Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- Nitrogen, TKN - Liquid

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

RM

2009 Trash Assessment Form

SITE ID: 907-ALV-001 **DATE:** 04/12/09

LOCATION: Alvarado rd., east of the Trolley Station, on the channel **TIME:** 10:15

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 50 x 15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 907-ALV-002 **DATE:** 06/02/2009

LOCATION: Along the south edge of Costco parking lot, just south of the Mandango Avenue and Fletcher Parkway intersection **TIME:** 11:30

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5 x 8

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 907-ALV-003 **DATE:** 06/15/09

LOCATION: Parkway Drive located in the southeast corner of Coleman College property **TIME:** 10:40

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 3 x 3

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 907-ALV-005 DATE: 06/15/09

LOCATION: Alvarado channel, underneath the intersection of Fletcher Parkway and Baltimore Drive, north side of channel TIME: 1500

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 908-LEM-520 DATE: 06/16/09

LOCATION: Near Waite Drive and Harris street intersection, South end of Harris street TIME: 10:10

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): ~~30~~ x 20 x 30

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 908-UNI-003 **DATE:** 06/12/2009

LOCATION: Along Lowell Street, about halfway between University Ave. and Normal Ave. North side of street in 4291 Lowell St. driveway **TIME:** 11:25

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 909-SPR-001 DATE: 06/15/09

LOCATION: Spring Street and Spring Gardens road intersection, inside LaMesa Seventh Day Adventist Church TIME: 1315

OBSERVER: MD/AK

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10 x 15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

City Manager

Date: September 2010

Telephone Number: (619) 667-1105

EXECUTIVE SUMMARY

San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit), a National Pollution Discharge Elimination (NPDES) Permit, regulates discharges to the storm drain systems of 21 municipal agencies in San Diego County, including the City of La Mesa (City). The Municipal Permit requires the City to develop and implement a Jurisdictional Urban Runoff Management Program (JURMP), with the overall goal of reducing discharges of pollutants to the City's storm drain system to the maximum extent practicable. The City's JURMP includes required "Best Management Practices" (BMP) to control pollution. Specific lists of BMPs apply to businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

At the end of each fiscal year, the City is required to report a summary of its JURMP implementation activities to the RWQCB. This JURMP Annual Report presents the City's activities during the 2009/2010 fiscal year, which began on July 1, 2009 and ended on June 30, 2010. Each section of this JURMP Annual Report discusses how the City's efforts during 2009/2010 met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

The City continued to oversee development activities occurring in the City to mitigate potential threats to water quality at the design stage. The City maintained and updated its inventory of installed treatment control BMPs and implemented its maintenance verification program through which parties responsible for maintaining BMPs at each of the City's 15 inventoried sites certify in writing that their treatment devices have been maintained and are in working order. Six sites in the City with approved treatment control BMPs were also inspected by City staff. Enforcement actions successfully achieved the return of all maintenance verification forms and the correction of all deficiencies noted during inspections.

Construction Component

During 2009/2010, a total of 69 routine construction inspections were completed at 27 sites. The City's plan check and inspection program required projects to comply with the City's minimum BMP requirements. Enforcement actions were taken where necessary and were effective in bringing about compliance. Notably, since the City had in the past received some hotline calls about poor BMP implementation at a few small projects, the City inspected all low priority construction sites and notified small projects and homeowners of the City's BMP requirements.

Municipal Component

The City inspected all high threat to water quality (TTWQ) municipal fixed facilities, as required by the Municipal Permit. Over 576 tons of trash and debris were removed during street sweeping activities, and 249 cubic yards of debris and sediment were removed during standard MS4 maintenance. An additional 14 cubic yards of debris were removed during

the cleaning of the filter inserts installed in the University drainage basin. The City also replaced or rehabilitated 15,063 linear feet of sewer line and continued to maintain its sanitary sewer system to decrease the potential for sanitary sewer overflows (SSO). In keeping with its regular practice, the City trained its staff regarding the most current storm water pollution prevention concepts and practices.

Industrial and Commercial Component

During 2009/2010, the City hired a full-time inspector to build a cooperative working relationship with local businesses, to keep businesses accountable to the storm water education they have received, and to track compliance from routine inspection through enforcement resolution. The City met the Municipal Permit requirement to inspect at least 25 percent of the City's industrial and commercial inventory. The City inspected all high TTWQ sites on its industrial and commercial inventory as well as additional medium TTWQ sites. An inspection fee has been instituted to recover costs for site visits. Since fees are assessed for each visit, including follow-up visits, businesses have generally become more willing to comply with BMP requirements in a smaller number of inspection visits. During 2009/2010, no inspected businesses were observed to be out of compliance with the General Industrial Permit (Industrial Permit).

Residential Component

Residential areas comprise more than half of the City of La Mesa's land use, and the City worked to educate these residents through a variety of means. The City provided its quarterly *La Mesa Focus* newsletter to City residents via email and the City's website. Each newsletter published during 2009/2010 contained storm water articles relating to residential activities. The City encouraged its residents to participate in a variety of waste disposal events and volunteer-based cleanup events, and 938 participants dropped off 134,782 pounds of household hazardous waste (HHW) during the City's eight HHW events. The City's residents are considered important allies in reporting complaints to the City storm water hotline. Complaint investigations in residential areas were used as opportunities both to enforce BMP requirements and to educate residents about storm water pollution prevention.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for 2010 Dry Weather Monitoring Program, which took place after July 1, 2010, is finalized. The section must be submitted to the RWQCB no later than December 15, 2010.

While the full section will not be submitted until after September 30, 2010, the City did implement its IDDE program component during 2009/2010. During this period, the City responded to and resolved 84 complaints made to its storm water hotline and the Public Works maintenance hotline. The City completed its 2009 Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program). The recommendations in the final report for the 2009 Dry Weather Monitoring Program were addressed during

this reporting period. The City also continued maintenance of the sanitary sewer system to prevent SSOs.

Education Component

As a means to raise storm water awareness in various communities, the City continued to conduct various education and outreach activities throughout 2009/2010. The City's efforts resulted in an estimated 34,642 impressions. I Love A Clean San Diego (ILACSD) partnered with the City to educate residents of all ages at special events and school presentations. The City continued to circulate the quarterly *La Mesa Focus* newsletter to businesses and residents, and each newsletter sent during the reporting included storm water-related articles. Additionally, the City continued to maintain a storm water bulletin board at City Hall, which is strategically located to maximize exposure to both City personnel and project proponents that visit the Engineering Division. To better serve the City's diverse population, some educational materials were distributed in Spanish and English. Additionally, City staff were provided various training sessions.

Public Participation Component

Public participation activities in 2009/2010 included multiple volunteer-based cleanup events, which have a direct effect on water quality, and public outreach activities intended to increase general knowledge and awareness regarding storm water issues. The City participated in Coastal Cleanup Day and the Creek to Bay Cleanup, with two cleanup sites located in the City for each event. During these events over 1,326 pounds of trash and 53 pounds of recyclables were collected. Other cleanup activities completed during 2009/2010 included Park Appreciation Day, Adopt-a-Park, Adopt-a-Block, and the La Mesa Spring Cleanup. A variety of waste disposal events, including HHW disposal events, were also held in the City.

Fiscal Analysis Component

The City continued to fund its storm water program though the City's Sanitation Fund and the collection of a storm water inspection fee. As required by the Municipal Permit, the Copermittees collectively developed new fiscal analysis reporting standards, which were implemented for the first time in 2009/2010.

Effectiveness Assessment Component

The City continued evaluating the effectiveness of its storm water program based on the approach presented in the City's JURMP. The City has seen a consistent trend of decreasing median concentrations and exceedance numbers for various polluting constituents in its Dry Weather Monitoring Program. In both the treatment control BMP program and the industrial and commercial inspection program, enforcement has been very effective in reaching compliance. The City has implemented additional City-maintained treatment control BMPs for the University drainage area and its Public Works Operation Center, and the City also conducts additional street sweeping to aid in meeting watershed requirements.

Special Investigations

Aside from upstream investigations conducted as part of the Dry Weather Monitoring Program, no special investigations were needed or conducted during this reporting period.

Conclusions and Recommendations

The City will continue to implement the programs in its JURMP during 2010/2011; it is anticipated that some program refinements will be made as implementation progresses. The City will also continue to collaborate with other Copermittees as applicable within its watersheds and regionally.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents an activity summary for the City of La Mesa (City) during the 2009/2010 fiscal year. The JURMP Annual Report preparation and submission are required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). In 1990, the RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region, followed by a revised permit in 2001. RWQCB Order No. 2001-01 was replaced by the current Municipal Permit in 2007.

In 2002, the City, like all regulated municipalities in the San Diego region (collectively referred to as Copermittees), developed and submitted a JURMP to the RWQCB. The City then submitted an updated JURMP, as required by the Municipal Permit, in March 2008. The JURMP explains management measures for different sectors, including municipal, industrial, commercial, construction, and significant development and re-development activities.

Annual reports documenting the implementation of the JURMP are required to be submitted to the RWQCB by September 30. This JURMP Annual Report presents data from the 2009/2010 fiscal year, which extended from July 1, 2009, to June 30, 2010.

1.1.2 CITY SETTING

The City of La Mesa, located in central San Diego County, covers an area of approximately nine square miles and has a population size of over 56,000 residents. Although the primary land use in La Mesa is residential, there are areas of industrial and commercial development, parks and open space, and other types of development.

Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. In total, the City constitutes about one percent of the land area in each watershed. Runoff generated in La Mesa is conveyed through five drainage basins: Alvarado, University, Spring Valley, Lemon Grove, and Lake Murray. Table 1-1 lists the approximate percentage of each drainage area in La Mesa, the corresponding hydrologic unit (HU) of the basin, and the receiving water body to which each basin drains. Figure 1-1 presents the drainage basins as they relate to land use activities in the City.

Table 1-1
City of La Mesa Drainage Basins

Drainage Basin	Percent of City Area	Hydrologic Sub Area	Receiving Water Body	Watershed
Alvarado	51	907.11 Mission San Diego	San Diego River	San Diego River
University	28	908.22 Chollas	Chollas Creek	San Diego Bay
Spring Valley	14	909.12 La Nacion	Sweetwater River	San Diego Bay
Lemon Grove	6	908.22 Chollas	Chollas Creek	San Diego Bay
Lake Murray	1	907.11 Mission San Diego	San Diego River	San Diego River

Please note that while runoff from the City drains to these water bodies, the actual receiving water bodies are not themselves located within the City.

Figure 1-1
City of La Mesa Land Use and Drainage Basins

1.2 Purpose and Objectives

The City's JURMP presents strategies to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP describes various programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the implementation of the City of La Mesa's JURMP during the 2009/2010 reporting period.

1.3 Report Organization

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1	**Introduction**
Section 2	**Development Planning Component**
Section 3	**Construction Component**
Section 4	**Municipal Component**
Section 5	**Industrial and Commercial Component**
Section 6	**Residential Component**
Section 7	**Illicit Discharge Detection and Elimination Component**
Section 8	**Education Component**
Section 9	**Public Participation Component**
Section 10	**Fiscal Analysis Component**
Section 11	**Effectiveness Assessment Component**
Section 12	**Special Investigations**
Section 13	**Non-Emergency Fire Fighting**
Section 14	**JURMP Revisions**
Section 15	**Conclusions and Recommendations**
Section 16	**References**

Each section includes all components required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a more detailed explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Background, subsection 1.1, has been divided into Regulatory Background, subsection 1.1.1, and City Setting, subsection 1.1.2, for clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and by managing the increase in runoff from development project that have the potential to negatively affect downstream water bodies. During the 2009/2010 fiscal year, the City accomplished these goals through implementation of its JURMP document.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2009/2010 reporting period are presented in the following bulleted list. The remainder of this section provides more detail about the City's implementation of this component of its storm water program.

- Distributed the City's development requirements checklist ("Appendix A" of BMP Manual Part II) to projects applying for permits.
- Updated the SUSMP requirements in February 2010, in advance of the March 24, 2010 deadline.
- Worked with other Copermittees to develop a final Hydromodification Management Plan, which was approved by the RWQCB just after the end of the 2009/2010 reporting period.
- Used the City's treatment control BMP database to track completed Priority Development Projects.
- Conducted maintenance inspections of treatment control BMPs at six completed development projects in the City. See Table 2-1 in this section for a comparison of inspection numbers and Municipal Permit requirements.
- Obtained verification of BMP maintenance from all inventoried projects.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Public Services and Facilities Element. The comprehensive principles established in 2002 provide an ample framework for implementing the requirements of the current Municipal Permit, and no changes to these policies were necessary during the reporting period.

2.2.2 Source Characterization

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period. The City Council has authorized a comprehensive update to the General Plan to be completed by the City's centennial celebration in 2012.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection related land use policies during the reporting period mainly through the City's Municipal Code. The City updated the SUSMP requirements in Chapter 7.18 of its Municipal Code by passing a revised Storm Water Ordinance on February 23, 2010. The updates made at this time were consistent with the Model SUSMP prepared by the Copermittees and adopted by the RWQCB on March 25, 2009. The revised Storm Water Ordinance is included as Attachment 2.1 of this JURMP Annual Report. The City of La Mesa's BMP Manual II, a formatted guidance manual based on the regional Model SUSMP document, was also updated in February 2010 and is incorporated into the municipal code as an uncodified appendix to Chapter 7.18. The updated City of La Mesa's BMP Manual II is included as Attachment 2.2.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report document.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's updated JURMP. The overall structure of the review process, such as the City's departments involved and the document submissions required, remains the same as in previous reporting years. No modifications to the City's environmental review process have been made since the submittal of the updated JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2009/2010 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's BMP Manual Part II, which contains the City's SUSMP regulations. The City's SUSMP regulations are included in Municipal Code Chapter 7.18. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

2.4.3 Best Management Practice Requirements

The City updated its SUSMP requirements for development projects in February 2010, as described in Section 2.2.4 above.

2.4.4 Program Implementation

During the 2009/2010 fiscal year, the City required implementation of its BMP requirements for all development projects through education, a comprehensive development project approval process, and a treatment control BMP inspection and maintenance verification program.

2.4.4.1 Outreach and Staff Training

The City provides training for staff involved in the planning and review of development projects within the City and works closely with the development community to communicate its development requirements throughout the entire approval process. City staff performs reviews of WQTR's submitted for development purposes. Outside consultants may also be used for review assistance. Details on trainings conducted and educational materials developed and distributed during the reporting period can be found in Section 8 of this JURMP Annual Report document. Based on initial results from the first year of the program, distribution of treatment BMP maintenance verification letters appears to be increasing the level of knowledge of regulated parties.

2.4.4.2 Urban Runoff Approval Process for Development Projects

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Forms completed by project

applicants are kept with the project's file at the City for future reference. As discussed in the City's JURMP, the City required all projects applying for construction and building permits with any potential to impact storm water to complete an "Appendix 'A' –Storm Water Requirements and Project Data Sheet" that guides project applicants to submit proper documents to the City for review. An updated "Appendix A" form is available as Attachment 2.3. All development projects determined to be Priority Projects after completing the "Appendix A" form were required to implement the City's SUSMP requirements and prepare Post Construction WQTRs in accordance with the City's BMP Manual II. All priority projects are tracked using the City's database.

During the reporting year, three development projects submitted WQTRs, which were subjected to the City's SUSMP requirements, as applicable. The projects and the results of the reviews are listed below.

- Grossmont Trolley Apartments. This was a resubmittal of the WQTR during construction, which was reviewed twice and eventually approved under the conditions described below in this sub-section.
- Park Station – Kitzman. The WQTR for this Priority Project was reviewed and not approved during 2009/2010.
- SFH 9323 Charmichael Dr. This project was determined not to be a Priority Project.

Several projects subjected to SUSMP requirements in previous reporting periods have not submitted revised plans nor have the existing plans been approved. If these projects are resumed, they will be subjected to the City's current SUSMP requirements and the document review process detailed in the updated JURMP. Some other proposed development projects have been abandoned. No new Priority Projects were allowed to implement treatment control BMPs with low removal efficiency rankings during the reporting period.

One development project that was noteworthy during 2009-2010 was the Grossmont Trolley Apartments project. During 2009/2010, several years after the final approval, the project submitted a revised WQTR during construction. Due to unforeseen onsite constraints the developer wished to change a treatment BMP in a particular location from a Baysaver media filtration unit to downspout filters. The City required a full feasibility analysis per SUSMP requirements, in order to make any changes to the plan. The developer submitted the analysis and revised WQTR to the City in early 2010. The City initially denied the request and required full and complete documentation prior to any approval. Following a meeting with City staff and a clarification of the rules, the developer submitted a complete feasibility study and revised WQTR in April 2010. The feasibility study included project alternatives as well as documentation of the reasons for the change, which was an unavoidable conflict with an existing 10" SDGE gas main. Documentation of the cost and difficulty of moving the gas main was provided by SDGE within the analysis.

While the proposed BMP type was changed, all BMPs were sized appropriately, and no waiver from numeric sizing criteria was issued. This BMP change affected a very small

percentage of the total project area with Baysaver media filtration units and vegetated swales installed at other locations onsite. The project was completed at the very end of the 2009/2010 reporting period.

During the reporting period, no projects received a SUSMP waiver for implementation of treatment control BMPs. The City has never issued a SUSMP waiver, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

Hydromodification Management Plan

During the reporting period the Copermittee Land Development Workgroup met regularly to discuss key Hydromodification Management Plan (HMP) development issues and provide updates on the status of consultant work products. City staff regularly participated in the workgroup meetings. The final regional HMP was adopted by the RWQCB just after the end of the 2009/2010 reporting period on July 14, 2010. The City will be incorporating the HMP requirements into its local development requirements prior to the January 14, 2011 deadline.

The City's current Municipal Code contains detailed Interim Hydromodification Criteria (IHC) which the City implemented in 2009/2010 and will continue to implement until the recently adopted regional HMP requirements are incorporated into local requirements. No projects were subject to IHC requirements during 2009/2010 since none were larger than 50 acres.

BMP Installation Verification

During the course of 2009/2010, after maintenance verification letters had been sent out during the summer of 2009, the City tracked Priority Projects within the City's jurisdiction completed during the remainder of the reporting period to be added to the treatment control BMP inventory. When a project is completed, the City checks for BMPs prior to occupancy, records the site information, assigns it a TTWQ priority, and then adds it to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A list of the projects identified after distribution of verification letters is presented in Table 2-2 at the end of this section. These projects will be added to the City's treatment control BMP inventory in 2010/2011.

2.4.4.3 Treatment Control BMP Inspection and Maintenance Verification Program

2009/2010 Annual Maintenance Verification

The Municipal Permit requires annual verification of operation and maintenance of treatment control BMPs installed within the City's jurisdiction. Annual verification must be provided by the party responsible for treatment control BMP maintenance and must be returned to the City prior to the start of the wet season (October 1st). Using the property owner names and addresses recorded in the City's BMP database, BMP maintenance

verification forms were mailed to all the projects included in the City's BMP database in early 2009/2010.

The City required that completed maintenance verification forms be returned no later than October 1, 2009. The City was able to obtain appropriate responses from every site on the inventory in 2009/2010. Out of the 15 projects on the City's inventory, seven projects did not return their verification forms by the deadline and were issued NOVs in October 2009. After receiving NOVs, nearly all promptly submitted the annual maintenance verification form. Only one site failed to comply in a timely manner, so the City issued an administrative citation to the Prescott Companies, the management company for the HOA for the Aragon development, in May 2010. The completed maintenance verification form was submitted shortly after the citation was issued.

Operation and Maintenance Inspections

During the 2009/2010 fiscal year, the City contracted D-MAX to conduct inspections of projects with treatment control BMPs in accordance with the inspection frequencies outlined in the City's JURMP. Table 2-1 provides a summary of the number of inspections performed and how these met the requirements of the Municipal Permit. All high TTWQ inspections were performed prior to October 1, 2009.

Table 2-1
Assessment of Compliance with Required Inspection Frequencies

Site Class	Number of Sites	Full BMP Assessments	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	15	6	40%	20%	Yes
Sites with Drainage Inserts	7	4	57%	50%	Yes
High TTWQ	3	3	100%	100%	Yes

During full inspections, each BMP was visually assessed, GPS coordinates were recorded, and deficiencies were documented in writing and in photographs. Table 2-3 lists the development projects inspected, the number of BMPs installed at each site, the number of BMPs inspected, the number of BMPs found in need of maintenance, a brief description of inspection findings, and, if applicable, any follow-up actions taken. Public Priority Projects are indicated with the marker "(CIP)", which is short for capital improvement project. The BMP types installed at these sites and the TTWQ priority for each site is included in the City's treatment control BMP inventory, which is included in Appendix A.1 of this JURMP Annual Report. Further discussion of some of the inspection results and follow-up actions is provided in the text below.

Enforcement

Follow-up actions were recommended for all development projects with BMPs observed in need of maintenance. Since sites are notified by mail of deficiencies in BMP maintenance, with specific corrective actions listed, official verbal and written warnings are typically not

used. The City has found that there is often significant turnover at property management companies responsible for BMP maintenance, and the City typically follows-up with non responders by phone to verify that documents have reached the correct individual prior to issuance of an NOV. Enforcement actions are administered in an escalating manner as described in the City's updated JURMP. The City follows up with any sites that fail to verify that the required corrective actions and regular BMP maintenance were conducted. The City issued eight NOVs and one administrative citation to projects failing to respond with appropriate maintenance verification documents and/or projects with deficiencies discovered during routine inspection. All deficiencies noted in the 2009/2010 reporting period have been resolved. Some examples of follow-up action and resolution are described below.

The inspection of Grossmont Trolley Theater Commercial, found that two catch basins on the property did not have drainage inserts installed as had been approved. The City issued an NOV on October 12, 2009. In response, the property owner installed two drainage inserts on November 23, 2009, which was verified by City personnel on November 30, 2009.

Additionally, during the inspection at the Grossmont Medical Offices Building and Parking Structure at 8860/8870 Center Drive, multiple deficiencies were noted. One catch basin did not contain a drainage insert as proposed, the CDS Unit was inaccessible for maintenance due to a fence, and the vegetated swale was not well maintained. At that time, the maintenance verification form had also not been returned. The City issued an NOV detailing all of these deficiencies on October 12, 2009. On November 17, 2009, City staff confirmed that the fence had been removed, the swale had been planted, and the site had retained a contractor to install the missing BMP. The maintenance verification letter was also returned to the City.

It is the City's policy to verify the installation of treatment control BMPs prior to granting occupancy at completed projects. Past installation deficiencies were rectified by inspection and enforcement during 2009/2010 as described above. Recent improvements to installation verification at project completion, more stringent SUSMP requirements for the clarity of site maps, and additional visits to completed sites by storm water staff have ensured that projects completed in 2009/2010 would not have installation deficiencies similar to projects completed in previous years.

Copies of the forms utilized to administer the above enforcement actions can be found in Appendix D of the City's updated JURMP.

During the reporting period, no sites were observed to present a significant threat to human health or the environment during inspections, so none were reported to the RWQCB.

2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 Program Review and Modification

The City's SUSMP requirements have been updated as described above in Section 2.2.4.

Table 2-2
SUSMP Projects Completed After Establishment of 2009/2010 Inventory

No.	Project Name	Project Address	Development Type	BMPs	Drainage Basin	TTWQ
1	Grossmont Trolley Apartments	8725 Fletcher Parkway	Commercial	2 vegetated swales, 1 media filter, 6 downspout filters, 11 catch basin inserts	Alvarado	High

Note: The Grossmont Trolley Apartments project was completed in June of 2010, at the end of the reporting period.

Table 2-3
Summary of Treatment Control BMP Inspection Results

#	Project Name	Inspection Date	TTWQ	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes	Follow Up Notes	Resolution Status
1	Kaiser	9/29/2009	High	1	1	0	No maintenance deficiencies noted.	N/A	N/A
2	Fire Station (CIP)	9/29/2009	High	1	1	0	No maintenance deficiencies noted.	N/A	N/A
3	Bougainvillea Walk	9/30/2009	Medium	3	3	0	No maintenance deficiencies noted.	N/A	N/A
4	Grossmont Trolley Theater Commercial	9/30/2009	High	0	0	2	Required BMPs indicated on development plan were not installed. Both catch basins on property observed without drainage inserts.	NOV issued on 10/12/09; two drainage inserts were installed on 11/23/09 and verified on 11/30/09.	Resolved
5	Grossmont Medical Offices and Parking Structure	9/29/2009	Medium	2	2	2	Drain insert indicated on development plans was not installed; vortex separator could not be accessed at time of inspection; standing water in vegetated swale & inadequate vegetative cover in swale observed.	NOV issued on 10/12/09; met with responsible party on 11/17/09 to discuss treatment control; vegetated swale planted with drought tolerant plants as of 11/17/09; will install Flo Gard catch basin insert.	Resolved

Table 2-3 (Continued)
Summary of Treatment Control BMP Inspection Results

#	Project Name	Inspection Date	TTWQ	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes	Follow Up Notes	Resolution Status
6	La Mesita	9/30/2009	Medium	0	0	2	One catch basin and one curb inlet observed without drain inserts.	NOV issued on 10/12/09; on 10/15/09 received call from Downstream Services indicating purchase of units.	Resolved

3.0 CONSTRUCTION

3.1 INTRODUCTION

The City's construction program is designed to control construction and grading activities in the City. These types of projects have the potential to impact nearby water bodies due to the presence of disturbed soils and building materials and the potential for associated pollutants to be transported off site by storm water or non-storm water flows. The City continued to implement its construction program throughout 2009/2010.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2009/2010 reporting period are presented in the following bulleted list. The following subsections provide more detail on how the City complied with the Municipal Permit during the reporting period.

- Distributed appropriate checklists to all projects applying for grading and building permits.
- Conducted plan checks of erosion control plans to ensure construction projects comply with the City's minimum BMP requirements.
- Conducted training for applicable City staff.
- Conducted 69 construction inspections at 27 sites during 2009/2010.
- Issued one verbal warning, seven written warnings, and eight NOVs to non-compliant construction sites and activities during 2009/2010.
- Required construction sites less than one acre to complete a Construction Storm Water Management Plan (CSWMP), similar to a Storm Water Pollution Prevention Plan, which details the planned construction phase BMPs for the project.

3.2 SOURCE CHARACTERIZATION

An inventory of active construction projects during the reporting period is presented in Appendix A.2 of this JURMP Annual Report. The City's inventory was maintained throughout the reporting period by the City's Engineering Division. New construction projects were added to the inventory at the start of construction, and projects were removed from the inventory after construction was completed. Since construction projects were continually being added and removed throughout the fiscal year, inventory updates were usually performed more frequently than the minimum once per month.

Since construction activities that involve grading activities are generally more of a threat to water quality than other construction activities such as tenant improvements, the City has chosen to include only projects that have applied for grading permits on the construction inventory. Although other, smaller, construction projects are not included on the City's construction inventory; the City requires BMP implementation and maintains oversight of these projects. The City's building inspectors inspect these sites for proper BMP implementation during their routine building construction inspections. Building inspectors will notify the Engineering Division of the Public Works Department if any major BMP deficiencies are noted or if a facility is required to submit an application for a grading permit, and thus be included on the City's construction inventory. Inspections by the Building Department are not tracked like the City's construction inspections, but these inspections are used as a supplemental tool to implement the City's construction storm water requirements.

3.3 Updates to Ordinances and Approval Processes

In February 2010, the City updated its BMP Manual II to include information on the newly adopted model SUSMP. The BMP Manual II is referenced as an uncodified appendix to City Code Chapter 7.18. There were no changes to the City's project approval process during 2009/2010.

3.4 Best Management Practice Requirements

The City's updated construction and grading project requirements are detailed in the City's updated BMP Manual Part II, which can be found as Appendix C in the City's JURMP. The City did not make any changes to these BMPs during 2009/2010.

3.5 Program Implementation

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 Education and Staff Training

During 2009/2010, City staff involved in construction program implementation was trained on dry weather and wet weather requirements, erosion control, material management BMPs, enforcement action and procedures. Please see Section 8 of this JURMP Annual Report document for details on trainings performed and construction-related educational materials distributed.

3.5.2 Construction and Grading Approval Process

The City's grading approval process is described thoroughly in Section 5 of the City's JURMP. During 2009/2010, City personnel verified that all construction projects planned to implement the City's minimum BMP requirements prior to issuing any building or grading

permits. The City continued to distribute Appendix A, which helps the City and the project proponent identify whether coverage under the State of California General Construction Permit (Construction Permit) is needed. Additionally, the City continued to require construction projects that are not subject to the General Construction Permit to complete a Construction Storm Water Management Plan (CSWMP), which details BMPs planned for construction sites not required to develop a storm water pollution prevention plan (SWPPP). A copy of the City's CSWMP form is included as Attachment 3.1. Approved forms and documents completed by project proponents are kept with the each project's file at the City for reference.

During 2009/2010, the City continued to enforce a 17 acre maximum disturbed area for grading activities. None of the City's active construction sites were larger than 17 acres, and the maximum disturbed area limitation did not apply. However, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also continued implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's updated JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Construction projects that were active during 2009/2010, along with their assigned TTWQ, the number of weeks the site was active during the rainy season, the number of inspections conducted during wet and dry seasons, and the total number of inspections for each site are included in Appendix A.2. A total of 69 routine construction inspections were performed at 27 construction sites during 2009/2010.

Construction inspections conducted during the reporting period were performed as described in the City's JURMP. Key components of the inspections include checks for coverage under the Construction Permit during the initial inspection and assessment of compliance with the City's BMP and discharge requirements. Responsible parties at the sites are educated as needed during inspections. Copies of the inspection forms are kept on file at the City.

3.5.4 Enforcement Measures

Any violations were noted on the project's inspection form, and the sites were given a list of corrective actions necessary to fix the observed violations. When necessary, a verbal or written warning was issued for the violation, and the City followed up with the site until compliance was achieved. Table 3-1, on the following page, includes the number of violations and enforcement actions taken during the reporting period in response to violations of the City's minimum construction BMP requirements. Enforcement actions are

administered in an escalating manner as described in the City's updated JURMP. Copies of the forms utilized to administer enforcement actions can be found in Appendix D of the City's updated JURMP.

Table 3-1
Construction Enforcement Actions Taken

Enforcement Context	Verbal Warnings	Written Warnings	NOVs	Stop Work Orders
Routine Inspections	1	5	6	0
Other Construction-Related Enforcement	0	2	2	0

In January 2010, the RWQCB contacted the City regarding the Fairfield Grossmont Trolley Apartments construction site located at 8725 Fletcher Parkway. City staff accompanied a RWQCB staff member on a joint inspection of the site. The site had ineffective sediment control BMPs in place; however no violations were issued by the RWQCB or the City at the time of the inspection. Upon investigation, it was found that sediment had remained on site and not entered the City's MS4 because the drainage features at the site were not yet connected to the MS4. City staff followed up with the site to ensure corrective actions provided during the inspection were implemented.

None of the violations observed at construction sites during the reporting period were found to endanger human health or the environment. The City was able to bring about compliance at all sites for which enforcement actions were taken, and it was not necessary to report any of these sites to the RWQCB.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's construction component have been made since that time.

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout the 2009/2010 reporting period, the City continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and conducts various municipal activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal facilities in the City. Municipal activities conducted by the City or City contractors include power washing, graffiti abatement, building maintenance, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. Information about sanitary sewer overflows (SSO) that occurred during 2009/2010 can be found in Table 4-3. The City continued to respond to complaints made to the City's Storm Water Hotline. All complaints made to the City's Storm Water Hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are included in Table 4-4. The City's municipal inspection results can be found in Table 4-5.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component and of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City hosted six training events/meetings for approximately 32 municipal personnel.
- The City maintained an informational storm water bulletin board in City Hall.
- The City removed a total of 576.88 tons of sediment and debris from street sweeping activities.
- The City removed over 249 cubic yards of sediment and debris from standard MS4 cleaning activities, not including drainage insert maintenance.
- The City removed over 14 cubic yards of sediment and debris from 21 filter inserts in University drainage basin.
- City personnel continued to restock the pet waste bag dispensers in City parks, using 22,500 pet waste bags during 2009/2010.

- A total of 34,723 linear feet of sewer line were televised during 2009/2010, which led to the discovery of some areas of the sanitary sewer in need of repair. The City replaced or rehabilitated 15,063 linear feet of sanitary sewer line.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included on the City's municipal inventory; descriptions of the facilities and activities can be found in the City's JURMP. The City's inventory is included in this JURMP Annual Report as Appendix A.3.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs at fixed municipal facilities. As mentioned in the City's JURMP, the City uses the California Stormwater Quality Association (CASQA) Municipal BMP Handbook to establish appropriate BMPs for fixed municipal facilities. Table 6-2 in the City's JURMP describes the CASQA fact sheets that are used for specific facility types.

The City continues to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as described in the City's JURMP. The City also continues to use Calsense Computerized Irrigation Control (Calsense) at a number of fixed municipal facilities to reduce water use and decrease the chance of transporting pollutants to the City's MS4 by over-irrigation. BMP implementation for parks and recreational facilities, as described in the City's JURMP, has not changed.

City public works employees, fire station employees, and employees at other fixed facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

As mentioned above, the City's BMP requirements have not changed since the development of the revised JURMP. Some notable examples of implementation of those BMPs are provided below.

Calsense Computerized Central Irrigation Control

The City continues to use Calsense, an advanced automated irrigation system designed to prevent over irrigation at several fixed municipal facilities. Since Calsense is automated, it has a lower chance of malfunction than manual irrigation systems and allows the City to monitor irrigation activity from a central computer. A total of 21 municipal facilities, including both parks and various fixed facilities, are equipped with Calsense technology.

The Calsense system monitors irrigation by including the use of master valves and flow sensing to prevent over-irrigation and also decrease the amount of water that is used. A break in the system is recognized as a high flow, and the system is shut off until it is repaired. The use of this technology allows the City to prevent major leaks by detecting smaller leaks that might otherwise go undetected earlier than with a manual system. The automatic shutoff by Calsense saves thousands of gallons of water and prevents the runoff generated by a leak from carrying pollutants from parks and other fixed municipal facilities to the storm drain system. The irrigation system can be controlled by a central computer, which calculates the best time for irrigation based on moisture readings, weather, and real time flow rates at every valve. Additionally, the system allows staff to manage the system more efficiently and with less chance of over-irrigation. The irrigation schedules can be designed for a long period of time or easily modified for weekly or daily needs if necessary. The system allows for the most efficient usage of water while minimizing the chance of over-irrigation and consequent introduction of pollutants to the City's storm drain system.

Parks and Recreational Facilities

During 2009/2010, City continued to maintain the 34 pet waste bag dispensers installed throughout 14 parks. City personnel restock the dispensers as necessary; 22,500 pet waste bags were used during the reporting period. As mentioned in the City's JURMP, a number of volunteers continue to assist in keeping the designated dog area at Harry Griffen Park free of pet waste as part of the Canine Corners Program. The City also continues to host the Adopt-A-Park program, which engages residents of the City in volunteering to pick up trash throughout local parks. The City continued its partnership with the St. Madeline Sophie's Center, which employs developmentally disabled individuals in park maintenance activities.

During 2009/2010, the City maintained the informational kiosks in three City parks: La Mesita Park, Vista La Mesa Park, and Jackson Park. These kiosks present storm water pollution prevention information to park patrons and are updated with information regarding upcoming outreach events. The Adopt-A-Park program, the partnership with St. Madeline Sophie's Center, and the storm water kiosks are also discussed in Section 9 of this Annual Report.

As previously mentioned, the City continued to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as described in the City's JURMP. In 2009/2010, the City used 7.6 tons of fertilizer, 86 pounds of herbicide, and 0.4 pounds of pesticides.

Public Works Facilities, Fire Stations, Other Fixed Facilities
As previously mentioned, City personnel continued to implement appropriate BMPs for municipal fixed facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance (i.e. landscaping, building maintenance, etc.) as necessary. Parking facilities associated with fixed municipal facilities are conducted as part of the regular sweeping activities and were swept weekly during 2009/2010. The large paved area at the City's Public Works Operation Center was swept at least once weekly during 2009/2010, and twice weekly if needed. Public Works employees continued to implement the storm water management plan (SWMP) at the Public Works Operations Center. Public Works employees also continued to maintain the seven filter inserts on the property; these inserts are cleaned twice annually.

Municipal Inspections
All high TTWQ fixed municipal facilities received a routine annual inspection in 2009/2010. Table 4-5 at the end of this section lists all high TTWQ municipal fixed facilities requiring inspection in 2009/2010, the date the inspection was performed, and the recommended corrective actions from the inspection. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2009/2010. The City's municipal inspection form is included as Attachment 4.1.

Two municipal facilities were recommended for follow-up during 2008/2009, Community Pool and Allison Avenue Parking Lot. During the routine inspections completed in 2009/2010 the issues observed at these facilities had been resolved.

- The chemical storage area at Community Pool was outfitted with secondary containment and it was determined that the pool deck drains are directed toward a landscape area, so no changes needed to be made to the deck hosing practices.
- The portable toilet at Allison Avenue Parking lot is wheelchair-accessible and equipping the toilet with secondary containment would make it inaccessible to wheelchairs. The portable toilet was clean and free of any evidence of spills or leaks.

4.3 Roads, Streets, Highways, and Parking Facilities

4.3.1 Background

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 Source Characterization

The City maintains roads, streets, and highways; the City also maintains four stand-alone parking facilities. Roads, streets, and highways, are included as one entity on the City's municipal inventory and each individual stand-alone parking facility is also included on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 BEST MANAGEMENT PRACTICES

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping. Other BMPs are chosen as needed based on the CASQA Municipal Handbook. The City's sweeping frequency is outlined in the JURMP and described in the following subsection. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2009/2010.

4.3.4 PROGRAM IMPLEMENTATION

During 2009/2010, the City swept a total of 8,285 curb miles, removing approximately 576.88 tons of debris. Similar to previous reporting periods, the debris removed by sweeping activities was approximately 80 percent sediment and 20 percent leaves, debris, and trash. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities, and the associated sweeping frequency. The City met the sweeping frequency requirements of the high, medium, and low priority streets as described in both the JURMP and in the table below. Parking lots associated with City parks were swept every two weeks; parking lots associated with all other fixed facilities in the City were swept every week during 2009/2010.

As a means to address priority pollutants in the San Diego Bay and the San Diego River Watersheds, the City conducted additional sweepings of some City streets. Designated residential areas that are low priority were swept monthly during 2009/2010 and selected high priority streets were swept weekly.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route	Sweeping Frequency
High	Downtown areas, designated residential areas, designated commercial areas, stand-alone parking facilities	10.6 miles	At least every two weeks
Medium	Center islands	9 miles	At least once per month
Low	Designated residential areas	140 miles	As needed, at least annually
Fixed Facilities	Parking lots associated with municipal fixed facilities	N/A*	Weekly
Fixed Facilities - Parks	Parking lots associated with parks	N/A*	Every two weeks

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route	Sweeping Frequency
Fixed Facilities – PW Operations Center	Public Works Operation Center	N/A*	At least weekly, twice weekly if needed
Total Amount of Debris Collected from Street Sweeping Activities: 576.88 tons			

* Mileage data is not available for the swept area of stand-alone parking facilities, parking facilities associated with municipal facilities, and the PW Operations Center. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections
Trash, debris, and sediment that have accumulated on City streets are identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 Background

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events. The City's MS4 consists of approximately 56 miles of pipes of varying materials, natural channels, concrete channels, and culverts and over 400 curb inlets and catch basins.

4.4.2 Source Characterization

The City's MS4, as one complete entity, is included on the City's high TTWQ municipal inventory.

4.4.3 Best Management Practices

The City maintains a strict MS4 maintenance and cleaning schedule in order to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. As described in the City's JURMP, BMPs for MS4 maintenance activities are chosen based on the CASQA Municipal Handbook and have not changed during 2009/2010.

The City has installed and maintains 21 filter inserts in catch basins in the University drainage basin, which are designed to prevent debris from entering the MS4. These filter inserts are maintained as part of the routine MS4 maintenance schedule. Figure 4-1 shows the locations of these drainage inserts.

During 2009/2010, two Filterra Bioretention System units were installed at Orien Avenue at Lowell Street. During the first year after installation, the Filterra Bioretention System units will be maintained by the manufacturer, and after the first year, the City's Public Works employees will maintain the units twice per year, once prior to the rainy season. These Filterra Bioretention System units are located in the University drainage basin and the location can be found in Figure 4-1.

4.4.4 PROGRAM IMPLEMENTATION

The City implemented a rigorous MS4 inspection and cleaning schedule during 2009/2010. The City inspected and cleaned all MS4 cleanout locations twice in 2009/2010; at least one cleaning was conducted between May 1 and September 30. The City's MS4 inspection and cleaning schedule for 2009/2010 is shown in Table 4-2.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter Cleaned	Amount of Debris Removed from Cleaning Activities
Catch Basins/Self Cleaning MS4 Facilities	**100%**	N/A	**175.25 cubic yards**
Open Channels	**100%**	**100%**	**74 cubic yards**
Drainage Inserts	**100%**	N/A	**14.25 cubic yards**
Total Debris Removed From MS4 Maintenance Activities: 263.5 cubic yards			

* No structures were observed at least 33% of capacity during the reporting period. However, the City cleans out any structures, including self-cleaning structures, in which trash and debris is observed at the time of inspection.

The City's cleanout locations are access points to various sections in the City's MS4, so no additional pipe beyond the cleanout location is typically cleaned. The City may flush the MS4 line and then reclaim the water in the event of a spill. During 2009/2010, there was no need to flush any MS4 line, so there is no data to report for additional MS4 cleanout activities. As previously mentioned, the City continued to maintain the filter inserts installed in the University drainage basin.

During 2009/2010, the City continued to inspect the open channels in the City and remove trash and debris as necessary. If litter or debris is observed during the routine inspections, it is removed immediately. The total length of the channel segments inspected and cleaned by City staff was approximately 4,930 feet.

As described in Table 4-2, 263.5 cubic yards of debris was removed during MS4 maintenance activities. The weight of the material removed was not recorded, though an overall estimation of the composition of debris removed from MS4 maintenance activities is

80 percent trash and leaves and 20 percent rocks and soil. The volumes were converted to estimated weights using the percent composition estimates from City maintenance staff and conversion factors of 2,300 pounds per cubic yard of rocks and soil and 400 pounds per cubic yard of trash, leaves, and similar material. The total weight of material removed was estimated at 102.8 tons.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 SOURCE CHARACTERIZATION

The City maintains a system of public sanitary sewer pipes to convey wastewater from the City to be treated. The sanitary sewer system, as one complete entity, is included on the City's high TTWQ municipal inventory.

4.5.3 BEST MANAGEMENT PRACTICES

The City implements BMPs from the CASQA Municipal Handbook, as described in the City's JURMP, during sanitary sewer maintenance. There have been no changes to these BMPs during 2009/2010. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities. The City clears blockages and repairs leaks as needed.

4.5.4 PROGRAM IMPLEMENTATION

As part of the City's regular maintenance schedule, the City maintains areas known to be "hot spots" for grease buildup on a monthly basis. During 2009/2010, the City continued to implement a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. Additionally, the City's FOG Ordinance, No. 2009-2794 and 2009-2795, went into effect on July 1, 2009. The FOG Ordinance provides legal authority for the City to regulate grease producing facilities and outlines specific details of the program. During 2009/2010, the City conducted 166 FOG inspections at FOG facilities. The City will continue to conduct FOG inspections during 2010/2011. The City also will enforce any storm water violations noted during FOG inspections.

Throughout FOG inspections conducted in 2009/2010, many FOG-producing facilities were observed without a grease control device (GCD). These facilities will be required to install

grease traps or will need to pay a mitigation fee. Public Works employees are working to assess the amount of grease found in the "hot spot" areas to establish a baseline for use in determining long term effectiveness. During FOG inspections in 2009/2010, City personnel identified facilities that will be required to increase the pumping frequency of their grease traps and identified some facilities where facility personnel never pumped their GCD and were unaware of its location within their facilities. Follow up FOG inspections of these facilities will occur during 2010/2011 to ensure facilities come into compliance with the City's FOG requirements. In fall 2010, NOVs will be issued to approximately 14 FOG facilities that have not enrolled in the FOG Program or that have refused inspection. The City is currently working to refine procedures, establish program measurements, and increase effectiveness for the FOG program.

In addition to the monthly maintenance at known grease "hot spots," the City seeks to eliminate seepage from the sanitary sewer system to the MS4 by routine preventative maintenance of both systems. Routine maintenance of both systems allows the City to find areas that are likely to become problems in the future and make the necessary repairs/replacements before any larger issues arise. The City also continued to conduct flow metering in its sanitary sewer system to monitor for evidence of potential problems. During 2009/2010, the City replaced or rehabilitated 15,063 linear feet of sewer line. The majority of this sewer replacement is through a multi-phase program whereby the City has been replacing older sewer in sections of the City. The City received a low interest loan from the State Water Resources Board in 2007 to upgrade the system and protect against infiltration and inflow, as well as SSOs. Additional phases of the sewer replacement project are set for 2010/2011.

A total of 34,723 linear feet of sewer line was televised during 2009/2010, which led to the discovery of some areas of the sanitary sewer in need of repair. This prevented these areas from becoming future seepage points.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. During 2009/2010, there was one SSO. The spill was reported to the State Water Resources Control Board (SWQCB) within 24 hours through the California Integrated Water Quality System (CIWQS), as required by the Municipal Permit. Table 4-3, below, provides a description of the SSO event that occurred during 2009/2010. The City responded by recovering as much of the spill as possible and cleaning up and mitigating the effects of the spill.

Table 4-3
SSO Information

Spill Location	Spill Date	Estimated Spill Volume	Approximate Percentage of Volume Recaptured
University Avenue and La Mesa Boulevard	11/4/2009	3 gallons	100%

4.6 Mobile Municipal Activities, Including Power Washing

4.6.1 Background

The City conducts a variety of different mobile municipal activities, typically involving infrastructure maintenance, landscape maintenance, graffiti removal, and power washing. Power washing is not considered a part of any normal maintenance activities, but it is used when other methods of cleaning or graffiti removal are not effective.

4.6.2 Source Characterization

Both power washing and graffiti removal are listed on the City's high TTWQ municipal inventory. Infrastructure maintenance and landscape maintenance are listed on the City's medium TTWQ municipal inventory.

4.6.3 Best Management Practices

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. For example, City personnel performing power washing are trained to collect all waste water and City personnel conducting graffiti removal are trained to store and handle any chemicals properly.

4.6.4 Program Implementation

Power washing and graffiti removal, both high TTWQ activities, are conducted on an as needed basis and are therefore not on a set schedule. Neither power washing nor graffiti removal was scheduled to be conducted during the timeframe that routine municipal inspections were conducted. Facility personnel responsible for graffiti removal and power washing have been trained and are aware of the BMPs necessary for each activity to prevent discharge to the MS4. Water produced by these activities is either directed to landscaping or storm drains are blocked and water is vacuumed up once the project is complete.

Municipal personnel that conduct other mobile activities such as infrastructure maintenance and landscape maintenance are trained regularly regarding BMPs for material use and disposal. Emergency vehicle maintenance personnel are trained on the proper handling and use of pesticides, herbicides, and fertilizers as described in the City's JURMP.

4.7 Special Events

4.7.1 Background

The La Mesa Oktoberfest is the only priority designated annual special event that occurs in the City. Oktoberfest is a three-day celebration occurring in early October. There are no other regular major special events, although smaller events may occur on occasion.

4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the city's high TTWQ municipal inventory.

4.7.3 Best Management Practices

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable. During smaller events, City staff ensure that any trash and debris left over from the events is cleaned up.

Individuals or groups wishing to host events in the City meeting certain criteria are required to obtain a permit from the City. Both Community Assembly Permits and Block Party Permits are available from Public Works and Park Use Permits are available from the Community Services Department. Permits require individuals responsible for the event to control trash and clean up after the event. If vendors are anticipated at the event, Vendor Fact Sheets (Attachment 8.1) are provided to the permit applicant.

4.7.4 Program Implementation

During 2009/2010, the City provided vendors of the Oktoberfest event a handout entitled "Tips for Outdoor Vendors" (Attachment 8.1). This fact sheet informed the vendors of the difference between the storm drain system and the sanitary sewer system and the effects of polluted urban runoff. The sheet also included event-specific BMPs, such as using dry cleaning methods, having spill response materials if using cooking grease, and managing trash and other wastes properly. The City distributed 50 copies of the aforementioned fact sheet.

On the Monday following the three-day event, the City conducted a post inspection of the area where the event took place. The inspection was a joint inspection conducted by the City and the City's storm water consultant, D-Max Engineering, Inc. The City issued two NOVs for illegal discharges that were observed as business owners attempted to clean the area after the event. All observed IC/IDs were eliminated during the inspection. Minor amounts of litter and debris were observed on the ground, which was cleaned up as part of the routine special event BMPs.

4.8 Public Reporting of Illicit Discharges and Connections

Reporting and Response

Public and municipal involvement is crucial to preventing and eliminating IC/IDs from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, in storm water articles in the

La Mesa Focus newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2009/2010 reporting period and the City's response to each are listed in Appendix B. A total of 84 complaints were documented this year.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works Hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material. Table 4-4, below, summarizes the enforcement actions taken in response to complaints received.

Table 4-4
Enforcement Actions Resulting from Complaints Received by the Storm Water Hotline

	Verbal Warning	Enforcement Letter	Written Warning	NOV
Commercial	0	3	2	2
Industrial	0	0	0	0
Mobile	0	0	0	0
Municipal	0	0	0	0
Residential	2	7	4	4
Construction	0	0	1	3

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. Preventative maintenance is regularly conducted on the City's sanitary sewer system, and video inspections and sewer surveys are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. City crews do not maintain private laterals, but the City assists in the containment and cleanup of spills from private laterals if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. As previously mentioned, there was one SSO during 2009/2010; there were no other spills during the reporting period.

4.10 Education and Outreach

During 2009/2010, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. The City also continued to maintain a storm water bulletin board in City Hall, which provided storm water information and brochures. Detailed information regarding the education and outreach conducted for City personnel is described in detail in Section 8 of this Annual Report.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 Program Modification and Review

The City's JURMP was updated in March 2008. No changes to the City's municipal component have been made since that time.

Table 4-5
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
1	Allison Avenue Lot (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	6/1/2010	• Provide secondary containment for portable toilet and sink	• Equipping the portable toilet with secondary containment will make the facility inaccessible to wheelchairs. • Portable toilet is clean, there is no evidence of spills or leaks	Resolved
2	Aztec Park	High	Parks and Recreation Facilities	4/21/2010	• No significant corrective actions	N/A	N/A
3	Briercrest Park	High	Parks and Recreation Facilities	4/21/2010	• No significant corrective actions	N/A	N/A
4	Collier Park and Pump House	High	Parks and Recreation Facilities	6/1/2010	• No significant corrective actions	N/A	N/A
5	Community Pool	High	Parks and Recreation Facilities	6/23/2010	• No significant corrective actions	N/A	N/A
6	Harry Griffen Park	High	Parks and Recreation Facilities	6/1/2010	• Clean out sediment, litter, and debris from all catch basins, channels, and parking lots • Keep dumpster lids closed and the enclosures free of trash and debris • Provide secondary containment for the portable toilet at the north parking lot • Repair downed portions of the silt fence that runs along the channel on the east side of the parking lot	• No follow-up inspection required. Facility personnel will be notified of corrective actions. City will follow-up verbally with appropriate personnel to ensure corrective actions taken.	N/A

Table 4-5 (Continued)
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
7	Highwood Park	High	Parks and Recreation Facilities	4/20/2010	• Collect sediment and plant debris that has accumulated in the parking lot, trench drain, catch basin, and sidewalk • Removed trash observed throughout parking lot and dumpster area	• No follow-up inspection required. Facility personnel will be notified of corrective actions. City will follow-up verbally with appropriate personnel to ensure corrective actions taken.	N/A
8	Jackson Park	High	Parks and Recreation Facilities	4/20/2010	• No significant corrective actions	N/A	N/A
9	Junior Sean Sports Complex	High	Parks and Recreation Facilities	6/2/2010	• Sediment needs to be removed from all catch basins around the perimeter of the fields	• No follow-up inspection required. Facility personnel will be notified of corrective actions. City will follow-up verbally with appropriate personnel to ensure corrective actions taken.	N/A
10	La Mesa Blvd (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	6/1/2010	• No significant corrective actions	N/A	N/A
11	La Mesita Park and Gardener's Shack	High	Parks and Recreation Facilities	5/18/2010	• Remove trash and cigarette butts in the skate park area	• No follow-up inspection required. Facility personnel will be notified of corrective actions. City will follow-up verbally with appropriate personnel to ensure corrective actions taken.	N/A
12	Lemon Ave Lot (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	5/18/2010	• No significant corrective actions	N/A	N/A

Table 4-5 (Continued)
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
13	MacArthur Park	High	Parks and Recreation Facilities	6/2/2010	• Stockpile of mulch needs to be covered and contained • Portable toilet needs secondary containment • All dumpsters need to remain closed	• No follow-up inspection required. Facility personnel will be notified of corrective actions. City will follow-up verbally with appropriate personnel to ensure corrective actions taken.	N/A
14	Northmont Park	High	Parks and Recreation Facilities	4/20/2010	• Clean out leaves and plant debris from all storm drain inlets • Keep site free of litter	• No follow-up inspection required. Facility personnel will be notified of corrective actions. City will follow-up verbally with appropriate personnel to ensure corrective actions taken.	N/A

5.0 INDUSTRIAL AND COMMERCIAL

5.1 INTRODUCTION

During 2009/2010, the City continued to implement a storm water program to reduce urban runoff pollution from the areas and activities of industrial and commercial businesses. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities by implementing various aspects of its industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2009/2010 reporting period are outlined below. Additional details about the City's implementation of the industrial and commercial component and of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ stationary industrial and commercial facilities.
- The City completed pollutant discharge potential assessment (PDPA) forms and additional watershed-specific questionnaires at inspections to aid watershed management and source identification efforts.
- Based on inspection findings and complaints made to the hotline, the City took enforcement actions against industrial and commercial businesses, as necessary.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated industrial and commercial inventories can be found in appendices A.4 and A.5, respectively, and include all stationary facilities known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and minimum, activity-specific BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

The City's industrial and commercial inventories include both stationary and mobile businesses, as required by the Municipal Permit, and were updated during 2009/2010.

Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers the following factors when prioritizing the inventories:

- Industrial Permit subjectivity
- Consideration of downstream waterbody and whether the business is likely to discharge pollutants for which the waterbody is impaired
- Results from previous inspections and institutional knowledge
- Proximity to the receiving waterbody

The City's updated inventory includes 462 stationary industrial and commercial facilities.

5.2.3 Best Management Practice Requirements

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other designated BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are described in more detail in the City's BMP Manual Part I, which is an attachment to the City's JURMP. BMP requirements for stationary industrial and commercial businesses did not change during 2009/2010.

5.2.4 Program Implementation

As previously mentioned, the City updated its industrial and commercial inventory during 2009/2010. The updated industrial and commercial inventories are included as Appendix A.4 and Appendix A.5, respectively, to this JURMP Annual Report.

Industrial and Commercial Inspections
During 2009/2010, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. This year the City hired a new employee, Engineering Technician I, to perform industrial and commercial inspections. All high TTWQ sites were selected for routine inspection. Additional sites selected for routine inspection were selected randomly.

Table 5-1, on the following page, provides a summary of the industrial and commercial site visits. In the table, full inspections have been counted as one full inspection. Because facilities move/go out of business, are duplicates of other businesses listed on the City's inventory, or are conducting activities for which inclusion on the City's inventory is not necessary, full inspections are not conducted at all visited facilities. Since time and effort are required to visit these facilities, visits where a full inspection is not conducted are considered equivalent to one half of a full inspection. The only time a site visit would not count as half of a full inspection is if the facility moved and was replaced by a facility where a full inspection was conducted or if the facility was a duplicate of another facility selected for inspection.

Table 5-1
Summary of Routine Site Visits

Facility Category	Inventoried Stationary Sites	Equivalent Full Inspections*	Percentage of Total Inventory
High TTWQ Sites	26	26	5.6%
Additional Sites	438	94.5	20.4%
Totals	**462**	**120.5**	**26%**

* "Equivalent Full Inspections" includes full inspections and also counts at 50 percent value the site visits where a full inspection could not be conducted but where effort was taken to document the visit and update the inventory. It does not include any businesses that were duplicate listings of other inspected facilities or facilities replaced by other businesses inspected during the reporting period.

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form and discussed with facility personnel present during the inspection. Businesses were given a copy of corrective actions at the time of inspection.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. The City also reviews storm water pollution prevention plans (SWPPP) and monitoring results when applicable. Furthermore, the City completed PDPA forms and supplemental watershed questionnaire forms during the inspections in an effort to collect more data from inspected facilities. These forms are included with the City's inspection form, which is included in Attachment 5.1. More information about the results of the watershed questionnaire analysis is presented in Section 12.

During 2009/2010, the City conducted the following inspections:

- Follow-up inspections at sites not in compliance in 2008/2009
- Routine inspections for 2009/2010

The results of full follow-up inspections are included in Table 5-2; compliance issues at these sites were resolved during 2009/2010. Results of the sites that received full routine inspections are included in Table 5-3.

In some cases, a facility recommended for follow-up during 2008/2009 was observed to be in compliance during the follow-up inspection conducted during 2009/2010. These sites received routine inspection subsequent to the follow-up to confirm continued compliance with City requirements. In some cases, businesses were out of compliance in the 2009/2010 routine inspections. The City will conduct further follow-up and enforcement activities at these sites to bring them back into compliance in 2010/2011. Additionally the City completed approximately 170 Fats, Oil, and Grease (FOG) inspections during 2009/2010.

These inspections also include a quick check for storm water compliance in addition to the FOG requirements for restaurants.

The City did not rely on third party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third party inspection program.

General Industrial Permit

Subjectivity to the Industrial Permit was evaluated during the industrial and commercial inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). Based on the assigned SIC code, the inspector evaluated the Industrial Permit subjectivity of the business. Notably, none of the inspected businesses in the City were observed to be in violation regarding obtaining coverage under the Industrial Permit in 2009/2010.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to give site-specific one-on-one education regarding storm water concepts and BMPs. The City Inspector discusses a variety of topics including watershed concepts, the Industrial Permit, and minimum, activity-specific BMP requirements. Prior to performing industrial and commercial inspections, the City sent a letter to all businesses informing them of the upcoming inspection. In the case of the follow-up inspections conducted in September 2009, this notification letter also authorized the City's consultant, D-MAX Engineering, Inc., to perform the facility inspections on behalf of the City. The City Inspector works directly with businesses that have had repeat violations, such as A-1 Equipment and Rainbow Steel, to ensure long term compliance. The City's inspector has visited businesses more frequently than for official annual inspections in order to build a relationship with the personnel and to clarify storm water regulations. Also, the City has started providing a customized list of corrective actions during the inspection to facilitate prompt compliance.

The City continued to partner with the local Target and Dixieline Lumber to provide English and Spanish Integrated Pest Management (IPM) cards (Attachment 5.2) to the public at each business's garden center. This continued collaboration between the businesses and the City's Storm Water Program Manager in distributing educational material is a valuable asset to the City's storm water program. During 2009/2010, a total of 75 packets of IPM cards were distributed by both Target and Dixieline Lumber.

The City continued to publish storm water-related articles in the *La Mesa Focus* newsletter. The 2009/2010 issues were distributed electronically to residents and businesses in the City. Summaries of the articles in the newsletter can be found in Section 6; the newsletters are included as Attachment 5.3 to this JURMP Annual Report.

Enforcement
Several industrial and commercial facilities were observed to be out of compliance with the City's municipal storm water ordinance during inspections conducted in 2009/2010. As previously mentioned, some inspections were conducted near the end of the 2009/2010 reporting period, so actions to bring the sites into compliance will continue into the 2010/2011 reporting period. The City did, however, send NOVs to all businesses in violation of the City's municipal storm water ordinance during routine inspections conducted in 2009/2010. A total of 19 NOVs were mailed in response to the 2009/2010 inspections for businesses failing to properly implement BMPs. Notably, a smaller percentage of business inspections resulted in the need for a follow-up visit than in previous years. The likely explanation for this increase in compliance is the storm water inspection fee program. While the initial purpose of the inspection fee was to fund the storm water program, charging businesses for each routine inspection and follow-up visit provides the additional benefit of encouraging businesses to come into compliance with the City requirements to avoid the fees associated with additional follow-up inspections. Businesses are required to pay for all necessary re-inspections until they are in compliance, which has made it fiscally possible for the City to have one inspector as point person who personally coordinates compliance assistance and enforcement. No industrial and commercial IC/IDs were discovered during routine inspections.

During the course of the 2009/2010 reporting period, the City received 11 complaints regarding stationary industrial and commercial businesses. These came directly from residents as calls into the storm water hotline, complaints entered through La Mesa's Request Tracker and the Civic Plus websites, or complaints from City staff. Details of the industrial and commercial complaint investigations are included in the City's complaint log, which is included as Appendix B. The City took appropriate enforcement actions during investigations conducted in response to these complaints including verbal discussions, distribution of educational materials, written warnings, and NOVs, as necessary.

There were no instances of noncompliance that posed significant threat to human health or the environment observed during 2009/2010. No non-filers were noted, as discussed earlier in this section, and no other businesses were reported to the RWQCB.

5.3 Mobile Sources

5.3.1 Background

Due to the nature of activities of most mobile businesses, a major area of concern is illegal discharges. In general, mobile businesses can be difficult to identify, as many do not have City business licenses. Additionally, many mobile businesses may be home-based and/or conduct activities that do not occur in one fixed location, so inspections of such facilities are impractical.

5.3.2 Source Characterization

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile. A total of 981 businesses are

included on the City's 2009/2010 mobile inventory. In 2008/2009, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction. The City contributed its mobile business inventory for upload to the regional database.

5.3.3 Best Management Practice Requirements

BMPs for stationary industrial and commercial facilities are required to be implemented for all outdoor activities, as applicable. BMPs for mobile businesses, including key principles, such as proper collection and disposal of any discharge, are discussed in the City's JURMP. The City has also established a program that requires mobile businesses operating in the City to sign an affidavit making businesses aware of the City's BMP requirements and commits them to implementing the required BMPs.

During 2008/2009, the Regional Industrial and Commercial Workgroup, in which the City participated, developed regional mobile business BMP standards. These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within the region. The regional mobile business BMP standards were adopted at the end of June 2009.

5.3.4 Program Implementation

During the 2009/2010 inspection program, the City responded to one call to the City's storm water hotline regarding mobile businesses. More detail about the complaint made to the City's storm water hotline regarding the U.S. Carpet Care discharge is included in the City's complaint log in Appendix B.

In addition to the regional effort to standardize mobile business BMPs, the Regional Industrial and Commercial Workgroup worked to develop a regional mobile business database. The database is designed to store information regarding mobile businesses operating within the region and to facilitate communication regarding mobile business activities and enforcement actions between Copermittees.

Mobile Affidavits
The City requires mobile businesses to sign an affidavit when applying for a business license to acknowledge the City's BMP requirements. Additionally, the affidavit states that the business owner agrees to implement BMPs as required by the City's JURMP and acknowledges that failure to do so will result in enforcement action and possible legal action. During 2009/2010, there was one application for a business license by a mobile auto detailing business; therefore one affidavit was signed during this reporting period.

Education and Outreach and Enforcement
The BMP template, based on regional mobile business BMP standards, was mailed out to 561 businesses during 2009/2010. As previously mentioned, one complaint was made to the City's Storm Water Hotline regarding a mobile business. City personnel discussed the BMP requirements of mobile businesses with business personnel.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2009/2010, so none were reported to the RWQCB.

5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's industrial and commercial component have been made since that time.

6.0 RESIDENTIAL

6.1 INTRODUCTION

Over half of the land use in the City of La Mesa is designated as residential. Due to the large residential area, activities that take place within these areas have the potential to impact the quality of the receiving water bodies. Residential activities such as vehicle washing, over-irrigation, pesticide and fertilizer application, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not properly implemented. Additionally, improper disposal of household hazardous waste (HHW) can also contribute pollutants to the MS4. Pollutants of concern include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has worked to implement a range of programs to address these residential activities with the goal of reducing pollutant loads associated with such activities.

Figure 6-1 depicts the residential land use in the City. Yellow areas signify single-family homes, orange areas are multi-family homes such as duplexes and apartment buildings, brown areas are mobile home parks, and purple areas are other residential areas such as nursing homes.

Figure 6-1
Residential Land Use in the City

Base Data Sources: USGS, SanGIS, SANDAG

6.1.1 Summary of Notable Accomplishments

Some notable achievements for the residential component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component and of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City continued to work with local Eagle Scouts to construct and install informational storm water kiosks. The City received approval to construct a new storm water kiosk in Harry Griffin Regional Park in 2010/2011.
- The City hosted eight HHW events; 938 participants dropped off 134,782 pounds of HHW.
- The City hosted the La Mesa Spring Clean Up on two consecutive Saturdays during 2009/2010. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge.
- The City continued to distribute the *La Mesa Focus* newsletter to residents in the City.
- The City continued to respond to complaints made to the City's Storm Water Hotline and submitted online regarding residential areas and activities.

6.2 Source Characterization

The City has identified several high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 High TTWQ Activities

During 2009/2010, the City continued to identify the following activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of pet waste

6.2.2 High Threat to Water Quality Areas

In addition high TTWQ activities, the City has identified several residential areas that pose a high TTWQ. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring, and criteria as defined in the Municipal Permit. The following residential areas have been designated high TTWQ.

East of Helix High School
This area drains to University Channel and includes the residential area east of Helix High School around Lowell Street, Normal Avenue, and Olive Avenue. University Channel serves as a part of the storm water conveyance system for the City and is part of the Chollas Creek Watershed. During the 2009 Dry Weather Monitoring Program, a transient dissolved copper exceedance was detected in this area.

Baltimore Drive, North of Interstate 8
The area surrounding Baltimore Drive is largely composed of high-density housing. Runoff from this area drains to Alvarado Channel via two internal storm drain networks. Storm Water Hotline calls related to high TTWQ activities in this area have been recorded in past years. Some past Dry Weather Monitoring results have indicated that this area could be a source of bacteria, although that has not been found in monitoring programs during recent sampling years. The area is still classified as a high TTWQ to be conservative, although the City may reevaluate the prioritization in future years if recent dry weather monitoring trends continue. Potential runoff sources include residences located on Parkway Drive, Aztec Drive, and Baltimore Drive.

Nagel Street and Sarita Street
The residential area around the intersection of Nagel Street and Sarita Street drains to Alvarado Channel. Past Dry Weather Monitoring Program upstream investigations have indicated that this area has been a source of bacteria.

Residential areas within the City designated as high TTWQ receive additional attention and periodic visual inspection from storm water staff to check for evidence of IC/IDs and high TTWQ activities.

6.3 Best Management Practice Requirements

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. The City's BMP Manual Part I includes lists of general residential BMP requirements and BMP requirements for specific residential activities. The manual is included in Appendix C of the JURMP. General residential BMPs include erosion control; non-storm water discharge management, including elimination of IC/IDs; and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Specific BMPs for the high priority activities outlined above are also included in the City's BMP Manual Part I. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 Program Implementation

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted. This ensures that pollutants associated with residential activities and areas are minimized. The residential program has an education component so that residents are made aware of appropriate BMPs and high TTWQ activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***La Mesa Focus* Newsletter Articles**

The City publishes storm water related articles in the quarterly *La Mesa Focus* newsletter. Four newsletters were printed during the reporting period. Each edition was mailed to approximately 21 residential addresses. These issues were also archived on the City's website; 908 individuals are signed up to receive e-mail notification when a new newsletter has been posted on the website. Additionally, copies were left out at the La Mesa Library for patrons to read. The articles published in 2009/2010 are summarized below and included as Attachment 5.3.

The August 2009 newsletter contained the following storm water-related articles and announcements:

- "DOING OUR PART TO SAVE H_2O" informed residents of water saving efforts conducted by the City and provided a link to water conservation web sites.
- "2ND ANNUAL ENVIRONMENTAL AWARENESS FESTIVAL" educated residents on the free upcoming event. The event provided information about resources pertaining to water conservation, storm drain runoff, and other environmental issues.
- "8th ANNUAL KIDS CARE FEST" was advertised. I Love A Clean San Diego (ILACSD) provided information about watersheds and storm water during this event.
- "PARK APPRECIATION DAY" encouraged residents to participate in the event and informed residents of the upcoming park cleanup event.
- "AVOID THE CLOG BY ELIMINATING FOG" informed residents of the harmful effects of improper disposal of fats, oils, and grease into the wastewater system and provided tips on how to properly dispose of FOG. The article also provided information on the City's FOG program with a link to a FOG Discharge Permit application and a phone number for more information.
- "GREEN AUTOMOTIVE TIPS FOR THE HOME MECHANIC" provided tips to residents on how to properly dispose of or recycle automotive materials and fluids.
- "DO THE RIGHT THING!" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.
- "RECYCLING NOW AVAILABLE AT CITY PARKS" informed residents of the additions of recycling containers to City parks and encouraged use of the containers.

The November 2009 newsletter contained the following storm water-related articles and announcements:

- "UPDATE: CITY OF LA MESA FOG PROGRAM" reminded residents of the harmful effects of improper disposal of fats, oils and grease into the wastewater system and provided information about the City's FOG program with a phone number for more information on FOG discharge permits and inspection requirements.
- "CITY OF LA MESA PARK APPRECIATION DAY 2009" informed residents of the past and future Park Appreciation Days and discussed the City's Adopt-a-Park program and provided a phone number for interested persons.
- "THE ENVIRONMENTAL AWARENESS FESTIVAL SAYS YES TO SUSTAINABILITY!" reported on the celebrated 2nd Annual La Mesa Environmental Awareness Festival and provided a link to La Mesa's Environmental Sustainability Commission.
- "CALIFORNIA COSTAL CLEAN UP DAY IN LA MESA" announced the participants' efforts during the cleanup event and the total amount of debris removed during the cleanup.
- "SAVE MONEY BY PREVENTING OVER-IRRIGATION" educated residents on the potential threats of over irrigating and tips on how to eliminate pollutants from entering creeks. The article also provided information on programs to help conserve water and a phone number for the City's Storm Water Hotline.
- "DO THE RIGHT THING!" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.
- "ENVIRONMENTAL RESOURCES" provided residents with a list of resources with phone numbers available to help reduce their environmental impact.

The February 2010 newsletter contained the following storm water-related articles and announcements:

- "ST. MADELINE SOPHIE CENTER ASSISTS IN OUR PARKS" introduced the public to the St. Madeline Sophie Center which keeps park grounds free of trash and graffiti in La Mesa parks.
- "GOT JUNK?" notified residents of the City's free event for unwanted items and waste disposal event at EDCO Station.
- "FREE OIL FILTERS" advertised the La Mesa oil filter exchange event which encouraged residents to bring used oil filters to be recycled and to receive a free one in exchange.
- "CUT OUT FOG!" informed residents on how to help maintain the City's wastewater system and provided information on FOG and a phone number for more information.

- "FREQUENTLY ASKED QUESTIONS" provided answers to questions regarding proper disposal of bulky items, water heaters, and household toxic products.
- "FREE HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.
- "8TH ANNUAL CREEK TO BAY CLEANUP" informed residents of the event and provided a link to the City's website with a phone number for more information.
- "EXCITING VOLUNTEER OPPORTUNITIES!' listed volunteer programs such as the Adopt-a-Block program which encourages residents to pick up trash around their neighborhoods.
- "GOOD HOUSEKEEPING: IMPORTANT STORM WATER REQUIREMENTS" informed residents of the City's requirements to implement good housekeeping measures and best management practices and provided tips on how to meet the requirements.
- "STORM DRAIN POLLUTION?" provided the City's Storm Water Pollution Hotline and a list of storm water pollutants.
- "TEST YOUR ENVIRONMENTAL KNOWLEDGE" provided a quiz for residents to test their knowledge on proper recycling and disposal practices, storm water runoff and watersheds in La Mesa.

The May 2010 newsletter contained the following storm water-related articles and announcements:

- "LA MESA CELEBRATES NATIONAL PUBLIC WORKS WEEK, MAY 16-22" informed residents of the La Mesa Public Works Department and its crucial role in the City's maintenance of wastewater and storm water collection systems.
- "FREE HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.
- "FREE OIL FILTERS" advertised the La Mesa oil filter exchange event which encouraged residents to bring used oil filters to be recycled and to receive a free one in exchange.
- "EXCITING VOLUNTEER OPPORTUNITIES!' listed volunteer programs such as the Adopt-a-Park program which encouraged residents to help with the upkeep of the City of La Mesa parks and provided a phone number for more information.
- "SHARPS DISPOSAL HAS NEVER BEEN EASIER!" listed types of sharps, HHW, and information regarding proper disposal methods with a phone number and website for more information.

- "OVER IRRIGATION IS MONEY DOWN THE DRAIN" informed residents on the potential threats of over irrigating and provided information on programs to help conserve water and a phone number for the City's Storm Water Hotline.
- "STORM WATER POLLUTION PREVENTION REQUIREMENTS" informed residents of the City's strict requirements set by the State of California regarding storm water pollution and educated the public on potential everyday pollutants. It also listed ways that residents can help decrease or maintain low pollutant concentrations.

Other Educational Outreach Materials and Activities
The City has continued to provide storm water information and contacts on their website (www.cityoflamesa.com). The City's Storm Water Hotline also provides a medium for City residents to obtain storm water information and file storm water related complaints. Other educational outreach materials and activities that targeted residents are discussed in detail in Sections 8 of this report.

During 2009/2010, the City continued to participate in the Regional Residential Education Program.

6.4.1.1 HHW Events

The City hosted eight HHW collection events throughout the 2009/2010 reporting period at the City's EDCO station on Commercial Street. Door-to-door pick-up was also offered for disabled and senior residents. A total of 938 people participated in the events, and 134,782 pounds of HHW were collected. HHW flyers or the Regional Guide for Household Hazardous Waste Reduction & Disposal in San Diego County were on hand if residents requested educational materials. About five pieces of educational material were distributed per event.

Other Collection Events
In addition to the HHW disposal events, the City hosted the La Mesa Spring Clean Up on two consecutive Saturdays during 2009/2010. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste without charge. Details about this event can be found in Section 9 of this report.

6.4.2 Compliance and Enforcement

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the Storm Water Hotline, and observations made by the City's municipal personnel. To help focus efforts on high priority areas, the City generated a map of the high TTWQ areas in the City and distributed it to Public Works staff. Staff was instructed to be especially vigilant for potential threats to storm water quality in these areas of the City and was told to report any observed threats to the Storm Water Hotline. A copy of the map is included as Attachment 6.1. If a potential to impact water quality is present

the City provides a verbal warning, written warning, Notice to Comply (NTC), and NOVs as applicable. The City received 54 residential-related complaints during this reporting period. Complaints were submitted through the Storm Water Hotline and through La Mesa's Request Tracker and the Civic Plus website as well as internally through the Public Works Department; the City's complaint log is included as Appendix B to this annual report.

Two written warnings, four NOVs, one verbal warning, and two enforcement letters were issued to residents and/or landlords during this reporting period. Many of the complaints verified involved residents who were unaware of residential BMPs. These issues were resolved with a verbal warning and distribution of educational materials. The City issued NOVs to more serious violations including, washing paint directly into the street, presence of loose dirt and debris onsite, onsite junk storage, and a hydraulic fluid spill. City personnel also cleaned areas in the public right of way as necessary to resolve complaints. All residential complaints were resolved and no further actions, such as fines or reports to the RWQCB aside from this JURMP Annual Report, were deemed necessary.

6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's residential component have been made since that time.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008 RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2009/2010 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2010.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2009/2010, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, residents, and underserved audiences. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component and of its storm water program during the reporting period are provided in the remainder of Section 8.

- The City has hosted six training events/meetings for approximately 32 municipal personnel.
- During 2009/2010, the City's quarterly newsletter, the *La Mesa Focus*, featured several articles highlighting storm water topics aimed at businesses and residents of the City.
- Educational materials were made available to project proponents and City personnel at City Hall through the informational Storm Water Bulletin Board.
- The City partnered with ILACSD to educate residents at special events and through school presentations during 2009/2010.
- The City provided financial support and educational materials for a booth hosted by the Solana Center for Environmental Innovations (Solana Center) at Earth Fair in Balboa Park on April 18, 2010.
- Approximately 50 vendors at the City's Oktoberfest event were provided with a handout entitled "Tips for Outdoor Vendors".

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention.

The informational storm water bulletin board at City Hall is continually updated with information on storm water topics such as BMPs. The bulletin board is visible to City personnel, project proponents, and other City Hall visitors. In addition, there are educational materials for the public to take located at the bulletin board such as storm water hotline magnets, IPM cards, and residential storm water pollution prevention trifolds. Additionally, the City has sent e-mails to its staff encouraging the participation in the California Coastal Clean-Up Day and the City's Park Appreciation Day. Each e-mail was sent to over 200 City staff members.

Table 8-1, below, includes all training sessions that were provided for various municipal departments during 2009/2010.

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
1	10/7/2009	Municipal Training	City's seasonal construction requirements for dry and wet weather; erosion and sediment control; material management practices; construction inventory; enforcement actions and procedures; new general construction permit	9 Public Works/ Engineering Employees
2	2/25/2010	FOG Seminar	General FOG info, grease traps and interceptors, case studies, SSO reduction (FOG and SSOs), inspection and evaluation	3 Public Works/ Engineering Employees
3	3/17/2010	Municipal Training	City's updated SUSMP, Low-Impact Development (LID) requirements, engineering submittals, forms, and website information	7 Public Works/ Engineering, 1 Building Division, 1 Community Development Employees
4	3/23/2010	One Day Environmental Enforcement Training	Conducting effective interviews; access, entry, and warrants; evidence to prove a violation; enforcement options and case development	Storm Water Program Manager and Engineering Technician I
5	3/31/2010	Industrial/ Commercial Training	Industrial/Commercial BMP enforcement, implementation, and monitoring data review	1 Public Works/ Engineering Employee

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
6	5/26/2010	Process Improvement Team (PIT) Meeting	Storm water standards	7 Community Development, 1 Building Division, and 2 Public Works/ Engineering Employees

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, residential areas, and underserved audiences. These efforts promote storm water awareness and BMP implementation.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Violations of the City's BMP requirements are corrected through enforcement actions as necessary. For each inspection, facility personnel received verbal education on the importance of implementing proper BMPs. Additionally, a letter describing the City's inspection program and BMP requirements was sent to all industrial and commercial businesses selected for routine inspection during 2009/2010.

As previously mentioned, the City's quarterly *La Mesa Focus* newsletter 2009/2010 featured several articles highlighting storm water topics that were aimed at businesses and residents of the City. Examples of such articles included "Avoid the Clog by Eliminating FOG," "Save Money by Preventing Over-Irrigation," and "Storm Water Pollution Prevention Requirements." Newsletters published during 2009/2010 are included as Attachment 5.3.

During 2009/2010 reporting period, the City distributed a handout with tips for outdoor commercial vendors (Attachment 8.1). These handouts were distributed to vendors that had booths at the Oktoberfest event, which is the City's largest special event. A total of 50 of these handouts were distributed. The handout detailed specific BMPs that could be implemented by the vendors at the event and detailed the difference between the storm drain system and the sanitary sewer system.

8.3.2 CONSTRUCTION SITE OWNERS AND DEVELOPERS

Due to the nature of activities, construction sites have the potential to discharge many types of pollutants to receiving waters if not managed properly. Many construction site owners, contractors, and developers visit the City's Engineering Division to apply for necessary

permits. The Storm Water Bulletin Board located across from the front counter where permits are issued, includes material about construction BMPs to provide education for these parties. Several construction related brochures, specifically the construction site management tri fold and a construction SWPPP tri fold are available for project proponents to take from the bulletin board.

8.3.3 Residential Areas

Since residential areas make up more than half the City, the City understands the importance of reaching this particular audience through educational outreach programs. During October 2009 and February 2010, ILACSD visited local schools of various aged students with prepared storm water presentations. The City also continued to publish the *La Mesa Focus* newsletter (Attachment 5.3), which reaches residents in the City. As previously mentioned, several storm water articles were included in the newsletters distributed in 2009/2010.

The City's Storm Water Bulletin Board provided information to residents that may have been visiting City Hall. Various posters provide storm water information and information about clean-up events. Additionally, there are several brochures and fact sheets available for the public to take, which included IPM cards (Attachment 5.2), Over-irrigation Fact Sheet (Attachment 8.2), Chollas Creek TDML Fact Sheet (Attachment 8.3), residential Preventing Urban Runoff Pollution trifold (Attachment 8.4), and the Pools and Spas Fact Sheet (Attachment 8.5).

The City also continued to partner with Target and Dixieline Lumber in La Mesa to provide English and Spanish versions of the IPM cards at the checkouts of each business' garden center (Attachment 5.2). Educational material was also distributed at various events in the City, such as the "Sustain La Mesa" Environmental Festival, Intergenerational Games, and Kids Care Fest. Materials distributed included the residential Preventing Urban Runoff trifold (Attachment 8.4), San Diego River and San Diego Bay fact sheets (Attachment 8.6), and magnets encouraging residents to recycle used oil and used oil filters. Other media like pencils, temporary tattoos, and stickers with storm water messages on them were also provided during special events. Details of the events are included in Section 9.

In addition to the educational materials that were provided at various locations and during various events, the City continued to display storm water-related educational material at storm water kiosks at select City parks. The City now maintains three kiosks in three City parks. Additionally, in May 2010, the City received approval from the Harry Griffen Park Joint Powers Authority to construct a new storm water kiosk in Harry Griffen Regional Park which is slated for 2010/2011. Educational material such as the San Diego River Watershed Fact Sheet (Attachment 8.6), Over-irrigation Fact Sheet (Attachment 8.2), Pool and Spas Fact Sheet (Attachment 8.5), a residential Preventing Urban Runoff Pollution trifold (Attachment 8.4), and a Helix Water District trifold were displayed at the kiosks for patrons of the park.

Figure 8-1. Storm Water Kiosk

The City website, www.cityoflamesa.com, is another resource for City residents to become familiar with the design and intended utilization of the storm drain system, proper HHW disposal, alternatives to hazardous household products, find information regarding volunteer opportunities, applicable City contact information, and IPM cards. As previously mentioned, the City provided electronic copies of each *La Mesa Focus* newsletter on the website during 2009/2010.

8.3.4 Underserved Communities

As discussed in the City's JURMP, the City has identified the several residential areas along University Avenue as "underserved" communities. Two residential areas have been identified as Low/Moderate Income Block Groups. A third area has been identified as a Hispanic Household Concentration area. In an effort to promote outreach and education in these underserved communities, the City has developed Spanish versions of several educational materials distributed to residents. Another effort implemented by the City is the utilization of the Spanish language option on the City's Storm Water Hotline. The City plans to continue outreach to these underserved communities by providing more educational programs in future reporting years.

8.3.5 Complaint Investigations

To further aid the process of identifying illegal discharges, the City encourages the public and City staff to report IC/IDs. In addition to the City's Storm Water Hotline, Public Works also has a maintenance hotline for complaints regarding issues with the MS4 and sewer lines. These complaints are followed up by Public Works personnel. If a representative for the targeted business, residential area, or construction site is present, the inspector will provide site-specific information regarding storm water issues including applicable educational materials.

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2009/2010 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder the effectiveness assessment for this program component.

Impressions Made

The City has continued to provide residents and businesses storm water-related education through inspections, distribution, and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session. Printed educational materials and other items such as pencils and stickers are assumed to generate three impressions each.

Table 8-2 details the number of impressions made by the City during this reporting year. The number of impressions decreased during 2009/2010 as compared to other reporting periods. The City discontinued the distribution of hard copies of the *La Mesa Focus* newsletters to conserve paper, which accounts for this decrease.

Table 8-2
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Municipal Inspections	22	Inspections	110
Industrial/Commercial Inspections	114	Inspections	342
Construction Inspections	69	Inspections	207
Training Session/Activities and Events	4,136	Attendees	16,544
Complaint Investigation	84	Investigations	252
Reusable Grocery Bags	3,130	Bags	9,390
FOG Binder	166	Binders	498
Storm Water Activity Book	57	Booklet	171
Automotive Recycling Guide	2	Brochures	6
Chollas Creek TMDL Fact Sheet	39	Brochures	117
IPM Cards (English/Spanish)	150	Brochures	450
Over-Irrigation Fact Sheet	33	Brochures	99
Pool and Spa Fact Sheet	3	Brochures	9
Residential Preventing Urban Runoff Pollution	155	Brochures	465
San Diego Bay Watershed Fact Sheets	64	Brochures	192
San Diego River Watershed Fact Sheet	42	Brochures	126
Tips for Outdoor Vendors	50	Brochures	150
2010 Regional Storm Water Calendar	500	Calendars	1,500
La Mesa Focus Newsletter	929	Newsletters	2,787
Recycling Pencil	140	Pencils	420
Oil Rags	100	Rags	300
Recycling Sticker	29	Stickers	87
Temporary Recycling Tattoos	140	Tattoos	420
		Total	***34,642***

8.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was updated in March 2008. No changes to the City's education component have been made since that time.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, cleanup events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Collaboration between the City and the community should help encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component and of its storm water program during the reporting period are provided in the remainder of Section 9.

- During 2009/2010, the City hosted clean-up events at Alvarado and University channels as part of California Coastal Cleanup and Creek to Bay Cleanup. Approximately 64 volunteers removed over 1,316 pounds of trash and debris and 53 pounds of recyclables during these events.
- The City hosted 8 HHW collection events. A total of 938 individuals disposed of 134,782 pounds of HHW in these events.
- The Solana Center hosted two used oil filter exchange events at Kragen Auto Parts in La Mesa. A total of 37 individuals traded a used oil filter for a new one.
- Similar to previous years, the City hosted the La Mesa Spring Cleanup event on two separate weekends during 2009/2010. A total of 1,556 participants disposed of 544 tons of large items, green waste, and other trash and 150 tons of recyclables.
- Volunteers for the City's Adopt-a-Block, Adopt-a-Park, and Canine Corner programs, continued to involve residents in keeping local streets and parks free of litter and pet waste.
- Similar to previous years, the City held Park Appreciation Day, a cleanup event occurring throughout 12 City parks. A total of 291 volunteers collected 95 cubic yards of green waste and 16 cubic yards of trash.
- The City contracted ILACSD to present "Operation Cleanup," an interactive watershed game, at the Intergenerational Games and Kidscarefest.

9.2 Public Participation Activities

Cleanup Events and Programs

During 2009/2010, the City hosted various cleanup events and activities at various locations in the City. Cleanup events provide a direct benefit to water quality and an opportunity for the City to distribute educational materials and information to the event's volunteers.

California Coastal Cleanup Day

The City hosted the California Coastal Cleanup Day in specific areas of Alvarado and University channels on 9/19/2009. A total of 9 volunteers removed over 17 pounds of trash and 3 pounds of recyclables at the Alvarado site, and 18 volunteers removed 550 pounds of trash and 125 pounds of recyclables in the channel and surrounding walkways at the University site.

At Alvarado Channel, volunteers were given a pre- and post-event knowledge assessment tests. The pre-test was given to participants before City personnel presented an overview of storm water pollution prevention and watershed concepts. A post-test was given immediately after City personnel finished the brief presentation. The results of the survey showed that the event left participants with a better understanding of which watershed they were in at the event, what defines a watershed, and how their indirect and direct actions can impact the environment. After the presentation, all volunteers were aware that they were in the San Diego River Watershed and how their actions can affect environmental quality.

Park Appreciation Day

Park Appreciation Day was a cleanup event held throughout 12 parks in the City on 10/24/2009. A short presentation was given by the site captain regarding watershed concepts, local watersheds' constituents of concern, the benefits of cleanups, and the TMDL for the San Diego Bay. Chollas Creek was mentioned at the parks that fell within the San Diego Bay Watershed. A total of 291 volunteers worked to collect over 95 cubic yards of green waste and 16 cubic yards of trash between all 12 locations.

Creek to Bay Cleanup

The City hosted the Creek to Bay Cleanup in specific areas of Alvarado and University channels on 4/24/2010 and 4/25/2010. At Alvarado Channel, 23 volunteers participated in removing 450 pounds of trash and 25 pounds of recyclables. At University Channel, 16 volunteers removed 350 pounds of trash and 10 pounds of recyclables (Figure 9-1). City personnel briefly explained watershed concepts, pollutants of concern, and required BMPs to all event volunteers. At the University Channel site, event volunteers were also presented with information on the TMDL for Chollas Creek. These cleanup events and results were advertised on the City website and were posted on the City's Storm Water Bulletin Board.

Similar to the California Coastal Cleanup Day event, volunteers received a pre- and post-knowledge assessment tests at the University Channel and Alvarado Channel sites. The pre-test was given to participants before City personnel presented an overview of

storm water pollution prevention and watershed concepts. A post-test was given immediately after City personnel finished the brief presentation. The results of the survey showed that the event left participants with a better understanding of which watershed they were in, what defines a watershed, and that the Chollas Creek has a TMDL for pesticides and metals. The increased level of storm water understanding was illustrated by the post-test results.

Figure 9-1 – Creek to Bay Cleanup at University Channel

Adopt-a-Park and Adopt-a-Block

The City's Adopt-a-Park Program has continued to involve local businesses, schools, service organizations, families, and other individuals in keeping the City's parks free of trash. Currently, many of the public parks in La Mesa have been adopted. Volunteers involved in this program are encouraged to remove trash on a regular basis from City parks and open spaces.

Similarly, the City's Adopt-a-Block Program promotes cleanliness in the City by encouraging City residents to keep neighborhoods free of trash and debris. Volunteers pick up trash during normal daily activities, such as daily walks in their neighborhood. Individuals utilize City-provided trash bags or may choose to collect trash prior to trash collection day so that litter and debris can be deposited into any available trash can along the street.

Canine Corners

Canine Corners volunteers pick up pet waste in designated areas of Harry Griffen Regional Park. Volunteers also advocate patrons of the park to pick up after their pets. This prevents pet waste and associated bacteria and viruses from being discharged to

the City's MS4. In combination with the City's Adopt-a-Park and Adopt-a-Block programs, volunteers have continued to remove trash and pet waste from various parks and streets throughout the City.

Saint Madeline Sophie's Center
The City maintains a contract with Saint Madeline Sophie's Center, which employs developmentally disabled individuals to aid in picking up trash and debris at various parks throughout the City. The scope of services includes trash and debris cleanup, emptying trash receptacles and replacement of plastic liners, sweeping/cleaning picnic area tables, as well as some janitorial responsibilities at the park restrooms. Crews consist of three to five individuals and a job coach. Parks included in this program are Aztec Park, Collier Park, Highwood Park, Jackson Park, La Mesita Park, Northmont Park, Rolando Park, Sunset Park, Sunshine Park, and Vista La Mesa Park.

Hazardous Waste Collection and Used Oil Recycling Program
The City's Community Hazardous Waste Collection and Used Oil Recycling Programs encourage City residents and business owners to properly dispose of HHW. The City hosted eight HHW collection events at EDCO's disposal transfer station facility, which is located near the center of the City. As previously mentioned, events were advertised in the City's *La Mesa Focus* newsletter (Attachment 5.3), which was circulated electronically to hundreds of residents and businesses in the City. A total of 776 people from La Mesa and an additional 162 residents from Lemon Grove and other jurisdictions participated in the events; a total of 134,782 pounds of HHW was collected. In January 2010, the City began a grant funded Pennysaver campaign that may explain the increase in hazardous waste disposal from previous years. Door-to-door pickup service was also provided for the senior and disabled communities.

By means of the California Integrated Waste Management Board grant and the Solana Center, La Mesa organized two used motor oil filter exchange events on February 27, 2010, and on June 12, 2010 at Kragen Auto Parts. A total of 37 people participated and exchanged 48 used oil filters for a total of 36 new filters. In addition to the filter exchange, participants disposed of approximately 10 gallons of used oil and were provided with a storm water magnet and the County's storm water automotive guide. The events were advertised in the *La Mesa Focus* newsletter. Throughout the City of La Mesa, there are also 11 certified collection centers for used oil (according to calrecycle.ca.gov).

Other Waste Disposal
The City hosted the La Mesa Spring Clean Up event on two consecutive Saturdays in 2009/2010 (4/10/2010 and 4/17/2010). Residents were allowed to bring large items, unwanted household materials (not including HHW), and green waste to the EDCO location in the City for free disposal. A total of 1,556 vehicles disposed of approximately 544 tons of waste and 150 tons for recycling. Participants were provided with a flyer for re-entry that included information regarding proper HHW disposal at City events and mixed construction and demolition debris (C&D) disposal at EDCO's SANCO Resource Recovery Facility.

Public Reporting
As discussed in Section 4, complaints are received through the City's Storm Water Hotline and online website reporting system. The number for the hotline is advertised in articles published in the *La Mesa Focus* newsletter and on various educational materials given out at public outreach events. The residential, industrial, commercial, construction and municipal communities are encouraged to utilize the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable.

9.3 Outreach Events

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include the participation of commercial businesses in distributing educational materials and the City's participation in regional meetings and events.

Kids Care Fest
Kids Care Fest is a free event designed to promote healthy living and mindsets for children and their families. The festival was held at Briercrest Park on September 26, 2009. I Love A Clean San Diego (ILACSD) hosted a booth and used the interactive watershed model to demonstrate storm water pollution concepts and emphasize the importance of keeping waterways free of pollutants. Approximately 500 people visited the ILACSD storm water booth during the festival. During the event, 100 temporary recycling tattoos, 80 recycling pencils, 57 storm water activity books, 29 recycling stickers, and 19 residential trifolds were distributed to the public.

Intergenerational Games
ILACSD also hosted a booth at the Intergenerational Games at the La Mesa Middle School on October 9, 2009. During this event, ILACSD displayed the "Operation Cleanup", an interactive watershed game for children, where pollutants are located and removed from the model (Figure 9-2). This allowed for explanation of storm water pollution concepts, emphasizing the importance of a healthy environment. Approximately 100 students visited the booth and a total of 40 recycling temporary tattoos, 30 recycling pencils, five San Diego Bay fact sheets, San Diego River fact sheets, and five Chollas TMDL fact sheets were distributed.

Figure 9-2 – ILACSD booth at the Intergenerational Games

La Mesa Antique Village Street Faire

The La Mesa Antique Village Street Faire is an annual street fair which features 100 vendors, displaying genuine antiques & collectibles only, music, food, and free parking and admission. On March 28, 2010, the City's Public Works Department hosted a booth at the event and distributed 100 oil rags, 100 reusable bags, 20 San Diego Bay fact sheets, 20 residential trifolds, and 2 Automotive recycling guides.

Oktoberfest

Oktoberfest is the largest festival in the City and was held from October 2, 2009 through October 4, 2009. As previously mentioned in Section 8.3.1, approximately 50 vendors at the event were provided a handout entitled "Tips for Outdoor Vendors" (Attachment 8.1). This handout listed constituents of concern and BMPs during events designed to eliminate pollutant discharges.

"Sustain La Mesa" Environmental Festival

On September 12, 2009, the "Sustain La Mesa" Environmental Festival was held at Harry Griffen Regional Park that was attended by more than 500 people. There were booths and activities emphasizing water conservation, storm water pollution prevention, energy efficiency, sustainable gardening techniques, and recycling. ILACSD had a booth with a Coastal Cleanup Day sign-up sheet and educational materials, such as San Diego Bay and River fact sheets and residential Preventing Urban Runoff Pollution trifolds. During this event there was an electronic waste and recyclables collection. Electronic waste, metal, plastic numbers 1-7, plastic bags, blister pack, six pack rings, bubble wrap, and Styrofoam packaging were collected. Throughout the festival, speakers from the Solana Center, National Wildlife Foundation, and the California Center for Sustainable Energy spoke to the public. The City's Public Works Department also hosted a booth at the event and

distributed 30 residential trifolds, 30 over-irrigation fact sheets, and 30 storm water flyers with "Ten Ways to Prevent Storm Water Pollution".

ILACSD School Presentations

During 2009/2010, ILACSD was contracted to conduct storm water pollution prevention presentations for La Mesa Middle School and Helix High School. One presentation was made to the 90 6th graders at La Mesa Middle in October 2009. One hundred twenty students in 9th through 12th grade from Helix High School attended the storm water presentation on their campus in February 2010.

Storm Water Information Kiosks

As mentioned in Section 8, the City has continued to work with local Eagle Scouts to construct storm water kiosks. The park kiosks present storm water pollution prevention information to park patrons. During 2009/2010, outreach material was updated and educational events were publicized throughout the year at the kiosks. In May 2010, the City received approval from the Harry Griffen Park Joint Powers Authority to construct a new storm water kiosk in Harry Griffen Regional Park which is slated for 2010/2011.

