWMP's. For a copy of the template SSPCBMP plan, refer to http://www.carlsbadca.gov/business/building/Documents/BMP_Plan_Sheet.zip.

In addition to the City's post-development storm water requirements, the City has integrated the review of construction BMPs into each stage of the development review process. At the project permitting stage, the applicant is required to submit a completed Construction Threat Assessment Worksheet for Determination of a Project's Perceived Threat to Storm Water Quality (Construction Threat Assessment Worksheet). The Construction Threat Assessment Worksheet is used to determine the inspection frequency level pursuant to the 2007 Municipal Permit requirements (low, medium or high). The required inspection level is entered into the City's Permits Plus software program for automated tracking. The Permits Plus program links the various ministerial construction permits (building, right-of-way, blasting and grading) to the "master" development project. The Permits Plus program is used to automatically generate storm water inspection requests for development projects with active permits. The program is also used to track inspection results and follow-up enforcement inspections.

2.5.2 SUSMP Requirements for Development Projects

During FY 2011-12, the Carlsbad SUSMP requirements were applied to 64 private development/redevelopment projects and 26 City Capital Improvement Program (CIP) projects. Of the 64 private development/redevelopment projects, 12 were subject to Priority Development Project requirements which required site design, source control and treatment control requirements and 52 were subject to Standard Storm water requirements subject to site design and source control BMP requirements. Of the 26 City CIP projects, 1 project was subject to Priority Development Project requirements, while 25 were subject to Standard Storm water requirements. Copies of the private development and CIP project approval list showing the type of storm water standards that were applied to each project are included in Appendices 2.1 and 2.2, respectively.

2.5.2.1 Confirmation that all applicable Carlsbad SUSMP BMP requirements were applied to all priority development projects, including a description of how the information was tracked

The City requires submittal of a completed SWSQ for every discretionary and non-discretionary application made to the City to establish how storm water requirements apply to each project. The submittal of a completed SWSQ signed by the applicant is part of the submittal requirements for both discretionary and plan check applications. Projects that are submitted without a completed SWSQ are considered incomplete and the applicant must respond before the City proceeds with project processing. If the outcome of the SWSQ shows the project is subject to Priority Development Project requirements the City required the applicant of these PDP projects to submit a preliminary SWMP and implement additional BMP measures as required by the Carlsbad SUSMP. All applicable requirements of the Carlsbad SUSMP were applied to all priority development projects. These application checklists also require that for those projects subject to Priority Development Project requirements also require the submittal of a SWMP to the City for review and approval. These process requirements help the City ensure that projects are evaluated against project criteria in the SWSQ and that the appropriate storm water requirements are applied as required by the Carlsbad SUSMP.

On projects that are approved at the discretionary stage, the City uses standard conditions that are included in the project conditions-of-approval for each project. These standard conditions are used by staff and are modified as required to address the unique merits of each project. The standard conditions include storm water-related conditions that help both the applicant and City staff understand how the project complies with the Carlsbad SUSMP. The conditions document whether the project is subject to 'Priority Development Project' or 'Standard Storm water' requirements.

For discretionary projects subject to Priority Development Project requirements, a preliminary SWMP is prepared detailing all proposed site design, source control, low impact design and treatment control BMPs. Structural site design, source control and treatment control BMPs, including the low impact development and interim hydromodification requirements (if applicable) are also outlined in the preliminary SWMP and reflected on the site plan or tentative map. The tentative map/site plan, conditions of approval and preliminary SWMP document are used at the construction plan review and ministerial permitting stage of the project to ensure compliance with the appropriate storm water requirements. Although a preliminary SWMP is provided at the discretionary stage, during final design, the applicant submits the final SWMP and it is reviewed and approved together with the construction documents to ensure the project conforms against the tentative map/site plan and also meets the current SUSMP requirements before permit issuance.

The City maintains a database of both discretionary and ministerial project approvals which includes project approval date, approving authority, applicable resolution numbers and the project storm water standards (i.e.: Priority Development Project requirements, Standard Storm water requirements). A list of the private development project approvals is included as Appendix 2.1.

Additionally, the City requires preparation of a single sheet post construction BMP (SSPCBMP) plan for all priority development projects that includes a project site plan and calls out the location of each required LID site design, source control, treatment control BMP, and applicable hydromodification facility. The single sheet post construction plan contains a matrix cross referencing the required BMP with the appropriate construction plan (grading, improvement, building or landscape) where the specified BMP construction is detailed. A copy of the SSPCBMP plan is signed and distributed with each

construction drawing for reference by the contractor and inspector. At the conclusion of the project and prior to issuance of an occupancy permit or acceptance of the improvements, the inspector uses the single sheet post construction to help ensure all required BMPs were installed as required. After verification, the inspector initials the plan and places a copy in the project inspection file.

2.5.3 SUSMP Implementation for FY 2011-12 – Priority Development Project

2.5.3.1 Example Priority Development Project that was conditioned to meet SUSMP requirements and a description of the required BMPs

Appendix 2.3 includes an example project subject to Priority Development Project requirements (Example PDP Project). The sample project is called La Posada de Guadalupe, CUP 10-08. This project received discretionary approval in October of 2011, and received design approval in May of 2012. Therefore, the project was subject to SUSMP requirements in effect during FY 2011-12. This project includes demolition of an existing 50-bed farm worker housing and the reconstruction of a new 120-bed farm worker housing project on a 3.62 acre lot. Based on project thresholds per the SWSQ, the project is subject to Priority Development Project requirements (under redevelopment thresholds) and a SWMP was required to address the storm water requirements for the project. The project involves grading, building, surface and utility improvements. Public street and utility access is provided by Impala Drive. The site is located in Hydrologic Unit 904.31, and is tributary to the Agua Hedionda Creek and Lagoon. Per the 2011 303(d) list, the Agua Hedionda creek is impaired for pathogens, metals, nutrients, and toxicity. Based on table 2-1 of the SUSMP, the project matches the land use category of detached residential. Therefore, the anticipated pollutants generated by the project include sediments, nutrients, and trash and debris. The potential pollutants of concern include organic compounds, oil and grease, bacteria and viruses, and pesticides. Per the project conditions and downstream impairments, the following BMPs were selected for this project as they were found have medium to high efficiency at removing the potential target pollutants:

1. Optimize Site layout
    a. Minimized Directly Connected Impervious Areas
        i. Roof drains directed to landscape areas
    b. Use of efficient irrigation system
2. Use of Pervious surfaces
    a. The parking lot includes the use of pervious pavement
3. Dispersal of runoff to pervious surfaces
    a. Roof runoff (downspounts) either discharge over landscaped areas or are directed to treatment BMP's (bioretention facilities).
    b. Runoff from sidewalks are pitched to drain over pervious landscaped area to slow/filter runoff.
    c. Use of curb cuts that drain to landscape areas.
    d. Use of cistern and/or rain barrels
4. Integrated Management Practice (IMP)
    a. Use of flow-through planter as a BMP sized per the BMP calculator.
    b. Use of bioretention facility as a BMP sized per the BMP calculator.
    c. Use of bioretention with cistern facility as a BMP sized per the BMP calculator.
    d. Use of linear bioretention facility (vegetated swale) as a BMP sized per the BMP calculator.

5. Source Control
    a. Trash receptacles include bin covers and are designed not to allow run-on water to enter enclosure
    b. Efficient irrigation with rain and water loss shut-off devices for landscaped areas
    c. All storm drain inlets in the project area to be stenciled
    d. Integrated pest management practices to be used

2.5.3.2 A listing of the priority development projects which were allowed to solely use treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible

No projects subject to Priority Development Project requirements were approved solely using treatment control BMPs with low removal efficiency rankings as the sole method of treatment control during FY 2011-12.

2.5.4. SUSMP Waivers

2.5.4.1 A description of any SUSMP waiver mitigation program

The Carlsbad SUSMP includes a waiver process (see Section 1 of the SUSMP). For projects subject to Priority Development Project requirements, the applicant may submit a SUSMP waiver request to the City Engineer. As part of the request, the applicant must clearly demonstrate how numerically-sized BMPs cannot be employed with the project and outline the infeasibility with using each available BMP and discuss why the project should not be required to meet the SUSMP requirements. Based on the information provided in the waiver request, the City Engineer may either approve or deny the SUSMP waiver request.

During the reporting period, no SUSMP waivers were requested or granted.

2.6 Hydromodification Management Plan

2.6.1 A description of Hydromodification Management Plan development collaboration and participation

After several cooperative meetings with the Copermittees during previous reporting periods, the final HMP was adopted into the Carlsbad SUSMP on January 14, 2011. The SUSMP, together with the final Hydromodification Plan, includes guidance materials and procedures for applicants to guage whether projects are subject to hydromodification. If subject to hydromodification, applicants must select and incorporate strategies and BMPs into their design to maximize infiltration and mimic pre-project hydrologic characteristics. These include using Integrated Management Practices (IMP's) identified in the SUSMP that are designed to satisfy all four categories for Priority Development Project requirements as previously discussed. Incorporating hydromodification (flow-control) facilities affects the design of each project. For those projects subject to hydromodification, the procedures include options and design guidance for how to select and deploy several IMP/LID facilities throughout their project. These IMP/LID facilities are generally placed so they treat the new/redeveloped impervious areas within the project. Placing these facilities in strategic locations allow for the IMP/LID facilties to both target/filter

urban polluants and address increases in runoff by providing hydromodification (flow-control) to these areas.

When sizing IMP/LID facilties to satisfy hydromodification, the SUSMP includes options for the applicant to perform a downstream channel assessment using established procedures from the Southern California Coastal Water Research Project (SCCWRP). Using the channel screening tools from SCCWRP may provide results that allow the applicant to use different lower flow thresholds. These lower flow thresholds may result in smaller IMP/LID facilities than would normally be required. If SCCRWP is performed for a project, this documentation is included within the SWMP for the project. To continue staff education and knowledge on storm water regulations, during FY 2011-12, staff attended a workshop regarding SCCWRP methodologies, channel screening and field analysis.

For certain projects, applicants may demonstate their projects are exempt from hydromodification, however, this requires the applicant provide documentation (per the final HMP), subject to review and approval by Land Development Engineering staff. Any HMP exemption documentation is included in the SWMP for the project, as required by SWMP submittal requirements.

During the reporting period, all projects subject to Priority Development Project requirements were evaluated against the final hydromodification requirements. Staff took considerable effort (project by project) to educate homeowners, developers, engineers and other city staff on the thresholds, criteria and solutions to satisfy hydromodification requirements.

During FY 2011-12, staff attended a full-day workshop regarding the San Diego Hydrology Model (SDHM) which is a software program discussed in the final HMP. The SDHM uses historical rainfall records and continuous simulation modeling to size different types of IMP/LID facilities that satisfy hydromodification (flow-control) requirements.

2.6.2 A listing of Priority Development Projects required to meet hydromodification requirements, including a description of hydrologic control measures implemented

During this reporting period, there were seven (7) Priority Development Projects that were required to meet hydromodification requirements. For a list of these projects and type of hydrologic controls incorporated for each project, refer to the List of Projects Subject to Hydromodification as Appendix 2.4.

2.6.3 A listing of priority development projects not required to meet the hydromodification requirements, including a description of why the projects were found to be exempt from the requirements

In FY 2011-12, six (6) Priority Development Projects were approved, but found to be exempt from the hydromodification requirements. For a list of these projects and exemptions identified for each project, refer to the List of Projects not required to meet Hydromodification as Appendix 2.5.

2.6.4 A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project

During FY 2010-11, *interim* hydromodification requirements were superceded by final HMP requirements. Final HMP requirements were adopted into the City SUSMP on January 14, 2011. Therefore, there were no projects subject to *interim* hydromodification requirements.

2.7. Treatment Control BMP Program

2.7.1 Inventory Management

The City maintains a watershed-based inventory of publicly and privately owned treatment control BMPs. The inventory has been used to track and document information about each of these structures including BMP type, inspection dates and findings, maintenance frequencies and requirements, verifications, and other information as required by the 2007 Municipal Permit. Development of the inventory is an ongoing process, as new structures are researched, verified, and added on a continual basis.

During this reporting period, the City updated the watershed-based inventory and prioritized all verified structures into high, medium, and low categories as required by the 2007 Municipal Permit using BMP type, location, and proximity to the nearest ESA as prioritization criteria.

During FY 2011-12, the City verified 655 privately owned treatment control BMPs on the inventory, which includes 106 high priority, 436 medium priority, and 113 low priority structures (Appendix 2.6).

For privately owned treatment control BMPs, staff continued to confirm the accuracy of the inventory, research certifications and maintenance requirements, verify ownership and responsible parties, update inspection forms, and distribute outreach materials.

The City continued to have internal meetings to discuss treatment control BMP program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance.

See Section 4 of this report for detailed information about the inspection and maintenance program for publicly owned treatment control BMPs.

2.7.2 Treatment Control BMP Inspection Program

During this reporting period, the City conducted compliance inspections of privately owned treatment control BMPs throughout the year and conducted inspections of high priority treatment control BMPs during the dry season only. During the 2011 dry season (May 1, 2011 through September 30, 2011), the City inspected 100% of the high priority, 72.91% of the medium priority, and 77.88% of the low priority privately owned treatment control BMPs (see Section 2.7.2.1).

During FY 2011-12, the City inspected 53.13% of the privately owned treatment control BMP inventory (see Section 2.7.2.2). Inspections of high priority privately owned treatment control BMPs identified on the updated inventory will continue to be conducted as required by the 2007 Municipal Permit through October 1, 2012 and results of those inspections will be reported in the FY 2012-13 annual report.

The *Treatment Control BMP Inspection Form* developed in FY 2007-08 was updated in FY 2011-12. The new form was modified to improve inspection time, include information about previous enforcement actions, and includes the most relevant information about the condition of a structure. A copy of the updated TCBMP inspection form can be found in Appendix 2.7. During inspections, the inspector uses their best professional judgment to determine the condition of the treatment control BMP. The condition of each structure is rated using the following criteria:

- **Good:** Currently no maintenance or corrective action is required for the treatment control BMP. No trees, large plants, excessive trash, stagnant water, blockages, or other major sources of pollutants were observed. The treatment control BMP appears to be functioning as designed. Re-inspect in one year.
- **Fair:** Light to minor maintenance required within the next year. Small amounts of trash, weeds, plants, debris, and/or silt has accumulated, but the treatment control BMP is functioning as designed. The structure should be re-inspected within one year by the responsible party and/or the City.
- **Poor:** Maintenance, installation, replacement and/or repairs are required on the structure. Excessive trash, weeds, vegetation, stagnant water, trees, silt, and/or other pollutants were observed during the inspection. In addition, a treatment control BMP could be rated as "Poor" if the structure was blocked, needed repair, or is not functioning as required.

2.7.2.1 2011 Dry Season (May 1, 2011 – September 30, 2011) Treatment Control BMP Inspections

For the 2011 dry season, all high priority privately owned treatment control BMPs were inspected as required. In addition, all minimum inspection goals for privately owned treatment control BMPs were met or exceeded during the 2011 dry season inspections. Please note the number of structures as of October 1, 2011 is different from the total number of structures reported for FY 2011-12 because of the updates made to the inventory throughout the year. Table 2.3 includes a summary of the inspections and findings of the 2011 dry season inspections.

Table 2.3: Summary of 2011 Dry Season (May 1, 2011 – September 30, 2011) Inspections and Findings for Privately Owned Treatment Control BMPs

Classification	Total on Inv List	Condition	Total	Total Verified	% of Inventory Inspected 2010 Dry Season
High	99	Good	34		
		Fair	10		
		Poor	19		
		Future	7		
		Excluded	4		
		Removed	2		
		Not Inspected	0		
		Total High Inspected		**99**	**100%**
Medium	395	Good	102		
		Fair	41		
		Poor	59		
		Future	64		
		Removed	17		
		Excluded	17		
		Not Inspected	107

Low	104	Good	65		
		Fair	0		
		Poor	0		
		Future	12		
		Removed	0		
		Excluded	4		
		Not Inspected	23		
		Total Low Inspected		**81**	**77.88 %**
Total	**598**[1]			**468**	**78.26%**

[1] Please note the number of structures as of October 1, 2011 is different from the total number of structures reported for FY 2011-12 because of the updates made to the inventory throughout the year.

2.7.2.2 Treatment Control BMP Inspections FY 2011-12 (July 1, 2011 – June 30, 2012)

The City conducted inspections of privately owned treatment control BMPs throughout FY 2011-12. During this reporting period, the treatment control inventory was updated and additional structures were verified and added. Inspections of privately owned treatment control BMPs on the updated inventory will continue as required by the Permit. Complete inspection results for the 2012 dry season will be reported in the FY 2012-13 annual report. Table 2.4 includes a complete summary of the inspections and findings for FY 2011-12.

Table 2.4: Summary of July 1, 2011 – June 30, 2012 Inspections and Findings for Privately Owned Treatment Control BMPs

Classification	Total on Inv List	Condition	Total	Total Verified	% of Inventory Inspected FY 11-12
High	106	Good	44		
		Fair	11		
		Poor	21		
		Future	7		
		Removed	0		
		Excluded	0

Total	**655**			**348**	**53.13%**

2.7.3 Treatment Control BMP Verification of Maintenance Program

During FY 2011-12, the City mailed verification of maintenance forms to all responsible parties on the treatment control BMP inventory list. The verification of maintenance form, revised in FY 2010-11, continues to be used to help responsible parties more accurately provide information about the treatment control BMP maintenance. The form includes fields that clearly show the inspection findings for the current and previous year, along with the inspection dates and last known date of maintenance. The verification of maintenance form, along with a cover letter, were mailed to all private property owners and other responsible parties identified on the updated inventory during the FY 2011-12 as required by the 2007 Municipal Permit. A copy of the revised verification form can be found in Appendix 2.8.

Outreach materials were also included with the verification mailers. The "*What You Need to Know About Privately Owned Treatment Control BMPs*" brochure and the "*Frequently Asked Questions About Treatment Control BMPs*" factsheet were included in mailers to help responsible parties understand their maintenance responsibilities.

The City continued to use the email address created in FY 2007-08 for the treatment control BMP verification program. Owners and responsible parties can send questions, verification forms, and other requests to the tcbmp@carlsbadca.gov email address, which is monitored by the Senior Construction Inspector. The City also continued to use and updated the treatment control BMP email list for responsible parties. The email list has been useful in providing information about treatment control BMP compliance program and notices about upcoming deadlines for maintenance verification submittals.

For 2011 dry season, mailers were sent out between May 2 and September 8, 2011. In addition to the first notification, those who did not comply with the initial request were sent reminder notices. As a result of the 2011 dry season effort, 88.84% of the verification forms were returned as required prior to October 1, 2011. This return rate exceeds the City's goal rate of 75%.

For FY 2011-12, the first notifications were sent to all responsible parties listed on the updated treatment control BMP inventory on May 1, 2012, with a second reminder notice mailed on June 4, 2012. As of June 30, 2012, 83.86% of the verification forms were returned, which is nearly equal to the total response rate reported at the end of dry season 2011. The City will continue to work with the responsible parties through October 1, 2012 to ensure verifications are returned as required. In the event that a responsible party does not respond, the City will use its enforcement authority to escalate efforts.

2.7.4 Treatment Control BMP Verification of Installation Prior to Occupancy

During FY 2011-12, the installation of all structural BMPs required for priority projects continued to be verified prior to occupancy. The process is initiated when the contractor/developer requests a pre-construction meeting with City inspectors. During the pre-construction meetings, the contractor/developer is notified of the BMP installation requirements and issued a copy of the memo outlining the City's requirements for occupancy. In addition, the Pre-Construction Meeting Agenda Packet was revised to state that occupancy will not be granted until the engineer of work provides a letter verifying that all treatment control BMPs have been installed according to the plans and SWMP. Each contractor/developer is provided with a copy of the agenda packet during the pre-construction meeting.

In addition, the City's inspection process requires documentation on BMP installations prior to occupancy. This process requires written verification from the developer, engineer of work, or other responsible party that BMPs were installed in accordance with the SWMP. This verification must be submitted before a request for occupancy is made. After receiving the written verification, the City reviews the SWMP, maintenance responsibilities, and confirms that the BMP installation is in compliance. On May 1, 2012, an updated memorandum was sent to all developers and contractors with active grading permits informing them of the prior to occupancy verification procedure. A copy of the "*BMP Verification of Installation Required Prior to Occupancy*" memorandum can be found in Appendix 2.9.

When a request for occupancy is made to the City by the contractor or developer, City inspectors are notified of the request for occupancy and final inspections are scheduled. The Grading Partial Site Release checklist includes a checkbox to remind inspectors to review BMP installations prior to releasing the pad for building. Inspectors review the project site for compliance with all City requirements including verification of BMP installation. If all the requirements are satisfactory the inspector signs off on the occupancy permit and occupancy is granted. The City maintains a copy of the signed occupancy permit in the building permit file.

The City continued to scan Storm Water Management Plans (SWMP's) into our digital management system (DMS). This allows these water quality reports to be accessed by CM&I inspectors, reviewers, and researchers. Having access to SWMP's helps verify the types and locations of approved post construction treatment control BMPs.

2.8. Enforcement

In FY 2011-12, the City continued to escalate enforcement actions against treatment control BMP owners and other responsible parties that were not in compliance with the maintenance and/or verification requirements of the CMC, including not returning the verification forms. The City's CMI Division is responsible for implementing all enforcement actions related to treatment control BMP compliance. The City's goal is to obtain voluntary compliance with the CMC and 2007 Municipal Permit requirements through public education, outreach and inspections. However, enforcement actions may become necessary when these measures fail to result in compliance.

Appropriate enforcement actions used to achieve compliance should be proportional to the compliance issue, reflective of the responsible party's compliance history, and protective of human health and the environment. In addition, an appropriate enforcement action, which in some cases may include a civil penalty and recovery of economic benefit, sends a message of deterrence to the regulated community. To ensure fairness, the City will remain receptive to good-faith arguments - based on fact, law, or policy - that a given situation is different and should be treated differently, that a site is in fact in compliance, or that a severe penalty is not warranted given the specific circumstances of the violation. Table 2.5 includes a summary of all enforcement actions related to the privately owned treatment control BMP inspection, maintenance, and verification program.

Table 2.5: Summary of Treatment Control BMP Enforcement Actions for FY 2011-12

Type of Enforcement Action	Number Issued per Structure
Warning Notice	107
Notice of Violation	83
Notice to Clean	2
Administrative Citation - Warning	9
Adminstrative Citation – Fine	14
TOTAL	**215**

FY 2011-12 was the first year the City issued administrative fines for failure to comply with the maintenance of verification requirments of the Municipal Permit and the CMC. Three parties responsible for 14 structures were issued fines totaling $800.00. The City will continue to escalate enforment actions to ensure compliance with the TCBMP program.

The City also achieved compliance with the updated Carlsbad SUSMP through the permitting process. Development approvals are not granted until the project shows complete compliance with the City's storm water standards. The City will not issue a construction permit until all applicable site design, source control and treatment control BMP requirements are incorporated into the project plans. For projects involving grading and/or street and utility improvements, the City requires that the developer enter into secured agreements to guarantee developer performance on the grading or improvement work including associated structural BMPs. City inspectors review the project sites during construction to ensure that all work is being done in compliance with the construction plans, City Standards and procedures. Prior to issuance of a certificate of occupancy or release of any security, the City inspector reviews the project site to ensure that all applicable structural BMPs have been installed per the approved plans and specifications. Only when the BMP installations have been verified will the certificate of occupancy be issued or any security is released.

2.9 Notable Activities

As mentioned in the Executive Summary, the City considers Notable Activities to be any activity above compliance requirements.

- In August of 2011, CMI and Land Development Engineering staff attended the annual StormCon conference in Anaheim, Ca. The conference featured over 80 sessions and presentations covering a variety of topics including Low Impact Development, Storm water Pollution Modeling, the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Storm water Treatment, and other related topics.

- During FY 2011-12, City staff attended full-day workshop, hosted by the floodplain management association, regarding hydromodification screening tools. This included training on methodologies, criteria and channel screening procedures by SCCWRP. This training and supplemental knowledge assists staff on the review of potential channel assessments when they are submitted by applicants.

- During FY 2011-12, staff attended a full-day workshop regarding the San Diego Hydrology Model (SDHM) which is a software program discussed in the final HMP. The SDHM uses historical

rainfall records and continuous simulation modeling to size different types of IMP/LID facilities that satisfy hydromodification (flow-control) requirements.

- During FY 2011-12, the City continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance.

Section 3

3.0 CONSTRUCTION COMPONENT

3.1 Introduction

The City of Carlsbad continues to stress the importance of storm water pollution prevention throughout the implementation of the construction component. This section of the annual report identifies those activities which occurred from July 1, 2011 through June 30, 2012 and will cover the requirements of the Permit No. R9-2007-0001 (2007 Municipal Permit).

The City has implemented activities that address and minimize impacts to receiving water quality from construction sites. During this reporting period, the City updated the construction inventory on a monthly basis, inspected all construction sites at the required frequencies, responded to construction related inquiries and complaints, provided outreach and education to developers, engineers, contractors and City staff, and when necessary used escalated enforcement mechanisms to obtain compliance.

3.2 Source Characterization

All construction sites were required to undergo the City's construction urban runoff approval process and meet the applicable construction requirements. The City uses the Permits Plus database to update the watershed based inventory of all construction sites that required grading and/or construction permits. The Development Services Division updates the Permits Plus database until the project is ready to begin construction. The Construction Management and Inspection (CMI) Division then issues the permit and updates the database during the "active construction" phase of the project. The CMI inspectors are primarily responsible for conducting storm water compliance inspections during the active construction phase.

Construction sites with grading permits may include sites where activities such as grading, excavation, clearing, road construction, structure construction, or demolition result in the disturbance of soil. Construction permits that do not require a grading permit may include sites such as single family residence remodels or additions, home demolitions, tenant improvements, or commercial/industrial buildings that are constructed resulting in the need for water quality protection. An inventory of all active construction sites requiring a grading permit can be found in Appendix 3.1. At the end of FY 2011-12, there were 124 grading permits on the grading construction site inventory, of which 99 were active and 25 were inactive (finaled, expired, or withdrawn). Table 3.1 is a summary of the FY 2011-12 grading permit inventory.

Table 3.1: Summary of the FY 2011-12 Active Grading Construction Site Inventory

Priority	Active	Finaled	Withdrawn	Expired	Total
High	36	1	0	0	37
Medium	21	5	1	0	27
Low	42	18	0	0	60
Total	**99**	**24**	**1**	**0**	**124**

3.3 Updates to Ordinances and Approval Processes

In FY 2011-12, all new development and redevelopment projects including CIP projects were required to undergo the City's urban runoff approval process in accordance with the requirements of the 2007 Municipal Permit and 2008 JURMP.

The City updated the single-sheet BMP plan to include a revised project site plan and call out the comprehensive locations of each required site design, source control, low impact development technique, and treatment control BMP. The plan contains a cross referencing table that shows the selected BMPs, grading, improvements, building, and/or landscape. A copy of the plan is attached to each construction drawing for reference by the contractor and inspector. At the conclusion of the project and prior to issuance of an occupancy permit or acceptance of the improvements, the inspector uses the single-sheet BMP plan to help ensure all required BMPs are installed as required.

During FY 2011-12, the installation of all structural BMPs required for priority projects continued to be verified prior to occupancy. When a request for occupancy is made to the City by the contractor or developer, City inspectors were notified of the request for occupancy and final inspections were scheduled.

During this reporting period, the ordinances were reviewed and found to be adequate; therefore, no ordinance changes were made.

3.4 Best Management Practice Requirements

SWPPPs and Erosion Control Plans are reviewed prior to commencement of construction activities to ensure that the required minimum BMPs will be implemented for all construction sites. The City has required the minimum BMPs be implemented, as identified in the 2008 JURMP and Carlsbad Municipal Code, for all construction sites. The seven required minimum BMPs include components that address the following:

1. Erosion control methods for graded slopes;
2. Erosion control method for graded flat areas (slope <5%);
3. Sediment control for perimeter boundaries;
4. Offsite tracking control of sediment;
5. Materials management control;
6. Waste management control; and
7. Non-storm water management control.

The City continues to utilize the pollution prevention measures contained in the Storm Water Best Management Practice Handbooks, published by the California Storm Water Quality Association (CASQA), Caltrans Storm Water Quality Handbooks, and Standards for Design & Construction of Public Works Improvements in the City of Carlsbad. All CMI staff are trained on construction site BMPs and their appropriate application.

Pollution prevention consists of procedures and practices that eliminate or reduce the pollutants at the source. The City has identified and required implementation of the following pollution prevention controls for all applicable construction sites:

- SWPPPs and Erosion Control Plans are required for grading permits and appropriate construction projects. These plans are checked by the City to ensure they adequately address the provisions of the General Construction Permit.
- CMI inspectors enforce the implementation and effectiveness of BMPs described in approved erosion control plans and SWPPPs.

To address each of the required BMPs, the City ensures the SWPPPs and/or erosion control plans include implementation of several types of BMPs as applicable, depending on site-specific requirements. The list of BMPs can be referenced in the 2008 JURMP.

3.4.1 Maximum Allowed Disturbed Areas

Grading sites were held to the maximum allowable disturbed areas on all applicable sites.

3.4.2 Advanced Treatment Requirement

There were no projects that triggered the advanced treatment requirements.

3.5 Program Implementation

During FY 2011-12, the City continued to monitor and enforce storm water regulations by dividing construction compliance into three areas – Capital Improvement Projects (CIP), Building Construction Permits, and Grading Permits. For FY 2011-12, CMI continued to oversee the inspection of active grading sites and CIPs, while the Building Division ensured sites covered under active building permits (construction sites without a grading permit) were compliant. In addition, one Senior Construction Inspector has been designated with full responsibility for storm water compliance for all NPDES activities for CMI.

During FY 2011-12, the installation of all structural BMPs required for priority projects were verified prior to occupancy. The process is initiated when the contractor/developer requests a pre-construction meeting with City inspectors. The Pre-Construction Meeting Agenda Packet also includes a memo stating that occupancy will not be granted until the engineer of work provides a letter verifying that all treatment control BMPs have been installed according to the plans and SWMP. Each contractor/developer is provided with a copy of the agenda packet during the pre-construction meeting.

3.5.1 Grading Construction Sites

3.5.1.1 Inventory Management

During FY 2011-12, all active grading sites continued to be prioritized into high, medium, and low categories and inspected at the minimum frequencies required by the 2007 Municipal Permit. All inspection protocols outlined in the 2007 Municipal Permit, 2008 JUMRP, CMI procedures, and the CMC were followed and implemented as required. The active grading permit inventory is maintained by CMI and updated on a monthly basis. The inventory helps to track each active grading site within each priority category (high, medium, and low) and identify the period of time (weeks) the site was active within the wet season, the number of inspections conducted during the wet season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all

active grading sites. A copy of the FY 2011-12 grading permit inventory can be found in Appendix 3.1. For a complete description of how the grading construction site inventory is maintained please refer to procedure #CMI-120 found in the FY 2009-10 annual report.

3.5.1.2 Inspections and Compliance

Storm water compliance continues to be the focus of CMI inspectors during this reporting period, especially during the wet season. All required inspections were documented and placed in the project files. During required site visits, inspectors generally found sites to be compliant with SWPPPs, Erosion Control Plans, and BMP implementation. The most common compliance deficiencies were found with BMP maintenance (i.e. broken gravel bags, silt fences, etc.). These deficiencies were immediately brought to the attention of the site superintendent or other responsible party who was directed by the project inspector to immediately implement corrective action. This interaction has proven to be productive in correcting minor deficiencies.

Prior to the wet season, CMI inspectors hand delivered a memo to all site superintendents reminding them of the NPDES requirements and informing them to ensure all sites are in compliance by and throughout the wet season. A copy of the *Rainy Season Preparation and Storm Water Compliance* memorandum, issued on September 1, 2011, can be found in Appendix 3.2.

In addition, the City continued to verify the validity of a project's Notice of Intent (NOI) prior to issuance of a grading permit or Notice to Proceed for CIP projects. Prior to the pre-construction meeting and issuance of a grading permit, the Construction Manager reviews the State's online database to ensure a NOI, for applicable projects, had been issued prior to assigning the project to an inspector for grading permit issuance.

CMI inspectors continued to use the NPDES Inspection Report form to verifiy BMP compliance and effectiviness at project sites. The inspection form facilitates efficient inspector use, clarifies required corrective actions, tracks the numbers and types of violations, and identifies any necessary escalated actions. The NPDES inspection report covers all administrative requirements including inspection and evaluation of SWPPPs, wall maps, desiltation basins, materials and waste management, temporary BMPs, slope protection, and site conditions and interactions. A copy of the inspection report can be provided directly to the site representative upon completion of an inspection.

All active grading sites were prioritized and inspected as required during this reporting period. CMI inspectors verified proper BMP implementation on a weekly, sometimes daily basis. Table 3.2 is a summary the grading permit inspections conducted during this reporting period:

Table 3.2: Inspections Required and Conducted for Sites Requiring a Grading Permit – FY 2011-12

Wet Season Inspections Required	Wet Season Inspections Conducted	Dry Season Inspections Required	Dry Season Inspections Conducted	**Total** Inspections Required	**Total** Inspections Conducted
658	**683**	**308**	**320**	**966**	**1,003**

3.5.2 Building Division Sites

Buiding Division storm water inspections were conducted using the procedures outlined in the 2008 JURMP and CMC. In addition, the Building Division developed new procedures in FY 2010-11 to help inspectors effectively conduct NPDES inspections. The "SWPPP Permit and Process Procedures" guides each building inspector and engineering tech through a step by step process to ensure NPDES compliance at each building site. A copy of the procedure can be found in previous annual reports. Building Division inspection staff also received training during this reporting period and continued to implement departmental procedures to ensure compliance with the inventory, inspection, and reporting requirements.

During this reporting period, the Building Division issued 453 SWPPP permits and required pre-construction meetings for all projects prior to the commencement of building activities. As part of the divisions' outreach program, the pre-construction meeting allows the inspector to review the BMP's outlined on the Storm Water Compliance Form for Tier 1 Construction SWPPP (E-29) with the contractor and/or homeowner. A copy of this form can be found in Appendix 3.3.

3.5.2.1 Inventory Management

The Building Division maintains an inventory of building permits in both a computer tracking system and on paper records. The inspector is responsible for maintaining copies of all NPDES information related to building permits, inspection results, and comments. The Building Division, in coordination with the City's IT Department, modified the Permits Plus database to track NPDES inspections at building sites. NPDES inspection information about all permitted building sites is maintained in the database and inspectors are able to schedule inspections, track information about compliance, issue enforcement actions, and document other relevant NPDES information. When new building permits are added to the database, they are prioritized into low, medium, or high categories and scheduled for inspection. In general, low priority sites were classified as sites that had only interior work and minimal to no material storage areas outside of the site.

3.5.2.2 Inspections and Compliance

Storm water compliance remained the focus of inspectors during this reporting period, especially during the wet season. All required inspections were documented and placed in the project files. NPDES building inspection requests are automatically generated by Permits Plus software based on the required inspection frequency during the wet and dry seasons. During the wet season high priority sites were inspected bi-weekly. All medium and low priority sites were inspected as needed. Building inspectors also reviewed site BMPs each time they performed inspections consistent with CASQA Standards outlined for Tier 1 Construction SWPPPs. As part of the building permit inspection procedures, any additional inspections are recorded in Permits Plus. The total number of site inspections conducted by the Building Division resulted in 703 total project inspections during the wet season and 147 total inspections during the dry season. In addition, there were 398 pre-construction meetings and 1,405 routine site contacts were preformed allowing inspectors to maintain a high level of oversight and was key in resolving compliance issues in an expeditious manner.

During site contacts, notable improvements were observed of the general condition of sites related to storm water compliance of most building sites. Contractors and owner builders appeared to be much more proactive in managing runoff from their sites as well as containment of pollutants within the site.

The most noted compliance issue continues to be the maintenance of stucco and concrete washout areas. Through the City's educational program and other compliance efforts this issue continues to be addressed during follow up inspections and escalated enforcement actions.

3.5.3 Capital Improvement Projects

3.5.3.1 Inventory Management

During FY 2011-12, CIPs continued to be prioritized into high, medium, and low categories and inspected at the minimum frequencies required by the Permit. All inspection protocols outlined in the 2007 Municipal Permit, 2008 JUMRP, CMI procedures, contracts, and the CMC were followed and implemented as required. The active CIP inventory is maintained by CMI and updated on a monthly basis. The inventory helps to track each CIP within each priority category and identify the period of time (weeks) the site was active within the wet season, the number of inspections conducted during the wet season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all CIP sites. A copy of the CIP inventory can be found in Appendix 3.4.

3.5.3.2 Inspections and Compliance

Daily inspections were conducted for CIP project sites. These inspections cover a number of construction-related and storm water compliance issues. All medium and low priority sites were inspected as needed. Table 3.3 is a summary the CIP inspections conducted during this reporting period:

Table 3.3: Inspections Required and Conducted for CIP Sites for FY 2011-12

Wet Season Inspections Required	Wet Season Inspections Conducted	Dry Season Inspections Required	Dry Season Inspections Conducted	**Total** Inspections Required	**Total** Inspections Conducted
108	**107**	**45**	**46**	**153**	**153**

3.6 Enforcement

There were no changes in the City's enforcement escalation procedures as described in the 2008 JURMP during this reporting period. Table 3.4 is a summary of enforcement actions taken by the City from July 1, 2011 to June 30, 2012.

Table 3.4 Summary of Violations and Enforcement Actions at Construction and Building Sites

Actions Taken	Number of Actions CMI	Number of Actions Building Division	TOTAL
Verbal Notices	200	63	263
Written Warning	31	7	38
Notice of Violation	3	0	3
Notice to Clean	0	7	7
Stop Work Notice	1	0	1
Total Actions	235	77	312

If a site was found to have deficiencies in storm water compliance, it was generally corrected at the time of the inspection. If a verbal or written warning was issued, a specific deadline for correction action was noted on the inspection report. Follow up inspections were conducted to ensure construction sites complied with the required corrective actions. Most sites were found to have completed corrective actions and were in compliance at the time of the follow up inspection.

If a site was found to be out of compliance to the point where major deficiencies were noted, a Stop Work Notice was issued. Stop Work Notices prevent the contractor from continuing any construction related work until the corrective actions have been implemented. Stop Work Notices were found to be an immediate and effective mechanism to ensure non-compliance was corrected in an expeditious manner. There was one Stop Work Notice and three NOVs issued during this reporting period. The following includes a brief summary of the NOVs issued during FY 2011-12.

GR110030

On February 28, 2012, a City inspector observed an illegal discharge at the Grand Pacific Carlsbad resort construction project. The Project Superintendent had directed staff to pump out a temporary detention basin located at the southeast quadrant of the project site. The pump was connected directly from the basin to the storm drain system causing approximately 1,000 gallons of sediment laden water to be discharged offsite. The entire discharge was completely contained within the storm drain system and basin. Upon discovery by the City, the pumping activity was immediately stopped. The Project Superintendent was directed to discontinue all pumping activities until appropriate BMPS could be implemented. On February 29, 2012, the Project Superintendent contracted a water truck to remove the water from the basin and deposit it on an adjacent agricultural field. In addition, Grand Pacific Carlsbad was issued an NOV and required to clean the storm drain conveyance from the inlet to the discharge point. The City inspector monitored the pumping operation, remediation, and the compliance efforts for the duration of the project.

GR110008

The City issued an NOV to Taylor Morrison Developers on April 16, 2012. The project site, known as Muroya Vista Del Mar, is located on Blackrail Road between Poinsettia Avenue and Aviara Parkway in Carlsbad. On April 13, 2012, the City received a complaint from the RWQCB that a slope failure had occurred at the site. The City immediately dispatched an inspector to conduct an investigation. The inspector did not observe a slope failure or a discharge from the site; however he did observe that

several BMPs needed maintenance and/or repair. On April 16, 2012, the City conducted a follow-up inspection of the site and found that the site operators were in violation of several NPDES requirements which warranted the issuance of a NOV. The contractor initiated corrective actions which included repairing the perimeter silt fence, installing additional erosion control for two slopes, updating the SWPPP records, and providing additional maintenance to the onsite desiltation basins. Taylor Morrison Developers completed all of the required corrective actions and CMI inspectors continued to work with the contractor to ensure BMPs were adequately maintained for the duration of the project.

GR100017

On May 24, 2012, the City received a complaint that BMPs were not being maintained at the Hilton Resort construction site located at 7250 Ponto Drive in Carlsbad. The Construction Manager directed staff to conduct a complete storm water compliance inspection and make recommendations on how to proceed. On May 25, 2012, the City inspector found the site to be out of compliance with the SWPPP and the Carlsbad Municipal Code (CMC). Specifically, silt fences along the perimeter of the site needed to be repaired and/or maintained, stockpiles and slopes needed additional protection, driveway areas needed sweeping, trash and dumpster areas needed to be managed throughout the site, and the washout area needed to be maintained. No discharge to the storm drain was observed. As a result of the inspection, an NOV was issued listing seven violations of the CMC and required corrective actions to be completed or significantly accomplished by May 30, 2012. A follow up inspection was conducted on May 30, 2012 to verify compliance, and corrective actions had been implemented as required. For the duration of the project SWPPP inspections were conducted on a weekly basis.

3.7 Notable Activities

As mentioned in the Executive Summary, the City considers Notable Activities to be any activity above compliance requirements. The City has continued its strong stance on storm water pollution prevention and inspectors have obtained a high awareness among field personnel (superintendents, field labor, etc.) regarding the importance and application of BMPs for construction sites. Notable activities for FY 2011-12 include:

- In August 2011, CM&I staff attended the annual StormCon conference in Anaheim, Ca. The conference featured over 80 sessions and presentations covering a variety of topics including the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Storm water Treatment, and other related topics.

- In FY 2011-12, the required number of inspections for active construction sites was exceeded. CMI conducted 1,003 inspections, which exceeds the 966 inspections required for the wet and dry seasons.

Section 4

4.0 MUNICIPAL COMPONENT

4.1 Introduction

Municipal facilities are required to implement the minimum BMPs identified and described in the 2008 JURMP (good housekeeping, preventive maintenance, material handling and storage, employee training, solid waste handling, record keeping, self-inspection, and spill response), as applicable. Specific BMPs are identified in SWPPPs and/or inspection reports. Specific pollution prevention measures may vary from one site to another and are evaluated separately at each facility. The City implements and assesses the effectiveness of BMPs through regular staff training, self-inspections, third party inspections by a contractor, and SWPPP implementation. The following includes a description of specific pollution prevention activities and storm water BMPs implemented from July 1, 2011 to June 30, 2012 per Order R9-2007-0001 by various City departments. All BMPs were implemented as required by the 2008 JURMP.

Municipal areas and activities are subdivided by categories in the sections below. Prioritization of these municipal areas is presented in the High Priority column of the Municipal Inventory located in Appendix 4.1. Municipal facilities are mapped using GIS and can be found in Appendix 4.2.

4.2 Minimum BMP Requirements

The following minimum BMPs were implemented at the facilities in the Municipal Inventory provided in Appendix 4.1, where appropriate.

4.2.1 Employee Training

Municipal departments provided training at least annually to all employees with responsibility for actions that have a potential to cause storm water pollution. A list of all Municipal storm water training is included in Appendix 8.1. Training generally addresses, among other topics, the following:

- Storm water awareness
- Applicable regulations
- Discharge prohibitions
- Importance of pollution prevention practices (good housekeeping, recycling, waste management, source control, etc.)
- Applicable best management practices (including those called out in the facility storm water pollution prevention plan [SWPPP]), where applicable
- Integrated pest management
- Self-inspections
- Record keeping

Documentation of training is maintained on-site at the location(s) where operations or activities are conducted. Where the operations are covered in a SWPPP, training records are filed with the SWPPP.

4.2.2 Pollution Prevention

The City implements urban runoff pollution prevention practices that are generally recognized for that facility's activity as being effective.

Pollution prevention is defined in Order No. R9-2007-0001 "*as practices and processes that reduce or eliminate the generation of pollutants. Recycling, use of different types of products or chemicals, and altering operational procedures are all types of pollution prevention practices that reduce the amounts of pollutants generated by a facility.*"

The City's approach is to promote pollution prevention as an activity for all municipal employees and locations. Since 1991, the City has implemented a procurement policy that directs the purchase and use of recycled products. Purchasing staff are encouraged to use "*Green Purchasing*" principles. This refers to buying products and services with reduced effects on human health and the environment (also called "*Environmental Purchasing*"). While some of these products are office and janitorial supplies, the policy also applies to construction supplies, landscape materials and equipment, automotive, road and highway supplies.

Specific pollution prevention measures may vary from one site to another, so they are evaluated separately at each facility. Where appropriate, High Priority municipal facilities implemented site specific Storm Water Pollution Prevention Plans (SWPPP) and associated training programs. Furthermore, the pollution prevention BMPs identified in the JURMP were implemented at all municipal facilities. These pollution prevention BMPs include:

- Affirmative Procurement – Use alternative, safer, or recycled products.
- Reduce the amount of hazardous materials used by implementing natural controls.
- Redirect storm water flows away from areas of concern.
- Reduce use of water.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.

In addition, the City required the following minimum pollution prevention practices (detailed in SWPPPs or inspection reports) at all municipal facilities where appropriate:

- <u>Reduce use of water or use dry cleanup methods:</u> Employees used dry cleanup methods when possible (sweeping, etc.). Any washing activities required containment and recovery, with no discharge to the storm drain system. These BMPs are also required for City contractors.
- <u>Conduct storm drain maintenance:</u> Employees performed regular visual inspections of the storm drains to identify unauthorized discharges and clean as needed.
- <u>Recycle:</u> City departments recycled appropriate items and implemented the City procurement policy to purchase and use recycled products.
- <u>Move or cover potential pollution sources from storm water contact:</u> Corporate yards protected materials and products that could potentially contribute to storm water pollution by storing them indoors, or covering them, and providing them with secondary containment as needed.

4.2.3 Good Housekeeping

Good housekeeping practices employed simple common sense in creating and maintaining a clean, orderly environment that reduced the risk of accidents and urban runoff contamination.

- **Routine Housekeeping Inspections.** Locations with higher risk of impacting storm water quality (e.g., storm water outfalls, loading and unloading areas, materials, products and wastes storage areas, equipment and vehicle maintenance and cleaning areas) were inspected regularly. Inspections focused on leaks or conditions that may have led to discharges of pollutants to the Storm Water Conveyance System or Receiving Waters.

- **Maintenance of Clean Grounds Surfaces.** Sweeping of all paved areas exposed to precipitation or storm water was conducted on a regular basis. Litter controls of all exposed surface were conducted on a regular basis. The frequency of sweeping and litter control is based on site conditions.

- **Waste Management.** Each facility conducted regular pickup and disposal of garbage and waste materials/products to prevent overfill of waste storage containers.

- **Equipment Inspection.** Each facility conducted routine inspection of equipment to ensure proper functioning. Where problems were identified during inspection, proper and prompt maintenance or repair is conducted.

- **Storage.** Raw materials, intermediate products, finished products, byproducts and waste products were stored in covered areas or sealed containers unless the materials or products were not a threat to urban runoff quality. To prevent accidental spills, materials or products are stored away from direct traffic routes. All containers were stacked according to applicable federal, state, and city regulations as well as manufacturers' instructions to avoid damage from improper weight distribution. Pallets or similar devices were used to prevent corrosion of the containers that can result when containers come in contact with moisture on the ground.

- **Limitations on Handling Hazardous Materials.** Each facility limited the handling of hazardous materials to those personnel specially trained to handle these materials.

- **Employee Training.** All good housekeeping practices were incorporated into a facility's employee-training program.

In addition to the BMPs listed above, good housekeeping was addressed as a site specific BMP for each category of facilities listed below. See BMP SC-60 for site specific information on implementation.

4.2.4 Spill Response and Prevention

Municipal staff implemented BMPs at all fixed facilities and field programs to prevent, control and clean up spills. The following are general BMPs that were implemented:

- BMPs listed in SC-11, Spill Prevention, Control and Cleanup (City of Carlsbad JURMP 2008).
- Spill cleanup materials were readily available and in known locations.
- Spills were cleaned up immediately and dry methods are used where possible.

- Spill cleanup material was disposed of properly.

Spill response and prevention was also addressed as a site specific BMP for each category of facilities listed in Sections 4.3 – 4.14 of this report. See SC-11 for site specific information on implementation.

4.3 Roads, Streets, Highways, Parking Facilities

4.3.1 Background

This section includes BMPs and an inventory of roads, streets, highways, and parking facilities which are deemed High Priority according to Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's 2008 JURMP. This section also includes information on the City's street sweeping program and BMPs for the City's street maintenance program.

4.3.2 Source Characterization

Table 4.1 below lists the 10 High Priority roads, streets, highways, and parking facilities on the City's municipal inventory as updated in the 2008 JURMP.

Table 4.1: Roads, Streets, Highways, and Parking Facilities

1	ADULT LEARNING PROGRAM PARKING LOT	3368 EUREKA PL
2	CARLSBAD SENIOR CENTER PARKING LOT	799 PINE AVE
3	CITY HALL FACILITY PARKING LOT	1200 CARLSBAD VILLAGE DR
4	CITY STREETS	CITY WIDE
5	COLE LIBRARY PARKING LOT	1250 CARLSBAD VILLAGE DR
6	DOVE LIBRARY PARKING LOT	1775 DOVE LN
7	FARADAY CENTER PARKING LOT	1635 FARADAY AV
8	FARMERS BUILDING PARKING LOT	FARADAY & EL CAMINO RL
9	HARDING COMMUNITY CENTER PARKING LOT	3096 HARDING ST
10	RAILROAD DEPOT VISITORS CENTER PARKING LOT	400 CARLSBAD VILLAGE DR

4.3.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.2 were implemented at the 10 High Priority facilities listed above.

Table 4.2: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-70 Road and Street Maintenance
SC-71 Plaza and Sidewalk Cleaning
SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.3.4 Program Implementation

Each of the applicable BMPs listed above in Table 4.2 were implemented at the facilities listed in Table 4.1 and are described below:

- SC-11 – Spill Prevention, Control, and Cleanup: Spill kits were located in all vehicles.
- SC-33 – Outdoor Storage of Raw Materials: Plastic tarps covered raw materials in the yard, equipment was covered by canopies, and the material was covered by a permanent overhead structure or stored indoors. Materials associated with street maintenance activities were stored at the Maintenance and Operations Facility.
- SC-34 – Waste Handling and Disposal: Paint waste was returned to the maintenance yard where it was transferred directly from the generating vehicle to secured storage containers. This was done within a proper containment area in case of any accidental spillage. These containers were clearly marked and stored until arrangements were made for a certified waste management company to remove them and transfer them to an approved facility.
- SC-41 – Building and Grounds Maintenance: In the event that any pressure washing was necessary, all wash water was recovered for proper disposal. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevents any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking and Storage Area Maintenance: Parking lots and storage areas were swept biweekly.
- SC-60 – Housekeeping Practices: All maintenance vehicles are equipped with spill kits. Work sites were swept and all debris was removed upon completion of any asphalt or concrete repair.
- SC-70 – Road and Street Maintenance: Storm drain inlets were protected using rock bags prior to the start of any maintenance activities. Concrete wash out was performed on a plastic tarp and contained to prevent any discharge to the storm drain. Street sweeping was performed for all curbed streets and municipal parking lots in the City. Table 4.3 below indicates the distance swept in curb miles, frequency, and amount of materials removed as a result of the street sweeping activities. In total, there were approximately 19,440 curb miles of streets swept from July 1, 2011 to June 30, 2012.

Table 4.3: Street Sweeping Data

Priority[1]	Description	Distance	Minimum Frequency	Material Removed
High[2]	Arterials/seawall/Downtown	54.5 curb miles	Four times Monthly	1160 tons/ Annually
Medium	Residential	1000 curb miles	Twice Monthly	
Low	Alleys	6.5 curb miles	Twice Monthly	
Parking Lots	54 lots	27 acres	Twice Monthly	

[1]Priority is based on the volume of trash and debris generated at these types of streets - streets which generate high volumes of trash are High Priority; streets which generate moderate and low volumes of trash are medium and low priority respectively.
[2]Downtown streets were swept twice weekly

- SC-71 – Plaza and Sidewalk Cleaning: A self-contained wet sweeper was used on all tile sidewalks in the downtown area on a scheduled basis.

- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers were stored inside and used sparingly in accordance with required application practices.
- SC-75 – Waste Handling and Disposal: All materials were hauled directly to the transfer station and were covered.

4.4 Flood Management Projects/Flood Control Devices

4.4.1 Background

This section includes BMPs and an inventory of the City's Flood Management Projects and Flood Control Devices which are deemed High Priority areas according to Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's 2008 JURMP. This section also includes a description of the Storm Drain Maintenance Program activities.

4.4.2 Source Characterization

The municipal separate storm sewer system is the only High Priority Flood Management Projects and Flood Control Devices on the City's municipal inventory, as updated for the 2008 JURMP. The municipal separate storm sewer system is inclusive of the City's flood management projects and flood control devices.

4.4.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.4 were implemented throughout the City's MS4.

Table 4.4: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-21 Vehicle and Equipment Cleaning
SC-34 Waste Handling and Disposal
SC-60 Housekeeping Practices
SC-74 Drainage System Maintenance
SC-75 Waste Handling and Disposal

4.4.4 Program Implementation

Each of the applicable BMPs listed above in Table 4.4 were implemented where applicable pertaining to the municipal separate storm sewer system and are described below.

- SC-11 – Spill prevention, Control, and Cleanup: All vehicles have spill kits and key vehicles carry hydrocarbon booms. All trash was placed in 55 gallon trash bags. The maintenance sweeper truck was called out to assist in spill cleanup when necessary.

- SC-21 – Vehicle and Equipment Cleaning: All vehicles used in flood control device cleaning were washed at fleet maintenance using an enclosed pressure wash system. The system has a secondary water and oil separator plumbed into the sanitary sewer system.
- SC-34 – Waste Handling and Disposal: Trash was hauled to transfer station. Debris and other organic material were transferred and deposited at 2400 Tamarack Avenue in three concrete covered bins. The material was then tested for contaminants and hauled to a landfill or appropriate facility upon receipt of permissible test results.
- SC-60 – Housekeeping Practices: Trash was removed from these areas of the MS4 on a routine basis.
- SC-74 – Drainage System Maintenance: A small self-contained vacuum with pressure washer was used to clean the inlets. All material in the drain box was removed by the vacuum. Disposal of the water and material occurred using a filter sock, allowing water to be decanted into the sanitary sewer system. The solid material was taken to the Tamarack site described above. All trash was removed from the MS4, placed in 55 gallon trash bags, and placed in a 40 cubic yard roll off dumpster that is covered. The material was then transported to Palomar Transfer Station for disposal. Data pertaining to maintenance activities of the MS4 is in Table 4.5 below.

Table 4.5: MS4 Maintenance

Structure	Inspected	Exceeding Cleaning Criteria	Cleaned	Amount of Material Removed (tons)
Catch Basin/Inlet	3,407 units	331	Anthropogenic trash removed 100%	37
MS4 miles	2,000 linear feet	N/A	2000 linear feet	0.10
Open Channel miles	32,000 linear feet	N/A	0 linear feet	0

- SC-75 – Waste Handling and Disposal: Described under SC-34 and SC-74 above.
- BMPs to limit infiltration from sanitary sewer to storm drain system: a preventive maintenance schedule was implemented that includes jet rodding, and vactoring the sanitary lines throughout the city of Carlsbad. Closed circuit television was used for investigations in sewer lines. In addition, engineering standards described below prevent infiltration of sewage to the MS4.

  The City of Carlsbad's Engineering Standards employed several measures to prevent sewage intrusion into municipal separate storm sewer systems (MS4).

  1. All gravity sewer pipes and laterals are required to have gasketed joints, which create water tight joints (Volume 1, Chapter 6, Item 3.A, 3.C, and 3.F). The water tight joints are tested using the methods indicated in Standard Specifications for Public Works Construction (SSPWC) section 306-1.4. The water tight test methods include a post-installation closed circuit television (CCTV) inspection and an air pressure test where the sewer line must sustain 2.5 to 3.5 psi gage pressure for at least 2 minutes after being pressurized to 3.0 psi.
  2. All gravity sewer lines are required to follow engineering standard for the amount of flow they can carry. During peak hour dry weather season the pipe shall be designed to carry a flow depth of 0.5 (or 0.75 depending on the pipe size) the diameter of the pipe (Volume 1, Chapter 6, Item

4.C). This design requirement prevents the pipe from becoming full, which would pressurize the pipe and potentially cause a leak.

3. Per Carlsbad's Engineering Standard GS-6 and GS-6A, the sewer lines are typically located at an elevation deeper than the storm drain line, which further prevents sewage intrusion into MS4. In the event of a sewage pipe leak, the leakage flow will naturally gravitate below the sewer line rather than up to the storm drain line.
4. The standard horizontal separation between sewer and storm drain is 13 feet, which further prevents sewage intrusion into MS4.
5. In special cases where storm drain lines are installed at a depth greater than that of sewer lines, additional design standards are required such as water tight joints or encasements (Volume 1, Chapter 5, Item 1.G).

- BMPs and Treatment Control BMPs: Storm Drain Inserts including fossil filters and rapid flow BMPs are in place at various storm drain locations throughout the City. Fossil filters removed trash and hydrocarbons, while debris catchers were installed to prohibit anthropogenic trash and debris from entering the storm drain system. City maintained desiltation basins were inspected annually prior to the rainy season and maintained as necessary. Table 4.6 lists the BMP or TCBMP, location, quantity, inspections required and inspections completed.

