| 04/19/2011 | CATCH BASINS | Commercial 1322 | THIRD | AV | Possible Dumping into Catch Basin |
| | Comments/ Action Taken: | On 04/18/11 rcvd notification of possible illegal dumping of grease/food into the catch basin at the subject address. City staff responded and observed remnants of grease and food products in the catch basin. Spoke with property owner of lunch truck possibly dumping. Owner to speak with employees to ensure that this was not occurring. Will monitor. | | | |
| 04/19/2011 | STREET | Residential | CENTER | ST | Dirt/Sediments |
| | Comments/ Action Taken: | On 04/19/11 rcvd notification of a sediment discharge at the subject location. City staff responded and observed sediment in the curb line. Spoke with property maintenance supervisor who stated that the property had water main break which caused the discharge. Confirmed that there was a water line break. Contractor to conduct cleanup. No further action required. | | | |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 04/25/2011 | STREET | Residential | 1822 | OAK VIEW | TE | Slulry/Concrete Discharge |
| | Comments/ Action Taken: | On 04/28/11 rcvd notification of concrete slurry in the storm drain. City staff responded and observed pool filter debris washed into the curbline. Spoke with resident and they conducted cleanup of the curbline. Left education material. Verbal warning. No further action required. | | | | |
| 04/26/2011 | STREET | Residential | 354 | NAPLES | ST | Sewage Spill |
| | Comments/ Action Taken: | On 04/28/11, rcvd notification of motorhome discharging sewage into the street. City staff responded and observed remnants of toilet paper splashed in the street. Resident approached and became extremely agitated and verbally abusive. Staff departing scene due to safety concerns. Will monitor. No further action required at this time. | | | | |
| 04/27/2011 | STREET | Residential | 1191 | NAPA | AV | Pool Filter Discharge |
| | Comments/ Action Taken: | On 04/27/11 rcvd notification of pool filter product discharge in front of resident. Spoke with son who stated that he will sweep up all the diatomaceous earth in the curbline. Resident stated that he normally cleans in backyard but children were playing. Compliance met. No further action required. | | | | |
| 05/01/2011 | STORM CHANNEL | | 62 | PEPPER TREE | RD | Storm Drain Flooding Issues |
| | Comments/ Action Taken: | On 05/01/11, rcvd notification of private sewage lift station failure at subject address. City staff responded and observed that sewage was overflowing through manhole cover. Contacted Pepper Tree HOA to contact plumber for repairs. City staff placed BMPs to prevent further discharge. Plumber arrived on-scene and conducted temporary repairs. Issued Pepper Tree HOA Admin Citation Warning requiring that they make upgraded repairs and provide maintenance program. Compliance met. No further action required. | | | | |
| 05/02/2011 | STREET | Residential | 1145 | HILLTOP | DR | Construction Debris & Waste |
| | Comments/ Action Taken: | On 05/02/11 rcvd notification of construction debris on sidewalk. Covered stockpile of dirt and brick in front yard. Did not encroach on sidewalk. No further action required. | | | | |
| 05/02/2011 | STREET | Residential | 660 | DEL REY | PL | Unknown Discharge |
| | Comments/ Action Taken: | On 05/02/11 rcvd notification of debris, soot on street caused by car fire. Observed debris, sand and soot on street. Conducted initial sweeping and cleanup. Street Sweeper completed cleanup. No further action required. | | | | |

Attention: Mr. David Gibson, Executive Officer

**SUBJECT: JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM (JURMP) ANNUAL REPORT NO. 32**

Please find enclosed City of Chula Vista's JURMP Annual Report No. 32 for Fiscal Year 2011-2012.

The JURMP Annual Report has been prepared in accordance with the requirements of the San Diego Regional Water Quality Control Board Order No. R9-2007-0001 (NPDES Permit No. CAS0108758) and is a documentation of the City's implementation of and compliance with the requirements of said Permit during the reporting period July 1, 2011 to June 30, 2012.

If you have any questions regarding the submitted report, or need further information, please contact Khosro Aminpour, Senior Civil Engineer, at (619) 397-6111. Please direct any and all correspondence to:

## EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. This is the fifth annual report submitted under the current permit and covers the implementation period of July 1, 2011 to June 30, 2012. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the stipulations of Section J.3.a of the Municipal Permit.

Among other requirements, the Municipal Permit requires that on September 30$^{th}$ of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports, which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has, therefore, been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2011 to June 30, 2012, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (this section will be submitted under a separate cover on or before December 15, 2012, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Prior to the 2007-2008 report, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, the 2012 Dry Weather Field Screening report, and an analysis of its findings will be submitted to the Regional Board before December 15, 2012, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

During this reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2011-2012 rainy season on January 31, 2013.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2011 to June 30, 2012. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

# 1.0 INTRODUCTION

## 1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (Regional Board), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority, and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 32 is an account of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2011 to June 30, 2012.

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Implemented inspection programs of construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable Best Management Practices (BMPs) that can be implemented to reduce the discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

- Participated in watershed and regional meetings and activities.

## 1.2 PURPOSE AND OBJECTIVES

Report No. 32 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of the Municipal Permit during the reporting period July 1, 2011 to June 30, 2012. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction Program
- Municipal Program
- Industrial and Commercial Program
- Residential Program

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0 of this report, together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2012.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management fiscal resources as required by Section G of the Municipal Permit. The Copermittees developed a Standardized Fiscal Analysis Method and Format, dated January 29, 2009, which has been used in this report as a basis for the City's fiscal analysis in this section.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this section, the Telegraph Canyon Channel has been placed on the 2008-2010 303(d) list for Selenium. The listing was based on the results of four samples taken from the Telegraph Canyon Channel within the Hilltop Park, as part of the SWAMP program. During the reporting period, the City initiated a Selenium Study to collect additional samples and obtain further data. Four sites were selected along the Telegraph Canyon Channel and samples were collected and tested in May 2011. This study will be continued in the future until adequate data is available to provide statistically significant results.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of this report is dedicated to descriptions of modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the City's JURMP effectiveness.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

## 2.0 DEVELOPMENT PLANNING COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.*

*Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.*

*Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.*

*Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.*

*Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory*

.

*Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.*

*Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.*

*Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.*

*Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.*

*Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.*

*Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.*

*Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.*

*Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.*

*Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.*

## 2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes actions taken during the defined reporting period by the City to minimize short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development (including construction or installation of a building or structure), creation of impervious surfaces, and capital improvement projects. Through the implementation of the Development Planning Component, the City minimizes and manages increases in runoff from development projects to the MEP to protect receiving waters.

## 2.2 LAND-USE PLANNING

### 2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to visions, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.
- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)
- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.
- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.
- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.
- Maximize the protection of potable water supply resources from pollutants.
- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

### 2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including

urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the Chula Vista Development Storm Water Manual (Manual), updated in January 2011, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2 of the JURMP) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

### 2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Manual. The Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Manual has been dedicated to the City's SUSMP. Another section of the Manual outlines BMP requirements on construction sites during both dry and rainy seasons.

During the current reporting period, amid continued slump in development activities, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

### 2.2.4 PROGRAM IMPLEMENTATION

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP as described in Section 2.4.4 of this report.

The Chula Vista Development Storm Water Manual (including the City's SUSMP) was updated in January 2011, in compliance with NPDES Municipal Permit requirements. This update incorporated hydromodification control requirements of the Municipal Permit. No further requirements have come into effect since and, therefore, the 2011 amendment is the current version of the Manual being implemented.

The main objective of this update was to incorporate Hydromodification Control requirements in the City's local SUSMP. During the update process, each of the City's implementation processes were objectively reviewed and, based on extensive experience gained during several

years of Municipal Permit implementation, significant improvements were made throughout all aspects of the program. Those improvements are reflected in the above referenced updated document. A copy of the updated Development Storm Water Manual is available on the City's website at http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp .

## 2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Division of the Development Services Department reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits and Land Development Divisions of the Development Services Department, and the Storm Water Management Section of the Public Works Department review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Environmental Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Development Services Department
- Public Works Department, Engineering
- Public Works Department, Operations - Storm Water Management Section

The Development Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Division of the Development Services Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Land Development Division for review and final approval.

Land Development Division staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; low impact development site design, source control, structural treatment control, and hydromodification control BMPs; calculations for sizing of treatment control and hydromodification control BMPs; and a perpetual maintenance plan and funding mechanism. The applicants are required to sign an agreement

with the City for the maintenance of post-construction BMPs. When necessary, the Land Development Division coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

The Land Development Division and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for low impact development site design, source control, treatment control, and hydromodification control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Land Development Division and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the planning and design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Land Development Division and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Land Development Division and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Public Works Department, Engineering Design Section. Public projects undergo the same review process as private developments. Engineering staff has received training on SUSMP requirements, identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs

are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments, divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are therefore readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals.

## 2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

### 2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP which culminated in December 2007, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP. During the current reporting period, City staff followed all such guidelines and procedures, and it can be asserted that a sound process is now in place. City staff involved with project review and approval is now familiar with their roles and responsibilities regarding water quality aspects of project approvals. They receive adequate training when necessary to stay abreast of the latest developments, including BMPs, Low Impact Development, and Hydromodification.

### 2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 10 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

### 2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's minimum BMP requirements for all development projects are outlined below and are included in the Manual (Forms 5501 and 5504A or 5504B of the Manual). All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.

- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.

- BMPs applicable to individual project categories

- Provide buffer zones or other buffers for natural water bodies.

- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.

- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

Priority Development Projects are additionally required to meet the City's SUSMP requirements included in Section 3 of the Manual. Also, projects disturbing one or more acre of land are required to comply with the Construction General Permit requirements of the State Water Resources Control Board.

During the project approval and verification process, all project submittals were reviewed for compliance with the minimum BMP requirements described above.

### 2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP document was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure that to the maximum extent practicable, development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual," available on the web at:

http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

In January 2011, City Council approved the updates to the City's SUSMP and Manual. The Updated SUSMP and Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the Municipal Permit. The City's Storm Water Management and Discharge Control and Grading Ordinances incorporate the Manual (which includes the City's SUSMP) by reference, therefore, making its contents legally enforceable.

#### 2.4.4.1 NOTABLE ACTIVITIES

In 2011-2012, notable improvements in processes and protocols supporting SUSMP implementation were made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates included:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Hydromodification BMPs.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document and Maintenance Agreement links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.
- Site inspections of all development projects to ensure proper installation of construction and post-construction BMPs.

On July 14, 2010, the Regional Water Quality Control Board approved the Final Hydromodification Management Plan submitted by the Copermittees. Subsequent to this

approval and throughout the current reporting period, City staff continued active participation in regional meetings and activities, which focused on issues concerning the implementation phase of this program component and other development planning issues.

#### 2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project requirements. Private development permit applications are tracked in Permits Plus, which is a project-tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development Projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and electronically saved. The City maintained the database necessary to link the above referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Public Works Department, Engineering. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

#### 2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects subject to SUSMP requirements is included in Attachment A. This list includes the names of all Priority Development or Redevelopment Projects from the inception of the SUSMP program on December 9, 2002 to the end of the current reporting period. The list is updated annually to include Priority Development Projects for which development applications have been received and SUSMP eligibility identified during that reporting period. The listed projects may be currently in different phases of review, construction, or occupancy. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Pending, 2) Inactive, 3) Under Construction, or 4) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

#### 2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

The Municipal Permit establishes requirements for post-construction BMPs on Priority Development and Redevelopment Projects. In order to develop regional standards and criteria for compliance with Municipal Permit requirements, the Copermittees have developed Model and local SUSMPs. All project applicants are required to complete forms that are included in the Manual to determine post-construction BMP requirements for their projects. City staff verifies proper completion of such forms and informs applicants of their required study reports and project submittals. Project submittals are then reviewed based upon this initial determination.

As required by the Municipal Permit, the City updated its local SUSMP for the first time in January 2008 to include Low Impact Development and Interim Hydromodification Management requirements, as well as other construction and post-construction criteria and standards. Subsequently, the Copermittees updated their Model SUSMP and submitted it for the Regional Boards approval in July 2008. The Regional Board approved the Model SUSMP on March 25, 2009. In March 2010, the City again updated its local SUSMP to incorporate the provisions of the Model SUSMP. In July 2009 and December 2009, the Copermittees submitted their draft and final Hydromodification Management Plans to the Regional Board. The Regional Board considered and approved the final Hydromodification Management Plan on July 14, 2010. The Copermittees had 180 days after approval of the Regional Board to incorporate the HMP into their local SUSMP and implement the HMP for all applicable Priority Development Projects. The City's current Manual, which came into effect on January 10, 2011, includes requirements for Final Hydromodification Control BMPs.

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Priority Development Projects without approved WQTRs do not move further along in the development review process, providing Land Development and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Project grading or construction plans are required to show all approved structural BMPs. Non-structural BMPs are described in the project's WQTR. Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes verification inspection and approval of installed or constructed structural treatment control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections and confirmation of SUSMP BMP applications of such Priority Development projects to ensure proper installation of post-construction BMPs.

In order to track confirmation of post-construction BMPs, and as an on-going activity, the City's GIS system is continuously updated with post-construction BMP information; further supporting

project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the types of BMPs, and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. WQTR documents are made available through the GIS Grading Plan layer as they are linked to individual projects (Figure 2-1 – CVMapper GIS Layer). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly or privately maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 – GIS Layer: Grading Plans & WQTR Links). In addition, all privately or publicly maintained treatment control BMPs are being added to the BMP layer to facilitate their tracking and mapping. Also, files containing hard copies of grading plans, WQTRs, maintenance agreements, and other pertinent information are being created and maintained to support and facilitate construction verification and maintenance inspections of post-construction BMPs. (Figure 2-3 – GIS Layer: Post Construction BMPs).

**Figure 2-1** CVMapper GIS Layer

**Figure 2-2** GIS Layer: Grading Plans and WQTR

**Figure 2-3:** GIS Layer: Post Construction BMPs

All pending, inactive, under construction, or installed Post-Construction BMPs and Priority Projects are inventoried and tracked by Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/Capital Improvement Plan, Residential, Commercial, etc.)
- Project status (Pending, inactive, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings
- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking, for examples of SUSMP tracking forms.

**Figure 2-4** GBA Master Series: SUSMP Verification and Maintenance Tracking Database A

#### 2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

The City works with developers, planners, and consulting engineers to establish standards of source control, LID site design, treatment control, and hydromodification control BMPs that meet the requirements of the Manual and the Municipal Permit. An example of such cooperation during the current reporting period was the Olympic Pointe project. This project, which is located at the intersection of Olympic Parkway and Wuste Road in Chula Vista comprises of 389 apartment units on a 19.6 acre parcel. The pre-project site consisted of a rough graded pad. The project includes three types of condominium units – two-story triplexes, three-story row homes, and three-story carriage units. Private streets within the project consist of a main entrance road, a loop road around the perimeter of the site, and alleys which provide access to the majority of the condominium units. Parking for the units are provided in garages, with surface parking for guest and visitors. Three recreation centers are located throughout the project. The Olympic Pointe project was subject to hydromodification mitigation requirements. Further, the project was subject to the statewide Construction General Permit, Order No. 2009-0009-DWQ. Permanent BMPs in the form of source control, Low Impact Development (LID) site design BMPs, and treatment control BMPs were incorporated into the project. Treatment control BMPs consisted of a combination of media filters and high-rate biofilters, while hydromodification control BMPs were in the form of underground storage facilities. Maintenance of the above referenced permanent BMPs is the responsibility of the property owner(s).

#### 2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all Priority Development Projects that received grading, construction, or building permits from the City proposed medium or high-efficiency treatment control BMPs. No SUSMP projects with low-efficiency treatment control BMPs were approved.

#### 2.4.4.7 TREATMENT CONTROL BMP INVENTORY

In Chula Vista there are 286 Priority Development Projects completed or under construction, inventoried from the inception of the SUSMP requirements to the end of the current reporting period. Projects that are still in the review stage are not included in the inventory and are not prioritized until the final WQTR is approved and the project construction commences. Attachment A of this report includes an inventory of all Priority Development Projects that have operational or under construction treatment control BMPs. The information provided in Attachment A includes the project name, subdivision, neighborhood, BMP type, category (residential, commercial, etc.), and inspection priority. The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority Development Project as well as post-construction BMPs inspection records.

#### 2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

Storm Water Management Section staff is responsible for annual inspections of private and public constructed permanent BMPs as required by the Municipal Permit. Additionally, responsible parties for the maintenance of permanent BMPs are required to conduct routine

inspections of their treatment facilities. For public permanent BMPs, the City's Public Works Storm Drain Maintenance staff is responsible for conducting routine inspections and maintenance. This duplicate inspections program ensures that all permanent BMPs are maintained to high operational standards.

During the current reporting period, Storm Water Management staff conducted inspections of all High Priority and over fifty percent of Medium Priority constructed permanent BMPs to verify their proper installation and maintenance, which exceeds Permit requirements. A summary of inspections is listed in Table 2-1 below, which includes both private and public permanent BMPs inspections. Where deficiencies were identified, notices were sent out to responsible parties, followed by further contacts to ensure that corrective actions were taken within the specified time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

**Table 2-1** Treatment Control BMP Inspection Summary FY 2011-2012

| PROJECT PRIORITY | TOTAL NUMBER OF PROJECTS | NUMBER OF PROJECTS INSPECTED |
|---|---|---|
| High | 118* | 93 |
| Medium | 105 | 48 |
| Low | 77 | 2 |
| Total | 300 | 143 |

**Note: Of the 118 high priority projects, 11 were under construction, 2 were inactive, and 12 projects were pending.*

As can be seen from Table 2-1, a total of 143 development projects were inspected for post-construction BMPs during the current reporting period, which meets and exceeds Municipal Permit requirements. Attachment F to this report includes more detailed information about each project, such as, inspection dates, project names, neighborhood, types of BMPs installed, categories (commercial, residential, etc.), inspection priority, development, and responsible party. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

Public Works Department Storm Drain Maintenance Section conducts routine inspections and maintenance of publicly owned permanent BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders for conducting inspection and scheduling maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-7 for a sample of Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

### 2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 106 maintenance self-verification forms were sent out to parties responsible for the maintenance of completed private Priority Development Projects (see City's JURMP document Appendix D).

It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way as well as private developments covered under Community Facility District (CFD) agreements. Those Treatment Control BMPs are inspected and maintained in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is therefore not necessary to send out verification letters for that type of projects. By conducting random inspections of public Treatment Control BMPs, Storm Water Management Section ensures that the level of maintenance on such facilities is adequate.

Further, some developments have regional Treatment Control BMPs, for which a single entity is the responsible party for maintenance. Therefore, a single letter was sent to each responsible party for regional Treatment Control BMPs, which covered several SUSMP projects.

The above discussion explains the apparent discrepancy between the total number of SUSMP projects and the total number of maintenance self-verification letters sent out during the current reporting period.

During this reporting period, responsible parties were aware of their BMP cleaning and maintenance obligations. The City worked closely with the responsible parties to ensure that the BMPs were inspected and maintained. The City continues to re-evaluate its annual maintenance verification procedures and may modify the program if necessary.

Prior to the beginning of the rainy season, the City requires annual verification of proper inspection and maintenance of all treatment control BMPs by the responsible parties. Each year, the City issues to the responsible party, either electronically, by fax, or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) if necessary, a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans.

This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form and certify that the treatment control BMPs have been properly maintained in accordance with the site's maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form. If signed and certified verification forms are not received by the due date, City staff contacts the responsible parties and follows up until Treatment Control BMPs are maintained and verification forms properly completed and returned to the City. Enforcement action may be initiated if a responsible party does not comply with the verification requirement after follow-up actions and proper service of a notice.

#### 2.4.4.10 BMP CONSTRUCTION VERIFICATION

The City's Public Works Inspectors and Storm Water Management staff is responsible for ensuring that permanent BMPs, which are components of the project's drainage systems and grading works, are constructed in accordance with approved specifications and grading plans. Public Works Inspectors and Storm Water Management staff conducts frequent inspections of projects during their grading and construction activities and verify that permanent BMPs are constructed as per approved plans.

In compliance with the Municipal Permit, the City has developed databases for tracking Priority Development Projects that are under construction. Additionally, hard copy files, including information about each project's WQTRs and grading or construction site plans that show locations of permanent BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section staff immediately after their inspections of grading activities are completed and their presence on the project is no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting permanent BMPs while

being constructed. They ensure that LID Site Design features are constructed as shown on approved grading, construction, or landscape plans and per approved specifications.

#### 2.4.4.11 SUSMP WAIVERS

Section D.1.d.(11) of the Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Development Project to receive a waiver from the requirement of meeting numeric sizing criteria for Treatment Control BMPs, if infeasibility can be established. During the reporting period, the City did not grant waivers to any Priority Development Projects.

#### 2.4.4.12 SUSMP WAIVER MITIGATION

During the reporting period, all Priority Development Projects were required to comply with the provisions of the City's local SUSMP. Therefore, the City did not grant waivers to any Priority Development Project during this period.

#### 2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN

Soon after Regional Board's adoption of the Municipal Permit on January 24, 2007, the Copermittees formed a Land Development Workgroup to develop Copermittees' Hydromodification Management Plan (HMP) and Model SUSMP, among other regional development related tasks. The Land Development Workgroup planned regular meetings in which various topics, mainly the development of the HMP and Model SUSMP, were discussed. A consultant was hired to assist in the development of the San Diego Regional Hydromodification Management Plan. Also, a Technical Advisory Committee (TAC), consisting of high-ranking and renowned experts in the fields of hydrology, hydromodification, and SUSMP issues were formed to oversee the Consultant's work, and to provide expert advice. The latest revision of the regional Hydromodification Management Plan is dated March 2011 and is incorporated by reference in the Chula Vista Development Storm Water Manual. During the current reporting period, all SUSMP projects were required to address hydromodification control requirements.

#### 2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

Section D.1.g.(5) of the Municipal Permit requires the development of an HMP document at the regional level and incorporation of such HMP into individual local SUSMPs. The HMP is to include limitations on increases of runoff discharge rates and durations from all Priority Development Projects in order to prevent increased downstream channel erosion, sediment pollutant generation, or other impacts to beneficial uses and stream habitat.

Development of a draft HMP was a two-year effort by the Copermittees and their consultants. The Copermittees submitted the first draft HMP to the Regional Board in January 2009. In the meantime, the Municipal Permit required the implementation of an Interim Hydromodification Criteria (IHC) for development projects that were 50 acres or more. The IHC requirement was incorporated into updated local SUSMPs, which came into effect in January 2008.

Adoption of IHC requirements in January 2008 coincided with the collapse in the housing market, and almost all major development projects in Chula Vista came to an abrupt halt. The Final Hydromodification Management Plan (HMP) was incorporated into the City's local SUSMP in January 2011 and became effective for all projects, which had not received their grading or building permits. However, development continued to be slow and occasional major projects submitted for review by City staff have had extended project submittal, review, and permitting schedules.

During the reporting period, 3 major projects continued to be under review as follows:

1. Eastern Urban Center
2. Otay Ranch Village 8
3. Otay Ranch Village 9

All these projects are required to either comply with HMP requirements or demonstrate exemption as provided in the Final HMP. The above referenced projects were still under review during the reporting period.

#### 2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

According to the Chula Vista Development Storm Water Manual, any project that had not obtained their construction permits before January 10, 2011, was required to address hydromodification controls per the Final HMP. During the reporting period, development project applicants were required to follow the HMP applicability flow chart provided in Section 6.1 of the Final HMP and to determine their project's status regarding HMP requirements. City staff then verified the accuracy of their findings and required compliance or exempted the project as applicable.

#### 2.4.4.16 PROJECTS DISTURBING 50 ACRES OR MORE

Until January 9, 2011, projects that disturbed 50 acres or more were required to comply with the Interim Hydromodification Criteria. Those projects that disturbed less than 50 acres were required to address Conditions of Concern, which typically included a comparison of pre- and post-development peak discharge rates for 2- and 10-year storm events, and a Best Professional Judgment evaluation of downstream geomorphic conditions. Under the current Municipal Permit requirements, Priority Development Projects, irrespective of disturbed area, are required to meet the Final Hydromodification Standards. Non-Priority Development Projects, while being subject to BMP implementation, are exempt from hydromodification considerations.

#### 2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP maintenance inspections, the City determined that 22 out of 143 inspected projects were partially or totally deficient in the inspection and maintenance of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, most of the deficiencies were remedied. The

remaining projects with mainly water quality basins have been issued warning to complete maintenance activities before the end of the current dry season. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to maintain their Treatment Control BMPs in an effective condition. Such enforcement action may include verbal and written warnings, Notices of Violation, Administrative Citations, and/or Civil or Criminal Penalties. During the current reporting period, the City worked with the responsible persons to maintain treatment control BMPs, therefore, higher enforcement action did become necessary.

## 3.0 CONSTRUCTION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(b).i – Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(b).ii – Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.*

*Permit Section J.3.a.(3)(b).iii – A description of modifications made to the construction and grading ordinances and approval processes.*

*Permit Section J.3.a.(3)(b).iv – Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.*

*Permit Section J.3.a.(3)(b).v – Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.*

*Permit Section J.3.a.(3)(b).vi – A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.*

*Permit Section J.3.a.(3)(b).vii – For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.*

*Permit Section J.3.a.(3)(b).viii – A description of the general results of the inspections.*

*Permit Section J.3.a.(3)(b).ix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(b).x – The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(b).xi – A description of the notable activities conducted to manage urban runoff from construction sites.*

## 3.1 INTRODUCTION

Pursuant to the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by Regional Board staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the Maximum Extent Practicable (MEP).

## 3.2 SOURCE CHARACTERIZATION

The City has compiled, and monthly updates a watershed-based inventory of all construction sites within its jurisdiction as required by Municipal Permit Section D.2.b. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including subdivision, project name, neighborhood, project status, work order number, and priority. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report and includes all active and inactive projects.