Business Participation

As previously discussed in this report, the City's Storm Water Program Manager has continued to work with two businesses in La Mesa, Target and Dixieline Lumber, to distribute IPM cards (Attachment 5.2). Each business was provided with approximately 75 Integrate Pest Management (IPM) cards each. The IPM cards were developed as part of a regional effort to combat pesticide pollution and increase the utilization of IPM techniques. Target keeps the educational materials in its garden center due to the likelihood of individuals visiting that portion of the store purchasing pesticides. Dixieline Lumber keeps the cards at the registers for customers to take while checking out. Providing educational materials that customers may take home and review before using the purchased products may mitigate the negative impacts they have on receiving water bodies.

Chollas Creek TMDL Stakeholder Meetings

The jurisdictions named as dischargers for Chollas Creek TMDLs regularly meet to share information, develop reports, and discuss strategies. The City actively engaged in the annual public stakeholder meeting on June 21, 2010 located at the Martin Luther King Recreation Center at 6401 Skyline Drive in San Diego, CA.

Storm Water Copermittee Meetings and Other City Participation

The meetings of various storm water Copermittee workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City continued to attend several of these meetings during the reporting period and will continue to do so during the 2009/2010 reporting period.

9.4 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's public participation component have been made since that time.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City's Sanitation Fund provides funding for the Storm Water Program. There have not been any changes to this funding mechanism during this reporting period. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City has used this template to report the 2009/2010 expenditures and funding sources in this JURMP Annual Report.

San Diego County Copermittees Fiscal Analysis Report for Urban Runoff Management Programs

EXPENDITURE SUMMARY

JURISDICTIONAL COMPONENTS	
Administration	$98,830.08
Development Planning	$19,665.06
Construction	$10,336.16
Municipal	$2,315.21
Industrial and Commercial	$21,411.21
Residential	$1,000.73

Administration (1)	0
Cost Share Contribution	$50.00
Other (2)	0
TOTAL	$50.00

(1) Administration – includes assessment, reporting, management, etc.
(2) Other – examples include regional and special studies.

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

The City regularly evaluates its storm water program to make it as effective as possible at reducing discharges of urban runoff related pollution to the MEP. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP, and the City has refined those metrics in the reporting periods since then.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual

program activities or individual programs. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome Level Assessments

Level 1

Level 1 outcomes are basic measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

Levels 2 and 3

See tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Figure 11-1 compares storm water complaint data from this fiscal year to past years. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

Level 4

Tables 11-1 through 11-8 at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is possible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. Reliable load estimation methods have not yet been developed for most other programs. Note that the City has installed Calsense in various City parks and medians, as described in Section 4. Calsense is designed to decrease water usage, which is likely to have reduced the load of pollutants potentially transported by irrigation runoff.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. The City also performs an additional monitoring program at six sites; five of these sites are located in the City's MS4, and one is located in an improved channel that has also been identified as a receiving water body. In 2009, the City began collecting MS4 outfall water quality data to help characterize pollutant discharges from its MS4, although not enough data to make definitive conclusions has been collected at this point.

Figures 11-2 through 11-5 are graphs that present historical Dry Weather Monitoring results and trends. Ammonia–nitrogen and detergents, the two constituents with the longest historical data record, both show decreasing trends over time. No discernable trend is apparent for other field screening constituents.

Level 6

No Regional Monitoring Program stations are located within or close to the City of La Mesa. The western portion of Alvarado Channel is the only receiving water body within City limits. The City has monitored sites at the downstream point of the Alvarado and

University drainage basins in the past and continues to monitor the University site as a collaborative activity associated with the Chollas Creek TMDL. No long terms trends have been identified in data from these sites. The City will continue to work with the San Diego River and San Diego Bay WURMP workgroups to improve the quality of water bodies downstream of the City of La Mesa.

11.2.2 Overall Component Assessments

Development Planning

The City's review process for development projects effectively requires higher removal efficiency BMPs. City interaction with responsible parties during the reporting period has resulted in BMP installation and a greater level of awareness of the need for regular treatment control BMP maintenance within the City, particularly with newly completed projects. The City will continue to work with the parties responsible for maintenance of treatment control BMPs during 2010/2011.

Construction

Available data indicate that on the whole the City's construction program effectively requires BMP implementation. Any BMP deficiencies noted are typically remedied promptly. Since the City had in the past received some hotline calls about poor BMP implementation at a few small projects, the City inspected all low priority construction sites in 2009/2010 and notified small projects and homeowners of the City's BMP requirements.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. In particular, the City sweeps its streets more often than the permit requirements to aid in WURMP efforts. The City has also installed drainage inserts along University Avenue and at the Public Works Operation Center to reduce the discharge of pollutants. Additional treatment controls, two Filterra bioretention system units, were installed in the University drainage basin during 2009/2010. The City has implemented a sophisticated system, Calsense, to control irrigation runoff from parks and medians. The City also distributes pet waste bags through dispensers in its parks.

Industrial and Commercial

The City hired a new storm water employee during 2009/2010 to fill a dedicated storm water inspector position. The inspector works with businesses during and following inspections to ensure compliance. 2009/2010 the City followed-up with non-compliant sites and will continue to do so into 2010/2011.

The City continued invoicing businesses in order to recover costs of inspections and it appears that this practice has stimulated more interest in the program and more of a desire to comply with regulations. The practice of charging businesses for each routine inspection and follow-up visit provides the additional benefit of encouraging businesses to comply in a timely manner.

Residential
The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. Residential areas within the City designated as high TTWQ receive additional attention from storm water staff to check for evidence of IC/IDs and high TTWQ activities.

Illicit Discharge Detection and Elimination
The City's IDDE program has effectively responded to complaints. No IC/IDs were observed during the 2009 Dry Weather Monitoring Program. There was one SSO during the reporting period, the effects of which were mitigated by containing and cleaning the spill. City staff were able to fully capture the volume of the spill, indicating the City's response and SSMP are effective. The City will continue to respond appropriately to SSOs and take action to prevent and eliminate IC/IDs.

Education
During 2009/2010, the City continued to educate various communities in the City. The City continued to work with local garden supply retailers to distribute IPM cards. The City also continued to distribute the quarterly *La Mesa Focus* newsletter, each issue of which included articles about storm water pollution prevention, to residents and businesses in the City.

Public Participation
The City continued to encourage participation in public events, such as cleanup events, and reporting potential storm water violations via the City's Storm Water Hotline. Hotline calls decreased between 2008/2009 and 2009/2010, which may indicate decreased number of storm water issues occurring in the City.

11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External No new projects subject to SUSMP requirements submitted reports during 2009/2010. However, it appears that the level of knowledge is increasing among projects installing and maintaining BMPs. Internal The City's Storm Water Program Manager worked with engineers in the City to improve their level of understanding of the new SUSMP requirements in March 2010. The City's consultant is available to review WQTRs submitted to the City.	Overall WQTR approval rate during reporting period	0%, only one new priority project was reviewed	N/A, addressed through other significant activities for this component
		Number of projects requiring three or more reviews prior to WQTR approval	N/A, no new projects approved	
		Percent of projects proposing BMPs besides filter inserts		
		Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern		
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of projects implementing proposed BMPs	100%, due to City follow-up	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Verification letters were sent to all 15 projects on the City's inventory. Internal N/A, verification letters were prepared by the City's consultant.	Percent of sites properly maintaining BMPs	100%, due to City follow-up	Load reduction can be achieved through regular BMP maintenance.
		Resolution status of enforcement actions	See Section 2	
		Percent of sites submitting proper verification forms	100%, due to City follow-up	
		Percent of sites certifying proper maintenance	100%, due to City follow-up	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by permit conditions, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of projects implementing required BMPs by end of reporting period	100%	Proper BMP implementation is likely to have reduced pollutant loading.
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8.	Percent of inspected facilities/activities in compliance with BMP requirements	95%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	See Section 4	Number of pet waste bags distributed	22,500
		Number of dry weather monitoring exceedances traced to municipal sites	0		
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	568 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	0.10 tons/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume) not including debris removed from treatment BMPs	249.25 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO discharge to MS4 (gallons)	0 gallons
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of sediment and debris removed from treatment BMPs	14.25 cubic yards
				BMP effectiveness studies	N/A
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External The City's inspector regularly interacts with business owners and provides site-specific BMP corrective actions at each full inspection visit. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City regularly hosts and attends training events. See Section 8 for more detail on specific training sessions.	Percent of inspected sites in compliance with BMP requirements (not including follow-ups)	91%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	0	Number of IC/IDs eliminated (inspections and complaint investigations)	1
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in variety of ways in 2009/2010; see sections 6 and 8 for details. Internal The City's Stormwater Program Manager is heavily involved in the implementation of the residential component. Other City staff involved in the program also have a good understanding of the goals of the storm water program.	Number of residential incidents reported to storm water hotline	54	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Stormwater Program Manager trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Section 7.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Section 7 are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventative inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	There was one SSO during the reporting period; overflow was fully captured in the majority of the overflows.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2009/2010.
	Estimated number of impressions made	34,642		

Notes

Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details. See Figure 11-1 for a summary of hotline reports in recent years.	Number of attendees at events	4,136	Amount of trash and debris collected at cleanup events	1,530 lbs.
		Number of calls received to the storm water hotline	84	Amount of HHW collected	134,782 pounds of HHW, 48 oil filters, and 10 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

12.0 Special Investigations

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (to be reported as part of the Illicit Discharge Detection and Elimination component in December), no special investigations were needed or conducted during this reporting period.

13.0 NON-EMERGENCY FIRE FIGHTING

Please reference Section 4.2.3 of this JURMP Annual Report for information about BMPs and procedures associated with non-emergency fire fighting activities.

14.0 JURMP REVISIONS

Changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 Conclusions and Recommendations

During 2009/2010, the City of La Mesa continued to implement its storm water program based on the 2008 JURMP. Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

Notes

TTWQ – Threat to Water Quality

SIC –Standard Industrial Classification Code

Basin – City of La Mesa drainage basin. HSAs are as follows: Alvarado and Lake Murray (907.12; San Diego River Watershed), University and Lemon Grove (908.22, San Diego Bay Watershed), Spring Valley (909.12, San Diego Bay Watershed)

Mobile – Mobile business

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water

APPENDIX B

Appendix B
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
1	7/9/09	Storm Water Hotline	Windsor Hills Baptist Church Orien Drive behind Helix High School	Residential	Small amount of water is flowing down the curb from above the church. Water is not coming from the storm drain but a crack in the curb/pavement.	Talked with caretaker regarding overwatering in rear. He assured that he wasn't watering much. Appears to be a ground water (curb line is below a steep hill).	None
2	7/13/09	Storm Water Hotline	Baltimore Shell Gas Station	Ind/Com	Small amounts of flow are coming out of the 3" curb outlet. Appears to be wastewater coming from the car wash.	Spoke to manager who indicated that he had pumped the water to the sewer yesterday. He reported he would investigate if there is some sort of cross connection. Followed Up October 6th, problem fixed. Leaky irrigation line to buried landscaping drain.	Preventing Urban Runoff Tri-Fold
3	7/13/09	Storm Water Hotline	4759 Harbinson Road	Utility	SDGE has placed dirt and debris on the curb line within their overhead easement. Sandbags and tarp has blown over.	SDGE was contacted and has agreed to fix.	None
4	7/22/09	Code Compliance	3840 Riviera Drive	Residential	Loose dirt and debris/erosion onsite.	Letter to owner of property. Area hydroseeded.	Notice of Violation
5	7/29/09	Code Compliance	6965 Alamo Way	Residential	Green swimming pool water being discharged to curb/gutter.	Site visited, and no pumping was observed.	Pool/Spa Fact Sheet

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
6	7/30/09	Storm Water Hotline	US Carpet Care 5925 Samuel Street	Ind/Com	Report that a US Carpet Care Van was discharging material into the storm drain system via a manhole on Samuel Street.	Spoke with manager about the possible violations and fines, and she ensured that she would investigate the crew and deal with the issue internally. She stated that crews are aware of protocol and that dumping down the storm drain is never allowed.	None
7	7/30/09	Code Compliance	4630 Palm Avenue	Ind/Com	Henry's Marketplace was flushing their fire sprinkler system into adjacent concrete ditch leading to storm drain system.	Talked to the manager about doing this and precautions that must be taken.	None
8	8/4/09	Code Compliance	9038 Molly Woods Avenue	Residential	SFH empty lot received grading permits from City and began work, but owner allegedly committed suicide and project halted. Needs BMP maintenance and erosion control measures.	Will send enforcement letters to next of kin owners or other we can find on permit. BMP issues relatively minor; this issue remains ongoing.	None
9	8/4/09	Public Works	4220 Bancroft Drive	Residential	Tree branches and debris dumped into drainage area.	PW removed debris.	None

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
10	8/5/09	Storm Water Hotline	5315 Kiowa Drive	Residential	Residents (renters) at 5315 Kiowa were reported to be dumping motor oil onto curb. There were oil stains in the street and gutter. It appears that someone changed the oil in the street and it leaked.	Informed residents of the code violation and fine for dumping. Residents said they would not work on cars onsite and would not dump anything. They were receptive and understood the problem.	SD County Automotive Oil Recycling Guide
11	8/11/09	Storm Water Hotline	NW Corner of La Mesa Boulevard and Palm Avenue	Ind/Com	Significant amount of grease on the sidewalk in front of Por Favor Restaurant.	Site visited and observed a greasy area on Palm Avenue that had been recently cleaned up. No illicit dumping was observed or any runoff issue. Sidewalk is dirty from an accumulation of grease and grime. Complainant was informed of the anticipated cleaning schedule.	None
12	8/14/09	Storm Water Hotline	House at corner of Manor Drive and W Manor Drive	Residential	Overwatering: irrigation running down the street.	Talked to elderly resident, who had forgotten to turn off the water.	Over Irrigation Fact Sheet
13	8/14/09	Civic Plus	9345 Monona Drive	Residential	Pool has a leak and water runs down the street when the filter pump runs.	No flows observed upon site visit. No one was home so educational material left on door.	Pool/Spa Fact Sheet

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
14	8/15/09	Storm Water Hotline	SDGE Massachusetts Avenue and Waite Drive	Utility	Motorist hit and dislodged power pole and transformer. Approximately 5 gallons of non-PCB mineral oil was conveyed to gutter.	100% of Material was recovered by absorbent material.	None
15	8/18/09	Storm Water Hotline	3015 Paula Street	Residential	SFH is doing driveway resurfacing. Dirt and material in the sidewalk.	Spoke with contractor who ensured they would clean it up ASAP. Clean up verified.	Construction Tri-fold
16	8/23/09	Request Tracker	6900 69th Street	Ind/Com	Area behind church and vet hospital is overgrown and full of trash	PW resolved issue.	None
17	8/24/09	Civic Plus	4463 4th Street	Residential	Runoff from neighbors' yard is causing a constant, slimy pooling of water at the curb/street edge where mosquitoes are breeding.	Site visited and small turtle pond is cleaned into a grate leading to the curb. Found an alternate area where resident could do this without discharge to storm drain.	Over Irrigation and Pool Fact Sheets
18	8/28/09	Storm Water Hotline	Blaine Place at Nagles Street (Dallas/Jackson Area)	Residential	Over-irrigation occurs early in the morning.	Site investigated and no issues observed. Returned Sept. 9 and found the house to be 6135 Blaine Place. Educational materials and an NPDES Written Warning was left at the door.	NPDES Written Warning Over Irrigation Fact Sheet

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
19	9/1/09	Resident	NE Corner of Jesse Avenue and Ohio Place (Side of house)	Ind/Com	Work truck dumped something down the storm drain during night. Resident did not get license plate or business name.	Site visited and observed a standard grate with no signs of pollution or dumping.	None
20	9/2/09	RWQCB Staff via Civic Plus	Ralphs Grocery Store Grossmont Drive and Jackson Drive	Ind/Com	Regional Board staff noticed carts being washed down with wash water heading toward the storm drain system.	Store manager was informed and issued a written warning. Manager investigated the issue and contacted the washing contractor.	NPDES Written Warning
21	9/9/09	Civic Plus	6235 Henderson	Residential	Discharging something oily into the gutter on a regular basis.	Site visited and no issue observed. Followed up with complainant but no response.	None
22	9/9/09	Resident	6090 Severin Drive	Residential	Over-irrigation complaint. Tenant says the water is on for 3 hours at a time and creates a torrent in the street from 7pm - 10pm on watering days.	Property manager claims this isn't true. Pictures were forwarded to the property owner who claimed to have fixed the problem.	None

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
23	9/16/09	EPA National Tips Database and RWQCB	4870 Palm Avenue Mailing address: 591 Camino de la Reina Suite 918	Residential	Owner is storing junk in his backyard. Much of it has the potential to impact storm water quality, including rusty metals and broken equipment.	Site investigated and NOV issued since this has been an ongoing issue. Letter sent giving 21 days to clean up and to request a meeting. Owner responded on Sept. 29 and agreed. Owner to obtain a dumpster on Oct. 21. Nov. 20 - Cleaned up 90% of material. Dec. 7 – inspection verified total clean up.	Notice of Violation, Letter to Owner, Residential Sources Tri-fold
24	9/21/09	Public Works	7257 University Avenue	Ind/Com	Trash and debris from storm drain behind location.	PW cleaned up.	None
25	9/29/09	Resident	Complete Auto Repair 7801 El Cajon Blvd	Ind/Com	Observed work being done outside and radiator flushing into street 2 weeks ago.	Spoke with owner who was aware of regulations. Said a car with a leaky radiator was driven onto the lot and fixed immediately. Claims to never dump anything into the street.	Commercial BMP Tri-fold

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
26	9/30/09	Resident	4102 Blackton Drive	Residential	Overwatering and detailing business is washing cars into the storm drain.	Investigated complaint and found that washing machine is not plumbed to sewer and drains to the corner of the property. This was source of water. Individual was washing a car in the street at the time and was told to stop. Owner called a plumber and will plumb the machine to sewer on Oct. 1. Oct. 5 - Washer was plumbed to sewer.	None
27	10/6/09	Resident	Alamo Drive and Patria Drive	Utility	San Diego Resident called and indicated large amount of water flowing down the street. Said the source was in La Mesa.	Investigated and found the source to be in San Diego. Alerted San Diego Water Dept. to a broken water main.	None
28	10/21/09	Code Compliance	Rodeway Inn 4210 Spring Street	Ind/Com	Hotel manager was power washing awning and frontage.	Amount of water used was minimal with most water conveyed to landscaping or evaporating. No discharges noted. Informed manager of City regulations regarding power washing and storm drain discharges.	None

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
29	10/23/09	Public Works	Greater San Diego Air Conditioning 8141 Center Street Sonora Plastering 2420 Palm Avenue Suite 77	Ind/Com	Greater San Diego Air Conditioning hired a contractor to do some stucco/plaster work on their facility at 8141 Center Street. Contractor washed the stucco/plaster down the gutter about 200 yards toward the curb inlet.	About ½ was cleaned up on the afternoon of Oct. 23. Remainder was cleaned up on morning of Oct. 26.	Notice of Violation (2) Commercial BMP Trifold (2)
30	11/5/09	Code Compliance	3840 Riviera Drive	Residential	Homeowner cleared and grubbed a large sloped area which drains toward a brow ditch.	Letter was issued to stabilize the slope with erosion control methods. Nov. 20 - Majority of work completed with hydroseed/tackifier stabilization.	Enforcement Letter

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
31	11/12/09	Storm Water Hotline	4350 Yale Avenue	Residential	Diesel fuel spill in the street.	Investigated and there appears to have been a spill at this location. Fuel is mostly just staining on pavement and gutter. Not a substantial amount of recoverable fuel. A verbal warning and door hanger was left at the residence instructing to call the City and to clean up the material. Nov. 18 - Resident stated that he was not the source but cleaned some of it up. Public Works request was made to investigate spill cleanup.	Pollutant door hanger Verbal warning
32	11/16/09	Storm Water Hotline	7439 Orien Avenue	Construction	Contractor had a hose that was sticking into the storm drain system. (SFH Yard)	Investigated and observed a pump that was conveying spring water from the surface adjacent to a hillside. Contractor was instructed to put a fiber roll in front of the inlet or to preferably put the water into landscaping.	None

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
33	11/20/09	Resident	4314 Corte Sano	Construction	Concrete being washed down storm drain.	Investigated and found an individual washing concrete down the gutter in an attempt to clean up a spill. Instructed owner to clean up all concrete in the gutter. Informed owner and worker that the discharge was illegal and fines could follow as well as storm water rules regarding this kind of work.	Notice of Violation
34	11/23/09	Resident	6217 Primrose Drive	Residential	Broken storm drain pipe at location.	Repaired.	None
35	12/2/09	Civic Plus	4529 Normandie Place	Residential	RV and truck with oil stains in driveway/street.	Instructed homeowner to clean up all fresh oil stains and to place drip pans under all vehicles. Proceeded to clean up material in the street which appeared to be residue from City slurry work on Normandie.	Residential BMP Tri-fold
36	12/2/09	Resident	4555 Date Avenue	Residential	Storm drain has broken up swale in front of it.	PW repaired.	None
37	12/9/09	Public Works	8960 Lemon Avenue	Residential	Straw swale stuck in drainage outlet.	PW repaired.	None

Appendix B (Continued)
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
38	12/15/09	Resident	MTS Property Riviera Drive @ High Street	Residential	Homeless person dumped debris down by a culvert on MTS property.	Dec. 21 - MTS cleaned up the area.	None
39	12/16/09	Resident	8250 Commercial Street	Ind/Com	Drain blockage led to storm water ponding in the rear parking area of a building at 8250 Commercial Street. Building is vacant and empty.	Water had only been there for 2-3 days and was being pumped to a drainage ditch on Commercial Street. Storm water did not appear to be oily, dirty, or a pollution hazard in the local area. Advised the owner to pump as much to the landscaping as possible over a period of days. Dec. 16 – Completed pumping and majority put to landscaping.	None
40	12/23/09	Community Development	5454 Jackson Drive	Construction	Site is doing electrical work and trenching around the structure. No BMPs onsite and some ground water from trenching was conveyed to the street. Poor materials management. Slopes eroding from storm on Dec. 14.	Dec. 24 - Met with contractor and resolved issues.	None

Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
41	12/24/09	Resident	9240 Bramble Road	Residential	Clogged storm drain flows into pool after rain.	PW cleaned out drain.	None
42	1/13/10	Storm Water Hotline	6160 Horton Drive	Residential	Large amount of cigarette butts being routinely discarded into the street and gutter in front of 6160 Horton Drive	Letter sent to resident.	Enforcement Letter
43	1/18/10	Request Tracker	8960 Moisan Way	Residential	Clogged drain is spilling trash into street.	PW cleaned out drain.	None
44	1/19/10	Resident	4298 Panorama	Residential	Water on driveway. Poor street drainage has led to flooding.	Informed resident that this would be looked into, but these are long term improvement projects.	None
45	1/19/10	Resident	8940 Johnson Drive	Construction	Construction on Johnson Drive resulted in a storm drain blowout/upheaval of dirt onto the street.	Contacted contractor who cleaned it up.	None
46	1/19/10	Resident	5550 Lake Parkway	Ind/Com	Clogged Storm Drain	Forwarded to Public Works. Resolved.	None
47	1/19/10	Resident	7510 Orien Avenue at Olive/Normal	Residential	Clogged Storm Drain	Forwarded to Public Works. Resolved.	None
48	1/19/10	Engineering Dept.	4958 Pine Street	Construction	Sediment coming down the street from construction in rear.	NOV issues to improve BMPs. Fiber rolls moved.	Notice of Violation

54	3/4/10	Resident	Sunset Park-Upper Dirt Lot adjacent to Regional Park/Lake Park Condos	Municipal	Dumping prevalent. Teenagers and transients use the area frequently. Resident wants the tree trimmed in order to limit coverage.	Apr. 1 - Parks Dept. trimmed the tree	None
55	3/11/10	Resident	Comanche Hills Apts 5040 Comanche Drive	Residential	Residents are letting animal waste, litter and cigarettes build up. Maintenance crew isn't raking up leaves. Everything is getting routed to the storm drain system.	Contacted complex owner who stated that his site has pet waste bags and does a great job cleaning up. Acknowledged he would inform staff not to litter.	San Diego River Sheet
56	3/22/10	Resident	8530 Tio Diego Place	Construction	Contractor was doing work and plaster/stucco was washed into the curb/gutter in front of house and down street. Did not appear to reach storm drain. Told contractor to clean up.	Mar. 25 - Verified clean up	Written Warning
57	3/23/10	Resident	5430 Kiowa Drive	Residential	Neighbor discharging pool to the street.	Visited site and no active discharge.	None
58	4/1/10	Public Works	69th Street and Boulevard Drive	Ind/Com	Dirt around inlet.	PW cleaned inlet.	None

81	6/19/10	Resident	9736 Murray Drive at Primrose	Residential	Plaster and waste dumped in gutter.	Referred to Public Works. Jun 24 – Streets supervisor indicated they had been swept and material removed to maximum extent possible.	None
82	6/23/10	Resident	4667 Judson Way	Residential	Residents are buying and selling cars and washing them at the location.	Letter sent to residence. Ongoing issue, referred to Code Compliance.	Residential Tri-fold
83	6/23/10	Resident	Colorado Street	Residential	Reported oil was spilled in the vicinity of Colorado Street	Issue was already resolved to the extent possible by Public Works.	None
84	6/28/10	Resident	8348 Center Drive	Ind/Com	Canal behind business is full of green algae.	Ongoing issue, canal functioning, not much PW can do.	None

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.4.2
iii. A listing of the development projects to which SUSMP requirements were applied.	2.4.4.2
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	Appendix A.1
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-1 and 2-3
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2, Table 2-2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	2.4.4.2
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	2.4.4.2

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	**Location in Report**
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3, Table 2-3
xviii. A description of notable activities conducted to manage urban runoff from development projects.	Throughout Section 2

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A.2
viii. A description of the general results of the inspections.	3.5
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5 Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A.3
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4 Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4 Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4 Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	**N/A for 09-10**
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3 Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3 Table 4-1
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3 Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3 Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3 Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3 Table 4-1
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.5.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-5
xviii. A description of the general results of the inspections.	Table 4-5
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.2 (mobile), Appendix A (inventories)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
* Section 7, the Illicit Discharge Detection and Elimination component, of the 2009/2010 Annual Report, will be submitted to the RWQCB no later than December 15, 2010.	

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
* Section 7, the Illicit Discharge Detection and Elimination component, of the 2009/2010 Annual Report, will be submitted to the RWQCB no later than December 15, 2010.	

Education

Permit Annual Reporting Requirement—Section J.3.a.(3).(g)	Location in Report
i. A description of education efforts conducted for each target community.	8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.	8.3
iii. A description of education efforts conducted for municipal departments and personnel.	8.2
iv. A description of education efforts conducted for the new development and construction communities.	8.3
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3

Public Participation

Permit Annual Reporting Requirement—Section J.3.a.(3).(h)	Location in Report
i. A description of public participation efforts conducted.	9.2 and 9.3

Effectiveness Assessment

Permit Annual Reporting Requirement—Section J.3.a.(3).(i)	Location in Report
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11

Fiscal Analysis

Permit Annual Reporting Requirement—Section J.3.a.(3).(j)	Location in Report
i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. (For 2007-2008, the requirements that apply are essentially the same as those found in Order No. 2001-01)	10

Same as old Permit for 2007-2008

Special Investigations

Permit Annual Reporting Requirement—Section J.3.a.(3).(k)	Location in Report
i. A description of any special investigations conducted.	12

Non-Emergency Firefighting

Permit Annual Reporting Requirement—Section J.3.a.(3).(l)	**Location in Report**
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	4.2.3, 13

JURMP Revisions

Permit Annual Reporting Requirement—Section J.3.a.(3).(m)	**Location in Report**
i. A description of any proposed revisions to the JURMP.	14 and each program component section

ATTACHMENT 2.1

UPDATED STORM WATER ORDINANCE

ORDINANCE NO. 2010-2806

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF LA MESA, CALIFORNIA, REPEALING CHAPTER 7.18 OF THE MUNICIPAL CODE IN ITS ENTIRETY AND ADOPTING A NEW CHAPTER 7.18 TO UPDATE REGULATIONS PERTAINING TO STORM WATER AND NON-STORM WATER DISCHARGES

WHEREAS, the San Diego Regional Water Quality Control Board issued National Pollutant Discharge Elimination System Permit No. R9-2007-0001, the "Permit," on January 24, 2007;

WHEREAS, the Permit requires the City to develop, adopt, and implement various programs and policies aimed at controlling storm water pollution in and out of La Mesa's storm water conveyance system;

WHEREAS, it is necessary to update Municipal Code Chapter 7.18 (Storm Water Management and Discharge Control) by repealing and adopting the aforementioned Chapter to ensure compliance with the Permit; and

WHEREAS, the City Council desires to adopt this Ordinance for the purpose of complying with the Permit.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF LA MESA, CALIFORNIA, DOES HEREBY ORDAIN AS FOLLOWS:

SECTION 1: Chapter 7.18 of the La Mesa Municipal Code shall be repealed in its entirety and readopted to read as follows:

"Chapter 7.18

STORM WATER MANAGEMENT AND DISCHARGE CONTROL

7.18.010 Title.

This Chapter shall be known as the 'City of La Mesa Watercourse Protection, Storm Water Management and Discharge Control Ordinance.'

7.18.020 Purpose and Intent.

The purpose of this Chapter is to protect the health, safety and welfare of the public by regulating all discharges into the storm water conveyance system and the waters of the State in order to preserve and enhance water quality for beneficial uses by:

(A) Prohibiting non-storm water discharges to the storm water conveyance system;

(B) Eliminating pollutants in storm water to the maximum extent practicable, including pollutants from both point and non-point sources;

(C) Prohibiting activities which cause, or contribute to, exceeding state and federal receiving water quality objectives.

(D) Protecting watercourses from disturbance and pollution.

The intent of this Chapter is to use the police power of the City to regulate water quality in a manner, which complies with all applicable laws, related to water quality, including the federal Clean Water Act, the state Porter-Cologne Water Quality Control Act, and the conditions of any NPDES

permit issued to the City.

7.18.030 Definitions.

For purposes of this Chapter only, the terms below have the following meaning:

"Beneficial Uses" means uses of water necessary for the survival or well being of man, plants, and wildlife. These uses of water serve to promote the tangible and intangible economic, social, and environmental goals.

"Beneficial Uses" of the Waters of the State that may be protected against include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves. Existing beneficial uses are uses that were attained in the surface or ground water on or after November 28, 1975; and potential beneficial uses are uses that would probably develop in future years through the implementation of various control measures. Beneficial Uses are equivalent to Designated Uses under federal law. [California Water Code Section 13050(f)].

"Best Management Practices" or "BMPs" means schedules of activities, pollution treatment practices or devices, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, operation and maintenance procedures, and other management practices or devices to prevent or reduce the discharge of pollutants directly or indirectly to storm water, receiving waters, or the storm water conveyance system. BMPs may be structural or non-structural. Best Management Practices include, but are not limited to, site design, source control, treatment control, natural design methods, low flow diversions to the sewer, and structures such as infiltration basins, clarifiers, oil and grease separators and filters. BMPs may include any type of pollution prevention and pollution control measure the can help to achieve compliance with this Chapter.

"Clean Water Act Section 303(d) Impaired Water Body" or "impaired water body" means an impaired water body in which water quality does not meet applicable water quality standards and/or is not expected to meet water quality standards, even after the application of technology based pollution controls required by the Clean Water Act. The discharge of urban runoff to these water bodies is significant because these discharges can cause or contribute to violations of applicable water quality standards.

"Development Project" means new development or redevelopment with land disturbing activities; structural development, including construction or installation of a building or structure, the creation of impervious surfaces, public agency projects, and land subdivision.

"Discharge" when used as a verb, means to allow pollutants to directly or indirectly enter storm water, or to allow storm water or non-storm water to directly or indirectly enter the storm water conveyance system or receiving waters, from an activity or operations. When used as a noun, "discharge" means the pollutants, storm water, and/or non-storm water that is discharged.

"Discharger" means any person engaged in activities or operations, or owning facilities, which may result in pollutants entering storm water, the storm water conveyance system or receiving waters. "Dischargers" include, but are not limited to, real and personal property owners, occupants, tenants, lessees, contractors, developers, managers and employees.

“Environmentally Sensitive Areas” include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and County of San Diego; and any other similar environmentally sensitive areas which have been identified by the City Engineer. “Directly adjacent” means situated within 200 feet of the Environmentally Sensitive Area. “Discharging directly to,” means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

“Illegal Connection” means a physical connection to the storm water conveyance system or receiving waters, which has not been reviewed and authorized by the city; or a permitted connection, which conveys illegal discharges.

“Illegal Discharge” is any discharge to the storm water conveyance system that is not composed entirely of storm water or is not discharged in compliance with this Chapter.

“Impervious Surface” means constructed or modified surfaces that cannot effectively infiltrate rainfall such as building rooftops, pavement, sidewalks, driveways, etc.

“Impervious Surface Area” means the ground area covered or sheltered by an impervious surface, measured in plan view, i.e., as if from directly above. For example, the “impervious surface area” for a pitched roof is equal to the ground area it shelters, rather than the surface area of the roof itself.

“Maximum Extent Practicable” or “MEP” refers to the standard established by Congress in Clean Water Act section 402(p)(3)(B)(iii) that municipal dischargers of storm water must meet; MEP is an acceptability standard for Best Management Practices based on a level of pollutant reduction that can be achieved by the most effective set of BMPs that can be implemented and still remain practicable; MEP generally emphasizes pollution prevention and source control BMPs as the first line of defense in combination with treatment methods as a backup.

“Non Point Source” refers to diffuse, widespread sources of pollution. These sources may be large or small, but are generally numerous throughout a watershed. Non point sources include, but are not limited to, urban, agricultural, or industrial areas, roads, highways, construction sites, communities served by septic systems, recreational boating activities, timber harvesting, mining, livestock grazing, as well as physical changes to stream channels, and habitat degradation. non point source pollution can occur year round any time rainfall, snow melt, irrigation, or any other source of water runs over land or through the ground, picks up pollutants from these numerous, diffuse sources and deposits them into rivers, lakes, and coastal waters or introduces them into ground water.

“Non-Storm Water” consists of all discharges to and from a storm water conveyance system that do not originate from precipitation events, i.e., all discharges other than storm water. Non-storm water includes illegal discharges, non-prohibited discharges, and NPDES permitted discharges.

“NPDES permit” means a National Pollutant Discharge Elimination System permit issued by the U.S. Environmental Protection Agency, the State Water Resources Control Board (“SWRCB”), or the California Regional Water Quality Control Board for the San Diego Region (“RWQCB”).

“Person” means an individual, corporation, partnership, limited liability company, joint venture, non-profit organization, trust, association, or governmental agency.

“Pollutant” is broadly defined as any agent that may cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated, including but not limited to, dredged spoil, rock, sand, or silt (excluding sediment, silt, or substances in quantities which would enter storm water from a natural undeveloped watershed); solid waste, animal waste, sewage, garbage, or medical waste; wrecked or discarded equipment; radioactive materials; industrial waste; any organic or inorganic contaminant; fecal coliform, fecal streptococcus, and enterococcus bacteria and other pathogens that pose a threat to human health; volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbons, total organic carbon, lead, copper, chromium, cadmium, silver, nickel, zinc, cyanides, phenols, and biocides; any contaminant which can significantly degrade the quality of receiving waters by altering pH, total suspended or settle able solids, biochemical oxygen demand, chemical oxygen demand, nutrients, or temperature.

“Pollution” is the alteration of the quality of the receiving waters to a degree that unreasonably affects the beneficial use of the receiving waters or the facilities that serve the beneficial uses. “Pollution” also includes contamination, which creates a hazard to the public health through poisoning or the spread of disease.

“Point Source” means any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operations, landfill leachate collection systems, vessel, or other floating craft from which pollutants are or may be discharged.

“RWQCB” means the California Regional Water Quality Control Board for the San Diego Region.

“Receiving Waters,” means all waters that are “Waters of the State” within the scope of the State Water Code, including but not limited to, natural streams, creeks, rivers, reservoirs, lakes, ponds, water in vernal pools, lagoons, estuaries, bays, the Pacific Ocean, and ground water.

“Significant Redevelopment” means the creation or addition of at least 5,000 square feet of impervious surfaces on an already developed site. Significant redevelopment includes, but is not limited to: the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces.

“State General Construction Storm Water Permit” means NPDES Permit No. CAS000002, Waste Discharge Requirements for Discharges of Storm Water Associated with Construction Activities, and any amendments thereto.

“State General Industrial Storm Water Permit” means NPDES Permit No. CAS000001, Waste Discharge Requirements for Discharges of Storm Water Associated with Industrial Activities Excluding Construction Activities, and any amendments thereto.

“Storm Water” means runoff that originates from precipitation events. “Storm Water” is that portion of precipitation that flows across a surface to the storm drain system or receiving waters. Examples of this phenomenon include: the water that flows off a building’s roof when it rains (runoff from an impervious surface); the water that flows into streams when snow on the ground begins to melt (runoff from a semi-pervious surface); and the water that flows from a vegetated surface when rainfall is in excess of the rate at which it can infiltrate into the underlying soil (runoff from a pervious

surface). During precipitation events in urban areas, rainwater picks up and transports pollutants through storm water conveyance systems, and ultimately to receiving waters.

"Storm Water Conveyance System" means private and public drainage facilities within the City of La Mesa by which storm water may be conveyed to waters of the state, including but not limited to, streets, roads, catch basins, natural and artificial channels, natural and artificial drainage features, aqueducts, canyons, stream beds, gullies, curbs, gutters, ditches, and storm drains. Historic and current development makes use of natural drainage patterns and features as conveyances for urban runoff. Urban streams used in this manner are part of the storm water conveyance system regardless of whether they are natural, man-made, or partially modified features. in these cases, the urban stream is both a storm water conveyance system and receiving water.
"Structural BMP" means a BMP that relies on either a physical condition (other than an entirely natural and undisturbed condition), or on a constructed or installed device to reduce or prevent pollutants in storm water discharges and exempt non-storm water discharges. Constructed or enhanced BMPs that depend on natural materials and processes (e.g., constructed drainage swales or buffers, or constructed wetlands), that require periodic maintenance to function as designed, are Structural BMPs.

"SWRCB" means the State Water Resources Control Board.

"Watercourse" means any natural or artificial stream, river, creek, ditch, channel, canal, conduit, culvert, drain, waterway, gully, ravine, arroyo or wash, in which surface waters flow in a definite direction or source, either continuously or intermittently, and which has a definite channel and a bed or banks. A channel is not limited to land covered by minimal or ordinary flow, but also includes land covered during times of high water.

"Waters of the State" means any water, surface or underground, including saline waters within the boundaries of California. The definition of the "Waters of the State" is broader than that for the "Waters of the United States" in that all water in the State is considered to be a "Waters of the State" regardless, of circumstances or condition. Under this definition, a municipal storm sewer system (MS4) is always considered to be a "Waters of the State". [California Water Code Section 13050 (e)].

"Waters of the United States" means water subject to the regulatory jurisdiction of the United States under the Federal Clean Water Act and applicable case law. In general, this includes "navigable" waters, waters tributary to "navigable" waters, and adjacent wetlands. [40 Code of Federal Regulations section 122.2.]

"Wet season" means October 1 thru April 30.

<u>7.18.040 Illegal Discharges.</u>

A. Compliance with this Chapter. Any discharge that is not in compliance with this Chapter is an Illegal Discharge. The City maintains legal authority to control the contributions of pollutants in discharges of runoff into the City's MS4 associated with industrial, commercial, construction, and residential activities.

B. Discharge of Non-storm Water Prohibited. No person shall discharge non-storm water directly or indirectly into the storm water conveyance system or receiving waters. Prohibited are illegal discharges or illegal connections that include but not limited to;
   1. Sewage;
   2. Discharge of wash water resulting from the hosing or cleaning of gas stations, auto repair garages, or other types of automotive service facilities;

3. Discharges resulting from the cleaning, repair, or maintenance of any type of equipment, machinery, or facility including motor vehicles, cement-related equipment, and port-a-potty servicing, etc.;
4. Discharges of wash water from mobile operations such as mobile automobile washing, steam cleaning, power washing, and carpet cleaning, etc.;
5. Discharge of wash water from the cleaning or hosing of impervious surfaces in municipal, industrial, commercial, and residential areas including parking lots, streets, sidewalks, driveways, patios, plazas, work yards and outdoor eating or drinking areas, etc.;
6. Discharges of runoff from material storage areas containing chemicals, fuels, grease, oil, or other hazardous materials;
7. Discharge of pool or fountain water containing chlorine, biocides, or other chemicals; discharges of pool or fountain filter backwash water;
8. Discharges of sediment, pet waste, vegetation clippings, or other landscape or construction related wastes;
9. Discharges of food related wastes (e.g. grease, fish processing, and restaurant kitchen mat and trash bin wash water, etc.).

C. Exemptions.

1. Separately Permitted Discharges. Storm water discharges regulated under a valid facility-specific NPDES permit or facility specific RWQCB Waste Discharge Requirements permit are exempt from discharge prohibitions established by this Chapter, provided compliance with all relevant permit conditions is maintained to the satisfaction of the RWQCB and the City Engineer. Facilities and activities whose storm water discharges are regulated under a general permit, including the State General Industrial Storm Water Permit, State General Construction Storm Water Permit and the State General De-Watering Permit, are not exempted from this Chapter.

2. Categorically Exempt Discharges. The following categories of non-storm water discharges are exempt from discharge prohibitions established by this Chapter, if all required BMPs are installed, implemented and maintained:

   a. Air conditioning condensation;
   b. Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks;
   c. Diverted stream flows (provided required permits are obtained);
   d. Flows from emergency fire fighting activities (flows necessary for the protection of life or property);
   e. Flows from riparian habitats and wetlands;
   f. Foundation drains (not including active groundwater dewatering systems);
   g. Individual residential washing of vehicles (as long as car washing activities are conducted on private property and that wastewater does not leave private property or enter City's MS4. Note that car washes for school or club fundraisers are not considered an exempt discharge);
   h. Irrigation water;
   i. Landscape irrigation (as long as significant volume of water is not flowing into the MS4 and there is no transport of sediment, grass clippings and other pollutants into the storm drain system);
   j. Lawn watering-(as long as significant volume of water is not flowing into the MS4 and there is no transport of sediment, grass clippings and other pollutants into the storm drain system);

k. Rising ground water;
l. Springs;
m. Swimming pool discharges (if dechlorinated, pH is between 7 and 8, and no erosion or pollutant transport occurs during draining);
n. Uncontaminated ground water infiltration [as defined in 40CFR 35.2005 (20)] to MS4;
o. Uncontaminated pumped ground water;
p. Water from crawl space pumps;
q. Water from footing drains (not including active groundwater dewatering systems);
r. Water line flushing.

3. Public Health and Safety Exemptions. Discharges determined by the City Engineer to be necessary to protect public health and safety are exempt from discharge prohibitions established by this Chapter, provided any conditions on such discharges imposed by the City Engineer are satisfied and the City Engineer makes written findings supporting the exemption.

4. On-Site Wastewater Systems. Discharges to the subsurface from properly functioning permitted site waste water systems are not prohibited by this Chapter.

5. Prohibit Categorically Exempt Discharges listed above that have been identified by the dry weather field screening and analytical monitoring, the receiving waters monitoring and reporting program, or other City monitoring programs as contributing to identified water quality problems.

6. Exemptions Not Absolute. Any exempt discharge described above which the City Engineer determines is a significant source of pollutants to receiving waters or the City's storm water conveyance system, shall be prohibited unless the discharger complies with additional BMPs imposed by the City Engineer to reduce pollutants in the discharge to the maximum extent practicable and the BMPs are effective. Such prohibitions shall take effect after written notice to the discharger by the City Engineer containing a schedule for compliance based on the necessity to protect public health and safety or the environment.

7.18.050 Notification and Mitigation of Illegal Discharges.

A Discharger shall immediately notify the City Engineer of an illegal discharge and take immediate action to control and contain the illegal discharge at the discharger's expense. The discharger shall also mitigate any damage caused by the illegal discharge. Should the City respond to the illegal discharge, the discharger shall be responsible for all costs associated with the City's response and cleanup efforts. The City Engineer may order the discharger to prepare and implement an approved mitigation plan with a time schedule for completion. A mitigation plan may include, but is not limited to, requiring a discharger to prepare a local SWPPP where applicable.

7.18.060 Illegal Connections.

No person shall establish, use, or maintain an illegal connection to the storm water conveyance system or the receiving waters.

7.18.070 Littering and Sweeping.

No person shall throw, deposit, leave, maintain, keep or permit to be thrown, deposited, placed, left or maintained, any refuse, pet waste, rubbish, garbage, or other discarded or abandoned objects, in or upon any street, alley, parking lot, sidewalk, curb, gutter, storm drain, catch basin,

conduit, or other drainage structure or lot except in receptacles maintained for the regular disposal of garbage.

Impervious surfaces, which drain directly or indirectly into the storm water conveyance system, shall be kept free of dirt and debris by regular sweeping. The sweepings shall be placed in garbage receptacles and shall not be allowed to enter the storm water conveyance system.

7.18.080 Compliance with Best Management Practices.

No discharger shall fail to implement, install, use, or maintain BMPs established by the City Engineer pursuant to this Chapter and in compliance with the City's BMP Manual.

7.18.090 Conclusive Determination of Maximum Extent Practicable.

The Best Management Practices established by the City Engineer shall reduce pollutants from the use or activity to the maximum extent practicable. For purposes of enforcement of this Chapter, the City Engineer's determination of the maximum extent practicable shall be conclusive.

7.18.100 Establishment and Prioritization of Best Management Practices for Construction Activities, New Development, Significant Redevelopment and Existing Development.

A. The City Engineer shall establish written BMPs for the following uses:

1. Construction Activities;
2. New Development and Significant Redevelopment;
3. Existing Industrial Development;
4. Existing Commercial Development;
5. Mobile Businesses;
6. Existing Residential Areas and Development;
7. Existing Municipal Areas and Activities;
8. Any other use if it is necessary to reduce pollutants entering receiving waters to the maximum extent practicable.

The document containing the Best Management Practices established by the City Engineer and required for the uses listed above shall be entitled the "The City of La Mesa Storm Water Best Management Practices Manual" (BMP Manual) and shall be incorporated by this reference as an appendix to this Chapter. The BMP Manual includes the City's local Standard Urban Storm Water Mitigation Plan.

B. The City Engineer shall establish priorities for implementation and enforcement of BMPs based on the threat to water quality for each use described in the subsection above.

1. Each site of construction activities shall be categorized as a high, medium, or low threat to water quality by considering the following:
   a. Soil erosion potential;
   b. Site slope;
   c. Project size and type;
   d. Sensitivity of receiving water bodies;
   e. Proximity to receiving water bodies;
   f. Non-storm water discharges;
   g. Past record of non-compliance by the operators of the construction site; and
   h. Any other relevant factors.

2. Each construction site that is determined by the City Engineer to present an exceptional threat to water quality shall be required to implement advanced treatment

for sediment per the requirements of the BMP Manual.

3. Development projects will be required to meet the hydromodification management requirements as described in the BMP Manual.

4. Development and redevelopment projects will be required to meet the applicable post-construction storm water management requirements as described in the BMP Manual. Projects included in the following list shall be categorized as priority development projects.

   a. Housing subdivisions resulting in the disturbance of one acre or more of land or comprised of 10 or more dwelling units. This category includes single-family homes, multi-family homes, condominiums, and apartments.
   b. Commercial developments resulting in the disturbance of one acre or more of land. This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than one acre. The category includes, but is not limited to, hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; commercial airfields; and other light industrial facilities.
   c. Development of heavy industry resulting in the disturbance of one acre or more of land. This category includes, but is not limited to, manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, trucks, etc.).
   d. Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.
   e. Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all Standard Urban Storm Water Mitigation Plan (SUSMP) requirements except for structural treatment BMP and numeric sizing criteria requirement and hydromodification requirement.
   f. All hillside development greater than 5,000 square feet. This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater.
   g. Environmentally Sensitive Areas: All development and redevelopment located within or directly adjacent to or discharging directly to an environmentally sensitive area (where discharges from the development or redevelopment will enter receiving waters within the environmentally sensitive area), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10 percent or more of its naturally occurring condition. “Directly adjacent” means situated within 200 feet of the Environmentally Sensitive Area (ESA). “Discharging directly to “means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.
   h. Parking lots 5,000 square feet or more or with 15 or more parking spaces and

potentially exposed to urban runoff. Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

i. Street, roads, highways, and freeways. This category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. Natural BMPs such as constructed wetlands, grassed swales, biofilters, wet ponds, and vegetated filter strips, shall be utilized whenever practicable for all new development and significant redevelopment.

j. Retail Gasoline Outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more, or (b) a projected average daily traffic (ADT) of 100 or more vehicles per day.

k. All other pollutant generating Development Projects that result in the disturbance of one acre or more of land. Generally all projects which include impervious surfaces and/or introduce landscaping that requires routine use of fertilizers and pesticides are considered pollutant generating above background levels. Linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered pollutant generating above background levels if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces.

5. Each site of existing industrial development that meets at least one of the following criteria will be included in the industrial inventory:

a. Industrial facilities as defined at 40 CFR§ 122.26(b) (14)
b. Industrial facilities that are subject to section 313 of Title III of the Superfund amendments and Reauthorization Act of 1986 (SARA);
c. Industrial facilities tributary to a Clean Water Act Section 303(d) Impaired Water Body, where a facility generates pollutants for which the water body is impaired;
d. Industrial facilities within or directly adjacent to or discharging directly to coastal lagoons or other receiving waters within environmentally sensitive areas;
e. Facilities subject to the statewide General Industrial Permit or other individual NPDES permits;
f. Operating and closed landfills;
g. Hazardous waste treatment, disposal, storage and recovery facilities;
h. All other industrial facilities that the City Engineer determines are contributing significant pollutant loading to its storm water conveyance system, regardless of whether such facilities are covered under the statewide General Industrial Permit or other NPDES permit.

6. Each site of existing commercial development that conducts activities consistent with any of the categories in the following list shall be included in the commercial inventory

a. Automobile mechanical repair, maintenance, fueling, or cleaning;
b. Airplane mechanical repair, maintenance, fueling, or cleaning;
c. Boat mechanical repair, maintenance, fueling, or cleaning;
d. Equipment repair, maintenance, fueling, or cleaning;
e. Automobile and other vehicle body repair or painting;
f. Automobile (or other vehicle) parking lots and storage facilities;
g. Retail or wholesale fueling;
h. Pest control services;
i. Eating or drinking establishments including food markets;
j. Cement mixing or cutting;
k. Masonry;
l. Painting and coating;
m. Botanical or zoological gardens and exhibits;
n. Landscaping;
o. Nurseries and greenhouses;
p. Golf courses, parks and other recreational areas/facilities;
q. Cemeteries;
r. Marinas;
s. Building material retailers and storage;
t. Animal facilities;
u. Portable sanitary services;
v. Mobile business (including but not limited to mobile automobile or other vehicle washing, mobile carpet/drape/furniture cleaning, painting and coating, pool and fountain cleaning, and power washing services);
w. Other commercial sites or sources that the City Engineer determines may contribute a significant pollutant load to the storm water conveyance system;
x. Any commercial site or source tributary to a Clean Water Act Section 303(d) impaired water body, where, the site or source generates pollutants for which the water body is impaired;
y. Any commercial site or source within or directly adjacent to or discharging directly to a coastal lagoon or other receiving water within an environmentally sensitive area.

7. Each inventoried site of existing industrial development and existing commercial development shall be assigned a threat to water quality prioritization based on the following factors:

a. Type of industrial activity (SIC Code);
b. Materials used at the facility;
c. Wastes generated;
d. Pollutant discharge potential;
e. Non-storm water discharges;
f. Size of facility;
g. Facility design;
h. Proximity to receiving water bodies;
i. Sensitivity of receiving water bodies;
j. Whether the industrial site is subject to the Statewide General Industrial Permit or an individual NPDES permit;
k. Whether the facility has filed a No Exposure Certification/Notice of Non-Applicability;
l. Total area of the site, area of site where industrial activities occur, and area of the site exposed to rainfall and runoff;
m. Facility's compliance history;

n. Any other relevant factors.

8. The City Engineer shall identify residential areas and activities that are a high priority threat to water quality. At a minimum, these shall include:

   a. Automobile repair and maintenance;
   b. Automobile washing;
   c. Automobile parking;
   d. Home and garden care activities, product use, and disposal (pesticides, herbicides, and fertilizers);
   e. Disposal of household hazardous waste (e.g., paints, cleaning products);
   f. Disposal of trash and pet waste;
   g. Disposal of green waste;
   h. Any other residential source that the City Engineer determines may contribute a significant pollutant load to the storm water conveyance system;
   i. Any residence tributary to a Clean Water Act Section 303(d) Impaired Water Body, where the residence generates pollutants for which the water body is impaired;
   j. Any residence within or directly adjacent to or discharging directly to a coastal lagoon or other receiving waters within an environmentally sensitive area.

9. Each existing municipal area or activity shall be categorized as a high, medium, or low threat to water quality by considering factors including but not limited to the following:

   a. Type of municipal area or activity;
   b. Materials used;
   c. Wastes generated;
   d. Pollutant discharge potential;
   e. Non-storm water discharges;
   f. Size of facility or area;
   g. Proximity to receiving water bodies;
   h. Sensitivity of receiving water bodies;
   i. Any other relevant factors.

At a minimum, the high priority municipal areas and activities shall include the following:

(1) Roads, streets, highways, and parking facilities;
(2) Flood management projects and flood control devices;
(3) Areas and activities tributary to a Clean Water Act Section 303(d) Impaired Water Body, where an area or activity generates pollutants for which the water body is impaired;
(4) Areas and activities within or adjacent to or discharging directly to coastal lagoons or other receiving waters within environmentally sensitive areas;
(5) Municipal waste facilities such as active or closed municipal landfills; publicly owned treatment works (including water and wastewater treatment plants) and sanitary sewage collection systems; municipal separate storm sewer systems; incinerators; solid waste transfer facilities; land application sites; uncontrolled sanitary landfills; corporate yards including maintenance and storage yards for materials, waste, equipment and vehicles; sites for disposing and treating sewage sludge; and hazardous waste treatment, disposal, and recovery facilities;
(6) Municipal airfields;
(7) Parks and recreation facilities;

(8) Special event venues following special events (festivals, sporting events, etc.);
(9) Power washing;
(10) Other municipal areas and activities that the City Engineer determines may contribute a significant pollutant load to the storm water conveyance system.

7.18.110 Site Specific Best Management Practices.

The City Engineer may establish written Best Management Practices for a specific site or activity if necessary to reduce pollutants to the maximum extent practicable or to comply with Total Maximum Daily Load orders or other orders issued to the City that require additional control of sources or potential sources of pollutants to the City's storm water conveyance system.

7.18.120 Alternative Best Management Practices.

The City Engineer may establish written alternative Best Management Practices. The allowable use of alternative BMPs at a specific site shall be determined at the sole discretion of the City Engineer.

7.18.130 Additional Best Management Practices.

The City Engineer may establish additional written Best Management Practices for a specific site if the City Engineer determines that the Best Management Practices implemented at the site have not reduced the pollutants to the maximum extent practicable.

7.18.140 Minimum Best Management Practices.

All dischargers shall implement all applicable Best Management Practices required by the BMP Manual. All dischargers shall also install, implement and maintain at least the following minimum Best Management Practices:

A. Eroded soils. Prior to the rainy season, dischargers must remove or secure any significant accumulations of eroded soils from slopes previously disturbed by clearing or grading, if those eroded soils could otherwise enter the storm water conveyance system or receiving waters during the rainy season. Slopes more than five feet in height, more than 250 square feet in total area, and steeper than 3:1 (run-to-rise) that have been disturbed at any time by clearing, grading, or landscaping, shall be continuously protected from erosion. Additionally, cleared or graded areas left exposed at any given time are limited to the amount of acreage that the project proponent can adequately protect prior to predicted storm event or 17 acres unless disturbance of a larger area is approved in writing by the City Engineer.

B. Parking Lots. Dischargers with parking lots or impervious surfaces used for similar purposes shall clean the surfaces frequently and thoroughly in a manner that does not cause non-storm water discharge to the storm water conveyance system. In most cases, this will require dry cleaning methods such as sweeping and removal of dirt and debris. The dirt and debris shall be disposed of in a manner that prevents it from entering the storm water conveyance system or the receiving waters. At least one cleaning shall be completed in September of each year.

C. Storage of Materials and Wastes. All materials and wastes with the potential to pollute urban runoff shall be stored in a manner that either prevents contact with rainfall and storm water, or contains contaminated runoff for treatment and disposal. Stockpiles of soil or other materials shall be covered and contained throughout the year. All liquid material shall be covered, contained, and placed over secondary containment at all times.

D. Use of Materials. All materials with the potential to pollute urban runoff, including but not limited to, cleaning and maintenance products used outdoors, fertilizers, pesticides and herbicides, shall be used in accordance with label directions. If a label cautions against use of a product where it may enter water or waterways, or cautions that the product may be toxic or have

toxic effects, the product may not be disposed of or rinsed into receiving waters or the storm water conveyance system.

E. Self Inspection for Illegal Discharges. All dischargers, except residential single-family home dischargers, shall inspect their facilities, activities, operations, and procedures at least annually to detect illegal connections and illegal discharges. The self-inspection shall be documented in records kept on the premises for at least five years.

F. Inspection, Maintenance, Repair and Upgrading of BMPs. Structural BMPs must be inspected by the discharger before predicted rain events and following actual rain events. These BMPs must be maintained so that they continue to function as designed. Structural BMPs that fail must be repaired as soon as it is safe to do so. Annual verification of maintenance of structural BMPs must be submitted to the City as required by the City Engineer. If the failure of a structural or nonstructural BMP indicates that the BMPs in use are inappropriate or inadequate to the circumstances, the BMPs must be modified or upgraded to prevent any further failure in the same or similar circumstances. All sediment and debris in catch basins must be removed prior to the wet season and disposed of in a manner that prevents it from entering the storm water conveyance system or the receiving waters.

7.18.150 Discharger Sampling, Testing, Monitoring, and Reporting.

The City Engineer may require dischargers to perform sampling, testing, monitoring and reporting of results as a Best Management Practice. In addition, the City Engineer may order a discharger to conduct testing or monitoring and to report the results to the City if (1) the City Engineer determines that testing or monitoring is needed to determine whether BMPs are effectively preventing or reducing pollutants in storm water to the maximum extent practicable, or to determine whether the facility is a significant source of contaminants to waters of the state; or (2) the City Engineer determines that testing or monitoring is needed to assess the impacts of an Illegal discharge on health, safety or the environment; or (3) an illegal discharge has not been eliminated after written notice by the City Engineer; or (4) the discharger is in violation of any provision of this Chapter; or the Regional Water Quality Control Board requires the City to provide information on the discharger's activities.

Testing and monitoring ordered pursuant to this section may include the following:

(1) Visual monitoring of dry weather flows, wet weather erosion, or BMPs;
(2) Visual monitoring of premises for spills or discharges;
(3) Laboratory analyses of storm water or non-storm water discharges for pollutants;
(4) Background or baseline monitoring or analysis; and
(5) Monitoring of receiving waters or sediments that may be affected by pollutant discharges by the discharger.

The City Engineer may direct the time and manner in which the results of required testing and monitoring are reported, and shall determine when required sampling, testing or monitoring may be discontinued. The sampling, testing, monitoring and reporting shall be at the expense of the discharger.

7.18.160 City Authority to Sample, Inspect, and Monitor.

A. Regulatory Inspections. The City Engineer or his designee may inspect the premises of any discharger at reasonable times and in a reasonable manner to carry out the purposes of this Chapter. If a discharger refuses to allow entry for an inspection, an inspection warrant shall be obtained prior to inspection.

B. Scope of Inspections. Inspections may include all actions necessary to determine whether any illegal discharges or illegal connections exist, whether the BMPs installed and implemented are adequate to comply with this Chapter, whether those BMPs are being properly maintained, and whether the discharger complies with other requirements of this Chapter. This may include sampling, metering, monitoring, visual inspections, and records review. Where samples are collected the discharger may request and receive split samples. Records, reports, analyses, or other required information may be inspected and copied, and photographs taken for purposes of enforcement of this Chapter.

C. Installation of Sampling Devices. As part of the inspection, the City Engineer may authorize the installation of sampling or metering devices.

7.18.170 Establishment of a Fee.

The City Council may establish a fee by resolution to recover the cost of inspection, sampling, metering or monitoring by the City Engineer.

7.18.180 Local Storm Water Pollution Prevention Plan.

The City Engineer may require a discharger to prepare and submit a Local Storm Water Pollution Prevention Plan (Local SWPPP) for approval as a Best Management Practice (BMP). In addition, the City Engineer may require a discharger to prepare and submit a Local SWPPP for approval if (1) the discharger is not in compliance with this Chapter; or (2) the facility or activity is a significant source of pollutants to the receiving waters despite compliance with this Chapter. Any discharger required to submit and to obtain approval of a Local SWPPP shall install, implement, and maintain the BMPs specified in the approved Local SWPPP.

The Local SWPPP shall identify the BMPs that will be used by the discharger to prevent or control pollutants in storm water to the maximum extent practicable. If the facility is an industrial facility, the Local SWPPP submitted to the City shall at a minimum meet the requirements of the State NPDES General Industrial Storm Water Permit. If the activity at issue is a construction or land disturbance activity, the Local SWPPP submitted to the City shall at a minimum meet the requirements of the State NPDES General Construction Storm Water Permit. Additional minimum Local SWPPP requirements are:

(1) An inventory of all materials on site that may adversely affect storm water quality;
(2) A description of measures that will be taken to reduce the possibility of accidental spillage resulting from equipment failure or employee error;
(3) A description of onsite spill control procedures and equipment to prevent pollutants from entering the storm water conveyance system;
(4) A site map showing all building structures, materials and waste storage areas, outdoor equipment; storage areas, vehicle service areas, paved areas, areas of existing and potential erosion, storm drain inlets, points of discharge to the storm water conveyance system, and an estimate of the size of the facility and the size of the impervious surface area;
(5) A description of the storm water monitoring program conducted on the site, if any.
(6) A documented employee training program which includes, but is not limited to, the following topics:
    a. Laws, regulations and local ordinances relating to storm water pollution prevention, and an overview of the potential impacts of pollutants in storm water on the receiving waters;
    b. Proper handling of all materials and wastes to prevent spillage;
    c. Proper mitigation of spills, including spill response, containment and cleanup procedures;

d. Visual monitoring of all effluent streams to ensure that no Illegal discharges enter the storm water conveyance system;
e. Discussion of the differences between the storm water conveyance system and the sanitary sewer system;
f. Identification of all onsite connections to the storm water conveyance system.
g. Preventative maintenance and good housekeeping procedures;
h. Material management practices employed by the facility to reduce or eliminate pollutant contact with storm water.

Training materials shall be kept onsite and records of attendance shall be retained for at least five years.

7.18.190 Violation of a State NPDES Permit. A violation of a State NPDES General Construction Storm Water Permit , a State NPDES General Industrial Storm Water Permit, a State General De Watering Permit, or other applicable NPDES permit shall also be considered a violation of this Chapter and may be enforced as such.

7.18.200 Watercourse Protection.

A. Every person owning or occupying real property through which a watercourse passes shall keep and maintain the watercourse within the property free of trash, debris, excessive vegetation, and other obstacles which would pollute, contaminate or retard the flow of water through the watercourse; shall maintain the private structures on the property in a manner which will prevent the structures from interfering with the use, maintenance and physical integrity of the watercourse; shall not remove vegetation in a manner which will increase erosion or remove more healthy vegetation than is necessary for maintenance of the flow.

B. No person shall commit, or cause to be committed, the following acts, unless a written permit has been obtained from the City Engineer and the appropriate state and federal agencies:

(1) Discharge pollutants into or connect any pipe or channel to a watercourse;
(2) Modify the natural flow of water in a watercourse;
(3) Carry out development within thirty feet of the centerline of any creek, or twenty feet of the top of a bank, whichever is the greater distance from the top of the bank;
(4) Deposit in, plant in, remove any material from a watercourse, including its banks, except as required for ordinary and necessary maintenance;
(5) Construct, alter, enlarge, connect to, change, or remove any structure in a watercourse; or
(6) Place any loose or unconsolidated material (including animal manure) along side of or within a watercourse so as to cause a diversion of the flow, or to allow the material to be carried away by storm water.

7.18.210 Permits and Approvals.

Compliance with this Chapter shall be a condition of every permit or approval granted or issued by the City. Failure to comply with this Chapter shall be grounds for revocation of any such permit or approval.

7.18.220 Violation is a Nuisance.

The City Council hereby declares that any violation of this Chapter is a public nuisance.

7.18.230 Enforcement of this Chapter.

A. Misdemeanor Violation. Notwithstanding any other provision of this Code, a violation of this Chapter is a misdemeanor punishable by a fine of not more than one thousand dollars

($1,000) or imprisonment in the County Jail for a period of not more than six months or both fine and imprisonment. Any such violation may be charged as an infraction at the discretion of the City Attorney. Any person convicted of an infraction under the provisions of this Chapter shall be punishable by a fine not to exceed two hundred fifty dollars ($250) for a first or second offense in one year, and not to exceed five hundred dollars ($500) for a third violation in one year.

B. Orders of the City Engineer. The City Engineer is authorized to issue Cease and Desist Orders or Stop Work Orders to any person who is in violation of this Chapter. Failure to comply with a written order of the City Engineer shall be a violation of this Chapter and shall be grounds for the imposition of the civil penalties described in this section.

C. Civil Penalties. Any person who violates a provision of this Chapter may be assessed a civil penalty based on the City of La Mesa Administrative Fine Schedule. Civil penalties may also be assessed by the court in a civil action filed by the City to enforce the provisions of this Chapter.

D. Abatement. Any violation of this Chapter may be abated as a public nuisance and costs of abatement may be recovered by the City as allowed by law.

E. Judicial Action. This Chapter is enforceable by any judicial action allowed by law, including, but not limited to, injunctive relief.

F. Liens. Costs of enforcement of this Chapter, including but not limited to, costs of investigation, sampling and monitoring costs, and unpaid administrative fines and civil penalties, shall constitute a lien against the real property on which the violation occurs and on the real property of any person who violates this Chapter until such lien is satisfied. The lien may be recorded and executed in the same manner as a judgment lien. Prior to the recordation of the lien, the property owner shall be given written notice of the lien and an opportunity to contest the validity of the lien and the amount at a hearing held by the City Manager or designee.

G. Remedies Not Exclusive. Remedies under this Chapter shall be in addition to each other, and in addition to any other legally available remedy, and do not limit or supersede any other enforcement action, civil, criminal or administrative."

SECTION 2: The document containing the Best Management Practices established by the City Engineer pursuant to Section 7.18.100, entitled the "The City of La Mesa Storm Water Best Management Practices Manuals Part I & II," and on file in the City Clerk's office, is hereby adopted as an uncodified appendix to Chapter 7.18.

SECTION 3: This ordinance shall be effective 30 days after its adoption and the City Clerk shall certify to the adoption of this Ordinance and cause the same to be published at least once in the *East County Californian/La Mesa Forum* within 15 days of its adoption.

INTRODUCED AND FIRST READ at a Regular meeting of the City Council of the City of La Mesa, California, held the 9th day of February 2010, and thereafter PASSED AND ADOPTED at a Regular meeting of said City Council held the 23rdday of February 2010, by the following vote, to wit:

AYES: Councilmembers Allan, Arapostathis, Ewin, Sterling and Mayor Madrid

NOES: None

ABSENT: None

APPROVED:

/s/Arthur E. Madrid
ARTHUR E. MADRID, Mayor

ATTEST:

/s/Mary J. Kennedy
MARY J. KENNEDY, CMC, City Clerk

CERTIFICATE OF CITY CLERK

I, MARY J. KENNEDY, City Clerk of the City of La Mesa, California, do hereby certify the foregoing to be a true and correct copy of Ordinance No. 2010-2806, duly passed and adopted by the City Council of said City on the date and by the vote therein recited and that the same has been duly published according to law.

/s/Mary J. Kennedy
MARY J. KENNEDY, CMC, City Clerk

GLOSSARY

HOW TO USE THE STORM WATER BEST MANAGEMENT PRACTICES MANUAL.....1

► Plan Ahead to Avoid the Three Most Common Mistakes.....2

CHAPTER 1. POLICIES AND PROCEDURES.....3

Background 3

Legal Framework 4

A Low Impact Development Design Procedure 5

Requirements for All Development Projects.....5

Priority Development Projects 6
► New Development 6
► Previously Developed Sites.....6
► The "50% Rule" for Previously Developed Projects.....7

Project Review and Permitting Process 7

Compliance Process at a Glance 9
► Additional Notes on Compliance 9

Phased Projects 10

New Subdivisions.....10

Compliance with Flow-Control Requirements 12
► Option 1: Continuous Simulation 12
► Option 2: LID Integrated Management Practices 13
► Option 3: Exemption from Hydromodification Management 13

Waivers from Numeric Sizing Criteria 14

CHAPTER 2. CONCEPTS AND CRITERIA 15

Water-Quality Regulations.....16
► Maximum Extent Practicable.....17
► Best Management Practices.....17

Pollutants of Concern 17

► Grouping of Potential Pollutants of Concern....17
► Identifying Pollutants of Concern Based on Land Uses....19
► Watersheds with Special Pollutant Concerns....19

Selection of Permanent Source Control BMPs....22

Selection of Storm Water Treatment Facilities....22

Hydrology for NPDES Compliance....25
► Imperviousness....25
► Low Impact Development Requirements....26
► Sizing Requirements for Storm Water Treatment Facilities....26
► Flow-Control (Hydromodification Management)....27

Criteria for Infiltration Devices....27
► Most LID Features and Facilities Are Not Infiltration Devices....28

CHAPTER 3. PREPARING YOUR PROJECT SUBMITTAL....30

Step by Step....33

Step 1: Assemble Needed Information....33

Step 2: Identify Constraints & Opportunities....35

Step 3: Prepare and Document Your LID Design....35

Step 4. Specify Source Control BMPs....36
► Identify Pollutant Sources....37
► Note Locations on Submittal Drawing....37
► Prepare a Table and Narrative....37
► Identify Operational Source Control BMPs....37

Step 5: Storm Water Facility Maintenance....38

Step 6: Complete Your Project Submittal....38
► Coordination with Site, Architectural, and Landscaping Plans....38
► Construction Plan SUSMP checklist....39
► Certification....40
► Example Project Submittal Outline and Contents....41
► Specific Project Considerations....42

CHAPTER 4. LOW IMPACT DEVELOPMENT DESIGN GUIDE....43

Analyze Your Project for LID....44
► Optimize the Site Layout....45
► Use Pervious Surfaces....47
► Disperse Runoff to Adjacent Pervious Areas....47
► Direct Runoff to Integrated Management Practices....47

Develop and Document Your Drainage Design....49
► Step 1: Delineate Drainage Management Areas....49

► Step 2: Classify DMAs and Determine Runoff Factors 50
► Step 3: Tabulate Drainage Management Areas 53
► Step 4: Select and Lay Out IMPs on Site Plan 54
► Step 5: Review Sizing for Each IMP 54
► Step 6: Calculate Minimum Area and Volume of Each IMP 55
► Step 7: Determine If Available Space for IMP Is Adequate 56
► Step 8: Complete Your Summary Report 56

Specify Preliminary Design Details 58

Alternatives to Integrated LID Design 59
► Design of Alternative Treatment Facilities 59
► Treatment Facilities for Special Circumstances 61

CHAPTER 5. OPERATION & MAINTENANCE OF STORM WATER FACILITIES 62

Stage 1: Ownership and Responsibility 63
► Private Ownership and Maintenance 64
► Transfer to Public Ownership 64

Stage 2: General Maintenance Requirements 65

Stage 3: Detailed Maintenance Plan 65
► Your Detailed Maintenance Plan: Step by Step 66
► Step 1: Designate Responsible Individuals 66
► Step 2: Summarize Drainage and BMPs 67
► Step 3: Document Facilities "As Built" 67
► Step 4: Prepare Maintenance Plans for Each Facility 67
► Step 5: Compile Maintenance Plan 68
► Step 6: Updates 70

Stage 4: Interim Maintenance 70

Stage 5: Transfer Responsibility 70

Stage 6: Operation & Maintenance Verification 70

CHAPTER 6. CONSTRUCTION BMP REQUIREMENTS AND PERFORMANCE STANDARDS 72

Construction Storm Water BMP Requirements 72
► Step 1: Determine Applicable Storm Water BMP Requirements 74
► Step 2: Prepare & Submit Appropriate Plans 74
► Step 3: Determine Adequacy of Proposed Plans 75
► Step 4: Assure Implementation & Maintenance of Requirements 75

Construction Storm Water BMP Performance Standards 76
► 1. Minimum Construction BMP Requirements 76
► 2. Site Management Requirements 78
► 3. Performance Standards 79
► 4. Seasonal Requirements 80
► 5. Advanced Treatment Requirements 83
► 6. Additional Controls for Construction Sites 83

Implementation and Maintenance of Requirements 83

Glossary

Advanced Treatment

Using mechanical or chemical means to flocculate and remove suspended **sediment** from runoff from construction sites prior to discharge.

Attached Residential Development

Any development that provides residential units that share an interior/exterior wall. This category includes, but is not limited to: dormitories, condominiums, and apartments.

Automotive Repair Shop

A facility that is categorized in any one of the following **Standard Industrial Classification (SIC)** codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

Best Management Practice (BMP)

Any procedure or device designed to minimize the quantity of pollutants that enter the storm drain system. BMPs also include treatment requirements, operating procedures and practices to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. This manual groups storm water BMPs into the following categories: (1) Construction Storm Water BMPs, which are practices, procedures, devices or materials used to prevent the transport and introduction of pollutants both on and from a project during construction; and (2) Permanent Storm Water BMPs, which are the **Low Impact Development** design features, **source control** features, and **treatment control BMP**s that become a permanent part of a project site.

California Association of Stormwater Quality Agencies (CASQA)

Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com. Successor to the Storm Water Quality Task Force (SWQTF).

California BMP Method

A method for determining the required volume of storm water treatment facilities. Described in Section 5.5.1 of the California Stormwater Best Management Practice Manual (New Development) (CASQA, 2003).

Commercial Development

Commercial development is defined as any development on private land that is not for heavy industrial or residential uses. The category includes, but is not limited to, hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; commercial airfields; and other light industrial facilities. Any development on private land that is not exclusively industrial or residential uses. The **Priority Development Project** category is defined as commercial developments resulting in the disturbance of one acre or more of land.

Conditions of Approval (COAs)

Requirements a municipality may adopt for a project in connection with a discretionary action (e.g., adoption of an EIR or negative declaration or issuance of a use permit). COAs may include features to be incorporated into the final plans for the project and may also specify uses, activities, and operational measures that must be observed over the life of the project.

Construction Storm Water Management Plan (CSWMP)	A CSWMP is the document prepared and submitted to meet the City of La Mesa's construction BMP requirements for a project that causes land disturbance of less than one acre.
Continuous Simulation Modeling	A method of hydrological analysis in which a set of rainfall data (typically hourly for 30 years or more) is used as input, and runoff rates are calculated on the same time step. The output is then analyzed statistically for the purposes of comparing runoff patterns under different conditions (for example, pre- and post-development-project).
Copermittees	See **Dischargers**.
Detached Residential Development	Any development that provides freestanding residential units. This category includes, but is not limited to: detached homes, such as single-family homes and detached condominiums.
Detention	The practice of holding storm water runoff in ponds, vaults, within berms, or in depressed areas and letting it discharge slowly to the storm drain system. See definitions of **infiltration** and **retention**.
Directly Connected Impervious Area	Any **impervious surface** which drains into a catch basin, area drain, or other conveyance structure without first allowing flow across pervious areas (e.g. lawns).
Direct Infiltration	Infiltration via methods or devices, such as dry wells or infiltration trenches, designed to bypass unsaturated surface soils and transmit runoff directly to groundwater.
Dischargers	The agencies named in the **storm water NPDES permit** (see definition): the County of San Diego; the Cities of Carlsbad, El Cajon, La Mesa, Poway, Solana Beach, Chula Vista, Encinitas, Lemon Grove, San Diego, Vista, Coronado, Escondido, National City, San Marcos, Del Mar, Imperial Beach, Oceanside, and Santee; the San Diego Unified Port District, and the San Diego County Regional Airport Authority.
Drainage Management Areas	Areas delineated on a map of the development site showing how drainage is detained, dispersed, or directed to **Integrated Management Practices**. There are four types of Drainage Management Areas, and specific criteria apply to each type of area. See Chapter 4.
Drawdown time	The time required for a storm water detention or infiltration facility to drain and return to the dry-weather condition. For detention facilities, drawdown time is a function of basin volume and outlet orifice size. For infiltration facilities, drawdown time is a function of basin volume and infiltration rate.

Areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and County of San Diego; and any other equivalent environmentally sensitive areas which have been identified by the City of La Mesa.

Environmentally Sensitive Areas

This **Priority Development Project** category includes all development and redevelopment located within or directly adjacent to or discharging directly to an environmentally sensitive area (where discharges from the development or redevelopment will enter receiving waters within the environmentally sensitive area), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10 percent or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the Environmentally Sensitive Area (ESA). "Discharging directly to "means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

Flow Control

Control of runoff rates and durations as required by the Hydromodification Management Plan.

Head

In hydraulics, energy represented as a difference in elevation. In slow-flowing open systems, the difference in water surface elevation, e.g., between an inlet and outlet.

Higher-Rate Biofilter

A biofilter with a design surface loading rate higher than the 5 inches per hour rate specified in this document for bioretention facilities and planter boxes.

Hillside

Lands that have a natural gradient of 25 percent (4 feet of horizontal distance for every 1 foot of vertical distance) or greater and a minimum elevation differential of 50 feet, or a natural gradient of 200 percent (1 foot of horizontal distance for every 2 feet of vertical distance) or greater and a minimum elevation differential of 10 feet.

Hillside Development Greater Than 5,000 Square Feet

This **Priority Development Project** category includes any development which creates 5,000 square feet of **impervious surface** which is located in an area with known erosive soil conditions, where the development will grade any natural slope that is 25 percent or greater.

Hydrograph

Runoff flow rate plotted as a function of time.

Hydromodification

The change in the natural hydrologic processes and runoff characteristics (i.e. interception, infiltration, overland flow, interflow, and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and changes in sediment transport. In addition, alteration of stream and river channels, installation of dams and water impoundments, and excessive stream bank and shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes.

Hydromodification Management Plan (HMP)	A Plan implemented by the **dischargers** so that post-project runoff shall not exceed estimated pre-project rates and/or durations, where increased runoff would result in increased potential for erosion or other adverse impacts to beneficial uses. Also see definition for **flow control.**
Hydrologic Soil Group	Classification of soils by the Natural Resources Conservation Service (NRCS) into A, B, C, and D groups according to infiltration capacity.
Industrial Development	Industrial facilities include those defined at 40 CFR 122.26(b)(14), including those subject to the General Industrial Permit or other individual NPDES permit, operating and closed landfills, facilities subject to SARA Title III, and hazardous waste treatment, disposal, storage and recovery facilities. Examples of industrial facilities includes manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.). The **Priority Development Project** category includes development of heavy industry resulting in the disturbance of one acre or more of land.
Impervious surface	Any material that prevents or substantially reduces infiltration of water into the soil. See discussion of imperviousness in Chapter Two.
Infeasible	As applied to best management practices, impossible to implement because of technical constraints specific to the site.
Infiltration	Seepage of runoff into soils underlying the site. See definition of **retention.**
Infiltration Device	Any structure, such as a dry well, that is designed to infiltrate storm water into the subsurface and, as designed, bypasses the natural groundwater protection afforded by surface or near-surface soil. See definition for **direct infiltration**.
Integrated Management Practice (IMP)	A facility **(BMP)** that provides small-scale treatment, retention, and/or detention and is integrated into site layout, landscaping, and drainage design. See **Low Impact Development.**
Integrated Pest Management (IPM)	An approach to pest management that relies on information about the life cycles of pests and their interaction with the environment. Pest control methods are applied with the most economical means and with the least possible hazard to people, property, and the environment.
Interim Hydromodification Criteria	Pursuant to NPDES permit Provision D.1.d.g.(6), the City of La Mesa prepared Interim Hydromodification Management criteria, which apply to projects disturbing 50 acres or more. The criteria are described in Chapter 2 and in memoranda on the Project Clean Water website.
Jurisdictional Urban Runoff Management Plan (JURMP)	A written description of the specific jurisdictional urban runoff management measures and programs that the City of La Mesa implements to comply with the **storm water NPDES permit** and ensure pollutant discharges are reduced to the MEP and do not cause or contribute to a violation of water quality standards. See **Storm Water Pollution Prevention Program.**

Lead Agency	The public agency that has the principal responsibility for carrying out or approving a project. (CEQA Guidelines §15367).
Low Impact Development	An integrated site design methodology that uses small-scale detention and retention (Integrated Management Practices, or **IMPs**) to mimic pre-existing site hydrological conditions.
Maximum Extent Practicable (MEP)	Standard, established by the 1987 amendments to the Clean Water Act, for the implementation of municipal **storm water pollution prevention programs** (see definition). According to the Act, municipal storm water NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."
National Pollutant Discharge Elimination System (NPDES)	As part of the 1972 Clean Water Act, Congress established the NPDES permitting system to regulate the discharge of pollutants from municipal sanitary sewers and industries. The NPDES was expanded in 1987 to incorporate permits for storm water discharges as well.
Natural Drainage	A natural swale or topographic depression which gathers and/or conveys runoff to a permanent or intermittent watercourse or waterbody.
New Development	Land disturbing activities; surface grading for structural development, including construction or installation of a building or structure, the creation of **impervious surfaces**; and land subdivision.
Numeric Criteria	Sizing requirements for storm water treatment facilities established in Provision D.1.d.(6)(c) of the San Diego RWQCB's storm water NPDES permit.
Operation and Maintenance (O&M)	Refers to requirements in the **Storm Water NPDES Permit** to inspect treatment BMPs and implement preventative and corrective maintenance in perpetuity. See Chapter Five.
Parking Lot	A land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. This **Priority Development Project** category includes parking lots 5,000 square feet or more or with 15 or more parking spaces and potentially exposed to urban runoff.
Permeable Pavements	Pavements for roadways, sidewalks, or plazas that are designed to infiltrate a portion of rainfall, including pervious concrete, pervious asphalt, unit-pavers-on-sand, and crushed gravel.
Pollutant Generating Development Project	Generally all projects which include **impervious surfaces** and/or introduce landscaping that requires routine use of fertilizers and pesticides are considered pollutant generating above background levels. Linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered pollutant generating above background levels if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces.

Post Construction Water Quality Technical Report (PCWQTR)	A PCWQTR is the **Project Submittal** of a **Priority Development Project** to demonstrate compliance.
Priority Development Project	A project subject to SUSMP requirements. Defined in **Storm water NPDES Permit** Provision D.1.d.(1). See Appendix A.
Project Area	The entire project area comprises all areas to be altered or developed by the project, plus any additional areas that drain on to areas to be altered or developed.
Projects Discharging to Receiving Waters within Environmentally Sensitive Areas	All development and significant redevelopment that would create 2,500 square feet of **impervious surfaces** or increase the area of imperviousness of a project site to 10% or more of its naturally occurring condition, and either (1) discharge urban runoff to a receiving water within or directly adjacent (where any portion of the project footprint is located within 200 feet of the **environmentally sensitive area**) to an environmentally sensitive area or (2) discharge to a receiving water within an environmentally sensitive area without mixing with flows from adjacent lands (where the **project footprint** is located more than 200 feet from the environmentally sensitive area).
Project Footprint	The limits of all grading and ground disturbance, including landscaping, associated with a project.
Project Submittal	Documents submitted to the City of La Mesa in connection with an application for development approval and demonstrating compliance with Storm Water NPDES Permit requirements for the project. Priority Development Projects submit a **Post Construction Water Quality Technical Report** and all other projects submit a **Standard Post Construction BMP Plan**.
Proprietary	A proprietary device is one marketed under legal right of the manufacturer.
Receiving Waters	Surface bodies of water, which directly or indirectly receive discharges from urban runoff conveyance systems, including naturally occurring wetlands, streams (perennial, intermittent, and ephemeral [exhibiting bed, bank, and ordinary high water mark]), creeks, rivers, reservoirs, lakes, lagoons, estuaries, harbors, bays and the Pacific Ocean. La Mesa will determine the definition for wetlands and the limits thereof for the purposes of this definition as protective as the United States Environmental Protection Agency. Constructed wetlands are not considered wetlands under this definition, unless the wetlands were constructed as mitigation for habitat loss. Other constructed **BMP**s are not considered receiving waters under this definition, unless the BMP was originally constructed in receiving waters. Construction of treatment control BMPs in "Receiving Waters" is prohibited and therefore may not be used to satisfy **SUSMP** requirements.

The creation, addition, and or replacement of **impervious surface** on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces.

Redevelopment Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk construction, pedestrian ramps, or bike lane on existing roads; and routine replacement of damaged pavement, such as pothole repair.

Rational Method A method of calculating runoff flows based on rainfall intensity, tributary area, and a factor representing the proportion of rainfall that runs off.

Regional (or Watershed) Storm water Treatment Facility A facility that treats runoff from more than one project or parcel.

Regional Water Quality Control Board (Regional Water Board or RWQCB) California RWQCBs are responsible for implementing pollution control provisions of the Clean Water Act and California Water Code within their jurisdiction. There are nine California RWQCBs.

Residential Development Any development on private land that provides living accommodations for one or more persons, including but not limited to: single-family homes, multi-family homes, condominiums, and apartments. This **Priority Development Category** is defined as housing subdivisions resulting in the disturbance of one acre or more of land or comprised of 10 or more dwelling units.

Residential Development of 10 Units or More Any development that provides 10 or more residential units. Residential units can be attached or detached.

Restaurant "Restaurant" means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (**SIC** code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all **SUSMP** requirements except for structural treatment BMP, numeric sizing criteria requirement, and hydromodification requirement.

Retail Gasoline Outlets (RGOs) This **Priority Development Project** category includes RGOs that meet the following criteria: (a) 5,000 square feet or more, or (b) a projected average daily traffic (ADT) of 100 or more vehicles per day.

Retention The practice of holding storm water in ponds or basins, or within berms or depressed areas, and allowing it to slowly infiltrate into underlying soils. Some portion will evaporate. See definitions for **infiltration** and **detention**.

Sediment	Soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organism survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth.
Self-retaining area	An area designed to retain runoff. Self-retaining areas may include graded depressions with landscaping or pervious pavements and may also include tributary impervious areas up to a 2:1 impervious-to-pervious ratio.
Self-treating area	A natural, landscaped, or turf area drains directly off site or to the public storm drain system.
Significant Redevelopment	**Redevelopment** that would create or add or replace at least 5,000 square feet of **impervious surfaces** on an already developed site that falls under one or more priority development project categories. When redevelopment results in an increase of, or replacement of, 50% or more of the previously existing impervious surface, and the existing development was not subject to SUSMP requirements, then the entire project must be included in the treatment measure design. If less than 50% of the previously impervious surface is to be affected, only that portion must be included in the treatment measure design.
Source Control	Land use or site planning practices, or structural or nonstructural measures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff.
Standard Industrial Classification (SIC)	A Federal government system for classifying industries by 4-digit code. It is being supplanted by the North American Industrial Classification System but SIC codes are still referenced by the Regional Water Board in identifying development sites subject to regulation under the NPDES permit. Information and an SIC search function are available at http://www.bls.gov/bls/NAICS.htm
Standard Post Construction BMP Plan (SPCBMPP)	A SPCBMPP is the **Project Submittal** to demonstrate compliance for a project subject to only standard permanent BMP requirements.
Storm Water Conveyance System	Private and public drainage facilities by which storm water may be conveyed to Receiving Waters, such as: natural drainages, roads, streets, constructed channels, aqueducts, storm drains, pipes, street gutters, or catch basins.
Storm Water NPDES Permit	A permit issued by a **Regional Water Quality Control Board** (see definition) to local government agencies (**Dischargers**) placing provisions on allowable discharges of municipal storm water to waters of the state.
Storm Water Pollution Prevention Plan (SWPPP)	A plan providing for temporary measures to control sediment and other pollutants during construction as required by the statewide storm water NPDES permit for construction activities. A SWPPP is required for projects causing land disturbance of one acre or more.

Storm Water Pollution Prevention Program	A comprehensive program of activities designed to minimize the quantity of pollutants entering storm drains. See **Jurisdictional Urban Runoff Management Plan.**
Standard Urban Storm Water Mitigation Plan (SUSMP)	Refers to various documents prepared in connection with implementation of the storm water **NPDES permit** mandate to control pollutants from new development and redevelopment. Each **discharger** will adapt the **model countywide SUSMP** to create a local SUSMP for their respective jurisdiction. Applicants for development project approvals will use the local SUSMP to prepare a submittal for each **Priority Development Project** they propose.
Streets, Roads, Highways, and Freeways	This **Priority Development Project** category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. For the purposes of SUSMP requirements, Streets, Roads, Highways and Freeways do not include trenching and resurfacing associated with utility work; applying asphalt overlay to existing pavement; new sidewalk, pedestrian ramps, or bike lane construction on existing roads; and replacement of damaged pavement.
Treatment	Removal of pollutants from runoff, typically by filtration or settling.
Treatment Control (Structural) BMP	Any engineered system designed and constructed to remove pollutants from urban runoff. Pollutant removal is achieved by simple gravity settling of particulate pollutants, filtration, biological uptake, media adsorption, or any other physical, biological, or chemical process.
Water Board	See **Regional Water Quality Control Board.**
Water Quality Volume (WQV)	For storm water treatment facilities that depend on detention to work, the volume of water that must be detained to achieve maximum extent practicable pollutant removal. This volume of water must be detained for a specified **drawdown time**.

How to Use the Storm Water Best Management Practices Manual

Review Chapters 1 and 2 to get a general understanding of the requirements. Then follow step-by-step instructions in Chapter 3 to prepare your Project Submittal.

THIS Storm Water Best Management Practices Manual (BMP Manual) will help you ensure your project complies with both the Local Standard Urban Storm Water Mitigation Plan (SUSMP) requirements and the Construction BMP requirements of the City of La Mesa (City). Most applicants will require the assistance of a qualified civil engineer, architect, and/or landscape architect. Because every project is different, you should begin by checking specific requirements with municipal staff.

To use the BMP Manual, note that Construction BMPs are temporary measures to control sediment and other pollutants during construction, while SUSMP requirements apply to the development process during all stages of design, construction, completion, use, and maintenance in perpetuity. Start by completing Appendix A to find out how storm water quality requirements apply to your project.

To meet post-construction SUSMP requirements, see chapters one through five of the BMP Manual. To comply with construction BMP requirements, skip ahead to Chapter Six.

Chapter One provides an overview of the process of planning, design, construction, operation, and maintenance leading to compliance with post-construction SUSMP requirements.

If there are terms and issues you find confusing, try finding answers in the glossary or in **Chapter Two**. Chapter Two provides background on key storm water concepts and water quality regulations, including design criteria.

Then proceed to **Chapter Three** and follow the step-by-step guidance to prepare a Project Submittal for your site.

Chapter Four, the Low Impact Development Design Guide, includes design procedures, calculation procedures, and instructions for presenting your design and calculations in your Project Submittal.

In **Chapter Five** you'll find a detailed description of the process for ensuring operation and maintenance of your storm water facilities over the life of the project. The chapter includes step-by-step instructions for preparing a Storm Water Facilities Operation and Maintenance Plan.

The City of La Mesa's specific construction BMP requirements and performance standards are included in **Chapter Six**.

Throughout each Chapter, you'll find references and resources to help you understand the regulations, complete your Project Submittal, and design storm water control measures for your project.

Construction-Phase Controls

Your Project Submittal for SUSMP compliance is a separate document from the Storm Water Pollution Prevention Plan (SWPPP). A SWPPP provides for temporary measures to control sediment and other pollutants during construction at sites that disturb one acre or more. See Chapter 6 of this BMP manual for more information on SWPPPs.

The most recent, updated version of the BMP Manual is on the City website. The on-line BMP Manual is in Adobe Acrobat format. If you are reading the Acrobat version on a computer with an internet connection, you can use hyperlinks to navigate the document and to access various references. The hyperlinks are throughout the text, as well as in "References and Resources" sections within chapters and in "Bibliography and Suggested Resources" in Appendix F. Some of these links (URLs) may be outdated. In that case, try entering portions of the title or other keywords into a web search engine.

► PLAN AHEAD TO AVOID THE THREE MOST COMMON MISTAKES

The most common (and costly) errors made by applicants for development approvals with respect to storm water quality compliance are:

1. Not planning for compliance early enough. You should think about your strategy for storm water quality compliance before completing a conceptual site design or sketching a layout of subdivision lots (Chapter 3).

2. Assuming proprietary storm water treatment facilities will be adequate for compliance. Most aren't (Chapter 2).

3. Not planning for periodic inspections and maintenance of treatment and flow-control facilities. Consider who will own and who will maintain the facilities in perpetuity and how they will obtain access, and identify which arrangements are acceptable to the City of La Mesa (Chapter 5).

Chapter 1

Policies and Procedures

Determine if your development project must comply with storm water quality requirements, and review the steps to compliance.

Background

Urban runoff discharged from municipal storm water conveyance systems has been identified by local, regional, and national research programs as one of the principal causes of water quality problems in most urban areas. The City of La Mesa's storm water conveyance system, which collects runoff from our streets, rooftops, driveways, parking lots, and other impervious areas, flows directly to our rivers, beaches, and bays without receiving treatment (our storm water conveyance system is separate from our sanitary sewer system). Urban runoff potentially contains a host of pollutants like trash and debris, bacteria and viruses, oil and grease, sediments, nutrients, metals, and toxic chemicals. These contaminants can adversely affect receiving and coastal waters, associated wildlife, and public health. Urban runoff pollution is not only a problem during rainy seasons, but also year-round due to many types of urban water use that discharge runoff (dry weather flow) to the storm water conveyance system.

Land development and construction activities significantly alter drainage patterns and contribute pollutants to urban runoff primarily through erosion and removal or change of existing natural vegetation during construction, and the creation of new impervious surfaces, such as parking lots, which often permanently contribute pollutants throughout the "use" of the project site. When homes, work places, recreational areas, roads, parking lots, and structures are built, new impervious areas are built- creating the potential for an impact to water quality. The natural landscape's ability to infiltrate and cleanse storm water and urban runoff is "capped" by the impervious surfaces. As impervious surfaces increase, water that normally would have percolated into the soil now flows over the land surface directly to downstream wetlands, creeks, and eventually the Pacific Ocean. Accordingly, increases in impervious cover can increase the frequency and intensity of storm water flows. Second, new impervious surfaces often become a source of pollutants associated with development, such as automotive fluids, cleaning solvents, toxic or hazardous chemicals, detergents, sediment, metals, pesticides, oil and grease, and food wastes. These pollutants, which are often temporarily captured on impervious surfaces, are

transported to the storm water conveyance system by storm water and urban runoff. The pollutants flow untreated through the storm water conveyance system and ultimately into our creeks, rivers, beaches, and bays. With the growing concerns of urban runoff and storm water pollution, local, state, and federal agencies devised regulations requiring development planning and construction controls to treat storm water-related pollution from new development projects before it reaches any receiving waters.

On January 24th, 2007, the Regional Board issued Order No. R9-2007-0001, hereinafter referred to as "Municipal Permit." This Municipal Permit replaces the previous municipal permit, RWQCB Order No. 2001-01. The City has updated parts I and II of its BMP Manual to reflect the updated requirements of the current Municipal Permit. The primary objectives of the updated BMP Manual are to (1) Effectively prohibit non-storm water discharges; and (2) Reduce the discharge of pollutants from storm water conveyance systems to the MEP both during construction and throughout the use of a developed site. To maximize the use of LID practices as a means of reducing storm water runoff, Order No. R9-2007-0001 further required that the City define minimum LID and other BMP requirements in a document called the Model Standard Urban Storm Water Mitigation Plan (Model SUSMP), which was approved by the Regional Board on March 25, 2009. The permanent BMP requirements within the Model SUSMP were updated to comply with the current Municipal Permit, and these changes are included in this BMP Manual.

Legal Framework

The requirement to implement storm water BMP requirements for development projects is based on Section 402 (p) of the Clean Water Act. The Federal Clean Water Act amendments of 1987 established a framework for regulating storm water discharges from municipal, industrial, and construction activities under the NPDES program. Under the Federal Clean Water Act, municipalities throughout the nation are issued a Municipal NPDES Permit. The primary goal of the Municipal Permit is to stop polluted discharges from entering the storm water conveyance system and local receiving and coastal waters.