Table 4.6: Public BMPs and TCBMPs

Type	Location	Number	Inspections Required	Inspections Completed
Debris Catcher	Carlsbad Boulevard	12	12	12
	State Street	4	4	4
	Grand Avenue	3	3	3

	Calle Conifera @ Corte Brezo	1	1	1
	Sand Shell w/end	1	1	1
	Mica & Poinsettia	1	1	1
	NE corner of ECR & Gateway	1	1	1
	Quartz & Poinsettia	1	1	1
Total		231	358	358

Inspection results and findings for the Publicly owned BMPs and TCBMPs showed that 90 % were in good condition and approximately 11 tons of anthropogenic trash was removed during the reporting period.

4.5 Fire Stations

4.5.1 Background

There are six fire stations in the City, which are high priority areas according to the City's JURMP. The inventory and BMPs for these facilities are described below.

4.5.2 Source Characterization

Table 4.7 below lists the High Priority Fire Stations on the City's 2008 JURMP inventory.

Table 4.7: Fire Stations

1	FIRE STATION #1	1275 CARLSBAD VILLAGE DR
2	FIRE STATION #2	1906 ARENAL RD
3	FIRE STATION #3	3701 CATALINA DR
4	FIRE STATION #4	6885 BATIQUITOS DR
5	FIRE STATION #5	2540 ORION WY
6	FIRE STATION #6	7201 RANCHO SANTA FE ROAD

4.5.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.8 were implemented at the High Priority facilities listed above.

Table 4.8: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-21 Vehicle and Equipment Cleaning
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices

SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.5.4 Program Implementation

Each of the applicable BMPs listed above in Table 4.8 were implemented at the facilities listed in Table 4.7 and are described below. In addition, training and pollution prevention BMPs specific to the Fire Department are described below.

Training:

- The City's Reclaimed Water Facility continued to be utilized for fire engineer training and testing. A training trailer facilitated engineer operations, pump testing, and other wet training opportunities. The Facility allowed for wet training and testing opportunities while ensuring that no water is discharged to the MS4.
- Conduct training and testing at other fire agencies Training Facilities which recycles the water that is being discharged (i.e. Rancho Santa Fe and San Marcos Fire Departments).Suitable locations were selected to provide "wet" training opportunities for personnel, while ensuring that appropriate BMPs were in place to protect the storm drains and eliminate discharges to the MS4. These sites were generally located on pervious surfaces with no potential for discharge to the storm drain system.
- A representative from the Fire Department attended and participated in the City's Storm Water Committee meetings when available.

Pollution Prevention:

- Dry cleanup methods were used to reduce water use. The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations. Awareness was heightened at fire scenes to minimize the potential for excessive water flow.
- Materials were recycled where possible.
- Storm Water Manuals were developed for each station which include SWPPPs with site maps, inspection reports, facility specific spill response procedures, training records, and department policies.
- SC-11 – Spill Prevention, Control, and Cleanup: Spill response equipment and materials are clearly identified and staged in accessible locations at each station. Awareness was heightened at incident scenes to contain potential discharges (once the scene had been stabilized) to prevent pollutants from entering the MS4. The Department continued implementation of the City's spill response procedure for incidents that occur on City streets. Absorbent materials are kept on all engines. The spill response plan is to apply absorbent, sweep material, place in bags, and remove from site for proper disposal.
- SC-21 – Vehicle and Equipment Cleaning: The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Vacuum equipment was purchased to recover and contain all wash water from vehicle washing activities occurring at the Fire Stations. Fire Station 5 currently has a pressure washer for vehicle and equipment cleaning to minimize the amount of water being used. Five more pressure washers have been approved and purchased for the other five fire stations. Pressure washers are now installed and in service at all six fire stations.

- SC-34 – Waste Handling and Disposal: Waste containers were inspected regularly for leaks and to ensure that lids remained closed. Waste container areas were inspected and swept as necessary to keep area free of trash and litter.
- SC-43 – Parking/Storage Area Maintenance: Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations.
- SC-60 – Housekeeping Practices: Fire stations are kept clean and orderly. Wash water was disposed of properly. Sweeping material was disposed of properly. Training on storm water and spill response was provided regularly.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping are used wherever possible; pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-75 – Waste Handling and Disposal: Solid waste was collected and disposed of properly at appropriate disposal facilities (Palomar Transfer Station, Waste Management) in accordance with all applicable laws and regulations. Waste containers were inspected regularly for leaks and to ensure that lids remained closed. Waste container areas were inspected and swept as necessary to keep area free of trash and litter. Liquids were not disposed of in waste containers. Recycling was implemented where possible; bins were provided.

4.6 Recreation Facilities

4.6.1 Background

The Monroe Street Pool is the only Recreation facility on the City's municipal inventory listed as a High Priority area. This is primarily due to the chemicals stored on-site. The pool's chemical systems are liquid chlorine (sodium hypochlorite) and muriatic (hydrochloric) acid/carbon dioxide, with 500 and 300 gallon double wall containers, respectively. BMPs implemented at this facility are described below.

4.6.2 Source Characterization

The only High Priority Recreation facility on the City's 2008 JURMP inventory was the Monroe Street Pool.

4.6.3 Site Specific BMP Requirements

The site specific BMPs, listed below in Table 4.9, were implemented at the Monroe Street Pool.

Table 4.9: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-31 Outdoor Container Storage
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-60 Housekeeping Practices
SC-72 Fountains & Pools Maintenance
SC-73 Landscape Maintenance

4.6.4 Program Implementation

BMPs listed in Table 4.9 above were implemented at the Monroe Street Pool. BMPs implemented specific to this facility and its activities are described below.

- SC-11 – Spill Prevention, Control, and Cleanup: Commercial spill kits are kept onsite. A facility specific SWPPP was developed and is kept onsite. The SWPPP includes a spill response plan.
- SC-31 – Outdoor Container Storage: The majority of materials stored on-site are kept inside sheds. These areas were cleaned up and maintained regularly.
- SC-34 – Waste Handling and Disposal: Trash bins and containers are enclosed and covered. Lids remain closed and locked at all times and serviced weekly.
- SC-41 – Building and Grounds Maintenance: Staff performed daily parking lot inspections looking for litter, debris, and leaking vehicles. In the event that any pressure washing was necessary, all wash water was recovered for proper disposal. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-60 – Housekeeping Practices: Cleaning of pool decks was performed by sweeping in most cases. Occasionally, wash down was necessary and all wash water was directed to a daylighted sediment blocking maze swale.
- SC-72 – Fountains and Pools Maintenance: Water was de-chlorinated if discharging to the storm drain was necessary; however, this was a rare occurrence. All filter back wash was discharged to sewer. Overflow from pool decks was directed to the daylighted sediment blocking maze swale.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off. Soil testing was utilized to assess need for fertilizers and irrigation. Timing improvements on irrigation system have reduced water usage. Blowing and sweeping were used wherever possible. Pesticide, herbicide, and fertilizers were not stored onsite and used sparingly in accordance with required application practices.

4.7 Publicly Owned Treatment Works

4.7.1 Background

The City of Carlsbad is a member agency of the Encina Wastewater Authority which treats raw sewage to the secondary treatment level. The Carlsbad Water Recycling Facility intakes secondary treated water and treats it again to the tertiary level of treatment which is used as recycled water throughout the City of Carlsbad. This facility was determined to be High Priority as required in Order No. R9-2007-0001, Section D.3.a.(7)(a). The BMPs listed below were implemented at the Carlsbad Recycled Water Facility.

4.7.2 Source Characterization

The Carlsbad Recycled Water Facility is the only High Priority Publicly Owned Treatment Works on the City's 2008 JURMP inventory.

4.7.3 Site Specific BMP Requirements

The site specific BMPs listed in Table 4.10 were implemented at the Recycled Water Facility.

Table 4.10: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-60 Housekeeping Practices

4.7.4 Program Implementation

Each of the applicable BMPs listed above were implemented at the Carlsbad Recycled Water Facility and are described below.

- Employee Training: Employees were informed of activities that could potentially cause contamination of storm water and the importance of carefully conducting these activities in areas that do not discharge/drain to storm drains. Storm water pollution prevention and BMP brochures were available to everyone who works at the materials storage area. Subcontractors were informed about the storm water requirements and their responsibilities. Training consisted of informal "tailgate" meetings, formal classroom training, or self-guided training activities. Employees in targeted positions were trained annually on the requirements of the SWPPP. Employee training, at a minimum, included: SWPPP requirements; spill response and reporting; good housekeeping; BMP updates and implementation; and materials and waste handling and storage procedures.
- SC-11 – Spill Prevention, Control, and Clean-up: A current spill response plan was provided in the SWPPP. The spill response plan addressed measures to clean, abate, and prevent spills and leaks from entering the storm drain. Employees were trained on the elements of the plan. Rags and absorbents were readily accessible. Waste was disposed of properly. Dry cleanup methods were used whenever possible. Spills on dirt areas were cleaned up by digging up and properly disposing of contaminated soil. Spills over 10 gallons were reported to the Storm Water Protection Program and/or the appropriate spill response agencies immediately. Employees were trained to routinely check for leaks and spills.
- SC-22 – Vehicle and Equipment Repair: All vehicle repairs were performed off-site. When equipment repair was necessary, work was performed in covered, contained areas that were not susceptible to storm water runoff.
- SC-31 – Outdoor Container Storage: There were several chemical storage tanks stored outside under cover and in full secondary containment structures. See SC-33 below for more information.
- SC-33 – Outdoor Storage of Raw Materials: Secondary containment was implemented where materials are stored outside. Examples of temporary BMPs utilized are: a dike, berm, or filter on the down slope sides of any stockpiles. All containment devices used around stockpiles were maintained to work effectively and were replaced when necessary. The chemical storage tanks were contained within a concrete parapet wall enclosure. Spills within the chemical storage areas were contained within the concrete walls and drain to a sump. Where chemical deliveries occurred, a concrete pad conveyed flow to a curb inlet. From the curb inlet, flow was controlled by plug valves, directing the flow to the sump.
- SC-34 – Waste Handling and Disposal: Dumpsters were covered and maintained and checked frequently for leaks. Lids were kept closed at all times. Dumpsters were never cleaned out using water. When cleaning the containers, all rinse water from cleaning was routed to the sanitary sewer system. All wastes and construction debris were disposed of properly. Many materials and wastes

were recycled including broken asphalt and concrete, cleared vegetation, scrap metals, aluminum cans, and plastic bottles. Materials and debris that could not be recycled were taken to an appropriate landfill or disposed of as hazardous waste. The waste storage area was swept or otherwise cleaned frequently using dry methods to collect all loose solids for proper disposal. If the amount of waste accumulated appeared to frequently exceed the capacity of the dumpster**,** then another container was obtained and utilized or collection frequency was increased. Green waste consisting of clippings, cuttings and droppings of leafy and woody materials was disposed of properly at an approved composting location or permitted landfill.

- SC-60 – Housekeeping Practices: Site was kept free of litter and debris. Trash cans and recycling receptacles were located around the site to minimize litter. Material moving and transfer activities were scheduled during dry weather periods, where possible. Heavy equipment was maintained in good working condition. Areas were inspected frequently for leaks and repaired as needed. Major equipment repairs were performed away from the storage area. Paved surfaces were swept that drain to storm drains, creeks, or channels. Cleanup materials such as brooms, shovels, dustpans, and sweepers are stocked near the storage area. Paved storage areas were swept weekly for collection and disposal of loose solid materials, and were not hosed into a storm drain or conveyance ditch. Information was distributed on good housekeeping practices during employee training sessions and discussed at employee meetings. Good housekeeping tips and reminders were posted on employee bulletin boards.
- Source Control BMPs (specific to the Recycled Water Facility):
  - Flo-Guard inlet baskets at all curb inlets on site to collect oil and grease and debris from site.
  - Vegetated swale (approximately 400 feet) collects and treats runoff from a portion of the site.
  - Roof over chemical storage area.
  - Permanent secondary containment is in place around all chemical storage areas.
  - By-pass valves are installed at containment areas to divert rain water.

4.8 Sanitary Sewer Facilities

4.8.1 Background

The facilities listed in Table 4.11 are sewer lift stations owned and operated by the City. The table also includes the City's collection system. These have been determined to be High Priority areas according to Order No. R9-2007-0001 and the City's 2008 JURMP, primarily due to the presence of sewage and potential for contamination of surface waters resulting from sewer overflows. BMPs implemented at these facilities and BMPs applicable to maintenance of the collection system are described below.

4.8.2 Source Characterization

Table 4.11 below lists the High Priority Sanitary Sewer Facilities on the City's JURMP inventory.

Table 4.11: Sanitary Sewer Facilities

1	AGUA HEDIONDA SEWER LIFT STATION*	SDGE PLANT SITE
2	BATIQUITOS SEWER LIFT STATION	7382 GABBIANO LN
3	BUENA VISTA SEWER LIFT STATION*	JEFFERSON ST

*Operation and maintenance performed by Encina Wastewater Authority

4.8.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.12 were implemented at all Sanitary Sewer Facilities.

Table 4.12: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-34 Waste Handling and Disposal
SC-60 Housekeeping Practices
SC-75 Waste Handling and Disposal
SC-76 Sewer Utility Maintenance

4.8.4 Program Implementation

Each of the BMPs listed above were implemented at the facilities listed in Table 4.11 and are described below.

- SC-11 – Spill Prevention, Control, and Cleanup: Hazmat plans were drawn up and located in the SWPPP at each location. Spill kits are kept inside at all facilities. Secondary containment structures were implemented around generator fuel cells and around all chemicals stored on-site. Overflow response included immediate Vactor response, containment, and cleanup. For more details see City of Carlsbad SSORP spill mitigation and clean-up. All vehicles have spill kits.
- SC-20 – Vehicle and Equipment Fueling: Small equipment fueling was performed in secondary containment areas or over pervious surfaces. All locations have secondary containment for fuel spills or oil leaks. Fuel deliveries were performed by an outside contractor. Documentation is kept onsite.
- SC-22 – Vehicle and Equipment Repair: Pump repair occurred indoors Wet wells were cleaned every 6 weeks with Vactor equipment and staff ensured that there were no leaks or spills at the facilities.
- SC-31 – Outdoor Container Storage: The 55-gallon trash cans are covered with a liner.
- SC-34 – Waste Handling and Disposal: Trash and debris were removed on a regular basis.

- SC-60 - Good Housekeeping: Sweep and vacuuming were implemented instead of washing down. Blowers were used to clean off concrete and asphalt. All hoses are rolled up and stored off the ground.
- SC-75 – Waste Handling and Disposal: Trash and debris were removed on a regular basis. All trash cans or other containers are covered or closed.
- SC-76 – Sewer Utility Maintenance: All stations were inspected and cleaned daily. Vactors were checked for leaks during pre-trip inspections. All materials were discharged at Encina Wastewater Authority: solids into grit bin, liquids at headworks. Recently the City began to implement FOG requirements as per Order 2006-003, including revision of ordinances, public outreach, and inspections of FOG generating facilities.

4.9 Water Facilities

4.9.1 Background

There are seven High Priority water facilities on the City's JURMP inventory. The sites are High Priority facilities due to chemical storage on-site or due to their location in the watershed. BMPs implemented at the sites according to the JURMP are described below.

4.9.2 Source Characterization

The table below lists the High Priority Water Facilities on the City's JURMP inventory.

Table 4.13: Water Facilities

1	MAERKLE DAM RESERVOIR/ PUMP/ CHLORINATION STATION	5203 SUNNY CREEK RD
2	RESERVOIR C	CALAVERA DR
3	RESERVOIR ELM	CARLSBAD VILLAGE DR & DONNA DR
4	RESERVOIR LA COSTA HI	ALGA RD
5	RESERVOIR LA COSTA LO	ALGA RD
6	CALAVERA PUMP STATION	3600 BLOCK COLLEGE DR
7	TAP PUMP STATION	6400 BLOCK OF EL CAMINO REAL

4.9.3 Site Specific BMP Requirements

The site specific BMPs listed in Table 4.14 were implemented at the water facilities listed above.

Table 4.14: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-60 Housekeeping Practices
Water Operations and Maintenance

4.9.4 Program Implementation

Each of the BMPs listed above were implemented at the facilities listed in Table 4.13 and are described below.

- Pollution Prevention: Automatic shut-off valves have been installed.
- SC-11 – Spill Prevention, Control, and Cleanup: At facility 1, specialized equipment has been implemented to mitigate a chlorine release; chlorine gas detectors, vacuum regulators, automatic shut-off valves, and chlorine scrubber systems. In addition to the equipment, all chemicals are stored in containment structures designed to contain stored amount. All chemicals are inspected prior to off-loading for containment defects and returned if any defects are noted. Operations Staff have the necessary hazardous materials training to be considered "qualified" to assess the severity of a chlorine leak. A site specific SWPPP was developed for Maerkle Reservoir.
- SC-20 – Vehicle and Equipment Fueling: Diesel deliveries were performed by outside contractors, following all required BMPs.
- SC-22 – Vehicle and Equipment Repair: All storm drain collectors were regularly inspected and cleaned accordingly. All building floor drains were inspected and verified to be isolated from discharge system.
- SC-31 – Outdoor Container Storage: The 55-gallon trash cans with liners were utilized and trash was removed on a regular basis.
- SC-33 – Outdoor Storage of Raw Materials: No raw materials are stored outdoors.
- SC-60 - Good Housekeeping – Increased sweeping schedule of asphalted areas was implemented. Chemicals supplies are kept at a minimum to reduce potential releases.
- Water Operations and Maintenance:
    - Repairs and New Line Installation: All flushing requirements follow established BMP's regarding de-chlorination and related sediment recovery concerns.
    - Reservoir Cleaning and Dewatering: All reservoir de-watering follows pre-established BMP's addressing daily water volume discharge amounts, de-chlorination, monitoring of chlorine residuals and sediment removal and disposal

4.10 Municipal Yards

4.10.1 Background

Table 4.15 below lists the City's municipal yards that were determined to be High Priority areas as required per Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's JURMP. Site specific BMPs implemented at each facility are listed and described below.

4.10.2 Source Characterization

The table below lists the High Priority Municipal Yards on the City's JURMP inventory.

Table 4.15: Municipal Yards

1	FLEET MAINTENANCE FACILITY AND PARKING LOT	2480 IMPALA DR
2	M&O OPERATIONS YARD AND PARKING LOT	5950 EL CAMINO REAL
3	OAK OPERATIONS YARD AND PARKING LOT	405 OAK AV
4	PARKS MAINTENANCE/STORAGE/PARKING LOT	1166 CARLSBAD VILLAGE DR

4.10.3 Site Specific BMP Requirements

Site specific BMPs listed in Table 4.16 were implemented at Municipal Yards, where applicable. For example, vehicle and equipment repair is not performed at all facilities; therefore SC-22 does not apply to all yards.

Table 4.16: Best Management Practices

Storm Water Pollution Control Plan
SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-21 Vehicle and Equipment Cleaning
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-61 Safer Alternative Products
SC-70 Road and Street Maintenance
SC-71 Plaza and Sidewalk Cleaning
SC-72 Fountains & Pools Maintenance
SC-73 Landscape Maintenance
SC-74 Drainage System Maintenance
SC-75 Waste Handling and Disposal

4.10.4 Program Implementation

BMPs listed in Table 4.16 were implemented specific to each facility and are described below.

4.10.4.1 FLEET MAINTENANCE YARD

- Employee Training – Storm water protection was covered as part of safety meetings.
- Pollution Prevention – Recycling containers were provided at the ends of the fuel pump inlands.
- Storm Water Pollution Control Plan: A site specific SWPPP was developed and is maintained on-site.
- SC-11 – Spill Prevention: Spill kits containing absorbents and booms are located at the fuel island and south west of the fuel island within the yard, including the shop area.
- SC-20 – Vehicle and Equipment Fueling: Spill kits are located adjacent to the vehicle fueling area.
- SC-21 – Vehicle and Equipment Cleaning: All vehicle washing was performed on the wash rack, inside the wash bay. This included pressure washing and hand washing of vehicles and equipment. Wash waste water is treated prior to release to the sewer system.
- SC-22 – Vehicle and Equipment Repair: All maintenance and repairs to Fleet vehicles were performed inside the shop bays whenever possible. Any vehicle on the dead line that had a leak had a drip pan put under it until it is brought into the shop. Any leaks or spills were handled immediately, with either the drip pans or an absorbent. The absorbent was picked up immediately

and stored in the drums labeled for waste absorbent. Damaged equipment and wrecked vehicles with a potential for discharge were covered with tarps.

- SC-31 – Outdoor Container Storage: Outdoor containers that include full coverage and containment of materials are utilized for storage of tires and motorcycles (two 40 yard containers) and for storage of fire extinguisher service items, used batteries, and oil filters for recycling (sheds).
- SC-33 – Outdoor Storage of Materials: All materials stored outside are kept under one of the provided canopies or in the shed. City-generated hazardous waste is stored in the hazardous waste shed (covered) in an appropriate container and on a pallet. This includes batteries and waste metals. A chain link fence was installed to prevent unauthorized dumping at the Facility. Signage was also in place to inform citizens that materials were not to be left at the Facility and provided information on proper disposal facilities.
- SC-34 – Waste Handling and Disposal: Waste oil was drained into the waste oil containers or into a drip pan and then into a waste oil container. The containers were emptied as needed into the waste oil in-ground tank as needed. Used batteries were stored in the provided container inside the shed. Used antifreeze was drained into one of the large drip pans, then transferred to the poly drums inside the shed. Scrap metal is stored in the provided container and covered. Used tires are stored in the covered tire storage bunker.
- SC-41 – Building and Grounds Maintenance: Language was included in contracts requiring storm water compliance and allowing the City to implement BMPs as needed with all associated costs recovered from the contractor. In the event that any pressure washing was necessary, all wash water was recovered for proper disposal. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: The Fleet Yard was swept via Sweeper-truck on a monthly schedule, clean ups of spills were done with dry absorbent and picked up directly, all leaks were captured with drip pans and brought into the shop for service.
- SC-60 – Housekeeping Practices: The shop was either swept or mopped. All debris was either picked up and put into appropriate containers or, in the case of wet mopping, all water was directed to the drains inside the shop that flow to our separator. All contaminated floor sweep was stored in labeled containers and removed by our hazardous waste contractor. The Fleet yard was inspected regularly as well as before and after storm events. Areas inspected were the shed and tire storage area at the north end of the shop, the waste tire and hazardous waste bunker along the north fence line, the two large dumpsters, the two trash and two recyclables cans at the fuel pumps, the spill kits for the fuel island, the storm drains on-site and the paved lot and dirt area at the east end (which is now fenced). Inspection criteria: all waste drums/containers are to have secondary containment, all materials are to be stored in covered areas. Appropriate areas included a shed and two canopies plus the hazardous waste container and waste metal containers. The dumpsters, trash cans, recyclables cans and metal storage were kept closed and no trash fell out of them. The filters at the storm drains were inspected for cleaning or replacement. The lot was inspected for spills and cleaned up as needed. Vehicles in the lot were inspected for leaks; action was taken to contain leaks as needed. The wash rack area, trash containers area, and drains were inspected for clogging from debris. All employees always took immediate action to correct any issues found during inspections of the Fleet yard directly.
- SC-71 – Sidewalk Cleaning: Where power washing was necessary, wash water was not allowed to drain to the storm drain system and was directed to sanitary sewer or to pervious surfaces where possible.

- SC-72 – Fountain and Pools Maintenance: Not applicable.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off. Soil testing was utilized to assess need for fertilizers and irrigation. Timing improvements on irrigation system have reduced water usage; blowing and sweeping are used wherever possible. Pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-74 – Drainage System Maintenance: Fossil filters have been installed at storm drain inlets in yard and were inspected and maintained regularly.
- SC-75 – Waste Handling and Disposal: Signage for proper Household Hazardous Waste disposal is posted on site.

4.10.4.2 MAINTENANCE AND OPERATIONS YARD

- Pollution Prevention – Native soils were used whenever possible to backfill trenches: the amount of dirt and soil stockpiled on site was minimized; filtration socks were used to dewater trenches.
- Storm Water Pollution Control Plan: A site specific SWPPP is kept on-site and maintained regularly.
- SC-11 – Spill Prevention, Control, and Cleanup: Secondary containment where fuel and oil are stored, also yard has spill kits in each vehicle. A hazmat plan has been implemented and is located in the SWPPP.
- SC-20 – Vehicle and Equipment Fueling: Small equipment fueling was performed in the secondary containment area or over pervious surfaces.
- SC-21 – Vehicle and Equipment Cleaning: Trash was removed daily from the work trucks, otherwise no cleaning or washing was allowed at M&O yard.
- SC-22 – Vehicle and Equipment Repair: No repairs were performed at yard.
- SC-31 – Outdoor Container Storage: Container storage areas are covered using overhead canopies.
- SC-33 –Outdoor Storage of Materials: Where necessary, plastic tarps cover raw materials in the yard; equipment is covered by canopies; material is covered by a permanent overhead structure or stored indoors.
- SC-34 – Waste Handling and Disposal: All material was put into a covered roll-off container.
- SC-41 – Building and Grounds Maintenance: The grounds and parking lot were swept twice a month by street sweeper and weekly by hand when necessary. Trash was removed daily. Erosive areas and slopes were protected by hydroseed, coconut mats, sand bags, and fiber rolls. Where painting, scraping, or sandblasting were necessary, all material was disposed of properly and drop cloths were used where possible. Where feasible, work was performed under cover and over pervious areas. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. Parking lots are spot cleaned for all spills weekly. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: The parking lot was swept twice a month by a street sweeper; ingress/egress to unpaved area of yard was protected by rocks and shaker plates. In FY 2011-12 a new concrete driveway was installed, installed 3 tons of three-inch minus rock, and installed 200 feet silt fence.
- SC-60 – Housekeeping Practices: Recycle bins, dumpsters, and cans were covered and kept closed.
- SC-61 – Safer Alternative Products: Used less hazardous cleaning materials and water-soluble paints for mark outs.
- SC-70 – Road and Street Maintenance: Not Applicable
- SC-71 – Sidewalk Cleaning: Sweep and/or vacuum sidewalks.

- SC-72 – Fountain and Pools Maintenance: Contractor maintained fountain at facility. No water was discharged during maintenance activities; all filter material was retained on-site for proper disposal. Due to water restrictions to the fountain was turned off in August 2009
- SC-73 – Landscape Maintenance: All material was cut and carried off by hand in burlap bags; no residue remains on site. Irrigation systems were checked regularly to avoid run-off; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-74 – Drainage System Maintenance: Rapid Flow filters and storm drain structures were cleaned annually. A pilot program was implemented using the innovative "Drivable Grass" which drains the parking lot through subsurface drainage system to reduce storm water flowing directly into MS4. In March, 2011 we refurbished the storage lot with 10 yards of crushed rock and three tons of 3 inch minus rock at the ingress and egress. We also upgraded the drainage runoff area with straw waddles and installed silt fence around the perimeter of the lot.
- SC-75 – Waste Handling and Disposal: All material was handled properly and covered in yard roll-off dumpsters, or other appropriate containers. Also new paper recycling bins were installed.

4.10.4.3 <u>OAK YARD</u>

- Storm Water Pollution Control Plan (SWPPP description): A site specific SWPPP was implemented at the Oak Yard.
- SC-11 – Spill Prevention, Control, and Cleanup: All liquids and hazardous materials are stored in locked containment lockers. These are located within secondary containment areas. Large spill containment kits are strategically located within the yard. MSDS binders are strategically placed throughout the yard.
- SC-20 – Vehicle and Equipment Fueling: Small equipment fueling was done only in the secondary containment area.
- SC-21 – Vehicle and Equipment Cleaning: Trash was removed daily from the work trucks. No cleaning or washing was allowed in the Oak yard
- SC-22 – Vehicle and Equipment Repairs: No repairs were done at the Oak yard.
- SC-31 – Outdoor Container Storage: Oak yard has storage areas covered with overhead canopies.
- SC-33 – Outdoor Storage of Raw Materials: No raw materials are stored at the Oak yard.
- SC-34 – Waste Handling and Disposal: Paint waste was returned to the maintenance yard where it was transferred directly from the generating vehicle to secured storage containers. This was done within a proper containment area in case of any accidental spillage. These containers are clearly marked and stored until arrangements were made for a certified waste management company to remove them and transfer them to an approved facility. Any other debris was placed in a canopy covered 40 yd roll-off. Dumpsters were covered and all other trash receptacles had lids.
- SC-41 – Building and Grounds Maintenance: The Oak yard was swept twice a month by a self-contained street sweeper and weekly by hand. Trash was removed daily.
- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control and lot was swept weekly.
- SC-60 – Housekeeping Practices: Recycle bins, dumpsters, and cans are covered. Yard clean-up was performed by-weekly with monthly site inspections.
- SC-61 – Safer Alternative Products: Not Applicable
- SC-70 – Road and Street Maintenance: Not Applicable
- SC-71 – Sidewalk Cleaning: Not Applicable

- SC-72 – Fountain and Pools Maintenance: Not Applicable
- SC-73 – Landscape Maintenance: Not Applicable
- SC-74 – Drainage System Maintenance: Debris was captured prior to entry into the vegetated swale. The drainage swale at the south end of the property was paved.

4.10.4.4 PARKS MAINTENANCE YARD

- Storm Water Pollution Control Plan (SWPPP description): Site specific SWPPPs were developed and implemented at each of these sites.
- SC-11 – Spill Prevention, Control, and Clean-up; Spill kits are located on-site; drip pans were placed under all equipment kept on-site; spill kits are located in all vehicles; spill response plan is updated and kept on-site.
- SC-20 – Vehicle and Equipment Fueling: No vehicle or equipment fueling was performed on-site.
- SC-21 – Vehicle and Equipment Cleaning: Most equipment was dry-cleaned in designated areas located away from storm drains; where wet cleaning was necessary, it was performed over pervious surfaces in a manner that allowed all water to percolate, generating no runoff to the storm drain system.
- SC-22 – Vehicle and Equipment Repair: All equipment was repaired in designated areas away from storm drains; no vehicle repair was performed on-site.
- SC-31 – Outdoor Container Storage: All chemical products are kept in locked storage bins with overhead coverage and containment.
- SC-33 – Outdoor Storage of Raw Materials: All bagged materials are stored on pallets and covered with canopies; canopies are also used to cover scrap metals and equipment.
- SC-34 – Waste Handling and Disposal: All waste containers are covered.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. Where painting, scraping, or sandblasting were necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevents any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control.
- SC-60 – Housekeeping Practices: Weekly yard clean-up and litter removal and monthly site inspections were conducted.
- SC-61 – Safer Alternative Products: IPM practices and green waste applications were in use; artificial turf and permeable surfaces were implemented where feasible; organics from tree trimming were mulched or composted and used for landscaping.
- SC-70 – Road and Street Maintenance: Not applicable at yard sites.
- SC-71 – Plaza and Sidewalk Cleaning: In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
- SC-72 – Fountains and Pools Maintenance: Not applicable at park sites.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on downtown irrigation system have reduced water usage; blowing and sweeping were used wherever possible;

pesticide, herbicide, and fertilizers are stored in secure lockers and used sparingly in accordance with required application practices and only by qualified applicators.

- SC-74 – Drainage System Maintenance: Storm drain inlets were maintained by City's Storm Drain Maintenance Division on an annual basis.
- SC-75 – Waste Handling and Disposal: All non-recyclable waste was disposed of properly.
- Site Design - Parks Maintenance/Storage Yard drains to a pervious area allowing low flows to infiltrate into the soils instead of running into the storm drain.

4.11 Parks Facilities

4.11.1 Background

The table below lists City parks facilities that were determined to be High Priority areas based on the criteria established in Order No. R9-2007-0001, Section D.3.a.(7)(a) and the City's JURMP. High Priority parks facilities were defined as developed park sites containing landscaping, building(s), and parking lot(s) and developed park sites within an Environmentally Sensitive Area.

Site specific BMPs implemented at each facility are listed and described below.

4.11.2 Source Characterization

The table below lists facilities on the inventory that are high priority and includes 16 parks and recreation facilities.

Table 4.17: Parks

	Park Name	Location
1	AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	6425 AMBROSIA LN
2	BEACH BLUFF TRIANGLE/PARK	CARLSBAD BLVD AT PINE
3	CADENCIA PARK	3310 CADENCIA ST
4	CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	2997 GLASGOW DR
5	CARRILLO RANCH AND PARKING LOT	5200 FLYING LC LANE
6	CHASE FIELD	3349 HARDING ST
7	HIDDEN CANYON PARK (LARWIN) AND PARKING LOT	2685 VANCOUVER STREET
8	HOLIDAY PARK AND PARKING LOTS	3200 PIO PICO DR
9	HOSP GROVE PARK AND PARKING LOT	JEFFERSON & MONROE
10	LA COSTA CANYON PARK AND PARKING LOT	3020 PUEBLO ST
11	LAGUNA RIVIERA PARK	4900 KELLY DR
12	MAGEE PARK AND PARKING LOT	258 BEECH AVE
13	PINE PARK AND PARKING LOT	3333 HARDING ST
14	POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	6600 HIDDEN VALLEY RD
15	STAGECOACH COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOT	3420 CAMINO DE LOS COCHES

	Park Name	Location
16	ZONE 5 PARK	CAMINO HILLS AND FARADAY AVE

4.11.3 Site Specific BMP Requirements

Site specific BMPs listed below were implemented at Parks Facilities.

Table 4.18: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-21 Vehicle and Equipment Cleaning
SC-22 Vehicle and Equipment Repair
SC-31 Outdoor Container Storage
SC-33 Outdoor Storage of Raw Materials
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-61 Safer Alternative Products
SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.11.4 Program Implementation

Each of the BMPs listed above were implemented at the facilities listed in Table 4.17 and are described below.

- SWPPP: Aviara, Poinsettia, and Stagecoach Parks also house small maintenance yards. Because of the added potential to contribute to storm water pollution, SWPPPs were required by the City for these facilities. Aviara, Poinsettia and Stagecoach Parks have developed and fully implemented SWPPPs. .
- SC-11 – Spill Prevention, Control, and Cleanup; Spills kits are located on-site; spill response plan was updated and kept on-site
- SC-20 – Vehicle and Equipment Fueling: Minor equipment fueling was performed over pervious surfaces when necessary.
- SC-21 – Vehicle and Equipment Cleaning: Most equipment was dry-cleaned in designated areas located away from storm drains; where wet cleaning was necessary, it was performed over pervious surfaces in a manner that allowed all water to percolate, generating no runoff to the storm drain system.
- SC-22 – Vehicle and Equipment Repair: Equipment was repaired in designated areas away from storm drains; no vehicle repair is performed on-site.
- SC-31 – Outdoor Container Storage: Chemical products are kept in locked storage bins with overhead coverage and containment.
- SC-33 – Outdoor Storage of Raw Materials: All bagged materials are stored on pallets and covered with canopies; canopies were also used to cover scrap metals and equipment.

- SC-34 – Waste Handling and Disposal: All waste containers are covered; pet waste bag dispensers and containers were provided at all parks where dogs are allowed.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. Where painting, scraping, or sandblasting were necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were are always cleaned in a way that prevents any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control.
- SC-60 – Housekeeping Practices: Park sites are kept clean and orderly; all debris was removed in a timely fashion and hard-scape areas were swept or blown daily; wash water, sweepings, and sediments were disposed of properly; recyclable materials were recycled; spill response plans were reviewed as part of routine training with staff.
- SC-61 – Safer Alternative Products: Integrated Pest Management Practices (IPM) practices and green waste applications were in use and are described below.

  In conjunction with the Integrated Pest Management (IPM) program, the Parks Maintenance Division continues to utilize slow release fertilizers in an effort to reduce the frequency of applications while minimizing the potential of fertilizer runoff. In some cases, staff reduced the recommended amount of fertilizer per 1,000 square feet by 50% to minimize flush of growth on turf which in turn reduces the amount of clippings. To help monitor fertilizer applications, the Parks Maintenance Division instituted a soil testing program which defines soil properties, allowing the correct monitoring of fertilization applications for proper use and desired outcome. In accordance with the new IPM , pesticide and herbicide applications were applied sparingly. Staff continues to search for alternative methods for pest control applications that are proven to be safe and effective.

  As required by the Department of Pesticide Regulation, all chemical applications are reported to the County Agriculture Department on a monthly basis. As identified in the JURMP, all applicable BMPs were implemented to address pesticide, herbicide, and fertilizers for sources of pollution.

  Specific BMPs implemented during FY 2011-12 include:

  - **Education:** A training program for identifying and defining chemicals, proper handling, application, storage, disposal, irrigating, and using non-synthetic alternatives was implemented. At many of the training seminars, new (IPM) methods were often presented for consideration by the department. All training information including BMPs were provided to personnel to keep in personalized folders for individual use. In addition, a master application manual that includes all Storm Water BMPs, training, and inspections was also prepared.

  - **Non-chemical applications:** Some pest problems can be eliminated or controlled by handpicking, pruning, or high pressure spraying with water. Many pest problems can be reduced or eliminated by removing affected leaves or plant parts. During FY 2010-11, efforts were made to improve upon our (IPM) system in the City's Parks and Downtown Village areas. The release of lady-bird beetles at City Parks and the Downtown Fountain

areas to combat infestations of aphids have proven successful in eradicating the pests. Other methods used to decrease the department's dependency on chemical sprays during FY 2011-12 include:

- Increased mulching of planter beds to smother weed germination
- Increased tilling of planter beds to kill young weed sprouts
- The use of organic plant derivative pesticide sprays such as Safer brand Products
- The use of water to spray plants infested with giant whitefly
- The removal of dying or diseased plant material to decrease the presence of harmful organisms.
- Hand weeding when feasible

- Pesticide application was performed on an as needed basis and was performed internally or by an outside pest control contractor after diagnosis.

- **Native Vegetation:** The Parks Maintenance Division continued to explore opportunities to use native vegetation to control pests, reduce chemical application, and maintain the aesthetic values of the Parks and Downtown Village areas.

- **Schedules for Irrigation and Application** – Irrigation systems were monitored and inspected on a weekly basis in an effort to minimize water loss. In addition, the use of evapo-transpiration (ET) gauges for controlling the irrigation system helped to reduce watering times based on evaporation and transpiration of moisture from plants and turf. ET gauges were installed at Poinsettia, Stagecoach, Pine, Aviara and Calavera Park. These gauges also helped staff to adjust watering times at other locations that were not connected to the gauge. Most large community parks are controlled by a Central Command Irrigation Program (CAlSense). During FY 2011-12, all irrigation systems were inspected weekly and repaired as necessary to prevent excess runoff. At Poinsettia, Aviara, Stagecoach and Pine Parks, synthetic turf has been installed on the soccer and sports fields, which requires no fertilization, weeding, or watering. The synthetic turf has proven to be particularly successful in eliminating the use of water for irrigation.

- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilization ; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside secure lockers and used sparingly in accordance with required application practices only by qualified applicators. Refer to description of (IPM) practices in SC-61 above.
- SC-75 – Waste Handling and Disposal: All non-recyclable waste was disposed of at an appropriate landfill or transfer station.
- Site Design – Desiltation basin was retrofitted at La Costa Canyon Park; pervious concrete was installed at Pine Park.

4.12 Administrative Areas

4.12.1 Background

One administrative building was determined to be a high priority facility based on its proximity to an environmentally sensitive area (ESA). This facility is the Safety Center, which includes a parking lot, police and fire department headquarters, and a skatepark.

4.12.2 Source Characterization

The only administrative building on the inventory that is a High Priority is the Safety Center.

4.12.3 Site Specific BMP Requirements

Site specific BMPs listed below were implemented at the Safety Center.

Table 4.19 Best Management Practices

SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-43 Parking/Storage Area Maintenance
SC-60 Housekeeping Practices
SC-71 Plaza and Sidewalk Cleaning
SC-73 Landscape Maintenance
SC-75 Waste Handling and Disposal

4.12.4 Program Implementation

Each of the BMPs listed above were implemented at the Safety Center and are described below.

- SC-34 – Waste Handling and Disposal: Dumpsters were covered and maintained and checked frequently for leaks. Lids were kept closed at all times.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. Where painting, scraping, or sandblasting was necessary, all material was disposed of properly and drop cloths were used where possible. Paint brushes and tools were always cleaned in a way that prevented any discharge from entering the storm drain. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-43 – Parking/Storage Area Maintenance: Dry-cleaning methods were used for debris control.
- SC-60 – Housekeeping Practices: Site was kept clean and orderly; all debris was removed in a timely fashion and hardscape areas were swept or blown routinely; wash water, sweepings, and sediments were disposed of properly; recyclable materials were recycled.
- SC-71 – Plaza and Sidewalk Cleaning: In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water

was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.

- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside and used sparingly in accordance with required application practices.
- SC-75 – Waste Handling and Disposal: All non-recyclable waste was disposed of properly.

4.13 Activities

4.13.1 Background

Four municipal activities were determined to be High Priority activities based on their potential to generate pollutants. These operations occur throughout the City and are required to implement BMPs as described in the JURMP.

4.13.2 Source Characterization

The table below lists the activities on the inventory that are considered High Priority.

Table 4.20: Activities

1	LANDSCAPE MAINTENANCE AND REPAIR	CITYWIDE
2	MS4 MAINTENANCE	CITYWIDE
3	POWER WASHING	CITYWIDE
4	SANITARY SEWER MAINTENANCE AND OPERATIONS	CITY SERVICE AREA

4.13.3 Site Specific BMP Requirements

Each of the BMPs listed were implemented for the activities listed in Table 4.20 and are described below.

Table 4.21: Best Management Practices

SC-11 Spill Prevention, Control & Cleanup
SC-20 Vehicle and Equipment Fueling
SC-34 Waste Handling and Disposal
SC-41 Building and Grounds Maintenance
SC-61 Safer Alternative Products
SC-71 Plaza and Sidewalk Cleaning
SC-73 Landscape Maintenance
SC-74 Drainage System Maintenance
SC-75 Waste Handling and Disposal
SC-76 Sewer Utility Maintenance

4.13.4 Program Implementation

- SC-11 – Spill Prevention, Control & Cleanup: Spill kits are kept in all vehicles. Employees were trained in spill response as applicable to their activities. Absorbents were used for spill cleanup where possible and disposed of properly.
- SC-20 – Vehicle and Equipment Fueling: Minor equipment fueling was performed over pervious surfaces when necessary; larger equipment was fueled at the fleet maintenance facility (BMPs are described above for Fleet Yard).
- SC-34 – Waste Handling and Disposal:
    - Landscape Maintenance: All non-recyclable waste was disposed of properly.
    - MS4 Maintenance: Trash was hauled to transfer station. Debris and other organic material were transferred and deposited at 2400 Tamarack Avenue in three concrete covered bins. The material was then tested for contaminants and disposed of properly upon receipt of permissible test results.
    - Powerwashing: All wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
    - Sewer Utility Maintenance: Waste was contained in Vactor truck tanks and disposed of properly to sanitary sewer.
- SC-41 – Building and Grounds Maintenance: Mulch was used extensively for erosion control and weed suppression; pervious areas were landscaped to reduce erosion. In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system. For grounds maintenance, refer to SC-73, landscape maintenance.
- SC-61 – Safer Alternative Products: IPM practices and green waste applications were in use. These practices are described in detail above.
- SC-71 – Plaza and Sidewalk Cleaning: In the event that pressure washing was necessary, all wash water was recovered for proper disposal or redirected to a pervious surface to ensure that no water was allowed to enter the storm drain system; any storm drains in proximity were protected from discharges.
- SC-73 – Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; soil testing was utilized to assess need for fertilizers and irrigation; timing improvements on irrigation system have reduced water usage; blowing and sweeping were used wherever possible; pesticide, herbicide, and fertilizers are stored inside secure lockers and used sparingly in accordance with required application practices only by qualified applicators.
- SC-74 – Drainage System Maintenance: A small self-contained vacuum with pressure washer was used to clean the drainage system. All material in the drain box was removed by the vacuum. Disposal of the water and material occurs using a filter sock, allowing water to be decanted into the sanitary sewer system through a permit from Encina Wastewater Authority. The solid material was taken to the Tamarack site described above. All trash was removed from the MS4, placed in 55 gallon trash bags, and placed in a 40 cubic yard roll off dumpster that is covered. The material was then transported to Palomar Transfer Station for disposal. See SC-34 above
- SC-75 – Waste Handling and Disposal: See SC-34 above.
- SC-76 – Sewer Utility Maintenance: All lift stations were inspected and cleaned as needed; Vactors were checked for leaks during pre-trip inspections; all materials were discharged at Encina Wastewater Authority: solids into grit bin, liquids at head-works; recently the City has begun to implement FOG requirements as per Order 2006-003 including revision of ordinances, public outreach, and inspections of FOG generating facilities.

The collections system maintenance schedule is designed to provide more frequent cleaning for identified trouble areas, with siphons being cleaned annually, low flow and flat lines cleaned semi-annually, and grease problem areas cleaned quarterly.

4.14 Areas and Activities Categorized as Not High Priority

4.14.1 Background

The Municipal Inventory found in Appendix 4.1 lists City owned areas and activities that were determined NOT to be High Priority based on the criteria established in Order No. R9-2007-0001, Section D.3.a.(7)(a). Basic minimum BMPs were implemented at each facility listed below as per the City's JURMP.

4.14.2 Source Characterization

The Municipal Inventory found in Appendix 4.1, lists facilities that are NOT High Priority and includes 49 facilities that are administrative, small parks, medians, and water/wastewater stations that are small or out of service. These facilities are located outside of ESAs and do not generate significant pollutant loads.

4.14.3 Site Specific BMP Requirements

a. Employee Training
b. Pollution Prevention
c. Good Housekeeping
d. Spill Response and Prevention

4.14.4 Program Implementation

The BMPs listed above were implemented City wide at all facilities, including the facilities. A description of these BMPs and how each was implemented is provided in Section 4.2.

4.15 Special Events

4.15.1 Background

The City of Carlsbad hosts a multitude of events each year from major invitational sporting events to community based festivals. A Special Event Permit and SWPPP is required for any organized event involving 50 or more people on public property that travel or assemble together, cause a change in normal traffic flow or controls, and is not within the scope of a Facility Use Permit, other land use approval, or a private property permit. The City has organized a Special Events Committee to ensure events are held in a manner that is safe and does not adversely impact the Carlsbad community or the environment.

4.15.2 Source Characterization

The City manages an updated inventory of special events. These special events have been prioritized according to type of event, number in attendance, proximity to the nearest water body, and potential

threat to water quality. During FY 2011-12, there were 25 special events on the inventory, which included 19 high priority, 1 medium priority, and 5 low priority events. Based on this prioritization, the City conducted storm water compliance inspections at all of the high and medium priority events. During this reporting period, there were 40 inspections conducted which included 20 pre-event inspections and 20 post-event inspections. In some cases inspectors were onsite for the duration of the event. A copy of the special events inventory can be found in Appendix 4.3.

4.15.3 BMP Requirements

All special events were required to implement the designated minimum special event BMPs and comply with all applicable regulations outlined in the Carlsbad Municipal Code. Event organizers were notified of the minimum BMPs during the event planning process, in outreach materials, and at pre-event meetings. All special events, regardless of priority, submitted a SWPPP or BMP plan for City review and approval in FY 2011-12. The SWPPP/BMP Plan are intended to help demonstrate that appropriate measures and BMPs are being implemented before, during, and after the event to reduce and/or prevent pollution. All SWPPPs were approved by the City prior to Special Event Permit issuance. During compliance inspections, the City confirmed that the designated and specific BMPs were implemented as required.

The City continued to distribute the "Best Management Practices for Special Events" brochure during FY 2011-12, which was provided to all event promoters during the applications and planning process. A copy of the brochure can be found in Appendix 4.4 of the FY 2009-10 annual report.

4.15.4 Program Implementation

Generally, the City found that event organizers implemented BMPs as required. Event venues were well managed, BMPs were installed, and the impacted areas were cleaned as required. The City will continue to work closely with event organizers to ensure compliance.

Storm water compliance inspections include a pre-event inspection where storm water BMPs were evaluated, a during-event inspection to determine the effectiveness of BMPs, and a post-event inspection to ensure the site is properly cleaned. Compliance inspections may also include recommendations for additional measures that may be required to comply with the storm water regulations. The Special Events Inspection Form developed at the end of FY 2007-08 continued to be used throughout FY 2011-12.

During FY 2011-12, there were only a few minor violations noted at the inspected events, all of which were immediately corrected. There were no enforcement actions for special events issued during FY 2011-12.

CMI continues to use NPDES inspections and inventory management procedures for special events. All inspection protocols outlined in the 2007 Municipal Permit, JURMP, CMI procedures, and the CMC were implemented as required.

4.16 Inspection of Municipal Facilities

4.16.1 Background

All High Priority municipal facilities were formally inspected during this fiscal year as required by the Permit. In addition, many departments will perform inspections of their facilities more frequently. Inspections of these facilities addressed all required inspection steps according to the Section D.3.b.(3)(a) including:

- Review of BMP implementation plans, if the site uses or is required to use such a plan;
- Review of facility monitoring data, if the site monitors its runoff;
- Coverage under the General Industrial Permit and NOI filing is checked;
- Compliance with the City of Carlsbad ordinances related to urban runoff is assessed;
- BMP implementation, maintenance, and effectiveness is assessed;
- Visual observations for non-storm water discharges, potential illicit connections, and potential discharges of pollutants in storm water are made;
- And education and training on storm water pollution prevention is performed as warranted.

4.16.2 Source Characterization

In total, there were 64 active High Priority municipal areas and activities on the City's inventory list. These areas and activities included:

- Roads, Streets, Highways, and Parking facilities;
- Flood Management Projects and Flood Control Devices;
- Fire Stations;
- Recreation Facilities;
- Publicly Owned Treatment Works;
- Sanitary Sewer Faciliites;
- Water Facilities;
- Municipal Yards;
- Parks Facilities;
- Administrative Facilities; and
- Activities*.

*the activities include: landscape maintenance and repair, power washing, MS4 maintenance, and sanitary sewer maintenance.

Refer to Appendix 4.1, the City's Municipal Inventory, for a list of the City's High Priority municipal areas and activities.

4.16.3 BMP Requirements

All areas and activities implement site specific BMP requirements as per the City's JURMP, Appendix 6-A. The preceding sections include table of site specific BMPs required to be implemented for each area and activity listed above. For facilities that are not High Priority, minimum BMPs are required that are tailored specifically to those sites and activities occurring there. Required BMPs have been implemented at all City areas and activities as described it the City's JURMP.

4.16.4 Program Implementation

A total of 64 inspections were performed at high priority municipal facilities. Of the 64, 42 were performed by a third party contractor and 22 performed in-house. Third party inspections were performed at larger, more complex facilities such as Fire Stations, Fleet Maintenance, Parks Maintenance and Operations as well as simple parks, and parking lots. Facilities that are not High Priority are inspected on an as needed basis.

Of the 64 high priority facilities inspected, minor recommendations at some sites involved addressing the accumulation of sediment and organic debris and general housekeeping. One site required corrective actions due to erosion and sediment issues. Corrective actions were implemented by the end of the fiscal year and a maintenance schedule was established to maintain compliance.

Three of four High Priority activities were inspected during field activities and were found to be in compliance with permit requirements and City ordinances. There was no City contracted power washing services during the time of inspections.

For a listing of all corrective actions identified during inspections and their implementation, refer to Appendix 4.4. There were three minor violations of the Carlsbad Municipal Code observed during municipal inspections; they were corrected and did not require enforcement.

4.17 Notable Activities

As mentioned in the Executive Summary, the City considers a Notable Activity to be any activity above compliance requirements. Notable Activities for FY 2011-12 include:

- No signs of over-irrigation were noted at Municipal Facilities during inspection.

Section 5

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 Introduction

The City of Carlsbad's Industrial and Commercial program is intended to reduce industrial and commercial discharges of pollutants from the MS4 to the maximum extent practicable, and prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards. This section covers activities occurring from July 1, 2011 to June 30, 2012 under the Permit Order No. R9-2007-0001.

5.2 Fixed Industrial and Commercial Sites / Sources Element

5.2.1 Background

Storm water inspectors identify pollution sources, assess the potential threat to water quality, and require BMP implementation to eliminate pollution sources from industrial and commercial businesses. Major industrial types in Carlsbad include high technology, multimedia and biomedical businesses, electronics, golf apparel and equipment manufacturers and several light industry parks. Fixed commercial types in Carlsbad consist of restaurants, automobile maintenance, gas stations, golf courses, and resorts, among others. Many of these industrial and commercial sites and their activities have the potential to generate significant amounts of pollutants, if proper BMPs are not implemented.

5.2.2 Source Characterization

Each year hundreds of new businesses are established in Carlsbad. During this reporting period, the Storm Water Protection Program worked closely with the Finance Department to obtain information about new businesses, including activities, SIC codes and descriptions, business types, and contact names and numbers. The Storm Water Protection Program downloaded, sorted, mapped, and prioritized new businesses by SIC, business type and other criteria per Order No. R9-2007-0001.

These new businesses were screened, evaluated, prioritized, and then added to the inventory and scheduled for inspection. In some cases information provided on business license applications was not correct and a pre-inspection evaluation was necessary. Pre-inspection evaluations helped determine if a business' activities were subject to storm water requirements. Two types of pre-inspection source evaluations were used:

1. Reviews: During the review process, the inspector evaluated the source and activity using relevant information from other City departments, databases, or licensing programs to determine whether the site/source should be inspected and tracked by the Storm Water Protection Program. A business could be excluded during the review process if it was found that their activities are not regulated by the City or General Permit. The most common reason businesses were excluded was because of an incorrect SIC code designation or they were not a high threat to water quality.
2. Telephone Contacts: If the review failed to provide enough information, the inspector contacted the business by phone to determine its status and scheduled an inspection if necessary.

After physical inspections, reviews, or telephone contacts, any changes to a business' threat to water quality or status were recorded on the Storm Water Inventory. New businesses were also found by referral from other agencies, field discovery, complaint investigations, or business directories.

The City's Commercial/Industrial inventory is located in Appendix 5.1 (Fixed) and 5.2 (Mobile). A map of the fixed facilities is located in Appendix 5.3.

As required by the permit, the following applicable fixed sites/sources are included in the inventory:

- Commercial Sites/Sources:
    - Automobile repair, maintenance, fueling, or cleaning;
    - Airplane repair, maintenance, fueling, or cleaning;
    - Boat repair, maintenance, fueling, or cleaning;
    - Equipment repair, maintenance, fueling, or cleaning;
    - Automobile and other vehicle body repair or painting;
    - Automobile (or other vehicle) parking lots and storage facilities;
    - Retail or wholesale fueling;
    - Pest control services;
    - Eating or drinking establishments, including food markets;
    - Cement mixing or cutting;
    - Masonry;
    - Painting and coating;
    - Botanical or zoological gardens and exhibits;
    - Landscaping;
    - Nurseries and greenhouses;
    - Golf courses, parks and other recreational areas/facilities;
    - Cemeteries;
    - Marinas;
    - Portable sanitary services;
    - Building material retailers and storage;
    - Animal facilities

- Industrial Sites/Sources:
    - Industrial Facilities, as defined at 40 CFR § 122.26(b)(14), including those subject to the General Industrial Permit or other individual NPDES permit;
    - Operating and closed landfills;
    - Facilities subject to SARA Title III; and
    - Hazardous waste treatment, disposal, storage and recovery facilities.

- All other commercial or industrial sites/sources tributary to a CWA Section 303(d) impaired water body segment, where the site/source generates pollutants for which the water body segment is impaired.

- All other commercial or industrial sites/sources within or directly adjacent to or discharging directly to coastal lagoons or other receiving waters within environmentally sensitive areas.

- All other commercial or industrial sites/sources that the Copermittee determines may contribute a significant pollutant load to the MS4.