### 3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, Storm Water Management staff maintained and monthly updated a construction site inventory. As a result of coordination between the Public Works Construction Inspection staff, Engineering Design staff, Development Services staff, and Storm Water Management staff, mechanisms have been established in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Development Services Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of inspection priority, and status.

## 3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Storm water compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and Discharge Control and Grading Ordinances incorporate, by reference, the Development Storm

Water Manual, hence providing legal authority for the enforcement of the Manual's requirements. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met.

## 3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and do not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of Best Management Practices (BMPs) during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

### 3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Development Storm Water Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets are obtained from the CASQA Storm Water BMP Portal and are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements
- Limitation of Grading
- Advanced Treatment
- Example Construction Best Management Practices

## 3.5 PROGRAM IMPLEMENTATION

The Development Storm Water Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit, it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the Qualified SWPPP Developer or authorized personnel designated by the Legal Responsible Person, electronically submits a Notice of Intent and a SWPPP through the State Water Resources Control Board Storm Water Multiple Application and Report Tracking System (SMARTS). The SWPPP is maintained at the construction site for review by City or Regional Board staff.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet and dry seasons, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive or in distress. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of seven or more consecutive calendar days. The City inspects inactive construction sites and issues formal letters to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such letter is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites. If a site is partially inactive, above requirements apply only to inactive areas of the site.

If a construction project is wholly or partially inactive or expected to remain inactive for some time, the City requires the developer to submit a Construction Site Stabilization Plan.

The Stabilization Plan is required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

### 3.5.1 MAXIMUM DISTURBED AREAS

The Development Storm Water Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. Detailed requirements for maximum disturbed area limitations are included in the Development Storm Water Manual. During the reporting period, most major development projects remained inactive due to the downturn in the housing industry, and developers in Chula Vista did not undertake new major grading projects. The focus of City inspectors was to ensure that developers of existing graded sites that were planned to become inactive fully stabilized graded areas by implementing adequate BMPs.

### 3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. These conditions are explained in Section 7.5 of the Development Storm Water Manual. If it is determined that a site poses an Exceptional TTWQ based on criteria outlined in the Manual, the site will be required to implement advanced treatment controls to minimize the discharges from the construction site.

### 3.5.3 CONSTRUCTION SITE INSPECTIONS

The City's construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one Senior Civil Engineer, two full-time Environmental Health Specialists and eight Public Works Inspectors who manage this effort on private and public construction projects.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. The Municipal Permit does not require prioritization for construction sites. However, the City has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites, therefore, includes a column indicating the prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of the Municipal Permit, as applicable. Please see Table 3-1 for the number of construction site inspections. A complete list of inspected construction sites is included in Attachment G. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

**Table 3-1** Construction Site Inspection Summary FY 2011-2012

| INSPECTION TYPE | NUMBER |
|---|---|
| Inspections During Wet Season | 465 |
| Inspections During Dry Season | 48 |
| Total Inspections | 513 |

City inspectors evaluate BMP implementation on construction sites in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP, monitoring results, training records, etc. for construction sites subject to the General Construction Permit.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP or CSWMP.
- Failure to implement good housekeeping practices at the site.
- Failure to comply with previous orders.

City inspectors who conduct site inspections of both public and private development projects have full inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements of the Municipal Permit, the Development Storm Water Manual, the erosion control plans, and any other development permit conditions imposed by the City prior to the issuance of a grading or construction permit.

Construction site inspections include the following:

- Verification of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Verification of proper maintenance of the BMPs.
- Evaluation of the effectiveness of the BMPs.
- Verification that site personnel has received adequate training.
- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

### 3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its storm water ordinances and development permit conditions at all private and public construction sites, as necessary. The City's ordinances and development permit conditions provide adequate legal authority for the City to enforce its storm water regulations on construction sites through stop work notices, penalties, fines, and other appropriate enforcement mechanisms. City's inspectors work with developers and contractors to identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City's inspectors initiate enforcement action which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 summarizes enforcement actions taken within the defined reporting period of this report.

**Table 3-2** Construction Enforcement Summary FY 2011-2012

| ENFORCEMENT ACTION | NUMBER |
|---|---|
| Written Notices of Violation (Includes Cease and Desist, Clean and Abate, Stop Work and Civil Penalty Orders) | 10 |

As a result of the above enforcement actions, follow-up inspections were conducted within a designated time period until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2011-2012. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

## 4.0 MUNICIPAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(c).i – Any updates to the municipal inventory and prioritization.*

*Permit Section J.3.a.(3)(c).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.*

*Permit Section J.3.a.(3)(c).iii – A description of inspections and maintenance conducted for municipal treatment controls.*

*Permit Section J.3.a.(3)(c).iv – Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.*

*Permit Section J.3.a.(3)(c).v – Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.*

*Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.*

*Permit Section J.3.a.(3)(c).vii – Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.*

*Permit Section J.3.a.(3)(c).viii – Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.*

*Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.*

*Permit Section J.3.a.(3)(c).x – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xi – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xii – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xiii – Identification of the total distance of curb-miles swept.*

*Permit Section J.3.a.(3)(c).xiv – Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.*

*Permit Section J.3.a.(3)(c).xv – Amount of material (tons) collected from street and parking lot sweeping.*

*Permit Section J.3.a.(3)(c).xvi – A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.*

*Permit Section J.3.a.(3)(c).xvii – Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.*

*Permit Section J.3.a.(3)(c).xviii – A description of the general results of the inspections.*

*Permit Section J.3.a.(3)(c).xix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(c).xx – The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(c).xxi – A description of notable activities conducted to manage urban runoff from municipal areas and activities.*

## 4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Open Space
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal and informal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

## 4.2 FIXED FACILITIES

### 4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

### 4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage, loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are

classified as high, medium, or low TTWQ based on activities, functions, and various site-specific factors. For more information on the facilities that have additional operations and activities, please see the City's JURMP. The inventory in Attachment C includes a column for facilities that are tributary to a 303(d) listed water body and potentially generate similar pollutants. This column is marked as "Tributary" in the inventory. Map 3 also shows municipal facility locations in relation to the 303(d) listed waterbodies in the City. Some areas of the City discharge to San Diego Bay, which is 303(d) listed for PCBs. Since PCBs have been banned since the early 1970s, no municipal facilities within the City discharge PCBs to San Diego Bay.

### 4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

### 4.2.4 PROGRAM IMPLEMENTATION

#### 4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

#### 4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities have received training and participate in refresher sessions on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

#### 4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City storm water staff inspected all high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected

on an as needed basis. No medium or low priority facilities were determined to need inspection this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in Attachment H. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented. Enforcement on municipal facilities is in the form of disciplinary process against the responsible staff member when compliance is not met in a timely manner. If a violation of the City's Storm Water Ordinance or the Municipal Permit is observed, which is caused by negligence of City personnel, inspectors work with supervisors to ensure that corrective actions are implemented; provide training to the personnel; and immediately inform the appropriate supervisor. The supervisor will then take action against the violating staff member as necessary, including warnings and other disciplinary measures. City storm water staff is in regular contact with Public Works Maintenance staff and provides training on pollution prevention and BMP implementation, therefore, most deficiencies are taken care of upon first notice.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Public Works Maintenance staff inspects all municipal treatment control BMPs to ensure their proper operation. Additionally, Storm Water Management staff conducts random inspections of such facilities to provide a second layer of confidence and to ensure that maintenance standards are met. The City maintains treatment control BMPs at several of its facilities. City crews conduct annual inspections and clean structural treatment control BMPs on an as needed basis and their condition is evaluated for effectiveness. Any repairs are noted and carried out on a timely manner. Table 4-1 includes a list of municipal facilities with high priority treatment control BMPs within the City that were inspected during the reporting year. Medium and low priority municipal facilities with treatment control BMPs are inspected on an as needed basis.

**Table 4-1** Inspected Municipal Facilities with Treatment Control BMPs

| FACILITY NAME | NUMBER & TYPE OF TREATMENT CONTROL BMP | DATE INSPECTED |
|---|---|---|
| Montevalle Park | 10 Filter Inserts | 05/31/12 |
| Salt Creek Park | 1 CDS Unit | 05/31/12 |
| Harvest Park | 1 Filter Insert | 06/18/12 |
| Sunset View Park | 3 Filter Inserts | 02/08/12 |
| Mountain Hawk Park | 20 Filter Inserts | 05/31/12 |
| All Seasons Park | Bioretention, Vegetated Swales | 02/09/12 |
| Horizon Neighborhood Park | 1 Filter Insert | 05/31/12 |
| Chula Vista Civic Center | 5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts | 03/20/12 |
| Mount San Miguel Park | Bioretention, Vegetated Swales | 02/09/12 |
| John Lippitt Public Works Center | 8 Filter Inserts | 06/06/12 |
| Fire Station 8 | 1 CDS Unit | 05/14/12 |
| Fire Station 6 | 4 Filter Inserts | 03/13/12 |
| Fire Station 7 | 1 CDS Unit | 05/14/12 |

#### 4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

***Fertilizer, Pesticides, and Herbicides***

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do not spray on windy days.
- All employees who spray herbicides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the State and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent Material Safety Data Sheet (MSDS) files.
- MSDS sheets for chemicals being used must be kept with the applicator while applying pesticides.

***Proper Planting Techniques***

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation and convert existing turf areas to drought tolerant, sustainable landscaping when possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

***Minimize Runoff***

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.

- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.
- The City is in the process of reducing large-scale vegetation on curb lines along major roads such as East Palomar, La Media, and Heritage Road. Existing ground cover is reduced by bringing it back from the curb line about 5-10 feet. Mulch is applied in the vegetated area that was removed and irrigation lines along the curb line are capped off. This cuts down on irrigation overspray, excess water use, and runoff.

## 4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

### 4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

### 4.3.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) designates roads, streets, highways, and parking facilities as high priority municipal areas for inspection purposes. Therefore, the Municipal Inventory (Attachment C) categorizes these facilities as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by roads, streets, highways, and parking facilities. The City maintains 414 miles of roads, streets, and highways.

The City has one stand-alone covered parking facility in downtown Chula Vista that generates a moderate volume of trash and debris that is swept twice per month and is inspected annually as a part of the City's Municipal Inspection Program. Other City parking facilities are associated with other municipal facilities (such as parks) and generate low volumes of trash and/or debris. These are swept on a monthly basis and are inspected annually.

For the purpose of street sweeping, roads, streets, and highways are further classified into high, medium, and low priority based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. Table 4-2 below provides more information about these classifications, the number of curb miles in each, the type of areas these classes cover, and respective sweeping frequencies.

**Table 4-2** Street Sweeping Information Based on Class

| CLASS | NUMBER OF CURB MILES | TYPE | SWEEPING FREQUENCY |
|---|---|---|---|
| High | 134.5 | Industrial and Commercial – 10.3 miles | Once per week |
| | | Commercial and Business – 124.2 miles | Once per week |
| Medium | 109.9 | Center Islands and Medians | Twice per month |
| Low | 758.2 | Residential – 734.1 miles | Once per 2 month |
| | | Center Lines – 24.1 miles | Twice per month |

### 4.3.3 BMP REQUIREMENTS

Street sweeping is one of the ongoing city functions that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

The City has identified some streets as high Threat to Water Quality (HTTWQ) areas. The main pollutant in these areas is trash. Trash in these areas is mainly attributable to customers of recycling businesses located in the industrial areas of Energy Way and Nirvana Avenue. Also, trash trucks shedding some of their load while traveling to and from the Otay Landfill on Maxwell Road and Main Street east of I-805 are sources of trash on these streets. As a proactive measure to minimize trash entering the storm drain system, the City has retrofitted existing curb inlets in these areas with filter inserts. The City's storm drain crews conduct regular inspections and cleaning of these filter inserts and replace parts as necessary.

### 4.3.4 PROGRAM IMPLEMENTATION

#### 4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept approximately 18,000 curb miles and removed more than 787 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular street sweeping is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

**Figure 4-1** Street Sweeping Schedule

## 4.4 MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4)

### 4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through four primary activities: 1) Inspections, 2) catch basin maintenance, 3) channel maintenance, and 4) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drain facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultant for dry weather field screening annually inspects over 57 outfall locations throughout the City and conducts upstream investigations based on field screening results. They report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to inspect the drainage area, abate the pollution, and conduct cleanup.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary. This multi-layer inspection program ensures that almost all MS4 facilities are inspected and maintained regularly.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all environmental regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris from areas that trash accumulation may cause flooding and damage to life or property.

Currently, two vacuum trucks and two crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drain systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drain systems in emergencies and other similar situations.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system universally used by the Public Works Department for collecting and tracking data about all its activities. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

All storm drain inlets throughout the City have been marked with prohibitive signs to discourage pedestrians and drivers from dumping into storm drainage systems. They are of various types, including thermoplastic signs, stamped concrete, stenciled markings, or plastic decals.

**Figure 4-2** Thermoplastic Storm Drain Stencil

### 4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4s, which include open channels, catch basins and inlets, and outfalls. Storm drain pipes are designed to be self-cleaning and do not typically require scheduled cleaning. As required by the Municipal Permit Section D.3.a.(7), the City's MS4 is included in the municipal facility inventory (Attachment C) as a high priority facility for inspection purposes. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

### 4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

### 4.4.4 PROGRAM IMPLEMENTATION

#### 4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2011 to June 30, 2012 is summarized below. A total of 463 inlets were identified as accumulating a high volume of trash while 774 inlets had moderate to low volumes. All high, moderate, and low trash volume facilities were cleaned at least once during the dry season (May 1 – September 30). Table 4-3 details the amounts of waste collected from the City's storm drain system based on various facility and waste categories.

*Catch Basins and Inlets*

- There are 12,491 catch basins and inlets in the City
  - 7,379 inspections were conducted (some inlets and catch basins were inspected more than once)
  - Out of all the catch basins and inlets inspected, 1,237 were cleaned
- Data collection for catch basins with accumulated waste exceeding the Permit cleaning criteria (33% or more full) started January 1, 2008. A total of 43 exceeded the criteria from July 1, 2011 – June 30, 2012.

*MS4*

- There are 224 miles of MS4 in the City
- The storm drain maintenance crews televised 2.99 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there was no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 338 feet of MS4 pipe was cleaned. It should be noted that the City's storm drain pipes are designed to be self-cleaning under normal operation.

*Open Channels*

- There are 32.85 miles of open channels in the City
- A total of 298,605 square feet of open channels were inspected and cleaned

**Table 4-3** Amount of Waste in Tons Cleaned from the Storm Drain System FY 2011-2012

| STRUCTURE | TRASH | LANDSCAPING DEBRIS | SEDIMENT |
|---|---|---|---|
| MS4 | 0 | 0 | 0 |
| Catch Basin/Inlet | 1.9 | 3.1 | 9.6 |
| Open Channel | 37.4 | 88.4 | 83.3 |
| Total | 39.3 | 91.5 | 92.9 |
| Grand Total | 223.7 | | |

The City will continue to inspect its MS4 as required by the Municipal Permit and record collected inspection data. During this reporting year, the City reviewed its inspection record and determined that there were no facilities that required inspections less than annually.

## 4.5 SANITARY SEWER SYSTEM

### 4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in the protection of the MS4 system. If not properly maintained, the sewer system can potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, parasites, and chemicals.

The City currently implements a Sewer System Management Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, in April 2009 the City developed a Sewer System Management Plan. Chula Vista Municipal Code provides authority for the City to implement a Fats, Oils, and Grease (FOG) Monitoring Program. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

### 4.5.2 SOURCE CHARACTERIZATION

There are 498 miles of sewer pipes in the City. The Municipal Permit Section D.3.a.(7) requires sanitary sewer collection systems to be identified as high priority facilities for the purpose of inspections. The sanitary sewer system is included in the municipal inventory as such (please see Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system. The City of Chula Vista does not operate a Publicly Owned Treatment Works. Sewage generated in Chula Vista is collected and conveyed to the City of San Diego treatment works at Point Loma.

### 4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receives training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance and cleanup crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector or an Environmental Health Specialist contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

### 4.5.4 PROGRAM IMPLEMENTATION

#### 4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 342 miles of sewer main (includes critical maintenance areas, which were cleaned more than once) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is also conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, minimizing potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with diameters larger than 36 inches. PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

## 4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

### 4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

### 4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as power washing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. The Municipal Permit Section D.3.a.(7) requires that power washing be identified as a high priority municipal activity for inspection purposes. Therefore, Attachment C has categorized power washing as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

### 4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including power washing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City power washing crews implement BMPs during their activities and receive regular training on storm water pollution prevention.

### 4.6.4 PROGRAM IMPLEMENTATION – POWER WASHING FOR GRAFFITI REMOVAL

#### 4.6.4.1 MAINTENANCE AND INSPECTION

The City provides graffiti removal services for public and private facilities and areas. However, due to financial challenges of the past few years, the size of crews and resources has been cut drastically. The operations include power washing, sand blasting, and color matching.

As a part of the inspection process, City's Storm Water Management staff annually conducts a ride-along with the graffiti/power washing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures. During this reporting year, City Storm Water Management staff accompanied the graffiti removal crew to inspect its operation and implementation of BMPs. The graffiti crew implemented all BMPs and prevented any wash water from entering the storm drain system. In addition, the crew used the least amount of water necessary to complete the job. All BMPs were in place and working properly.

## 4.7 SPECIAL EVENTS

### 4.7.1 BACKGROUND

The City hosts or sponsors a variety of special local events, which include festivals, fairs, and other events for special causes and occasions. Usually, these events involve the participation of outside organizations, community groups, and the general public. The gathering of event participants and crowds is generally a source of trash and debris if BMPs are not implemented.

### 4.7.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) requires that special events be designated as high priority for inspection purposes. Therefore, special events are included in the City's municipal inventory as high priority activities (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

### 4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping immediately following major events taking place on a street, and having personnel dedicated to litter abatement throughout City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works in conjunction with other City departments and event organizers to ensure that adequate BMPs are implemented during special events.

### 4.7.4 PROGRAM IMPLEMENTATION

Storm Water Management and Environmental Services staff has active presence at the majority of City events. They set up booths, provide public education on environmental issues, and distribute informational materials. As necessary, they conduct surveys at the same time to evaluate general public's awareness and practice of BMPs. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed protection. City Environmental Services staff notifies hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

## 5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(d).i – Any updates to the industrial and commercial inventory.*

*Permit Section J.3.a.(3)(d).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.*

*Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.*

*Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.*

*Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.*

*Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.*

*Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.*

*Permit Section J.3.a.(3)(d).ix – A description of efforts implemented to address mobile businesses.*

*Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.*

*Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.*

## 5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City of Chula Vista to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity is mutually exclusive, and that each is essential to the overall success of the program. The City has compiled an inventory of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

## 5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

### 5.2.1 BACKGROUND

Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

### 5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, annually, the City conducts updates of its industrial and commercial facility inventories by searching through its business license database and conducting visual observations of new or closed businesses during annual inspections. Additionally, with each permit cycle, the City conducts a comprehensive field validation of its industrial and commercial inventories Citywide. The industrial and commercial inventories are also updated on a continuous basis by adding businesses that cause incidents of pollutant discharge or are found to require regular inspections due to the type and amount of pollutants that they generate.

Watershed-based inventories of industrial and commercial sites within the City have been compiled. Information was obtained from the City's business license database (Permits Plus), the State Water Resources Control Board database of industrial sites that have filed NOIs, inspection records, and previous experience.

Inventories of industrial and commercial facilities within the City were compiled during the development of the City's JURMP in 2008, which were later updated for the current reporting period and are included in Attachments D.1 and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Business category
- Priority
- SIC Code
- Mobile or stationary
- Tributary to a 303(d) listed waterbody

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- SIC code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.
- Tributary to a 303(d) listed waterbody

The entire City of Chula Vista jurisdiction is located within the San Diego Bay watershed and, therefore, watershed designations are not included separately for each industrial/commercial facility. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

The inventories in Attachments D.1 and E include a column for facilities that are tributary to a 303(d) listed waterbody and potentially generate similar pollutants. This column is marked as "Tributary" in the inventory. In addition, Maps 3 and 4 show each commercial and industrial facility, respectively, in relation to the 303(d) listed waterbodies in the City. Some areas of the City discharge to San Diego Bay, which is 303(d) listed for PCBs. Since PCBs have been banned since the early 1970s, no facilities within the City discharge PCBs to San Diego Bay. Attachment D.2 has additional information about each commercial and industrial facility, including the potential pollutants generated by the business type as well as the latitude and longitude of each facility. The inclusion of the APNs and latitude/longitude allows the City to track its inventories through the City's GIS program.

### 5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing discharges of pollutants into MS4s from existing industrial and commercial facilities. Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and

outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides legal authority for the City to require a SWPPP for any industrial or commercial facility that may potentially discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets because they are less stringent than, and conflict with Municipal Permit requirements or City's ordinances. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further,

pollution prevention methods are commonly used in compliance with other regulatory management standards. It has been determined that one-on-one interaction between City inspectors and business owners are more effective in knowledge and behavior change than conducting workshops or distributing informational materials, although latter methods are also effective to a lesser degree and are practiced by the City.

### 5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. The City inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements, as described in the JURMP, are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities. Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection, the City provides a copy of the inspection report to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

During inspections of new businesses, a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Providing one-on-one training and helping business owners to develop their activity and site specific BMPs
- Distributing informational printed materials
- Conducting industrial and commercial inspections and setting standards for compliance

#### 5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

The City's 2011-2012 inventory of industrial and commercial facilities include 195 industrial facilities and 1,243 commercial facilities, which includes 593 mobile businesses. These facilities are identified in Attachments D.1 and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, industrial and commercial inspections were conducted to ensure compliance with Permit requirements per Attachments I and J.

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b.(3).
- Threat to Water Quality – Facilities that posed a higher TTWQ was given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.
- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial and commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed for bringing the facility into compliance. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities and during administrative hearings.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

The Copermittees have standardized industrial/commercial inspections. An Inspection Standards Workgroup was formed with the task of finding a way to standardize industrial-commercial

inspections so that the results from each Copermittee's inspections are consistent. The goal of the workgroup was to create minimum regional guidelines while maintaining flexibility for each Copermittee to identify and apply their individual requirements that have been developed to match each Copermittee's respective storm water program.

#### 5.2.4.2 PRIORITIZATION

The Municipal Permit no longer requires industrial and commercial inventories to be categorized into high or low priority for TTWQ, although Section D.3.b.(3) of the Municipal Permit requires inspections of sites determined to pose a high threat to water quality. Based on the City's past experience, prioritization of industrial and commercial facilities into high or low priority provides a powerful tool to identify facilities that require focused attention and more frequent inspections. Therefore, the inventories of industrial and commercial facilities have been prioritized in this report.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge are also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- SIC Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)
- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road (Sweetwater River)
  - Bay Boulevard (San Diego Bay). Facilities within the Port jurisdiction are not included)
- Fast food chains

This is due to frequent rotation of management and employees, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrappers, etc. in the parking lot.

- Private golf courses
- Entertainment facilities
  Cricket Wireless Amphitheater and Knott's Soak City
- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

#### 5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note to update the inventory. If a new business has been determined to be included in the inventory, Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Where applicable, Storm Water Management staff checks for coverage under the General Industrial Permit

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/groupmonitoring.shtml

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies the Environmental Health Specialist during the walk-through to enable City staff to point out areas where corrections are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, the Environmental Health Specialist completes a Storm Water Quality Inspection Report for Commercial/Industrial Facilities. The responsible party is

provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Results of the SWPPP review, BMP plan, and monitoring results, where applicable
- Assessment of BMP implementation
- Recommended corrective actions
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the report

The Environmental Health Specialists does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person. Educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while the Environmental Health Specialist is at the site.

As discussed above, the business is provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high priority or vice versa. Any such changes are reflected in the inventory update submitted in the following JURMP Annual Report.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachments I and J.

#### 5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the services of a third party. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

#### 5.2.4.5 VIOLATIONS AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate

- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

Environmental Health Specialists properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, Environmental Health Specialist conducts follow-up inspections to ensure that required corrective actions are adequately addressed.

Where the Environmental Health Specialist observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the situation. When necessary, City's maintenance crews respond to illegal discharges; attempt to contain and capture pollutants before entering storm water conveyance system inlets; and stay at the scene until the responsible person terminates the illegal discharge. The affected areas and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the business owner or the property owner. In any case in which Environmental Health Specialists determine that a noncompliant site poses a threat to human or environmental health, the City notifies the Regional Board by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illicit discharges or illegal connections from industrial and commercial businesses. This includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section 9.5 of the City's JURMP.

Table 5-1 details the types of violations and the numbers of each during the reporting period. A detailed account of enforcement actions taken during this reporting period is included in Attachment K.

**Table 5-1** Industrial/Commercial Enforcement Action Summary FY 2011-2012

| VIOLATION TYPE | NUMBER |
|---|---|
| Administrative Citations – Fine | 3 |
| Notice of Violation – Civil Penalties | 1 |
| **VIOLATION CATEGORY** | **NUMBER** |
| Commercial | 3 |
| Industrial | 1 |

NOTE: Total Fines issued - $12,186.

The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

#### 5.2.4.6 IDENTIFICATION OF NON-FILERS

If Environmental Health Specialists determine that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the Regional Board to determine if the facility is required to obtain coverage. At the same time, the Regional Board is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with Regional Board staff to assist in their site inspections.

During the current reporting period, the City did not identify any non-filer facilities that may be eligible for coverage under the General Industrial Permit.

## 5.3 MOBILE SOURCES ELEMENT

### 5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Mobile businesses can be difficult to regulate because many do not have permanent locations in the City or may not have a business license. On a continual basis, new mobile businesses are started, existing mobile businesses go out of business, some mobile businesses do not renew their business license, or some operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses.