In California, the State Water Resources Control Board (SWRCB), through the nine Regional Boards, administers the NPDES storm water municipal permitting program. Based on the San Diego Municipal Permit issued by the San Diego Regional Board, the City is required to develop and implement construction and permanent storm water BMPs addressing pollution from new development projects.

In order to comply with the conditions of Order No. 2001-01, the City of La Mesa adopted the City of La Mesa Watercourse Protection, Storm Water Management and Discharge Control Ordinance ("Storm Water Ordinance") codified in Chapter 7.18 of the La Mesa Municipal Code. These ordinances have been updated as necessary to comply with the current Municipal Permit. This manual is an uncodified ordinance adopted by reference as Part II of the City of La Mesa Storm Water Best Practices Manual. The current Municipal Permit requires the City to categorize and prioritize land uses in order to establish effective BMPs. The City's current Storm Water Ordinance authorizes the City Engineer to establish Best Management Practices

(BMPs), including permanent improvements, for all types of land uses. This manual provides instructions on the City's construction phase and permanent BMP requirements, based on the most recent Model SUSMP, for development projects in the City of La Mesa.

The City Engineer may establish alternative BMPs. The allowable use of alternative BMPs at a specific site shall be determined at the sole discretion of the City Engineer. The City Engineer may establish BMPs for a specific site or activity if necessary to reduce Pollutants to the MEP or to comply with an order of the San Diego Regional Water Board. The City Engineer may also establish additional BMPs for a specific site if the City Engineer determines that the BMPs implemented at the site have not reduced the pollutants to the MEP.

A Low Impact Development Design Procedure

The San Diego Regional Water Board reissued a municipal storm water NPDES permit to the municipal **Copermittees** in January 2007. The permit updates and expands storm water requirements for new developments and redevelopments. Storm water treatment requirements have been made more stringent, minimum standards for **Low Impact Development** (LID) have been added, and the Copermittees are required to develop and implement criteria for the control of runoff peaks and durations from development sites.

To assist the land development community, streamline project reviews, and maximize cost-effective environmental benefits, the Copermittees have developed a unified LID design procedure, which has been adapted for use by the City of La Mesa. This design procedure integrates site planning and design measures with engineered, small-scale **Integrated Management Practices** (IMPs) such as bioretention. By following the procedure, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit LID requirements, storm water treatment requirements, and flow-control (**hydromodification management**) requirements.

The design approach is detailed in Chapter 4. General instructions for preparing a complete Project Submittal are in Chapter 3, and project-specific submittal requirements are available from municipal staff.

Applicants may choose not to use this design procedure, in which case they will need to demonstrate, in their submittal, compliance with applicable LID criteria, storm water treatment criteria, and flow-control criteria. These criteria are described in Chapter 2 and in the NPDES permit.

Requirements for All Development Projects

All development projects must include control measures to reduce the discharge of storm water pollutants to the maximum extent practicable.

Standard permanent storm water requirements, even for projects that are not "Priority Development Projects," include:

- Implementation of source control BMPs as listed in Appendix C.
- Inclusion of feasible LID features that conserve natural features, set back development from natural water bodies, minimize imperviousness, maximize infiltration, direct runoff to landscaping, and retain and slow runoff.
- Submittal of proof of a mechanism under which on-going long-term maintenance of all structural post-construction BMPs will be conducted.
- Compliance with requirements for construction-phase controls on sediment and other pollutants as described in Chapter 6.

Projects (requiring either discretionary actions or construction permits), subject to only standard permanent BMP requirements need to prepare a Standard Post Construction BMP Plan (SPCBMPP). See Appendix G for specific SPCBMPP requirements. Analysis of the project's anticipated pollutants of concern must also be included with the project submittal. Applicants must incorporate all necessary permanent BMPs into the project plans prior to submittal, regardless of project type. Municipal staff may also require additional controls appropriate to the project, which may include storm water treatment controls. LID treatment controls such as infiltration or bioretention are preferred. See "Selection of Treatment Facilities" on page 22.

Priority Development Projects

The NPDES permit requires more specific criteria be applied to Priority Development Projects. Projects (requiring either discretionary actions or construction permits), subject to the priority development project permanent BMP requirements must complete all of the analyses and incorporate all of the applicable BMP requirements in chapters 2 through 5 of this BMP Manual. This includes the LID and source control BMPs, and treatment control BMP requirements.

Projects subject to priority development project requirements must prepare and submit a Post Construction Water Quality Technical Report (PCWQTR) in accordance with Chapter 3 of this BMP Manual. Applicants must incorporate all necessary permanent BMPs into the project plans prior to submittal, regardless of project type.

► NEW DEVELOPMENT

Projects on previously undeveloped land are Priority Development Projects if they are in one or more of the categories listed in Appendix A.

► PREVIOUSLY DEVELOPED SITES

Projects on previously developed sites ("**redevelopment** projects") are Priority Development Projects if they create, add, or replace 5,000 square feet or more of impervious surface and also are in one of the categories listed in Appendix A.

Municipal staff may choose to designate projects not within the categories in Appendix A as Priority Development Projects, based on potential impacts to storm water quality.

► THE "50% RULE" FOR PREVIOUSLY DEVELOPED PROJECTS

Projects on previously developed sites may also need to retrofit drainage of **all** impervious areas of the **entire** site. For sites creating or replacing more than 5,000 square feet of impervious area:

- If the new project results in an increase of, or replacement of, 50% or more of the previously existing impervious surface, and the existing development was not subject to SUSMP requirements, then the entire project must be included in the treatment measure design.
- If less than 50% of the previously impervious surface is to be affected, only that portion must be included in the treatment measure design.

If a new Development Project feature such as a parking lot falls into a Priority Development Project category, then the entire project footprint is subject to SUSMP requirements.

Projects limited to interior remodels, routine maintenance or repair, roof or exterior surface replacement, resurfacing and reconfiguring surface parking lots and existing roadways, new sidewalk construction, pedestrian ramps, or bike lanes on existing roads and routine replacement of damaged pavement such as pothole repair are not subject to treatment requirements. However, other requirements, including incorporation of appropriate source controls, still apply.

Project Review and Permitting Process

The City of La Mesa's Watercourse Protection, Storm Water Management and Discharge Control Ordinance requires that all new development and redevelopment activities comply with the storm water pollution prevention requirements in Chapter 7.18 of the La Mesa Municipal Code, and Parts I and II of the City Of La Mesa Best Management Practices Manual. Applicants must also comply with the grading regulations in Chapter 14.05 of the Municipal Code. These storm water pollution prevention requirements, which are described in detail in this BMP Manual are site specific and vary based on the project's potential impact on receiving water quality.

The flow chart in Figure 1-1, "Review Process for Discretionary Actions" demonstrates how storm water requirements are incorporated into projects requiring subdivision approvals, development permits or other discretionary actions. For information on the construction permit and review process, see Chapter 6 of this BMP Manual. The steps below in "Compliance Process at a Glance" describe the elements of the plan review and permitting processes for storm water best management practice (BMP) requirements.

FIGURE 1-1. Review Process for Discretionary Actions.

The following figure provides an overview of the project review process for projects that require a discretionary action by the City of La Mesa. Discretionary actions include land use plan amendments, re-zonings, subdivisions, planned development permits, conditional use permits, site development permits, variances, neighborhood development permits, and neighborhood use permits.

Compliance Process at a Glance

For the applicant for development project approval, storm water compliance follows these general steps:

1. Discuss requirements during a pre-application meeting with municipal staff.
2. Determine applicable storm water BMP requirements by completing the "Storm Water Requirements Applicability Checklist" in Appendix A prior to submittal.
3. Review the instructions in this BMP manual before you prepare your tentative map, preliminary site plan, drainage plan, and landscaping plan.
4. Prepare your Project Submittal, which is typically made with your application for development approvals (entitlements).
5. Prepare a draft Storm Water Facility Operation and Maintenance Plan and include it with your Project Submittal.
6. Under the authority of the City Engineer, Engineering staff will review the Project Submittal with Storm Water Facility Operation and Maintenance Plan for compliance with the applicable storm water requirements contained in this manual.
7. Create your detailed project design, incorporating the features described in your Project Submittal.
8. In a table on your construction plans, list each storm water compliance feature and facility and the plan sheet where it appears.
9. Maintain storm water facilities during construction and following construction.
10. The owner must periodically verify storm water facilities are properly maintained.

Preparation of a complete and detailed Project Submittal is the key to cost-effective storm water compliance and expeditious review of your project. Additional notes about these steps are provided below. Instructions for preparing your Project Submittal are in Chapter 3.

► ADDITIONAL NOTES ON COMPLIANCE

Storm Water Requirements Applicability Checklist. Prior to submittal, applicants must complete the "Storm Water Requirements Applicability Checklist" in Appendix A, to determine if their project is subject to construction and/or permanent storm water best management practice (BMP) requirements. (Note: this form must be completed for all permit applications, even if previous approvals exist. Projects requesting additional construction permits or discretionary approvals, even though previous permits and/or approvals have been obtained, will be required to comply with the storm water requirements in this document). This checklist must be

completed, signed by the responsible party for the project, and submitted with your permit application. Applicants may also verify the project's storm water BMP requirements through a single discipline preliminary review of the project. The project design must include all required permanent BMPs (as determined from the Storm Water Requirements Applicability Checklist in Appendix A), prior to deeming the application package complete.

Determining Adequacy of Proposed Plans. The City Engineer may approve proposed alternatives to the BMP requirements in this manual if they are determined to be applicable and equally effective. Additional analysis or information may be required to enable staff to determine the adequacy of proposed BMPs.

Phased Projects

When determining whether SUSMP requirements apply, a "project" should be defined consistent with California Environmental Quality Act (CEQA) definitions of "project." That is, the "project" is the whole of an action which has the potential for adding or replacing or resulting in the addition or replacement of roofs, pavement, or other impervious surfaces and thereby resulting in increased flows and storm water pollutants. "Whole of an action" means the project may not be segmented or piecemealed into small parts if the effect is to reduce the quantity of impervious area for any part to below the SUSMP thresholds.

Municipal staff may require, as part of an application for approval of a phased development project, a conceptual or master Project Submittal which describes and illustrates, in broad outline, how the drainage for the project will comply with the SUSMP requirements. The level of detail in the conceptual or master Project Submittal should be consistent with the scope and level of detail of the development approval being considered. The conceptual or master Project Submittal should specify that a more detailed Project Submittal for each later phase or portion of the project will be submitted with subsequent applications for discretionary approvals.

Note these minimum standards for SUSMP applicability are for the purpose of ensuring a consistent minimum level or "floor" for implementation consistent with the requirements of the NPDES permit. The City Engineer reserves the right to choose a more expansive interpretation of the NPDES permit's applicability and may also choose to apply source control, treatment, and flow-control requirements to projects that would be exempt under these minimum standards.

New Subdivisions

If a tentative map approval would potentially entitle future owners to construct new or replaced impervious area which, in aggregate, could exceed one of the SUSMP thresholds (Appendix A), then the applicant must take steps to ensure SUSMP requirements can and will be implemented as the subdivision is built out.

If the tentative map application does not include plans for site improvements, the applicant should nevertheless identify the type, size, location, and final ownership of storm water treatment and flow-control facilities adequate to serve common private roadways and any other common areas, and to also manage runoff from an expected reasonable estimate of the square footage of future roofs, driveways, and other impervious surfaces on each individual lot. The City Engineer may condition approval of the map on implementation of storm water treatment and other SUSMP measures when construction occurs on the individual lots. At the City Engineer's discretion, this condition may be enforced by a grant deed of development rights or by a development agreement.

If the City Engineer deems it necessary, the future impervious area of one or more lots may be limited by a deed restriction. This might be necessary when a project is exempted from one or all SUSMP provisions because the total impervious area is below a threshold, or to ensure runoff from impervious areas added after the project is approved does not overload a storm water treatment and flow-control facility.

The City Engineer may require subdivision maps to dedicate an "open space easement, as defined by Government Code Section 51075," to suitably restrict the future building of structures at each storm water facility location if necessary.

In general, in new subdivisions **storm water treatment, infiltration, or flow-control facilities should not be located on individual single-family residential lots**, particularly when those facilities manage runoff from other lots, from streets, or from common areas. A better alternative is to locate storm water facilities on one or more separate, jointly owned parcels.

After consulting with local planning staff, applicants for subdivision approvals will propose one of the following four options, depending on project characteristics and local policies:

1. Show the number of parcels and the total impervious area to be created on all parcels could not, in the future, exceed any of the thresholds in Appendix A.

2. Show that, for each and every lot, the intended use can be achieved with a design which disperses runoff from roofs, driveways, streets, and other impervious areas to self-retaining pervious areas, using the criteria in Chapter 4.

3. Prepare improvement plans showing drainage to treatment and/or flow-control facilities designed in accordance with this BMP manual, and commit to constructing the facilities prior to transferring the lots.

4. Prepare improvement plans showing drainage to treatment and/or flow-control facilities designed in accordance with this BMP manual, and provide appropriate legal instruments to ensure the proposed facilities will be constructed and maintained by subsequent owners.

For the option selected, municipal staff will determine the appropriate conditions of approval, easements, deed restrictions, or other legal instruments necessary to assure future compliance.

Compliance with Flow-Control Requirements

Priority Development Projects (Appendix A) must be designed so that runoff rates and durations are controlled to maintain or reduce downstream erosion conditions and protect stream habitat.

For projects disturbing areas smaller than 50 acres, this can be accomplished by implementing **Low Impact Development** (LID) design using the design criteria and procedures in Chapter 4. The criteria will be updated following RWQCB approval of the **Hydromodification Management Plan** (see Option 2 below).

Priority Development Projects disturbing 50 acres or more must meet the following **interim hydromodification standard**:

> "…post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations … where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to increased flow rates and durations."

The City of La Mesa is developing a Hydromodification Management Plan (HMP) in compliance with Provision D.1.g of the NPDES Permit. As required, the City has adopted interim hydromodification criteria (IHC) which will be superseded after the HMP is accepted by the Regional Water Board.

Compliance with the interim hydromodification criteria can be achieved by one of the following options:

1. Use a continuous simulation hydrologic computer model such as USEPA's Hydrograph Simulation Program—Fortran (HSPF) to simulate pre-project and post-project runoff, including the effect of proposed IMPs, detention basins, or other storm water management facilities, and demonstrate the standard is achieved.

2. Use Low Impact Development Integrated Management Practices to manage hydrograph modification impacts, using design procedures, criteria, and sizing factors (ratios of LID IMP volume or area to tributary area) specified by the City of La Mesa.

3. Identify an exemption applicable to the site.

► OPTION 1: CONTINUOUS SIMULATION

Prepare an analysis of pre-project and post-project runoff following the instructions in the memoranda "Using Continuous Simulation to Size Stormwater Control Facilities" (May 9, 2008)

and "Development of Interim Hydromodification Criteria" (October 30, 2007). Both memoranda are available on the Project Clean Water website.

Before preparing the analysis, discuss with municipal staff the required documentation for your Project Submittal, which will include assumptions and modeling parameters used in the analysis and a graphical presentation demonstrating compliance with the following:

1. For flow rates from 20% of the pre-project 5-year runoff event (0.2Q5) to the pre-project 10-year runoff event (Q10), the post-project discharge rates and durations shall not deviate above the pre-project rates and durations by more than 10% over and more than 10% of the length of the flow duration curve.

2. For flow rates from 0.2Q5 to Q5, the post-project peak flows shall not exceed pre-project peak flows. For flow rates from Q5 to Q10, post-project peak flows may exceed pre-project flows by up to 10% for a 1-year frequency interval. For example, post-project flows could exceed pre-project flows by up to 10% for the interval from Q9 to Q10 or from Q5.5 to Q6.5, but not from Q8 to Q10. (Note that the 0.2Q5 end of the range may be modified).

► OPTION 2: LID INTEGRATED MANAGEMENT PRACTICES

Low Impact Development Integrated Management Practices, such as bioretention facilities, planter boxes, and dry wells, can achieve the hydromodification standard. However, the City of La Mesa has not yet prepared design criteria and sizing factors for these facilities applicable to projects 50 acres or more. Project proponents for projects 50 acres or more may use Option 1 to demonstrate their IMPs meet the interim criteria.

► OPTION 3: EXEMPTION FROM HYDROMODIFICATION MANAGEMENT

Exemption from the IHC is allowed for development projects when any of the following conditions are met. (However, plans to restore a channel reach may re-introduce the applicability of hydromodification management.)

1. The project would discharge into channels that are concrete-lined or significantly hardened (e.g., with rip-rap, sackcrete, etc.) downstream to their outfall in bays or the ocean;

2. The project would discharge into underground storm drains discharging directly to bays or the ocean;

3. The project would discharge to a channel where the sub-watershed areas below the project's discharge points are highly impervious (e.g. >70%) and the potential for single-project and/or cumulative impacts is minimal; or

4. The applicant conducts an assessment incorporating sediment transport modeling across the range of geomorphically-significant flows that demonstrates project flows and sediment reductions will not detrimentally affect the receiving water. A May 15,

2008 memorandum, "Geomorphic Analysis for Interim Hydrograph Modification Plan" is available on the Project Clean Water website.

Grandfathering. Projects with prior lawful approval (such as a development agreement, vested tentative map, or a building or grading permit) that have started construction before March 25, 2008, may not have to meet the interim hydromodification management requirements. Verify with municipal staff.

Note these are interim requirements and will be superseded following approval of the HMP by the Regional Water Board in early 2010. Updated hydromodification criteria for all Priority Development Projects will be incorporated into local SUSMP requirements sometime in mid-2010 or later.

Waivers from Numeric Sizing Criteria

The NPDES permit allows for a project to be waived from numeric sizing criteria for storm water treatment only if all available treatment facilities have been considered and found **infeasible**. Municipal staff must inform the Water Board within 5 days of granting a waiver. Other SUSMP requirements—including site designs to minimize imperviousness and source control BMPs—will still apply.

Experience has shown implementation of LID facilities, as described in Chapter 4, is feasible on nearly all development sites. However, the use of LID to retrofit existing drainage systems, to manage runoff from sites smaller than one acre in pedestrian-oriented developments, or to manage runoff from widened portions of roadways, sometimes presents special challenges. In these special situations, applicants should see the discussion of "Selection of Storm Water Treatment Facilities" in Chapter 2 and evaluate the options described on page 24 in order (depending on the specific characteristics of the project and as determined by the City Engineer). All the options listed meet the numeric sizing criteria in the NPDES permit.

If infeasibility of all these options can be established, the City Engineer may determine eligibility of the project for a waiver.

Chapter 2

Concepts and Criteria

Technical background and explanations of policies and design requirements

The Regional Water Board reissued a municipal storm water NPDES permit to San Diego County, its 18 cities, the San Diego Unified Port District, and the San Diego Regional Airport Authority in January 2007. The permit mandates a comprehensive program to prevent storm water pollution. That program now includes street sweeping, maintenance of storm drains, business inspections, public outreach, construction site inspections, monitoring, and studies of stream and ocean health, and control of runoff pollutants from new developments and redevelopments.

Permit Provision D.1.d. requires the City of La Mesa to regulate projects in specific categories (Table 1-1) to:

1. Reduce discharges of pollutants to the maximum extent practicable.
2. Prevent runoff discharges from causing or contributing to a violation of water quality standards.

The City of La Mesa has created a Low Impact Development (LID) design procedure (Chapter 4) that ensures consistent and thorough implementation of the Regional Water Board's requirements. This chapter explains the technical background of the LID approach and how it was derived.

The previous permit, issued in 2001, included a requirement to control the post-development peak storm water runoff rates and velocities to maintain or reduce pre-development downstream erosion and protect stream habitat. The 2007 permit includes, in addition to this ongoing requirement, a new requirement to develop a hydromodification management plan (HMP) to identify and define a methodology and performance criteria to ensure flow rates and durations do not exceed pre-project runoff where increased runoff could cause erosion or other significant adverse impacts to beneficial uses.

As required by the NPDES permit, the City of La Mesa has adopted interim hydromodification criteria. See Chapter One.

Water-Quality Regulations

Provision D.1 requires the City of La Mesa to condition development approvals on incorporation of specified storm water controls.

Provision D.1 requires applicable new developments and redevelopments:

- Design the site to conserve natural areas, existing trees and vegetation and soils, to maintain natural drainage patterns, to minimize imperviousness, to detain runoff, and to infiltrate runoff where feasible
- Cover or control sources of storm water pollutants
- Treat runoff prior to discharge. Provision E.10 states: "Urban runoff treatment and/or mitigation must occur prior to the discharge of urban runoff into a receiving water. Federal regulations at 40 CFR 131.10(a) state that in no case shall a state adopt waste transport or waste assimilation as a designated use for any waters of the U.S."
- Ensure runoff does not exceed pre-project peaks and durations where increases could affect downstream habitat or other beneficial uses
- Maintain treatment and flow-control facilities

The City of La Mesa maintains a database to track approved installations of treatment facilities and to verify facilities are maintained. The City's annual report to the Regional Water Board includes a list of development projects subject to SUSMP conditions and descriptions of those projects that:

- Received a waiver from SUSMP criteria;
- Used hydrologic controls used to meet HMP requirements, including a description of the controls;
- Have an area of 50 acres or greater, thus subject to **Interim Hydromodification Criteria**; and

The City of La Mesa must also report the number of violations and enforcement actions taken upon development projects. The City of La Mesa's programs are subject to audit by the Regional Water Board.

The City of La Mesa—not the Regional Water Board or its staff—is charged with ensuring development projects comply with the D.1 requirements. Regional Water Board staff sometimes review storm water controls and hydromodification impacts in connection with applications for Clean Water Act Section 401 water-quality certification, which is required for projects that involve work, such as dredging or placement of fill, within streams, creeks, or other waters of the US.

► MAXIMUM EXTENT PRACTICABLE

Clean Water Act Section 402(p)(3)(iii) sets the standard for storm water controls as "maximum extent practicable," but doesn't define that term. As implemented, "maximum extent practicable" is ever-changing and varies with conditions.

Many storm water controls, including LID facilities, have proven to be practicable in most site development projects. To achieve fair and effective implementation, criteria, and guidance, requirements for controls must be detailed and specific—while also offering the right amount of flexibility or exceptions for special cases. The NPDES permit includes various standards, including hydrologic criteria, which have been found to comprise "maximum extent practicable." This BMP Manual is to be continuously improved and refined based on the experience of municipal planners and engineers, with input from land developers and development professionals. By following the BMP Manual, applicants can ensure their project design meets "maximum extent practicable."

► BEST MANAGEMENT PRACTICES

Clean Water Act Section 402(p) and USEPA regulations (40 CFR 122.26) specify a municipal program of "management practices" to control storm water pollutants. **Best Management Practice (BMP)** refers to any kind of procedure, activity, or device designed to minimize the quantity of pollutants that enter the storm drain system. BMPs are typically used in place of assigning numeric effluent limits. The criteria for source control BMPs and treatment and flow-control facilities are crafted to fulfill "maximum extent practicable."

To minimize confusion, this guidebook refers to "facilities," "features," or "controls" to be incorporated into development projects. All of these are BMPs.

Pollutants of Concern

NPDES Permit Provision D.1.d.(3) requires the City of La Mesa to develop and implement a procedure for pollutants of concern to be identified for each Priority Development Project.

Documentation of the approach to identifying pollutants of concern and selecting BMPs and facilities follows.

► GROUPING OF POTENTIAL POLLUTANTS OF CONCERN

Urban runoff from a developed site has the potential to contribute pollutants, including oil and grease, suspended solids, metals, gasoline, pesticides, and pathogens to the storm water conveyance system and receiving waters. For the purposes of identifying pollutants of concern and associated storm water BMPs, pollutants are grouped in nine general categories as follows:

- **Sediments** are soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms

survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth.

- **Nutrients** are inorganic substances, such as nitrogen and phosphorus. They commonly exist in the form of mineral salts that are either dissolved or suspended in water. Primary sources of nutrients in urban runoff are fertilizers and eroded soils. Excessive discharge of nutrients to water bodies and streams can cause excessive aquatic algae and plant growth. Such excessive production, referred to as cultural eutrophication, may lead to excessive decay of organic matter in the water body, loss of oxygen in the water, release of toxins in sediment, and the eventual death of aquatic organisms.

- **Metals** are raw material components in non-metal products such as fuels, adhesives, paints, and other coatings. Primary sources of metal pollution in storm water are typically commercially available metals and metal products. Metals of concern include cadmium, chromium, copper, lead, mercury, and zinc. Lead and chromium have been used as corrosion inhibitors in primer coatings and cooling tower systems. At low concentrations naturally occurring in soil, metals are not toxic. However, at higher concentrations, certain metals can be toxic to aquatic life. Humans can be impacted from contaminated groundwater resources, and bioaccumulation of metals in fish and shellfish. Environmental concerns, regarding the potential for release of metals to the environment, have already led to restricted metal usage in certain applications.

- **Organic compounds** are carbon-based. Commercially available or naturally occurring organic compounds are found in pesticides, solvents, and hydrocarbons. Organic compounds can, at certain concentrations, indirectly or directly constitute a hazard to life or health. When rinsing off objects, toxic levels of solvents and cleaning compounds can be discharged to storm drains. Dirt, grease, and grime retained in the cleaning fluid or rinse water may also adsorb levels of organic compounds that are harmful or hazardous to aquatic life.

- **Trash** (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste products on the landscape. The presence of trash & debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a stream and thereby lower its water quality. Also, in areas where stagnant water exists, the presence of excess organic matter can promote septic conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfide.

- **Oxygen-Demanding Substances** includes biodegradable organic material as well as chemicals that react with dissolved oxygen in water to form other compounds. Proteins, carbohydrates, and fats are examples of biodegradable organic compounds. Compounds such as ammonia and hydrogen sulfide are examples of oxygen-

demanding compounds. The oxygen demand of a substance can lead to depletion of dissolved oxygen in a water body and possibly the development of septic conditions.

- Primary sources of **oil and grease** are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids. Introduction of these pollutants to the water bodies are very possible due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality.

- **Bacteria and Viruses** are ubiquitous microorganisms that thrive under certain environmental conditions. Their proliferation is typically caused by the transport of animal or human fecal wastes from the watershed. Water, containing excessive bacteria and viruses can alter the aquatic habitat and create a harmful environment for humans and aquatic life. Also, the decomposition of excess organic waste causes increased growth of undesirable organisms in the water.

- **Pesticides** (including herbicides) are chemical compounds commonly used to control nuisance growth or prevalence of organisms. Excessive application of a pesticide may result in runoff containing toxic levels of its active component.

► IDENTIFYING POLLUTANTS OF CONCERN BASED ON LAND USES

Table 2-1 associates pollutants with the categories of Priority Development Projects. Pollutants associated with any hazardous material sites that have been remediated or are not threatened by the proposed project are not considered a pollutant of concern.

► WATERSHEDS WITH SPECIAL POLLUTANT CONCERNS

Receiving water conditions may require specialized attention. The three conditions to consider include:

- Ocean waters designated as an "Area of Special Biological Significance" (ASBS)
- 303(d) listed waters; and
- Waters with established TMDLs.

TABLE 2-1. Anticipated and Potential Pollutants Generated by Land Use Type.

	General Pollutant Categories								
Land Use Type	Sediment	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P(1)	P(2)	P	X
Commercial Development	P(1)	P(1)	X	P(2)	X	P(5)	X	P(3)	P(5)
Heavy Industry	X		X	X	X	X	X		
Automotive Repair Shops			X	X(4)(5)	X		X		
Restaurants					X	X	X	X	P(1)
Hillside Development >5,000 ft^2	X	X			X	X	X		X
Parking Lots	P(1)	P(1)	X		X	P(1)	X		P(1)
Retail Gasoline Outlets			X	X	X	X	X		
Streets, Highways & Freeways	X	P(1)	X	X(4)	X	P(5)	X	X	P(1)

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

The State Water Resources Control Board's California Ocean Plan identifies thirty-four locations along the California coast as **Areas of Special Biological Significance (ASBS)**. Currently, there are no ASBS of downstream of the City of La Mesa, See Table 2-2 for a list of applicable downstream water bodies. Please note that while runoff from the City drains to these water bodies, the actual water bodies are not located within the City itself.

TABLE 2-2. City of La Mesa Drainage Basins.

Drainage Basin	Percent of City of La Mesa Area	Receiving Waterbody	Hydrologic Subarea	Watershed
Alvarado	51	San Diego River	907.11	San Diego River
Lake Murray	1	Lake Murray		
University	28	Chollas Creek	908.22	San Diego Bay
Lemon Grove	6			
Spring Valley	14	Sweetwater River	909.12	

The NPDES Permit identifies several receiving waters as impaired for constituents or water quality effects pursuant to **Section 303(d)** of the Clean Water Act. Placement of a water onto the list requires the Regional Board to make further analysis of the impairment and development of total maximum daily loads (TMDLs) for addressing the impairment. The 303(d) listing in itself does not demand that a project proponent select BMPs on the basis of the impairment; however, the project proponent should be cognizant of the impairment and the future implications a TMDL might have upon the proposed land use. The San Diego River, Chollas Creek, and Lake Murray, all of which are on the 2006 CWA Section 303(d) list, are located downstream of the City of La Mesa. The San Diego River is impaired for fecal coliform, low dissolved oxygen, phosphorus, and total dissolved solids (TDS). Chollas Creek is impaired for bacterial indicators, copper, diazinon, lead, and zinc. Lake Murray, which drains a very small portion of the City, is 303(d) listed for pH.

Forthcoming 2008 303(d) list additions will apply upon adoption by the RWQCB and EPA. Check the website below for the most current listing.
(http://www.waterboards.ca.gov/sandiego/water_issues/programs/303d_list/index.shtml

Once a TMDL is established it may impose conditions on development either through an implementation plan and schedule for the listed water, or through special conditions required of the City of La Mesa affected by the numeric criteria of the TMDL. At this time, several 303(d) listings in San Diego County are at various stages of TMDL development with only four TMDLs having been adopted by the Regional Board. However, there are approximately 190 pending TMDLs in the county.

Applicable current and pending **TMDLs** in the La Mesa area include:

- Adopted TMDL for diazinon for Chollas Creek;

- Adopted TMDL for copper, lead, and zinc for Chollas Creek,
- Pending TMDL for sediment toxicity for the mouth of Chollas Creek,
- Pending TMDL for indicator bacteria for beaches and creeks in the San Diego Region.

The applicant should meet with municipal staff to determine if any project characteristics or watershed characteristics affect selection and design of BMPs. Except in rare circumstances, the use of the LID Design Guide (Chapter 4) and the Storm Water Pollutant Sources/Source Control Checklist (Appendix C) will ensure your project complies with all storm water requirements.

Selection of Permanent Source Control BMPs

Based on identification of potential pollutants of concern associated with various types of facilities, the City of La Mesa has developed a Storm Water Pollutant Sources/Source Control Checklist (Appendix C) of "maximum extent practicable" source controls associated with each facility type. This approach ensures appropriate BMPs are applied to potential sources of each pollutant of concern.

Selection of Storm Water Treatment Facilities

Table 2-3, below, categorizes pollutants of concern related to fate and pathways.

Table 2-4, below, includes a general comparison of how various types of treatment facilities perform for each group of pollutants.

TABLE 2-3. Grouping of Potential Pollutants of Concern by Fate During Storm Water Treatment

Pollutant	Coarse Sediment and Trash	Pollutants that tend to associate with fine particles during treatment	Pollutants that tend to be dissolved following treatment
Sediment	X	X	
Nutrients		X	X
Heavy Metals		X	
Organic Compounds		X	
Trash & Debris	X		
Oxygen Demanding		X	
Bacteria		X	
Oil & Grease		X	
Pesticides		X	

TABLE 2-4. Groups of Pollutants and Relative Effectiveness of Treatment Facilities

Pollutants of Concern	Bioretention Facilities (LID)	Settling Basins (Dry Ponds)	Wet Ponds and Constructed Wetlands	Infiltration Facilities or Practices (LID)	Media Filters	Higher-rate biofilters*	Higher-rate media filters*	Trash Racks & Hydro -dynamic Devices	Vegetated Swales
Coarse Sediment and Trash	High	High	High	High	High	High	High	High	High
Pollutants that tend to associate with fine particles during treatment	High	High	High	High	High	Medium	Medium	Low	Medium
Pollutants that tend to be dissolved following treatment	Medium	Low	Medium	High	Low	Low	Low	Low	Low

*See page 24 for a discussion of selection of treatment facilities in special situations.

Based on this analysis, the City of La Mesa has determined that the following types of facilities are appropriate for treatment of runoff potentially containing most pollutants of concern. These types of facilities can be used for storm water treatment for all land uses in all watersheds, except where site-specific constraints make them infeasible.

- Infiltration facilities or practices, including dry wells, infiltration trenches, infiltration basins, and other facilities that infiltrate runoff to native soils (sized to detain and infiltrate a volume equivalent to the 85th percentile 24-hour event).
- Bioretention facilities and media filters that detain storm water and filter it slowly through soil or sand (sized with a surface area at least 0.04 times the effectively impervious tributary area).
- Extended detention basins, wet ponds, and wetlands or other facilities using settling (sized to detain a volume equivalent to runoff from the tributary area generated by the 85th percentile 24-hour event).

The recommended design procedure in Chapter 4 integrates LID practices—optimizing the site design, using pervious surfaces, and dispersing of runoff to adjacent pervious areas—with the use of infiltration facilities and practices and bioretention facilities to meet NPDES permit LID requirements, treatment requirements, and flow-control requirements in a cost-effective, unified design.

Oil/water separators ("water quality inlets"), storm drain inlet filters, and hydrodynamic separators, including vortex separators and continuous deflection separators ("CDS units"), are less effective means of storm water treatment, although they may be used in series with more effective facilities.

Underground vaults typically lack the detention time required for settling of fine particles associated with storm water pollutants. They also require frequent maintenance and may retain stagnant water, potentially providing harborage for mosquitoes. Because vaults may be "out of sight, out of mind," experience shows that the required maintenance may not occur.

Lack of space, in itself, is not a suitable justification for using a less-effective treatment on a development site, because the uses of the site and the site design can be altered as needed to accommodate bioretention facilities or planter boxes. In most cases, these effective facilities can be fit into required landscaping setbacks, easements, or other unbuildable areas.

Where possible, drainage to inlets, and drainage away from overflows and underdrains, should be by gravity. Where site topography makes it infeasible to accommodate gravity-fed facilities in the project design, the design flow may be captured in a vault or sump and pumped via force main to an effective facility.

The following situations sometimes present special challenges:

- Portions of sites which are not being developed or redeveloped, but which must be retrofit to meet treatment requirements in accordance with Provision D.1.d.(1)(a) which states in part: "Where redevelopment results in an increase of, or replacement of, more than fifty percent of the impervious surface of a previously existing development, the numeric sizing criteria applies to the entire development."

- Sites smaller than one acre approved for development or redevelopment as part of a municipality's stated objective to preserve or enhance a pedestrian-oriented "smart-growth" type of urban design.

- Roadway widening projects.

In these special situations, the following types of facilities should each be evaluated in priority order (depending on the specific characteristics of the site and as determined by the municipal storm water coordinator) until a feasible design is found.

1. Bioretention areas or planter boxes fed by gravity.

2. Capture of the design flow in a vault or sump and pumping to bioretention areas or planter boxes.

3. A subsurface sand or media filter with a maximum design surface loading rate of 5 inches per hour and a minimum media depth of 18 inches. The sand surface must be made accessible for periodic inspection and maintenance (for example, via a removable grating).

4. A higher-rate surface biofilter, such as a tree-pit-style unit. The grading and drainage design should minimize the area draining to each unit and maximize the number of discrete drainage areas and units.

5. A higher-rate vault-based filtration unit (for example, vaults with replaceable cartridge filters filled with inorganic media).

Proprietary Devices
Many currently available proprietary devices do not meet City of La Mesa requirements when used alone for storm water treatment. Consult with municipal staff before proposing these devices.

Many proprietary storm water treatment devices are currently marketed, and new brands will be introduced. Applicants and applicants' engineers and design professionals should review with municipal staff any proposals for using proprietary devices for storm water treatment before they commence work on preliminary site layout, drainage plans, grading plans, or landscape plans.

Hydrology for NPDES Compliance

► IMPERVIOUSNESS

Schueler (1995) proposed **imperviousness** as a "unifying theme" for the efforts of planners, engineers, landscape architects, scientists, and local officials concerned with urban watershed protection. Schueler argued (1) that imperviousness is a useful indicator linking urban land development to the degradation of aquatic ecosystems, and (2) imperviousness can be quantified, managed, and controlled during land development.

Imperviousness has long been understood as the key variable in urban hydrology. Peak runoff flow and total runoff volume from small urban catchments is usually calculated as a function of the ratio of impervious area to total area **(rational method)**. The ratio correlates to the runoff factor, usually designated "C". Increased flows resulting from urban development tend to increase the frequency of small-scale flooding downstream.

Imperviousness links urban land development to degradation of aquatic ecosystems in two ways.

First, the combination of paved surfaces and piped runoff efficiently collects urban pollutants and transports them, in suspended or dissolved form, to surface waters. These pollutants may originate as airborne dust, be washed from the atmosphere during rains, or may be generated by automobiles and outdoor work activities.

Second, increased peak flows and runoff durations typically cause erosion of stream banks and beds, transport of fine sediments, and disruption of aquatic habitat. Measures taken to control stream erosion, such as hardening banks with riprap or concrete, may permanently eliminate habitat. By reducing infiltration to groundwater, imperviousness may also reduce dry-weather stream flows.

Imperviousness has two major components: rooftops and transportation (including streets, highways, and parking areas). The transportation component is usually larger and is more likely to be **directly connected** to the storm drain system.

The effects of imperviousness can be mitigated by disconnecting impervious areas from the drainage system and by encouraging detention and retention of runoff near the point where it is

generated. Detention and retention reduce peak flows and volumes and allow pollutants to settle out or adhere to soils before they can be transported downstream.

► LOW IMPACT DEVELOPMENT REQUIREMENTS

The NPDES permit requires LID be used on all projects to minimize directly connected impervious area and promote infiltration. For Priority Development Projects, the minimum standards are:

- Drain a portion of impervious areas into pervious areas, if any.
- Design and construct pervious areas, if any, to effectively receive and infiltrate runoff from impervious areas, taking into account soil conditions, slope, and other pertinent factors.
- Construct a portion of paved areas with low traffic and appropriate soil conditions with permeable surfaces.

The LID design procedure in Chapter 4 incorporates these requirements into an integrated design which also meets sizing requirements for storm water treatment facilities and flow-control (hydromodification management) requirements.

► SIZING REQUIREMENTS FOR STORM WATER TREATMENT FACILITIES

The guidance in Chapter 4 was crafted to ensure LID facilities comply with the NPDES permit's hydraulic sizing requirements for storm water treatment facilities and flow-control facilities. The technical background follows.

Most runoff is produced by frequent storms of small or moderate intensity and duration. Treatment facilities are designed to treat smaller storms and the first flush of larger storms—approximately 80% of average annual runoff.

The NPDES permit identifies two types of treatment facilities—volume-based and flow-based.

Volume-based facilities must be designed to infiltrate, filter, or treat the volume of runoff produced from a 24-hour 85th percentile storm event as determined from the County of San Diego's 85th Percentile Precipitation Isopluvial Map. As shown on the map, rainfall depths vary from about 0.55" to 1.55".

For **flow-based** facilities, the NPDES permit specifies the rational method be used to determine flow. The rational method uses the equation

$Q = CiA$, where

Q = flow

C = weighted runoff factor between 0 and 1

i = rainfall intensity

A = area

The permit identifies two alternatives for calculating rainfall intensity:

1. the 85th percentile rainfall intensity times two, or
2. 0.2 inches per hour.

It is typically found that both methods yield similar results. The 0.2 inches per hour rainfall intensity should be used for sizing flow-based treatment facilities.

The 0.2 inches per hour criterion is the basis for a **consistent countywide sizing factor** for bioretention facilities when used for storm water treatment only (i.e., not for flow control). The factor is based on maintaining a minimum percolation rate of 5 inches per hour through the engineered soil mix. The sizing factor is the ratio of the design intensity of rainfall on tributary impervious surfaces (0.2 inches/hour) to the design percolation rate in the facility (5 inches/hour), or **0.04** (dimensionless).

► FLOW-CONTROL (HYDROMODIFICATION MANAGEMENT)

The NPDES permit specifies for applicable projects:

> … post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in flow rates and durations.

Under current Interim Hydromodification Criteria, the requirement applies to projects disturbing 50 acres or more, and applicants may select among **three options** for compliance: Use a continuous simulation model to compare pre-project and post-project runoff, use LID facilities with sizing factors and design criteria developed by the City of La Mesa, or identify a specified exemption. See Chapter One.

The technical background for the Interim Hydromodification Criteria is in the memorandum "Development of Interim Hydromodification Criteria" (October 30, 2007) and other technical documents available on the Project Clean Water website.

Criteria for Infiltration Devices

The NPDES permit restricts the design and location of "infiltration devices" that, as designed, may bypass filtration through surface soils before reaching groundwater. These devices include:

- Infiltration basins.
- Infiltration trenches (includes French drains).

- Unlined retention basins (i.e., basins with no outlets).
- Unlined or open-bottomed vaults or boxes installed below grade (dry wells).

Infiltration devices may not be used in:

- Areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or greater average daily traffic on main roadway or 15,000 or more average daily traffic on any intersecting roadway);
- Automotive repair shops;
- Car washes;
- Fleet storage areas (bus, truck, etc.);
- Nurseries;
- Other areas with pollutant sources that could pose a threat to groundwater, as designated by the City of La Mesa.

The vertical distance from the base of any infiltration device to the seasonal high groundwater mark shall be at least 10 feet. Infiltration devices shall be located a minimum of 100 feet horizontally from any known water supply wells.

In addition, infiltration devices are not recommended where:

- The infiltration device would receive drainage from areas where chemicals are used or stored, where vehicles or equipment are washed, or where refuse or wastes are handled.
- Surface soils or groundwater are polluted.
- The facility could receive sediment-laden runoff from disturbed areas or unstable slopes.
- Increased soil moisture could affect the stability of slopes of foundations.
- Soils are insufficiently permeable to allow the device to drain within 72 hours.

► MOST LID FEATURES AND FACILITIES ARE NOT INFILTRATION DEVICES

Self-treating and self-retaining areas, pervious pavements, bioretention facilities, and planter boxes are not considered to be infiltration devices.

Bioretention facilities work by percolating runoff through 18 inches or more of engineered soil. This removes most pollutants before the runoff is allowed to seep into native soils below. Further pollutant removal typically occurs in the unsaturated (vadose) zone before moisture reaches groundwater.

Where there is concern about the effects of increased soil moisture on slopes or foundations, an impermeable barrier may be added so the facility is "flow through" and all treated runoff is underdrained away from the facility. See the design sheets for Bioretention Facilities and Flow-Through Planters in Appendix B.

Chapter 3

Preparing Your Project Submittal

Step-by-step assistance to demonstrate compliance.

Your Project Submittal will demonstrate your project complies with all applicable requirements in the storm water NPDES permit—to minimize imperviousness, retain or detain storm water, slow runoff rates, incorporate required source controls, treat storm water prior to discharge, control runoff rates and durations, and provide for operation and maintenance of treatment and flow-control facilities.

Submittal requirements vary from jurisdiction to jurisdiction. See below for the specific requirements of the City of La Mesa.

Typically, your Project Submittal must be coordinated with your application for discretionary approvals and must have sufficient detail to ensure the storm water design, site plan, and landscaping plan are congruent.

A complete and thorough Project Submittal will facilitate quicker review and fewer cycles of review. The City of La Mesa requires a submittal for every applicable project. The step by step procedure in this chapter is highly recommended by the City of La Mesa; any other approaches to meeting the requirements of this BMP Manual must be shown by the project proponent to be defensibly equivalent or better.

In order to meet SUSMP requirements, your submittal will be a Standard Post Construction BMP Plan (SPCBMPP) or a Post Construction Water Quality Technical Report (PCWQTR), depending on the outcome of the "Storm Water Requirements Applicability Checklist" in Appendix A. If you need to prepare a SPCBMPP, see Appendix G for appropriate guidance. If your project is a Priority Development Project, you will need to prepare a PCWQTR as directed in this chapter. **Municipal staff may use a review checklist** such as the following example to evaluate your Project Submittal:

EXAMPLE PROJECT SUBMITTAL CHECKLIST

SUBMITTAL COMPONENT REQUIREMENTS FOR PRIORITY DEVELOPMENT PROJECTS

- ❒ Completed "Storm Water Requirements Applicability Checklist" (Appendix A)
- ❒ Vicinity Map
- ❒ Site Map (See below for contents of Exhibit.)
- ❒ PCWQTR (See below for contents of Report.)
- ❒ Drainage Study (with Hydromodification, if applicable)

CONTENTS OF EXHIBIT (SITE MAP)

Show all of the following on drawings:

- ❒ Show entire property on one map. Use key map if multiple sheets are necessary. (Step 1 in the following step-by-step instructions)
- ❒ Existing natural hydrologic features (depressions, watercourses, floodplains, relatively undisturbed areas) and significant natural resources. (Step 1)
- ❒ Areas of potential soil erosion on the property and downstream of the project. (Step 1)
- ❒ Soil types and depth to groundwater. (Step 1)
- ❒ Existing and proposed site drainage network and connections to drainage off-site, including surface conveyances, private storm drain systems, and municipal storm drain inlets. (Step 3)
- ❒ Proposed design features and surface treatments used to minimize imperviousness. (Step 3)
- ❒ Entire site divided into separate drainage areas, with each area identified as self-treating, self-retaining (zero-discharge), draining to a self-retaining area, or draining to an IMP. (Step 3)
- ❒ For each drainage area, types of impervious area proposed (roof, plaza/sidewalk, and streets/parking) and area of each. (Step 3)
- ❒ Proposed locations and sizes of treatment or flow-control facilities. (Step 3)
- ❒ Potential pollutant source areas, including refuse areas, outdoor work and storage areas, etc. listed in Appendix C and corresponding required source controls. (Step 4)

CONTENTS OF REPORT

Include all of the following in your PCWQTR:

- ❒ Table of Contents
- ❒ Identification of the watershed(s), downstream waterbodies, waterbody impairments, and pollutants of concern (Step 1)
- ❒ Narrative analysis or description of site features and conditions that constrain, or provide opportunities for, storm water control. (Step 2)
- ❒ Narrative description of site design characteristics that protect natural resources. (Step 3)

- ❒ Narrative description and/or tabulation of site design characteristics, building features, and pavement selections that reduce imperviousness of the site. (Step 3)
- ❒ Basis for selection of each proposed engineered LID IMP or alternative treatment facility. (Step 3)
- ❒ Tabulation of proposed pervious and impervious area, showing self-treating areas, self-retaining areas, and areas tributary to each treatment or flow-control facility. (Step 3)
- ❒ Preliminary designs, including calculations, for each infiltration, treatment, or flow-control facility. Elevations should show sufficient hydraulic head for each. (Step 3)
- ❒ A table of identified pollutant sources and for each source, the source control measure(s) used to reduce pollutants to the maximum extent practicable. See worksheet in Appendix C. (Step 4)
- ❒ General maintenance requirements for infiltration, treatment, and flow-control facilities (Step 5)
- ❒ Means by which facility maintenance will be financed and implemented in perpetuity. (Step 5)
- ❒ Statement accepting responsibility for operation & maintenance of facilities (Step 5).
- ❒ Identification of any conflicts with codes or requirements or other anticipated obstacles to implementing the proposed facilities in the submittal (Step 6).
- ❒ Construction Plan SUSMP Checklist (Step 6).
- ❒ Certification by a registered civil engineer (Step 6).

Step by Step

Suggested coordination with site and landscape design

Plan and design your storm water controls integrally with the site planning and landscaping for your project. It's best to start with general project requirements and preliminary site design concepts, then prepare the detailed site design, landscape design, and storm water control design simultaneously. **This will help ensure that your site plan, landscape plan, and Project Submittal are congruent.**

Begin with general project requirements and program.

The following step-by-step procedure should optimize your design by identifying the best opportunities for storm water controls **early in the design process.**

The recommended steps are:

Sketch conceptual site layout, building locations, and circulation.

1. Assemble needed information.
2. Identify site opportunities and constraints.
3. Follow the LID design guidance in Chapter 4 to analyze your project for LID and to develop and document your drainage design.

Revise site layout, building locations, and circulation to accommodate LID design. Develop land-scaping plan.

4. Specify source controls using the sources/source control checklist in Appendix C.
5. Plan for ongoing maintenance of treatment and flow-control facilities.
6. Complete the Project Submittal.

Submit Site Plan, Landscape Plan, and SUSMP Submittal

Municipal staff may recommend you prepare and submit a preliminary site design prior to formally applying for planning and zoning approvals. Your preliminary site design should incorporate a conceptual plan for site drainage, including self-treating and self-retaining areas and the location and approximate sizes of any treatment facilities. This additional up-front design effort will save time and avoid potential delays later in the review process.

Step 1: Assemble Needed Information

To select types and locations of treatment facilities, the designer needs to know the following site characteristics:

- **Existing natural hydrologic features** and natural resources, including any contiguous natural areas, wetlands, watercourses, seeps, or springs.

- **Existing site topography**, including contours of any slopes of 4% or steeper, general direction of surface drainage, local high or low points or depressions, any outcrops or other significant geologic features.
- **Zoning**, including requirements for **setbacks** and **open space**.
- **Public Works Standards** or other local codes governing minimum street widths, sidewalk construction, allowable pavement types, and drainage. These codes may conflict with Low Impact Development objectives to minimize imperviousness and to maintain or restore natural site hydrology.
- Soil types (including **hydrologic soil groups**) and depth to groundwater, which may determine whether infiltration is a feasible option for managing site runoff. Depending on site location and characteristics, and on the selection of treatment and flow-control facilities, site-specific information (e.g. from boring logs or geotechnical studies) may be required.
- **Existing site drainage.** For undeveloped sites, this should be obtained by inspecting the site and examining topographic maps and survey data. For previously developed sites, site drainage and connection to the municipal storm drain system can be located from site inspection, municipal storm drain maps, and plans for previous development.
- Existing **vegetative cover** and **impervious areas**, if any.
- **Watershed(s)** in which the project area is located.
- **Pollutants of Concern** in receiving waters. For each of the proposed project discharge points, identify the receiving water(s), including hydrologic unit basin number(s), as identified in the most recent version of the Water Quality Control Plan for the San Diego Basin[1], prepared by the San Diego Regional Water Quality Control Board. Identify any receiving waters, into which the developed area would discharge to, listed on the most recent list of Clean Water Act Section 303(d) impaired water bodies[2]. List any and all pollutants for which the receiving waters are impaired. Use Table 2-1 of this BMP Manual to list anticipated pollutants based on land use.

[1]. Go to: http://www.waterboards.ca.gov/sandiego/water_issues/programs/303d_list/index.shtml

[2]. Under Section 303(d) of the 1972 Clean Water Act, states, territories and authorized tribes are required to develop a list of water quality limited segments. These waters on the list do not meet water quality standards, even after point sources of pollution have installed the minimum required levels of pollution control technology. Go to: http://www.swrcb.ca.gov/rwqcb9/water_issues/programs/303d_list/index.shtml. San Diego is in Region 9.

Step 2: Identify Constraints & Opportunities

Review the information collected in Step 1. Identify the principal constraints on site design and selection of treatment and flow-control facilities as well as opportunities to reduce imperviousness and incorporate facilities into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, restricted right-of-way, or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention facilities), and differences in elevation (which can provide hydraulic head). Note storm water treatment facilities should not be located within protected riparian areas.

Prepare a brief **narrative** describing site opportunities and constraints. This narrative will help you as you proceed with LID design and explain your design decisions to others.

Step 3: Prepare and Document Your LID Design

Use the Low Impact Development Design Guide (Chapter 4) to analyze your project for LID, design and document drainage, and specify preliminary design details for integrated management practices. **Follow the detailed instructions in Chapter 4 to ensure your project complies with NPDES permit LID requirements (Provision D.1.d.(4)) as well as storm water treatment requirements in Provision D.1.d.(6)).** In future editions of this BMP Manual, the LID Design Guide will be updated so that additional hydromodification management requirements are also met via this unified design procedure. Chapter 4 includes calculation procedures and formats for presenting your calculations.

As shown in the example checklist (page 31), your Project Submittal may need to include a drawing showing:

- The entire site divided into separate drainage management areas (DMAs), with each area identified as one of the following: self-treating, self-retaining, draining to a self-retaining area, or draining to an IMP. Each area should be clearly marked with a unique identifier.
- For each drainage area, the types of impervious area proposed, and the area of each.
- Proposed locations and sizes of treatment facilities. Each facility should be clearly marked with a unique identifier.

Compliance
The design criteria for DMAs in Chapter 4 ensure the required volume of flow from all developed portions of the project, including landscaped areas, is infiltrated, filtered, or treated (Provision D.1.d.(6)(a).

Your Project Submittal may need to include:

- Tabulation of proposed self-treating areas, self-retaining areas, areas draining to self-retaining areas, and areas draining to IMPs, and the corresponding IMPs identified on the Exhibit.
- Calculations, in the format shown in Chapter 4, showing the minimum square footage required and proposed square footage for each IMP.
- Preliminary designs for each IMP. The design sheets and accompanying drawings in Appendix B may be used or adapted for this purpose.

The following may also be required, or may be advisable to assist the reviewer to understand your design:

- A narrative overview of your design and how your design decisions optimize the site layout, use pervious surfaces, disperse runoff from impervious surfaces, and drain impervious surfaces to engineered IMPs. See Chapter 4.
- A narrative briefly describing each **drainage management area** (DMA), its drainage, and where drainage will be directed.
- A narrative briefly describing each IMP. Include any special characteristics or features distinct from the design sheets in Appendix B.

Step 4. Specify Source Control BMPs

Some everyday activities – such as trash recycling/disposal and washing vehicles and equipment – generate pollutants that tend to find their way into storm drains. These pollutants can be minimized by applying **source control BMPs**.

Source control BMPs include **permanent**, structural features that must be incorporated into your project plans and **operational** BMPs, such as regular sweeping and "housekeeping," that must be implemented by the site's occupant or user. The maximum extent practicable standard typically requires both types of BMPs. In general, operational BMPs cannot be substituted for a feasible and effective permanent BMP.

Use the following procedure to specify source control BMPs for your site:

► IDENTIFY POLLUTANT SOURCES

Review the first column in the **Pollutant Sources/Source Control Checklist** (Appendix C). Check off the potential sources of pollutants that apply to your site.

► NOTE LOCATIONS ON SUBMITTAL DRAWING

Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist (Appendix C). Show the location of each pollutant source and each permanent source control BMP in your submittal drawing.

► PREPARE A TABLE AND NARRATIVE

Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist (Appendix C). Now, create a table using the format in Table 3-1. In the left column, list each potential source on your site (from Appendix C, Column 1). In the middle column, list the corresponding **permanent, structural BMPs** (from Columns 2 and 3, Appendix C) used to prevent pollutants from entering runoff. Accompany this table with a narrative that explains any special features, materials, or methods of construction that will be used to implement these permanent, structural BMPs.

► IDENTIFY OPERATIONAL SOURCE CONTROL BMPS

TABLE 3-1. Format for table of permanent and operational source control measures.

Potential source of runoff pollutants	*Permanent source control BMPs*	*Operational source control BMPs*

To complete your table, refer once again to the Pollutant Sources/Source Control Checklist (Appendix C, Column 4). List in the right column of your table the operational BMPs that should be implemented as long as the anticipated activities continue at the site. The same BMPs may also be required as a condition of a use permit or other revocable discretionary approval for use of the site.

- *Urban Runoff Quality Management* (WEF/ASCE, 1998) Chapter 4: Source Controls

Step 5: Storm Water Facility Maintenance

As required by NPDES Permit Provision D.1.c.(5), projects that include permanent BMPs shall be conditioned to require submittal of proof of a mechanism under which ongoing long-term maintenance of storm water treatment and flow-control facilities will be conducted, satisfactory to the City Engineer. The City of La Mesa requires the following items be included in your Project Submittal:

1. A means to finance and implement facility maintenance in perpetuity.
2. Acceptance of responsibility for maintenance from the time the facilities are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the treatment and flow-control facilities you have selected.

The City Engineer may also require that you prepare and submit a detailed plan that sets forth a maintenance schedule for each of the treatment and flow-control facilities built on your site.

Details of these requirements, and instructions for preparing a detailed operation and maintenance plan, are in Chapter 5.

References and Resources

- *Chapter 5*
- Operation, Maintenance, and Management of Stormwater Management Systems (Watershed Management Institute, 1997)

Step 6: Complete Your Project Submittal

City staff may provide specific instructions for the content and format of your Project Submittal. Your Project Submittal should document the information gathered and decisions made in Steps 1-5. A clear, complete, well-organized Project Submittal will make it possible to confirm your design meets the minimum requirements of the NPDES permit, the City of La Mesa Storm Water Ordinance, and this BMP manual.

► COORDINATION WITH SITE, ARCHITECTURAL, AND LANDSCAPING PLANS

Before completing your Project Submittal, ensure your storm water control design is fully coordinated with the site plan, grading plan, and landscaping plan being proposed for the site.

Information submitted and presentations to design review committees, planning commissions, and other decision-making bodies must incorporate relevant aspects of the storm water design. In particular, ensure:

- Curb elevations, elevations, grade breaks, and other features of the drainage design are consistent with the delineation of DMAs.

- The top edge (overflow) of each bioretention facility is level all around its perimeter—this is particularly important in parking lot medians.
- The resulting grading and drainage design is consistent with the design for parking and circulation.
- Bioretention facilities and other IMPs do not create conflicts with pedestrian access between parking and building entrances.
- Vaults and utility boxes can be accommodated outside bioretention facilities and will not be placed within bioretention facilities.
- The visual impact of storm water facilities, including planter boxes at building foundations and any terracing or retaining walls required for the storm water control design, is shown in renderings and other architectural drawings.
- Landscaping plans, including planting plans, show locations of bioretention facilities, and the plant requirements are consistent with the engineered soils and conditions in the bioretention facilities.
- Renderings and representation of street views incorporate any storm water facilities located in street-side buffers and setbacks

► CONSTRUCTION PLAN SUSMP CHECKLIST

When you submit construction plans for City review and approval, the reviewer will compare that submittal with your earlier Project Submittal. By creating a Construction Plan SUSMP Checklist for your project, you can facilitate the reviewer's comparison and speed review of your project.

TABLE 3-2. Format for Construction Plan SUSMP Checklist.

SUSMP Page #	*BMP Description*	*See Plan Sheet #s*

Here's how:

1. Create a table similar to Table 3-2. Number and list each measure or BMP you have specified in your Project Submittal in Columns 1 and 2 of the table. Leave Column 3 blank. Incorporate the table into your Project Submittal.

2. When you submit construction plans, **duplicate the table** (by photocopy or electronically). Now fill in Column 3, identifying the plan sheets where the BMPs are shown. List all plan sheets on which the BMP appears. Submit the updated table with your construction plans.

Note that the updated table—or Construction Plan SUSMP Checklist—is **only a reference tool** to facilitate comparison of the construction plans to your Project Submittal. City Engineering staff can advise you regarding the process required to propose changes to your approved Project Submittal.

► CERTIFICATION

Your Project Submittal shall be certified by a registered civil engineer.

The certification should state: "The selection, sizing, and preliminary design of storm water treatment and other control measures in this plan meet the requirements of Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments."

► EXAMPLE PROJECT SUBMITTAL OUTLINE AND CONTENTS

Check with City Engineering staff for requirements specific to your project.

I. Project Setting

- A. Project Name, Location, Description of project activities
- B. Vicinity Map
- C. Existing site features and conditions
- D. Opportunities and constraints for storm water control
- E. Watershed(s), receiving water bodies, and water body impairments
- F. Pollutants of concern based on land use and downstream water body impairments
- G. Impacts to hydrologic regime

II. Low Impact Development Design Strategies

- A. Optimization of site layout
  - (1) Limitation of development envelope
  - (2) Preservation of natural drainage features
  - (3) Setbacks from creeks, wetlands, and riparian habitats
  - (4) Minimization of imperviousness
  - (5) Using drainage as a design element
- B. Use of permeable pavements
- C. Dispersal of runoff to pervious areas
- D. Use of Integrated Management Practices

III. Documentation of Drainage Design

- A. Drainage Management Areas
  - (1) Tabulation
  - (2) Descriptions
- B. Integrated Management Practices
  - (1) Tabulation and Sizing Calculations

(2) Descriptions

IV. Source Control Measures

A. Description of site activities and potential sources of pollutants

B. Table showing sources, permanent source controls, and operational source controls

V. Facility Maintenance Requirements

A. Ownership and responsibility for maintenance in perpetuity.

(1) Commitment to execute any necessary agreements.

(2) Statement accepting responsibility for operation and maintenance of facilities until that responsibility is formally transferred.

B. Summary of maintenance requirements for each storm water facility.

VI. Construction Plan SUSMP Checklist

VII. Certifications

VIII. Attachment: SUSMP Exhibit (Site Map) clearly showing:

A. Entire property

B. Nearby water bodies and municipal storm drain inlets

C. Private storm drain systems

D. Drainage Management Areas

E. Integrated Management Practices

F. Source control measures and potential sources of pollutants

G. Any other proposed BMPs

► SPECIFIC PROJECT CONSIDERATIONS

Your submittal will reflect the unique character of your own project and should meet the requirements identified in this BMP manual. City Engineering staff can assist you to determine how specific requirements apply to your project.

Chapter 4

Low Impact Development Design Guide

Guidance for designing and documenting your LID site drainage, storm water treatment facilities, and flow-control facilities

Follow the Low Impact Development (LID) design in this BMP manual to achieve compliance with the storm water treatment requirements as well as the LID requirements in the storm water NPDES permit. The City of La Mesa encourages the use of the design and documentation strategies outlined in this chapter. While other approaches may be used, they must be defensibly shown by the project proponent to meet or exceed the low impact development standards in this BMP Manual.

This will require careful documentation of:

- Pervious and impervious areas in the planned project.
- Drainage from each of these areas.
- Locations, sizes, and types of proposed treatment facilities.

Your Project Submittal must include calculations showing the site drainage and proposed LID treatment facilities meet the criteria in this BMP Manual.

This Low Impact Development Design Guide will help you:

- **Analyze your project** and identify and select options for implementing LID techniques to meet runoff treatment requirements—and flow-control requirements, if they apply.
- **Design and document drainage** for the whole site and document how that design meets this BMP Manual's storm water treatment criteria.
- **Specify preliminary design details** and integrate your LID drainage design with your paving and landscaping design.

Alternatives to LID design are discussed in the final section of this chapter.

Analyze Your Project for LID

Conceptually, there are four LID strategies for managing runoff from buildings and paving:

1. **Optimize the site layout** by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.

2. **Use pervious surfaces** such as turf, gravel, or pervious pavement—or use surfaces that retain rainfall, such as vegetated roofs. All drainage from these surfaces is considered to be "self-retained" (a detailed definition corresponding to this concept is on page 50). No further management of runoff is necessary. An emergency overflow should be provided for extreme events.

3. **Disperse runoff** from impervious surfaces on to adjacent pervious surfaces (e.g., direct a roof downspout to disperse runoff onto a lawn).

4. Drain impervious surfaces to engineered **Integrated Management Practices** (IMPs), such as bioretention facilities, planter boxes, cisterns, or dry wells. IMPs infiltrate runoff to groundwater and/or percolate runoff through engineered soil and allow it to drain away slowly. Depending on site conditions and local regulations, it may be possible to harvest and reuse rainwater in conjunction with IMPs.

A combination of two or more strategies may work best for your project. With forethought in design, the four strategies can provide multiple, complementary benefits to your development. Pervious surfaces reduce heat island effects and temperature extremes. Landscaping improves air quality, creates a better place to live or work, and upgrades value for rental or sale. Retaining natural hydrology helps preserve and enhance the natural character of the area. LID drainage design can also conserve water and reduce the need for drainage infrastructure.

Table 4-1 includes ideas for applying LID strategies to site conditions and types of development.

TABLE 4-1. Ideas for Runoff Management

Site Features and Design Objectives	*Vegetated Roof*	*Self-retaining Areas*	*Pervious Pavement*	*Bioretention Facility*	*Flow-through Planter*	*Dry Well*	*Cistern with bioretention*
Clayey native soils	✓			✓	✓		✓
Permeable native soils	✓		✓	✓	✓	✓	
Very steep slopes	✓				✓		
Shallow groundwater	✓				✓		
Avoid saturating subsurface soils	✓		✓		✓		
Connect to roof downspouts		✓		✓	✓	✓	✓
Parking lots/islands and medians			✓	✓		✓	
Sites with extensive landscaping		✓	✓	✓			
Densely developed sites with limited space/landscape	✓		✓		✓	✓	✓
Fit IMPs into landscape and setback areas				✓			✓
Make drainage a design feature		✓		✓			✓
Convey as well as treat storm water				✓			

► OPTIMIZE THE SITE LAYOUT

To minimize storm water-related impacts, apply the following design principles to the layout of newly developed and redeveloped sites.

Conserve natural areas, soils, and vegetation. Define the development envelope and protected areas, identifying areas that are most suitable for development and areas that should be left undisturbed. Use the following guideline to determine the least sensitive areas of the site, in order of increasing sensitivity:

1. Areas devoid of vegetation, including previously graded areas and agricultural fields.
2. Areas of non-native vegetation, disturbed habitats, and eucalyptus woodlands where receiving waters are not present.
3. Areas of chamise or mixed chaparral, and non-native grasslands.
4. Areas containing coastal scrub communities.
5. All other upland communities.
6. Occupied habitat of sensitive species and all wetlands.

Within each of the previous categories, hillside areas should be considered more sensitive than flatter areas.

Coordination
Chapter One includes a presentation of how review of your project's site design and landscape design is coordinated with review for compliance with storm water NPDES requirements.

Where possible, conform the site layout along natural landforms, avoid excessive grading and disturbance of vegetation and soils, and replicate the site's natural drainage patterns. Set back development from creeks, wetlands, and riparian habitats. Preserve significant trees, especially native trees and shrubs, and identify locations for planting additional native or drought tolerant trees and large shrubs. Concentrate development on portions of the site with less permeable soils, and preserve areas that can promote infiltration.

For all types of development, **limit overall coverage** of paving and roofs. Where allowed by La Mesa zoning and design standards—and provided public safety and a walkable environment are not compromised—this can be accomplished by designing compact, taller structures, narrower and shorter streets and sidewalks, smaller parking lots (fewer stalls, smaller stalls, and more efficient lanes), and indoor or underground parking. Examine site layout and circulation patterns and identify areas where landscaping can be substituted for pavement.

Detain and retain runoff throughout the site. On flatter sites, it typically works best to intersperse landscaped areas and IMPs among the buildings and paving. On hillside sites, drainage from upper areas may be collected in conventional catch basins and piped to landscaped areas and IMPs in lower areas.

Use drainage as a design element. Use depressed landscape areas, vegetated buffers, and bioretention areas as amenities and focal points within the site and landscape design. Bioretention areas can be almost any shape and should be located at low points. Bioretention areas shaped as swales can detain and treat low runoff flows and also convey higher flows.

► USE PERVIOUS SURFACES

Consider a vegetated roof. Although not yet widely used in California, vegetated or "green" roofs are growing in popularity. Potential benefits include longer roof life, lower heating and cooling costs, and better sound insulation, in addition to air quality and water quality benefits. For SUSMP compliance purposes, vegetated roofs are considered not to produce increased runoff or runoff pollutants (i.e., any runoff from a vegetated roof requires no further treatment or detention). For more information on vegetated roofs, see www.greenroofs.org.

Consider permeable pavements and surface treatments. Inventory paved areas on your preliminary site plan. Identify where permeable pavements, such as crushed aggregate, turf block, unit pavers, pervious concrete, or pervious asphalt could be substituted for impervious concrete or asphalt paving.

► DISPERSE RUNOFF TO ADJACENT PERVIOUS AREAS

Look for opportunities to direct runoff from impervious areas to adjacent landscaping. The design, including slopes and soils, must reflect a reasonable expectation that an inch of rainfall will soak into the soil and produce no runoff. For example, a lawn or garden depressed 3-4" below surrounding walkways or driveways provides a simple but functional landscape design element.

For sites subject to storm water treatment requirements only, a 2:1 maximum ratio of impervious to pervious area is acceptable. Be sure soils will drain adequately.

Under some circumstances, it may be allowable to direct runoff from impervious areas to pervious pavement (for example, from roof downspouts to a parking lot paved with crushed aggregate or turf block). The pore volume of pavement and base course must be sufficient to retain an inch of rainfall, including runoff from the tributary area. The slopes and soils must be compatible with infiltrating that volume without producing runoff.

► DIRECT RUNOFF TO INTEGRATED MANAGEMENT PRACTICES

Design criteria have been developed for the following IMPs:

- **Bioretention facilities**, which can be configured as swales, free-form areas, or planters to integrate with your landscape design.
- **Flow-through planters**, which can be used near building foundations and other locations where infiltration to native soils is not desired.
- **Dry wells** and other infiltration facilities, which can be used only where soils are permeable.
- **Cisterns**, in combination with a bioretention facility.

See the design sheets in Appendix B.

It may be possible to create a site-specific design that uses cisterns to achieve storm water flow control, storm water treatment, and rainwater reuse for irrigation or indoor uses (**water harvesting**). Such a design could expand the multiple benefits of LID to include water conservation. Keep in mind:

- Facilities must meet criteria for capturing and treating the volume specified by Equation 4-8 below. This volume must be allowed to empty within 24 hours so runoff from additional storms, which may follow, is also captured and treated. Additional volume may be required if the system also stores runoff for longer periods for reuse.

- Storage of water for longer than 48 hours creates the potential for mosquito harborage. Cisterns must be designed to prevent entry by mosquitoes.

- Indoor uses of non-potable water may be restricted or prohibited. Check with municipal staff.

Some references and resources for water harvesting appear at the end of this chapter.

Finding the right location for treatment facilities on your site involves a careful and creative integration of several factors:

- To make the most efficient use of the site and to maximize aesthetic value, **integrate IMPs with site landscaping**. Zoning codes may require landscape setbacks or buffers, or may specify that a minimum portion of the site be landscaped. It may be possible to locate some or all of your site's treatment and flow-control facilities within this same area, or within utility easements or other non-buildable areas.

- Planter boxes and bioretention areas must be **level or nearly level** all the way around. Bioretention areas configured as swales may be gently sloped in the linear direction, but opposite sides must be at the same elevation.

- For effective, low-maintenance operation, **locate facilities so drainage into and out of the device is by gravity flow.** Pumped systems are feasible, but are expensive, require more maintenance, are prone to untimely failure, and can cause mosquito control problems.

- If the property is being subdivided now or in the future, the facility should be in a **common, accessible area.** In particular, avoid locating facilities on private residential lots. Even if the facility will serve only one site owner or operator, make sure the facility is located for ready access by inspectors from the City of La Mesa and local vector control agency.

- The facility must be accessible to equipment needed for its maintenance. **Access requirements for maintenance** will vary with the type of facility selected. Planter boxes and bioretention areas will typically need access for the same types of equipment used for landscape maintenance.

To complete your analysis, include in your Project Submittal a brief **narrative** documenting the site layout and site design decisions you made. This will provide background and context for how your design meets the quantitative LID design criteria.

Develop and Document Your Drainage Design

The **design documentation procedure** begins with careful delineation of pervious areas and impervious areas (including roofs) throughout the site. The procedure accounts for how runoff from each delineated area is managed. For areas draining to IMPs, the procedure ensures each IMP is appropriately sized.

The procedure results in a space-efficient, cost-efficient LID design for meeting SUSMP requirements on most residential and commercial/industrial developments. The procedure arranges documentation of drainage design and IMP sizing in a consistent format for presentation and review.

This procedure is intended to facilitate, not substitute for, creative interplay among site design, landscape design, and drainage design. **Several iterations may be needed** to optimize your drainage design as well as aesthetics, circulation, and use of available area for your site.

You should be able to complete the needed calculations using only the project's site development plan.

► STEP 1: DELINEATE DRAINAGE MANAGEMENT AREAS

This is the key first step. You must divide the **entire project area** into individual, discrete Drainage Management Areas (DMAs). Typically, lines delineating DMAs follow grade breaks and roof ridge lines. The Exhibit, tables, text, and calculations in your Project Submittal will illustrate, describe, and account for runoff from each of these areas.

Use separate DMAs for each surface type (e.g., landscaping, pervious paving, or roofs). Each DMA must be assigned a single hydrologic soil group. Assign each DMA an identification number and determine its size in square feet.

► STEP 2: CLASSIFY DMAS AND DETERMINE RUNOFF FACTORS

Next, determine how drainage from each DMA will be handled. Each DMA will be one of the following four types:

1. Self-treating areas.
2. Self-retaining areas (also called "zero-discharge" areas).
3. Areas that drain to self-retaining areas.
4. Areas that drain to IMPs.

Self-treating areas are landscaped or turf areas that do not drain to IMPs, but rather drain directly off site or to the storm drain system. Examples include upslope undeveloped areas which are ditched and drained around a development and grassed slopes which drain off-site to a street or storm drain. In general, self-treating areas include no impervious areas, unless the impervious area is very small (5% or less) in relationship to the receiving pervious area and slopes are gentle enough to ensure runoff will be absorbed into the vegetation and soil. Criteria for self-treating areas are in the design sheet "Self Treating and Self-Retaining Areas" in Appendix B.

Rationale

Pollutants in rainfall and windblown dust will tend to become entrained in the vegetation and soils of landscaped areas, so no additional treatment is needed. It is assumed the self-treating landscaped areas will produce runoff less than or equal to the pre-project site condition.

FIGURE 4-1. Self-treating areas are entirely pervious and drain directly off-site or to the storm drain system.

Self-retaining areas are designed to retain the first one inch of rainfall without producing any runoff. The technique works best on flat, heavily landscaped sites. It may be used on mild slopes if there is a reasonable expectation that a one-inch rainfall event would produce no runoff.

To create self-retaining turf and landscape areas in flat areas or on terraced slopes, berm the area or depress the grade into a concave cross-section so that these areas will retain the first inch of rainfall. Specify slopes, if any, toward the center of the pervious area. Inlets of area drains, if any, should be set 3 inches above the low point to allow ponding.

Criteria for self-retaining areas are in the design sheet "Self Treating and Self-Retaining Areas" in Appendix B.

FIGURE 4-2. Self-retaining areas. Berm or depress the grade to retain at least an inch of rainfall and set inlets of any area drains at least 3 inches above low point to allow ponding.

Areas draining to self-retaining areas. Runoff from impervious or partially pervious areas can be managed by routing it to self-retaining pervious areas. For example, roof downspouts can be directed to lawns, and driveways can be sloped toward landscaped areas. The maximum ratio is 2 parts impervious area for every 1 part pervious area.

FIGURE 4-3. Relationship of impervious to pervious area for self-retaining areas.
Ratio: ***pervious ≥ ½ impervious***

The drainage from the impervious area must be directed to and dispersed within the pervious area, and the entire area must be designed to retain an inch of rainfall without flowing off-site. For example, if the maximum ratio of 2 parts impervious area into 1 part pervious area is used, then the pervious area must absorb 3 inches of water over its surface before over-flowing to an off-site drain.

A partially pervious area may be drained to a self-retaining area. For example, a driveway composed of unit pavers may drain to an adjacent lawn. In this case, the maximum ratios are:

(Runoff factor) x (tributary area) ≤ 2 x (self-retaining area) *Equation 4-1*

Use the runoff factors in Table 4-2.

Prolonged ponding is a potential problem at higher impervious/pervious ratios. In your design, ensure that the pervious area soils can handle the additional run-on and are sufficiently well-drained.

Under some circumstances, pervious pavement (e.g., crushed stone, pervious asphalt or pervious concrete) can be self-retaining. Adjacent roofs or impervious pavement may drain on to the pervious pavement in the same maximum ratios as described above.

To design a pervious pavement to be a self-treating area, ensure:

- The gravel base course is a minimum of four or more inches deep.
- The base course is not to be underdrained.
- A qualified engineer has been consulted regarding infiltration rates, pavement stability, and suitability for the intended traffic.

Runoff from self-treating and self-retaining areas does not require any further treatment or flow control.

TABLE 4-2. Example Runoff factors for surfaces draining to IMPs.

Surface	Factor
Roofs	1.0
Concrete	1.0
Pervious Concrete	0.1
Porous Asphalt	0.1
Grouted Unit Pavers	1.0
Solid Unit Pavers on granular base, min. 3/16 inch joint space	0.2
Crushed Aggregate	0.1
Turfblock	0.1
Amended, mulched soil	0.1
Landscape	0.1

Areas draining to IMPs are multiplied by a sizing factor to calculate the required size of the IMP. On most densely developed sites—such as commercial and mixed-use developments and small-lot residential subdivisions—most DMAs will drain to IMPs.

More than one drainage area can drain to the same IMP. However, because the minimum IMP sizes are determined by ratio to drainage area size, a drainage area may not drain to more than one IMP. See Figures 4-4 and 4-5.

FIGURE 4-4. More than one Drainage Management Area can drain to a single IMP.

FIGURE 4-5. One Drainage Management Area cannot drain to more than one IMP. Use a grade break to divide the DMA.

Where possible, design site drainage so **only impervious roofs and pavement** drain to IMPs. This yields a simpler, more efficient design and also helps protect IMPs from becoming clogged by sediment.

If it is necessary to include turf, landscaping, or pervious pavements within the area draining to an IMP, list each surface as a separate DMA. A runoff factor (similar to a "C" factor used in the rational method) is applied to account for the reduction in the quantity of runoff. For example, when a turf or landscaped drainage management area drains to an IMP, the resulting increment in IMP size is:

$$\Delta \text{ (Area)} = \text{(pervious area)} \times \text{(runoff factor)} \times \text{(sizing factor)}.$$

Use the runoff factors in Table 4-2.

► STEP 3: TABULATE DRAINAGE MANAGEMENT AREAS

- Tabulate self-treating areas in the format shown in Table 4-3.
- Tabulate self-retaining areas in the format shown in Table 4-4.
- Tabulate areas draining to self-retaining areas in the format shown in Table 4-5. Check to be sure the total product of (square feet of tributary area × runoff factor) for all DMAs draining to a receiving self-retaining area is no greater than a 2:1 ratio to the square footage of the receiving self-retaining area itself.

- Compile a list of DMAs draining to IMPs. Proceed to Step 4 to check the sizing of the IMPs.

TABLE 4-3. Format for Tabulating Self-Treating Areas

DMA Name	*Area (square feet)*

TABLE 4-4. Format for Tabulating Self-Retaining Areas

DMA Name	*Area (square feet)*

TABLE 4-5. Format for Tabulating Areas Draining to Self-Retaining Areas

DMA Name	*Area (square feet)*	*Post-project surface type*	*Runoff factor*	*Receiving self-retaining DMA*	*Receiving self-retaining DMA Area (square feet)*

► STEP 4: SELECT AND LAY OUT IMPS ON SITE PLAN

Select from the list of IMPs in Table 4-6. Illustrations, designs, and design criteria for the IMPs are in the "IMP Design Details and Criteria" at the end of this chapter.

Once you have laid out the IMPs, calculate the square footage you have set aside on your site plan for each IMP.

► STEP 5: REVIEW SIZING FOR EACH IMP

For each of the IMPs, use the appropriate sizing from Table 4-6.

TABLE 4-6. IMP Sizing

Bioretention Facilities	Sizing Factor for Area = 0.04
Flow-through Planters	Sizing Factor for Area = 0.04
Dry Well or Infiltration Basin	See Step 6 to Calculate Min. Volume
Cistern with Bioretention	See Step 6 to Calculate Min. Volume of Cistern; then use 0.04 to calculate minimum size of bioretention area

► STEP 6: CALCULATE MINIMUM AREA AND VOLUME OF EACH IMP

The minimum area of bioretention facilities and flow-through planters is found by summing up the contributions of each tributary DMA and multiplying by the adjusted sizing factor for the IMP.

Equation 4-7

$$Min.\,IMP\,Area = \sum \begin{pmatrix} DMA & DMA \\ Square & \times Runoff \\ Footage & Factor \end{pmatrix} \times \begin{pmatrix} IMP \\ Sizing \\ Factor \end{pmatrix}$$

Use the format of Table 4-7 to present the calculations of the required minimum area and volumes for **bioretention areas** and **planter boxes**:

TABLE 4-7. Format for presenting calculations of minimum IMP Areas for bioretention areas and planter boxes.

DMA Name	*DMA Area (square feet)*	*Post-project surface type*	*DMA Runoff factor*	*DMA Area × runoff factor*	*Soil Type:*	*IMP Name*			
					IMP Sizing factor		*Minimum Area*	*Proposed Area*	
			Total		***0.04***				***IMP Area***

To size **dry wells**, **infiltration basins**, or **infiltration trenches**, use the following procedure:

1. Use the County of San Diego's 85th Percentile Isopluvial Map to determine the minimum unit volume.
2. Determine the weighted runoff factor ("C" factor) for the area tributary to the facility. The factors in Table 4-2 may be used.
3. Multiply the weighted runoff factor times the tributary area times the minimum unit volume.

Equation 4-8

$$Volume = [Tributary\ Area] \times [weighted\ runoff\ \ factor] \times [unit\ volume]$$

4. Select a facility depth.
5. Determine the required facility area. Dry wells may be designed as an open vault or with rock fill. If rock fill is used, assume a porosity of 40%.
6. Ensure the facility can infiltrate the entire volume within 72 hours.

To size a **cistern in series with a bioretention facility**:

1. Use Equation 4-8 to calculate the required cistern volume.
2. Design a discharge orifice for a drawdown time of 24 hours.
3. Determine the maximum discharge from the orifice.
4. The minimum area of the bioretention facility must treat this flow based on a percolation rate of 5" per hour through the engineered soil.

► STEP 7: DETERMINE IF AVAILABLE SPACE FOR IMP IS ADEQUATE

Sizing and configuring IMPs may be an iterative process. After computing the minimum IMP area using Steps 1 – 6, review the site plan to determine if the reserved IMP area is sufficient. If so, the planned IMPs will meet the SUSMP sizing requirements. If not, revise the plan accordingly. Revisions may include:

- Reducing the overall imperviousness of the project site.
- Changing the grading and drainage to redirect some runoff toward other IMPs which may have excess capacity.
- Making tributary landscaped DMAs self-treating or self-retaining.
- Expanding IMP surface area.

► STEP 8: COMPLETE YOUR SUMMARY REPORT

Present your IMP sizing calculations in tabular form. Adapt the following format as appropriate to your project. Coordinate your presentation of DMAs and calculation of minimum IMP sizes with the Project Submittal drawing (labeled to show delineation of DMAs and locations of IMPs). It is also helpful to incorporate a brief description of each DMA and each IMP.

Sum the total area of all DMAs and IMPs listed and show it is equal to the total project area. This step may include adjusting the square footage of some DMAs to account for area used for IMPs.

Format:

Project Name:

Project Location:

APN or Subdivision Number:

Total Project Area (square feet):

Mean Annual Precipitation at Project Site:

I. Self-treating areas:

DMA Name	*Area (square feet)*

II. Self-retaining areas:

DMA Name	*Area (square feet)*

III. Areas draining to self-retaining areas:

DMA Name	*Post-project surface type*	*Runoff factor*	*Area (square feet)*	*Receiving self-retaining DMA*	*Receiving self-retaining DMA Area (square feet)*

IV. Areas draining to IMPs (repeat for each IMP):

DMA Name	*DMA Area (square feet)*	*Post-project surface type*	*DMA Runoff factor*	*DMA Area × runoff factor*	*Soil Type:*	*IMP Name*			
					IMP Sizing factor		*Minimum Area or Volume*	*Proposed Area or Volume*	
			Total						***IMP Area***

Specify Preliminary Design Details

In your Project Submittal, describe your IMPs in sufficient detail to demonstrate the area, volume, and other criteria of each can be met within the constraints of the site.

Ensure these details are consistent with preliminary site plans, landscaping plans, and architectural plans submitted with your application for planning and zoning approvals.

Appendix B includes design sheets for:

- Self-treating and self-retaining areas
- Pervious pavements
- Bioretention facilities
- Flow-through planter
- Dry wells and infiltration basins
- Cistern with bioretention facility

These design sheets include recommended configurations and details, and example applications, for these IMPs. **The information in these design sheets must be adapted and applied to the conditions specific to the development project such as unstable slopes or the lack of available head. Designated municipal staff have final review and approval authority over the project design.**

Keep in mind that proper and functional design of the IMP is the responsibility of the applicant. Effective operation of the IMP throughout the project's lifetime will be the responsibility of the property owner.

Alternatives to Integrated LID Design

If you believe design of features and facilities as described above is infeasible for your development site, consult with Engineering staff before preparing an alternative design for storm water treatment, flow control, and LID compliance.

For all alternative designs, the applicant must prepare a complete Project Submittal, including a drawing showing the entire site divided into discrete Drainage Management Areas, text and tables showing how drainage is routed from each DMA to a treatment facility, and calculations demonstrating the design achieves the applicable design criteria for each storm water treatment facility. Alternative treatment facilities are limited to the circumstances and selection criteria identified beginning on page 22. The Project Submittal must also show how the project meets the minimum LID criteria (page 26) and ensures runoff rates, durations, and velocities are controlled to maintain or reduce downstream erosion conditions and protect stream habitat (NPDES Permit Provision D.1.d.(10)).

► DESIGN OF ALTERNATIVE TREATMENT FACILITIES

Here are criteria and design considerations for some alternative treatment facilities, also known as treatment control BMPs:

Sand Filters. To ensure effectiveness is not compromised by compacting or clogging of the filter surface, sand filters must be maintained frequently.

The following criteria apply to sand filters:

- Calculate the design flow using the rational method with an intensity of 0.2"/hour and the "C" factors for "treatment only" from Table 4-2.
- To determine the required filter surface area, divide the design flow by an allowable design surface loading rate of 5"/hour.
- The minimum depth of filter media is 18". The media should be washed sand, with gradation similar to that specified for fine aggregate in ASTM C-33.
- The entire filter area must be accessible for easy maintenance without the need to enter a confined space.

A typical filter design includes a gravel drain layer and a perforated pipe underdrain. Filter fabric may be used to prevent the filter media from entering the gravel layer.

The design should not include any permanent pool or other standing water. Instead of including a pretreatment basin, consider the following features in the area tributary to the filter to reduce the potential for filter clogging:

- Limit the size of the Drainage Management Area.

- Include only impervious areas in the DMA.
- Stabilize slopes and eliminate sources of sediment in the DMA.
- Provide screens for trash and leaves at storm drain inlets (if allowed by the City of La Mesa).

For additional design considerations and details, see *Design of Stormwater Filtering Systems* by Richard A. Claytor and Thomas R. Schueler, The Center for Watershed Protection, 1996, and *California Stormwater BMP Handbooks* Fact Sheet TC-40, Media Filter.

Extended ("Dry") Detention Basins. The required detention volume is based on the 85th percentile 24-hour storm depth. The steps to calculate the required detention volume are:

1. Use the County of San Diego's 85th Percentile Isopluvial Map to determine the unit basin volume.
2. Determine the weighted runoff factor ("C" factor) for the area tributary to the basin. The factors in Table 4-2 may be used.
3. Multiply the weighted runoff factor times the tributary area times the unit basin volume.

For maximum effectiveness the basin should not be sized substantially larger than this volume.

For design considerations and details, see the *California Stormwater Best Management Practice Handbooks*, Fact Sheet TC-22, "Extended Detention Basins." The basin outlet should be designed for a 24-hour drawdown time.

As noted in Fact Sheet TC-22, "dry" detention basins may not be practicable for drainage areas less than 5 acres. The potential for mosquito harborage is a concern. In the design, do not create any areas that will hold standing water for 72 hours or more.

"Wet" Detention Ponds and Constructed Wetlands. The required detention volume is determined as with a "dry" detention basin. Before proceeding with design, contact the local mosquito control agency to coordinate the design and plan ongoing inspection and maintenance of the facility for mosquito control. For design considerations and details, see the *California Stormwater Best Management Practices Handbooks*, Fact Sheet TC-20, "Wet Ponds," and Fact Sheet TC-21, "Constructed Wetlands."

Vegetated Swales. Design recommendations for conventional vegetated swales are in the *California Stormwater Best Management Practices Handbooks*. The conventional swale design uses available on-site soils and does not include an underdrain system. Where soils are clayey, there is little infiltration. Treatment occurs as runoff flows through grass or other vegetation before exiting at the downstream end. Recommended detention times are on the order of 10 minutes.

Conventional vegetated swales may be used to meet NPDES permit treatment requirements and LID requirements (see page 22). The following should be incorporated in the design:

- Determine the weighted runoff factor ("C" factor) for the area tributary to the swale. The factors in Table 4-2 may be used.
- Calculate the design flow by multiplying the weighted runoff factor times the tributary area times either (1) 0.2 inches of rainfall per hour, or (2) twice the 85th percentile hourly rainfall intensity.
- When sizing the swale, use a value of 0.25 for Manning's "n".
- Ensure that all flow enters the swale near its highest point and that no flow short-circuits treatment by entering the swale along its length.
- The swale should be a minimum 100 feet in length.
- Longitudinal slopes should not exceed 2.5%; on flatter slopes, incorporate measures to avoid prolonged surface ponding.

Consider using linear-shaped bioretention areas in place of conventional vegetated swales because:

- Conventional swale design has resulted in standing water and associated nuisances.
- Conventional swales often don't obtain even the design residence time because of the length required and because proper design requires runoff enter the swale at the upstream end rather than at various locations along its length, and
- Bioretention areas provide a more flexible drainage design, more effective practicable treatment, and more effective flow control within the same footprint.

► TREATMENT FACILITIES FOR SPECIAL CIRCUMSTANCES

Higher-rate surface filters and vault-based proprietary filters can only be used in the circumstances described beginning on page 22 and when sand filters, extended "dry" detention basins, and "wet" detention ponds or constructed wetlands have been found infeasible.

For surface filters, the grading and drainage design should minimize the area draining to each unit and maximize the number of discrete drainage areas and units. Proprietary facilities should be installed consistent with the manufacturer's instructions.

Chapter 5

Operation & Maintenance of Storm Water Facilities

How to prepare a customized Storm Water Maintenance Plan for the treatment BMPs on your site.

The storm water NPDES Permit requires the City of La Mesa to verify all treatment and flow-control facilities are adequately maintained. Note that treatment facilities include both LID IMPs and treatment control BMPs. Facilities you install as part of your project will be verified for effectiveness and proper performance. The City of La Mesa may also verify the ongoing function of storm water management features that are not treatment or flow control facilities, such as permeable pavements and limitations on impervious area.

Operation and maintenance of storm water facilities is a six-stage process:

1. Determine **who will own** the facility and be responsible for the maintenance of treatment facilities. Identify the means by which ongoing maintenance will be assured (for example, a maintenance agreement that runs with the land).

2. Identify typical maintenance requirements, and allow for these requirements in your project planning and preliminary design.

3. Prepare a **maintenance plan** for the site incorporating detailed requirements for **each treatment and flow-control facility**.

4. **Maintain** the facilities from the time they are constructed until ownership and maintenance responsibility is formally transferred.

5. **Formally transfer** operation and maintenance **responsibility** to the site owner or occupant. A warranty, secured by a bond, or other financial instrument, may be required to secure against lack of performance due to flaws in design or construction.

6. Maintain the facilities in perpetuity and comply with self-inspection, reporting, and verification requirements.

See the schedule for these stages in Table 5-1.

Stage 1: Ownership and Responsibility

You must specify a means to **ensure maintenance** of treatment and flow-control facilities **in perpetuity.**

Depending on the intended use of your site, this will require one or more of the following:

- Project proponent agreement to maintain storm water BMPs: The City may enter into a contract with the project proponent obliging the project proponent to maintain, repair, and replace the storm water BMP as necessary into perpetuity. Security may be required.

- Assessment districts: The City may approve an Assessment District or other funding mechanism proposed by the project proponent to provide funds for storm water BMP maintenance, repair, and replacement on an ongoing basis. Any agreement with such a District shall be subject to the Public Entity Maintenance Provisions above.

- Lease provisions: In those cases where the City holds title to the land in question, and the land is being leased to another party for private or public use, the City may assure storm water BMP maintenance, repair, and replacement through conditions in the lease.

- Public entity maintenance: The City may approve a public or acceptable quasi-public entity (e.g., the County Flood Control District, or annex to an existing assessment district, an existing utility district, a state or federal resource agency, or a conservation conservancy) to assume responsibility for maintenance, repair and replacement of the permanent treatment BMP. Unless acceptable to the City, public entity maintenance agreements shall ensure estimated costs are front-funded or reliably guaranteed, (e.g., through a trust fund, assessment district fees, bond, letter of credit or similar means). In addition, the City may seek protection from liability by appropriate releases and indemnities. The City shall have the authority to approve storm water BMPs proposed for transfer to any other public entity within its jurisdiction before installation. The City shall be involved in the negotiation of maintenance requirements with any other public entities accepting maintenance responsibilities within their respective jurisdictions; and in negotiations with the resource agencies responsible for issuing permits for the construction and/or maintenance of the facilities. The City must be identified as a third party beneficiary empowered to enforce any such maintenance agreement within their respective jurisdictions.

The City may accept alternative maintenance mechanisms if such mechanisms are as protective as those listed above.

Ownership and maintenance responsibility for treatment and flow-control facilities should be discussed at the **beginning of project planning**, typically at the pre-application meeting for

planning and zoning review. Experience has shown provisions to finance and implement maintenance of treatment and flow-control facilities can be a major stumbling block to project approval, particularly for **small residential subdivisions**. (See "New Subdivisions" in Chapter 1.)

► PRIVATE OWNERSHIP AND MAINTENANCE

The City of La Mesa requires—as a condition of project approval—that a maintenance agreement be executed.

TABLE 5-1. Schedule for planning operation and maintenance of storm water treatment BMPs

Stage	*Description*	*Schedule*
1	Determine facility ownership and maintenance responsibility	Discuss with planning staff at pre-application meeting
2	Identify typical maintenance requirements	In initial submittal, coordinate with planning & zoning application
3	Develop detailed operation and maintenance plan	Provided with Project Submittal, and updated as necessary if any information changes prior to Stage 5.
4	Interim operation and maintenance of facilities	During and following construction including warranty period
5	Formal transfer of operation & maintenance responsibility	On sale and transfer of property or permanent occupancy
6	Ongoing maintenance and compliance with inspection & reporting requirements	In perpetuity

These agreements could provide that the City of La Mesa may collect a management and/or inspection fee established by a standard fee schedule, as applicable. In addition, the agreement may provide that, if the property owner fails to maintain the storm water facility, the City may enter the property, restore the storm water facility to good working order, and obtain reimbursement, including administrative costs, from the property owner.

► TRANSFER TO PUBLIC OWNERSHIP

The City of La Mesa may sometimes choose to have a treatment and flow-control facility deeded to the public, in fee or as an easement, and maintain the facility as part of the municipal storm drain system. The City may recoup the costs of maintenance through a special tax, assessment district, or similar mechanism.

Locating an IMP in a public right-of-way or easement creates an additional design constraint—along with hydraulic grade, aesthetics, landscaping, and circulation. However, because sites typically drain to the street, it may be possible to locate a bioretention swale parallel with the edge of the parcel. The facility may complement, or substitute for, an underground storm drain system.

Even if the facility is to be transferred to the City of La Mesa after construction is complete, it is still the responsibility of the builder to identify general operation and maintenance requirements, prepare a detailed operation and maintenance plan, and to maintain the facility until that responsibility is formally transferred.

Stage 2: General Maintenance Requirements

Include in your Project Submittal a general description of anticipated facility maintenance requirements. This will help ensure that:

- Ongoing costs of maintenance have been considered in your facility selection and design.
- Site and landscaping plans provide for access for inspections and by maintenance equipment.
- Landscaping plans incorporate irrigation requirements for facility plantings.
- Initial maintenance and replacement of facility plantings is incorporated into landscaping contracts and guarantees.

Fact sheets available on the Project Clean Water web page describe general maintenance requirements for the types of storm water facilities featured in the LID Design Guide (Chapter 4). You can use this information to specify general maintenance requirements in your Project Submittal.

Maintenance fact sheets for conventional storm water facilities are available in the California Stormwater BMP Handbooks.

Stage 3: Detailed Maintenance Plan

Prepare a detailed maintenance plan and submit it as required by the City of La Mesa. A detailed maintenance plan must be included with the initial Project Submittal; however the maintenance plan may later be updated to incorporate solutions to any problems or changes that occurred during project construction.