Potential threats to water quality at each commercial and industrial site/source were determined by evaluating a variety of site-specific factors including the criteria outlined in the Permit. Individual prioritization criteria are described below in further detail:

Threat to Water Quality Determination: Threat to water quality determination involved two steps: (1) initially classifying a facility as being a high threat to water quality based on site information; and (2) subsequently confirming or reclassifying the facility based on field observations and/or additional information. Initial classification of sites/sources was accomplished administratively using the data provided in the existing industrial and commercial inventory. The confirmation and/or reclassification, when necessary, were completed following the initial inspection of each site/source. The city considered the following site/source attributes to evaluate the potential threat to water quality:

i. Type of activity (SIC code): Standard Industrial Classification (SIC) codes were used primarily to prioritize and identify specific commercial and industrial activities/sites that have the potential to contribute to storm water pollution. In addition, the NPDES General Industrial Permit (General Permit) defines specific SIC codes such that (1) coverage under the General Permit is mandatory (as defined in Categories ii, iii, vi, and viii of the General Industrial Permit) or (2) coverage under the General Permit is conditional, required only if material, machinery, or products are exposed to storm water (as defined in Category 10 of the General Permit). Industries not listed with an SIC code were directly contacted and assigned an appropriate code based on a description of business activities.

ii. Materials used at the facility: Materials, including hazardous materials, used at industrial and commercial sites have the potential to contribute significant pollutant loads to receiving waters if transported by storm water. These materials and associated activities were considered during the prioritization process.

iii. Wastes generated: If not properly disposed of, industrial and commercial wastes have the potential to degrade receiving waters when transported by storm water. Types of wastes generated or stored onsite were considered during the prioritization process. Industrial Waste Permits issued by Encina Wastewater Authority may also be examined.

iv. Pollutant discharge potential: When evaluating a commercial or industrial site/source's potential to discharge pollutants, the inspector took into account all material handling equipment or activities, raw materials, intermediate products, final products, waste material, by-products, or industrial machinery exposed to storm water.

v. Non-storm water discharges: Authorized non-storm water discharges can contribute to water quality degradation by transporting pollutants into receiving waters. Non-storm water discharges were evaluated to determine whether they were a significant source of pollutants and whether the discharges may continue to be exempted from the prohibitions of Section B.1 of the Permit.

vi. Size of facility: Size of the facility affects the amount of runoff and pollutant loads generated from the industry. The size of a facility was taken into consideration during the threat evaluation process.

vii. Proximity to receiving water bodies: The potential for pollutant transport to sensitive receiving water bodies was evaluated by determining the proximity and sensitivity of receiving water bodies using the ESA definitions from the Permit.

viii. Sensitivity of receiving water bodies: All facilities directly discharging to or within 200 feet of an ESA were considered high priority. This criterion will be reviewed in FY 2011-12, to ensure that all sites/sources within an ESA are included on the current business inventory.

ix. Whether the facility is subject to the General Industrial Permit or an individual NPDES permit: A listing of facilities located in Carlsbad that have filed a Notice of Intent (NOI) and are covered under the General Permit were classified as high priority threats to water quality.

x. Whether the facility has filed a No Exposure Certification/Notice of Non-Applicability: Those facilities that were identified as "Conditional" (NONA and NEC filers) were evaluated using the "prioritization flowchart" included in the Threat to Water Quality Procedure and prioritized accordingly.

xi. Facility design: The design of a facility, including whether structural BMPs has been installed and maintained, or there are outdoor activities, was considered during the threat to water quality evaluation process.

xii. Total area of the site, area of the site where industrial or commercial activities occur, percentage of pervious surface, and area of the site exposed to rainfall and runoff was considered during the Threat to Water Quality evaluation process.

xiii. The facility's compliance history: Inspectors reviewed the compliance history of each commercial and industrial site and considered any relevant enforcement actions in determining the threat potential on activities conducted onsite.

xiv. Any other relevant factors: The City reserved the authority to consider any other relevant factors specific to the facility to utilize in the prioritization process.

5.2.3 Best Management Practice Requirements

5.2.3.1 Pollution Prevention

Pollution prevention eliminates or reduces polluted storm water runoff. Specific pollution prevention procedures and management guidelines may vary from one industrial or commercial facility to another, and the City informed these facilities of pollution prevention opportunities during site inspections. The following pollution prevention principles applied to most industrial and commercial facilities:

- Affirmative Procurement – Use alternative, safer, or recycled products.
- Redirect storm water flows away from areas of concern.
- Reduce use of water or use dry methods.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.
- Provide on-going employee training in pollution prevention.
- Regular maintenance of on-site BMPs.

5.2.3.2 Minimum BMPs

The following are minimum BMPs required to be implemented, by fixed commercial and industrial sites and sources, as applicable:

1. Good housekeeping
    - Protect materials and products that could potentially pollute storm water from rain, run-on, runoff, and wind dispersal by storing them indoors or covering them, and providing them with secondary containment as needed. For industries with conditional

SIC codes, moving stored materials indoors may allow an exemption from the General Permit requirements.

- Use dry cleanup methods (mops, brooms, rags or wire brushes to clean pavement, buildings and equipment as much as possible) instead of using water hose or pressure washing system to conduct washing or cleaning activities.
- Sweep up around dumpsters and other areas to prevent trash and debris from accumulating. Dumpsters must be kept closed when not in use. All trash must be kept in appropriate sized containers until it can be hauled away. When inspecting solid waste collection areas, inspectors will note if recyclable materials (cardboard, green waste, etc.) are placed in dumpsters.

2. Preventive maintenance
   - Preventive maintenance includes the regular inspection and maintenance of storm water structures (drains, catch basins, etc.) as well as other facility equipment and systems. Structures should be maintained in good working order and cleaned as needed to prevent discharge of pollutants into the storm water system. Facility equipment or systems should be properly maintained to prevent leaks or discharges of pollutants into the storm water system.

3. Material Storage and Handling
   - This includes all procedures to minimize exposure of significant materials to storm water and to minimize the potential for spills and leaks from storage, loading, unloading and transfer of materials.

4. Employee training
   - Appropriate personnel should be trained in good housekeeping, preventive maintenance, materials storage and handling, solid waste handling and recycling, and spill response as applicable to the facility. Records should be retained of employees attending storm water training sessions and the topics covered.

5. Solid waste (non-hazardous) handling and recycling
   - This includes the procedures or processes to handle, store, or dispose of waste or recyclable materials. Waste disposal areas should be kept free of litter and debris and waste and recyclable receptacles must have a cover or lid to prevent the contents from being dispersed by the wind or coming in contact with storm water.

6. Spill response
   - Spills and leaks can be a major contributor to storm water pollution. Facilities should identify potential locations and quantities of significant materials that may spill or leak, and should write and implement a response plan addressing spill containment, clean up and notification procedures. Appropriate spill clean-up equipment should be readily accessible to trained spill response personnel.

7. Record keeping
   - This includes the procedures to ensure that all records of inspections, spills, maintenance activities, corrective actions, visual observations, etc., are developed, retained, and provided, as necessary, to the appropriate facility personnel. Record

keeping and internal reporting represent good operating practices as they increase the efficiency of the facility and the effectiveness of BMPs.

8. Self inspection/quality assurance
   - This includes, in addition to the preventative maintenance inspections identified above, an inspection schedule of all potential pollutant sources. Tracking and follow-up procedures should be described to ensure adequate corrective actions are taken. Quality assurance includes the procedures to ensure that all elements of any required SWPPPs or monitoring plans are adequately conducted.

BMP information was made available during inspections, in printed materials and direct mailings, on the storm water website and hotline, during presentations and at outreach events. A listing of education and outreach events held during this reporting period can be found in Section 8 of this report.

5.2.3.3 BMP and Knowledge Assessment Tools

During this reporting period, the Storm Water Protection Program used the BMP and Knowledge Assessment to measure knowledge of storm water issues and assess the implementation of BMPs onsite. The assessment tool rated a commercial operator and site using the following criteria:

Overall Knowledge Assessment:
Inspectors ranked personnel from 1-5 per the following *Knowledge Assessment* scale:

Level 1: Individual has never heard of the storm water program, requirements, or BMPs. This individual does not know what BMPs are or understand how to implement them.

Level 2: Individual has a general awareness of water quality issues, but does not understand the requirements of the storm water program, BMPs, or pollution prevention.

Level 3: Individual has a general understanding of storm water issues ("*I've heard something about that*"), but not specific storm water requirements or BMPs required for the facility.

Level 4: Individual has a clear understanding of BMPs but may not have a clear awareness of the connection between pollution prevention and water quality.

Level 5: Individual demonstrated an in-depth knowledge of the storm water program and BMPs consistent with the facility's activities and operations.

Overall BMP Assessment
Inspectors ranked the facility per the following 1-5 *BMP Assessment* scale:

Level 1: An illegal discharge was noted during the inspection. Enforcement actions such as a NOV and/or citation are required.

Level 2: BMPs have not been implemented. Several violations were noted during the inspection, however an illegal discharge was not observed. A detailed inspection report and/or written warning were issued.

Level 3: BMPs have been implemented throughout the site, but not properly or adequately maintained. Violations were noted during the inspection and a verbal warning was issued. A detailed inspection report or written Warning Notice may follow.

Level 4: BMPs implemented effectively, however minor violations associated with communal areas or good housekeeping practices (i.e., dumpsters open, leaves in the parking lot, etc.) were noted during the inspection.

Level 5: All BMPs implemented effectively. No violations noted during the inspection.

Table 5.1, 5.2, and 5.3 show the number of instances in raw score and percentage that active businesses rated for each score; 5 is the highest score possible. The number of BMP Assessments collected is usually higher than the number of Knowledge Assessments collected, because at some facilities, a company representative is not available to complete the Knowledge Assessment. BMP implementation results show that the City has been successful in ensuring that businesses implement BMPs throughout the sites at least 72% of the time during this reporting period. The City will continue to work with businesses to educate them about storm water issues, and ensure BMPs are implemented and maintained.

Table 5.1: HTTWQ Facilities Rated for Each Score – July 1, 2011 to June 30, 2012

Level	Knowledge Assessment (raw score)	Knowledge Assessment (%)	BMP Implementation (raw score)	BMP Implementation (%)
1	5	1%	6	1%
2	56	14%	48	10%
3	141	34%	108	22%
4	111	27%	220	45%
5	96	23%	103	21%
TOTAL	409	100%	485	100%

Table 5.2: Not HTTWQ Facilities Rated for Each Score – July 1, 2011 to June 30, 2012

Level	Knowledge Assessment (raw score)	Knowledge Assessment (%)	BMP Implementation (raw score)	BMP Implementation (%)
1	0	0%	0	0%
2	2	4%	0	0%
3	11	22%	2	2%
4	15	30%	18	21%
5	22	44%	66	77%
TOTAL	50	100%	86	100%

Table 5.3: All Facilities Rated for Each Score – July 1, 2011 to June 30, 2012

Rating	Knowledge Assessment (raw score)	Knowledge Assessment (%)	BMP Implementation (raw score)	BMP Implementation (%)
1	5	1%	6	1%
2	58	13%	48	8%
3	152	33%	110	19%
4	126	27%	238	42%
5	118	26%	169	30%
TOTAL	459	100%	571	100%

5.2.4 Program Implementation

5.2.4.1 Inspections

The City conducted inspections at fixed Industrial and Commercial facilities to verify BMP implementation, Permit compliance, and municipal code compliance. Table 5.2 summarizes the inspections performed at active fixed Industrial and Commercial Businesses in FY 2011-12.

Table 5.4: Summary of Inspections Performed

	Total Number on Inventory	Number Inspected	Percentage of Total Inspected	In Compliance?
HTTWQ	485	485	100%	Yes
Not HTTWQ	225	86	38%	Yes
Total on Inventory	710	571	80%	Yes

The City conducted compliance inspections at commercial and industrial sites and sources at the frequencies required by the Permit. During site visits, the inspector:

- Reviewed the SWPPP or BMP implementation plans, if the site used or was required to use such a plan;
- Reviewed facility monitoring data, if the site monitored its runoff
- Checked for coverage under the General Industrial Permit (Notice of Intent (NOI), Waste Discharge Identification No., or No Exposure Certification), if applicable;
- Assessed compliance with ordinances and permits related to urban runoff;
- Assessed BMP implementation, maintenance and effectiveness;
- Conducted visual observations for non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff; and
- Evaluated education and training on storm water pollution prevention, as conditions warrant.

Copies of inspection reports and correspondence are maintained by the Storm Water Protection Program.

5.2.4.2 Enforcement

In cases where violations were noted and follow-up necessary, the City conducted follow-up inspections to determine compliance with corrective actions outlined in the inspection report or enforcement notices. When a storm water complaint was received about an industrial or commercial site/source or an illegal discharge was observed or suspected, the City conducted a storm water compliance inspection or investigation. If a significant and/or immediate threat to water quality was observed, appropriate actions were taken to require the responsible party to immediately cease the discharge and/or correct the situation. In judging the degree of severity, City inspectors also took into account any history of similar incidents or discharges. Appendix 5.4 is a summary of individual enforcement actions taken by the city.

The Enforcement procedures outlined in the 2008 JURMP continued to be used by inspectors to identify, document, and respond to storm water violations.

For this reporting period, the Storm Water Protection Program had three full-time Environmental Specialists and one part-time intern. Environmental Specialists are continually trained on code enforcement, inspection procedures, applicable laws and regulations, and investigation techniques. These training courses, in addition to the Enforcement Response Plan, helped the Storm Water Protection Program appropriately identify and respond to storm water violations. The City took a total of 120 enforcement actions against industrial and commercial businesses during FY 2011-12. The types and numbers of enforcement actions for fixed industrial/commercial businesses are listed in Table 5.5.

Table 5.5: Enforcement Actions during FY 2011-12

Action	Total
Verbal Warning	90
Written Warning	19
Notice of Violation	11
Notice to Clean	0
Cease and Desist Order	0
Administrative Citation	0
TOTAL	**120**

During inspections and investigations completed during this reporting period, there were 15 illegal discharges found and eliminated at fixed businesses. All of the discharges were transient sources as shown in Appendix 5.4 and there was no evidence of the discharges reaching a receiving water during the inspection.

5.2.4.3 Third Party Inspections

There were no third party inspections conducted on any industrial or commercial facilities during FY 2011-12.

5.2.4.4 Industrial Non-Filers

The City takes the following steps to identify non-filers under the General Industrial Permit:

- During the threat to water quality prioritization
  - Facilities were checked for whether they are subject to the General Industrial Permit or an individual NPDES permit: A listing of facilities located in Carlsbad that have filed a Notice of Intent (NOI) and are covered under the General Permit were classified as high priority threats to water quality.
- During inspection of high threat to water quality facilities:
  - The city Checked for coverage under the General Industrial Permit (Notice of Intent (NOI), Waste Discharge Identification No., or No Exposure Certification), if applicable;

In FY 2011-12 the City did not identify any industrial non-filers

5.3 Mobile Sources

5.3.1 Background

The City has participated in the development of a Regional Mobile Outreach and Education Strategy. The City will work with the Copermittees to ensure the implementation and success of this strategy. A copy of the *Regional Mobile Outreach and Education Strategy*, which includes a discussion of Carlsbad's jurisdictional efforts, can be found in the City's JURMP.

5.3.2 Source Characterization

A large percentage of businesses on the industrial and commercial inventory are mobile businesses, which include carpet cleaning, power washing, etc. Because site inspections are not required for mobile businesses, many were reviewed by City inspectors. During the review process the inspector evaluated a commercial business using any relevant information available in other City departments, databases, or licensing programs. A business could be excluded during a review if it was found that their activities were not regulated by the City or Permit. The most common reason businesses were excluded during the review process was because of an incorrect SIC code designation.

5.3.3 Best Management Practice Requirements

Implementing BMPs is a priority for all mobile businesses. Dry cleanup methods, diverting wash water, and covering or blocking drains are all required practices. The regional Industrial/Commercial Workgroup finalized a list of minimum BMPs that must be used by all mobile businesses in the region. Mobile facilities are notified of the requirements through mailings or onsite investigations/inspections.

5.3.4 Program Implementation

Inspections of mobile businesses were conducted as needed based on complaints and field discovery of non-compliance. Upon arrival onsite to investigate a complaint of non-compliance, City staff conducted the following activities:

- Requested stop work if discharge was entering or had potential to enter the MS4 system.

- Requested to speak to the manager of the responsible party or property owner as necessary.
- Took photos and made observations.
- Educated the responsible party or person onsite as necessary regarding the City's NPDES permit, Federal and State requirements, Carlsbad Municipal Code (CMC), and required BMPs in order to continue work.
- Enforced the CMC as necessary.
- Followed up with documentation in Permits Plus Database and with written correspondence to the responsible party with a CC to the property owner.

In FY 2010-11 there were 15 storm water violations by mobile businesses. Table 5.5 summarizes the enforcement actions on mobile sources.

Table 5.6: Enforcement Actions on Mobile Sources

Action	Total
Informational Letter	3
Verbal Warning	5
Written Warning	0
Notice of Violation	7
Notice to Clean	0
Cease and Desist Order	0
Administrative Citation	0
TOTAL	15

5.4 Notable Activities

As mentioned in the Executive Summary, the City considers a Notable Activity to be any activity above compliance requirements.

There were no Notable Activities for the Industrial and Commercial Program during FY 2011-12.

Section 6

6.0 RESIDENTIAL COMPONENT

#

6.1 Introduction

This section describes the activities of the City for the reporting period for FY 2011-12 with respect to implementation of the Residential Component of the JURMP. The program is intended to: (1) reduce residential discharges of pollutants from the MS4 to the maximum extent practicable, and; (2) prevent residential discharges from the MS4 from causing or contributing to a violation of water quality standards.

6.2 Source Characterization

In accordance with Order No. R9-2007-0001 and the City's JURMP, the City focused on all the high priority activities and areas outlined in the JURMP (March 2008). Since writing the JURMP, no amendments were made to source characterization or areas of focus.

6.3 Best Management Practice Requirements

In accordance with the City's JURMP, required BMPs were implemented in residential areas in compliance with the permit. The minimum BMPs addressing residential activities and areas, as detailed in various outreach materials, are the following:

- Residential auto repair, maintenance, washing and parking. Leaking vehicles must be parked in the residential driveway with BMPs in place to prevent oil and other liquids from leaking onto the street. No leaking vehicles can be parked on the street or right-of-way. No automotive repairs are permitted to be conducted in the street or right-of-way. Residents are allowed to wash vehicles in the driveway, and are encouraged to use soap sparingly, and to divert wash water to landscaping.
- Home and garden care activities and product use. Decrease the use of lawn and garden care products such as pesticides, weed killers and chemical fertilizers. Consider using non-toxic pest control methods. Avoid over-irrigation which washes these chemicals into the storm drain system. Avoid applying fertilizers and pesticides 3-5 days before any predicted rain event.
- Disposal of trash. All trash must be kept in appropriate sized containers until it can be hauled away. Frequently dispose of grass, debris, leaves, and other waste materials. Composting green waste is encouraged.
- Recycle, Reduce and Reuse. Recycle cans, bottles, paper and cardboard whenever possible.
- Disposal of pet waste. Clean up after pets. Use a bag to pick up waste when walking pets. Flush pet waste down the toilet or dispose of in a sealed plastic bag and deposit in the trash.
- Disposal of household hazardous waste. Residents are encouraged to properly dispose of household hazardous waste through the city's household hazardous waste pickup and disposal program.
- Move or cover potential pollution sources from storm water contact. Protect materials that could potentially contribute to storm water pollution by storing them indoors or covering them.
- Use dry cleanup methods. Instead of washing or hosing, use dry cleanup methods such as mops, brooms, rags or wire brushes to clean surfaces.

6.4 Program Implementation

The residential component of Carlsbad's Storm Water Program continued to address residential activities and pollutants through the implementation of outreach and education on proper BMPs, the household hazardous waste program and complaint investigations.

6.4.1 Regional Residential Education Program

The City of Carlsbad continued to participate in the regional workgroup targeting residential areas. Notable activities during this fiscal year include participation at the Paws in the Park event in March 2012, and at the San Diego County EnviroFair during June 2012, PSA distribution at UltraStar cinemas, and continued distribution of outreach materials promoting storm water education.

6.4.2 BMP Implementation

During FY 2011-12 the City continued to implement its residential program aimed at reducing contaminants in urban runoff originating from residential areas and activities. BMP information was made available to residents via the following:

- Storm water website and hotline
- City outreach through social media
- Outreach events
- Direct mailings
- During investigations of suspected storm water violations.

Outreach and Education activities for FY 2011-12 are further detailed in Section 8 of this report. Discussion of investigations and enforcement actions for residential areas and activities are discussed in Section 6.4.5 and Section 7 of this report.

Mass Media, Website and Hotline

Information about water conservation, trash management, and storm water pollution prevention is located on the Environmental Programs web page accessed through the city's website at www.carlsbadca.gov. During FY 2011-12 there were a total 1,447 visits to the Environmental Programs and Storm Water web pages.

The Environmental Programs and Storm Water hotlines provided information about storm water, trash, and water conservation for the public. The hotline was answered by the Storm Water Protection Program during business hours, and a detailed voice message provided information on reporting violations to a duty phone after hours.

Outreach Events

The City hosted or participated in several public events, which provided opportunities for residents to learn about pollution prevention and storm water BMPs. During these events residents had the opportunity to pick up printed materials, and to speak directly to storm water representatives. See Table 6.1 for a summary of outreach events occurring during FY 2011-12.

Table 6.1: Outreach Events for Residential Community (FY 2011-12)

DATE	NAME	TYPE	TARGET AUDIENCE	ATTENDANCE/ DISTRIBUTION	LOCATION
09/17/2011	Beach Cleanup - California Coastal Cleanup Day	Public event	Residential	113	Tamarack State Beach
04/01/2012	Kids Day at the Flower Fields	Public event	Residential	5,000	Carlsbad
05/19/2012	Family Open Studios	Public event	Residential	170	Carlsbad
06/09/2012	Carlsbad Beach Fest	Public event	Residential	10,000	Carlsbad

Printed Materials and Media

Storm water information was also conveyed through a variety of printed materials such as mailers and print media. Informational brochures continued to be distributed during outreach events and complaint investigations in residential areas. All printed materials distribution and media are shown in the table below and examples are in Appendices 6.1 and 6.2.

Table 6.2: Printed Materials and Media

DATE	NAME	TYPE	TARGET AUDIENCE	ATTENDANCE/ DISTRIBUTION
03/01/2012	Carlsbad Currents	Media	Residential	100,000
05/01/2012	Carlsbad Currents	Media	Residential	100,000
06/01/2012	TGIF Jazz in the Parks	Media	Residential	50,000
06/01/2012	Carlsbad Currents	Media	Residential	100,000

Promotional Items

The Storm Water Protection Program distributed various promotional items with the storm water hotline and pollution prevention messages, such as crayons and coloring books, pencils, Frisbees, lip balm and stickers. All items carried program contact information and environmental messages. In addition, numerous copies of "All the Way to the Ocean," a book by Joel Harper illustrating storm water pollution, were raffled off at several outreach events.

6.4.3 HHW, Used Oil, Bulky Items, and Environmental Programs Hotline

The City continued to operate the Household Hazardous Waste (HHW) and used oil recycling program outlined in the JURMP.

On April 28, 2012, the City sponsored a free HHW disposal day during which Carlsbad residents could dispose of up to 15 gallons or 125 pounds of HHW materials. The City collected and disposed of 47, 691 pounds of HHW during this event. Table 6.3 shows the types and quantities of HHW collected.

Table 6.3: Items Collected During April 30, 2011 HHW Event

Type of Material	Weight In Pounds
1. Flammable & Poison	12,350
2. Acid	400
3. Base	1,330
4. Oxidizer	80
5. PCB-containing	0
6. Reclaimable	22,700
7. Asbestos	0
8. Universal Waste	8,331
9. Other	2,500
Grand Total	47,691

In addition, Carlsbad residents were allowed to dispose of bulky items and household hazardous waste through the residential pick up service.

Residents used the Solid Waste hotline and e-mail address to request information about the HHW program, trash and recycling.

6.4.4 Oversight of Residential Areas

The Water Conservation Specialist continued to conduct patrols of different residential areas within the City. Evidence of excess runoff from irrigation was investigated on a case-by-case basis. Door hangers were left and a follow-up phone call or a site visit conducted to evaluate irrigation systems.

6.4.5 Enforcement in Residential Areas

Storm Water staff handled all residential complaints and subsequent enforcement actions in accordance with the City's existing procedures and Carlsbad Municipal Code. Each reported and observed violation was documented using the Permits Plus database. See the tables below for information on residential complaints.

A total of 22 residential complaints from residential sources were documented during FY 2011-12. See the following tables for more information on complaint investigations and enforcement in residential areas.

Table 6.4: Complaints in Residential Areas

Total number of complaints during FY 2011-12	93
Number occurring in residential area	49
Total number of complaints dealing with pollutants from residential sources (mobile businesses in residential areas excluded)	22

During FY 2011-12, the Storm Water Protection Program received 93 total storm water related complaints. Of those complaints, 49 occurred in residential areas. Twenty-two complaints concerned residential sources of pollution, while 27 concerned mobile businesses operating in residential areas. Table 6.4 and Table 6.5 show a summary of residential enforcement actions. A summary of all complaints responded to can be found in Section 7, to be submitted in December 2011.

Table 6.5: Summary of Residential Enforcement Actions FY 2011-12

Enforcement action	Number
Informational Letter	7
Verbal Warning	7
Written Warning	0
NOV	0
Admin Citation	0
Cease and Desist	0
Notice to Clean	0
Total	14

Table 6.6: Residential Complaint Types FY 2011-12

Type of complaint	Number
Accident	2
Dumping to storm drain	6
Erosion	1
Other	2
Piles without proper BMPs	1
Leaking vehicle	2
Washing to storm drain	8
Total	22

6.5 Notable Activities

As mentioned in the Executive Summary, the City considers a notable activity to be any activity above compliance requirements.

Notable activities for FY 11-12 are:

- Increased interdepartmental coordination on outreach and education activities, in particular the Family Open Studios event.

Section 7

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION (IDDE)

The City's Illicit Discharge Detection and Elimination (IDDE) will be submitted in December 2012 as approved by the Regional Board in Addendum 2, Order 2007-0001.

Section 8

8.0 OUTREACH AND EDUCATION COMPONENT

8.1 Introduction

Public outreach and education are fundamental to the success of Carlsbad's urban runoff management program. The city continues to increase awareness about pollution prevention, and promote behavioral changes and environmental stewardship. The Storm Water Protection Program collaborated locally and regionally to ensure outreach efforts and messages for storm water pollution prevention were consistent. The city continues to be actively involved in outreach and education efforts at the local level, the watershed level, and the regional level (Project Clean Water – Outreach Workgroup). These efforts are further discussed in the following subsections by target audience.

8.2 Staff Training Element

Storm water training for municipal employees included general training and job specific training for designated departments and personnel. The objectives of the employee training programs are as follows:

- Promote a clear understanding of the urban runoff and water quality issues, including activities that can potentially pollute receiving water bodies.
- Identify and implement BMPs.
- Promote employee understanding and response.
- Integrate employee feedback into training and BMP implementation.

8.2.1 General Employee Training

During FY 2011-12, city employees received training on the storm water program and pollution prevention. Messages include, where applicable, the topics listed in the Permit. City staff received information and general storm water training through various communication methods including:

1. Storm Water Web Page: Employees were able to download BMP brochures and the JURMP directly from the city's website.
2. Intranet: The city's intranet was used to post messages and inform employees of various events and opportunities for participation, such as the Coastal Cleanup Day and Earth Day activities.
3. Employee Outreach: During FY 2011-12 the Carlsbad Currents newsletter was issued to all employees. Car window decals and notepads with the storm water hotline were available for employee use in the field.
4. First Mondays: During FY 2011-12, all new employees attended an orientation training called First Mondays. The training session included general information about the city, as well as NPDES regulations, the city's JURMP and Storm Water Pollution Prevention BMPs applicable to municipal personnel.

8.2.2 Job Specific Training

General, Development Planning, Construction and Environmental Management employees and relevant contractors are trained annually on storm water laws and regulations, BMPs, runoff concepts and other storm water related topics. See Appendix 8.1 for further details.

8.2.3 Storm Water Committee

The Storm Water Committee continued to meet on a regular basis to discuss storm water BMPs, activities for staff, coordinate inspections, compliance activities, documentation and reporting.

8.2.4 Storm Water Leadership Team

In FY 2011-12, the City of Carlsbad's City Manager continued the Storm Water Leadership Team (SWLT). Periodic meetings of the SWLT were conducted and attendees included Senior Management of the city's major service areas and Directors. Agenda items covered areas of the city's compliance with Order No. R9-2007-0001.

8.2.5 Utility Coordinating Committee Meeting

Engineering and Construction Management and Inspection (CMI) staff attended the bi-monthly Utility Coordinating Committee meetings with various utility agencies (SDGE, Cox Cable, ATT, etc.) throughout North County to discuss ongoing and upcoming projects that impact utilities in Carlsbad. As a standing agenda item, storm water and NPDES compliance are discussed at each meeting to ensure outside agencies understand their role in pollution prevention.

8.2.6 Special Events Committee

Construction Management and Inspection (CMI) staff and Utilities staff attended the monthly Special Events Committee meeting to coordinate upcoming event operations and activities. As a standing agenda item, storm water and NPDES compliance were discussed at each meeting to ensure staff understand their role in pollution prevention.

8.2.7 Other Committees and Meetings

During the reporting period, the city continued to participate in the regional outreach education workgroup meetings. The city has participated and will continue to participate in these meetings that include but are not limited to: Technical Advisory Committee (TAC) and Development, Reporting and Assessment and watershed management meetings.

During this reporting period, there have been several regional meetings that the City has attended with other Copermittees. The Development Services Division has participated and will continue to participate in these meetings that include but are not limited to: the land development workgroup, the HMP technical advisory committee, and the reporting and assessment Workgroup.

8.3 Educational Outreach Element

8.3.1 New Development and Construction Communities

The City continued to educate the new development and construction communities throughout FY 2011-12. CMI staff worked with new contractors, homeowners, developers, and others in the construction industry during inspections and investigations to identify storm water compliance issues,

detail corrective actions and assess the appropriateness of BMPs. CMI continues to require pre-construction meetings with contractors and developers prior to the issuance of a new grading permit. The process is initiated when the contractor/developer requests a pre-construction meeting with City inspectors. During the pre-construction meetings, the contractor/developer is notified of the City's NPDES requirements and compliance efforts. In addition, the Pre-Construction Meeting Agenda Packet was revised to state that occupancy will not be granted until the engineer of work provides a letter verifying that all treatment control BMPs have been installed according to the plans and SWMP. Each contractor/developer is provided with a copy of the agenda packet during the pre-construction meeting.

Development and Planning Services provided information and education to applicants and developers during one-on-one or small group meetings, inspections, complaint investigations, and during pre-construction meetings. They also provided sample SWPPPs and SWMPs for engineers, developers, and applicants to use as guides when preparing documents for proposed development projects. Copies of these documents and the SUSMP are available at the city's permits counter. The SUSMP is also available through the city's website.

In addition, the City continued to use the email address developed in FY 2007-08 for the treatment control BMP verification program. Owners and responsible parties can send questions, verification forms, and other requests to the tcbmp@carlsbadca.gov email address, which is monitored by the Senior Construction Inspector. The City has also developed an email address list for TCBMP responsible parties. The email mailing list has been useful in providing immediate information about treatment control BMP compliance and other educational information.

The City's inspection guidelines require documentation of BMP installations prior to occupancy. Annually the City mails a memorandum to all developers and contractors working in the City educating them on the BMP installation prior to occupancy requirement. On May 1, 2012, an updated memorandum was sent to all developers and contractors with active grading permits informing them of the prior to occupancy verification procedure. A copy of the "*BMP Verification of Installation Required Prior to Occupancy*" memorandum can be found in Appendix 2.9.

8.3.2 Construction Site Owners and Developers

The greatest strength of Carlsbad's efforts to educate construction site owners and developers is its motivated and well-informed project review and inspection staff. The project review and CMI inspection staff holds staff meetings where issues of storm water requirements are discussed including issues of new regulatory requirements, new and evolving BMP standards, updates from training seminars, inventory collection and reporting, LID application in new development design and BMP effectiveness (a list of the Land Development Engineering staff training meetings is included in Appendix 8.1).

Prior to the wet season, CMI inspectors hand delivered a memo to all site superintendents reminding them of the NPDES requirements and informing them to ensure all sites are in compliance by and throughout the wet season. A copy of the *Rainy Season Preparation and Storm Water Compliance* memorandum, issued on September 1, 2011, can be found in Appendix 3.2.

In August 2012, CMI staff attended the annual StormCon conference in Anaheim, CA. The conference featured over 80 sessions and presentations covering a variety of topics including the new Construction

General Permit, BMP Effectiveness Assessment, Regulations and Policies, Storm Water Treatment, and other related topics.

The City of Carlsbad is committed to working with developers and contractors to ensure that BMPs are implemented at all construction sites. The "*Pollution Prevention Guide for the Construction Industry*" brochure continued to be distributed at pre-construction meetings. In addition, storm water and NPDES compliance were a part of the regular agenda for each of the meetings. Pre-construction meetings are required for all new development, CIP, and major construction projects in Carlsbad.

The Storm Water Protection Program also continued to distribute the "*Pollution Prevention Guide for the Construction Industry*" brochure. This brochure was developed to provide BMP and pollution prevention information related to materials storage, perimeter controls, building and staging areas, dumpsters and port-a-potty services, tracking controls, concrete trucks and pumpers, washout areas, dirt and grading, earthmoving equipment, and storm drain protection. The brochure was distributed to commercial businesses that conduct small remodeling or home improvement projects.

The City continued to conduct and participate in workshops to educate external parties, which include project applicants, developers, contractors, and property owners on the implementation of the storm water program and requirements for construction sites.

8.3.3 Commercial and Industrial Owners and Operators

The city continued to educate commercial and industrial owners and operators through various methods. This included the distribution of printed materials, participation at workshops, presentations to business community groups, direct mailings, inspections and site visits. Accomplishments are detailed below.

1. <u>Printed Material</u>
During FY 2011-12, several printed materials were distributed to industrial and commercial facilities in Carlsbad. The "*Mobile Business Guide to Pollution Prevention*" brochure continued to be provided to residents and mobile business operators during complaint investigations related to mobile service provider discharges. The "*Industrial/Commercial Business Guide to Pollution Prevention*" brochure was distributed to businesses during inspections. See Appendix 8.2 for an example of these brochures. Various Storm Water Protection Program brochures continued to be stocked at city kiosks and display racks.

2. <u>Website and Hotline</u>
Industrial and commercial businesses were directed to use the website and hotline for more information. The website and hotline are listed on all printed materials distributed by the city. During this fiscal year, there were 1,447 to the Environmental Programs and Storm Water web pages. The storm water hotline continued to be used to request information and report violations.

3. <u>Inspections and Site Visits</u>
Education is a central component to commercial and industrial inspections and site visits. City inspectors educated businesses owners during inspections and investigations to identify storm water compliance issues, detail corrective actions, and assess the effectiveness of BMPs.

4. Workshops

The City conducted a pollution prevention workshop for employees of Weseloh Chevrolet and Kia on January 3, 2012. The workshop provided an opportunity to address pollution prevention and BMPs with employees, as well as answer any questions.

8.3.4 Quasi-Government Agencies/Districts (i.e. Educational Institutions, Water Districts, Sanitation Districts, etc.)

The city continued to educate these communities during this reporting period through the distribution of printed materials in person and through the mail, as well as through website postings.

The city meets bi-monthly with agencies within the Carlsbad jurisdiction to discuss construction projects that impact various utility operations. As a standing item on the Utility Coordination Committee Meeting agenda, storm water and NPDES are discussed to ensure other agencies that work in Carlsbad understand the requirements of the Permit, JURMP, and CMC.

Educational information was provided during water and sanitary facility inspections, as well as in written inspection reports.

8.3.5 Residential Community, General Public, Underserved Target Audiences and School Children

Carlsbad continued outreach to the residential community, school children, and the general public during this reporting period. This included the development and distribution of printed materials, public outreach events, presentations, published articles, videos, website access, and direct interaction with the public. Accomplishments for FY 2011-12 are described below.

1. Residential Community and General Public

Please refer to Section 6 of this Annual Report for outreach and education targeting the residential community.

The city hosted or participated in several public events, which provided opportunities for residents and the general public to learn about storm water pollution prevention. During most of these events, a staffed booth was set up, and residents and children had the opportunity to pick up printed materials, view an *EnviroScape* model demonstration, and speak directly with city storm water representatives. Table 8.1 summarizes education activities for the residential community and general public during FY 11-12.

Table 8.1: Outreach Events for Residential Community and General Public (FY 2011-12)

DATE	NAME	TYPE	TARGET AUDIENCE	ATTENDANCE/ DISTRIBUTION	LOCATION
09/17/2011	Beach Cleanup - California Coastal Cleanup Day	Public event	Residential	113	Tamarack State Beach
04/01/2012	Kids Day at the Flower Fields	Public event	Residential	5,000	Carlsbad
05/19/2012	Family Open Studios	Public event	Residential	170	Carlsbad
06/09/2012	Carlsbad Beach Fest	Public event	Residential	10,000	Carlsbad

Printed materials were available for download from the city's website and Environmental Programs website. There were 1,447 visits to the Environmental Programs and Storm Water web pages. Monthly tips were regularly updated on the city's website with storm water pollution prevention tips.

Publications were also used to convey storm water information. Carlsbad Currents, a city publication distributed to all residents, contained articles on storm water pollution prevention. The Jazz in the Parks guide contained an advertisement highlighting the importance of water quality. See Table 8.2 for a list of printed materials and mass media, and Appendices 6.1 and 6.2 for examples of these publications.

Table 8.2: Printed Materials and Media

DATE	NAME	TYPE	TARGET AUDIENCE	ATTENDANCE/ DISTRIBUTION
03/01/2012	Carlsbad Currents	Media	Residential	100,000
05/01/2012	Carlsbad Currents	Media	Residential	100,000
06/01/2012	TGIF Jazz in the Parks	Media	Residential	50,000
06/01/2012	Carlsbad Currents	Media	Residential	100,000

Brochures addressing storm water pollution prevention were made available during residential complaint investigations, through mailings, during outreach events and at all city facilities.

Pencils, stickers, lip balm, Frisbees and pet waste bag dispensers were purchased and/or distributed this fiscal year at all city events. All promotional items are labeled with the Storm Water Hotline and/or the website. In addition, copies of a children's book titled *All the Way to the Ocean* were purchased and raffled off at city events.

Various Storm Water Protection Program brochures continued to be stocked at city kiosks and display racks.

Direct interactions provide another opportunity for education. During complaint investigations, city inspectors met with residents whenever possible to explain storm water regulations and pollution prevention. When a resident was not available, a door hanger and other outreach materials were left to provide information about the reported discharge. Follow-up informational letters were sent to homeowners and/or contractors after an investigation. These correspondences included brochures and fact sheets about storm water.

2. Underserved Target Audiences, High Risk Behaviors, and "Allowable Behaviors and Discharges"

During this reporting period, the City of Carlsbad offered several brochures in the Spanish language, providing important information on Automotive Service and Repair Shops, Lawn and Garden Care and Restaurants. These brochures were developed to raise awareness in the Spanish-speaking community about the difference between storm water conveyance systems and sanitary sewer systems, the connection of storm drains to local waterways, and common residential sources of urban runoff. In addition, one storm water inspector is qualified as proficient in Spanish, ensuring appropriate communication in Spanish when necessary.

Staff continued to collaborate with the Regional Education and Residential Sources workgroup focusing on the development of outreach and education materials targeting underserved target audiences.

3. School Children

During this reporting period, the Solana Center for Environmental Innovation (Solana Center) continued to conduct the storm water education program for school children in the city. The Solana Center used the *EnviroScape* interactive model to teach students about watershed stewardship and pollution prevention. Outreach materials and workbooks were provided to the students and teachers. Storm water fliers announcing the free presentations were distributed to teachers.

Each classroom was given a watershed poster, handouts on ten simple ways to help protect the ocean, pencils and stickers. Each school received a book titled "All the Way to the Ocean," illustrating storm water pollution.

In addition, quizzes on watershed and storm drain systems were distributed before and after presentations. Table 8.3 lists all of the schools and the number of classrooms and students that attended the watershed classroom presentation during this reporting period.

Table 8.3 Carlsbad Elementary Schools Watershed Awareness Programs

Date of presentation	School	Number of students
9/13/11 and 9/15/11	El Camino Creek Elementary School	83

	Total	586

City Stuff is an outreach program that evolved through a partnership between the City of Carlsbad and the Junior Achievement program. The program reaches over 50 third-grade classrooms in Carlsbad (across district lines) and information filters home to the parents/residents. Students learn how cities are planned, operated, and what services are offered. They also learn about important businesses in a city. Out of the six lessons taught, three of the lessons are Carlsbad specific, and one lesson is focused on municipal programs, including reference to Storm Water Pollution Prevention.

8.4 Notable Activities

As mentioned in the Executive Summary, the City considers a notable activity to be any activity above compliance requirements.

Notable activities for FY 11-12 are:

- Increased interdepartmental coordination on outreach and education activities, in particular the Family Open Studios event.

Section 9

9.0 PUBLIC PARTICIPATION

9.1 Introduction

This section describes the activities of the City for the FY 2011-12 reporting period with respect to the implementation of the Public Participation component of the JURMP.

9.2 Public Meetings and Hearings

The public had numerous opportunities to attend meetings at the local, watershed and regional levels, in order to learn about the City's implementation of the Permit and to have their concerns addressed.

City Council Meetings were held in the Council Chambers at Carlsbad City Hall and were open to the public. The City of Carlsbad also offered residents and visitors the opportunity to view City Council meetings via the Internet and local cable channel, Time Warner channel 24 or 126. Regularly scheduled Carlsbad Council meetings aired live on Tuesday evenings at 6 pm. Each meeting and agenda was posted online approximately two hours after the conclusion of each meeting. Past meetings were available for up to a year on the City's own archive video portal. Users could conveniently "keyword search" through the audio/video content and "jump to" meeting discussion items in real-time by using a drop down menu. Agendas from previous meetings could also be accessed through the City's Document Management System.

During FY 2011-12, the Planning Commission was comprised of seven members appointed by the City Council. This commission made recommendations to the City Council regarding implementation and updating of the General Plan. When needed, they also provided recommendations to the Council regarding policy issues that affect long-range planning. They reviewed development projects, provided recommendations to the City Council, provided reports to the City Council on the Local Facilities Management Plan, reviewed the annual CIP for consistency with the Growth Management Program, identified potential problems and opportunities facing the City, made findings which conformed to Storm Water compliance, and suggested special studies when appropriate. During this reporting period the City also provided live streaming of Planning Meetings, typically held on the first and third Wednesday of each month at 6 p.m.

Residents could also become representatives on various City committees. The City Clerk's office maintained a list of City Boards, Commissions, and Committees, current vacancies, meeting dates and times, and coordinated all appointments to these positions.

In addition, the public could attend various Municipal Storm Water Copermittee meetings, such as the Management Committee Meetings, Outreach Workgroup, Regional Monitoring Workgroup, Coastal Storm Drain Monitoring Sub-Workgroup, and Dry Weather Monitoring Sub-Workgroup. Notices of these meetings were available from the Project Clean Water website at www.projectcleanwater.org.

9.3 Feedback Mechanisms

In addition to the public participation opportunities available through public meetings and hearings, numerous other feedback mechanisms promoted public involvement.

9.3.1 Hotline and e-mail address

The public was encouraged to provide input and feedback on the Storm Water Protection Program implementation. In addition to the public meeting opportunities detailed above, the public could call the storm water hotline to request information, provide comments, or make illegal discharge reports. The public could also send e-mails directly to the Storm Water Protection Program at stormwater@carlsbadca.gov. There were several other public contact phone numbers and City e-mail addresses available for public use. Other City departments forwarded comments and questions to the Storm Water Protection Program as needed. The public accessed the Storm Water Protection Program web page through the City's website, which provided information about storm water requirements and BMPs.

The public used the Solid Waste Services hotline and e-mail address to obtain information about HHW, trash, and recycling programs.

9.3.2 Direct interaction

The City relied on interactions between City staff and the public to convey messages about storm water and pollution prevention. City staff received targeted training to increase their understanding of urban runoff issues. Staff interaction with the public also provided additional opportunities for the City to obtain direct feedback about BMPs, ordinances, and pollution prevention efforts.

9.3.3 General outreach

Efforts through printed ads, newspapers, press releases, media interviews, PSA's, the Community Calendar, City guides, brochures, water bill stuffers, and other publications were used to keep the public informed of storm water requirements, updates, and public participation opportunities. Specific outreach efforts are discussed in section eight of this report.

9.3.4 Storm drain stenciling

Stenciling storm drain inlets with "*No Dumping – Drains to Ocean*" messages reminded citizens and businesses not to pollute waterways. Stencils were available upon request to businesses and residents who were interested in stenciling private storm drains. Public inlets were marked by the Streets Department.

9.3.5 Public surveys

The BW Research Partnership, on behalf of the City, conducted an annual *Public Opinion Survey* of Carlsbad residents. The city-wide telephone survey of residents was administered from September 13 through October 2, 2011 and averaged 20 minutes in length. In total, a statistically representative sample of 1,000 Carlsbad residents 18 years and older completed a telephone survey, resulting in a maximum margin of error +/- 3.08 percent (at the 95 percent level of confidence) for questions answered by all 1,000 respondents. There were three questions related to storm water quality on the 2011 survey. The results of these questions are summarized in Section 11 of this report. The entire report was available for download from the City's website. Surveys helped the City understand how the public perceives storm water which can help foster better planning and management programs.

9.4 Community Events and Volunteer Efforts

The City's Community Volunteer Coordinator administered outreach and involvement programs for Carlsbad residents. This position continued to find volunteers to assist the Storm Water Protection Program with various activities. The City participated in several community events held in Carlsbad and other locations across the county. These events are summarized in Table 9.1.

Table 9.1: Community Events FY 2011-12

DATE	NAME	TYPE	TARGET AUDIENCE	ATTENDANCE/ DISTRIBUTION	LOCATION
09/17/2011	Beach Cleanup - California Coastal Cleanup Day	Public event	Residential	113	Tamarack State Beach
04/01/2012	Kids Day at the Flower Fields	Public event	Residential	5,000	Carlsbad
05/19/2012	Family Open Studios	Public event	Residential	170	Carlsbad
06/09/2012	Carlsbad Beach Fest	Public event	Residential	10,000	Carlsbad

Section 10

10.0 FISCAL ANALYSIS

10.1 Introduction

This section provides a Fiscal Analysis of the Storm Water Pollution Prevention activities in the City of Carlsbad. This methodology was developed by the Copermittees in January 2009 in accordance with sections, G, J.1 a(3)(k) and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The data provided in this section is based on actual expenditures for the period from July 1, 2011 through June 30, 2012.

10.2 General Budget Information

In FY 02-03 and 03-04, the City conducted a fee study to evaluate possible financing mechanisms for the Storm Water Protection Program. The new financing mechanism was detailed in the "*City of Carlsbad Storm Water Pollution Protection Program Regulatory Fee Study Report*", dated September 12, 2003. The report recommended funding the storm water program through an increase in the City's Solid Waste Service fees and new development processing fees. Nearly all of the pollutants discharged into the MS4 are classified as solid waste under state and local codes. Based on this information and other findings, the City implemented a *Solid Waste Service* fee increase for residential and commercial service users to fund certain Storm Water Protection Program activities. The amount of the fee increase is calculated based upon the apportioned costs to the business and residential service users and their contribution to the pollutant loading. This fee was last reviewed in June 2007, and updated to reflect current workloads. The current fee is $3.46 per month for residential customers, and 23.09% of the base trash rate for commercial customers.

The total operating costs to fund the storm water program activities related to existing development for FY 11-12 were budgeted at $3,357,402. This is a slight increase from FY 10-11, due to an increasein fees from the San Diego Regional Water Quality Board, as well as increases in estimated costs for outside contracted services. A summary of expenditures for the City of Carlsbad's Storm Water Program is included as Appendix 10.1.

10.3 Fiscal Analysis Methods

The data presented here was derived from the City of Carlsbad's financial reporting system, IFAS. Some estimates are made where specific activities are not clearly delineated in the budget.

10.4 Fiscal Analysis Results

10.4.1 Expenditures

For FY 11-12 ending June 30, 2012, a total of $2,695,098 was spent, with $2,529,052 spent on JURMP activities, $40,327 spent on WURMP activities, and $125,718 spent on RURMP activities. A breakdown of expenses is reported in Appendix 10.1.

10.4.2 Funding Sources

The Permit requires the City to secure the resources necessary to meet the requirements of the Permit and the JURMP, and to conduct an annual fiscal analysis. The analysis must evaluate the expenditures necessary to accomplish the activities identified in the JURMP and describe the sources of the funds

used to meet the expenditures. The Storm Water Protection Program is comprised of numerous program activities funded from a variety of sources. Table 10.1 summarizes the storm water protection program activities and identifies the current funding source:

Table 10.1 Summary of Program Activities and Current Funding Sources

Program/Activity	Funding Source(s)
Storm Water Facility Capital Improvement Program	Developer Impact Fees, Developer Exactions, General Fund, Gas Tax, TransNet Sales Tax, Federal and State Grants
Storm Water Facility Maintenance and Operation Program including Street Sweeping, Litter Removal and Storm Event Readiness and Patrolling	Solid Waste Service Fees, General Fund
Storm Water Program Administration	Solid Waste Service Fees
Illicit Detection and Illegal Discharge Enforcement Program	Solid Waste Service Fees
Commercial/Industrial SWPPP Inspection Program	Solid Waste Service Fees (charged to commercial service customers only)
Construction Related SWPPP Review and Inspection Program	Developer Fees

Section 11

11.0 EFFECTIVENESS ASSESSMENT

The effectiveness assessment is based on data for FY 2011-12 and focuses on the assessment of three areas, as required in Section I.1.a.(1) of Order No. R9-2007-0001: significant activities, components, and an integrated assessment.

- Section 11.1 assesses the significant activities as listed in the City's JURMP. Each significant activity has an associated measure and targeted outcome. These measures relate to various levels in the range of Levels 1-4 outcome levels, assessing permit compliance, changes in knowledge and awareness, changes in behavior/BMP implementation, and load reductions.

- Section 11.2 assesses each component identified in Section I.1.a.(1)(b). The components include Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education. Each component assessment uses various levels in the range of Levels 1-4 outcome levels where measures have been developed applicable to the component.

- Section 11.3 provides an integrated assessment, combining conclusions from the individual component assessments and water quality data. At this time, it is not always feasible to link jurisdictional activities and components to changes in discharge and receiving water quality. This assessment draws conclusions where possible and may be further developed as more water quality data is collected in future years.

11.1 Significant Activity Assessment

The identification of significant activities was performed during the development of the JURMP. These significant activities targeted measurable outcomes, and results for FY 2011-12 are listed in Table 11.1. Some of the measurable goals are related to Levels 1-4 of the Effectiveness Assessment Outcomes as defined in Attachment C of Order No. R9-2007-0001.

Level 1: Compliance with Activity Based Permit Requirements

Where required during this fiscal year, all compliance based permit activities were completed successfully at or above 100% compliance. These measures are effective at determining the City's compliance with the permit.

The compliance measure for the Land Development Category is a new permit requirement that must be completed prior to the onset of the rainy season, October 1 each year. All required inspections were performed prior to October 1, 2011 for the 2011 Dry Season. For 2012 Dry Season, 78% of the High Priority inspections were conducted prior to June 30, 2012. Other measures appear to be appropriate for assessing compliance this year and the City was in compliance on all counts.

Level 2: Changes in Knowledge/Awareness

Changes in knowledge and awareness of storm water requirements were assessed using two significant activities or measures as described in Table 11.1.

As a part of the business inspection program, the City implemented a rating system to assess the general knowledge of storm water requirements during inspections. This measure has been used for several years in the industrial and commercial inspection programs. For this measure, data collected during FY 2011-12 was compared to data collected during FY 2010-11. As shown in the table, the average knowledge/awareness at these businesses remains consistent this year. Slight variances from year to year may reflect the difference in assessments by the various inspectors.

The second method to assess changes in knowledge and awareness compares quiz scores that are administered before and after class room presentations to school aged children. In general, the knowledge base before the presentation is low. Quizzes administered this year showed 46% of the children had an awareness of storm water prior to the presentation. After the presentation, the number of children aware of storm water issues rose to 84% of the children. This demonstrates an increase in storm water awareness in 37% of the students that were tested. By measuring this change, it appears that the presentations are effective at increasing the children's knowledge of storm water issues.

Level 3: Behavioral Change/BMP Implementation

The mechanism the City used to assess behavior change is the BMP inspection ratings for industrial and commercial businesses, assessed during site inspections.

As a part of the business inspection program, the City used the one to five rating system to assess BMP implementation (i.e. behavior change) at the establishments during industrial and commercial inspections. Because this measure has been used for several years data collected during FY 2011-12 was compared to data collected during FY 2010-11. As shown in Table 11.1, the average measured BMP implementation at these businesses was consistent with previous years. In general, BMP implementation remained relatively high this fiscal year. A comparison of the changes over the past four years is discussed below in Section 11.2.

Level 4: Load Reductions

There are two significant activities that provide direct load reductions of various pollutants. These include storm drain cleaning and street sweeping activities, providing estimations of the removal of trash, sediments, and debris from these facilities. These activities account for the removal of 47 tons of trash, sediment, and debris from the storm drain system and 1160 tons from street sweeping activities.

Additionally, the City uses two estimations of load reductions related to residential outreach and education activities in an attempt to quantify the amount of nutrients and bacteria prevented from entering the MS4. These estimations are dependent on the types of education and outreach utilized and relate this education to reductions in fertilizer usage (i.e. nitrogen and phosphorous reductions) and reductions in pet waste (i.e. bacteria) entering the MS4.

Table 11.1 contains relevant information pertaining to the significant activities defined in the City's JURMP. These data are used to determine if these activities are considered effective.

Table 11.1 Significant Activity Assessment Table

Component	Significant Activity	Method	Measure	Level	Targeted Outcome	Data	Result	Program Effective? YES/NO			
								Compliance	Knowledge Change	Behavior Change	Load Reduction
								Level 1	Level 2	Level 3	Level 4
Land Development	1. Post construction BMP inspection: inspections performed/inspections required.[1]	Confirmation	Performed /Required	Compliance (1)	05/01/11 to 09/30/11 100% High Priority 50% Medium Priority	99/99 H 283/395 M	100% H 72.9% M	Yes	N/A	N/A	N/A
					07/01/11 to 06/30/12 *40% High Priority 20% Medium Priority	83/106 H 234/436 M	78.3% H 53.7% M	Yes	N/A	N/A	N/A
Construction	1. Were all required inspections performed during the wet season?	Confirmation	Performed /Required	Compliance (1)	100%	683 /658	103.8 %	Yes	N/A	N/A	N/A

Municipal	1. Were all required facility inspections performed under Order 2007-0001?	Confirmation	Performed/ Required	Compliance (1)	100%	64/64	100%	Yes	N/A	N/A	Yes
	2. Were all required catch basin inspections performed?	Confirmation	Performed /Required	Compliance (1)	100%	3407/ 3407	100%				
	3. How much debris was removed from the MS4?	Direct Measure	Tons	Load Reduction (4)	N/A	47	N/A				
	4. How much debris was removed from street sweeping activities?	Direct Measure	Tons	Load Reduction (4)	N/A	1160	N/A				
	5. Were all special events applications reviewed for potential coverage under City requirements?	Confirmation	# Reviewed /Total	Compliance (1)	100%	25/25	100%				
Commercial-Industrial	1. Were all inspections performed as required?	Confirmation	Performed /Required	Compliance (1)	100%	485/485	100%	Yes	Yes	Yes	N/A
	2. Were knowledge scores, on average, for current fiscal year higher than previous fiscal year? [2]	Analysis	Average Score	Knowledge Change (2)	Upward Average	3.57 FY 10-11, 3.64 FY 11-12	1.9%				
	3. Were behavioral change/BMP implementation scores, on average, for current fiscal year higher than previous fiscal year? [2]	Analysis	Average Score	Behavior Change (3)	Upward Average	4.19 FY 10-11, 3.90 FY 11-12	-7.4%				

IDDE	1. Were all urban runoff related complaints responded to and resolved?	Confirmation	# Responses /Total Complaints	Compliance (1)	100%	93/93	100%	Yes	N/A	N/A	N/A
Education	1. Were changes in knowledge demonstrated or verified (i.e. quizzes?)[3]	Analysis	Average Score Before/ After	Knowledge Change (2)	%Change	46% aware in pre-test, 84% aware in post test	37%	N/A	Yes	N/A	Yes
	2. How much nutrient load reduction occurred as a result of the "Lawn Care Education" Program?	WTM	Tons	Load Reduction (4)	N/A	N=5.2, P=0.11	N/A				
	3. How much bacteria load reduction occurred as a result of the "Pet Waste Education" Program?	WTM	billion/year	Load Reduction (4)	N/A	45,946	N/A				

[1]During the Dry Season of 2011 inspections performed met and exceeded Permit requirements and were conducted in FY 2011-12. For Dry Season 2011, a targeted outcome of 40% for High Priority and 20% for Medium Priority was used since only two months of the Dry Season was included in FY 2011-12.

[2]See Section 11.2.4 and 11.2.7 for trends over time and explanations of these results.

[3]Quiz results based on acquisition of knowledge or not, as opposed to based on a raw score.

11.2 Component Assessment

11.2.1 Development Planning

During FY 2011-12, the City has experienced measurable changes in outcome levels 1, 2, and 3 regarding compliance with the Development Planning Component.

Level 1: Compliance with Activity Based Permit Requirements

Outcome Level 1 improvements included the updating of procedures for acquisition and management of the City's private treatment control BMP inventory and annual inspection and verification program.

Level 2: Changes in Knowledge/Awareness

The Outcome Level 2 improvements included the ongoing raising of awareness of existing and new storm water compliance requirements among City development review staff, developers and the City's Planning Commission. Through a combination of training during weekly staff meetings, webinars and outside training courses, City staff significantly increased their knowledge and understanding of the updated SUSMP requirements, LID designs, hydromodification principles and City storm water compliance processes. Developers continue to show increases in knowledge of the updated SUSMP requirements, LID designs, and City storm water compliance requirements through revised plan review checklists, City plan review comments, the City's Storm Water Standards Manual and outside training courses.

Level 3: Behavioral Change/BMP Implementation

Outcome Level 3 improvements were seen in the development community. An increased number of development project submittals included acceptable LID, source control and treatment control measures with the initial submittal resulting in fewer project re-designs. The LID designs submitted by developers are showing increased sophistication, effectiveness and cover more significant portions of the project design.

11.2.2 Construction

During FY 2011-12, the City has experienced measurable changes in outcome levels 1 and 3 regarding compliance with the Construction Component.

Level 1: Compliance with Activity Based Permit Requirements

Overall, the Construction, Management, and Inspections Division (CMI) was successful at maintaining full compliance with the permit requirements during FY 2011-12. Table 11.2 contains examples of permit requirements and confirmation that these requirements were met.