### 5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business

types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile auto detail/ maintenance
- Window washing/pressure washing/ street sweeping
- Pool and spa cleaning
- Carpet cleaning
- Plumbing/ handyman/ repairman
- Landscaping
- Pest Control
- Boat cleaning/ hull maintenance
- Fire sprinkler maintenance
- Painting and coating
- Masonry
- Concrete cutting
- Mobile construction trades, which include cement work and masonry

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business license applicant within the above categories are required to go through a storm water BMP training, and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 127 mobile businesses from the categories listed above applied for a City business license, were trained on BMPs related to their business, completed the City of Chula Vista Storm Water Questionnaire and Certification Statement, and received their business license. Attachment D.3 is a list of the businesses that went through this process during the reporting period. Table 5-2 details the types and numbers of mobile businesses approved during the reporting year.

**Table 5-2** Approved Mobile Business Licenses by Category FY 2011-2012

| MOBILE BUSINESS TYPE | NUMBER |
|---|---|
| Construction Related | 17 |
| Carpet Cleaning | 9 |
| Boat Cleaning and Maintenance | 2 |
| Auto Detailing | 17 |
| Pool and Spa Cleaning | 3 |
| Handyman/ Repairman | 26 |
| Powerwashing/ Window Cleaning | 1 |
| Plumbing | 19 |
| Landscaping | 19 |
| Fire Protection Systems | 4 |
| Painting and Coatings | 9 |
| Pest Control | 1 |
| **TOTAL** | **127** |

### 5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

#### 5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes as well as costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

#### 5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge Control and Spill Prevention, Control, and Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

In addition, as per the Municipal Permit, the Copermittees developed a set of minimum core BMPs for the various types of mobile businesses. The following BMPs specifically address the unique characteristics of mobile businesses.

- Storm water training
- Spill containment and cleanup (Spill Kits)
- Proper handling of all wastes (Solid, liquid and hazardous)
- Protecting storm water conveyance systems
- Providing proper handling and containment of materials
- Providing equipment washout areas

These practices represent only the minimum required BMPs. Mobile businesses are encouraged to contact City staff for any questions or for information on any additional and more stringent activity-specific requirements.

The Copermittees posted information about mobile business minimum BMPs as a resource in the Project Clean Water Toolbox website. Please see Figure 5-1 – Clean Water Toolbox for the home page of the website.

**Figure 5-1** Clean Water Toolbox

### 5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed to the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. Approved applications and completed Storm Water Questionnaires and Certification Statements are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department's Business License Section receives application from mobile business owner
- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance, and appropriate CASQA BMPs relevant to the type of business activities.
- The applicant is instructed to complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval from the Storm Water Management Section before a business license can be issued.
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.

#### 5.3.4.1 EDUCATION AND OUTREACH

During the business license application process, the City provides mobile business owners or operators the necessary information, educational materials, and outreach related to storm water quality issues specific to their type of business. As stated above, businesses are given the educational materials outlining pollution prevention measures and other BMP requirements related to their respective activities prior to the license being issued. A sample of the Storm Water Information Packets for Mobile Businesses is included in Appendix D of the City's updated JURMP. The education program is described in detail in Section 10, of the City's updated JURMP.

#### 5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobile businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene, City inspectors require an immediate stop to any illegal discharge and instruct the responsible person to initiate containment and cleanup of the affected areas. If the business lacks materials and equipment required for the deployment of adequate BMPs, the responsible person is informed that they will not be able to resume activities until such time that they procure all necessary materials and equipment. Environmental Health Specialists find out if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being allowed to resume business operations. Enforcement action, including warnings, citations, civil penalties, or other enforcement measures are initiated where justified. During the current reporting period, a total of one administrative citation totaling $300 in fines was issued to mobile businesses operating in Chula Vista.

##### 5.3.4.2.1 NOTABLE ACTIVITIES

During the reporting period, the City continued its mobile business license application processing combined with public education, which is considered a notable and very effective method of minimizing pollutant discharges from mobile business activities.

## 6.0 RESIDENTIAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.*

*Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.*

*Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.*

*Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.*

*Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.*

*Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.*

*Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.*

### 6.1 INTRODUCTION

The City has developed the residential component of the Jurisdictional Urban Runoff Management Program (JURMP) based upon a multi-faceted approach including pollution prevention; complaint response and enforcement; and outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharges of pollutants into the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP) and to support the long-term improvements of water quality through awareness and behavior modification.

### 6.2 SOURCE CHARACTERIZATION

The information collected from reported illegal discharges and results of subsequent investigations can be analyzed to provide useful tools in effectively characterizing activities, sources, and areas within the City that contribute more to water quality impacts and that need to be targeted. These criteria may stay constant from year to year, or change each year. However,

knowledge of the pattern that they follow will provide the storm water manager an insight that is necessary to develop or modify an effective program. As in previous reporting years, the City has taken a critical look at the hotline calls related to residential activity received during the reporting period (Figure 6-1). Home improvement and auto-related discharges were most prevalent in this reporting period. The City has continued to focus residential education on pollution prevention during home and auto related activities in order to foster a change in behavior and to increase residential BMP implementation. Further, characterizing the sources of pollutants can provide a resource in tailoring public education and outreach programs to the specific needs of the community and improving their effectiveness, while maintaining economic viability. This type of critical look is an important tool in making management decisions on how to approach residential BMP implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

**Figure 6-1** Percentage of Hotline Reported Residential Storm Water Violations by Activity FY 2011-2012

## 6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high Threat To Water Quality (TTWQ) residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, every year certain residential areas of the City are designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating residential BMP implementation is quite challenging, however, the City has developed a number

of mechanisms through which information on BMPs are disseminated to the public and ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, door hangers, City's environmental website, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response and Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed above have been discussed in more detail throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented primarily through public education, and where necessary by enforcement action.

## 6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses public education and outreach together with enforcement mechanisms, when necessary, to ensure program implementation by residents and compliance with all federal, state, and local laws and regulations.

The City keeps accurate records of all reported residential illegal discharges and non-compliance with BMP requirements. This information can be used in many ways such as identification of pollutants of concern, areas of HTTWQ, increasing/decreasing trends in illegal discharges, and repeat violators. Such analysis is then used to develop new programs or modify existing programs to focus attention on program elements that result in higher effectiveness and quicker results. Map 1 – Violation Location Map was prepared to depict all areas of the City with a visual demonstration of reported illegal discharge distributions. The City then targets higher density areas for more focused public education and surveillance.

### 6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Information pertaining to the household hazardous waste and the used oil and filter programs are distributed to residents annually during special events, presentations, point of purchase locations, mobile displays throughout the city offices and community centers, local realtors/associations, and property management offices. Residents are

educated about the disposal of such waste through the City's public education program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the Cal Recycle. The program has the capacity to receive and process used oil and filters generated by City residents. The amount of used oil collected from certified oil centers increased compared to last reporting year as shown in Table 6-1. The City continues encouraging residents to take a proactive approach to changing their oil by draining it, uninstalling their oil filters, and taking the used oil and filters to their local auto supply store. In this way, residents recycle used oil as they purchase their new oil and avoid an extra trip, one that could have added green house gases into the atmosphere. This method also prevents storm drain pollution, as unattended oil could intentionally or unintentionally spill and enter storm drain systems.

The South Bay Used Oil Recycling Program has been evaluated by CalRecycle as a successful program for its effectiveness and regional approach. In a recent consolidation of CalReycle programs, the City of Chula Vista was asked to absorb four cities to its regional program. As such, the City of Chula Vista is now the regional lead of the used oil programs for National City, Imperial Beach, Coronado, La Mesa, Lemon Grove, El Cajon, and Santee, thus improving environmental quality throughout the east and southern San Diego county regions. Residents of Chula Vista can also leave oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. This used oil will be collected and recycled through the South Bay Used Oil Recycling Program. Residents of Chula Vista also have the option of taking their used oil to various used oil collection facilities in the City for recycling or disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. This facility accepts oil, both clean and contaminated as well as residential hazardous waste. Residents are limited to 15 gallons or 125 pounds of used oil or hazardous waste per vehicle. The facility is open every Saturday and Wednesday from the hours of 9 AM to 1 PM. The City also offers "door-to-door" collection of HHW for a small donation. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. Every used oil and HHW application has focused on pollution prevention, watershed protection, source reduction and making it easy for residents to do the right thing when it comes to proper disposal.

**Table 6-1** Amount of HHW and Used Oil Collected FY 2011-2012

| | | |
|---|---|---|
| **Household Hazardous Waste** | Quantity of waste collected (FY 10-11) | Quantity of waste collected (FY 11-12) |
| | 412,706 pounds | 620,929 pounds |
| **Used Oil** | Quantity of used oil collected from certified centers (FY 10-11) | Quantity of used oil collected from certified centers (FY 11-12) |
| | 28,732 gallons | 78,122 gallons |

### 6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where extra efforts may be necessary:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel
- City's environmental website at: www.chulavistaca.gov/clean
- Analysis of data collected and managed in the Department of Public Works data management system Lucity

Further information about the City's hotline reporting system and Dry Weather Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP document. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. By using a Geographic Information System program and the data collected from these mechanisms, residential areas of the City that have had higher numbers of violations, and outfall locations that exceeded pollutant standard limits are mapped annually (see Map 1 – Violation Locations Map and Map 2– HTTWQ Residential Area Map). City staff then develops programs to inspect and investigate areas of the City that are considered high TTWQ. City staff investigates violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continues to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's illegal discharge reports database can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1.

The residential areas and activities evaluation method described above indicate that: 1) residents are becoming more environmentally conscious, 2) residents take an active role in environmental protection by calling the City and reporting illegal discharges, 3) a positive trend in urban runoff discharge quality is emerging. These results are encouraging and provide incentive to City staff to maintain their level of efforts and find innovative methods to accelerate the positive trend.

### 6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in Chula Vista Municipal Code Chapter 14.20, Storm Water Management and Discharge Control; and Chula Vista Municipal Code Title 1, General Provisions. During this reporting period, Storm Water Management Section staff responded to 81 reported violations, of which 52 were residential. Eight of the reported residential violations resulted in administrative citations. Storm Water staff responded to each reported violation, investigated each case, took appropriate actions regarding containment of pollution, educated the violating party on existing laws and regulations, made follow-up visits where necessary, and proceeded with enforcement action if voluntary compliance was not achieved. The amount of fines collected during this reporting period from residential violations was over $6,000. Although there were fewer residential citations issued during this reporting year compared to last, there were more fines collected due to the fact that there was a civil penalty issued to one resident.

Data management of past violations helps City staff identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate illegal act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of the violations issued during the reporting year are included in Attachment K.

### 6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step towards improving receiving water quality, both locally and regionally. Increasing public awareness and encouraging a change in both attitude and behavior of the general public and the regulated community, can directly lead to a reduction or elimination of storm water pollution caused by common daily residential activities. Due to the importance of public education and outreach in storm water programs, the Municipal Permit requires public education at jurisdictional, watershed, and regional levels. The following are brief accounts of the implementation of jurisdictional and regional education programs during the reporting period. Additionally, during the reporting period, the City collaborated with the Copermittees of the San Diego Bay Watershed to implement the Watershed Urban Runoff Management Program (WURMP) residential education component. Details of such efforts are fully discussed in this year's WURMP Annual Report, which will be submitted to the Regional Board under a different cover.

#### 6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the City's Environmental Services Division and the Conservation Division in the implementation of the Jurisdictional Residential Education Program. Pollution prevention and water quality regulation information is disseminated by actively participating in community events throughout the year. Informational booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise pubic awareness about the City's storm water regulations and requirements as well as Best Management Practice methods. Residents become aware of the importance of protecting their watersheds and water resources, and recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also distributed throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of reported violations, and other similar factors.

Residential hotline calls, response, and enforcement rely heavily upon citizen participation and awareness. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

#### 6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting period, the City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. The workgroup is broken down into sub-workgroups that focus on one, or more of the various components undertaken by the ERS. These sub-workgroups address media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Continued implementation of a comprehensive media program including ads on TV, radio, and movie theaters; 2) Development and distribution of the bilingual regional Storm Water Coloring books and calendars; and 4) Continued participation in regional community events such as the Envirofair at the San Diego County Fair.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under a separate cover.

### 6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the negative impacts of improper waste disposal. A consistent message of stewardship through everyday actions and behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

During the reporting year, the City identified several High Threat to Water Quality (HTTWQ) residential neighborhoods that required focused educational outreach (see Map 2). These areas have been targeted based on storm water inspection observations, reported violations to the City's hotline, and the dry weather monitoring upstream investigation program. The City distributed storm water pollution prevention door hangers in addition to brochures targeting specific residential activities and their associated pollutants to these neighborhoods. The activities and pollutants that were focused on include: 1) landscaping activities (fertilizer and over-irrigation discharge) and 2) trash. These areas and their corresponding activities and pollutants have been identified on Map 2. In addition, the City provided storm water residential education packets to several Homeowner's Associations to distribute to new homeowners.

In November 2010, the USEPA approved the 2008-2010 303(d) list for the San Diego Region. Therefore, in addition to the HTTWQ areas shown in Map 2, there are also residential areas of the City that could potentially discharge pollutants of concern to 303(d) listed waterbodies within the City. Table 6-2 shows the pollutant/waterbody combinations within or adjacent to the City. Some areas of the City discharge to San Diego Bay, which is 303(d) listed for PCBs. Since PCBs have been banned since the early 1970s, no residential areas within the City discharge PCBs to San Diego Bay. The pollutant(s) of concern causing toxicity in Poggi Canyon and Sweetwater River are not known, however, previous regional monitoring reports suggest that synthetic pyrethroids are potential cause of toxicity. Synthetic pyrethroids are a component of pesticides, which can come from residential homecare activities. The lower section of Sweetwater River, below the impoundment, is 303(d) listed for a variety of pollutants. Residential activities may potentially affect water quality in this area, mostly through gardening and landscaping activities. It is not clear if selenium is generated through residential activity and accordingly, the City is still in the process of further studying selenium and its sources. The City will continue to educate its residents through distribution of educational materials and interaction at community events, with a focus on these pollutants of concern.

**Table 6-2** 2008-2010 303(d) Listed Waterbodies-Pollutants In or Adjacent to Chula Vista

| WATERBODY | POLLUTANT |
|---|---|
| Poggi Canyon Creek | Toxicity |
| Telegraph Canyon Creek | Selenium |
| Sweetwater River, Lower (below Sweetwater Reservoir) | Enterococcus |
| | Fecal Coliform |
| | Phosphorus |
| | TDS |
| | Total Nitrogen as N |
| | Toxicity |
| | Selenium |

The City also targets HTTWQ residential areas by having cleanup events that provide residents the opportunity to volunteer to help cleanup their neighborhoods. The annual Beautify Chula Vista event focuses on a different neighborhood each year, frequently in under-privileged areas of the City, and provides graffiti cleanup, tree planting, trash pick-up, and storm drain stenciling. By participating in the event, residents are able to make a connection to their community and environment while learning about storm water pollution prevention.

In addition to targeting HTTWQ areas for public education and outreach, the City has a number of programs in place throughout the City to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

## 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.*

*Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.*

*Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.*

*Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.*

*Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.*

*Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.*

*Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.*

*Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.*

*Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.*

*Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.*

*Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.*

*Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.*

On September 10, 2008, the Regional Board adopted Addendum No. 2 to the Municipal Permit. The addendum recognized that Dry Weather Field Screening and Analytical Monitoring activities may continue until the end of September each year, and the results would not be available to be included in JURMP Annual Reports, which are also due for submittal on September 30 of each year. Therefore, submittal of Section 7.0 of the JURMP Annual Report (Illicit Discharge Detection and Elimination Component) was allowed to be postponed until December 15 of each year. Pursuant to this requirement, the City of Chula Vista will submit the entire FY 2011-2012 Illicit Discharge Detection and Elimination Component; copies of the City's 2012 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2012.

## 8.0 EDUCATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.*

*Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.*

*Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.*

*Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.*

*Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.*

### 8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public, and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay/ East County Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Program targets issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and Best Management Practices (BMPs) to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

## 8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of City-wide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting year, several City staff from Storm Water Management Section, Public Works Inspections, Development Services, and Public Works Engineering attended workshops and received training and certification about the new Construction General Permit. Training included general permit overview, risk levels, sampling and monitoring, inspections, reporting, and certification requirements. As construction projects begin to implement the Construction General Permit, the Storm Water Management Section staff will continue its efforts to educate itself as well as municipal staff.

Education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) and the Hydromodification Plan (HMP). In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. A continuing focus on internal SUSMP and HMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize Low Impact Development (LID) techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of higher efficiency treatment control BMPs. In addition, presentations

by the manufacturers and vendors of structural BMPs have been organized and hosted by the City.

As in previous reporting year, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance
- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Vehicle Maintenance
- Land Development
- Public Works Inspectors

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

**Table 8-1** Municipal Staff Education FY 2011-2012

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 08/12/11 | Hydromodification Management Training | City staff provided training about water balance, sediment transport in natural channels, BMPs, erosion, and sizing calculators to City engineering staff | City Storm Water Staff |
| 08/17/11 | Monitoring Trash, TMDLs, and Efforts Towards Compliance | City staff participated in a webinar given by the LA Regional Board who discussed trash TMDLs and how responsible parties are making efforts to fulfill requirements, including monitoring | CA Water Quality Monitoring Collaboration |

Table 8-1 continued on next page

Table 8-1 continued

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 08/21-25/11 | StormCon | Staff attended this conference about storm water BMPs, LID, program management, and monitoring. Staff took CPSWQ training and exam. | StormCon |
| 09/06/11 | SCCWRP Channel Screening Tool | Staff attended this workshop in which geomorphology experts provided training on the newly developed Hydromodification Screening Tool to determine susceptibility of natural channels, creeks, and rivers to erosion. | Floodplain Management Association |
| 12/07/11 | Storm Water and HMP BMPs | Staff attended a presentation on Contech products such as LID BMPs, high-rate media filters, dry wells, underground storm water runoff storage and reuse, and infiltration. | Contech Construction Products |
| 03/13/12 | Storm Water Training | Storm water staff conducted annual refresher storm water training to wastewater and storm drains group. Showed video "What We Can Do as Municipal Employees." | City Storm Water Staff |
| 03/15/12 | Storm Water Training | Storm water staff conducted annual refresher storm water training to streets department and pump techs. Showed video "Storm Pollution for Municipal Employees – Storm Watch." | City Storm Water Staff |
| 03/26/12 | Storm Water Training | Storm water staff conducted annual refresher storm water training to garage staff. Showed video "What We Can Do as Municipal Employees." | City Storm Water Staff |
| 04/05/12 | Storm Water Training | Storm water staff conducted annual refresher storm water training to parks staff. Showed video "What We Can Do as Municipal Employees." | City Storm Water Staff |
| 04/19/12 | Storm Water Training | Storm water staff conducted annual refresher storm water training to open space and construction staff. Showed video "What We Can Do as Municipal Employees." | City Storm Water Staff |
| 05/09/12 | Storm Water Training | Storm water staff conducted annual refresher storm water training to locksmith, Hvac, plumbing, and electrical staff. Showed video "What We Can Do as Municipal Employees." | City Storm Water Staff |

## 8.3 EDUCATIONAL OUTREACH ELEMENT

### 8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

The CLEAN group, made up of the City's environmental departments and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

**"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."**

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. *Your Choice*."**

The culmination of efforts of various involved City divisions has been embodied in the established CLEAN program, which provides an effective and powerful body to guide the significant efforts envisioned for the program. It is also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including pollution notification residential door hangers, stickers, brochures, and various giveaways were distributed to the general public within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean includes information about environmentally focused divisions in the City including Storm Water Management, Environmental Services, and Conservation. The storm water section of the website includes information useful to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to evolve, a wide array of media outlets have been explored, and established branding has been incorporated in them. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2011-2012 the City continued to use pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of items such as recyclables, cooking grease, and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging.

**Figure 8-1** CLEAN Homepage

The City has continued to maintain six trail displays (Figure 8-2) throughout the City, near walking trails and parks. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. They demonstrate the connectivity of environmental concerns throughout the City. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park

- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

A poster form of the trail display is also displayed in the City's John Lippit Public Works Center and the Chula Vista Public Library. Chula Vista staff and residents pass this display on a daily basis, reminding them that the City is within the Sweetwater and Otay Watersheds and of the simple actions they can take to protect their local waterways. Another poster is used for community events to explain watershed concepts and pollution prevention to Chula Vista residents.

**Figure 8-2** City of Chula Vista CLEAN Trail Display

### *Media Articles*

As a member of the CLEAN group, Storm Water Section staff contributed articles about pollution prevention to various publications aimed at residents living in the City. These included The Star News and Your Guide to CLEAN, which is included in residential trash bills. Altogether, these publications reach more than 50,000 households. The City will continue to contribute and place pollution prevention advertisements and articles in these publications as well as continue to explore more venues for reaching citizens through print media.

### *School Education Efforts*

Due to the previous success of the Salt Creek Critters, South Bay Water Warriors, and elementary and high school education programs, the City decided to continue its education

outreach program to school children. With the help of I Love a Clean San Diego, the City provided storm water education presentations to students at Otay Elementary School and Valle Lindo Elementary School. The presentation focused on pollutant types and their sources, pollution prevention, watershed protection, and volunteer opportunities. Pre- and post-tests were administered to the students receiving the presentations. In addition, an interactive activity was done with each class to enforce the concepts taught in the presentations. Overall, both students and teachers felt that the presentations were beneficial and increased knowledge and interest in environmental issues in their community. The City will continue with school programs such as these into the coming fiscal year, as funding permits.

***Community Events***

The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. During the reporting period the CLEAN group, which includes the Storm Water Management Section and the Department of Conservation and Environmental Services, participated in and set up booths and displays at most major South Bay community events. City staff provided education and outreach materials regarding a variety of interrelated environmental issues. A variety of brochures and pamphlets were distributed to the general public about the effects of storm water pollution on the environment and ways that residents can prevent pollution of their waterways. By participating in these community events, City storm water staff has the opportunity to generate large numbers of impressions each fiscal year. In addition, City staff displayed the EnviroScape model at several community events in order to teach residents about watershed concepts and to reinforce the connection between everyday actions and water quality.

***Living Coast Discovery Center***

The Living Coast Discovery Center, formerly known as the Chula Vista Nature Center, is located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Center's mission is to inspire care and exploration of the living Earth by connecting people with coastal animals, plants, and habitats. Through visits to the Center and its offsite programs thousands of people are given the opportunity to connect with local wildlife and learn what they can do to protect coastal habitats. To help facilitate educational experiences, the Center offers interactive permanent and seasonal exhibits, field trips, tours, day camps, scout programs, and much more. During the reporting year, there were over 460 scheduled tours to the Center, resulting in over 10,750 children and over 2,850 adults learning about San Diego Bay wildlife, watersheds, and watershed protection.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- Students learn to recycle, reuse, and reduce waste. They also learn about storm drains and the types of pollutants commonly identified in the storm drain system. The Center also conducts a weekly composting class that is free with admission to the Center through a partnership with the City's Environmental Services Division.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

**Table 8-2** Education Outreach Provided During FY 2011-2012

| DATE | EVENT | EVENT DESCRIPTION | LOCATION |
|---|---|---|---|
| 07/16/11 | Kick-Off Block Party | Community event designed to teach residents how to save on energy bills, tour an energy efficient home, and learn about environmental issues in the City. | Espuelas Court – Rancho del Rey |
| 10/01/11 | Annual Fire Department Open House | City storm water staff had a booth at this community event and distributed pollution prevention educational materials and reusable bags. | Chula Vista Fire Station #4 |
| 10/22/11 | Beautify Chula Vista | Community event where citizens removed graffiti and picked up trash from neighborhoods in southwest Chula Vista. | Harborside Park |
| 10/29/11 | South Bay Homeownership Fair | City staff distributed storm water educational materials at this event designed for homebuyers. | Chula Vista City Hall |
| 03/08/12 | Reylenn Construction Staff Training | City staff provided training to Reylenn construction staff about SWPPPs, construction BMPs, inspections, and enforcement. | Rosina Vista Development |

Table 8-2 continued on next page

| DATE | EVENT | EVENT DESCRIPTION | LOCATION |
|---|---|---|---|
| 03/31/12 | Walk the Watershed | Community event where citizens took a walk though the OVRP and visited various education stations. City staff had an booth and distributed educational material. | Otay Valley Regional Park |
| 04/17/12 | San Diego County Apartment Association Conference | City and County of San Diego staff had a booth about storm water pollution prevention geared towards multi-family residential. Provided dog waste bag holders and reusable bags. | San Diego Convention Center |
| 04/21/12 | Day of the Child | Storm water staff manned a booth and provided storm water pollution prevention brochures, IPM tip cards, storm water calendars, and environmental giveaways | Memorial Park |
| 04/24/12 | Chula Vista Employee Earth Day Fair | City staff provided information about recycling, hazardous waste disposal, and water and energy conservation | Chula Vista City Hall |
| 04/28/12 | Go Green and Clean Family Day | City staff manned a booth and provided CLEAN brochures, IPM Pest Tip cards, and other giveaways to promote pollution prevention. | Otay Ranch Town Center |
| 04/28/12 | Creek to Bay Cleanup | City staff served as site co-captain for a site and provided educational materials to volunteers who picked up trash and removed graffiti. | Rice Canyon Open Space and Discovery Park |
| 05/06/12 | Cinco de Mayo | Storm water staff shared a booth with the CLEAN group and provided storm water pollution prevention brochures, IPM tip cards, and dog waste bag holders. | Downtown Chula Vista (Third Avenue) |
| 06/16/12 | Pet Fest and Doggy Dash | Storm water staff implemented a pet waste survey, provided pollution prevention education, and environmental giveaways to citizens | Memorial Park |
| 06/21/12 | Chula Vista Green Business Challenge Training | City storm water staff provided information about pollution prevention BMPs to business owners. | Mangia Italiano |

***Regional Outreach***

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further implementation of the Regional Residential Storm Water Education Plan that was submitted to the Regional Board in March 2008. The City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. The workgroup is broken down into sub-workgroups that focus on one, or more of the various components undertaken by the ERS. These sub-workgroups address media and

public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Continued implementation of a comprehensive media program including ads on TV, radio, and movie theaters; 2) Development and distribution of a bilingual regional Storm Water Coloring book; and 3) Continued participation in regional community events such as the Envirofair at the San Diego County Fair.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under a separate cover.