Your detailed maintenance plan should be kept on-site for use by maintenance personnel and during site inspections. It is also recommended that a copy of your initial Project Submittal be kept onsite as a reference.

► YOUR DETAILED MAINTENANCE PLAN: STEP BY STEP

The following step-by-step guidance will help you prepare your detailed maintenance plan.

Preparation of the plan will require familiarity with your storm water facilities as they have been or will be constructed and a fair amount of "thinking through" plans for their operation and maintenance.

► STEP 1: DESIGNATE RESPONSIBLE INDIVIDUALS

To begin creating your detailed maintenance plan, designate and identify:

- The individual who will have direct responsibility for the maintenance of storm water controls. This individual should be the designated contact with City inspectors and should sign self-inspection reports and any correspondence with the City of La Mesa regarding verification inspections.
- Employees or contractors who will report to the designated contact and are responsible for carrying out BMP operation and maintenance.
- The corporate officer authorized to negotiate and execute any contracts that might be necessary for future changes to operation and maintenance or to implement remedial measures if problems occur.
- Your designated respondent to problems, such as clogged drains or broken irrigation mains, that would require immediate response should they occur during off-hours.

Updated contact information must be provided to the City of La Mesa immediately whenever a property is sold and whenever designated individuals or contractors change.

Draw or sketch an **organization chart** to show the relationships of authority and responsibility between the individuals responsible for maintenance. This need not be elaborate, particularly for smaller organizations.

Describe how **funding for BMP operation and maintenance** will be assured, including sources of funds, budget category for expenditures, process for establishing the annual maintenance budget, and process for obtaining authority should unexpected expenditures for major corrective maintenance be required.

Describe how your organization will accommodate initial **training** of staff or contractors regarding the purpose, mode of operation, and maintenance requirements for the storm water facilities on your site. Also, describe how your organization will ensure ongoing training as needed and in response to staff changes.

► STEP 2: SUMMARIZE DRAINAGE AND BMPS

Incorporate the following information from your Project Submittal into your maintenance plan:

- Figures delineating and designating pervious and impervious areas.
- Figures showing locations of storm water facilities on the site.
- Tables of pervious and impervious areas served by each facility.

Review the Project Submittal narrative, if any, that describes each facility and its tributary drainage area and update the text to incorporate any changes that may have occurred during planning and zoning review, building permit review, or construction. Incorporate the updated text into your maintenance plan.

► STEP 3: DOCUMENT FACILITIES "AS BUILT"

Include the following information from final construction drawings:

- Plans, elevations, and details of all facilities. Annotate if necessary with designations used in the initial Project Submittal.
- Design information or calculations submitted in the detailed design phase (i.e., not included in the initial Project Submittal.)
- Specifications of construction for facilities, including sand or soil, compaction, pipe materials and bedding.

In the maintenance plan, note field changes to design drawings, including changes to any of the following:

- Location and layouts of inflow piping, flow splitter boxes, and piping to off-site discharge
- Depths and layering of soil, sand, or gravel
- Placement of filter fabric or geotextiles
- Changes or substitutions in soil or other materials.
- Natural soils encountered (e.g., sand or clay lenses)

► STEP 4: PREPARE MAINTENANCE PLANS FOR EACH FACILITY

Prepare a maintenance plan, schedule, and inspection checklists (routine, annual, and after major storms) for each facility. Plans and schedules for two or more similar facilities on the same site may be combined.

Use the following resources to prepare your customized maintenance plan, schedule, and checklists.

- Specific information noted in Steps 2 and 3, above.
- Other input from the facility designer, municipal staff, or other sources.
- Operation and Maintenance Fact Sheets (available on the Project Clean Water website).

Note any particular characteristics or circumstances that could require attention in the future, and include any troubleshooting advice.

Also include manufacturer's data, operating manuals, and maintenance requirements for any:

- Pumps or other mechanical equipment.
- Proprietary devices used as BMPs.

Manufacturers' publications should be referenced in the text (including models and serial numbers where available). Copies of the manufacturers' publications should be included as an attachment in the back of your maintenance plan or as a separate document.

► STEP 5: COMPILE MAINTENANCE PLAN

The following general outline is provided as an example.

I. Inspection and Maintenance Log

II. Updates, Revisions and Errata

III. Introduction

A. Narrative overview describing the site; drainage areas, routing, and discharge points; and treatment facilities.

IV. Responsibility for Maintenance

A. General

(1) Name and contact information for responsible individual(s).

(2) Organization chart or charts showing organization of the maintenance function and location within the overall organization.

(3) Reference to Operation and Maintenance Agreement (if any). A copy of the agreement should be attached.

(4) Maintenance Funding

(1) Sources of funds for maintenance

(2) Budget category or line item

(3) Description of procedure and process for ensuring adequate funding for maintenance

B. Staff Training Program

C. Records

D. Safety

V. Summary of Drainage Areas and Storm Water Facilities

A. Drainage Areas

(1) Drawings showing pervious and impervious areas (copied or adapted from initial Project Submittal).

(2) Designation and description of each drainage area and how flow is routed to the corresponding facility.

B. Treatment and Flow-Control Facilities

(1) Drawings showing location and type of each facility

(2) General description of each facility (Consider a table if more than two facilities)

(1) Area drained and routing of discharge.

(2) Facility type and size

VI. Facility Documentation

A. "As-built" drawings of each facility (design drawings in the draft Plan)

B. Manufacturer's data, manuals, and maintenance requirements for pumps, mechanical or electrical equipment, and proprietary facilities (include a "placeholder" in the draft plan for information not yet available).

C. Specific operation and maintenance concerns and troubleshooting

VII. Maintenance Schedule or Matrix

A. Maintenance Schedule for each facility with specific requirements for:

(1) Routine inspection and maintenance

(2) Annual inspection and maintenance

(3) Inspection and maintenance after major storms

B. Service Agreement Information

Assemble and make copies of your maintenance plan. One copy must be submitted to the City of La Mesa, and at least one copy kept on-site. Here are some suggestions for formatting the maintenance plan:

- Format plans to 8½" x 11" to facilitate duplication, filing, and handling.
- Include the revision date in the footer on each page.
- Scan graphics and incorporate with text into a single electronic file. Keep the electronic file backed-up so that copies of the maintenance plan can be made if the hard copy is lost or damaged.

► STEP 6: UPDATES

Your maintenance plan will be **a living document**.

Operation and maintenance personnel may change; mechanical equipment may be replaced, and additional maintenance procedures may be needed. Throughout these changes, the maintenance plan must be kept up-to-date.

Updates may be transmitted to the City of La Mesa at any time. However, at a minimum, updates to the maintenance plan must be reported with the annual submittal of the "BMP Inspection & Maintenance Verification Form," or equivalent, to the City.

Stage 4: Interim Maintenance

Applicants will typically be required to warranty storm water facilities against lack of performance due to flaws in design or construction. The warranty may need to be secured by a bond or other financial instrument.

Stage 5: Transfer Responsibility

As part of the detailed maintenance plan, note the expected date when responsibility for operation and maintenance will be transferred. Notify the City of La Mesa when this transfer of responsibility takes place.

Stage 6: Operation & Maintenance Verification

The City of La Mesa implements an operation and maintenance verification program, including periodic site inspections.

Contact municipal staff to determine the frequency of inspections, whether self-inspections are allowed, and applicable fees, if any.

Chapter 6

Construction BMP Requirements and Performance Standards

Guideline to meeting construction BMP requirements in the SWPPP or CSWMP for your site.

The storm water NPDES Permit requires the City of La Mesa to regulate construction activities within the City in order to reduce construction site discharges of pollutants from the MS4 to the maximum extent practicable and to prevent construction site discharges from the MS4 from causing or contributing to a violation of water quality standards.

Compliance with the City of La Mesa's construction BMP requirements is a four-step process:

1. Determine the applicable storm water requirements for your site.
2. Prepare and submit the appropriate plans.
3. Determine the adequacy of the plans proposed.
4. Assure implementation and maintenance of the requirements.

These steps are described below in greater detail.

Construction Storm Water BMP Requirements

The flow chart in Figure 6-1, "Construction Permit Review & Approval Process" describes how storm water requirements are incorporated into projects during the construction permit review process. The steps below describe the elements of the plan review and permitting processes for storm water best management practice (BMP) requirements.

FIGURE 6-1. Construction Permit Review and Approval Process.

The following figure provides an overview of the project review process for projects that require a construction permit from the City of La Mesa. Construction permits include building permits, grading permits, demolition permits, and encroachment permits.

► STEP 1: DETERMINE APPLICABLE STORM WATER BMP REQUIREMENTS

Prior to submittal, applicants must complete the "Storm Water Requirements Applicability Checklist" in Appendix A, to determine if their project is subject to construction and/or permanent storm water best management practice (BMP) requirements. Projects subject to the construction storm water best management practices requirements must comply with the standards included in this BMP Manual, as appropriate depending on the site conditions, season, and project design, and construction methods. Each project must be given a priority ranking (high, medium, or low) for the construction phase (see Appendix A). The prioritization will determine the inspection frequency by the City but will not change the construction BMP requirements. Refer to Step 2: "Prepare & Submit Appropriate Plans," for guidance in navigating through this BMP Manual to ensure construction BMP performance standards are met.

► STEP 2: PREPARE & SUBMIT APPROPRIATE PLANS

This BMP Manual describes the construction site management requirements that contractors must comply with. In addition, the next section of this chapter ("Construction Storm Water BMP Performance Standards") lists the performance standards that construction sites must meet, and provides a list of required erosion control, sediment control, and materials management BMPs for reference. Additionally, each project must determine if they are subject to s requirements and be given a priority of high, medium or low (see Appendix A).

Construction Projects Over 1 Acre. Those projects that have been determined to require construction BMPs in Step 1 must identify the construction BMPs to be implemented in accordance with the performance standards in the next section of this chapter, "Construction Storm Water BMP Performance Standards." If a project disturbs 1 acre or more, the applicant must provide a Storm Water Pollution Prevention Plan (SWPPP), which identifies all construction BMP requirements required by this chapter, in accordance with the current State General Permit for Storm Water Discharges Associated with Construction Activity (State General Construction Permit). Consistent with the State General Construction Permit, the City will require that <u>both</u> erosion and sediment control BMPs be installed and maintained for all applicable projects in addition to good housekeeping and site and materials management. Additionally, the State General Construction Permit has a requirement for a sampling and monitoring program to be implemented. Additionally, each project determined to be subject to the City's advanced treatment requirements (see Appendix A) will need to include details on how the site plans to meet these requirements in the SWPPP and/or erosion control plan. Appendix D provides general guidelines for preparation of a SWPPP as well as a more detailed checklist to meet the requirements.

Construction Projects Under 1 Acre. Those projects that have been determined to require construction BMPs in Step 1 must identify the construction BMPs to be implemented in accordance with the performance standards in the next section of this chapter, "Construction Storm Water BMP Performance Standards." For projects that disturb less than 1-acre and are determined to have a potential to impact water quality during construction, the applicant must provide a Construction Storm Water Management Plan (CSWMP), which identifies all

construction BMP requirements required in this chapter, with the project submittal. The CSWMP shall depict the BMPs to be implemented during construction to reduce/eliminate discharges of pollutants to the storm drain conveyance system. The CSWMP shall include but not be limited to erosion and sediment control BMPs, good housekeeping measures and site and materials management.

After preparing plans and supporting documents according to the requirements in this BMP Manual, submit plans to the Department of Public Works/Engineering for review (See Step 3).

► STEP 3: DETERMINE ADEQUACY OF PROPOSED PLANS

Under the authority of the City Engineer, Engineering staff will review submitted plans for compliance with the applicable storm water requirements contained in this BMP Manual. The City Engineer may approve proposed alternatives to the BMP requirements in this manual if they are determined to be applicable and equally effective. Additional analysis or information may be required to enable staff to determine the adequacy of proposed BMPs. After all storm water requirements have been approved by the City Engineer, proceed to Step 4 to assure implementation and maintenance of the approved BMPs through permit conditions, plan notes, and if necessary, maintenance agreements.

► STEP 4: ASSURE IMPLEMENTATION & MAINTENANCE OF REQUIREMENTS

Applicants must provide assurances that permanent storm water BMPs will be constructed and permanently maintained throughout the use of a developed site, and that construction BMPs will be implemented and maintained until construction is complete. The summaries below describe how construction and permanent BMP requirements must be assured during both discretionary actions and construction permit review processes. After the City Engineer has approved all construction and/or permanent BMPs, refer to the final section of this chapter, "Implementation and Maintenance of Requirements," to determine how construction and permanent BMP implementation and maintenance will be assured.

Discretionary Action. For any discretionary action, permanent storm water requirements shall be incorporated into the project design and be shown on the plans. In addition, project shall be conditioned to execute a maintenance agreement for ongoing permanent BMP maintenance, satisfactory to the City Engineer, prior to the issuance of any construction permits. This requirement shall be noted on the plans for the discretionary action. If the project will be required to provide construction BMPs, the permit/approval shall include the "Standard Construction BMP Implementation and Maintenance Condition" listed in "Implementation and Maintenance of Requirements" at the end of this chapter.

Construction Permits. For projects requiring construction permits, construction and permanent BMP requirements shall be incorporated into the project design and shown on the plans prior to the issuance of any permits. The project applicant shall execute a permanent BMP maintenance agreement, satisfactory to the City Engineer, prior to issuance of any construction permits. Construction maintenance requirements and the specific permanent BMP maintenance procedures shall be noted on the plans. Any construction BMP requirements that cannot be shown graphically must be noted on the plans.

Construction Storm Water BMP Performance Standards

Those projects that have been determined to require construction BMPs in Steps 1 and 2 of this chapter must identify the construction BMPs to be implemented in accordance with the performance standards in this section. The construction BMPs must be identified in a Storm Water Pollution Prevention Plan or Construction Storm Water Management Plan (CSWMP) for projects disturbing more than or less than 1 acre, respectively. Because all projects require BMPs during construction, those projects that disturb less than 1 acre are required to have a Construction Storm Water Management Plan (CSWMP) which identifies the pollution prevention measures that will be taken. These plans must be prepared in accordance with the guidelines in Appendix D.

► 1. MINIMUM CONSTRUCTION BMP REQUIREMENTS

The City has developed a set of minimum BMPs that must be implemented at all construction sites. Every construction site within the City's jurisdiction is required to select, install, and maintain general site management, soil stabilization and erosion prevention, and sediment containment BMPs to reduce, retain, and manage pollutant discharges to the MEP. Table 6-1 outlines the minimum construction BMPs required by the City along with the corresponding current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual (2003), where applicable. Additional information on the BMPs included in Table 6-1 can be found in the City of La Mesa Jurisdictional Urban Runoff Management Plan (JURMP), the Model Construction Program for San Diego Copermittees, the City of Los Angeles "Reference Guide for Stormwater Best Management Practices," and the California Stormwater Quality Association (CASQA) BMP Handbook for Construction.

It is the responsibility of the property owner or his/her designee to select, install and maintain appropriate BMPs that meet the City's minimum BMP requirements outlined in Table 6-1 below. BMPs must be installed in accordance with an industry recommended standard or in accordance with the requirements of the State General Construction Permit.

TABLE 6-1. Minimum Required BMPs for Construction

BMP Type	Minimum Required BMP(s)	Corresponding Caltrans Fact sheet
General Site Management		
Project Planning	Preserve natural hydrologic features where feasible	-
	Preserve riparian buffers and corridors where feasible	-
	Minimize areas that are cleared and graded to only the portion of the site that is necessary for construction	-
	Minimize exposure time of disturbed soil areas	SS-1
	Minimize grading during the wet season and correlate grading with seasonal dry weather periods to the extent feasible	SS-1
	Temporarily stabilize and reseed disturbed soil areas as rapidly as feasible	SS-1

BMP Type	Minimum Required BMP(s)	Corresponding Caltrans Fact sheet
	Educate construction site employees and subcontractors on minimum BMP requirements	-
Pollution Prevention	Prevent the contamination of storm water from vehicles and equipment through proper management of the following types of activities: - Cleaning - Fueling - Maintenance	 NS-8 NS-9 NS-10
	Prevent the contamination of storm water from construction materials through proper management of the following types of activities: - Material Delivery and Storage - Material Use - Stockpile Management[1] - Spill Prevention and Control	 WM-1 WM-2 WM-3 WM-4
	Prevent the contamination of storm water by wastes through proper management of the following types of wastes: - Solid Waste - Hazardous Waste - Contaminated Soil - Concrete - Sanitary Waste - Liquid	 WM-5 WM-6 WM-7 WM-8 WM-9 WM-10
	Prevent the contamination of storm water through proper management of the follow activities: - Water Conservation Practices - Dewatering Operations - Paving and Grinding - Potable Water/Irrigation and Flushing	 NS-1 NS-2 NS-3 NS-7
Erosion Prevention and Sediment Containment		
Soil Stabilization and Erosion Prevention	Preserve existing vegetation where feasible	SS-2
	Prevent erosion and sediment runoff from exposed graded areas through physical stabilization and/or vegetation stabilization[2] by implementing one or more of the following BMPs: - Hydraulic Mulch - Hydroseeding - Soil Binders - Straw Mulch - Geotextiles, Plastic Covers, and Erosion Control Blankets/Mats - Wood Mulch - Earth Dikes/Drainage Swales	 SS-3 SS-4 SS-5 SS-6 SS-7 SS-8 SS-9
	Reduce the velocity of storm water by using one or more of the following: - Outlet Protection/Velocity Dissipation - Slope Drains	 SS-10 SS-11
	Establish permanent re-vegetation or landscaping as early as feasible	SS-1

BMP Type	Minimum Required BMP(s)	Corresponding Caltrans Fact sheet
Sediment Containment	Protect the Perimeter of the site or exposed area from sediment discharge using one or more of the following: - Silt Fence - Gravel Bag Berm - Fiber Rolls	 SC-1 SC-6 SC-5
	Capture sediments in channeled storm water by using one or more of the following: - De-silting Basin[3] - Storm Drain Inlet Protection - Sediment Trap - Gravel Bag Barrier	 SC-2 SC-10 SC-3 SC-8
	Prevent sediment from being tracked off-site by using one or more of the following: - Stabilized Construction Entrance - Construction Road Stabilization - Entrance/Exit Tire Wash - Street Sweeping	 TC-1 TC-2 TC-3 SC-7

1. Stockpiles should be fully covered when materials are not being added or removed.
2. Vegetation stabilization BMPs must be installed, irrigated, and established (uniform vegetative coverage with 70% coverage established) prior to October 1st. In the event stabilizing vegetation has not been established by October 1st, other forms of physical stabilization must be employed to prevent erosion until the stabilizing vegetation is established.
3. De-silting basins must be designed in accordance with industry standards such as Caltrans. If the project is one acre or greater the de-silting basin must be designed in accordance with the current State General Construction Permit.

► 2. SITE MANAGEMENT REQUIREMENTS

Construction is a dynamic operation where changes are expected. Storm water BMPs for construction sites are usually temporary measures that require frequent maintenance to maintain their effectiveness and may require relocation, revision, and re-installation, particularly as project grading progresses. Therefore, owner/contractor self- inspections are required. They shall be performed by the owner's/contractor's Qualified Contact Person specifically trained in storm water pollution prevention site management and storm water BMPs, including the installation and maintenance of sediment and erosion control measures. Additional qualified persons may assist with the inspection activities under the direction of the Qualified Contact Person. A Qualified Contact Person is required for all sites during both wet and dry weather conditions.

There are four primary purposes of the self-inspections conducted by owners and contractors:

- To ensure that the owners/contractors take full responsibility for managing storm water pollution caused by their activities.
- To ensure that storm water BMPs are properly documented and implemented and are functioning effectively.
- To identify maintenance (e.g., sediment removal) and repair needs.

- To ensure that the project proponents implement their storm water management plans.

A self-inspection checklist, noting date, time, conditions and inspection date, must be kept on-site and made available for inspection, if requested (note: the State General Construction Permit has additional inspection requirements that must be met to comply with the permit). Self-inspections must be performed by a Qualified Contact Person according to the following schedule:

- Daily forecasting at all times
- At 24-hour intervals during extended rainfall events
- Daily evaluations as earth moving/grading is being conducted during the wet season
- Weekly (every 7 days) in the dry season as earth moving/grading is progressing

Storm water pollution prevention site management requirements include:

A. A qualified person who is trained and competent in the use of BMPs shall be on site daily, although not necessarily full time, to evaluate the conditions of the site with respect to storm water pollution prevention. This qualified contact person shall represent the contractor/ owner on storm water issues.

B. The qualified person shall implement the conditions of the Storm Water Pollution Prevention Plan, contract documents, and/or local ordinances with respect to erosion and sediment control and other waste management regulations.

C. The qualified person is responsible for monitoring the weather and implementation of any emergency plans as needed. The weather shall be monitored on a 5-day forecast plan and a full BMP protection plan shall be activated when there is a 40% chance of rain.

D. The qualified person is responsible for overseeing any site grading and operations and evaluating the effectiveness of the BMPs. This person shall modify the BMPs as necessary to keep the dynamics of the site in compliance. This person or other qualified persons are responsible for checking the BMPs routinely for maintenance and documenting the BMPs being implemented.

► 3. PERFORMANCE STANDARDS

Construction The City Engineer will evaluate the adequacy of the owner's/contractor's site management for storm water pollution prevention, inclusive of BMP implementation, on construction sites based on performance standards for storm water BMPs. Poor BMP practices shall be challenged. Performance standards shall include:

A. No measurable increase of pollution (including sediment) in runoff from the site.

B. No slope erosion.

C. Water velocity moving offsite must not be greater than pre-construction levels.

A site will be considered inactive if construction activities have ceased for a period of 7 or more consecutive calendar days. At any time of year, an inactive site must be fully protected from erosion and discharges of sediment. It is also the owner's/contractor's responsibility at both active and inactive sites to implement a plan to address all potential non-storm water discharges.

Regardless of any inspections conducted by the City, property owners or contractors are required to prevent any construction-related materials, wastes, spills, or residues from entering a storm water conveyance system and to apply for coverage under the State General Construction Permit as applicable for the site.

► 4. SEASONAL REQUIREMENTS

BMP requirements differ between the wet season (Oct. 1 – Apr. 30) and the dry season (May 1 – Sept. 30), the type of the project and topography of the site, as described below.

A. Dry Season Requirements (May 1 through September 30) include but are not limited to:

A. All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)

B. Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).

C. Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).

D. Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.

E. At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not considered to be "exposed" for purposes of this requirement.

F. The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).

G. Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.

H. The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.

I. A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.

J. Properly protected, designated storage areas are required for materials and wastes.

K. All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.

L. Remnant trash and debris shall be removed and/or properly stored/disposed of daily.

M. Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.

N. Materials for spill control/containment must be stockpiled onsite.

O. Non-storm water discharges must be eliminated or controlled to the MEP.

B. Rainy Season Requirements (October 1 through April 30) include but are not limited to:

A. All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)

B. Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).

C. Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).

D. Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.

E. At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not considered to be "exposed" for purposes of this requirement.

F. The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).

G. Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.

H. The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.

I. A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.

J. Properly protected, designated storage areas are required for materials and wastes.

K. All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.

L. Remnant trash and debris shall be removed and/or properly stored/disposed of daily.

M. Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.

N. Materials for spill control/containment must be stockpiled onsite.

O. Non-storm water discharges must be eliminated or controlled to the MEP.

P. Erosion control BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.

Q. Perimeter protection and sediment containment BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.

R. Adequate soil stabilization and erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a selected BMP fails, it must be repaired, improved, or replaced with an acceptable alternate as soon as it is safe to do so.

S. All vegetation erosion prevention BMPs must be established prior to the rainy season to be considered as a BMP.

T. Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. A disturbed area that is not completed but that is not being actively graded must be fully protected from erosion if left for seven or more calendar days. The ability to deploy standby BMP materials is not sufficient for these areas.

► 5. ADVANCED TREATMENT REQUIREMENTS

The City requires advanced treatment methods to be employed at construction sites determined to be an exceptional threat to water quality (see Appendix A). Advanced treatment involves using mechanical or chemical means to flocculate and remove suspended sediment from construction site runoff. Projects required to implement advanced treatment must comply with the following:

1. Treatment effluent water quality shall meet or exceed the water quality objectives for sediment, turbidity, and any other parameter deemed necessary by the City Engineer as listed in the Water Quality Control Plan for the San Diego Basin (9) for inland surface waters and lagoons and estuaries for the appropriate hydrologic unit.

2. Applicant shall provide design, operations and maintenance schedule, monitoring plan, certification of training of staff to the satisfaction of the City Engineer.

► 6. ADDITIONAL CONTROLS FOR CONSTRUCTION SITES

The Municipal Permit requires implementation of additional controls for construction sites tributary to 303(d) listed water body segments impaired for sediment or within, adjacent to, or discharging directly to coastal lagoons or other receiving waters within ESAs. Additional requirements for theses site will be determined on a site-by-site basis at the discretion of the City Engineer.

Implementation and Maintenance of Requirements

Discretionary Actions. Projects seeking discretionary approvals are not required to graphically demonstrate any construction BMP requirements on the project plans. Instead, the discretionary action shall include the following standard condition, which shall also be noted on the plans:

> "The Permittee or designee shall incorporate any construction best management practices (BMPs) necessary to comply with the grading regulations in Chapter 14.05 of the La Mesa Municipal Code, into the construction plans and/or specifications, satisfactory to the City Engineer, prior to the issuance of any construction permits."

Construction Permits for Projects Under 1 Acre. Projects proposing to disturb less than 1 acre during construction shall include construction BMP requirements, where possible, on the plans. Any remaining construction BMPs that cannot be shown graphically on the plans shall be either noted on, or stapled to, the plans and made a condition of the permit. The project's construction priority ranking (see Appendix A) must also be noted on the construction plans. Applicants proposing projects that include permanent BMPs must prepare (if not already prepared as part of a previous permit or approval), and execute a maintenance agreement, prepared satisfactory to the City, following the program described in Chapter 5 of this BMP Manual prior to the issuance of any construction permits. The permanent BMPs shall be

graphically shown on the plans, where possible, and made a condition of the project's permit/approval. The permanent BMP's operation and maintenance requirements (O & M plan discussed in Chapter 5 of this BMP Manual) shall also be noted on the plans and made a condition of the project's permit/approval.

Construction Permits for Projects Over 1 Acre. Projects proposing to disturb more than 1 acre during construction shall include all construction BMPs in a Storm Water Pollution Prevention Plan, prepared in accordance with Appendix D. The construction BMPs shall also be shown on the plans, where possible. Any remaining construction BMPs that cannot be shown graphically on the plans shall be either noted or stapled to the plans and made a condition of the permit. The project's construction priority ranking (see Appendix A) must also be noted on the construction plans. Applicants proposing projects that include permanent BMPs must prepare (if not already prepared as part of a previous permit or approval), and execute a maintenance agreement, prepared satisfactory to the City, following the program described in Chapter 5 of this BMP Manual prior to the issuance of any construction permits. The permanent BMPs shall be graphically shown on the plans, where possible, and made a condition of the project's permit/approval. The permanent BMP's operation and maintenance requirements (O & M plan discussed in Chapter 5 of this BMP Manual) shall also be noted on the plans and made a condition of the project's permit/approval.

APPENDICES

STORM WATER PROJECT DATA SHEET

PROJECT DATA:

Owner's Name & Phone No: _____

Address: _____ Permit No: _____

Project: _____ Date Applied: _____

PROJECT SITE DATA:

1. Area of the lot/parcel _____ sf
2. Existing impervious area (roof/building foot print) _____ sf
3. Existing impervious area (driveway, parking, walkway, hardscape etc.) _____ sf
4. Impervious area after development (roof/building foot print) _____ sf
5. Impervious area after development (driveway, parking, walkway, hardscape, etc.) _____ sf
6. Total area to be disturbed _____ sf
7. Storm water runoff based on Hydrology Study:

Existing runoff _____ cfs, Post construction runoff _____ cfs

8. Identify if the runoff from the site discharges to the public street or storm drain or open channel, detention or retention basin: _____
9. Watershed (Check One): San Diego River _____ San Diego Bay _____

---

a. Total disturbed area includes impervious area, construction material storage, staging area, graded slopes, new slopes and landscape areas.

b. The information shall be shown on the site/grading plans.

c. Complete the Storm Water Requirements Applicability Checklist

Notes:

- Items 1 through 9 shall be shown on the site development plan/grading plan.
- The applicant may be required to submit SWPPP or CSWMP, and PCWQTR or SPCBMPP depending on the Priority as stated below.
- A Hydrology report may be required.

STORM WATER REQUIREMENTS APPLICABILITY CHECKLIST

Complete Sections 1 and 2 of the checklist to determine which permanent best management practices (BMPs) and which construction BMPs are required for your project for storm water. *This form must be completed and submitted with your permit application.*

SECTION 1. PERMANENT STORM WATER BMP REQUIREMENTS:

	YES	NO
1. Is the project a new development?	☐	☐
2. Is the project a significant redevelopment that adds/replaces/creates at least 5,000 ft^2 of impervious surface?	☐	☐
Refer to the Glossary in La Mesa's Storm Water BMP Manual Part II for an expanded definition of significant redevelopment.		

If both of the above answers are "No", go to Part B. If either of the above answers is "Yes," Complete Part A Below.

PART A: DETERMINE PRIORITY DEVELOPMENT PROJECT PERMANENT STORM WATER BMP REQUIREMENTS.

DOES THE PROJECT MEET THE DEFINITION OF ONE OR MORE OF THE PRIORITY DEVELOPMENT PROJECT CATEGORIES AS DEFINED IN LA MESA'S BMP MANUAL PART II? (SEE GLOSSARY)	YES	NO
1. Residential development resulting in the disturbance of one acre or more of land or comprised of 10 or more attached or detached dwelling units?	☐	☐
2. Commercial development resulting in the disturbance of one acre or more of land?	☐	☐
3. Industrial development resulting in the disturbance of one acre or more of land?	☐	☐
4. Automotive repair shop?	☐	☐
5. Restaurant greater than 5,000 square feet?	☐	☐
6. Steep (slope of 25% or more) hillside development that will create greater than 5,000 square feet of impervious surface?	☐	☐
7. Project located within or directly adjacent to (within 200 feet) or directly discharging to an Environmentally Sensitive Area (ESA) and creates at least 2,500 square feet of impervious area or increases impervious area to 10% or more of its naturally occurring condition?	☐	☐
8. "Parking lot" greater than or equal to 5,000 square feet or with at least 15 parking spaces, and potentially exposed to urban runoff?	☐	☐
9. "Streets, roads, highways, and freeways" that would create a new paved surface that is 5,000 square feet or greater?	☐	☐
10. "Retail Gasoline Outlets" either 5,000 square feet or greater or with a projected "Average Daily Traffic" of 100 or more vehicles per day	☐	☐
11. All other pollutant generating Development Projects that result in the disturbance of one acre or more of land. Generally all projects which include impervious surfaces and/or introduce landscaping that requires routine use of fertilizers and pesticides are considered pollutant generating above background levels.	☐	☐
***** *Refer to the Glossary in La Mesa's Storm Water BMP Manual Part II for expanded definitions of the priority development project categories.*		

Limited Exclusion: Trenching and resurfacing work associated with utility projects, such as resurfacing and reconfiguring surface parking lots and existing roadways, new sidewalk construction, pedestrian ramps, bike lanes on existing roads, and routine replacement of damaged pavement, such as pothole repair, are not considered priority development projects. Linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered pollutant generating above background levels if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces. Parking lots, buildings and other structures associated with utility projects are priority development projects if one or more of the criteria in Part A are met.

If all answers to Part A are "No", continue to Part B.

PART B: DETERMINE STANDARD PERMANENT STORM WATER REQUIREMENTS.

DOES THE PROJECT PROPOSE:	YES	NO
1. New impervious areas such as rooftops, roads, parking lots, driveways, paths and sidewalks?	☐	☐
2. New pervious landscape areas and irrigation systems?	☐	☐
3. Permanent structures within 100 feet of any natural water body?	☐	☐
4. Trash storage areas?	☐	☐
5. Liquid or solid material loading and unloading areas?	☐	☐
6. Vehicle or equipment fueling, washing, or maintenance areas?	☐	☐
7. Require a General NPDES Permit for storm water discharges associated with industrial activities "(except construction)?	☐	☐
8. Commercial/ industrial waste handling or storage, excluding typical office or household waste?	☐	☐
9. Any grading or ground disturbance during construction?	☐	☐
10. Any new storm drains, or alteration to existing storm drains?	☐	☐
**To find out if your project is required to obtain an individual General NPDES Permit for Storm Water Discharges Associated with Industrial Activities, visit the State Water Resources Control Board web site at, www.swrcb.ca.gov/stormwtr/industrial.html.*		

If any of the answers provided in Section 1, Part A are "Yes," the project is subject to the "Priority Development Project Permanent Storm Water BMP Requirements". A Post Construction Water Quality Technical Report (PCWQTR) shall be submitted; the requirements of the City's Storm Water BMP Manual Part II must be satisfied. In particular, see Chapters 1 through 5 of the BMP Manual. If a Priority Development Project is over 50 acres, the project is also subject to the City's Interim Hydromodification Criteria (IHC) as discussed in Chapter 1 of the Storm Water BMP Manual Part II.

If all answers provided in Section 1, Part A are "No," and <u>any</u> answers to Part B are "Yes," the project is only subject to the Standard Permanent Storm Water BMP Requirements and shall submit a Standard Post-Construction BMP Plan (SPCBMPP). In particular, see Appendix G of the City's Storm Water BMP Manual Part II.

If every question in Part A and B is answered "No," the project is exempt from permanent storm water requirements.

Required submittals, Section 1:	**PCWQTR**	☐	**SPCBMPP**	☐	**Hydromodification**	☐

SECTION 2. CONSTRUCTION STORM WATER BMP REQUIREMENTS:

PART C: DETERMINE CONSTRUCTION PHASE STORM WATER REQUIREMENTS.

WOULD THE PROJECT MEET ANY OF THESE CRITERIA DURING CONSTRUCTION?	YES	NO
1. Does the project propose grading or soil disturbance over one acre?	☐	☐
2. Does the project propose any grading or soil disturbance?	☐	☐
3. Would storm water or urban runoff have the potential to contact any portion of the construction area, including washing and staging areas?	☐	☐
4. Would the project use any construction materials that could negatively affect water quality if discharged from the site (such as paints, solvents, concrete and stucco)?	☐	☐

If the answer to question 1 of Part C is answered "Yes," your project is subject to California's statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities (General Construction Permit) and the City's Construction Storm Water BMP Performance Standards. A Storm Water Pollution Prevention Plan (SWPPP) and a Notice of Intent (NOI) to enroll in the General Construction Permit must be prepared. Parts D and E of this form must also be completed.

If the answer to question 1 is "No," but the answer to any of the remaining questions is "Yes," your project is subject to Construction Storm Water BMP Performance Standards. A Construction Storm Water Management Plan (CSWMP) must be prepared, and Part E of this form must be completed.

If every question in Part C is answered "No," you do not need to complete Parts D and E of this form, and neither a SWPPP nor CSWMP is required.

PART D: DETERMINE ADVANCED TREATMENT SUBJECTIVITY

WOULD THE PROJECT MEET ANY OF THESE CRITERIA DURING CONSTRUCTION?	YES	NO
1. Is the project located within, adjacent to, or is a portion of the site within 200 feet of waters listed on the CWA Section 303(d) list of Water Quality Limited Segments as impaired for sedimentation or turbidity?	☐	☐
2. Will the project disturb more than five acres, including all phases of the development?	☐	☐
If the answers to 1 and 2 are both "yes", please answer questions 3 and 4 below.		
3. Will the project disturbed slopes steeper than 4:1 (horizontal: vertical) and higher than 10 feet that drain toward the 303(d) listed receiving water?	☐	☐
4. Does the project contain a predominance of soils with USDA-NRCS Erosion factors k_f greater than or equal to 0.4?	☐	☐

If <u>all</u> answers to part D are "yes", the project is subject to the City's advanced treatment requirements for construction. Advanced treatment requirements are detailed in Chapter 6 of the Storm Water BMP Manual Part II. Note that even if the above criteria do not apply, advanced treatment may be required at the discretion of the City Engineer.

<u>Required submittals, Section 2:</u>	**SWPPP, NOI** ☐	**CSWMP** ☐	**Advanced Treatment** ☐

PART E: DETERMINE CONSTRUCTION SITE PRIORITY

In accordance with the Municipal Permit, each construction site with construction storm water BMP requirements must be designated with a priority: high, medium or low. This prioritization must be completed with this form, noted on the plans and included in the SWPPP or CSWMP. See the attached flow chart for guidance on determining the construction prioritization. The City Engineer may adjust the priority of the projects both before and during construction.

According to the attached flow chart, this project has the following threat to water quality priority:

☐ **High** ☐ **Medium** ☐ **Low**

[Note: The construction priority DOES NOT change construction BMP requirements that apply to projects; all construction BMP requirements must be identified on a case-by-case basis. The construction priority DOES affect the frequency of inspections that will be conducted by the City.]

Completed By: _____

Name, Address & Phone

Water Quality Threat Prioritization Flow Chart for Construction Projects

* Sites with a low or medium threat to water quality priority can be given a higher threat prioritization at the discretion of City staff based on additional factors, such as project type and non-storm water discharge potential.

Note: High soil erosion potential and significant slope are determined at the discretion of City staff.

LID Integrated Management Practice Design Sheets

This appendix provides design sheets for the following IMPs:

- Self-treating and self-retaining areas
- Pervious pavements
- Bioretention facilities
- Flow-through planter
- Dry wells and infiltration basins
- Cistern with bioretention facility

These design sheets include recommended configurations and details, and example applications, for these IMPs. **The information in these design sheets must be adapted and applied to the conditions specific to the development project such as unstable slopes or the lack of available head. Designated municipal staff have final review and approval authority over the project design.**

Chapter 3 of this BMP Manual provides information regarding the documentation necessary in your Project Submittal. Keep in mind that proper and functional design of the IMP is the responsibility of the applicant. Effective operation of the IMP throughout the project's lifetime will be the responsibility of the property owner.

Self-Treating and Self-Retaining Areas

Best Uses

- Heavily landscaped sites

Advantages

- No maintenance verification requirement
- Complements site landscaping

Limitations

- Requires substantial square footage
- Grading requirements must be coordinated with landscape design

► **CRITERIA**

Rainfall on self-treating areas infiltrates or—during intense storms— drains directly off-site or to the storm drain system.

Self-retaining areas are designed to retain the first one inch of rainfall without producing any runoff. During intense storms, runoff may drain off-site, to the storm drain system, or to IMPs.

LID design seeks to manage runoff from roofs and paving so effects on water quality and hydrology are minimized. Runoff from landscaping, however, does not need to be managed the same way.

Runoff from landscaping can be managed by creating self-treating and self-retaining areas.

Self-treating areas are natural, landscaped, or turf areas that drain directly off site or to the storm drain system. Examples include upslope undeveloped areas that are ditched and drained around a development and grassed slopes that drain offsite to a street or storm drain. Self-treating areas may not drain on to adjacent paved areas.

Where a landscaped area is upslope from or surrounded by paved areas, a **self-retaining area** (also called a zero-discharge area) may be created. Self-retaining areas are designed to retain the first one inch of rainfall without producing any runoff. The technique works best on flat, heavily landscaped sites. It may be used on mild slopes if there is a reasonable expectation that the first inch of rainfall would produce no runoff.

To create self-retaining turf and landscape areas in flat areas or on terraced slopes, berm the area or depress the grade into a concave cross-section so that these areas will retain the first inch of rainfall. Inlets of area drains, if any, should be set 3 inches above the low point to allow ponding.

Areas draining to self retaining areas. Drainage from roofs and paving can be directed to self-retaining areas and allowed to infiltrate into the soil. The maximum allowable ratio is 2 parts impervious: 1 part pervious.

The self-retaining area must be bermed or depressed to retain an inch of rainfall including the flow from the tributary impervious area.

► **DETAILS**

Drainage from self-treating areas must flow to off-site streets or storm drains without flowing on to paved areas.

Pavement within a self-treating area cannot exceed 5% of the total area.

In self-retaining areas, overflows and area drain inlets should be set high enough to ensure ponding over the entire surface of the self-retaining area.

Self–retaining areas should be designed to promote even distribution of ponded runoff over the area.

Leave enough reveal (from pavement down to landscaped surface) to accommodate buildup of turf or mulch.

► **APPLICATIONS**

Lawn or landscaped areas adjacent to streets can be considered self-treating areas.

Self-retaining areas can be created by depressing lawn and landscape below surrounding sidewalks and plazas.

Runoff from walkways or driveways in parks and park-like areas can sheet-flow to self-retaining areas.

Roof leaders can be connected to self-retaining areas by piping beneath plazas and walkways. If necessary, a "bubble-up" can be used.

Connecting a roof leader to a self-retaining area. The head from the eave height makes it possible to route roof drainage some distance away from the building.

Self-retaining areas can be created by terracing mild slopes. The elevation difference promotes subsurface drainage.

Mild slopes can be terraced to create self-retaining areas.

► DESIGN CHECKLIST FOR SELF-TREATING AREAS

- ❒ The self-treating area is at least 95% lawn or landscaping (not more than 5% impervious).
- ❒ Re-graded or re-landscaped areas have amended soils, vegetation, and irrigation as may be required to maintain soil stability and permeability.
- ❒ Runoff from the self-treating area does not enter an IMP or another drainage management area, but goes directly to the storm drain system.

► DESIGN CHECKLIST FOR SELF-RETAINING AREAS

- ❒ Area is bermed all the way around or graded concave.

- ❒ Slopes do not exceed 4%.
- ❒ Entire area is lawn, landscaping, or pervious pavement (see criteria in Chapter 4).
- ❒ Area has amended soils, vegetation, and irrigation as may be required to maintain soil stability and permeability.
- ❒ Any area drain inlets are at least 3 inches above surrounding grade.

► DESIGN CHECKLIST FOR AREAS DRAINING TO SELF-RETAINING AREAS

- ❒ Ratio of tributary impervious area to self-retaining area is not greater than 2:1.
- ❒ Roof leaders collect runoff and route it to the self-retaining area.
- ❒ Paved areas are sloped so drainage is routed to the self-retaining area.
- ❒ Inlets are designed to protect against erosion and distribute runoff across the area.

Pervious Pavements

► CRITERIA

Impervious roadways, driveways, and parking lots account for much of the hydrologic impact of land development. In contrast, pervious pavements allow rainfall to collect in a gravel or sand base course and infiltrate into native soil.

Pervious pavements are designed to transmit rainfall through the surface to storage in a base course. For example, a 4-inch-deep base course provides approximately 1.6 inches of storage. Runoff stored in the base course infiltrates to native soils over time. Except in the case of solid pavers, the surface course provides additional storage.

Areas with the following pervious pavements may be regarded as "self-treating" and require no additional treatment or flow control if they drain off-site (not to an IMP).

- Pervious concrete
- Porous asphalt
- Crushed aggregate (gravel)
- Open pavers with grass or plantings
- Open pavers with gravel
- Artificial turf

Areas with these pervious pavements can also be **self-retaining areas** and may receive runoff from impervious areas if they are bermed or depressed to retain the first one inch of rainfall, including runoff from the tributary impervious area.

Solid unit pavers—such as bricks, stone blocks, or precast concrete shapes—are considered to reduce runoff compared to impervious pavement, when the unit pavers are set in sand or gravel with d" gaps between the pavers. Joints must be filled with an open-graded aggregate free of fines.

Best Uses

- Areas with permeable native soils
- Low-traffic areas
- Where aesthetic quality can justify higher cost

Advantages

- No maintenance verification requirement
- Variety of surface treatments can complement landscape design

Limitations

- Initial cost
- Placement requires specially trained crews
- Geotechnical concerns, especially in clay soils
- Concerns about pavement strength and surface integrity
- Some municipalities do not allow in public right of way

When draining pervious pavements to an IMP, use the runoff factors in Table 4-2.

► DETAILS

Permeable pavements can be used in clay soils; however, special design considerations, including an increased depth of base course, typically apply and will increase the cost of this option. Geotechnical fabric between the base course and underlying clay soil is recommended.

Pavement strength and durability typically determines the required depth of base course. If underdrains are used, the outlet elevation must be a minimum of 3 inches above the bottom elevation of the base course.

Pervious concrete and porous asphalt must be installed by crews with special training and tools. Industry associations maintain lists of qualified contractors.

Parking lots with crushed aggregate or unit pavers may require signs or bollards to organize parking.

► DESIGN CHECKLIST FOR PERVIOUS PAVEMENTS

- ❒ No erodible areas drain on to pavement.
- ❒ Subgrade is uniform. Compaction is minimal.
- ❒ Reservoir base course is of open-graded crushed stone. Base depth is adequate to retain rainfall and support design loads.
- ❒ If a subdrain is provided, outlet elevation is a minimum of 3 inches above bottom of base course.
- ❒ Subgrade is uniform and slopes are not so steep that subgrade is prone to erosion.
- ❒ Rigid edge is provided to retain granular pavements and unit pavers.
- ❒ Solid unit pavers are installed with open gaps filled with open-graded aggregate free of fines.
- ❒ Permeable pavements are installed by industry-certified professionals according to vendor's recommendations.
- ❒ Selection and location of pavements incorporates Americans with Disabilities Act requirements, site aesthetics, and uses.

Bioretention Facilities

Bioretention facility configured for treatment-only requirements. Bioretention facilities can rectangular, linear, or nearly any shape.

Bioretention detains runoff in a surface reservoir, filters it through plant roots and a biologically active soil mix, and then infiltrates it into the ground. Where native soils are less permeable, an underdrain conveys treated runoff to storm drain or surface drainage.

Bioretention facilities can be configured in nearly any shape. When configured as linear **swales**, they can convey high flows while percolating and treating lower flows.

Bioretention facilities can be configured as in-ground or above-ground planter boxes, with the bottom open to allow infiltration to native soils underneath. If infiltration cannot be allowed, use the sizing factors and criteria for the Flow-Through Planter.

► CRITERIA

For development projects subject only to runoff treatment requirements, the following criteria apply:

Parameter	Criterion
Soil mix depth	18 inches minimum
Soil mix minimum percolation rate	5 inches per hour minimum sustained (10 inches per hour initial rate recommended)
Soil mix surface area	0.04 times tributary impervious area (or equivalent)

Best Uses

- Commercial areas
- Residential subdivisions
- Industrial developments
- Roadways
- Parking lots
- Fit in setbacks, medians, and other landscaped areas

Advantages

- Can be any shape
- Low maintenance
- Can be landscaped

Limitations

- Require 4% of tributary impervious square footage
- Typically requires 3-4 feet of head
- Irrigation typically required

Parameter	Criterion
Surface reservoir depth	6 inches minimum; may be sloped to 4 inches where adjoining walkways.
Underdrain	Required in Group "C" and "D" soils. Perforated pipe embedded in gravel ("Class 2 permeable" recommended), connected to storm drain or other accepted discharge point.

► **DETAILS**

Plan. On the surface, a bioretention facility should be one level, shallow basin—or a series of basins. As runoff enters each basin, it should flood and fill throughout before runoff overflows to the outlet or to the next downstream basin. This will help prevent movement of surface mulch and soil mix.

Use check dams for linear bioretention facilities (swales) on a slope.

In a linear swale, check dams should be placed so that the lip of each dam is at least as high as the toe of the next upstream dam. A similar principle applies to bioretention facilities built as terraced roadway shoulders.

Inlets. Paved areas draining to the facility should be graded, and inlets should be placed, so that runoff remains as sheet flow or as dispersed as possible. Curb cuts should be wide (12" is recommended) to avoid clogging with leaves or debris. Allow for a minimum reveal of 4"-6" between the inlet and soil mix elevations to ensure turf or mulch buildup does not block the inlet. In addition, place an apron of stone or concrete, a foot square or larger, inside each inlet to prevent vegetation from growing up and blocking the inlet.

Recommended design details for bioretention facility inlets (see text).

Where runoff is collected in pipes or gutters and conveyed to the facility, protect the landscaping from high-velocity flows with energy-dissipating rocks. In larger installations, provide cobble-lined channels to better distribute flows throughout the facility.

Upturned pipe outlets can be used to dissipate energy when runoff is piped from roofs and upgradient paved areas.

Soil mix. The required soil mix is similar to a loamy sand. It must maintain a minimum percolation rate of 5" per hour throughout the life of the facility, and it must be suitable for maintaining plant life. Typically, on-site soils will not be suitable due to clay content.

Storage and drainage layer. "Class 2 permeable," Caltrans specification 68-1.025, is recommended. Open-graded crushed rock, washed, may be used, but requires 4"-6" washed pea gravel be substituted at the top of the crushed rock gravel layers. **Do not use filter fabric** to separate the soil mix from the gravel drainage layer or the gravel drainage layer from the native soil.

Underdrains. No underdrain is required where native soils beneath the facility are Hydrologic Soil Group A or B. For treatment-only facilities where native soils are Group C or D, a

perforated pipe must be bedded in the gravel layer and must terminate at a storm drain or other approved discharge point.

Outlets. In treatment-only facilities, outlets must be set high enough to ensure the surface reservoir fills and the entire surface area of soil mix is flooded before the outlet elevation is reached. In swales, this can be achieved with appropriately placed check dams.

The outlet should be designed to exclude floating mulch and debris.

Vaults, utility boxes, and light standards. It is best to locate utilities outside the bioretention facility—in adjacent walkways or in a separate area set aside for this purpose. If utility structures are to be placed within the facility, the locations should be anticipated and adjustments made to ensure the minimum bioretention surface area and volumes are achieved. Leaving the final locations to each individual utility can produce a haphazard, unaesthetic appearance and make the bioretention facility more difficult to maintain.

Emergency overflow. The site grading plan should anticipate extreme events and potential clogging of the overflow and route emergency overflows safely.

Trees. Bioretention areas can accommodate small or large trees. There is no need to subtract the area taken up by roots from the effective area of the facility. Extensive tree roots maintain soil permeability and help retain runoff. Normal maintenance of a bioretention facility should not affect tree lifespan.

The bioretention facility can be integrated with a tree pit of the required depth and filled with structural soil. If a root barrier is used, it can be located to allow tree roots to spread throughout the bioretention facility while protecting adjacent pavement. Locations and planting elevations should be selected to avoid blocking the facility's inlets and outlets.

Bioretention facility configured as a tree well.
The root barrier is optional.

► APPLICATIONS

Multi-purpose landscaped areas. Bioretention facilities are easily adapted to serve multiple purposes. The loamy sand soil mix will support turf or a plant palette suitable to the location and a well-drained soil.

Example landscape treatments:

- Lawn with sloped transition to adjacent landscaping.
- Swale in setback area
- Swale in parking median
- Lawn with hardscaped edge treatment
- Decorative garden with formal or informal plantings
- Traffic island with low-maintenance landscaping
- Raised planter with seating
- Bioretention on a terraced slope

Bioretention facility configured as a recessed decorative lawn with hardscaped edge.

Bioretention facility configured and planted as a lawn/ play area.

Residential subdivisions. Some subdivisions are designed to drain roofs and driveways to the streets (in the conventional manner) and then drain the streets to bioretention areas, with one bioretention area for each 1 to 6 lots, depending on subdivision layout and topography.

If allowed by the local jurisdiction, bioretention areas can be placed on a separate, dedicated parcel with joint ownership.

Bioretention facility receiving drainage
from individual lots and the street in
a residential subdivision.

Sloped sites. Bioretention facilities must be constructed as a basin, or series of basins, with the circumference of each basin set level. It may be necessary to add curbs or low retaining walls.

Bioretention facility configured as a parking median.
Note use of bollards in place of curbs, eliminating the need for curb cuts.

Design Checklist for Bioretention

- ❒ Volume or depth of surface reservoir meets or exceeds minimum.
- ❒ 18" depth "loamy sand" soil mix with minimum long-term percolation rate of 5"/hour.
- ❒ Area of soil mix meets or exceeds minimum.
- ❒ Perforated pipe underdrain bedded in "Class 2 perm" with connection and sufficient head to storm drain or discharge point (except in "A" or "B" soils).
- ❒ No filter fabric.
- ❒ Underdrain has a clean-out port consisting of a vertical, rigid, non-perforated PVC pipe, with a minimum diameter of 6 inches and a watertight cap.
- ❒ Location and footprint of facility are shown on site plan and landscaping plan.
- ❒ Bioretention area is designed as a basin (level edges) or a series of basins, and grading plan is consistent with these elevations. If facility is designed as a swale, check dams are set so the lip of each dam is at least as high as the toe of the next upstream dam.
- ❒ Inlets are 12" wide, have 4"-6" reveal and an apron or other provision to prevent blockage when vegetation grows in, and energy dissipation as needed.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.
- ❒ Plantings are suitable to the climate and a well-drained soil.
- ❒ Irrigation system with connection to water supply.
- ❒ Vaults, utility boxes, and light standards are located outside the minimum soil mix surface area.
- ❒ When excavating, avoid smearing of the soils on bottom and side slopes. Minimize compaction of native soils and "rip" soils if clayey and/or compacted. Protect the area from construction site runoff.

Bioretention Facility Outlet Detail - A

Flow-through Planter

Portland 2004 Stormwater Manual

Best Uses

- Management of roof runoff
- Next to buildings
- Dense urban areas
- Where infiltration is not desired

Advantages

- Can be used next to structures
- Versatile
- Can be any shape
- Low maintenance

Limitations

- Can be used for flow-control only on sites with "C" and "D" soils
- Requires underdrain
- Requires 3-4 feet of head

Flow-through planters treat and detain runoff without allowing seepage into the underlying soil. They can be used next to buildings and on slopes where stability might be affected by adding soil moisture.

Flow-through planters typically receive runoff via downspouts leading from the roofs of adjacent buildings. However, they can also be set in-ground and receive sheet flow from adjacent paved areas.

Pollutants are removed as runoff passes through the soil layer and is collected in an underlying layer of gravel or drain rock. A perforated-pipe underdrain is typically connected to a storm drain or other discharge point. An overflow inlet conveys flows which exceed the capacity of the planter.

► CRITERIA

Treatment only. For development projects subject only to runoff treatment requirements, the following criteria apply:

Parameter	Criterion
Soil mix depth	18 inches minimum
Soil mix minimum percolation rate	5 inches per hour minimum sustained (10 inches per hour initial rate recommended)

Parameter	Criterion
Soil mix surface area	0.04 times tributary impervious area (or equivalent)
Surface reservoir depth	6" minimum; may be sloped to 4" where adjoining walkways.
Underdrain	Typically used. Perforated pipe embedded in gravel ("Class 2 permeable" recommended), connected to storm drain or other accepted discharge point.

► DETAILS

Configuration. The planter must be level. To avoid standing water in the subsurface layer, set the perforated pipe underdrain and orifice as nearly flush with the planter bottom as possible.

Inlets. Protect plantings from high-velocity flows by adding rocks or other energy-dissipating structures at downspouts and other inlets.

Soil mix. The required soil mix is similar to a loamy sand. It must maintain a minimum percolation rate of 5" per hour throughout the life of the facility, and it must be suitable for maintaining plant life. Typically, on-site soils will not be suitable due to clay content.

Gravel storage and drainage layer. "Class 2 permeable," Caltrans specification 68-1.025, is recommended. Open-graded crushed rock, washed, may be used, but requires 4"-6" of washed pea gravel be substituted at the top of the crushed rock layer. **Do not use filter fabric** to separate the soil mix from the gravel drainage layer.

Emergency overflow. The planter design and installation should anticipate extreme events and potential clogging of the overflow and route emergency overflows safely.

► APPLICATIONS

Adjacent to buildings. Flow-through planters may be located adjacent to buildings, where the planter vegetation can soften the visual effect of the building wall. A setback with a raised planter box may be appropriate even in some neo-traditional pedestrian-oriented urban streetscapes.

At plaza level. Flow-through planters have been successfully incorporated into podium-style developments, with the planters placed on the plaza level and receiving runoff from the tower roofs above. Runoff from the plaza level is typically managed separately by additional flow-through planters or bioretention facilities located at street level.

Steep slopes. Flow-through planters provide a means to detain and treat runoff on slopes that cannot accept infiltration from a bioretention facility. The planter can be built into the slope similar to a retaining wall. The design should consider the need to access the planter for

periodic maintenance. Flows from the planter underdrain and overflow must be directed in accordance with local requirements. It is sometimes possible to disperse these flows to the downgradient hillside.

Flow-through planter on the plaza level of a podium-style development.

Flow-through planter built into a hillside. Flows from the underdrain and overflow must be directed in accordance with local requirements.

Design Checklist for Flow-through Planter

- ❒ Reservoir depth is 4-6" minimum.
- ❒ 18" depth "loamy sand" soil mix with minimum long-term infiltration rate of 5"/hour.
- ❒ Area of soil mix meets or exceeds minimum.
- ❒ "Class 2 perm" drainage layer.
- ❒ No filter fabric.
- ❒ Perforated pipe underdrain with outlet located flush or nearly flush with planter bottom. Connection with sufficient head to storm drain or discharge point.
- ❒ Underdrain has a clean-out port consisting of a vertical, rigid, non-perforated PVC pipe, with a minimum diameter of 6 inches and a watertight cap.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Location and footprint of facility are shown on site plan and landscaping plan.
- ❒ Planter is set level.
- ❒ Emergency spillage will be safely conveyed overland.
- ❒ Plantings are suitable to the climate and a well-drained soil.
- ❒ Irrigation system with connection to water supply.

NOTES:

1. FLOW-THROUGH PLANTER SHALL BE SIZED TO MEET CCCWP CRITERIA FOR TREATMENT AND/OR FLOW CONTROL.
2. MINIMUM SURFACE AREA OF PLANTER IS 4% OF TRIBUTARY IMPERVIOUS AREA FOR TREATMENT ONLY DESIGN. FOR FLOW CONTROL AND TREATMENT, REFER TO CCCWP SIZING TOOL CRITERIA.
3. SHAPE OF PLANTER CAN VARY TO MEET PROJECT DESIGN REQUIREMENTS AND LOCATION.
4. CLASS 2 PERMEABLE MATERIAL
5. DOWNSPOUTS/INLET PIPES REQUIRE ENERGY DISSIPATION.
6. USE COUNTY APPROVED ADDITIVE MIXTURE FOR WATERPROOFING CONCRETE.
7. PLANTINGS: SEE CCCWP RECOMMENDED PLANT LIST AND GUIDELINES.
8. PLANTER DESIGN MAY REQUIRE STRUCTURAL ENGINEERING DESIGN.
9. AREA = W x L (ABOVE). EXCLUDES AREA OF VAULT

Flow-Through Planter Outlet Detail

Dry Wells and Infiltration Basins

The typical dry well is a prefabricated structure, such as an open-bottomed vault or box, placed in an excavation or boring. The vault may be empty, which provides maximum space efficiency, or may be filled in rock.

An infiltration basin has the same functional components—a volume to store runoff and sufficient area to infiltrate that volume into the native soil—but is open rather than covered.

Best Uses

- Alternative to bioretention in areas with permeable soils

Advantages

- Compact footprint
- Can be installed in paved areas

Limitations

- Can be used only on sites with "A" and "B" soils
- Requires minimum of 10' from bottom of facility to seasonal high groundwater
- Not suitable for drainage from some industrial areas or arterial roads
- Must be maintained to prevent clogging.

► CRITERIA

Dry wells and infiltration basins must be designed with the minimum volume calculated by Equation 4-8 using a unit volume based on the County of San Diego's 85th Percentile Isopluvial Map.

Consult with the local jurisdiction engineer regarding the need to verify soil permeability and other site conditions are suitable for dry wells and infiltration basins. Some proposed criteria are on Page 5-12 of Caltrans' 2004 *BMP Retrofit Pilot Study Final Report* (CTSW-RT-01-050).

The infiltration rate and infiltrative area must be sufficient to drain a full facility within 72 hours.

► DETAILS

Dry wells should be sited to allow for the potential future need for removal and replacement.

In locations where native soils are coarser than a medium sand, the area directly beneath the facility should be over-excavated by two feet and backfilled with sand as a groundwater protection measure.

Design Checklist for Dry Well

- ❒ Volume and infiltrative area meet or exceed minimum.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.
- ❒ Depth from bottom of the facility to seasonally high groundwater elevation is ≥10'.
- ❒ Areas tributary to the facility do not include automotive repair shops; car washes; fleet storage areas (Bus, truck, etc.); nurseries, or other uses that may present an exceptional threat to groundwater quality.
- ❒ Underlying soils are in Hydrologic Soil Group A or B. Infiltration rate is sufficient to ensure a full basin will drain completely within 72 hours. Soil infiltration rate has been confirmed.
- ❒ Set back from structures 10' or as recommended by structural or geotechnical engineer.

Cistern with Bioretention Facility

A cistern in series with a bioretention facility can meet treatment requirements where space is limited. In this configuration, the cistern is equipped with a flow-control orifice and the bioretention facility is sized to treat a trickle outflow from the cistern.

Best Uses

- In series with a bioretention facility to meet treatment requirement in limited space.
- Management of roof runoff
- Dense urban areas

Advantages

- Storage volume can be in any configuration

Limitations

- Somewhat complex to design, build, and operate
- Requires head for both cistern and bioretention facility

► CRITERIA

Cistern. The cistern must detain the volume calculated by Equation 4-8 and must include an orifice or other device designed for a 24-hour drawdown time.

Bioretention facility. See the design sheet for bioretention facilities. The area of the bioretention facility must be sized to treat the maximum discharge flow, assuming a percolation rate of 5" per hour through the engineered soil.

Use with sand filter. A cistern in series with a sand filter can meet treatment requirements. See the discussion of treatment facility selection in Chapter 2 and the design guidance for sand filters in Chapter 4.

► DETAILS

Flow-control orifice. The cistern must be equipped with an orifice plate or other device to limit flow to the bioretention area.

Preventing mosquito harborage. Cisterns should be designed to drain completely, leaving no standing water. Drains should be located flush with the bottom of the cistern. Alternatively—or in addition—all entry and exit points, should be provided with traps or sealed or screened to prevent mosquito entry. Note mosquitoes can enter through openings 1/16" or larger and will fly for many feet through pipes as small as ¼".

Exclude debris. Provide leaf guards and/or screens to prevent debris from accumulating in the cistern.

Ensure access for maintenance. Design the cistern to allow for cleanout. Avoid creating the need for maintenance workers to enter a confined space. Ensure the outlet orifice can be easily accessed for cleaning and maintenance.

► APPLICATIONS

Shallow ponding on a flat roof. The "cistern" storage volume can be designed in any configuration, including simply storing rainfall on the roof where it falls and draining it away slowly. See the County of San Diego's 85th percentile isopluvial diagrams for required average depths.

Cistern attached to a building and draining to a planter. This arrangement allows a planter box to be constructed with a smaller area.

Vault with pumped discharge to bioretention facility. In this arrangement, runoff from a parking lot and/or building roofs can be captured and detained underground and then pumped to a bioretention facility on the surface. Alternatively, treatment can be accomplished with a sand filter. See the discussion of selection of storm water treatment facilities in Chapter 2.

Water harvesting or gray water reuse. It may be possible to create a site-specific design that uses cisterns to achieve storm water flow control, storm water treatment, and rainwater reuse for irrigation or indoor uses (**water harvesting**). Facilities must meet criteria for capturing and treating the volume specified by Equation 4-8. This volume must be allowed to empty within 24 hours so runoff from additional storms, which may follow, is also captured and treated. Additional volume may be required if the system also stores runoff for longer periods for reuse. Indoor uses of non-potable water may be restricted or prohibited. Check with municipal staff.

Design Checklist for Cistern

- ❒ Volume meets or exceeds minimum.
- ❒ Outlet with orifice or other flow-control device restricts flow and is designed to provide a 24-hour drawdown time.
- ❒ Outlet is piped to a bioretention facility designed to treat the maximum discharge from the cistern orifice.
- ❒ Cistern is designed to drain completely and/or sealed to prevent mosquito harborage.
- ❒ Design provides for exclusion of debris and accessibility for maintenance.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.

NOTES:
1. DESIGNER SHALL ACCOUNT FOR AND ACCOMODATE FOR POSSIBLE OVERFLOW.
2. OVERFLOW OUTLET CAPACITY SHALL EQUAL OR EXCEED POTENTIAL RUNOFF VOLUME AND RATE.
3. CISTERN PROVIDES FLOW CONTROL ONLY. USE IN COMBINATION WITH TREATMENT IMP.
4. PROVIDE ACCESS FOR CLEAN OUT OF OUTLET ORIFICE. SEE FLOW-THROUGH PLANTER OUTLET DETAIL.
5. PREVENT MOSQUITO BREEDING BY SEALING OR SCREENING ALL OPENINGS TO THE WATER SURFACE AND/OR ENSURE COMPLETE DRAINAGE.

How to use this worksheet (also see instructions in Step 4 of Chapter 3 of this BMP Manual):

1. Review Column 1 and identify which of these potential sources of storm water pollutants apply to your site. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your Project-Specific SUSMP drawings.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in a table in your Project-Specific SUSMP. Use the format shown in Table 3-1 in Step 4 of Chapter 3 of this BMP Manual. Describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternatives.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	**2** **Permanent Controls—Show on SUSMP Drawings**	**3** **Permanent Controls—List in SUSMP Table and Narrative**	**4** **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **A.** On-site storm drain inlets	❑ Locations of inlets.	❑ Mark all inlets with the words "No Dumping! Flows to Bay" or similar.	❑ Maintain and periodically repaint or replace inlet markings. ❑ Provide storm water pollution prevention information to new site owners, lessees, or operators. ❑ See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com ❑ Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on SUSMP Drawings	3 Permanent Controls—List in SUSMP Table and Narrative	4 Operational BMPs—Include in SUSMP Table and Narrative
❑ **B.** Interior floor drains and elevator shaft sump pumps		❑ State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.	❑ Inspect and maintain drains to prevent blockages and overflow.
❑ **C.** Interior parking garages		❑ State that parking garage floor drains will be plumbed to the sanitary sewer.	❑ Inspect and maintain drains to prevent blockages and overflow.
❑ **D1.** Need for future indoor & structural pest control		❑ Note building design features that discourage entry of pests.	❑ Provide Integrated Pest Management information to owners, lessees, and operators.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	**2** **Permanent Controls—Show on SUSMP Drawings**	**3** **Permanent Controls—List in SUSMP Table and Narrative**	**4** **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **D2.** Landscape/ Outdoor Pesticide Use	❑ Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained. ❑ Show self-retaining landscape areas, if any. ❑ Show storm water treatment facilities.	State that final landscape plans will accomplish all of the following. ❑ Preserve existing native trees, shrubs, and ground cover to the maximum extent possible. ❑ Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to storm water pollution. ❑ Where landscaped areas are used to retain or detain storm water, specify plants that are tolerant of saturated soil conditions. ❑ Consider using pest-resistant plants, especially adjacent to hardscape. ❑ To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	❑ Maintain landscaping using minimum or no pesticides. ❑ See applicable operational BMPs in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com ❑ Provide IPM information to new owners, lessees, and operators.
❑ **E.** Pools, spas, ponds, decorative fountains, and other water features.	❑ Show location of water feature, nearest landscaped areas, and nearest storm drains.	❑ Describe how water removed from the water feature would drain to nearby landscaping or be dechlorinated before discharge in accordance with City requirements.	❑ See applicable operational BMPs in Fact Sheet SC-72, "Fountain and Pool Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	**2** **Permanent Controls—Show on SUSMP Drawings**	**3** **Permanent Controls—List in SUSMP Table and Narrative**	**4** **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **F.** Food service	❑ For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment. ❑ On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.	❑ Describe the location and features of the designated cleaning area. ❑ Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.	❑
❑ **G.** Refuse areas	❑ Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas. ❑ If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area. ❑ Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.	❑ State how site refuse will be handled and provide supporting detail to what is shown on plans. ❑ State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.	❑ State how the following will be implemented: Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on SUSMP Drawings	3 Permanent Controls—List in SUSMP Table and Narrative	4 Operational BMPs—Include in SUSMP Table and Narrative
❑ **H.** Industrial processes.	❑ Show process area.	❑ If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."	❑ See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
❑ **I.** Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)	❑ Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area. ❑ Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. ❑ Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.	❑ Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. Where appropriate, reference documentation of compliance with the requirements of local Hazardous Materials Programs for: ▪ Hazardous Waste Generation ▪ Hazardous Materials Release Response and Inventory ▪ California Accidental Release (CalARP) ▪ Aboveground Storage Tank ▪ Uniform Fire Code Article 80 Section 103(b) & (c) 1991 ▪ Underground Storage Tank	❑ See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls—Show on SUSMP Drawings**	3 **Permanent Controls—List in SUSMP Table and Narrative**	4 **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **J.** Vehicle and Equipment Cleaning	❑ Show on drawings as appropriate: (1) Commercial/industrial facilities having vehicle /equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses. (2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use). (3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer. (4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.	❑ If a car wash area is not provided, describe measures taken to discourage on-site car washing and explain how these will be enforced.	Describe operational measures to implement the following (if applicable): ❑ Wash water from vehicle and equipment washing operations shall not be discharged to the storm drain system. ❑ See Fact Sheet SC-21, "Vehicle and Equipment Cleaning," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls—Show on SUSMP Drawings**	3 **Permanent Controls—List in SUSMP Table and Narrative**	4 **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **K.** Vehicle/Equipment Repair and Maintenance	❑ Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of storm water. ❑ Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas. ❑ Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.	❑ State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area. ❑ State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements. ❑ State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.	In the SUSMP report, note that all of the following restrictions apply to use the site: ❑ No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinse water from parts cleaning into storm drains. ❑ No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately. ❑ No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls—Show on SUSMP Drawings**	3 **Permanent Controls—List in SUSMP Table and Narrative**	4 **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **L.** Fuel Dispensing Areas	❑ Fueling areas[3] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of storm water to the maximum extent practicable. ❑ Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.		❑ The property owner shall dry sweep the fueling area routinely. ❑ See the Business Guide Sheet, "Automotive Service—Service Stations" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

[3] The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls—Show on SUSMP Drawings**	3 **Permanent Controls—List in SUSMP Table and Narrative**	4 **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **M.** Loading Docks	❑ Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct storm water away from the loading area. Water from loading dock areas should be drained to the sanitary sewer where feasible. Direct connections to storm drains from depressed loading docks are prohibited. ❑ Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation. ❑ Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer. ❑		❑ Move loaded and unloaded items indoors as soon as possible. ❑ See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls—Show on SUSMP Drawings**	3 **Permanent Controls—List in SUSMP Table and Narrative**	4 **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **N.** Fire Sprinkler Test Water		❑ Provide a means to drain fire sprinkler test water to the sanitary sewer.	❑ See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
O. Miscellaneous Drain or Wash Water ❑ Boiler drain lines ❑ Condensate drain lines ❑ Rooftop equipment ❑ Drainage sumps ❑ Roofing, gutters, and trim.		❑ Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system. ❑ Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. ❑ Rooftop mounted equipment with potential to produce pollutants shall be roofed and/or have secondary containment. ❑ Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water. ❑ Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.	

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR STORMWATER CONTROL PLAN SHOULD INCLUDE THESE SOURCE CONTROL BMPs		
1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls—Show on SUSMP Drawings**	3 **Permanent Controls—List in SUSMP Table and Narrative**	4 **Operational BMPs—Include in SUSMP Table and Narrative**
❑ **P.** Plazas, sidewalks, and parking lots.			❑ Plazas, sidewalks, and parking lots shall be swept regularly to prevent the accumulation of litter and debris. Debris from pressure washing shall be collected to prevent entry into the storm drain system. Wash water containing any cleaning agent or degreaser shall be collected and discharged to the sanitary sewer and not discharged to a storm drain.

STORM WATER POLLUTION PREVENTION PLAN CONSTRUCTION STORM WATER MANAGEMENT PLAN GUIDELINES

At a minimum, the Storm Water Pollution Prevention Plan (SWPPP) or Construction Storm Water Management Plan (CSWMP) whichever is required, must cover the areas listed below.

If a project disturbs 1-acre or more, the applicant must provide a Storm Water Pollution Prevention Plan (SWPPP), which identifies all construction BMP requirements required by Chapter Six, in accordance with the State General Permit for Storm Water Discharges Associated with Construction Activity (State General Construction Permit). The SWPPP must be kept on site and made available upon request of a representative of the City. Additionally, the State General Construction Permit has a requirement for a sampling and monitoring program to be implemented. Projects that are also required to obtain a general construction National Pollutant Discharge Elimination System (NPDES) Permit are encouraged to visit the State Water Resource Control Board's website for permit application instructions, NOI and NOT forms and guidance in preparing a Storm Water Pollution Prevention Plan (go to: http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml). A template to assist with the preparation of a SWPPP is also provided at the following website: http://www.cabmphandbooks.com/Construction.asp.

For projects that disturb less than 1-acre and are determined to have a potential to impact water quality during construction, the applicant must provide a Construction Storm Water Management Plan (CSWMP), which identifies all construction BMP requirements required by Chapter Six, with the project submittal. The CSWMP shall depict the BMPs to be implemented during construction to reduce/eliminate discharges of pollutants to the storm drain conveyance system. The CSWMP shall include but not be limited to erosion and sediment control BMPs, good housekeeping measures and site and materials management.

Planning and Organization

- Identify the pollution prevention team members who will maintain and implement the SWPPP/CSWMP.
- If applicable, incorporate or reference the appropriate elements of other regulatory requirements.

Site Map

Features displayed on the map must include:

- An outline of the entire property
- Drainage areas on the property and direction of flow
- Areas of soil erosion
- Nearby water bodies and municipal storm drain inlets
- Location of storm water conveyance systems (ditches, inlets, storm drains, etc.)
- Location of existing storm water controls (oil/ water separators, sumps, etc.)
- Location of "impervious" areas- paved areas, buildings, covered areas
- Locations where materials are directly exposed to storm water
- Locations where toxic or hazardous materials have spilled in the past
- Location of building and activity areas (e.g. fueling islands, garages, waste container area, wash racks, hazardous material storage areas, etc.)

List of Significant Materials

List materials stored and handled at the site. Include the location and typical quantities.

Description of Potential Pollutant Sources

- Provide a narrative description of the site's activities and list the potential pollutant sources and the potential pollutants that could be discharged in storm water discharges from each activity.
- List non-storm water discharges including the source, quantity, frequency, and characteristics of the discharges and drainage area.

Assessment of Potential Sources

Describe which activities are likely to be sources of pollution in storm water and which pollutants are likely to be present in storm water discharges.

Best Management Practices

Describe the BMPs that will be implemented at the site for each potential pollutant and its source.

APPENDIX E — EXAMPLE CONSTRUCTION BEST MANAGEMENT PRACTICES

A. Erosion Control

Physical stabilization BMPs, vegetation stabilization BMPs, or both, will be required to prevent erosion and sediment runoff from exposed graded areas. BMPs for physical and vegetation stabilization include:

1) Physical Stabilization

a) Geotextiles
b) Mats
c) Fiber blankets
d) Hydraulic mulch, Bonded Fiber Matrix
e) Sprayed on binders
f) Mulch on flat areas
g) Other material approved by the City Engineer for use in specific circumstances

If physical stabilization is selected, materials must be appropriate to the circumstances in which they are deployed, and sufficient material must be deployed.

2) Vegetation Stabilization

h) Preservation of existing vegetation
i) Established interim vegetation (via Hydroseed, seeded mats, etc.)
j) Established permanent landscaping

If vegetation stabilization is selected, the stabilizing vegetation must be installed, irrigated and established (uniform vegetative coverage with 70% coverage established) prior to October 1. In the event stabilizing vegetation has not been established by October 1, other forms of physical stabilization must be employed to prevent erosion until the stabilizing vegetation is established.

B. Sediment Control

1) Perimeter protection. Protect the perimeter of the site or exposed area from sediment ingress/discharge in sheet flows using:

k) Silt fencing
l) Gravel bag barriers
m) Fiber rolls

2) Resource protection. Protect Environmentally Sensitive Areas and watercourses from sediment in sheet flows by using**:**

a) Silt fencing
b) Gravel bag barriers
c) Fiber rolls

3) Sediment Capture. Capture sediments in channeled storm water by using:

a) Storm-drain inlet protection measures
b) De-silting basins (Designed in accordance with an industry standard such as Caltrans, California Storm water BMP manual etc. If the project is 5 acres or greater the desilting basin(s) must be designed in accordance with the State General Construction Permit, Order DWQ 99-08.)

4) Velocity Reduction. Reduce the velocity of storm water by using:

a) Outlet protection (energy dissipater)
b) Equalization basins
c) Check dams

5) Off-site Sediment Tracking. Prevent sediment from being tracked off-site by using:

a) Stabilized construction entrances/exits
b) Construction road stabilization
c) Tracking control (i.e., corrugated steel panels, wheel washes)
d) Dust control

C. Materials Management

6) Prevent the contamination of storm water by wastes through proper management of the following types of wastes:

a) Solid
b) Sanitary
c) Concrete
d) Hazardous
e) Equipment – related wastes
f) Stock piles (protection from wind and rain)

7) Prevent the contamination of storm water by construction materials by:

a) Covering and/or providing secondary containment of storage areas
b) Taking adequate precautions when handling materials.

CITY OF LA MESA
JEWEL of the HILLS

Standard Post-Construction BMP Plan

Standard Permanent Storm Water BMPs

Project Name: _____ Project Address: _____
Person completing form: _____Telephone number: (____)____-_____
Signature: _____ Date: ____/_____/_____

The following planning, design, and post-construction BMPs are required for all land development and redevelopment projects in the City of La Mesa. All BMPs listed below shall be selected and implemented where applicable and feasible.

List pollutants of concern: _____

Each selected BMP must be shown on the applicable plan(s) for the project.

Required BMPs	Check if Selected	If the BMP is not selected, explain why below (attach additional pages if necessary).
1. BMPs for permanent control of erosion from slopes.		
a. Convey runoff safely from the tops of slopes		
b. Vegetate slopes with native or drought tolerant vegetation		
c. Other (describe):		
2. BMPs to control flows, velocity and erosion. Flow control and downstream erosion protection measures shall prevent any significant increase in downstream erosion as a result of the new development, but shall not prevent flows needed to sustain downstream riparian habitats or wetlands.		
a. Minimize disturbances to Natural Drainages		
b. Stabilize permanent channel crossings		
c. Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels		
d. Provide buffer zones for natural water bodies		
e. Other (describe):		
3. Low Impact Development (LID) and site design BMPs.		
a. Conserve natural areas, soils, and vegetation where feasible		
b. Construct walkways, trails, patios. overflow parking lots, alleys, and other low-traffic areas with permeable surfaces		
c. Construct impervious surfaces to minimum widths necessary		
d. Use natural drainage systems		
e. Minimize soil compaction in areas that will remain pervious after development		

Required BMPs	Check if Selected	If the BMP is not selected, explain why below (attach additional pages if necessary).
f. Drain runoff from impervious roofs into adjacent landscaping		
g. Drain runoff from impervious sidewalks and/or walkways into adjacent landscaping		
h. Drain runoff from impervious parking lots into adjacent landscaping		
i. Drain runoff from other impervious areas into adjacent landscaping		
j. Other (describe):		
4. Storm drain stenciling and signage		
5. BMPs for outdoor materials storage and exposed work areas, to reduce pollution introduction.		
a. Provide overhead coverage for outdoor storage or work areas		
b. Divert storm water run-on away from outdoor storage or work areas		
6. BMPs for trash storage areas, to reduce pollution introduction. Store trash containers on an impervious surface in a screened or walled area designed to prevent run-on from flowing through the trash area, and provide a roof or awning to prevent direct contact with rain.		
7. BMPs for irrigation systems and landscape design, to minimize the runoff of excess irrigation water into the storm water conveyance system. (Limited exclusion: detached residential developments)		
a. Use rain shutoff devices		
b. Design irrigation system to each landscape area's water requirements		
c. Use flow reducers		
d. Other (describe):		
8. Structural BMPs[1] to treat and/or to infiltrate storm water where a development project would otherwise cause or contribute to a violation of water quality standards in receiving waters.		

[1] Off-site structural BMPs may be used for treatment and infiltration necessary to meet water quality standards only if the conveyance of run-off to those facilities prior to treatment will not cause or contribute to an exceedance of water quality standards or deprive wetlands or riparian habitats of needed flows. Offsite facilities shall not substitute for the use of any on-site source control BMPs required by the manual. When an infiltration BMP is used, related BMPs set out in the manual (including but not limited to siting constraints), to protect present uses of ground water and future uses of that ground water as currently designated in the applicable RWQCB Basin Plan. (Discharges to infiltration BMPs may also require an RWQCB permit and additional state requirements may also be applicable to these discharges.)

City Use Only

If Structural BMPs are proposed, a maintenance agreement is required. Has a maintenance agreement for this project been submitted? □ Yes □ No □ NA

Approved □ Yes □ No

UPDATED APPENDIX 'A' STORM WATER REQUIREMENTS CHECKLIST

APPENDIX 'A' – STORM WATER REQUIREMENTS AND PROJECT DATA SHEET

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91942
Phone: 619.667.1166 • Fax: 619.667.1380

PROJECT DATA:

Owner's Name & Phone No: _____

Address: _____ **Permit No:** _____

Project: _____ **Date Applied:** _____

PROJECT SITE DATA:

1. Area of the lot/parcel = _____ sf
2. Existing impervious area (roof/building foot print) = _____ sf
3. Existing impervious area (driveway, parking, walkway, hardscape etc.) = _____ sf
4. Impervious area after development (roof/building foot print) = _____ sf
5. Impervious area after development (driveway, parking, walkway, hardscape etc.) = _____ sf
6. Total area to be disturbed = _____ sf
7. Storm water runoff based on Hydrology Study:

   Existing runoff = _____ cfs, Post construction runoff = _____ cfs
8. Identify if the runoff from the site discharged to the public street or storm drain or open channel, detention or retention basin: _____
9. Water Shed (Check One): San Diego River _____ San Diego Bay _____

---

a. Total disturbed area includes impervious area, construction material storage, staging area, graded slopes, new slopes and landscape areas.

b. The information shall be shown on the site/grading plans.

c. Complete Storm Water Requirements Applicability Checklist.

Notes:

- Items I through 9 shall be shown on the site development plan/grading plan.
- The applicant may be required to submit SWPPP or CSWMP, and PCWQTR or SPCBMPP depending on the "Priority" as stated below.
- A Hydrology report may be required.

STORM WATER REQUIREMENTS APPLICABILITY CHECKLIST

Complete Sections 1 and 2 of the checklist to determine which permanent best management practices (BMPs) and which construction BMPs are required for your project for storm water. *This form must be completed and submitted with your permit application.*

SECTION 1. PERMANENT STORM WATER BMP REQUIREMENTS:

	Yes	No
1. Is the project a new development?		
2. Is the project a significant redevelopment that adds/replaces/creates at least 5,000 ft^2 of impervious surface?*		
* *Refer to the Glossary in La Mesa's Storm Water BMP Manual Part II for an expanded definition of "significant redevelopment"*.		

If both of the above answers are "No", go to Part B. If either of the above answers is "Yes", completer Part A below.

PART A: DETERMINE PRIORITY DEVELOPMENT PROJECT PERMANENT STORM WATER BMP REQUIREMENTS.

DOES THE PROJECT MEET THE DEFINITION OF ONE OR MORE OF THE PRIORITY PROJECT CATEGORIES AS DEFINED IN LA MESA'S BMP MANUAL, PART II? (SEE GLOSSARY)*	Yes	No
1. Residential development resulting in the disturbance of one acre or more of land or comprised of 10 or more attached or detached dwelling units?		
2. Commercial development resulting in the disturbance of one acre or more of land?		
3. Industrial development resulting in the disturbance of one acre or more of land?		
4. Automotive repair shop?		
5. Restaurant greater than 5,000 square feet?		
6. Steep (slope of 25% or more) hillside development that will create greater than 5,000 square feet of impervious surface?		
7. Project located within or directly adjacent to (within 200 feet) or directly discharging to an Environmentally Sensitive Area (ESA) and creates at least 2,500 square feet of impervious area or increases impervious area to 10% or more of its naturally occurring condition?		
8. "Parking lot" greater than or equal to 5,000 square feet or with at least 15 parking spaces, and potentially exposed to urban runoff?		
9. "Streets, roads, highways, and freeways" that would create a new paved surface that is 5,000 square feet or greater?		
10. "Retail Gasoline Outlets" either 5,000 square feet or greater or with a projected "Average Daily Traffic" of 100 or more vehicles per day		
11. All other pollutant generating Development Projects that result in the disturbance of one acre or more of land. Generally all projects which include impervious surfaces and/or introduce landscaping that requires routine use of fertilizers and pesticides are considered pollutant generating above background levels.		
***** *Refer to the Glossary in La Mesa's Storm Water BMP Manual Part II for expanded definitions of the priority development project categories.*		

Limited Exclusion: Trenching and resurfacing work associated with utility projects, such as resurfacing and reconfiguring surface parking lots and existing roadways, new sidewalk construction, pedestrian ramps, bike lanes on existing roads, and routine replacement of damaged pavement, such as pothole repair, are not considered priority development projects. Linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered pollutant generating above background levels if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces. Parking lots, buildings and other structures associated with utility projects are priority development projects if one or more of the criteria in Part A are met.

If all answers to Part A are "No", continue to Part B.

PART B: DETERMINE STANDARD PERMANENT STORM WATER REQUIREMENTS.

DOES THE PROJECT PROPOSE:	**Yes**	**No**
1. New impervious areas such as rooftops, roads, parking lots, driveways, paths and sidewalks?		
2. New pervious landscape areas and irrigation systems?		
3. Permanent structures within 100 feet of any natural water body?		
4. Trash storage areas?		
5. Liquid or solid material loading and unloading areas?		
6. Vehicle or equipment fueling, washing, or maintenance areas?		
7. Require a General NPDES Permit for storm water discharges associated with industrial activities* (Except construction)?		
8. Commercial/ industrial waste handling or storage, excluding typical office or household waste?		
9. Any grading or ground disturbance during construction?		
10. Any new storm drains, or alteration to existing storm drains?		
**To find out if your project is required to obtain an individual General NPDES Permit for Storm Water Discharges Associated with Industrial Activities, visit the State Water Resources Control Board web site at, www.swrcb.ca.gov/stormwtr/industrial.html.*		

If any of the answers provided in Section 1, Part A are "Yes," the project is subject to the "Priority Development Project Permanent Storm Water BMP Requirements". A Post Construction Water Quality Technical Report (PCWQTR) shall be submitted; the requirements of the City's Storm Water BMP Manual Part II must be satisfied. In particular, see Chapters 1 through 5 of the *Storm Water BMP Manual*. If a Priority Development Project is over 50 acres, the project is also subject to the City's Interim Hydromodification Criteria (IHC) as discussed in Chapter 1 of the *Storm Water BMP Manual, Part II*.

If all answers provided in Section 1, Part A are "No," and any answers to Part B are "Yes," the project is only subject to the Standard Permanent Storm Water BMP Requirements and shall submit a Standard Post-Construction BMP Plan (SPCBMPP). In particular, see Appendix G of the City's *Storm Water BMP Manual*, Part II.

If every question in Part A and B is answered "No," the project is exempt from permanent storm water requirements.

Required submittals, Section 1:	PCWQTR	SPCBMPP	Hydromodification

SECTION 2. CONSTRUCTION STORM WATER BMP REQUIREMENTS:

PART C: DETERMINE CONSTRUCTION PHASE STORM WATER REQUIREMENTS.

WOULD THE PROJECT MEET ANY OF THESE CRITERIA DURING CONSTRUCTION?	**Yes**	**No**
1. Does the project proposed grading or soil disturbance over one acre?		
2. Does the project propose any grading or soil disturbance?		
3. Would storm water or urban runoff have the potential to contact any portion of the construction area, including washing and staging areas?		
4. Would the project use any construction materials that could negatively affect water quality if discharged from the site (such as paints, solvents, concrete and stucco)?		

If the answer to question 1 of Part C is answered "Yes," your project is subject to California's statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities and the City's Construction Storm Water BMP Performance Standards. A Storm Water Pollution Prevention Plan (SWPPP) and Notice of Intent to enroll in the General Constructin Permit must be prepared. Parts D and E of this form must also be completed.

If the answer to question 1 is "No," but the answer to any of the remaining questions is "Yes," your project is subject to Construction Storm Water BMP Performance Standards and a Construction Storm Water Management Plan (CSWMP) must be prepared and Part E of this form must be completed.

If every question in Part C is answered "No," you do not need to completed Parts D and E of this form and neither a SWPPP nor CSWMP is required.

PART D: DETERMINE ADVANCE TREATMENT SUBJECTIVITY

WOULD THE PROJECT MEET ANY OF THESE CRITERIA DURING CONSTRUCTION?	**Yes**	**No**
1. Is the project located within, adjacent to, or a portion of the site within 200 feet of waters listed on the CWA Section 303(d) list of Water Quality Limited Segments as impaired for sedimentation or turbidity?		
2. Will the project disturb more than five acres, including all phases of the development?		
If the answers to 1 and 2 are both "yes", please answer questions 3 and 4 below.		
3. Will the project disturbed slopes steeper than 4:1 (horizontal: vertical) and higher than 10 feet that drain toward the 303(d) listed receiving water?		
4. Does the project contain a predominance of soils with USDA-NRCS Erosion factors k_f greater than or equal to 0.4?		

If <u>all</u> answers to part D are "yes", the project is subject to the City's advanced treatment requirements for construction. Advanced treatment requirements are detailed in Chapter 6 of the *Storm Water BMP Manual,* Part II. Note that even if the above criteria do not apply, advanced treatment may be required at the discretion of the City Engineer based.

<u>Required submittals, Section 2</u>:	SWPPP, NOI	CSWMP	Advanced Treatment

PART E: DETERMINE CONSTRUCTION SITE PRIORITY

In accordance with the Municipal Permit, each construction site with construction storm water BMP requirements must be designated with a priority: high, medium or low. This prioritization must be completed with this form, noted on the plans and included in the SWPPP or CSWMP. See the attached flow chart for guidance on determining the construction prioritization. The City Engineer may adjust the priority of the projects both before and during construction.

According to the attached flow chart this project has the following threat to water quality priority:

☐ A) High Priority ☐ B) Medium Priority ☐ C) Low Priority

[Note: The construction priority DOES NOT change construction BMP requirements that apply to projects; all construction BMP requirements must be identified on a case-by-case basis. The construction priority DOES affect the frequency of inspections that will be conducted by the City.]

Completed By: _____

Name, Address & Phone Number

ATTACHMENT 3.1

CONSTRUCTION STORM WATER MANAGEMENT PLAN

CONSTRUCTION STORM WATER MGMT. PLAN

CITY OF LA MESA
JEWEL of the HILLS

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

Project Name: _____ Project Address: _____
Person completing form: _____ Telephone number: (_____)_____-_____
Signature: _____ Date: ____/____/_____

Construction projects less than one acre but answer "Yes" to questions 2, 3, or 4 in Section 2 Part C of the City's Appendix A document are required to prepare a Construction Storm Water Management Plan (CSWMP). Completion of this form along with submittal of a site map with the features described at the end of this form can adequately meet this requirement.

Planning and Organization

Person responsible for implementing items in this CSWMP:_____

Is this project subject to other construction regulations? ~ Yes ~ No
If yes, please list: _____

Significant Materials

List all significant materials that will be stored and handled at the site in the table below.
Include a brief description of the location where the materials will be stored and expected quantities.

Material	Storage Location	Expected Quantity

Potential Pollutant Sources

Provide a brief narrative description of the site's activities and list the potential pollutants that could be transported from the site by storm water in the following table.

Activity	Potential Pollutants Sources and Pollutants Generated by Activity

Best Management Practices

Every construction site within the City's jurisdiction is required to select, install, and maintain construction BMPs to reduce, retain, and manage pollutant discharges to the maximum extent practicable. The BMPs listed below are required by the City where applicable. The corresponding Caltrans fact sheet for the listed BMPs is indicated in parenthesis. These fact sheets are obtainable from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual (2003) and provide additional details on how to implement the BMP.

Please check all BMPs below that are applicable and feasible for the construction that will be implemented and maintained for the length of construction.

- ☐ Preserve natural hydrologic features where feasible
- ☐ Preserve riparian buffers and corridors where feasible
- ☐ Minimize areas that are cleared and graded to only the portion of the site that is necessary for construction
- ☐ Minimize exposure time of disturbed soil areas
- ☐ Minimize grading during the wet season and correlate grading with seasonal dry weather periods to the extent feasible
- ☐ Temporarily stabilize and reseed disturbed soil areas as rapidly as feasible
- ☐ Preserve existing vegetation where feasible (SS-2)
- ☐ Establish permanent re-vegetation or landscaping as early as feasible

Prevent the contamination of storm water from vehicles and equipment through proper management of the following types of activities:

- ☐ Cleaning (NS-8)
- ☐ Fueling (NS-9)

☐ Maintenance (NS-10)

Prevent the contamination of storm water from construction materials through proper management of the following types of activities:

☐ Material Delivery and Storage (WM-1)
☐ Material Use (WM-2)
☐ Stockpile Management1 (WM-3)
☐ Spill Prevention and Control (WM-4)

Prevent the contamination of storm water by wastes through proper management of the following types of wastes:

☐ Solid Waste (WM-5)
☐ Hazardous Waste (WM-6)
☐ Contaminated Soil (WM-7)
☐ Concrete (WM-8)
☐ Sanitary Waste (WM-9)
☐ Liquid (WM-10)

Prevent the contamination of storm water through proper management of the follow activities:

☐ Water Conservation Practices (NS-1)
☐ Dewatering Operations (NS-2)
☐ Paving and Grinding (NS-3)
☐ Potable Water/Irrigation and Flushing (NS-7)

Prevent erosion and sediment runoff from exposed graded areas through physical stabilization and/or vegetation stabilization[2] by implementing <u>one or more</u> of the following BMPs:

☐ Hydraulic Mulch (SS-3)
☐ Hydroseeding (SS-4)
☐ Soil Binders (SS-5)
☐ Straw Mulch (SS-6)
☐Geotextiles, Plastic Covers, and Erosion Control Blankets/Mats (SS-7)
☐ Wood Mulch (SS-8)
☐ Earth Dikes/Drainage Swales (SS-9)

Reduce the velocity of storm water by using <u>one or more</u> of the following:

☐ Outlet Protection/Velocity Dissipation (SS-10)
☐ Slope Drains (SS-11)

Protect the Perimeter of the site or exposed area from sediment discharge using <u>one or more</u> of the following:

☐ Silt Fence (SC-1)
☐ Gravel Bag Berm (SC-6)
☐ Fiber Rolls (SC-5)

Capture sediments in channeled storm water by using <u>one or more</u> of the following:

☐ De-silting Basin3 (SC-2)
☐ Storm Drain Inlet Protection (SC-10)
☐ Sediment Trap (SC-3)
☐ Gravel Bag Barrier (SC-8)

Prevent sediment from being tracked off-site by using <u>one or more</u> of the following:

☐ Stabilized Construction Entrance (TC-1)
☐ Construction Road Stabilization (TC-2)
☐ Entrance/Exit Tire Wash (TC-3)
☐ Street Sweeping (SC-7)

Notes on above BMPs:

1. Stockpiles should be fully covered when materials are not being added or removed.
2. Vegetation stabilization BMPs must be installed, irrigated, and established (uniform vegetative coverage with 70% coverage established) prior to October 1st. In the event stabilizing vegetation has not been established by October 1st, other forms of physical stabilization must be employed to prevent erosion until the stabilizing vegetation is established.
3. De-silting basins must be designed in accordance with industry standards such as Caltrans.

All construction sites must implement the above BMPs in accordance with the City's dry and wet season requirements, which are detailed below.

A. Dry Season Requirements (May 1 through September 30) include but are not limited to:

- All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)
- Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).
- Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not considered to be "exposed" for purposes of this requirement.
- The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).
- Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.
- A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.
- Properly protected, designated storage areas are required for materials and wastes.
- All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.
- Remnant trash and debris shall be removed and/or properly stored/disposed of daily.
- Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.
- Materials for spill control/containment must be stockpiled onsite.
- Non-storm water discharges must be eliminated or controlled to the MEP.

B. Rainy Season Requirements (October 1 through April 30) include but are not limited to:

- All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)
- Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).
- Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not

considered to be "exposed" for purposes of this requirement.

- The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).
- Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.
- A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.
- Properly protected, designated storage areas are required for materials and wastes.
- All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.
- Remnant trash and debris shall be removed and/or properly stored/disposed of daily.
- Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.
- Materials for spill control/containment must be stockpiled onsite.
- Non-storm water discharges must be eliminated or controlled to the MEP.
- Erosion control BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.
- Perimeter protection and sediment containment BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.
- adequate soil stabilization and erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a selected BMP fails, it must be repaired, improved, or replaced with an acceptable alternate as soon as it is safe to do so.
- All vegetation erosion prevention BMPs must be established prior to the rainy season to be considered as a BMP.
- Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. A disturbed area that is not completed but that is not being actively graded must be fully protected from erosion if left for seven or more calendar days. The ability to deploy standby BMP materials is not sufficient for these areas.