Table 11.2 Examples of Construction Related Permit Requirements and Compliance

Permit Requirements	Requirement	Performed
Ordinance updates to comply with order	As necessary	Yes
Designate a set of minimum BMPs	In JURMP	Yes
Require implementation of designated minimum BMPs	All sites	Yes
Maintain and update a watershed based inventory	Monthly	Yes
Require advanced treatment	Sites determined to be an exceptional threat to water quality	Yes, none identified.
Inspections of sites meeting criteria in D.2.d.(1)	Every 2 weeks during wet season	Yes
Implement follow-up actions	As needed based on inspection results	Yes
Inspect according to requirements in Section D.2.d.(6)	Each inspection	Yes
Track number of inspections for the inventoried sites	Continuous	Yes
Develop escalating enforcement process	JURMP	Yes
Implement escalating enforcement process	As needed based on inspections	Yes
Report non-compliant sites to Regional Board	Stop work order or higher level of enforcement	Yes

Level 3: Behavioral Change/BMP Implementation

Changes in behavior and implementation of BMPs on construction sites are evident throughout the City. In general, contractors are more aware of the BMP requirements and are more willing to cooperate with inspectors, resulting in timely and proper implementation of the required BMPs. If a site was found to have deficiencies in storm water compliance, it was generally corrected at the time of the inspection. If a verbal or written warning was issued, a specific deadline for correction action was noted on the inspection report. Follow up inspections were conducted to ensure construction sites complied with the required corrective actions. Most sites were found to have completed corrective actions and were in compliance at the time of the follow up inspection.

Table 11.3 contains enforcement actions for FY 2011-12.

Table 11.3 Enforcement Actions on Construction Sites

	FY 2011-12		
Enforcement Actions	**Number**	**Total Inspections**	**Percentage**
Verbal Notices	200	1003	19.9%
Written Warning	31		3.1%
Notice of Violation	3		0.3%
Notice to Clean	0		0%
Stop Work Notice	1		0.1%

Staff will continue to develop ideas and implement those deemed appropriate in the future to assist in assessing the changes in knowledge and awareness in the construction community.

11.2.3 Municipal

During FY 2011-12, the City has experienced measurable changes in outcome levels 1 and 3 regarding compliance with the Municipal Component.

Level 1: Compliance with Activity-Based Permit Requirements

This level of effectiveness assessment is based on compliance with Activity Based Permit Requirements. The City was in compliance with all municipal requirements of Order No. R9-2007-0001 during the past fiscal year. Table 11.4 tracks some of the City's Municipal Program activity measures, which are discussed in detail in the previous report sections. Tracking of many of these activities was useful in assessing compliance with the program, but is not yet tied to long-term assessment or improved water quality.

Table 11.4: FY 2011-12 Program Activity Measures

	Permit Requirements	**Requirement**	**Performed**
	Develop Inventory of Areas and Activities	Update with JURMP	Yes
	Develop and Implement Minimum BMPs	Update with JURMP	Yes
Special Events	Require Minimum BMPs	Establish and Require Implementation	Yes
	Inspections	Inspect all Special Event venues following events	Yes
MS4 Maintenance	Catch Basins	Inspect all, clean those exceeding 33% criteria	3407 inspections, cleaned all trash and 331 exceeding 33% criteria
	Pipelines (miles)	As needed	Cleaned 0.2000 linear feet.

	Permit Requirements	Requirement	Performed
	Open Channels (miles)	Inspect all and clean in a timely manner	Inspected and removed trash from 32,000 linear feet
	Desilting Basins	Inspect all, clean as needed	Inspected 3, removed all trash from 3
	Treatment Controls	Inspection and Maintenance	Annually
	High Volumes of Trash	Inspection between May 1 and September 30	Yes
	Tracking of Quantities of Waste Removed	Track Quantities	Yes
Integrated Pest Management	Implement Program	Develop and Implement	Yes
Street Sweeping	High Volume Streets (miles)	2 times/month	4 times/month
	Moderate Volume Streets (miles)	monthly	Twice/month
	Low Volume Streets (miles)	annual	Twice/month
	Parking Lots (acres)	Depends on volume, see above	Twice/month
Infiltration from Sanitary Sewer to MS4	Preventative Maintenance of Sanitary Sewer	Perform	Yes
	Preventative Maintenance of MS4	Perform	Yes
	High Priority Facilities	Inspect all facilities	64 of 64 inspected

Based on the permit requirements presented above in Table 11.5, the municipal program remains in compliance with the requirements of Order No. R9-2007-0001. Several of the measures will continue to be developed, and improved with better tracking mechanisms and improved coordination between departments.

Level 3: Behavioral Change / BMP Implementation

One way to assess the amount of behavioral change and the actual implementation of BMPs for storm water is to look at the results of the municipal inspections. In general, all facilities have improved over the years. There were only a few minor violations at Municipal facilities during the 2012 Annual Inspections, all of which were immediately corrected.

In addition, several departments and facilities have invested in new BMPs and continue to maintain BMPs at their sites which are effective at mitigating potential pollutants at the sites. Examples of these BMPs include:

- All of the City's Fire Stations purchased and use high pressure nozzles to reduce runoff and use vacuum equipment, if necessary, to recover and contain wash water from vehicle washing activities.
- Site specific SWPPPs were maintained for municipal facilities including fire stations, maintenance yards, pump stations, and the Carlsbad Recycled Water Facility.
- A new training video was developed with City staff participating in the filming activities.

Level 4: Load Reductions

As described in Table 11.1, there are several methods of calculating load reductions available from data collected in the municipal program. Refer to Section 11.1 and Table 11.1 for more detail on estimated load reductions resulting from activities performed in the municipal program. Examples of these load reductions include working to eliminate discharges from beach outfalls so that no flow reaches the beach and a street sweeping and catch basin cleaning program which removed approximately 1197 tons of debris.

11.2.4 Industrial and Commercial

During FY 2011-12, the City has experienced measurable changes in outcome levels 1 and 2 regarding compliance with the Industrial and Commercial component.

Level 1: Compliance with Activity Based Permit Requirements

As seen in Table 11.5, inspections completed during FY 2011-12 exceeded the requirements set forth by Order No. R9-2007-0001.

Table 11.5 Inspections of sites/sources FY 2011-12

Order No. R9-2007-0001 (July 1, 2011 to June 30, 2012)				
High Threat to WQ	**Inventory**	**# Inspected**	**Target Percentage**	**Percent Completed**
Ind/Comm Sites/Sources	485	485	100%	100%

Level 2: Changes in Knowledge / Awareness

For Knowledge Assessment, inspectors rank personnel from one to five. Refer to Section 5 of this report for details on the rating scale.

Since the implementation of the rating system, the majority of businesses have ranked at three or better for storm water knowledge and awareness. Figure 11.1 illustrates that on average the majority of the sites inspected had a relatively high knowledge of storm water and ranked greater than or equal to 3.

11.2.5 Residential

During FY 2011-12, the City has experienced measurable changes in outcome levels 1, 2, 3 and 4 regarding compliance with the Residential component.

Level 1: Compliance with Activity-Based Requirements

Residential activities outlined in the March 2008 JURMP were completed as described in Section 6 of this report. Activities include various outreach events and activities, used oil and waste collection services, and complaint response followed by enforcement action.

Level 2: Changes in Knowledge/ Awareness

City of Carlsbad Public Opinion Survey

An annual public telephone survey was conducted this year by the City, as part of the *Performance Measurement Program* and "*State-of-Effectiveness Report.*" Carlsbad households were selected using *Random-Digit-Dial* methodology with a minimum sample size of 1,000. This survey had a margin of error of +/- 3% at the 95% confidence level. Storm water pollution was addressed briefly in this survey. The City survey asked, "*Have you seen or heard any information about how residents can prevent the pollution of creeks, lagoons, and the ocean?*" This question was used to gauge the public's perception of ocean water pollution and was asked previously in 2003, 2006 to 2009. The results, with Don't Know or N/A factored out, are presented in Table 11.6 below.

Table 11.6: Results of Environmental Question 1

Answer:	2003 (%)	2006 (%)	2007 (%)	2008 (%)	2009 (%)	2010 (%)	2011 (%)
1. Yes	58.1	64.6	61.1	59.2	75.3	65.2	63.8
2. No	41.9	35.4	38.9	40.8	24.7	33.9	34.5

The percentage of residents that had heard information in the past year about preventing the pollution of local creeks, lagoons, and the ocean decreased from 2009, but was statistically higher than 2008 and 2007 An additional question was asked again this year to assess the most effective educational methods by asking, "*Where do you recall seeing or hearing about ways to prevent pollution?"* The top five responses were TV, newspaper newsletters curb signs and brochures, respectively comprising over 86% of the total responses. Other significantly higher responses included water or utility bills, radio, and website.

Level 3: Behavioral Change/BMP Implementation

The City asked a behavioral question during the survey to those who answered affirmatively to the question, "*Have you seen or heard any information about how residents can prevent the pollution of creeks, lagoons, and the ocean?*" The 65.2% who answered this question affirmatively were asked the follow-up question, "*Given what you have seen or heard, what have you done, if anything, to reduce the amount of pollution in our creeks, lagoons, and oceans?*" Results for this question are presented in Table 11.7.

Table 11.7: Top Responses to follow-up question.

Answer:	Percent
1. Properly disposing of hazardous waste.	22.2
2. Used a commercial carwash	16.3
3. Using environmentally friendly soaps, pesticides, etc.	12.6
4. Cleaned up trash at Beach, Roadside, Etc.	10.9
5. Recycled	14.2
6. No longer dump down storm drain	7.7
7. Reduced water usage/used water more efficiently	6.5
8. Cleaned up animal waste	4.2
9. Did nothing.	20.8
10. Other (ex. don't litter, reduced runoff)	12.9
11. Don't know.	3.9

Continued survey data should help to show if long-term behavior change has occurred. Over eighty percent of residents who answered question one affirmatively, consciously chose an environmentally friendly method over others in certain instances.

Level 4: Load Reduction

The primary goal of BMP implementation is to reduce pollutant loads in storm water discharges. An important emphasis of annual program assessments is to estimate the load reductions resulting from various program activities. Assuming that such reductions are properly targeted to existing or potential water quality problems, load reductions should in turn result in improvements to discharge and receiving water quality. Quantifying load reductions represents an important intermediate endpoint for assessments. The Regional Board wrote the following in October 2004:

Program effectiveness can be assessed by quantifying the pollutant load reductions attributable to various program activities. An effective program will compare pollutant load reductions of various program activities and implement those activities which result in the largest pollutant load reductions. It is expected that by implementing program activities which maximize pollutant load reductions, Copermittees will be implementing effective programs which will improve receiving water quality.

The City used the Watershed Treatment Model (WTM) as a tool for rapid assessment of effectiveness of the storm water programs. The WTM (version 3.1) was prepared by Deb Caraco of the Center for Watershed Protection for the U.S. EPA Region V - Office of Wetlands, Oceans and Watersheds. The 2008 WURMP identified bacteria, sediment, and nutrients as water quality problems. The WTM estimates the pollutant loading reductions for sediment, bacteria and nutrients for various program activities, such as residential education, erosion and sediment control programs, and street sweeping, among others. The results of some of these storm water management programs are discussed below. Complete explanations and assumptions are found in the WTM book. Land Use amounts are from 2009 and provided by SANDAG and the City GIS department.

Public Education

A variety of public education programs may help to reduce the concentration of nutrients, sediment and bacteria in urban streams. The model currently focuses only on a few of these, including programs to address lawn care, septic system maintenance, and pet waste. Several other residential pollution prevention programs improve water quality, but have little effect on nutrients, suspended solids, and bacteria. For example, HHW programs are effective at reducing toxics but do not have a quantifiable impact on pollutants such as suspended solids, nutrients, or bacteria.

Lawn Care: The ideal pollutant removal associated with lawn care would be achieved if all of the additional fertilizer applied to turf were eliminated. The model uses equations to estimate optimal nutrient load reduction from a lawn care program combined with a calculation of the residential lawn area. The model calculates the residential lawn area based on the City's input of residential acres taken from GIS. The user inputs the information on how the education campaign was conducted. Default values were given for the fraction of the audience willing to change behavior based on nationwide data. The City conducted lawn care education through brochure distribution, workshops and newspaper ads.

The model allows the user to input the media type, which determines the portion of the population that *remembers* the message ("Awareness of Message"). This number is largest with television (0.4), followed by newspaper (0.3), radio (0.25), billboard (0.13), brochures (0.08) and workshops (0.07). Because residents have been exposed to five of these mechanisms in FY 2010-11, the input value entered was an average for brochures, workshops and newspaper, radio, and television (0.22). This results in an annual nutrient load reduction of 10,480 pounds of nitrogen and 210 pounds of phosphorus (Table 11.8).

Table 11.8: Loading Reduction from Existing Lawn Care Education

	N (lbs/year)	P (lbs/year)
Lawn Care Education	10,480	210

Pet Waste: The Storm Water Protection Program also conducted a *Pet Waste Education Program* during FY 2011-12. In the urban watershed, dogs are a significant contributor of bacteria and nutrients. Ideally, a *Pet Waste Education Program* would reduce this source to zero, with all homeowners properly

disposing of waste. The model provides estimated values for the fraction of households with a dog, the fraction of owners who walk their dog, the fraction of owners who cleanup after their dog, and the fraction willing to change their behavior. As with the lawn care education, the portion of the population that remembers the message is based on the media used for the education. This past year, the City delivered this message through brochures and the newspaper. Residents were also exposed to regional education efforts on television and radio. In addition, the City distributed free pet waste bag dispensers at local events and provided animal care facilities with these dispensers. These activities were considered similar to a workshop, so an averaged value of 0.22 was used for this calculation. This results in an annual pollutant loading removal of 5,284 pounds of nitrogen, 689 pounds of phosphorus, and 45,946 billion bacteria per year (Table 11.9).

Table 11.9: Loading Reduction from Existing Pet Waste Education Program

	N (lbs/year)	P (lbs/year)	Bacteria (billion/year)
Pet Waste Education	5,284	689	45,946

The overall assessments of these education programs show that the media significantly affected the associated pollutant removal due to the increased audience that *remembers* the message. For instance, if the City had the financial resources to use mass media (television and radio), the estimated pollutant reduction would be increased significantly. The City's annual phone survey confirms that most people recall hearing these messages through mass media. However, mass media is <u>significantly</u> more expensive than brochures and workshops. Large campaigns for mass media may be best conducted on a regional basis with Copermittees sharing the expense or pursuing grant funds for these expensive activities. Due to an increase in mass media educational tools used at the Regional level this year, it is expected that many of the residents in Carlsbad were exposed to these campaigns, accounting for the increase in load reductions associated with lawn care and pet waste.

11.2.6 Illicit Discharge Detection and Elimination

Effectiveness assessment for the IDDE Program will be submitted with Section 7 of this year's Annual Report to be submitted to the Regional Board by December 15, 2012.

11.2.7 Outreach and Education

During FY 2011-12, the City has experienced measurable changes in outcome levels 1, 2 and 3 regarding compliance with the Outreach and Education component.

Level 1: Compliance with Activity Based Permit Requirements

Table 11.10 below illustrates examples of the permit requirements in the outreach and education section and what activities the City implemented to comply with each.

Table 11.10 Outreach and Education Permit Requirements

Municipal Training	Compliance Activity
• Development Planning	Staff training specific to development planning activities referenced in Appendix 8.1
• Construction	Various staff training events specific to construction activities referenced in Appendix 8.1
• Inspection Staff (industrial/commercial)	Various training events specific to inspections of businesses referenced in Appendix 8.1
• Other Activities	Various activity specific training events for water, wastewater, and parks departments
New Development and Construction	Various outreach activities as described in Section 8.
Residential	
General Public	
School Children	

Level 2: Changes in Knowledge/Awareness

Measurably increase the knowledge/awareness of target communities:

- Municipal Departments and Personnel

  During FY 2011-12, a detailed municipal training program continued to be implemented to ensure compliance with Order No. R9-2007-0001. This training program assessed each position within the City to determine the applicable (i.e. required) training and groups the positions into separate modules to make training easier for the various departments. Staff will continue to determine ways to assess the changes in knowledge and awareness of municipal personnel throughout the permit cycle.

  In June 2007, the City implemented a new internal waste reduction strategy as a pilot program. This included the purchase and distribution of larger single stream recycling containers and a small trash can for employee work stations. There were also several new larger recycling containers placed in public meeting areas throughout the City. Seen as an effective program, the City implemented new waste reduction programs, promoted double siding copies and print jobs, and distributed reusable beverage containers at all City facilities. Rollout of these new programs included the development of posters, fact sheets and a presentation to educate and inform employees about the importance and benefits of recycling, reducing and reusing.

- Construction Site Owners and Developers

  The City conducts outreach activities specific to construction site owners and developers as described in Section 8.3. The activities occur throughout the development process.

- Industrial and Commercial Owners and Operators

  The City uses a program to assess changes in knowledge at industrial and commercial facilities based on a numeric ranking from one to five, with one representing a lack of

knowledge and five representing adequate knowledge of storm water BMPs and requirements as applicable to their facility. The results are compiled each year and reported in the industrial/commercial section of the Annual Reports. Results are also presented in Figure 11.2 of this section. Over time, these site assessments can be compiled and compared.

- Residential Community, General Public, and School Children

There are various outreach efforts in place to increase storm water knowledge and awareness for residents, the general public, and for school children. Changes in the knowledge and awareness of the residents and general public are assessed and tracked via an annual telephone survey of the citizens of Carlsbad. The survey includes several questions used to assess these changes in awareness. Survey results, tracked over the past three surveys are described above in Section 11.6.

Level 3: Changes in Behavior/BMP Implementation

Measurably change the behavior of target communities:

- Municipal Departments and Personnel

Behavior changes are evident throughout municipal departments and personnel and can be attributed to targeted outreach and training for municipal staff. Awareness of Storm Water issues is evidenced by calls from City staff to the storm water hotline. All levels of staff are continually seeking advice from the Storm Water Program on how to implement BMPs allowing them to continue to perform their necessary activities. There have also been programmatic changes in the Development Services Division, ensuring that required BMPs and submittals are provided on all projects, and are tracked and approved. In FY 2011-12, there were only minor violations noted during Municipal Inspections, of which all were corrected immediately.

- Construction Site Owners and Developers

Changes in behavior on construction sites and by developers are also evident throughout the development community. These changes are manifested throughout the development process, from submitting appropriate BMPs on plans and better Storm Water Management Plans, to installation and maintenance of proper BMPs during construction, to the development, installation, and maintenance of BMPs on projects after construction is complete.

- Industrial/Commercial Owners and Operators

Industrial and commercial owners and operators are continually educated on storm water issues during inspections, mailers, and interactions during outreach events. Behavioral changes at industrial and commercial sites are most evident through assessment of proper BMP implementation during inspections and site visits. Using the rating system of one through five, with one being no implementation of BMPs and five being effective implementation of all BMPs, businesses have on average scored close to

four, as shown in Figure 11.2. These results indicate that business owners and operators have altered and maintained behavior consistent with storm water rules and regulations. This method of assessment will continue to be used to measure behavior changes among industrial and commercial sites.

- Residential Community, General Public, and School Children

Outreach to the residential community, general public, and school children continues to be effective in conveying storm water information. At this time, it is difficult to measure the changes in BMP implementation in these target audiences. Several methods have been discussed previously and will continue to be utilized. One of the best feedback mechanisms that the City has in place is its annual citizen survey. Answers to the question, "What things are you doing to reduce water pollution?" helps the Storm Water Program track BMP implementation over time and changes in the community, as discussed previously in the report.

The Storm Water Protection Program collaborated locally and regionally to ensure outreach efforts and messages for storm water pollution prevention were consistent. The messages were delivered by various means including presentations, workshops, inspections, investigations, and outreach events, in addition to use of direct mail, the website and newspaper advertisements.

The City conducted the annual (telephone) Public Opinion Survey in FY 2011-12, which included questions on storm water pollution prevention. The results from this survey provide important information on the public's awareness and knowledge of storm water pollution prevention issues and activities. This information can help focus future

education and outreach messages and events, and is also used on a *Performance Measure* to gauge the effectiveness of the outreach and education program.

The Storm Water Protection Program and Environmental Programs staff worked with the Communications Department and the Information Technology Department to continually revise the web pages and provide updated information about pollution prevention, including a tip of the month section.

Staff collaborated regionally with the Storm Water Regional Education and Residential Sources Workgroup, consisting of 21 Copermittees, throughout the year. During FY 2008-09, the workgroup developed a Regional Residential Education Plan that was implemented in FY 2009-10 and continued in FY 2011-12.

In addition to the development and completion of the documents, the workgroup also continued to focus on the development of a regional brand, a regional website, mass media and public relations, materials development and distribution, underserved target audience, market research and assessment tools, partnership development and regional events during FY 2011-12. Staff will continue to participate in these areas with accomplishments reported in the annual reports.

11.3 Integrated Assessment

11.3.1 Changes in MS4 Discharge Water Quality

Dry Weather Field Screening and Analytical Monitoring Program

The City has conducted an annual *Dry Weather Field Screening and Analytical Monitoring Program* since 1995. The purpose of the monitoring program is to detect and eliminate illicit connections and illegal discharges to the storm drain system.

Historically, the results for field analyses indicate a decreasing trend in ammonia-nitrogen concentrations. No discernible trend is apparent for other field constituents. Bacteria levels have varied over the years, with a slight upward trend in Enterococcus counts. Diazinon and chlorpyrifos have only been detected once and oil and grease exceedances have been infrequent.

Over the course of the Dry Weather Monitoring Program, repeated testing at the same sampling sites can allow for a historical comparison of certain water quality parameters. While any trends or historical analysis of this data can be useful for current and future evaluations of potential pollutant sources to the MS4, this is not the stated purpose of the Dry Weather Monitoring Program. This program is designed to detect and eliminate illicit connections and/or acute discharges through sampling. Following a confirmed exceedance, an investigation is performed within two business days to determine and abate, if possible, the source of the exceedance.

The Dry Weather Monitoring Program report for FY 2011-12 and follow-up activities will be provided under separate cover, due to the Regional Board by December 15, 2012.

Coastal Outfall Monitoring Program

The City continued to collect samples from various storm drain outfalls as part of the *Coastal Outfall Monitoring Program*. As stated in the *Adaptive Monitoring Plan*, if water was flowing from a storm drain

outfall, samples were collected and analyzed for total coliform, fecal coliform and enterococci and sample results were compared to the 95th percentile criteria. Where storm drain flow reaches the receiving water, protocol states to collect a paired receiving water sample to assess the impacts of the storm drains on the receiving waters. The receiving water samples would then be compared to Rec-1 standards to determine exceedances. Where storm drain bacteria concentrations exceeded 95th percentile criteria or receiving water samples exceeded Rec-1 objectives, follow-up sampling and/or investigations would be performed.

Recent years indicate a decrease in storm drain exceedances for all three bacterial indicators, showing possible improvements in storm drain water quality. In all cases, the flow from outfalls was intermittent, low volume and did not actually reach the receiving waters but dissipated into the sand or sediment. The City will continue to conduct the Coastal Outfall Monitoring Program and to conduct follow-up investigations as detailed in the Adaptive Plan.

During FY 2011-12, there were no storm drain flows that reached the ocean. The City has been successful at decreasing illegal discharges in areas where outfalls discharge directly to the beach during dry weather.

11.3.2 Level 6: Changes in Receiving Water Quality

It is important to note that receiving water quality reflects considerably more than the quality of the City's MS4 discharges. In addition, receiving water quality can be adversely impacted by other events that are not under the control of the City, such as other permitted NPDES discharges, wildlife (impacting bacteria levels), atmospheric deposition, and other events and activities.

<u>Coastal Outfall Monitoring Program – Receiving Waters</u>

During FY 2011-12, there were no samples collected in the receiving waters as part of the Coastal Outfall Monitoring Program, since no storm drain outfall discharges reached the receiving water.

11.3.3 Overall Assessment

Program implementation in areas of construction, residential, MS4 maintenance, and street sweeping are properly targeted for protection of and improvement of water quality, as evidenced by direct load reductions in these programs.

Other program implementation in areas of industrial and commercial inspections, municipal, residential, construction, and outreach and education appear to be properly targeted for the protection of and improvement of water quality, as evidenced by changes in knowledge and awareness and in behavior.

In addition, the City has had a steady revenue source to fund the Storm Water Protection Program over the past year. City Staff will continue to monitor revenue and expenditures to determine if adjustments are needed in future years.

In FY 2009-10, the City implemented the development processing fees for the plan review and inspection of Construction Storm Water Pollution Prevention Plans and post-construction Storm Water Management Plans.

Section 12

12.0 SPECIAL INVESTIGATIONS

12.1 Introduction

There were no special investigations conducted by the City of Carlsbad in FY 2011-12.

Section 13

13.0 NON-EMERGENCY FIRE-FIGHTING

13.1 Introduction

The Carlsbad Fire Department (CFD) has developed the Non-Emergency Fire Fighting Program to meet the requirements of Order No. R9-2007-0001, as written in the City's 2008 JURMP. This section describes the City's program to reduce pollutants from non-emergency fire-fighting flows (i.e., flows from controlled or practice blazes and maintenance activities) conducted in FY 2011-12 from July 1, 2011 to June 30, 2012.

13.2 Overall Program Definition

The CFD is a dedicated team of professionals whose mission is to enhance the quality of life in our community by delivering exceptional services in safeguarding lives, property and the environment. By default, the definition of non-emergency fire-fighting flows, are flows generated by the Fire Department other than in emergency situations. The duration of an emergency exists from alarm notification until, in the opinion of the Incident Commander, the emergency has concluded and equipment is returned to service. Outside of this duration of time, Fire Department flows are considered non-emergency.

13.3 BMP Implementation

In order to reduce pollutant discharges from non-emergency fire-fighting flows, the City of Carlsbad's Fire Department has implemented several BMPs. During this reporting period, the CFD maintained a Storm Water Manual specific to each fire station to serve as a central location for all storm water documents, training, and BMP descriptions, as well as departmental policies related to storm water. The BMPs incorporated at Fire Stations are listed below:

Pollution Prevention

- Storm Water Manuals were developed for each station which include SWPPPs with site maps, inspection reports, facility specific spill response procedures, training records, and department policies. Training on storm water and spill response was provided regularly.
- Dry cleanup methods were used to reduce water use. The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations. Awareness was heightened at fire scenes to minimize the potential for excessive water flow.
- Materials were recycled where possible.
- Spill Prevention, Control, and Cleanup: Spill response equipment and materials are clearly identified and staged in accessible locations at each station. Awareness was heightened at incident scenes to contain potential discharges (once the scene had been stabilized) to prevent pollutants from entering the MS4. The Department continued implementation of the City's spill response procedure for incidents that occur on City streets. Absorbent materials are kept on all engines and at all the stations. The spill response plan is to apply absorbent, sweep material, place in bags, and remove from site for proper disposal.
- Vehicle and Equipment Cleaning: The department continued to implement a department policy limiting outside water use as applicable to vehicle, hose, and equipment washing. Vacuum equipment is used to recover and contain all wash water from washing activities occurring at Fire

Stations 1-5. Fire Station 6 is equipped with a strip drain in the driveway which allows Fire Department employees to wash Fire vehicles onsite, with any excess wash water diverted to sewer. All Fire Stations currently have a pressure washer for vehicle and equipment cleaning to minimize the amount of water being used.

- Waste Handling and Disposal: Waste containers were inspected regularly for leaks and to ensure that lids remained closed. Waste container areas were inspected and swept as necessary to keep area free of trash and litter. Recycling was implemented where possible; bins were provided.
- Parking/Storage Area Maintenance: Sweeping and removal of organic material from parking lots and walkways were completed on a weekly or as needed basis at all fire stations.
- Housekeeping Practices: Fire stations were kept clean and orderly. Wash water was disposed of properly. Sweeping material was disposed of properly.
- Landscape Maintenance: Irrigation systems were checked regularly to avoid run-off; timing improvements on irrigation system have reduced water usage; blowing and sweeping are used wherever possible; pesticides, herbicides, and fertilizers are stored inside and used sparingly in accordance with required application practices.

13.4 Training and Education

The CFD continued to communicate with other City departments to improve coordination and education with regards to storm water. The CFD's Storm Water Committee met quarterly to address new and ongoing storm water topics and how they relate to the responsibilities of the Fire Department, and included personnel from each Fire Department rank. Other activities CFD participated in are as follows:

- A representative from the Fire Department attended and participated in the City's Storm Water Committee meetings as available.
- The CFD worked closely with the Storm Water Protection Program to conduct a series of meetings to review BMP implementation and perform one-on-one training;
- The City's Reclaimed Water Facility continued to be utilized for fire engineer training and testing. A training trailer facilitated engineer operations, pump testing, and other wet training opportunities. The Facility allowed for wet training and testing opportunities while ensuring that no water is discharged to the MS4;
- The CFD conducted training and testing at other fire agencies and training facilities which recycle the water that it is being discharged (i.e. Rancho Santa Fe and San Marcos Fire Departments). Suitable locations were selected to provide "wet" training opportunities for personnel, while ensuring that appropriate BMPs were in place to protect the storm drains and eliminate discharges to the MS4. These sites were generally located on pervious surfaces with no potential for discharge to the storm drain system;
- The CFD explored CIP opportunities for potential funding for permanent structural BMPs at the fire stations to serve wash areas;
- The CFD worked extensively with the design and construction committee for new fire stations to ensure that storm water requirements were 1) addressed early in the process and 2) met during and after construction.
- The CFD continued current annual training levels to ensure that all CFD personnel were versed in storm water as it relates to fire stations and fire-fighting activities.

13.5 Fire Prevention Program

Fire Prevention is itself, a Best Management Practice (BMP). During this reporting period, fire prevention activities included those activities not directly associated with emergency scene operations, post fire scene or mop-up operations.

Perhaps the most effective way to eliminate water runoff from fires is to eliminate or reduce the magnitude of fires. The CFD has shown that an aggressive Fire Prevention Program has a significant impact on the number and magnitude of fires. Procedures or actions that lead to early fire detection/notification, automatic suppression, confinement, or enhanced suppression capabilities can reduce or control fires and ultimately reduce water runoff. The installation and maintenance of these procedures, devices, or features can significantly reduce potential flows in the event of an emergency.

An example of this type of prevention was weed abatement which included the encouragement of mowing. When mowing was not practical for perimeter breaks, and after considering topography, roughing the slope in a manner that would not increase soil or sediment releases was utilized, such as disking.

The City of Carlsbad continued its Fire Prevention Program during this reporting period.

Section 14

14.0 JURMP REVISIONS

The City's 2008 JURMP was developed in response to the issuance of Order No. R9-2007-0001. The City began implementing the 2008 JURMP on March 24, 2008 as required under the new permit.

There were a few minor changes to the City's 2008 JURMP during FY 2011-12 and they are discussed below.

In Section 2 of this Annual Report, the Treatment Control BMP inventory was updated in accordance with the Permit.

In Section 3 of this JURMP Annual Report, changes were made to the construction site inspection inventory..

In Section 4 of this Annual Report, the municipal inventory and Special Events inventory were updated.

In Section 5 of this Annual Report, the Industrial/Commercial inventory was updated in accordance with the Permit and the City's procedures.

Section 15

15.0 CONCLUSIONS AND RECOMMENDATIONS

15.1 Overview

From July 1, 2011 to June 30, 2012, the City continued to implement Permit Order No. R9-2007-0001. This section of the JURMP Annual Report describes activities that the City undertook to reduce discharges of pollutants and urban runoff flow to the MS4 to the maximum extent practicable. It also provides an overall account of the activities conducted and the programs implemented to address the new Permit requirements for major components: Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education.

Several highlights are listed below, including specific discussion of activities conducted per Permit requirements, as well as those that exceeded requirements and are considered notable activities. Note that these are highlights only and do not represent all activities conducted by the City to maintain compliance. Comprehensive details are reported in the applicable preceding sections.

15.2 Highlighted Activities Performed to Meet Permit Requirements

The City continued activities that were consistent with Permit Order No. R9-2007-0001. For comprehensive details, please refer to the applicable preceding sections of the report. Highlights for July 1, 2011 to June 30, 2012 are listed below.

The City:

- continued updating and revising the Treatment Control BMP (TCBMP) database of private and public TCBMPs.
- continued to distribute a copy of the Pollution Prevention Guide to the Construction Industry with each construction related permit application.
- inspected all high priority construction sites at required frequencies, conducted outreach to project proponents and City staff, and issued 312 enforcement actions to obtain compliance during 1,156 inspections.
- continued to review inventory management, prioritization practices, inspection and enforcement procedures, training programs, record-keeping, and reporting procedures related to construction activities.
- updated and mapped the municipal inventory and inspected high priority municipal facilities.
- conducted cleaning and maintenance activities to reduce pollutant discharges from the MS4.
- inspected 100% of catch basins.
- continued evaluating and inspecting Special Events.
- updated and revised the Special Events inventory.
- updated and mapped the High Threat to Water Quality Industrial/Commercial inventory, and conducted 485 inspections, or 100% of the total inventory. The City issued 120 enforcement actions to obtain compliance from July 1, 2011 to June 30, 2012.
- continued using the *Knowledge and BMP Assessment*s at commercial and industrial facilities.
- continued distributing the brochure for mobile service providers, including carpet cleaners, plumbers, pressure washers, mechanics, porta-potty services, and any other mobile businesses that provide services at various off-site locations. This brochure was designed for mobile service providers, their employees, and anyone that hires a mobile service provider.

- distributed educational information for residential activities, continued an advertising campaign, hosted or participated in community outreach events, and collaborated in offering five oil recycling and two HHW drop-off sites for residential use.
- collaborated with other internal departments to assist with investigations and remediation during field incidents. The Storm Drain Maintenance Division was key to prompt, effective responses to complaints involving clean ups of incidents on public streets. Regular meetings and discussions about compliance issues and consistent contact facilitates this inter-departmental coordination.
- conducted a proactive program to detect and eliminate illegal discharges to the MS4. The public continued to use the storm water hotline and e-mail address to report illegal discharges to the storm drain system. The Storm Water Protection Program responded to 93 reports of illegal discharges to the storm drain system and issued enforcement actions.
- continued implementation of the *Dry Weather Field Screening and Analytical Program*, analyzing conditions and samples from up to 60 sites in the MS4.
- continued implementation of the *Coastal Outfall Program* by routinely monitoring 8 "active" outfall sites on a regular basis, and "inactive" sites semi-annually.
- continued involvement in outreach and education at the local level, the watershed level, and the regional level with the Project Clean Water Outreach Workgroup, and the Think Blue campaign.
- continued distributing storm water educational brochures.
- distributed information through direct mail, during inspections and investigations, on the website, at workshops, during presentations, training seminars, and other public outreach events.
- conducted a Public Opinion Survey of 1,000 residents and included questions on storm water.
- distributed promotional items such as coloring books, pens, and Bags on Board with pollution prevention messages.

15.3 Notable Activities in Addition to Permit Requirements

The City implemented several initiatives in addition to the requirements of the Permit Order No. R9-2007-0001 which are considered Notable Activities. Some of these are internal program goals and should not be viewed as enforceable under the Permit, and will be continued and enhanced as resources allow. For comprehensive details on all City activities, please refer to the applicable preceding sections of this report. Notable Activities for FY 2011-12 are as follows:

The City:

- sent CMI and Land Development Engineering staff to the annual StormCon conference in Anaheim, Ca In August of 2011,. The conference featured over 80 sessions and presentations covering a variety of topics including Low Impact Development, Storm water Pollution Modeling, the new Construction General Permit, BMP Effectiveness Assessment, Regulations and Policies, Storm water Treatment, and other related topics.

- sent staff to a full-day workshop, hosted by the floodplain management association, regarding hydromodification screening tools. This included training on methodologies, criteria and channel screening procedures by SCCWRP. This training and supplemental knowledge assists staff on the review of potential channel assessments when they are submitted by applicants.

- sent staff to a full-day workshop regarding the San Diego Hydrology Model (SDHM) which is a software program discussed in the final HMP. The SDHM uses historical rainfall records and continuous simulation modeling to size different types of IMP/LID facilities that satisfy hydromodification (flow-control) requirements.

- continued to have internal meetings to discuss treatment control BMP compliance program improvements such as inspections, maintenance agreements, verification of maintenance requirements, improved departmental coordination, transfer of information during the approval process, and other issues related to treatment control BMP compliance.

- exceeded the required number of inspections for active construction sites. CMI conducted 1,003 inspections, which exceeds the 966 inspections required for the wet and dry seasons.

- had no signs of over-irrigation noted during inspections at Municipal Facilities.

- increased interdepartmental coordination on outreach and education activities with events like the Family Open Studios event.

15.4 Recommendations for Improvements

As the City continued to implement the 2008 JURMP in this reporting period, some areas for improvement were noted for the future:

The City will:

- continue to research, observe, and evaluate the performance of various types of BMPs.
- continue to evaluate and update internal procedures for Industrial/Commercial inventory prioritization and management and revise as appropriate.
- continue to develop effectiveness assessment mechanisms for each significant activity, for each major component, as well as an integrated assessment of the overall program.
- continue to work at the watershed level and help focus activities on high priority pollutants.

15.5 Water Quality Improvements or Degradation

The complete 2012 Dry Weather report and the full IDDE Section of the Annual Report will be submitted in December of 2012. Please refer to the *Carlsbad Watershed 2011 WURMP* for data trends supporting the focus on *High Priority Pollutants* on a watershed basis. The following text highlights some of the observations on water quality.

MS4 Water Quality

The MS4 program continued in this fiscal year. This program was implemented to characterize pollutant discharges from MS4 outfalls. Data was collected this year as required and will be submitted with the Regional Monitoring Report.

Exceedances of bacteria 95th percentile criteria in the *Coastal Storm Drain Monitoring Program* have stabilized or declined in recent years. During FY 2011-12, there were no storm drain flows that reached the ocean. The City has been successful at decreasing illegal discharges in areas where outfalls discharge directly to the beach during dry weather.

Receiving Water Quality

In FY 2011-12, programs assessing receiving water quality included the Coastal Storm Drain Monitoring Program and mass loading station monitoring under the Regional program.

No receiving water samples were collected as part of the Coastal Monitoring Program because in most cases, the outfalls were dry and had no discharge. If flow was observed, it was intermittent, low volume and did not actually reach the receiving waters but dissipated into the sand or sediment.

Data related to the Mass Loading Station will be submitted with the Copermittees' Regional Monitoring Annual Report in January 2013.

15.6 Conclusion

The Storm Water Protection Program continues to evolve over time in response to the iterative process of implementing BMPs, assessing effectiveness, and evaluating results. As more procedures, programs and activities are implemented, there is a clear need for better databases to track and report activities and BMPs being implemented. Tying these activities to changes in water quality still presents a considerable challenge. This is part of the long-term assessment strategy that will take time to develop trends and to determine cause and affect relationships between pollution prevention and water quality management. The City will continue to work individually and with the Copermittees to further develop existing compliance programs and create new opportunities for improvement.

This section of the Annual Report demonstrated the City's compliance with Permit Order No R9-2007-0001 and continued implementation of the 2008 JURMP. Other sections of this report show that knowledge has increased in target communities, BMP implementation and behavior changes are consistent or improving, pollutant loadings are being reduced from storm water management programs, the MS4 water quality is improving, and pollutant loads to receiving waters are being reduced. These are encouraging signs worth noting. The City recognizes that measurable changes occur over time and that continued program improvements and effectiveness measures are needed for long-term success.

RFA	Request for Action
RV	Recreational Vehicle
RW	Receiving Water
RWQCB	Regional Water Quality Control Board Regional Board
SC	Source Control
SDP	Site Development Plan
SDRWQCB	San Diego Regional Water Quality Control Board
SDSU	San Diego State University
SIC	Standard Industrial Classification
SOPP	Sewer Overflow Prevention Plan
SUP	Special Use Permit
SUSMP	Standard Urban Stormwater Mitigation Plan
SWMP	Storm Water Management Plan
SWPPP	Storm Water Pollution Prevention Plan
SWRCB	State Water Resources Control Board
TAC	Technical Advisory Committee
TC	Total Coliform or Treatment Control
URMP	Urban Runoff Management Plan
V	Variance
WS	Wet Season
WTM	Watershed Treatment Model
VCP	Vitrified Clay Pipe
ZC	Zone Change

2.0 Development Planning Component

Permit Annual Reporting Requirement Section J.3.a.(3).(a)	Section
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2.1, 2.2.3, 2.3, 2.4.1
ii. Confirmation that all development projects were required to undergo the Copermittee s urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.5.1
iii. A listing of the development projects to which SUSMP requirements were applied.	2.5.1
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	2.5.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.5.3
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.5.3.2
vii. An updated treatment control BMP inventory.	2.7.2
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.7.2, 2.7.3
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.7.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.3
xi. A listing of any projects which received a SUSMP waiver.	2.5.4.1
xii. A description of implementation of any SUSMP waiver mitigation program.	2.5.4.1
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.6.1
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	2.6.2
xv. A listing of priority development projects not required to meet HMP require ments, including a description of why the projects were found to be exempt from the requirements.	2.6.3
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.6.4
xvii. The number of violation and enforcement action (including types) taken for development projects, including information on any necessary follow-up action taken. The discussion should exhibit that compliance has been achieved, or describe action that are being taken to achieve compliance.	2.8
xviii. A description of notable activities conducted to manage urban runoff from development projects.	2.5

3.0 Construction

Permit Annual Reporting Requirement Section J.3.a.(3).(b)	Section
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.2
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
ii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iii. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.4
iv. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.4.1
v. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.4.2
vi. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix 3.1
vii. A description of the general results of the inspections.	3.5
viii. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5
ix. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.6
x. A description of notable activities conducted to manage urban runoff from construction sites.	3.7

4.0 Municipal

Permit Annual Reporting Requirement Section J.3.a.(3).(c)	Section
i. Any updates to the municipal inventory and prioritization.	4.16.2, App 4.1
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4, 4.8.4, 4.9.4, 4.10.4, 4.11.4, 4.12.4, 4.13.4, 4.14.4, 4.15.4,

	4.16.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	4.4.4
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.4
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.4
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding .	N/A
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal are as and activities.	4.11.4
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently gene rating the highest volumes of trashand/or debris, as well as the frequency of s weeping conducted for such roads,streets, and highways.	4.3.4
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4
xiii. Identification of the total distance of curb-miles swept.	4.3.4
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, App. 4.1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.4.4

xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.16.4, App 4.7
xviii. A description of the general results of the inspections.	App 4.7
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	App 4.7
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.16.4, App 4.7
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	4.17

5.0 Industrial and Commercial

Permit Annual Reporting Requirement Section J.3.a.(3).(d)	Section
i. Any updates to the industrial and commercial inventory.	App 5.1
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.3, App 5.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.3.2
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.4.1, Table 5.2
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.2
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4.1
vii. Identification of the number of third party inspections conducted.	5.2.4.1
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4.1
ix. A description of efforts implemented to address mobile businesses.	5.3
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4.2
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4.4
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	5.4

6.0 Residential

Permit Annual Reporting Requirement Section J.3.a.(3).(e)	Section
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2, 6.3

ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.3,6.4.2
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4.3
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4.3
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4.4
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4.5
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4.1
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.5

7.0 IDDE

Permit Annual Reporting Requirement Section J.3.a.(3).(f)	Section
i. Correction of any inaccuracies in either the MS4 map or Dry Weather Field Screening and Analytical Monitoring Stations Map.	To be submitted in December 2012
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order NO. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	To be submitted in December 2012
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	To be submitted in December 2012
iv. A brief description of any other investigation and follow-up activities for illicit discharges and connections.	To be submitted in December 2012
v. The number and brief description of illicit discharges and connections identified.	To be submitted in December 2012

vi. The number of illicit discharges and connections eliminated	To be submitted in December 2012
vii. Identification and description of all spills to the MS4 and response to the spills.	To be submitted in December 2012
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	To be submitted in December 2012
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	To be submitted in December 2012
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	To be submitted in December 2012
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges	To be submitted in December 2012
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	To be submitted in December 2012
xiii. A description of notable activities conducted to manage illicit discharges and connections.	To be submitted in December 2012

8.0 Education

Permit Annual Reporting Requirement Section J.3.a.(3).(g)	Section
i. A description of education efforts conducted for each target community.	8.2, 8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and allowable behaviors and discharges.	8.3.5
iii. A description of education efforts conducted for municipal departments and personnel.	8.2
iv. A description of education efforts conducted for the new development and construction communities.	8.3.1, 8.3.2
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3.5

9.0 Public Participation

Permit Annual Reporting Requirement Section J.3.a.(3).(h)	Section
i. A description of public participation efforts conducted.	9.2 to 9.5

10.0 Fiscal Analysis

Permit Annual Reporting Requirement Section J.3.a.(3).(j)	Section
i. A fiscal analysis of the Copermittee s urban runoff management programs which meets all requirements of section G of this Order.	10.1 to 10.4

11.0 Effectiveness Assessment

Permit Annual Reporting Requirement Section J.3.a.(3).(i)	Section
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11.1 to 11.3

12.0 Special Investigations

Permit Annual Reporting Requirement Section J.3.a.(3).(k)	Section
i. A description of any special investigations conducted.	12.1

13.0 Non-Emergency Firefighting

Permit Annual Reporting Requirement Section J.3.a.(3).(l)	Section
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	13.1 to 13.5

14.0 JURMP Revisions

Permit Annual Reporting Requirement Section J.3.a.(3).(m)	Section
i. A description of any proposed revisions to the JURMP.	14.0

Appendix 2

City of Carlsbad
Storm Water Priority Project List
for
Development Project Approvals (July 1, 2011 to June 30, 2012)

PLANNING COMMISSION RESOLUTION NO. 6796

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF CARLSBAD, CALIFORNIA, RECOMMENDING APPROVAL OF A CONDITIONAL USE PERMIT TO ALLOW FOR THE DEMOLITION OF AN EXISTING 50 BED TEMPORARY AGRICULTURAL FARM WORKER HOUSING FACILITY AND ALLOW FOR THE CONSTRUCTION AND OPERATION OF A NEW 120 BED TEMPORARY AGRICULTURAL FARM WORKER HOUSING FACILITY ON PROPERTY LOCATED AT 2480 IMPALA DRIVE IN LOCAL FACILITIES MANAGEMENT ZONE 5.

CASE NAME: LA POSADA DE GUADALUPE DE CARLSBAD

CASE NO.: CUP 10-08

WHEREAS, **Catholic Charities, a Non-Profit Religious Corporation,** "Developer/Owner," has filed a verified application with the City of Carlsbad regarding property," described as

> **Parcel 2 of Parcel Map No. 15247 in the City of Carlsbad, County of San Diego, State of California, filed in the Office of the County Recorder of San Diego, May 25, 1988 as file number 88-247094**

("the Property"); and

WHEREAS, said verified application constitutes a request for a Conditional Use Permit as shown on Exhibits **"A" – "GG"** dated **August 3, 2011**, on file in the Planning Department, **CUP 10-08 – LA POSADA DE GUADALUPE DE CARLSBAD,** as provided by Chapter 21.42 of the Carlsbad Municipal Code; and

WHEREAS, the Planning Commission did, on **August 3, 2011**, hold a duly noticed public hearing as prescribed by law to consider said request; and

WHEREAS, at said public hearing, upon hearing and considering all testimony and arguments, if any, of all persons desiring to be heard, said Commission considered all factors relating to the CUP; and

WHEREAS, on **August 3, 2011**, the Planning Commission recommended approval of CUP **10-08**, as described and conditioned in Planning Commission Resolution No. **6796**.

NOW, THEREFORE, BE IT HEREBY RESOLVED by the Planning Commission of the City of Carlsbad as follows:

A) That the foregoing recitations are true and correct.

B) That based on the evidence presented at the public hearing, the Commission **RECOMMENDS APPROVAL OF CUP 10-08 - LA POSADA DE GUADALUPE DE CARLSBAD**, based on the following findings and subject to the following conditions:

Findings:

1. That the requested use is necessary or desirable for the development of the community, and is in harmony with the various elements and objectives of the general plan, including, if applicable, the certified local coastal program, specific plan or master plan, in that **the proposed use (Agricultural Farm Worker Housing) is allowed within the Industrial (M) Zone with the approval of a CUP, which implements the Planned Industrial (PI) General Plan Land Use designation, and furthermore is necessary and desirable to the community in that the shelter will continue a use which provides temporary housing for homeless seasonal agricultural farm workers.**

2. That the requested use is not detrimental to existing uses or to uses specifically permitted in the zone in which the proposed use is to be located in that **the proposed Agricultural Farm Worker Housing is not detrimental to the existing surrounding non-residential, open space, industrial office and City Facility uses or to uses specifically permitted in the zone in that the use is an existing use for which the occupancy is proposed to be intensified and has had no enforcement issues in the 20 years of operation at this site. Furthermore, to ensure compatibility of the project with the surrounding community, the project as designed will meet or exceed the required development standards of the Industrial (M) Zone and Q Overlay zone.**

3. That the site for the proposed conditional use is adequate in size and shape to accommodate the yards, setbacks, walls, fences, parking, loading facilities, buffer areas, landscaping and other development features prescribed in this code and required by the Planning Director, planning commission or city council, in order to integrate the use with other uses in the neighborhood, in that **the 3.62-acre project site, and more precisely the 1.17 acre existing pad is adequate in size and shape to accommodate the proposed use in that the project can be fit within the proposed development area without the need for any variances. Furthermore, the project complies with all of the required development standards of the Industrial (M) Zone and the Qualified Overlay Zone in that the project meets or exceeds the building setbacks and height**

restrictions; temporary residents of the site are expected to arrive by bus, bicycle, or on foot and a bus stop is nearby and bicycle racks are being provided, therefore the 10 parking spaces can accommodate the employees and visitors; and, the buildings as proposed meet or exceed the slope edge setback.

4. That the street system serving the proposed use is adequate to properly handle all traffic generated by the proposed use, in that **the existing street system, Impala Drive, is adequate to properly handle the limited amount of traffic (265 ADT) that is generated by the project. No levels of service are expected to change on surrounding roadways in that this use is existing and the temporary residents of the site are expected to arrive by bus, bicycle, or on foot and there are bus stops nearby and bicycle racks are being provided, therefore the 10 parking spaces can accommodate the employees and visitors.**

5. The project is consistent with the adopted Airport Land Use Compatibility Plan for the McClellan-Palomar Airport (ALUCP), dated October 2004, in that the project is conditioned to record a notice concerning aircraft noise. The project is compatible with the projected noise levels of the ALUCP; and, based on the noise/land use compatibility matrix of the ALUCP, the proposed land use is compatible with the airport, in that **it is located outside of the 60 dB CNEL noise contour and will therefore not require any interior or exterior noise attenuation and is identified as a compatible land use within Safety Zone 6. Furthermore, because the maximum 25' tall building on the proposed 355' tall pad (380' MSL) will be below the Federal Aviation Administration's 481' MSL Part 77 notification elevation, no FAA notification is required.**

6. That the project is consistent with the City's Landscape Manual (Carlsbad Municipal Code Section 14.28.020 and Landscape Manual Section I B).

7. That the Planning Director has determined that the project belongs to a class of projects that the State Secretary for Resources has found do not have a significant impact on the environment, and it is therefore categorically exempt from the requirement for the preparation of environmental documents pursuant to Section 15332, In-Fill Development Projects, in that, the project is consistent with the General Plan & Zoning Ordinance; the project is within the City limits; is less than five (5) acres in size; and is surrounded by urban uses.

8. The Planning Commission has reviewed each of the exactions imposed on the Developer contained in this resolution, and hereby finds, in this case, that the exactions are imposed to mitigate impacts caused by or reasonably related to the project, and the extent and the degree of the exaction is in rough proportionality to the impact caused by the project.

Conditions:

Note: Unless otherwise specified herein, all conditions shall be satisfied prior to **issuance of grading permits or building plans, whichever occurs first**.

. . .

1. If any of the following conditions fail to occur, or if they are, by their terms, to be implemented and maintained over time, if any of such conditions fail to be so implemented and maintained according to their terms, the City shall have the right to revoke or modify all approvals herein granted; deny or further condition issuance of all future building permits; deny, revoke, or further condition all certificates of occupancy issued under the authority of approvals herein granted; record a notice of violation on the property title; institute and prosecute litigation to compel their compliance with said conditions or seek damages for their violation. No vested rights are gained by Developer or a successor in interest by the City's approval of this **Conditional Use Permit.**

2. Staff is authorized and directed to make, or require the Developer to make, all corrections and modifications to the **Conditional Use Permit** documents, as necessary to make them internally consistent and in conformity with the final action on the project. Development shall occur substantially as shown on the approved Exhibits. Any proposed development, different from this approval, shall require an amendment to this approval.

3. Developer shall comply with all applicable provisions of federal, state, and local laws and regulations in effect at the time of building permit issuance.

4. If any condition for construction of any public improvements or facilities, or the payment of any fees in-lieu thereof, imposed by this approval or imposed by law on this Project are challenged, this approval shall be suspended as provided in Government Code Section 66020. If any such condition is determined to be invalid, this approval shall be invalid unless the City Council determines that the project without the condition complies with all requirements of law.

5. Developer/Operator shall and does hereby agree to indemnify, protect, defend, and hold harmless the City of Carlsbad, its Council members, officers, employees, agents, and representatives, from and against any and all liabilities, losses, damages, demands, claims and costs, including court costs and attorney's fees incurred by the City arising, directly or indirectly, from (a) City's approval and issuance of this **Conditional Use Permit**, (b) City's approval or issuance of any permit or action, whether discretionary or nondiscretionary, in connection with the use contemplated herein, and (c) Developer/Operator's installation and operation of the facility permitted hereby, including without limitation, any and all liabilities arising from the emission by the facility of electromagnetic fields or other energy waves or emissions. This obligation survives until all legal proceedings have been concluded and continues even if the City's approval is not validated.

6. Developer shall submit to **Planning Director** a reproducible 24" x 36" mylar copy of the **Site Plan** reflecting the conditions approved by the final decision-making body.

7. This project shall comply with all conditions and mitigation measures which are required as part of the Zone **5** Local Facilities Management Plan and any amendments made to that Plan prior to the issuance of building permits.

. . .

8. This approval is granted subject to the approval of **HMP 11-01** and is subject to all conditions contained in Planning Commission Resolution No. **6797** for those other approvals incorporated herein by reference.

9. This approval shall become null and void if building permits are not issued for this project within **36 months** from the date of project approval.

10. Building permits will not be issued for this project unless the local agency providing water and sewer services to the project provides written certification to the City that adequate water service and sewer facilities, respectively, are available to the project at the time of the application for the building permit, and that water and sewer capacity and facilities will continue to be available until the time of occupancy.

11. Developer shall pay the citywide Public Facilities Fee imposed by City Council Policy #17, the License Tax on new construction imposed by Carlsbad Municipal Code Section 5.09.030, and CFD #1 special tax (if applicable), subject to any credits authorized by Carlsbad Municipal Code Section 5.09.040. Developer shall also pay any applicable Local Facilities Management Plan fee for Zone **5,** pursuant to Chapter 21.90. All such taxes/fees shall be paid at issuance of building permit. If the taxes/fees are not paid, this approval will not be consistent with the General Plan and shall become void.

12. Prior to the issuance of the **Building Permit**, Developer shall submit to the City a Notice of Restriction executed by the owner of the real property to be developed. Said notice is to be filed in the office of the County Recorder, subject to the satisfaction of the Planning Director, notifying all interested parties and successors in interest that the City of Carlsbad has issued a **Conditional Use Permit** by Resolution No. **6796** on the property. Said Notice of Restriction shall note the property description, location of the file containing complete project details and all conditions of approval as well as any conditions or restrictions specified for inclusion in the Notice of Restriction. The Planning Director has the authority to execute and record an amendment to the notice which modifies or terminates said notice upon a showing of good cause by the Developer or successor in interest.

13. **CUP 10-08** shall be reviewed by the Planning Director annually to determine if all conditions of this permit have been met and that the use does not have a substantial negative effect on surrounding properties or the public health, safety and general welfare. If the Planning Director determines that: 1) the Conditional Use Permit was obtained by fraud or misrepresentation; or 2) the use for which such approval was granted is not being exercised; or 3) the Conditional Use Permit is being or recently has been exercised contrary to any of the terms or conditions of approval or the conditions of approval have not been met; or 4) the use for which such approval was granted has ceased to exist or has been suspended for one year or more; or 5) the use is in violation of any statute, ordinance, law or regulation; or 6) the use permitted by the Conditional Use Permit is being or has been so exercised as to be detrimental to the public health, safety or welfare or so as to constitute a nuisance, the Planning Director shall recommend that the Planning Commission hold a public hearing and after providing the permittee the opportunity to be heard, the Planning Commission may revoke and terminate the Conditional Use Permit in

whole or in part, reaffirm the Conditional Use Permit, modify the conditions or impose new conditions.

14. This Conditional Use Permit is granted for a period of **ten (10)** years from **August 3, 2011** through **August 2, 2021**. This permit may be revoked at any time after a public hearing, if it is found that the use has a substantial detrimental effect on surrounding land uses and the public's health and welfare, or the conditions imposed herein have not been met. This permit may be extended for a reasonable period of time not to exceed **ten (10)** years upon written application of the permittee made no less than 90 days prior to the expiration date. The Planning Commission may not grant such extension, unless it finds that there are no substantial negative effects on surrounding land uses or the public's health and welfare. If a substantial negative effect on surrounding land uses or the public's health and welfare is found, the extension shall be denied or granted with conditions which will eliminate or substantially reduce such effects. There is no limit to the number of extensions the Planning Commission may grant.