### 8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included dissemination of information via the County's Clean Water Project website targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, City inspectors meet with facility owners or managers and explain water quality issues relating to the particular type of industrial or commercial facility. BMPs relevant to the activities at each facility are explained and, corrective actions are proposed to bring the facility into compliance with the City's ordinances and BMP requirements. Consequences of non-compliance are also brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

### 8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of Low Impact Development site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- Chula Vista Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

### 8.3.4 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day
- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as pencils, pens, and pet waste bag holders. This reporting year, the CLEAN Team and Stakeholders continued to distribute the all-inclusive environmental brochure called CLEAN – Your Environmental Guide for Green Living. The brochure covers a wide range of environmental topics such as storm water pollution prevention, water conservation, energy, green living, transportation, recycling, and green gardening. In addition, Storm Water Management staff reaches underserved communities by distributing educational door hangers in specific neighborhoods that focus on pollutants such as trash, oil and grease, and bacteria.

During the reporting period, the City, with the help of I Love a Clean San Diego supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteers have participated in a number of activities during this event, including cleaning of trash, graffiti removal, and planting trees. Efforts are usually focused in underserved areas of the

City where more attention is needed due to trash and graffiti problems. Over 900 volunteers participated in the Beautify Chula Vista Day in October 2011.

The Graffiti Abatement Program allows citizens to report graffiti in their neighborhoods by phone, web, or email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. During the current reporting period, and as a result of downsizing City services, the Graffiti Abatement Program was reduced to one day per week. However, volunteers help the City in graffiti removal during weekends. During the current reporting period, the City received over 600 requests to remove graffiti by phone, e-mail, or website.

## 9.0 PUBLIC PARTICIPATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.*

### 9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

### 9.2 PROGRAM IMPLEMENTATION

***Beautify Chula Vista Day – October 22, 2011***

Beautify Chula Vista Day is an annual event that involves citizen participation and involvement in activities that enhance the environmental setting of the City. Every year, this event attracts several hundred volunteers and provides an opportunity for City staff to have direct interaction with the public to discuss environmental issues and the role that citizens can play in protecting their community's health and living standards. Volunteer citizens are able to participate in activities such as tree planting, graffiti removal, clean-up projects, and storm drain stenciling. During this reporting year's event, over 900 volunteers were able to remove more than 3,000 pounds of trash from City streets in addition to cleaning up graffiti.

***Otay Valley Regional Park Cleanup***

The Otay Valley Regional Park (OVRP) is being developed as a collaborative effort of the cities of Chula Vista and San Diego and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land.

Park maintenance and cleanup activities typically include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, repairing trails, and placing signage identifying the OVRP. On March 31, 2012, the San Diego Coastkeeper organized the Walk the Watershed public participation event in the OVRP. Several public and private organizations, including the City of Chula Vista supported

the event. More than 200 citizens participated in the event by taking a walking tour of the OVRP where they visited several education stations within the park and learned about pollution prevention and watershed protection. Participants ended their day by removing trash and/or invasive plant species from the park. More information about the Otay Valley Regional Park can be found on the web at http://www.ovrp.org/

***I Love a Clean San Diego (ILACSD) 10th Annual Creek to Bay Cleanup***

The tenth Annual Creek to Bay Cleanup event occurred on Saturday, April 28, 2012. The City co-sponsored this cleanup event, which was coordinated by ILACSD. The San Diego County Board of Supervisors presented this year's cleanup event through the support of a variety of organizations, including the City of Chula Vista through the San Diego Bay Watershed group. The event was able to bring together 5,900 volunteers who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Volunteers picked up almost 80 tons of trash, green waste, and recyclables from over 185 miles of coastline and inland areas. Commonly found items included plastic items and cigarette butts.

Cleanup sites within or adjacent to Chula Vista included the Otay Valley Regional Park, Otay Lakes, the Sweetwater Regional Park, Rice Canyon, Del Rey Canyon, and J Street Marina. At these locations, 380 volunteers removed almost 2,500 pounds of trash and recyclables from about 17 miles of Chula Vista waterways.

***Household Hazardous Waste and Used Oil Recycling***

The Household Hazardous Waste (HHW) Facility at the City of Chula Vista Public Works Center started operation in January 2002. It serves the Cities of Chula Vista, Imperial Beach, National City, and the County of San Diego. The facility is open every Wednesday and Saturday from 9am to 1pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under the door-to-door program, HHW is collected by appointment from residents who are unable to take the waste to the permanent facility or because of scheduling conflicts. The facility is under 24-hour camera surveillance to prevent illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill. Public participation in this program is expected to minimize the amount of hazardous materials that may otherwise enter storm drain systems. During the reporting period 3,430 residents participated in the collection program from the City of Chula Vista, National City, the County of San Diego, and Imperial Beach, of which 2,599 were Chula Vista residents.

***Public IC/ID Reporting and Graffiti Hotline***

The City encourages its citizens to partner with the City in keeping Chula Vista clean. Citizens can do so by reporting any illegal discharges to storm drains, as well as reporting any graffiti in their neighborhoods. Despite budget cuts from the previous reporting years, the City continued one day per week graffiti removal services on public and private property by using environmentally friendly power washing equipment and BMPs. Storm Water Management Section staff investigates illegal discharges to storm drain systems and provides education and enforcement. In cases of spills or pollutants entering storm drain systems, Public Works maintenance crews provide cleanup as needed. During the reporting period the City received 83

calls and reports about illegal discharges to storm drain systems. There were over 600 calls, emails, and web requests from citizens and City employees to the graffiti program during the reporting year, showing that citizens and employees are participating and taking an active part in keeping the City clean.

***CLEAN Business Program***

As part of its efforts to involve local businesses in keeping the City clean, the CLEAN Team started the CLEAN Business Program in February 2008. The CLEAN Team is made up of the City's Storm Water Management Section, Environmental Services Division, and the Department of Conservation. The CLEAN Business Program was designed to help small businesses exercise environmentally safe practices and become sustainable. This goal could only be achieved by learning basic environmentally responsible and sound methods related to their specific daily activities. The program verifies and promotes businesses that demonstrate environmentally friendly practices and conserve resources. As part of the verification process, the business must complete a packet of checklists with minimum BMPs and request an inspection by the CLEAN Team to verify that the selected BMPs are adequate and have been correctly implemented. A part of these BMP checklists are items related to storm water pollution prevention. The CLEAN Team verifies that the BMPs are in place and functioning. Once a business becomes a CLEAN Business, they receive recognition on the City's website and receive a decal sticker to put on their front window to show consumers that they are shopping at a CLEAN Business. During this reporting period, 86 businesses were certified, bringing the grand total of CLEAN Businesses to 125. In addition to the CLEAN Business Program, the City has also started the Green Business Challenge, which challenges businesses who are already certified to take extra measures to become more 'green' than they already are. Fifty-one businesses are participating in this program.

## 10.0 FISCAL ANALYSIS COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.*

*Permit Section G: Fiscal Analysis*

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

### 10.1 INTRODUCTION

The Municipal Permit requires the Copermittees to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The Standardized Fiscal Analysis Method and Format (Fiscal Analysis Method) was collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis

Method document was submitted to the San Diego Regional Water Quality Control Board by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009. The Municipal Permit further requires the Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. The fiscal analysis incorporated in this section is based on the standardized method. This is the third year that the standardized method is being used.

## 10.2 GENERAL BUDGET INFORMATION

The Standardized Fiscal Analysis Method includes a Standardized Fiscal Analysis Reporting Form, which consists of three tables separating jurisdictional, watershed, and regional expenditures. Jurisdictional expenditures are divided into components that mirror those included in the Municipal Permit as follows:

- Administration
- Development Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Illegal Discharge Detection and Elimination (IDDE)
- Education
- Public Participation
- Special Investigations
- Non-Emergency Firefighting

Further, each of the above categories may be broken down into sub-categories. Potential Sub-categories may include:

- Land Use Planning
- Environmental Review
- Development Project Approval and verification
- Public Construction Projects
- Private Construction Projects
- Public Reporting of Illicit Connection or Illegal Discharges (ICIDs)
- Jurisdictional Urban Runoff Monitoring Programs
- Other

Expenditure items to be considered for each category or sub-category may include:

- Administration
- Permitting and Licensing
- Project Planning and Engineering
- Maintenance Inspections
- Compliance Inspection and Enforcement

- BMP Implementation
- Educational Outreach
- Waste Collection and Recycling
- Jurisdictional Urban Runoff and Receiving Water Monitoring
- Other Expenditures

For reporting purposes, only the table incorporating major jurisdictional components will be used. Sub-categories and expenditure items are intended to provide standardization of expenditures and need not be shown in the final report.

City of Chula Vista staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Environmental Planning Division of the Development Services Department reviews development projects for compliance with the California Environmental Quality Act, assesses potential environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Land Development Division of the Development Services Department is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Division staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm Water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm Water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Section of the Public Works Department manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, the Conservation Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the City's GIS systems, and provides support to the Storm Water Management Section by mapping and updating the City's storm water conveyance systems and data management.

- The Operations Division of the Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Section, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Section of the Public Works Department is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections provide support to the Storm Water Management Section in the fulfillment of the City's JURMP and are instrumental in the implementation of that program. Although those departments, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

## 10.3 FISCAL ANALYSIS METHODS

The fiscal analysis method used in this report is based on the standardized fiscal analysis method and format dated January 29, 2009, developed by the Copermittees of the San Diego County NPDES Municipal Permit, Order No. R9-2007-0001.

## 10.4 FISCAL ANALYSIS RESULTS

### 10.4.1 EXPENDITURES

#### 10.4.1.1 JURISDICTIONAL

The City's jurisdictional expenditures for FY 2011-2012 related to compliance with the Municipal Permit are listed in Table 10-1 to 10-3.

**Table 10-1** NPDES Jurisdictional Expenditures for FY 2011-2012

| JURISDICTIONAL COMPONENT | | MULTIPLE PROGRAMS | PRIOR PROGRAM |
|---|---|---|---|
| Administration | $270,111 | | |
| Development Planning | $78,916 | | |
| Construction | $127,320 | | |
| Municipal | $1,053,661 | | |
| Industrial and Commercial | $81,430 | | |
| Residential | $24,446 | | |
| IDDE | $311,231 | | |
| Education | $39,374 | | |
| Public Participation | $1,000 | | |
| Special Investigations | $4,851 | | |
| Non-Emergency Firefighting | $8,149 | | |
| **Jurisdictional Total** | **$2,000,489** | | |

**Table 10-2** NPDES Jurisdictional Shared Program Expenditures for FY 2011-2012

| JURISDICTIONAL COMPONENT SHARED PROGRAMS | | MULTIPLE PROGRAMS | PRIOR PROGRAM |
|---|---|---|---|
| Used Oil Recycling | $10,582 | x | x |
| Household hazardous Waste Management | $360,877 | | |
| Wastewater Collection Systems Maintenance | $4,597,347 | x | x |
| Flood Management Projects and Flood Control Devices | $519,239 | x | x |
| **Jurisdictional Shared Programs Total** | **$5,488,045** | | |

**Table 10-3** Jurisdictional Shared Programs For Which Expenditures are Not Readily Available

| JURISDICTIONAL COMPONENT SHARED PROGRAMS FOR WHICH COSTS ARE NOT READILY AVAILABLE | MULTIPLE PROGRAMS | PRIOR PROGRAM |
|---|---|---|
| Land Use Planning | x | x |
| Environmental Review | x | x |
| Development Project Approval and Verification | x | x |
| Management of Pesticides, Herbicides, and Fertilizers | x | x |
| Roads, Streets, Highways, and Parking Facilities | x | x |
| Parks and Recreational Facilities | x | x |

#### 10.4.1.2 WATERSHED

The standardized Fiscal Analysis method and format provides a form for total watershed expenditures, which is divided into various watersheds draining each Copermittee's jurisdictional boundaries. The City of Chula Vista is wholly located within the San Diego Bay watershed and, therefore, the sum total of all expenditures associated with watershed activities is shown as one number under Watershed Total.

**Table 10-4** NPDES Watershed Expenditures for FY 2011-2012

| WATERSHED COMPONENT | | MULTIPLE PROGRAMS | PRIOR PROGRAMS |
|---|---|---|---|
| **Chula Vista's Share of the Watershed Total** | **$35,441** | | |

During FY 2011-2012, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions. During the current reporting period, the Copermittees of San Diego Bay Watershed decided to hire a consultant to develop their Watershed Urban Runoff Management Program annual report, and a cost share agreement was signed and each Copermittee contributed their share of the costs for this activity.

#### 10.4.1.2 REGIONAL

Table 10-5 for total regional expenditures shows the City's share of total regional costs that are determined by using cost share formulae included in the Memorandum of Understanding dated November 16, 2007, and signed by all Copermittees.

The City participates in regional meetings and activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, costs associated with activities of the following workgroups were included in the regional expenditures and budgets:

- Program Planning Subcommittee
- Fiscal, Reporting, and Assessment Workgroup
- Education and Residential Sources Workgroup
- Monitoring Workgroup
- Land Development Workgroup
- Municipal Workgroup
- Industrial and Commercial Sources Workgroup
- Regional WURMP Workgroup

Additionally, City staff time for attending regional workgroup meetings has been included in regional expenditures for Fiscal Year 2011-2012. Finally, annual fees for membership in the

California Storm Water Quality Association is paid as a regional expenditure and the appropriate share of the City of Chula Vista has been included in the following regional expenditure analysis.

**Table 10-5** NPDES Regional Expenditures for FY 2011-2012

| REGIONAL COMPONENT | | MULTIPLE PROGRAMS | PRIOR PROGRAMS |
|---|---|---|---|
| **Chula Vista's Share of the Regional Total** | **$236,308** | | |

As shown in Table 10-5, City's share of the above expenditures was $236,308 for FY 2011-2012.

### 10.4.2 FUNDING SOURCES

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, these vary significantly from year to year, depending on the level of development activities within the City. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

**Table 10-6** Funding Sources for FY 2011-2012

| No. | FUNDING SOURCE | PROGRAM ELEMENT |
|---|---|---|
| 1 | General Fund | Storm Water Management Program |
| | | Storm Drain Maintenance |
| 2 | Storm Drain Fee | Storm Water Management Program |
| 3 | Sewer Fee | Wastewater Collection System Maintenance |
| 4 | Special Assessment District Fees | Storm Drain Maintenance |
| | | Wastewater Collection System Maintenance |
| 5 | Grant Funds | Used Oil Recycling |
| | | Drainage Capital Improvement Projects |
| 6 | Solid Waste Fee | Household Hazardous Waste Management<br>Waste Management Recycling |
| 7 | Developer Deposits and Fees | Environmental Reviews |
| 8 | Loans | Drainage Capital Improvement Projects |
| 9 | Transnet | Drainage Capital Improvement Projects |

## 11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6 to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

*effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.*

## 11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the Copermittees to the Regional Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in other sections of this report.

The 2004-2005 reporting year was highlighted by the Copermittees' regional development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD) for the previous Municipal Permit, Order No. 2001-001. This comprehensive assessment incorporated water quality and source data collected by all Copermittees and provided a critical first look at regional water quality presented per watershed. On June 29, 2011, pursuant to the requirements of Section J.2.c-d of the current Municipal Permit, Order No. R9-2007-0001, the Copermittees of San Diego County submitted their Report of Waste Discharge (ROWD) and Long Term Effectiveness Assessment for the current permit cycle to the Regional Water Quality Control Board. The ROWD, among other topics, discusses the long-term effectiveness assessment methodology and proposes to adopt the methodology developed by the California Stormwater Quality Association (CASQA) in 2007. If approved by the Regional Board, the Copermittees will start using the CASQA Municipal Stormwater Program Effectiveness Assessment Guide during the next permit cycle.

The City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City continued to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

During the reporting period, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the continued implementation of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

In FY 2008-2009 the City of Chula Vista administered a survey instrument designed to measure public awareness of various storm water quality related issues. It is intended that similar surveys be conducted in the future to provide a measurable accounting of the City's public education and awareness programs. Additionally, the City of Chula Vista participates in the regional public education and outreach workgroup, which conducts surveys throughout San Diego County to evaluate the effectiveness of its public education programs. In addition, the City continued its source inventory validation process. This effort has been detailed in Sections 2.0 through 6.0 of

this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

## 11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization
  - BMP Selection
  - Targeted Outcomes
  - Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics are included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation during the reporting period. It is important to recognize that the whole of this document represents an account of program implementation in 2011-2012, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluates the overall effectiveness of the City's Storm Water Management Program.

### 11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this

concept continues to be perpetuated. The City has sought to integrate these key elements in order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

***Source Characterization***

Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by the previous Municipal Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially compiled in 2001, and have been updated annually ever since. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS systems, GBA database, and comprehensive business license tracking. In recognizing that source characterization needs to be increasingly matched to identified water quality concerns and program results, the City seeks to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Sections 2.0 through 6.0 of this report, the City has continued to fortify source characterization in 2011-2012. Comprehensive field verification of source inventories is conducted approximately every five years with the renewal of the Municipal Permit, while inventory updates based on existing information in the City's databases and observations during regular inspections are conducted annually. In this reporting period, the City continued its source verification utilizing the City's business license database combined with field observations during inspections and investigations to identify all active industrial and commercial facilities Citywide. The Municipal inventory is updated continuously as new facilities are constructed or acquired. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data is utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

***BMP Selection***

In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by the previous Municipal Permit's Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. These minimum BMPs were visited during the City's JURMP update in 2008 and changes were made as needed. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs.

***Targeted Outcomes***

The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes are to be established prior to program implementation to accurately

provide measurability and accountability. Included within the regional long-term assessment framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

**Figure 11-1** Hierarchy of Targeted Outcomes

***Assessment Measures and Indicators***

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

### 11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

### 11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes in water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional levels.

#### 11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the quality of storm water or non-storm water discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

#### 11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success or failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

#### 11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for the Copermittees to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

## 11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)
- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

### 11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2005 and 2011. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The graph on the following page, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent-specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. Graphs detailing the action level exceedences for each pollutant are on the following pages.

### 11.3.2 PROGRAM ASSESSMENT

In 2011-2012, the City continued to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2011-2012 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment. As mentioned in the preceding paragraphs, Copermittees continued to collaborate in an effort to establish a comprehensive assessment in developing a standardized framework for assessing the effectiveness of Jurisdictional Urban Runoff Management Program.

In previous reporting periods, i.e., in 2005-2006 and 2009-2010, the City conducted two rounds of public awareness surveys. The data collected during these surveys, together with future survey results will provide a better understanding of the effectiveness of the City's storm water education efforts.

The discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

#### 11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City, based on various components of the Municipal Permit (Tables 11-1 – 11-7). In the following sections, these tables and their associated analysis are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation, reflecting various elements of the Municipal Permit, and provide a summary accounting of activities conducted by the City in 2011-2012.

##### 11.3.2.1.1 LAND USE PLANNING

In view of the update to the City's local Standard Urban Storm Water Mitigation Plan (SUSMP), and inclusion of Low Impact Development (LID) and Final Hydromodification Management Plan (HMP), the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. During the current reporting period, development activities remain slow and the number of projects submitted to the City for approval and permit issuance was low. As can be seen from Table 11-1, thirteen SUSMP projects were submitted and eight SUSMP projects received approval. However, the number of total cumulative projects that have implemented post-construction BMPs and the number of projects inspected for post-construction BMPs remains high.

During this reporting period, BMP maintenance verification letters were sent to responsible parties reminding them of their responsibility to clean, inspect, and maintain storm water treatment facilities. Responsible parties were required to provide the City with certification of maintenance of the treatment facilities within a set time frame. Additionally, the City has added another GIS layer in the GBA tracking system identifying all public and private treatment category BMPs. These processes provided yet another mechanism to ensure proper maintenance and effectiveness of all treatment facilities and compliance with Municipal permit provisions.

The following tables summarize City of Chula Vista's activities during the reporting period towards ensuring compliance with SUSMP implementation and the review, inspection, and maintenance verification of SUSMP projects.

**Table 11-1** FY 2011-2012 Compliance with Activity-Based Requirements – Land Use Planning

| PERMIT SECTION | ACTIVITY/ SOURCE TYPE | TARGETED OUTCOME | ACTUAL | MEASURE OF SUCCESS | |
|---|---|---|---|---|---|
| D.1 Land Use Planning | Development Projects | # SUSMP Projects Submitted | # SUSMP Projects Approved | Actual/Target | % |
| | | 13 | 8 | N/A | N/A |
| | High Priority Sites (Total Listed = 85) | # Sites Targeted for Inspection | # Sites inspected | Actual/Target | % |
| | | 85 | 85 | 85/85 | 100 |
| | Medium Priority Sites (Total Listed = 47) | 47 | 35 | 35/47 | 74 |
| | Low Priority Sites (Total Listed = 3) | As Needed | 3 | N/A | N/A |

Please refer to Attachment F for a list of SUSMP projects inspected during the current reporting period.

Based upon the significant achievements and continued refinements experienced in 2011-2012, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

JURMP strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2011-2012.

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

***Development Storm Water Manual***

The Manual, updated in January 2011, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by City staff, developers, and consultants.

During this reporting period City staff actively participated in the Regional Land Development Workgroup meetings and activities and collaborated with other participants on regional activities. The current updated Model SUSMP is dated March 2011. The Copermittees submitted the Final HMP to the Regional Board, which was approved in July 2010. HMP requirements were later incorporated in the City's Development Storm Water Manual in January 2011. The City of Chula Vista has met all the deadlines for updating its local SUSMP and incorporating the Final HMP into its ordinances.

***Inter-Departmental Coordination***

The City's SUSMP and development review process includes multiple entities throughout the City. As the City continues to grow, it has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Although the current economic situation has slowed down the City's growth during the past five years, such coordination has continued in 2011-2012 to require refinement and augmentation, as necessary, to maintain compliance and ultimately improve water quality.

***Dedicated Storm Water Management Section***

The Development Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to City staff and assist project proponents and consultants. Environmental Health Specialists also perform the functions of post-construction BMP construction verification, inspection, and maintenance verification.

***Information System Support***

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. Additionally, Permits Plus, which is a specialized permits tracking software, is utilized in tracking a variety of discretionary permits, and specifically is used by the Development Services Department to identify and track Priority Development Projects. Further, Permits Plus is utilized in annual inventory updates. The GIS layer is continuously updated to manage and provide easy access and tracking of post-construction BMP Treatment facilities.

***Data Management***
As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. The City continues to address these challenges through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. The City continues to maintain up-to-date data and effectively track all information related to JURMP activities such as inventories, inspections, violations, notifications, and post-construction BMPs.

***New Development and Redevelopment Project Design Elements***
With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City continued to work with the development community to improve the storm water design features of proposed projects. The City continuously stressed this focus in 2011-2012 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects. The updated Model SUSMP, which is incorporated in the City SUSMP requirements, provides an enhanced approach in the level of analysis and project design elements for the development community.

#### 11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component continued to demonstrate success by consistent programmatic developments and enhancements. Through identified needs and associated management decisions, the City fortified its jurisdictional construction management component in 2011-2012. As the slowdown in development continued, many construction sites remained inactive or faced sever reductions in construction activities. Within the reporting period, the City worked closely with developers to stabilize inactive construction sites; promote pollution prevention and BMP implementation; and ensure proper maintenance of BMPs to prevent polluted discharges from construction sites. Because of sagging economy, this was a challenge, as many developers claimed that they had limited financial resources and were unable to fund their planned maintenance activities. City staff worked with developers to identify cost-effective BMPs and in some instances initiated enforcement action until full compliance was achieved. Mechanisms were identified to promote pollution prevention techniques as described in Section 3 of this report. The City continues to maintain the regulatory standards established by the Municipal Permit for construction activities and the City's construction performance standards included in the Chula Vista Development Storm Water Manual.

**Table 11-2** FY 2011-2012 Compliance with Activity-Based Requirements – Construction

| PERMIT SECTION | ACTIVITY/ SOURCE TYPE | TARGETED OUTCOME | ACTUAL | MEASURE OF SUCCESS | |
|---|---|---|---|---|---|
| D.2.d Construction | High Priority Sites (Total Listed = 39) | # Sites targeted for inspection | # Sites inspected | Actual/ Target | % |
| | | 39 | 39 | 39/39 | 100 |
| | Medium Priority Sites (Total Listed = 27) | 27 | 27 | 27/27 | 100 |
| | Low Priority Sites (Total Listed = 3) | As Needed | 3 | NA | NA |
| | All Sites (Total Listed = 69*) | Total sites identified | # in compliance or on a schedule for compliance | Actual/ Target | % |
| | | 69 | 69 | 69/69 | 100 |
| | | # of inspections during dry season | # of inspections during wet season | Total # of inspections | N/A |
| | | 48 | 465 | 512 | N/A |

*Note: Of the 69 construction sites listed above, 5 sites were inactive during the reporting period and were inspected on an as needed basis. Active sites were inspected according to the Municipal Permit requirements. For a complete list of construction sites inspected during the reporting period, please refer to Attachment G.

The following features distinguish the construction component of the City's JURMP:

***Inspection and Enforcement***

As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensures compliance with the construction component of the JURMP. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been fully achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

***Education and Training***

Storm Water Management staff provides education and training to all entities related to construction activities including developers, site superintendents, sub-contractors, and trades persons. During the previous years, this education and training capacity was further defined by storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, Chula Vista Storm Water Management staff continues to offer a strong asset and broad-based expertise in construction storm water management both locally and regionally. The adoption of the new Construction

General Permit necessitates further education and trainings to all entities related to construction activities. City staff continued their efforts in educating members of the construction industry at the local level during meetings and site inspections. During the reporting period, many Chula Vista staff members participated in training and certification courses required under the Construction General Permit, Order No. 2009-0009-DWQ and obtained their respective certificates.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2011-2012. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

***BMP Maintenance***

During the reporting period, due to an increase in the number of inactive construction sites, BMP maintenance on construction sites continued to be an area of concern. While inspection staff noted significant efforts in BMP implementation, the maintenance needs associated with implemented BMPs did not match implementation efforts on a consistent basis. The City continues to inspect inactive construction sites and issues formal inspection reports to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such formal reports is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites.