Project Site Map

A site map of the project must be attached to this form and contain the following features:

- An outline of the entire property
- Drainage areas on the property and direction of flow
- Areas of soil erosion
- Nearby water bodies and municipal storm drain inlets
- Location of storm water conveyance systems (ditches, inlets, storm drains, etc.)
- Location of existing storm water controls (oil water separators, sumps, etc.)
- Location of impervious areas (paved areas, buildings, covered areas)
- Locations where toxic or hazardous materials spilled in the past
- Location of building and activity areas (e.g. fueling islands, garages, waste container areas, wash racks, hazardous material storage areas, etc.)
- Locations where BMPs proposed in this document will be installed
- Locations where materials will be temporarily stored onsite

MUNICIPAL INSPECTION FORM

City of La Mesa
Storm Water Quality Inspection for Municipal Facilities

Inspector Name _____

Date____/____/_____Time_____AM / PM Type of Inspection: ☐ Routine ☐ Follow-up ☐ Complaint Investigation

A. Contact Information

Facility Name_____

Street Address_____ Mailing Address_____

_____ _____

Manager/Operator(s)_____

Telephone (□□□□□□) _____ - □□□□□□□□□□ ext._____ Fax (□□□□□□□) _____ - □□□□□□□□□□

Manager/Operator(s) Email:_____

Facility Personnel Present_____

B. Facility Site Information

Principal activity:_____

JURMP Classification_____

New JURMP Classification?_____

Does facility maintain SWPPP/BMP Plan? ☐ Yes ☐ No

If yes, what is the date of last SWPPP/BMP Plan revision?_____

If yes, does the SWPPP/BMP Plan include applicable minimum BMPs from the JURMP? (if no, describe in Section E) ☐ Yes ☐ No

If yes, does the SWPPP/BMP Plan include a current list of individuals Responsible for implementing BMPs at the site? ☐ Yes ☐ No

Does facility have a map/sketch of the site with flow lines and storm drains? ☐ Yes ☐ No

C. Initial Observations

Drainage basin: ☐ Alvarado ☐ University ☐ Spring Valley ☐ Lemon Grove ☐ Lake Murray

Nearest conveyances or water bodies: _____ Hydrologic Area: _____

Approximate distance to water bodies: ☐ □ 200 ft. ☐ 200 □ 1000 ft. ☐ 1000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points along perimeter: _____

_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Approximate area covered by industrial or commercial activities: _____ square feet

Approximate □ impervious surface of this area_____□

Exposed areas of intensive outdoor activity: _____

City of La Mesa
Storm Water Quality Inspection for Municipal Facilities

D. BMP Assessment

BMPs	N/A	Yes	No	Comments
D.1 General				
Is the site free of excessive litter and debris?				
Are discharge locations free of excessive sediment and debris?				
Are parking lots, sidewalks and streets free of excessive sediment and debris?				
Are roof downspouts directed away from areas of potential pollutants?				
Is wash water from pressure washing / hosing managed appropriately?				
Are employees trained in storm water management?				
Does the facility have a current log of employees who have participated in training?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
If reclaimed water is used for irrigation, is the site free of evidence of irrigation water entering the storm drain?				
Are stockpiles of soil or landscape waste covered when feasible and equipped to prevent runoff transport?				
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area adequately covered (closed lids or permanent overhead cover)?				
Is the trash/recycling area free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor materials that pose a threat to water quality stored appropriately (covered or in sealed containers)?				
Are outdoor storage containers properly labeled?				
Is there an accessible, appropriate spill response kit?				
Is there a written spill response plan? If so, please provide to inspector. (NA if no significant materials to spill)				
Are liquid storage containers/tanks equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
Is water from pools and/or fountains disposed of properly?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are vehicle maintenance activities conducted within contained areas when feasible (garage, canopy, work shop)?				

City of La Mesa
Storm Water Quality Inspection for Municipal Facilities

BMPs	N/A	Yes	No	Comments
Are equipment and vehicles inspected daily for leaks and repaired as necessary?				
Are storm drain inlets near vehicle-fueling areas protected from spills and leaks?				
Is vehicle washing preformed in a designated area where runoff does not enter the MS4?				
Are biodegradable soaps used when appropriate?				
D.5 Building Repair/Construction				
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)				
Are adequate sediment control BMPs employed throughout the site? (sandbags, gravel bags, inlet filters)				
Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities?				
D.6 Structural BMPs				
Are structural BMPs adequately maintained? (NA if no structural BMPs at facility)				
D.7 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
D.8 Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
E. ADDITIONAL COMMENTS (describe any additional deficiencies not represented above and/or notable BMP improvements)				

City of La Mesa
Storm Water Quality Inspection for Municipal Facilities

F. Corrective Action

Is corrective action needed? ☐ Yes ☐ No (If **BMP-related** corrective action is required, describe below.)

Operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax ☐ E-Mail

G. Violations

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described in Section F.

☐ Violation of City Ordinance(s):

- ☐ Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
  Description
- ☐ Illegal connection(s) to the storm drain system
  Location_____
- ☐ Littering
- ☐ Failure to properly implement required BMPs

☐ Other Violation_____

Specific action(s) required to correct the violation described above:

☐ Implement the recommended corrective actions listed in Section F.

Additional actions required:

H. Additional Recommended City Actions

Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff

Does this facility require a follow-up inspection? ☐ Yes ☐ No

D. BMP ASSESSMENT

BMPs	No Corrections Required		Corrections Required		Comments
	N/A	Fully Implemented	Partially Implemented	Not Implemented	
D.1 General					
Keep site free of litter, debris, and sediment using dry methods					
Keep storm drains on site free of litter and debris					
Keep outdoor areas free of spills and leaks					
Collect water from pressure washing or hosing and dispose of appropriately					☐ Unknown Performed by:
Direct roof downspouts away from areas of potential pollutants					
D.2 Landscaping					
Properly manage pesticides/fertilizer; use IPM when feasible					☐ Unknown Landscaping Co:
Employ adequate erosion prevention measures (vegetation or physical stabilization)					
Eliminate over watering/over-irrigation					
Properly store stockpiles to prevent material transport					
D.3 Materials and Wastes					
Protect trash area from contact with storm water					
Keep trash area free of litter and debris, liquids, powders, sediment					
Keep grease bin and area surrounding grease bin free of grease stains/spills					
Do oil-recycling/grease bins have overhead coverage?					
Adequately cover materials stored outside					
Prevent run-on from contacting materials stored outdoors					
Provide an accessible, functional spill response kit					
Equip liquid storage containers with spill containment					
Keep spill containment free of spills and rainwater					
Properly store and dispose of hazardous materials					
Keep loading and unloading areas, including drains, free of debris					
Dispose of water generated by processing activities appropriately					
Dispose of pool, spa, fountain, and filter backwash water properly					☐ Unknown Performed by:
Clean floor mats in locations that do not drain to street or storm drain system					

BMPs	No Corrections Required		Corrections Required		Comments
	N/A	Fully Implemented	Partially Implemented	Not Implemented	
D.4 Equipment, Vehicles, and Outdoor Activities					
Conduct outdoor activities within contained areas (garage, under canopy, work shop)					
Use drip pans to collect leaks/spills					
Provide materials (berm, mat, etc.) to protect storm drain inlets from spills and leaks					
Perform vehicle/equipment washing in a contained area where runoff does not enter the MS4					
D.5 Other					
Manage animals and animal waste in a manner that prevents animal waste from being transported in runoff					
Identify and eliminate illicit connections and illegal discharges					
D.6 Additional Required Actions					

D.7 Additional Questions	Comments Results
Are there any potential air sources that could contribute to atmospheric deposition of pollutants?	☐ Painting ☐ Sandblasting ☐ Fuel Distribution ☐ Dust dispersion or mineral processing ☐ Metal smelting ☐ Metal plating or anodizing ☐ Chemical production or mixing ☐ Large fuel burning device ☐ Incinerator
Are there any treatment control BMPs on site?	☐ Filter insert ☐ Hydrodynamic separator ☐ Debris screen ☐ Sewer diversion ☐ Vegetated swale ☐ Vegetated filter strip ☐ Biofiltration ☐ Detention/sedimentation basin ☐ Containment and evaporation or reuse ☐ Filtration
Are treatment control BMPs regularly maintained?	☐ Yes ☐ No ☐ Unknown ☐ N/A
What is the approximate percentage of the site that drains to the treatment control BMPs?	☐ N/A
Do major potential pollutant sources drain to treatment BMP(s)?	☐ All ☐ Some ☐ None ☐ N/A
If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified?	☐ Yes ☐ No ☐ N/A
If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit?	☐ Yes ☐ No ☐ N/A
Were any non IC/ID related corrective actions implemented during the site visit?	☐ Yes ☐ No ☐ N/A
Were any educational materials distributed?	NOI ☐ NONA/NEC ☐

E. STATE GENERAL INDUSTRIAL PERMIT COMPLIANCE

☐ Non-compliance with the State Industrial Storm Water General Permit noted.

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit; see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).

- ☐ For "Conditional" facilities only: this site presently has outdoor exposure that requires filing for coverage under the Industrial Permit. If you implement all the recommended BMPs and eliminate outdoor exposure, you may be able to qualify for exemption from obtaining Industrial Permit coverage. Please contact the RWQCB for details.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP); see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program--see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional notes and/or actions required:

F. CORRECTIVE ACTION SUMMARY

☐ **Corrective Actions and Re-inspection Required.** Please refer to sections D.1-D.6, E, and F of this form.

☐ No Corrective Actions Required at this time.

G. RECOMMENDED CITY ACTIONS

ASSESSMENT

Level of knowledge regarding stormwater issues:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Level of cleanliness, BMP implementation, orderliness of site:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

Please note that the Regional Water Quality Control Board (RWQCB) is the final arbiter of Industrial Permit compliance; please contact the RWQCB at (858) 467-2952 for details of what is necessary to comply with the Industrial Permit.

Recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

Site Name:_____

Pollutant	PDP	Sources Needing More BMPs							Recommended BMPs (check if applicable)			
		Trash Area	Material Storage	Prkng Lot	Load/ Unload	Land-scape	Veh/Eqp Maint	Exposed Work Area	Emp. Training	House-keeping	Minor Struct.	Major Struct.
Sediments												
Nutrients												
Aluminum												
Iron												
Heavy Metals												
Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury												
Organic Compounds												
Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT												
Trash & Debris												
Oxygen Demanding												
Oil & Grease												
Bacteria & Viruses												
Pesticides												
Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos												
Acid/Base (pH effects)												
Others (list):												

☐RW 303(d)☐☐ Receiving water impairments, as listed in the most recent 303(d) list
☐WS COC☐☐ High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
☐PDP☐☐ pollutant discharge potential.
☐Emp. Training☐☐ employee training activities focused on storm water pollution prevention
☐Housekeeping☐☐ standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
☐Minor Struct.☐☐ minor structural BMPs that do not require building permits, such as covering with tarps or building berms
☐Major Struct.☐☐ major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results☐are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results☐are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results☐are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results☐above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results☐exceed the EPA benchmark by an order of magnitude or more

CITY OF LA MESA

SUPPLEMENTAL WATERSHED ASSESSMENT QUESTIONNAIRE AND INSPECTION

Business Name _____ Date:_____/_____/_____

Watershed (circle one): San Diego River Chollas Creek/San Diego Bay

Questions for Facility Contact Person

When water (from rain, sprinklers, etc.) leaves your site where does it go? ☐ Treatment Plant/Sewer ☐ Storm Drain System ☐ A Water Body (any) ☐ Don't Know/Unsure

Runoff leaving your site eventually reaches what water body (more than one can be checked)? ☐ San Diego Bay ☐ Chollas Creek ☐ Pacific Ocean ☐ San Diego River ☐ Mission Bay ☐ Don't Know/Unsure

What is your impression of the water quality/condition of the downstream water body? ☐ Good ☐ Fair ☐ Poor ☐ Don't Know

In general, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff? ☐ Washing Activities ☐ Washing Activities Done by Mobile Businesses ☐ Material Storage ☐ Material Processing ☐ Landscaping ☐ Repair Services ☐ Illegal Dumping ☐ Trash Area ☐ Don't Know/Unsure ☐ Other

Other than today's inspection, have you received any information or education about what your business should do to prevent pollution from entering the environment? ☐ Yes ☐ No

Observations

Was evidence of any non-storm water discharge (including allowable discharges) observed? ☐ Significant ☐ Minimal ☐ No

If irrigation system is present, which sprinkler head types are present (check all that apply)? ☐ Spray ☐ Rotor ☐ Microspray ☐ Drip ☐ Bubblers ☐ Water by hand ☐ Other ☐ NA

Approximate percentage of site's total pervious area that is landscaped: _____ %

Attitude toward compliance with storm water regulations: ☐ Receptive ☐ Neutral ☐ Resistant

Overall Source Ranking (for Watershed Pollutants of Concern)

☐ Significant ☐ Not Significant

INTEGRATED PEST MANAGEMENT CARDS

Ants

Ants are one of the most prevalent pests in California. Although ants are annoying when they come indoors, they can be beneficial by feeding on fleas, termites, and other pests in the garden. While spraying chemicals inside the house may seem effective, it won't prevent more ants from entering your home, which is essential for control because most ants nest outside. Focus management efforts on excluding ants from buildings or valuable plants.

Make your house less attractive to ants:

- Caulk cracks and crevices that provide entry inside.
- Store attractive food in closed containers.
- Clean up grease and spills.
- Look for and remove indoor nesting sites, such as inside potted plants.
- Ant-proof kitchen garbage pails with sticky barriers such as petroleum jelly under the lip and pet dishes by placing them in a moat of water.
- Remove sweet food sources next to your house such as aphid-infested bushes and ripened fruit on trees.

When ants invade your house, take these steps:

- Sponge invaders with soapy water as soon as they enter.
- Plug up ant entryways with caulk or petroleum jelly.
- Remove infested potted plants.
- Clean up food sources.
- Rely on baits to control the ant colony.
- Indoor sprays are not usually necessary.

How and why baits work best:

When using bait, place it along ant trails and at nest openings. Worker ants will be attracted to bait and take it back to the nest where the entire colony, including queens, may be killed. The bait must be slow-acting so workers won't be killed before they get back to the nest. It may take several weeks for results to be evident. Just killing workers foraging in your home or garden does little to control the colony, because as few as one percent of a colony's foraging worker ants are able to provide sufficient food to support nestbound queens and larvae. Baits in bait stations or ant stakes are easiest to use and safest for the environment.

(actual size)

Aphids

HEALTHY GARDEN HEALTHY HOME

Almost every plant has one or more aphid species that occasionally feeds on it, but low to moderate numbers of aphids are usually not damaging in gardens or on landscape trees. Although aphids can curl leaves and produce sticky honeydew, they rarely kill plants and can often be washed off with water. When aphid numbers get high, natural enemies frequently feed on them, eliminating the need for pesticides. Insecticidal soaps and oils are less toxic pesticides that can be used when treatment is necessary.

Aphids are common in your garden because:

- Aphids like lush new growth. Don't over fertilize. Use organic fertilizers or slow-release products.
- Aphids build up on flowering plums, roses, tulip trees, crape myrtles, apples, and many vegetables. Expect aphids when you grow these plants.
- Ants protect aphids from their natural enemies. Keep ants off plants to get more benefit from these beneficial insects.

To reduce aphids:

- Prune out infested leaves and stems.
- Knock aphid populations off plants by shaking or spraying with a strong stream of water.
- Protect seedlings with covers or aluminum soil mulches.
- Wait for hot weather; most aphids are heat-intolerant and will be gone by mid-June.

Protect aphids' natural enemies:

- Lady beetles, both adults and larvae
- Lacewings
- Syrphid fly larvae
- Soldier beetles
- Parasitic mini-wasps that turn aphids into crusty mummies (See reverse for insect drawings.)

Natural enemies of aphids such as lady beetles and lacewings will come into your garden naturally when aphids are abundant. Protect these good bugs by avoiding the use of insecticides that may be toxic to a broad variety of insects.

If insecticides seem necessary, use the safest products:

- Nonchemical pest control methods should be used first to manage aphid populations. However, if you feel insecticides are necessary, choose less toxic products.
- Insecticidal oils and soaps are the safest products. When properly used, these materials solve most pest problems.
- Oils and soaps work by smothering aphids, so application must be thorough. Don't apply to drought-stressed plants or when it is very hot. A few plants are sensitive to these products.
- Insecticidal soaps, soap-pyrethrum mixtures, or neem oils are often applied on vegetables or small bushes like roses.
- Narrow range oils, like parafinic, supreme or superior oils, are appropriate for larger trees.
- Oils and soaps don't kill aphids hidden within curled leaves. Prune these out. Systemic insecticides can kill hidden aphids, but they are much more toxic and not registered for use on garden vegetables or fruit trees.

Cockroaches

HEALTHY GARDEN HEALTHY HOME

Cockroaches thrive in warm environments that provide food, water, and shelter. Roaches hide in cracks, crawl spaces, and other dark places during the day and come out at night to feed. Pesticide sprays alone will not control roaches and are not usually required. Baits provide better control. You must integrate several strategies to make your home a less roach-friendly environment. Thoroughness is essential for effective control.

Identify your cockroach species first:

- Effective management options vary according to species.
- Cockroach traps provide an easy way to catch roaches for identification.
- Control practices for outdoor invaders (American, oriental roaches) and indoor residents (brownbanded and German roaches) differ.
- For help with identification go to www.ipm.ucdavis.edu.

Remove food and water sources:

- Even tiny crumbs or liquids in cracks provide good food sources.
- Store food in sealed containers.
- Keep trash in containers with tight lids.
- Eliminate plumbing leaks.
- Vacuum cracks and crevices and clean floors and counters daily.

Remove roach hiding places:

- Seal cracks and other openings to prevent invaders from the outside.
- Seal cracks in false bottoms of cupboards and other indoor hiding places.
- Seal or clean up other areas where you find roaches or their egg cases hiding.
- Remove old newspapers, boxes, and other clutter in kitchens and bathrooms.
- The oriental cockroach hides outdoors under ivy and other shelter. Check to see if you have this roach and remove outdoor hiding places or bait.

Use traps to identify and track cockroach populations:

- Cockroach traps are available in hardware stores.
- Place traps on the floor around edges of walls, in cupboards and other places where you think roaches are foraging. Place bait stations at locations where you trap roaches.
- Check traps daily.
- Sticky traps with pheromones may provide some control of German cockroaches.

Using chemicals to control cockroaches:

- Avoid use of foggers, bombs, or aerosol sprays — they just disperse populations.
- Boric acid powder blown into cracks, crevices, hollow walls, under refrigerators, or other undisturbed hiding places is very effective (allow 7 days or more for an effect to be seen).
- Bait stations containing boric acid, abamectin, fipronil, or hydramethylnon placed near hiding places can be effective if other food sources are removed (allow 7 days or more for an effect to be seen). Replace stations as needed as long as roaches are being caught.
- Insecticide sprays alone do not give long-term control. They are not necessary if other methods such as baits and boric acid powder are combined along with cleanup and removal of hiding places.
- Contact a professional pest control operator for very serious infestations, but be sure they use an integrated program as described above.

Earwigs

HEALTHY GARDEN HEALTHY HOME

While their prominent tail-end pincers may look ferocious, earwigs are not harmful to people. Earwigs may seriously damage seedling vegetables and chew holes in annual flowers, soft fruit, and corn silks, but earwigs also play a beneficial role by feeding on aphids and other insects. Nocturnal in habit, earwigs feed at night and hide during the day in dark, cool, moist places in the yard or within flowers or vegetables. To manage earwigs, reduce hiding places and moisture, and employ a vigilant trapping program.

Should you be concerned about earwigs in your garden?

- Yes, if you are growing vegetables, herbaceous flowering plants, sweet corn, or plants with soft fruits like strawberries and apricots.
- No, if your garden is primarily lawn, trees, and woody ornamentals or native plants.

Reduce outdoor hiding places:

- Eliminate dense undergrowth of vines, ground cover and weeds around vegetable and flower gardens.
- Prune away fruit tree suckers.
- Remove leaves, boards, boxes, trash, and other debris from planting areas.
- Move flower pots and other garden objects and structures that can harbor earwigs.
- Check plastic or organic mulches and remove them to limit earwig numbers.

Trap earwigs until they are gone!

- Trap earwigs with rolled newspaper, bamboo tubes, or short pieces of hose. Place these traps on the soil near plants just before dark, and shake accumulated earwigs out into a pail of soapy water in the morning. A low-sided can filled with oil and a drop of bacon grease or fish oil also makes a good trap. Daily trapping will reduce earwig populations to tolerable levels.

Other ways to reduce earwig problems:

- Drip irrigate where possible to reduce surface moisture.
- Keep earwigs out of stone fruit trees with a band of sticky substance like Tanglefoot, around the trunk, and harvest fruit as soon as it ripens.
- Insecticides should rarely be needed.

Inside the home:

Earwigs may seek refuge indoors when conditions outside are too dry, hot, or cold. Large accumulations of earwigs can be annoying but present no health hazards. When earwigs invade your home follow these steps:

- Sweep or vacuum up invading earwigs.
- Seal up cracks or other entry points.
- Remove debris from gutters and around entryways.
- Keep water and moisture away from structures.
- Replace white outdoor lights with yellow ones, which are less attractive to earwigs.
- Indoor application of pesticides is not recommended.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org.

Fleas

HEALTHY GARDEN HEALTHY HOME

Fleas are particularly annoying to people and pets, especially during spring and early summer when their numbers tend to increase dramatically. The common flea in California is the cat flea. Despite its name, it attacks both dogs and cats and will also bite humans. To keep fleas out of your home, control fleas on your pet and regularly clean pet sleeping areas.

On the pet:

Recently, a number of very effective and safe new products for flea control on the pet have become available. Remember to supplement pet treatments with regular cleaning of your home and periodic combing with a pet flea comb to detect new infestations.

- Spot-on formulations are applied to the animal's coat, providing flea control for 1 to 3 months. Available from veterinarians or over-the-counter.
- Systemic flea control products, available from vets, are given as a pill or food additive. While they do not kill adult fleas, they prevent reproduction.
- Flea collars containing insect growth regulators (IGRs) give protection for up to 6 months on dogs and up to a year on cats. Be sure to choose collars containing methoprene or pyriproxyfen.
- Flea shampoos and soaps, powders and dusts, spray-on liquids, and dips are less effective and more hazardous to pets, people, and the environment than the three types of products above.

In the yard:

Outdoor treatment is rarely needed, but if your pet regularly sleeps outside and flea numbers are high, these areas can be treated with a spray containing pyriproxyfen. If possible, open sleeping areas to sunlight by removing low hanging vegetation. Immature fleas are unlikely to survive in areas with exposure to sunlight.

Inside the home:

Whether or not you are aware of fleas in your home, regularly vacuum and launder areas where your pet rests to avoid flea buildup. If you have a major flea problem, treat your pet with one of the options on the front of this card and follow the steps below.

- Locate heavily infested areas (usually areas where the pet rests) and concentrate treatment there.
- Wash throw rugs and pet bedding.
- Vacuum upholstered furniture, cleaning under cushions and in crevices.
- Vacuum carpets, especially beneath furniture.
- Use a hand sprayer or aerosol to treat all carpets and unwashable upholstered furniture with an insecticide that contains an IGR (methoprene or pyriproxyfen). This treatment kills larvae but not pupae, so fleas may continue to emerge for up to 2 weeks.
- Over the next 2 weeks vacuum regularly to remove adult fleas that emerge from pupae. Do not reapply pesticides.
- Seal vacuum bags and discard them so fleas don't escape.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Gardening with Good Bugs

HEALTHY GARDEN HEALTHY HOME

Most gardens contain far more types of good bugs,or beneficial insects, than pest insects. Beneficial insects and other organisms that kill pest insects are called natural enemies. In any pest management or plant care program, it is important to encourage these natural enemies by avoiding pesticides that kill them. You can also encourage beneficial insects by choosing plants that provide them with pollen, nectar, and shelter and keeping ants out of pest-infested plants. Learn to identify good bugs, both in their adult forms and immature (larval) stages.

Common good bugs found in California gardens include:

- Lady beetles: Both adults and larvae consume aphids.
- Lacewings: Lacewing larvae feed on many insect pests; adults are often seen around lights.
- Syrphid flies: Syrphid fly larvae consume aphids; adults hover around flowers.
- Parasitic mini-wasps: Many species of tiny wasps lay their eggs in pests like aphids or caterpillars; their hatching larvae consume the pest and kill it.
- Spiders: All spiders feed on insects or other arthropods and are beneficial in the garden.

(See reverse for drawings of good bugs mentioned above.)

What is Integrated Pest Management?

Integrated pest management (IPM) uses environmentally sound, yet effective, ways to keep pests from annoying you or damaging plants. IPM programs usually combine several pest control methods for long- term prevention and management of pest problems without harming you, your family, or the environment — IPM also reduces pollution in California waterways. Successful IPM begins with correct identification of the pest. Only then can selection of the appropriate IPM methods and materials be made.

Preferred IPM methods include:

- Planting pest-resistant or well-adapted plant varieties like native plants.
- Discouraging pests by modifying the way you design, irrigate, fertilize, and manage your garden.
- Altering the garden or home environment to deprive pests of the food, water, shelter or other requirements they need to thrive.
- Keeping pests out of the home and garden using barriers, screens, and caulking.
- Squashing, trapping, washing off or pruning out pests.
- Relying on good bugs in your garden to eat pests, thereby eliminating the need for insecticides that may end up in our waterways.

Turning to pesticides:

- Only use pesticides when non-chemical controls are ineffective and pests are reaching intolerable levels.
- Use pesticides in combination with the methods described above.
- Choose pesticides carefully so that the least toxic, most effective material is used to protect human health and the environment.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Head Lice

HEALTHY GARDEN HEALTHY HOME

Head lice can infest anybody, but children are prone to infestations because they play closely and share items that come in contact with the head like hats, headphones, and combs. Head lice are not known to transmit any infectious diseases; they are more of a nuisance than a health risk. Children with head lice, however, are generally not allowed to attend school as long as nits are found in their hair.

Head lice facts:

- Head lice cannot hop, fly, or jump; they crawl. Lice spread only through direct contact with an infested object or person.
- Head lice spend their entire life in head hair and can only survive off a human head for about 1 or 2 days.
- A newly hatched louse must ingest blood within minutes of birth to survive.
- Head lice cannot live on family pets.
- Nits (eggs) that are more than 1 1/4 inch from the scalp probably are dead or have already hatched.

What to look for:

- Intense scratching on the back of the head or neck.
- Tiny white eggs (nits) glued to hair near the scalp.
- Small, rapidly crawling flat insects.

Four steps necessary to manage an infestation of head lice:

1 Use a head louse shampoo if you observe active lice or viable eggs.

- Avoid shampoo products containing lindane, which are available by prescription only. Pyrethrin and permethrin are safer, more effective, and less polluting to wastewater than lindane. Not all eggs will be killed.
- To avoid insecticides entirely, use soap shampoos that contain coconut or olive oils. Most soap shampoos kill all stages of the louse except the egg. Because they are not as effective as products containing pesticides, you must be sure to comb and repeat these shampoos four times at 3-day intervals. Successive shampooing kills newly hatched lice.

2 Remove nits from the head by combing with a specially designed nit comb.

- This step is the key to successful control. Repeat daily as long as you find live lice or nits within 1¦4 inch of the scalp. Use a metal comb specially designed for removing head lice and their eggs. Combs sold with head lice shampoos are not generally effective. Infested hair can also be cut out with small safety scissors.

3 Remove lice and nits from the household.

- Wash clothing and bedding of the infested person in hot water (at least 140°F) and dry in a hot dryer or have them dry cleaned. Place other items (earphones, bike helmets) in plastic and put in a freezer that is 5°F or lower for at least 10 hours. Clean any object that might have come in contact with the infested person's head (stuffed animals, car seats). Vacuum carpets and upholstery. Pesticide sprays are not recommended.

4 Check heads and remove nits daily until infestation is gone. Follow with weekly head checks to detect reinfestation.

Lawn Insects

HEALTHY GARDEN HEALTHY HOME

Contrary to popular belief, insects are not a common cause of residential lawn damage in California. Poor lawn care, especially improper watering and planting inappropriate grass species, are more likely causes of unhealthy or dying lawns. Disease-causing agents, excess orinappropriate use of chemicals such as fertilizer and herbicides, or dog urine also produce lawn damage resembling that of insects. Many insects in the lawn are beneficial. Never apply an insecticide unless a damaging level of a known insect pest is confirmed. Insecticides are only effective if applied at the right time and in the right manner. Some insecticides may kill good bugs too.

How do you know if insects are causing damage?

- Brown spots in lawns can be caused by over- or under-irrigation, plant disease, improper use of chemicals, or dog urine as well as insects.
- Confirm presence of insects before applying an insecticide. For grubs, dig around roots, for other insects perform a drench test. (See reverse.)

Keep your lawn healthy by:

- Planting grass species that do well in your area
- Irrigating deeply and infrequently
- Doing routine maintenance on sprinkler heads
- Applying only 3 to 6 pounds of actual nitrogen per 1000 square feet per year when fertilizing
- Aerating your lawn annually; remove thatch if it exceeds ½ inch
- Cutting only one-third to one-half of grass height at each mowing and keeping lawnmower blades sharp

See the UC Guide to Healthy Lawns at www.ipm.ucdavis.edu

If a damaging level of insects is confirmed, do the following:

- Choose an insecticide based on the pest you're targeting.
- Find out which insecticide ingredients target specific lawn insects:
  - *Bacillus thuringiensis* (Bt) kills only caterpillars, including cutworms, lawn moths, and skippers.
  - Insect-attacking nematodes control caterpillars or grubs.
  - Azadirachtin controls cutworms, armyworms, and larvae of lawn moths.
  - Imidacloprid is effective against young lawn grubs.
  - Pyrethroids (e.g., cyfluthrin, bifenthrin) are broadly toxic insecticides that kill chinch bugs, lawn moths, and cutworms, but also kill beneficial insects and should be avoided.
- Get help from UC Cooperative Extension.

HOW TO PERFORM A DRENCH TEST

- Mix 3–4 tablespoons of dishwashing liquid to 2 gallons of water.
- Evenly apply the 2 gallons to 1 square yard of your lawn.
- Monitor the area for 10 minutes and count the number of armyworms, cutworms, or lawn moth larvae that rise to the surface.
- Treat the area only if insect numbers exceed 5 armyworms or cutworms or 15 lawn moths per square yard.

Safe Use & Disposal of Pesticides

HEALTHY GARDEN HEALTHY HOME

Pesticides are designed to be toxic to the pests they target — insects, weeds, and other unwanted home and garden invaders. Always read pesticide product labels carefully and follow all directions on proper use, storage, and disposal of empty pesticide containers. Product labels are your main source of information on how to use a product safely and legally. They include guidelines needed to protect you, your family, and pets. The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For the site nearest you in San Diego County call 1-877-713-2784 .

If you must use pesticides, follow these tips to reduce pesticide effects on your local waterways:

- Identify your pest problem and choose the least toxic pesticide that targets your pest and achieves the results you want. If you need help identifying the least toxic pest control method, contact your University of California Cooperative Extension office.
- Determine the right amount of pesticide to purchase. Purchasing exactly the amount you need for the application eliminates the need for storing unused pesticides.
- Use spot treatments whenever possible.

Outdoors

- Avoid overwatering after applying pesticides. Never let pesticide runoff flow into storm drains.
- Do not apply pesticides outdoors when rain is forecast or when it is windy.
- Avoid applying pesticides on paved areas.

Indoors

- Avoid applying pesticides in or near floor drains or sinks.
- Avoid applying pesticides on areas that will be washed or mopped with water, or where food is prepared or stored.

When using and storing pesticides take these precautions:

- Always wear a long-sleeved shirt, pants, and eye protection, and other equipment suggested on the label.
- Store products tightly capped in a locked cabinet out of reach from children and pets.
- Always keep pesticides in their original container.
- Know where to call for help in an emergency!

Pesticide disposal:

- If you cannot use up your pesticides, fertilizers, and weed killers, give them to a friend who may need them.
- Sewage treatment plants are not designed to treat for certain toxic pesticides like diazinon and chlorpyrifos — dumping pesticides into the stormdrain or down the sink is never an option.
- The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For household pesticide disposal information for San Diego County, call 877-713-2784.

Finding active ingredients on a pesticide label:

Pesticide labels are required by law to show the active ingredient and its percentage. Minimize or avoid the use of products that contain diazinon and chlorpyrifos – these materials are polluting our waterways. Always read the label before you buy!

Active Ingredient
Chlorpyrifos 4.38%
Inactive Ingredients 95.62%
KEEP OUT OF REACH OF CHILDREN
CAUTION See back panel booklet for additional precautionary statements.

Snails & Slugs

HEALTHY GARDEN HEALTHY HOME

Snails and slugs rank among our most despised garden pests. These slimy mollusks emerge from hiding at night and chew holes in leaves and flowers of many succulent garden plants and fruit. Slugs and snails are similar in structure and biology, except slugs lack the snails' external spiral shell. Management requires a vigilant and integrated approach that includes eliminating moisture and hiding spots, trapping, barriers, and handpicking. Baits can be helpful, but by themselves, don't provide adequate control in gardens that contain plenty of shelter, food, and moisture.

How do you know snails and slugs are causing damage?

- You may not observe these pests at first because they feed at night and hide during the day. Go out at night or early morning to view them in action.
- Other pests can cause holes in leaves, flowers, and fruit. Look for the shiny, slimy trails slugs and snails leave behind.

What must be done to reduce snails and slugs?

- Remove daytime hiding places — ivy, weedy areas, debris, or boards.
- Regularly remove snails from shelters you cannot eliminate such as low ledges on fences, undersides of decks, meter boxes.
- Place traps in your garden and dispose of trapped snails and slugs daily.
- Reduce moist surfaces by switching to drip irrigation or sprinkling in the morning rather than later in the day.
- Consider snail-proof plants such as impatiens, geraniums, begonias, lantana, nasturtiums, and many plants with stiff leaves and highly scented foliage like sage, rosemary,and lavender.

How can I manage snails and slugs without using pesticides?

- Make sure the garden is mollusk-free before planting. Then erect a copper barrier around it. Use a 4- to 6-inch-wide band of copper, buried an inch below the soil and bent over at the top or attach it around the edge of a raised bed.
- Place your garden in the sunniest spot possible. Remove garden objects or adjacent plants or ground cover that may serve as shady shelter. Reduce moist surfaces as much as possible.
- Build a trap using a 12"x15" board raised off the ground by 1-inch runners. As the mollusks collect under the board, scrape them off and destroy them daily.

What about baits?

- Baits will not be very effective unless you also remove shelter, food, and moisture.
- Metaldehyde baits are especially poisonous to dogs and birds. Metaldehyde also loses its effectiveness rapidly in sunlight and after rain or irrigation.
- Iron phosphate baits are safe for use around dogs, children, and wildlife.
- Irrigate before applying bait and apply in evening on warm days when mollusks are active.
- Scatter bait around sprinklers and in moist and protected areas where snails and slugs travel.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Spiders

HEALTHY GARDEN HEALTHY HOME

Spiders are mostly beneficial because they feed on pest insects. However, many people think that all spiders are dangerous and aggressive. In California, the main spider capable of causing serious injury is the black widow, which generally remains outdoors and out of sight. Spiders seen out in the open during the day are unlikely to bite people. Focus pest management efforts on removing webs and hiding places. Pesticides are not generally recommended.

What to know about spiders:

- In California, the main spider capable of causing serious injury is the black widow:
  - The poisonous black widow spider is commonly found outdoors, in sheltered, dry, undisturbed areas such as wood piles.
  - Female black widows have shiny black bodies with a red hourglass marking on the underside.
  - Only large female black widows can injure people.

  Anyone bitten by a black widow spider should remain calm and seek medical advice, or call California's Poison Control Center at 1-800-8-POISON (1-800-876-4766).
- The brown recluse spider does not live in California.
- The jaws of most spiders are too small to bite humans.
- Some other spiders bite when trapped in clothing, but the reaction is usually no more severe than itching or a bee sting. See www.ipm.ucdavis.edu for more information about these spiders.

To prevent spiders from entering your house, take these steps:

- Seal home foundation cracks and other access holes.
- Inspect window and door screens for good seals that keep out spiders and the insects they prey on.
- Keep areas around home foundations free of clutter.

Manage spiders using these tips:

- Indoors, regular housecleaning provides adequate spider control.
- Vacuum up the spider and its web.
- Prevent clutter buildup that can provide hiding places.
- Remove spider webs from the exterior of the house with a broom or high pressure hose.
- Indoors, squash spiders or capture them in a jar and release them outdoors.

When removing spiders, don't overlook the fact that spiders eat a large number and variety of nuisance and pest insects. Spiders also have natural enemies — wasps, other spiders, birds, reptiles, and others — that sometimes keep them from becoming too numerous.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Termites

Because of the serious damage they can cause to wooden structures, termites are among the pests most feared by homeowners. However, swarms of flying termites do not always mean your building is infested. A careful inspection of the structure is required to confirm an infestation. People also frequently mistake swarms of flying ants for termites. If you suspect that your house is infested, call a professional. Do-it-yourself sprays cannot be relied on to reduce a damaging infestation. Common termites in California are the subterranean termites that build nests in soil, dampwood termites that nest in moist wood and soil, and drywood termites that nest above ground in dry wood. Management of each termite species is different.

Distinguish flying ants from termites:

- Check the antennae, wings and waist to confirm that pest insects are termites. (Please refer to ant vs. termite drawing on back.)

Design your building to keep termites out:

- Keep a 12-inch barrier of smooth concrete, sand, or other material between the soil surface and substructure wood beneath a building.
- Choose termite-resistant wood for fences or other structures that must contact soil.
- Remove wood piles, untreated fence posts, and buried scrap wood near structures.
- Provide adequate ventilation to substructures and keep them dry.
- Immediately repair foundation cracks.

If termites are invading your home:

- Destroy shelter tubes that subterranean termites build between soil and wood structures.
- If dampwood termite nests are accessible, remove infested wood and eliminate excess moisture.
- Drywood termites can be controlled with heat, freezing, electricity, microwaves, fumigation, or spot treatments of chemicals.
- For any infestation, contact a professional for help. Pesticides licensed only for use by a pest control operator are usually necessary to control subterranean and dampwood infestations.

Using pesticides for termite control:

- Pesticides may be injected into the soil by professional applicators through drilling or rodding. Special procedures must be followed to prevent contamination of ground or surface water.
- For soil injections, ask your applicator to use a product other than chlorpyrifos. Newer types of products such as fipronil and chloronicotinyls are safer for your health and the environment.
- Baits can be effective in some cases, but may take several months to control the problem and must be followed up with constant monitoring.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Giant Whitefly

HEALTHY GARDEN HEALTHY HOME

Giant whiteflies can cover a beautiful plant with white fuzzy wax and sticky honeydew, turning it into an unsightly mess. First discovered in San Diego County in October 1992, this whitefly has spread northward into other areas of California. Since its introduction into San Diego, giant whitefly has spread rapidly northward along the coast. Although affected plants may be weakened, they rarely die. To manage giant whitefly, wash plants off with water and encourage natural enemies.

What plants are affected?

- Many ornamentals including hibiscus, giant bird of paradise, begonia, Xylosma.
- Fruit trees including citrus, avocado, mulberry and banana.

Look for these damage symptoms on affected plants:

- Long, white, waxy filaments produced by the whitefly give the leaf surface a bearded appearance. These hairlike strands may be mistaken for a fungal infection.
- Large amounts of sticky honeydew excreted by the whitefly as it feeds on plant sap.
- Black sooty mold growing on the honeydew.

How to recognize the whitefly:

- Adults are small (3/16") and white with light brown markings on wings and usually found in groups on undersides of leaves.
- Nymphs are yellowish, small, oval, have no legs and don't move.

To reduce problems, use an integrated program that includes:

- Removing infested leaves.
- Washing giant whiteflies off leaves with a strong stream of water.
- Planting species less susceptible to giant whitefly.
- Avoiding insecticides that injure natural enemies, such as lacewings, lady beetles, syrphid flies, and parasitic wasps.

What about insecticides?

- **Don't use insecticides if beneficial insects, including parasites and predators, are present in the area.**
- **To confirm the presence of parasitic wasps, use a magnifying glass to look for parasite exit holes on giant whitefly nymphs or darkened nymphs as indicated in drawings below.**
- **If you do choose to use an insecticide, select least toxic products such as insecticidal soaps or oils. Remember to follow label directions and spray the undersides of the leaves where whitefly colonies are found.**

(adult)  (actual size) I

Examine whitefly colonies for grayish-black or yellow nymphs with exit holes (a), or darkened nymphs (b), or healthy nymphs (c).

Use NON-CHEMICAL methods & LEAST TOXIC pesticides. WHY? Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes, and oceans.

DOING OUR PART TO SAVE H2O

Water is becoming an increasingly valuable commodity. The City of La Mesa continually strives to reduce water consumption and save tax dollars at the same time. The following are some of our significant water saving efforts:

- All parks and building renovations have been retrofit with Calsense® irrigation controllers. The controllers have a master valve sensor with a shut-off that eliminates water waste by shutting down the system in the event of a break. The last phase of the Calsense® project, currently underway, will allow the irrigation cycles to be modified automatically based on weather changes. Grants from the Helix Water District supplemented purchase of new irrigation controllers for conversion from older irrigation systems.
- Drought tolerant vegetation is being used for all new or replacement landscaping.
- Artificial turf was installed at the Junior Seau Sports Complex in 2003.
- Irrigation upgrades were completed in 2008 in medians on Baltimore Drive and Lake Murray Boulevard reducing water consumption.
- Utilizing the Empower Partnership with the City of Chula Vista, kitchen sink spray valves were exchanged for low-flow pre-rinse spray valves at local restaurants.
- The Environmental Sustainability Commission was formed to address a variety of issues including water conservation.
- The second annual Environmental Awareness Festival is being held on September 12th at Harry Griffen Park. The event will feature water conservation information and demonstrations. Representatives from the Helix Water District will be available with information and to answer questions.

Links to water conservation web sites are posted on the Environmental Awareness pages of the City website.

La Mesa Library Celebrates 1st Anniversary

On June 20 the La Mesa Library celebrated the first anniversary in its new facility adjacent to City Hall. During this first year the facility had more than 335,000 visits. That's 100,000 more than last year in the old building and represents about five visits for every La Mesa resident. Also during this first year more than 526,000 items were checked out of the La Mesa Library. This is the second highest circulation in the entire County library system with the highest being from a branch with three times the square footage of La Mesa's facility.

The library building, which also houses a Post Office retail facility, was constructed and is maintained by the City Of La Mesa. The library is a branch of the County's library system. In a presentation to the City Council on June 23 Joe Glidden, President of the Friends of La Mesa Library reported on the growing success of the La Mesa Library and cited a formula developed by the Friends of the San Francisco Library. "Using San Francisco's formula," Mr. Glidden reported, "the La Mesa Library returned $7 million in services to the City last fiscal year." These services included books, CDs, DVDs, video games, newspapers, magazines, computers with internet access, and programs for children, teens, and adults.

As you can see here, the new Police Station is beginning to take shape. Construction continues to progress according to schedule with an anticipated completion in fall 2010.

Downtown Village Streetscape Improvement Project

On June 29, 2009 the City held a second community workshop on the Downtown Village Streetscape Improvement Plan, a comprehensive design effort underway to upgrade and modernize public amenities in the Downtown Village and enhance the area's image and identity. The workshop, held at the La Mesa Community Center, was attended by over 60 people, including business owners, property owners, and residents.

The plan is being prepared by a team of consultants led by RBF Consulting, a planning and civil engineering firm. At the meeting, RBF presented a summary of the feedback received at the first workshop, held in April 2009 and provided attendees with a first look at the draft concept designs for the Village. Key elements of the concept plan include establishing multiple gateways to the Village through the use of lighting treatments, improving walkability with enhanced pedestrian crosswalks and wider sidewalks, new lighting and landscaping, and wiring for electricity and sound during special events. Participants engaged City staff and the consultant team in a lengthy and productive question and answer session.

Visit the City website for more information and updates on the Downtown Village Streetscape Improvement Project.

New Signs in the Downtown Village

The City of La Mesa will be replacing the signs in and around the Downtown Village this summer. New sign designs were created as part of La Mesa's effort to enhance the community image and will provide a fresh look for the Downtown Village. The new signs are being funded by a combination of state grants and revenue from the Downtown Parking Fund.

SIDEWALK CONSTRUCTION

A contract has been awarded to construct sidewalks along the southeast corner of Helix Charter High School where none currently exist. Thanks to a state funded Safe Routes to School grant, construction of curb, gutter, sidewalk, new paving, storm drain improvements, landscaping, and irrigation will be completed this summer.

This project compliments other work recently completed near the school. Other work includes: undergrounding of overhead utilities, replacing a storm drain on Lowell Street, and improving the student parking lot. Six different agencies are collaborating on and contributing resources to this project: Helix Charter High School, Grossmont Union High School District, San Diego Gas & Electric, AT&T, Cox Comunications, and the City of La Mesa.

Helix Charter High School completed improvements to the student parking lot along the southeast corner of the school property. The parking lot project included new accessible driveways and improved pedestrian safety in the area. The City's sidewalk project will provide an improved pedestrian linkage from the boundary of the school on Orien Avenue to the intersection of Lowell Street and Normal Avenue where new curb ramps will be installed.

Rides4Neighbors

DRIVERS WANTED

We need Volunteer Drivers for Rides-4Neighbors, a growing transportation program for La Mesa's older residents and residents with disabilities. Rides are provided by trained volunteers who use their own vehicles. Funding from a transportation grant allows the City to reimburse for mileage and provide supplemental liability insurance. Volunteers decide availability and choose the rides they wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. As a volunteer you will be part of a rewarding and meaningful civic program.

For information visit Rides4Neighbors on the City website or call the Adult Enrichment Center at 464.0109.

NEW LEFT TURN SIGNAL AT LAKE MURRAY AND EL PASO

Federal grant money will provide funding for upgrading the traffic signal at the intersection of Lake Murray Boulevard and El Paso Street. The project will install a protected left turn arrow for the Lake Murray Boulevard approaches to the intersection. This means that vehicles turning left from Lake Murray onto El Paso will have a separate signal to help protect them from on-coming traffic.

The signal will be upgraded to include state-of-the-art pedestrian countdown features that show how many seconds remain to safely cross the street. An audible voice will tell pedestrians when it is safe to cross, and a vibrotactile feature will cause the push button to vibrate indicating that the button has been pushed. Since the intersection is near Murray Manor Elementary School, new high visibility crosswalks will be installed at the intersection.

These improvements provide greater safety by helping to reduce vehicle crashes and increasing the visibility of school children and other pedestriaans using the crosswalks. Additional work at the intersection includes updating the curb ramps to comply with the Americans with Disabilities Act (ADA).

COOL SPOTS IN & AROUND LA MESA

La Mesa residents who may be at risk from extreme heat can seek relief during the hot summer months at these La Mesa locations:

Christian Science Reading Room, 8370 La Mesa Blvd., 463.8470, M,W,Th,F 9-5; Tu 9-7; Sat 10-4

La Mesa Adult Enrichment Center, 8450 La Mesa Blvd., 464.0505, M-F 8-5

La Mesa library, 8074 Allison Ave., 469.2151, M-Th 9:30-8, F&S 9:30-5, Su 1-5

The County of San Diego establishes a network of Cool Zones at public and community facilities across the County. Most of these sites are open to the public during regular weekday hours. Cool Zone sites, mostly located in the hottest areas of the county, help older adults and others keep cool and save energy costs. For a complete list of San Diego County Cool Zones and other tips to stay cool go to www.CoolZones.org or contact the County's Aging & Independence Services Call Center at 800.510.2020 and press 6.

FREE Fitness Walks

ALL AGES AND LEVELS!

Get up, Get Out, and Get Moving!

- **FREE guided fitness walks led by certified fitness professionals**
- **Receive coaching and tips for maximizing your workout**
- **Each walk includes a coached warm-up and cool-down**
- **Courses are marked every quarter mile**
- **Summer walks run through September 30**

Join our program host, Fit-X, for the following walks:

The Stroll (novice) – 1 mile, flat - meets corner of La Mesa Blvd & Nebo Drive
Tuesdays begin @ 6:45 pm & Saturdays begin @ 8:00 am

The Stride (intermediate) – 5 miles, slight hills – meets at Jackson Park
Saturdays begin @ 8:00 am

The Challenge (advanced) – 3.5 miles, hills & steps – meets at Highwood Park
Wednesdays begin @ 6:45 pm & Saturdays begin @ 8:00 am

For more information call La Mesa Community Services at 667.1300 or Fit-X San Diego at 858.715.8611

www.fitxsandiego.com/servicesitelinks.asp and click on "City of La Mesa" logo

NOTE: *Hosted fitness walks will continue through December. Watch the website for schedule changes to begin in October.*

CELEBRATE

Foothills Art Association's 60th Anniversary

in conjunction with

The 20th Annual Wildlife in Art Show

November 3 – December 2
Juror: Joe Garcia

Reception
Saturday, November 7
4:30 to 6:30 pm
Awards at 5:30 pm

Foothills Fine Art Gallery
Porter Hall
4910 Memorial Drive
La Mesa, CA
Open Tuesday through Saturday
11:00 am to 4:00 pm

LA MESA UNVEILS NEW URBAN WALKING TRAILS

As we've all heard, walking is one of the best means of exercise for overall health. As part of the "ready, set, Live Well" community wellness initiative, La Mesa has unveiled three urban walking trails in the City providing you the opportunity to increase your physical activity and improve overall fitness.

The Stroll [blue] is a 1 mile beginner walk beginning near the Downtown Village.

The Stride [green] is a 5 mile intermediate walk in the northwest portion of the City.

The Challenge [red] is a 3.5 mile advance walk in the south portion of the City that includes hills and steps.

The Urban Walking Trails guide shows each route clearly marked with its own color. Sidewalk markers in corresponding colors every quarter mile along each trail help to keep you on the right course. Funding for purchase of the markers was provided by the La Mesa Collaborative and the markers were installed by Eagle Scout Candidate Cole Budvarson.

Look for the Urban Walking Trails guide at City Hall, the Library, the Community Center, the Adult Enrichment Center, and other locations throughout the City, or download a copy from the website. Production and printing of the guide was made possible by a grant from the Grossmont Healthcare District with design assistance from Helix High School Marketing Class.

The City is offering free hosted walks along these routes to help get you started on your fitness walking program.

See the detailed program information on page 5. The hosted walking program presented by Fit-X San Diego will continue through December and is made possible through a grant award to the City from the President's Council on Physical Fitness.

How to Calculate YOUR Body Mass Index

Want to see if your weight is right for your height? Calculate your Body Mass Index (BMI) with these simple steps.

$$BMI = \left(\frac{\text{Weight in Pounds}}{(\text{Height in inches}) \times (\text{Height in inches})} \right) \times 703$$

or

$$BMI = \frac{\text{Weight in Kilograms}}{(\text{Height in Meters}) \times (\text{Height in Meters})}$$

Judge your personal BMI result against the following scale:

- A BMI of less than 18 means you are underweight.
- A BMI of less than 18.5 indicates you are thin for your height.
- A BMI between 18.6 and 24.9 indicates you are at a healthy weight.
- A BMI between 25 and 29.9 suggests you are overweight for your height.
- A BMI of 30 or greater indicates obesity. If you are obese, please consult your doctor about losing weight.

REMEMBER: This is just a scale. Muscle weighs more than fat, so an athletic person may be considered overweight or obese according to this index. It is also important to remember that weight is only one factor related to risk for disease. If you have questions or concerns about the appropriateness of your weight, you should discuss them with your healthcare provider. Source: The Centers for Disease Control and Prevention.

Are your calculations higher than you would like them to be? Do you want to find an exercise option close to home? Check out La Mesa's new Urban Walking Trails.

PERSONAL DISASTER PLAN

There are three common elements of disasters. They are usually unexpected, the emergency services network may be overwhelmed, and the lives and health of people may be in danger. It is important for everyone to make a plan around all of these commonalities.

Transportation, food and water supplies, utilities, and communication systems are some services that may be disrupted during an emergency situation. Consider each of these resources and think about the effect it would have on our lives if these services were compromised. As you do that, gather information to structure your own personal emergency plan and compile a list of supplies to assemble into an emergency supply kit for you and your family.

So how do you prepare for an emergency situation? Have a plan! Obviously you cannot prepare for every potential type of disaster but, depending upon your location, you will know which types of natural disasters will be the most likely. In the San Diego region wildfires are a concern every summer and fall. Assess issues that are pertinent to your family and develop a plan for action.

When putting together your emergency plan, ask the following questions:

1. **How will you get out of your home?**
2. **Who will be responsible for children, elderly relatives, and pets?**
3. **Where will you meet your family?**
4. **How will you communicate with each other if you are separated?**

Make sure you open discussion about emergency preparation with your family. Determine and communicate the plan. Conduct family drills. Determine a contact that lives out of the immediate area, and ask that person to be your lifeline in an emergency situation. Educate appropriate members of your family on how to shut off electricity, water, and gas. It is helpful if all members of your family know basic safety practices.

Personal emergency preparedness allows a measure of independence and confidence in the event of a disaster. Taking the time to develop a plan of action and to compile a few emergency items can mean the difference between panic or control until emergency service teams can reach you during a disaster. Having a plan could make the difference for your family.

The following websites offer more information or you can call the La Mesa Fire Department at 667.1355, or visit www.ready.gov or www.bt.cdc.gov

Coming this fall...

The La Mesa Commission on Aging will present a Community Forum

Emergency Planning, Preparedness, & Neighbor-to-Neighbor Support

Make a note to watch the City website for details as they become available.

TAKE PRECAUTIONS TO PREVENT BURNS

When we think of things in our homes that might cause burns, there are some obvious culprits: curling irons, stoves, radiators and tap water?

As surprising as it sounds, it's true. Each year thousands of emergency room visits are attributed to scalds – injuries caused by hot liquid or steam. Adults often experience mild scalds, perhaps when washing dishes, and quickly adjust the temperature without a second thought. But skin of older adults and children is much more sensitive and can sustain a burn in a matter of seconds.

In an effort to prevent scalds and other painful burns the La Mesa Fire Department and the National Fire Protection Association (NFPA) have teamed up for Fire Prevention Week to help our community "Stay Fire Smart! Don't Get Burned." The public safety campaign, which takes place October 4-10, focuses on burn prevention and treatment, as well as ways to keep your home and family safe from the leading causes of fire.

Simple acts such as setting your water heater's thermostat to no higher than 120 degrees Fahrenheit, and installing "anti-scald" devices on tub faucets and shower heads, can help protect you and your family from scalds. But these measures alone are not enough. Test your water at the faucet using a cooking thermometer to make sure it is no higher than 100 degrees Fahrenheit. Even if your water heater is set no higher than 120 degrees Fahrenheit, use your wrist, elbow, or the back of your hand as your main guide.

Vigilance is key in burn prevention. Always test the water before placing a child or yourself into the tub. The water should feel warm, not hot. Before you put your child in the tub, test the temperature with your wrist, elbow, or the back of your hand. If you're using a thermometer with a read-out, remember that bath water should be no more than 100 degrees.

Of course, tap water isn't the only liquid that can cause burn injuries. Other precautions you can take to keep your family safe from burns include:

- Keep hot foods and liquids away from tables and counter edges so they cannot be pulled or knocked over.
- Never hold a child in your arms while preparing hot food or drinking a hot beverage.
- Teach children that hot things hurt.
- Wear short or close-fitting sleeves when cooking.

All the vigilance in the world may not be sufficient to prevent every single scald or burn. That is why it is also important to know how to treat a burn. Run the burned area under cool water right away for 3-5 minutes and then cover with a clean, dry cloth. If the burn is bigger than your fist or if you have questions, get medical help.

In addition to these important burn prevention strategies, the La Mesa Fire Department is encouraging residents and their families to put their safety first by performing a home hazards inspection during Fire Prevention Week, October 4 - 10. You can download a checklist from www.firepreventionweek.org.

While Fire Prevention Week is an opportune time to practice fire safety in your home, we hope that you will keep these lessons with you year-round and "Stay Fire Smart!"

Please join La Mesa Fire Department as we celebrate Fire Prevention Week on October 10. The celebration will take place between 10:00 am and 2:00 pm at La Mesa Fire Station 11, 8034 Allison Avenue. For more information visit Fire Department pages on the City website or www.firepreventionweek.org.

FALL RECREATION & ENRICHMENT PROGRAMS

Falling into fitness is as easy as enrolling in classes offered through La Mesa Community Services.

Enrollment for fall classes begins August 1.

Browse our weekly youth class selections or our class offerings for adults.

Convenient enrollment is available online or you can access a printable version of our enrollment form to mail in.

Or drop off completed enrollment forms with payment at either the La Mesa Community Center, La Mesa Adult Enrichment Center, or La Mesa Municipal Pool.

Classes fill quickly. DON'T DELAY!

LA MESA MUNICIPAL POOL ANNUAL WINTER MAINTENANCE

The pool and spa will be closed Monday November 23, 2009 through Sunday, January 3, 2010

The La Mesa Environmental Sustainability Committee is pleased to announce the first…

"Our Planet, Our Home"

Environmental Literacy Contest

Students are invited to submit a poem or work of art in which they reflect upon the environment.

The contest is open to youth living or attending schools located within the boundaries of the La Mesa-Spring Valley or Grossmont Union High School Districts. Entrants need not submit work through their school; individual submissions are also accepted.

Sixteen of our entries will be honored for special recognition; two in poetry and two in art for each of four age categories:

Category I — Kindergarten-Grade 2

Category II — Grades 3-5

Category III — Grades 6-8

Category IV — Grades 9-12

Each of these sixteen honored entries will be recognized for achievement by the Mayor at the Sustain La Mesa Environmental Fair September 12, 2009 and displayed in a public exhibit or publication.

Submissions must be received by September 4.

Visit the City website for contest rules and entry form or contact Gregory Humora, Director of Public Works at 667.1146.

ADULT SOFTBALL

(Ages 18 and up)

Leagues forming later this year. Watch for more details in the November issue of the La Mesa FOCUS or leave your contact Information on the Sports Information Line 667.1172 option #6.

FALL WATER POLO

Do you like swimming and team sports? Come learn water polo! Classes Run September through mid-November. Fees are $33 per month for residents and $40 per months for non-residents.

Register at the pool office during office hours Monday through Friday 11:30 am - 6:00 pm.

Questions? Call the Municipal Pool information line at 667.1494.

BACK TO SCHOOL TRAFFIC CONCERNS

Attention: To all school faculty members, parents, and students, there are traffic safety laws that must be followed each and every morning and afternoon when numerous children are being dropped off or picked-up in front of schools. As a reminder, it is illegal for drivers to hold-up the flow of traffic by allowing passengers to enter or exit their vehicle while that vehicle is still in a traffic lane designated for the continued movement of traffic. Not only is this activity unsafe for each and every child involved, it is a violation of California Vehicle Code Section 22400(A). This California Vehicle Code section states that:

"No person shall drive slowly or stop upon a highway so as to impede or block the normal movement of traffic unless the stop is necessary for safe vehicle operation."

In order that we may continue to provide a safe environment for our children when approaching or exiting our schools, the La Mesa Police Department requests voluntary compliance from all parties walking or driving in school areas. Students should exit vehicles on the sidewalk side and not on the traffic side of the vehicle, and students should use crosswalks whenever possible.

To assist with securing and maintaining a safe environment for our schools, the La Mesa Police Department will place uniformed officers at school sites from time to time. Follow the law. Think "Safety First" and "Convenience" a distant second to keep kids safe every day.

BEWARE OF UNLICENSED CONTRACTORS

If you are thinking about remodeling your home or business, beware of unscrupulous contractors. In California, anyone who contracts to perform work that is valued at $500 or more in materials and labor must hold a valid license from the Contractors State License Board.

In order to protect yourself against significant financial and legal consequences in the event of injury or property damage, and to avoid substandard work, be sure you ask to see the contractor's pocket license and some form of identification before you hire. For additional information regarding hiring of a contractor, visit the Contractors State Licensed Board website at www.cslb.ca.gov/Consumers/HireAContractor

THE IMPORTANCE OF KEEPING YOUR DOG LEASHED

Summer is upon us, a time to enjoy our spacious parks for barbeques, kite flying, and a plethora of other summer activities. Summer is fun for our canine companions too. The nice weather allows more opportunities for them to enjoy the City of La Mesa with their human counterparts. Keep in mind; however, that the City of La Mesa does enforce a leash law throughout the City. Our canine friends must be on leash whenever they leave their property. It is illegal to have your dog off leash in any City park unless specifically designated. This law is important to keep you and your dog safe, as well as other people and dogs around you. A leash can protect your dog from running into traffic if spooked or chasing a squirrel, prevent a dog fight, or keep your dog away from something that is not good for them to eat. Per La Mesa Municipal Code 8.04.130 it is illegal for your dog to be running at large, so keeping your dog on leash also prevents you, the dog owner, from receiving a costly citation to appear in court. The fenced off-leash dog area at Harry Griffen Park does provide a space where your dog can run off leash and socialize with other dogs. While enjoying the summer weather make sure when you pack the Frisbees and barbeque supplies; don't forget your dog leash!

8TH ANNUAL

Kids Care Fest

Saturday, September 26 • 9:00 am – 2:00 pm

Briercrest Park and Grossmont Healthcare District
9001 Wakarusa Street, La Mesa

A FREE event for kids and parents!

- health information
- fun zone
- children's fingerprinting
- health screenings
- art activities
- meet fire & police

Event is presented in partnership with the City of La Mesa, Grossmont Healthcare District, and La Mesa Park & Recreation Foundation

For additional details go to
www.cityoflamesa.com, OR www.grossmonthealthcare.org
or call 825.5050

La Mesa is a...

2009 PLAYFUL CITY USA

On July 13 KaBOOM! named the City of La Mesa a 2009 Playful City USA. La Mesa is one of 93 communities in 33 states to receive this honor and one of only 32 to receive this designation for the second year in a row.

Designation as a Playful City USA community recognizes La Mesa's demonstrated creative commitment to bringing play into children's lives, most specifically in the areas of quantity, quality, and access. Quality relates to the number of usable, open playspaces. Quality involves subjective factors that encourage repeated use and make playspaces engaging, exciting, interesting, and fun. Access entails the ability to get to a playspace (roads, trails) and a lack of barriers to the playspace (cost, safety, traffic, locked gates, equity).

The City's partnership with the La Mesa Park and Recreation Foundation (LMP &RF) is just one of the creative ways our City is enhancing play. This past year the LMP&RF launched the It's Child's Play campaign to raise $1 million dollars to refurbish five La Mesa playgrounds over the next five years. Information about this project is available on the City's website. Join the City, LMP&RF, and Grossmont Healthcare District as we celebrate KaBoom!'s National Play Days Initiative on September 26 at Kids Care Fest.

CURB PAINTING IN LA MESA

It has come to the attention of City staff that a few unlicensed businesses are soliciting curb painting services in various La Mesa neighborhoods. The notice from the companies indicates they will paint your street number on the curb for a small fee or donation.

Curb Painters are regulated by the City of La Mesa and must abide by the requirements detailed in the Municipal Code. Individuals and businesses are required to have a business license issued by the City of La Mesa in order to sell services door-to-door within the City. Non-profit organizations are not exempt from this requirement.

The City regulates the number, size, and paint specifications. These curb painters must present their business and paint specifications to be approved by the City Council. There have been no approved plans submitted at this time.

For more information, or to inquire about a curb painter, please call the Finance Division at 667.1118 between the hours of 7:30 am and 5:30 pm. When leaving a message after hours, please include the company's name, time and location of the occurrence, and the product or service being offered. Alternately, you may submit the information electronically through our website under the Report a Problem link at www.cityoflamesa.com. If you are harassed or are concerned about a solicitor, please call the La Mesa Police Department at 667.1400.

THANK YOU FOR YOUR HELP IN LOCATING UNLICENSED BUSINESSES!

Teaming Up to Bring You Intergenerational Games!

INTERGENERATIONAL GAMES
EVERYONE'S A WINNER!

The City of La Mesa, in partnership with the East County Action Network and AARP, announce the Annual East County Intergenerational Games event in La Mesa! The games take place Friday, October 9 from 9:30 am – 12:30 pm at the La Mesa Middle School athletic fields. Intergenerational Games teams up active adults age 55+ with local students for a fun-filled half-day event. Participants complete a circuit of physical activity games and knowledge challenges. The focus is on non-competitive fun, activity, wellness, and healthy lifestyles.

Active adults age 55+ and La Mesa/Spring Valley students in grades 4 through 6 are encouraged to sign up for this fun FREE event! It's a great way to get the kids active during the fall school break. For information and registration call the La Mesa Community Center at 667.1300 or the Adult Enrichment Center at 464.0505.

Partners include: City Of La Mesa, East County Action Network (ECAN), AARP, La Mesa Commission on Aging, County of San Diego Aging & Independence Services, La Mesa-Spring Valley School District, La Mesa 55+ Senior Softball League, and many other community partners and business sponsors. For sponsorship opportunities call Judy Stern, Human Services Manager, at 667.1490.

PARK APPRECIATION DAY

Saturday, Oct 24
8:00 am to 12:00 noon

Individuals and families are invited to pick a La Mesa park on Saturday morning, October 24, sign up with an Adopt-a-Park volunteer (visible in a Park Appreciation Day t-shirt) and help spruce up your favorite neighborhood park. General clean up includes picking up trash, light raking, trimming, and weeding.

If you have a large group, we can help you find a project that all your members can do! Give us a call at 667.1300.

Bring your own gloves, rakes, or trowels. Free t-shirts for all participants. Signed waivers are required – download from www.cityoflamesa.com and bring with you to the park. Parents must accompany children under age 18 unless with a supervised group.

La Mesa's Parks are Our City's Jewels, Help Make Them Shine!

HALLOWEEN SAFETY

Fall is quickly approaching which means it is time for back to school and time to start thinking about those Halloween plans! In addition to the scary costumes, decorations, and treats, citizens need to take proper measures to ensure Halloween is safe for everyone in the neighborhood. Following is a list of precautions that should be utilized when making your Halloween plans:

First: Prepare your home for trick-or-treaters.

- Your home should be well-lit and appear that visitors are welcome.
- Make sure that all hazards are cleared from your yard and porch. This includes tools, debris, overgrown brush, and vehicles. If you choose to decorate your yard, make sure that a path to the front door is clearly defined and free of tripping hazards.
- Don't leave windows or doors open when you are not in the room. Busy streets and excitement are also an opportunity for a criminal to move around undetected. Secure your home as if you were leaving for the evening. Only open the front door for trick-or-treaters.
- Employ Neighborhood Watch volunteers to "haunt" the neighborhood. Extra sets of eyes and ears will help ensure this Halloween is a safe one for you and the trick-or-treaters roaming the neighborhood.

Next: Prepare children by dressing them appropriately and reviewing safety rules.

- Try makeup instead of masks; it's more comfortable and doesn't obstruct vision the way masks can.
- Check to ensure that costumes are flame-retardant so that trick-or-treaters are safe around jack-o-lanterns, candles, and other flames.
- Look for brightly colored costumes, attach reflector strips to costumes and bags, and remind trick-or-treaters to carry glow sticks and flashlights.
- If a costume involves any sort of fake weapon, make sure that it is made of a flexible material such as cardboard or foam. Or, avoid the whole problem of weapons by challenging your child to design a costume without one.
- Never allow your child to carry an air-soft gun or other toy weapon that appears real.
- Remind everyone to stay on sidewalks and obey traffic signals.
- Encourage children to stay in familiar neighborhoods and only approach homes that are well lit.
- Someone in the group should carry a cell phone to call home or 911 in case of emergency.
- Young children of any age should be accompanied by an adult.
- Parents should know where their children are going before they leave the house.
- Older kids should trick-or-treat in groups; kids walking around alone are never as safe as those in groups, especially at night. Younger kids should be accompanied by a parent or other trusted adult.
- Have a plan if children get separated from their friends or from you.
- Remind your children not to enter strange houses or cars.
- Make a rule that no candy is to be consumed until trick-or-treaters get home.

Once the festivities come to an end remember that the treats still need scrutiny before anyone eats them. It is unlikely the candy will have been tampered with, but it is always better to be safe than sorry. Be especially wary of anything that is not factory wrapped or treats that are no longer sealed.

If you or your children witness anything dangerous or suspicious, call the La Mesa Police Department non-emergency number at 667.1400. Please use 9-1-1 for emergencies only.

For more information on La Mesa Crime Prevention programs visit the Police Department pages on the City website or call 667.1445.

More information available regarding Halloween Safety can be found at the following websites:

www.childrensafetyzone.com

www.ncpc.org

AVOID THE CLOG BY ELIMINATING FOG

Did you know that improper disposal of fats, oils and grease (otherwise known as FOG) into the wastewater system is the leading cause of sewer backups? When put down the drain, FOG can accumulate in collection pipes causing backups into homes and businesses negatively impacting the environment. To comply with state and federal mandates the City of La Mesa has implemented a Fats, Oils, and Grease Control Program to prevent FOG from entering the City's sewer system.

FOG enters the sewer system from homes, as well as from poorly maintained grease traps and interceptors in restaurants and other businesses. Help protect the environment by doing your part to keep FOG out of the sewer system.

Here are a few tips:

- Never pour grease, cooking oil or fat down the sink. Instead pour into an empty jar or coffee can with a secure lid and allow liquid to solidify before throwing away.
- Wipe out greasy pots and pans with a paper towel before doing the dishes.
- Scrape grease and food scraps from cooking surfaces, plates, pots and pans and utensils into a can or the trash for disposal.

GET THE FAQS ABOUT THE CITY'S FOG PROGRAM

What is FOG?

FOG is short for fats, oils, and grease. FOG is created during food preparation and typically ends up in City sewer pipes.

Who has to comply with the City's new FOG requirements?

Restaurants and businesses that prepare food must obtain a FOG discharge permit and be inspected annually.

What do I have to do to comply with the City's FOG Program requirements?

- Complete the FOG Discharge Permit application form (available on-line) and submit to the City of La Mesa along with the appropriate permit and inspection fee.
- The City will schedule an annual inspection of your business to discuss program implementation requirements and enforcement.
- Implement appropriate kitchen best management practices (BMPs) to ensure compliance.
- Install and maintain an appropriate FOG control device and meet all record keeping and reporting requirements of the program.

Who should I call if I have questions or would like more information about the program?

Please contact the City of La Mesa at 667.1166 for information about FOG discharge permit and inspection requirements and for general questions about the City's FOG program.

Information for People Living in San Diego County from the Centers for Disease Control and Prevention – Swine Flu

WHAT IS SWINE FLU?

H1N1 influenza, also known as swine flu, is a new strain of flu that has not previously been seen in the United States. Swine flu has been seen in the United States before, but not this strain, which is caused by type A influenza viruses. Outbreaks of swine flu happen regularly in pigs. People do not normally get swine flu but human infections can and do happen.

Are humans infected with H1N1 flu in San Diego County?

In late March and early April 2009, cases of human infection with H1N1 flu were first reported in Southern California and near San Antonio, Texas. At this time, human cases of H1N1 flu infection have been reported in San Diego County. CDC and local and state health agencies are working together to investigate this situation.

Are there going to be more cases?

More cases are anticipated because health care providers have been put on alert and heightened surveillance to help identify patients with flu-like symptoms.

Is this flu virus contagious?

CDC has determined that this virus is contagious and is spreading from human to human.

We have an entire flu season every year; why is there so much concern about this flu?

Yes, we do have flu in our communities throughout the year with a definite increase in flu during the, "flu season." As a matter of fact, approximately 35,000 people die nationally in any given year from the seasonal flu. What is different is this flu strain is new; therefore, the current seasonal flu vaccine does not protect against it and people have not built up any immunity to it yet. Also, because it is new, our medical community really doesn't know how our bodies will physically respond to it.

What if I got my seasonal flu shot?

This H1N1 influenza virus currently circulating has never been seen before and the vaccine you received for your seasonal flu shot will not protect you. Also, any vaccinations received for swine flu previously (there was an outbreak in 1976) would not provide immunity as this virus is a different strain. There is no vaccine currently available to protect against swine flu.

What are the signs and symptoms of H1N1 flu in people?

The symptoms of H1N1 flu in people are similar to the symptoms of regular human flu and include fever, cough, sore throat, body aches, headache, chills, and fatigue. Some people have reported diarrhea and vomiting associated with swine flu. In the past, severe illness (pneumonia and respiratory failure) and deaths have been reported with swine flu infection in people. Like seasonal flu, H1N1 flu may cause a worsening of underlying chronic medical conditions.

How serious is H1N1 flu infection?

Like seasonal flu, H1N1 flu in humans can vary in severity from mild to severe. Between 2005 until January 2009, 12 human cases of swine flu were detected in the U.S. with no deaths occurring. However, swine flu infection can be serious. In September 1988, a previously healthy 32-year-old pregnant woman in Wisconsin was hospitalized for pneumonia after being infected with swine flu and died eight days later. A swine flu outbreak in Fort Dix, New Jersey occurred in 1976 that caused more than 200 cases with serious illness in several people and one death.

But I have heard that in the recent cases, people in the United States just get flu-like symptoms?

Yes, so far in the United States most people have had regular seasonal flu-like symptoms and recover. However, in Mexico numerous people were hospitalized and there have been deaths, so we are watching and preparing for that possibility here in the United States.

How do you catch swine flu?

Spread of swine flu can occur in two ways:

- Through contact with infected pigs or environments contaminated with swine flu viruses.
- Through contact with a person with swine flu. Human-to-human spread of swine flu has been documented and is thought to occur in the same way as seasonal flu. Influenza is thought to spread mainly person-to-person through coughing or sneezing of infected people.

Are there medicines to treat swine flu?

Yes. CDC recommends the use of oseltamivir or zanamivir for the treatment and/or prevention of infection with these swine influenza viruses. Antiviral drugs are prescription medicines (pills, liquid or an inhaler) that fight against the flu by keeping flu viruses from reproducing in your body. If you get sick, antiviral drugs can make your illness milder and make you feel better faster. They may also prevent serious flu complications. For treatment, antiviral drugs work best if started soon after getting sick (within two days of symptoms).

How long can an infected person spread H1N1 flu to others?

People with H1N1 influenza virus infection should be considered potentially contagious as long as they are symptomatic and possibly for up to seven days following illness onset. Children, especially younger children, might potentially be contagious for longer periods.

What can I do to protect myself from getting sick?

There is no vaccine available right now to protect against H1N1 flu. There are everyday actions that can help prevent the spread of germs that cause respiratory illnesses like influenza. Take these everyday steps to protect your health:

- Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it.
- Wash your hands often with soap and water, especially after you cough or sneeze. Alcohol-based hand cleaners are also effective.
- Try to avoid close contact with sick people.
- If you get sick with influenza, CDC recommends that you stay home from work or school and limit contact with others to keep from infecting them. Avoid touching your eyes, nose or mouth. Germs spread this way.

Continued on 16

Continued from page 15

What is Swine Flu?

What should I do if I get sick?

If you live in San Diego County and become ill with influenza-like symptoms, including fever, body aches, runny nose, sore throat, nausea, or vomiting or diarrhea, you may want to contact your health care provider, particularly if you are worried about your symptoms. Your health care provider will determine whether influenza testing or treatment is needed.

If you are sick, you should stay home and avoid contact with other people as much as possible to keep from spreading your illness to others.

If you become ill and experience any of the following warning signs, seek emergency medical care.

In children emergency warning signs that need urgent medical attention include:

- Fast breathing or trouble breathing
- Bluish skin color
- Not drinking enough fluids
- Not waking up or not interacting
- Being so irritable that the child does not want to be held
- Flu-like symptoms improve but then return with fever and worse cough
- Fever with a rash

In adults, emergency warning signs that need urgent medical attention include:

- Difficulty breathing or shortness of breath
- Pain or pressure in the chest or abdomen
- Sudden dizziness
- Confusion
- Severe or persistent vomiting

Can I get swine influenza from eating or preparing pork?

No. Swine influenza viruses are not spread by food. You cannot get swine influenza from eating pork or pork products. Eating properly handled and cooked pork products is safe.

Is travel to Mexico restricted?

At this time, the CDC recommends that U.S. travelers avoid all nonessential travel to Mexico.

Is anything being done at the border?

There is increased surveillance at the border. Customs and Border Patrol agents are instructed to send travelers who appear ill with flu-like symptoms to a secondary screening. Any decision to restrict travel at the border lies with the federal government.

CDC H1N1 Flu Information

This information was reprinted with permission from the County of San Diego Office of Media and Public Affairs. Visit the San Diego County website for local updates on the H1N1 flu virus.

More Headroom for La Mesa

PROGRESS UPDATE

Work continues on several of the City's six approved underground districts.

In early spring construction to put overhead cabling underground began along Parkway Drive and Orien Avenue.

At this time, all underground conduit and street improvements for the Parkway Drive district (Marengo Avenue to Lambda Lane) have been installed. The work to pull all cabling connecting residents and businesses being served within the district and removing existing poles and overhead cabling are all that remain. A timeline of one year is anticipated for closeout of the project.

For the Orien Avenue district, Lowell Street to Phoenix Drive, installation of new underground cabling is partially complete and work to pull remaining cables and remove old overhead poles and cables is anticipated completed by the end of Summer.

Finally, the Massachusetts Avenue and Waite Drive districts are one step closer to reality. All necessary easements have been acquired to allow for finalizing the project design. Work in this district is anticipated to begin in the fall.

Stay tuned, there's more work to come!

Thank you for your patience.
The end result will be well worth the wait.

COMMINGLED RECYCLING DO'S AND DON'TS

RECYCLING DO	RECYCLING DON'T
Scrap paper, junk mail and envelopes	*Disposable plates and cups*
Gift paper	*Paper napkins, towels, facial tissues*
Cardboard product packaging	*Soiled cardboard (pizza box bottoms)*
Magazines and newspapers	*Paper milk & juice cartons*
Telephone books	*Wax paper*
File folders	*Drinking glasses & mirrors*
Post-it notes	*Ceramics*
Shredded paper (in a paper bag)	*Plastics other than no. 1 & 2*
Cans and bottles	*Food wrappers*
Glass jars	*Plastic Bags**
Steel cans	*Styrofoam*
All no. 1 & 2 plastics	*Electronics***

It's important to keep our recycling stream clean and free of non-recyclable materials. Please remember the recycling basics and visit www.cityoflamesa.com for more recycling information and options.

** Clean plastic bags can be recycled at grocery stores and large retailers*
*** Electronics can be recycled at the EDCO Station buyback center*

For more recycling information see "Do the Right Thing" in this issue of the FOCUS.

WIPES CLOG PIPES

Did you know that not all, "flushable" wipes are really flushable? Despite that claim, many are not suitable for flushing and can snag in pipes and cause clogs in the sewer system.

While many personal care, diaper, and home cleaning wipes advertise that they are "flushable," testing shows this doesn't mean that they disappear. Two different "flushable" wipes were compared to regular toilet paper in a water test and only the toilet paper disintegrated quickly. After an hour of soaking, one wipe began to dissolve, but not completely until torn apart and the other did not degrade at all. When these wipes are flushed they can clog the sewer pipes, blocking the flow of waste water. Please exercise caution when disposing of anything in the toilet!

GREEN AUTOMOTIVE TIPS FOR THE HOME MECHANIC

The home mechanic can be a green mechanic. There are lots of ways to properly dispose of or recycle automotive materials and fluids. **Here's how:**

USED OIL

There are nine certified collection centers in La Mesa that take oil for recycling and will pay you 16¢ a gallon for your used oil.

OIL FILTERS

Five of the certified collection centers also accept oil filters for steel recycling.

TIRES

Tires can be recycled at four tire centers in La Mesa. Find them now at www.cityoflamesa.com.

ANTIFREEZE

Antifreeze can be disposed of through several businesses in the area as well as La Mesa's household hazardous waste program. Visit our website for more information or use the search feature at www.wastefreesd.org to find the nearest location.

MISCELLANEOUS PARTS

Automotive parts and bodies can be taken to various businesses near La Mesa for scrap or rebuilding and reuse. Find them at www.wastefreesd.org.

STAY UP-TO-DATE

ON IMPORTANT CITY NEWS, EVENTS, AND SERVICES.

Through the City's Notify Me website service you can subscribe to one or more categories of information and have email alerts sent to you whenever special announcements are made in your categories. Use the button at the left to sign up for this service. Enter your email address, select the type of email you would like to receive (html or text) and select each email list you wish to subscribe to. Finally, click the Subscribe/Manage button. You will receive a confirmation email for each category you select.

RECYCLING'S HERE TO STAY

The amount of debris being trucked to our landfills is steadily declining and our recycling numbers are growing. La Mesa has met and exceeded California's 50% diversion mandate by diverting at least half of what we've been discarding away from the landfills since 2005. These materials are diverted by recycling, reuse, and proper disposal of hazardous waste. Here are some diversion program highlights:

Commingled Recycling – All single-family, multi-family and commercial recycling is collected together in containers and sorted later by EDCO Disposal, the City's waste and recycling hauler. There is no need to separate recyclables from each other before collection.

Recycling in Public – All City facilities and parks, as well as the Downtown Village, have recycling containers for public use.

Mandatory Recycling – The majority of commercial properties, businesses, and multifamily complexes are now in compliance and are recycling.

Electronics Recycling – EDCO Station at 8184 Commercial Street has been certified as an electronics recycling facility. All electronics are accepted there at the recycling buyback center during operating hours (Monday-Saturday, 8:00 am to 4:00 pm). Fees may apply to certain devices. Call 619.466.3355 for more information.

Household Hazardous Waste – Materials that should not be taken to landfills such as paint, chemicals, mercury, fluorescent bulbs, medical sharps, and propane can be disposed of through the City's HHW facility. See "Do the Right Thing" in this issue of the FOCUS or visit our website at www.cityoflamesa.com/hhw for more information.

Construction and Demolition Debris – Since 2007 construction projects have been required to recycle 75% of leftover materials. This is the largest growing segment of the recycling stream.

KEEP UP THE GOOD WORK LA MESA!

All of these efforts are making a difference as we aim to continue to improve and minimize our landfill needs.

What Can You Do For a Bee Problem?

In recent weeks, the La Mesa Police Department and the La Mesa Fire Department have received numerous calls of bees and bee hive sightings. The City recommends that residents call a local bee keeper or exterminator to take care of a bee problem on private property.

If there is a bee problem on City property, please call the Public Works Department at 667.1450. The La Mesa Police Department and La Mesa Fire Department will only respond to medical emergencies.

There is additional information about bees available from the County of San Diego.
Call the Bee Info Hotline at 800.200.2337 or visit the County's website at the following link:
http://www.co.san-diego.ca.us/cnty/cntydepts/landu.

DO THE RIGHT THING

Did you know that household hazardous waste (HHW) disposal is FREE for La Mesa residents for the following items?

Batteries
Fluorescent lights
Latex & oil based paints
Solvents & cleaners
Pesticides & garden products
Pool products
Propane
Any items labeled flammable, hazardous, toxic, or corrosive.

Electronics
TVs
Computer monitors & hardware
Cell phones & telephones
MP3 players
VCRs
Radios
Automotive batteries
Used oil & filters
Antifreeze

These items are considered hazardous and are not allowed to be placed in the trash because of their destructive effect on the environment. If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

Collection events are available by appointment only by calling EDCO at 287.5696 x.4270 or emailing to lmhhw@edcodisposal.com.

Medical sharps (needles) can also be disposed of through this program. They must be properly secured in a sharps container. Call 667.1338 or visit our website at www.cityoflamesa.com/hhw for more information.

E-waste can be recycled at the EDCO Station buy back center during business hours without an appointment. The center is open Monday through Saturday from 8:00 am to 4:00 pm. A small fee may apply to some items.

To request additional information about the program, please contact the Department of Public Works Environmental Services Division at 667.1338 or by email at envirosvcs@ci.la-mesa.ca.us. For general HHW information or other disposal and recycling options, visit www.cityoflamesa.com/hhw.

UPCOMING DATES ARE:

August 29 October 10 November 21

Recycle at La Mesa's City Parks

Recycling in La Mesa is easier than ever! Thanks to funding from the California Department of Conservation's Division of Recycling we have over 50 recycling containers located at every City park.

Containers have covered lids, clearly visible signs, and they are located near existing unmarked trash cans. Materials collected are part of the City's commingled recycling program. This means that all recyclable materials go into one container- aluminum, plastic, glass, paper, and cardboard. We encourage all users of the parks to take advantage of this opportunity to take care of the environment!

2009 HISTORIC HOMES TOUR

Save the date and join in the fun!

La Mesa will hold its fourth annual Historic Home Tour on Saturday, November 7 from 10:00 am to 3:00 pm. Presented by the La Mesa Historical Society and co-sponsored by the Historic Preservation Commission of the City of La Mesa, the tour will feature homes that helped make La Mesa what it was and is today. The tour highlights five La Mesa historic homes and one historic church. All tour properties are carried in the City's Inventory of Historic Resources and three are designated landmarks.

Due to limited parking and vehicle access for most of the tour homes, free shuttle buses will operate from the Tour Center at the corner of Palm and Lemon Avenues in the downtown Village of La Mesa. Shuttle parking is available adjacent to the Tour Center and in City lots.

An art show co-sponsored by La Mesa's Foothills Art Association will display original art by local artists with works available for sale. Each site will feature artists displaying their works throughout the grounds. The Tour Center will also feature historical displays, antique automobiles, and sources of information for other special events in East County.

Tickets purchased the day of the event will be $15 for La Mesa Historical Society members and $18 for non-members. Pre-sale tickets at $12 for La Mesa Historical Society members and $15 for non-members are available by telephoning 465.1883 until November 2. Pre-sale tickets may be picked up at the event.

FASHION ROCKS THE EAST

Raising Funds for Pageant Scholarship

The Miss La Mesa and Miss Santee pageants will hold their inaugural fashion show fundraiser "Fashion Rocks the East" benefiting the Miss La Mesa and Miss Santee Scholarship Fund. The fashion show will be held Sunday, August 9 at the La Mesa Community Center beginning at 2:00 pm. The event features live music from Ramshackle and wardrobe provided by Prevue, Act II, Sara's Selections, and Sentimental Fashions just to name a few.

Tickets are $20 each and include a dessert reception and silent auction in addition to the show. The event is open to the public. Pre-ordering tickets is recommended. Tickets at the door are first come first served. To order tickets, donate, become a sponsor, or for information please contact Alexandra Kuty, Pageant Director, at 698.4163 or via email misslamesapageant@yahoo.com.

COUNCIL ACTIONS

April 14, 2009
Adopted a resolution amending Section 12.64.010 of the La Mesa Municipal Code establishing a 25 mph speed limit for La Mesa Boulevard from El Cajon Boulevard to University Avenue (E) and retaining the existing 35 mph speed limit from University Avenue (E) to Interstate 8.

Adopted ordinances adding a new Chapter 17.24 to the La Mesa Municipal Code for purposes of establishing regulations related to a fats, oils, and grease control program and amending Chapters 17.08 and 17.20 to establish regulations necessary for compliance with the State Water Resources Control Board requirements.

Approved the acceptance of the San Diego Police Foundation Canine Unit Expansion Grant for a narcotics detection canine, required equipment, and training.

Adopted a resolution authorizing the City to use American Recovery and Reinvestment Act Funds of 2009 in the amount of $991,000 for construction of the Downtown Village Streetscape Improvement Project.

April 28, 2009
Adopted resolutions authorizing applications for Transportation Development Act – Transnet program funds for the City's Bicycle Master Plan ($75,000); Spring Street freeway crossing pedestrian and bicycle facilities ($500,000); Spring Street and High Street intersection improvements ($138,000); and La Mesa Boulevard - El Cajon Boulevard intersection improvements ($465,000).

Approved General Plan Amendment GPA-08-01 and Zone Reclassification Z-08-01 for an amendment to the La Mesa General Plan to change the land use designation of property located north of El Cajon Boulevard on the east side of Thorne Drive from "Mixed Density Residential" (7-23 dwelling units per acre) to "Mixed Use Urban" (24-40 dwelling units per acre) land use. Also approved a corresponding zone reclassification from the R3 (multiple unit residential) zone to the R3-MU (multiple unit residential/mixed use overlay) zone.

Adopted the Fee Schedule for fiscal year 2009-2010.

May 12, 2009
Ratified the Design Review Board's approval of DRB-09-02 (Addy Investments) for a proposal to demolish a single family residence and construct two new detached dwellings with garages at 4851 Palm Avenue.

Ratified the Design Review Board's approval of DRB-09-06 (Toys R Us) for proposed exterior alterations to an existing retail store at 8790 Grossmont Boulevard.

Ratified the Design Review Board's approval of DRB-08-03 (Mansour) for a proposed two-story commercial/retail building on a vacant site addressed as 5980 Severin Drive.

May 26, 2009
Adopted a resolution authorizing reapplication for a Playful City USA designation in 2009 as part of the City's continuing Wellness Initiative.

Adopted a resolution authorizing an agreement with Walk San Diego for implementation of the La Mesa Kids Walk & Roll to School Safe Routes to School Grant Program.

Adopted a resolution approving the La Mesa Park and Recreation Foundation's recommendation to revamp Jackson Park Playground and name it "Drew Ford Family Playground."

Adopted a resolution accepting a Safe Routes to School grant and waiving formal bid procedures to award a contract for design of the Glen Street Sidewalk Project to PBS&J.

Adopted a resolution approving a proposed residential care facility for the elderly and a skilled nursing facility located at the northeast corner of State Route 125 and Murray Drive, adjacent to Briercrest Park; ratified the Design Review Board's approval of DRB-09-05; and adopted a resolution approving an agreement to ground lease property between the City and Briercrest Development, L.P.

Adopted a resolution awarding Bid No. 08-29 to Ideal Electric for the Aztec Park Lighting Project.

Approved the replacement of paper copies of City Council agenda packets with electronic packets.

June 9, 2009
Adopted a resolution accepting bid of Anton's Service, Inc. and awarding a contract for Bid 08-37, construction of Orien Avenue and Lowell Street sidewalk improvements.

Adopted a resolution authorizing Program Supplement Agreement No. 009-N for traffic signal improvements at the intersection of Lake Murray Boulevard and Baltimore Drive.

Adopted a resolution authorizing Program Supplement Agreement No. 010-N for the La Mesa Kids Walk and Roll to School Safe Routes to School non-infrastructure grant project.

Adopted an ordinance adding Chapter 2.85 to the La Mesa Municipal Code establishing the La Mesa Environmental Sustainability Commission.

June 23, 2009
Adopted the preliminary Biennium Budget for 2009-2011.

Adopted a resolution authorizing the filing of a grant application from the Energy Efficiency and Conservation Block Grant Program to convert city street lights to broad spectrum lighting technology.

Adopted a resolution authorizing an agreement with Island Fitness Express, DBA Fit-X San Diego, for the implementation of a fitness walking program utilizing the urban walking trails in La Mesa.

Adopted a resolution authorizing the City Attorney to cooperate with the League of California Cities, other cities, and counties in litigation challenging the constitutionality of any seizure by the State Government of the City's street maintenance funds.

Adopted a joint resolution of the City Council and the La Mesa Community Redevelopment Agency authorizing the City Attorney/Redevelopment Agency General Counsel to cooperate with the California Redevelopment Association, other cities and counties in litigation challenging the constitutionality of any seizure by the State Government of redevelopment funds.

Adopted a resolution approving rate adjustments for EDCO Disposal Corporation for the collection of refuse and recyclables for the two-year period beginning July 1, 2009.

La Mesa Joins El Cajon and Lemon Grove to Provide Cooperative Fire Services

In an historic endeavor, the cities of La Mesa, El Cajon and Lemon Grove will provide cooperative fire services through a Joint Exercise of Powers Agreement (JPA) which was approved by all three city councils and signed on October 15, 2009. The JPA will provide for the oversight of fire operations in all three agencies under one shared management structure. This will result in more efficient use of resources, better delivery of service to the public, and cost savings of over $500,000 annually.

(l to r) Fire Chiefs Dave Burk of La Mesa, Mike Scott of El Cajon, and Tim Laff of Lemon Grove

CITY RECEIVES PRESTIGIOUS HELEN PUTNAM AWARD

La Mesa earned a prestigious 2009 Helen Putnam Award for Excellence in the category of Health and Wellness Programs for its "ready, set... Live Well" community wellness initiative.

On September 17 at the annual League of California Cities Conference in San Jose; the City of La Mesa was presented the 2009 Helen Putnam Award for Excellence in the category of Health and Wellness Programs for "ready, set…..Live Well" a community wellness initiative.

Established in 1982, this program recognizes 10 outstanding cities that deliver the highest quality and level of service in the most effective manner possible. Helen Putnam was a dedicated parent, teacher, principal, mayor, and county supervisor who viewed meeting one's potential as the greatest measure of success. To her, excellence was defined as people doing their best. The League of California Cities recognized that Ms. Putnam epitomized the best definition of excellence in her years of public service and named this Award of Excellence in her honor.

ORIEN AVENUE WALKABILITY IMPROVEMENTS

New sidewalks have been constructed along the southeast corner of Helix Charter High School. Thanks to a state funded Safe Routes to School grant, construction of curb, gutter, sidewalk, new paving, storm drain improvements, landscaping, irrigation, and street lights have been added to improve walkability in this area.

This project provides an improved pedestrian linkage from the west boundary of the school on Orien Avenue to the intersection of Lowell Street and Normal Avenue. Filling this sidewalk gap enhances the safety aspect for children walking to La Mesa Dale Elementary School, La Mesa Middle School, Highwood Park, and the Teen Center by physically separating and increasing the distance between pedestrians and vehicular traffic.

The improvements on Orien Avenue compliment other work recently completed in the area. The other work includes: undergrounding of overhead utilities, replacing a storm drain on Lowell Street, and improving the high school's student parking lot. Grant funding for this project was awarded based on results of a study known as CX3 – Communities of Excellence in Nutrition, Physical Activity and Obesity Prevention that began in 2007. You can read more about CX3 in the May 2008 issue of the La Mesa FOCUS. Six different agencies collaborated on and contributed resources to this project: Helix Charter High School, Grossmont Union High School District, San Diego Gas & Electric, AT&T, Cox Comunications, and the City of La Mesa.

SPRING RECREATION AND ENRICHMENT PROGRAMS

Springing into fitness is as easy as enrolling in classes offered through La Mesa Community Services.

Enrollment for spring classes begins December 1.

Browse our weekly youth class selections or our class offerings for adults.

Convenient enrollment is available online or you can access a printable version of our enrollment form to mail in.

Or drop off completed enrollment forms with payment at either the La Mesa Community Center, La Mesa Adult Enrichment Center, or La Mesa Municipal Pool.

Classes fill quickly. DON'T DELAY!

It's not too late to enroll for Fall classes starting in November. Details are available on the City's website.

2009 HISTORIC HOMES TOUR

The La Mesa Historical Society and the Historic Preservation Commission of the City of La Mesa will present the fourth annual Historic Home Tour on Saturday, November 7 from 10:00 am to 3:00 pm. The tour features five homes and one church that helped make La Mesa what it was and is today. Three of the tour properties are designated landmarks and all are carried in the City's Inventory of Historic Resources.

Free shuttle buses will operate from the Tour Center at the corner of Palm and Lemon Avenues in the downtown Village of La Mesa. Shuttle parking is available adjacent to the Tour Center and in City lots.

Tickets purchased the day of the event will be $15 for La Mesa Historical Society members and $18 for non-members. Pre-sale tickets at $12 for La Mesa Historical Society members and $15 for non-members are available by telephoning 619.465.1883 until November 2. Pre-sale tickets may be picked up at the event.

"ARJIS" CRIME MAPPING

The Automated Regional Justice Information System, or "ARJIS" is a great crime information resource for all San Diego County residents. One of the features you may want to check out is the crime mapping program, which you can access from the ARJIS website home page at www.arjis.org. It can also be reached through a link on the City of La Mesa's website.

The crime mapping feature can provide you with a picture of the crime activity in your neighborhood, the area where you work, where your children go to school, etc., and includes data for all of San Diego County. Once you have selected the crime mapping feature from the ARJIS home page you will go through a series of steps to define the area you want to check, how you want to search (such as by address, Zip code, etc.), what type of crime or crimes you want to see displayed, and the time frame that you would like to check. Once the map is displayed you can use other features of the program to get more detailed information on particular incidents.

The ARJIS crime mapping program is an easy way to check crime activity in the areas you are interested in and can be a valuable tool for you, your family, your Neighborhood Watch Group, or co-workers. We encourage you to try it out.