15. Developer shall submit and obtain Planning Director approval of a Final Landscape and Irrigation Plan showing conformance with the approved Preliminary Landscape Plan and the City's Landscape Manual. Developer shall construct and install all landscaping as shown on the approved Final Plans, and maintain all landscaping in a healthy and thriving condition, free from weeds, trash, and debris.

16. The first submittal of Final Landscape and Irrigation Plans shall be pursuant to the landscape plancheck process on file in the Planning Department and accompanied by the project's building, improvement, and grading plans.

17. Prior to the issuance of grading permit or the issuance of building permits, whichever occurs first, the Developer shall prepare and record a Notice that this property is subject to overflight, sight and sound of aircraft operating from McClellan-Palomar Airport, in a form meeting the approval of the Planning Director and the City Attorney (see Noise Form #2 on file in the Planning Department).

18. Developer shall construct trash receptacle and recycling areas enclosed by a six-foot-high masonry wall with gates pursuant to City Engineering Standards and Carlsbad Municipal Code Chapter 21.105. Location of said receptacles shall be approved by the Planning Director. Enclosure shall be of similar colors and/or materials to the project to the satisfaction of the Planning Director.

19. No outdoor storage of materials shall occur onsite unless required by the Fire Chief. When so required, the Developer shall submit and obtain approval of the Fire Chief and the Planning Director of an Outdoor Storage Plan, and thereafter comply with the approved plan.

Engineering:

Unless specifically stated in the condition, all of the following conditions, upon the approval of this proposed development, must be met prior to approval of a building or grading permit whichever occurs first.

General

1. Prior to hauling dirt or construction materials to or from any proposed construction site within this project, developer shall apply for and obtain approval from, the city engineer for the proposed haul route.

2. This project is approved upon the express condition that building permits will not be issued for the development of the subject property, unless the district engineer has determined that adequate water and sewer facilities are available at the time of permit issuance and will continue to be available until time of occupancy.

3. Developer shall install sight distance corridors at all street intersections and driveways in accordance with City Engineering Standards. The property owner shall maintain this condition.

Fees/Agreements

4. Developer shall cause property owner to execute and submit to the city engineer for recordation, the city's standard form Geologic Failure Hold Harmless Agreement.

5. Developer shall cause property owner to execute and submit to the city engineer for recordation the city's standard form Drainage Hold Harmless Agreement.

6. Developer shall cause property owner to process, execute and submit an executed copy to the city engineer for recordation a city standard Permanent Stormwater Quality Best Management Practice Maintenance Agreement for the perpetual maintenance of all treatment control, applicable site design and source control, post-construction permanent Best Management Practices prior to the issuance of a grading permit or building permit, whichever occurs first for this project.

7. Developer shall cause the property owner to process a street vacation to vacate the excess street dedication of Impala Drive along the project frontage as shown on the site plan.

Grading

8. Based upon a review of the proposed grading and the grading quantities shown on the site plan, a grading permit for this project is required. Developer shall prepare and submit plans and technical studies/reports, for city engineer review, and shall pay all applicable grading plan review fees per the city's latest fee schedule.

9. Developer shall apply for and obtain a grading permit from the city engineer. Developer shall pay all applicable grading permit fees per the city's latest fee schedule and shall post security per City Code requirements.

10. Developer shall comply with the city's Stormwater Regulations, latest version, and shall implement best management practices at all times. Best management practices include but are not limited to pollution control practices or devices, erosion control to prevent silt runoff during construction, general housekeeping practices, pollution prevention and

educational practices, maintenance procedures, and other management practices or devices to prevent or reduce the discharge of pollutants to stormwater, receiving water or stormwater conveyance system to the maximum extent practicable. Developer shall notify prospective owners and tenants of the above requirements.

11. Prior to the issuance of a grading permit, developer shall submit to the city engineer receipt of a Notice of Intent from the State Water Resources Control Board.

12. Prior to the issuance of grading permit or building permit, whichever occurs first, developer shall submit for city approval a Tier 3 Storm Water Pollution Prevention Plan (TIER 3 SWPPP). The TIER 3 SWPPP shall comply with current requirements and provisions established by the San Diego Regional Water Quality Control Board and City of Carlsbad Requirements. The TIER 3 SWPPP shall identify and incorporate measures to reduce storm water pollutant runoff during construction of the project to the maximum extent practicable. Developer shall pay all applicable SWPPP plan review and inspection fees per the city's latest fee schedule.

13. This project is subject to 'Priority Development Project' requirements. Developer shall prepare and process a Storm Water Management Plan (SWMP), subject to city engineer approval, to demonstrate how this project meets new/current storm water treatment requirements per the city's Standard Urban Storm Water Management Plan (SUSMP), latest version. In addition to new treatment control BMP selection criteria in the SUSMP, the developer shall use low impact development (site design) approaches to ensure that runoff from impervious areas (roofs, pavement, etc) are drained through landscaped (pervious) areas prior to discharge. Developer shall pay all applicable SWMP plan review and inspection fees per the city's latest fee schedule.

14. Developer is subject to hydromodification (runoff reduction) requirements. Hydromodification involves detailed site design and analysis to reduce the amount of post-development run-off by mimicking the natural hydrologic function of the site, preserving natural open-spaces and natural drainage channels, minimizing use of new impervious surfaces, and promoting onsite infiltration and evaporation of run-off. During final design, developer shall demonstrate compliance with hydromodification requirements in accordance with the city's Standard Urban Storm Water Management Plan (SUSMP) to the satisfaction of the city engineer.

15. Developer is responsible to ensure that all final design plans (grading plans, improvement plans, landscape plans, building plans, etc) incorporate all source control, site design, treatment control BMP, hydromodification, and Low Impact Design (LID) facilities.

Dedications/Improvements

16. Developer shall design the private drainage systems, as shown on the site plan to the satisfaction of the city engineer. All private drainage systems (12" diameter storm drain and larger) shall be inspected by the city. Developer shall pay the standard improvement plan check and inspection fees for private drainage systems.

. . .

17. Developer shall design all proposed public improvements including but not limited to (pedestrian ramps, driveways, curb and gutter, sidewalk, water services/meters, curb drains, etc.) as shown on the site plan. These improvements shall be shown on one of the following, subject to city engineer approval:

    A. Grading plans processed in conjunction with this project; or
    B. Construction Revision to an existing record public improvement drawing, DWG 248-5.

    Developer shall pay plan check and inspection fees using improvement valuations in accordance with the city's current fee schedule. Developer shall apply for and obtain a right-of-way permit prior to performing work in the city right-of-way.

Utilities

18. Developer shall meet with the fire marshal to determine if fire protection measures (fire flows, fire hydrant locations, building sprinklers) are required to serve the project. Fire hydrants, if proposed, shall be considered public improvements and shall be served by public water mains to the satisfaction of the district engineer.

19. Prior to issuance of building permits, developer shall pay all fees, deposits, and charges for connection to public facilities.

20. Developer shall install potable water services and meters at locations approved by the district engineer. The locations of said services shall be reflected on public improvement plans, grading plans, or construction revision to existing improvement plan DWG 248-5.

21. The developer shall install sewer laterals and clean-outs at locations approved by the city engineer. The locations of sewer laterals shall be reflected on public improvement plans, grading plans, or construction revision to existing improvement plan DWG 248-5.

Code Reminders:

The project is subject to all applicable provisions of local ordinances, including but not limited to the following:

22. Developer shall pay traffic impact and sewer impact fees based on Section 18.42 and Section 13.10 of the City of Carlsbad Municipal Code, respectively. The Average Daily Trips (ADT) and floor area contained in the staff report and shown on the site plan are for planning purposes only.

23. Developer shall pay a landscape plancheck and inspection fee as required by Section 20.08.050 of the Carlsbad Municipal Code.

24. Approval of this request shall not excuse compliance with all applicable sections of the Zoning Ordinance and all other applicable City ordinances in effect at time of building permit issuance, except as otherwise specifically provided herein.

25. Premise identification (addresses) shall be provided consistent with Carlsbad Municipal Code Section 18.04.320.

26. Any signs proposed for this development shall at a minimum be designed in conformance with the City's Sign Ordinance and shall require review and approval of the Planning Director prior to installation of such signs.

NOTICE

Please take **NOTICE** that approval of your project includes the "imposition" of fees, dedications, reservations, or other exactions hereafter collectively referred to for convenience as "fees/exactions."

You have 90 days from date of final approval to protest imposition of these fees/exactions. If you protest them, you must follow the protest procedure set forth in Government Code Section 66020(a), and file the protest and any other required information with the City Manager for processing in accordance with Carlsbad Municipal Code Section 3.32.030. Failure to timely follow that procedure will bar any subsequent legal action to attack, review, set aside, void, or annul their imposition.

You are hereby FURTHER NOTIFIED that your right to protest the specified fees/exactions DOES NOT APPLY to water and sewer connection fees and capacity charges, nor planning, zoning, grading, or other similar application processing or service fees in connection with this project; NOR DOES IT APPLY to any fees/exactions of which you have previously been given a NOTICE similar to this, or as to which the statute of limitations has previously otherwise expired.

GRADING NOTES

(IN ADDITION TO THE REQUIREMENTS OF CHAPTER 15.16 OF THE CARLSBAD MUNICIPAL CODE.)

1. THIS PLAN SUPERSEDES ALL OTHER PLANS PREVIOUSLY APPROVED BY THE CITY OF CARLSBAD REGARDING GRADING SHOWN ON THIS SET OF PLANS.
2. APPROVAL OF THIS PLAN DOES NOT LESSEN OR WAIVE ANY PORTION OF THE CARLSBAD MUNICIPAL CODE, RESOLUTION OF CONDITIONAL APPROVAL, CITY STANDARDS OR OTHER ADDITIONAL DOCUMENTS LISTED HEREON AS THEY MAY PERTAIN TO THIS PROJECT. THE ENGINEER IN RESPONSIBLE CHARGE SHALL REVISE THESE PLANS WHEN NON-CONFORMANCE IS DISCOVERED.
3. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER OR ENGINEER-OF-WORK FROM RESPONSIBILITY FOR THE CORRECTION OF ERRORS AND OMISSIONS DISCOVERED DURING CONSTRUCTION. ALL PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR APPROVAL.
4. A RIGHT-OF-WAY PERMIT FROM THE CITY ENGINEER WILL BE REQUIRED FOR ANY WORK IN THE PUBLIC RIGHT OF WAY PRIOR TO PERMIT ISSUANCE. A CERTIFICATE OF INSURANCE AS WELL AS ADDITIONAL INSURED ENDORSEMENT MUST BE FILED NAMING THE CITY OF CARLSBAD AS AN ADDITIONAL INSURED ON THE PERMITTEE'S POLICY IN THE MINIMUM AMOUNT OF $1,000,000.00 FOR EACH OCCURRENCE OF LIABILITY. THE INSURANCE COMPANY WRITING THE POLICY MUST HAVE A RATING OF "A-" OR BETTER AND A SIZE CATEGORY OF CLASS VII OR BETTER AS ESTABLISHED BY "BEST'S" KEY RATING GUIDE.
5. UNLESS EXEMPTED BY SECTION 301.(b)5 OF THE UNIFORM BUILDING CODE, RETAINING WALLS OUTSIDE OF PUBLIC RIGHT OF WAY REQUIRE SEPARATE PERMITS FROM THE BUILDING DEPARTMENT.
6. NO WORK SHALL BE COMMENCED UNTIL ALL PERMITS HAVE BEEN OBTAINED FROM THE CITY AND OTHER APPROPRIATE AGENCIES.
7. APPROVAL OF THESE PLANS BY THE CITY ENGINEER DOES NOT AUTHORIZE ANY WORK OR GRADING TO BE PERFORMED UNTIL THE PROPERTY OWNER'S PERMISSION HAS BEEN OBTAINED AND A VALID GRADING PERMIT HAS BEEN ISSUED.
8. NO REVISIONS WILL BE MADE TO THESE PLANS WITHOUT THE WRITTEN APPROVAL OF THE CITY ENGINEER, NOTED WITHIN THE REVISION BLOCK, ON THE APPROPRIATE SHEET OF THE PLANS AND THE TITLE SHEET.
9. ORIGINAL DRAWINGS SHALL BECOME THE PROPERTY OF THE CITY UPON BEING SIGNED BY THE CITY ENGINEER.
10. THE ORIGINAL DRAWING SHALL BE REVISED TO REFLECT AS-BUILT CONDITIONS BY THE ENGINEER-OF-WORK PRIOR TO FINAL ACCEPTANCE OF THE WORK BY THE CITY.
11. ACCESS FOR FIRE AND OTHER EMERGENCY VEHICLES SHALL BE MAINTAINED TO THE PROJECT SITE AT ALL TIMES DURING CONSTRUCTION.
12. WHERE TRENCHES ARE WITHIN CITY EASEMENTS, A SOILS REPORT COMPRISED OF: (A) SUMMARY SHEET, (B) LABORATORY WORK SHEETS AND (C) COMPACTION CURVES, SHALL BE SUBMITTED BY A PROFESSIONAL ENGINEER OF THE STATE OF CALIFORNIA, PRINCIPALLY DOING BUSINESS IN THE FIELD OF APPLIED SOILS MECHANICS. THE SOILS REPORT WILL BE SUBMITTED TO THE CITY ENGINEERING INSPECTOR WITHIN TWO WORKING DAYS OF THE COMPLETION OF FIELD TESTS.
13. A SOILS COMPACTION REPORT AND COMPLIANCE VERIFICATION REGARDING ADHERENCE TO RECOMMENDATIONS OUTLINED IN THE SOILS REPORT IS REQUIRED PRIOR TO THE ISSUANCE OF A GRADING PERMIT. ALL CONTROLLED GRADING SHALL BE DONE UNDER THE DIRECTION OF A PROFESSIONAL ENGINEER OF THE STATE OF CALIFORNIA PRINCIPALLY DOING BUSINESS IN THE FIELD OF APPLIED SOILS MECHANICS. ALL FILL OR FUTURE FILL AREAS SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE CITY OF CARLSBAD STANDARD SPECIFICATIONS AND THE " EARTHWORK SPECIFICATIONS " ATTACHED TO THE PRELIMINARY SOILS INVESTIGATION. DAILY FIELD COMPACTION REPORTS WILL BE SUBMITTED TO THE PROJECT INSPECTOR.
14. A PRECONSTRUCTION MEETING SHALL BE HELD AT THE SITE PRIOR TO THE BEGINNING OF WORK AND SHALL BE ATTENDED BY ALL REPRESENTATIVES RESPONSIBLE FOR CONSTRUCTION, INSPECTION, SUPERVISION, TESTING AND ALL OTHER ASPECTS OF THE WORK. THE CONTRACTOR SHALL REQUEST A PRECONSTRUCTION MEETING BY CALLING THE INSPECTION LINE AT (760) 438-3891 AT LEAST FIVE(5) WORKING DAYS PRIOR TO STARTING CONSTRUCTION. THE CONTRACTOR WILL THEN BE CONTACTED BY THE PROJECT INSPECTOR TO COORDINATE A DATE AND TIME FOR THE PRECONSTRUCTION MEETING. APPROVED DRAWINGS MUST BE AVAILABLE PRIOR TO SCHEDULING. THE GRADING PERMIT WILL BE PROVIDED BY THE PROJECT INSPECTOR AT THE MEETING.
15. AN INSPECTION REQUESTS FOR THE PRECONSTRUCTION MEETING WILL BE MADE BY CALLING THE ENGINEERING 24-HOUR INSPECTION REQUEST LINE AT (760) 438-3891. INSPECTION REQUEST MUST BE RECEIVED PRIOR TO 2:00 P.M. ON THE DAY BEFORE THE INSPECTION IS NEEDED. INSPECTIONS WILL BE MADE THE NEXT WORK DAY UNLESS YOU REQUEST OTHERWISE. REQUESTS MADE AFTER 2:00 P.M. WILL BE SCHEDULED FOR TWO FULL WORK DAYS LATER.
16. THE OWNER AND/OR APPLICANT THROUGH THE DEVELOPER AND/OR CONTRACTOR SHALL DESIGN, CONSTRUCT AND MAINTAIN ALL SAFETY DEVICES, INCLUDING SHORING, AND SHALL BE SOLELY RESPONSIBLE FOR CONFORMING TO ALL LOCAL, STATE AND FEDERAL SAFETY AND HEALTH STANDARDS, LAWS AND REGULATIONS.
17. THE CONTRACTOR SHALL CONFORM TO LABOR CODE SECTION 6705 BY SUBMITTING A DETAIL PLAN TO THE CITY ENGINEER AND/OR CONCERNED AGENCY SHOWING THE DESIGN OF SHORING, BRACING SLOPING OR OTHER PROVISIONS TO BE MADE OF WORKER PROTECTION FROM THE HAZARD OF CAVING GROUND DURING THE EXCAVATION OF SUCH TRENCH OR TRENCHES OR DURING THE PIPE INSTALLATION THEREIN. THIS PLAN MUST BE PREPARED FOR ALL TRENCHES FIVE FEET (5') OR MORE IN DEPTH AND APPROVED BY THE CITY ENGINEER AND/OR CONCERNED AGENCY PRIOR TO EXCAVATION. IF THE PLAN VARIES FROM THE SHORING SYSTEM STANDARDS ESTABLISHED BY THE CONSTRUCTION SAFETY ORDERS, TITLE 8 CALIFORNIA ADMINISTRATIVE CODE, THE PLAN SHALL BE PREPARED BY A REGISTERED ENGINEER AT THE CONTRACTORS EXPENSE. A COPY OF THE OSHA EXCAVATION PERMIT MUST BE SUBMITTED TO THE INSPECTOR PRIOR TO EXCAVATION.
18. NO BLASTING SHALL BE PERFORMED UNTIL A VALID BLASTING PERMIT HAS BEEN OBTAINED FROM THE CITY OF CARLSBAD. SUBMIT APPLICATION FOR BLASTING PERMIT WELL IN ADVANCE OF THE SCHEDULING OF BLASTING OPERATIONS.
19. IF ANY ARCHAEOLOGICAL RESOURCES ARE DISCOVERED WITHIN ANY WORK AREA DURING CONSTRUCTION, OPERATIONS WILL CEASE IMMEDIATELY, AND THE PERMITTEE WILL NOTIFY THE CITY ENGINEER. OPERATIONS WILL NOT RESTART UNTIL THE PERMITTEE HAS RECEIVED WRITTEN AUTHORITY FROM THE CITY ENGINEER TO DO SO.
20. ALL OPERATIONS CONDUCTED ON THE SITE OR ADJACENT THERETO, INCLUDING WARMING UP, REPAIR, ARRIVAL, DEPARTURE OR OPERATION OF TRUCKS, EARTHMOVING EQUIPMENT, CONSTRUCTION EQUIPMENT AND ANY OTHER ASSOCIATED GRADING EQUIPMENT SHALL BE LIMITED TO THE PERIOD BETWEEN 7:00 A.M. AND SUNSET EACH DAY, MONDAY THRU FRIDAY AND NO EARTHMOVING OR GRADING OPERATIONS SHALL BE CONDUCTED ON WEEKENDS OR HOLIDAYS. (A LIST OF CITY HOLIDAYS IS AVAILABLE AT THE ENGINEERING DEPARTMENT COUNTER.)
21. ALL OFF-SITE HAUL ROUTES SHALL BE SUBMITTED BY THE CONTRACTOR TO THE CITY ENGINEER FOR APPROVAL TWO FULL WORKING DAYS PRIOR TO BEGINNING OF WORK.
22. IMPORT MATERIAL SHALL BE OBTAINED FROM, AND WASTE MATERIAL SHALL BE DEPOSITED AT, A SITE APPROVED BY THE CITY ENGINEER. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DEBRIS OR DAMAGE OCCURRING ALONG THE HAUL ROUTES OR ADJACENT STREETS AS A RESULT OF THE GRADING OPERATION.
23. BRUSH SHALL BE REMOVED ONLY WITHIN THE AREA TO BE GRADED. NO TREES ARE TO BE REMOVED UNLESS SPECIFICALLY NOTED ON THE PLAN.
24. ALL AREAS SHALL BE GRADED TO DRAIN. GRADING RESULTING IN THE PONDING OF WATER IS NOT PERMITTED. ALL EARTHEN SWALES AND DITCHES SHALL HAVE A MINIMUM ONE PERCENT SLOPE.
25. THESE PLANS ARE SUBJECT TO A SIGNED AND APPROVED SET OF EROSION CONTROL PLANS. EROSION CONTROL SHALL BE AS SHOWN AND AS APPROVED BY THE CITY ENGINEER OR AS DIRECTED BY THE PROJECT INSPECTOR.
26. ALL SLOPES SHALL BE TRIMMED TO A FINISH GRADE TO PRODUCE A UNIFORM SURFACE AND CROSS SECTION. THE SITE SHALL BE LEFT IN A NEAT AND ORDERLY CONDITION. ALL STONES, ROOTS OR OTHER DEBRIS SHALL BE REMOVED AND DISPOSED OF AT A SITE APPROVED OF BY THE CITY ENGINEER.
27. ALL SLOPES SHALL BE IRRIGATED, STABILIZED, PLANTED AND/OR HYDROSEEDED WITHIN TEN (10) DAYS OF THE TIME WHEN EACH SLOPE IS BROUGHT TO GRADE AS SHOWN ON THE APPROVED GRADING PLANS.
28. LANDSCAPING SHALL BE ACCOMPLISHED ON ALL SLOPES AND PADS AS REQUIRED BY THE CITY OF CARLSBAD LANDSCAPE MANUAL. THE LANDSCAPING PLANS FOR THIS PROJECT, DRAWING NO. DWG 473-4L, AND/OR AS DIRECTED BY THE CITY ENGINEER OR PLANNING DIRECTOR.
29. THE OWNER/APPLICANT SHALL INSURE THAT ALL CONTRACTORS SHALL COORDINATE THE WORK OF THESE GRADING PLANS WITH THAT SHOWN ON BOTH THE LANDSCAPE AND IRRIGATION PLANS AND THE IMPROVEMENT PLANS AS REQUIRED FOR THIS WORK IN ACCORDANCE WITH THE LANDSCAPE MANUAL TIME REQUIREMENTS.
30. WHERE AN EXISTING PIPE LINE IS TO BE ABANDONED AS A RESULT OF THE GRADING OPERATION, IT SHALL BE REMOVED WITHIN TWENTY FEET OF BUILDING OR STREET AREAS AND REPLACED WITH PROPERLY COMPACTED SOILS. IN OTHER AREAS THE PIPE WILL BE PLUGGED WITH CONCRETE OR REMOVED AS APPROVED BY THE CITY ENGINEER.
31. THE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL EXISTING FACILITIES (ABOVE GROUND AND UNDER GROUND) WITHIN THE PROJECT SITE SUFFICIENTLY AHEAD OF GRADING TO PERMIT THE REVISION OF THE GRADING PLANS IF IT IS FOUND THAT THE ACTUAL LOCATIONS ARE IN CONFLICT WITH THE PROPOSED WORK.
32. THE CONTRACTOR SHALL NOTIFY AFFECTED UTILITY COMPANIES (SEE BELOW) AT LEAST 2 FULL WORKING DAYS PRIOR TO STARTING GRADING NEAR THEIR FACILITIES AND SHALL COORDINATE THE WORK WITH A COMPANY REPRESENTATIVE.

UNDERGROUND SERVICE ALERT	(800)422-4133

33. PERMIT COMPLIANCE REQUIREMENTS:
    A. FOR CONTROLLED GRADING – THE APPLICANT HIRES A CIVIL ENGINEER, SOILS ENGINEER, AND/OR GEOLOGIST TO GIVE TECHNICAL ADVICE, OBSERVE AND CONTROL THE WORK IN PROGRESS {15.16.120 A.8} CARLSBAD MUNICIPAL CODE.
    B. PRIOR TO FINAL APPROVAL OF A GRADING PERMIT – THE FOLLOWING REPORTS MUST BE SUBMITTED TO THE CITY ENGINEER VIA THE PROJECT INSPECTOR {15.16.120 A.10} CARLSBAD MUNICIPAL CODE:
        (1) FINAL REPORT BY SUPERVISING GRADING ENGINEER STATING ALL GRADING IS COMPLETE. ALL EROSION CONTROL, SLOPE PLANTING AND IRRIGATION ARE INSTALLED IN CONFORMANCE WITH CITY CODE AND THE APPROVED PLANS (OBTAIN SAMPLE OF COMPLIANCE LETTER FROM CITY ENGINEERING DEPARTMENT).
        (2) AS-BUILT GRADING PLAN.
        (3) REPORT FROM THE SOILS ENGINEER, WHICH INCLUDES RECOMMENDED SOIL BEARING CAPACITIES, A STATEMENT AS TO THE EXPANSIVE QUALITY OF THE SOIL, AND SUMMARIES OF FIELD AND LABORATORY TESTS. THE REPORT SHALL ALSO INCLUDE A STATEMENT BY THE SOILS ENGINEER THAT THE GRADING WAS DONE IN ACCORDANCE WITH THE REQUIREMENTS AND RECOMMENDATIONS OUTLINED IN THE PRELIMINARY SOILS REPORT AND ANY SUPPLEMENTS THERETO.
        (4) REPORT WITH AS-BUILT GEOLOGC PLAN, IF REQUIRED BY THE CITY.
34. UNLESS A GRADING PERMIT FOR THIS PROJECT IS ISSUED WITHIN ONE (1) YEAR AFTER THE CITY ENGINEER'S APPROVAL, THESE PLANS MAY BE REQUIRED TO BE RESUBMITTED FOR PLANCHECK. PLANCHECK FEES WILL BE REQUIRED FOR ANY SUCH RECHECK.
35. THE SOILS REPORT TITLED GEOTECHNICAL PLAN REVEW, LA POSADA MEN'S SHELTER, IMPALA DRIVE, CARLSBAD, CA (JOB#09-224-P) PREPARED BY VINJE & MIDDLETON ENGINEERING, INC. DATED APRIL 8, 2011, SHALL BE CONSIDERED AS A PART OF THIS GRADING PLAN. ALL GRADING SHALL BE DONE IN ACCORDANCE WITH THE RECOMMENDATIONS AND SPECIFICATIONS CONTAINED IN SAID SOILS REPORT.

SOILS ENGINEER'S CERTIFICATE

I, S. MEHDI S. SHARIAT, A REGISTERED (CIVIL/GEOTECHNICAL) ENGINEER OF THE STATE OF CALIFORNIA, PRINCIPALLY DOING BUSINESS IN THE FIELD OF APPLIED SOILS MECHANICS, HEREBY CERTIFY THAT A SAMPLING AND STUDY OF THE SOIL CONDITIONS PREVALENT WITHIN THIS SITE WAS MADE BY ME OR UNDER MY DIRECTION BETWEEN THE DATES OF August 17, 2009 AND April 20 11. TWO COPIES OF THE SOILS REPORT COMPILED FROM THIS STUDY, WITH MY RECOMMENDATIONS, HAS BEEN SUBMITTED TO THE OFFICE OF THE CITY ENGINEER.

REGISTERED PROFESSIONAL ENGINEER SEYED M. SAMSAM SHARIAT No. 2885 Exp. 12/31/12 GEOTECHNICAL STATE OF CALIFORNIA

LETTER OF PERMISSION FOR GRADING AND CONSTRUCTION OF GRADING IMPROVEMENTS

SAN DIEGO GAS & ELECTRIC COMPANY (SDG&E) IS THE OWNER OF VARIOUS ELECTRIC AND NATURAL GAS TRANSMISSION EASEMENTS LOCATED IN AND ADJACENT TO THE PROPERTY MORE PARTICULARLY DESCRIBED AS: 2478 IMPALA DRIVE, CARLSBAD, CA 92008, APN 209-041-28. SAID SDG&E EASEMENTS FILED AS DOCUMENT 157924 ON JULY 4, 1960 AND IN OFFICIAL RECORDS OF THE OFFICE OF THE COUNTY RECORDER, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA. SAN DIEGO GAS AND DOCUMENTS FILED AS 157934 ON AUGUST 4, 1960, AND DOCUMENTS FILED AS 65560 AND 65561 ON MARCH 31, 1960 IN OFFICIAL RECORDS OF THE OFFICE OF THE COUNTY RECORDER, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA.

UPON REVIEW OF THIS PLAN FOR THE PROPOSED DEVELOPMENT, RECEIVED, THIS DATE BY SAN DIEGO GAS AND ELECTRIC, WHICH SHOW THE PROPOSED GRADING AND IMPROVEMENTS ON THE PROPERTY SUBJECT TO OUR EASEMENTS; GRADING PLANS FOR: LA POSADA MEN'S SHELTER.

PERMISSION IS HEREBY GRANTED TO RSM CONTRACTORS, INC, A CALIFORNIA LIMITED LIABILITY COMPANY (PERMITTEE) TO GRUB, GRADE, AND INSTALL IMPROVEMENTS ONLY AS SHOWN ON THE ATTACHED PLANS, SUBJECT TO THE FOLLOWING CONDITIONS:

1. EXPIRATION: THIS "PERMISSION TO GRADE" TO GRADE SHALL EXPIRE IF GRADING DOES NOT COMMENCE WITHIN 6 MONTHS FROM THE DATE OF THIS LETTER AND WORK IS NOT DILIGENTLY PURSUED TO COMPLETION.
2. SUBMITTALS:
   - 2.1. FINAL SIGNED APPROVED PLANS MUST BE SUBMITTED TO SDG&E'S LAND MANAGEMENT REPRESENTATIVE A MINIMUM OF 10 WORKING DAYS BEFORE COMMENCEMENT OF GRADING AND CONSTRUCTION OF IMPROVEMENTS WITHIN THE EASEMENT AREA.
   - 2.2. PERMITTEE AGREES TO SUPPLY SDG&E TRANSMISSION ENGINEERING WITH 'AS BUILT' PROFILE MAPS, IF REQUESTED, OF THE GRADE CHANGES WITHIN ITS EASEMENTS. PROFILES SHALL BE AT THE SPECIFICATIONS OF SDG&E'S TRANSMISSION ENGINEERING DEPARTMENT.
   - 2.3. SITE IMPROVEMENT PLANS AND LANDSCAPE PLANS HAVE NOT BEEN REVIEWED OR APPROVED AT THIS TIME. PERMITTEE AGREES TO SUPPLY SITE PLANS AND LANDSCAPE PLANS FOR REVIEW, APPROVAL AND ISSUANCE OF A "PERMISSION TO GRADE AND CONSTRUCT IMPROVEMENTS" LETTER WHEN THE PLANS ARE COMPLETED.
3. PRE-CONSTRUCTION MEETING: SDG&E'S LAND MANAGEMENT REPRESENTATIVE MUST BE INVITED WITH AT LEAST FORTY-EIGHT (48) HOURS PRIOR NOTICE, WHETHER BY TELEPHONE, FAX OR OTHERWISE, TO ANY PRE-CONSTRUCTION MEETINGS HELD BEFORE THE START OF CONSTRUCTION.
4. GRADING:
   - 4.1. AT LEAST TWENTY-FOUR (24) HOURS NOTICE MUST BE GIVEN TO SDG&E'S LAND MANAGEMENT REPRESENTATIVE BEFORE START OF WORK OR MAKING FIELD CHANGES TO PLANS WITHIN SAID EASEMENT.
   - 4.2. PERMITTEE IS RESPONSIBLE TO CALL DIG ALERT AT 1-800-227-2600 FOR ALL UNDERGROUND MARK-OUT LOCATIONS.
   - 4.3. CLEARANCE OF (35) FEET MINIMUM BETWEEN THE SDG&E ELECTRIC TRANSMISSION WIRES AND THE NATURAL GROUND SHALL BE MAINTAINED ON ANY GIVEN DAY, NOTING LINE SAGS VARY DEPENDING ON AMBIENT TEMPERATURE AND LINE CURRENT. ALL CAL-OSHA REQUIREMENTS FOR CLEARANCES BETWEEN HIGH VOLTAGE WIRES AND HEAVY EQUIPMENT MUST BE MAINTAINED.
   - 4.4. NO GRADING SHALL BE ALLOWED WITHIN TEN (10) FEET OF A SINGLE WOOD POLE STRUCTURE OR ANCHOR, WITHIN FIFTEEN (15) FEET OF MULTI-WOOD POLES, WITHIN TWENTY (20) FEET OF STEEL LATTICE TOWERS OR WITHIN THIRTY (30) FEET OF STEEL POLES.
5. EROSION CONTROL:
   - 5.1. ALL DISTURBED AND CREATED SLOPES, WITHIN THE SDG&E ELECTRIC TRANSMISSION EASEMENT, SHALL BE HYDRO-SEEDED OR PLANTED BY PERMITTEE WITH AN SDG&E APPROVED MIX.
   - 5.2. PERMITTEE SHALL DESIGN, IMPLEMENT AND MAINTAIN EROSION CONTROL TO MEET THE COUNTY OF SAN DIEGO'S AND THE CITY OF SAN DIEGO'S REQUIREMENTS.
   - 5.3. ALL DRAINAGE SHALL BE DESIGNED TO PREVENT EROSION OF SDG&E ACCESS ROADS.
6. STORAGE: THIS PERMISSION TO GRADE LETTER DOES NOT PERMIT STORAGE OF EQUIPMENT, MATERIALS, DIRT OR DEBRIS ON THE EASEMENT OR FEE OWNED PROPERTY.
7. ACCESS:
   - 7.1. SDG&E RESERVES THE RIGHT TO INSPECT AND PERFORM QUALITY CONTROL WORK DURING CONSTRUCTION.
   - 7.2. 24 HOUR PER DAY ACCESS TO ALL EXISTING SDG&E FACILITIES SHALL BE MAINTAINED.
   - 7.3. ALL GATES SHALL PROVIDE FOR SDG&E ACCESS BY PADLOCK, LOCK-BOX OR KEYED BYPASS BOTH DURING CONSTRUCTION AND UPON COMPLETION OF CONSTRUCTION.
8. GATES: PIPE GATE CONSTRUCTION AND THE LOCATION OF THE GATES RELATIVE TO THE STREET TO BE APPROVED BY SDG&E'S LAND MANAGEMENT REPRESENTATIVE.
9. OUTSTANDING AGREEMENTS: PERMITTEE AGREES TO PAY FOR, SIGN AND/OR HAVE SIGNED ALL CONSENT AGREEMENTS, RIGHT-OF-WAY USE AGREEMENTS AND/OR JOINT USE AGREEMENTS BETWEEN SDG&E AND OWNER, COMPANY, OR PUBLIC AGENCIES WHO ENCROACH UPON THE SDG&E EASEMENTS WHICH WILL BE SUBJECT TO THE REVOCABILITY CLAUSE AS STATED IN THE CALIFORNIA PUBLIC UTILITY'S GENERAL ORDER 69-C AS SHOWN ON WEB SITE: HTTP://WWW.CPUC.CA.GOV/PUBLISHED/GRAPHICS/645.PDF.
10. CHANGES: THIS LETTER SHALL NOT BE CONSTRUED AS APPROVAL OF ANY FIELD CHANGES. SPECIFIC APPROVAL OF ANY CHANGES WITHIN THE SDG&E EASEMENT MUST BE APPROVED IN WRITING BY SDG&E'S LAND MANAGEMENT REPRESENTATIVE.
11. SPECIAL CONDITIONS:
   - 11.1. WHEN RELOCATING ACCESS ROADS PERMITTEE SHALL ALWAYS PROVIDE AT LEAST ONE PASSABLE WAY ALONG THE EASEMENT FOR SDG&E VEHICLES.
   - 11.2. ALL TREES AND BUSHES PLANTED IN EASEMENT SHALL BE NO TALLER THAN FIFTEEN (15) FOOT AT MATURITY. VEGETATION EXCEEDING THIS HEIGHT MAY BE REMOVED OR TRIMMED AT PERMITTEE'S EXPENSE IF IT CREATES A VIOLATION OF SDG&E LINE CLEARANCE REQUIREMENTS. EASEMENT LANGUAGE AND THIS DOCUMENT SHALL PREVAIL OVER DIAGRAMMATIC PLANS SHOULD THERE BE A CONFLICT THAT VIOLATES SDG&E OR PUC STANDARDS.
   - 11.3. IRRIGATION SYSTEMS LOCATED IN SDG&E EASEMENTS OR IN SDG&E ACCESS ROADS WILL BE THE SOLE COST AND RESPONSIBILITY OF THE PERMITTEE. DAMAGED MAINLINES, LATERALS, VALVES, SPRINKLER HEADS, ETC. SHALL BE PROMPTLY REPAIRED BY PERMITTEE TO PREVENT EROSION OR WATER DAMAGE TO SDG&E ROADS OR FACILITIES.
   - 11.4. PERMITTEE AGREES TO SUBMIT FOR REVIEW AND APPROVAL A BLASTING PLAN, IF BLASTING IS REQUIRED, MEETING ALL REQUIREMENTS OF SDG&E CIVIL STRUCTURAL DEPARTMENT PRIOR TO ANY BLASTING.
   - 11.5. ALL GRUBBING, GRADING AND BLASTING OPERATIONS WILL USE ADEQUATE DUST CONTROL MEASURES TO PREVENT DUST ACCUMULATION ON TRANSMISSION INSULATORS. IF IN THE OPINION OF SDG&E THESE OPERATIONS CREATES A NEED FOR ADDITIONAL WASHING OF INSULATORS PERMITTEE AGREES TO REIMBURSE SDG&E FOR THOSE COSTS.
   - 11.6. SDG&E WILL NOT BE RESPONSIBLE FOR ANY DAMAGE DONE BY SDG&E OR ITS CONTRACTORS TO ANY FACILITIES LOCATED IN THE TRANSMISSION EASEMENT INCLUDING ACCESS ROADS AND WORK PADS.
12. CONTINGENCIES:
   - 12.1. IF THE PERMITTEE HAS NOT RECEIVED A "GUIDE FOR ENCROACHMENTS ON TRANSMISSION RIGHTS-OF-WAY," PERMITTEE SHALL ACQUIRE A COPY FROM SDG&E'S LAND MANAGEMENT REPRESENTATIVE.
   - 12.2. THIS LETTER IS SUBJECT TO PERMITTEE OBTAINING THE NECESSARY GRADING AND IMPROVEMENT PERMITS FROM THE CITY OF CARLSBAD.
13. INDEMNIFICATION:
   - 13.1. PERMITTEE AGREES TO ASSUME ALL RISK OF LOSS, DAMAGE TO PROPERTY AND/OR INJURY AND/OR DEATH TO PERSONS, AND TO INDEMNIFY AND HOLD SDG&E HARMLESS FROM ANY AND ALL LIABILITY IN ANY WAY ARISING FROM THE PROPOSED GRADING OR CONSTRUCTION OF IMPROVEMENTS.
   - 13.2. SDG&E SHALL NOT BE RESPONSIBLE IN ANY MANNER FOR ANY MAINTENANCE OR REPAIR OF THE PROPOSED GRADING OR IMPROVEMENTS. THIS INCLUDES, BUT IS NOT LIMITED TO, DRAINAGE AND/OR EROSION PROBLEMS OR DAMAGE CAUSED TO IMPROVEMENTS THAT WERE NOT CONSTRUCTED TO TAKE THE WEIGHT OR ACTIVITIES OF VEHICLES AND EQUIPMENT OWNED BY OR WORKING ON BEHALF OF SDG&E.
   - 13.3. PERMITTEE IS RESPONSIBLE FOR ADHERING TO ALL APPLICABLE CAL-OHSA REQUIREMENTS FOR WORKING AROUND ENERGIZED ELECTRICAL FACILITIES.
14. REGULATIONS: ALL APPLICABLE LAWS AND REGULATIONS OF LOCAL, STATE AND FEDERAL GOVERNMENTS AND THEIR AGENCIES SHALL BE COMPLIED WITH.
15. TERMS AND CONDITIONS: THE TERMS AND CONDITIONS OF THE DOCUMENT SHALL BENEFIT AND BIND PERMITTEE ITS SUCCESSORS, ASSIGNS, AGENTS OR CONTRACTORS.
16. POSTING: THIS PERMISSION LETTER SHALL BE POSTED ON THE JOB SITE AT ALL TIMES.

SHOULD YOU HAVE ANY QUESTIONS OR REQUIRE ADDITIONAL ASSISTANCE, PLEASE CALL ME AT (858) 654-1235.

SAN DIEGO GAS & ELECTRIC COMPANY

SAN DIEGO GAS & ELECTRIC COMPANY
GAS TRANSMISSION
NOTIFICATION TO MUNICIPALITIES/DEVELOPERS/CONTRACTORS

INSTRUCTIONS:
1. ADD THE BOXED NOTE BELOW IMMEDIATELY NEXT TO SDG&E'S GAS TRANSMISSION PIPELINES ON EACH DRAWING PREPARED BY YOU INCLUDING, BUT NOT LIMITED TO, GRADING, IMPROVEMENT, ELECTRICAL, LANDSCAPING AND IRRIGATION PLANS WHEN PLOTTING SDG&E'S GAS TRANSMISSION LINES.

> WARNING!!
> EXISTING HIGH PRESSURE
> GAS LINE TO REMAIN
> IN PLACE
>
> ANY WORK IN GAS EASEMENT SHALL BE
> PER SDG&E NOTES IN GENERAL NOTES.

2. ADD THE NOTES BELOW, VERBATIM, TO THE GENERAL NOTES ON YOUR PLANS:

SDG&E NOTES:

YOU ARE DIGGING IN THE VICINITY OF AN UNDERGROUND HIGH PRESSURE GAS TRANSMISSION PIPELINE. SDG&E'S STANDBY PERSONNEL ARE AUTHORIZED TO STOP EXCAVATION IF THESE PRECAUTIONS ARE NOT STRICTLY ADHERED TO.

1. SDG&E STANDBY PERSONNEL ARE REQUIRED WHEN DIGGING WITHIN THE GAS EASEMENT OR WITHIN 10 FEET OF THE GAS LINE WHEN IN FRANCHISE POSITION. UNDERGROUND SERVICE ALERT AT 1-800-227-2600 MUST BE CALLED 48 HOURS BEFORE BEGINNING ANY EXCAVATION.
2. WORK SHALL CONFORM TO THE CONDITIONS SET FORTH IN SDG&E'S PERMISSION TO GRADE LETTER, IF APPLICABLE.
3. THE EXCAVATOR SHALL CAREFULLY HAND DIG IF WITHIN 2-FEET OF THE GAS LINE. NO POWER-OPERATED EQUIPMENT SHALL BE ALLOWED WITHIN 2-FEET OF ANY PORTION OF THE GAS LINE.
4. IF CONTACT IS MADE WITH THE GAS LINE OR ITS COATING, SDG&E MUST BE NOTIFIED IMMEDIATELY AT 1-800-411-7343.
5. THE GAS EASEMENT SHALL BE STAKED WITH RIBBONED LATH AT 50' INCREMENTS AND THE STAKING SHALL BE MAINTAINED AT ALL TIMES DURING GRADING AND CONSTRUCTION OF THE PROJECT.

SAN DIEGO GAS & ELECTRIC COMPANY
REVIEWED BY: Jeff Sykes DATE: 5/14/12
JEFF SYKES
RIGHT OF WAY SUPERVISOR

(619) 725-7335
858-382-0414

VALID FOR 18 MONTHS FROM DATE OF SIGNATURE

> SPECIAL NOTE TO CONTRACTOR:
>
> 1. ALL REQUIRED EXCAVATION WITHIN THE 30" GAS TRANSMISSION EASEMENT SHALL BE PERFORMED WITH EQUIPMENT NO LARGER THAN A ROAD GRADER.
>
> 2. PRIOR TO CONSTRUCTION, TWO ADDITIONAL POTHOLES SHALL BE DUG AT THE NORTH END OF THE GRADING.

TYP.SECTION IMPALA DRIVE

N.T.S.

EROSION CONTROL NOTES

1. IN CASE EMERGENCY WORK IS REQUIRED, CONTACT MIKE COLARUSSO AT (PHONE NUMBER)
2. EQUIPMENT AND WORKERS FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES DURING THE RAINY SEASON. ALL NECESSARY MATERIALS SHALL BE STOCKPILED ON SITE AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY DEVICES WHEN RAIN IS EMINENT.
3. DEVICES SHOWN ON PLANS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE ENGINEERING INSPECTOR.
4. THE CONTRACTOR SHALL RESTORE ALL EROSION CONTROL DEVICES TO WORKING ORDER TO THE SATISFACTION OF THE CITY ENGINEER AFTER EACH RUN-OFF PRODUCING RAINFALL.
5. THE CONTRACTOR SHALL INSTALL ADDITIONAL EROSION CONTROL MEASURES AS MAY BE REQUIRED BY THE CITY ENGINEER DUE TO UNCOMPLETED GRADING OPERATIONS OR UNFORESEEN CIRCUMSTANCES WHICH MAY ARISE.
6. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATERS CREATE A HAZARDOUS CONDITION.
7. ALL EROSION CONTROL MEASURES PROVIDED PER THE APPROVED GRADING PLAN SHALL BE INCORPORATED HEREON.
8. GRADED AREAS AROUND THE PROJECT PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
9. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE (5) DAY RAIN PROBABILITY FORECAST EXCEEDS FORTY PERCENT (40%). SILT AND OTHER DEBRIS SHALL BE REMOVED AFTER EACH RAINFALL.
10. ALL GRAVEL BAGS SHALL BE BURLAP TYPE WITH 3/4 INCH MINIMUM AGGREGATE.
11. SHOULD GERMINATION OF HYDROSEEDED SLOPES FAIL TO PROVIDE EFFECTIVE COVERAGE OF GRADED SLOPES (90% COVERAGE) PRIOR TO NOVEMBER 15, THE SLOPES SHALL BE STABILIZED BY PUNCH STRAW INSTALLED IN ACCORDANCE WITH SECTION 35.023 OF THE EROSION AND SEDIMENT CONTROL HANDBOOK OF THE DEPARTMENT OF CONSERVATION, STATE OF CALIFORNIA.

TEMPORARY EROSION CONTROL PLANTING AND IRRIGATION

ALL PERMANENT AND TEMPORARY EROSION CONTROL PLANTING AND IRRIGATION SHALL BE INSTALLED AND MAINTAINED AS REQUIRED IN SECTION 212 OF THE STANDARD SPECIFICATIONS AND THE FOLLOWING:

A. HYDROSEEDING SHALL BE APPLIED TO:
   1. ALL SLOPES THAT ARE GRADED 6:1 (HORIZONTAL TO VERTICAL) OR STEEPER WHEN THEY ARE:
      a. THREE FEET OR MORE IN HEIGHT AND ADJACENT TO A PUBLIC WALL OR STREET.
      b. ALL SLOPES 4 FEET OR MORE IN HEIGHT.
   2. AREAS GRADED FLATTER THAN 6:1 WHEN ANY OF THE FOLLOWING CONDITIONS EXIST:
      a. NOT SCHEDULED FOR IMPROVEMENTS (CONSTRUCTION OR GENERAL LANDSCAPING) WITHIN 60 DAYS OF ROUGH GRADING.
      b. IDENTIFIED BY THE PARKS AND RECREATION DIRECTOR AS HIGHLY VISIBLE TO THE PUBLIC.
      c. HAVE ANY SPECIAL CONDITION IDENTIFIED BY THE CITY ENGINEER THAT WARRANTS IMMEDIATE TREATMENT.
B. HYDROSEEDED AREAS SHALL BE IRRIGATED IN ACCORDANCE WITH THE FOLLOWING CRITERIA:
   1. ALL SLOPES THAT ARE GRADED 6:1 OR STEEPER AND THAT ARE:
      a. THREE TO EIGHT FEET IN HEIGHT SHALL BE IRRIGATED BY HAND WATERING FROM QUICK COUPLERS/HOSE BIBS OR A CONVENTIONAL SYSTEM OF LOW PRECIPITATION SPRINKLER HEADS PROVIDING 100% COVERAGE.
      b. GREATER THAN 8 FEET IN HEIGHT SHALL BE WATERED BY CONVENTIONAL SYSTEM OF LOW PRECIPITATION SPRINKLER HEADS PROVIDING 100% COVERAGE.
   2. AREAS SLOPED LESS THAN 6:1 SHALL BE IRRIGATED AS APPROVED BY THE CITY ENGINEER, PRIOR TO HYDROSEEDING. THE DEVELOPER SHALL SUBMIT A PROPOSED SCHEME TO PROVIDE IRRIGATION TO THE CITY ENGINEER. THE PROPOSAL SHALL BE SPECIFIC REGARDING THE NUMBERS, TYPES AND COSTS OF THE ELEMENTS OF THE THE PROPOSED SYSTEM.
   3. IRRIGATION SHALL MAINTAIN THE MOISTURE LEVEL OF THE SOIL AT THE OPTIMUM LEVEL FOR THE GROWTH OF THE HYDROSEEDED GROWTH.
C. HYDROSEEDING MIX SHALL CONSIST OF ALL OF THE FOLLOWING:
   1. SEED MIX SHALL CONSIST OF NO LESS THAN:
      a. 20 lbs. PER ACRE OF ROSE CLOVER
      b. 20 lbs. PER ACRE OF ZORRO FESCUE
      c. 3 lbs. PER ACRE OF E SCHOOL CIA CALIFORNIA
      d. 4 lbs. PER ACRE OF ACHILLEA MILLEFOLIA
      e. 3 lbs. PER ACRE OF ALYSSUM (CARPET OF SNOW)
      f. 1/2 lb. PER ACRE OF DIMORPHOLECA
      g. ITEMS c,d,e, AND f OF THIS SUBSECTION MAY BE OMITTED ON LOCATIONS WHERE THE AREA BEING HYDROSEEDED IS NOT VISIBLE FROM EITHER A PUBLIC STREET OR RESIDENTIAL STRUCTURES.
      h. ITEM a OF THIS SUBSECTION MUST BE INOCULATED WITH A NITROGEN FIXING BACTERIA AND APPLIED DRY EITHER BY DRILLING OR BROADCASTING BEFORE HYDROSEEDING.
      i. ALL SEED MATERIALS SHALL BE TRANSPORTED TO THE JOBSITE IN UNOPENED CONTAINERS WITH THE CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE CERTIFICATION TAG ATTACHED TO, OR PRINTED ON SAID CONTAINERS.
      j. NON-PHYTO-TOXIC WETTING AGENTS MAY BE ADDED TO THE HYDROSEED SLURRY AT THE DISCRETION OF THE CONTRACTOR.
   2. TYPE 1 MULCH APPLIED AT THE RATE OF NO LESS THAN 2000 lbs PER ACRE. TYPE 6 MULCH (STRAW) MAY BE SUBSTITUTED, ALL OR PART, FOR HYDRAULICALLY APPLIED FIBER MATERIAL. WHEN STRAW IS USED IT MUST BE ANCHORED TO THE SLOPE BY MECHANICALLY PUNCHING NO LESS THAN 50% OF THE STRAW INTO THE SOIL.
   3. FERTILIZER CONSISTING OF AMMONIUM PHOSPHATE SULFATE, 16-20-0, WITH 15% SULPHUR APPLIED AT THE RATE OF 500 lbs. PER ACRE.

CONTINUE ON UPPER RIGHT

CONTINUED FROM LOWER LEFT

D. AREAS TO BE HYDROSEEDED SHALL BE PREPARED PRIOR TO HYDROSEEDING BY:
   1. ROUGHENING THE SURFACE TO BE PLANTED BY ANY OR COMBINATION OF:
      a. TRACK WALKING SLOPES STEEPER THAN 6:1
      b. HARROWING AREAS 6:1 OR FLATTER THAT ARE SUFFICIENTLY FRIABLE.
      c. RIPPING AREAS THAT WILL NOT BREAK UP USING ITEMS a OR b ABOVE.
   2. CONDITIONING THE SOILS SO THAT IT IS SUITABLE FOR PLANTING BY:
      a. ADJUSTING THE SURFACE SOIL MOISTURE TO PROVIDE A DAMP
      b. THE ADDITION OF SOIL AMENDMENTS, PH ADJUSTMENT, LEACHING COVERING SALINE SOILS TO PROVIDED VIABLE CONDITIONS FOR GROWTH. BUT NOT SATURATED SEED BED.

E. HYDROSEEDED AREAS SHALL BE MAINTAINED TO PROVIDE A VIGOROUS GROWTH UNTIL THE PROJECT IS PERMANENTLY LANDSCAPED OR, FOR AREAS WHERE HYDROSEEDING IS THE PERMANENT LANDSCAPING, UNTIL THE PROJECT IS COMPLETED AND ALL BONDS RELEASED.

	YES	NO	

Completion of the following checklists and attachments will fulfill the requirements of a Major SWMP for the project listed above.

CITY OF CARLSBAD

STORM WATER STANDARDS QUESTIONNAIRE E-34

Development Services
Land Development Engineering
1635 Faraday Avenue
760-602-2750
www.carlsbadca.gov

INSTRUCTIONS:

To address post-development pollutants that may be generated from development projects, the City requires that new development and significant redevelopment priority projects incorporate Permanent Storm Water Best Management Practices (BMP's) into the project design per the City's Standard Urban Stormwater Management Plan (SUSMP). To view the SUSMP, refer to the Engineering Standards (Volume 4, Chapter 2) at www.carlsbadca.gov/standards.

Initially this questionnaire must be completed by the applicant in advance of submitting for a development application (subdivision, discretionary permits and/or construction permits). The results of the questionnaire determine the level of storm water standards that must be applied to a proposed development or redevelopment project. Depending on the outcome, your project will either be subject to 'Standard Stormwater Requirements' or be subject to additional criteria called 'Priority Development Project Requirements'. Many aspects of project site design are dependent upon the storm water standards applied to a project.

Your responses to the questionnaire represent an initial assessment of the proposed project conditions and impacts. City staff has responsibility for making the final assessment after submission of the development application. If staff determines that the questionnaire was incorrectly filled out and is subject to more stringent storm water standards than initially assessed by you, this will result in the return of the development application as incomplete. In this case, please make the changes to the questionnaire and resubmit to the City.

If you are unsure about the meaning of a question or need help in determining how to respond to one or more of the questions, please seek assistance from Land Development Engineering staff.

A separate completed and signed questionnaire must be submitted for each new development application submission. Only one completed and signed questionnaire is required when multiple development applications for the same project are submitted concurrently. In addition to this questionnaire, you must also complete, sign and submit a Project Threat Assessment Form with construction permits for the project.

Please start by completing Section 1 and follow the instructions. When completed, sign the form at the end and submit this with your application to the city.

SECTION 1: NEW DEVELOPMENT

Does your project meet one or more of the following criteria:	YES	NO
1. ***Housing subdivisions of 10 or more dwelling units***. Examples: single family homes, multi-family homes, condominium and apartments		
2. ***Commercial – greater than 1-acre.*** Any development other than heavy industry or residential. Examples: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities.		
3. ***Heavy Industrial / Industry- greater than 1 acre.*** Examples: manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.).		
4. ***Automotive repair shop.*** A facility categorized in any one of Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, and 7536-7539		
5. ***Restaurants.*** Any facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirements and hydromodification requirements.		

CITY OF CARLSBAD

STORM WATER STANDARDS QUESTIONNAIRE E-34

Development Services
Land Development Engineering
1635 Faraday Avenue
760-602-2750
www.carlsbadca.gov

6.	***Hillside development.*** Any development that creates more than 5,000 square feet of impervious surface and is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent (25%) or greater.		
7.	***Environmentally Sensitive Area (ESA)***[1]. All development located within or directly adjacent[2] to or discharging directly[3] to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet or more of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site 10% or more of its naturally occurring condition.		
8.	***Parking lot***. Area of 5,000 square feet or more, or with 15 or more parking spaces, and potentially exposed to urban runoff		
9.	***Streets, roads, highways, and freeways***. Any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles		
10.	***Retail Gasoline Outlets.*** Serving more than 100 vehicles per day and greater than 5,000 square feet		
11.	***Coastal Development Zone.*** Any project located within 200 feet of the Pacific Ocean and (1) creates more than 2500 square feet of impervious surface or (2) increases impervious surface on property by more than 10%.		
12.	***More than 1-acre of disturbance.*** Project results in the disturbance of 1-acre or more of land and is considered a Pollutant-generating Development Project[4].		

1 Environmentally Sensitive Areas include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and County of San Diego; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees.

2 "Directly adjacent" means situated within 200 feet of the Environmentally Sensitive Area.

3 "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flow from adjacent lands.

4 Pollutant-generating Development Projects are those projects that generate pollutants at levels greater than background levels. In general, these include all projects that contribute to an exceedance to an impaired water body or which create new impervious surfaces greater than 5000 square feet and/or introduce new landscaping areas that require routine use of fertilizers and pesticides. In most cases linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered Pollutant-generating Development Projects if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces.

INSTRUCTIONS:

Section 1 Results:

If you answered **YES** to **ANY** of the questions above, your project is subject to **Priority Development Project** requirements. Skip Section 2 and please proceed to Section 3. Check the "meets PRIORITY DEVELOPMENT PROJECT requirements" box in Section 3. Additional storm water requirements will apply per the SUSMP.

If you answered **NO** to **ALL** of the questions above, then please proceed to Section 2 and follow the instructions.