#### 11.3.2.1.3 MUNICIPAL

As exemplified in program descriptions included in other sections of this report, the City prides itself for outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City activities such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. The following table summarizes municipal activities' data.

**Table 11-3** FY 2011-2012 Compliance with Activity-Based Requirement – Municipal

| PERMIT SECTION | ACTIVITY/ SOURCE TYPE | TARGETED OUTCOME | ACTUAL | MEASURE OF SUCCESS | |
|---|---|---|---|---|---|
| D.3.a Municipal | High Priority Sites (Total inventoried in 2010-2011 = 68[1]) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 68 | 68 | 68/68 | 100 |
| | Medium Priority Sites (Total Listed = 5) | As needed | As needed | N/A | N/A |
| | Low Priority Sites (Total Listed = 12) | As needed | As needed | N/A | N/A |
| | Catch Basins, Inlets, MS4, Open Channels | Estimated quantity of waste targeted for removal (Tons) | Quantity of waste removed (Tons) | Actual/Target | % |
| | | 122 | 224 | 224/122 | 183 |
| | Streets/Parking Lots | Estimated distance of curb/park miles to be cleaned | Total curb/park miles cleaned | Actual/Target | % |
| | | 18,000 | 18,000 | 18,000/18,000 | 100 |
| | Catch Basins/ Inlets | # of catch basins and inlets in the City | # of catch basins and inlets inspected | Actual/Target | % |
| | | 12,491 | 7,379 | 7,379/12,491 | 59 |
| | | # of catch basins and inlets targeted to be cleaned | # of catch basins and inlets cleaned | Actual/Target | % |
| | | 43[2] | 1,237 | 1,237/43 | 2,876 |

[1] Three categories listed in the Municipal Inventory (Attachment C) as follows are inspected on a regular and as needed basis. The frequency of inspection of these categories exceed Municipal Permit requirements:

- MS4
- Roads, Streets, and Highways
- Special Events

[2] 43 catch basins exceeded the criteria for cleaning (33% or more full).

With such a well-rounded approach, the City has a significant number of management measures to accurately assess the effectiveness of municipal program component. Further, no BMPs have been identified as ineffective within the reporting period of this report.

The following features distinguish the Municipal component of the City's JURMP:

***Municipal Facility Inspections***
The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2011-2012, and as part of this comprehensive inspection process, Storm Water Management staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

***Environmental Programs***
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have continued to capitalize upon in 2011-2012 through the development of a broad-based outreach and educational campaign by the City. The City's CLEAN Business program adopted in 2008 continued to promote partnerships between the City and local businesses that operate in an environmentally responsible manner and protect the environment. The program was well received by local businesses and has increased in membership since its adoption. To date, 125 Chula Vista businesses have enrolled in the program.

Based on exemplary municipal pollution prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for program improvement or modification at this time.

#### 11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2011-2012 reporting year was a continued maintenance year in terms of industrial and commercial activities within the City. Inventory validation and supplemental inspection efforts remain the highlights of this year's activities. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous industrial and commercial facilities operating within the City. With such a significant variety of commercial and industrial activities in Chula Vista, staff has recognized the need to target those areas and business activities that remain high on the source priority list, and to provide a consistent presence and strong enforcement standard. Notably in this reporting period, Storm Water Section staff continued its one-on-one educational training program on storm water pollution prevention and BMP implementation to specific industrial facilities that have a track record of violations and were identified as High Threat To Water Quality.

The City's FY 2011-2012 inventory of industrial/commercial facilities includes 184 industrial facilities and 1,154 commercial facilities, of which 409 are mobile businesses. However, this inventory was not yet available during the reporting period, and the 2010-2011 industrial/commercial inventory was used for inspections. The numbers under Targeted Outcomes in Table 11-4 reflect the 2010-2011 inventory. In 2011-2012, Storm Water Management staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Municipal Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not

identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

**Table 11-4** FY 2011-2012 Compliance with Activity Based Requirements – Industrial/Commercial

| PERMIT SECTION | ACTIVITY/SOURCE TYPE | TARGETED OUTCOME | ACTUAL | MEASURE OF SUCCESS | |
|---|---|---|---|---|---|
| D.3.b Industrial | High Priority Sites (Total inventoried in 2010-2011 = 43) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 43 | 37 | 37/43 | 86 |
| | Medium Priority Sites (Total = 5) | As needed | As needed | NA | NA |
| | Low Priority Sites (Total = 148) | As needed | As needed | NA | NA |
| D.3.c Stationary Commercial | High Priority Sites (Total inventoried in 2010-2011 = 225) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 225 | 197[1] | 197/225 | 88 |
| | Low Priority Sites (Total = 672[2]) | As needed | 44 | NA | NA |

[1] Of the 225 total high priority commercial facilities targeted for inspection, 28 were inspected and found to be either closed, relocated, or did not pose a threat to water quality (had indoor activities only). Therefore, inspection reports for only 197 facilities were prepared. Those facilities that were closed, relocated, or did not pose a threat to water quality were subsequently removed from the 2011-2012 commercial source inventory.

[2] The Municipal Permit does not require annual inspections of mobile businesses. Therefore, mobile businesses marked as such in the Commercial Source Inventory and Prioritization List (Attachment D.1) are not included in the above numbers. Mobile businesses are regulated differently from stationary businesses

The following features distinguish the industrial/commercial component of the City's JURMP:

***Integrated and Balanced Approach***

With a dedicated storm water compliance inspection staff, industrial and commercial facilities are effectively regulated. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme. Further, Public Works maintenance and landscape crews, whose working environment is in the field, have been trained and educated in storm water pollution prevention, and they report any observed illegal activities or discharges. As such, they are considered the "eyes and ears" of the Storm Water Management Section.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

#### 11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City of Chula Vista defines the residential component of the City's JURMP. Any small changes in behavior of residents are magnified due to the effect of numbers. As such, the Storm Water Management staff has sought to achieve continued success in the reduction of pollutants from residential areas through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types associated with such activities. The Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality. Table 11-5 shows the quantity of Household Hazardous Waste and used oil collected from residents in the City of Chula Vista for FY 2010-2011. The significant quantities collected in HHW can be attributed to an aggressive effort by the City on residential outreach and educational efforts. Similarly, the quantity of used oil collected showed an increase of 172% over the previous Fiscal Year, which is an indication of the effectiveness of the program.

**Table 11-5** FY 2011-2012 Compliance with Activity-Based Requirements – Residential

| PERMIT SECTION | ACTIVITY/ SOURCE TYPE | TARGETED ACTUAL FY 10-11 | ACHIEVED ACTUAL FY 11-12 | MEASURE OF SUCCESS | |
|---|---|---|---|---|---|
| D.3.c Residential | Household Hazardous Material | 412,706 lbs | 620,929 lbs | Actual/Target | % |
| | | | | 620,929/412,706 | 150 |
| | Used Oil | 28,732 gallons | 78,122 gallons | 78,122/28,732 | 272 |

***Residential Program Strengths:***

***Pollution Prevention***

Various pollution prevention programs offered to residents strengthen the City's residential component. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, oil filters, green waste, recyclables, used cooking oil, household hazardous waste, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

***Residential Outreach and Education***

The City continued to focus significant resources on residential outreach and education efforts in 2011-2012 and constantly endeavored to devise different avenues in reaching the public. While these activities are more fully described in Section 8.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

***Residential Program Improvement Areas and Challenges:***
Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

#### 11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts within various City programs such as the Conservation Program, the Regional Used Oil Recycling Program, the waste management and recycling program, and the Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Management Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

While the City continuously strives to improve its JURMP implementation program, it has not identified specific management measures by which to improve education and public participation activities. The Clean Business program was the latest measure added in our public participation activities. The City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

***Education and Public Participation Program Strengths:***

***Environmental Program Collaboration***
As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous environmental programs within the City. As such, the Storm Water Management Program has been able to reach more diverse audiences and participate in a greater variety of public participation venues. This collaboration of programs that culminated in the creation of the CLEAN program has resulted in clear and consistent messaging to Chula Vista residents and has reinforced City's resources toward more effective and holistic environmental programs.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. Through the collaboration of environmental programs such as conservation, waste management, household hazardous waste collection, recycling, and storm water management, citizens receive consistent and interrelated messages, and participate in activities that demonstrate various facets of environmental protection. Such coordinated public education and participation programs have far reaching and lasting effects that ultimately result in general acceptance of environmental concepts and changes in behavior. It has been recognized that the interrelationship of each of

these programs collectively, is integral to the overall success of each of these programs individually.

***Internal Staff Training***

Through formal or informal training, meetings or individual contact, staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

***Chula Vista CLEAN Program***

The City continued to take significant steps to further implement an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment and a sense of ownership to the community's environment, water resources and watershed.

***Education and Public Participation Program Improvement Areas and Challenges:***

***Education of the Development Community***

The updated Model SUSMP, which was incorporated in the City's local SUSMP required extra efforts by City staff, developers, and consultants. The development community, which was used to meeting water quality requirements of their projects by mainly incorporating mechanical treatment BMPs in their drainage systems, was now faced with LID and hydromodification requirements. LID principles are based on site planning for the minimization of impervious areas, utilizing landscaped areas for the benefit of water quality, water conservation, and other natural site design BMPs that mimic the pre-development hydrologic conditions of the site. Integrated Management Practices (IMPs) combine the benefit of natural treatment and flow attenuation methods to both treat runoff and mimic pre-development hydrology by reducing runoff flow peaks and durations.

LID concepts require site planning at the earliest stages of the project conception. A change in perspective and a closer cooperation between architects, planners, and engineers, as well as cross training among these groups are needed. Because of these reasons, and the inevitable fact that normally there is reluctance to change acquired habits and established procedures, City staff faced the challenge of reviewing multiple submittals and meeting with project applicants, on occasions several times, before acceptable site plans were achieved. Through regional and jurisdictional efforts, developers and consultants are becoming familiar with the new requirements and are making the necessary adjustments to incorporate LID principles into their project plans. After the issuance of the current Municipal Permit, the Storm Water Management staff expanded its inspections and enforcement of post-construction BMPs to ensure BMP implementation and maintenance on development projects, often exceeding minimum requirements of the Permit. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and

clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

**Table 11-6** Compliance with Activity-Based Requirements – Education and Public Participation

| PERMIT SECTION | ACTIVITY/ SOURCE TYPE | TARGETED OUTCOME | ACTUAL | MEASURE OF SUCCESS | |
|---|---|---|---|---|---|
| D.3.g Education | Outreach (External) | # targeted training workshops, outreach events | # training workshops, outreach events conducted | Actual/Target | % |
| | | 14 | 14 | 14/14 | 100 |
| | Staff Training | # Training sessions FY 09-10 | # Training sessions FY 10-11 | Actual/Target | % |
| | | 10 | 11 | 11/10 | 110 |

### 11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program, all support this critical programmatic element. To date, the City of Chula Vista has completed two rounds of surveys designed to measure public awareness of various storm water quality related issues. The surveys are intended to measure the level of knowledge and associated behavioral change. During the reporting period, the City provided a wide cross-section of information through the interrelationship of various environmental programs. The City was able to significantly impact the level of knowledge and awareness within the community through its continued efforts in influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Hotline Call Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years, as these indicators become more wholly developed and additional data is collected; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

***Hotline Call Response Tracking***

A comprehensive hotline call response summary is presented in Attachment L – Hotline Call Response Summary. It is important to note that trends in hotline calls received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of hotline calls from FY 1998-1999 to FY 2011-2012. The high level of public participation in reporting illegal discharges can be attributed to two elements, 1) the expanded effort by the City in its public education and outreach that gained substantial increase in public awareness of various storm water quality issues, and 2) publicity of the hotline and its ease of access. It may be inferred that overall programmatic influences are strong throughout the community.

**Figure 11-2** Chula Vista Storm Water Hotline Call Summary 1998-2012

***Business License Application Screening Procedure***

The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants, Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

The City continued to utilize the regional mobile business database website. The website includes a compilation of all approved mobile business applications in the region, which is categorized by jurisdiction. The creation of regional source inventory is a significant improvement in mobile business database management, which can provide essential information in monitoring and tracking mobile business activities in the entire region.

***Storm Water Web Site***

The City's CLEAN website development and update continued into 2011-2012. This site offers valuable information to Chula Vista residents and businesses and is intended to facilitate public education on environmental issues, including storm water. The website also provides a means for residents to report illegal discharges to storm drain systems. Due to technical constraints, it is not possible at this time to count the number of people accessing the website. It is hoped that this technical difficulty will be overcome in the future in order to provide a method to assess the usefulness of the website. In the meantime, Storm Water Management Section will continue to resort to other means of assessment such as surveys.

***Development Review Process***

During the current reporting period, the City continued implementing the environmental review process for all development and redevelopment project submittals. The City's JURMP includes a comprehensive flow chart to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. Through the required submission of Water Quality Technical Reports (WQTR) for Priority Development Projects; subsequent review by City staff; and project pre-construction meetings, in 2011-2012 a notable increase in knowledge and awareness within the development community was observed. The level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with SUSMP requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. A detailed description of the review process has been discussed in section 2 of this report. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, including Low Impact Development and hydromodification, and will continue to take this approach in future reporting years.

#### 11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

During this reporting period, the City continued to implement BMP tracking measures into various components as reviewed in this report. It has been recognized that through the implementation of well-developed BMP tracking measures, the City is able to more fully evaluate BMP implementation and associated behavioral change. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation

- Survey

***Inspection Activities***
As discussed in applicable sections of this report, the City has developed comprehensive commercial, industrial, municipal, and construction inspection programs. It is through these well-developed inspection programs, that the City is able to utilize BMP implementation tracking and assessment mechanisms.

In the reporting year 2011-2012, the Storm Water Management Section continued to use the GBA database management system to track source inventories, inspection activities, and other data relevant to the assessment of storm water management programs. The use of the GBA was expanded and refined to better serve the purposes of the new Municipal Permit. Through this database program, Storm Water Management staff is able to view the historical activities such as inspections and violations of commercial, industrial, municipal, and construction sites. Further, in support of BMP selection and evaluation throughout various community sectors, staff uses the inspection forms that were developed in FY 2005-2006. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities are intended to provide fully developed BMP implementation tracking mechanisms.

Based on data gathered from such activities, the City is able to take a critical look at BMP selection and implementation Citywide, and be able to evaluate behavioral change within business communities and further validate effectiveness trends in years to come.

***SUSMP Implementation***
Within the development community, implementation of post-construction BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

***Survey***
To date, the City has conducted two rounds of surveys and intends to conduct similar surveys in the future with each permit reissuance cycle. The survey questionnaire includes 11 questions designed to measure public awareness of various storm water quality related issues and their relationship to behavioral change. The survey administered in 2005 served as a general baseline for comparison. Although the survey in general is an assessment of public awareness, a few questions were designed to measure behavioral change. The focus of the survey was residential behaviors related to auto maintenance, landscaping, pet care, and swimming pool maintenance. Overall, results show that residents are aware of pollution prevention methods to protect waterways. Results show that some improvement can be made by educating residents about watersheds, the difference between the storm drain and the sewer system, and on BMPs for vehicle washing. Results suggest that although residents know in general how to prevent pollution, they still may not know the fundamentals of why they should prevent pollution. The City will take this knowledge and use it to better focus its education program.

#### 11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-7 are focused on municipal functions and programs.

**Table 11-7** FY 2011-2012 Load Reduction

| ACTIVITY/FUNCTION | LOAD REDUCTION | POLLUTANT TYPE |
|---|---|---|
| Used Oil Recycling | 78,122 gallons | Motor Oil |
| Household Hazardous Waste Collection | 620,929 pounds | Antifreeze, Oils, Paints, Aerosols, etc |
| MS4 Maintenance | 0.06 tons | Trash, Debris, Leaves, Grass, Rock, Silt |
| MS4 Catch Basin and Inlets | 14.66 tons | Trash, Debris, Leaves, Grass |
| Channel Maintenance | 209.09 tons | Trash, Debris |
| Street Sweeping | 787.6 tons | Trash, Debris, Sediment |

### 11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators and nitrate are the persistent constituents of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses. Nitrate is commonly associated with landscaping activities and groundwater intrusion. Notably, the City continued its special investigation this reporting year to learn more about the sources of nitrate within the City, particularly those areas that show a consistent flow of groundwater into the storm drain system. Based on the findings of the study, it has been determined that groundwater intrusion into surface and underground storm drain conveyance systems is the main source of elevated nitrate levels in MS4 discharges.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program
- A comprehensive storm water conveyance system maintenance
- Street sweeping

- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that a number of pollutants are on a declining trend in this reporting period. Particularly, significant decreases in Total Coliform and Fecal Coliform are encouraging. These results can be interpreted as follows:

The City maintained its expanded public education and outreach in this reporting period. This effort was aimed at increased awareness and changes in public behavior. Based on current and past results from the dry-weather monitoring program, and past violation reports, specific residential areas that were identified as High Threat To Water Quality (HTTWQ) were targeted for disseminating educational materials specific to the type of pollutants and violation activities. Moreover, the implementation of BMPs as described above is considered effective in deceases in fecal coliform and total coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. Further, due to the slowdown in construction activities, creation of urban impervious areas slowed down during the reporting period, which may also contribute to decreased instances of observed pollutant discharges. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout an extended period of time. The recently submitted ROWD and LTEA include more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

## 12.0 SPECIAL INVESTIGATIONS

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.*

### 12.1 SELENIUM SPECIAL STUDY

In November 2010, the USEPA approved the 2008-2010 303(d) list for the San Diego Region. Table 12-1 shows the pollutant/waterbody combinations within or adjacent to the City. Both Poggi Creek and Telegraph Canyon Creek, listed for toxicity and selenium, respectively, are located entirely within the City of Chula Vista. The lower section of Sweetwater River, below the impoundment (Sweetwater Reservoir), is 303(d) listed for a variety of pollutants. The Cities of San Diego, Chula Vista, National City, Lemon Grove, and La Mesa, as well as the County of San Diego discharge into the Lower Sweetwater River. As a proactive measure, the City, with the help of a consultant, initiated a special study to further investigate selenium concentrations in Telegraph Canyon Creek and augment data collected by the Regional Board as part of the SWAMP monitoring program. The City decided to give priority to selenium due to the fact that exact pollutant(s) causing toxicity within Poggi Canyon Creek and Sweetwater River have yet to be determined through regional monitoring studies. Similar studies for the Sweetwater River will have to be conducted with cooperation from all Copermittees contributing to flows in the Sweetwater River as a collaborative effort.

**Table 12-1** 2008-2010 303(d) Listed Waterbody-Pollutant Combinations In or Adjacent to Chula Vista

| WATERBODY | POLLUTANT |
|---|---|
| Poggi Canyon Creek | Toxicity |
| Telegraph Canyon Creek | Selenium |
| Sweetwater River, Lower (below Sweetwater Reservoir) | Enterococcus |
| | Fecal Coliform |
| | Phosphorus |
| | TDS |
| | Total Nitrogen as N |
| | Toxicity |
| | Selenium |

The four sites within Telegraph Canyon Creek that were sampled during the previous reporting period were sampled in the current reporting period. Preliminary results have shown that the majority of total selenium concentrations have been below the Water Quality Objective of 5µg/L. The City will continue gathering data to supplement this study in both the wet and dry seasons to obtain better temporal coverage.

The City will continue this long-term special study to characterize selenium within Telegraph Canyon Creek in order to obtain statistically significant data. Potential future directions for selenium studies involve working with other dischargers within Sweetwater River.

## 13.0 NON-EMERGENCY FIRE FIGHTING

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.*

### 13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

### 13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods are used to reduce the discharge of pollutants to the MEP. BMPs are implemented when conducting the activities described in the following sections:

#### 13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff can be directed to the sanitary sewer system.
- Vehicles and equipment are cleaned where runoff can pond and evaporate and/or where runoff filters through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

#### 13.2.2 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When water flows to an area where landscaping does not prevent runoff, the Officer-in-Charge surveys the area prior to training activities to ensure that drill activities do not wash debris or sediment to storm drain systems.
- Prior to drill activities, debris is removed from downstream areas that could potentially discharge to storm drain systems.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.

### 13.2.3 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept regularly to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and the disposal of spilled materials is in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site personnel are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

### 13.2.4 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods cannot be identified. In such cases, BMPs are used to control water usage and effluent flows to prevent discharges to MS4s.

### 13.2.5 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory (See Attachment C). Such facilities are inspected on an as needed basis. Only one fire station (Fire Station No. 4/Training Tower) has training capabilities. This facility is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter
- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism, which diverts the wash water to the sanitary sewer system and rainwater to storm drain systems.

All personnel who conduct washing activities are properly trained on using the diverter device and ensuring it is used appropriately. Trucks that require cleaning from other stations are brought to the stations equipped with washing capabilities.

## 14.0 JURMP REVISIONS

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(m)i – A description of any proposed revisions to the JURMP.*

The following paragraph details updates to the City's JURMP.

## APPENDICES

Since the City's JURMP document was developed and submitted to the Regional Board in March 2008, the JURMP Appendices have been updated, as needed, and have been included in the JURMP Annual Reports as Attachments. During the current reporting period, the inventories of construction sites; municipal, commercial, and industrial facilities and activities; and Priority Development Projects with treatment control BMPs were updated. These inventories are included in Attachments A to E of this report.

## 15.0 CONCLUSIONS

The present report is an accounting of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2011 to June 30, 2012. It has been prepared in compliance with the requirements of the San Diego Regional Water Quality Control Board's Order No. R9-2007-0001, National Pollutant Discharge Elimination System Municipal Permit No. CAS0108758. The report format follows the regional standardized reporting format developed by the Copermittees as required under Section M.6 of the Municipal Permit.

Section 10 "Fiscal Analysis" of this report follows the guidelines provided in the Standardized Fiscal Analysis Method and Format dated January 29, 2009, which was developed by all Copermittees pursuant to the requirements of Section G.3 of the Municipal Permit.

Submittal of Section 7 "Illicit Discharge Detection and Elimination Component" has been deferred to December 15, 2012 as permitted by Addendum No. 2 to Order No. R9-2007-0001. The Regional Board issued Addendum No. 2 in recognition of the fact that field screening and analytical monitoring work could continue to the end of September of each year, and time was necessary to complete, finalize, and submit the required reports.

As can be construed from the contents of this report, during the reporting period of July 1, 2011 to June 30, 2012, the City of Chula Vista met, and in some cases exceeded, implementation requirements of the Municipal Permit and the City's JURMP.

### DEVELOPMENT PLANNING

The latest update of the City of Chula Vista Development Storm Water Manual was made in January 2011, which is the current update. The Manual includes the City's local SUSMP. The updated Manual incorporates the requirements established under the updated regional Model SUSMP and the Final Hydromodification Management Plan. No further SUSMP updates are required under the current Municipal Permit cycle.

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP. The 2011-2012 Fiscal Year marked one of the lowest number of private development applications. Although there were a few major development projects under review by the City, only a handful of small projects received construction permits.

The City mailed out post-construction treatment control Best Management Practices (BMPs) maintenance verification letters and forms to responsible parties and followed up to ensure that they were duly certified and returned. Inspections of post-construction treatment control BMPs were conducted on privately maintained facilities. The City successfully met and exceeded the post construction treatment control BMP inspections requirements of the Municipal Permit. The Municipal Permit requires that at least 20% of all SUSMP projects should be inspected annually.

Further emphasis was placed on the practice of Low Impact Development site design BMPs. Developers and consulting engineers were encouraged and required to incorporate such BMPs in

their site design as much as site conditions permitted. In January 2011, the hydromodification control requirements went into effect. However, due to the slump in building construction, very few projects that qualify under this requirement have their project submittals under review by City staff.

### CONSTRUCTION

The Construction Component of the City's JURMP primarily included inspections of construction sites for BMP implementation. The City successfully conducted all inspections on private and public construction sites and resorted to enforcement action where necessary to bring violating sites into compliance with the requirements of the City's storm water management and grading ordinances. Notices of Violation were issued when necessary. During the reporting period, the majority of graded construction sites remained inactive. Responsible persons for such sites were contacted and they were required to repair and maintain their erosion and sediment control BMPs. The number of construction inspections conducted during the reporting period meets and exceeds the minimum requirements included in Section D.2.d of the Municipal Permit.

### MUNICIPAL

The Municipal Component of the City's JURMP primarily includes implementation of BMPs on all City owned facilities and activities. During the reporting period, the City ensured BMP implementation through staff training and inspections. All high priority municipal facilities and some low priority facilities and activities were inspected during the reporting period. The City also conducted street sweeping, storm sewer system maintenance, and sanitary sewer system maintenance as source control preventive measures. Wastewater capture was implemented during graffiti removal, Integrated Pest Management practices were implemented during landscaping and parks maintenance, and waste management activities were conducted after each special community event. In Fiscal Year 2011-2012, the City achieved all its inspections, training, and BMP implementation goals under its JURMP Municipal Component.

### INDUSTRIAL AND COMMERCIAL

The Industrial and Commercial Component of the City's JURMP constitutes a major section of its storm water management program. City staff conducts industrial and commercial inspections and provides one-on-one training to business owners and managers throughout the City. As shown in Attachments I and J, during the current reporting period, commercial and industrial facilities were inspected as required by the Municipal Permit.

Mobile businesses applying for business licenses were directed to the Storm Water Management Section for training and signing of a certification statement to the effect that they are familiar with the City's storm water regulations and would implement BMPs appropriate to their line of business at all times. An inventory of such businesses is included in Attachment D3 of this report.