Holiday DUI checkpoints are made possible through a grant from the California Office of Traffic Safety.

HOLIDAY DUI ENFORCEMENT

During the upcoming holiday season the La Mesa Police Department will again focus enforcement efforts to detect and arrest suspected intoxicated drivers. Each year 30% to 40% of all traffic fatalities are alcohol related, totaling about 1,500 deaths in California each year.

As part of the enforcement efforts officers will conduct driving under the influence or DUI checkpoints at various locations throughout the City. The checkpoints are not only an enforcement tool but also serve as an educational opportunity for the community to inform drivers of the dangers of driving while under the influence of alcohol or drugs.

One important aspect of the checkpoints is to inform the public that a person does not have to be "drunk" to be guilty of driving under the influence of alcohol. A relatively small amount of alcohol will impair a person's driving abilities, even though they may feel unaffected. A person is legally in violation of the law with a blood/alcohol concentration level of .08%, potentially only two or three drinks an hour depending on body weight and other factors.

The La Mesa Police Department arrests more than 200 people each year for driving under the influence. There are significant costs associated with being arrested and convicted for driving under the influence of alcohol. In addition to attorney fees, fines average from $1,400 to $1,800, and driver's license suspension for at least six months; there is a mandatory two-day jail sentence, and car insurance rates will likely double or triple for up to five years.

The Police Department was recently awarded a grant from the California Office of Traffic Safety for $115,000 to specifically target suspected intoxicated drivers. A similar grant awarded last year provided funds for the Police Department to purchase a DUI trailer. This trailer allows for the storage of equipment, provides workspace for officers at the checkpoints, and provides a secure location to arrest, question, and process prisoners, thereby eliminating the need to relocate to the police station for processing prior to transporting them to jail.

In addition to the checkpoints, officers will be assigned to work special details where they specifically target suspected intoxicated drivers. All of the Police Department's DUI enforcement efforts this holiday season and throughout the coming year will work to educate the public and help make the streets safer in our community by apprehending impaired drivers before they can injure or kill someone.

HAPPY SAFE HOLIDAYS

While most people are spending their time during the holidays enjoying friends and family, thieves are on the prowl for unsuspecting victims. The holidays are the prime season for robberies, home burglaries, and vehicle burglaries. Be careful not to get complacent with your daily activities during the holidays. By following a few simple rules, you will be armed to reduce your chances of becoming a victim.

When you are out shopping, be aware of those around you. Con artists often take advantage of people's generosity in order to scam them out of their hard-earned cash. Keep an eye on anyone hovering around you or following too closely. Be extra careful not to get distracted. Any distraction can give a thief an open opportunity to steal your belongings.

Avoid carrying large amounts of cash and don't wear expensive jewelry. Take one credit card with you and leave the rest at home. If possible don't carry a purse or backpack. Put your credit card, cell phone, and identification in your front pocket to reduce the likelihood that someone will pickpocket you in the large holiday crowds. Should you find that your credit card has been lost or stolen, cancel the credit card immediately.

Be on the lookout for identity theft. With the excitement and stress of the holidays, it is easy to overlook fraudulent charges on your accounts. Check your accounts regularly. If there are charges you don't recognize follow up with your bank immediately. By keeping accurate records of all your holiday purchases and returns, it will be obvious if there is a new charge. Check your credit report after the holidays to ensure no new accounts have been opened in your name.

If you must shop alone, try to go during daylight hours. Never leave packages in your car. If you must carry packages with you, lock them in your trunk, where they are out of sight. Park in a well-lit parking lot and ask a security guard to accompany you to your car if it is dark outside or the lot is deserted. Don't talk on your cell phone or listen to your i-Pod® while walking to and from your car. Once you are in your car, leave the parking lot immediately. Try not to sit in your car and balance your checkbook or shuffle through receipts. Being distracted can make you a prime target for an opportunist.

If children accompany you on your shopping trips, make sure they know your cell phone number by heart. Also, make sure your children know to go to a security guard or store employee if they get separated from you.

Check that all doors and windows are locked when you leave your home. Set the alarm if you have one and leave lights on if you plan to be out past dark. Make sure gifts and cash are not visible from any window. If you will be gone for an extended period of time, have your neighbors watch your home for you. If they bring in your mail and newspapers everyday, it will not appear as if the house is empty. Put timers on both indoor and outdoor lights to make the house appear occupied.

For more information about preventing crime during the holidays, call the La Mesa Police Department Crime Prevention Unit at 619.667.1445. For additional valuable information; including a video that explains home security, vehicle security, and personal safety, visit www.cityoflamesa.com/CrimePreventionVideo.

ACTIVATE YOUR CHILD'S BRAIN POWER

The National Association of State Boards of Education has reported a significant relationship between physical activity and educational success.

Increasing your child's motivation, academic focus, and spirit can be a rewarding experience for the entire family. With cooler weather approaching, fall is the perfect time to set new goals. You already know the benefits of exercise for the adult body—it's not magic, but requires discipline, now how do you make it fun?

- Challenge your child to map out a new walking route each week.
- Set a time and day for the walk, and promise a prized activity treat for completing the walk.
- Make it an adventure! Discover a new neighborhood, and involve the whole family.
- Create exclusive time with each of your children by sharing a walk with each, one at a time. Limit the conversation to positive statements, compliment your child on a good grade, caring gesture, or accomplished task.

Help your child achieve a habit that will give him or her a jump start on healthy adulthood. Who knows, this may become a new family tradition.

COMMUNITY GROUPS TO RAISE FUNDS FOR FIELD REPAIRS

A recent third-party inspection of the artificial turf football field at the Junior Seau Sports Complex has revealed that the turf will need to be replaced in two years or less. Due to the high cost of field replacement and the current financial environment, we expect fundraising could take two years. To avoid closure of the field at the end of this season, $100,000 is needed to repair the field to a condition that will provide the additional two years of play while replacement funding is raised.

The current turf is an early version of artificial field surfacing that has reached the end of its anticipated lifespan. Other than two high school football fields with little availability for public use outside of high school sports, this is the only field designed specifically for youth football in our community and demand for field time is high. The field is an important component to the City's Community Services programs as well as to the physical education programs at Parkway Middle School. In addition to reducing the cost of maintenance and irrigation, artificial turf extends the available playing hours on the field. Since installation in 2003, the field has been scheduled seven days a week throughout the year by eight youth and adult sports leagues and five days a week during the school year by roughly 1,100 students at Parkway Middle School – over 20,600 hours of play. Constant use, coupled with the devastating effect of sun exposure, lack of rain, and decomposed granite tracked onto the field from surrounding walkways, has caused the field to degrade faster than the 10-year lifespan that was originally anticipated when the turf was installed.

Led by the La Mesa Athletic Council, whose membership includes the leagues that utilize the field, several groups are working together to raise funds by the end of this year. If successful, repairs can be accomplished in early 2010 to make the field ready for spring sports. Repairs will provide two years additional playing time while the significant capital necessary for replacement is raised. The newer generation of artificial field surfacing has improved protections against sun exposure and weathering, thus creating a longer field life.

Your support of these community based efforts will help keep this tremendous asset available to our community. Planned fundraising activities include a youth baseball/softball clinic November 23 - 25, and a soccer tournament for youth and adults to be scheduled in January. Individual leagues will also be hosting their own events to help the cause.

Tax deductible donations can be made payable to JSSC Field c/o La Mesa Park and Recreation Foundation, 4975 Memorial Drive, La Mesa, 91942, Tax ID #33-0856480.

SPRING 2010 ADULT SOFTBALL SEASON

(18 years and older)

New Team Registration: La Mesa Fire Station #12, 8844 Dallas St.
January 26, 2010 —5:30 to 6:30 pm

Adult Softball Voicemail 667-1172, #6

Thursday – Coed
Friday – Men

Game Times: Tuesday & Thursday 6:00 – 9:00 pm
Friday 6:00 – 10:00 pm

** Subject to change based on the number of teams*

***Minimum 4 teams required per night or league night subject to change or cancellation.*

PLAY BALL!

City of La Mesa Hosts a Casting Call for VOLUNTEER DRIVERS!

Become a part of La Mesa's award-winning community production~"Rides4Neighbors"

Rides4Neighbors is a volunteer-based transportation assistance program for older adults and adults with disabilities. Funding for the program comes from federal, state, and Grossmont Healthcare District grants. Rides are provided by volunteers, who use their own vehicles to help eligible riders in La Mesa and neighboring communities in need of a lift. Volunteers help riders get to their doctor, do their grocery shopping, meet other essential needs and, overall, live independently in the community!

"You're an answer to our prayers" was the comment received from a senior couple, both aged 84, who can no longer drive themselves to their medical appointments. Another 85 year-old La Mesa resident stated, "I can't brag about this service enough! Thank you so much for all your help."

Since the program began in December 2007, there have been 342 eligible riders enrolled in the program. Rides4Neighbors made 2,008 trips in its first year of operation. In the first six months of 2009 there have been 1,510 rides given by volunteer drivers, an average of 250 per month and a 50% increase from the previous year.

There are presently 20 screened, trained volunteer drivers who are capable of serving only 45-55 unduplicated riders each month. The more volunteer drivers we have, the better able we are to meet the growing need in our community.

There is no minimum time commitment or number of rides required to be a volunteer. As a volunteer, you decide your availability and choose the rides you wish to provide. Ride requests are posted on the program's scheduling website; drivers simply log on and select the rides that work with their schedule. Rides are scheduled Monday through Friday during regular business hours. Volunteer drivers are reimbursed for mileage at the current federal rate and are covered under a secondary liability and accident insurance.

As a volunteer, you can be a vital part of a rewarding and meaningful civic program. Community surveys consistently find that what residents like best about La Mesa is the neighborly, small town feel. Rides4Neighbors helps build that spirit of community and old-fashioned neighborliness. So please join us by opening your heart and car door to a rider in need of a lift!

For more information, call the Adult Enrichment Center at 619.464.0109, or visit www.cityoflamesa.com to download a volunteer application form.

La Mesa Kids Walk & Roll to School PROGRESS REPORT

In conjunction with WALKSanDiego, the City of La Mesa has received a four-year federal grant administered through Caltrans intended to increase the number of children who walk or bicycle to school and remove the barriers that currently prevent them from doing so. Those barriers include lack of infrastructure, unsafe infrastructure, and a lack of programs that promote walking and bicycling through education/encouragement programs aimed at children, parents, and the community. Eight schools in the La-Mesa Spring Valley School District will participate in the program in two waves with four schools beginning this fall. The remaining four schools will be incorporated into the project beginning in the 2010-2011 school year.

After meeting with La Mesa-Spring Valley School Board and Principals from the eight targeted schools, the Steering Committee decided Wave 1 schools will be: Lemon Avenue, Rolando, and Maryland Elementary Schools, and La Mesa Middle School. Parent and student surveys will be administered in these four schools after fall break.

The Steering Committee for the Project is comprised of parents, teachers, school administrators, city council members, City of La Mesa employees, and WALKSanDiego representatives. They are: Jenna Kirschenman & Thomas Herman, Live Well; Carol Lockwood, La Mesa resident; Craig Wood, La Mesa-Spring Valley School District; Greg Humora & Kathy Feilen, Public Works Department; Heather Lindquist & Ken Hinton, City of La Mesa Police Department; Jo Gilman, Lemon Avenue parent; Juan Antonio Ramirez, Ken Grimes, & Kristin Mueller, WalkSanDiego; Kathy Keehan, San Diego County Bicycle Coalition; Katie Judd, San Diego County Health & Human Services Agency; Mark Arapostathis, Vice-Mayor/Rolando Elementary School; Yvonne Garrett & Kim Shannon, City of La Mesa Community Services Department.

FALL INTO FITNESS

As the fall season approaches, and daylight hours decrease, our motivation to exercise may diminish. It often seems more appealing and relaxing to end the work day with the remote control and to ignore your determination to maintain fitness or meet that goal of losing extra pounds. Don't waste another day. Try walking to improve your mood, and alter the negative spiral that can result from inactivity.

- **Challenge yourself.** Enjoy the personal satisfaction of setting goals and motivating yourself to achieve.
- **Mark your calendar.** Take note of every workout session. Seeing it on the calendar helps with motivation.
- **Listen to music.** Great beats make it easier to keep your body moving. Take your music along or crank up the volume at home and dance around the house.
- **Reward yourself.** Place a dollar in a jar every time you work out. It's also a great way to save money for a special treat!
- **Make it a group thing.** Take a class, go to the gym, or join a walking club. Having someone else around provides great motivation and support.

If you enjoy the company of others and are energized by the sights and sounds of your community, the City of La Mesa offers:

- **"Walk and Talk,"** offered every Tuesday from 9:00-10:30. The first Tuesday of each month, walkers meet at Porter Hall (corner of Memorial Drive & University Ave.) Each week's walking sites are given at that time. You may call 619.667.1300 for further information.
- **La Mesa's Urban Walking Trails** are free walks designed for all ages and fitness levels. The trails showcase various parks and regions of La Mesa. Access the route map at www.cityoflamesa.com or call La Mesa Community Services 619.667.1300 for more information.
- **The La Mesa Walking Art Trail** features utility boxes painted by local artists along an easy walking route in the La Mesa Village. A brochure can be found at many businesses in the La Mesa Village or visit www.cityoflamesa.com.
- Pick up a **"Walk La Mesa"** brochure at any City office and you will find there are community walking groups that meet every day of the week. The brochure is also available for download at www.cityoflamesa.com.

Join others to revive your spirit and commitment to your goals, stay healthy and safe, and experience all that La Mesa has to offer.

LA MESA FLAG DAY PARADE 2010

"A Salute to Old Glory"

You can help create a wonderful, patriotic family event by supporting the La Mesa Flag Day Parade 2010 –"A Salute to Old Glory." Thousands of spectators will wave flags as the entries perform along the parade route through the La Mesa Village beginning at 10:00 am on Saturday, June 5. You may see youth groups, horse units, dance troupes, clown brigades, active and retired military, floats, bands, local heroes, and elected officials - this is Americana at its very best. The Flag Day Parade is organized by volunteers and supported financially by community individuals, organizations, and businesses.

Hosting the 2010 parade will cost $15,000. Thanks to the generosity of donor support for the 2009 parade, and prudent parade management, we have $2,100 as a balance forward, leaving a target amount of $12,900 to raise for 2010. We need to have $12,000 in the bank by January 2010 to justify beginning parade planning and production.

Your donation supports transportation costs for school marching bands, public address equipment for pre-parade school concerts and announcing parade participants, set up and tear down, safety, public restrooms, and printing. A sponsor form outlining the benefits of your participation is available for download on the City website. We are looking for corporate and business pledges, donations from La Mesa's many civic and service organizations, and contributions from individuals.

Other municipalities have had to scale back or cancel their parades, but with your support we can continue this La Mesa tradition. This parade is one of the things that make our City a special place. Please help us by joining our family of sponsoring partners and donors.

Questions? Contact the parade hotline at 619.667.1172 option 4 or download a donor form from the City website.

UPDATE: City of La Mesa's FOG Program

The City of La Mesa has recently begun implementation of a Fats, Oils, and Grease (otherwise known as FOG) Control Program. The goal of this program is to decrease the amount of FOG accumulation within the City's sewer system and is a positive step regarding the prevention of FOG related sewer issues.

Why is reducing FOG Important?
FOG accumulation in the sewer system can lead to blockages and backups which have potential to negatively impact the environment. In addition, FOG reduction results in decreased sewer maintenance costs and increased capacity both within private sewer laterals and City sewer mains.

How are the City's new FOG requirements being implemented?
Restaurants and businesses that prepare food are currently being enrolled and will receive a FOG discharge permit issued by the City. Businesses will then be annually inspected by the City and will also receive FOG Program education and enforcement.

Do your part to prevent FOG discharges

- Never pour grease, cooking oil or fat down the sink. Instead pour into an empty jar or coffee can with a secure lid and allow liquid to solidify before throwing away.
- Wipe out greasy pots and pans with a paper towel before doing the dishes.
- Scrape grease and food scraps from cooking surfaces, plates, pots and pans and utensils into a can or the trash for disposal.

FOG enters the sewer system from homes, as well as from poorly maintained grease traps and interceptors in restaurants and other businesses. Help protect the environment by doing your part to keep FOG out of the sewer system.

Who should I call if I have questions or would like more information about the program?
Please contact the City of La Mesa at 619.667.1340 for more information about FOG discharge permits and inspection requirements and for general questions about the City's FOG program.

ABANDONED SHOPPING CARTS AN UNSIGHTLY NUISANCE

Shopping carts come in handy for shoppers at local grocery stores and at the mall. We all use shopping carts, thus we all share responsibility in keeping shopping carts in their proper place. However, one glaring negative to the convenient shopping cart is they are frequently rolled off the property to which they belong. You may see abandoned shopping carts at a bus stop, an apartment complex parking lot, or at the end of a cul-de-sac. Customers should not remove carts from the business premises. In fact, in the city of La Mesa, it is illegal to remove a cart from the premises of a business.

Businesses should keep track of and retrieve abandoned carts. If you see a cart that has been abandoned please note the cart owner and the location. (Example: a Vons cart at the intersection of Maple and University Avenue). You should then call the store manager and notify them of the cart location. Following are the phone numbers of some local stores that provide shopping carts to customers:

Vons (Baltimore Drive & Lake Murray Blvd.)	**619.464.1099**
Vons (University Avenue & La Mesa Blvd.)	**619.464.1011**
Walmart (Grossmont Shopping Center)	**619.337.3655**
Target (Grossmont Shopping Ceanter)	**619.461.1960**
Costco (8125 Fletcher Parkway)	**619.697.9933**
Albertson's (8920 Fletcher Parkway)	**619.667.4343**
Ralphs (Jackson Drive & Grossmont Blvd.)	**619.469.2161**
99 Cents Only (Baltimore Dr. & El Cajon Blvd.)	**619.697.7599**
Henry's (Palm Avenue & Finley Avenue)	**619.460.7722**
CVS-Pharmacy (Grossmont Shopping Center)	**619.465.1011**
Petco (8501 Fletcher Parkway)	**619.337.0701**
Burlington Coat Factory (7938 El Cajon Blvd.)	**619.460.7624**

If shopping carts are not picked up in a reasonable period of time you can also call the California Shopping Cart Retrieval Corporation (CSCRC) at 800.252.4613. The City of La Mesa contracts with CSCRC to retrieve abandoned shopping carts. The CSCRC will typically pick up the cart(s) within 2-3 days. If you have any questions please call the City of La Mesa at 619.667.1177.

Abandoned carts can be an unsightly eyesore and hazardous along sidewalks and roadways.

PARK APPRECIATION DAY 2009

was held on Saturday, October 24th

Our thanks to all the volunteers who helped out at La Mesa parks

BEAUTIFUL JOB EVERYONE — Thank You!!

October 24 was the 2009 La Mesa Park Appreciation Day. If you participated at your favorite park, City staff would like to take this opportunity to thank you for all the hard work and to share what you accomplished. In addition to painting tables, trimming, and raking, 291 volunteers removed 95 yards of green material and 16 yards of trash from 12 City parks. City park sites are cleaner, spruced up, and ready for the change of season.

If you missed this year's event, you missed a wonderful opportunity to take a hands-on approach to improve your park facilities. This is a great event for groups and special projects can be assigned depending on the size of your group. Park Appreciation Day is an annual event, so plan ahead for next year on October 23, 2010.

Individuals or groups who are interested in helping to keep City parks green and in tip top condition can join our Adopt-a-Park program. Adopt-a-Park assigns one person or a group to a specific park and that person or group spruces up the park each weekend by picking up litter, emptying trash cans into the dumpster, and stocking the restrooms. Park adopters get their name on a sign posted at the park. For more information about the Adopt-a-Park program, or if you are interested in adopting a park, contact the City's Volunteer Coordinator Judy Stern at 619.667.1490 or the Department of Public Works at 619.667.1450.

SAVE-THE-DATE
Saturday October 23, 2010
The Next La Mesa Park Appreciation Day

Displays and presentations located throughout Harry Griffen Park demonstrated various ways to sustain our environment.

The Environmental Awareness Festival Says YES TO SUSTAINABILITY!

The 2nd Annual La Mesa Environmental Awareness Festival topped last year's successful event with hundreds of people in attendance from around the county. The event was presented by La Mesa's Environmental Sustainability Commission at Harry Griffen Park on Saturday, September 12.

Thirty-four organizations were present offering everything from giveaway items such as recycling stickers and reusable shopping bags to face painting and workshops on solar cooking and native trees. A drive-thru recycling zone was provided for e-waste, all plastics, glass, metal, cardboard and paper. A portion of the electricity for the event was generated by solar power. The event catered to all ages and included information and discussion on topics including water conservation, energy efficiency, recycling, composting, solar power, storm water pollution prevention, gardening and more.

Watch for announcements regarding the 2010 festival next summer.

CONTEST PARTICIPANTS GET SPECIAL RECOGNITION

Twenty-one outstanding entries of the first-ever "Our Planet Our Home" Environmental Literacy and Art Contest were recognized by the La Mesa City Council and Betty Waznis, San Diego County Library Assistant Director, at La Mesa's 2nd Annual Environmental Awareness Festival on September 12th. The festival took place at Harry Griffen Park in La Mesa and the recognized work was displayed on the stage where the winners were presented with certificates. The contest received 278 entries and was organized by the City's Environmental Sustainability Commission.

The contest was open to all youth from kindergarten to 12th grade residing within the boundaries of the La Mesa-Spring Valley and Grossmont High School Union School Districts. Recognition was given for art and poetry in four different grade categories. Award winning entries were displayed for a month in the La Mesa Community Library.

Fire Prevention Week Open House Draws Crowd

The new platform ladder truck replaces a 22 year-old truck

On Saturday, October 10 the La Mesa Fire Department hosted a Fire Prevention Week open house at Fire Station 11 from 10:00 am to 2:00 pm.

Approximately 400 people came to visit and department staff handed out approximately 100 plastic fire helmets. Kids also received pencils, sticker badges, coloring books, and fire safety materials.

Visitors were able to see the La Mesa Fire Department's newest addition – a Pierce 100 platform ladder truck. This truck replaces the 22 year-old truck and provides critical access to La Mesa's tallest buildings.

Additional highlights of the open house included: San Miguel fire safety trailer, rescue demonstrations, station tours, getting in and on apparatus.

Participating agencies included: Burn Institute and SDG&E

CALIFORNIA COASTAL CLEANUP DAY IN LA MESA

The California Coastal Cleanup Day was held on Saturday, September 19. The state-wide cleanup event included over 800 cleanup sites with more than 70,000 volunteers throughout the state removing over 1,000,000 pounds of debris from the shorelines, coast and inland areas. This year marks the fourth year the City of La Mesa has hosted two cleanup sites (1) Alvarado Channel and (2) University Channel. The 27 volunteers who participated in the cleanup event at these sites removed over 550 pounds of trash and debris from our local waterways. This was another successful community event helping to protect our environment and preserve our quality of life.

Volunteers cleaned debris from local waterways before it could reach the ocean during the 2009 California Coastal Cleanup Day.

LA MESA LIBRARY
a great community resource!

Check out the new books, movies, video games, and books on tape free with a library card! Access Internet computers with a library card or bring your own notebook computer for Wi Fi. There are story times for children as well as programs for teens and adults.

Thanks to our many Friends of the La Mesa Library, the Library Bookstore has been a great success during its first year in the new building. Is it our new location just off the lobby entrance? Or our new hours from 1:00 – 4:00 pm daily? Or could it be our supply of quality used books that keeps our customers coming back for more? Bookstore sales are reinvested into activities and collections at the La Mesa Branch Library and have helped to expand the Readers, Viewers, Listeners, and Gamers Express programs for La Mesa Library users. You can volunteer to become a Friend of the La Mesa Library. Volunteers with a background in literature, sales, marketing, accounting, or public relations are especially needed. Stop by the bookstore or call Joe Glidden at 619.460.6668 for information.

You can check for upcoming events, and browse library holdings, at the San Diego County Library website, www.sdcl.org. The La Mesa Branch Library is open seven days a week. Hope to see you soon in the new library, next to City Hall, at 8074 Allison Avenue. For additional information call the library at 619.469.2151.

STOP THE SPREAD OF WEST NILE VIRUS:

Prevent, Protect and Report

There has been a lot of buzz about West Nile Virus (WNV) in the last few years. The County of San Diego Vector Control Program reports the virus has been present in the County since 2003. Last year, there were 35 reported human cases and 563 positive dead birds; thankfully, there were no human fatalities.

So far this year Vector Control has detected 32 dead birds that tested positive for the virus. There have also been two human cases; however, they were not locally acquired. Although there are fewer cases this year, Vector Control encourages the public to protect themselves from the virus.

Anyone can get WNV. Infected female mosquitoes transmit the virus when they bite. Severe West Nile disease, such as meningitis or encephalitis, affects less than 1% of people who become infected. West Nile fever (fever, headache, body aches, occasional skin rash, and swollen lymph glands) develops in about 20% of cases. WNV is NOT transmitted from person to person.

Backyard mosquito breeding is a major source of the mosquito problem. To help reduce the mosquito population, remove standing water from your property every week. The Vector Control Program asks you to "Prevent, Protect, and Report" to help fight WNV.

Prevent: Mosquitoes thrive in warm weather. Females lay their eggs in as little as a ½ inch of water. Eggs hatch into flying, biting adults in about one week. Even the smallest items can hold water. Remove, drain, clean, or drill holes into anything that can hold water for more than three days, such as buckets, clogged rain gutters, old tires, plant saucers, pots, coffee cans, pet bowls, and children's toys. Make sure that window and door screens are in good repair to keep mosquitoes outside.

Mosquito-eating fish can be used to control mosquitoes in ornamental ponds or neglected swimming pools. These fish eat mosquito larvae before they turn into biting adults. They are available free of charge from the San Diego County Vector Control Program. Call or visit the County website at http://www.sdcounty.ca.gov/deh/pests/mosquitofishlocations.html for information on how to request the fish.

Protect: Avoid going outdoors at dawn and dusk when mosquitoes are most active. When you do go outdoors, wear long pants and long-sleeved, light-colored shirts. The light color will help you see mosquitoes when they land on you, and the clothing makes it harder for them to bite you.

It is also very important to use insect repellent when going outdoors. Make sure that the repellent contains one of the following EPA registered, CDC recommended ingredients: DEET, Picaridin, Oil of Lemon Eucalyptus, or IR 3535. Read the product label before applying and follow instructions carefully. Unapproved repellents may not be effective.

Report: Over watering, leaky irrigation systems, clogged storm drains, and neglected swimming pools all provide mosquitoes a place to breed. If you find mosquito breeding sources or neglected swimming pools in your community please report them to the Vector Control Program.

More information about West Nile virus or other vector-borne diseases is available by calling 888.551.INFO (4636), or visit www.SDFightTheBite.com. Standing water can be reported at 858.694.2888 or 888.551.4636

Save Money by Preventing Over Irrigation

Could you be that neighbor that is over-watering their yard? With our clay soils, it doesn't take much moisture on the ground before water starts running off your property. Over irrigation can mobilize pollutants such as pesticides, fertilizers, and pet waste prior to reaching the storm drain system and eventually the creeks and channels within our City. Preventing these pollutants from making their way into the storm drain system ultimately improves our quality of life. Following are tips to help you eliminate pollutants from entering our creeks:

- Design your irrigation to meet site-specific conditions and prevent over-watering.
- Application rate should not exceed the soil's ability to absorb water.
- Irrigation system should be designed with control devices, sensors, or shut-off switches to address malfunctions.
- Place or group plants with similar water needs within the same area.
- Do not irrigate non-planted areas.
- Regularly inspect your irrigation system for potential problems.
- Consider drip irrigation to save water and prevent over-irrigation and runoff.
- Adjust irrigation rates according to seasons and weather conditions.
- Irrigate in the early morning because it is the most efficient time to water plants with minimal evaporation.
- Refrain from irrigation during hot windy periods of the day.

You may not be aware that Helix Water District has several programs to help single-family homeowners conserve water outdoors. Residents are eligible to apply for a high efficiency clothes washer rebate worth up to $100 or a smart controller rebate worth up to $200. For more information, call 619.466.0585 or visit www.hwd.com/conserv or e-mail conserve@helixwater.org.

Please share the above information with your family, friends, and neighbors. For more information you may contact the City's Storm Water Hotline 619.667.1134.

HELEN PUTNAM AWARD

continued from page 1

Students at La Mesa Dale Elementary learn how to prepare healthy snacks.

The award winning "ready, set…..Live Well" initiative is a partnership endeavor that has evolved from the La Mesa Community Wellness Program. This model program, adopted by the La Mesa City Council in July 2006, is now a growing network of community partners whose shared vision is to create opportunities that promote physical activity and good nutrition, and provide encouragement and incentive for community members to embrace habits that lead to lifelong health and wellness.

The work accomplished by the City's partnership efforts with the La Mesa-Spring Valley School District (LMSVSD) positioned the City to receive a grant from The California Endowment to pursue establishment of joint policies and programs to promote health and wellness in the community and "ready, set…..Live Well" was born. The Live Well policy team met during the first quarter of 2009 to establish policy guidelines for future programs and projects. Following the work of the policy team, tactical teams were established to draft a strategic plan to encompass a variety of subject areas devoted to community health and wellness. The City Council approved the draft strategic plan on September 22. The plan now heads to the LMSVSD board for its endorsement. Specific elements within the plan that have begun are funded through grants already received. Additional grant and private funding sources are being sought for other programs outlined in the strategic plan.

La Mesa is one of only two cities in San Diego County to receive a 2009 Helen Putnam Award for Excellence. The City of Chula Vista also received the award in the category of Internal Administration. The City of La Mesa is honored to be the recipient of this prestigious award for the second time. In 2006 La Mesa received the award under the category of City-Business Relationships for The PARKS Project, a partnership endeavor between the City, local businesses, non-profits, and the LMSVSD that resulted in construction of the Junior Seau Sports Complex at Parkway Middle School and renovation of Briercrest Park adjacent to the Grossmont Healthcare District building.

WALK LA MESA

Just for the fun of it!

Did you know there are organized walks nearby every day of the week? For a list of options visit Walk La Mesa under Quick Links – Live Well. You may also pick up a flyer at La Mesa City Hall or the La Mesa Community Center. Call 619.667.1300 for more information.

La Mesa...it's made for walking.

City of La Mesa Answers Your Most Frequently Asked Questions

Lists of frequently asked questions can be found on individual Department pages throughout the City website. Below you will find some of the most common inquiries received in the Community Development Department.

Do I need a building permit?
Permits are required for, but not necessarily limited to, residential and business additions, alterations, patio covers, decks, garden and retaining walls, swimming pools, spas, air conditioners, all electrical and plumbing installations including sprinklers, water heaters and gas lines. If you are considering an alteration to an existing building, or a new construction project, please contact the Building Division at 619.667.1176. For additional information please see the Building Division page.

How do I file a zoning code complaint?
To report a zoning code violation in your neighborhood please submit the Zoning Complaint Form [PDF] to the address below or complete the online form at Request Tracker. Zoning Complaints may be submitted in person to:

Code Compliance Officer
Planning Department
8130 Allison Avenue
La Mesa, CA 91941

Does the city have any affordable housing projects or programs?
Please see the City of La Mesa Housing Programs page for more information.

Also see the County of San Diego website here and here for more information.

HELP WANTED

HELP WANTED: Very nice 95-year old lady who can no longer use her car needs a driver for trips to the grocery store, medical appointments, the bank, and the beauty salon. I may need a ride once or twice a week, and my appointments might take an hour or so. ***If you can help me, please call!***

Attention Drivers!

The City of La Mesa Rides4Neighbors Program needs your help for riders like the lady who "placed" the ad above. We have many other riders who need drivers!

- We are seeking adult volunteer drivers with excellent driving records who are willing to use their personal vehicles to provide a ride to a neighbor in need.
- Volunteers complete an application, provide a copy of a valid Drivers' License and insurance certificate, authorize the City to make a DMV records check, complete a Livescan background check, and complete orientation and training.
- Volunteer drivers are reimbursed for mileage and receive secondary liability insurance.
- As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer.

Please call 619-464-0109 for information on becoming a Rides4Neighbors volunteer!

We need you!

EXCITING VOLUNTEER OPPORTUNITIES!

Are you interested in becoming a volunteer with the City of La Mesa? Check out our volunteer opportunities below or download a Volunteer Application from www.cityoflamesa.com.

Volunteers play an important role in the enhancement and expansion of services to City residents. You will not only provide a valuable service for the community, but also enjoy flexible scheduling for most assignments, develop new skills, and meet new friends.

Rides4Neighbors We need Volunteer Drivers for Rides4Neighbors, a transportation program for La Mesa's older residents and residents with disabilities. Rides are provided by trained volunteers, who use their own vehicles. We reimburse for mileage and provide supplemental liability insurance through this grant-funded program. Volunteers decide availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. As a volunteer, you will be part of a rewarding and meaningful civic program. For information call the Adult Enrichment Center at 619.464.0109.

Adopt-A-Block! You can help preserve and enhance the beauty and cleanliness of La Mesa by volunteering for Adopt-A-Block. If you are a regular walker in your neighborhood, whether alone, with a pet, or with a neighbor, you can join this dedicated team of volunteers. The City provides a program vest, bags, and a pick-up tool. All you need to do is commit to spending at least five hours a month for one year. You make your own hours! Sign up TODAY by calling 619.464.0505.

Friday Night Dance at La Mesa Adult Enrichment Center We need volunteers to help with front door cashiering and cash out. Minimum time commitment: once a month for a 3½ hour shift. Please pick up a Volunteer Application at the Adult Enrichment Center or call 619.464.0505 to have one mailed to you.

La Mesa Pet Therapy Needs You & Your Dog! Would you and your dog be willing to spend two hours each month visiting patients in La Mesa convalescent homes? Pick up an application at the Adult Enrichment Center or call 619.464.0505. If you have more questions about the program we can put you in touch with a current Pet Therapy volunteer.

Adopt the Moffatt Garden at the La Mesa Adult Enrichment Center! We are seeking a dedicated garden lover, or group of garden lovers, to help us with tender loving care and upkeep for our beautiful memorial garden. A weekly weeding, helping meet the needs of thirsty plants, and sprucing up would be just the right stuff needed to keep this special place a treasure for all to enjoy. Please stop in the Adult Enrichment Center office to pick up a Volunteer Application or call 619.464.0505.

DO THE RIGHT THING

Did you know that household hazardous waste (HHW) disposal is available free for La Mesa residents? The following items are considered hazardous and are not allowed to be placed in the trash because of their destructive effect on the environment. If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program to dispose of these items:

Batteries
Fluorescent lights
Latex & oil based paints
Solvents & cleaners
Pesticides & garden products
Pool products
Propane

Any items labeled flammable, hazardous, toxic, or corrosive.
Electronics
TVs
Computer monitors & hardware
Cell phones & telephones

MP3 players
VCRs
Radios
Automotive batteries
Used oil & filters
Antifreeze
Medical Sharps

Collection events are available by appointment only. Call EDCO at 619.287.5696x4270 or email lmhhw@edcodisposal.com to schedule an appointment. The next event will be November 21.

ANNOUNCING THE 2010 EVENT SCHEDULE!

January 30	May 1	July 24	October 9
March 13	June 5	August 28	November 20

Medical sharps (needles) can also be disposed of through this program. They must be properly secured in a sharps container. Call 619.667.1338 or visit our website at www.cityoflamesa.com/hhw for more info.

E-waste can be recycled at the EDCO Station buy back center during business hours without an appointment. The center is open Monday through Saturday from 8:00 am to 4:00 pm. A small fee may apply to some items.

To request additional information about the program, please contact the Department of Public Works Environmental Services Division at 619.667.1338 or by email at envirosvcs@ci.la-mesa.ca.us. For general HHW information or other disposal and recycling options, visit www.cityoflamesa.com/hhw.

Provide Cooperative Fire Services

continued from page 1

HOW DID WE GET TO THIS HISTORIC ACTION

On December 9, 2008 City Council designated a representative from that body to work with the City Manager and East County cities to explore creation of a joint powers agency for fire services. City managers and fire chiefs from El Cajon, La Mesa, Lemon Grove, and Santee met over the next several months to discuss the idea. Santee dropped out of the process in early 2009. The cities of La Mesa, El Cajon, and Lemon Grove continued discussing a cooperative effort to provide fire and emergency medical services.

Staff presented preliminary findings regarding the research conducted to the City Council at its March 17, 2009 meeting. At this meeting, the City Council authorized staff to work with the other cities to prepare a Cooperative Fire Services Study. The stated objective in preparing the study was to "provide a comprehensive analysis of cooperative fire services opportunities," expanding on the current level of cooperation between the three cities.

To complete the comprehensive analysis in a short period of time, work groups were established, relying on staff experts from all three cities. The work groups focused on nine functional areas and were given deadlines to answer four general questions:

1) How are we operating today?
2) What are the options/opportunities available through a cooperative effort?
3) What are the challenges and obstacles of a cooperative effort?
4) What are the options for implementation?

As the work groups addressed these questions, they were asked to focus on four guiding principles throughout the analysis process:

1) Maximize resources
2) Contain costs
3) Ensure a high level of fire and emergency medical services delivery
4) Maintain local control

The deliverables from each work group would constitute the Cooperative Fire Services Study. The major sections of the study included the following:

1) Governance
2) Administration
3) Labor
4) Fire Operations
5) EMS Operations
6) Fire Prevention
7) Emergency Preparedness
8) Fleet/Facilities/Equipment
9) Finance

The Governance work group tackled the assignments of recommending the type of relationship that would best serve the three

Officials from the Cities of La Mesa, Lemon Grove, and El Cajon sign a joint powers agreement for cooperative fire and emergency medical services

Provide Cooperative Fire Services

continued from page 19

cities, developing a cooperative agreement, and developing an implementation schedule.

A JPA, which provides the best opportunity for the three cities to pool resources, was recommended for several reasons. First, the agreement is simple and quick to implement. Second, the agreement provides a high degree of local control. Third, the agreement allows the cities to share senior management positions, resulting in efficiencies and allowances for specialization of senior staff. Fourth, the joint powers agreement establishes a foundation for the cities to evolve the cooperative relationship into that of a joint agency at some point.

JOINT POWERS AGREEMENT

The committee developed a draft JPA that was presented at the October 13 City Council meeting. The agreement creates a joint executive city manager committee (each with one equal vote), establishes the cost allocation formula for shared positions, specifies that shared staff will remain as employees of their respective cities, creates a personnel exchange and resources pool, defines the distribution of assets, includes provisions for adding new members (although the agreement includes a two year moratorium on adding members), and includes a process to withdraw from the agreement. The joint powers agreement also ensures that budget authority rests with each respective City Council and does not impose changes to existing labor agreements. At the October 13 City Council meeting, additional analysis regarding the joint powers agreement was provided.

The committee explored several formulas that could be used to calculate how the three agencies would share expenses. The committee decided to keep the formula simple. A city's costs are determined by two factors—its population and the number of incidents that occur in the jurisdiction. Each factor makes up 50 percent of the total contribution rate. El Cajon's share is 55%, La Mesa's share is 31%, and Lemon Grove's share is 14%.

The Administration work group began detailing the actual operation of the three separate fire departments under one shared management team. In addition to the opportunities and challenges identified by the work group, this section includes a proposed organizational chart and an implementation plan.

Under the proposed organization, the three fire departments would share a management team led by a single Fire Chief. Each city would appoint a Deputy Fire Chief. The three Deputies would act as the liaisons for their respective cities. As the liaison, the Deputy would attend staff meetings, City Council meetings, provide direct management for their respective departments, and be assigned a shared management duty such as the Deputy Chief over Operations, Training, or Administration.

The shared management structure would also include duty coverage personnel through Battalion Chiefs and Division Chiefs. A shared duty chief agreement was approved by City Council on June 23 and went into effect July 15. At this time, it is proposed that each city will retain its own fire prevention program; however, there will be opportunities for coordination and development of expertise.

The Labor work group, in addition to identifying opportunities, challenges, and a proposed implementation schedule, compared the compensation packages offered by each city.

Surprising to the work group, the city managers, and the fire chiefs was how close each city's compensation package compared to the others.

The task for the Fire Operations work group was critical to the feasibility of cooperative efforts between the three cities. If the level of service offered to residents and businesses in the cities declines because of the joint powers agreement, the rationale for a cooperative arrangement no longer exists. The Fire Operations work group focused on the opportunities and challenges that a shared management of fire services would present.

At the street level, the combined agency would have a daily staffing level of 41 personnel and would operate nine engine companies, two truck companies, one rescue, and three advanced life support ambulances, supervised by a 24-hour shift battalion chief. Even with automatic aid agreements, this potential level of service surpasses what is currently offered.

Each city currently provides paramedic engine companies. El Cajon also manages its own transport paramedic ambulance system. Patient paramedic transport services are provided to La Mesa and Lemon Grove by a private ambulance company, American Medical Response, under contract with the Grossmont Hospital District. Training and continuing education are provided to La Mesa and Lemon Grove through the Regional Cooperative Care Program. El Cajon provides this function in-house.

The Fire Prevention work group had one of the more complicated assignments. Each city operates with unique service Fire Prevention delivery systems. For example; the El Cajon system includes the Fire Marshal position assigned to the building division, while La Mesa and Lemon Grove have the Fire Marshal assigned as part of the Fire Department. El Cajon, La Mesa, and Lemon Grove all participate in the most advanced emergency preparedness programs that meet Federal, State, and County mandates. Each city manages their respective programs with either a combination of chief officers or with a sole chief officer.

The Fleet, Facilities, and Equipment work group identified several areas that will result in more efficient shops and better maintained vehicle fleets. The work group also predicted significant savings by purchasing standardized apparatus/equipment and through placing larger orders.

The last work group, the Finance group, played a vital role in the study, ensuring that compensation calculations were accurate, providing feedback regarding the Cost Allocation Plan, and helping the Governance and Administration work groups with recommendations on the implementation of cost sharing and methodologies for payments between the cities.

A copy of the entire Cooperative Fire Services Study is available on the City's website at www.cityoflamesa.com.

This is a momentous endeavor and is being watched closely by our communities and other surrounding agencies. La Mesa residents should be proud of their Council and staff on leading the way with its partners on the regionalization of fire and EMS services.

COUNCIL ACTIONS

July 14, 2009
Ratified the Design Review Board's approval of DRB-09-07 (Rogers) – for a detached workshop at 8407 Lemon Avenue.

Ratified the Design Review Board's approval of DRB-09-08 (Peterson) – for proposed exterior alterations to the Baltimore Plaza retail center located at 5575 Baltimore Drive and 5611 Lake Murray Boulevard.

Adopted a resolution of Intention to execute the Third Amendment to the Agreement for management and implementation of a Home Investment Partnerships Program Project with the County of San Diego to fund the La Mesa Down Payment and Closing Cost Assistance (DCCA) Loan Program and accept the Home allocation of $1,768,882.95.

Adopted a resolution approving the 2009-2010 Home administration contract for management and implementation of a Home Investment Partnerships Project.

Adopted resolutions pertaining to pension cost sharing changes for unrepresented employees.

Appointed members to fill vacancies on various City boards, commissions and committees.

July 28, 2009
Adopted a resolution approving the Sewer System Management Plan.

Adopted a resolution authorizing the execution of Program Supplement Agreement No. 011-N for project SRTSL-5207(030) for design and construction of sidewalk improvements on Glen Street; and a resolution approving delegation of authority for executing documents with the State of California Department of Transportation (CALTRANS).

Adopted a resolution approving a Paramedic Resource Pool Memorandum of Understanding.

Adopted a resolution approving the 2009-2010 Memorandum of Understanding between the City of La Mesa and the La Mesa Firemen's Association; a resolution rescinding Resolution 2009-104 implementing Government Code Section 20636(c)(4) for employer paid member contributions to the Public Employees' Retirement System (PERS); and a resolution authorizing implementation of Government Code Section 20636(c)(4) for employer paid member contributions to the Public Employees' Retirement System (PERS).

Adopted an ordinance implementing state law (SB 731) regarding the regulation of massage technicians.

Adopted an ordinance amending La Mesa Municipal Code Chapter 10.50 pertaining to the regulation of outdoor assemblages.

Adopted an ordinance amending La Mesa Municipal Code Chapter 7.20 to prohibit scavenging of garbage and refuse containers.

August 11, 2009
Adopted a resolution authorizing execution of an amendment to the Lease Agreement between the City of La Mesa and the United States Postal Service for the buildings located at 4800 Nebo Drive and 4860 Allison Avenue.

Adopted a resolution amending Section 12.64.010 of the La Mesa Municipal Code to reflect approved speed limits on six City streets.

Adopted a resolution awarding Bid No. 09-02 for the Orien Avenue Storm Drain Replacement Project to Rentex Construction Incorporated.

Adopted a resolution accepting the Bid of SC Valley Engineering, Inc. and awarding the contract for Bid No. 09-04 for the Johnson Drive Storm Drain and Sewer Improvements to SC Valley Engineering, Inc.

Adopted a resolution adopting the Biennial Budget for fiscal year 2009-2010 and fiscal year 2010-2011.

September 8, 2009
Ratified the Design Review Board's approval of DRB-09-11 (Chase Bank) – for proposed signage at 4791 Spring Street.

Adopted a resolution amending the Down Payment and Closing Cost Assistance (DCCA) Program to reduce the maximum level of assistance to $70,000 and the loan interest rate to 3.0 percent.

Adopted a resolution approving the 2009-2010 Memorandum of Understanding between the City of La Mesa and the La Mesa General Employees Unit affiliated with the Service Employees International Union Local 221; and a resolution rescinding resolution 2009-105 implementing Government Code Section 20636 (c) (4) for employer paid member contributions to the Public Employees' Retirement System (PERS).

Adopted a resolution authorizing the Chief of Police to enter into an Agreement with the San Diego Regional Computer Forensics Laboratory for evidence examination and analysis services.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a local DUI Enforcement and Awareness Program by approving the addition of the grant funds to the fiscal year 2009-2010 budget.

September 22, 2009
Adopted a resolution taking legislative action to resolve the labor contract impasse with the Police Officers' Association for fiscal year 2009-2010.

Adopted a resolution adopting by reference the San Diego Area Regional Standard Drawings, 2009 Edition, for the City of La Mesa.

Adopted a resolution adding Section 12.40.040 (38.5) to the La Mesa Municipal Code establishing a no parking zone on the southeasterly side of Fletcher Parkway.

Adopted a resolution authorizing the Chief of Police to enter into a Memorandum of Understanding with the San Diego Regional Command and Control Communication (3C's) Program.

A Newsletter for the Citizens of La Mesa • February 2010

NEW CITY MANAGER

On January 12, 2010 City Council appointed David E. Witt to the position of City Manager. Dave has served as Interim City Manager since November 2009. Dave first joined the City in 1985 as Assistant Director of Planning. He became Director of Planning (now Community Development) in 1989 and was promoted to Assistant City Manager/Community Development Director in 2003. Join us as we congratulate Dave on his appointment as City Manager.

2010 LA MESA TOWN HALL MEETINGS

If you missed the January meeting you still have an opportunity to participate in a 2010 Town Hall Meeting on

Thursday, February 4
6:30 – 8:30 pm

Murray Manor Elementary School
8305 El Paso Street

The City Council encourages all who are interested in the present and future of La Mesa to attend and provide their ideas, comments, and opinions. Information gathered at Town Hall Meetings is used by staff and the City Council to recommend and set priorities for the City's next budget.

AN INTRODUCTION TO THE 2010 CENSUS

Counting Everyone Once and Only Once and In the Right Place

The foundation of our American democracy is dependent on fair and equitable representation in Congress. In order to achieve an accurate assessment of the number and location of the people living within the nation's borders, the U.S. Constitution mandates a census of the population every 10 years.

The census population totals determine which states gain or lose representation in Congress. It also determines the amount of state and federal funding communities receive over the course of the decade. 2010 Census data will directly affect how more than $4 trillion is allocated to local, state, and tribal governments over the next 10 years. In order for this funding allocation to be accomplished fairly and accurately, the goal of the decennial census is to count everybody, count them only once, and count them in the right place. The facts gathered in the census also help shape decisions for the rest of the decade about

ST. MADELINE SOPHIE CENTER ASSISTS IN OUR PARKS

Since December 2006 the City of La Mesa has contracted with St. Madeline Sophie Center to perform basic restroom and grounds cleaning in many of our heavily used parks. St. Madeline Sophie Center is an organization that helps improve the lives of adults with developmental disabilities through a variety of programs. One of these programs is the Supported Employment Program which provides ongoing vocational training opportunities for its students.

The City currently contracts for four crews to assist with 10 sites. Each crew consists of a coach and from three to five students that have assigned schedules and sites. Crews arrive at the sites on a varied schedule starting at 10:00 am Monday through Friday.

Crews pick up litter throughout the parks, empty trash cans, sweep, wash, and restock restrooms The City provides all necessary cleaning supplies. The St. Madeline Sophie Center crews also notify City staff of any graffiti or vandalism that is found. Performing these daily tasks provides an excellent opportunity for these students to learn valuable work skills and, in turn, city staff is able to focus on other maintenance issues throughout the City. Working with the staff and students from St. Madeline Sophie Center has proven to be a productive and positive experience for all involved. You can find our more information about St. Madeline Sophie Center by visiting their website at www.stmsc.org.

NEED A RIDE?

Are you having trouble getting to your doctor, the pharmacy, the bank or shopping?

THE DISCOUNT TAXI PROGRAM COULD BE FOR YOU!!

- The DISCOUNT TAXI PROGRAM helps make taxicabs affordable to older adults and persons with disabilities who live within the Grossmont Healthcare District.
- The DISCOUNT TAXI PROGRAM is funded by the Grossmont Healthcare District and managed by the City of La Mesa.
- Taxi coupons are used like cash to pay for taxicab fares (and tips) with Yellow Cab for essential travel needs, such as medical appointments, grocery shopping, pharmacy, personal care, and personal business.
- Discount Taxi coupon booklets for Yellow Cab rides are available for $10 each – the actual value of the booklet is $20! That's twenty dollars worth of taxi rides for a 50% discount!
- You must be age 65 years of age or older, or under 65 with a disability, and unable to drive or use public transit.
- Eligibility includes temporary inability to drive due to medical procedures.

CITY OF LA MESA JEWEL of the HILLS

Grossmont Healthcare District

For more information or to receive an application for the DISCOUNT TAXI PROGRAM, please call the La Mesa Adult Enrichment Center at 667.1321. The application is also available online at www.cityoflamesa.com.

Outdoor Wedding Venues

Springtime wedding plans naturally turn thoughts to an outdoor wedding that is beautiful and romantic. Lush grass, trees, and plants are natural decorations as the bride and groom exchange vows in a park setting that they have chosen for their special day.

The City of La Mesa offers two scenic locations for an outdoor wedding. The Amphitheatre at Harry Griffen Park sets the stage with a gazebo where the bride may wait until she makes her entrance walking down the paved path to join her groom. Seating for up to 350 guests face the staging area where the wedding party awaits.

The West Terrace Patio at the La Mesa Community Center offers another choice for an outdoor wedding. Vine-covered red brick columns edge a semi-circular patio that overlooks a golf course. White fan-back chairs provide seating for up to 150 guests, and a decorated trellis is available to provide a frame for the bride and groom as they exchange vows.

An outdoor wedding can be the dream wedding for many couples. If you would like additional information and pricing for La Mesa's outdoor wedding sites, please call the Facilities Specialist at 667.1307.

SENIOR TRANSPORTATION & MOBILITY EXPO

Thursday, June 17—10:00 am – 2:00 pm

SPRING CLEANING INVENTORY

Now that the stress of the holidays is over it is time to think about spring cleaning. As part of your spring cleaning, the La Mesa Police Department would like to recommend an organizational project. Almost every household has one or more items of value. It is important to protect your valuables by keeping accurate records.

Go through your home and identify items that are most likely to be stolen. Items such as electronics, computers, jewelry, musical instruments, and bicycles are all items that are frequently stolen. Take a photograph of each item and note any serial numbers or unusual markings with the photograph. Be as detailed as possible. Refrain from storing the information on your computer as computers may get stolen during a burglary. List everything valuable you own and refer to the list if your home gets burglarized to determine any items that may be missing. When you receive or purchase a new item, immediately note the serial number and save the receipt and warranty paperwork.

It is easy to forget what items you have during a high-stress incident such as a burglary. If your belongings are found in a pawn shop or a suspect's home, it is very difficult for police officers and detectives to return the items to their rightful owner without proper records and serial numbers. Insurance companies may also require documentation of your stolen items.

Another precaution you can take is to install a tracking system on your valuable computer. There are several products on the market, such as software and GPS systems, that can aid the police in finding your computer.

For more information on protecting your valuables, contact Crime Prevention Specialist Heather Lindquist at the La Mesa Police Department at 667.1445.

GOT JUNK?

Want to clean out the garage or spruce up the yard but don't know what to do with all that stuff?

Bring it to the annual Spring Clean Up event being held on two Saturdays in April at EDCO Station – It's free to City of La Mesa residents!

The event will be held from 7:00 a.m. to 2:00 p.m. at EDCO Station, located at 8184 Commercial Street.

If you live SOUTH of Interstate 8, your clean-up day is April 10

If you live NORTH of Interstate 8, your clean-up day is April 17

This is your opportunity to dispose of:

Old appliances — *Broken or unwanted furniture*

Landscape material — *Waste debris from improvement projects*

Reusable items — *Electronics*

Trash and yard waste — *Just plain junk*

Free mulch will be available on a self-loading, first-come-first-serve basis.

This annual event is for residents who live within the incorporated city limits of La Mesa ONLY. Proof of residency is required, so bring a California Driver's License showing your La Mesa address. DO NOT bring items from a household outside of the City of La Mesa.

There are some restrictions on the items than can be accepted. This is NOT a Household Hazardous Waste (HHW) Collection Event. We CANNOT accept batteries, fluorescent lights, tires, or items labeled poison, flammable, corrosive, or explosive. To dispose of HHW, please call 287.5696 ext. 4270 or email LMHHW@edcodisposal.com. To get more info see the HHW flyer in this issue of the FOCUS or visit our website at www.cityoflamesa.com/hhw.

We will NOT accept waste from businesses, contractors or professional landscapers.

For event questions please call 667.1338 or email envirosvcs@ci.la-mesa.ca.us.

FREE OIL FILTERS

La Mesa Oil Filter Exchange Event

Saturday February 27—10:00 am - 2:00 pm

Kragen Auto Parts, 5350 Jackson Drive

Bring in your used oil filters to be recycled and receive a FREE OIL FILTER!

This offer is only valid at the specific date, time, and location above.
Only drop off used filters during business hours. Thank you!

Funded by a grant from the California Integrated Waste Management Board

SPRING CALENDAR

City Hall is closed alternate Fridays and holidays as follows:

Fri, Feb 5	**Fri, Mar 5**	**Fri, Apr 2**	**Fri, Apr 30**
Fri, Feb 19	**Fri, Mar 19**	**Fri, Apr 16**	

CUT OUT FOG!

Help Maintain the City Wastewater System

What is FOG?

FOG refers to Fats, Oil, and Grease, which when dumped down the drain can lead to clogs and reduced pipe capacity. Greasy plates, pots, pans, and frying oil are a few of the sources of FOG.

Do your part to prevent FOG discharges!

FOG accumulation in the sewer system can lead to blockages and backups which have the potential to negatively impact the environment. Sewage spills due to FOG blockages are an avoidable source of pollution. This problem can be minimized if we all do our part in disposing of FOG in the proper manner.

Do not pour oil or fat down your sink drains. Oils and fats will solidify into grease, can cause your lateral to become clogged, and can cause the public sewer main in the street to become clogged. The number one maintenance problem in City sewer pipes is the presence of grease.

In addition...

FOG reduction results in decreased sewer maintenance costs and increased capacity both within private sewer laterals and City sewer mains. Sewer pipes that are clear of FOG will run much more smoothly than those which are heavily impacted with fats, oil, and grease.

Who should you call if I have questions or would like more information about FOG?

Call 667.1340 for more information about FOG control methods and for general questions about the City's Food Service Establishment FOG program.

Frequently Asked Questions

List of frequently asked questions can be found on individual Department pages throughout the City website. Below you will find some of the most common inquiries received in the Environmental Services Division of the Public Works Department.

1. How can I dispose of a water heater, broken sofa, or other bulky items?

Each spring the City and EDCO Disposal Corp hold a Clean-up Day for La Mesa residents. The only items not accepted are hazardous waste, wet garbage, tires, explosives, and business waste. Call the City at 667.1338 for further information or clarification. For landfill information call 562.0530. Bulky item pick-up is also available from EDCO for a small fee. Call 287.7555.

2. What can I do about my neighbor's bad trash habits?

If they leave their trash carts on the street past collection day, set them out too early, or let trash accumulate for weeks, call the City at 667.1338 or report it online.

3. Who should I call to start trash/recycle service?

La Mesa has automated residential trash and yard waste collection as well as mandatory recycling. EDCO Disposal Corp is the City's franchised contractor for the collection of trash, yard waste, and recyclables. Call EDCO at 287.7555 to sign up for service and obtain your automated carts and recycling containers.

4. Where can I dispose of household toxic products like old paint and pesticides?

The City holds regular collection events for City of La Mesa residents. Hazardous materials can be dropped off by appointment only. If you live within the City limits, you can call EDCO at 287.5696 ext. 4270 to make an appointment.

Free

HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL

This is your chance to safely and properly dispose of the following materials and items:

Batteries **Fluorescent lights** **Medical sharps** **Latex & oil based paints**
Solvents & cleaners **Pesticides & garden products** **Pool products** **Propane**
Any items labeled flammable, hazardous, toxic, or corrosive.

Electronics **TVs** **Computer monitors & hardware**
Cell phones & telephones **MP3 players** **VCRs** **Radios**
Automotive batteries **Used oil & filters** **Antifreeze**

Collection events are available by appointment only by calling EDCO at 287.5696 ext. 4270 or emailing to lmhhw@edcodisposal.com.

These items are considered hazardous and are not allowed to be placed in the trash because of their destructive effect on the environment. If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

E-waste can be recycled at the EDCO Station buy back center during business hours without an appointment. The center is open Monday through Saturday from 8:00 am to 4:00 pm. A small fee may apply to some items.

To request additional information about the program, please contact the Department of Public Works Environmental Services Division at 667.1338 or by email at envirosvcs@ci.la-mesa.ca.us. For general HHW information or other disposal and recycling options, visit www.cityoflamesa.com/hhw

UPCOMING COLLECTION DATES:
March 13 **May 1** **June 5** **July 24**
August 28 **October 9** **November 20**

8th Annual Creek to Bay Cleanup April 24

Mark Your Calendars!

Working with "I Love A Clean San Diego," the City of La Mesa will sponsor and host two creek cleanup sites on April 24 from 9:00 am – 12:00 pm as part of the 8th Annual Creek to Bay Cleanup Day.

Clean up sites will consist of one location along the Alvarado Channel, and one along the University Channel. Last year during this event, 296 pounds of trash was removed from the Alvarado Channel site, and 83 pounds of trash and 26 pounds of recyclables were removed from the University Channel. Volunteers from the local community demonstrated their true concern to protect the environment and also had fun in the process. This year, we hope to increase our collection totals and will award prizes for the most amount of trash collected as well as the most unique trash item found.

For more information visit the City website or contact Joe Kuhn, Storm Water Program Manager at 667.1340.

SMALL STEPS TO BIG CHANGE!

You do not have to be rich or famous to make healthy choices. There are small steps that anyone can take to live more sustainably.

WHAT IS SUSTAINABILITY?

"Sustainable societies are those whose infrastructure, institutions, and practices (social, economic and environmental) meet the needs of the present generation without compromising the ability of future generations to meet their own needs."

- Brundtland Commission, U.N. Commission on Sustainably Development

TRAVEL THOUGHTFULLY

It's not only what you drive; it's how you drive! Ease up on the gas and brakes and you can get up to 35% better gas mileage; properly inflated tires can increase mileage another 3%. Avoid rush hour when possible, and remove excess cargo; the heavier the load, the more fuel needed to move it. Finally, "piggy back" errands, use transit, carpool, bike, or walk more to reduce the miles you drive. These simple changes can save you thousands of pounds of CO2 every year, and reduces stops at the gas pump too.

Did you know? A quarter of the trips Americans drive are within walking distance. Every mile you don't drive saves one pound of carbon dioxide.

THE FOUR R'S - *Reduce, Reuse, Recycle, and Repair*

Creative thinking is one of the best tools we have to create less waste. Choose products that are returnable, reusable, or refillable. Save your wallet and the environment: take coffee in a travel mug, buy bulk for the best product to package ratio, bring your own bags, and buy secondhand. Packaging accounts for a third of trash generated. Recycling one glass jar saves the energy needed to light a 100-watt bulb for four hours, and recycling just one tenth of American newspapers would save 25 million trees a year.

Did you know? In the past 35 years trash generated per person has almost doubled from 2.7 to 4.4 pounds a day. If you cut your garbage by 10% you can save 1,200 pounds of carbon dioxide.

STOP UNSOLICITED JUNK MAIL.

The average American receives 41 pounds of junk mail each year. Remove your name from national mailing lists at dma-choice.org. Opt out of credit card offers at 1.888.5optout. Any time you give your contact information to a company, you may be placed on a mailing list (i.e.: store discount programs, contests, catalog/internet purchases, warranty cards, etc.); writing "Please do not rent or sell my name" or "no mailing lists" next to your name will help protect you.

Did you know? The annual production of junk mail in the U.S. uses more than 100 million trees; its production and disposal uses more energy than 3 million cars.

EXCITING VOLUNTEER OPPORTUNITIES!

Are you interested in becoming a volunteer with the City of La Mesa? Check out our volunteer opportunities below or download a Volunteer Application from the City website.

Volunteers play an important role in the enhancement and expansion of services to City residents. You will not only provide a valuable service for the community, but also enjoy flexible scheduling for most assignments, develop new skills, and meet new friends.

Adopt A Block! You can help preserve and enhance the beauty and cleanliness of La Mesa by volunteering for Adopt A Block. If you are a regular walker in your neighborhood, whether alone, with a pet, or with a neighbor, you can join this dedicated team of volunteers. The City provides a program vest, bags, and a pick-up tool. All you need to do is commit to spending at least five hours a month for one year! You make your own hours. Sign up TODAY by calling 464.0505.

Rides4Neighbors We need Volunteer Drivers for Rides4Neighbors, a transportation program for La Mesa's older residents and residents with disabilities. Rides are provided by trained volunteers, who use their own vehicles. We reimburse for mileage and provide supplemental liability insurance. Volunteers decide availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. As a volunteer, you will be part of a rewarding and meaningful civic program. For information, call the Adult Enrichment Center at 464.0109.

La Mesa Pet Therapy Needs You & Your Dog! Would you and your dog be willing to spend two hours a month visiting patients in La Mesa convalescent homes? Call the Adult Enrichment Center to pick up an application or call 464.0505. If you have more questions about the program, we will put you in touch with a current Pet Therapy volunteer.

City Hall and Fire Department Tour Guide Would you be interested in coordinating City Hall and Fire Department tours for school classes? This volunteer job involves coordinating school visit requests with the Mayor's office and the Fire Department. The schedule corresponds to the school year and tours are requested periodically. Call the Adult Enrichment Center to pick up an application or call 464.0505.

Adopt the Moffatt Garden at the La Mesa Adult Enrichment Center!

We are seeking a dedicated garden-lover, or group of garden lovers, to help us with tender loving care and upkeep for our beautiful memorial garden. A weekly weeding, helping meet the needs of thirsty plants and sprucing up would be just the right stuff needed to keep this special place a treasure for all to enjoy. Please stop in the Adult Enrichment Center office to pick up a Volunteer Application, or call 464.0505!

GOOD HOUSEKEEPING

Important Storm Water Requirements

The City of La Mesa's National Pollutant Discharge Elimination System (NPDES) Storm Water Program requires residents and business owners to implement various types of good housekeeping measures and best management practices to comply with all regulations. Consider the following tips to help you protect our environment:

1) Swimming pool water must be tested before discharge. Chlorine should be less than 1 mg/L and pH between 7 to 8. No algae should be present in the water and filter debris is prohibited from entering the storm drain system. Detailed fact sheets available at City Hall.

2) Check your irrigation system and do not over-irrigate. Water landscaping during the morning or late afternoon.

3) Do not hose down driveways or sidewalks, dry sweep in place.

4) Clean up oil spills and other liquid material with absorbent material and place in a trash can for disposal.

5) Wash vehicles over a pervious (absorbent) surface such as dirt, gravel, or grass to prevent runoff. Consider taking vehicles to a commercial car wash.

6) Keep your trash dumpsters closed, and keep all pesticides and herbicides in a covered contained area away from pets and children.

7) Protect areas with bare soil from eroding during rainy weather. Establish ground cover using hydroseed/hydromulch and use fiber rolls and silt fencing for sediment control.

A Storm Water Bulletin Board with education and outreach material is available for public view in the City Hall lobby. Find answers to your questions on the City's Storm Water Hotline at 667.1134, or visit the City's website for more information.

STORM DRAIN POLLUTION?

Call The La Mesa Pollution Hotline!

You can call the City's Storm Water Pollution Prevention Hotline 667.1134 at any time to stop storm water pollution. City personnel will verify the complaint and respond to the problem immediately. Below is a list of several storm water pollutants you should be aware of.

Storm Water Pollutants

- Sediment (soil/dirt)
- Fertilizers (plant food)
- Metals
- Detergents (soap)
- Pesticides (chemicals to kill plants or bugs)
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

What should you report?

You may either ask the person to stop polluting the environment or count on the City to address the issue. The following are examples of what you should lookout for and report to the City:

Commercial/Industrial Areas

- Hosing down the parking lot/water running off onto the street
- Washing company vehicles without capturing the runoff
- Storing equipment outside without coverings
- Overflowing trash cans

Construction Sites

- Tracking soil onto the street
- Storing stockpiles of soil without covering it for extended periods of time
- Discharging water into the street

Residential

- Washing soil off the property and into the street
- Significant over-irrigation
- Fixing cars on the street
- Significant overspray of pesticides or fertilizers
- Not picking up after pets

If you notice any of these examples, ask the responsible party to comply with environmental regulations, or contact the City for a quick response to these issues. Protecting our environment protects our quality of life!

PROPER USE OF 9-1-1

9-1-1 is an emergency phone number only.

All 9-1-1 calls within the City of La Mesa are routed to the La Mesa Police Department. A dispatcher will evaluate the caller's needs. If the call involves a fire or medical emergency, the call is immediately transferred to the Heartland Fire Dispatch Center.

Following are some types of questions you should be prepared to answer when calling 9-1-1 are:

- Is this a police, fire, or medical emergency?
- Where is the emergency?
- What is occurring?
- When did this occur?
- Do you have any suspect and/or vehicle descriptions?
- Are there now, or were there weapons involved? (gun, knife, etc.)

You will be asked to give your name, address, and telephone number (anonymous calls are accepted). If you are safely able to do so, please remain on the telephone to provide additional information as requested.

It is appropriate to call 9-1-1 for circumstances such as the following:

- A serious crime in progress such as a robbery, burglary, shooting, assault, domestic violence, or vehicle theft.
- A fire, medical, or mental health emergency; or a traffic accident that has just occurred.

Please do not call 9-1-1 for non-emergency calls such as:

- a loud party or music
- parking violations
- barking dogs
- road information
- minor injuries
- time-delayed crime reports
- general questions

Note: *Calls to 9-1-1 for non-emergencies require the dispatcher to divert attention from real emergencies and may create a delay in officers' response to the scene of a serious crime.*

Whether you dial 9-1-1 on purpose or by accident, the dispatcher receives your caller information even if you hang up before the line is answered. The dispatcher will immediately call you back and inquire if an emergency exists. If the line is busy or not answered when the dispatcher attempts to call, an officer will be dispatched to the address from which the call originated to "check the welfare" of the residence or business. If you dial 9-1-1 in error, please remain on the line and advise the dispatcher that you have made a mistake.

Wireless 9-1-1: How To Use Your Cell Phone To Call 9-1-1

Wireless 9-1-1 is the term used to refer to emergency calls made to 9-1-1 from a cellular phone or other wireless device. A cell phone works as a radio transmitter and a receiver that uses radio frequencies instead of a traditional telephone wire to connect callers. Because cell phones are portable, they are not associated with a fixed location or address. The cell tower used to transmit a cellular 9-1-1 call provides only a general location of the cellular caller. This location information is not specific enough for public safety personnel to respond in a timely manner.

To expedite processing of cellular 9-1-1 calls by public safety dispatchers, you should remember the following:

- Immediately advise the dispatcher of the location of the emergency, including the city if known. If you are not sure of the location, look for helpful markers such as street signs, local landmarks, or freeway exits that will help the dispatcher pinpoint your location.
- Provide the dispatcher with your cell phone number so that if the call is disconnected the dispatcher can call you back. If you do not know your cell phone number, memorize it.

If you do not currently have a contract for service with a wireless service provider and your call is disconnected, you must call back because the dispatcher will not have your phone number to call you back.

Become familiar with the features of your cell phone, especially the keypad lock, which prevents accidental dialing. Many 9-1-1 calls made to the La Mesa Police Department are the result of accidental dialing from phones carried in pockets, purses, strollers, or gym bags without the keypad lock feature activated. The processing of accidental calls may delay help for callers with true emergencies.To prevent accidental dialing, do not program your phone to automatically dial 9-1-1. Consult your cell phone user's manual for further information on this and other features.

Using your cell phone while driving is against the law and the practice can be very dangerous. If you must use your cell phone while driving, pull over park where it is safe to do so before you make or answer a call.

Test Your ENVIRONMENTAL KNOWLEDGE!

Q1. How many times can an aluminum can be recycled before the aluminum becomes unusable?
a) 5
b) 10
c) 1,000
d) 1,000,000
e) It will never degrade

Q2. Which of these cannot be recycled in your blue bin or recycling dumpster?
a) Window envelopes
b) Glass jars (no CRV)
c) Plastic bags
d) Telephone books
e) They can all be recycled this way

Q3. How can you recycle old or broken televisions?
a) Place them in your blue bin or recycling dumpster
b) Place them at the curb on trash collection day
c) Take them to EDCO Station's recycling buyback center
d) You can't recycle them
e) a & c only

Q4. Which of the following is not accepted through our household hazardous waste collection?
a) Chlorine
b) Automobile batteries
c) Propane
d) Medical sharps (needles)
e) They are all accepted

Q5. Anything plugged into an outlet uses electricity even when turned off.
True or False?

Q6. Tap water is better than bottled water because:
a) bottled water is often just tap water from somewhere else
b) tap water is regulated for safety and bottled water is not
c) bottling and shipping water has a much greater negative environmental impact than using water from the tap
d) tap water is much, much cheaper
e) all of the above

Q7. Carpooling is easy to do only when set up by an employer.
True or False?

Q8. Within the City of La Mesa, storm water runoff from driveways, sidewalks and streets ends up:
a) soaking into the ground
b) in a wastewater treatment plant
c) in our local creeks and waterways
d) evaporating into the air

Q9. The City of La Mesa is generally divided into 2 watersheds, the _____ in the north, and the _____ in the south.
a) Pacific Ocean, Lake Murray
b) San Diego River, San Diego Bay
c) Otay River, San Diego Bay
d) Mission Bay, Sweetwater River

Q10. Watering your yard everyday and/or for long periods:
a) is a waste of water
b) causes your plants to be less drought-tolerant
c) results in excess water running from your property
d) is a storm drain pollution issue
e) all of the above

ANSWERS:

Q1. e – Aluminum never loses its strength and can be recycled indefinitely.

Q2. c – You should never place plastic bags in your recycling bin. They may be recycled at large grocery and retail stores.

Q3. c – Televisions and computer monitors can be recycled for free - other electronics are subject to a fee. Contact EDCO at 466.3355 or visit www.edcodisposal.com for more info.

Q4. e – See our flyer in this issue of FOCUS for more info.

Q5. True – These are known as vampire electronics and draw small amounts of power as long as they are plugged into an outlet.

Q6. e – Use reusable bottles with your tap water for convenience.

Q7. False – You can search for carpool opportunities using very specific criteria at www.icommuteSD.com.

Q8. c – Storm water flows directly to local creeks and waterways. Storm water does not pass through a treatment plant before reaching the ocean.

Q9. b – Both carry rain water into the ocean.

Q10. e – To report an issue, please call 667.1134 or visit www.cityofLamesa.com and select "Report a Problem."

CONSTRUCTION UPDATE

As you can see by these recent photos, construction is progressing quickly on the new police station. Construction should be complete by late May at which time interior furnishings will be installed. Police staff anticipate moving into the new facility in late summer.

WALK LA MESA

Just for the fun of it!

Did you know there are organized walks nearby every day of the week? For a list of options visit the City website, and under Quick Links, choose *City Walks & Urban Hikes.* You may also pick up a Walk La Mesa flyer at City Hall or the La MesaCommunity Center. Call 667.1300 for more info.

La Mesa... it's made for walking

Put a Spring in Your Step!

La Mesa's Urban Walking Trails are FREE walking trails that offer beginner, intermediate, or advanced walkers of all ages and fitness levels different routes to choose from. Walking is a wonderful family activity to enjoy the outdoors and at the same time exercise and explore La Mesa. Look under Quick Links at www.cityoflamesa.com for City Walks & Urban Hikes to download your FREE walking trails map. Maps are also available at the kiosks at Jackson and La Mesita Parks. Routes are identified with sidewalk markers along the way so you won't get lost!

Fun and unstructured volunteer groups get together each week for walks along the intermediate and advanced trails. This is a great way to meet new people and enjoy walking. The "Stride" - an intermediate level five mile route with slight hills - meets at Jackson Park on Saturdays at 8:00 a.m. The "Challenge" - an advanced level three and a half mile route with hills and steps - meets at Highwood Park on Mondays and Wednesdays at 6:15 p.m.

Remember to wear proper walking shoes, bring a water bottle, and check with your doctor first before starting any type of exercise program. For evening walks, bring a flashlight.

It's a new year.... Get Up, Get Out and Get Moving! Visit the City website or call La Mesa Community Services at 667.1300 for more information on La Mesa's Urban Walking Trails and other walking programs throughout the City.

Enjoy FREE concerts featuring performances from some of San Diego's premiere recording artists, musicians, and singers. Bring a picnic and spend "Sundays at Six" relaxing to concert band, country, jazz, and variety music in the company of friends.

Watch the City website for updated concert information and performance lineup as it becomes available.

CITY OF LA MESA JEWEL of the HILLS

LA MESA ARTS ALLIANCE fostering the arts in our community

We are searching for Miss La Mesa and Miss Teen La Mesa 2010!

The Miss La Mesa pageant has been a tradition in the City of La Mesa for over 35 years and is an outstanding mentoring and leadership opportunity for young women. The 2010 pageants are set for Friday, March 5. The show is open to the public and two young women will earn the opportunity of a lifetime to be an official hostess for their city. This year a $750.00 scholarship will be awarded to Miss La Mesa 2010 and a $350.00 scholarship to Miss La Mesa Teen 2010!

Contestants will be scored in the following categories: Interview (35% of total score), Poise and Personality (25% of total score), Sportswear (15% of total score), Evening Gown (15% of total score), On Stage Impromptu Question (10% of total score). If you are interested in becoming a contestant please email misslamesapageant@yahoo.com or download the application at www.LaMesaChamber.net. Young women ages 13-26 are eligible to participate. For girls ages 6-12, please contact us about the Miss La Mesa Princess Program.

2009 La Mesa Queens

You could be the next Miss La Mesa or Miss La Mesa Teen!

LA MESA KIDS WALK & ROLL TO SCHOOL

PROGRESS REPORT

In conjunction with WalkSanDiego, the City of La Mesa is moving right along with the La Mesa Kids Walk & Roll to School program. Parent Surveys have been completed at all four Wave 1 schools (Rolando Elementary, Maryland Avenue Elementary, Lemon Avenue Elementary, and La Mesa Middle School) to determine the current number of students walking and/or biking to school. A post-evaluation will be given at the end of the school year to measure program effectiveness.

Each school is currently in the process of establishing a SRTS (Safe Routes to School) Coalition to assist with the facilitation of education activities at their individual schools. Spring activities include student, staff and parent educational presentations, safety patrol training, and SRTS Workshops.

During SRTS Workshops, participants will receive education on relevant health and safety messages, techniques for conducting walkability audits, a range of tools and approaches to assess and enhance pedestrian safety, how to choose suitable routes to school, how to review pedestrian/bicycle collision statistic maps of the school neighborhood, and encouragement of safe behavior applicable to students and parents of each school. Participants will also take part in a walk/bike audit and mapping session of the school neighborhood.

WalkSanDiego will then compile and analyze data from parent surveys, walk audits, and mapping sessions to develop a Safe Routes to School map for each school neighborhood with suggested walk and bike routes. These maps are intended to be used as guides for children walking or biking to school. WalkSanDiego will also use this data to develop a proposed SRTS Work Plan outlining specific infrastructure improvements such as sidewalks and crosswalks geared toward reducing and/or eliminating pedestrian barriers.

VISIT THE LA MESA TEEN WEBSITE

This site offers helpful information regarding resources, programs, and services available to La Mesa teens.

Want to see additional information on the site?

La Mesa Offers Beginning Bridge Classes

The La Mesa Adult Enrichment Center is offering new Beginning Bridge classes in February and March. Classes begin Friday, February 12 and run through April 9th. The 9-week introductory course will teach you how to play and enjoy the greatest card game of all. Each class meets for 2 hours from 10:00 am until Noon.

The cost for the series is $54 for La Mesa residents and $61 for non-residents.

Beginning Bridge will cover various components of play and bidding such as:

- *Bridge Basics*
- *Suits*
- *No Trump*
- *Taking Tricks*
- *Bidding Ladder*
- *Language of Bidding*
- *Scoring*
- *How to Play Bridge Hands*
- *How to Defend Bridge Hands*

Course instructor Randy Fadem has taught bridge to adults since 1999. He has been a winner of numerous tournaments in New England, New York, New Jersey, Arizona, Nevada, and California.

Online enrollment is now open. Go to www.cityoflamesa.com. Click on the Class Enrollment button in the left menu bar. Mail-in registration forms are also available. Call 464.0505 with questions or for more information.

JUMP-START YOUR DAY WITH HEALTHY FARE

Parents, is this scene among your childhood memories: as Mom serves Dad his first cup of coffee of the day, Junior and his sisters join in a request for scrambled eggs and toast, please. The lunch sacks are assembled and ready to grab on the way out the door. Although this vision may be an exaggerated memory reflected by the sitcoms of the 1960s and '70s, the importance of the breakfast ritual is not fiction. Fast forward to today, and the data suggests that our kids' first meal of the day may not be eaten until many hours after they have used up their nutritional reserves.

Childrens' and teens' bodies, a work in progress, deserve better. According to Kidsdata.org, a website charged with compiling statistics relative to the health of California's children, breakfast consumption decreases steadily with age. The most recent statistics available reveal only 41% of 11th grade males and 39.9% of females reported eating breakfast. To generate and sustain the energy needed to study, learn, and problem-solve, bodily engines thrive on nutrients. An ideal morning meal would consist of an array of protein, fat, and carbohydrate. However, many breakfast foods are manufactured for convenience and only masquerade as nutritious fuel for a busy day.

Fiber cereals, yogurt, English muffins with cheese or peanut butter, fruit, and low in sugar protein/cereal bars are most compatible with the stress-driven, time-constrained mornings we all face today. Successful strategies are difficult to recommend, and you know the approach that is best for your children. However, it is clear that there is wisdom in preparing for the day. And, breakfast is a winning strategy.

2010 Census

Continued from page 1

public health, neighborhood improvements, transportation, education, senior services and much more.

Reaching an Increasingly Diverse Population

The goal of the 2010 Census is to count all residents living in the United States on April 1, 2010. The U.S. Census Bureau does not ask about the legal status of respondents in any of its surveys and census programs. To help ensure the nation's increasingly diverse population can answer the questionnaire accurately and completely, about 13 million bilingual Spanish/English forms will be mailed to housing units in neighborhoods identified as requiring high levels of Spanish assistance. Additionally, questionnaires in Spanish, Chinese (Simplified), Korean, Vietnamese and Russian—as well as language guides in 59 languages—will be available on request.

Recruiting Census Workers

By 2010, there will be an estimated 310 million people residing in the United States. Counting each person is one of the largest operations the federal government undertakes. For example, the Census Bureau will recruit nearly 3.8 million applicants for 2010 Census field operations. Of these applicants, the Census Bureau will hire about 1.4 million temporary employees. Some of these employees will be using GPS-equipped hand-held computers to update maps and ensure there is an accurate address list for the mailing of the census questionnaires.

10 Questions, 10 Minutes to Complete

With one of the shortest questionnaires in history, the 2010 Census asks for name, gender, age, race, ethnicity, relationship, and whether you own or rent your home. It takes only about 10 minutes for the average household to complete. Questions about how we live as a nation—our diversity, education, housing, jobs and more—are now covered in the American Community Survey, which is conducted every year throughout the decade and replaces the Census 2000 long-form questionnaire. Responses to the 2010 Census questionnaire are required by law. All responses are used for statistical purposes only, and all are strictly confidential.

For more information, visit the 2010 Census Web site at www.census.gov/2010.

Village Makeover

Continued from page 1

gateways to let visitors know that they have arrived at their destination. The project will enhance the sense of place in the Village and further establish it as a competitive commercial district offering patrons an array of dining options, products, and services in a visually appealing and safe environment.

The City financed the planning and engineering effort by reinvesting parking revenues from the Downtown Parking Fund to hire a consultant to prepare design concepts and construction documents. The City and the consultant conducted two community workshops in 2009 to gather feedback from the business community. This public involvement was viewed by the City Council as a critical component in the process of developing concept plans and facilitating construction of the improvements. The business community provided valuable guidance and recommendations which have been integrated into final concept plans that illustrate the joint vision of the City and the business community. The project timeline and concept plans can be viewed on the City's website.

The completion of the concept plan, while a major milestone for the overall project, does not mean that jackhammers will be pounding on the Village any time soon. There is much work to be done before construction can begin. The consulting team must prepare engineering plans for a first-phase of construction. The City, with assistance from the consultant, will also devise a work program to ensure that individual businesses can serve their customers effectively during construction.

In this endeavor, the City looks to the local business community to develop a financing mechanism to provide for ongoing and long-term maintenance of the proposed improvements. With assistance from a consultant, the La Mesa Village business community has begun exploring various special financing options for development of a business district that could fund ongoing maintenance and other promotional and management activities to benefit businesses in the Village. The process of establishing a business improvement district is complex and is expected to take at least a year to complete.

Once a satisfactory business improvement district solution is in place, the actual construction of improvements could begin as early as January 2011.

COUNCIL ACTIONS

October 13, 2009
Adopted a resolution waiving formal bidding and authorizing the purchase and installation of a fire station alerting system for Fire Station 13.

Adopted a resolution of intention to authorize the Mayor to execute the fourth amendment to the Agreement for Management and Implementation of a Home Investment Partnerships Program project with the County of San Diego to fund the La Mesa Down Payment and Closing Cost Assistance (DCCA) Loan Program and accept the HOME allocation of $1,768,882.95.

Adopted a resolution authorizing the acceptance of the San Diego Service Authority for a freeway emergencies grant for rescue airbags and auto extrication training.

Approved a Joint Exercise of Powers Agreement (JPA) between the cities of El Cajon, La Mesa and Lemon Grove to provide cooperative fire protection and emergency medical services.

Appointed members to the Youth Advisory Commission.

October 27, 2009
Adopted a resolution approving a professional services agreement with Edward Henning & Associates, and authorized the allocation of additional funds from the Downtown Parking Fund for development of a plan to finance downtown improvements, maintenance and promotion.

Appointed a member to the Youth Advisory Commission.

Adopted a resolution ordering the vacation of portions of the Grossmont Center Drive and Murray Drive right of way dedicated for public road purposes.

Approved the designation of the properties located at 7910 El Capitan Drive, 4646 Third Street, and 9339 Lemon Avenue as historic landmarks, and established Property Preservation (Mills Act) Agreements for the sites.

Adopted an ordinance adopting standard specifications for public works construction in the City of La Mesa regulating materials of construction and their use in the erection, installation, alteration, repair, removal, conversion, demolition, and construction of public works improvements; providing for the administration of contracts as well as permits issued in connection with such improvements; providing penalties for the violation thereof; and repealing all ordinances and parts of ordinances in conflict therewith; and adopting by reference the 2009 edition of the "Standard Specifications for Public Works Construction" commonly known as "Greenbook," 2007 Supplement to "Greenbook" and 2008 Cumulative Supplement to "Greenbook" of the Southern California Chapter, American Public Works Association and Southern California District Associated General Contractors of California Joint Cooperative Committee.

November 10, 2009
Adopted a resolution authorizing staff to submit an application for inclusion in San Diego Association of Governments (SANDAG) proposed project funding recommendations for fiscal year 2011 federal appropriations for the Downtown Village Streetscape Improvement Project

Adopted a resolution authorizing the continuing use of Supplemental Law Enforcement's Citizens Option for Public Safety (COPS) Funds for the San Diego County 800 MHz Regional Communications System (RCS).

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a local Seat Belt Compliance Traffic Safety Project and approving the addition of the grant funds to the fiscal year 2009-2010 and 2010-2011 budgets.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a local DUI Enforcement and Awareness Program by approving the addition of the grant funds to the fiscal year 2009-2010 budget.

Adopted an ordinance amending Chapter 10.36 of the Municipal Code to prohibit the consumption of alcoholic beverages in public places; and adopted a resolution establishing a fee related to regulating and permitting the possession of open alcoholic beverage containers and the consumption and/or sale of alcoholic beverages in public places pursuant to La Mesa Municipal Code Chapter 10.36

November 24, 2009
Accepted the annual audit reports of the La Mesa Community Redevelopment Agency, City of La Mesa, and single audit of federally assisted grant programs for year ending June 30, 2009.

Adopted a resolution authorizing the renewal of the Police Department Storefront lease for a six month-term.

Adopted a resolution approving the 2010-2014 Redevelopment Area Implementation Plan for the Central, Fletcher Parkway and Alvarado Creek Redevelopment Project Areas.

December 8, 2009
Adopted a resolution authorizing a budget adjustment for the award of grant funding from Kaiser Foundation Hospital Southern California Region.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a Sobriety Checkpoint Mini-Grant Project and approving the addition of the grant funds to the fiscal year 2009-2010 and 2010-2011 budgets.

Adopted a resolution authorizing an amendment for a seventh year renewal of RFP No. 02-3, for an annual contract for janitorial/custodial/set up/tear down services – Community Services, Public Works, and Fire Department facilities to American Building Maintenance (ABM) Janitorial Services.

Adopted a resolution finding the apparent low bidder non-responsive and awarding the contract for Bid No. 07-29, Construction of Traffic Signal Modifications at the Intersection of Lake Murray Boulevard and Baltimore Drive, to HMS Construction, Inc., the lowest responsive bidder.

Adopted an ordinance adding Chapter 14.29 to the Municipal Code to establish water efficient landscape regulations.

Convenient enrollment is available online OR print the enrollment form to mail in.

Streetscape Improvement Project – Allison Avenue

Allison Avenue is the main access road to the newly revitalized civic center that includes the library, post office, city hall, Fire Station 11/Administration, and police station. Allison Avenue also provides a connection to the downtown village. With a number of busses passing through Allison Avenue and the adjacent trolley station on Spring Street, Allison Avenue also serves as a major transit and pedestrian corridor.

The Allison Streetscape Improvement Project will continue the streetscape improvements that were recently completed on University Avenue around the north side of the civic center which were designed to improve walkability. Improvements will include: landscaped and sheltered bus stops, mid-block crosswalks in front of the new library and bus stop, street lighting, sidewalks, enhanced crosswalks, street trees and landscaping, and an asphalt overlay. The work will take place in between Palm Avenue and University Avenue.

Work is expected to begin this summer and will take approximately nine months to complete. During the construction, there may be delays and parking restrictions. Additional parking will be available on the civic center property north of city hall. We apologize for any inconvenience and will strive to keep disruptions to a minimum.

This project has been funded by a grant from the San Diego Association of Governments. For additional information, please call the city's project manager, Hamed Hashemian at 667.1153.

Planned Sidewalk to Provide Safer Route to School

The City of La Mesa has been awarded a federally funded Safe Routes to School grant in the amount of $522,300 to construct a sidewalk along the east side of Glen Street from Lemon Avenue Elementary School to Springview Lane.

The project includes design and construction of new curb, gutter, sidewalk and any required retaining walls within existing City right of way and driveway transitions behind the new sidewalk on

Continued on page 2

The City of La Mesa recently completed the Downtown Gateway Signage Improvement Project. The City installed approximately 50 new directional signs and new street name signs in and around the Downtown Village, including this new monument sign at Fletcher Parkway & Baltimore Drive. The signage project was paid for with a mix of state grant funds and reinvested parking revenues.

Planned sidewalk...

Continued from page 1

private property, as well as a pedestrian refuge island at the intersection of Glen Street and Alpine Avenue. This project fills a sidewalk gap along the suggested route to school for Lemon Avenue Elementary School on the east side of Glen Street, providing a continuous sidewalk route from the south to the school boundary.

The school has an enrollment of approximately 560 children, of which about 30 or 5% walk on a daily basis. In addition to encouraging students to walk to school, this project would further ongoing efforts to enhance walkability throughout the City. Construction will begin following utility relocations.

DEADLINE
FOR VOTER REGISTRATION

MONDAY, MAY 24

FOR THE CALIFORNIA PRIMARY ELECTION ON JUNE 8

YOUR VOTE COUNTS!

You will need to register to vote if you:

- Have moved recently
- Changed your name
- Wish to change your political affiliation
- Will be at least 18 years of age on or before the next election

Postcard registration forms are available at a variety of public offices including:

- Registrar of Voters Main Office
- All City Clerk Offices
- Department of Motor Vehicles
- U.S. Postal Services
- Public Libraries

Call the Registrar of Voters main office at 858.565.5800 or visit www.sdvote.com for more voter registration information.

WANT TO MAKE A DIFFERENCE IN YOUR COMMUNITY?

VOLUNTEER FOR A CITY BOARD, COMMISSION, OR COMMITTEE

The City of La Mesa is currently seeking La Mesa residents who are interested in serving their community by becoming a member of a City board, commission or committee.

Serving on a board or commission can be a rewarding experience. Citizen participation helps to ensure that our local government is addressing the needs of the La Mesa community through the services, planning, and decision making provided by each board.

Applications are now being accepted for appointment on the following boards, commissions, and committees:

Commission on Aging

Community Services Commission

Design Review Board

Historic Preservation Commission

Human Relations Advisory Commission

La Mesa Community Parking Commission

Loan Committee for Real Estate Rehabilitation

Personnel Appeals Board

Planning Commission

Traffic Commission

Youth Advisory Commission

Please consider this opportunity to serve on a board, commission, or committee. You will find an application and specific information regarding qualifications, requirements for serving, and meeting days and times on the City's website, or call or visit the City Clerk's office in City Hall, 8130 Allison Avenue, 667.1120.

Applications for advisory boards must be submitted to the City Clerk's office no later than 5:30 pm, Thursday, June 10, to be included in the June interview process tentatively scheduled for 6:30 pm on Tuesday, June 22. The interview and selection process for the Youth Advisory Commission occurs in September.

COOL SPOTS IN & AROUND LA MESA

Summer is fast approaching and La Mesa residents who may be at risk from extreme heat can seek relief during the hottest days of the year at several community locations. You can find a list of Cool Zones in and around La Mesa on the City's website.

For a list of Cool Zones throughout the County and tips to stay cool see www.CoolZones.org or contact the AIS Call Center at 800.510.2020 and press 6.

COUNCIL REVIEWS ACCOMPLISHMENTS FOR 2009

As you know, cities throughout California and the nation continue to struggle with the challenges of balancing falling revenues with the ever increasing costs to provide vital services. On March 18, 2010 City Council met with management staff for the annual strategic planning workshop, the first step in the budget review and update process each year. At the workshop Council reviewed accomplishments from the past year, considered community input gathered from Town Hall meetings, and heard reports on fiscal issues that could impact the City.

Visit the City website to learn about accomplishments for the past year in your City.

CITY RECEIVES AWARDS

KAST-Kids and Seniors Together, La Mesa's Urban Walking Trails, and the sidewalks around Helix High School received recognition in spring 2010.

KAST-Kids and Seniors Together received a $700 grant from CECO, San Diego County Employees' Charitable Organization to purchase sports equipment and craft supplies. KAST is a free after-school program for second through fourth grade youth at La Mesa Dale Elementary School. Teachers recommend the children they feel will benefit most from the supportive interaction with older adults working with daily. There is no charge for the children to attend KAST. The program is funded through La Mesa Park & Recreation Foundation with the generous support of donations and grants. For more information please call 667.1300.

La Mesa's Urban Walking Trials received a 2010 Kaiser Permanente Golden Footprint Award for Local Jurisdiction on April 22 from WalkSanDiego. The City's Public Works Department also received the award for sidewalk design and construction on Orien and Lowell around Helix High School. La Mesa's Urban Walking Trails program is part of our "ready… set… Live Well" Community Wellness Program. The trails offer a one mile beginner level route, a five mile intermediate route and a three half mile advanced route. Go to www.cityoflamesa.com under Quick Links go to City Walks & Urban Hikes to print out your user friendly walking map.

In addition to awards, the City's "ready, set, Live Well" initiative was featured in the April 2010 issue of Western Cities magazine. "Ready, set, Live Well" is working to create the most livable city in the San Diego region.

La Mesa Welcomes New Superintendent of Public Works

The City of La Mesa has hired a new superintendent of public works, Mike Emberton, to oversee the Operations and Maintenance Division of the Public Works Department. Mike began in February and replaced long-time employee Eric Johnson who retired in December. Mike is responsible for managing maintenance crews and administrative office staff housed at the Public Works Operations Center at 8152 Commercial Street.

Director of Public Works, Greg Humora is excited to have Mike on board. "Mike comes to the City with the experience and expertise to lead public works operations. He is extremely customer service oriented and I believe his contribution to the department will be significant."

Mike looks forward to serving the citizens of La Mesa for years to come. "La Mesa is a great community. I look forward to many years of service to the citizens and hope to make La Mesa an even better place to live, work and play."

LA MESA CELEBRATES

National Public Works Week, May 16-22

National Public Works Week is a celebration of the tens of thousands of men and women nationwide who provide and maintain the infrastructure and essential services, above, below and all around us, that affect our quality of life. Instituted by the American Public Works Association (APWA) in 1960, National Public Works Week is observed each year during the third full week in May to call attention to the importance of public works in community life.

Often the unseen heroes, the employees of the La Mesa Public Works Department are the key to the City's ability to consistently deliver the high quality services and quality of life for which La Mesa is known. The department is responsible for the engineering, construction, operation and maintenance of the City's infrastructure, including streets and sidewalks, public buildings, wastewater and storm water collection systems, traffic control devices and park facilities. Capital construction projects, land development, right-of-way permits, solid waste and recycling and environmental programs are also managed by Public Works Department staff.

The services provided by the dedicated staff of the Public Works Department impact the community at large and are an integral component of residents' everyday lives. These services and systems are operated, maintained and improved in the most efficient and effective manner ensuring the health, safety and comfort of the general public.

Free Household Hazardous Waste and Electronic Waste Disposal

UPCOMING COLLECTION DATES: June 5 & July 24

Collection events are available by appointment only by calling EDCO at 287.5696 x4270 or emailing to lmhhw@edcodisposal.com.

E-waste can be recycled at the EDCO Station buy back center during business hours without an appointment. The center is open Monday through Saturday from 8:00 am to 4:00 pm. A small fee may apply to some items.

A list of household hazardous waste and electronic waste items included in these programs can be found on the City website. To request additional information about the program, please contact the Department of Public Works Environmental Services Division at 667.1338 or by email at enviros-vcs@ci.la-mesa.ca.us. For general HHW information or other disposal and recycling options, visit www.cityoflamesa.com/hhw.

Free Oil Filters!

La Mesa Oil Filter Exchange Event

Sat., June 12 • 10 am – 2 pm

Kragen O'Reilly Auto Parts
5350 Jackson Drive

Bring in your used oil filters to be recycled and receive a FREE OIL FILTER!

Limit one free filter per customer. This offer is only valid at the specific date, time, and location above. Only drop off used filters during business hours. Thank you!

Program is funded by a grant from the California Department of Resources Recycling and Recovery.

EXCITING VOLUNTEER OPPORTUNITIES!

Are you interested in becoming a volunteer with the City of La Mesa? Volunteers play an important role in the enhancement and expansion of services to City residents. You will not only provide a valuable service for the community, but also enjoy flexible scheduling for most assignments, develop new skills and meet new friends. Check out our volunteer opportunities below or download a Volunteer Application from www.cityoflamesa.com.