CITY OF CARLSBAD

STORM WATER STANDARDS QUESTIONNAIRE E-34

Development Services
Land Development Engineering
1635 Faraday Avenue
760-602-2750
www.carlsbadca.gov

SECTION 2 SIGNIFICANT REDEVELOPMENT

INSTRUCTIONS: Complete the questions below regarding your project	**YES**	**NO**
1. Project results in the disturbance of 1-acre or more of land and is considered a Pollutant-generating Development Project *?	✓	
INSTRUCTIONS: If you answered **NO**, please proceed to question 2.		
If you answered **YES**, then you **ARE** a significant redevelopment and you **ARE** subject to **PRIORITY DEVELOPMENT PROJECT** requirements. Please check the "meets PRIORITY DEVELOPMENT PROJECT requirements" box in Section 3 below.		
2. Is the project redeveloping an existing priority project type? (Priority projects are defined in Section 1)	✓	
INSTRUCTIONS: If you answered **YES**, please proceed to question 3.		
If you answered **NO**, then you **ARE NOT** a significant redevelopment and your project is subject to **STANDARD STORMWATER REQUIREMENTS**. Please check the "does not meet PDP requirements" box in Section 3 below.		
3. Is the work limited to trenching and resurfacing associated with utility work; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk; bike lane on existing road and/or routine maintenance of damaged pavement such as pothole repair? Resurfacing/reconfiguring parking lots is where the work does not expose underlying soil during construction.		✓
INSTRUCTIONS: If you answered **NO**, then proceed to question 4.		
If you answered **YES,** then you **ARE NOT** a significant redevelopment and your project is subject to **STANDARD STORMWATER REQUIREMENTS.** Please check the "does not meet PDP requirements" box in Section 3 below.		
4. Will your redevelopment project create, replace, or add at least 5,000 square feet of impervious surfaces on existing developed property **or** will your project be located within 200 feet of the Pacific Ocean and (1) create 2500 square feet or more of impervious surface or (2) increases impervious surface on the property by more than 10%? Replacement of existing impervious surfaces includes any activity that is not part of routine maintenance where impervious material(s) are removed, exposing underlying soil during construction.	✓	
INSTRUCTIONS: If you answered **YES**, you **ARE** a significant redevelopment, and you **ARE** subject to **PRIORITY DEVELOPMENT PROJECT** requirements. Please check the "meets PRIORITY DEVELOPMENT PROJECT requirements" box in Section 3 below. Review SUSMP to find out if SUSMP requirements apply to your project envelope or the entire project site.		
If you answered **NO**, then you **ARE NOT** a significant redevelopment and your project is subject to **STANDARD STORMWATER REQUIREMENTS.** Please check the "does not meet PDP requirements" box in Section 3 below.		

*for definition see Footnote 4 on page 2

SECTION 3 QUESTIONNAIRE RESULTS

☑ My project meets **PRIORITY DEVELOPMENT PROJECT (PDP)** requirements and must comply with additional stormwater criteria per the SUSMP and I understand I must prepare a Storm Water Management Plan for submittal at time of application. I understand flow control (hydromodification) requirements may apply to my project. Refer to SUSMP for details.

☐ My project **does not meet PDP** requirements and must only comply with **STANDARD STORMWATER REQUIREMENTS** per the SUSMP. As part of these requirements, I will incorporate low impact development strategies throughout my project.

Applicant Information and Signature Box

Address: 2472 Impala Drive Carlsbad, CA	Assessor's Parcel Number(s): 209-041-28
Applicant Name: Andrew Bauzlinsky	Applicant Title: Project Manager
Applicant Signature:	Date: 4.4.11

This Box for City Use Only

City Concurrence:	YES	NO

By: Tecle Levy		
Date: 2/28/12		
Project ID: CUP 10-08		

STEP 1
PROJECT SETTING

Total Project Site Area 1.219 Acres(Acres or ft^2)

Estimated amount of disturbed acreage: 1.01 Acres (Acres or ft^2)
(If >1 acre, you must also provide a WDID number from the SWRCB) WDID: Pending

Complete A through C and the calculations below to determine the amount of impervious surface on your project before and after construction.

A. Total size of project site: 1.219 (Acres or ft^2)

B. Total impervious area (including roof tops) before construction 0.316 (Acres or ft^2)

C. Total impervious area (including roof tops) after construction 0.418 (Acres or ft^2)

Calculate percent impervious before construction: B/A = 25.9 %
Calculate percent impervious after construction: C/A = 39.46%

Project Site Address:	2478 Impala Drive, Carlsbad, CA 92008
APN Number(s):	209-041-28
Zoning:	M-Q Industrial
Land Use :	Shelter Facility
Project Watershed:	Carlsbad Watershed (Hydrologic Unit No. 904.00)
Sub-Watershed:	Agua Hedionda Creek Watershed (Hydrologic Area 904.30)
Soil Type :	D (See Attached Soil Hydrology Groups)

Project Description

This Stormwater Management Plan (SWMP) is being prepared by Ware Malcomb for Catholic Charities who is developing the La Posada Men's shelter at 2478 Impala Drive, Carlsbad, CA 92008. It sits north of Impala Drive and bounded to the west by Palmer Way and east by Orion St. Existing parking and building structures and improvements at the property are planned for demolition to allow for constructions of a new men's shelter facility and the associated structures and improvements.

Existing structures and improvements will be demolished and a new facility consisting of two large dormitory-type buildings and administrative office will be constructed. Associated improvements are expected to consist of surface and paving improvements and underground utilities. All planned new buildings will maintain a minimum 20-foot setback from the top of nearby descending slopes. Significant grade alterations are not anticipated over the majority of the property and finish grades are expected to be at or very near the existing surfaces. Some minor cutting and filling are locally anticipated to achieve fine pad grades with deeper cuts.

Refer to Appendix B for Vicinity Map and Site Plan.

TEMPORARY CONSTRUCTION BMPS

Please check the construction BMPs that may be implemented during construction of the project. The applicant will be responsible for the placement and maintenance of the BMPs incorporated into the final project design.

- ☒ Silt Fence
- ☒ Basin Fiber Rolls
- ☒ Street Sweeping and Vacuuming
- ☒ Storm Drain Inlet Protection
- ☒ Stockpile Management
- ☐ Solid Waste Management
- ☒ Stabilized Construction Entrance/Exit
- ☒ Dewatering Operations
- ☒ Vehicle and Equipment Maintenance
- ☐ Desilting
- ☒ Gravel Bag Berm
- ☒ Sandbag Barrier
- ☒ Material Delivery and Storage
- ☒ Spill Prevention and Control
- ☒ Concrete Waste Management
- ☒ Water Conservation Practices
- ☒ Paving and Grinding Operations

Any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval.

STEP 2
IDENTIFY CONSTRAINTS AND OPPORTUNITIES:

CONSTRAINTS: The project property is generally under Type D soil which has very low porosity and is very difficult to excavate. However, significant cutting into the bedrock is not planned. There is also a very steeply descending natural slope at the northern portion of the property. The slopes descend more than 250 feet, at gradients approaching 1:1 maximum, into Agua Hedionda Creek below. The west property is also marked by a graded cut embankment that descends at 2:1 gradients approximately 20 feet to a developed commercial lot below.

OPPORTUNITES: Geologic hazards are not presently indicated at the project site per the Geotechnical Investigation report by Vinje & Middleton Engineering, Inc. under Job # 09-224-P. It states that the nearby natural and graded slopes are underlain by massive hard and competent crystalline bedrock. Thus gross geologic instability or hazards due to landslides, faults, unstable natural hillside terrain or graded embankments are not present at the project property. The project site is also considered non-corrosive and has no contaminated or hazardous soils within the area. There is approximately 20 feet difference in elevation from the north-east portion of the property and the south-west point which can give good amount of hydraulic head.

STEP 3

SPECIFY SOURCE CONTROL BMPs

TABLE 3-1: TABLE FOR PERMANENT AND OPERATIONAL SOURCE CONTROL MEASURES

Potential source of runoff pollutants	*Permanent source control BMPs*	*Operational source control BMPs*
On-Site Storm Drain Inlet	See plan for locations	Inlets to be marked "No Dumping Drains to Ocean"
		Property Owner will enter into an Operation & Maintenance Agreement
Landscape/Outdoor Pesticide Use	Self treating areas and stormwater treatment facilities shown on Attachment B	Landscape is designed to minimize runoff and irrigation, detain stormwater, planting has been selected for pest control, and appropriate planting has been selected for ecosystem
Food Service	Grease Interceptor is shown on Attachment B	Kitchen is main cleaning area
Refuse areas	Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas. If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run- on and show locations of berms to prevent runoff from the area.	State how site refuse will be handled and provide supporting detail to what is shown on plans. State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.

	Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.	
Fire Sprinkler Test Water	Provide a means to drain fire sprinkler test water to the sanitary sewer.	See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
Plazas, sidewalks, and parking lots.		Plazas, sidewalks, and parking lots shall be swept regularly to prevent the accumulation of litter and debris. Debris from pressure washing shall be collected to prevent entry into the storm drain system. Washwater containing any cleaning agent or degreaser shall be collected and discharged to the sanitary sewer and not discharged to a storm drain
Misc. Drains: Roofing, gutters and trim	Roof mounted equipment with potential to produce pollutants shall be roofed and/or have secondary containment. Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. Avoid roofing, gutters, and trim made of cupper or other unprotected metals that may leach into runoff.	See the note in the Fact Sheet SC-41 "Building and Grounds Maintenance" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

PROJECT ANTICIPATED AND POTENTIAL POLLUTANTS

Using Table 2-1, identify pollutants that are anticipated to be generated from the proposed priority project categories. Pollutants associated with any hazardous material sites that have been remediated or are not threatened by the proposed project are not considered a pollutant of concern.

TABLE 2-1: ANTICIPATED AND POTENTIAL POLLUTANTS GENERATED BY LAND USE TYPE

	General Pollutant Categories								
PDP Categories	Sediments	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P(1)	P(2)	P	X
Commercial Development 1 acre or greater	P(1)	P(1)		P(2)	X	P(5)	X	P(3)	P(5)
Heavy industry /industrial development	X		X	X	X	X	X		
Automotive Repair Shops			X	X(4)(5)	X		X		
Restaurants					X	X	X	X	
Hillside Development >5,000 ft^2	X	X			X	X	X		X
Parking Lots	P(1)	P(1)	X		X	P(1)	X		P(1)
Retail Gasoline Outlets			X	X	X	X	X		
Streets, Highways & Freeways	X	P(1)	X	X(4)	X	P(5)	X		

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

PROJECT POLLUTANTS OF CONCERN SUMMARY TABLE

Please summarize the identified project pollutant of concern by checking the appropriate boxes in the table below and list any surface water impairments identified. Pollutants anticipated to be generated by the project, which are also causing impairment of receiving waters, shall be considered the primary pollutants of concern. For projects where no primary pollutants of concern exist, those pollutants identified as anticipated shall be considered secondary pollutants of concern.

TABLE 7: PROJECT POLLUTANTS OF CONCERN

Pollutant Category	Anticipated (X)	Potential (P)	Surface Water Impairments
Sediments	X		
Nutrients	X		
Heavy Metals			
Organic Compounds		X	
Trash & Debris	X		
Oxygen Demanding Substances			
Oil & Grease		X	
Bacteria & Viruses		X	
Pesticides		X	

POLLUTANTS OF CONCERN

The expected or potential Urban Runoff Pollutants of concern are:

- ***Metals*** – The primary source of metal pollution in Urban Runoff is typically commercially available metals and metal products. Metals of concern include cadmium, chromium, copper, lead, mercury, and zinc. Lead and chromium have been used as corrosion inhibitors in primer coatings and cooling tower systems. Metals are also raw material components in non-metal products such as fuels, adhesives, paints, and other coatings. At low concentrations naturally occurring in soil, metals may not be toxic. However, at higher concentrations, certain metals can be toxic to aquatic life. Humans can be impacted from contaminated groundwater resources, and bioaccumulation of metals in fish and shellfish. Environmental concerns, regarding the potential for release of metals to the environment, have already led to restricted metal usage in certain applications.

- ***Nutrients*** – Nutrients are inorganic substances, such as nitrogen and phosphorus. They commonly exist in the form of mineral salts that are either dissolved or suspended in water. Primary sources of nutrients in Urban Runoff are fertilizers and eroded soils. Excessive discharge of nutrients to water bodies and streams can cause excessive aquatic algae and plant growth. Such excessive production, referred to as cultural eutrophication, may lead to excessive decay of organic matter in the water body, loss of oxygen in the water, release of toxins in sediment, and the eventual death of aquatic organisms.
- ***Organic Compounds*** – Organic compounds are carbon-based. Commercially available or naturally occurring organic compounds are found in pesticides, solvents, and hydrocarbons. Organic compounds can, at certain concentrations, indirectly or directly constitute a hazard to life or health. When rinsing off objects, toxic levels of solvents and cleaning compounds can be discharged to the MS4. Dirt, grease, and grime retained in the cleaning fluid or rinse water may also adsorb levels of organic compounds that are harmful or hazardous to aquatic life.
- ***Sediments*** – Sediments are soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth.
- ***Trash and Debris*** – Trash (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste products on the landscape. The presence of trash and debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a stream and thereby lower its water quality. In addition, in areas where stagnant water exists, the presence of excess organic matter can promote septic conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfide.
- ***Oxygen-Demanding Substances*** – This category includes biodegradable organic material as well as chemicals that react with dissolved oxygen in water to form other compounds. Proteins, carbohydrates, and fats are examples of biodegradable organic compounds. Compounds such as ammonia and hydrogen sulfide are examples of oxygen-demanding compounds. The oxygen demand of a substance can lead to depletion of dissolved oxygen in a water body and possibly the development of septic conditions.
- ***Oil and Grease*** – Oil and grease are characterized as high-molecular weight organic compounds. Primary sources of oil and grease are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids. Introduction of these pollutants to the water bodies are very possible due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality.
- ***Pathogens (Bacteria/Virus)*** – Bacteria and viruses are ubiquitous microorganisms that thrive under certain environmental conditions. Their proliferation is typically caused by the transport of animal or human fecal wastes from the watershed. Water, containing excessive bacteria and viruses can alter the aquatic habitat and create a harmful environment for humans and aquatic life. Also, the decomposition of excess waste causes increased growth of undesirable organisms in the water.

FIGURE 2-1. HMP Applicability Determination*

*refer to expanded HMP exemption criteria below for justifications required on each node

HMP APPLICABILITY DETERMINATION:

Based on Figure 2-1: HMP Applicability Determination AND FIGURE 2-2: Mitigation Criteria and Implementation, the project is subject to flow-control (hydromodification). The project will increase the impervious area from 0.316 Ac (25.9%) to 0.481 Ac (39.45%). SCCWRP channel assessment was not conducted. Therefore, the project would be held to the 0.1Q2 lower flow threshold. IMP and extended detention facilities must be sized to that the mitigates post project flow and durations do not exceed pre-project flows and durations for the geomorphically-significant flow range of 0.1Q2 to Q10.

STEP 5

LID AND SITE DESIGN STRATEGIES

Each numbered item below is a Low Impact Development (LID) requirement of the WPO. Please check the box(s) under each number that best describes the LID BMP(s) and Site Design Strategies selected for this project.

TABLE 8: LID AND SITE DESIGN

1.	Conserve natural Areas, Soils, and Vegetation
	☒ Preserve well draining soils (Type A or B)
	☐ Preserve Significant Trees
	☒ Preserve critical (or problematic) areas such as floodplains, steep slopes, wetlands, and areas with erosive or unstable soil conditions
	☐ Other. Description:
2.	Minimize Disturbance to Natural Drainages
	☒ Set-back development envelope from drainages
	☐ Restrict heavy construction equipment access to planned green/open space areas
	☐ Other. Description:
3.	Minimize and Disconnect Impervious Surfaces (see 5)
	☐ Clustered Lot Design
	☒ Items checked in 5?
	☐ Other. Description:
4.	Minimize Soil Compaction
	☐ Restrict heavy construction equipment access to planned green/open space areas
	☐ Re-till soils compacted by construction vehicles/equipment
	☐ Collect & re-use upper soil layers of development site containing organic Materials
	Other. Description:
5.	Drain Runoff from Impervious Surfaces to Pervious Areas
	LID Street & Road Design
	☐ Curb-cuts to landscaping
	☐ Rural Swales
	☐ Concave Median
	☐ Cul-de-sac Landscaping Design
	☐ Other. Description:
	LID Parking Lot Design
	☒ Permeable Pavements

☒ Curb-cuts to landscaping
☐ Other. Description:
LID Driveway, Sidewalk, Bike-path Design
☐ Permeable Pavements
☒ Pitch pavements toward landscaping
☐ Other. Description:
LID Building Design
☒ Cisterns & Rain Barrels
☒ Downspout to swale
☐ Vegetated Roofs
☐ Other. Description:
LID Landscaping Design
☐ Soil Amendments
☒ Reuse of Native Soils
☒ Smart Irrigation Systems
☐ Street Trees
☐ Other. Description:
6. Minimize erosion from slopes
☒ Disturb existing slopes only when necessary
☐ Minimize cut and fill areas to reduce slope lengths
☒ Incorporate retaining walls to reduce steepness of slopes or to shorten slopes
☐ Provide benches or terraces on high cut and fill slopes to reduce concentration of flows
☒ Rounding and shaping slopes to reduce concentrated flow
☐ Collect concentrated flows in stabilized drains and channels
☐ Other. Description:

LID AND TREATMENT CONTROL SELECTION

A treatment control BMP and/or LID facility must be selected to treat the project pollutants of concern identified in Table 7 "Project Pollutants of Concern". A treatment control facility with a high or medium pollutant removal efficiency for the project's most significant pollutant of concern shall be selected. It is recommended to use the design procedure in Chapter 4 of the SUSMP to meet NPDES permit LID requirements, treatment requirements, and flow control requirements. If your project does not utilize this approach, the project will need to demonstrate compliance with LID, treatment and flow control requirements. Review Chapter 2 "Selection of Stormwater Treatment Facilities" in the SUSMP to assist in determining the appropriate treatment facility for your project.

Will this project be utilizing the unified LID design procedure as described in Chapter 4 of the Local SUSMP? *(If yes, please document in Attachment E following the steps in Chapter 4 of the City's SUSMP)*	
Yes	
If this project is not utilizing the unified LID design procedure, please describe how the alternative treatment facilities will comply with applicable LID criteria, stormwater treatment criteria, and hydromodification management criteria.	

➢ Indicate the project pollutants of concern (POCs) from Table 7 in Column 2 below.

TABLE 10: GROUPING OF POTENTIAL POLLUTANTS of Concern (POCs) by fate during stormwater treatment

Pollutant	Check Project Specific POCs	Coarse Sediment and Trash	Pollutants that tend to associate with fine particles during treatment	Pollutants that tend to be dissolved following treatment
Sediment	X	X	X	
Nutrients	X		X	X
Heavy Metals			X	
Organic Compounds	X		X	
Trash & Debris	X	X		
Oxygen Demanding			X	
Bacteria	X		X	
Oil & Grease	X		X	
Pesticides			X	

- Indicate the treatment facility(s) chosen for this project in the following table.

TABLE 11: GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

Pollutants of Concern	Bioretention Facilities (LID)	Settling Basins (Dry Ponds)	Wet Ponds and Constructed Wetlands	Infiltration Facilities or Practices (LID)	Media Filters	Higher-rate biofilters[1]	Higher-rate media filters[2]	Trash Racks & Hydro-dynamic Devices	Vegetated Swales
Coarse Sediment and Trash	High	High	High	High	High	High	High	High	High
Pollutants that tend to associate with fine particles during treatment	High	High	High	High	High	Medium	Medium	Low	Medium
Pollutants that tend to be dissolved following treatment	Medium	Low	Medium	High	Low	Low	Low	Low	Low

- Please check the box(s) that best describes the Treatment BMP(s) and/or LID BMP selected for this project.

TABLE 12: PROJECT LID AND TC-BMPS

Bioretention Facilites (LID)
☒ Bioretention area
☒ Flow-through Planter
☒ Cistern with Bioretention Facility
Settling Basins (Dry Ponds)
☐ Extended/dry detention basin with grass/vegetated lining
☐ Extended/dry detention basin with impervious lining
Infiltration Facilities or Practices (LID)
☐ Infiltration basin
☐ Dry well
☐ Infiltration trench
Wet Ponds and Constructed Wetlands
☐ Wet pond/basin (permanent pool)
☐ Constructed wetland
Vegetated Swales (LID[1])
☒ Vegetated Swale

Media Filters
Austin Sand Filter
Delaware Sand Filter
Multi-Chambered Treatment Train (MCTT)
Higher-rate Biofilters
Tree-pit-style unit
Other_____
Higher-rate Media Filters
Vault-based filtration unit with replaceable cartridges
Other_____
Hydrodynamic Separator Systems
Swirl Concentrator
Cyclone Separator
Trash Racks
Catch Basin Insert
Catch Basin Insert w/ Hydrocarbon boom
Other_____
Self-Treating or Self-Retaining Areas (LID)
Pervious Pavements
Vegetated Roofs
Other Landscape areas, vegeatated swales, biorention

(1) Must be designed per SUSMP "Vegetated Swales" design criteria for LID credit (p. 65).

For design guidelines and calculations refer to Chapter 4 "Low Impact Development Design Guide" in the SUSMP. Please show all calculations and design sheets for all treatment facilities proposed in Attachment E.

- Please describe why the chosen treatment BMP(s) was selected for this project. For projects utilizing a low performing BMP, please provide a feasibility analysis that demonstrates utilization of a treatment facility with a high or medium removal efficiency ranking is infeasible.

The site has significant amount of landscape making it ideal for using Detention ponds, planters, and vegetated swales. Also, each of these Facilities can be incorporated into the landscape design to create an Aesthically pleasing amenity for the site and remain economical to the Client. The site's lack of existing infrastructure and existing slopes, do not Lend itself to be treated with cisterns, rain barrels, pourous concrete or Large underground vaults for treating and collecting stormwater runoff.

Treatment BMP must address runoff from developed areas. Please provide the post-construction water quality treatment volume or flow values for the selected project Treatment BMP(s). Guidelines for design calculations are located in Chapter 4 of the County SUSMP. Label outfalls on the BMP map. The Water Quality peak rate of discharge flow (Q_{WQ}) and the Water Quality storage volume (V_{WQ}) is dependent on the type of treatment BMP selected for the project.

Outfall	Tributary Area (acres)	Q_{WQ} (cfs)	V_{WQ} (ft^3)
BMP 1	0.260	0.03	0.007
BMP 2	0.290	0.04	0.011

STORMWATER FACILITY MAINTENANCE

➢ Responsible Party for Long-term Maintenance:

Identify the parties responsible for long-term maintenance of the BMPs identified above and Source Controls specified in this report.

Name: Sister Raymonda DuVall
Company Name: Catholic Charities
Phone Number: 619-231-2828
Street Address: 349 Cedar Street
City/State/Zip: San Diego, CA 92101
Email Address: SRMDuVall@ccdsd.org

➢ Funding

Source:

Provide the funding source or sources for long-term operation and maintenance of each BMP identified above. By certifying the Major SWMP the applicant is certifying that the funding responsibilities have been addressed and will be transferred to future owners.

Grant funded

OPERATION AND MAINTENANCE RESPONSIBILITY

The Operation and maintenance (O&M) requirement of the treatment facilities shall be performed by the owners or owner's representative per the City of Carlsbad requirements & recommendations or as assessment requires it. The owner or owner's representative shall provide specifications for the handling and placement of any wastes. As well as providing a schedule and frequency for the O & M.

Prior to the approval of SWMP, the facility manager shall:

- Identify the parties (name, address, and telephone number) responsible for O&M, including a written agreement with the entities responsible for O&M. This agreement can take the form of a Covenant and Agreement recorded by the Project Proponent with the County Recorder, POA CC&Rs, or other instrument sufficient to guarantee perpetual O&M.
- Provide self-inspections and record-keeping requirements for BMPs (review local specific requirements regarding self-inspections and/or annual reporting), including identification of responsible parties for inspection and record- keeping.
- Provide thorough descriptions of water quality monitoring, if required by the City.

Inspection and Maintenance Matrix

Code	BMP Description	Activity (Frequency)	Responsibility
		Source Control Structural BMPs	
SD-10	**Site Design & Landscaping Planning**	Verify that the irrigation system is working properly. Check for broken sprinkler heads and verify proper coverage. Listen for water flowing through valves when system is off as a check for possible leaks. Adjust valve run times to avoid over-watering and/or ponding in landscape areas. Review instruction manuals and consult with the system manufacturer for system repairs. (Twice per month)	Owner and/or Site Landscaping Contractor
SD-12	**Efficient Irrigation**	Verify that the irrigation system is working properly. Check for broken sprinkler heads and verify proper coverage. Listen for water flowing through valves when system is off as a check for possible leaks. Adjust valve run times to avoid over-watering and/or ponding	Owner and/or Site Landscaping Contractor

		in landscape areas. Review instruction manuals and consult with the system manufacturer for system repairs. (Twice per month)	
SD-32	**Trash Enclosures**	Trash storage areas are covered and enclosed to prevent introduction of trash & debris to site runoff. Proper receptacles will be used and the area kept clean. (Weekly)	Owner

Routine Non-Structural BMPs

N1	**Education for Property Owners**	Owner assumes financial responsibility for property maintenance and implementation of practices set forth in this WQMP. Whenever possible, the Owner shall relay this information to other employees and occupants of the facility in order to increase their understanding of stormwater quality, sources of pollutants, and what they can do to reduce pollutants in Stormwater. (Annually at a minimum)	Owner
N4	**BMP Maintenance**	Owner and contracted personnel are responsible for knowledge and implementation of all site requirements specified in this WQMP. WQMP shall be reviewed by owner and any contracted maintenance personnel. (Annually)	Owner and/or contracted site maintenance personnel
N11	**Litter Control**	Pick up debris and trash to maintain a clean	Owner and/or

		site. (Weekly) Sweep hardscape areas to prevent accumulation of debris and pollutants. (Once per month, after heavy winds, and prior to forecasted storm events)	contracted site maintenance personnel
N14	**Drainange Facility Inspection**	Inspect drain inlets and catch basins. Clean prior to storm season and as necessary no later than October 1st each year. (Annually) Keep grates in landscape areas clear of debris. (Weekly) Contact County Department of Environmental Health in case vector concerns are observed (i.e. standing water in or around a BMP for more than 72 hours) Inspection and Maintenance records should be kept for five (5) years.	Owner and/or Site Landscaping Contractor

Treatment Control BMPs

MP-52	**Drain Inserts**	Check the debris level in the drain inserts prior to, immediately after, and once per month during the rainy season (Oct 1st to Apr 30th). Remove accumulated debris at each inspection and replace the filter media once per year during the pre-season inspection. (Annually) Waste generated from cleaning the iinserts and drain inlets shall be disposed of properly and not discharged into the storm drain system. See Appendices A & B for product and service information specific to each insert type.	Owner and/or contracted site maintenance personnel

➢ PRIVATE OWNERSHIP AND MAINTENANCE:

For Priority Development Projects (PDP), the owner will be required to execute a Permanent Stormwater Quality BMP Maintenance Agreement.

TABLE 5-1. SCHEDULE for Planning Operation and Maintenance of stormwater treatment BMPs.

STAGE	DESCRIPTION	SCHEDULE
1	Determine facility ownership and maintenance responsibility	Discuss with planning staff at pre-application meeting.
2	Identify typical maintenance requirements.	In initial submittal, coordinate with land-use application.
3	Develop detailed operation and maintenance plan.	Prior to plan check submittal
4	Interim operation and maintenance facilities.	During and following construction including warranty period.
5	Formal transfer of operation and maintenance responsibility	On sale ad transfer of property or permanent occupancy.
6	Ongoing maintenance and compliance with inspection & reporting requirements.	In perpetuity.

STEP 8

SWMP CERTIFICATION

"The selection and preliminary design of stormwater treatment and other control measures in this plan have been prepared under the direction of the following Registered Civil Engineer and meet the requirements of Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments. Our preliminary assessment indicated that the project site can provide adequate room to accommodate the required sizes for the on-site LID and Hydromodification facilities. Sizing calculations will be provided later, prior to planning commission hearing."

Felix Gonzalez

Appendix 1: Stormwater Pollutant Sources and Source Control Checklist

Stormwater Pollutant Sources and Source Control Checklist

How to Use this Checklist:

1. Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your project. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your SUSMP Drawings.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in a table in your SUSMP Drawings. For PDP's, in your SWMP, use the format shown in Table 3-1. In the SWMP, describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternatives.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR PROJECT SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	**2** **Permanent Controls—Show on SUSMP Drawings**	**3** **Permanent Controls—List in SWMP Table and Narrative**	**4** **Operational BMPs—Include in SWMP Table and Narrative**
☑ **A.** On-site storm drain inlets	☑ Locations of inlets.	☑ Mark all inlets with the words "No Dumping! Flows to Bay" or similar.	☑ Maintain and periodically repaint or replace inlet markings. ☑ Provide stormwater pollution prevention information to new site owners, lessees, or operators. ☑ See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com ☑ Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."

☐ **B.** Interior floor drains and elevator shaft sump pumps		☐ State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.	☐ Inspect and maintain drains to prevent blockages and overflow.
☐ **C.** Interior parking garages		☐ State that parking garage floor drains will be plumbed to the sanitary sewer.	☐ Inspect and maintain drains to prevent blockages and overflow.
☐ **D1.** Need for future indoor & structural pest control		☐ Note building design features that discourage entry of pests.	☐ Provide Integrated Pest Management information to owners, lessees, and operators.
☑ **D2.** Landscape/ Outdoor Pesticide Use	☑ Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained. ☑ Show self-retaining landscape areas, if any. ☐ If a PDP, show stormwater treatment facilities.	State that final landscape plans will accomplish all of the following. ☑ Preserve existing native trees, shrubs, and ground cover to the maximum extent possible. ☑ Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. ☑ Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. ☑ Consider using pest-resistant plants, especially adjacent to hardscape. ☑ To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	☑ Maintain landscaping using minimum or no pesticides. ☑ See applicable operational BMPs in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com ☑ Provide IPM information to new owners, lessees and operators.
☐ **E.** Pools, spas, ponds, decorative fountains, and other water features.	☐ Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet.	☐ If the local municipality requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.	☐ See applicable operational BMPs in Fact Sheet SC-72, "Fountain and Pool Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

☑ **F.** Food service	☐ For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment. ☑ On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.	☑ Describe the location and features of the designated cleaning area. ☐ Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.	☐
☑ **G.** Refuse areas	☑ Show where site refuse and recycled materials will be handled and stored for pickup. See city standard drawing GS-16. ☑ If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area. ☐ Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.	☑ State how site refuse will be handled and provide supporting detail to what is shown on plans. ☑ State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.	☑ State how the following will be implemented: Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
☐ **H.** Industrial processes.	☐ Show process area.	☐ If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."	☐ See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

❑ I. Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)	❑ Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area. ❑ Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. ❑ Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.	❑ Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. Where appropriate, reference documentation of compliance with the requirements of local Hazardous Materials Programs for: ▪ Hazardous Waste Generation ▪ Hazardous Materials Release Response and Inventory ▪ California Accidental Release (CalARP) ▪ Aboveground Storage Tank ▪ Uniform Fire Code Article 80 Section 103(b) & (c) 1991 ▪ Underground Storage Tank	❑ See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

❑ **J. Vehicle and Equipment Cleaning**	❑ Show on drawings as appropriate: (1) Commercial/industrial facilities having vehicle /equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses. (2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use). (3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer. (4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.	❑ If a car wash area is not provided, describe measures taken to discourage on-site car washing and explain how these will be enforced.	Describe operational measures to implement the following (if applicable): ❑ Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system. ❑ Car dealerships and similar may rinse cars with water only. ❑ See Fact Sheet SC-21, "Vehicle and Equipment Cleaning," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

❑ **K.** Vehicle/Equipment Repair and Maintenance	❑ Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater. ❑ Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas. ❑ Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.	❑ State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area. ❑ State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements. ❑ State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.	In the SUSMP report, note that all of the following restrictions apply to use the site: ❑ No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains. ❑ No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately. ❑ No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.

❑ L. Fuel Dispensing Areas	❑ Fueling areas[1] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable. ❑ Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.		❑ The property owner shall dry sweep the fueling area routinely. ❑ See the Business Guide Sheet, "Automotive Service—Service Stations" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

[1] The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

☐ **M.** Loading Docks	☐ Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas should be drained to the sanitary sewer where feasible. Direct connections to storm drains from depressed loading docks are prohibited. ☐ Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation. ☐ Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.		☐ Move loaded and unloaded items indoors as soon as possible. ☐ See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
☑ **N.** Fire Sprinkler Test Water		☑ Provide a means to drain fire sprinkler test water to the sanitary sewer.	☑ See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

O. Miscellaneous Drain or Wash Water ☐ Boiler drain lines ☐ Condensate drain lines ☑ Rooftop equipment ☐ Drainage sumps ☑ Roofing, gutters, and trim.		☑ Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system. ☑ Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. ☑ Rooftop mounted equipment with potential to produce pollutants shall be roofed and/or have secondary containment. ☐ Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water. ☑ Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.	
☑ **P.** Plazas, sidewalks, and parking lots.			☑ Plazas, sidewalks, and parking lots shall be swept regularly to prevent the accumulation of litter and debris. Debris from pressure washing shall be collected to prevent entry into the storm drain system. Washwater containing any cleaning agent or degreaser shall be collected and discharged to the sanitary sewer and not discharged to a storm drain.

Operation and Maintenance Verification Forms

PRIVATE TREATMENT CONTROL BMP OPERATION AND MAINTENANCE VERIFICATION FORM
BIOFILTER

Biofilters Include:

☑ **Vegetated Filter Strip** ☑ **Vegetated Swale** ☑ **Bioretention Facility**

Routine maintenance is needed to ensure that flow is unobstructed, that erosion is prevented, and that soils are held together by plant roots and are biologically active. Typical maintenance consists of the following:

Bioretention BMPs Inspection and Maintenance Checklist	
Typical Maintenance Indicators	**Typical Maintenance Actions**
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials, without damage to the vegetation.
Poor vegetation establishment	Examine the vegetation to ensure that it is healthy and dense enough to provide filtering and to protect soils from erosion. Replenish mulch as necessary, remove fallen leaves and debris, prune large shrubs or trees, and mow turf areas.
Overgrown vegetation	Mow or trim as appropriate, but not less than the design height of the vegetation (typically 4-6 inches for grass). Confirm that irrigation is adequate and not excessive and that sprays do not directly enter overflow grates. Replace dead plants and remove noxious and invasive vegetation.
Erosion due to concentrated irrigation flow	Repair/re-seed eroded areas and adjust the irrigation system.
Erosion due to concentrated stormwater runoff flow	Repair/re-seed eroded areas and make appropriate corrective measures such as adding erosion control blankets, adding stone at flow entry points, or re-grading where necessary.
Standing water (BMP not draining)	Abate any potential vectors by filling holes in the ground in and around the biofilter facility and by insuring that there are no areas where water stands longer than 48 hours following a storm. If mosquito larvae are present and persistent, contact the San Diego County Vector Control Program at (858) 694-2888. Mosquito larvicides should be applied only when absolutely necessary and then only by a licensed individual or contractor.
Obstructed inlet or outlet structure	Clear obstructions.
Damage to structural components such as weirs, inlet, or outlet structures	Repair or replace as applicable.

PRIVATE TREATMENT CONTROL BMP OPERATION AND MAINTENANCE VERIFICATION FORM

DRAINAGE INSERTS – SIDE 2

The following list of typical maintenance indicators and maintenance activities for drainage inserts is provided for your reference.

Drainage Insert BMPs Inspection and Maintenance Checklist	
Typical Maintenance Indicators	**Typical Maintenance Actions**
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials.
Spent or clogged sorbent material or media pack	Remove and properly dispose of sorbent material or media pack, and replace with fresh material. These materials/media are potentially hazardous and must be handled by a properly trained contractor.
Damage to components of the drainage insert	Repair or replace as applicable.

Maintenance of drainage inserts involves handling of potentially hazardous material (oil sorbent material), which requires special disposal. Additionally, maintenance may involve entry into the storm drain inlet underground. Therefore the maintenance operator must be trained in handling and disposal of hazardous waste, and must also be certified for confined space entry if the maintenance will require entry into the storm drain inlet. Therefore it is recommended that private BMP owners obtain a maintenance contract with a qualified contractor to provide inspection and maintenance. There are several storm drain cleaning service providers who are able to inspect and/or maintain drainage inserts. Contact the manufacturer of the drainage insert to find qualified service providers.

OPERATION AND MAINTENANCE VERIFICATION FORM
FILTRATION – SIDE 2

The following list of typical maintenance indicators and maintenance activities for filtration BMPs is provided for your reference.

Filtration BMPs Inspection and Maintenance Checklist	
Typical Maintenance Indicators	**Typical Maintenance Actions**
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials.
Accumulation of floating oil and grease	Remove and properly dispose of oil and grease.
Clogged filter media	Remove and properly dispose of filter media, and replace with fresh media.
Damage to components of the filtration system	Repair or replace as applicable.

Maintenance of filtration BMPs involves handling of potentially hazardous material (oil and/or oil sorbent material), which requires special disposal. Additionally, maintenance may involve entry into the filtration BMP underground. Therefore the maintenance operator must be trained in handling and disposal of hazardous waste, and must also be certified for confined space entry if the maintenance will require entry into the filtration BMP. Therefore it is recommended that private BMP owners obtain a maintenance contract with a qualified contractor to provide inspection and maintenance. There are several storm drain cleaning service providers who are able to inspect and/or maintain filtration BMPs. Contact the manufacturer of the filtration system to find qualified service providers.

PRIVATE TREATMENT CONTROL BMP OPERATION AND MAINTENANCE VERIFICATION FORM

PLANTER BOXES

Planter boxes capture runoff from downspouts or sheet flow from plazas and paved areas. The runoff briefly floods the surface of the box and then percolates through an active soil layer to drain rock below. Typical maintenance consists of the following:

Planter Box BMP Inspection and Maintenance Checklist	
Typical Maintenance Indicators	**Typical Maintenance Actions**
Accumulation of sediment, litter, or debris	Check that the soil is at the appropriate depth to allow a reservoir above the soil surface and is sufficient to effectively filter stormwater. Remove any accumulations of sediment, litter, and debris. Till or replace soil as necessary. Confirm that soil is not clogging and that the planter will drain within 3-4 hours after a storm event.
Poor vegetation establishment	Determine whether the vegetation is dense and healthy. Replace dead plants. Prune or remove any overgrown plants or shrubs that may interfere with planter operation. Clean up fallen leaves or debris and replenish mulch. Remove any nuisance or invasive vegetation.
Standing water (BMP not draining)	Check the underdrain piping to make sure it is intact and unobstructed. If mosquito larvae are present and persistent, contact the San Diego County Vector Control Program at (858) 694-2888. Mosquito larvicides should be applied only when absolutely necessary and then only by a licensed individual or contractor.
Erosion due to concentrated stormwater runoff flow	Examine downspouts from rooftops or sheet flow from paving to ensure that flow to the planter is unimpeded. Remove any debris and repair any damaged pipes. Check splash blocks or rocks and repair, replace, or replenish as necessary.
Damage to structural components such as the box, inlet, or outlet structures	Observe the structure of the box and fix any holes, cracks, rotting, or failure.
Obstructed inlet or outlet structure	Clear obstructions. Examine the overflow pipe to make sure that it can safely convey excess flows to a storm drain. Repair or replace any damaged or disconnected piping.

City of Carlsbad
Projects Subject to Hydromodification Requirements
(July 1, 2011 to June 30, 2012)

Project ID	Project Name	Description of Hydrologic Control Measures
CUP 10-08	La Posada de Guadalupe	bioretention basin, cistern w/ bioretention, pervious pavement
EIR 09-01	Dos Colinas	bioretention basins, pervious pavement
GPA 06-03	Rancho Milagro	bioretention basins , linear bioretention swales
SDP 98-01B	La Costa Glen Skilled Nursing Facility	bioretention basins
CUP 10-10	Carlsbad Kingdom Hall	bioretention basins
SDP 12-03	La Costa Oaks North 3.2 Daycare	bioretention basin, wet vault
PIP 11-01	Production Facility at Bressi Ranch	flow-thru planter, gravel detention basin

City of Carlsbad
List of Projects not required to meet Hydromodification
(July 1, 2011 to June 30, 2012)

Project ID	Project Name	Description of HMP exemption criteria met
SDP 06-12(A)	Tavarua Apartments	post development impervious equal or less than pre-development impervious area; no increase in unmitigated peak runoff from project
SDP 00-06B	Daybreak Community Church	post development impervious equal or less than pre-development impervious area; no increase in unmitigated peak runoff from project
SDP 11-02	Legoland California Pirate Island	post development impervious equal or less than pre-development impervious area; no increase in unmitigated peak runoff from project
DWG 428-9F/G	Carlsbad Ranch Planning Area 5	lawful prior approval; development permits issued prior to HMP adoption; vegetated swales designed and constructed prior to January 14, 2011
DWG 451-7/A	Lincoln & Oak Mixed Use	project discharges to a tidally influenced lagoon
3837/3925	Alga Norte Park - Phase 1	lawful prior approval; development permits issued prior to HMP adoption; site rough graded with swales and utilities constructed prior to January 14, 2011

BMP IMPLEMENTATION AND COMPLIANCE

BMP Activity	YES	NO	N/A	Corrective Action Required
Has the BMP been installed?				
Does the BMP need maintenance?				
Has trash and/or debris accumulated in or around the BMP?				
Is the BMP area overgrown?				
Is the BMP operating as designed?				
Are there signs of illegal dumping?				
Are there strong odors of gas, oil, or sewage?				
Is there standing water?				
Are there signs of invasive species?				
Were there any discharges observed during the inspection?				

CORRECTIVE ACTION REQUIRED

- ☐ BMP needs to be installed.
- ☐ BMP needs to be replaced.
- ☐ Provide additional erosion control.
- ☐ Keep desiltation/ retention basin free of litter.
- ☐ Provide additional protection at storm drain inlets.
- ☐ BMP needs to be maintained.
- ☐ Remove trash and debris from BMP.
- ☐ **Immediately** discontinue washing or hosing.
- ☐ Clean in and around storm drains.
- ☐ BMP could not be accessed. (stuck or heavy lid)
- ☐ Train responsible parties in pollution prevention.
- ☐ Other:_____
- ☐ Other:_____

Implement corrective actions by _____.
A City Inspector will return on or after the correction date to verify that corrective actions were completed as required and/or BMPs implemented. If you have any questions or comments, please contact 760-602-2780 x7111

Overall Condition: ☐ **Good** ☐ **Fair** ☐ **Poor** ☐ **Could Not Locate/Inspect**

BMP VERIFICATION AND MAINTENANCE

BMP ACTIVITY	YES	NO	DON'T KNOW	N\A	COMMENTS
Has the BMP been installed?					
Is the BMP operating properly?					
Has the BMP been replaced? If so when?					
Is the BMP on a regular maintenance schedule?					
Has the BMP been inspected during the last year?					
Has the BMP been maintained or cleaned during the last year?					

TCBMP Verification of Maintenance Records Requirement

If the 2011 or 2012 Condition of the TCBMP is **POOR**, you will need to submit documentation that the structure has been maintained since the last inspection. The structure was found to in POOR condition because of one or more of the following:

- **BMP has not been installed**
- **Accumulation of trash and debris**
- **BMP could not be accessed**
- **BMP needs repair**

Failure to submit the requested information could result in the issuance of a Notice of Violation and the assessment of administrative fines.

Certification Statement

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system to assure that the responsible party gathered and evaluated the information submitted. Based on my inquiry of the person or person who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief true, accurate and complete, I am aware that there are significant penalties for submitting false information including the possibility of fines and other enforcement actions.

MEMORANDUM

TO: Property Owners/Developers/Contractors - All Active Construction Sites in the City of Carlsbad
FROM: Shawnetta Grandberry, Senior Construction Inspector, Construction Management and Inspections

RE: **BMP Verification of Installation Required Prior to Occupancy**

In order to comply with Regional Water Quality Control Board Order R9-2007-0001, the City has adopted an approach for ensuring verification that all permanent best management practices (BMPs), including LID, source control, and treatment control best management practices are installed and constructed per the requirements of approved plans prior to occupancy of the project. This requirement applies to all priority development projects subject to SUSMP requirements, including phased development projects. As a result of this requirement, project applicants must certify that constructed BMPs are in compliance with all specifications, plans, permits, ordinances, and are ready for inspection by the City. Verification of BMP installation can be certified by one of the following:

1. A California registered civil engineer;
2. A California registered geologist;
3. A California registered landscape architect;
4. A professional hydrologist registered through the American Institute of Hydrology;
5. A certified professional soil scientist registered through the Soil Science Society of America;
6. A certified professional in erosion and sediment control registered through Certified Professional in Erosion and Sediment Control, Inc.;
7. A certified professional in storm water quality registered through Certified Professional in Erosion and Sediment Control, Inc.; or
8. A certified professional in erosion and sediment control registered through the National Institute for Certification in Engineering Technologies.

The City requires each project applicant to verify all treatment and flow-control facilities are adequately maintained. Facilities that are installed as part of the project will be verified for effectiveness and proper performance. Operation and maintenance of storm water BMP facilities is a six-stage process:

1. Determine who will own and be responsible for the maintenance of treatment facilities. Identify the means by which ongoing maintenance will be assured.
2. Identify anticipated maintenance requirements and allow for these requirements in project planning and preliminary design.
3. Prepare a maintenance plan incorporating detailed requirements for each treatment and flow-control facility.
4. Maintain the facilities from the time they are constructed until ownership and maintenance responsibility is formally transferred.
5. Formally transfer operation and maintenance responsibility to the site owner or occupant.
6. Maintain the facilities in perpetuity and keep records for self-inspection and verification requirements.

Project applicants in the City of Carlsbad are required to comply with all applicable storm water regulations and implement BMPs to the maximum extent practicable. It is the City's goal to obtain your compliance with the applicable regulations and requirements. Please contact your Project Inspector to review your specific project requirements. Thank you in advance for your cooperation and compliance efforts.

MEMORANDUM

To: Property Owners/Developers/Contractors - All Active Construction Sites in the City of Carlsbad

From: Shawnetta Grandberry, Senior Construction Inspector, Construction Management and Inspections

RAINY SEASON PREPARATION AND STORM WATER COMPLIANCE

The City of Carlsbad (City) would like to take this opportunity to remind you that the rainy season begins on **October 1, 2011**. As you are aware, additional storm water pollution prevention measures are required during the rainy season, which ends on May 1, 2012. Pursuant to Carlsbad Municipal Code (CMC) Chapter 15.16.120, the California Regional Water Quality Control Board (RWQCB) Order 2007-0001, and the City of Carlsbad 2008 Jurisdictional Urban Runoff Management Plan all erosion control measures must be installed prior to and regularly maintained during the rainy season.

Property Owners/Developers/Contractors working at active construction sites in Carlsbad are required to comply with all applicable storm water regulations and implement BMPs to the maximum extent practicable. It is the City's goal to obtain your voluntary compliance with the applicable regulations and requirements. The following measures are required for all active construction sites during the rainy season:

- **All** exposed disturbed areas must have erosion protection BMPs properly installed. This includes all building pads, unfinished roads, and slopes.
- Perimeter protection and sediment control BMPs will be upgraded, if necessary, to provide sufficient protection from runoff during the rainy season.
- Adequate physical or vegetation erosion control BMPs will be installed and maintained for all completed slopes prior to **October 1, 2011**.
- All disturbed areas that are not completed, but that are not being actively graded, must be fully protected from erosion if left for 10 or more days. The ability to install BMP materials in a prompt manner is **NOT** sufficient for these areas. **BMPs will actually need to be installed for these areas.**
- Deployment of physical or vegetation erosion control BMPs will commence as soon as slopes are completed for any portion of the site. BMPs must also be stockpiled and ready for deployment whenever there is a 40% chance or greater of a rain event within a five (5) day forecast.
- When a ***Rain Event Action Plan*** is required it must be updated on a weekly basis. The plan shall include, in detail, any and all actions to be taken in advance (50% chance or greater) of a rain event in the five (5) day forecast by the National Weather Service. A copy of each updated action plan shall be placed in the project SWPPP.
- All treatment and erosion control BMPs must be inspected weekly and prior to a forecasted rain event of greater than 40%. In addition, treatment control BMPs must be inspected and/or serviced prior to October 1.
- Inspections of each site shall be conducted by the QSD/QSP or designee prior to a forecasted event, during and after a rain event, at least bi-weekly during the rainy season, and as necessary to ensure site compliance.
- All construction employees must be trained on the importance of storm water pollution prevention and BMP maintenance prior to the rainy season.
- All construction and grading projects are required to emphasize erosion prevention as the most important measure for keeping sediment on-site during construction. Sediment controls are to be used as a supplement to erosion prevention never as the single or primary method.

The City will continue to conduct scheduled and unscheduled inspections to verify compliance with storm water regulations. Please keep in mind that compliance is dependent on the continued use of BMPs to prevent storm water pollution and the consistent implementation of an employee-training program. Please contact your Project Inspector to review your specific project requirements. Thank you in advance for your cooperation and compliance efforts.

Construction Management and Inspection

STORM WATER COMPLIANCE CERTIFICATE

- ✓ My project is not in a category of permit types exempt from the Construction SWPPP requirements
- ✓ My project is not located inside or within 200 feet of an environmentally sensitive area with a significant potential for contributing pollutants to nearby receiving waters by way of storm water runoff or non-storm water discharge(s).
- ✓ My project does not require a grading plan pursuant to the Carlsbad Grading Ordinance (Chapter 15.16 of the Carlsbad Municipal Code)
- ✓ My project will not result in 2,500 square feet or more of soils disturbance including any associated construction staging, stockpiling, pavement removal, equipment storage, refueling and maintenance areas that meets one or more of the additional following criteria:
  - located within 200 feet of an environmentally sensitive area or the Pacific Ocean; and/or,
  - disturbed area is located on a slope with a grade at or exceeding 5 horizontal to 1 vertical; and/or
  - disturbed area is located along or within 30 feet of a storm drain inlet, an open drainage channel or watercourse; and/or
  - construction will be initiated during the rainy season or will extend into the rainy season (Oct. 1 through April 30).

I CERTIFY TO THE BEST OF MY KNOWLEDGE THAT ALL OF THE ABOVE CHECKED STATEMENTS ARE TRUE AND CORRECT. I AM SUBMITTING FOR CITY APPROVAL A TIER 1 CONSTRUCTION SWPPP PREPARED IN ACCORDANCE WITH THE REQUIREMENTS OF CITY STANDARDS.

I UNDERSTAND AND ACKNOWLEDGE THAT I MUST: (1) IMPLEMENT BEST MANAGEMENT PRACTICES (BMPS) DURING CONSTRUCTION ACTIVITIES TO THE MAXIMUM EXTENT PRACTICABLE TO MINIMIZE THE MOBILIZATION OF POLLUTANTS SUCH AS SEDIMENT AND TO MINIMIZE THE EXPOSURE OF STORM WATER TO CONSTRUCTION RELATED POLLUTANTS; AND, (2) ADHERE TO, AND AT ALL TIMES, COMPLY WITH THIS CITY APPROVED TIER 1 CONSTRUCTION SWPPP THROUGHOUT THE DURATION OF THE CONSTRUCTION ACTIVITIES UNTIL THE CONSTRUCTION WORK IS COMPLETE AND APPROVED BY THE CITY OF CARLSBAD.

OWNER(S)/OWNER'S AGENT NAME (SIGNATURE) DATE

STORM WATER POLLUTION PREVENTION NOTES

1. ALL NECESSARY EQUIPMENT AND MATERIALS SHALL BE AVAILABLE ON SITE TO FACILITATE RAPID INSTALLATION OF EROSION AND SEDIMENT CONTROL BMPS WHEN RAIN IS EMINENT.
2. THE OWNER/CONTRACTOR SHALL RESTORE ALL EROSION CONTROL DEVICES TO WORKING ORDER TO THE SATISFACTION OF THE CITY ENGINEER AFTER EACH RUN-OFF PRODUCING RAINFALL.
3. THE OWNER/CONTRACTOR SHALL INSTALL ADDITIONAL EROSION CONTROL MEASURES AS MAY BE REQUIRED BY THE CITY ENGINEERING OR BUILDING INSPECTOR DUE TO UNCOMPLETED GRADING OPERATIONS OR UNFORESEEN CIRCUMSTANCES WHICH MAY ARISE.
4. ALL REMOVABLE PROTECTIVE DEVICES SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE (5) DAY RAIN PROBABILITY FORECAST EXCEEDS FORTY PERCENT (40%). SILT AND OTHER DEBRIS SHALL BE REMOVED AFTER EACH RAINFALL.
5. ALL GRAVEL BAGS SHALL BE BURLAP TYPE WITH 3/4 INCH MINIMUM AGGREGATE.
6. ADEQUATE EROSION AND SEDIMENT CONTROL AND PERIMETER PROTECTION BEST MANAGEMENT PRACTICE MEASURES MUST BE INSTALLED AND MAINTAINED.

Site Access Across Dirt																														
Other (list):																														

Instructions: Begin by reviewing the list of construction activities and checking the box to the left of any activity that will occur during the proposed construction. Add any other activity descriptions in the blank activity description boxes provided for that purpose and place a check in the box immediately to the left of the added activity description. For each activity descrribed, pick one or more best management practices (BMPs) from the list located along the top of the form. Then place an X in the box at the place where the activity row intersects with the BMP column. Do this for each activity that was checked off and for each of the selected BMPs selected from the list. For Example – If the project includes site access across dirt, then check the box to the left of "Site Access Across Dirt". Then review the list for something that applies such as "Stabilized Construction Ingress/Egress" under Tracking Control. Follow along the "Site Access Across Dirt" row until you get to the "Stabilized Construction Ingress/Egress" column and place an X in the box where the two meet. As another example say the project included a stockpile that you intend to cover with a plastic sheet. Since plastic sheeting is not on the list of BMPs, then write in "Cover with Plastic" in the blank column under the heading Erosion Control BMPs. Then place an X in the box where the "Stockpiling" row intersects the new "Cover with Plastic" column.

To learn more about what each BMP description means, you may wish to review the BMP Reference Handout prepared to assist applicants in the selection of appropriate Best Management Practice measures. The reference also explains the California Stormwater Quality Association (CASQA) designation and how to apply the various selected BMPs to a project.