## RESIDENTIAL

The City has developed the residential component of the JURMP based upon a multi-faceted approach, including pollution prevention; hotline response and enforcement; and outreach and education. The City collects and analyzes information about various aspects of observed and reported violations from multiple sources to identify high-priority residential areas and activities. Such areas and activities are then targeted for public education and outreach. During the current reporting period the number of hotline calls decreased from a peak in Fiscal Year 2009-2010, but still remained relatively high, which can be indicative of the public awareness of storm water regulations and the relative ease of reporting.

During the reporting period, various programs under the City's residential component continued, including 1) Household hazardous waste collection center, 2) State-certified used-oil collection center, 3) Household collection of used oil, 4) Christmas tree recycling program, 5) Residential complaint response and enforcement, 6) Residential door hangers, and 7) City's environmental website.

## PUBLIC EDUCATION AND OUTREACH

The City of Chula Vista has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses and activities. As such, the City places great importance on its education and outreach programs. During the reporting period, City staff organized or participated in several training and educational events.

The CLEAN group continued its activities toward its mission: "Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation." CLEAN group activities included media articles, school education efforts, and community events.

City staff provided public education to industrial, commercial, and construction communities by one-on-one contact and on-site training. Business owners and managers, and construction site personnel were trained based on their specific site conditions and pollutant generating activities.
The City's storm water management program is based on the concept of continuous improvement through iterative goal setting, implementation, and assessment cycles. This process requires identifying measurable goals at the beginning of the process, followed by implementation of tasks, and then assessment and comparison of results with identified goals. This illustrates the importance of assessment in any storm water management program.

## PROGRAM EFFECTIVENESS ASSESSMENT

During the reporting period, the City of Chula Vista continued using the methodology developed in the regional document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs." Assessment tools such as assessment of activity based results, surveys, and dry weather monitoring results were used to arrive at acceptable conclusions. Higher levels of assessment such as changes in discharge quality and receiving water quality were deemed to be beyond the scope of jurisdictional programs and, therefore, delegated to regional research and analysis such as the Regional Monitoring Program, Long-Term Effectiveness Assessment, and the Report of Waste Discharge.

Assessment results indicate that during the Fiscal Year 2011-2012, the City of Chula Vista met all its measurable goals for program element implementation. Dry Weather monitoring indicates that the majority of pollutants of concern show decreasing trends, while some still pose a challenge. In particular, nitrate and bacterial indicators appear to pose persistent problems, which the program should focus on.

## FISCAL ANALYSIS

A successful storm water program would require adequate funding. During the current reporting period, the City of Chula Vista made such funds available through various sources including the general fund, storm drain fee, sewer fee, special assessment district fees, etc. There were other City programs designed to serve multiple objectives, including storm water pollution prevention, such as wastewater collection system maintenance, household hazardous waste management, etc. While those programs were originally intended to serve other goals and objectives, they, directly or indirectly, help the City's storm water management program by reducing sources of pollution and preventing pollution from reaching receiving waters. Where cost analysis is available for such programs, they have been included in Section 10 of this report.

Additionally, the City contributed its share to watershed and regional activities, which is identified in the Fiscal Analysis included in Section 10 of this report.

As the City of Chula Vista continues its efforts toward environmental protection in general and water quality improvements in particular, its storm water management program becomes more refined and a part of a more holistic sustainability program.

## Attachment D.2 - Additional Information for Industrial and Commercial Inventories

| Facility Name | Address Number | Street Name | Street Designation | Potential Pollutants | | | | | | | | | GIS | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Name used to identify facility in database | Street number of facility, this is the numeric street address | Name of street facility is located on. | **NOTE:** Chula Vista Database has separate column for street designation | Potential pollutants that may be generated by the facility. A facility can be identified as having more than one pollutant. Each Copermittee shall use best professional judgement to determine potential pollutants for each facility. Copermittees may elect to use "likely" or "unlikely" rather than "yes" or "no" for valid entries. | | | | | | | | | The following fields are optional. The purpose of these fields are to supply a coordinate system for the purposes of GIS mapping. | |
| | | | | Bacteria | Oxygen Demanding | Metals | Nutrients | Oil & Grease | Organics | Pesticides | Sediment | Trash | Latitude / Longitude (Decimal Degrees) NAD 83 | |

## FY 2011-2012 Hotline Call Response Summary

| Incident Date | Structure Category | Site Category | | Address | | Type of Violation |
|---|---|---|---|---|---|---|
| 07/11/2011 | STREET | Residential | 805 | OAKLAWN | AV | Power Washing |
| | Comments/ Action Taken: | On 07/11/11, City staff responded to a complaint call at 805 Oaklawn. Upon arrival, saw a puddle of brownish water in front of 805 Oaklawn at the southeast corner of K St and Oaklawn. There was a powerwashing machine in the front yard of the subject address, but there was no evidence showing that an illegal discharge came from the subject address. | | | | |
| 07/12/2011 | STREET | Residential | 1525 | MARBLE CANYON | WY | Automotive Work |
| | Comments/ Action Taken: | On 07/12/11 responded to a complaint call at the subject address about welding with no containment. Upon arrival at the home, there was no welding activity occurring. The street and driveway appeared to have no evidence of welding debris. There was some landscaping irrigation discharge in the gutter from the french drain. Photos taken for record. A door hanger was left on the inside of the front door gate with the home improvement brochure attached. No further action required. | | | | |
| 07/28/2011 | STREET | Construction Sites | | AGUA VISTA | DR | Other |
| | Comments/ Action Taken: | On 07/27/11 rcvd notification of algae buildup in curbline from model home in Rolling Hills Ranch. City staff responded and observed same. Home was overwatering causing discharge. Spoke with superintendent who will clean curbline. No further action required. | | | | |
| 07/28/2011 | STORM CHANNEL | Construction Sites | 942 | THIRD | AV | Other |
| | Comments/ Action Taken: | On 07/25/11 rcvd notification of a transient camp located near the storm channel at subject location. Contacted PD Watch Commander who forwarded the issue to [redacted] of the Street Crime Division. On 07/27/11 PD staff responded and made contact with one transient. PD has given him 72 hours to depart the area. Individual complied. No further action required. | | | | |
| 07/29/2011 | STREET | Residential | 1182 | DE ANZA | CT | Pool Maintenance |
| | Comments/ Action Taken: | On 07/29/11 rcvd notification of pool filter backwash at subject address. City staff responded and observed diatomaceous earth in the curbline. Resident was not home. Left door hanger and education material and have resident contact me ASAP. Resident conducted cleanup. No further action required. | | | | |
| 07/29/2011 | STORM CHANNEL | Municipal | | WILLOW | ST | Other |

| Incident Date | Structure Category | Site Category | Address | Type of Violation |
|---|---|---|---|---|
| 07/29/2011 | STORM CHANNEL | Municipal | WILLOW ST | Other |
| | Comments/ Action Taken: | On 07/28/11 rcvd notification from County consultant of possible oil in the draining area at Willow Street Bridge. City staff responded and observed black stagnant water. In addition, they referred possible transient camp. Observed trash and debris but no evidence of camp. Site in County. No further action required. | | |
| 08/03/2011 | STREET | Residential | 225 PALOMAR ST | Unknown Discharge |
| | Comments/ Action Taken: | On 08/03/ rcvd notification of discharge from apartment complex for some time. City staff responded and observed that discharge was from irrigation system. Spoke with staff to have maintenance check system for any breaks. No further action required. | | |
| 08/04/2011 | STREET | Residential | 1052 FIFTH AV | Sewage Spill |
| | Comments/ Action Taken: | On 08/04/11 rcvd notification of a sewage from the subject property. City staff responded and observed large pools of sewage along with approximately 30 gallons of used oil. Owner conducted repairs and cleanup. Issued Admin Citation for $2000. No further action required. | | |
| 08/08/2011 | STREET | Commercial | 1206 BROADWAY | Unknown Discharge |
| | Comments/ Action Taken: | On 08/08/11 rcvd notification of unknown discharge coming from IHOP parking lot. City staff responded and observed trash enclosure that needed cleanup. No discharge was observed. No further action required. | | |
| 08/11/2011 | STREET | Commercial | 495 TELEGRAPH CANYON RD | Possible Dumping into Catch Basi |
| | Comments/ Action Taken: | On 08/11/11 received notification of Jack's BBQ discharging grease into the storm drain system. City staff responded and observed minor grease drip from under grill. Instructed employees to cleanup. Compliance met. No further action required. | | |
| 08/11/2011 | STREET | Residential | 9 J ST | Fuel/Oil/Gas Spill |
| | Comments/ Action Taken: | On 08/11/11 rcvd notification of oil being dumped into back yard from subject address. City staff responded and did not observe any discharge into the storm drain. No further action required. | | |
| 08/11/2011 | STREET | Residential | 1517 STANISLAUS DR | Other |

| | Comments/ Action Taken: | On 01/18/12 rcvd notification of sand dumped into street. Did not observe. No further action required. | | | | |
| 01/11/2012 | STREET | Residential | 1541 | MELROSE | AV | Leaking Vehicle |
| | Comments/ Action Taken: | On 01/11/12 received notification of oil staining from a vehicle parked on the street. Arrived on scene and did not observe an unusual amount of oil staining on street. Subject vehicle was not at the location. No further action required. | | | | |
| 01/12/2012 | STORM DRAIN PIPES | Residential | 1035 | SURREY | DR | Dirt/Sediments |
| | Comments/ Action Taken: | On 1/12/12 rcvd notification of sand in the curbline at subject address. City staff responded and observed homeowner sweeping up sand and remove the stockpile. No further actions required. | | | | |
| 01/24/2012 | STREET | Residential | 170 | VANCE | ST | Slurry/Concrete Discharge |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 01/24/2012 | STREET | Residential | 170 | VANCE | ST | Slurry/Concrete Discharge |
| | Comments/ Action Taken: | On 01/24/12 received complaint call of concrete slurry in the storm drain near the subject address. Upon arrival, City vactor crew was on site. Concrete slurry had been washed into the curb. No slurry entered the storm drain inlet. Owner had hired a contractor to do concrete work and they washed out into the street. City crews cleaned the area. Owner provided with education and issued Warning Citation with Full Cost Recovery. Photos taken for reference. No further action required. | | | | |
| 01/26/2012 | STREET | Residential | 1126 | ALPINE | AV | Unknown Discharge |
| | Comments/ Action Taken: | On 01/26/12, received complaint of unknown water pooling in the street in front of the subject address. Saw pooled water near french drain coming from the from property. Did not observe any water coming from the drain. Left door hanger. Received phone call from resident who said that it was rain water. When it rains, water always pools in that area. No further action required. | | | | |
| 02/21/2012 | STREET | Residential | 1191 | NOLAN | AV | Accident/Spill |
| | Comments/ Action Taken: | On 02/21/12 received notification of auto repairs being conducted in the street and dumping of oil into the curbline. City staff arrived on scene and observed vehicle in front of subject house with absorbents to contain minor leak. There was no evidence of illegal dumping. Spoke with renter about conducting repairs in the street. This was the second visit by city staff about the importance to conduct his vehicle repairs in the driveway. Verbal Warning was issued. | | | | |
| 02/27/2012 | STREET | Residential | 1948 | VERSAILLES | RD | Construction Debris & Waste |
| | Comments/ Action Taken: | On 02/27/12 received notification of construction debris in street at subject address. City staff responded and observed pavers and sand in the street. Informed contractor to remove. Follow-up completed. | | | | |
| 02/27/2012 | STREET | Construction Sites | 1500 | MAGDALENA | AV | Dirt Tracking |
| | Comments/ Action Taken: | On 02/27/12 received notification of a significant amount of dirt tracking on Magdalena Road at East Palomar. Arrived on-scene and observed mud in the street from E. Palomar to Santa Venetia. Mud was coming from contractor's empty lot that was being used as a laydown area. Spoke with contractor and had crew clean up the mud. | | | | |
| 02/27/2012 | STREET | Residential | 1197 | AGUA TIBIA | AV | Fuel/Oil/Gas Spill |
| | Comments/ Action Taken: | On 02/27/12 received notification of oil spill in front of subject address. Kitty litter was put on the spills, but it was not swept up. Drove by address, saw spills and kitty litter. Cars were on jacks in front of the house indicating that they may perform auto repairs at the house. Took photos for file. Left door hanger and auto care maintenance brochure and asked that the litter be swept up and disposed of properly. | | | | |
| 03/01/2012 | STREET | Residential | 2394 | TRELLIS | WY | Construction Debris & Waste |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 03/01/2012 | STREET | Residential | 2394 | TRELLIS | WY | Construction Debris & Waste |
| | Comments/ Action Taken: | On 03/01/12 received notification that a contractor was discharging red concrete wash water from the subject address. Contractor was asked by nearby construction superintendent to stop discharging, but the contractor did not stop. Upon arrival, contactor had left the site, but there was obvious discharge to the storm drain system from the red staining, color of the discharge, and accumulation around construction BMPs. A vactor crew was used to clean up the discharge along the street. Spoke to contractor supervisor/business owner. Issued Administrative Citation with FCR to the contractor. No further action required. | | | | |
| 03/05/2012 | CATCH BASINS | Commercial | 699 | E | ST | Sewage Spill |
| | Comments/ Action Taken: | On 03/05/12 received notification of sewer spill that entered the storm drain system at the subject address. Spill was discovered by City crews doing storm drain cleaning. Upon arrival, saw City storm drain crew containing and cleaning the spill. Spoke to manager of business who said that the sewer lateral where the spill was occurring was installed last year and has been maintained regularly. A plumber was called and was en route. Photos taken for file. Issued Administrative Citation Warning with full cost recovery. No further action required. | | | | |
| 03/08/2012 | CATCH BASINS | | 726 | EASTSHORE | TE | Accident/Spill |
| | Comments/ Action Taken: | Request cancelled | | | | |
| 03/13/2012 | STREET | Commercial | 1038 | BROADWAY | | Paint Discharge |
| | Comments/ Action Taken: | On 03/13/12 received notification of dumping of paint thinner into storm drain. City staff responded and did not observe signs of a discharge. No further action required. | | | | |
| 03/14/2012 | STREET | Construction Sites | 692 | H | ST | Other |
| | Comments/ Action Taken: | On 03/15/12 received notification that a construction contractor was discharging fire sprinkler water into the storm drain system at the subject address, which was a hotel in the process of renovation. Observed evidence of discharge of water from the sprinkler system to the storm drain. Talked to site superintendants. Provided education for fire sprinkler maintenance. Gave verbal warning. No further action required. | | | | |
| 03/15/2012 | STREET | Commercial | 600 | BROADWAY | | Other |
| | Comments/ Action Taken: | On 04/03/12 rcvd notification of broken irrigation line at subject address. Responded and business was conducting repairs. | | | | |
| 03/15/2012 | STORM CHANNEL | Residential | 1187 | NEPTUNE | DR | Storm Misc |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 03/15/2012 | STORM CHANNEL | Residential | 1187 | NEPTUNE | DR | Storm Misc |
| | Comments/ Action Taken: | On 03/15/12 received notification of a used oil container next to an inlet. City staff responded and observed a 5-gallon bucket on top of manhole lid. Moved oil bucket and covered due to predicted rain. Placed covered bucket near responsible party address. Left door hanger. Follow-up next day and bucket removed. No further action required. | | | | |
| 03/23/2012 | STREET | Residential | 160 | E | ST | Other |
| | Comments/ Action Taken: | On 03/19/12, rcvd notification of resident discharging washing machine effluent into storm drain. City staff responded and did not observe discharge. Complainant stated that discharge has stopped. | | | | |
| 04/09/2012 | CATCH BASINS | | 985 | BROADWAY | | Construction Debris & Waste |
| | Comments/ Action Taken: | Request cancelled | | | | |
| 04/19/2012 | CATCH BASINS | Residential | 707 | TERRA NOVA | DR | Construction Debris & Waste |
| | Comments/ Action Taken: | On 04/19/12, rcvd notification from city staff of sand, decorated brick in the street. City staff responded of spoke landscaper who removed sand and brick and placed on residents drive way. No further action required. | | | | |
| 05/02/2012 | STREET | Residential | 1135 | MONTEREY | AV | Other |
| | Comments/ Action Taken: | On 05/02/12, rcvd email notification from Code Enforcement of a broken irrigation line coming from subject property. City staff arrived on scene and observed that a irrigation line was broken and discharging onto 1136 Nolan. Contacted property agent and real estate company. | | | | |
| 05/09/2012 | STREET | Other | | H | ST | Other |
| | Comments/ Action Taken: | On 05/7/12 rcvd notification from resident of human waste near the storm channel at the H Street Trolley Station. City staff responded and observed the same. City staff contacted MTS staff and voiced our concerns and conduct the cleanup. | | | | |
| 05/23/2012 | STREET | Residential | 344 | HILLTOP | DR | Other |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 05/23/2012 | STREET | Residential | 344 | HILLTOP | DR | Other |
| | Comments/ Action Taken: | On 05/21/12, received email from Code Enforcement about a resident who reported that her yard has been flooding on and off for the past few months due to neighbor discharging washing machine water. Code Enforcement explained to her that it was a civil issue. She told Code Enforcement that her neighbor has dug a ditch to have the water drain to the curb. Code Enforcement referred the issue to NPDES since there was the potential for illegal discharge. City staff investigated and did not see evidence of illegal discharge. Made attempts to contact resident via telephone and by going to house. | | | | |
| 05/23/2012 | STREET | Residential | 637 | ELDER | AV | Construction Debris & Waste |
| | Comments/ Action Taken: | On 05/23/12 rcvd notification of debris in the street. City staff responded and observed minor amounts of concrete, tree trimmings. Contacted homeowner who conducted the cleanup. No further action required. | | | | |
| 05/29/2012 | STREET | Residential | 1618 | HAYFORD | RD | Fuel/Oil/Gas Spill |
| | Comments/ Action Taken: | On 05/29/12 rcvd notification of fuel and oil in the street at the subject address. City staff responded on 05/30/12 and only observed normal vehicle stains. No further action required. | | | | |
| 06/15/2012 | STREET | Commercial | 225 | THIRD | AV | Construction Debris & Waste |
| | Comments/ Action Taken: | On 06/15/12, received call from [redacted] of TAVA about possible illegal discharge of construction wash water containing paint or concrete from construction activities behind 225 and 227 Third Avenue. Did not observe same. No further action required. | | | | |
| 06/25/2012 | STREET | Residential | 712 | JEFFERSON | AV | Fuel/Oil/Gas Spill |
| | Comments/ Action Taken: | On 06/25/12 rcvd notification of oil in the street at subject address. City staff responded and observed normal vehicle leaks. No further actions required. | | | | |
| 06/26/2012 | STREET | Residential | | EXPLORATION FALLS | DR | Over-Irrigation/Pesticide |
| | Comments/ Action Taken: | On 06/26/12 rcvd notification of landscaping company discharging chemicals in the street. City staff responded and observed Rainscape using a Plant Growth Regulator chemical on the bushes. Due to the smell caused resident that a spill occurred. No further action required. | | | | |

# Executive Summary

The City of Del Mar (City) developed its Jurisdictional Urban Runoff Management Program (JURMP) in 2008 to meet the requirements of the Municipal Separate Storm Sewer System (MS4) Urban Runoff Discharge Permit (NPDES Order No. R9-2007-0001) (Permit) issued to the City and the Regional Copermittees by the California Regional Water Quality Control Board, San Diego Region (RWQCB). The Permit requires the Copermittees to individually, but collaboratively, develop comprehensive programs to reduce and eliminate urban runoff pollutants that are discharged from their storm drain systems to the receiving waters. The programs and activities designed to meet these requirements are described in detail in each Copermittees JURMP. In accordance with the requirements of the Permit, the City has revised the JURMP and updated it to provide a written account of how the City s programs comply with the latest requirements.

The City of Del Mar has prepared this JURMP Annual Report to provide a comprehensive description of all the activities conducted by the City to comply with all the requirements of Section D of the Permit, as described in its 2008 JURMP. This first JURMP Annual Report covers the implementation of jurisdictional activities during the period from July 1, 2007 through June 30, 2008 (Reporting Period), and follows the standardized format created by the Regional Copermittees and adapted as appropriate for the City of Del Mar.

During the Reporting Period, the City took the necessary steps to begin the implementation of the new Permit requirements, including the adoption of the revised JURMP in March 2008, and expanded the City s Clean Water Program and activities to the levels outlined in the City s newly adopted JURMP. The City completed the necessary revisions to the goals and policies in its Community (General) Plan to facilitate the implementation of practices such as Low Impact Design (LID) and to clarify previously existing language to reflect the new requirements. In addition, the City made substantive changes to its Stormwater Management and Discharge Control Ordinance (Chapter 11.30 of the Del Mar Municipal Code) to ensure enforceability of the new requirements. These changes, along with the new Ordinance, were adopted by the City Council on March 3, 2008.

Education and outreach to commercial, industrial, and residential stakeholders has been at the core of the City s program. As such, the development of workshops, a new outreach video, and use of television and print media has been crucial to reach the largest audience possible with information regarding the new requirements. Combined with an increased enforcement presence, the City of Del Mar is getting the message out and a visible change is occurring in the way business is being conducted  for the improvement of water quality. Residents, local businesses, and City staff are working diligently to protect the waterways and improve water quality in the beaches and lagoons.

Overall, the City s effectiveness in continuing the implementation of the program was high. However, some minor challenges were identified due to a combination of the new Permit requirements and staff turnover in a few positions. City staff has identified areas of improvement and taken steps to begin their implementation. However, there were no substantive changes to the 2008 JURMP identified as necessary during this Reporting Period.

Funding of these programs remains an issue for many of the Copermittees and the City of Del Mar is no exception. However, the City has committed to the success of its program and sufficient funds have been allocated to meet the requirements of the Permit. In addition, staff is diligently working with community leaders and non-profit groups to identify ways to fund the activities necessary to meet the challenges offered by the Permit without sole reliance on General Fund monies. As such, the development of community-based partnerships and identification of grant opportunities is a priority for the City. In addition, the City is moving ahead with a City-wide vote during the first quarter of FY2008/2009 to meet the requirements of Proposition 218 with the desire to enact the Clean Water Service Fee as a permanent revenue source to fund the Clean Water Program.

In assessing the first few months of the implementation of the new Permit requirements and transitioning from the 2001 Permit, the City has met its obligations under both permits and is looking toward the first year of full implementation in FY2008/2009.

# Certification Statement

## FY2007/2008 JURMP ANNUAL REPORT

I Certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Date 9/26/08

Karen P. Brust, City Manager
City of Del Mar

# Section 1
# Introduction

This document is the first annual report for the City of Del Mar's 2008 Jurisdictional Urban Runoff Management Plan (2008 JURMP) which went into effect March 25, 2008 in accordance with NPDES Order No. R9-2007-0001 (Permit), and any subsequent amendments. The JURMP Annual Report follows the standardized format prepared and submitted to the San Diego Regional Water Quality Control Board by the Copermittees in June 2007, and any deviations are minor and correspond to the format of the 2008 JURMP. The reporting period covered by this document is from July 1, 2007 through June 30, 2008 under two different permits. The period from July 1, 2007 through March 24, 2008 complies with NPDES Order No. 2001-01 and the period from March 25 through June 30, 2008 with NPDES Order No. R9-2007-0001.

## 1.1 Background

This section provides background information, including a brief overview, of the City of Del Mar Clean Water Program which implements its JURMP.

### 1.1.1 Overview of the City of Del Mar

The name Del Mar means "of the sea," and highlights the symbiotic relationship between the City and Pacific Ocean. The City of Del Mar is a coastal, primarily residential community in the northern section of San Diego County. Del Mar is bounded by Solana Beach to the north, San Diego to the south and east, and the Pacific Ocean to the west (see Figure 1.1-1). The City covers an area of approximately two square miles, with a population of approximately 4,500 residents. The main attraction of visitors is the beach and sunny weather. The annual San Diego County Fair, horse racing, and other events held at the Del Mar Fairgrounds bring in people from the surrounding area and beyond.

### 1.1.2 Watershed(s)

The City of Del Mar is part of the San Dieguito Hydrologic Unit and the Los Peñasquitos Hydrologic Unit, as shown in Figure 1.1-1.

## 1.2 Purpose and Objectives

This Annual Report has been prepared to cover the implementation of jurisdictional activities during the reporting period from July 1, 2007 through June 30, 2008. The Annual Report is a comprehensive description of all the activities conducted by the City of Del Mar to comply with all the requirements of Section D of Order No. R9-2007-0001, as described in the 2008 JURMP, and the equivalent requirements in Order No. 2001-01.

**Figure 1.1-1**

# Section 2
# Development Planning Component

## 2.1 Introduction

As indicated in Section 1, the City of Del Mar is a coastal, primarily residential community nestled within two-square miles between an open space area, two lagoons, and the Pacific Ocean. The majority of the developable land within the City's limits is already developed, and as such, there is limited opportunity for the larger-scale projects seen in other jurisdictions. Moreover, tight land-use controls via a Design Review process, combined with the limited development potential, provides a unique opportunity to apply development review processes outlined within the City's JURMP on more direct level. This section provides information that the City has determined is relevant to the implementation activities of the Development Planning Component of its 2008 JURMP.

## 2.2 Land Use Planning

### 2.2.1 Background

Section 4.2.1 of 2008 JURMP described the goal of the Planning and Community Development Department of the City of Del Mar to prepare a variety of short-, mid-, and long-range plans that direct and guide residential and commercial development and encourage land uses that are compatible, sustainable and most beneficial to the community. No modifications in Section 4.2.1 of the 2008 JURMP have been recorded during this reporting period.

### 2.2.2 Source Characterization

This section provides a general description of the priority pollutants, sources, and activities that were addressed through the City's land use planning process. Section 4.2.2 of 2008 JURMP provided a general description of the priority pollutants, sources, and activities to be addressed through modifications to land use planning practices. No modifications in Section 4.2.2 of the 2008 JURMP have been recorded during this reporting period.