Rides4Neighbors

We need Volunteer Drivers for Rides4Neighbors, a transportation program for La Mesa's older residents and residents with disabilities. Rides are provided by trained volunteers in their own vehicles. We reimburse for mileage and provide supplemental liability insurance. Volunteers decide availability and choose the rides they wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. As a volunteer, you will be part of a rewarding and meaningful civic program. For information, call the Adult Enrichment Center at 464.0109.

Adopt A Block!

You can help preserve and enhance the beauty and cleanliness of La Mesa by volunteering for Adopt A Block. If you are a regular walker in your neighborhood, whether alone, with a pet or a neighbor, you can join this dedicated team of volunteers. The City provides a program vest, bags and a pick-up tool. All you need to do is commit to spending at least five hours a month for one year! You make your own hours. Sign up TODAY by calling 464.0505.

City Hall and Fire Department Tour Guide

Would you be interested in coordinating City Hall and Fire Department tours for school classes? This volunteer job involves coordinating school visit requests with the Mayor and the Fire Department administration. The schedule corresponds to the school year and City Hall tours are requested periodically. Download the standard Volunteer Application or call 464.0505.

Adopt A Park!

We are seeking dedicated garden-lovers, park aficionados and environmentally conscious residents to help us with weekly or bi-monthly care and upkeep of one of the City of La Mesa parks. Periodic litter patrol, weeding, rubbish removal, planting and sprucing up would be just the right stuff to help keep these special places a treasure for all to enjoy. Please download a Volunteer Application, or call 464.0505 for more information!

La Mesa Flag Day Parade

"A Salute to Old Glory"

Sat., June 5

10:00 am

Best viewing along La Mesa Blvd. in the Downtown Village

ATTENTION ELEMENTARY STUDENTS & ADULTS AGE 50+

SAVE THE DATE!

East County Intergenerational Games in La Mesa!

Thursday, October 14

"Join the Generations" for a fun-filled morning of bocce ball, hockey shoot, basketball shoot, Frisbee toss, horseshoes, and lots more fun activities with students from 4th thru 6th grade. Each active adult is paired with a student; the activity circuit is completed as a TEAM. T-shirts, snacks, lunch and giveaways included! Events will take place at La Mesa Middle School.

MAKE A DIFFERENCE!

To register for La Mesa Intergenerational Games, please call

POLICE DEPARTMENT INTRODUCES NARCOTICS DETECTION CANINE TEAM

In October 2008 the La Mesa Police Department sought funding to implement a narcotics detection canine program. The department obtained a grant award of $68,890 from the San Diego Police Foundation, funded by the Gary and Mary West Foundation. Over the past several months, the department has developed a program and will soon have a team in operation.

A Narcotics Detection Canine Team consists of an officer/handler and a narcotics detection dog. This type of team will assist the La Mesa Police Department in reducing the availability of narcotics on the street, and in apprehending those involved in the use and sale of illegal drugs in our community.

Officer Derek Cox has been selected as the Police Department's first Narcotics Detection Canine Handler. Officer Cox is a very proactive officer who has focused his patrol efforts on arresting those involved in the use, sale, and transportation of illegal drugs and narcotics. Officer Cox has made over 150 narcotics related arrests during the last three years and he is an expert in this field. Officer Cox is also a decorated officer who has received the California Highway Patrol's "10851 Pin" Award three times, for excellence in the identification and recovery of stolen vehicles, along with numerous department commendations and citations.

Officer Cox will introduce his "K9" partner, along with representatives of the Gary and Mary West Foundation and the San Diego Police Foundation, to the community and City Council Members at an upcoming City Council Meeting. Through the generous support of these foundations and the excellent work of Officer Cox, the La Mesa Police Department has a new resource to help meet our commitment of keeping La Mesa a safe community.

SHARPS DISPOSAL HAS NEVER BEEN EASIER!

Trying to figure out how to safely dispose of your medical sharps? It's now easier than it has ever been before and won't cost you a thing! Home-generated sharps waste is defined as hypodermic needles, pen needles, intravenous needles, lancets, and other devices that are used to penetrate the skin for the delivery of medications derived from a household, including a multifamily residence or household.

In September 2008, State law (Section 118286 of the California Health and Safety Code) made it illegal to dispose of sharps waste in the trash or recycling containers, and required that all sharps waste be transported to a collection center in an approved sharps container.

You can now conveniently dispose of sharps free Monday-Saturday during business hours at EDCO Station's Recycling Buyback Center, located at 8184 Commercial Street. For more information please call EDCO at 287.7555 or visit their website at www.edcodisposal.com/toxic.html.

OVER IRRIGATION IS MONEY DOWN THE DRAIN

Are you that neighbor that is over-watering their yard? Not only is our precious resource being wasted, but hard earned money as well!

It doesn't take much to moisten the ground before water starts running off your property. Also, over irrigation can mobilize pollutants such as pesticides, fertilizers, and pet waste prior to reaching the storm drain system, and eventually the creeks and channels within our City. Visit the City website for tips that you can follow to help eliminate pollutants from entering our creeks.

You may not be aware that Helix Water District has several programs to help single-family homeowners conserve water. Residents are eligible to apply for high efficiency toilet, clothes washer, and irrigation controller rebates worth up to $200. For more information, call 466.0585 or visit www.hwd.com/conserv or e-mail conserve@helixwater.org.

Please share the above information with your family, friends, and neighbors. For more information you may contact the City's Storm Water Hotline 667.1134.

ADULT SOFTBALL

REGISTRATION

La Mesa Fire Station 12, 8844 Dallas St.
Wednesday, July 21
5:30 – 6:30 pm
Voicemail 667.1172 #6

Team rosters will be issued at time of registration

Fee: $525 for season payable in full at time of registration. Umpire fees not included - $15/game each team

Visit the City website for additional information regarding registration and season schedule.

(18 years and older)

PERSONAL SAFETY

Recent events in the county have caused concern within the community; especially among women. Questions range from, "Where can I safely exercise?" to "Should I buy a weapon?"

Purchasing a weapon and carrying it is a personal choice. The La Mesa Police Department's recommendation is that if you purchase a weapon make sure you are properly trained in the use of that weapon. And know the legal requirements for carrying that particular weapon.

Being physically and psychologically prepared to defend yourself is important. There are numerous excellent self defense courses available within your community. It's a good idea to go online and research which course will work best for you. If you can, attend with a group of friends you can practice with after the training course.

Learning to trust yourself and your instincts is one of the keys to prevent or fight off an attack. Know all your options. Physically and mentally rehearse them. If an attack occurs, you may only have a split second to decide your response. Have a plan in mind…know what you are going to do and then do it quickly.

Below are some tips to help you stay safe:

- Avoid walking or jogging alone especially in the early morning or late at night.
- Wear comfortable clothing that would be easy to run or fight in.
- Avoid wearing headphones, talking on the phone, or texting while you are walking or running alone.
- Carry identification and an emergency phone number.
- Tell someone you trust where you are going and when you will return. Notify them when you get back.
- Always have your keys ready when walking to and from your home, car, or place of business. Avoid getting distracted by digging in your purse or fumbling with shopping bags.
- Always walk with your head held high and look around. A confident presence can make you less of a target.
- Make good eye contact with anyone you encounter; male or female.
- Always be aware of your surroundings and who is near you.
- Change your routine. If you take a certain route at the same time everyday, it will be easy for someone to guess when you will be arriving and leaving.
- If you frequent a particular area, know what businesses are open and what houses are safe. If you need help, you will know exactly where to go instead of trying to guess during a stressful moment.
- Be suspicious! It's not a bad thing.
- Trust your intuition; it's there for a reason. If something doesn't feel right or causes that funny feeling in your gut, move away from the area as quickly as possible. Don't ignore your feelings about a person or a place.
- Sometimes you don't have to be nice! It's OK to be direct or even rude if you don't feel safe. Examples would be the "Talk to the hand gesture" or telling a person, "Sorry, I am not interested."
- If you ever feel that someone is following you, whether they are in a car or on foot, get away! Cross the street, walk into a business or turn and head in the other direction. If the person continues to follow you after you change your course, scream, run into a business, call the police, or signal to other people on the street.
- Know the location of your local police department. If you are being followed while driving, pull into the police station parking lot. Hospitals and fire departments are also good choices.

If you are being attacked:

- Run! Get away any way you can.
- Scream and yell while you are running. Even if the area seems deserted, there may be someone who can hear you.
- If your attacker has control over you and you can't run, do whatever you can not be taken to another location.
- Your hands, feet, knees, elbows and teeth are all weapons. Use them!
- If you are fighting off an attack, the best places to target are face, eyes, throat, and groin.

SMALL STEPS TO BIG CHANGE!

You do not have to be rich or famous to make healthy choices. There are small steps that anyone can take to live more sustainably.

WHAT IS SUSTAINABILITY?

Sustainable societies are those whose infrastructure, institutions, and practices (social, economic and environmental) meet the needs of the present generation without compromising the ability of future generations to meet their own needs.

- Brundtland Commission, U.N. Commission on Sustainably Development

GREEN LAUNDRY.

Do full loads and clean your dryer's lint trap for greater energy efficiency. Set your rinse cycle on cold; you'll use less energy and clothes get just as clean. Hang partially dried clothes, or line dry altogether. Choose high-efficiency models when replacing machines.

Did you know? Heating the water accounts for 90% of the energy used by a washing machine.

EAT LOCALLY.

Buying and growing local food reduces energy consumption. Visit our weekly farmer's market on Alison Ave, Fridays 3:00-6:00 pm. Join a local organic co-op, or grow your own fruits and vegetables.

Did you know? The journey from pasture to plate averages 1,200 to 2,500 miles.

KICK THE BOTTLED WATER HABIT.

America's bottled water habit uses more than 1.5 million barrels of oil each year. Invest in a reusable, nontoxic bottle.

Did you know? 40 percent of bottled waters sold are just tap water.

UNPLUG IT.

Computers and electronic devices with standby-remote control ability are "energy vampires" which suck energy even when turned off. Most recharging adaptors for phones, cameras etc. draw energy whenever they are plugged into an outlet, despite being fully charged or even connected. By plugging into a surge protector strip that can be turned off when not in use, you will save thousands of pounds of carbon dioxide a year.

Did you know? Such phantom energy loss uses an estimated 65 billion kilowatt-hours annually in America, creating more than 87 billion pounds of carbon dioxide.

Part 2 of 3

SUNDAYS AT SIX

Summer Concert Series • Concerts from 6:00 – 7:00 pm

at Harry Griffen Park • 9550 Milden Street, La Mesa

SAVE THE FOLLOWING DATES:

JUNE 13 JUNE 20 JUNE 27 JULY 11 JULY 18 JULY 25

Enjoy FREE concerts featuring performances from some of San Diego's premiere recording artists, musicians, and singers. Bring a picnic and spend "Sundays at Six" relaxing to concert band, country, jazz, and variety music in the company of friends.

Watch the City website for updated concert information and performance lineup as it becomes available.

Thanks to sponsors: Wells Fargo and Country Hills Healthcare Center

STORM WATER POLLUTION PREVENTION REQUIREMENTS

Did you know that the City of La Mesa is under strict requirements set by the State of California regarding storm water pollution? Similar to the requirements of neighbor cities, La Mesa is required to develop and implement strategies to reduce the amount of pollutants entering our streams and waterways.

In order to investigate the level of storm water pollution, the City began conducting storm water quality testing in 1993. Since then, the City has expanded the testing program to analyze additional pollutants, including metals, nutrients, pesticides, oil and grease, and bacteria. There are a total of 18 locations within the City that are tested annually. Monitoring and testing allows the City to pinpoint the pollutants of concern, as well as provide an approximate location of the source. Further investigation can then be conducted to attempt to pinpoint and eliminate the exact cause.

Sources of everyday pollution can include household cleaners, fertilizers, sewage, pesticides, trash, and pet waste. Allowing just a small amount of these materials to run into the street or storm drain may impact the storm water testing which the City conducts.

Here are ways that you can help decrease or maintain low pollutant concentrations.

- Pick up after your pet and place waste in trash cans.
- Dry sweep exterior paved areas. Do not use water or a hose to clean areas such as sidewalks or driveways.
- If water must be used for cleaning, use a mop and bucket. Dispose of wash water in a mop sink.
- Avoid over-irrigation and adjust timers accordingly. The added benefits are a lower water bill and a more efficient use of water.
- Minimize use of pesticides, herbicides, and fertilizers and if used, ensure instructions are followed and over-spray is minimized. Store material properly, cover and contain.
- Keep trash receptacle lids closed and schedule regular pick-ups.
- Perform vehicle maintenance indoors and use drip pans.
- Wash vehicles at a commercial car wash when possible or over an area that prevents wastewater from entering into the storm drain system. Also minimize using soap while washing vehicle.

Storm drains are different than the sewer system. Water entering the storm drain system does not get treated. It flows directly to creeks and rivers – terminating at the Pacific Ocean. Please do your part to help protect the environment. Visit the City website for information and storm water educational materials or call the City of La Mesa's Storm Water Hotline if you have any questions or concerns at 667.1134.

TRANSPORTATION & MOBILITY EXPO

Thursday, June 17 10:00 am – 2:00 pm

La Mesa Community Center, 4975 Memorial Drive

The City of La Mesa will host a Transportation & Mobility Expo on Thursday, June 17.

The Expo is a free event open to East County seniors, adults with disabilities, adult children of aging parents, and other caregivers who want to learn more about San Diego area transportation and community accessibility options. Exhibitors and guest presenters will be on hand to inform and educate attendees about specialized transportation resources, discount taxi services, public transit services and special programs, ADA paratransit, adaptive devices for home and community accessibility, scooters and electric mobility options and more! Channel 10 News Anchor Hal Clement will be the featured speaker.

Funded by the San Diego Association of Government's Transnet Minigrant Program and the Grossmont Healthcare District.

Event sponsorship and exhibitor opportunities are now available. Call Judy Stern at 667.1490.

COUNCIL ACTIONS

January 12, 2010

Ratified the Design Review Board's approval of DRB-09-14 (Windmill Summit LLC), for a proposed 33,000 square-foot, 3 story office building addressed as 9400 Grossmont Summit Drive.

Ratified of the Design Review Board's approval of DRB-09-18 (Clearwire), for proposed modifications to an existing wireless communications facility at 8265 Commercial Street.

Adopted a resolution authorizing the extension of the Regional Communications System Participating Agency Agreement between the County of San Diego and the City of La Mesa until March 31, 2013.

Adopted a resolution authorizing the acceptance and expenditures of the 2008 Homeland Security Grant Program funds to purchase and install the San Diego Regional Command and Control Communication (3C's) equipment into the police department's mobile command vehicle and approving the addition of the grant funds to the FY 2009/2010 budget.

Adopted a resolution approving the use of Heartland Fire and Rescue as the representative name for the joint management team under the Joint Exercise of Powers Agreement for fire protection and emergency medical services for the cities of El Cajon, La Mesa and Lemon Grove.

January 26, 2010

Ratified the Design Review Board's approval of DRB-09-20 (Clearwire), for proposed modifications to an existing wireless communications facility at 9019 Park Plaza Drive.

Adopted a resolution awarding a contract to KTU&A for professional services related to the General Plan circulation update incorporating bicycle facilities and infrastructure and complete street planning.

Adopted a resolution awarding Bid No. 09-18 for the Junior Seau synthetic turf repair to Asphalt, Fabric & Engineering, Inc. dba California Ultimate Turf and accepting a donation from the La Mesa Park and Recreation Foundation and appropriating funds from the City Liability Risk Financing fund to the project.

Adopted a resolution awarding a contract for Bid No. 09-11, Parkway Drive Street Light Project, to Patterson Brothers Lighting Incorporated.

Adopted a resolution waiving formal bid procedures and authorizing execution of agreements between the City of La Mesa and Gary F. Hoyt Landscape Architecture, Inc., for specialized professional services for Collier Park – Phase 1 Landscape Construction Documents; and between the City of La Mesa and Snipes-Dye Associates, Inc., for specialized professional services for Collier Park – Phase 1 Sewer Improvement Drawings.

Adopted a resolution authorizing a grant application for Prop 84 – Statewide Park Development and Community Revitalization Program of 2008 for Collier Park construction.

February 9, 2010

Ratified the Design Review Board's approval of DRB-09-19 (Clearwire), for a proposed wireless communications facility at 5575 Lake Park Way.

Ratified the Design Review Board's approval of DRB-09-22 (Clearwire), for proposed modifications to a wireless communications facility at 8861 La Mesa Boulevard.

Adopted a resolution accepting bid and awarding contract for Sewer Improvements Project at various locations to SC Valley Engineering, Inc., Bid No. 09-19

Adopted a resolution entering into an agreement to perform construction inspection services for sewer improvements at various locations with Infrastructure Engineering Corporation.

Adopted a resolution of the City of La Mesa authorizing the acceptance of the FY09 State Homeland Security Grant Program (SHSGP) grant of $67,821 for terrorism preparedness.

Adopted a resolution in support of the Local Taxpayer, Public Safety and Transportation Protection Act of 2010.

February 23, 2009

Adopted a resolution accepting Bid No. 09-07 and awarding a contract for the Allison Avenue Improvements Project to Hazard Construction Company.

Adopted a resolution entering into an agreement to perform construction inspection services for sewer improvements at various locations with Infrastructure Engineering Corporation.

Adopted a resolution authorizing a grant application for the County of San Diego Community Enhancement Program in collaboration with the "Ready…Set…Live Well" Initiative, the San Diego County Childhood Obesity Initiative, the San Diego County YMCA and the La Mesa Environmental Sustainability Commission.

Adopted an ordinance repealing Chapter 7.18 of the Municipal Code in its entirety and adoption a new Chapter 7.18 to update regulations pertaining to storm water and non-storm water discharges.

Adopted a resolution authorizing the City to join the CaliforniaFIRST Property Assessed Clean Energy Program; authorized the California Statewide Communities Development Authority to accept applications from property owners, conduct contractual assessment proceedings and levy contractual assessments, and authorizing related actions; and adopted a resolution authorizing the lead collaborative entity to apply for funds on behalf of the City.

March 9, 2010

Adopted a resolution approving the establishment of veterans preference credit in the hiring process.

March 23, 2010

Accepted the 2009 Annual Report – Implementation of the General Plan and authorized staff to transmit the Report to the State Office of Planning and Research.

Adopted a resolution authorizing execution of a Memorandum of Understanding for the San Diego Urban Area Regional Computer-Aided Dispatch Interoperability Project (RCIP)

City of La Mesa Monthy Meeting Schedule

Meetings are held at City Hall
8130 Allison Avenue - La Mesa
(unless indicated otherwise)

CITY COUNCIL
Second Tuesday - 4:00 pm
Fourth Tuesday - 6:00 pm

PLANNING COMMISSION
First and Third Wednesday - 7:00 pm

DEVELOPMENT ADVISORY BOARD
Every other Monday - 10:00 am

DESIGN REVIEW BOARD
Every other Monday - 12:30 pm

ENVIRONMENTAL SUSTAINABILITY COMMISSION
Third Monday - 6:00 pm

HISTORIC PRESERVATION COMMISSION
First Tuesday - 5:00 pm

LOAN COMMITTEE FOR REAL ESTATE REHABILITATION
Third Wednesday - 8:30 am (as needed)

REDEVELOPMENT AGENCY
Fourth Tuesday - 6:00 pm

HUMAN RELATIONS ADVISORY COMMISSION
Second Monday - 5:30 pm

LA MESA COMMUNITY PARKING COMMISSION
First Thursday - 5:30 pm

TRAFFIC COMMISSION
First Wednesday - 9:00 am

COMMUNITY SERVICES COMMISSION
Second Wednesday - 6:00 pm

YOUTH ADVISORY COMMISSION
Second & Fourth Monday - 4:15 pm
The above meetings are held at the Community Center Conference Room 4975 Memorial Drive - La Mesa

COMMISSION ON AGING
Fourth Tuesday - 1:30 pm (except July, Aug., Nov., & Dec.)
The above meeting is held at the Adult Enrichment Center 8450 La Mesa Boulevard - La Mesa

City of La Mesa
Storm Water Pollution Prevention
Tips for Outdoor Vendors

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying storm water runoff into receiving water bodies, such as creeks, lakes and oceans. Unlike the sewer system, storm water runoff entering the storm drain system is not treated. Harmful pollutants, as listed below, can be transported during non-storm water discharges such as hosing down side walks or equipment. These types of pollutants are harmful to the environment and negatively impact water quality, aquatic animal and plant life as well as our quality of life. Non-storm water discharges are prohibited and in violation of the City Ordinance. A list of common pollutants and pollution prevention tips are provided below.

Pollutants of Concern

1. Sediment
2. Fertilizers
3. Metals
4. Detergents
5. Pesticides
6. Organic Compounds (solvents)
7. Trash and Debris
8. Oil and Grease
9. Bacteria

Good House Keeping

- Dry sweep exterior paved areas. **Do not use a hose or water!** Place debris in dumpster and keep dumpster lid closed.
- If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer system (sink or toilet). Wash water is not allowed to enter the storm drain.

Outdoor Material and Equipment Management

- Store material under covered areas.
- Place liquid material in secondary containment to ensure spills are contained.
- Ensure that frying oil is contained and managed properly without dropping/leaking on to the pavement.
- If using frying oil, ensure that you purchase absorbent material (absorbent pads) to address cleanup of potential oil spills.
- Inspect/fix equipment to ensure no leaks.
- Do not wash equipment at the event!

Waste Management

- Place trash in dumpsters with lids always closed.
- Cleanup leaks/spills immediately and place waste material into the dumpster

Should you require clarification or additional information on storm water pollution prevention, please contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.2

OVER IRRIGATION FACT SHEET

City of La Mesa
Storm Water Pollution Prevention
Over-Irrigation

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

With La Mesa's clay soils, it doesn't take much to moisten the ground before water starts running off your property to the curb, down the street and into the storm drain. Runoff from over-irrigation may transport pollutants such as sediment, pesticides, fertilizers, pet waste, bacteria, and automobile fluids. These pollutants enter our local creeks and streams and discharge into the ocean.

Over-irrigation is not prohibited; however, the following measures are recommended.

1. Over-irrigation runoff shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Irrigate to meet site-specific conditions to prevent over-watering.
3. Ensure that your irrigation system has control devices, sensors or shut-off switches to address malfunctions.
4. Place or group plants with similar water needs within the same area.
5. Don't irrigate non-planted areas.
6. Inspect your irrigation system regularly for potential problems
7. Consider drip irrigation to save water and prevent over-irrigation and runoff.
8. Adjust irrigation rates according to seasons, weather conditions and the soil's ability to absorb water. Instead of watering for 15-minutes straight, break up the session into 5-minute intervals, allowing water to soak in before the next application.
9. Irrigate in the early morning; it's the most efficient time to water plants with minimal evaporation.
10. Refrain from irrigation during hot, windy periods of the day. Do not let water run out into the street.

Do the right thing, stay in compliance and protect our environment. For more information contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.3

CHOLLAS CREEK TMDL FACT SHEET

Chollas Creek TMDL Fact Sheet

What are the Chollas Creek TMDLs?
In 2003 and 2007, Total Maximum Daily Load (TMDL) allocations for the pesticide diazinon and for heavy metals (copper, lead, and zinc), respectively, were adopted by the Regional Water Quality Control Board (a State Regulatory Agency) for Chollas Creek. The regulations establish strict numeric limits on the amounts of heavy metals and diazinon that can be present in urban runoff. Southwestern La Mesa, roughly bounded by El Cajon Boulevard to the north and Spring Street to the east (see map), eventually drains to Chollas Creek and is subject to these requirements. Businesses within this area are impacted by these new requirements. The City is monitoring water quality near your business to identify and eliminate sources of these pollutants to comply with new State regulations. The following activities/sources contribute to the discharge of heavy metals and diazinon.

Heavy metals are commonly associated with industrial waste, uncontained storage of certain metal products or materials (such as galvanized steel), cutting and grinding activities, atmospheric deposition, metal smelting or plating, and automobile tires and brakes.
Diazinon is a pesticide associated with landscaping activities. It has been banned for use and is no longer available at retail outlets. Diazinon acquired prior to the ban should be disposed of in accordance with state and federal regulations.

What is the City of La Mesa doing about these TMDLs?
The City's many efforts to protect water quality and comply with State regulations include regularly sweeping its streets and cleaning out its storm drain system, inspecting businesses and construction sites, and applying strict water pollution control standards to new development projects.

What do these TMDLs mean for my business?
The City's Municipal Code requires that businesses take measures to ensure that urban runoff (water that leaves your business and enters storm drains) is not contaminated with pollutants. Chapter 7.18 of the Municipal Code requires businesses to implement measures including those listed below. Taking these actions will help meet TMDL requirements.

- Eliminate non-storm water discharges, such as hosing off property and allowing the water to leave the site, dumping liquids into a storm drain, and runoff from excessive irrigation.
- Cover and contain metal products or materials that may contain heavy metals where feasible. Examples of such materials include galvanized metal, brake pads, tires, and metal recycling bins.
- Conduct metal cutting, grinding, welding, automotive or equipment repair, and similar activities in indoor, contained areas where feasible.
- Regularly sweep paved areas of your site to keep them clean and dispose of debris appropriately.
- Do not use any product containing diazinon. Contact County of San Diego Hazmat for instructions on proper disposal (619-338-2231).
- Store all pesticides and fertilizers in covered and contained areas. Consider alternative, non-chemical pest control methods.
- Do not apply pesticides before storms and eliminate overspray of pesticides onto paved surfaces.

If you observe illegal dumping into a storm drain, please report it to the City at 619-667-1134.

ATTACHMENT 8.4

RESIDENTIAL PREVENTING URBAN RUNOFF POLLUTION BROCHURE

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following Best Management Practices (BMPs) are required to be used in residential areas to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or checked by the City inspector.

Maintenance & Good Housekeeping

- ❑ Regularly, dry sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- ❑ If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- ❑ Water used for cleaning exterior surfaces must be contained and disposed of into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the storm drain or leave the property.
- ❑ Regularly inspect and maintain storm drain inlets.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over watering and causing runoff.
- ❑ Minimize pesticide, herbicide and fertilizer use, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid material.
- ❑ Have a spill response kit available to clean up potential spills such as kitty litter or other absorbents.
- ❑ Keep material storage areas free from rainwater accumulation.
- ❑ Keep lids closed on all outdoor storage containers and ensure containers are labeled.

Waste Management

- ❑ Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- ❑ Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Schedule regular waste pick-up.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using kitty litter or other absorbents. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Protect storm drains or curb inlets and then collect all wash water by vacuum. Recycle or dispose of wash water via the sanitary sewer system.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

Loading Areas & Operations

- ❑ Load and unload in designated areas.
- ❑ Regularly dry sweep loading and unloading areas.
- ❑ If possible, cover loading areas.
- ❑ Divert storm water away from all loading and unloading areas.
- ❑ Check shipments and trucks for leaks and spills.
- ❑ Cleanup spills/leaks immediately and dispose of properly.
- ❑ If you must use water for cleaning, use a mop and bucket and dispose of wash water into the sanitary sewer.
- ❑ Major cleaning of exterior surfaces must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water should not be allowed to enter the street gutter or storm drains.

a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

City of La Mesa
Storm Water Pollution Prevention
Pools & Spas

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

Discharging of pool or spa water is not prohibited; however, the following measures are required.

1. Water shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Pool water must be dechlorinated
3. Water pH acceptable range from 7 to 8
4. No algae present in water
5. Water shall not contain chemicals to counteract the chlorine
6. Water does not contain hydrogen peroxide based products
7. Controlled discharge eliminating potential for erosion

Chlorine

Test pool or spa water for chlorine prior to discharge. Chlorine naturally dissipates overtime and if pool or spa water is left 3 to 5 days, it will become dechlorinated. Pool water needs to be drained before it turns green. Draining pool water gradually over landscaped areas will help prevent erosion problems.

Pool Filters

Pool filters should be cleaned over landscaped areas or anything that will absorb the discharge. Material may be collected over a filter cloth and disposed of in the trash. Filter backwash must be discharged into the sewer system with a pH of 5 to 12.5.

Pool Construction

Material must be contained and disposed of appropriately. Waste generated from plaster, gunite, cement, sediment, and other construction materials is prohibited from entering the storm drain system.

Do the Right Thing, Stay in Compliance and Protect Our Environment. For more information, contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.6

SAN DIEGO RIVER AND SAN DIEGO BAY FACT SHEETS

San Diego River Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego River and the San Diego Bay. Your business or facility is located within the San Diego River Watershed.

San Diego River Watershed

The San Diego River Watershed is comprised of 443 square miles. It extends from the mountains near Julian to the Pacific Ocean. Portions of the watershed fall within the cities of El Cajon, Poway, San Diego, Santee, several unincorporated areas, and the City of La Mesa. Primary tributaries to the San Diego River include Boulder Creek, Conejos Creek, Los Coches Creek, San Vicente Creek, and Forester Creek. Alvarado Creek in La Mesa is also tributary to the San Diego River. Alvarado Creek flows into the San Diego River and ultimately into the Pacific Ocean between South Mission Beach and Ocean Beach near Dog Beach.

Pollutants of concern listed in the 2002 Clean Water Act Section 303(d) List Of Water Quality for the lower San Diego River Watershed include fecal coliform (sewage/urban runoff), low dissolved oxygen (decay of organic matter), total dissolved solids (industrial waste/chemical spills), and phosphorus (phosphate based detergents). Between 1996 and 1999, coliform bacteria more than doubled due to urban runoff and sewage.

Other pollutants of concern not listed above include pesticides such as Diazinon and Chlorpyrifos (commercial, agricultural, and residential application), Total Suspended Solids/Turbidity (suspended sediment/solids, construction, sewage, eutrophication), Copper and Zinc (industrial waste or automobiles), and pH/Phosphate (industrial waste, automobiles, sewage, fertilizers, eutrophication, hardening/concrete of creeks).

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Store materials properly to ensure it is not exposed to storm water. Do not over-irrigate your landscape. If you observe illegal dumping into a storm drain, you should call the City's storm water pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

San Diego Bay Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego Bay and the San Diego River. Your business or facility is located within the San Diego Bay Watershed.

San Diego Bay Watershed

The San Diego Bay Watershed is comprised of 415 square miles. It extends from the Laguna Mountains to San Diego Bay. The watershed falls within the cities of La Mesa, Chula Vista, Coronado, Imperial Beach, Lemon Grove, National City, San Diego, and unincorporated areas of the County. Approximately 4 square miles in the southern portion of the City of La Mesa is part of this watershed. The major discharge sources to San Diego Bay include Sweetwater River, Otay River, Chollas Creek, Paleta Creek, Paradise Creek, and Switzer Creek.

Three drainage basins in the City of La Mesa are part of the San Diego Bay Watershed. Runoff from the Spring Valley Basin flows to the Sweetwater River. Runoff from the University Channel and Lemon Grove Basin contribute to Chollas Creek. The aforementioned creek and river flow into San Diego Bay.

Pollutants of concern associated with the watershed include diazinon, copper and zinc, fecal coliform, turbidity, and total suspended solids. The sources of these pollutants are a result of residential, agriculture or commercial pesticide application, automobiles and industrial waste, sewer spills, encampments, wildlife, erosion, suspended sediment, and fertilizers. Pollutants of concern for Chollas Creek in particular include metals such as copper, lead, zinc, cadmium, and coliform bacteria.

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Moreover, store materials properly to ensure it is not exposed to storm water and do not over-irrigate your landscape. If you observe storm water pollution or illegal dumping into a storm drain, you should call the City's Storm Water Pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

City Manager

Date: December 2010

Telephone Number: (619) 667-1105

INTRODUCTION AND CONTENTS

Introduction

Section 7 of the Annual Report discusses the implementation of the illicit discharge detection and elimination (IDDE) component of the City's storm water program. This program consists of dry weather monitoring activities and other activities intended to prevent and respond to illicit connections and illegal discharges, such as operating a storm water hotline. The reporting period for the portions of this section that discuss dry weather monitoring activities extends through September 30, 2010, but the reporting period for other activities described in the section extends through June 30, 2010, consistent with the rest of the JURMP Annual Report. Because the field work for the dry weather monitoring program is not required to be completed until September 30, 2010, the same day that the JURMP Annual Report is to be submitted, the RWQCB extended the submittal deadline for all of Section 7 of the 2009/2010 JURMP Annual Report until December 15, 2010.

Contents

This submittal includes a certification statement, the text of Section 7 of the 2009/2010 JURMP Annual Report, and the attachments associated with that section. For clarity, the items included in this submittal are listed below.

- Certification Statement for Section 7 Submittal
- Introduction and Contents
- Section 7 (IDDE Component) of the 2009/2010 JURMP Annual Report
- JURMP Annual Report Requirements Checklist (for Section 7 only)
- Attachment 7.1, City of La Mesa Dry Weather Field Screening and Analytical Monitoring Program 2010

Please note that the complaint log, referenced as Appendix B in Section 7, was already provided with the main 2009/2010 JURMP Annual Report submittal in September 2010 and is not included again with this December submittal.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

The City maintains several programs to prevent and to seek out and eliminate illicit connections and illegal discharges (IC/IDs), which can be significant sources of pollutants to the City's MS4. Illicit connections include improper links to the MS4 such as sewer pipes or car wash facility drains. Illegal discharges may result from activities such as vehicle washing or equipment cleaning without the use of proper BMPs. City storm water personnel work with residents, businesses, and City staff to make them aware of BMPs to prevent IC/IDs and to encourage reporting of IC/IDs. The following activities are the primary components of the City's program to combat IC/IDs:

- Inspecting local businesses, construction sites, and municipal facilities
- Conducting the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program)
- Operating a public complaint hotline

These activities enable the City to provide a comprehensive system to improve the quality of storm water and urban runoff throughout the City.

7.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the illicit discharge detection and elimination component during the 2009/2010 reporting period are presented in the following bulleted list. Please note that per Addendum No. 2 to the Municipal Permit, the reporting period for the Dry Weather Monitoring Program extends through September 30, 2010. The reporting period for all other components of the City's IDDE program ended on June 30, 2010.

- The City recorded and investigated 84 Storm Water Hotline complaints (Appendix B, within the City of La Mesa 2009/2010 JURMP Annual Report).
- Eleven IC/IDs were discovered and reported during the 2009/2010 reporting period. These were followed up on by City personnel, and enforcement measures were applied as required.
- The City performed the recommended corrective actions proposed in the 2009 Dry Weather Monitoring Program Report to prevent possible pollutants from entering the storm drain system.
- The City conducted the 2010 Dry Weather Monitoring Program.

7.2 Public Reporting of Illicit Discharges and Connections

See also Section 4.8 of this JURMP Annual Report.

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating IC/IDs from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational and outreach material, in storm water articles in the *La Mesa Focus* newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges.

Complaints received by the City during the 2009/2010 reporting period and the City's response to each are listed in Appendix B. A total of 84 complaints were documented this year, a decrease from the 107 complaints documented last year. This may indicate that La Mesa residents are becoming more aware of the City's Storm Water Pollution Prevention Program and, therefore, fewer violations are occurring.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material.

7.3 Spill Reporting, Response, and Prevention

See Section 4.9 of this JURMP Annual Report.

7.4 Urban Runoff Monitoring

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit. This program assists the City in detecting and eliminating IC/IDs to the storm drain system. There are three major components to the Dry Weather Monitoring Program:

- Field observations, which include site descriptions and qualitative observations
- Field screening, which includes flow estimation and sample testing using meters and test kits at the site

- Analytical monitoring, which involves submittal of collected samples from selected sites, constituting 25 percent of all flowing or ponded sites, to an analytical laboratory for additional testing

Numeric action levels are used as the primary approach for the interpretation of most constituent concentrations measured in the field and laboratory. Action levels for dissolved metals follow the California Toxics Rule (CTR) Criteria Maximum Concentration (CMC). Temperature, turbidity, and conductivity parameters are evaluated using best professional judgment to determine if further investigation is needed. The action levels for pH, surfactants, ammonia-nitrogen, nitrate-nitrogen, orthophosphate-phosphorus, oil and grease, diazinon, and chlorpyrifos were adopted in 2003 and were based on statistical analyses of previous Dry Weather Monitoring Program data, established water quality benchmarks from the Basin Plan, and the United States Environmental Protection Agency Multi-Sector General Permit.

The Regional Monitoring Workgroup in November 2008 requested the Dry Weather Monitoring Sub-workgroup to evaluate dry weather action levels that were submitted in April 2003 by the County of San Diego on behalf of the Copermittees. The Dry Weather Monitoring Sub-workgroup determined that the bacterial indicators action levels required additional analysis. The Dry Weather Monitoring Sub-workgroup contracted D-MAX Engineering through the City of La Mesa to evaluate historical bacterial data collected from dry weather monitoring from 2002 through 2007. Details of their evaluation are posted on the Project Clean Water Website at http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf. The Regional Monitoring Workgroup on May 19, 2009 evaluated the recommendations of the Dry Weather Monitoring Sub-workgroup and selected the 80th percentile values to be the dry weather action levels for bacterial indicators beginning on May 1, 2010. The previous and current action levels (effective as of May 1, 2010) are presented in Table 7-1.

Table 7-1
Bacterial Indicators Action Levels for Dry Weather Monitoring Program

	Total Coliform (MPN/100 mL)	**Fecal Coliform (MPN/100 mL)**	***Enterococcus* (MPN/100 mL)**
2003-2009 Action Levels	50,000	20,000	10,000
2010 -2012 Action Levels	130,000	13,000	7,000

The City visits all designated primary monitoring stations each year between May 1 and September 30 to collect dry weather monitoring data. When a primary monitoring station is found to be dry, the City visits designated alternate monitoring stations.

7.4.1 2009 Dry Weather Monitoring Program

During the 2009 Dry Weather Monitoring Program, 20 primary monitoring stations and one alternate monitoring station were visited. Since primary Site 907-ALV-003 was dry, alternate Site 907-ALV-580 was visited. Seven sites had constituents measured above action levels in 2009. For further information about how the City addressed notable findings of the 2009 Dry Weather Monitoring Program and responded to the resulting recommendations, see Section 7.5.1 of this report.

7.4.2 2010 Dry Weather Monitoring Program

2010 Results

The City's storm water consultant, D-MAX, conducted the 2010 Dry Weather Monitoring Program in June 2010. Twenty primary monitoring stations and two alternate monitoring stations were visited.

A summary of action level exceedances for field and laboratory constituents is provided in Table 7-2. The results of all follow-up investigations are presented in Table 7-3, in Section 7.5.2 of this report. A list of all the monitoring stations visited is displayed in Table 7-4. Also in this section, the complete field analytical and laboratory analytical results are included as Table 7-5 and Table 7-6, respectively.

Table 7-2
Summary of Action Level Exceedances

Field Screening (20 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0	-
Conductivity	0	0	-
Turbidity	0	0	-
Surfactants	0	0	-
Ammonia-Nitrogen*	0	0	-
Nitrate-Nitrogen	0	0	-
Orthophosphate-Phosphorus	0	0	-
Laboratory Analyses (6 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
Oil & Grease	0	0	-
Cadmium	0	0	-
Copper	0	0	-
Lead	0	0	-
Zinc	0	0	-
Diazinon	0	0	-
Chlorpyrifos	0	0	-
Total Coliforms	2**	33**	908-UNI-002, 908-UNI-003
Fecal Coliforms	0	0	-
Enterococci	1	17	908-UNI-002

Notes: Data is from the initial site visits only; data from follow-up investigations is not included.
*Ammonia-N was not measured above the action level at any site, but one upstream investigation was conducted for a borderline measurement.
** Measured result was equal to action level.

Follow-up investigations conducted in response to action level exceedances are summarized in Section 7.5.2 of this report.

A formal trash assessment was performed in 2010 in accordance with the Municipal Permit requirements. A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although a number

of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.
- *Threat to Aquatic Health* – Large amount (50 pieces or more) of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment.

Twenty-two sites were assessed during the 2010 Dry Weather Monitoring Program, and most of the sites were rated optimal, having little or no trash. Only five sites were rated as suboptimal, and no sites had conditions warranting a marginal, submarginal, or poor trash rating. Additionally, none of the trash observed was determined to pose a threat to human or aquatic health. Actions taken by the City in response to the results of the trash assessment are described in Section 7.5.2 of this report.

The 2010 Dry Weather Monitoring Program Report can be found as Attachment 7.1.

7.5 FOLLOW-UP AND ENFORCEMENT

7.5.1 ACTIONS TAKEN IN RESPONSE TO THE 2009 DRY WEATHER MONITORING PROGRAM FINDINGS

Based on the 2009 Dry Weather Monitoring Program results, three follow-up recommendations were made. In response to these recommendations, leaf debris was removed from Memorial Avenue, along the conveyance upstream of Site 907-ALV-002. The City removed decomposing leaves and trash from location 907-ALV-002-2, an upstream concrete box, as well as from Site 907-ALV-002. Household debris and trash were removed from Site 907-ALV-590, which received a submarginal trash rating. Sites 908-UNI-001 and 908-UNI-002, which received marginal trash ratings, were also cleaned. Finally, primary Site 907-ALV-003, which has been dry for several years was replaced by alternate Site 907-ALV-580, which has been sampled for the past few years.

7.5.2 2010 DRY WEATHER MONITORING FOLLOW-UP INVESTIGATIONS

If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. Upstream investigations are performed when exceedances are verified during confirmation visits. See the City's JURMP for a complete discussion of upstream investigation procedures.

Table 7-3 presents conclusions based on the results of confirmation visits and, where necessary, upstream investigations conducted at two sites during the 2010 Dry Weather Monitoring Program.

Table 7-3
Summary of Follow-up Investigations

Site	Upstream Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
908-UNI-002	---	Total Coliforms, Enterococci	Exceedances not confirmed
908-UNI-003	---	Total Coliforms	Exceedance not confirmed

The City is in the process of responding to the 2010 Dry Weather Monitoring Program findings.

Any other actions taken during the remainder of the Reporting Period will be described in the 2010/2011 JURMP Annual Report.

7.5.3 IC/IDs Identified

Eleven IC/IDs were identified and eliminated during the reporting period. The IC/IDs identified in 2009/2010 are described in Appendix B of the 2009/2010 City of La Mesa JURMP Annual Report.

7.6 Illicit Discharge Detection and Elimination Component Effectiveness Assessment

The effectiveness assessment of this program component is provided in Section 11 of the 2009/2010 City of La Mesa JURMP Annual Report.

7.7 Program Review and Modification

No changes to the City's illicit discharge detection and elimination component were made during the reporting period.

Table 7-4

x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	7.5, Table 7-1, Appendix B
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.1, 7.5

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	Attachment 7.1
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4; Attachment 7.1
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4; Attachment 7.1
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4; Table 7-6; Attachment 7.1
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	(See following)
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4; Table 7-5, Attachment 7.1
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4; Attachment 7.1
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4; Attachment 7.1
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4; Attachment 7.1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4; Attachment 7.1
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.5; Attachment 7.1
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.5; Attachment 7.1
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4, 7.5; Attachment 7.1

Re: 2010 Dry Weather Field Screening and Analytical Monitoring Program
City of La Mesa, California

Dear Mr. Kuhn:

Enclosed please find the final report for the City of La Mesa 2010 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of La Mesa during the 2010 dry weather season. The contents include field screening results, trash assessment data, analytical laboratory test results, analyses of the collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions.

Review comments from the draft report submitted to the City have been incorporated into this final report. If you have any questions regarding this report, please call me at (858) 586-6600.

1 INTRODUCTION

1.1 Program Overview

The purpose of the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) is to detect and eliminate illicit connections and illegal discharges (IC/ID) to the storm water conveyance system, minimizing the negative impact of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following components:

- Field screening observations
- Field screening analytical monitoring
- Trash assessments
- Laboratory analytical monitoring

The data gathered from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as needed to detect and eliminate the sources of these pollutants.

1.2 Hydrologic Setting

The City of La Mesa (City) encompasses an area of nine square miles just east of the City of San Diego. The primary land use in La Mesa is residential with over 55,500 residents. Other types of land use include roads and streets, commercial, mixed use, schools, and industrial. Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. The City of La Mesa makes up about one percent of the overall land area in both the San Diego Bay and the San Diego River watersheds. Runoff generated in La Mesa is conveyed through five drainage basins. Table 1-1 lists the drainage basins along with the approximate percentage of drainage area in La Mesa, the corresponding hydrologic subarea (HSA) of the basin, and the receiving water body to which each basin drains. The boundaries of these drainage basins are illustrated in Figure A at the end of this report.

TABLE 1-1
CITY OF LA MESA DRAINAGE BASINS

Drainage Basin	Percentage of City Area	Hydrologic Subarea	Receiving Water Body	Watershed
Alvarado	51	907.11	San Diego River	San Diego River
University	28	908.22	Chollas Creek	San Diego Bay
Spring Valley	14	909.12	Sweetwater River	San Diego Bay
Lemon Grove	6	908.22	Chollas Creek	San Diego Bay
Lake Murray	1	907.11	San Diego River	San Diego River

The San Diego River Watershed is the second largest hydrologic unit (HU) in San Diego County. The San Diego River carries runoff from other large portions of the cities of San Diego, El Cajon, Poway, and Santee and several unincorporated jurisdictions in addition to that of La Mesa. Runoff collected in the Lake Murray Basin eventually enters the Alvarado Drainage Basin, which drains to the San Diego River. The mouth of the river discharges into the Pacific Ocean, south of Mission Bay.

The San Diego Bay Watershed is comprised of three HUs: Pueblo San Diego (HU 908), Sweetwater (HU 909), and Otay (HU 910). These three watersheds all drain into San Diego Bay, even though each HU is essentially a separate watershed. For regulatory purposes, they have been combined into one watershed management area, referred to as the San Diego Bay Watershed. The City of La Mesa includes areas within two of those HUs, the Pueblo San Diego Watershed and the Sweetwater Watershed. Runoff from the Spring Valley Basin eventually enters the Sweetwater River, which terminates in San Diego Bay. Runoff collected in the University and Lemon Grove basins drains to Chollas Creek, which also flows into San Diego Bay.

1.3 Regulatory Requirements

In accordance with San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit), each of the Copermittees, including the City of La Mesa, is required to annually perform dry weather field screening of discharges into its storm drain conveyance system. During the dry weather season, May 1 through September 30, selected locations along the storm drain conveyance system are evaluated. This procedure includes recording field observations, estimating observed flow rates, and conducting field testing. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station is selected. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

1.4 Constituents of Concern

Based primarily on wet weather monitoring data from mass loading stations (MLS) located on Chollas Creek, bioassessments, the 2008/2009 San Diego Bay Watershed Urban Runoff Management Program (WURMP) Annual Report, and the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), several constituents have been established as targeted pollutants in hydrologic areas (HA) located within City of La Mesa's Jurisdiction. In HA 908.2, part of the Pueblo San Diego Watershed, the constituents of concern (COCs) identified are bacteria indicators, metals, sediment, trash, and pesticides. For HA 909.1 within the Sweetwater Watershed, bacteria indicators have been listed as a COC.

Constituent data have been collected annually in the San Diego River Watershed. The 2008/2009 San Diego River WURMP Annual Report lists bacteria indicators, phosphorus, total dissolved solids, low dissolved oxygen and turbidity as the COCs.

1.5 Previous Work

The City of La Mesa has conducted annual dry weather monitoring programs since 1993. A summary of the screening results obtained for each year is displayed in Table 1-2. Historical dry weather monitoring data is included in Appendix A.

TABLE 1-2
SUMMARY OF HISTORICAL DRY WEATHER SITES

Year	Number of Field Screening Sites [1]	Number of Flowing Sites	Number of Ponded Sites	Number of Dry Sites	Number of Lab Analysis Sites [2]
1993	15	10	4	1	0
1994 [3]	11	11	0	4	0
1995 [4]	11	11	0	2	0
1996	12	12	0	3	0
1997	9	8	1	3	0
1998	11	8	3	3	0
1999-R1	10	10	0	4	0
1999-R2	11	11	0	3	0
2000-R1	11	11	0	4	0
2000-R2	11	11	0	4	0
2001 R1	11	11	0	4	0
2001 R2	12	12	0	4	0
2002	18	18	0	1	5
2003	18	16	2	1	5
2004	18	17	1	0	5
2005	18	16	2	0	5
2006	18	17	1	0	5
2007	18	18	0	1	5
2008	20	20	0	1	6
2009	20	20	0	1	6

Notes:
The City of La Mesa conducted two separate rounds of dry weather monitoring in years 1999-2001.
R1 = Round one; R2 = Round two
[1] Number of Field Screening Sites = Number Flowing + Number Ponded. Field screening cannot be conducted at dry sites. Dry sites are replaced by either a flowing or ponded site.
[2] Laboratory testing commenced in 2002 as required by San Diego RWQCB Order 2001-001.
[3] The 1994 *City of La Mesa Dry Weather Non-Point Source Outfall Screening Program* by Cooper Engineering Associates states that 13 sites showed evidence of flow. However, in "Table 3. Summary of Dry Weather Screening Chemical Analysis" of the report, flow rates and chemical test results are provided for 11 sites only. For the purposes of this table, number of sites tested is listed as 11 and the remaining sites have been added to the number of dry sites.
[4] Per the *City of La Mesa Dry Weather Non-Point Source Outfall Screening Program* by Cooper Engineering Associates for 1995, 12 sites had flowing water and one site was ponded. Chemical analysis data is provided for 11 sites only. Thus, number of sites tested is listed as 11 and the remaining two sites are listed as dry.

The San Diego RWQCB did not require laboratory analyses to be performed as part of the dry weather program until 2002. The same laboratory and field tests have been used since 2002 until present. Graphical representations of the data for both the San Diego River and San Diego Bay watersheds are included as Attachments 1 and 2, respectively. The graphs display the results of both field and laboratory analyses for the 2002 through 2009 dry weather monitoring programs. Where applicable, averages for each constituent have been calculated, and error bars displaying average plus and minus one standard deviation have also been included on the graphs. Trend lines have been prepared for constituents where multiple values above the method reporting limit were recorded. The equations and R^2 values for the lines have been indicated on the graphs. Note that an R^2 value of 0.0 indicates a very poor fit and 1.0 indicates a perfect fit.

1.6 Report Outline

Section 1, Introduction, includes an overview of the program, a discussion of the City of La Mesa's hydrologic setting, regulatory background, a description of constituents of concern, a summary of historical dry weather monitoring, and the report outline.

Section 2, Sampling Locations, describes the field sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Trash Assessment, discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of laboratory analyses.

Section 7, Data Analysis, provides an analysis of field and laboratory data collected in 2009, as well as a comparison of past results.

Section 8, Follow-up Investigations, details the results of follow-up investigations undertaken to isolate the sources of water pollutants detected during the program.

Section 9, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Historical Dry Weather Monitoring Table

Appendix B Photographs of the Sampling Locations

Appendix C Laboratory Analytical Reports

Appendix D Field Data and Trash Assessment Sheets

Attachment 1 Historical Data Graphs: San Diego River Watershed

Attachment 2 Historical Data Graphs: San Diego Bay Watershed

2 SAMPLING LOCATIONS

The City of La Mesa's 2008 Jurisdictional Urban Runoff Management Plan (JURMP) identifies 20 primary dry weather monitoring stations. During the 2010 Dry Weather Monitoring Program, 22 primary sampling locations were visited. Twenty sites had flowing water and two sites were dry. Since sites 907-ALV-640 and 908-UNI-005 were dry, alternate sites, 907-ALV-570 and 908-UNI-14A, were selected as replacements.

Table 2-1 lists site information including site name, location, conveyance configuration, primary and secondary land uses, hydrologic subareas, and Global Positioning System (GPS) coordinates. Photographs of all sites visited in 2010 are included in Appendix B. Figure A shows site locations on a map of the City in relation to storm drain lines, roads, and drainage basin boundaries. A map of the watersheds in and around the City of La Mesa is included as Figure B.

TABLE 2-1
2010 DRY WEATHER MONITORING STATIONS

Site	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
907-ALV-001	Alvarado Road, east of the trolley station	Concrete Channel	Commercial	Residential	907.11	32.77209	-117.04136
907-ALV-002	Along the southern edge of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection	Manhole	Industrial	Commercial	907.11	32.77414	-117.02287
907-ALV-004	7780 Parkway Drive, inside Parkway Manor Condominiums parking lot, by visitor parking at the top of the driveway	Manhole	Residential	None	907.11	32.77546	-117.02918
907-ALV-005	Alvarado Channel, underneath the intersection of Fletcher Parkway and Baltimore Drive, north side of channel	Outlet	Residential	Commercial	907.11	32.77380	-117.02737
907-ALV-006	Fletcher Parkway and Marengo Avenue intersection, in planter	Manhole	Residential	None	907.11	32.77550	-117.02309
907-ALV-007	Jackson Drive and Parkway Drive, behind Amex Auto Repair	Manhole	Residential	Commercial	907.11	32.77832	-117.01821
907-ALV-008	South of Fletcher Parkway, under SR-125 overpass, west of the outfalls from the north	Concrete Channel	Residential	Commercial	907.11	32.78400	-117.00570
907-ALV-120	Jackson Drive, 100 feet west of Murray Drive, north side of street	Manhole	Commercial	None	907.11	32.77630	-117.01423
907-ALV-12A	Jackson Drive, 100 feet west of Murray Drive, south side of street, in front of 5304 Jackson Drive	Manhole	Commercial	Residential	907.11	32.77605	-117.01434

TABLE 2-1 (CONTINUED)
2010 DRY WEATHER MONITORING STATIONS

Site	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
907-ALV-570*	Amaya Drive, east of Severin Drive, across from Howell Drive	Earthen Channel	Residential	None	907.11	32.78532	-116.99744
907-ALV-580	Northeast corner of Amaya Drive and Amaya Court intersection	Manhole	Residential	None	907.11	32.78640	-117.00116
907-ALV-590	Southeast corner of Parkway Drive and Amarillo Avenue intersection	Natural Creek	Residential	None	907.11	32.78180	-117.01328

909-SPR-001	Spring Street and Spring Gardens Road intersection, inside La Mesa Seventh Day Adventist Church	Concrete Channel	Residential	Parks	909.12	32.75483	-117.00118
909-SPR-002	In front of 4621 Bancroft Drive, just south of Golondrina Drive	Manhole	Residential	None	909.12	32.76324	-117.00118

Note: * Alternate sites 907-ALV-570 and 908-UNI-14A were substituted for dry primary monitoring sites 907-ALV-640 and 908-UNI-005.
Denotes a site sampled for laboratory analysis.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of flow measurements, qualitative field observations, and quantitative field analyses of selected water quality parameters. Weather conditions, time since last rainfall, and the type of storm water conveyance are recorded as well. Specific observations and results of the field water quality analyses are documented on field datasheets, which also serve as a record of the field visit. Datasheets are completed for every site visit regardless of whether or not samples were collected. Check boxes on the datasheets indicate if the visit is for routine field screening, confirmation of an exceedance, or an IC/ID follow-up visit. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation. Datasheets from the 2010 Dry Weather Monitoring Program are included as Appendix D.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations are made during each site visit. These observations include a general site assessment and description of water odor, clarity, the presence of floatable materials, visible deposits or stains, and organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system can also be discovered through careful field observations. Each field screening location is photographed to document site conditions. Photographs of each site visited are included in Appendix B.

Flow Measurement

Flow measurements can help estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal discharge. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth, and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)
- Orthophosphate-Phosphorus (Orthophosphate-P)
- Surfactants, measured as methylene blue active substances (MBAS)

The methods used to perform the above field analyses, along with the reporting limit, range, and accuracy of each method, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Method Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter*	0.01 mS/cm	0 – 20 mS/cm	± 2% of FS[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter*	0.1°C	0.0°C – 60.0°C	± 0.5°C
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter*	0.01	0.00 – 14.00	± 0.01
Turbidity	Hanna Instruments HI 93703 Portable Turbidity Meter*	0.00 NTU	0.00 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate*	0.20 mg/L**	0.20 mg/L – 3.00 mg/L**	Varies with measured concentration[2,3]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[4]*	1.13 mg/L**	1.13 mg/L – 113 mg/L**	± 30%of PDL[2]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[4]*	0.10 mg/L**	0.10 mg/L – 2.61 mg/L**	Varies with measured concentration[2,3]
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.00 mg/L – 3.00 mg/L***	± 0.13 & ± 0.5 mg/L[5]

Notes:

EC = electrical conductivity
TDS = Total Dissolved Solids
mS/cm = millisiemens per centimeter
°C = Degrees Celsius
NTU = nephelometric turbidity unit
mg/L = milligrams per liter
LED = light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] Practical Detection Limit (PDL), also known as the reporting limit, is defined as the lower limit of the stated test range.

Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-N, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). PDL for nitrate is 5.0 mg/L; however, the PDL for nitrate-N is lower due to the conversion.

[4] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The practical detection limit for orthophosphate is 0.3 mg/L; however, the practical detection limit for orthophosphate-phosphorus is lower due to the conversion.

[5] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

*Test method information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

3.2 Laboratory Analytical Methods

In accordance with the Municipal Permit, laboratory samples were collected at 6 sites, representing 25 percent of the sites where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc. (EMA), a laboratory certified by the California Department of Health Services, for analysis of the following constituents:

- Oil and grease
- Total hardness
- Dissolved Cadmium
- Dissolved Copper
- Dissolved Lead
- Dissolved Zinc
- Diazinon
- Chlorpyrifos
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

3.3 Quality Assurance and Quality Control

The Quality Assurance and Quality Control (QA/QC) Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters, turbidity meter, and conductivity meter are tested daily before field screening begins. The pH meters are calibrated as needed with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter and conductivity meter are calibrated as needed using standard solutions.

Field sample collection containers are rinsed first with distilled water and then with the sample water prior to sample collection. Upon completion of sampling and testing at each site, sample collection containers, test vials, and ion-sensitive electrodes are rinsed twice with distilled water and dried.

Field test kit accuracy is assessed prior to commencing sampling. Each lot, or batch, of CHEMetrics ampoules is analyzed against standard solutions of known concentrations of ammonia-N, nitrate, orthophosphate, and surfactants. The results of these tests are shown in Table 3-3.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Reporting Limit	Method Detection Limit	Maximum Holding Time [1]
Oil and Grease	USEPA 1664	5 mg/L	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	10 mg/L	14 days
Dissolved Cadmium	USEPA 200.8	1 µg/L	0.2 µg/L	24 hours
Dissolved Copper	USEPA 200.8	10 µg/L	1 µg/L	24 hours
Dissolved Lead	USEPA 200.8	5 µg/L	1 µg/L	24 hours
Dissolved Zinc	USEPA 200.8	20 µg/L	0.3 µg/L	24 hours
Diazinon	USEPA 8141A	0.05 µg/L	0.04 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	0.04 µg/L	7 days
Total Coliforms[2]	SM 9221	20 – 1,600,000 MPN/100 mL	20 MPN/100 mL	6 hours
Fecal Coliforms[2]	SM 9221	20 – 160,000 MPN/100 mL	20 MPN/100 mL	6 hours
Enterococci[2]	SM 9230	20 – 160,000 MPN/100 mL	20 MPN/100 mL	6 hours
Total Coliforms	SM 9223 (IDEXX Colilert)[3]	10 – 2,419,600 MPN/100 mL	10 MPN/100 mL	6 hours
Escherichia coli (E. coli) [4]	SM 9223 (IDEXX Colilert)[3]	10 – 2,419,600 MPN/100 mL	10 MPN/100 mL	6 hours
Enterococci	IDEXX Enterolert[3]	10 – 241,960 MPN/100 mL	10 MPN/100 mL	6 hours

Notes:
µg/L = micrograms per liter
MPN/100 mL = most probable number (of colony-forming units) per 100 milliliters
[1] Maximum Holding Time values listed apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.
[2] For D-MAX's Dry Weather Monitoring Program, EMA performs standard dilutions for total coliforms to quantify from 20-1,600,000 most probable number per 100 milliliters (MPN/100 mL). For fecal coliforms and Enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.
[3] IDEXX Colilert and Enterolert tests are performed by EMA. This test is used during upstream investigations only.
[4] Number of fecal coliforms is derived from number of *E. coli* through the following formula:
Fecal Coliforms = *E. coli* / 0.85. The converted fecal coliform count, not the number of *E. coli*, is reported in this report's data tables.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Lot Number	Date	Field Test Kit Results (mg/L)
Ammonia-N	0.85	0.68 - 1.02	74559/8	5/27/2010	0.821
			73707/2	5/17/2010	0.811
			75425/13	6/30/2010	0.811
Nitrate*	44.3	31.0 - 57.6	75362/2	5/17/2010	42.77
			73960/4	5/17/2010	41.02
			75655/6	6/30/2010	38.56
			75655/8	6/30/2010	36.49
Orthophosphate*	6.13	4.29 - 7.97	75263/4	5/17/2010	6.023
			73677/4	5/17/2010	5.265
			75756/4	6/30/2010	5.015
Surfactants	1.0	0.75 - 1.25	75440/75293/12	5/17/2010	1.0
			74268/74253/2	5/17/2010	1.0
			75638/75460/12	6/30/2010	1.0
			75638/75631/2	6/30/2010	1.0

Notes:
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.
** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by multiplying the results by 0.226 for nitrate and 0.326 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilize the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times listed in Table 3-2. Completed chain of custody forms are included in Appendix C.

3. 4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a confirmation visit is conducted within two business days. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is initiated within two business days of receiving the laboratory results. A discussion of follow-up investigations is included in Section 8.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment (BPJ). The three approaches are described below and presented with associated constituents in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results. Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels based on county-wide sampling data. These action levels have been used by all San Diego County Copermittees since the 2003 dry weather season. For implementation in 2010, D-MAX performed statistical analysis on county-wide data to update action levels for bacterial indicators.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is a short term concentration limit in which aquatic life can be sustained. The CMC is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under BPJ, the need for a follow-up investigation is left to the discretion of the D-MAX field crew. BPJ may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/Notes
Conductivity (mS/cm)	BPJ	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Temperature (°C)	BPJ	Base judgment on season, air temperature, channel type, shading, etc.
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Turbidity (NTU)	BPJ	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Surfactants (MBAS) (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Laboratory Analytes	**Action Levels**	**Source/Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	CTR	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)		
Dissolved Lead (µg/L)		
Dissolved Zinc (µg/L)		
Total Coliforms (MPN/100 mL)	130,000	Bacteria action levels were updated for implementation in 2010 by the Dry Weather Monitoring Sub-workgroup. Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	13,000	
Enterococci (MPN/100 mL)	7,000	

Notes:
[1] The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information, including within-site and between-site sample variability.
[2] Basin Plan = Water Quality Control Plan for the San Diego Basin
BPJ = Best Professional Judgment
WQO = Water Quality Objective
ppb = parts per billion

4 FIELD SCREENING RESULTS

The 2010 Dry Weather Monitoring Program was conducted in June and July 2010. A total of 22 monitoring stations were visited including two sites that were dry. Completed field datasheets for each site visit are included in Appendix D.

4.1 Qualitative Observations

Qualitative observations, which are a routine part of the Dry Weather Monitoring Program, are summarized below and presented in Table 4-1:

Light Conditions
During the majority of the field screenings, light conditions were sunny, with occasional overcast weather.

Odor
Water samples from all sites were odorless.

Color
All sites had colorless water, with the exception of two sites having yellow water.

Clarity
Water samples from all sites were clear.

Floatable Materials
During routine field screening visits, the majority of sites had no material floating on the water's surface. Water at one site had a slight oil sheen, and another had trash in the water.

Deposits
Sediment, gravel, or fine particulates were observed at most sites. No other types of deposits were noted.

Vegetation
Most sites had no vegetation present. Three sites had limited vegetation and two sites had normal vegetation. Manholes did not support vegetative growth.

Biology
Most sites did not have organisms present in the water. Algae and insects were the organisms most commonly seen, with snails observed at some of the sites.

Denotes a confirmation visit.

Denotes a site sampled for laboratory analysis.

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Definitions of constituents measured are as follows.

Flow rates are the measurements of the volume of fluid passing through a given surface per unit time. Flow rate measurements are particularly important when calculating the load or particular amount of a pollutant discharged.

The **pH** is an expression of the acidity or alkalinity of a water sample. The pH of an aquatic system will affect a multitude of chemical reactions, including the availability of nutrients and the solubility of chemical substances, especially heavy metals.

Water temperature is needed to assess the significance of other parameters such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life.

Conductivity values indicate the total concentration of ions in an aquatic system and the ability of water to conduct electricity. This parameter can be used to assess the mineral content of water or to help determine the presence of dissolved pollutants. Salinity also increases conductivity. Therefore, sites that receive water from the San Diego Bay during high tide often have conductivity greater than the maximum detection limit of 20 mS/cm.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures.

Ammonia-nitrogen is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment, however, in higher quantities it can become toxic to fish and other organisms.

Nitrate-nitrogen is a common indicator of nutrient pollution from agricultural or household fertilizer use and irrigation runoff. Nitrate pollution can cause excessive algal growth, which can later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. During field analysis, nitrate is measured in mg/L NO_3 and converted into mg/L nitrate-nitrogen using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-phosphorus, known as reactive phosphorus, is also a common indicator of nutrient pollution from agricultural or household fertilizer use and irrigation runoff. Similar to nitrate, phosphate pollution can cause eutrophication, which stimulates algal growth and eventually lowers aquatic dissolved oxygen to levels that are dangerous for aquatic life. Because it is commonly a limiting nutrient required for plant growth, relatively low levels of phosphate can cause significant algal growth. During the field analysis, orthophosphate was measured in mg/L PO_4 and converted into mg/L orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 4 of Table 3-1.

Surfactants in water samples often indicate illegal discharges from industrial, commercial, or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish and other aquatic organisms.

A statistical summary of the field analytical results is presented in Table 4-2. The data used in statistical calculations in this table are from routine visits only; data for confirmation visits and upstream investigations have not been incorporated. Table 4-3 presents the results of routine field analyses conducted at the routine sampling sites. Graphs of the parameters analyzed at flowing or ponded sites are included at the end of this section.

TABLE 4-2
FIELD ANALYSES STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceed-ances	Graph Number
Flow (gpm)	164	0.5	18.3	6.0	36.1	0	4-1

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather monitoring site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Sub-workgroup developed a Trash Assessment Form to document the amount and extent of trash at each evaluated site. The form categorizes the site into one of five trash categories: optimal, suboptimal, marginal, submarginal, or poor. The form also addresses any potential threats that the trash may pose to human or aquatic health. For sites rating submarginal or poor, the form includes a section to record types, prevalence, potential routes, and sources of trash.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although the number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.
- *Threat to Aquatic Health* – Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable,

degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. *Large amount is defined as 50 pieces or more.

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Form.

If a site is labeled as submarginal or poor, it is assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on their prevalence and the potential threat to water quality they pose. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are identified.

5.3 Trash Assessment Results

Seventy-seven percent of the sites evaluated during the 2010 Dry Weather Monitoring Program were rated "optimal." The remaining 23 percent of the sites were rated "suboptimal". Table 5-1 and Graph 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and their corresponding trash assessment ratings.

6 LABORATORY ANALYTICAL RESULTS

6.1 Summary

Laboratory analyses were conducted at six sites, representing over 25 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Hardness itself is not considered a pollutant, but is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms.

The CTR for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness, with toxicity decreasing as hardness increases. For a specific hardness, each dissolved metal has a Criterion Maximum Concentration (CMC), a short term concentration limit in which aquatic life can be sustained. The laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure.

Coliform bacteria are present in mammalian digestive tracts and are relatively harmless to humans. Coliform bacteria are naturally found in most surface waters and soils. Water samples are tested for total coliform in the interest of public health, serving as an indicator of the presence of other more harmful pathogenic organisms of potentially fecal origin. Water is tested for total coliform in lieu of these pathogens as they occur in much smaller quantities that may be difficult to detect.

Fecal coliform, a subset of coliform bacteria, and **Enterococci** are found primarily in the gastrointestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material present in water is human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

A summary of the laboratory analytical results is presented in Table 6-2. Table 6-3 presents the laboratory results from all samples. Laboratory reports are included in Appendix C.

TABLE 6-1
CTR – CMC FOR DISSOLVED METALS

Notes:
Red values exceed action level.
Denotes a confirmation visit.
nd = not detected
na = not analyzed
J = Detected below the reporting limit; therefore, result is an estimated concentration.
CTR = California Toxics Rule; CTR action levels for metals are calculated based upon on the total hardness value of the water sample.
* Number of fecal coliforms is derived from *E. coli* count. Number of fecal coliforms = (Number of *E. coli*) / 0.85
** Reporting limit is 10 MPN/100 mL for IDEXX tests used during confirmation and upstream testing.
*** Total hardness is not considered a pollutant (see section 3.4 for details), and thus has no established action level for the purposes of dry weather monitoring.

Denotes a confirmation visit.

7 DATA ANALYSIS

This first part of this section provides an overall evaluation of test results obtained from the 2010 Dry Weather Monitoring Program. The second portion of this section describes historical trends for various constituent exceedances.

7.1 2010 Results

Of the 20 sites sampled, two sites had exceedances in total coliform bacteria, and one site had an *Enterococcus* count above the action level. Table 7-1 presents a snapshot of the exceedances found during the 2010 Dry Weather Monitoring Program.

TABLE 7-1
2010 EXCEEDANCES SUMMARY

Site	Total Coliforms	Enterococci
907-UNI-002	✔	✔
908-UNI-003	✔	

Note: Table reflects exceedances occurring during routine visits only. Confirmation and follow-up visits are not included.

7.2 Previous Results

Historical results of exceedances are presented in Table 7-2, Graph 7-1, and Graph 7-2. Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of exceedances for field constituents, and Graph 7-2 presents the percentage exceedances by year for laboratory analyses.

Since 2002, no exceedances were measured in water temperature, oil and grease, cadmium, lead, zinc, diazinon, or chlorpyrifos, so these constituents have not been incorporated into the following table and graphs.

Based on historical dry weather data, the following observations have been made:

- Conductivity has not exceeded the action level since 2003. The action level for conductivity was changed from a numeric value to BPJ to account for sites which contain salt water or groundwater which increases conductivity.
- There is a decreasing trend in ammonia-N and orthophosphate-P exceedances. No orthophosphate-P exceedances have been measured since 2005.
- No exceedances of ammonia-N have been observed since 2006.
- A nitrate-N exceedance was measured during 2009 only.
- With the exception of 2009, there appears to be a generally decreasing trend in surfactants exceedances.
- Total coliform, fecal coliform, and *Enterococcus* exceedance rates have generally decreased over time. Note that dry weather action levels for bacterial indicators were revised in 2010. Constituents have been compared to action levels in effect at the time of sampling to identify exceedances.

TABLE 7-2
PERCENT OF SITES WITH EXCEEDANCES BY YEAR

Year	Field Testing								Laboratory Analyses				
	Number of Field Testing Sites	pH	Turbidity	Conductivity*	Ammonia-N	Nitrate-N	Orthophosphate-P	Surfactants	Number of Laboratory Sampling Site	Copper	Total Coliforms	Fecal Coliforms	Enterococci
2002	18	0	6	6	28	0	6	17	5	0	100	80	40
2003	18	0	0	6	17	0	6	6	5	0	60	60	20
2004	18	0	0	0	11	0	0	0	5	0	60	20	20
2005	18	0	0	0	11	0	6	6	5	0	60	20	20
2006	18	0	0	0	17	0	0	6	5	0	80	20	0
2007	18	6	0	0	0	0	0	0	5	0	0	0	20
2008	20	0	5	0	0	0	0	0	6	0	50	17	33
2009	20	5	0	0	0	5	0	15	6	17	17	0	17
2010**	20	0	0	0	0	0	0	0	6	0	33	0	17

Notes: Results based on complete routine visits only. Confirmation visits, follow-up visits, and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

** Note that dry weather action levels for bacterial indicators were revised in 2010. Constituents have been compared to action levels in effect at the time of sampling to identify exceedances.

PERCENT OF SITES WITH LABORATORY EXCEEDANCES BY YEAR

8 FOLLOW-UP INVESTIGATIONS

One of the primary purposes of the Dry Weather Monitoring Program is to identify IC/IDs. When a parameter is measured at or above the regionally accepted action level, it is possible that an IC/ID is present and further investigation is performed. Procedures for such investigations are described below, followed by a discussion of the 2010 investigations.

8.1 Investigation Procedures

In the event that a constituent measurement is above the associated action level during the routine visit, a confirmation visit is typically conducted within two business days of receiving the result. The visit includes returning to the routine site to retest the water for the parameters initially in exceedance. The purpose of the confirmation visit is to identify whether the initial exceedance is persistent or due to transient conditions.

If during the follow-up investigations, flow rates are measured, visual observations are performed, and field testing is conducted. Visual observations, such as water color, clarity, odor, floatable materials, deposits, vegetation, and biology are recorded on field data sheets at each site. Field data sheets are included in Appendix D.

Source identification investigations begin by testing the water at the site again. This is referred to as a “confirmation” visit, as its purpose is to confirm the initial findings. If confirmation testing results in constituent concentrations below specified action levels, the exceedance found during the initial sampling may have been due to a transient flow. If confirmation testing at a site finds constituent concentrations again above the specified action levels, an upstream investigation will be conducted. The field crew will progress upstream to isolate and identify potential pollutant sources.

Upstream investigations are also referred to as “follow-up” visits, as the purpose is to identify illicit connections and illegal discharges. They are conducted by examining a number of upstream branches for any potential sources of the constituent of concern. The estimated flow rate in each branch and any relevant observations are recorded. Depending upon the constituent(s) under investigation, laboratory samples may be collected for analysis.

The laboratory test for investigating upstream bacteria sources differs from routine bacteria testing by using the IDEXX Colilert and IDEXX Enterolert tests. Information about these methods is provided in Table 3-2. Results for the Colilert and Enterolert tests are typically available within 24 hours, as opposed to the five business days needed for routine testing. The quicker turnaround time allows for additional upstream investigations as needed.

8.2 Investigated Sites

During the 2010 Dry Weather Monitoring Program, two sites required follow-up investigations for constituent exceedances. The total coliform action level was exceeded at both sites, and *Enterococcus* bacteria was elevated at one site. This section includes a description of the sites, analytical results, and the results of upstream investigations. Table 9-2 in Section 9 of this report provides a summary of the investigation results.

8.2.1 Site 908-UNI-002

Site 908-UNI-002 is located in a manhole near the intersection of Harbison Avenue and University Avenue. Laboratory results indicated a total coliform bacteria count at the action level of 130,000 MPN/100 mL and *Enterococcus* bacteria at 28,000 MPN/100mL, above the action level of 7,000 MPN/100 mL. Both total coliform and *Enterococcus* bacteria measured

below respective action levels at the confirmation visit. A sample taken from a manhole in the upstream residential area, at location 908-UNI-002-1, also contained *Enterococcus* bacteria above the action level. Several catch basins in this area contained large amounts of organic debris and trash, and flow through these areas was very low (Photo 8-1). These conditions are likely the result of debris decomposition and bacterial growth. This is the likely source of *Enterococcus* bacteria at the upstream location, and may be the source of the initial exceedance at Site 908-UNI-002. The results of the upstream investigation are presented in Table 8-1 and the sampling locations are displayed in Figure 8-1 below.

PHOTO 8-1: Dirty catch basin upstream from Site 908-UNI-002

In addition, ammonia-N was measured at 0.95 mg/L, just below the action level of 1.0 mg/L. Since this value was near to the action level, a confirmation visit was performed at the City's request. At the time of the confirmation visit, the ammonia-N concentration measured 0.47 mg/L. It was concluded that the relatively higher ammonia-N concentration observed during the initial visit was also the result of a transient flow.

TABLE 8-1
SITE 908-UNI-002 BACTERIA & AMMONIA-N UPSTREAM INVESTIGATION RESULTS

8.2.2 Site 908-UNI-003

Site 908-UNI-003 is located at the convergence of two pipes in a manhole on the north side of Lowell Street, between University Avenue and Normal Avenue (Photo 8-2). During the routine site visit, the total coliform bacteria count was measured at the action level of 130,000 MPN/100mL. No obvious source of bacteria was noted in the immediate area, and the site received an optimal trash rating. During the confirmation visit, the total coliform bacteria count was measured below the action level. The initial exceedance was most likely the result of a transient flow. The results of the upstream investigation are presented in Table 8-2, and the sampling locations are located in Figure 8-2 below.

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary of Field Screening and Laboratory Analysis Data

In the City of La Mesa's 2010 Dry Weather Monitoring Program, 22 sites were visited, 20 of which had flowing or ponded water. Samples from six sites were submitted for laboratory analyses. Confirmation visits and upstream investigations were performed for two sites having constituents at or above respective action levels. A summary of action level exceedances is provided in Table 9-1. Conclusions based on confirmation visits and upstream investigations are presented in Table 9-2.

Notable results and observations of the 2010 Dry Weather Monitoring Program include the following: the majority of water samples were odorless, and all sites had clear water; samples at six sites were yellow in color, and the remaining sites were colorless; algae and insects were present at seven sites, and six sites were host to snails; trash assessment ratings were optimal at the majority of sites, and five sites were ranked suboptimal.

TABLE 9-1

Cadmium	0	0	-
Copper	0	0	-
Lead	0	0	-
Zinc	0	0	-
Diazinon	0	0	-
Chlorpyrifos	0	0	-
Total Coliforms	2	33	908-UNI-002, 908-UNI-003
Fecal Coliforms	0	0	-
Enterococci	1	17	908-UNI-002

Note: Data is from the initial site visits only. Confirmation visits, follow-up visits and dry sites not included.
*Ammonia-N was not measured above the action level at any site, but one upstream investigation was conducted for a borderline measurement. See Section 8 for a description of the investigation.

9.2 Summary of Follow-up Data

Table 9-2 presents the conclusions based on the results of the confirmation and upstream investigations conducted at seven sites for the 2010 Dry Weather Monitoring Program.

TABLE 9-2
SUMMARY OF FOLLOW-UP INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
908-UNI-002	---	Total Coliforms, Enterococci	Transient flow
908-UNI-003	---	Total Coliforms	Transient flow

9.3 Recommendations

9.3.1 2009 Recommendation Implementation

In response to the recommendations presented in the 2009 Dry Weather Field Screening Program, the City took the following actions:

- Removed leaf debris from Memorial Avenue, located along the conveyance upstream of Site 907-ALV-002.
- Removed decomposing leaves and trash from Site 907-ALV-002 and location 907-ALV-002-2, which had total coliform bacteria exceedances in 2009.
- Removed the household debris and trash from the area surrounding Site 907-ALV-590, which received a submarginal trash rating in 2009.
- The City also cleaned up trash from sites 908-UNI-001 and 908-UNI-002, which received marginal trash ratings in 2009.
- Substituted primary Site 907-ALV-003, which has been dry for several years, with alternate Site 907-ALV-580, which has been sampled for the past two years.

9.3.2 2010 Recommendations

Based on the results of the City of La Mesa's 2010 Dry Weather Monitoring Program, it is recommended that the City continues regular maintenance of the MS4 to prevent the introduction of debris to the stormwater conveyance system.

Laboratory Analytical Reports

07 July 2010

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 10F0694

Project Name: La Mesa Additional Study
Project Desc./#: 201025W-1

Enclosed are the results of analyses for samples received by the laboratory on 06/23/10 13:51. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

Client Name: D-Max Engineering
Project Name: La Mesa Additional Study

EMA Log #: 10F0694

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
907-ALV-001	10F0694-01	Stormwater	06/23/10 10:30	06/23/10 13:51
908-UNI-003	10F0694-02	Stormwater	06/23/10 11:50	06/23/10 13:51
908-UNI-004	10F0694-03	Stormwater	06/23/10 12:40	06/23/10 13:51

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

QR-02	The RPD result exceeded the QC limits due to non-homogeneity of sample.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

QR-02	The RPD result exceeded the QC limits due to non-homogeneity of sample.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

2010 Trash Assessment Form

SITE ID: 907-ALV-001 DATE: 6-23-10

OBSERVER: CG/AK TIME: 10:30

LOCATION: Alvarado Road, east of the trolley station

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 60 x 25

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 908-UNI-003 DATE: 6/23/10

OBSERVER: CG/AK TIME: 11:50

LOCATION: Along Lowell Street, about halfway between University Avenue and Normal Avenue, north side of street

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 908-UNI-14A DATE: 6/28/10

OBSERVER: LN/AK TIME: 12:05

LOCATION: Boulevard Drive between Harbinson Avenue and Massachusetts Avenue, across from 7105-7033

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): N/A

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 x 12

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Oil & Grease
San Diego River Watershed

Note: All "nd" values have been plotted with a value of half the reporting or detection limit: 2002-2004 reporting limit = 0.5 mg/L, 2005-2009 reporting limit = 5 mg/L, 2010 detection limit = 5 mg/L

Dissolved Cadmium
San Diego River Watershed

Note: No detectable levels of dissolved cadmium have been measured. All "nd" values have been plotted as half the reporting or detection limit; 2002-2008 reporting limit = 0.005 mg/L, 2009 reporting limit = 0.001 mg/L, 2010 detection limit = 0.0002 mg/L

Dissolved Copper
San Diego River Watershed

Note: All "nd" values have been plotted as half the reporting or detection limit: 2002-2008 reporting limit = 0.005 mg/L, 2009 reporting limit = 0.001 mg/L, 2010 detection limit = 0.001 mg/L

Dissolved Lead
San Diego River Watershed

Note: No detectable levels of dissolved lead have been measured. All "nd" values have been plotted as half the reporting or detection limit:
2002-2009 reporting limit = 0.001 mg/L, 2010 detection limit = 0.001 mg/L

Dissolved Zinc
San Diego River Watershed
Note: All "nd" values have been plotted as half the reporting or detection limit: 2002-2009 reporting limit = 0.02 mg/L, 2010 detection limit = 0.0003 mg/L

Surfactants (Laboratory Analysis)
San Diego Bay Watershed

Note: All "nd" values have been plotted as half the reporting limit of 0.5 mg/L.

Oil & Grease
SanDiego Bay Watershed

Note: No detectable levels of oil and grease have been noted. All "nd" values have been plotted with a value of half the reporting or detection limit:
2002-2004 reporting limit = 0.5 mg/L, 2005-2009 reporting limit = 5 mg/L, 2010 detection limit = 5 mg/L

Dissolved Cadmium
San Diego Bay Watershed

Note: No detectable levels of dissolved cadmium have been measured. All "nd" values have been plotted as half the reporting or detection limit; 2002-2008 reporting limit = 0.005 mg/L, 2009 reporting limit = 0.001 mg/L, 2010 detection limit = 0.0002 mg/L

Dissolved Copper
San Diego Bay Watershed

Note: All "nd" values have been plotted as half the reporting or detection limit: 2002-2008 reporting limit = 0.005 mg/L, 2009 reporting limit = 0.001 mg/L, 2010 detection limit = 0.001 mg/L

Dissolved Lead
San Diego Bay Watershed

Note: No detectable levels of dissolved lead have been measured. All "nd" values have been plotted as half the reporting or detection limit:
2002-2009 reporting limit = 0.001 mg/L, 2010 detection limit = 0.001 mg/L

Dissolved Zinc
San Diego Bay Watershed

Note: All "nd" values have been plotted as half the reporting or detection limit: 2002-2009 reporting limit = 0.02 mg/L, 2010 detection limit = 0.0003 mg/L

Diazinon
San Diego Bay Watershed

Note: No detectable levels of diazinon have been measured. All "nd" values have been plotted as half the reporting or detection limit: 2002-2009 reporting limit = 0.05 µg/L, 2010 detection limit = 0.04 µg/L.

Chlorpyrifos
San Diego Bay Watershed

Note: No detectable levels of chlorpyrifos have been measured. All "nd" values have been plotted as half the reporting or detection limit: 2002-2009 reporting limit = 0.05 µg/L; 2010 detection limit = 0.04 µg/L.

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

David E. Witt
City Manager

Date: September 2011

Telephone Number: (619) 667-1105

EXECUTIVE SUMMARY

San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit), a National Pollution Discharge Elimination (NPDES) Permit, regulates discharges to the storm drain systems of 21 municipal agencies in San Diego County, including the City of La Mesa (City). The Municipal Permit requires the City to develop and implement a Jurisdictional Urban Runoff Management Program (JURMP), with the overall goal of reducing discharges of pollutants to the City's storm drain system to the maximum extent practicable. The City's JURMP includes required "Best Management Practices" (BMP) to control pollution. Specific lists of BMPs apply to businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

At the end of each fiscal year, the City is required to report a summary of its JURMP implementation activities to the RWQCB. This JURMP Annual Report presents the City's activities during the 2010/2011 fiscal year, which began on July 1, 2010 and ended on June 30, 2011. Each section of this JURMP Annual Report discusses how the City's efforts during 2010/2011 met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

The City continued to oversee development activities occurring in the City to mitigate potential threats to water quality at the design stage. The City maintained and updated its inventory of installed treatment control BMPs and implemented its maintenance verification program through which parties responsible for maintaining BMPs at each of the City's 17 inventoried sites certify in writing that their treatment devices have been maintained and are in working order. Nine sites in the City with approved treatment control BMPs were also inspected by City staff. Enforcement actions successfully achieved the return of all maintenance verification forms and the correction of all deficiencies noted during inspections.

Construction Component

During 2010/2011, a total of 48 routine construction inspections were completed at 32 sites. The City's plan check and inspection program required projects to comply with the City's minimum BMP requirements. Enforcement actions were taken where necessary and were effective in bringing about compliance. Notably, the City inspected almost every low priority construction site during the wet season and notified small projects and homeowners of the City's BMP requirements.

Municipal Component

The City inspected all high threat to water quality (TTWQ) municipal fixed facilities, as required by the Municipal Permit. Over 525.29 tons of trash and debris were removed during street sweeping activities, and 178 cubic yards of debris and sediment were removed during standard MS4 maintenance. An additional 8.75 cubic yards of debris were removed during the cleaning of the filter inserts installed in the University drainage basin. The City

also televised 6,838 linear feet of sewer line and continued to maintain its sanitary sewer system to decrease the potential for sanitary sewer overflows (SSO). In keeping with its regular practice, the City trained its staff regarding the most current storm water pollution prevention concepts and practices.

Industrial and Commercial Component

During 2010/2011, the City's full-time inspector continued to build upon cooperative working relationships with local businesses, to keep businesses accountable to the storm water education they have received, and to track compliance from routine inspection through enforcement resolution. The City met the Municipal Permit requirement to inspect at least 25 percent of the City's industrial and commercial inventory. The City inspected all high TTWQ sites on its industrial and commercial inventory as well as additional medium TTWQ sites. An inspection fee is collected to recover costs for site visits. Since the institution of fees assessed for each visit, including follow-up visits, businesses have generally become more willing to comply with BMP requirements in a smaller number of inspection visits. During 2010/2011, no inspected businesses were observed to be out of compliance with the General Industrial Permit (Industrial Permit).

Residential Component

Residential areas comprise more than half of the City of La Mesa's land use, and the City worked to educate these residents through a variety of means. The City provided its quarterly *La Mesa Focus* newsletter to City residents via email and the City's website. Each newsletter published during 2010/2011 contained storm water articles relating to residential activities. The City encouraged its residents to participate in a variety of waste disposal events and volunteer-based cleanup events, and 898 participants dropped off 99,878 pounds of household hazardous waste (HHW) during the City's eight HHW events. The City's residents are considered important allies in reporting complaints to the City storm water hotline. Complaint investigations in residential areas were used as opportunities both to enforce BMP requirements and to educate residents about storm water pollution prevention.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for 2011 Dry Weather Monitoring Program, which took place after July 1, 2011, is finalized. The section must be submitted to the RWQCB no later than December 15, 2011.

While the full section will not be submitted until after September 30, 2011, the City did implement its IDDE program component during 2010/2011. During this period, the City responded to and resolved 151 complaints made to its storm water hotline and the Public Works maintenance hotline. The City completed its 2010 Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program). The recommendations in the final report for the 2010 Dry Weather Monitoring Program were addressed during this reporting period. The City also continued maintenance of the sanitary sewer system to prevent SSOs.

Education Component

As a means to raise storm water awareness in various communities, the City continued to conduct various education and outreach activities throughout 2010/2011. The City's efforts resulted in an estimated 22,843 impressions. I Love A Clean San Diego (ILACSD) partnered with the City to educate residents of all ages at special events and school presentations. The City continued to circulate the quarterly *La Mesa Focus* newsletter to businesses and residents, and each newsletter sent during the reporting included storm water-related articles. Additionally, the City continued to maintain a storm water bulletin board at City Hall, which is strategically located to maximize exposure to both City personnel and project proponents that visit the Engineering Division. To better serve the City's diverse population, some educational materials were distributed in Spanish and English. Additionally, City staff were provided various training sessions.

Public Participation Component

Public participation activities in 2010/2011 included multiple volunteer-based cleanup events, which have a direct effect on water quality, and public outreach activities intended to increase general knowledge and awareness regarding storm water issues. The City participated in Coastal Cleanup Day and the Creek to Bay Cleanup, with two cleanup sites located in the City for each event. During these events over 978 pounds of trash and 107 pounds of recyclables were collected. Other cleanup activities completed during 2010/2011 included Park Appreciation Day, Adopt-a-Park, Adopt-a-Block, and the La Mesa Spring Cleanup. A variety of waste disposal events, including HHW disposal events, were also held in the City.

Fiscal Analysis Component

The City continued to fund its storm water program though the City's Sanitation Fund and the collection of commercial and industrial storm water inspection fees. As required by the Municipal Permit, the City has used the new fiscal analysis reporting standards, developed and implemented by the Copermittees starting in 2009/2010.

Effectiveness Assessment Component

The City continued evaluating the effectiveness of its storm water program based on the approach presented in the City's JURMP. The City has seen a consistent trend of decreasing median concentrations and exceedance numbers for various polluting constituents in its Dry Weather Monitoring Program. In both the treatment control BMP program and the industrial and commercial inspection program, enforcement has been very effective in reaching compliance. The City has implemented additional City-maintained treatment control BMPs for the University drainage area and its Public Works Operation Center, and the City also conducts additional street sweeping to aid in meeting watershed requirements.

Special Investigations

Aside from upstream investigations conducted as part of the Dry Weather Monitoring Program, no special investigations were needed or conducted during this reporting period.

Conclusions and Recommendations

The City will continue to implement the programs in its JURMP during 2011/2012; it is anticipated that some program refinements will be made as implementation progresses. The City will also continue to collaborate with other Copermittees as applicable within its watersheds and regionally.

Beyond the JURMP Program, City is also subject to additional requirements associated with Total Maximum Daily Load (TMDL) regulations, which set numeric compliance limits. The City of La Mesa has been collaborating with other Copermittees in the Chollas Creek watershed to conduct annual reporting and monitoring for the Chollas Creek Diazinon and dissolved metals TMDLs. During 2010/2011, the City also developed a Strategic Plan for Watershed and TMDL Activity Implementation, coinciding with the adoption of bacteria TMDLs for both the San Diego River and Chollas Creek watersheds. Since that time, the City has been collaborating with other Copermittees to conduct monitoring and modeling, as well as developing the Implementation Plan for San Diego River's bacteria TMDL, and updating the Chollas Creek Implementation Plan to include the new bacteria TMDL. These efforts will continue throughout the TMDL implementation and compliance timelines.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents an activity summary for the City of La Mesa (City) during the 2010/2011 fiscal year. The JURMP Annual Report preparation and submission are required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). In 1990, the RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region, followed by a revised permit in 2001. RWQCB Order No. 2001-01 was replaced by the current Municipal Permit in 2007.

In 2002, the City, like all regulated municipalities in the San Diego region (collectively referred to as Copermittees), developed and submitted a JURMP to the RWQCB. The City then submitted an updated JURMP, as required by the Municipal Permit, in March 2008. The JURMP explains management measures for different sectors, including municipal, industrial, commercial, construction, and significant development and re-development activities.

Annual reports documenting the implementation of the JURMP are required to be submitted to the RWQCB by September 30. This JURMP Annual Report presents data from the 2010/2011 fiscal year, which extended from July 1, 2010, to June 30, 2011.

1.1.2 CITY SETTING

The City of La Mesa, located in central San Diego County, covers an area of approximately nine square miles and has a population size of over 56,000 residents. Although the primary land use in La Mesa is residential, there are areas of industrial and commercial development, parks and open space, and other types of development.

Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. In total, the City constitutes about one percent of the land area in each watershed. Runoff generated in La Mesa is conveyed through five drainage basins: Alvarado, University, Spring Valley, Lemon Grove, and Lake Murray. Table 1-1 lists the approximate percentage of each drainage area in La Mesa, the corresponding hydrologic unit (HU) of the basin, and the receiving water body to which each basin drains. Figure 1-1 presents the drainage basins as they relate to land use activities in the City.

Table 1-1
City of La Mesa Drainage Basins

Drainage Basin	Percent of City Area	Hydrologic Sub Area	Receiving Water Body	Watershed
Alvarado	51	907.11 Mission San Diego	San Diego River	San Diego River
University	28	908.22 Chollas	Chollas Creek	San Diego Bay
Spring Valley	14	909.12 La Nacion	Sweetwater River	San Diego Bay
Lemon Grove	6	908.22 Chollas	Chollas Creek	San Diego Bay
Lake Murray	1	907.11 Mission San Diego	San Diego River	San Diego River

Please note that while runoff from the City drains to these water bodies, the actual receiving water bodies are not themselves located within the City.

Figure 1-1
City of La Mesa Land Use and Drainage Basins

Base Data Sources: City of La Mesa, SANDAG, SanGIS

1.2 Purpose and Objectives

The City's JURMP presents strategies to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP describes various programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the implementation of the City of La Mesa's JURMP during the 2010/2011 reporting period.

1.3 Report Organization

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1	**Introduction**
Section 2	**Development Planning Component**
Section 3	**Construction Component**
Section 4	**Municipal Component**
Section 5	**Industrial and Commercial Component**
Section 6	**Residential Component**
Section 7	**Illicit Discharge Detection and Elimination Component**
Section 8	**Education Component**
Section 9	**Public Participation Component**
Section 10	**Fiscal Analysis Component**
Section 11	**Effectiveness Assessment Component**
Section 12	**Special Investigations**
Section 13	**Non-Emergency Fire Fighting**
Section 14	**JURMP Revisions**
Section 15	**Conclusions and Recommendations**
Section 16	**References**

Each section includes all components required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a more detailed explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Background, subsection 1.1, has been divided into Regulatory Background, subsection 1.1.1, and City Setting, subsection 1.1.2, for clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and by managing the increase in runoff from development project that have the potential to negatively affect downstream water bodies. During the 2010/2011 fiscal year, the City accomplished these goals through implementation of its JURMP document.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2010/2011 reporting period are presented in the following bulleted list. The remainder of this section provides more detail about the City's implementation of this component of its storm water program.

- Distributed the City's development requirements checklist ("Appendix A" of BMP Manual Part II) to projects applying for permits.
- Updated the City's SUSMP Manual to include Regional Hydromodification Management Plan (HMP) requirements in January 2011.
- Used the City's treatment control BMP database to track completed Priority Development Projects.
- Conducted maintenance inspections of treatment control BMPs at nine completed development projects in the City. See Table 2-1 in this section for a comparison of inspection numbers and Municipal Permit requirements.
- Obtained verification of BMP maintenance from all inventoried projects.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 1996 and contains water quality and watershed protection principles in its Public Services and Facilities Element. The principles established in 1996 provide a framework for implementing the requirements of the current Municipal Permit, and no changes to these policies were necessary during the reporting period. An update to the General Plan is planned for 2012.

2.2.2 SOURCE CHARACTERIZATION

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's

General Plan for storm water purposes were implemented during the reporting period. The City Council has authorized a comprehensive update to the General Plan to be completed by the City's centennial celebration in 2012.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection related land use policies during the reporting period mainly through the City's Municipal Code. The City updated its BMP Manual II, a formatted guidance manual based on the regional Model SUSMP document, in January 2011. The City's BMP Manual II is an uncodified appendix to Chapter 7.18 of its Municipal Code. The updates made at this time were consistent with the regional HMP document, prepared by the Copermittees and adopted by the RWQCB in July 2010, and the updated Model SUSMP. The regional HMP document was also added as an appendix to the City's BMP Manual II. The updated City of La Mesa BMP Manual II is included as Attachment 2.1. This BMP manual and other documents for development project proponents are available on the development tab at the City's storm water pollution prevention website at http://www.cityoflamesa.com/stormwater.

Details on how the City implemented its established storm water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report document.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's updated JURMP. The overall structure of the review process, such as the City's departments involved and the document submissions required, remains the same as in previous reporting years. No modifications to the City's environmental review process have been made since the submittal of the updated JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2010/2011 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's BMP Manual Part II, which contains the City's SUSMP regulations. The City's SUSMP regulations are included in Municipal Code Chapter 7.18. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

2.4.3 Best Management Practice Requirements

The City updated its SUSMP requirements for development projects in January 2011, as described in Section 2.2.4 above.