Scale of map

Site Map

Features displayed on the map must include:

- An outline of the entire property
- Location and brief description of construction activity areas (e.g. grading, building, trenching, fueling areas, waste container area, wash racks, hazardous material storage areas, etc.)
- Location and flow direction arrows for existing drainage facilities (ditches, channels, inlets, storm drains, etc.)
- Location of existing storm water BMP controls (sediment basins, oil/ water separators, sumps, etc.)
- Location of proposed storm water BMP controls with brief description or legend reference

AREA/NAME	Corrective Action(s)	BMPS IMPLEMENTED
ADULT LEARNING PROGRAM PARKING LOT	Keep dumpster area free of standing water.	Scheduled for ongoing routine cleaning
ADULT LEARNING PROGRAM PARKING LOT	Keep parking lot and concrete ditch free of sediment and leaf debris.	Scheduled for ongoing routine cleaning
AGUA HEDIONDA SEWER LIFT STATION	No Corrective Actions Recommended for this site	NA
AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	Keep concrete ditch free of excessive sediment.	sweeping/raking
AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	Keep catch basins and curb inlets free of grass clippings, sediment, and leaf debris.	sweeping/raking
AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	Ensure adequate erosion control methods are employed on the landscaped slope on the west side of the property by the restrooms.	Wattles deployed in run-off prone areas
AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	Ensure the stockpiles and green waste bin are covered when feasible.	Tarps used to cover exposed stockpiles
AVIARA COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOTS	Keep the secondary containment pallet free of rainwater.	Staff to drain tray as necessary
BATIQUITOS SEWER LIFT STATION	No corrective actions are recommended for this site.	NA
BEACH BLUFF TRIANGLE/PARK	Consider applying appropriate storm drain signage to the trench drain along the east end of the grass area, near the intersection of Carlsbad Blvd and Pine Ave.	Stenciled signage applied
BUENA VISTA SEWER LIFT STATION	No corrective actions are recommended for this site.	NA
CADENCIA PARK	Consider directing drinking fountain wastewater to sewer or landscaped area.	Existing drinking fountain drains into a french drain system.
CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	Keep storm drain by basketball courts free of sediment and leaf debris. Keep inlet pipe at the north end of the property near the stockpiles free of leaf debris, sediment, and mulch.	Area is monitored in wet and dry weather raked and swept
CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	Ensure landscaping material stockpiles and green waste dumpster are covered as feasible.	Tarps used to cover exposed stockpiles
CALAVERA HILLS PARK, COMMUNITY CENTER, AND PARKING LOT	Ensure filter inserts are adequately maintained to remove landscaping debris and sediment to retain capacity.	Filters replaced as needed
CALAVERA PUMP STATION	No corrective actions are recommended.	NA
CANNON SEWER LIFT STATION	No corrective actions are recommended for this site.	NA
CARLSBAD RECYCLED WATER FACILITY	Keep trench drain free of leaf sediment and leaf debris.	Landscaping contract in place. Contacted Encina staff to have them monitor.
CARLSBAD SENIOR CENTER PARKING LOT	Keep curb gutters free of sediment and leaf debris.	Scheduled for ongoing routine cleaning

AREA/NAME	Corrective Action(s)	BMPS IMPLEMENTED
CARLSBAD SENIOR CENTER PARKING LOT	Keep catch basins in west parking lot free of sediment and leaf debris.	Scheduled for ongoing routine cleaning
CARRILLO RANCH AND PARKING LOT	Keep discharge locations free of excessive sediment and gravel.	Area is monitored in wet and dry weather rock/gravel bags used as needed
CARRILLO RANCH AND PARKING LOT	Stabilize and maintain exposed soil areas to prevent soil from eroding during rain events.	Wattles deployed in run-off prone areas
CARRILLO RANCH AND PARKING LOT	Consider applying storm drain signage to the concrete ditch inlets and parking lot catch basins.	Stenciled signage applied
CARRILLO RANCH AND PARKING LOT	Consider repairing the damaged portion of the concrete ditch along the north bordering trail to prevent sediment transport.	Damaged areas patched
CHASE FIELD	Consider redirecting drinking fountain waste water flow to the landscaping or to the sewer system.	Existing drinking fountain drains into a french drain system.
CHINQUAPIN SEWER LIFT STATION	No corrective actions are recommended.	NA
CITY HALL FACILITY PARKING LOT	Keep parking lot free of leaf debris.	Scheduled for ongoing routine cleaning
COLE LIBRARY PARKING LOT	No corrective actions are recommended for this site.	Scheduled for ongoing routine cleaning
DOVE LIBRARY PARKING LOT	Keep outdoor areas, discharge locations, and filter inserts free of excessive trash, leaf debris, cigarette butts, and sediment, especially the filter insert inside the curb inlet in the northern parking area by the Dove Lane entrance.	Scheduled for ongoing routine cleaning
DOVE LIBRARY PARKING LOT	Keep outdoor areas free of oil spills/leaks.	Scheduled for ongoing routine cleaning
DOVE LIBRARY PARKING LOT	Consider reapplying storm drain signage to the catch basin at the southwest corner of the library by the trash enclosure and the circular storm drain in the northern parking area by the Dove Lane entrance.	Signage scheduled for installation
DOVE LIBRARY PARKING LOT	Consider providing recycling containers.	To be considered
DOVE LIBRARY PARKING LOT	Consider replacing/repairing the sand bag at the curb inlet south of the library.	Scheduled for repair/replacement prior to rainy season
El FUERTE LIFT STATION	Sweep up trash and debris in outdoor areas.	Swept up trash and debris
FARADAY CENTER PARKING LOT	Keep outdoor areas and discharge locations free of excessive sediment and leaf debris.	Scheduled for ongoing routine maintenance
FARADAY CENTER PARKING LOT	Keep outdoor areas free of oil stains.	Scheduled for ongoing routine sweeping
FARMERS BUILDING PARKING LOT	Consider repairing asphalt to prevent excessive sediment from entering the storm drain system.	BMPs to be installed at storm drains prior to rainy season; parking lot scheduled for slurry repair
FARMERS BUILDING PARKING LOT	Keep all outdoor areas and discharge locations free of excessive sediment and landscaping debris.	Scheduled for ongoing routine maintenance

AREA/NAME	Corrective Action(s)	BMPS IMPLEMENTED
FARMERS BUILDING PARKING LOT	Ensure stock piles and landscaping debris are adequately covered and contained.	Scheduled for ongoing routine inspection
FIRE STATION #1	Cover and elevate, or coat, rusty materials to prevent contact with storm water.	Materials moved inside for storage
FIRE STATION #2	No corrective actions are recommended for this site.	NA
FIRE STATION #3	Consider applying appropriate storm drain signage to the catch basin in the rear of the station.	Will consider
FIRE STATION #4	Keep outdoor areas and trash enclosure free of excessive sediment and leaf debris.	Daily inspection and cleaning as needed
FIRE STATION #5	Keep site and all catch basins free of leaves and sediment.	Daily inspection and cleaning as needed
FIRE STATION #5	Keep used tires adequately covered.	Tire was there for training and is not stored onsite.
FIRE STATION #5	Ensure waste water from fire hose rinsing activity is contained disposed of to the sewer system or landscaping.	Sand bags are used to block storm drain and vacuumed used to reclaim water.
FIRE STATION #5	Ensure truck washing is performed in an area where runoff cannot enter the MS4.	Sand bags replaced and vacuum used to reclaim water. Water observed may have been from landscaping.
FIRE STATION #5	Ensure filter insert in catch basin by hose wash area is adequately maintained and installed correctly.	Scheduled for ongoing maintenance
FIRE STATION #6	Keep trench drain free of sediment and leaf debris.	Daily inspection and cleaning as needed
FIRE STATION #6	Consider applying storm drain signage to trench drain.	Will consider
FLEET MAINTENANCE FACILITY AND PARKING LOT	Keep site and parking lot free of sediment and leaf debris.	vendor contacted to address lot area debris and sediment. Cleaned as part of service.
FLEET MAINTENANCE FACILITY AND PARKING LOT	Keep catch basin behind maintenance building free of sediment, leaf debris, and gravel.	BMP's for catch basin 2490 renewed, debris at area is collected by vendor service.
FLEET MAINTENANCE FACILITY AND PARKING LOT	Keep scrap metal bin and area around the bin free of oil leaks/spills. Consider improving cover for bin or moving under a permanent structure.	Scrap metal bit cleaned of oil residue and no oily items allowed.
FLEET MAINTENANCE FACILITY AND PARKING LOT	Ensure hazardous waste is adequately covered. Consider repairing the roof structures of the sheds containing hazardous materials. Ensure containment trays inside shed are kept free of rainwater and any accumulated liquid in the trays is disposed of properly.	Hazardous waste area was wet from foam to disperse rodent population and reduce risk of inhalation of materials. No leaks on structure. Accumulated material has been collected and shipped by Veolia.
FLEET MAINTENANCE FACILITY AND PARKING LOT	Provide secondary containment for the portable toilets by the maintenance bay.	Vendor serviced portable toilets same day and installed containment.
FLEET MAINTENANCE FACILITY AND PARKING LOT	Consider replacing fiber rolls at the three curb inlets, which appear to be wearing and may have reduced functionality.	Storm drain filters are in consideration for replacement by an improved BMP system to collect materials.
FOXES LANDING LIFT STATION	Repair broken A/C	Crews repaired broken asphalt
GATESHEAD SEWER LIFT STATION	Repair fence	Contractor to replace in June

AREA/NAME	Corrective Action(s)	BMPS IMPLEMENTED
HARDING COMMUNITY CENTER PARKING LOT	No corrective actions are recommended for this site.	NA
HARDING COMMUNITY CENTER PARKING LOT	Consider applying storm drain signage to some catch basins around the perimeter of the site.	Signage scheduled for installation
HARDING COMMUNITY CENTER PARKING LOT	Control sediment erosion from slope along concrete channel and parking medians in the west park.	Scheduled for ongoing routine maintenance
HARDING COMMUNITY CENTER PARKING LOT	Protect rusty metal material from contact with rainwater.	Scheduled for maintenance
HIDDEN CANYON PARK (LARWIN) AND PARKING LOT	Keep discharge locations free of excessive woodchips and leaf debris.	Area is monitored in wet and dry weather raked and swept
HOLIDAY PARK AND PARKING LOTS	Ensure parking areas remain free of oil spills.	Absorbents applied as needed
HOME PLANT SEWER LIFT STATION	No corrective actions are recommended.	NA
HOSP GROVE PARK AND PARKING LOT	Keep west parking lot free of sediment and leaf debris.	Area is monitored in wet and dry weather raking and sweeping as needed
KNOTS SEWER LIFT STATION	Repair secondary containment door	Contractor contacted to repair containment
LA COSTA CANYON PARK AND PARKING LOT	Keep discharge locations free of excessive sediment and organic debris, particularly the inlet at the base of the slope located southeast of the tennis courts and north of the basketball court	Area is monitored in wet and dry weather; raking and sweeping as needed
LA COSTA CANYON PARK AND PARKING LOT	Control erosion along walking trails, around the detention basin, along the slopes north of the basketball court and southeast of the tennis courts, and along the concrete ditch north of the basketball court to minimize sediment transport to the storm drain system.	Wattles deployed in run-off prone areas
LA COSTA CANYON PARK AND PARKING LOT	Provide cover for trash cans in northern picnic area and tennis court.	Trash lids provided
LA COSTA CANYON PARK AND PARKING LOT	Consider replacing the gravel bags and straw wattles in poor condition, and restricting water flow, throughout the site.	Wattle and gravel bags replaced as needed
LA COSTA CANYON PARK AND PARKING LOT	Consider redirecting drinking fountain waste water flow to the landscaping or to the sewer system.	Existing drinking fountain drains into a french drain system.
LAGUNA RIVIERA PARK	Consider applying storm drain signage to the catch basin near the park restrooms.	Staff to stencil catch basin with storm drain signage
LAGUNA RIVIERA PARK	Consider redirecting drinking fountain waste water flow to the landscaping or to the sewer system.	To install french drain under drinking fountain 6-30-2012
LANDSCAPE MAINTENANCE AND REPAIR	No corrective actions are recommended.	NA
M&O OPERATIONS YARD AND PARKING LOT	No corrective actions are recommended for this site.	NA
MAERKLE DAM RESERVOIR/PUMP/CHLORINATION STAT	Control slope erosion on eastern side of reservoir and prevent sediment discharge to the concrete ditch. Continue to regularly remove any sediment accumulation in concrete ditch.	In contact with Urban Corps to get a large crew to clear sediment near ditch.

AREA/NAME	Corrective Action(s)	BMPS IMPLEMENTED
MAERKLE DAM RESERVOIR/PUMP/CHLORINATION STAT	Keep lower lot and north end of upper lot free of sediment.	We will increase our sweeping intervals.
MAERKLE DAM RESERVOIR/PUMP/CHLORINATION STAT	Consider providing storm drain signage for those catch basins that lack or have faded signage.	Repainted markings at drains.
MAGEE PARK AND PARKING LOT	No corrective actions are recommended for this site.	NA
MONROE STREET POOL	Consider structural modification of the drainage layout from pool deck areas to reduce potential for pollutant discharge.	The catch basin for the deck drains is being inspected and cleaned 3 to 4 times a week. Sediment and debris is vacuumed out of the basin and deposited where they will not enter the storm drains.
MONROE STREET POOL	Prevent sediment erosion from the slope at the southwest corner and the landscaped strip in the north end of the parking lot.	Additional plants and physical barriers have been installed in these areas. Plants are being irrigated by hand as necessary.
MONROE STREET POOL	Consider applying storm drain signage to the southwest and northwest catch basins.	Request has been put in to have the drains stenciled.
MONROE STREET POOL	Provide an adequate container and cover for bags of recyclables.	Bags are located above a permeable gravel field with no possibility of contaminants reaching the storm drain system.
MS4 MAINTENANCE	No corrective actions are recommended.	NA
OAK OPERATIONS YARD AND PARKING LOT	Consider repaving the south edge of the site to prevent sediment transport.	The drainage swale at the south end of the property was paved.
PARKS MAINTENANCE/STORAGE/PARKING LOT	Keep site free of sediment and debris.	Area is monitored in wet and dry weather; raking and sweeping as needed
PINE PARK AND PARKING LOT	Keep discharge locations free of excessive sediment and organic debris.	Area is monitored in wet and dry weather; raking and sweeping as needed
POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	Keep concrete area and drain by baseball field bleachers free of sediment and gravel. Consider structural BMPs to protect the drain.	Area swept as needed
POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	Ensure adequate maintenance of vegetation around drains in landscaped area. Consider structural BMPs to prevent sediment from accumulating in drains in landscaped areas.	Vegetation cut as needed / Wattles used as needed
POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	Keep drains throughout site free of leaf debris and grass clippings.	Area swept and raked as needed
POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	Consider providing lids for uncovered trash cans.	Trash lids provided
POINSETTIA COMMUNITY PARK, MAINTENANCE STATION AND PARKING LOT	Ensure green waste containers are covered when feasible.	Containers covered with tarps
POINSETTIA SEWER LIFT STATION	Palletize drum, three-story parking lot	Completed
POWER WASHING	NA	NA

AREA/NAME	Corrective Action(s)	BMPS IMPLEMENTED
RAILROAD DEPOT VISITORS CENTER PARKING LOT	Keep outdoor areas and discharge locations free of excessive leaf debris and sediment	Scheduled for ongoing routine maintenance
RAILROAD DEPOT VISITORS CENTER PARKING LOT	Prevent sediment erosion from slope at northern exit driveway.	Scheduled for ongoing routine maintenance
RESERVOIR C	No corrective actions are recommended.	NA
RESERVOIR ELM	No corrective actions are recommended.	NA
RESERVOIR LA COSTA HI	No corrective actions are recommended.	NA
RESERVOIR LA COSTA LO	No corrective actions are recommended.	NA
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Consider redirecting flow of skate park drinking fountain wastewater to the sewer system or landscaping.	Will evaluate flow of drinking water
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Keep all outdoor areas free of excessive sediment, leaf debris, trash, and cigarette butts.	Scheduled for routine cleaning
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Keep discharge locations free of excessive sediment, trash, leaves, and wood debris.	Scheduled for routine cleaning
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Control erosion along the concrete ditch east of skate park lot, the hillside on the west and south side of skate park, and on the west side of the Safety Center to prevent sediment transport.	Scheduled for routine inspection and maintenance as necessary
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Consider providing recycling containers in the skate park.	Will consider
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Provide permanent cover for trash cans in the skate park and parking lot, in front of Safety Center, and by the Safety Center trash enclosure.	Will design and implement permanent cover
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Ensure an accessible, appropriate spill response kit and plan are kept on site.	Spill Kit available
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Maintain filter inserts at curb inlets in the skate park lot, at the entrance to the Safety Center employee parking lot, and at the northeast corner of the Safety Center to remove sediment, leaves, and trash and maintain capacity.	Scheduled for routine maintenance
SAFETY CENTER (POLICE & FIRE HEADQUARTERS), PARKING LOT, SKATEPARK	Consider applying appropriate storm drain signage to the curb inlet in the Safety Center employee parking area towards the entrance.	Signage scheduled for installation
SAND SHELL SEWER LIFT STATION	Sweep up trash and debris in outdoor areas.	Completed and placed on weekly cleaning schedule
SANITARY SEWER MAINTENANCE AND OPERATIONS	No corrective actions are recommended.	NA
SIMSBURY SEWER LIFT STATION	No corrective actions are recommended.	NA
STAGECOACH COMMUNITY PARK, MAINTENANCE STATION, AND PARKING LOT	Consider applying storm drain signage to the inlets within the concrete ditch around the perimeter of the park and to the catch basin near the tennis courts.	Stenciled signage applied
TAP PUMP STATION	No corrective actions are recommended.	NA
TERRAMAR SEWER LIFT STATION	No corrective actions are recommended.	NA

AREA/NAME	**Corrective Action(s)**	BMPS IMPLEMENTED
VANCOUVER SEWER LIFT STATION	Replace Fence	Department will work on contract to repair fence
VILLAS SEWER LIFT STATION	Fence in bad shape	Contactor to replace in June
ZONE 5 PARK	Keep concrete ditch and drain in the northeast corner of site free of sediment and landscaping debris.	Area swept as needed
ZONE 5 PARK	Ensure adequate erosion control methods are employed along concrete ditch.	Contractor installed wattles and gravel bags
ZONE 5 PARK	Keep street free of sediment from vehicle tracking from dirt parking lot.	Area swept as needed
ZONE 5 PARK	Provide secondary containment for non-ADA compliant portable toilet.	Secondary containment tray installed
ZONE 5 PARK	Consider applying appropriate storm drain signage to the inlet within the concrete ditch, and to the park catch basin by the drinking fountain.	Stenciled signage applied
ZONE 5 PARK	Consider redirecting drinking fountain waste water flow to the landscaping or to the sewer system.	To install french drain under drinking fountain

Appendix 5

Appendix 6

Remember: **pick up** *after your pet*

Did you know pet waste can be a major cause of water pollution? Dog waste contains bacteria, harmful viruses and parasites.

Rain and sprinkler runoff wash pet waste off lawns and recreational areas through our storm drain system and into our creeks, lagoons and ocean. Bacteria in the water not only pose a threat to human health, but also to the environment by consuming oxygen that fish and aquatic organisms need to survive.

To keep our pets and our environment safe, follow some simple rules:

- Use a bag to collect pet waste, and dispose of it in the trash can.
- Do not wash or dump pet waste, aquarium water, kitty litter or any other pet waste material down the storm drain.
- Keep your pets on a leash. Leashes protect dogs from wilderness hazards such as rattlesnakes or rabid animals.

By minding these simple rules we can keep our pets safe and our environment clean. For more information, visit the city's website: **www.carlsbadca.gov**. To report washing or dumping into the storm drain, please call the city's storm water hotline at **760-602-2799**.

Preschool/toddler fall registration underway

The City of Carlsbad is currently registering students for the fall semester of preschool. Classes fill quickly so get your applications in soon. The City of Carlsbad's preschool program is an exciting, fun and enriching experience for young children, ages 1-5. We emphasize language development, socialization, problem solving and school readiness in a nurturing environment. Daily activities include music and movement, art projects, story time, cooking, sharing and indoor and outdoor play. Children will learn about the world from teacher developed thematic units that include sea life, seasons, zoo animals and plant life. Field trips are also taken to enhance these learning experiences. For more information search for "preschool" on the city website or pick up a copy of the summer Community Services Guide.

> The City of Carlsbad's preschool program is an exciting, fun and enriching experience for young children, ages 1-5.

CITY OF CARLSBAD

Photographs © City of Carlsbad and istockphoto.com

Clean water is *music to our ears*

To report dumping or washing to the storm drain, please call the City of Carlsbad Storm Water hotline at **760-602-2799**.

Do your part to keep pollution out of storm drains.

- Pick up pet waste.
- Apply fertilizers and pesticides sparingly.
- Sweep up or use a mop instead of hosing or washing to the street.
- Properly dispose of household hazardous waste.

Spill response

Quick and efficient response to spills is the most effective way to avoid contaminated runoff to the storm drain system.

- Use mops and absorbents, such as cat litter or sawdust to clean up small spills.
- Keep spill response kits readily available.
- Write and keep a current spill response plan. Be sure that all appropriate contacts are updated.
- Ensure employees are trained on appropriate spill response.

Employee training

- Train employees on storm water pollution prevention.
- Post information in employee areas
- Keep records of employee training events.

Other BMPs may be required to prevent pollutants from entering the storm drain system.

To report illegal discharges, call
760-602-2799.

CITY OF CARLSBAD

Storm Water Protection Program

Industrial/Commercial Business
Guide to Pollution Prevention

Industrial and commercial businesses are required to comply with municipal storm water rules and regulations to prevent storm water pollution. Potential pollutants from industrial and commercial facilities include trash, bacteria, hazardous materials, sediment, nutrients, pesticides, organics, oil and grease, and metals. The storm water conveyance system is not connected to sanitary sewer or treatment facilities. Rainwater and urban runoff transport pollutants directly into our creeks, lagoons and ocean.

All businesses are subject to storm water regulations. Violations of these regulations can result in enforcement action and penalties. Best Management Practices (BMPs) are methods and behaviors to prevent pollution. Proper implementation of the following BMPs can prevent storm water pollution.

Good housekeeping

Simple housekeeping practices are very effective at preventing polluted runoff:

- Use mops, brooms or wire brushes to clean dumpsters, sidewalks, buildings and other surfaces. Wash water is never allowed to drain to the street, gutter or storm drain.
- Sweep up trash and debris, including organic matter such as leaves and dirt.

Preventative maintenance

Proper maintenance of equipment, vehicles, building structures and storm drains can prevent larger problems from occurring.

- Keep equipment and vehicles properly serviced. Inspect frequently and clean and repair as needed.
- Gutters, storm drains, catch basins and other drainage should be regularly inspected and cleaned. Filters, drain covers, sand bags and other materials should be regularly inspected and replaced as necessary.

- Regularly inspect and maintain BMPs as needed.

Materials storage and handling

Improperly stored materials can spill or run off during rain events.

- When possible, store materials, especially liquids, hazardous waste and other chemicals, indoors or under covered and contained areas.

- Cover materials stored outdoors to protect them from rain run-on and run-off.
- Dispose of unused materials properly.

Waste disposal and management

Disposal areas must be properly maintained to prevent trash, liquids and other pollutants from entering the storm drain system.

- Keep dumpsters closed when not in use.
- Sweep up trash and debris in outdoor areas.
- Ensure that trash is properly secured to prevent spills and leaks.

- Immediately clean up spills and leaks.
- If no recycling program is in place, consider contacting your waste hauler about recycling programs.

Re: 2008 Dry Weather Field Screening and Analytical Monitoring Program
City of Chula Vista, California

Dear Mr. Aminpour:

Per your request D-MAX Engineering, Inc (D-MAX) conducted the routine phase of the Dry Weather Field Screening and Analytical Monitoring Program for the City of Chula Vista during the summer of 2008. Subsequently, we conducted follow-up investigations to identify the sources of pollutants detected during the monitoring program.

This report presents the results of the monitoring program and upstream investigations. The contents include field screening data and analytical laboratory test results, analysis of collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations and our recommendations for additional actions.

It has been our pleasure working with the City of Chula Vista on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Program Overview

The principal goal of the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) is to identify and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain conveyance system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components:

- Field screening observations
- Field analytical testing
- Laboratory analytical testing

Information gathered from dry weather monitoring is used to characterize dry weather discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. As needed, follow-up studies and source investigations are conducted to detect and eliminate the sources of these pollutants. This report presents the results of the City of Chula Vista 2008 Dry Weather Monitoring Program.

1.2 Regulatory Requirements

In accordance with Order No. R9-2007-0001 (Permit), the most recent permit issued by the San Diego Regional Water Quality Control Board (RWQCB), each of the Copermittees, including the City of Chula Vista (City), must annually perform dry weather monitoring of discharges into its storm drain system. This procedure is comprised of recording field observations, estimating observed flow rates, and conducting field testing at selected locations along the storm drain conveyance system during the dry weather season, May 1 through September 30. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station should be visited. The Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

1.3 Hydrologic Setting

The City of Chula Vista is in the southern portion of the County of San Diego and is bordered by the cities of National City, San Diego, and unincorporated areas of the County of San Diego. The City covers an area of approximately 52 square miles and maintains a population of about 228,000. The majority of the land use in the City is residential; other land uses include commercial, industrial, municipal facilities, streets, highways, and open spaces.

The City of Chula Vista lies within the Sweetwater River Hydrologic Unit (HU 909) and the Otay River Hydrologic Unit (HU 910). These two Hydrologic Units, along with the Pueblo San Diego Hydrologic Unit, form the San Diego Bay Watershed and ultimately drain into the San Diego Bay. The City is located in the Lower Sweetwater Hydrologic Area (HA 909.1) and the Otay Valley Hydrologic Area (HA 910.2).

The City of Chula Vista is naturally divided by topography into several basins from which runoff flows into the City's major receiving water bodies, including San Diego Bay,

Sweetwater River, Otay River, and the Lower Otay Reservoir. A complete drainage map for the City of Chula Vista is included as Figure A. The drainage basins, along with abbreviations used to identify field sampling stations, are listed in Table 1-1.

TABLE 1-1
OUTFALL DESIGNATIONS AND DRAINAGE BASINS

Site Name Abbreviation	Basin
BAY	Bay Boulevard Outfalls
BLC	Long Canyon Basin
CEN	Central Area Basin
JUD	Judson Basin
MGC	Chula Vista Municipal Golf Course
OLR	Otay Lakes Basin
OVR	Otay Valley Road Outfalls
POG	Poggi Canyon Basin
PRD	Palm Road Basin
RCC	Rice Canyon Basin
SCR	Salt Creek Basin
SUN	Sunnyside Basin
SVS	Sunny Vista Basin
SWB	Southwest Basin
SWR	Sweetwater River
TCC	Telegraph Canyon Basin
TCS	Telegraph Canyon, southern Branch
WIL	Upstream of the Willow Street Bridge
WOL	Wolf Canyon Basin

Based primarily on wet weather data from mass loading stations (MLS), ambient bay and lagoon monitoring, bioassessments, Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), and/or TMDL programs for the San Diego Bay Watershed, the high priority constituents of concern (COC) for the San Diego Bay Watershed were identified in the 2008 Watershed Urban Runoff Management Plan (WURMP). COCs for the Sweetwater River Hydrologic Unit (HU 909) are bacteria and pesticides, and for the Otay River Hydrologic Unit (HU 910) they are bacteria and gross pollutants. Receiving water bodies that lie within the jurisdiction of the City of Chula Vista and are 303(d)listed include: Pogi Canyon Creek for DDT, and the Lower Otay Reservoir for color, iron, manganese, nitrogen ammonia (total ammonia), and high pH – both are in the Otay River HU. The San Diego Bay Shoreline at Chula Vista Marina is 303(d) listed for copper and the shoreline along Bay Park for bacteria; both are within the jurisdiction of the Port of San Diego.

1.4 Previous Work

The City of Chula Vista has conducted dry weather monitoring programs since 1994. The results of the previous programs (1994 through 2007) are summarized in Table 1-2.

TABLE 1-2
SUMMARY OF HISTORICAL DRY WEATHER MONITORING

Year	Number of Field Screening Sites [1]	Number of Flowing Sites	Number of Ponded Sites	Number of Dry Sites	Number of Lab Analysis Sites [2]
1994-R1	14	Data not available [2]		40	0
1994-R2	17			42	0
1995-R1	23			36	0

Notes:
The City of Chula Vista conducted two separate rounds of dry weather monitoring in years 1994-2002.
R1 = Round one
R2 = Round two
[1] Number of Field Screening Sites = Number Flowing + Number Ponded. Field screening cannot be conducted at sites found to be dry. Dry sites are replaced by either a flowing or ponded site.
[2] Laboratory testing commenced in 2002 as required by San Diego Regional Water Quality Control Board Order 2001-001.
[3] Available information does not distinguish between flowing and ponded sites during this period.

1.5 Report Outline

Section 1, Introduction, includes regulatory background, a program overview, a discussion of the City of Chula Vista's hydrologic setting and constituents of concern, a summary of historical field screening data, and the report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Trash Assessment discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 7, Data Analysis, provides an analysis of field and laboratory data collected in 2008, as well as a comparison of past results.

Section 8, Upstream Investigations, details the results of follow-up investigations undertaken to isolate the sources of water contamination detected during initial field and laboratory screenings.

Section 9, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Figure A is a drainage map for the City of Chula Vista.

Figure B is a map showing the 2008 Dry Weather sample locations.

Figure C is a watershed map of the Chula Vista area, broken into hydrologic subareas.

Appendix A contains historical dry weather monitoring data.

Appendix B contains photographs of each of the investigated sites.

Appendix C contains the laboratory analytical reports.

Appendix D contains original copies of the field data sheet.

2 SAMPLING LOCATIONS

During the 2008 Dry Weather Monitoring Program, all 57 primary sampling sites located in the San Diego Hydrologic Units 909 and 910 were visited. Site Bay-01 was found to be dry, thus an alternate sampling site was chosen to replace the dry site. Site SWR-03 was considered but did not have a measurable flow. Therefore water was sampled approximately 200 feet east of Site SWR-03, and this new location was named SWR-03-E.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrological unit, and GPS coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix B. A City map with sampling locations is included as Figure B. A map of the watersheds in and around Chula Vista, broken down into HSAs, is included as Figure C.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of qualitative field observations, flow measurement, and quantitative field analyses of selected water quality parameters. Information relating to weather conditions, the amount of time since last rainfall, and the type of storm water conveyance are recorded. Specific observations and results of the field water quality analyses are documented on field data sheets, which are included in Appendix D. The data sheets also serve as a record of the field visit and are completed for every site visit regardless of whether or not samples were collected.

For 2008, field data sheets have been updated to include three categories of visits. Previously there were check boxes for either routine field screening or follow-up visits. This year there are check boxes for routine field screening, confirmation and IC/ID follow-up visits. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Irrespective of flow, qualitative field observations are made during each site visit. These observations provide a general site assessment and describe factors like water odor, clarity, the presence of floatables, visible deposits or stains, vegetation and biological organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system may also be ascertained through careful field observations. Each field screening location is photographed to provide additional information and documentation of site conditions. Photographs are included in Appendix B.

Flow Measurement

Flow measurements can be utilized to estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may indicate an illegal discharge upstream. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples are collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as methylene blue active substances (MBAS)*

- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)
- Orthophosphate-Phosphorus (Orthophosphate-P)
- Glycol

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results.

The methods used to perform the above field tests, along with the detection limit, range and accuracy of each method, are listed in Table 3-1 3.2 Laboratory Analytical Methods

In accordance with Order R9-2007-0001, laboratory samples were collected at 15 sites, representing more than 25 percent of the sites where ponded or flowing water was observed. Samples are submitted to EnviroMatrix Analytical, Inc, a laboratory certified by the California Department of Health Services, for analysis of the following constituents:

- Total hardness
- Oil and grease
- Diazinon and Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.1 °C	0.0 °C – 60.0 °C	± 0.5 °C
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01	0.00 – 14.00	± 0.01 pH
Turbidity	Hanna Instruments HI 93703 Portable Turbidity Meter***	0.01 NTU	0.01 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.0 mg/L – 3.0 mg/L*	± 0.13 & ± 0.5 mg/L[2]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[3]***	2.26 mg/L**	2.26 mg/L –13.6 mg/L**	± 30%of practical detection limit[4]
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate***	0.10 mg/L**	0.10 mg/L – 3.00 mg/L**	Varies with measured concetration[4,5]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[6]***	0.25 mg/L**	0.25 mg/L – 2.61 mg/L**	Varies with measured concetration[4,5]
Glycol	CHEMetrics V-2000 Multi-Analyte LED Photometer – Glycol Vacu-vials® (K-4403) Purpald/periodate***	0.60 mg/L**	0.60 mg/L – 10.00 mg/L	Varies with measured concetration[4,5]

Notes:

EC = electrical conductivity
TDS = total dissolved solids
mS/cm = millisiemens per centimeter
°C = Degrees Celsius
NTU = nephelometric turbidity unit
mg/L = milligrams per liter
LED = light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The detection limit for nitrate is 10.0 mg/L; however, the detection limit for nitrate-nitrogen is lowered due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.75 mg/L; however, the detection limit for orthophosphate-phosphorus is lowered due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Reporting limit, range, and accuracy information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Reporting Limit	Maximum Holding Time [1]
Oil and grease	EPA 1664	5 mg/L	28 days
Total Hardness	EPA 200.7	10 mg/L	14 days
Dissolved Cadmium	EPA 6010, 6020, 200.8	5 µg/L	24 hours
Dissolved Copper	EPA 6010, 6020 200.8	5 µg/L	24 hours
Dissolved Lead	EPA 6010, 6020 200.8	5 µg/L	24 hours
Dissolved Zinc	EPA 6010, 6020, 200.8	20 µg/L	24 hours
Diazinon	EPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	EPA 8141A	0.05 µg/L	7 days
Total Coliforms	SM 9221 B, E	[2] 20** – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms	SM 9221 B, E	[2] 20** – 160,000 MPN/100 mL	6 hours
Enterococcus	SM 9230 A, B	[2] 20** – 160,000 MPN/100 mL	6 hours
Total Coliforms	SM9223 (IDEXX Colilert)[4]	10 – 2,400,000 MPN/100mL	6 hours
E. coli [3]	SM9223 (IDEXX Colilert)[4]	10 – 2,400,000 MPN/100mL	6 hours
Enterococcus	IDEXX Enterolert [4]	10 – 240,000 MPN/100mL	6 hours

Notes:

[1] Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the QA/QC procedures listed in Section 3.3.2.

[2] For the Dry Weather Program for D-Max Engineering, Inc., EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 MPN/100 mL. For fecal coliforms and *Enterococcus*, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the most probable number index table (MPN) from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20 and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes set up for the sample is set up.

[3] Number of fecal coliforms is derived from the *E. coli* count using the following formula: Number of fecal coliforms = (Number of *E. coli*) / 0.85. The converted fecal coliform count, not the *E. coli* count, is repeated in the data tables in this report.

[4] IDEXX Colilert and Enterolert tests are performed by EnviroMatrix Analytical. These tests used during upstream investigations only.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters are calibrated periodically with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter is calibrated and periodically checked for accuracy using standard solutions. The conductivity meter is checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers are first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water and dried.

The accuracy of field analytical techniques is assessed at the beginning of each sampling week by analyzing solutions of known concentrations for ammonia-nitrogen, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Field Test Kit Results (mg/L)
07/01/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	0.9
07/01/08	Surfactants	1.0	0.75 – 1.25	1.0
07/01/08	Nitrate **	44.3	31.0 – 57.6	52.8
07/01/08	Orthophosphate **	1.0	0.75 – 1.25	0.8
07/01/08	Glycol	2.0	1.6 – 2.4	1.8
07/07/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	1.0
07/07/08	Surfactants	1.0	0.75 – 1.25	1.0
07/07/08	Nitrate **	44.3	31.0 – 57.6	54.5
07/07/08	Orthophosphate **	1.0	0.75 – 1.25	1.0
07/07/08	Glycol	2.0	1.6 – 2.4	2.3
07/14/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	1.0
07/14/08	Surfactants	1.0	0.75 – 1.25	1.0
07/14/08	Nitrate **	44.3	31.0 – 57.6	52.6
07/14/08	Orthophosphate **	1.0	0.75 – 1.25	0.9
07/14/08	Glycol	2.0	1.6 – 2.4	2.0

Notes:
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.

** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by dividing the results by 4.43 for nitrate and 3.26 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilize the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included in Appendix C.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation was necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination was present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), a source identification investigation is initiated immediately. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a re-sampling is conducted within 24 hours. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is conducted within two days of receiving the analytical reports from the lab. The results of these investigations are included in Section 8 of this report. Recommendations based on these investigations are included in Section 9.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (see Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. The current set of numeric action levels in this report are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, orthophosphate-P, nitrate-N, ammonia-N, or surfactants are observed above the numeric action level, a follow-up investigation is conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations are conducted within two business days of receiving the test results from the lab.

California Toxics Rule
The CTR criterion maximum concentration (CMC) is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment
Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the field crew due to their familiarity with the City of Chula Vista's Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan, with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan, and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Glycol (mg/L)	1.0	Not naturally present; main source is coolant systems.
Surfactants (MBAS) (mg/L)	1.0	Basin Plan with allowance based on workgroup field experience and possible field reagent interfaces.
Turbidity (NTU)[2]	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity), and unusual odors.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Values > 5.0 mS/cm may indicate IC/ID; however, EC may be highly elevated in some regions due to high TDS groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values < 0.75 mS/cm may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg /L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin; source identification investigations should also be undertaken.
Chlorpyrifos (µg /L)	0.5	
Dissolved Cadmium (mg/L)	California Toxics Rule	Use California Toxics Rule Table, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (mg/L)	California Toxics Rule	
Dissolved Lead (mg/L)	California Toxics Rule	
Dissolved Zinc (mg/L)	California Toxics Rule	
Total Coliform (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliform (MPN/100 mL)	20,000	
Enterococcus (MPN/100 mL)	10,000	

Notes

[1]The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

°C	degrees Celsius
mS/cm	millisiemens per centimeter
mg/L	milligram per liter
IC/ID	illegal connection/illicit discharge
MBAS	methylene blue active substances
MPN/100 mL	most probable number (of colony forming units) per 100 milliliters
NTU	nephelometric turbidity unit
ppb	parts per billion
USEPA	United States Environment Protection Agency
WQO	Water Quality Objectives

4 FIELD SCREENING RESULTS

The Dry Weather Monitoring Program was started on July 2, 2008, and completed on July 24, 2008. A total of 58 monitoring stations were visited, and field screening was conducted at the sites where ponded or flowing water was observed. 42 sites had measurable flow, 15 sites were ponded, and one site was dry. A total of 119 site visits were performed, including 32 confirmation visits to sites where one or more constituents were found to exceed specified action levels and 30 upstream investigation visits.

4.1 Qualitative Observations

Qualitative observations are summarized below and presented in Table 4-1. These observations are based on routine and confirmation site visits only. Upstream investigation data is not included.

Light Conditions
The majority of the program was conducted under sunny light conditions. Several days were party cloudy or overcast, and there was one incident of fog.

Odor
Most sites had no observable odors. Two sites displayed a musty odor, two smelled of sewage and one site had a chemical odor.

Color
Water samples were mainly colorless, however many yellow samples were also observed.

Clarity
The majority of the water samples were clear, with negligible suspended particles observed. Seven sites were observed having slightly cloudy water.

Floatable Materials
Trash was seen in the water at more than half of the sites visited. Some sites also showed bubbles, foam or sheen.

Vegetation
Depending upon the type of conveyance and access to sunlight and soil, vegetative growth varied naturally from no growth to normal. Five sites showed excessive vegetative growth, in some cases impeding the flow of water.

Biology
Algae, insects, and snails were prevalent organisms witnessed at sites. In some cases fish, frogs, larvae, crustaceans and a snake were noted. The presence of biological organisms typically indicates healthy water conditions. Specifically, the presence of algae implies a persistent water flow at the site. Excessive algae, however, may be a result of nutrient enrichment (eutrophication) and may diminish the dissolved oxygen available to other organisms.

Deposits
Sediment, gravel and fine particulates were observed at most sites.

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Definitions of constituents measured by the field crew are stated below.

Flow rates are the measurements of the volume of fluid passing through a given surface per unit time. Flow rate measurements are particularly important because they are needed when calculating the load or particular amount of a pollutant discharged.

Water temperature is needed to assess the significance of other parameters such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. Water temperature was measured in the field immediately upon sample collection at each site with ponded or flowing water.

The **pH** is an expression of the acidity or alkalinity of a water sample. This is a critical factor in determining water quality, as the pH of an aquatic system will drive a multitude of chemical reactions, including the availability of nutrients and the solubility of chemical substances, especially heavy metals.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures.

Conductivity values indicate the total concentration of ions in an aquatic system and the ability of water to conduct electricity. This parameter can be used to assess the mineral content of water or to help determine the presence of dissolved pollutants.

Ammonia-nitrogen is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment, however, in higher quantities it can become toxic to fish and other organisms.

Surfactants in water samples often indicate illegal discharges from industrial, commercial, or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms.

Nitrate-nitrogen is a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which can later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. During field analysis, nitrate is measured in mg/L NO_3 and converted into mg/L nitrate nitrogen using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-phosphorus, also known as reactive phosphorus, is also a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate, phosphate pollution can cause eutrophication, which stimulates algal growth and eventually lowers aquatic dissolved oxygen to levels that are dangerous for aquatic life. Because it is commonly the limiting nutrient in plant growth, even low levels of phosphate can cause significant algal growth. During the field analysis, orthophosphate was measured

in mg/L PO_4 and converted into mg/L orthophosphate-P using a conversion factor of 0.326. This process is explained in note 6 of Table 3-1.

Glycol is associated with radiator coolant discharges. Glycol is not naturally found in water. Its presence in water from the MS4 indicates an illegal discharge or illicit connection.

A statistical summary of the field analytical results is presented in Table 4-2. The data for this table is from routine visits only; confirmation and upstream investigation visit data has not been included. Table 4-3 presents the results of routine field analyses conducted at the sampled sites. Graphs of each parameter analyzed and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
INITIAL FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceed-ances	Graph Number
Flow Rate (gpm)	281	0 (Ponded)	32.4	2.0	63.4	0	4-1
Temperature (ºC)	32.7	19.8	23.3	22.8	2.6	0	4-2
pH	8.9	7.0	8.0	8.0	0.5	0	4-3
Turbidity (NTU)	41.0	0.01	6.17	3.4	9.30	0	4-4
Conductivity (mS/cm)	> 20	0.94	4.35	4.22	3.34	0	4-5
Ammonia-N (mg/L)	5.0	nd	0.4	0.2	0.9	2	4-6
Surfactants (mg/L MBAS)	1.25	0.13	0.54	0.50	0.21	2	4-7
Nitrate-N (mg/L NO_3-N)	38.87	0.29 *	7.38	2.78	8.97	16	4-8
Orthophosphate-P (mg/L PO_4-P)	1.70	nd	0.39	0.20	0.41	0	4-9
Glycol (mg/L)	10.0	nd	0.7	0.5	1.3	5	4-10

Note:
Table includes routine screening data only. Dry sites not incorporated.
nd = not detected, considered to behalf of detection limit in statistical calculations
* Nitrate-N reporting limit is 2.26 mg/L. Measurements below the limit are reported but flagged as being below the practical detection limit.

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

One of the new requirements in the recently updated Municipal Permit is the addition of a trash monitoring program. Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather field screening site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a two-page Trash Assessment Form to document the amount and extent of trash and the threat to human and aquatic health. The first page is completed at every site. The second page, which includes information about the types, prevalence, potential routes, and the sources of trash, is completed at sites where a larger amount of trash is observed.

A qualitative estimate of trash abundance is made based upon a general impression of the site. The Trash Assessment Form includes five categories to describe the amount and extent of trash. The definitions are primarily qualitative, although a number of trash pieces is also included in each category as a rough guideline. The five categories are listed below.

- *Optimal:* On first glance, no trash is visible. Little or no trash (<10 pieces) is evident when the evaluated area is closely examined for litter and debris.

- *Suboptimal:* On first glance, little or no trash is visible. After close inspection, small levels of trash (~10-50 pieces) are evident in the evaluated area.

- *Marginal:* Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing are present.

- *Submarginal:* Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing are present.

- *Poor:* Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* - Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris have the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g., medical waste, diapers, human waste), or have the potential for physical harm (sharps, entanglement, nails, etc.).

- *Threat to Aquatic Health* – Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc.) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category.

In the event that a potential threat to human or aquatic health is noted, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Form. If a site is labeled as submarginal or poor, it is then assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on the prevalence and potential threat to water quality of the items. Lastly, the potential mechanism through which the trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are identified.

5.3 Trash Assessment Results

Table 5-1 and Graph 5-1 summarize the assessments of trash levels at the sites sampled in 2008. Figure 5-1 presents the trash assessment results on a GIS map.

GRAPH 5-1
TRASH ASSESSMENT SUMMARY

5.3.1 Threat to Human or Aquatic Health

Site JUD-01 is part of a concrete channel located in a primarily commercial area. The site contained a significant accumulation of trash, which included: styrofoam and plastic food and beverage containers; plastic/metal light bulb fixtures; toys; and at least one empty can of brake fluid.

Upstream of the site, accumulation of trash was even greater. A significant amount of dumping had occurred in the channel just east of the 3rd Avenue and Orange Avenue intersection, and transients were observed occupying the area under the bridge. In addition to the types of trash seen at the primary site, animal waste, full detergent containers, garbage bags with food waste, and clothing were observed. The conditions of the site were reported to Chula Vista city officials immediately, and the site was cleared shortly thereafter.

Site TCS is a catch basin located inside of a gated property, immediately northeast of the intersection of the trolley tracks and Moss Street. A significant amount of food and beverage containers had accumulated here, along with various other pieces of styrofoam and litter. Access to the site is relatively limited since it is within a gated property and there is a grate covering the catch basin, it appears that the trash within the basin must come from upstream. There is a drainage grate within the site that appears to have been clogged by the trash. A film of food grease was visible on the water surface and the area had a very strong sewage-like odor. The conditions at this site were immediately reported to city officials.

FIGURE 5-1
TRASH ASSESSMENT GIS MAP

Base Data Sources: USGS, SanGIS, SANDAG

5.3.2 Submarginal and Poor Sites

In addition to sites JUD-01 and TCS, listed above, the following sites were rated as submarginal or poor.

Site CEN-03 is located downstream of a residential area. A substantial accumulation of yard clippings and a plastic chair were observed here, most likely the result of illegal dumping into the channel, by nearby residents. Several food and beverage containers were also observed, as a result of littering either at the site or upstream.

Site RCC-04 is located immediately downstream of a shopping center and a high school, on an undeveloped lot of land. Several shopping carts and a substantial amount of food and beverage containers were observed in the immediate vicinity of the site. This accumulation of trash is likely the result of dumping and littering, possibly by teenagers observed occupying the area.

Site SWR-04 is located in an area with nearby shopping centers and businesses as well as a nearby park. A significant accumulation of trash and litter were noted within the immediate vicinity of the site. Several shopping carts, a substantial amount of clothing, household items, cardboard boxes, and food and beverage containers were observed, and are likely the result of dumping by transients in the area.

TABLE 5-2

6 LABORATORY ANALYTICAL RESULTS

Laboratory analyses were conducted at 15 sites, representing over 25 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Although it is not itself considered a pollutant, total hardness is measured in order to calculate CTR (California Toxics Rule) limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Diazinon and **chlorpyrifos** are organophosphate pesticides that are detrimental to birds, mammals, beneficial insects, freshwater fish, invertebrates, and other aquatic organisms.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms, including fish and waterfowl.

The California Toxics Rule for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness, with toxicity decreasing as hardness increases. Therefore, each dissolved metal has an action level or CMC (criterion maximum concentration) for a particular total hardness. The laboratory samples collected were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. All samples collected had dissolved metal concentrations below applicable action levels as calculated using CTR criteria. Table 6-1 provides a summary of those sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

TABLE 6-1
CTR – CMC FOR DISSOLVED METALS

Dissolved Copper			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
CEN-01	536	0.065	0.023

Dissolved Zinc			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
PRD-02	382	0.365	0.021
SCR-01	487	0.448	0.021
OVR-09	973	0.806	0.037
POG-02	297	0.295	0.062
SVS-01	707	0.615	0.069

Note: -Only those sites where a particular dissolved metal was detected are listed. Cadmium and lead were not detected in any of the samples.
- For equations and constants used in California Toxics Rule calculations, see http://www.epa.gov/ost/standards/ctr/toxic.pdf

Coliform bacteria are relatively harmless to humans and are typically present at high levels in mammalian digestive tracts, as well as naturally found in most surface waters and soils. Testing water samples for total coliform bacteria is a standard practice in public health because a high level of total coliform bacteria often, although not always, indicates the presence of other more harmful, pathogenic organisms, usually from fecal contamination. Total coliform is used as a surrogate for these pathogens because they are generally present in much smaller quantities and are therefore difficult to test for directly. Upstream investigations for total coliforms were conducted at two sites; the results are detailed in Section 8 of this report.

Fecal coliform, a subset of coliform bacteria, and ***Enterococcus*** are found primarily in the gastro-intestinal (GI) tracts of humans and animals, so they are commonly used as indicators of water contamination by fecal matter. A host of human diseases, particularly those of the GI tract, are spread through water contaminated with fecal matter. Upstream investigations were conducted at two sites for *Enterococcus*. The results of these investigations are described in Section 8.

A summary of the laboratory analytical results is presented in Table 6-2. Table 6-3 presents the laboratory results from all samples. Laboratory reports are included as Appendix C.

TABLE 6-2
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Number of Exceedances
Oil and Grease (mg/L)	nd	nd	0
Total Hardness (mg/L CaCO3)	2,180	297	*
Cadmium (dissolved, mg/L)	nd	nd	0
Copper (dissolved, mg/L)	0.023	0.007	0
Lead (dissolved, mg/L)	nd	nd	0
Zinc (dissolved, mg/L)	0.069	0.021	0
Diazinon (µ/L)	nd	nd	0
Chlorpyrifos (µ/L)	nd	nd	0
Total Coliform (MPN/100 mL)	500,000	170	7
Fecal Coliform (MPN/100 mL)	90,000	nd	2
Enterococcus (MPN/100 mL)	50,000	20	4

Notes:
nd = not detected
* Total hardness is not considered a pollutant and thus has no exceedances

na = not analyzed

nd = not detected

CTR = California Toxics Rule (based on hardness)

* Results from calculation: Number of Fecal Coliforms = (Number of *E. coli*) / (0.85)

** = Total hardness is not considered a pollutant (see section 3.4 for details), and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependent on the total hardness value of the water sample.

7 DATA ANALYSIS

This first part of this section provides an overall evaluation of test results obtained from the 2008 Dry Weather Monitoring Program. The second portion describes historical trends for various constituent exceedances.

7.1 2008 Results

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 16 sites. Also, bacteria were elevated at eight sites. All five of the glycol action level exceedances were within normal range at the confirmation visit. In addition, ammonia and surfactants tested above the action level at two sites. Upon the confirmation visit to the sites, both ammonia and surfactant levels had decreased to below the action level. Table 7-1 presents the sites at which one or more parameter tested above the respective action level.

7.2 Previous Results

Historical results regarding exceedances are presented in Table 7-2, Graph 7-1 and Graph 7-2. Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of exceedances for field constituents, and Graph 7-2 presents the percentage exceedances by year for laboratory analyses.

Since 2002, no exceedances have been measured for temperature, turbidity, cadmium, copper, lead, or chlorpyrifos. Thus, these constituents are not included in the following table and graphs.

The historical data for the results of field analyses presented in Graph 7-1 indicates a decreasing trend in ammonia concentrations. Orthophosphate exceedances have been very rare in all years since 2002. No discernable trend is apparent for glycol, nitrate, or surfactants results, which have fluctuated from year to year.

Historical data for laboratory analyses presented in Graph 7-2 indicates relatively high bacteria exceedance rates, although the fecal coliform exceedance rate has decreased somewhat over the years. Zinc and diazinon have not been detected over their action levels since 2003. Prior to 2003 the rates of exceedances were approximately 10 percent per year. Surfactants and oil & grease have generally had no exceedances or only a minimal number of exceedances over the years.

Notes:

Results based on complete routine visits only. Confirmation visits, follow-up visits and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

GRAPH 7-1
PERCENT OF SITES WITH FIELD CONSTITUENTS EXCEEDANCES BY YEAR

* The action level for conductivity was numeric in the past but was later changed to best professional judgment. See footnote in Table 7-2.

GRAPH 7-2
PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR

8 UPSTREAM INVESTIGATIONS

The purpose of upstream investigations is to find the sources of the pollutants identified during the initial round of field screening and laboratory testing. Photographs of all primary sampling sites are provided in Appendix B.

8.1 Investigation Procedure

Follow-up investigations are conducted in two rounds. The first follow-up investigations are for the sites at which field tests indicates action level exceedances. These investigations are in the form of additional field testing and are conducted within 24 hours of the initial findings. The second round of follow-up investigations are carried out for the sites at which laboratory testing shows elevated constituent levels. These investigations are conducted within two business days of receiving the laboratory test results.

During the follow-up investigations, flow rates are measured, visual observations are performed, and field testing is conducted. Visual observations, such as water color, clarity, odor, floatable materials, vegetation and biology are recorded on field data sheets at each site. Field data sheets are included in Appendix D.

Source identification investigations begin by testing the water at the site again. This is referred to as a "confirmation" visit, as it is to confirm the initial findings. If follow-up testing at a site results in constituent concentrations below specified action levels, the pollution found during the initial field screening and laboratory analysis phase may have been due to a transient flow. If follow-up testing at a site finds constituent concentrations again above the specified action levels, an upstream investigation will be conducted. The field crew will progress upstream until the potential pollutant source(s) is isolated or identified.

Upstream investigations are also referred to as "IC/ID follow-up" visits, as the purpose is to identify illicit connections and illegal discharges. They are conducted by checking a number of upstream branches for any potential sources of the constituent of concern. The estimated flow rate in each branch and any relevant observations are recorded. Depending upon the constituent(s) under investigation, laboratory samples may be collected for analysis.

The laboratory test for investigating upstream bacteria sources differs from routine field screening bacteria testing by using the IDEXX Colilert and IDEXX Enterolert tests. Information about these methods is provided in Table 3-2. Results for the Colilert and Enterolert tests are typically available within 24 hours, as opposed to the five days needed for routine testing. The quicker turnaround time allows for additional upstream investigations as needed.

8.2 Investigated Sites

Site BAY-02

Site BAY-02 is an earthen channel located west of the intersection of Palomar Street and Bay Boulevard. During the first visit to the site, water was present at the site, but there was no active source of water from upstream. The sample collected appeared clear and conductivity measured 3.21 mS/cm. The site is close to San Diego Bay and is influenced by water from the bay during high tide. The glycol concentration was measured at 1.3 mg/L, above the action level of 1.0 mg/L. Trash and litter were noted in the area surrounding the site.

The following day, closer inspection of trash around the site revealed a discarded container of antifreeze next to the channel (Photo 8-1 and 8-2). Field tests indicated that the glycol concentration had fallen to 0.7 mg/L, below the action level, while the conductivity had

PHOTOS 8-1 AND 8-2: Discarded antifreeze container at Site BAY-02.

increased to 14.47 mS/cm. It was concluded that the discarded container of antifreeze was likely the source of glycol and that tidal changes had flushed the site, diluting the glycol concentration. The corresponding rise in conductivity supports this conclusion.

Site BAY-03

Site BAY-03 is an earthen channel located west of the intersection of Ada Street and Bay Boulevard. During the initial visit the water was found to be clear and ponded, with no active source of water from upstream. Like Site BAY-02, this site is close to San Diego Bay and is also influenced by bay water during high tide. Algae, insects, fish, and small crustaceans were observed at the site. On the initial visit to the site, the nitrate-nitrogen concentration was measured at 23.50 mg/L, above the action level of 10.00 mg/L.

By the following day, the nitrate-nitrogen concentration had diminished slightly to 20.79 mg/L, but was still measured above the action level. There was no obvious source of nitrate at the site and the field crew was unable to locate any ponded or flowing water upstream of the site.

Site CEN-01

Site CEN-01 is a concrete channel located south of H Street and east of I-5. When the field crew visited the site, they observed low to medium levels of trash in and around the ponded water. Samples were collected for both field and laboratory analyses and had a yellow color and musty odor. Field screening results revealed that ammonia, surfactants, and glycol were all at or above their action levels. Ammonia was measured at 5.0 mg/L, MBAS at 1.00 mg/L, and glycol at 1.8 mg/L. Laboratory analyses of the sample indicated total coliforms and *Enterococcus* to be in exceedance of their action levels as well. Total coliforms were measured at 80,000 MPN/100 mL and *Enterococcus* at 13,000 MPN/100 mL.

Upon returning to the site the following day, the field crew noted that the water was no longer ponded; it was observed to be clear and flowing at approximately 4 gpm. The ammonia, surfactant, and glycol levels had all diminished and were below their respective action levels. According to available historical data, these constituents are not consistently

PHOTO 8-3: Food grease in catch basin upstream of CEN-01.

in exceedance at this site. It was therefore concluded that the initial readings were the result of a transient flow.

A separate follow-up investigation was conducted in order to determine the source of bacteria to the site. During this investigation the flow rate at the site was observed to be approximately 1 gpm. A sample was collected, and total coliforms were measured at 98,000 MPN/100 mL. The *Enterococcus* count had fallen well below the action level, and the initial reading was likely due to the stagnant water conditions at that time. Upstream of the site, the crew was able to find only one location to sample flowing or ponded water. This sample was taken from CEN-01-01, a catch basin located on Jefferson Avenue. At CEN-01-01 food grease was noted on the grate covering the catch basin and in the basin itself (Photo 8-3). The sample collected here had a very high total coliform count of 1,990,000 MPN/ 100mL, and it was concluded that Site CEN-01-01 was the main source of bacteria to Site CEN-01. A table and map summarizing the investigations of the site are presented in Table 8-1 and the following Figure 8-1.

TABLE 8-1
SITE CEN-01 BACTERIA UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)	*Enterococcus* (MPN/100 mL)

FIGURE 8-1
SITE CEN-01 BACTERIA UPSTREAM INVESTIGATION MAP

Base Data Sources: USGS, SanGIS, SANDAG

Site CEN-08

PHOTO 8-4: Ponded water in the car wash area upstream from Site CEN-08.

Site CEN-08 is a catch basin located approximately 100 feet west of Mariana Parkway, just north of G Street. On the initial visit to the site a sample was collected from the clear ponded water. Surfactant levels were measured at 1.25 mg/L, above the 1.00 mg/L action level. BF Goodrich, a large industrial facility located adjacent to and upstream of the site, was investigated as a possible source of the surfactants on the same day the sample was taken, but no evidence of contribution was found there.

The following day a confirmation visit to the site indicated that the surfactant level had diminished slightly to 1.0 mg/L, but this value is still at the action level. The field crew investigated upstream of the site and found a designated car wash area in the residential community of Cabrillo Mobile Lodge, at 731 G Street. The wash area is located directly adjacent to an open concrete channel and appears to drain directly into it. A sample was collected from the ponded water at this washing location and yielded surfactant measurements above the upper detection limit of the 3 mg/L

MBAS test kit. Washing activities at this location are likely the main source of the elevated surfactant levels measured downstream at Site CEN-08.

Site JUD-01

Site JUD-01 is an open concrete channel located south of the Fresno Avenue and Main Street intersection. Upon arrival at the site, a substantial amount of litter was observed. The site had an active flow of approximately 1 gpm and samples were taken for both field and laboratory analyses. The water was noted to be yellow in color, and a thin oil sheen was noted on the surface. Field screening tests indicated that all constituents were below their respective action levels. Laboratory results indicated a total coliform count of 80,000 MPN/100 mL, above the action level of 50,000 MPN/mL. Upstream of the site, more significant levels of litter were observed in the channel.

Food waste and packaging, clothing, containers of automotive fluids and detergents, animal feces, and evidence of human inhabitation were all present (Photo 8-5). City officials were notified of the conditions within the channel and shortly thereafter the field crew noted that the litter and debris had been removed from the channel.

Photo 8-5: Dumping in channel upstream of JUD-01

During the follow-up investigation, total coliforms were measured at 19,000 MPN/100 mL. Two additional samples were taken upstream of the site to identify the source of bacteria. Water was ponded at the location at which the highest bacteria count was noted, but some trash and debris were noted in the storm drain system upstream of that location (JUD-01-01). Results from the upstream samples and visual observations indicate that the main sources of bacteria to the site are trash and debris in the main channel upstream of the site and urban runoff affected by trash from the area bounded by the channel just south of Orange Avenue, 4th Avenue, Palomar Street, and 3rd Avenue. A table and map summarizing the investigations is presented in Table 8-2 and Figure 8-2.