### 2.2.3 Best Management Practice Requirements

This section provides a description of modifications to the water quality and watershed protection principles that were addressed in the City's land use planning process. Section 4.2.3 of 2008 JURMP provided a description of the comprehensive JURMP Development Planning Component designed by the City of Del Mar in order to reduce pollutant discharges, prevent violations of water quality standards and manage runoff discharge. No modifications in Section 4.2.3 of the 2008 JURMP have been recorded during this reporting period.

### 2.2.4 Program Implementation

This section includes a description of the steps that were taken to require the implementation of water quality and watershed protection principles through the City's General Plan, other plans, or other applicable methods. Section 4.2.4 of 2008 JURMP described how the City of Del Mar assessed existing plans and processes and implemented necessary changes in order to

implement water quality and watershed protection principles. No modifications in Section 4.2.4 of the 2008 JURMP have been recorded during this reporting period.

### *Community (General) Plan Revisions*

Section D.1.a of the Municipal Permit requires each Copermittee revise as needed its General Plan or equivalent plan (e.g., Comprehensive, Master, or Community Plan) for the purpose of providing effective water quality and watershed protection principles and policies that direct land-use decisions and require implementation of consistent water quality protection measures for Development Projects.

After careful review by City staff, several modifications were proposed to the Goals and Policies in the Del Mar Community Plan. The changes were accomplished by adding more general policy wording to what currently exists in the identified elements of the Del Mar Community Plan. However, these changes facilitated the implementation of practices such as Low Impact Design (LID), and clarified language that existed previously as Policy. As required by the Del Mar Municipal Code, the proposed amendments to the Community Plan were reviewed by the Planning Commission on February 12, 2008, and forwarded, with recommendations, to the City Council for review and approval. On March 3, 2008, the City Council of the City of Del Mar adopted the proposed amendments to the Community Plan. The text of the adopted changes to the Del Mar Community (General) Plan are included in the Staff Report from the March 3, 2008 City Council Meeting, along with the minutes of the February 12, 2008 Planning Commission Hearing, and are provided as Appendix 2-A.

### *Revisions to the Del Mar Municipal Code*

In addition to the revisions to the Del Mar Community (General) Plan, City staff recommended changes to the City's Stormwater Management and Discharge Control Ordinance, Chapter 11.30 of the Del Mar Municipal Code (DMMC). Because of the substantive changes required to make DMMC Chapter 11.30 consistent with the requirements of the 2008 Permit, and for easier use by staff and the public, City staff proposed repealing DMMC Chapter 11.30 in its entirety and introduced a new Chapter 11.30 on March 3, 2008.

The major changes to the existing Ordinance included new and updated definitions to be consistent with the 2008 Permit. Additional Best Management Practices (BMPs) and requirements for residential development were added, including stormwater treatment requirements for some projects. The definitions were expanded to include new terminology such as Low Impact Development (LID); establishment of new criteria for priority projects that are linked to Water Quality Sensitive Areas (WQSA), and requiring water quality treatment for priority projects with long term operation and maintenance requirements.

At the March 3, 2008 Hearing, the Del Mar City Council accepted staff's recommendations, and repealed DMMC Chapter 11.30 replacing it with the new Ordinance. With the second reading on March 17, 2008, the new DMMC 11.30 went into effect, consistent with the City's JURMP and the requirements of the 2008 Permit. The text of the new Ordinance is included in the Staff Report from the March 3, 2008 City Council Meeting and provided as Appendix 2-B.

## 2.3 Environmental Review Process

Section 4.3 of 2008 JURMP described the City of Del Mar Environmental Review process that aimed at accurately evaluating water quality and cumulative impacts and identifying appropriate

measures to avoid, minimize and mitigate development project impacts to water quality. No modifications in Section 4.3 of the 2008 JURMP have been recorded during this reporting period.

## 2.4 Development Project Approval and Verification Process

### 2.4.1 Background

The City's Planning and Community Development Department is responsible for coordinating all aspects of development project approval and seeking input from other City departments to ensure that policies, regulations and standards are met. The Development Project Approval and Verification Process is described in Section 4.4 of the 2008 JURMP and includes the various sections described below.

### 2.4.2 Source Characterization

Section 4.4.2 of 2008 JURMP described how each project is evaluated to identify priority pollutant sources and activities. No modifications in Section 4.4.2 of the 2008 JURMP have been recorded during this reporting period.

### 2.4.3 Best Management Practice Requirements

Section 4.4.3 of 2008 JURMP described how best management practices (BMPs) during the development project approval phase are selected based on the type and size of the project, pollutant sources, and other factors. No modifications in Section 4.4.3 of the 2008 JURMP have been recorded during this reporting period.

### 2.4.4 Program Implementation

This section describes the results of implementing of the City's strategy for conditioning development projects and verifying compliance with established conditions and minimum BMP requirements. Section 4.4.4 of 2008 JURMP described the City's program implementation process which depicts the main steps for private and capital improvement project approval. Moreover, the City of Del Mar is implementing the strategies and processes outlined in Section 4.4.4 of the JURMP, and no modifications in the 2008 JURMP have been recorded during this reporting period.

#### *Priority Development Projects*

As discussed above, given the City of Del Mar's relatively limited land development potential, the majority of the projects reviewed by staff are redevelopment projects that are often small in size and scope. All development projects were required to undergo the City's urban runoff approval process and meet the applicable project requirements. Because of the limited number of projects, these are tracked by the Planning and Community Development Department using a centralized spreadsheet. The Clean Water Program Manager and Interim Planning Director are presently reviewing alternative ways of tracking projects, and anticipate implementing an enhanced system of tracking during the next reporting period. During the reporting period, a total of 196 permit applications were reviewed by the Planning and Community Development Department. Appendix 2-C contains a complete list of the permits reviewed by the Department during this reporting period.

Of the projects reviewed during this reporting period, only four (4) projects meet the definition of Priority Development Projects under the Permit, and were subject to SUSMP requirements. These projects and their current status are found in Table 2.4-1 below. As of June 30, 2008, the City of Del Mar has not granted any Priority Project a SUSMP waiver, and as such has not needed to implement a SUSMP waiver mitigation program.

**Table 2.4-1**
**FY2007–2008 City of Del Mar Priority Development Projects (PDP)**

| Project Name | Description | Status During FY2007–2008 |
|---|---|---|
| **Review in Process** | | |
| Garden Del Mar Specific Plan (SP-07-01; LCPA-08-02; CDP-08-17) | The proposed project is a mixed-use commercial development with restaurant, retail, and office uses situated in six two-story structures (totaling 19,600 square feet) built over a two-level subterranean parking garage. | As of June 30, 2008, the Project was still making its way through the adoption process. Staff has reviewed the Project, and required appropriate structural and treatment control, and LID BMPs to the project design. The approval of this project is subject to legislative action, and approval by the voters. Staff anticipates action on this project during FY2008/2009. |
| Riverview Project (CUP-08-01; CDP-08-19; FDP-08-02) | The project proposes to construct two, two-story, commercial office buildings totaling 23,293 square feet, with 83 parking spaces on two vacant parcels of land. The proposed project includes grading, hardscaping, and landscaping, and lies within 200 feet of the San Dieguito Lagoon. | As of June 30, 2008, staff is working with the project proponents to redesign portions of the project to meet the new SUSMP requirements, and to incorporate the required changes into the Project EIR. The project is expected to go to hearing during FY2008/2009. |
| **Under Construction** | | |
| Pacifica Stratford | The project proposes approval of a Final Subdivision Map which subdivides two existing legal lots into five two-unit condominium lots with required public improvements. | The project received project approval in April 2006. However, no groundbreaking or demolition of the existing structures had occurred until February 2008. Staff reviewed project conditions and designs during permitting of the grading operations and required subsequent changes to the project to incorporate SUSMP BMPs on-site. The project is currently under construction. |
| Morotta/James Single Family Residence | This project is a single family residence on a vacant lot within 200 feet of an environmentally sensitive area (the San Dieguito Lagoon). | Construction drawings for this project were approved in April 2008. The project incorporates LID to the MEP through the use of minimal hardscape and the incorporation of vegetated swale/bio-retention areas. The structure itself is elevated, allowing for preservation of pervious surface conditions under what would otherwise be the building footprint. |

The Garden Del Mar Project identified as a Priority Development Project in Table 2.4-1, above, is a good example of the application of SUSMP requirements in the City of Del Mar. A copy of the Conditions of Approval, and a description of the required BMPs applied to the Garden Del Mar Project has been included as Appendix 2-D of this report.

During this reporting period, no priority development projects were allowed to implement treatment control BMPs with low removal efficiency rankings, and as such no feasibility analyses were conducted to exhibit that more effective BMPs were infeasible. As of June 30, 2008, the City of Del Mar does not have any treatment control BMPs approved for priority projects under SUSMP provisions. As SUSMP Projects are approved in the future, updated treatment control BMP inventory will be provided.

Prior to final occupancy of all Priority Development Projects, the project proponent will be required to provide a signed, sealed certification from the Engineer of Record that all treatment control BMPs have been inspected and constructed according to the approved plans.

As indicated in Section 4 of the 2008 JURMP, City of Del Mar participated in the development of the Hydromodification Management Plan (HMP) due to be submitted in January 2009. Staff from the Department of Engineering and the Department of Planning both participated in the Regional Copermittee Workgroup, attending meetings on a regular basis, and providing substantive comments on the interim drafts of the Model HMP and Model SUSMP. The City of Del Mar revised its local SUSMP to accommodate LID and source control measures as required to meet the principles of hydromodification.

Of the five (5) identified Priority Development Projects listed in Table 2.4-1 above, none of them disturb 50 acres or more, and as such Interim HMP requirements were not applied.

### 2.4.5 Enforcement Measures for Development Projects

This section provides the number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 4.4.4.3 of the 2008 JURMP provides a description of the general process for applying enforcement to development projects urban runoff related violations. No modifications in Section 4.4.4.3 of the 2008 JURMP have been recorded during this reporting period.

No enforcement actions for development projects were taken during the reporting period. Enforcement actions related to construction activities are listed in Section 3 of this report.

### 2.4.6 Notable Activities

This section provides a description of notable activities conducted to manage urban runoff from development projects. No notable activities other than those identified above were conducted during this reporting period.

## 2.5 Development Planning Component Effectiveness Assessment

This section includes assessment of the effectiveness of the City's Development Planning Component. Section 4.5 of 2008 JURMP included the effectiveness assessment for Development Planning component. No modifications in Section 4.5 of the 2008 JURMP have

been recorded during this reporting period. The City is presently reviewing alternative ways of tracking projects and anticipates implementing an enhanced system of tracking during the next reporting period. During the reporting period, a total of 196 permit applications were reviewed by the Planning and Community Development Department.

## 2.6 Program Review and Modification

This section identifies and documents modifications to the Development Planning Component. Section 4.6 of 2008 JURMP included the list any changes made to the JURMP to meet the requirements. No modifications in Section 4.6 of the 2008 JURMP have been recorded during this reporting period.

No modifications were made to Section 4  Development Planning Component of the 2008 JURMP during this reporting period.

# Appendix 2-A
# City Council Staff Report for Community (General) Plan Amendments  March 3, 2008

# City of Del Mar
# Staff Report

**TO:** Honorable Mayor and City Council

**FROM:** Linda S. Niles, Director of Planning & Community Development
Via Karen P. Brust, City Manager
Prepared by Joseph M. DeStefano II, Clean Water Manager

**DATE:** March 3, 2008

**SUBJECT:** A request to review and add policies to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan (GPA 08-01) regarding City stormwater management and discharge control regulations as revised under the new National Pollutant Discharge Elimination System (NPDES) Permit (SDRWQCB Order No. R9-2007-0001).

**ISSUE:**

Whether to adopt the attached draft resolution which amends the City of Del Mar Community (General) Plan adding policies to the Community Development, Environmental Management, and Transportation Elements that require all development, subject to review by the City of Del Mar, to comply with the City's Stormwater Management and Discharge Control regulations.

**FISCAL ANALYSIS:**

Funding for the NPDES/Stormwater Program i.e. assessment of the Community Plan and associated amendments, ordinance revisions, program development, etc. is included in the approved budget for FY 07/08.

**CEQA ANALYSIS:**

This project is categorically exempt from environmental review under the California Environmental Quality Act (CEQA) guidelines as specified under Section 15307

---

City Council Action:

and Section 15308 of the State CEQA Guidelines because it is an action by a regulatory agency for the protection of natural resources and the environment.

**RECOMMENDATION:**

Review and adopt draft Resolution No. 2008-xx amending the Community (General) Plan as it relates to stormwater management and discharge control.

**BACKGROUND:**

This is a request to review and adopt draft Resolution No. 2008-xx which amends the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community (General) Plan as it relates to stormwater management and discharge control regulations.

In 2001, the City of Del Mar adopted a series of Municipal Code amendments and Community Plan amendments to comply with the requirements of the San Diego Regional Water Quality Control Board (Regional Board) Order No. 2001-01, issued under the National Pollutant Discharge Elimination System (NPDES), and adopted on February 21, 2001. It was anticipated that amendments to the regional municipal stormwater permit (Permit) would be required approximately every five years. Although it took longer than five years, the Regional Board issued an updated Permit on January 24, 2007 to the County, all 18 cities within the county, the Port District, and the County Regional Airport Authority, collectively designated as Copermittees. As a result of the 2007 Wildfires, and at the request of the Copermittees, the Regional Board extended the Permit implementation deadline by eight weeks to March 24, 2008.

There are substantial new requirements in the Permit, including additional requirements for education, inspection, reporting, and monitoring that must be completed by all Copermittees. The Permit also requires each Copermittee to review their respective general plans and implementing ordinances, and make necessary modifications and additions to ensure enforceability with the requirements of the Permit. The proposed Community Plan amendments, included in Attachment "A" for your review and consideration, fulfill this requirement.
Staff presented these proposed amendments to the Planning Commission for their consideration and review at their regular meeting on February 12, 2008. The Planning Commission endorsed these amendments, and has forwarded them on to you, with minor modifications, for your review and consideration.

2

**ANALYSIS:**

The new Permit requirements greatly expand the responsibilities of the Copermittees from those required under the 2001 permit. The amendments to the Community Plan will include modified or additional policies that will further address the elimination, to the maximum extent practicable (MEP), or significant reduction of pollutants found in urban runoff from Del Mar that is discharged into the municipal separate storm sewer system (MS4) and subsequently into San Dieguito Lagoon, the Los Peñasquitos Lagoon, and ultimately into the Pacific Ocean. Both State and Federal authorities have identified urban runoff as a major source of pollution adversely affecting the beneficial uses of waters statewide. Some of those impaired beneficial uses are recreation, commercial and sport fishing, estuarine habitat, and the preservation of rare and endangered species.

In response to the requirements of the new Permit, modifications to the Del Mar Community (General) Plan are required. The requirement is listed in Section D.1.a of the Permit which reads:

> **Development Planning Component**
> Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the MS4 to the MEP, (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.
>
> a. GENERAL PLAN
> Each Copermittee shall revise as needed its General Plan or equivalent plan (e.g., Comprehensive, Master, or Community Plan) for the purpose of providing effective water quality and watershed protection principles and policies that direct land-use decisions and require implementation of consistent water quality protection measures for Development Projects.

The proposed amendments to the Community Plan will strengthen the goals and policies in the Community Development, Environmental Management, and Transportation Elements to support the requirements in the new permit. In addition to the amendments to the Community Plan, the new Permit also necessitates amendments to the Municipal Code that will be reviewed and approved by the City

Council. Any Municipal Code changes will be reviewed by the Council along with the amendments to the Community Plan after review and recommendation by the Planning Commission.

The new permit has many additional or revised provisions that the City must enforce and that development and redevelopment projects will be required to comply with including the following:

- Modification to private development application processing and documentation as required by Low Impact Development (LID) standards;
- Annual inspection of all commercial sites;
- Inspection of all special events and special event venues (festivals, street fairs, farmer's market, etc);
- Dual regulation and inspection of State permitted construction and industrial sites;
- New Watershed Urban Runoff Management Plan (WURMP) requirements specifically aimed at reducing "priority pollutants";
- Increased requirements to comply with investigative and TMDL (Total Maximum Daily Load) orders;
- Significant increase in local and regional water quality monitoring requirements;
- Expanded Regional Education & Program Management requirements;
- Upgrading the Standard Urban Stormwater Mitigation Plan (SUSMP) requirements and establishing Hydromodification controls;
- Amending ordinances and the City's General Plan;
- A significant increase in data tracking, documentation and reporting;
- Revised long-term assessment and fiscal reporting of the Clean Water Program;
- Other elements that still need to be completed: regional and local educational material purchase and distribution to residents and

businesses, regional and local water quality monitoring, municipal facility inspections, illegal discharge and hotline/citizen complaint investigations, annual municipal employee training, special investigations and studies, industrial and construction inspections, and grant support;

- Modified Municipal Operations and Maintenance for street sweeping and storm drain inlet cleaning;

- Dual regulation of sanitary sewage system with more reporting requirements; and

- Implementation of additional Best Management Practices (BMP's) to improve water quality.

Staff proposes that revised policies be added to the Community Development, Environmental Management, and Transportation Elements of the Community Plan (see Attachment "A") to satisfy the requirements of the stormwater management and discharge control requirements as set forth in Regional Board Order No. R9-2007-0001. These proposed changes to the Community Plan goals and policies are not in conflict with any of the current goals and policies, but will compliment them by adding detail, slightly expanding the scope, and emphasizing more regional coordination. The changes have been accomplished by adding more general policy wording to what currently exists in the identified elements of the Del Mar Community Plan.

As required by the Del Mar Municipal Code, the proposed amendments to the Community Plan were reviewed by the Planning Commission on February 12, 2008 and forwarded, with recommendations, to the Council for your review and approval. A draft of the Minutes for this Planning Commission Hearing is included as Attachment "C" of this report.

**RECOMMENDATION/FINDINGS:**

Staff recommends that the City Council adopt the proposed amendments to the Community Development, Environmental Management, and Transportation Elements of the Community Plan as shown in Attachment "A". Staff further recommends the Council adopt the findings shown below supporting the amendments to the Community Plan. The suggested findings are listed below and in the draft resolution of approval included as Attachment "B".

1. The amendments to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan will

5

be in the interest of furtherance of the public health, safety, comfort, convenience and general welfare, and will not adversely affect the established character of the City of Del Mar or the surrounding neighborhood, nor be injurious to other properties in the vicinity in which the amendments may have impact.

2. By addressing the long-term protection of water quality, the amendments to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan conform to the existing general purpose, planned uses, and intent of the adopted Community Plan, and all ordinances, regulations, and plans in effect to implement said Community Plan.

3. The amendments to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan are consistent with, and will compliment current goals and policies and strengthen their intent by adding clarity, expanding the scope of existing drainage policies, and emphasizing more regional coordination, by revising general policy wording that currently exists in the identified elements of the Del Mar Community Plan.

As a reminder, an amendment of the Del Mar Community Plan requires an affirmative vote of at least four members of the City Council.

7

MAR 0 3 2008 ITEM 11

**RESOLUTION NO. 2008-XX**

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF DEL MAR, CALIFORNIA, AMENDING THE GENERAL PLAN (GPA-08-01), SPECIFICALLY ADDING POLICIES TO THE COMMUNITY DEVELOPMENT, ENVIRONMENTAL MANAGEMENT, AND TRANSPORTATION ELEMENTS OF THE COMMUNITY PLAN RELATING TO STORMWATER MANAGEMENT AND DISCHARGE CONTROL

WHEREAS, the City of Del Mar is required to comply with the City Stormwater Management and Discharge Control regulations and requirements of the new San Diego Regional Water Quality Control Board Order No. R9-2007-0001 adopted on January 24, 2007; and

WHEREAS, the City of Del Mar is required to amend the goals and policies of the Del Mar Community (General) Plan to ensure that the Plan shall include water quality and watershed protection principles and policies to direct land use decisions and require implementation of consistent water quality protection measures for development projects that include more natural management approaches to be used during the land use planning and zoning processes; and

WHEREAS, on February 12, 2008, the Planning Commission of the City of Del Mar held a public hearing on the application of GPA-08-01, at which time all persons desiring to be heard were heard, and the Planning Commission recommended that the City Council approve the amendments to the Community (General) Plan; and

WHEREAS, the Community Plan Amendment application GPA-08-01 has been determined to be exempt from the provisions of the California Environmental Quality Act pursuant to Sections 15307 and 15308; and

NOW THERFEFORE BE IT RESOLVED that the City Council finds:

1. The amendments to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan will be in the interest of furtherance of the public health, safety, comfort, convenience and general welfare, and will not adversely affect the established character of the City of Del Mar or the surrounding neighborhood, nor be injurious to other properties in the vicinity in which the amendments may have impact;

8

MAR 0 3 2008 ITEM 11

2. By addressing the long-term protection of water quality, the amendments to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan conform to the existing general purpose, planned uses, and intent of the adopted Community Plan, and all ordinances, regulations, and plans in effect to implement said Community Plan; and

3. The amendments to the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan are consistent with, and will compliment current goals and policies and strengthen their intent by adding clarity, slightly expanding the scope of existing drainage policies, and emphasizing more regional coordination, in the more general policy wording that currently exists in the identified elements of the Del Mar Community Plan.

BE IT FURTHER RESOLVED that the City Council of the City of Del Mar:

Hereby amends the Community Development, Environmental Management, and Transportation Elements of the Del Mar Community Plan as set forth as follows:

See Exhibit "A"

ATTACHMENT B

For City Council Report dated March 3, 2008

10

MAR 0 3 2008 ITEM 11

## Goal 1

ESTABLISH WITHOUT DELAY A COMPREHENSIVE PROGRAM TO PRESERVE AND ACQUIRE PERMANENT OPEN SPACE SUFFICIENT TO MEET THE LONG-RANGE NEEDS OF THE COMMUNITY, PRESERVE AND ENHANCE NATURAL RESOURCES, AND PROTGECT AREAS AND PEOPLE SUSCEPTIBLE TO SEISMIC AND FLOODING HAZARDS.

## Objectives and Policies

A. SECURE SUFFICIENT LAND AS PERMANENT OPEN SPACE TO PRESERVE INTACT THE LOCALLY AND REGIONALLY SIGNIFICANT NATURAL ENVIRONMENTAL CHARACTERISTICS OF DEL MAR: BLUFFS, BEACH, CANYONS, OUTSTANDING GEOLOGICAL FORMATIONS, AND THE SAN DIEGUITO LAGOON.

B. SECURE OPEN SPACE NECESSARY TO IDENTIFY DEL MAR AS A DISTINCT AND SEPARATE COMMUNITY, AND TO PROTECT SCENIC.

C. SECURE SUFFICIENT OPEN SPACE TO MEET RECOGNIZED STANDARDS FOR OUTDOOR RECREATION AND EDUCATION, INCLUDING LAND FOR TRAILS AND SMALL NEIGHBORHOOD PARKS.

1. Consider the Comprehensive Planning Organization's recreational standard of 15 acres per thousand inhabitants (including in the total the acreage of beach above mean sea level) in defining the needs of Del Mar.

2. Protect open space areas to satisfy recreational needs or to preserve particularly unique natural features in specific neighborhoods.

3. Develop a continuous pedestrian loop trail which extends around the perimeter of the City while connecting and passing through areas of natural and scenic value without unnecessarily imposing on residential privacy.

4. Establish a Parks and Recreation Commission to administer the parks and scenic preserves and to plan for specific development of open space areas.

D. INSURE THAT ALL FUTURE DEVELOPMENT BE SUCH AS TO PRESERVE AN ATMOSPHERE OF OPENNESS AND ACCESS TO PUBLIC OPEN SPACES, INCLUDING THE BLUFFS AND BEACH.

1. Undertake a comprehensive survey and legal analysis of areas of potential public prescriptive rights throughout the City. Where such rights are believed to exist actively pursue the establishment and recognition of such rights through judicial proceeding as appropriate

E. PROTECT SPECIFIC OPEN SPACE AREAS AS SHOWN ON THE DEL MAR ENVIRONMENTAL MANAGEMENT PLAN.

1. Preserve, as open space, areas such as the 100-year floodway and the beach bluffs west of the railroad tracks that are too hazardous to justify permanent construction.

2. Preserve, as City-owned open space, areas desirable as City parks and preserves.

3. Preserve, as open space, pending possible acquisition by other jurisdictions, areas of regional significance.

4. Preserve and where necessary acquire easements for the protection of access to the beach and other public open space.

5. Protect the scenic quality of the air space above the railroad tracks by allowing only railroad transportation and open space uses, and restrict stretches of right-of-way with adjacent landslide danger to single track usage.

6. Control building, signing and paving on publicly owned open space so such use will not be objectionable to Del Mar residents.

7. Open space areas should be managed with erosion control and pollution prevention measures in the forefront.

F. AGGRESIVELY DEVELOP BOTH INNOVATIVE AND CONVENTIONAL MEANS FOR IMPLEMENTING THE OPEN SPACE PROGRAM.

1. Insure that the implementation of the Open Space Program be one of the highest priority planning activities within the City government.

2. Establish and schedule revenue-generating techniques sufficient to accomplish a permanent program of open space implementation aimed at achieving the goals explicit in this Plan. This program shall include the creation of an open space fund which will be used exclusively to buy land for public use.

   a. Prepare a ballot measure to be submitted to the voters requesting approval of the mechanism for financing open space acquisition and improvements and the sources of revenues to be used for these purposes.

3. Control the impact of private development on areas designated as having open space sensitivities.

4. Require City approval prior to development of areas designated as neighborhood parks, so that if they are not acquired by the City, the neighborhood will have a reasonable period in which to form an assessment district following development application.

5. Establish special controls to protect the natural environment in areas of bluffs, slopes, and canyons having special conservation sensitivity. (See Precise Plan for Bluffs, Slopes and Canyons.)