2.4.4 Program Implementation

During the 2010/2011 fiscal year, the City required implementation of its BMP requirements for all development projects through education, a comprehensive development project approval process, and a treatment control BMP inspection and maintenance verification program.

2.4.4.1 Outreach and Staff Training

The City provides training for staff involved in the planning and review of development projects within the City and works closely with the development community to communicate its development requirements throughout the entire approval process. City staff performs reviews of WQTR's submitted for development purposes. Outside consultants may also be used for review assistance. On March 15th, a training session was provided to City staff that covered the City's new hydromodification requirements, management techniques, and methods for demonstrating compliance. Details on trainings conducted and educational materials developed and distributed during the reporting period can be found in Section 8 of this JURMP Annual Report document. Based on results from the first years of the program, distribution of treatment BMP maintenance verification letters appears to continue increasing the level of knowledge of regulated parties.

2.4.4.2 Urban Runoff Approval Process for Development Projects

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Forms completed by project applicants are kept with the project's file at the City for future reference. As discussed in the City's JURMP, the City required all projects applying for construction and building permits with any potential to impact storm water to complete an "Appendix 'A' –Storm Water Requirements and Project Data Sheet" that guides project applicants to submit proper documents to the City for review. An updated "Appendix A" form is available as Attachment 2.2. All development projects determined to be Priority Projects after completing the "Appendix A" form were required to implement the City's SUSMP

requirements and prepare Post Construction WQTRs in accordance with the City's BMP Manual II. All priority projects are tracked using the City's database.

During the reporting year, six development projects submitted WQTRs, which were subjected to the City's SUSMP requirements, as applicable. The projects and the results of the reviews are listed below.

- Care Meridian. The WQTR for this Priority Project was reviewed and not approved during 2010/2011, but is likely to be approved in the 2011/2012 fiscal year.
- Comerica Bank. The WQTR for this Priority Project was reviewed and approved during 2010/2011.
- Grossmont Summit Drive. The WQTR for this Priority Project was reviewed and approved during 2010/2011.
- Park Station – Kitzman. The WQTR for this Priority Project was reviewed and not approved during 2010/2011. This project awaits discretionary approvals by the City Council.
- Severin Drive. The WQTR for this Priority Project was reviewed and approved during 2010/2011.
- Hilltop Project. The WQTR was initially submitted in the 2004-2005 reporting period. The project was subsequently sold and the WQTR resubmitted in the 2008-2009 reporting period, but was not approved. In the 2010-2011 reporting period, the project was sold yet again and the WQTR was submitted and approved. Although the project received discretionary permits prior to 2008, the City required the project to submit a WQTR showing water quality features meeting the new SUSMP standard. The project is now in construction.

Several projects subjected to SUSMP requirements in previous reporting periods have not submitted revised plans nor have the existing plans been approved. If these projects are resumed, they will be subjected to the City's SUSMP requirements at the time of approval. Some other proposed development projects have been abandoned. No projects approved during 2010/2011 were allowed to implement low removal efficiency BMPs. During the reporting period, no projects received a SUSMP waiver for implementation of treatment control BMPs. The City has never issued a SUSMP waiver, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

The Comerica Bank project is one example of a priority development project that was conditioned to meet SUSMP requirements in 2010/2011. This project, located at 5450 Jackson Drive, proposed three flow-through planter facilities that will receive surface runoff from the project site, allowing the water to infiltrate through soil media to a perforated under drain. In an onsite location where the flows were not able to reach the flow through planters, a Filterra bioretention-type media filter was proposed to treat the storm water. This project represents an urban infill location where the future development (which is currently in construction as of September 2011) will be more protective of storm water quality than the previous urbanized land use.

Hydromodification Management Plan
During the reporting period the Copermittee Land Development Workgroup met regularly to discuss key Hydromodification Management Plan (HMP) development issues and provide updates on the status of consultant work products. City staff regularly participated in the workgroup meetings. The final regional HMP was adopted by the RWQCB just after the end of the 2009/2010 reporting period on July 14, 2010. The City incorporated the HMP requirements into its local development requirements in January 2011, as discussed above. Before the new HMP requirements were adopted in January 2011, the BMP Manual II contained Interim Hydromodification Criteria (IHC), but no approved projects were subject to these requirements since all were less than 50 acres in size. All three Priority Projects approved during the reporting period received discretionary approvals prior to January 2011; therefore the new hydromodification requirements did not apply. The two Priority Projects that have been reviewed but not yet approved during the 2010/2011 fiscal year will be required to address hydromodification requirements.

BMP Installation Verification
During the course of 2010/2011, after maintenance verification letters had been sent out during the summer of 2010, the City tracked Priority Projects within the City's jurisdiction completed during the remainder of the reporting period to be added to the treatment control BMP inventory. When a project is completed, the City checks for BMPs prior to occupancy, records the site information, assigns it a TTWQ priority, and then adds it to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs.

2.4.4.3 Treatment Control BMP Inspection and Maintenance Verification Program

2010/2011 Annual Maintenance Verification
The Municipal Permit requires annual verification of operation and maintenance of treatment control BMPs installed within the City's jurisdiction. Annual verification must be provided by the party responsible for treatment control BMP maintenance and must be returned to the City prior to the start of the wet season (October 1st). Using the property owner names and addresses recorded in the City's BMP database, BMP maintenance verification forms were mailed to all the projects included in the City's BMP database in early 2010/2011.

The City required that completed maintenance verification forms be returned no later than October 1, 2010. The City was able to obtain appropriate responses from every site on the inventory in 2010/2011. Out of the 17 projects on the City's inventory, seven projects did not return their verification forms by the deadline and were issued NOVs in October 2010. After receiving NOVs, nearly all promptly submitted the annual maintenance verification form. Two sites failed to comply in a timely manner, so the City issued a second NOV to the Castle Breckenridge Management, the management company for the Providence Square

development, in December 2010, and to Fairfield Grossmont Trolley LLC, the management company for the Alterra/Pravada development. The completed maintenance verification form was submitted shortly after the second NOVs were issued.

Operation and Maintenance Inspections

During the 2010/2011 fiscal year, the City contracted D-MAX to conduct inspections of projects with treatment control BMPs in accordance with the inspection frequencies outlined in the City's JURMP. Table 2-1 provides a summary of the number of inspections performed and how these met the requirements of the Municipal Permit. All high TTWQ inspections were performed prior to October 1, 2010.

Table 2-1
Assessment of Compliance with Required Inspection Frequencies

Site Class	Number of Sites	Full BMP Assessments	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	17	9	53%	20%	Yes
Sites with Drainage Inserts	9	6	67%	50%	Yes
High TTWQ	5	5	100%	100%	Yes

During full inspections, each BMP was visually assessed, GPS coordinates were recorded, and deficiencies were documented in writing and in photographs. Table 2-2 lists the development projects inspected, the number of BMPs installed at each site, the number of BMPs inspected, the number of BMPs found in need of maintenance, a brief description of inspection findings, and, if applicable, any follow-up actions taken. Public Priority Projects are indicated with the marker "(CIP)," which is short for capital improvement project. The BMP types installed at these sites and the TTWQ priority for each site is included in the City's treatment control BMP inventory, which is included in Appendix A.1 of this JURMP Annual Report. Further discussion of some of the inspection results and follow-up actions is provided in the text below.

Enforcement

Follow-up actions were recommended for all development projects with BMPs observed in need of maintenance. Since sites are notified by mail of deficiencies in BMP maintenance, with specific corrective actions listed, official verbal and written warnings are typically not used. The City has found that there is often significant turnover at property management companies responsible for BMP maintenance, and the City typically follows-up with non-responders by phone to verify that documents have reached the correct individual prior to issuance of an NOV. Enforcement actions are administered in an escalating manner as described in the City's updated JURMP. The City follows up with any sites that fail to verify that the required corrective actions and regular BMP maintenance were conducted. The City issued nine NOVs to projects failing to respond with appropriate maintenance verification documents and/or projects with deficiencies discovered during routine

inspection. All deficiencies noted in the 2009/2010 reporting period have been resolved. Some examples of follow-up action and resolution are described below.

During the inspection at the Grossmont Medical Offices Building and Parking Structure at 8860/8870 Center Drive, multiple deficiencies were noted. One catch basin did not contain a drainage insert as proposed, a significant amount of trash and/or debris was observed in the vortex separator, and the vegetated swale was not well maintained. The City worked with the responsible party to verify that appropriate maintenance was performed and that the missing drainage insert would be installed. The maintenance verification letter was returned to the City, showing maintenance had been performed by mid-October 2010. City staff also worked with the site to order and install the correct missing BMP by March 2011.

It is the City's policy to verify the installation of treatment control BMPs prior to granting occupancy at completed projects. Past installation deficiencies were rectified by inspection and enforcement during 2010/2011 as described above. Recent improvements to installation verification at project completion, more stringent SUSMP requirements for the clarity of site maps, and additional visits to completed sites by storm water staff have ensured that projects completed in 2010/2011 would not have installation deficiencies similar to projects completed in previous years.

Copies of the forms utilized to administer the above enforcement actions can be found in Appendix D of the City's JURMP.

During the reporting period, no sites were observed to present a significant threat to human health or the environment during inspections, so none were reported to the RWQCB.

2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 Program Review and Modification

The City's SUSMP requirements have been updated as described above in Section 2.2.4.

Table 2-2
Summary of Treatment Control BMP Inspection Results

#	Project Name	Inspection Date	TTWQ	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes	Follow-Up Notes	Resolution Status
1	Bougainvilla Walk	8/17/2010	Medium	3	3	2	Brow ditch insert had significant trash and/or debris; insert by stairs had significant amount of sediment and trash and/or debris; inlets/outlets were obstructed with vegetation debris.	NOV issued on 10/4/10; maintenance indicated on verification form.	Resolved
2	Grossmont Medical Offices and Parking Structure	8/17/10	Medium	2	3	2	The drainage insert indicated on development plans was not installed; vortex separator had a significant amount of trash and/or debris as well as standing water with an unpleasant odor; vegetated swale had an inadequate vegetative cover.	Maintenance indicated on 10/15/10 and 10/18/10 on verification form. Missing BMP was installed by the responsible party by March 2011, through City follow-up correspondence.	Resolved
3	Grossmont Trolley Theatre Conversion	8/17/2010	High	2	2	0	No maintenance deficiencies noted.	N/A	N/A
4	Kaiser	8/17/2010	High	1	1	0	No maintenance deficiencies noted.	N/A	N/A

Table 2-2 (Continued)
Summary of Treatment Control BMP Inspection Results

#	Project Name	Inspection Date	TTWQ	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes	Follow-Up Notes	Resolution Status
5	La Mesa Fire Station #11	8/18/2010	High	1	1	1	Excessive sediment was observed in storm screen and needed to be cleaned out.	Maintenance indicated on 4/8/2011 on verification form	Resolved
6	La Mesa Teen Center	8/18/10	Medium	2	2	1	Vegetated swale needed additional vegetation.	Maintenance indicated on 8/30/2010 on verification form	Resolved
7	Providence Square (AKA Talmadge East Apts)	8/18/10	Medium	3	3	3	A significant amount of trash and debris was observed in three drainage inserts; excessive sediment was observed in the insert within landscaping.	Maintenance indicated on 10/24/2010 on verification form.	Resolved
8	Alterra/Pravada Grossmont Trolley Apartments (AKA Fairfield)	9/1/10	High	20	20	0	No maintenance deficiencies noted.	N/A	N/A
9	County Library, La Mesa Branch	9/22/10	High	1	1	0	No maintenance deficiencies noted.	N/A	N/A

3.0 CONSTRUCTION

3.1 INTRODUCTION

The City's construction program is designed to control construction and grading activities in the City. These types of projects have the potential to impact nearby water bodies due to the presence of disturbed soils and building materials and the potential for associated pollutants to be transported off site by storm water or non-storm water flows. The City continued to implement its construction program throughout 2010/2011.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2010/2011 reporting period are presented in the following bulleted list. The following subsections provide more detail on how the City complied with the Municipal Permit during the reporting period.

- Distributed appropriate checklists to all projects applying for grading and building permits.
- Conducted plan checks of erosion control plans to ensure construction projects comply with the City's minimum BMP requirements.
- Conducted training for applicable City staff.
- Conducted 48 construction inspections at 32 sites during 2010/2011.
- Issued 47 verbal warnings and two NOVs to construction sites and activities during 2010/2011.
- Required construction sites less than one acre to complete a Construction Storm Water Management Plan (CSWMP), similar to a Storm Water Pollution Prevention Plan, which details the planned construction phase BMPs for the project.

3.2 SOURCE CHARACTERIZATION

An inventory of active construction projects during the reporting period is presented in Appendix A.2 of this JURMP Annual Report. The City's inventory was maintained throughout the reporting period by the City's Engineering Division. New construction projects were added to the inventory at the start of construction, and projects were removed from the inventory after construction was completed. Since construction projects were continually being added and removed throughout the fiscal year, inventory updates were usually performed more frequently than the minimum once per month.

Since construction activities that involve grading activities are generally more of a threat to water quality than other construction activities such as tenant improvements, the City has chosen to include only projects that have applied for grading permits on the construction inventory. Although other, smaller, construction projects are not included on the City's construction inventory; the City requires BMP implementation and maintains oversight of these projects. The City's building inspectors inspect these sites for proper BMP implementation during their routine building construction inspections. Building inspectors will notify the Engineering Division of the Public Works Department if any major BMP deficiencies are noted or if a facility is required to submit an application for a grading permit, and thus be included on the City's construction inventory. Inspections by the Building Department are not tracked by Storm Water Staff like the City's construction inspections, but these inspections are used as a supplemental tool to implement the City's construction storm water requirements.

3.3 Updates to Ordinances and Approval Processes

The City did not make any changes or updates to City ordinances during 2010/2011. However, the City changed its approval process for Capital Improvement Program (CIP) encroachment projects. These projects are now required to submit a BMP Plan Sheet through the Virtual Project Manager (VPM) website for approval. After review and approval by the City, any changes to the BMP Plan Sheet are to be annotated and uploaded to the VPM. Additional bid language was added and designed to penalize the contractor for poor BMP implementation by deducting the line item daily BMP amounts from their payment.

3.4 Best Management Practice Requirements

The City's updated construction and grading project requirements are detailed in the City's updated BMP Manual Part II, which can be found as Appendix C in the City's JURMP and Attachment 2.1. The City did not make any changes to these BMPs during 2010/2011.

3.5 Program Implementation

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 Education and Staff Training

During 2010/2011, City staff involved in construction program implementation was trained on dry weather and wet weather requirements, erosion control, material management BMPs, enforcement action and procedures. Please see Section 8 of this JURMP Annual Report document for details on trainings performed and construction-related educational materials distributed.

3.5.2 Construction and Grading Approval Process

The City's grading approval process is described thoroughly in Section 5 of the City's JURMP. During 2010/2011, City personnel verified that all construction projects planned to implement the City's minimum BMP requirements prior to issuing any building or grading permits. The City continued to distribute Appendix A, which helps the City and the project proponent identify whether coverage under the State of California General Construction Permit (Construction Permit) is needed. Appendix A was updated in January 2011 to include Hydromodification requirements. Additionally, the City continued to require construction projects that are not subject to the General Construction Permit to complete a Construction Storm Water Management Plan (CSWMP), which details BMPs planned for construction sites not required to develop a storm water pollution prevention plan (SWPPP). A copy of the City's CSWMP form is included as Attachment 3.1. Approved forms and documents completed by project proponents are kept with the each project's file at the City for reference.

During 2010/2011, the City continued to enforce a 17 acre maximum disturbed area for grading activities. None of the City's active construction sites were larger than 17 acres, and the maximum disturbed area limitation did not apply. However, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also continued implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Construction projects that were active during 2010/2011, along with their assigned TTWQ, the number of weeks the site was active during the rainy season, the number of inspections conducted during wet and dry seasons, and the total number of inspections for each site are included in Appendix A.2. A total of 48 routine construction inspections were performed at 32 construction sites during 2010/2011.

Construction inspections conducted during the reporting period were performed as described in the City's JURMP. Key components of the inspections include checks for coverage under the Construction Permit during the initial inspection and assessment of compliance with the City's BMP and discharge requirements. Responsible parties at the sites are educated as needed during inspections. Copies of the inspection forms are kept on file at the City.

3.5.4 Enforcement Measures

Any violations were noted on the project's inspection form, and the sites were given a list of corrective actions necessary to fix the observed violations. When necessary, a verbal or written warning was issued for the violation, and the City followed up with the site until compliance was achieved. Verbal warnings are often relayed through the City's inspection staff, and generally involved minor BMP issues which require quick resolution. The City prefers to check sites frequently and use a more informal, hands-on approach to ensure contractors are implementing correct BMPs onsite. Table 3-1, below, includes the number of violations and enforcement actions taken during the reporting period in response to violations of the City's minimum construction BMP requirements. Enforcement actions are administered in an escalating manner as described in the City's JURMP. Copies of the forms utilized to administer enforcement actions can be found in Appendix D of the City's JURMP.

Table 3-1
Construction Enforcement Actions Taken

Enforcement Context	Verbal Warnings	Written Warnings	NOVs	Stop Work Orders
Routine Inspections	47	0	2	0

For example, one NOV was issued to a single family residence for not installing the erosion control BMPs per the approved Erosion Control Plan. The City followed up with the residence to confirm that all BMPs indicated on the Erosion Control Plan were installed onsite during construction.

None of the violations observed at construction sites during the reporting period were found to endanger human health or the environment. The City was able to bring about compliance at all sites for which enforcement actions were taken, and it was not necessary to report any of these sites to the RWQCB.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

The City's JURMP was updated in March 2008. No significant changes to the City's construction component have been made since that time.

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout the 2010/2011 reporting period, the City continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and conducts various municipal activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal facilities in the City. Municipal activities conducted by the City or City contractors include power washing, graffiti abatement, building maintenance, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. Information about sanitary sewer overflows (SSO) that occurred during 2010/2011 can be found in Table 4-3. The City continued to respond to complaints made to the City's Storm Water Hotline. All complaints made to the City's Storm Water Hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are included in Table 4-4. The City's municipal inspection results can be found in Table 4-5.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component and of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City hosted several training events/meetings for municipal personnel.
- The City maintained an informational storm water bulletin board in City Hall.
- The City removed a total of 525.29 tons of sediment and debris from street sweeping activities.
- The City removed over 178 cubic yards of sediment and debris from standard MS4 cleaning activities, not including drainage insert maintenance.
- The City removed over 8.75 cubic yards of sediment and debris from filter inserts maintained by the City. City personnel continued to restock the pet waste bag dispensers in City parks, using approximately 22,500 pet waste bags during 2010/2011.
- A total of 6,838 linear feet of sewer line were televised during 2010/2011, which led to the discovery of some areas of the sanitary sewer in need of repair. The City also replaced or rehabilitated 584 linear feet of sanitary sewer line.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included on the City's municipal inventory; descriptions of the facilities and activities can be found in the City's JURMP. The City's inventory is included in this JURMP Annual Report as Appendix A.3. The designations of pollutants potentially generated by municipal facilities on the inventory are based on the pollutant loading potentials shown in Table 6-1 of the City's JURMP. TTWQ prioritizations are assigned via the process laid out in the flow chart shown in Figure 6-1 of the City's JURMP.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs at fixed municipal facilities. As mentioned in the City's JURMP, the City uses the California Stormwater Quality Association (CASQA) Municipal BMP Handbook to establish appropriate BMPs for fixed municipal facilities. Table 6-2 in the City's JURMP describes the CASQA fact sheets that are used for specific facility types.

The City continues to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as described in the City's JURMP. The City also continues to use Calsense Computerized Irrigation Control (Calsense) at a number of fixed municipal facilities to reduce water use and decrease the chance of transporting pollutants to the City's MS4 by over-irrigation. BMP implementation for parks and recreational facilities, as described in the City's JURMP, has not changed.

City public works employees, fire station employees, and employees at other fixed facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

As mentioned above, the City's BMP requirements have not changed since the development of the revised JURMP. Some notable examples of implementation of those BMPs are provided below.

Calsense Computerized Central Irrigation Control

The City continues to use Calsense, an advanced automated irrigation system designed to prevent over irrigation at several fixed municipal facilities. Since Calsense is automated, it has a lower chance of malfunction than manual irrigation systems and allows the City to monitor irrigation activity from a central computer. During 2010/2011, the City added two clocks to the new landscaping installed on Allison Avenue and one clock to the landscaping at the new Police Station. A total of 24 municipal facilities, including both parks and various fixed facilities, are now equipped with Calsense technology.

The Calsense system monitors irrigation by including the use of master valves and flow sensing to prevent over-irrigation and also decrease the amount of water that is used. A break in the system is recognized as a high flow, and the system is shut off until it is repaired. The use of this technology allows the City to prevent major leaks by detecting smaller leaks that might otherwise go undetected earlier than with a manual system. The automatic shutoff by Calsense saves thousands of gallons of water and prevents the runoff generated by a leak from carrying pollutants from parks and other fixed municipal facilities to the storm drain system. The irrigation system can be controlled by a central computer, which calculates the best time for irrigation based on moisture readings, weather, and real time flow rates at every valve. Additionally, the system allows staff to manage the system more efficiently and with less chance of over-irrigation. The irrigation schedules can be designed for a long period of time or easily modified for weekly or daily needs if necessary. The system allows for the most efficient usage of water while minimizing the chance of over-irrigation and consequent introduction of pollutants to the City's storm drain system.

Parks and Recreational Facilities

During 2010/2011, City continued to maintain the 34 pet waste bag dispensers installed throughout 14 parks. City personnel restock the dispensers as necessary; 22,500 pet waste bags were used during the reporting period. As mentioned in the City's JURMP, a number of volunteers continue to assist in keeping the designated dog area at Harry Griffen Park free of pet waste as part of the Canine Corners Program. The City also continues to host the Adopt-A-Park program, which engages residents of the City in volunteering to pick up trash throughout local parks. The City continued its partnership with the St. Madeline Sophie's Center, which employs developmentally disabled individuals in park maintenance activities.

During 2010/2011, the City maintained the informational kiosks in four City parks: La Mesita Park, Vista La Mesa Park, and Jackson Park, and Harry Griffen Park. These kiosks present storm water pollution prevention information to park patrons and are updated with information regarding upcoming outreach events. The Adopt-A-Park program, the partnership with St. Madeline Sophie's Center, and the storm water kiosks are also discussed in Section 9 of this Annual Report.

As previously mentioned, the City continued to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as

described in the City's JURMP. In 2010/2011, the City used 10.6 tons of fertilizer, 97.5 gallons of herbicide, and 38.5 pounds of pesticides.

Public Works Facilities, Fire Stations, Other Fixed Facilities
As previously mentioned, City personnel continued to implement appropriate BMPs for municipal fixed facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance (i.e. landscaping, building maintenance, etc.) as necessary. Parking facilities associated with fixed municipal facilities are conducted as part of the regular sweeping activities and were swept weekly during 2010/2011. The large paved area at the City's Public Works Operation Center was swept at least once weekly during 2010/2011, and twice weekly if needed. Public Works employees continued to implement the storm water management plan (SWMP) at the Public Works Operations Center. Public Works employees also continued to maintain the seven filter inserts on the property; these inserts are cleaned twice annually.

Municipal Inspections
All high TTWQ fixed municipal facilities received a routine annual inspection in 2010/2011. Table 4-5 at the end of this section lists all high TTWQ municipal fixed facilities requiring inspection in 2010/2011, the date the inspection was performed, and the recommended corrective actions from the inspection. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2010/2011. The City's municipal inspection form is included as Attachment 4.1.

The Public Works yard was the only municipal facility recommended for follow-up during 2010/2011. Since the inspection was conducted near the end of the 2010/2011 reporting period, corrective actions will be completed in 2011-2012.

4.3 Roads, Streets, Highways, and Parking Facilities

4.3.1 Background

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 Source Characterization

The City maintains roads, streets, and highways; the City also maintains four stand-alone parking facilities. Roads, streets, and highways, are included as one entity on the City's municipal inventory and each individual stand-alone parking facility is also included on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 Best Management Practices

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping. Other BMPs are chosen as needed based on the CASQA Municipal Handbook. The City's sweeping frequency is outlined in the JURMP and described in the following

subsection. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2010/2011.

4.3.4 PROGRAM IMPLEMENTATION

During 2010/2011, the City swept a total of 8,985 curb miles, removing approximately 525.29 tons of debris. Similar to previous reporting periods, the debris removed by sweeping activities was approximately 80 percent sediment and 20 percent leaves, debris, and trash. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities, and the associated sweeping frequency. The City met the sweeping frequency requirements of the high, medium, and low priority streets as described in both the JURMP and in the table below. Parking lots associated with City parks were swept every two weeks; parking lots associated with all other fixed facilities in the City were swept every week during 2010/2011.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route	Sweeping Frequency
High	Downtown areas, designated residential areas, designated commercial areas, four stand-alone parking facilities	10.6 miles	At least every two weeks
Medium	Center islands	9 miles	At least once per month
Low	Designated residential areas	140 miles	As needed, at least annually
Fixed Facilities	Eleven parking lots associated with municipal fixed facilities	N/A*	Weekly
Fixed Facilities - Parks	Twelve parking lots associated with parks	N/A*	Every two weeks
Fixed Facilities – PW Operations Center	Public Works Operation Center, including the two parking lots	N/A*	At least weekly, twice weekly if needed
Total Amount of Debris Collected from Street Sweeping Activities: 525.29 tons			

* Mileage data is not available for the swept area of stand-alone parking facilities, parking facilities associated with municipal facilities, and the PW Operations Center. Mileage accrued while sweeping these facilities is included in the total mileage.

As a means to address priority pollutants in the San Diego Bay and the San Diego River Watersheds, the City continued to conduct additional sweepings of some City streets.

Designated residential areas that are low priority were swept monthly during 2010/2011 and selected high priority streets were swept weekly.

Inspections
Trash, debris, and sediment that have accumulated on City streets are identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 Background

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events. The City's MS4 consists of approximately 56 miles of pipes of varying materials, natural channels, concrete channels, and culverts and over 400 curb inlets and catch basins.

4.4.2 Source Characterization

The City's MS4, as one complete entity, is included on the City's high TTWQ municipal inventory.

4.4.3 Best Management Practices

The City maintains a strict MS4 maintenance and cleaning schedule in order to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. As described in the City's JURMP, BMPs for MS4 maintenance activities are chosen based on the CASQA Municipal Handbook and have not changed during 2010/2011.

The City has installed and maintains 21 filter inserts in catch basins in the University drainage basin, which are designed to prevent debris from entering the MS4. These filter inserts are maintained as part of the routine MS4 maintenance schedule. Figure 4-1 shows the locations of these drainage inserts.

During 2009/2010, two Filterra Bioretention System units were installed at Orien Avenue at Lowell Street. The manufacturer's warranty includes maintenance for the first two years, after which the City's Public Works employees will maintain the units twice per year, once prior to the rainy season. These two Filterra Bioretention System units are located in the University drainage basin and are included with the drainage inserts in Figure 4-1.

4.4.4 Program Implementation

The City implemented a rigorous MS4 inspection and cleaning schedule during 2010/2011. The City inspected and cleaned all MS4 cleanout locations twice in 2010/2011; at least one cleaning was conducted between May 1 and September 30. The City's MS4 inspection and cleaning schedule for 2010/2011 is shown in Table 4-2.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter Cleaned	Amount of Debris Removed from Cleaning Activities
Catch Basins/Self Cleaning MS4 Facilities	**100%**	N/A	**66.25 cubic yards**
Open Channels	**100%**	**100%**	**103 cubic yards**
Drainage Inserts	**100%**	N/A	**8.75 cubic yards**
Total Debris Removed From MS4 Maintenance Activities: 178 cubic yards or 69.4 tons			

* No structures were observed at least 33% of capacity during the reporting period. However, the City cleans out any structures, including self-cleaning structures, in which trash and debris is observed at the time of inspection.

The City's cleanout locations are access points to various sections in the City's MS4, so no additional pipe beyond the cleanout location is typically cleaned. The City may flush the MS4 line and then reclaim the water in the event of a spill. During 2010/2011, there was no need to flush any MS4 line, so there is no data to report for additional MS4 cleanout activities. As previously mentioned, the City continued to maintain the filter inserts installed in the University drainage basin.

During 2010/2011, the City continued to inspect the open channels in the City and remove trash and debris as necessary. If litter or debris is observed during the routine inspections, it is removed immediately. The total length of the channel segments inspected and cleaned by City staff was approximately 4,930 feet.

As described in Table 4-2, 178 cubic yards of debris was removed during MS4 maintenance activities. The weight of the material removed was not recorded, though an overall estimation of the composition of debris removed from MS4 maintenance activities is 80 percent trash and leaves and 20 percent rocks and soil. The volumes were converted to estimated weights using the percent composition estimates from City maintenance staff and conversion factors of 2,300 pounds per cubic yard of rocks and soil and 400 pounds per cubic yard of trash, leaves, and similar material. The total weight of material removed was estimated at 69.4 tons.

4.5 Sanitary Sewer System

4.5.1 Background

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of

bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 Source Characterization

The City maintains a system of public sanitary sewer pipes to convey wastewater from the City to be treated. The sanitary sewer system, as one complete entity, is included on the City's high TTWQ municipal inventory.

4.5.3 Best Management Practices

The City implements BMPs from the CASQA Municipal Handbook, as described in the City's JURMP, during sanitary sewer maintenance. There have been no changes to these BMPs during 2010/2011. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities. The City clears blockages and repairs leaks as needed.

4.5.4 Program Implementation

As part of the City's regular maintenance schedule, the City maintains areas known to be "hot spots" for grease buildup on a monthly basis. During 2010/2011, the City continued to implement a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. Additionally, the City's FOG Ordinance, No. 2009-2794 and 2009-2795, went into effect on July 1, 2009. The FOG Ordinance provides legal authority for the City to regulate grease producing facilities and outlines specific details of the program. During 2010/2011, the City conducted approximately 180 FOG inspections at FOG facilities. The City will continue to conduct FOG inspections during 2011/2012. The City also will enforce any storm water violations noted during FOG inspections.

In addition to the monthly maintenance at known grease "hot spots," the City seeks to eliminate seepage from the sanitary sewer system to the MS4 by routine preventative maintenance of both systems. Routine maintenance of both systems allows the City to find areas that are likely to become problems in the future and make the necessary repairs/replacements before any larger issues arise. A total of 6,838 linear feet of sewer line was televised during 2010/2011 in order to find and repair any areas where seepage could occur. The City also continued to conduct flow metering in its sanitary sewer system to monitor for evidence of potential problems. During 2010/2011, the City replaced or rehabilitated 584 linear feet of sewer line. The majority of this sewer replacement is through a multi-phase program whereby the City has been replacing older sewer in sections of the City. The City received a low interest loan from the State Water Resources Board in 2007 to upgrade the system and protect against infiltration and inflow, as well as SSOs. Additional sewer replacement projects may continue in 2011/2012 as additional funding is secured.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. During 2010/2011, there were nine SSOs. These spills were reported to the State Water Resources Control Board (SWQCB) within 24 hours through the California Integrated Water Quality System (CIWQS), as required by the Municipal Permit. The City submitted a technical report to the RWQCB about the results of its investigations into the spills, which contains the details of the City's mitigation efforts.

4.6 Mobile Municipal Activities, Including Power Washing

4.6.1 Background

The City conducts a variety of different mobile municipal activities, typically involving infrastructure maintenance, landscape maintenance, graffiti removal, and power washing. Power washing is not considered a part of any normal maintenance activities, but it is used when other methods of cleaning or graffiti removal are not effective.

4.6.2 Source Characterization

Both power washing and graffiti removal are listed on the City's high TTWQ municipal inventory. Infrastructure maintenance and landscape maintenance are listed on the City's medium TTWQ municipal inventory.

4.6.3 Best Management Practices

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. For example, City personnel performing power washing are trained to collect all waste water and City personnel conducting graffiti removal are trained to store and handle any chemicals properly.

4.6.4 Program Implementation

Power washing and graffiti removal, both high TTWQ activities, are conducted on an as needed basis and are therefore not on a set schedule. Neither power washing nor graffiti removal was scheduled to be conducted during the timeframe that routine municipal inspections were conducted. Facility personnel responsible for graffiti removal and power washing have been trained and are aware of the BMPs necessary for each activity to prevent discharge to the MS4. Water produced by these activities is either directed to landscaping or storm drains are blocked and water is vacuumed up once the project is complete.

Municipal personnel that conduct other mobile activities such as infrastructure maintenance and landscape maintenance are trained regularly regarding BMPs for material use and disposal. Emergency vehicle maintenance personnel are trained on the proper handling and use of pesticides, herbicides, and fertilizers as described in the City's JURMP.

4.7 Special Events

4.7.1 Background

The La Mesa Oktoberfest is the only priority designated annual special event that occurs in the City. Oktoberfest is a three-day celebration occurring in early October. There are no other regular major special events, although smaller events may occur on occasion.

4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the city's high TTWQ municipal inventory.

4.7.3 Best Management Practices

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable. During smaller events, City staff ensure that any trash and debris left over from the events is cleaned up.

4.7.4 Program Implementation

Individuals or groups wishing to host events in the City meeting certain criteria are required to obtain a permit from the City. Both Community Assembly Permits and Block Party Permits are available from Public Works and Park Use Permits are available from the Community Services Department. Permits require individuals responsible for the event to control trash and clean up after the event. If vendors are anticipated at the event, the "Tips for Outdoor Vendors" fact sheet (Attachment 8.1) is provided to the permit applicant.

During 2010/2011, the City provided "Tips for Outdoor Vendors" to the vendors of the Oktoberfest event. This fact sheet informed the vendors of the difference between the storm drain system and the sanitary sewer system and the effects of polluted urban runoff. The sheet also included event-specific BMPs, such as using dry cleaning methods, having spill response materials if using cooking grease, and managing trash and other wastes properly. The City distributed approximately 50 copies of the aforementioned fact sheet.

On the Monday following the three-day Oktoberfest event, the City conducted a post inspection of the area where the event took place. Minor amounts of litter and debris were observed on the ground, which were cleaned up as part of the routine special event BMPs.

4.8 Public Reporting of Illicit Discharges and Connections

Reporting and Response

Public and municipal involvement is crucial to preventing and eliminating IC/IDs from the storm water conveyance system. The Storm Water Hotline provides an effective means for

individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, in storm water articles in the *La Mesa Focus* newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2010/2011 reporting period and the City's response to each are listed in Appendix B. A total of 151 complaints were documented this year.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works Hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material. Table 4-4, below, summarizes the enforcement actions taken in response to complaints received.

Table 4-3
Enforcement Actions Resulting from Complaints Received by the Storm Water Hotline

	Verbal Warning	Compliance/ Enforcement Letter	Written Warning	NOV
Commercial	5	29	2	8
Industrial	0	1	0	0
Mobile	0	0	0	0
Municipal	0	1	0	0
Residential	8	20	4	7
Construction	8	1	0	1

Note: Hotline calls received that are not represented in this table were able to be resolved without requiring formal enforcement means. Generally, formal warnings, enforcement letters, and violations are issued if a discharge is observed or facilitating responsible party action requires higher levels of enforcement.

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. Preventative maintenance is regularly conducted on the City's sanitary sewer system, and video inspections and sewer surveys are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. City

crews do not maintain private laterals, but the City assists in the containment and cleanup of spills from private laterals if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. As previously mentioned, there were nine SSOs during 2010/2011; there were no other spills during the reporting period. Additional information regarding the City's mitigation efforts for the SSOs can be found in the technical report that was submitted to the RWQCB during 2010/2011.

4.10 Education and Outreach

During 2010/2011, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. The City also continued to maintain a storm water bulletin board in City Hall, which provided storm water information and brochures.

During 2010/2011, the City also played a central role in the development of a training video for municipal employees, a product of the Regional Municipal Workgroup. City staff wrote the script for the video, coordinated filming and voiceovers, and worked with the production company to edit the final product. Upon completion in 2011/2012, this video can be used region-wide to train municipal employees on appropriate BMP implementation.

Detailed information regarding the education and outreach conducted for City personnel is described in detail in Section 8 of this Annual Report.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 Program Modification and Review

The City's JURMP was updated in March 2008. No changes to the City's municipal component have been made since that time.

Table 4-4
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
1	Allison Avenue Lot (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	6/1/11	Cigarette butts were observed in the eastern corner of the lot and should be swept regularly. Surrounding businesses have been talked to about this issue.	Surrounding businesses have been talked to about this issue.	Resolved
2	Aztec Park	High	Parks and Recreation Facilities	5/2/11	No significant corrective actions	N/A	N/A
3	Briercrest Park	High	Parks and Recreation Facilities	5/20/11	No significant corrective actions	N/A	N/A
4	Collier Park and Pump House	High	Parks and Recreation Facilities	6/1/11	Vegetative debris is a major concern at this site. Concrete channel in the middle of the park is full of this debris and it is creating a blockage at the bridge in the middle.	Will be completed in beginning of FY 11-12.	TBD
5	Community Pool	High	Parks and Recreation Facilities	6/30/11	No significant corrective actions	N/A	N/A
6	Harry Griffen Park	High	Parks and Recreation Facilities	6/6/11	No significant corrective actions	N/A	N/A
7	Highwood Park	High	Parks and Recreation Facilities	6/6/11	No significant corrective actions	N/A	N/A
8	Jackson Park	High	Parks and Recreation Facilities	5/4/11	No significant corrective actions	N/A	N/A
9	Junior Seau Sports Complex	High	Parks and Recreation Facilities	6/6/11	Sediment is a concern in the inlets around the fields.	Will be completed in beginning of FY 11-12.	TBD

Table 4-4 (Continued)
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
10	La Mesa Blvd (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	5/26/11	No significant corrective actions	N/A	N/A
11	La Mesita Park and Gardener's Shack	High	Parks and Recreation Facilities	5/9/11	No significant corrective actions	N/A	N/A
12	Lemon Ave Lot (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	6/1/11	No significant corrective actions	N/A	N/A
13	MacArthur Park	High	Parks and Recreation Facilities	5/26/11	No significant corrective actions	N/A	N/A
14	Northmont Park	High	Parks and Recreation Facilities	5/6/11	No significant corrective actions	N/A	N/A
15	Palm Avenue Lot (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	6/1/11	No significant corrective actions	N/A	N/A
16	Porter Hall	High	Parks and Recreation Facilities	5/26/11	No significant corrective actions	N/A	N/A
17	Porter Park	High	Parks and Recreation Facilities	5/26/11	No significant corrective actions	N/A	N/A

Table 4-4 (Continued)
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
18	Public Works Facility	High	Public Works Facilities	6/29/11	(1) Catch basin at west end along the wall(across from sign shop) needs immediate maintenance. The inlet filter seemed to be in good condition but basin was full of trash and debris and needed to be cleaned out. (2) Area where the paver is kept needs improvement. Drip pans should be used under the truck. Any spills should be cleaned immediately. Make sure that the fiber rolls and absorbent rolls on the east side of the building are kept in good condition. (3) Stockpile adjacent to the drying bed area needs improvement. Areas around containment should be swept as needed. When the piles are not in use they should be covered, and fiber rolls should be placed across the openings. (4) Materials and debris (shopping cart w/ buckets and bottles) that are located by the storage container in the middle of the yard need to be thrown away if they are empty, or kept under cover. (5) Granular rubber in the Northeast corner needs to be covered, broken bags should be replaced or fixed.	Will be completed in beginning of FY 11-12.	TBD
19	Rolando Park	High	Parks and Recreation Facilities	6/2/11	Sediment was observed in the parking lot and has been an issue in the past. (6) Trash cans on the upper field were overflowing and garbage bags were filled and stacked near the cans.	Will be completed in beginning of FY 11-12.	TBD

Table 4-4 (Continued)
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
20	Sunset Park, Gardener's Shack and Recreational Building	High	Parks and Recreation Facilities	5/6/11	Slope along the northwest side of the park is contributing large amounts of sediment into the parking lot and cross gutters.	Will be completed in beginning of FY 11-12.	TBD
21	Sunshine Park	High	Parks and Recreation Facilities	6/2/11	No significant corrective actions	N/A	N/A
22	Vista La Mesa Park	High	Parks and Recreation Facilities	5/2/11	Landscape debris should be picked up after all work is finished. Do not leave debris on the ground.	Will convey info to Parks Supervisor.	N/A

Note: Roads, streets, highways, and parking lots; the MS4; and the sanitary sewer system were inspected via the maintenance effort described earlier in this section.

Figure 4-1
City Maintained Treatment Control BMPs Installed in the University Drainage Basin

5.0 INDUSTRIAL AND COMMERCIAL

5.1 INTRODUCTION

During 2010/2011, the City continued to implement a storm water program to reduce urban runoff pollution from the areas and activities of industrial and commercial businesses. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities by implementing various aspects of its industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2010/2011 reporting period are outlined below. Additional details about the City's implementation of the industrial and commercial component and of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ stationary industrial and commercial facilities.
- The City completed pollutant discharge potential assessment (PDPA) forms and additional watershed-specific questionnaires at inspections to aid watershed management and source identification efforts.
- Based on inspection findings and complaints made to the hotline, the City took enforcement actions against industrial and commercial businesses, as necessary.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated commercial and industrial inventory is included as Appendix A.4 to this JURMP Annual Report and includes all stationary facilities known to be operating in the City that are required to be included on the City's inventory. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and minimum, activity-specific BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

The City's commercial and industrial inventory includes both stationary and mobile businesses, as required by the Municipal Permit, and were updated during 2010/2011.

Information on how the City prioritizes the commercial and industrial inventory based on TTWQ is discussed in detail in the City's JURMP. The City considers the following factors when prioritizing the inventory:

- Industrial Permit subjectivity
- Consideration of downstream waterbody and whether the business is likely to discharge pollutants for which the waterbody is impaired
- Results from previous inspections and institutional knowledge
- Proximity to the receiving waterbody

The City's updated inventory includes 366 stationary industrial and commercial facilities.

In August 2011 the City received comments from Coastkeeper indicating that Coastkeeper could not find the list of pollutants potentially generated by inventoried businesses or the identification of which businesses are tributary to impaired water bodies and likely generating pollutants for which the water bodies are impaired. For pollutants generated, this year the City's inventory has been reformatted to explicitly show the information about pollutants generated all in one table rather than in two separate tables—one listing the businesses and their categories, the other listing the categories and their pollutant discharge potentials. The City has also taken steps to individually evaluate pollutant discharge potentials during site inspections, and that site-specific information is also reflected on the updated inventory where applicable. The information about which businesses are believed to be tributary to impaired water bodies and likely generating pollutants for which the downstream water bodies are impaired is reported in a column now titled "Generating Pollutants Tributary to 303(d) Listed." This is the same information as has been reported in a column titled "Likely Source" in previous years, but the column title has been changed to ensure the meaning is clearly conveyed to the reader.

5.2.3 Best Management Practice Requirements

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other designated BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are described in more detail in the City's BMP Manual Part I, which is an attachment to the City's JURMP. BMP requirements for stationary industrial and commercial businesses did not change during 2010/2011.

5.2.4 Program Implementation

As previously mentioned, the City updated its industrial and commercial inventory during 2010/2011. The updated commercial and industrial inventory is included as Appendix A.4 to this JURMP Annual Report.

Industrial and Commercial Inspections

During 2010/2011, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. All high TTWQ sites were selected for routine inspection. Additional sites selected for routine inspection were selected randomly, with consideration for sites with previous issues that had not recently been inspected.

Table 5-1, on the following page, provides a summary of the industrial and commercial site visits. In the table, full inspections have been counted as one full inspection. Because facilities move/go out of business, are duplicates of other businesses listed on the City's inventory, or are conducting activities for which inclusion on the City's inventory is not necessary, full inspections are not conducted at all visited facilities. Since time and effort are required to visit these facilities, visits where a full inspection is not conducted are considered equivalent to one half of a full inspection. The only time a site visit would not count as half of a full inspection is if the facility moved and was replaced by a facility where a full inspection was conducted or if the facility was a duplicate of another facility selected for inspection.

Table 5-1
Summary of Routine Site Visits

Facility Category	Inventoried Stationary Sites	Equivalent Full Inspections*	Percentage of Total Inventory
High TTWQ Sites	38	37.5**	10.2%
Additional Sites	328	57	15.6%
Totals	**366**	**94.5**	**25.8%**

* "Equivalent Full Inspections" includes full inspections and also counts at 50 percent value the site visits where a full inspection could not be conducted but where effort was taken to document the visit and update the inventory. It does not include any businesses that were duplicate listings of other inspected facilities or facilities replaced by other businesses inspected during the reporting period.
** One high TTWQ facility, Rainbow Steel Inc., is no longer conducting business within the City; however the existing site was still inspected in 2010/2011 in order to evaluate site conditions. As a full inspection could not be completed with facility personnel, this inspection is considered to account for half of one full inspection.

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form and discussed with facility personnel present during the inspection. Businesses were given a copy of corrective actions at the time of inspection.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. The City also reviews storm water pollution prevention plans (SWPPP) and monitoring results when applicable. Furthermore, the City completed PDPA forms and supplemental watershed questionnaire forms during the inspections in an effort to collect more data from inspected facilities. These forms are included with the City's inspection form, which is included in Attachment 5.1.

During 2010/2011, the City conducted the following inspections:

- Follow-up inspections at sites not in compliance in 2009/2010
- Routine inspections for 2010/2011
- Brief re-inspections at sites with minor violations during routine 2010/2011 inspections

Follow-up inspections performed in 2010/2011 are included in Table 5-2. Results of full routine inspections performed in 2010/2011 are included in Table 5-3.

In 2010/2011, a minor re-inspection form was developed to document a no-fee inspection that is completed within 48 hours of the initial inspection. These are for minor issues that do not warrant a full fee-imposed re-inspection (e.g. small amounts of trash). These inspections are still categorized as a failure to comply and re-prioritized as such. The purpose of this minor re-inspection form is to get small issues corrected quickly. If the issues are not corrected within 48 hours, then a full re-inspection is required. Facilities where minor re-inspections were completed and a full re-inspection was not required have a correction status of "Completed" in Table 5-3.

The conditions at two facilities inspected at the end of the reporting period warranted a full re-inspection, and the City's follow-up and enforcement activities at these sites will continue into 2011/2012. In some cases, a facility recommended for follow-up during 2009/2010 was observed to be in compliance during the follow-up inspection conducted during 2010/2011. These sites received a routine inspection subsequent to the follow-up inspection to confirm continued compliance with City requirements. In some cases, businesses were out of compliance during the 2010/2011 routine inspections. The City performed brief re-inspections at these sites and achieved full compliance during 2010/2011.

Additionally the City completed approximately 180 Fats, Oil, and Grease (FOG) inspections during 2010/2011. These inspections also include a quick check for storm water compliance in addition to the FOG requirements for restaurants.

The City did not rely on third party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third party inspection program.

General Industrial Permit

Subjectivity to the Industrial Permit was evaluated during the industrial and commercial inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). Based on the assigned SIC code, the inspector evaluated the Industrial Permit subjectivity of the business. Notably, none of the inspected businesses in the City were observed to be in violation regarding obtaining coverage under the Industrial Permit in 2010/2011.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to give site-specific one-on-one education regarding storm water concepts and BMPs. The City Inspector discusses a variety of topics including watershed concepts, the Industrial Permit, and minimum, activity-specific BMP requirements. Prior to performing industrial and commercial inspections, the City sent a letter to all businesses informing them of the upcoming inspection. At the time of inspection, businesses are given a copy of corrective actions. Additionally, automotive-related facilities receive the "Green Wrench Guide". This year, approximately 25 San Diego Bay or River Watershed factsheets were distributed to businesses interested in more information on storm water beyond basic compliance.

The City Inspector works directly with businesses that have had repeat violations, such as A-1 Equipment and Walter H. Barber & Sons, Inc., to ensure long term compliance. The City's inspector has visited businesses more frequently than for official annual inspections in order to build a relationship with the personnel and to clarify storm water regulations. Also, the City provides a customized list of corrective actions during the inspection to facilitate prompt compliance.

The City continued to publish storm water-related articles in the *La Mesa Focus* newsletter. The 2010/2011 issues were distributed to the residents and businesses in the City that have elected to receive it; 908 were sent electronically, and 21 were mailed hard copies. In addition, a hard copy of each newsletter is available at the City Library. Summaries of the articles in the newsletter can be found in Section 6; the newsletters are included as Attachment 5.2 to this JURMP Annual Report.

Enforcement

Ten industrial and commercial facilities were observed to be out of compliance with the City's municipal storm water ordinance during routine inspections conducted in 2010/2011. As previously mentioned, brief re-inspections were performed in 2010/2011 in order to address minor corrective actions. Eight of the ten facilities had achieved compliance at the time of the re-inspection. One industrial and one commercial facility were found to have ongoing issues that will require additional follow-up. These inspections were conducted near the end of the 2010/2011 reporting period, so actions to bring the sites into compliance will continue into the 2011/2012 reporting period. The City did, however, send NOVs to both of these businesses for failing to properly implement BMPs. Notably, a smaller percentage of business inspections resulted in the need for a follow-up visit than in previous years. The likely explanation for this increase in compliance is the storm water inspection fee program. While the initial purpose of the inspection fee was to fund the storm water program, charging businesses for each routine inspection and follow-up visit provides the additional benefit of encouraging businesses to come into compliance with the City requirements to avoid the fees associated with additional follow-up inspections. Businesses are required to pay for all necessary re-inspections until they are in compliance, which has made it fiscally possible for the City to have one inspector as point person who personally coordinates compliance assistance and enforcement. No industrial and commercial IC/IDs were discovered during routine inspections.

During the course of the 2010/2011 reporting period, the City received 26 complaints regarding stationary industrial and commercial businesses. These came directly from residents as calls into the storm water hotline, complaints entered through La Mesa's Request Tracker and the Civic Plus websites, or complaints from City staff. Details of the industrial and commercial complaint investigations are included in the City's complaint log, which is included as Appendix B. The City took appropriate enforcement actions during investigations conducted in response to these complaints including verbal discussions, distribution of educational materials, written warnings, enforcement letters, and NOVs, as necessary.

There were no instances of noncompliance that posed significant threat to human health or the environment observed during 2010/2011. No non-filers were noted, as discussed earlier in this section, and no other businesses were reported to the RWQCB.

5.3 Mobile Sources

5.3.1 Background

Due to the nature of activities of most mobile businesses, a major area of concern is illegal discharges. In general, mobile businesses can be difficult to identify, as many do not have City business licenses. Additionally, many mobile businesses may be home-based and/or conduct activities that do not occur in one fixed location, so inspections of such facilities are impractical.

5.3.2 Source Characterization

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile. A total of 981 businesses are included on the City's 2010/2011 mobile inventory. The City has also contributed its mobile business inventory for upload to the regional database, which was developed in 2008/2009, by the Regional Industrial and Commercial Workgroup for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction.

5.3.3 Best Management Practice Requirements

BMPs for stationary industrial and commercial facilities are required to be implemented for all outdoor activities, as applicable. BMPs for mobile businesses, including key principles, such as proper collection and disposal of any discharge, are discussed in the City's JURMP. The City has also established a program that requires mobile businesses operating in the City to sign an affidavit making businesses aware of the City's BMP requirements and commits them to implementing the required BMPs.

The City participates in the Regional Industrial and Commercial Workgroup, which developed regional mobile business BMP standards in 2008/2009. These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within

the region. The regional mobile business BMP standards are provided on the Project Clean Water website.

5.3.4 Program Implementation

During the 2010/2011 inspection program, the City responded to two calls to the City's storm water hotline regarding mobile businesses. More detail about the complaints is included in the City's complaint log, included in Appendix B.

In addition to the regional effort to standardize mobile business BMPs, the Regional Industrial and Commercial Workgroup continued to develop the regional mobile business database. The database is designed to store information regarding mobile businesses operating within the region and to facilitate communication regarding mobile business activities and enforcement actions between Copermittees.

Mobile Affidavits
The City requires mobile businesses to sign an affidavit when applying for a business license to acknowledge the City's BMP requirements. Additionally, the affidavit states that the business owner agrees to implement BMPs as required by the City's JURMP and acknowledges that failure to do so will result in enforcement action and possible legal action. During 2010/2011, affidavits were distributed to mobile auto detailing businesses that applied for business licenses, and one affidavit was signed during this reporting period.

Education and Outreach and Enforcement
As previously mentioned, two complaints were made to the City's Storm Water Hotline regarding mobile businesses. City personnel investigated these cases, and both were resolved.

In 2010/2011, the City's Storm Water Staff conducted early morning compliance investigations to look for mobile washing violations that would not be apparent during normal working hours. Staff checked approximately 31 locations on October 13th and 28th between 4:00-7:30 am, including commercial loading docks. No storm water violations were discovered, but City staff communicated the City's requirements and pollution prevention tips to business employees that were encountered during the investigations.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2010/2011, so none were reported to the RWQCB.

5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was updated in March 2008. No changes to the City's industrial and commercial component have been made since that time.

6.0 RESIDENTIAL

6.1 INTRODUCTION

Over half of the land use in the City of La Mesa is designated as residential. Due to the large residential area, activities that take place within these areas have the potential to impact the quality of the receiving water bodies. Residential activities such as vehicle washing, over-irrigation, pesticide and fertilizer application, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not properly implemented. Additionally, improper disposal of household hazardous waste (HHW) can also contribute pollutants to the MS4. Pollutants of concern include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has worked to implement a range of programs to address these residential activities with the goal of reducing pollutant loads associated with such activities.

Figure 6-1 depicts the residential land use in the City. Yellow areas indicate single-family homes, orange areas indicate multi-family homes such as duplexes and apartment buildings, brown areas indicate mobile home parks, and purple areas indicate other residential areas such as nursing homes.

Figure 6-1
Residential Land Use in the City

Base Data Sources: USGS, SanGIS, SANDAG

6.1.1 Summary of Notable Accomplishments

Some notable achievements for the residential component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component and of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City continued to work with local Eagle Scouts to construct and install informational storm water kiosks. A new storm water kiosk was constructed in Harry Griffen Regional Park in 2010/2011.
- The City hosted eight HHW events; 898 participants dropped off 99,878 pounds of HHW.
- The City hosted the La Mesa Spring Clean Up on two consecutive Saturdays during 2010/2011. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge.
- The City continued to distribute the *La Mesa Focus* newsletter to residents in the City.
- The City continued to respond to complaints made to the City's Storm Water Hotline and submitted online regarding residential areas and activities.

6.2 Source Characterization

The City has identified several high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 High TTWQ Activities

During 2010/2011, the City continued to identify the following activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of pet waste

6.2.2 High Threat to Water Quality Areas

In addition to high TTWQ activities, the City has identified residential areas that pose a high TTWQ relative to other residential areas. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring Program, and criteria as defined in the Municipal Permit. The following residential areas have been designated high TTWQ.

East of Helix High School
This area drains to University Channel and includes the residential area east of Helix High School around Lowell Street, Normal Avenue, and Olive Avenue. University Channel serves as a part of the storm water conveyance system for the City and is part of the Chollas Creek Watershed. During the 2009 Dry Weather Monitoring Program, a transient dissolved copper exceedance was detected in this area.

Baltimore Drive, North of Interstate 8
The area surrounding Baltimore Drive is largely composed of high-density housing. Runoff from this area drains to Alvarado Channel via two internal storm drain networks. Storm Water Hotline calls related to high TTWQ activities in this area have been recorded in past years. Some past Dry Weather Monitoring results have indicated that this area could be a source of bacteria, although that has not been found in monitoring programs during recent sampling years. The area is still classified as a high TTWQ to be conservative, although the City may reevaluate the prioritization in future years if recent dry weather monitoring trends continue. Potential runoff sources include residences located on Parkway Drive, Aztec Drive, and Baltimore Drive.

Nagel Street and Sarita Street
The residential area around the intersection of Nagel Street and Sarita Street drains to Alvarado Channel. Past Dry Weather Monitoring Program upstream investigations have indicated that this area has been a source of bacteria.

Residential areas within the City designated as high TTWQ receive additional attention and periodic visual inspection from storm water staff to check for evidence of IC/IDs and high TTWQ activities.

6.3 Best Management Practice Requirements

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. The City's BMP Manual Part I includes lists of general residential BMP requirements and BMP requirements for specific residential activities. The manual is included in Appendix C of the JURMP. General residential BMPs include erosion control; non-storm water discharge management, including elimination of IC/IDs; and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Specific BMPs for the high priority activities outlined above are also included in the City's BMP Manual Part I. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 Program Implementation

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted. This ensures that pollutants associated with residential activities and areas are minimized. The residential program has an education component so that residents are made aware of appropriate BMPs and high TTWQ activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***La Mesa Focus* Newsletter Articles**

The City publishes storm water related articles in the quarterly *La Mesa Focus* newsletter. Four newsletters were printed during the reporting period. The issues are archived on the City's website; 960 individuals are signed up to receive e-mail notification when a new newsletter has been posted on the website. Additionally, copies were left out at the Friends of La Mesa Library for patrons to read and are accessible on the La Mesa Neighborhood Watch website. Articles related to storm water that were published in 2010/2011 are summarized below and included as Attachment 5.2.

The August 2010 newsletter contained the following storm water-related articles and announcements:

- "PARK APPRECIATION DAY" announced the upcoming park cleanup event and encouraged residents to participate.
- "3RD ANNUAL SUSTAIN LA MESA ENVIRONMENTAL FESTIVAL" informed residents of the free upcoming event, which provided resources on water conservation, waste reduction and recycling, pollution prevention, and other environmental issues.
- "OUR PLANET, OUR HOME" K-12 Environmental Art and Literacy Contest was announced.
- "INTERGENERATIONAL GAMES" announced the upcoming event to residents. I Love A Clean San Diego (ILACSD) demonstrated storm water pollution concepts at during this event.
- "RECYCLING PROGRAM EXPANDS TO ACCEPT ALL RIGID PLASTICS" described the new items accepted by EDCO's recycling program.
- "FREE HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL" identified different types of HHW and notified residents of the next collection date.
- "9th ANNUAL KIDS CARE FEST" was advertised. I Love A Clean San Diego (ILACSD) provided information about watersheds and storm water during this event.
- "8th ANNUAL CREEK TO BAY CLEANUP" highlighted the accomplishments of the April 2010 clean-up event and advertised the upcoming California Coastal Cleanup Day. Residents were directed to the Storm Water Program Manager for additional information.

The November 2010 newsletter contained the following storm water-related articles and announcements:

- "WHAT IS YOUR VISION FOR LA MESA?" discussed tips for everyday sustainability, including cleaning with dry methods rather than using water.
- "EL CAJON BOULEVARD AND LA MESA BOULEVARD AND SPRING STREET AND HIGH STREET: Intersection Modifications" described the upcoming modifications including a Low Impact Design (LID) grass swale to treat storm water runoff.
- "LA MESA'S WATERSHEDS IN FOCUS" discussed the definition of a watershed, identified the watersheds that La Mesa is a part of, and highlighted the water quality concerns in these areas. The article concluded with a discussion of what residents and business owners can do to reduce storm water pollution, including reporting to the City's Storm Water Hotline.
- "VOLUNTEERS CLEAR OVER 500 LBS OF TRASH FROM LOCAL WATERWAYS" celebrated the accomplishments of the 26th Annual California Coastal Cleanup Day in September 2010.
- "CITY OF LA MESA PARK APPRECIATION DAY 2010" highlighted the success of the event, thanked participants for their support, and informed them of the next Park Appreciation Day.
- "FREE HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL" notified residents of the next collection date and directed them to the City's website for more information on HHW.
- "SMALL STEPS TO BIG CHANGE" discussed the definition of sustainability and the importance of water conservation, smart landscaping, and teaching others about sustainable practices.

The February 2011 newsletter contained the following storm water-related articles and announcements:

- "FREE HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL" notified residents of the next collection date and directed them to the City's website for more information on HHW.
- "9th ANNUAL CREEK TO BAY CLEANUP – APRIL 30, 2011" announced the upcoming cleanup event and highlighted the successes of the 2010 event. Residents were directed to the Storm Water Program Manager for additional information.
- "ARE YOU A YOUNG PERSON CONCERNED ABOUT THE ENVIRONMENT?" advertised a vacant position to represent the youth population with the Environmental Sustainability Commission.

- "CONVENIENT RECYCLING FOR APARTMENTS AND CONDOS" announced a grant from CalRecycle to improve recycling in apartments and condos, including the new recycling opportunities and contact information for participation.
- "2011 SPRING CLEAN UP" notified residents of the free event to dispose of unwanted items at the EDCO station.

The May 2011 newsletter contained the following storm water-related articles and announcements:

- "SPRING, GARDENS, AND STORM WATER POLLUTION?" discussed ways to reduce the impact of gardening on water quality including the use of non-toxic and natural pesticides, composting, and growing native vegetation.
- "FREE HOUSEHOLD HAZARDOUS WASTE AND ELECTRONIC WASTE DISPOSAL" notified residents of the next collection dates and directed them to the City's website for more information on HHW.
- "CUT OUT FOG!" informed residents on how to help maintain the wastewater system and directed them to the City's website for more information.

Other Educational Outreach Materials and Activities
The City has continued to provide storm water information and contacts on their website (www.cityoflamesa.com). The City's Storm Water Hotline also provides an avenue for City residents to obtain storm water information and file storm water related complaints. Other educational outreach materials and activities that targeted residents are discussed in detail in Sections 8 of this report.

During 2010/2011, the City continued to participate in the Regional Residential Education Program.

6.4.1.1 HHW Events

The City hosted eight HHW collection events throughout the 2010/2011 reporting period at the City's EDCO station on Commercial Street. Door-to-door pick-up was also offered for disabled and senior residents. A total of 898 people participated in the events, and 99,878 pounds of HHW were collected. HHW flyers or the Regional Guide for Household Hazardous Waste Reduction & Disposal in San Diego County were on hand if residents requested educational materials. Approximately 20 educational HHW brochures were distributed at HHW events.

Other Collection Events
In addition to the HHW disposal events, the City hosted the La Mesa Spring Clean Up on two consecutive Saturdays during 2010/2011 The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste without charge. All Spring Clean Up participants (2,088 vehicles) were provided HHW brochures or the Regional Guide for Household Hazardous Waste Reduction & Disposal in San Diego County. Details about this event can be found in Section 9 of this report.

6.4.2 Compliance and Enforcement

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the Storm Water Hotline, and observations made by the City's municipal personnel. To help focus efforts on high priority areas, the City maintains a map of the high TTWQ areas in the City, which is available to City staff. Staff are especially vigilant for potential threats to storm water quality in these areas of the City and report any observed threats to the Storm Water Hotline. A copy of the map is included as Attachment 6.1. If a potential to impact water quality is present the City provides a verbal warning, written warning, Notice to Comply (NTC), and NOVs as applicable. The City received 111 residential-related complaints during this reporting period. Complaints were submitted through the Storm Water Hotline and through La Mesa's Request Tracker and the Civic Plus website as well as internally through the Public Works Department; the City's complaint log is included as Appendix B to this annual report.

Four written warnings, one verbal warning, 12 NOVs, 11 compliance letters, and four enforcement letters were issued to residents and/or landlords during this reporting period. Many of the verified complaints involved residents who were unaware of residential BMPs. These issues were resolved with a verbal warning and distribution of educational materials. The City issued NOVs to more serious violations including power washing, concrete or drywall dust discharge into the street, presence of uncontained sediment piles, wastewater discharge, and spills of oil. City personnel also cleaned areas in the public right of way as necessary to resolve complaints. All residential complaints were resolved and no further actions, such as fines or reports to the RWQCB aside from this JURMP Annual Report, were deemed necessary.

6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's residential component have been made since that time.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008 RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2010/2011 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2011.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2010/2011, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, residents, and underserved audiences. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component and of its storm water program during the reporting period are provided in the remainder of Section 8.

- The City worked in conjunction with the Industrial/Commercial and Municipal Workgroup to produce a training video for municipal employees.
- Storm water staff attended several outside training events and also provided training sessions for other municipal personnel.
- During 2010/2011, the City's quarterly newsletter, the *La Mesa Focus*, featured several articles highlighting storm water topics aimed at businesses and residents of the City.
- Educational materials were made available to project proponents and City personnel at City Hall through the informational Storm Water Bulletin Board.
- The City partnered with ILACSD to educate residents at special events and through school presentations during 2010/2011.
- Approximately 50 vendors at the City's Oktoberfest event were provided with a handout entitled "Tips for Outdoor Vendors."
- A new storm water kiosk was constructed in Harry Griffen Regional Park to display educational materials to park patrons, bringing the total number of kiosks to four.

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. During 2010/2011, the City also played a central role in the development of a training video for municipal employees, a

product of the Industrial/Commercial and Municipal Workgroup. City staff wrote the script for the video, coordinated filming and voiceovers, and worked with the production company to edit the final product. Upon completion in 2011/2012, this video can be used regionally to train municipal employees on appropriate BMP implementation.

Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention.

The informational storm water bulletin board at City Hall is continually updated with information about storm water topics. The bulletin board is visible to City personnel, project proponents, and other City Hall visitors. In addition, there are educational materials for the public to take located at the bulletin board such as storm water hotline magnets, Integrated Pest Management (IPM) cards, and residential storm water pollution prevention trifolds. Additionally, staff were reminded about the City's Park Appreciation Day and posters for California Coastal Cleanup Day and the Creek to Day Cleanup were displayed to encourage participation.

Table 8-1, below, includes all training sessions that were provided for various municipal departments during 2010/2011.

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
1	7/22/2010	EPA Training Course	Developing an Effective Municipal Storm Water Management Program for Construction sites	Engineering Technician I
2	7/26/2010	EPA Training Course	Illicit Discharge Detection and Elimination (IDDE) 301 – Finding and Fixing Illicit Discharges and Connections	Engineering Technician I
3	8/21/2010	Pesticide Applicators Professional Association Seminar	Worker safety, Laws and regulations, Irrigation essentials, Reduced risk chemicals	3 Parks Department Staff Members
4	8/22/2010	Professional Horticultural Seminar	Controlling pests with IPM, Pesticide Safety programs for compliance	3 Parks Department Staff Members
5	8/31/2010	Municipal Training	Sanitary Sewer Overflow (SSO) reporting	15 Public Works/ Engineering Employees
6	9/6/2010	Target IPM	IPM, How soil and water relationships effect Pest Management	3 Parks Department Staff Members

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
7	9/10/2010	EPA Training Course	Fundamental Inspector Course (FIC)	Engineering Technician I
8	9/13 – 9/16/2010	EPA Training Course	Basic Inspector Academy	Engineering Technician I
9	9/29/2010	Municipal Training	Construction Best Management Practices (BMPs)	10 Public Works/ Engineering and Community Development Employees
10	3/2011	Sustainable Urban Landscape	Sustainable urban forestry, Regional Storm Water Regulations, residential sustainability	4 Parks Department Staff Members
11	3/15/2011	Municipal Training	City's Hydromodification Requirements including an introduction to hydromodification management and methods for demonstrating compliance	7 Public Works/ Engineering and Community Development Employees
12	3/29 – 3/31/2011	California Construction General Permit Training	Qualified SWPPP Developer (QSD) and Qualified SWPPP Practitioner (QSP) course	Storm Water Program Manager

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, residential areas, and underserved audiences. These efforts promote storm water awareness and BMP implementation.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Violations of the City's BMP requirements are corrected through enforcement actions as necessary. For each inspection, facility personnel received verbal education on the importance of implementing proper BMPs. Additionally, a letter

describing the City's inspection program and BMP requirements was sent to all industrial and commercial businesses selected for routine inspection during 2010/2011.

As previously mentioned, the City's quarterly *La Mesa Focus* newsletter 2010/2011 featured several articles highlighting storm water topics that were aimed at businesses and residents of the City. Examples of such articles included "La Mesa's Watersheds in Focus", "Small Steps to Big Change", and "Spring, Gardens, and Storm Water Pollution. Newsletters published during 2010/2011 are included as Attachment 5.2.

During 2010/2011 reporting period, the City again distributed a handout with tips for outdoor commercial vendors (Attachment 8.1). These handouts were distributed to vendors that had booths at the Oktoberfest event, which is the City's largest special event. Approximately 50 of these handouts were distributed. The handout detailed specific BMPs that could be implemented by the vendors at the event and detailed the difference between the storm drain system and the sanitary sewer system.

8.3.2 Construction Site Owners and Developers

Due to the nature of activities, construction sites have the potential to discharge many types of pollutants to receiving waters if not managed properly. Many construction site owners, contractors, and developers visit the City's Engineering Division to apply for necessary permits. The Storm Water Bulletin Board located across from the front counter where permits are issued, includes material about construction BMPs to provide education for these parties. Several construction related brochures, specifically the construction site management tri fold and a construction SWPPP tri fold are available for project proponents to take from the bulletin board.

8.3.3 Residential Areas

Since residential areas make up more than half the City, the City understands the importance of reaching this particular audience through educational outreach programs. During January, February, and March 2011, ILACSD visited local schools of various aged students with prepared storm water presentations. The City also continued to publish the *La Mesa Focus* newsletter (Attachment 5.2), which reaches residents in the City. As previously mentioned, several storm water articles were included in the newsletters distributed in 2010/2011.

The City's Storm Water Bulletin Board provided information to residents that may have been visiting City Hall. Various posters provide storm water information and information about clean-up events. Additionally, there are several brochures and fact sheets available for the public to take, which included the Over-irrigation Fact Sheet (Attachment 8.2), Chollas Creek TDML Fact Sheet (Attachment 8.3), Residential Preventing Urban Runoff Pollution brochure (Attachment 8.4), Pools and Spa Fact Sheet (Attachment 8.5), and IPM cards (Attachment 8.6).

Educational material was also distributed at various events in the City, such as the "Sustain La Mesa" Environmental Festival, Intergenerational Games, and Kids Care Fest. Materials

distributed included the residential Preventing Urban Runoff Pollution brochure (Attachment 8.4) and San Diego River and San Diego Bay Fact Sheets (Attachment 8.7). Other media like pencils, temporary tattoos, and stickers with storm water messages on them were also provided during special events. Details of the events are included in Section 9.

In addition to the educational materials that were provided at various locations and during various events, the City continued to display storm water-related educational material at storm water kiosks at select City parks. The City now maintains four kiosks in four City parks since a new storm water kiosk was constructed in Harry Griffen Regional Park during 2010/2011 (Figure 8-1). Educational material such as the San Diego River Watershed Fact Sheet (Attachment 8.7), Over-irrigation Fact Sheet (Attachment 8.2), Pool and Spa Fact Sheet (Attachment 8.5), the Residential Preventing Urban Runoff Pollution brochure (Attachment 8.4), along with excerpts from storm water calendars and a Helix Water District brochure, were displayed at the kiosks for patrons of the park.

Figure 8-1. Storm Water Kiosk

The City website, www.cityoflamesa.com, is another resource for City residents to become familiar with the design and intended utilization of the storm drain system, proper HHW disposal, alternatives to hazardous household products, find information regarding volunteer opportunities, applicable City contact information, and IPM. As previously mentioned, the City provided electronic copies of each *La Mesa Focus* newsletter on the website during 2010/2011.

8.3.4 UNDERSERVED COMMUNITIES

As discussed in the City's JURMP, the City has identified the several residential areas along University Avenue as "underserved" communities. Two residential areas have been identified as Low/Moderate Income Block Groups. A third area has been identified as a

Hispanic Household Concentration area. In an effort to promote outreach and education in these underserved communities, the City has developed Spanish versions of several educational materials distributed to residents. Another effort implemented by the City is the utilization of the Spanish language option on the City's Storm Water Hotline. The City plans to continue outreach to these underserved communities by providing more educational programs in future reporting years.

8.3.5 Complaint Investigations

To further aid the process of identifying illegal discharges, the City encourages the public and City staff to report IC/IDs. In addition to the City's Storm Water Hotline, Public Works also has a maintenance hotline for complaints regarding issues with the MS4 and sewer lines. These complaints are followed up by Public Works personnel. If a representative for the targeted business, residential area, or construction site is present, the inspector will provide site-specific information regarding storm water issues including applicable educational materials.

8.4 Outreach Component Effectiveness Assessment

The estimated number of impressions made by the City's education and outreach efforts during 2010/2011 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder the effectiveness assessment for this program component.

Impressions Made

The City has continued to provide residents and businesses storm water-related education through inspections, distribution, and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session. Printed educational materials and other items such as pencils and stickers are assumed to generate three impressions each.

Table 8-2 details the number of impressions made by the City during this reporting year.

Table 8-2
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Municipal Inspections	22	Inspections	110
Industrial/Commercial Inspections	88	Inspections	264
Construction Inspections	48	Inspections	144
Training Session/Activities and Events	1,747	Attendees	6,988
Complaint Investigation	151	Investigations	453
FOG Binder	30	Binders	90
Alternative Household Product Guide	100	Brochures	300
Chollas Creek TMDL Fact Sheet	40	Brochures	120
Door Hanger	300	Brochures	900
Household Hazardous Waste Brochure	2,108	Brochures	6,324
Over-Irrigation Fact Sheet	25	Brochures	75
Residential Preventing Urban Runoff Pollution	30	Brochures	90
San Diego Bay Watershed Fact Sheets	30	Brochures	90
San Diego River Watershed Fact Sheet	60	Brochures	180
Tips for Outdoor Vendors	50	Brochures	150
La Mesa Focus Newsletter	960	Newsletters	2,880
FOG Poster	200	Posters	600
Recycling Badge	50	Badges	150
Recycling Pencil	420	Pencils	1,260
Recycling Sticker	100	Stickers	300

"Sustain La Mesa" Bookmarks	120	Bookmarks	360
Temporary Recycling Tattoos	150	Tattoos	450
		Total	***22,843***

8.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was updated in March 2008. No changes to the City's education component have been made since that time.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, cleanup events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Collaboration between the City and the community should help encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component and of its storm water program during the reporting period are provided in the remainder of Section 9.

- During 2010/2011, the City hosted clean-up events at Alvarado and University channels as part of California Coastal Cleanup and Creek to Bay Cleanup. Approximately 120 volunteers removed over 978 pounds of trash and debris and 107 pounds of recyclables during these events.
- The City hosted 8 HHW collection events. A total of 898 vehicle loads disposed of 99,878 pounds of HHW in these events.
- Similar to previous years, the City hosted the La Mesa Spring Cleanup event on two separate weekends during 2010/2011. A total of 2,088 participants disposed of almost 699 tons of large items, green waste, and other trash and recyclables.
- Volunteers for the City's Adopt-a-Block, Adopt-a-Park, and Canine Corner programs, continued to involve residents in keeping local streets and parks free of litter and pet waste.
- Similar to previous years, the City held Park Appreciation Day, a cleanup event occurring throughout 12 City parks. A total of 234 volunteers collected 89 cubic yards of green waste and 5.5 cubic yards of trash.
- The City contracted ILACSD to present "Operation Cleanup," an interactive watershed game, at the Intergenerational Games and Kids Care Fest.

9.2 Public Participation Activities

Cleanup Events and Programs

During 2010/2011, the City hosted various cleanup events and activities at various locations in the City. Cleanup events provide a direct benefit to water quality and an opportunity for the City to distribute educational materials and information to the event's volunteers.

California Coastal Cleanup Day

The City hosted the California Coastal Cleanup Day in specific areas of Alvarado and University channels on September 25, 2010. A total of 34 volunteers removed over 250 pounds of trash and 50 pounds of recyclables at the Alvarado site (Figure 9-1), and 29 volunteers removed 55 pounds of trash and 20 pounds of recyclables in the channel and surrounding walkways at the University site.

At both the Alvarado and University Channels, volunteers were given pre- and post-event knowledge assessment tests. The pre-test was given to participants before City personnel presented an overview of storm water pollution prevention and watershed concepts. A post-test was given immediately after City personnel finished the brief presentation. The results of the survey showed that the event left participants with a better understanding of which watershed they were in at the event, what defines a watershed, and how their indirect and direct actions can impact the environment. Pre-test accuracy improved from 77 to 92 percent at the Alvarado Channel (30 tests) and from 73 to 92 percent at the University Channel (20 tests).

Figure 9-1 – Coastal Cleanup Day at Alvarado Channel

Park Appreciation Day

Park Appreciation Day was a cleanup event held throughout 12 parks in the City on October 23, 2010. A short presentation was given by the site captain regarding watershed concepts, local watersheds' constituents of concern, the benefits of cleanups, and the TMDL for the San Diego Bay. Chollas Creek was mentioned at the parks that fell within the San Diego Bay Watershed. A total of 234 volunteers worked to collect over 89 cubic yards of green waste and 5.5 cubic yards of trash between all 12 locations.

Creek to Bay Cleanup

The City hosted the Creek to Bay Cleanup in specific areas of Alvarado and University channels on April 30, 2011. At Alvarado Channel, 35 volunteers participated in removing 320 pounds of trash and 19 pounds of recyclables. At University Channel, 22 volunteers removed 353 pounds of trash and 18 pounds of recyclables (Figure 9-2). City personnel briefly explained watershed concepts, pollutants of concern, and required BMPs to all event volunteers. At the University Channel site, event volunteers were also presented with information on the TMDL for Chollas Creek. These cleanup events and results were advertised on the City website and were posted on the City's Storm Water Bulletin Board.

Figure 9-2 – Creek to Bay Cleanup at University Channel

Adopt-a-Park and Adopt-a-Block

The City's Adopt-a-Park Program has continued to involve local businesses, schools, service organizations, families, and other individuals in keeping the City's parks free of trash. Currently, many of the public parks in La Mesa have been adopted. Volunteers involved in this program are encouraged to remove trash on a regular basis from City parks and open spaces.

Similarly, the City's Adopt-a-Block Program promotes cleanliness in the City by encouraging City residents to keep neighborhoods free of trash and debris. Volunteers pick up trash during normal daily activities, such as daily walks in their neighborhood. Individuals use City-provided trash bags or collect trash prior to trash collection day so that litter and debris can be deposited into any available trash can along the street.

Canine Corners
Canine Corners volunteers pick up pet waste in designated areas of Harry Griffen Regional Park and encourage patrons of the park to pick up after their pets. This prevents bacteria and viruses associated with pet waste from being discharged to the City's MS4. In combination with the City's Adopt-a-Park and Adopt-a-Block programs, volunteers remove trash and pet waste from parks and streets throughout the City.

Saint Madeline Sophie's Center
The City maintains a contract with Saint Madeline Sophie's Center, which employs developmentally disabled individuals to aid in picking up trash and debris at various parks throughout the City. The scope of services includes trash and debris cleanup, emptying trash receptacles and replacement of plastic liners, sweeping/cleaning picnic area tables, as well as some janitorial responsibilities at the park restrooms. Crews consist of three to five individuals and a job coach. Parks included in this program are Aztec Park, Collier Park, Highwood Park, Jackson Park, La Mesita Park, Northmont Park, Rolando Park, Sunset Park, Sunshine Park, and Vista La Mesa Park.

Hazardous Waste Collection and Used Oil Recycling Program
The City's Community Hazardous Waste Collection and Used Oil Recycling Programs encourage City residents and business owners to properly dispose of HHW. The City hosted eight HHW collection events at EDCO's disposal transfer station facility, which is located near the center of the City. As previously mentioned, events were advertised in the City's *La Mesa Focus* newsletter (Attachment 5.2), which was circulated electronically to hundreds of residents and businesses in the City. A total of 763 participants from La Mesa and an additional 135 residents from Lemon Grove and other jurisdictions disposed of hazardous waste at the events; a total of 99,878 pounds of HHW was collected. Door-to-door pickup service was also provided for the senior and disabled communities.

Throughout the City of La Mesa, there are also 10 certified collection centers for used oil that are advertised on the HHW disposal dates flyer as well as four tire recycling centers.

Other Waste Disposal
The City hosted the La Mesa Spring Clean Up event on two consecutive Saturdays in 2010/2011 (April 9 and 16, 2011). Residents were allowed to bring large items, unwanted household materials (not including HHW), and green waste to the EDCO location in the City for free disposal. A total of 2,088 vehicles disposed of approximately 699 tons of waste and recycling. Recyclable materials were estimated to account for 68 percent of the disposed waste. Participants were provided with a flyer that included information regarding HHW disposal dates at the City.

Public Reporting

As discussed in Section 4, complaints are received through the City's Storm Water Hotline and online website reporting system. The number for the hotline is advertised in articles published in the *La Mesa Focus* newsletter and on various educational materials given out at public outreach events. The residential, industrial, commercial, construction and municipal communities are encouraged to utilize the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable.

9.3 Outreach Events

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include the participation of commercial businesses in distributing educational materials and the City's participation in regional meetings and events.

Kids Care Fest

Kids Care Fest is a free event designed to promote healthy choices and attitudes for children and their families. The festival was held at Briercrest Park on September 25, 2010. I Love A Clean San Diego (ILACSD) hosted a booth and used the interactive watershed model to demonstrate storm water pollution concepts and emphasize the importance of keeping waterways free of pollutants (Figure 9-3). Approximately 500 people visited the ILACSD storm water booth during the festival. During the event, 60 temporary recycling tattoos, 200 recycling pencils, 150 storm water magnets, 40 Chollas Creek TMDL fact sheets, 40 San Diego River fact sheets, and 100 recycling stickers were distributed to the public.

Figure 9-3 – ILACSD booth with "Operation Cleanup" at Kids Care Fest

Intergenerational Games

ILACSD also hosted a booth at the Intergenerational Games at the La Mesa Middle School on October 14, 2010. During this event, ILACSD displayed the "Operation Cleanup", an interactive watershed game for children, where pollutants are located and removed from the model (Figure 9-4). This allowed for explanation of storm water pollution concepts, emphasizing the importance of a healthy environment. Approximately 110 students visited the booth and a total of 60 recycling temporary tattoos, 90 recycling pencils, 120 "Sustain La Mesa" bookmarks, 50 recycling badges, five San Diego Bay fact sheets, five residential Preventing Urban Runoff Pollution trifolds, and five over-irrigation fact sheets were distributed.

Figure 9-4 – ILACSD booth with "Operation Cleanup" at the Intergenerational Games

Oktoberfest

Oktoberfest is the largest festival in the City and was held from October 1, 2010 through October 3, 2010. As previously mentioned in Section 8.3.1, approximately 50 vendors at the event were provided a handout entitled "Tips for Outdoor Vendors" (Attachment 8.1). This handout listed constituents of concern and BMPs during events designed to eliminate pollutant discharges.

La Mesa Rotary Club Presentation

The City's Storm Water Program manager presented storm water and watershed concepts at the La Mesa Rotary Club meeting on June 22, 2011. Approximately 50 people were in attendance at the meeting.

Girl Scout Door Hanger Project

La Mesa girl scouts from ages six to eight were enlisted to help distribute door hangers that provided storm water pollution prevention education to local residences. The girl scouts distributed approximately 300 door hangers.

"Sustain La Mesa" Environmental Festival

On October 9, 2010, the "Sustain La Mesa" Environmental Festival was held at Harry Griffen Regional Park that was attended by more than 500 people. There were booths and activities emphasizing water conservation, storm water pollution prevention, energy efficiency, sustainable gardening techniques, and recycling. During this event there was an electronic waste and recyclables collection. Electronic waste, metal, plastic numbers 1-7, plastic bags, blister pack, six pack rings, bubble wrap, and Styrofoam packaging were collected. Throughout the festival, speakers from the Solana Center, National Wildlife Foundation, and the California Center for Sustainable Energy spoke to the public. The City's Public Works Department also hosted a booth at the event and distributed 25 residential trifolds, 20 over-irrigation fact sheets, 20 San Diego River fact sheets, 80 recycling pencils, 30 temporary recycling tattoos, and 100 alternative household products guides.

Figure 9-5 – Public Works booth at the "Sustain La Mesa" Environmental Festival

San Diego RiverFest

The City collaborated with the San Diego River WURMP workgroup to host a booth at this festival in May 2011 and distributed 78 dog bag dispensers, 52 reusable tote bags, 40 coloring books, and 20 pencils. Additionally, approximately 75 pet waste surveys were filled out by participants, which increased awareness of the effects of pet waste on water quality and proper disposal methods.

Storm Water Information Kiosks

As mentioned in Section 8, the City has continued to work with local Eagle Scouts to construct storm water kiosks. The park kiosks present storm water pollution prevention information to park patrons. During 2010/2011, outreach material was updated and

educational events were publicized throughout the year at the kiosks. Additionally, a new storm water kiosk was constructed in 2010/2011 at the Harry Griffen Regional Park.

ILACSD School Presentations

During 2010/2011, ILACSD was contracted to conduct storm water pollution prevention presentations for Rolando Elementary School and La Mesa Dale Elementary School. One presentation was made to 105 5th graders at Rolando Elementary in January 2011. Additionally, two presentations were given to 75 2nd graders at Rolando Elementary in February 2011. Three presentations were made to 70 2nd graders at La Mesa Dale Elementary in March 2011.

Figure 9-6 – Students Using the ILACSD Enviroscape Watershed Model

Chollas Creek TMDL Stakeholder Meetings

The jurisdictions named as dischargers for Chollas Creek TMDLs regularly meet to share information, develop reports, and discuss strategies. The City actively engaged in the annual public stakeholder meeting on June 23, 2011 in Lemon Grove, CA.

Storm Water Copermittee Meetings and Other City Participation

The meetings of various storm water Copermittee workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City continued to attend several of these meetings during the reporting period and will continue to do so during the 2011/2012 reporting period.

9.4 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 Program Review and Modification

The City's JURMP was updated in March 2008. No significant changes to the City's public participation component have been made since that time.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City's Sanitation Fund provides almost all funding for the Storm Water Program. There have not been any changes to this funding mechanism during this reporting period. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City has used this template to report the 2010/2011 expenditures and funding sources in this JURMP Annual Report.

San Diego County Copermittees Fiscal Analysis Report
for Urban Runoff Management Programs

EXPENDITURE SUMMARY

JURISDICTIONAL COMPONENTS	
Administration	$122,161.77
Development Planning	$15,998.96
Construction	$13,195.34
Municipal	$3,663.48
Industrial and Commercial	$49,494.32
Residential	$1,316.00
IDDE	$42,451.82
Education	$7,335.98
Public Participation	$6,304.51
Special Investigations	$21,361.00
Non-Emergency Firefighting	$0.00
Jurisdictional Total	**$283,283.19**

WATERSHED	
Watershed 1 – San Diego River	$7,937.02
Watershed 2 – San Diego Bay	$19,740.06

Watershed Urban Runoff Management Program (WURMP)

	Watershed 1 – San Diego River	Watershed 2 – San Diego Bay
Administration (1)	$3,290.01	$9,870.03
Cost Share	$1,357.00	$0.00
Watershed Activities	$3,290.01	$9,870.03
Other	$0.00	$0.00
TOTAL	**$7,937.02**	**$19,740.06**

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting.

Regional Urban Runoff Management Program (RURMP)

Regional Programs	Jurisdictional Cost Share Amount
Administration (1)	$0.00
Cost Share Contribution	$50.00
Other (2)	$0.00
TOTAL	**$50.00**

(1) Administration – includes assessment, reporting, management, etc.
(2) Other – examples include regional and special studies.

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

The City regularly evaluates its storm water program to make it as effective as possible at reducing discharges of urban runoff related pollution to the MEP. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP, and the City has refined those metrics in the reporting periods since then.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual

program activities or individual programs. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome Level Assessments

Level 1

Level 1 outcomes are basic measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

Levels 2 and 3

See tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Figure 11-1 compares storm water complaint data from this fiscal year to past years. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

Level 4

Tables 11-1 through 11-8 at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is possible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. Reliable load estimation methods have not yet been developed for most other programs. Note that the City has installed Calsense in various City parks and medians, as described in Section 4. Calsense is designed to decrease water usage, which is likely to have reduced the load of pollutants potentially transported by irrigation runoff.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. The City also performs an additional monitoring program at six sites; five of these sites are located in the City's MS4, and one is located in an improved channel that has also been identified as a receiving water body. In 2009, the City began collecting MS4 outfall water quality data to help characterize pollutant discharges from its MS4, although not enough data to make definitive conclusions has been collected at this point.

Figures 11-2 through 11-5 are graphs that present historical Dry Weather Monitoring results and trends. Ammonia–nitrogen and detergents, the two constituents with the longest historical data record, both show decreasing trends over time. No discernable trend is apparent for other field screening constituents.

Level 6

No Regional Monitoring Program stations are located within or close to the City of La Mesa. The western portion of Alvarado Channel is the only receiving water body within City limits. The City has monitored sites at the downstream point of the Alvarado and

University drainage basins in the past and continues to monitor the University site as a collaborative activity associated with the Chollas Creek TMDL. No long term trends have been identified in data from these sites. The City will continue to work with the San Diego River and San Diego Bay WURMP workgroups to improve the quality of water bodies downstream of the City of La Mesa.

Beyond the JURMP Program, City is also subject to additional requirements associated with Total Maximum Daily Load (TMDL) regulations, which set numeric compliance limits. The City of La Mesa has been collaborating with other Copermittees in the Chollas Creek watershed to conduct annual reporting and monitoring for the Chollas Creek Diazinon and dissolved metals TMDLs. During 2010/2011, the City also developed a Strategic Plan for Watershed and TMDL Activity Implementation targeted at TMDL requirements for the San Diego River and Chollas Creek watersheds. Since that time, the City has been collaborating with other Copermittees to develop an implementation plan for the San Diego River bacteria TMDL and an updated implementation plan that incorporates bacteria TMDL requirements along with previously adopted TMDLs for dissolved metals and Diazinon in the Chollas Creek watershed.

11.2.2 Overall Component Assessments

Development Planning

The City's review process for development projects effectively requires BMPs with higher pollutant removal efficiency. City interaction with responsible parties during the reporting period has resulted in BMP installation and a greater level of awareness of the need for regular treatment control BMP maintenance within the City, particularly with newly completed projects. The City will continue to work with the parties responsible for maintenance of treatment control BMPs during 2011/2012.

Construction

Available data indicate that on the whole the City's construction program effectively requires BMP implementation. Any BMP deficiencies noted are typically remedied promptly. Since the City continued to require even small projects to complete a Construction Storm Water Management Plan (CSWMP) and performed inspections on low priority construction sites beyond the minimum requirements of the Municipal Permit to ensure compliance.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. In particular, the City sweeps its streets more often than the permit requirements to aid in WURMP efforts. The City has also installed drainage inserts along University Avenue and at the Public Works Operation Center to reduce the discharge of pollutants. Additional treatment controls, two Filterra bioretention system units, were installed in the University drainage basin during 2009/2010. The City continues

implementation of a sophisticated system, Calsense, to control irrigation runoff from parks and medians. The City also distributes pet waste bags through dispensers in its parks.

Industrial and Commercial
The City employs a dedicated storm water inspector that works with businesses during and following inspections to ensure compliance. In 2010/2011 the City followed-up with non-compliant sites and will continue to do so into 2011/2012.

The City continued invoicing businesses in order to recover costs of inspections and it appears that this practice has stimulated more interest in the program and more of a desire to comply with regulations. The practice of charging businesses for each routine inspection and follow-up visit provides the additional benefit of encouraging businesses to comply in a timely manner.

Residential
The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. Residential areas within the City designated as high TTWQ receive additional attention from storm water staff to check for evidence of IC/IDs and high TTWQ activities.

Illicit Discharge Detection and Elimination
The City's IDDE program has effectively responded to complaints. No IC/IDs were observed during the 2010 Dry Weather Monitoring Program. There were nine SSOs during the reporting period, the effects of which were assessed and found to be minimal. The City submitted a technical report to the RWQCB about the results of its investigations into the spills, which contains the details of the City's monitoring and mitigation efforts. The City will continue to respond appropriately to SSOs and take action to prevent and eliminate IC/IDs.

Education
During 2010/2011, the City continued to educate various communities in the City. The City also continued to distribute the quarterly *La Mesa Focus* newsletter, each issue of which included articles about storm water pollution prevention, to residents and businesses in the City.

Public Participation
The City continued to encourage participation in public events, such as cleanup events, and reporting potential storm water violations via the City's Storm Water Hotline. Hotline calls increased between 2009/2010 and 2010/2011, which may indicate an increased awareness of the hotline and storm water program.

11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A small number of projects submitted reports during 2010/2011. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing. Internal The City's Storm Water Program Manager worked with engineers in the City to improve their level of understanding of the new SUSMP and HMP requirements in March 2011. The City's consultant is also available to review WQTRs submitted to the City.	Overall WQTR approval rate during reporting period	67%; four of six new priority projects were reviewed and approved	N/A, addressed through other significant activities for this component
		Percent of projects proposing BMPs besides filter inserts	100%	
		Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern	100%	
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of projects implementing proposed BMPs	100%, due to City follow-up	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Verification letters were sent to all 17 projects on the City's inventory. Internal N/A, verification letters were prepared by the City's consultant.	Percent of sites properly maintaining BMPs	100%, due to City follow-up	Load reduction can be achieved through regular BMP maintenance.
		Resolution status of enforcement actions	See Section 2	
		Percent of sites submitting proper verification forms	100%, due to City follow-up	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by permit conditions, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of BMP deficiencies resolved by City follow-up within the reporting period	100%	Proper BMP implementation is likely to have reduced pollutant loading.
		Details about resolution and enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8.	Percent of inspected facilities/activities in compliance with BMP requirements	95%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	See Section 4	Number of pet waste bags distributed	22,500
		Number of dry weather monitoring exceedances traced to municipal sites	0		
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	525.29 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	0.06 tons/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume) not including debris removed from treatment BMPs	178 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO discharge recovered	107 gallons
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of sediment and debris removed from treatment BMPs	8.75 cubic yards
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External The City's inspector regularly interacts with business owners and provides site-specific BMP corrective actions at each full inspection visit. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City regularly hosts and attends training events. See Section 8 for more detail on specific training sessions.	Percent of inspected sites in compliance with BMP requirements (not including follow-ups)	88%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Percent of inspected sites in compliance with BMP requirements following brief re-inspection.	98%		
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	0	Number of IC/IDs encountered during inspections	0
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in variety of ways in 2010/2011; see sections 6 and 8 for details. Internal The City's Storm Water Program Manager is heavily involved in the implementation of the residential component. Other City staff involved in the program also have a good understanding of the goals of the storm water program.	Number of residential incidents reported to storm water hotline	11	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Storm Water Program Manager trains City staff as needed. See sections 4 and 8. City staff were responsible for some of the reports made to the hotline.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Section 7 are likely to have resulted in a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventative inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	There were nine SSOs during the reporting period; 107 gallons of wastewater were recaptured.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2010/2011.
	Estimated number of impressions made	22,843		

Notes

Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details. See Figure 11-1 for a summary of hotline reports in recent years.	Number of attendees at events	4,750	Amount of trash and debris collected at cleanup events	38,885 pounds
		Number of calls received to the storm water hotline	151	Amount of HHW collected	99,878 pounds

12.0 Special Investigations

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (to be reported as part of the Illicit Discharge Detection and Elimination component in December), no special investigations were needed or conducted during this reporting period.

13.0 NON-EMERGENCY FIRE FIGHTING

Please reference Section 4.2.3 of this JURMP Annual Report for information about BMPs and procedures associated with non-emergency fire fighting activities.

14.0 JURMP REVISIONS

Changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 Conclusions and Recommendations

During 2010/2011, the City of La Mesa continued to implement its storm water program based on the 2008 JURMP. Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

Beyond the JURMP Program, City is also subject to additional requirements associated with Total Maximum Daily Load (TMDL) regulations, which set numeric compliance limits. The City of La Mesa has been collaborating with other Copermittees in the Chollas Creek watershed to conduct annual reporting and monitoring for the Chollas Creek Diazinon and dissolved metals TMDLs. During 2010/2011, the City also developed a Strategic Plan for Watershed and TMDL Activity Implementation, coinciding with the adoption of bacteria TMDLs for both the San Diego River and Chollas Creek watersheds. Since that time, the City has been collaborating with other Copermittees to conduct monitoring and modeling, develop the Implementation Plan for San Diego River's bacteria TMDL, and update the Chollas Creek Implementation Plan to include the new bacteria TMDL. These efforts will continue throughout the TMDL timelines.

Notes

[1]Likely Source: Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water

L = Likely, PO = Possible, UL= Unlikely

* Discharge of heavy metals and oil and grease is possible if the facility has on-site parking

** Sediment and oxygen demanding substances are possible pollutants for earthen or natural conveyances. Bacteria, but generally not viruses and other pathogens, may regrow in MS4s under certain conditions. While other pollutants may be discharged from the MS4, the MS4 itself is not a direct source of those pollutants.

***The sanitary sewer system is only a potential source of pollutants in the event of sewer line breaks or SSOs.