TABLE 8-2
SITE JUD-01 TOTAL COLIFORMS UPSTREAM INVESTIGATION

FIGURE 8-2
SITE JUD-01 BACTERIA UPSTREAM INVESTIGATION MAP

Base Data Sources: USGS, SanGIS, SANDAG

Site JUD-02

Site JUD-02 is an outlet southwest of the intersection of Main Street and Reed Court. During the initial visit to the site water was flowing at approximately 1 gpm and appeared to be slightly obstructed by the dense vegetation in front of the outlet. The sample collected for both field and lab analyses had a musty odor and yellow color. Field screening analyses indicated no action level exceedances.

Historically Site JUD-02 has elevated bacteria counts, and initial lab results indicated both total and fecal coliforms to be in exceedance of their action levels. Total coliforms were measured at 500,000 MPN/100 mL and fecal coliforms at 24,000 MPN/100 mL. At the confirmation visit, the total coliform count had dropped to approximately one-fifth of its initial value, and the fecal coliform count had fallen below the action level, indicating that the main source of the initially elevated counts was a transient flow and had been flushed from the site. Upstream of the site, no ponded or flowing water could be identified in order to collect additional samples. However, a significant amount of decaying vegetation and litter was observed in a storm drain inlet on Connelly Circle, an upstream location that has also recorded historically high bacteria counts. It is likely that contaminated irrigation runoff from this residential area transports bacteria downstream to the site. However, the slow-moving water and excessive vegetation at the site itself are likely the main source of the elevated total coliform count measured at the site during the follow-up investigation.

TABLE 8-3
SITE JUD-02 TOTAL COLIFORMS UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)
JUD-02 (Routine Visit)	South of intersection of Fresno Avenue and Main Street	1	**500,000**	**24,000**
JUD-02 (Confirmation)	South of intersection of Fresno Avenue and Main Street	1	**105,000**	324

Notes:
Red values were at or above the measured constituent's action level.
Fecal coliform counts for confirmation and follow-up visits derived from *E. coli* counts. See Table 3-3 for more information.

Site LAK-01

Site LAK-01 is an outlet northeast of the intersection of Proctor Valley Road and Agua Vista Drive, in the canyon. During the initial site visit minimal amounts of trash were noted and the 10 gpm flow was colorless and odorless. The nitrate-nitrogen concentration was measured at 18.31 mg/L, above the action level. A return visit to the site, the following day, yielded approximately the same elevated nitrate concentration. An upstream investigation was conducted; two samples were taken from the risers in the detention basin upstream of the site. Though both samples yielded nitrate concentrations below the action level, concentration levels increased as the flow moved downstream.

This area has been recently undergone substantial residential development. It is likely that the irrigation and fertilization of the associated landscaping have enriched the runoff with nitrates.

PHOTOS 8-6 AND 8-7: Site LAK-01

Site OVR-07

Site OVR-07 is a corrugated metal pipe (CMP) outfall located in a City easement at the base of a 30-foot slope, just east of the property at 1879 Nirvana Avenue. A sample taken from the 1 gpm flow was clear, colorless, odorless, and yielded high nitrate and conductivity values. The nitrate concentration was measured at 21.92 mg/L, and conductivity at 13.53 mS/cm. During the follow-up visit the nitrate concentration was measured at 25.99 mg/L and the conductivity at 13.15 mS/cm. This site has recorded consistently high nitrate concentrations, as well as conductivity values. Previous investigations have identified groundwater infiltration along the main pipe, between Energy Way and 1869 Nirvana Avenue (F.J. Willert Contracting Company, Inc), as the source of both high nitrate levels and conductivity.

Upstream a sample was taken from the manhole inside of the property at 1869 Nirvana Avenue, yielding high nitrate concentrations, consistent with those measured at the site. Lines upstream this location were checked and found to be dry, and it was therefore concluded that the groundwater infiltration that had been previously observed was the source of the elevated nitrate and conductivity measurements at the site.

Site POG-02

Site POG-02 is a manhole located on the north side of the intersection of Eastlake Parkway and Trinidad Cove, near the entrance to the Antigua housing tract. During the initial visit to the site, samples were taken from the 3 gpm flow for both field and laboratory analyses. Field screening analysis yielded glycol concentrations at 1.2 mg/L, above the action level of 1.0 mg/L. During the follow-up visit the next day, glycol was not detected at the site. It was concluded that the source of the initially high glycol concentration was transient, and an upstream investigation for its source was not necessary.

Historically this site has recorded high levels of bacteria, and laboratory results indicated elevated bacteria levels similar to past results. Samples taken at the site during the bacteria follow-up investigation indicated that the fecal coliform count had fallen below the action level; however, total coliforms and *Enterococcus* were still measured in exceedance of their action levels. The field crew traced the flow upstream, north on Eastlake Drive to Clubhouse Drive, then east to the intersection of Clubhouse Drive and Greensview Drive. Here lines converged from the north, south, and east. Samples were taken from each line and lab results indicated that the southern line was the main source of the elevated bacteria levels. Historically both the southern and eastern lines have been identified as the main source of bacteria to the site. The majority of surface runoff from the Eastlake Country Club

drains to these lines. It appears likely that irrigation runoff is transporting bacteria, from the fecal material left behind by the water foul that inhabit the area, downstream to site POG-02. A summary of the upstream investigation is presented in the map and table that follow. TABLE 8-4

SITE POG-02 BACTERIA UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)	*Enterococcus* (MPN/100 mL)

FIGURE 8-3
SITE POG-02 BACTERIA UPSTREAM INVESTIGATION MAP

Base Data Sources: USGS, SanGIS, SANDAG

Site PRD-02

PHOTO 8-8: Auto fluid stains upstream of PRD-02.

Site PRD-02 is an outlet located just west of Aires Court and approximately 200 feet south of Rienstra Street. The site is located in an open grassy area and is within a SDG&E easement. During the initial visit a thin sheen of dust was noted on the water surface, flow was measured to be approximately 2 gpm, and the sampled water exhibited a yellow color. Samples were collected for both field and laboratory analyses. All parameters tested for in the lab analysis were measured below their action levels. Field screening tests yielded a glycol concentration of 10 mg/L, above the action level of 1.0 mg/L. Immediately following this result, the area directly upstream of the site was surveyed for possible sources. Numerous automotive fluid stains were found throughout the residential community located at 1450 Melrose Avenue (Photo 8-8).

Upon returning to the site for confirmation of the initial results, conditions at the site appeared the same as the previous day, except that the dust sheen on the water surface was no longer observed. The glycol concentration was below the action level at 0.4 mg/L. A return visit to the residential complex was made and irrigation runoff was observed there. This supported the conclusion that the initially elevated glycol concentration was due to recent automotive fluid spills in the residential complex immediately upstream and was

carried by irrigation runoff. Since the initial visit most of the automotive fluid had been washed downstream, thus cleaner runoff flowed through the site at the confirmation visit.

Site RCC-03

Site RCC-03 is a 90-inch diameter CMP outfall located downstream of Discovery Park and west of Rancho Del Rey Parkway, in the Rice Canyon open space hiking trail. Upon arrival to the site, the field crew noted a thick layer of aquatic plant material on the surface of the water just below the outfall, and a snake was seen swimming through it. Samples were collected from the approximately 20 gpm flow for both field and laboratory analyses. The water was noted to be clear, colorless, and odorless. Initial field screening results yielded an elevated nitrate concentration of 17.18 mg/L, while lab results indicated total coliform counts were in exceedance of 110,000 MPN/100 mL.

A follow-up visit to the site for nitrate testing indicated that the concentration was still in exceedance of the action level. Measurements of the nitrate concentration were shown to increase as the flow was traced upstream to RCC-04. Previous investigations by the City of Chula Vista have shown nitrate-laden groundwater infiltrating the line upstream of Site RCC-04. Infiltration of nitrate enriched groundwater upstream of the site was concluded to be the main source of the elevated nitrate concentration measured at site RCC-03.

During the follow-up visit for the bacteria investigation total coliforms were counted at 112,000 MPN/100 mL. An upstream investigation was conducted to locate the source of bacteria. A sample was taken immediately upstream from Site RCC-03-01, a manhole at the intersection of Cima Del Rey and Rancho Del Rey Parkway. This sample showed an elevated total coliform count of 141,000 MPN/100 mL. Upstream of this site, storm drain inlets and street gutters were observed to contain moderate amounts of food wrappers, yard clippings, over irrigation and car washing evidence. This combination of materials and activities creates an environment for bacterial growth. As this flow constitutes only a minor portion of the flow to Site RCC-03, it should be considered a contributing factor, but not the main source of elevated bacteria levels at the site.

Further upstream another sample was taken from RCC-03-02. (Site RCC-04 will be referred to as RCC-03-02 here in order to identify it as part of the RCC-03 upstream investigation.) An approximate 8 gpm flow was observed here and the total coliform count was 54,800 MPN/100 mL. Wildlife waste and the substantial amount of food and beverage containers observed at this site are likely sources of bacteria in this open section of the creek. The contribution of bacteria from upstream of RCC-03 does not appear to be the main source of bacteria to the site. It is likely that conditions at the site itself are responsible for the elevated levels of total coliforms.

TABLE 8-5

SITE RCC-03 TOTAL COLIFORMS UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)

FIGURE 8-4
SITE RCC-03 TOTAL COLIFORMS UPSTREAM INVESTIGATION

Site RCC-04

Site RCC-04 is a 60-inch diameter RCP outfall that discharges into an open natural creek, Rice Creek. It is located west of the shopping center at the East H Street and Otay Lakes Road intersection, down in the canyon. During the initial visit to the site a flow of approximately 8 gpm was measured, and the water was noted to be clear, colorless, and

odorless. Field screening tests yielded nitrate concentrations in exceedance of the action level. A follow-up visit to the site produced similar measurements. As mentioned earlier, regarding elevated nitrate measurements at RCC-03, previous investigations by the City of Chula Vista have revealed an infiltration of nitrate laden groundwater upstream of this site. This infiltration appears to be the main source of elevated nitrate levels recorded at the site.

PHOTO 8-9: Coolant stains in parking area upstream from SCR-01

Site SCR-01

Site SCR-01 is an outlet located northeast of the Otay Lakes Road and Hunte Parkway intersection, approximately 300 feet west of Woods Drive. Vegetation around this site was quite dense and though the flow path was not obstructed by vegetation the site was heavily shaded. A strong sewage-like odor was evident before even reaching the outfall. Both field and laboratory samples were collected from the approximately 2 gpm flow which exhibited the same sewage-like odor as well as a yellow color. It is believed that the strong smell is due to decomposition of organic materials and possibly activities by transients.

Initial field screening tests yielded a glycol concentration of 2.0 mg/L, in exceedance of the 1.0 mg/L action level. An immediate upstream investigation revealed automotive fluid spills in the parking area of the Eastlake Greens residential community, along Torrey Pines Road. During the return visit the following day the glycol concentration was measured at 0.5 mg/L, below the action level. Frequently, an initially high concentration of glycol is measured, followed by a measurement which is below the action level. This often occurs due to automotive fluid spills being rinsed from street and parking surfaces by irrigation runoff, as appeared to be the case at this site (Photo 8-9).

Lab results from the initial visit indicated that both total coliforms and *Enterococcus* were measured in exceedance of their action level. A total coliform count of 130,000 MPN/100 mL was measured, and 30,000 MPN/100 mL for *Enterococcus*. Elevated bacteria levels have been recorded at this site four of the last five years. Similarly to past investigations the field crew traced the primary source of the flow upstream to the Eastlake Greens residential community, and a sample was taken from a manhole at the La Costa Avenue and Torrey Pines Road intersection. The count for total coliforms was measured at 1,050,000 MPN/100 mL, significantly higher than at the site. The lab results also indicated elevated levels of *Enterococcus*. Storm drain inlets and street gutters in this area were noted to contain yard clippings, excess irrigation was observed in some street gutters, and people were observed walking their dogs. This area appears to be the main source of bacteria to Site SCR-01. It has recorded consistently high bacteria counts and has also historically been the primary source of flow to the site. A table and map summarizing the investigations of the site are presented below.

TABLE 8-6
SITE SCR -01 BACTERIA UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)	*Enterococcus* (MPN/100 mL)
SCR-01 (Routine Visit)	North of Otay Lakes Road and 300', west of private Otay Ranch Road, east of Hunte Parkway	2	**130,000**	5,000	**30,000**
SCR-01 (Confirmation)	North of Otay Lakes Road and 300', west of private Otay Ranch Road, east of Hunte Parkway	1	**579,000**	12,353	**14,136**
SCR-01-01	Intersection of La Costa Avenue and Torrey Pines Road	1	**1,050,000**	**40,588**	**42,250**

FIGURE 8-5
SITE SCR -01 BACTERIA UPSTREAM INVESTIGATION

Base Data Sources: USGS, SanGIS, SANDAG

Site SCR-02

Site SCR-02 is located northeast of the Hunte Parkway and Otay Lakes road intersection. It is a section of Salt Creek, just before the natural creek passes underneath Otay Lakes Road. On the initial visit to the site the flow was measured at approximately 125 gpm, vegetation was excessive, the water was clear and colorless, and nitrate levels were measured at 16.27 mg/L. By the following day vegetation had been cleared from the site and the flow had increased slightly. The nitrate concentration had also risen slightly to 21.92 mg/L (Photos 8-10 and 8-11).

PHOTOS 8-10 AND 8-11: Site SCR-02 before and after vegetation was cleared.

A sample further upstream, SCR-02-1, yielded an even higher nitrate concentration of 44.75 mg/L. This location is at the base of a steep slope and it is likely that nitrate-laden groundwater, enriched from the landscaping activities associated with the recent residential development, is seeping into the creek in at this low point.

Site SCR-03

Site SCR-03 is part of Salt Creek, and is located approximately 200 feet east of Hunte Parkway, where it passes under Olympic Parkway. During the initial visit to the site the water was noted to have a yellow color, the flow was measured at approximately 112 gpm, and the nitrate concentration was measured at 11.16 mg/L. Conditions appeared similar during the follow up visit, though the nitrate concentration had increased to 19.66 mg/L. There are several new residential developments in this area, and fertilization of the associated landscaping is likely the main source of the elevated nitrates at site SCR-03.

Site SCR-05

Site SCR-05 is an outlet located 200 feet south of Hunte Parkway, across from Exploration Falls Drive, in the canyon. During the initial visit a sample was collected from the 2 gpm flow, the water exhibited a yellow color, and elevated levels of nitrates were detected (12.20 mg/L). A follow up visit was made and conditions at the site appeared similar to the previous visit, though nitrate levels had risen to 16.95 mg/L.

An upstream investigation was conducted, and the primary source of the flow was traced to the intersection of Trellis Street and Exploration Falls Drive. A sample was collected from the manhole at this intersection and a nitrate concentration of 17.85 mg/L was measured, nearly the same as the site. Upstream of the sample location the field crew observed irrigation of newly installed landscaping at the Winding Oaks Recreation Center (see photo 8-12). The sprinklers had turned on just as the field crew reached the area. Although no runoff was observed reaching the storm drain, over irrigation and fertilization of the landscaping in the newly developed residential areas upstream of Site SCR-05 is likely the main source of the elevated nitrate levels detected.

PHOTO 8-12: Irrigation of new landscaping in front of Winding Oaks Recreation Center.

Site SUN-02

Site SUN-02 is an outlet that drains into a detention basin north of East H Street and approximately 50 ft west of SR-125 (photos 8-13 and 8-14). There are two outfalls at this location; site SUN-02 is the easternmost of the two and site SUN-05 is the westernmost. During the initial visit to the site, the field crew collected samples for both field and laboratory analyses. Results indicated exceedances for both nitrate-nitrogen and total coliforms.

PHOTOS 8-13 AND 8-14: Site SUN-02

The initial nitrate concentration measured at 22.37 mg/L. Upon returning to the site for a follow-up visit, the field crew measured the nitrate at 17.40 mg/L. An upstream investigation was conducted, and the only line found to be contributing flow to the site was along Mount Miguel Road. The flow was estimated to be less than 2 gpm, less than half of the 5 gpm flow observed at the site. A water sample was collected from a manhole just south of the intersection of Mount Miguel Road and East H Street/Proctor Valley Road. The nitrate concentration of this sample was measured below the action level, at 7.23 mg/L. Elevated

nitrate levels and the higher flow rate were reconfirmed at the primary site and seepage of nitrate laden groundwater was concluded to be the primary source of elevated nitrate levels at the site. It appears likely that groundwater seepage is occurring along the landscaped hillside on the south side of East H Street/Proctor Valley Road (see discussion below regarding SUN-05 for further indications).

In addition, laboratory results from the initial visit yielded a count for total coliforms at the action level of 50,000 MPN/ 100 mL. Follow-up and upstream samples for bacteria showed that total coliforms had fallen well below the action level, indicating that the initially elevated count was from a transient source and had been flushed from the system.

TABLE 8-7
SITE SUN-02 TOTAL COLIFORMS UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms * (MPN/100 mL)

Red values were at or above the measured constituent's action level

FIGURE 8-6
SITE SUN-02 TOTAL COLIFORMS UPSTREAM INVESTIGATION

Site SUN-05

Site Sun-05 is an outlet that drains into a detention basin north of East H Street and approximately 50 ft west of SR-125. Site SUN-05 is the westernmost of the two outfalls at this location; SUN-02 (discussed above) is the other. During the initial visit samples were collected for both field and laboratory analyses. Initial field screening results indicated an elevated nitrate concentration of 18.08 mg/L, while laboratory analyses indicated none of the tested parameters were in exceedance of action levels.

The follow-up visit and upstream investigation into the source of nitrates at Site SUN-05 yielded very similar results to the investigation for nitrates at Site SUN-02. Elevated nitrate levels were confirmed at the site during the follow up visit, and a sample from the only flow detected upstream yielded a concentration below the action level (6.10 mg/L). Between the upstream site and the primary site, the storm drain pipe appears to pass through the landscaped hillside along the south side of East H Street/Proctor Valley Road. As at Site SUN-02, infiltration of nitrate-laden groundwater appears to be the most likely source of elevated nitrate levels recorded at the site.

Site SUN-06

Site SUN-06 is an outlet located southwest of the intersection of Proctor Valley and San Miguel Ranch Roads. During the initial visit to the site field screening results indicated an elevated nitrate concentration of 12.88 mg/L. The follow up visit to the site confirmed an elevated nitrate concentration, and an upstream investigation was conducted.

Directly upstream from the outlet, on the eastern side of Proctor Valley Rd. is a detention basin. Inside of the detention basin there are two outfalls, one from the northeast and one from the southeast. The southeastern line was observed to have ponded water but no flow appeared to be reaching the drainage pipe that leads to Site SUN-06. A flow of

approximately 2 gpm was observed discharging from the northern line and a sample was collected. This sample yielded a nitrate measurement of 11.53 mg/L.

During the upstream investigation the field crew had the opportunity to speak with a landscaper who was maintaining the common area of a new upstream community. He indicated that a 15-15-27 (N-P-K) fertilizer is commonly used. Landscaping activities (over irrigation and fertilization) associated with the newly developed residential areas upstream of Site SUN-06 are likely the main source of the elevated nitrate concentrations.

Site SUN-07

Site SUN-07 is an outlet which drains into a detention basin located at the eastern end of Jonel Way, and west of SR-125. Field screening results at the initial visit to the site yielded a measurement of 25.54 mg/L for nitrate nitrogen. A follow up visit confirmed an elevated nitrate concentration and an upstream investigation was conducted. No flowing or ponded water was located upstream; however, both newly developed residential areas and ongoing construction were observed. The most likely source of the elevated nitrate concentration measured at Site SUN-07 is fertilization and over-irrigation of the new landscaping associated with this residential development.

Site SVS-01

Site SVS-01 is a box culvert located north of the rear parking lot at the Ramada Inn, north of the Bonita Road and Bonita Glenn Drive intersection. During the initial visit to the site, samples were collected for both field and laboratory analyses. The ponded water at this heavily shaded site exhibited a yellow color, had no odor, and was observed to contain snails. Field screening analyses indicated that all tested parameters measured below their action level. Laboratory analyses indicated an elevated count for *Enterococcus* of 17,000 MPN/ 100 mL. By the follow up visit the *Enterococcus* count had diminished to 146 MPN/ 100 mL, well below the action level, indicating that the source of the bacteria was likely transient and had been flushed from the system.

Site TCC-02, TCC-03, and TCC-05

Site TCC-03 is a concrete outlet eight feet in diameter discharging into an open area on the north side of Otay Lakes Road, approximately 500 feet west of Eastlake Parkway (see Appendix A for photo). Site TCC-03 has historically recorded elevated nitrate concentrations. Initial and follow up visits this year confirmed the elevated nitrate levels which had been recorded in the past. Site TCC-03 is at the upstream end of Telegraph Canyon Channel, and the elevated nitrate concentration observed here is transported downstream. All sites sampled downstream of TCC-03 measured nitrate concentrations of 6.0 mg/L or higher.

An upstream investigation was conducted in order to identify the source of nitrates to Site TCC-03 and it appears likely that seepage of nitrate laden groundwater, enriched from landscaping activities at the Eastlake Country Club and Golf Course, is the main source of nitrate pollution the Telegraph Canyon Channel. A table summarizing the upstream investigation of TCC-03 is presented below.

TABLE 8-8
SITE TCC-03 NITRATE UPSTREAM INVESTIGATION

Site ID	Location	Flow (gpm)	Nitrate mg/L NO_3-N
TCC-03 (Routine Visit)	Telegraph Canyon Channel 500' west of East Lake Parkway., 100' north of Otay Lakes Road: Across from Mobil Gas Station	85	**32.50**
TCC-03 (Confirmation)	Telegraph Canyon Channel 500' west of East Lake Parkway., 100' north of Otay Lakes Road: Across from Mobil Gas Station	75	**32.10**
TCC-03-01 (Follow-Up)	South side of Otay Lakes Road between Mobil Gas Station and East Lake Parkway	15	**46.30**
TCC-03-02 (Follow-Up)	North side of intersection of Otay Lakes Road and East Lake Parkway	60	**26.40**
TCC-03-03 (Follow-Up)	Behind Vons in Eastlake Village Center	1	**65.09**
TCC-03-04 (Follow-Up)	In grass south east of intersection of Greensgate Drive and Greensview Drive	3	**52.21**
TCC-03-05 (Follow-Up)	On east sidewalk approximately 150 feet north of Fenton Street and Eastlake Parkway intersection	20	**34.80**

Site TCC-05 is a natural creek located northeast of the Telegraph Canyon Road and Heritage/Paseo Ranchero Road intersection. It is the first site located downstream, approximately three miles, of Site TCC-03. During the initial visit to the site the flow was observed to be approximately 234 gpm and the nitrate concentration was measured at 16.50 mg/L. During the follow up visit the conditions appeared similar and an elevated nitrate concentration was confirmed at 23.28 mg/L. The main source of the elevated nitrate concentration measured at this site is likely the transport of nitrates from Site TCC-03. The flow at this site is significantly higher than at Site TCC-03, the addition of water appears to dilute the concentration of nitrate transported from upstream.

Site TCC-02 is a concrete channel located west of the Telegraph Canyon Road and Hilltop Drive intersection, in Hilltop Park (see Appendix A for photo). Initial and follow up nitrate concentrations were measured at 12.43 mg/L and 11.75 mg/L, respectively. In addition to the nitrate contributed from upstream Site TCC-03, it is likely that fertilization and irrigation of the surrounding park grounds contribute to the elevated nitrate level measured here.

Site TCS

Site TCS is a catch basin located just north of the Moss Street and the trolley tracks intersection, in the parking area west of 694 Moss Street. During the initial visit to the site water was found to be ponded, the site was significantly impacted by trash, and the general area had a sewage like odor, though the sample itself did not (Photo 8-10). The samples exhibited a yellow color and a thin sheen of grease was noted on the water' surface.

PHOTO 8-10: **Trash and debris at Site TCS**.

Field screening results yielded an ammonia concentration of 5.0 mg/L. During the follow-up visit the next day, the site was dry and no ponded or flowing water could be located upstream in order to conduct further testing.

This site has historically recorded elevated ammonia concentrations. A previous investigation by the City of Chula Vista yielded details about the configuration of the site and its connection with the main storm drain. On the north wall of the catch basin is a door that opens when the hydraulic pressure of the water in the catch basin surpasses a specific level. Water is then released through this door and merges with the Telegraph Canyon Channel downstream. This door was installed to prevent water from Telegraph Canyon Channel from backing up into this line during periods of high flow. Grates at the bottom of the door that were designed to drain water out of this catch basin were clogged in the past. The substantial amount of trash in the site has likely clogged the drains again, allowing the water to pond. The shallow ponded water likely evaporates rapidly during the day, concentrating the ammonia level at the site.

Site WOL-02

Site WOL-02 is an outlet located along the west side of La Media Boulevard, in the canyon, across from the detention basin. During the first visit to the site, a flow of approximately 1 gpm was observed, and nitrate levels were measured to be 11.53 mg/L, above the action level. All other parameters were measured below their respective action levels.

During the follow-up visit the next day, the flow was approximately the same, and seepage water was beneath the outfall, at the bottom of the structure. A sample taken from this area yielded a nitrate concentration of 27.35 mg/L, significantly higher than the initial results. Upstream of the site, on the east side of La Media Boulevard, there is a detention basin with four outfalls draining into it. Three of these lines were found to be dry, while one, the northern most line, had a flow of approximately 1 gpm. Nitrate levels here were measured at 32.77 mg/L. Several manholes upstream of this outfall, north along La Media Boulevard, were opened and the inlet pipe was dry. Then the manhole in the center divide, at the bottom of the slope, was opened and revealed seepage water flowing from the base of the concrete wall.

The field crew concluded that the elevated nitrate levels at Site WOL-02 are likely due to the irrigation runoff in the conveyance system. It should also be noted that as the area surrounding this site has been developed in the last several years, a significant amount of

new landscaping and irrigation have been installed. It is likely that over irrigation and fertilization of these landscaped areas are a main source of nitrogen to the groundwater in this area.

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary

9.1.1 Summary of Field Screening and Laboratory Analysis Data

58 primary monitoring sites were visited during the 2008 Dry Weather Monitoring Program. Because Site BAY-01 was dry, Site SWR-03-E was selected as a replacement; 42 sites had measurable flow and 15 sites were ponded. A total of 15 sites were sampled for laboratory analyses. A summary of action level exceedances is presented in Table 9-1.

TABLE 9-1
SUMMARY OF ACTION LEVEL EXCEEDANCES

Field Screening (57 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedances**	**Site(s) Exceeding Action Level**
pH	0	0	---
Conductivity	0	0	---
Turbidity	0	0	---
Surfactants	2	4	CEN-01, CEN-08
Ammonia-N	4	7	CEN-01, TCC-04, TCC-05, TCS
Nitrate-N	16	28	BAY-03, LAK-01, OVR-07, RCC-03, RCC-04, SCR-02, SCR-03, SCR-05, SUN-02, SUN-05, SUN-06, SUN-07, TCC-02, TCC-03, TCC-05, WOL-02
Orthophosphate-P	0	0	---

Fecal Coliforms	2	13	JUD-02, POG-02
Enterococcus	4	27	CEN-01, POG-02, SCR-01, SVS-01

Note: Table data is based on routine visits only. Confirmation, follow-up and dry site visits not included.

9.1.2 Summary of Upstream Investigation Data

Taking into account both field screening and lab sampling, 26 sites showed parameters above one or more corresponding action level. Table 9-2 shows the conclusions based on the results of the follow up investigations for these sites.

TABLE 9-2
SUMMARY OF UPSTREAM INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
BAY-02	Glycol	----	Discarded container of antifreeze
BAY-03	Nitrate-N	----	Unknown
CEN-01	Surfactants, Ammonia-N, Glycol	Total Coliforms, *Enterococcus*	Surfactants, ammonia-N, glycol—transient flow; Bacteria—catch basin with food grease located on Jefferson Avenue
CEN-08	Surfactants	----	Car wash area in Cabrillo Mobile Lodge residential community
JUD-01	----	Total Coliforms	Significant trash at the site itself and from water discharging to the site from the west
JUD-02	----	Total Coliforms, Fecal Coliforms	Decaying vegetation and litter in a storm drain inlet on Connelly Circle, washed down by irrigation runoff. Bacteria are likely amplified in the site's slow-moving water and excessive vegetation.
LAK-01	Nitrate-N	----	Nitrate-enriched flow from landscaping activities
OVR-07	Nitrate-N	----	Nitrate-enriched groundwater seepage, possibly secondary to landscaping
POG-02	Glycol	Total Coliforms, Fecal Coliforms, *Enterococcus*	Glycol—transient flow; Bacteria- significant amounts of water fowl waste transported by irrigation runoff
PRD-02	Glycol	----	Recent automotive fluid spills in the residential complex immediately upstream, carried by irrigation runoff
RCC-03	Nitrate-N	Total Coliforms	Nitrate-N— nitrate-enriched groundwater seepage; Total Coliforms— thick layer of aquatic plant material at site, trash and wildlife waste upstream
RCC-04	Nitrate-N	----	Nitrate-enriched groundwater seepage
SCR-01	Glycol	Total Coliforms, *Enterococcus*	Glycol—automotive fluid spills on nearby streets; Bacteria—combination of lawn clippings, excess irrigation, and possibly pet waste
SCR-02	Nitrate-N	----	Landscaping fertilization in new residential developments
SCR-03	Nitrate-N	----	Landscaping fertilization in new residential developments
SCR-05	Nitrate-N	----	Landscaping fertilization in new residential developments and over-irrigation
SUN-02	Nitrate-N	Total Coliforms	Nitrate-N—Groundwater seepage along landscaped hillside on the south side of East H Street/Proctor Valley Road; Total Coliforms—transient flow

Site	Upstream Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
SUN-05	Nitrate-N	----	Nitrate-enriched groundwater seepage
SUN-06	Nitrate-N	----	Landscaping fertilization in new residential developments and over-irrigation
SUN-07	Nitrate-N	----	Landscaping fertilization in nearby developments
SVS-01	----	*Enterococcus*	Transient flow
TCC-02	Nitrate-N	----	Nitrate-enriched groundwater seepage; landscaping fertilization of park
TCC-03	Nitrate-N	----	Nitrate-enriched groundwater seepage
TCC-05	Nitrate-N	----	Nitrate-enriched groundwater seepage
TCS	Ammonia-N	----	Storm drain clogged with trash allowing water to pond; shallow ponded water likely evaporates during the day, concentrating ammonia levels
WOL-02	Nitrate-N	----	Nitrate-enriched due to landscape seepage

9.2 Recommendations

Based on the results of the 2008 Dry Weather Monitoring Program for the City of Chula Vista, the following actions are recommended for consideration.

9.2.1 Education

- Provide educational material to the residents of Jefferson Avenue, upstream from Site CEN-01, regarding best management practices (BMPs) for household grease disposal.
- Provide educational material to the residents at Cabrillo Mobile Lodge (731 G Street), upstream from Site CEN-08, regarding vehicle washing BMPs.
- Provide educational material regarding proper disposal of trash and debris to residents and businesses in the area bounded by Palomar Street, 4th Avenue, 3rd Avenue, and the channel just south of Orange Avenue. This area is upstream of site JUD-01.
- Provide educational material to the residents of Connelley Circle, upstream from Site JUD-02, regarding the storm water conveyance system and BMPs for green waste and litter disposal.
- Provide educational material to the residents of Rolling Hills Ranch (particularly in the area of the subdivision bound by Coastal Hills Drive on the west, Proctor Valley Road on the south, and Agua Vista Drive on the east), upstream from LAK-01, regarding BMPs for fertilizer use and minimizing over-irrigation.
- Provide educational material to the Eastlake Greens Country Club and Golf Course, upstream of POG-02, regarding BMP's for minimizing over-irrigation and animal waste clean-up.
- Provide educational material regarding BMP's for automotive fluids to the residents of the complex located upstream of Site PRD-02, where extensive automotive fluid stains were observed. This complex is located south of Reinstra

Court and north of Orange Avenue, on the west side of Melrose Avenue (no name for the community or street could be identified).

- Provide educational material to the residents upstream of Site RCC-03, particularly those residing along Ridgeback Road and Cima Del Rey, regarding BMPs for green waste and vehicle washing.
- Provide educational material regarding the storm water conveyance system and BMPs for litter control to Bonita Vista High School, and to the businesses in the shopping center located adjacent to RCC-04, and upstream of RCC-03.
- Provide educational material to the residents of Torrey Pines Road and La Costa Avenue, upstream of Site SCR-01, regarding BMPs for automotive fluid spills and leaks.
- Provide educational material regarding BMP's for landscape fertilization and minimizing over-irrigation to the residents/HOA's of the sections of the Rolling Hills Ranch and Eastlake Woods communities which contribute runoff to SCR-02. The area of Rolling Hills Ranch is to the east of Hunte Parkway and the area in Eastlake Woods is bound by Stone Gate Street, Hawthorne Creek Drive, and Silver Oak Place.
- Provide educational material regarding BMP's for landscape fertilization and minimization of over-irrigation to the residents of Eastlake Trails and Eastlake Vistas, upstream of SCR-03. The area is bound on the north by Otay Lakes Road, Olympic Parkway in the south, Hunte Parkway in the west, and Lake Crest Drive and Paradise Ridge Way in the east.
- Provide educational material to the residents upstream of Site SCR-05, particularly in the area bound by Eastlake, Hunte, and Olympic Parkways, regarding BMPs fertilizer application and minimization of over-irrigation.
- Provide educational material regarding BMPs for fertilization and minimization of over-irrigation to the residents and HOAs in the portion of the San Miguel Ranch community which appears to be contributing to the elevated nitrate levels measured at Sites SUN-06 and SUN-07.
- Provide educational material regarding irrigation and fertilization BMP's to businesses (including Eastlake Country Club and Golf Course), residents, and/or HOA's in the area upstream of Site TCC-03. One area is in the Eastlake Greens community, bound by Eastlake Parkway, Greensview Drive, and Greensgate Drive. The other area is north of Otay Lakes Road, bound by Eastlake Parkway, Miller Drive, and Fenton Street.
- Provide educational material regarding the storm water conveyance system to the residents living in the motor home and/or the property owners of the lot that Site TCS is located on.
- Provide educational material regarding fertilization and irrigation BMP's to the residents and HOA's of the Otay Ranch community, upstream of WOL-02 (particularly the area along La Media Drive, south of Olympic Parkway, and north of Fleishbein Street).

9.2.2 Inspection and Maintenance

- Establish and maintain a regular schedule for the removal of trash from Sites CEN-03, JUD-01, RCC-04, SWR-04 and TCS. Ensure that physical pollution at these sites is regularly assessed, and implement preventative measures where possible to decrease the introduction of debris to the storm water conveyance system.
- Establish and maintain a regular schedule for inspection of Site TCS to ensure that the drainage grates are clear.
- Routinely clean up trash located inside the concrete channel at and upstream of Site JUD-01.
- Clear vegetation blocking the outlet at Site JUD-02. Vegetation in channel and downstream is impairing proper flow from the site.

9.2.3 Further Investigations

- Conduct further investigation into the source of nitrates measured at Site BAY-03.

Laboratory Analytical Reports

EnviroMatrix Analytical, Inc.

11 July 2008

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 0807072

Project Name: Chula Vista Dry Weather
Project Desc./#:200838W-1

Enclosed are the results of analyses for samples received by the laboratory on 07/03/08 13:58. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

4340 Viewridge Avenue, Suite A - San Diego, California 92123 - (858) 560-7717 - Fax (858) 560-7763

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Trash Assessment Form

SITE ID: BAY-01 DATE: 7/23/08

LOCATION: West side of Bay Blvd across from 1075 Complex TIME: 10:00 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: BLC-01 DATE: 7/18/08

LOCATION: Chula Vista Municipal Golf Course, West of Bonita/Acacia Intersection TIME: 11:30 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L X W (FT): 15 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☒ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: CEN-03 DATE: 7/10/08

LOCATION: south of J. St. behind 726 and 728 Colorado Ave. TIME: 8:40 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 18 x 4

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☒ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) : Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)						
		Dumping	Littering	Upstream	Unable to determine	Household	Construction	Commercial	Industrial	School	Transient	Unable to determine
Automotive												
Biohazard Waste												
Business Related												
Cigarette Butts												
Construction												
Fabric/Clothing												
Food Packaging	2		X	X								X
Food Waste												
Household	3	X				X						X
Shopping Carts												
Toxic												
Yard Waste	1	X				X						

* Only rank the types of trash PRESENT in evaluated area from 1 through 12 (1 is most prevalent – 12 is least prevalent). DO NOT rank types of trash that are not present in evaluated area.

Trash Assessment Form

SITE ID: CEN-10 DATE: 7/16/08

LOCATION: Northwest of the Intersection of Hilltop Drive and Whitney St. TIME: 8:45 am

OBSERVER: JP / MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 4x3

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

☒ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)						
		Dumping	Littering	Upstream	Unable to determine	Household	Construction	Commercial	Industrial	School	Transient	Unable to determine
Automotive	4		X		X							X
Biohazard Waste												
Business Related												
Cigarette Butts												
Construction	2	X			X		X					X
Fabric/Clothing												
Food Packaging	1		X	X								X
Food Waste												
Household	3			X	X	X						
Shopping Carts												
Toxic												
Yard Waste												

* Only rank the types of trash PRESENT in evaluated area from 1 through 12 (1 is most prevalent – 12 is least prevalent). DO NOT rank types of trash that are not present in evaluated area.

Comments: Styrofoam and plastic food and beverage containers, several light bulb fixtures, house hold trash consisted of balls/childrens toys, and atleast one ~~can of~~ empty can of brake fluid.

Upstream, at 3rd Ave and Orange Ave, dumping and trash increased significantly. Transients occupying area - site reported to city and cleaned.

Trash Assessment Form

SITE ID: JUD-03 DATE: 7/17/08

LOCATION: Southwest of Main St. and Mace St. Intersection TIME: 9:20 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 3 x 3

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: OVR-09 DATE: 7/8/08

LOCATION: South of property at 850 Energy Way in city easement at base of slope TIME: 8:50 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 6 x 6

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☐ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☒ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: POG-03 DATE: 7/11/08

LOCATION: Olympic Parkway across from Heritage Road TIME: 1:30 pm

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 30 x 20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: RCC - 03 DATE: 7/7/08

LOCATION: Downstream of Discovery Park West of Rancho Del Rey PKWY in Rice Canyon open space hiking trail TIME: 11:45

OBSERVER: JP / MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10 x 15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☒ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: RCC-04 DATE: 7/10/08

LOCATION: E. H St. and Otay Lakes Rd. intersection, west of shopping center, in canyon TIME: 2:40 pm

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☒ RECEIVING WATER ☒ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☒ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)						
		Dumping	Littering	Upstream	Unable to determine	Household	Construction	Commercial	Industrial	School	Transient	Unable to determine
Automotive												
Biohazard Waste												
Business Related												
Cigarette Butts												
Construction												
Fabric/Clothing												
Food Packaging	1		X		X					X		X
Food Waste												
Household												
Shopping Carts	2	X			X					X		X
Toxic												
Yard Waste												

* Only rank the types of trash PRESENT in evaluated area from 1 through 12 (1 is most prevalent – 12 is least prevalent). DO NOT rank types of trash that are not present in evaluated area.

Trash Assessment Form

SITE ID: SCR-01 DATE: 7/7/08

LOCATION: North of Otay Lakes Rd and 300 ft. W of Wood Dr. E. of Hunte Pkwy TIME: 9:45

OBSERVER: JP / MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 6 x 12

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: SCR-03 DATE: 7/2/08

LOCATION: Olympic Pkwy about 200ft. East of Hunte Pkwy on the Salt Creek TIME: 15:45

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10 x 6

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☐ MS4 ☐ RECEIVING WATER ☒ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: SUN-02 DATE: 7/3/08

LOCATION: North of EH St and 50 ft West of SR-125 at base of slope, East of SUN-05 TIME: 11:30 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: SUN-06 DATE: 7/16/08

LOCATION: south west of the intersection of Proctor Valley Rd and San Miguel Ranch Rd. TIME: 11:30 am

OBSERVER: JP / MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: SVS-01 DATE: 7/9/08

LOCATION: Rear of ~~Bonita~~ Ramada Inn at Intersection of Bonita Rd and Bonita Glen North of Bonita Rd. TIME: 10:30 am

OBSERVER: MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 12 X 6

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

LOCATION: Telegraph Canyon Channel, Southwest of Bay Blvd "L" St. intersection, inside Duke Energy Plant TIME: 9:00 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: TCC-03 DATE: 7/22/08

LOCATION: Telegraph Canyon Channel, 500 ft. West of Eastlake Pkwy, 100 ft. N. of Otay Lakes Rd, across from Mobil Gas Station TIME: 14:00

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☒ RECEIVING WATER ☒ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: TCC-04 **DATE:** 7/10/08

LOCATION: Telegraph canyon channel W. of 3rd Ave and south of L.S. under mobil gas station **TIME:** 10:45 am

OBSERVER: MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): ~~10x~~ 15x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☐ MS4 ☐ RECEIVING WATER ☒ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: TCC-05 DATE: 7/22/08

LOCATION: Telegraph Canyon Rd and Heritage Rd/Paseo Ranchero, Northeast of intersection. TIME: 14:45

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 40 X 25

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☒ RECEIVING WATER ☒ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: WOL-02

DATE: 7/2/08

LOCATION: West of La Media Rd across from detention basin, in canyon

TIME: 10:00 am

OBSERVER: JP/MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 25 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Attention: Mr. John H. Robertus, Executive Officer

SUBJECT: JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM (JURMP) ANNUAL REPORT NO 28 AND ATTACHMENTS

Please find enclosed City of Chula Vista's JURMP Annual Report No. 28, for Fiscal-Year 2007-2008.

The JURMP Annual Report has been prepared in accordance with the requirements of the San Diego Regional Water Quality Control Board Order No. R9-2007-0001 (NPDES Permit No. CAS0108758) and is a documentation of the City's activities on the implementation of, and compliance with the requirements of said Permit during the reporting period July 1, 2007 to June 30, 2008.

If you have any questions regarding the submitted report, or need further information, please contact Khosro Aminpour, Senior Civil Engineer, at (619) 397-6111. Please direct any and all correspondence to:

City of Chula Vista, Department of Public Works

ACKNOWLEGEMENTS

This Report has been prepared by or under the supervision of:

Matt Little, Assistant Director of Public Works
Silvester Evetovich, Principal Civil Engineer
Khosro Aminpour, Senior Civil Engineer
Don Bergeson, Environmental Health Specialist
Marisa Fontanoz, Environmental Health Specialist
Mike Hice, Storm Water Compliance Inspector
Ramon Quicho, Engineering Technician

Staff from the following City of Chula Vista departments, divisions, or sections has contributed to the implementation of the JURMP in 2007-2008:

Public Works Inspection Services
Public Works Storm Water Management
Public Works Wastewater Management
Public Works Environmental Services
Office of Communications
Chula Vista Nature Center
Geographic Information Systems
Engineering Land Development
Engineering Design
Planning Landscape Architecture
Environmental Planning
City Attorney's Office

The following organizations have contributed to the implementation of the JURMP in 2007-2008:

- D-MAX Engineering, Inc.
- I Love a Clean San Diego, Inc.
- Otay Valley Regional Park (OVRP)
- Members of the CLEAN Stakeholder Group

The City of Chula Vista wishes to thank:

- Volunteers who dedicated their time to improve water quality in Chula Vista
- Environmentally conscious citizens who reported illegal discharges
- Citizens, business owners, contractors, and developers who cooperated with City staff in implementing Best Management Practices

EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. Prior to that date, NPDES Municipal Permit, Order No. 2001-01 regulated discharges from urbanized areas of San Diego County. This report, therefore, covers two distinct implementation periods, July 1, 2007 to January 23, 2008, and January 24, 2008 to June 30, 2008. Implementation during the first period was under Order No. 2001-0001, while Order No. R9-2007-0001 established compliance standards during the second period. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the Municipal Permit, Orders No. R9-2007-0001.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

Meanwhile, during the current reporting period, the Copermittees developed a regional standardized format for JURMP annual reports. This report was prepared in conformance with the regional standardized format for annual reports.

The present report has been prepared in compliance with said requirements and, covers subjects and areas outlined in the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2007 to June 30, 2008, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination
- Education
- Public Participation
- Fiscal Analysis

- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

In previous years, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, Dry Weather Field Screening reports, and analyses of their findings will be submitted to the Regional Board before December 15, 2008, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

As required under Section III.A.2 of the Receiving Waters and Urban Runoff Monitoring and Reporting Program, the County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2007-2008 rainy season on January 31, 2009.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover the City's strides toward continued implementation and improvement of its JURMP and participation in regional and watershed level activities and programs from July 1, 2007 to June 30, 2008. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local water bodies, as well as the overall health of the San Diego Bay watershed.

1.0 INTRODUCTION

1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (RWQCB), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001. The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 28 spans two NPDES Municipal Permits, i.e., Order No. 2001-01 (Old Permit) and Order No. R9-2007-0001 (New Permit). The implementation phase of the New Permit commenced on January 24, 2008. However, region-wide wildfires of November 2007 impacted the progress on certain regional efforts and the development of some required reports and plans, which made it impossible for the Copermittees to submit such reports and plans to the RWQCB on time. On November 13, 2007, the Copermittees requested an extension of 60 days for the submittals and/or implementation deadlines related to the following Permit components:

1. Submittal and implementation of Jurisdictional Urban Runoff Management Programs (JURMPs).
2. Review and update of grading and other ordinances to comply with the New Permit's Construction Component.
3. Submittal and implementation of Watershed Urban Runoff Management Programs.
4. Submittal and implementation of the Regional Urban Runoff Management Program.

Subsequently, the RWQCB approved the 60-day extension under Addendum No. 1 to Order No. R9-2007-0001. Therefore, Report No. 28 describes programs and activities conducted by the City of Chula Vista for program implementation under the Old Permit until January 23, 2008; partial implementation of the New Permit between January 24, 2008, and March 23, 2008; and finally, full implementation of the New Permit from March 24, 2008 to the end of this reporting period (June 30, 2008).

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Updated its JURMP document. The updated JURMP includes plans and procedures to comply with the Municipal Permit requirements.

- Developed a Development Storm Water Manual (Manual). The Manual provides information to applicants for development and redevelopment projects processed through the City of Chula Vista, as well as public projects on how to comply with permanent and construction storm water requirements. The Manual further guides project applicants through the selection, design, and incorporation of storm water Best Management Practices (BMPs) into the project's design plan. Section 3 of the Manual comprises the City's Standard Urban Storm Water Mitigation Plan (SUSMP), which describes post-construction BMP requirements, including Low Impact Development and Interim Hydromodification Management, for Priority Development Projects.

- Revised its Storm Water Management and Discharge Control and Grading Ordinances. The revised ordinances now incorporate, by reference, the Development Storm Water Manual and make the Manual's requirements enforceable.

- Reviewed its General Plan, Subdivision Manual, and other relevant Municipal Code sections and regulations for conformity and continuity with the Municipal Permit requirements.

- Implemented inspection programs of high priority construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable BMPs that can be implemented to reduce discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

1.2 PURPOSE AND OBJECTIVES

Report No. 28 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of said Permits during the reporting

period July 1, 2007 to June 30, 2008. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0, together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2008.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management costs and budgets. Program costs during FY 2007-2008 and program budgets for FY 2008-2009 are included in two separate tables that show itemized and total figures.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going

component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this Section, the need for special investigations did not arise during the current reporting period.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the Copermittee's JURMP effectiveness. Since the City's JURMP document was developed recently and submitted to the RWQCB in March 2008, the City has not found it necessary to modify the JURMP document at this time. As necessary, future annual reports will include modifications to the JURMP document during the reporting period.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

2.0 DEVELOPMENT PLANNING COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.

Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.

Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.

Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.

Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory

.

Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.

Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.

Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.

Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.

Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.

Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.

Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.

Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.

Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.

2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes the actions taken during the defined reporting period by the City to minimize the short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development, including construction or installation of a building or structure, creation of impervious surfaces and capital improvement projects. Through the implementation of the Development Planning Component, the City will minimize and manage increases in runoff from development projects to the MEP to protect receiving waters.

2.2 LAND-USE PLANNING

2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to vision, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.

- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)

- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.

- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.

- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.

- Maximize the protection of potable water supply resources from pollutants.

- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the City's Development Storm Water Manual (Manual), updated in 2008, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Manual. The Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Manual has been dedicated to the City's SUSMP. Another section of the Manual outlines BMP requirements on construction sites during both rainy and dry seasons.

During the current reporting period, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

2.2.4 PROGRAM IMPLEMENTATION

The current reporting period is highlighted by program implementation under two separate NPDES Municipal Permits. During the first half of the period, extending from June 1, 2007 to March 23, 2008, Development Planning program implementation was under the NPDES Municipal Permit, Order No. 2001-01, while during the second half of the period, from March

24, 2008 to June 30, 2008 program implementation was under NPDES Municipal Permit, Order No. R9-2007-0001.

The City successfully completed implementation of the program under both Municipal Permits as described in Section 2.4.4 of this report.

The City's GPU was completed in December 2005 and incorporates several goals, objectives, and policies directed toward protecting the City's environmental resources and improving water quality throughout the City's storm water conveyance systems and receiving waters. City staff has determined that at this time there is no need to make any revisions to the General Plan. However, in compliance with the NPDES Municipal Permit requirements, several of the City's implementation documents were updated, including:

- Jurisdictional Urban Runoff Management Plan
- Storm Water Management and Discharge Control Ordinance
- Grading Ordinance
- Development Storm Water Manual

During the process of updating the above-referenced documents, each of the City's implementation processes were objectively reviewed for any potential deficiencies and, based on extensive experience gained during the previous Municipal Permit implementation, significant improvements were made throughout all aspects of the program. Those improvements are reflected in the above referenced updated documents and are currently being implemented.

2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Section of the Planning Division reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits, Land Development, and the Storm Water Management Sections review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Planning and Building Services Department
- Engineering and General Services Department, Land Development and Permits Sections
- Public Works Department, Storm Water Management Section

The Engineering and General Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Engineering and General Services Department for review and final approval.

Engineering staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; Low Impact Development Site Design, Source Control, and Structural Treatment Control BMPs; calculations for sizing of treatment control BMPs; and a perpetual maintenance plan and funding mechanism. When necessary, the Engineering and General Services Department coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

Engineering and General Services Department and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for Low Impact Development Site Design, Source Control, and Treatment Control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Engineering and General Services Department and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Engineering and General Services Department and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected

and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Engineering and General Services Department and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Engineering and General Services Department. Public projects undergo the same review process as private developments. Engineering staff has received training on SUSMP requirements, the identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments, divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are, therefore, readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals.

2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP and the Manual, which culminated in March 2008, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments,

divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP.

2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 10 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's BMP minimum requirements for all development projects are outlined below and are included in the Manual. All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.
- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.
- Provide buffer zones or other buffers for natural water bodies.
- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.
- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

During the project approval and verification process, all project submittals were reviewed for compliance with the BMP minimum requirements described above.

2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure to the MEP that development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual", available on the web at:
http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

On February 19, 2008, the City Council of the City approved updates to the City's SUSMP and Manual. The Updated SUSMP and Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the NPDES Municipal Permit, Order No. R9-2007-0001. Concurrently, the City's Storm Water Management and Discharge Control and Grading Ordinances were updated to incorporate the Development Storm Water Manual (which includes the City's SUSMP) by reference.

2.4.4.1 NOTABLE ACTIVITIES

In 2007-2008, notable improvements in processes and protocols supporting SUSMP implementation have been made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates within the defined reporting period include:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Interim Hydromodification Criteria.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.

2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project

requirements. Private development permit applications are tracked in Permits Plus, which is a project tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and digitally saved. Links have been provided between the above referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Engineering and General Services Department. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects in the City, to which SUSMP requirements were applied during the current reporting period, is included in Attachment A. It should be noted that the list includes all projects that were identified as High Priority Development projects during the reporting period by their permit issue date. The projects may be currently in different phases of review and construction. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Under Construction, 2) Pending, and 3) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Projects without approved WQTRs do not move further along in the development review process, providing Engineering and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes inspection and approval of installed or constructed Structural Treatment Control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections of such development projects to

ensure proper installation of post-construction BMPs before final Certificates of Occupancy are issued and bonds are released.

The City's GIS system has been continuously updated throughout FY 2007-2008 with post-construction BMP information, further supporting project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the type of BMPs and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. Most significantly, in FY 2007-2008, WQTR documents are being made available through the Grading Plan layer as they are linked to individual projects (Figure 2-1 - GIS Layer: Grading Plan and WQTR Links). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 - GIS Layer: Post Construction BMPs). In addition, files containing hard copies of grading plans and other pertinent information are being created and maintained to support and facilitate inspection of post-construction BMPs.

Figure 2-1 GIS Layer: Grading Plan and WQTR Links

Figure 2-2 GIS Layer: Post Construction BMPs

During the current reporting period, Storm Water Management staff conducted extensive inspections of constructed permanent BMPs to verify their proper installation and maintenance. A summary of inspections is listed in Table 2-1 below. Where deficiencies were identified, notices were sent out to the responsible parties, followed by further contacts to ensure that corrective actions were taken within the allowed time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

Table 2-1 Treatment Control BMP Inspection Summary FY2007-2008

PROJECT CATEGORY	NUMBER OF PROJECTS INSPECTED	NUMBER OF INSTALLED TREATMENT CONTROL BMP UNITS
High Priority	20	108
Medium Priority	23	320
Low Priority	58	209

Public Works Department Storm Drain Maintenance Section maintains publicly owned post-construction BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders to field staff for conducting inspection and scheduled maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-3 Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

CITY OF CHULA VISTA **Storm Drain Structure - Maintenance and Condition Report**

Report Date: 08/12/2008

ID# 10315 High Volume Trash=No BMP/Filter: Insert

Maintenance Related Work Orders:

WO#	Task	Date Completed	Lbs. Collected: Trash (lbs)	Debris (lbs)
08-004892	Inspections	04/24/2008		
08-004920	Clean and Flush Catch Basin	04/21/2008		
08-005010	Clean Filter & Catch Basin (CFD 07 M)	04/29/2008		
08-008445	Clean and Flush Catch Basin	07/16/2008	1.00	30.00

Latest Inspection Details:

Date: 4/29/08 Debris Depth 10.00%

Manhole Cover - Grate Cover - Curbside - Below Grade Wall - Good

Manhole Frame - Grate Frame - Filter - BMP- Insert

ID# 10316 High Volume Trash=No BMP/Filter: Insert

Maintenance Related Work Orders:

WO#	Task	Date Completed	Lbs. Collected: Trash (lbs)	Debris (lbs)
08-004892	Inspections	04/24/2008		
08-004920	Clean and Flush Catch Basin	04/21/2008		
08-008445	Clean and Flush Catch Basin	07/16/2008	25.00	150.00

Latest Inspection Details:

Date: 4/24/08 Debris Depth 5.00%

Manhole Cover - Good Grate Cover - Curbside - Below Grade Wall - Good

Manhole Frame - Good Grate Frame - Filter - BMP- Insert

ID# 10392 High Volume Trash=No BMP/Filter: Insert

Maintenance Related Work Orders:

WO#	Task	Date Completed	Lbs. Collected: Trash (lbs)	Debris (lbs)
08-004892	Inspections	04/25/2008		

All pending, under construction, and installed Post-Construction BMPs and Priority Projects are inventoried and tracked by the Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/CIP, Residential, Commercial, etc.)
- Project status (Pending, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings

- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking for examples of SUSMP tracking forms.

2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

During the current reporting period, the City worked with developers, planners, and consulting engineers to establish standards of Source Control, LID Site Design, and Treatment Control BMPs that met the requirements of the Municipal Permit, Order No. R9-2007-0001. An example of such cooperation was the Windstar Pointe Resort development. The Windstar Pointe Resort project will be located at the southwest corner of Olympic Parkway and Wueste Road, adjacent to the Olympic Training Center. The project is planned for high-density multifamily use. It is a luxury apartment project consisting of 494 units located on a 19.6-acre site.

The Windstar Pointe Resort project is still under review by City staff, pending final approval and issuance of grading and construction permits. The project will incorporate Site Design, Source Control, and Treatment Control BMPs with particular emphasis on LID principles for the post-construction storm water management. The treatment control BMPs that will be used are bioretention/biofiltration areas, Modular Wetlands Systems (MWS) Linear storm Water Filtration, porous material over gravel bed filters, and Filter Inserts. The Filter Inserts will be

used in combination with other treatment BMPs as a trash-removal BMP. In addition to on-site BMPs, an existing CDS unit located off-site will act as the last line of defense in a treatment train for the treatment of site runoff.

The site of the Windstar Pointe Resort project is less than 50 acres in area and, therefore, exempt from the Interim Hydromodification Criteria. If grading and construction permits for this project are issued before the City adopts its final Hydromodification Management Plan, the project will be permanently exempted from Hydromodification requirements. However, if permits are not issued by that time, the project will be required to comply with the City's final Hydromodification Management Plan criteria. Nonetheless, the WQTR for the project includes a discussion of hydrologic conditions of concern, and the consultant has demonstrated that based on analysis of two- and ten-year peak discharge rates, flows will not exceed pre-development peak discharge rates due to existing detention facilities in Salt Creek, where the project discharges to.

2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all SUSMP projects that received grading, construction, or building permits proposed medium or high-efficiency treatment control BMPs. No SUSMP projects were permitted to have low-efficiency treatment control BMPs.

2.4.4.7 TREATMENT CONTROL BMP INVENTORY