G. COOPERATE WITH OTHER JURISDICTIONS TO COORDINATE OPEN SPACE ACQUISITION, ~~AND~~ PRESERVATION AND PROTECTION POLICY.

MAR 0 3 2008 ITEM 11

12

1. Encourage and support efforts of the City of San Diego to preserve sufficient open space within the Torrey Pines Community Planning Area that is adjacent to Del Mar.

2. Coordinate and request assistance from the Comprehensive Planning Organization, the State of California, the City of San Diego, San Diego County, and other jurisdictions in preserving areas of mutual concern.

3. Obtain community comment through the public hearing process on any proposal to encourage acquisition of land within the City of Del Mar Planning impact area by other jurisdictions.

4. Support open space acquisition as part of the Los Penasquitos and San Dieguito Watershed Management Plans. In order to do this, close coordination should take place with the County, the cities, stakeholder organizations, and the various special districts whose decisions and activities affect open space, water resources, and water quality in these watersheds.

H. CONSERVE THE NATURAL CHARACTER OF LAND, WATER, VEGETATIVE AND WILDLIFE RESOURCES WITHIN THE COMMUNITY.

1. Participate in regional and/or statewide efforts to evaluate and control beach and bluff erosion problems.

2. Prohibit the encroachment of private development on the public beach.

3. Prohibit the use of private vehicles on the public beach

4. Insure that future development results in a minimum disturbance of existing or natural terrain and vegetation and does not create soil erosion, silting of lower slopes, slide damage, flooding problems and/or severe cutting or scarring.

5. Minimize particulate matter pollution that leads to sedimentation or siltation through implementation of erosion control plans and permits for new and redevelopment projects which pose such a threat to water quality.

6. Minimize land uses which pose a major threat to water quality-including commercial and industrial uses such as automobile dismantlers, transportation and vehicle storage facilities, waste transfer disposal facilities, light industries, and other uses that have a significant potential for pollution of streams, reservoirs, or percolation facilities or where pollutants could easily come in contact with flood waters, high groundwater, flowing streams, or reservoirs.

7. Require commercial and industrial facilities and residential developments which pose a high threat to water quality to reduce any threat of pollution to an insignificant level, as a condition of approval.

8. Reduce the quantity and duration of runoff and discharge of pollutants to the maximum extent practicable by integrating low impact design features, surface runoff source and treatment controls into new development and redevelopment land use decisions through conditions of approval.

9. Implement the City's jurisdictional urban runoff program to maximize pollution prevention and control measures that reduce and control the discharge of pollutants into Del Mar's storm drains, local creeks, beaches, and lagoons to the maximum extent practicable.

10. Work with other local government agencies to develop cross-jurisdictional land use development standards and policies in order to maintain a watershed-based approach to land use, erosion, flood control, and nonpoint source pollution.

11. Minimize or prevent development in hazard and resource areas with the following characteristics: flood potential; wetlands; riparian corridors and areas with a greater than 25% slope.

12. Encourage reductions and modifications to air pollution generating activities and sources to reduce the deposition of air-borne pollutants and improve urban and stormwater runoff water quality.

I. RETAIN AND ENHANCE NATURAL BENEFITS WITHIN THE SAN DIEGUITO RIVER FLOODWAY AND LAGOON HABITAT.

1. Establish a comprehensive master plan and management program for the lagoon including biological productivity potential, health controls, future water supply, the preservation and enhancement of wildlife, and opportunities for educational and recreational enjoyment.

2. Land use policies established within the San Dieguito River Floodway and Lagoon Habitat should be consistent with the long-range goal of returning the entire area to the natural lagoon condition.

3. Identify public ownership and public use rights in the lagoon and tidelands and restrict therein uses inconsistent with such public rights.

4. Support and continue education with regard to biological resource values of the lagoon ecosystem.

5. Require the placement of beach quality sand on Del Mar beaches whenever beach quality sand results from the dredging of the San Dieguito lagoon. If placement within Del Mar is not needed or desirable, consideration shall be given to placement elsewhere within the Oceanside littoral cell or where exceptional biological benefits can be demonstrated.

MAR 03 2008 ITEM 11

13

6. Require the proper disposal of less than beach quality sand in a manner that protects against the pollution of beaches, lagoons, or other waterways and minimizes as much as possible any potentially adverse environmental impacts that could result from the disposal.

7. Prohibit the placement of sand in areas that may result in negative long term impacts including, but not limited to, the filling of wetlands, the closing of the rivermouth, or the disturbance of sensitive habitat near shore or in the lagoon unless exceptional biological benefits can be demonstrated.

8. Prohibit any development, dredging, protective devices, and/or enhancement that would exacerbate flooding or erosion.

9. Prohibit placement of fill within the effective flow area as delineated using the FESWNS (Federal Highway Administration, 1992) Model.

10. Maintain existing public uses of the beach.

11. Preserve the natural appearance and open space character of the river mouth region.

12. Protect and enhance the biological resources of the river mouth region.

13. Maintain existing east-west public access to the beach from Camino del Mar. Public access shall be enhanced provided that there are no significant negative impacts upon the natural appearance and/or biological resources of the river mouth region.

14. Maintain existing lateral, north-south access to the beach without negatively impacting the beauty and biological resources of the river mouth region. Public access shall be enhanced provided that there are no significant negative impacts upon the natural appearance and/or biological resources of the river mouth region.

15. Mitigate for impacts that, while beneficial to the biological resources of the San Dieguito Lagoon, adversely impact public access. If lateral access across the river mouth is impacted by Lagoon restoration, access shall be enhanced between the beach and Camino del Mar both north and south of the San Dieguito River, including a pedestrian access connection over San Dieguito River.

16. Preserve and, where necessary, acquire easements for the protection or enhancement of access to the beach and other public open space in the San Dieguito River mouth and Lagoon.

17. Prohibit adverse environmental impacts from all types of uses and/or pollution including, but not limited to, public access, visual blight, noise, light, air, and water pollution.

J. RESTORE ENVIRONMENTALLY DEGRADED AREAS TO THE HIGH QUALITY STANDARDS IMPLIED IN THE OBJECTIVES ABOVE.

K. REQUIRE DEVELOPMENT IN AREAS OF ARCHEOLOGICAL SIGNIFICANCE TO BE REVIIEWED BY THE CITY OF DEL MAR TO INSURE THAT SUCH USES DO NOT RESULT IN A PERMANENT DESTRUCTION OF ANY ARCHEOLOGICAL SITES OR CULTURAL INFORMATION.

L. REDUCE ENERGY CONSUMPTION AND ENCOURAGE MATERIAL RECYCLING.

1. Encourage the maximum feasible insulation in buildings.

2. Encourage energy efficient heating, lighting and ventilation systems and discourage completely air-conditioned buildings in favor of buildings designed to maximize natural temperature regulating conditions (e.g., buildings with windows that open for ventilation).

3. Encourage an increased degree of energy self-sufficiency through such means as solar heating, particularly for swimming pools.

4. Establish and publicize a local recycling program for solid waste material.

5. Support statewide use of returnable beverage containers.

M. PROMOTE THE PRUDENT USE OF WATER RESOURCES BY ENCOURAGING NATURAL LANDSCAPING THAT REQUIRES LITTLE WATERING.

1. Encourage conservation measures and water recycling programs that eliminate or discourage wasteful uses and urban water runoff.

2. Maximize a development's pervious landscaping footprint by reducing lawn areas, promoting turf that requires low irrigation, and taking advantage of permeable material areas (i.e. mulch, gravel, porous pavers).

3. Strategically plant and increase use of deciduous shade trees, evergreen trees, and drought tolerant native vegetation, as appropriate.

4. Implement water conservation measures in buildings and landscaping site design.

N. SUPPORT GASOLINE CONSERVATION ACTIVITIES SUCH AS CAR-POOLING AND PUBLIC TRANSPORTATION.

O. MINIMIZE THE LOSS OF LIFE AND DESTRUCTION OF PROPERTY FROM SEISMIC AND GEOLOGICAL OCCURRENCES.

1. Develop a well-coordinated disaster plan, which includes preparation for earthquakes, Tsunamis and storm waves.

MAR 0 3 2008 ITEM 11

Environmental Management

14

2. Supplement and update geologic information available to the City.

P. INSURES PUBLIC SAFETY WITHIN THE SAN DIEGUITO RIVER FLOOD PLAIN.

1. Prohibit structures in the floodway.

2. Locate proposed development so as to eliminate the need for protective construction such as seawalls, retaining walls, or flood control devices.

3. Discourage landfill, land removal, and structures within the flood plain that would limit water-holding capacity or impede water movement so as to adversely affect other property.

4. Development in the flood-fringe shall sustain periodic flooding without creating public burdens by aggravating the flood problem or impeding flood storage capacity.

5. ~~Water quality protection measures set forth throughout this Community (General) Plan are the result of United States Environmental Protection Agency legislation under the Clean Water Act. The intent of these measures is to protect the health and safety of humans as well as to protect the beneficial uses of receiving waters.~~

5. The water quality protection measures set forth throughout this Community (General) Plan are based on the Federal Clean Water Act (CWA), the Porter-Cologne Water Quality control Act (Division 7 of the Water code, commending with Section 13000), applicable state and federal regulations, all applicable provisions of statewide Water Quality Control Plans and Policies adopted by the State Water Resources Control Board (SWRCB), the *Water Quality Control Plan for the San Diego* Basin adopted by the Regional Board, the California Toxics Rule, and the California Toxics Rule Implementation Plan.

MAR 0 3 2008 ITEM 11

Environmental Management

14 A

## Goal 2

MINIMIZE THE IMPACT OF THE AUTOMOBILE ON THE CHARACTER OF DEL MAR AND EMPHASIZE A MORE PEDESTRIAN ORIENTED ENVIRONMENT, SAFER SIDEWALKS, LANDSCAPED BUFFER ZONES, AND ALTERNATE MEANS OF TRANSPORTATION.

### Objectives and Policies

A. ENCOURAGE A PEDESTRIAN-ORIENTED, NON-MOTORIZED COMMUNITY BY DEVELOPING A SYSTEM OF BICYCLE RIGHTS-OF-WAY AND PEDESTRIAN PATHS, AND DISCOURAGING HIGH SPEED TRAFFIC ALONG CITY STREETS.

1. Redesign Camino del Mar to improve its appearance as a scenic coastal route and accommodate low-speed vehicular traffic.
2. Improve the safety of Camino del Mar pedestrian crossings, particularly in the north and south ends of the community.
3. Provide a continuous north-south bicycle network through the City.
4. Develop a continuous pedestrian loop trail which extends around the perimeter of the City while connecting and passing through areas of natural and scenic value without unnecessarily imposing on residential privacy.
5. Preserve and improve pedestrian access to and along beaches and sea cliffs by use of all public rights-of-way and prescriptive public easements.
6. Encourage all unimproved public rights-of-way to be used solely for pedestrian movement unless absolutely necessary for vehicular access.
7. Oppose any attempts to widen Carmel Valley Road.

B. FACILITATE THE MOVEMENT OF TRAFFIC IN A SAFE AND UNCONGESTED MANNER CONSISTENT WITH A PEDESTRIAN-ORIENTED COMMUNITY.

1. Encourage the development of an improved intersection design at Via de la Valle, Stevens Street, Turf Road and Jimmy Durante Boulevard.

C. ENCOURAGE ALTERNATE SOLUTIONS TO THE TRANSPORTATION NEEDS OF DEL MAR SUCH AS LOCAL TRANSIT AND DELIVERY SYSTEMS AND REGIONAL RAPID TRANSIT.

1. Consider the feasibility of a local transit system serving residential areas, the downtown commerical area, the beach, the fairgrounds and racetrack, and railroad station.
2. Support the expansion of convenient bus or other transit service between Del Mar and downtown San Diego.
3. Encourage and participate in the initiation of a long-range regional multi-modal transportation system.

D. REDUCE THE LEVEL OF NOISE CREATED BY MAJOR TRANSPORTATION ROUTES IN THE COMMUNITY.

1. Limit the speed of vehicular traffic along City streets, particularly Camino del Mar.
2. Encourage sound reduction construction techniques in new buildings within the 65 decibel boundaries adjacent to Camino del Mar and the railroad right-of-way.

E. MINIMIZE AIR POLLUTION BY ENCOURAGING ALTERNATIVES TO THE USE OF THE AUTOMOBILE.

F. WORK TO REDUCE TRANSPORTATION RELATED SOURCES OF WATER POLLUTION, PARTICULARLY IN STORM WATER RUNOFF.

1. ~~Seek to~~ Promote the reduction of vehicle-miles-traveled, thereby reducing congestion and reducing air and water pollution.
2. Educate the public as to ~~Recognize and publicize~~ the relationship between air pollution and water pollution in the deposition onto streets and other surfaces of airborne contaminants, including metals and fine particulate matter (PM10).

MAR 03 2008 ITEM 11

PRELIMINARY DRAFT

14 B

# Goal 4

FOCUS MAJOR RETAIL AND OFFICE ACTIVITY INTO ONE ECONOMICALLY VIABLE, PEDESTRIAN ORIENTED AND ATTRACTIVE AREA THAT SERVES THE NEEDS OF BOTH REIDENTS AND VISITORS AND IS WELL INTEGRATED INTO THE RESIDENTIAL FABRIC OF THE COMMUNITY.

## Objectives and Policies

A. ENCOURAGE QUALITY RESIDENT-ORIENTED BUSNESSES WHICH SERVE THE INTELLECTUAL, SOCIAL, AND MATERIAL NEEDS OF THE LOCAL COMMUNITY.

1. Limit the amount of office space within the downtown area and discourage office space which does not primarily serve local residents.

B. INSURE THAT THE DOWNTOWN AREA IS WELL INTEGRATED INTO THE RESIDENTIAL FABRIC OF THE COMMUNITY.

1. Encourage alternatives to the use of the automobile for tourist access to the downtown.

2. Discourage high volume or evening commercial activity on the perimeter of the downtown area that may be detrimental to the liveability of adjacent residential areas.

3. Encourage mixed residential commercial land uses adjacent to the western boundary of the downtown areas near 15th Street.

4. Explore mixed residential-commercial land uses within other areas of the commercially zoned downtown area.

5. Establish strict limits on noise within the downtown area.

C. CREATE A PEDESTRIAN ORIENTED DOWNTOWN WHICH GROUPS RETAIL SERVICES WITH FACILITIES FOR CIVIC AND COMMUNITY ACTIVITIES.

1. Maintain commercial uses within the retail core composed primarily of retail sales and service establishments and offices which primarily serve local residents.

2. Discourage commercial uses which are automotive oriented (such as drive-in establishments).

3. Encourage developments which provide social, cultural and recreational activities.

4. Develop a pedestrian network which ties all parts of the downtown together in a way which reduces conflicts with the automobile.

D. MAINTAIN ARCHITECTURAL DESIGN AND LOW MASS-INTENSITY SCALE WITHIN THE DOWNTOWN AREA THAT IS IN KEEPING WITH THE TRADITIONAL VILLAGE CHARACTER OF THE COMMUNITY.

1. Promote informality of design with varied and interesting setbacks.

2. Limit floor areas and require building siting which provides ocean views and open space.

3. Limit the height of structures on the west side of Camino del Mar to one story above street level, and maintain a strict two story limitation elsewhere.

4. Encourage building designs and uses that utilize the advantages of Del Mar's warm, sunny climate.

E. INITIATE A BEAUTIFICATION PROGRAM FOR THE DOWNTOWN AREA.

1. Provide benches, mini-parks, and street trees, and require extensive landscaping of private open space and parking areas.

2. Require undergrounding of all utilities, and the use of low intensity lighting.

3. Require the removal of inappropriate or out-of-scale signing and encourage signing which is well integrated into building or site design.

F. DEVELOP GUIDELINES FOR THE DESIGN OF THE DOWNTONW AREA THAT INCLUDES CAMINO DEL MAR CIRCULATION, PARKING, ARCHITECTURAL DESIGN, AND WALKWAYS.

1. Consider the conversion of Del Mar Lane between 13th and 15th Streets into a pedestrian mall.

G. DISCOURAGE COMMERCIAL USES OUTSIDE OF THE DOWNTOWN AREA THAT WOULD MINIMIZE ITS SOCIAL AND ECONOMIC VITALITY.

MAR 0 3 2008 ITEM 11

**DRAFT**

## NEW APPLICATIONS

| | |
|---|---|
| **ITEM 1**<br>**GPA-08-01**<br><br>*Forward to City Council* | **Location:** City-wide<br>**Applicant/Owners:** City of Del Mar<br>**Contact Person:** Linda S. Niles, Planning and Community Development Director<br>**Description:** Amendments to the Community (General) Plan to add policies to the Community Development, Environmental Management, and Transportation Elements regarding City Storm Water Management and Discharge Control regulations as revised under the new NPDES Permit. |

Chair Price wanted to confirm that this would be moving on to Council and that these are the changes mandated by the Clean Water Program.

Planning & Community Development Director Niles stated that the Commissions' recommendations will be forwarded to the City Council. Council will be hearing the amendments and the Planning Commission's recommendations to the amendments to the Community Plan in addition to some municipal code amendments on March 3.

Chair Price asked Planning & Community Development Director Niles to clarify 'recommendations' and whether it included additions or modifications to the wording.

Planning & Community Development Director Niles responded in the affirmative. She then introduced Joe DeStefano, the new Clean Water Manager for Del Mar, and Rosanna Lacarra, of PBS&J, who has served in that capacity for the past three years. She also advised that these are all requirements of the new permit that she just mentioned which will be reviewed at the community workshop February 25, and then go on to a public hearing at the March 3 City Council meeting on the Community Plan amendments along with some amendments to the Municipal Code that go directly to the Council for their review.

Rosanna Lacarra presented an overview of the staff report.

Chair Price suggested that the Commission review the comments in red on the Stormwater documents, starting with number 7, and that Commissioners make their comments before moving on to the next proposed change.

Rosanna Lacarra read number 7: Open space areas should be managed with erosion control and pollution prevention measures in the forefront.

Commissioner Kerridge commented that having done his due diligence, there is nothing in the proposed changes that he has questions or comments about. However, he stated he has not given any thought into what may have been missed. He is not sure to what extent the Commission is supposed to think hard about the issues that, conceivably, the professionals might have missed. He stated that although he does not mistrust staff, he could not swear that all the bases have been covered.

Chair Price confirmed with Commissioner Kerridge that he does not have any problems with the proposed changes in red.

**DRAFT**

Commissioner Kerridge responded affirmatively.

Commissioner Nordhoff and Chair Price stated they also do not have any problems with the proposed changes.

Commissioner Ehrenfeld wanted to know if on page 32, number 5, when it talks about particulate matter, if that included air pollution.

Commissioner Nordhoff wanted to know if he might be referring to wood-burning fireplaces.

Rosanna Lacarra stated she did not know if that particular item is specific enough to address particulate matter as airborne pollutants. It is under the heading of "Conserve the natural character of land, water and vegetation," so she believes it has more to do with land erosion preservation. She stated it is used commonly as an air pollutant description, which she believes may be addressed under Transportation.

Commissioner Ehrenfeld stated he wasn't sure how the term 'particulate' was used in the report versus how it has been used by the Planning Commission.

Rosanna Lacarra stated it is commonly used as an air pollutant description which is addressed under Transportation on page 48.

Commissioner Ehrenfeld felt that the term 'educate the public' was a little weak; however, stated that might be about as strong as they want to get in this document. He wanted to know if that left the City open to create Code or whatever would encourage work in this direction or if the word 'educate' simply stopped with a brochure and a TV ad. He asked if the word 'educate' would be strong enough if the City eventually wanted to create guidelines, through its development standards, for City vehicles if it decided the relationship between air pollution and water pollution was an issue it wanted to address, or if there was need to suggest stronger language now so there would be room to do that in the future.

Rosanna Lacarra responded that she does not believe the current document addresses where Commissioner Ehrenfeld is going with Transportation. She stated she believes it would be complicated to try to address transportation air pollution at a City level because the City would not have much control other than to limit certain traffic patterns and things like that to prevent additional traffic through the City. As far as emission-related things, she believes it would be very difficult to regulate locally because there are a lot of standards that come from Federal and State governments, so to the degree that the City can educate the public to those standards and requirements, she believes they are doing a pretty good job. She stated she is not inclined to recommend additional, more stringent language at this time, because she believes the regulations are changing and are too volatile right now when it comes to emissions at the State and Federal levels.

Commissioner Ehrenfeld stated he was curious about whether electric fire engines would service the City properly. It may be something the City wants to set as a priority in the long-run, or at least alternative fuel or hybrid fire engines would be something that would be encouraged and it really isn't addressed in the document other than stating 'educate the public'. He stated he does not have any suggestions on what language

17

MAR 0 3 2008 ITEM 11

**DRAFT**

could be proposed to bring the City more to action and less to talking on the issue of air pollution.

Planning & Community Development Director Niles stated that one of Commissioner Ehrenfelds' issues was particulates coming from outdoor fireplaces which may be related to development. She asked Rosanna Lacarra and Clean Water Manager DeStefano if there was any policy or goal that could be added to the Community Development element regarding development that could work towards reducing those kinds of particulates and then, as they move forward in Municipal Code Amendments to the language, the City could consider something in there regarding that.

Rosanna Lacarra stated that she could add some language that would say "support reduction of emissions through" and then address some of things like possibly obtaining grant funding for replacement vehicles of the City's fleet. She advised that language like that can be incorporated so the City could control its fleet. She can also add something to support reductions in emissions regarding fireplaces and related issues that the Planning Commission has influence over.

Commissioner Ehrenfeld stated that is his agenda.

Chair Price added that with regard to fireplaces and related issues, he burns wood in his own fireplace and he is sure a lot of people around town do also, so he thinks that it should be added as a discussion item at City Council. He stated he is not so sure they should adopt something unless everyone wants to vote on it to say they should put it in.

Commissioner Nordhoff clarified that these are just goals and objectives.

Commissioner Kerridge stated that this is the Community Plan; it's not the Municipal Code.

Rosanna Lacarra suggested the wording "seek opportunities to reduce emissions" which would not necessarily prescribe that they were prohibiting or limiting; it would just look for opportunities for those things to happen in the future, so they are broader goals.

Commissioner Ehrenfeld stated that thanks to Planning & Community Development Director Niles, they've expanded into the Community Development area now.

Commissioner Kerridge noted that if the Planning Commission is going to start micro-managing the connection between air pollution and water pollution, then there's almost no limit to where they could go. For example, when he would argue that one of the biggest contributors to air pollution which could get into the water system is from vehicles on the main drag that are required to stop and restart frequently, they would produce less pollutants if they were allowed to drive straight through town without stopping at stop signs. He stated he would not be ashamed to make the argument that if the Planning Commission is seriously interested in reducing air pollution, particularly of heavy metals and things that can get from the air into the water, then they should consider revising the City's traffic management plan because there is a real nexus between the two. He is not suggesting that they should do that, but if that Pandora's box is opened, then this is one of the things that should be discussed.

Commissioner Ehrenfeld stated research backs up the fact that a sealed fireplace that's

18

MAR 0 3 2008 ITEM 11

**DRAFT**

properly designed will put out a lot more heat and a lot less pollution. Those are the kinds of things that cities all over the country are encouraging. Right now, outdoor fireplaces are incredibly inefficient when it comes to burning; they put an incredible amount of particulate into the air; that's one end of the spectrum. He stated he's not saying they should outlaw them, he's simply saying that there are cities all over the State that have rules that say only certain kinds of wood can be burned because it cuts down the pollution. He shared that when he was travelling once, he met a scientist who studied how airborne pollutants get into the water and it started him thinking about it; if they have stuff floating out of fireplaces and then washing down into the ocean, that's pretty direct. He stated he understands what Commissioner Kerridge is saying and he agrees with him that there's a public good to having the cars moving more efficiently through the City in terms of air pollution.

Commissioner Kerridge clarified that his point was really if the City does get involved in discussions of outdoor fireplaces, what logic is there to stopping at that point and not going on to other sources of air pollution that can get into the wastewater. He commented that Commissioner Ehrenfeld is making an arbitrary decision that outdoor fireplaces constitute a problem the city should tackle, but it shouldn't necessarily get into other potential sources, and he doesn't see any logic to that.

Commissioner Ehrenfeld stated he thinks air pollution should be a major point within the document; whether they end up discussing indoor or outdoor fireplaces, he thinks they have sources of pollution within the City that could easily be controlled. He stated that it's within the control of the population and it's not unheard of to have these kinds of rules. He agrees that anything could be taken to the extreme, but he thinks every way to eliminate air pollution is worthy of discussion and he wants to see air pollution in the document, because he thinks it is a critical issue. It is not his plan to use this document to get his own personal agenda through, but he thinks that to have a document such as the one before them that does not specifically address air pollution, there's a major gap that he would like to see filled to a point where reducing air pollution is a priority within the City as much as possible. It's mostly a regional issue; the City can't really affect the air pollution coming from Los Angeles or Tijuana but there are sources of pollution within the City that, through development, the City can properly affect, even in terms of building materials that are used.

Commissioner Kerridge confirmed that Commissioner Ehrenfeld wanted to see wording that was more proactive than simply "educate the public", but still general enough to encompass any locally manipulatable source or pollution.

Commissioner Ehrenfeld stated that "educate the public" is in the Transportation element, and it may be strong enough there, but in the Development standards that the Planning Commission could possibly have an impact on, he would like to see air pollution addressed as something that should be minimized. He is not talking about the source at this point because it's not really important.

Chair Price wanted to know how that applied to what the Planning Commission was talking about tonight.

Rosanna Lacarra stated she is trying to think of some additional examples so she can craft some general language, because the goals should be broad. She noted to the degree that the City doesn't use leaf blowers that are powered by small engines, they

**DRAFT**

are improving air pollution quality around the city and that leads to an environmental benefit to water quality, so she is trying to think of other examples the Planning Commission could potentially give her to incorporate some language regarding air pollution that the City has already effectively implemented that she can use as examples. She suggested "Promoting the reduction of air emissions or particulate emissions from fireplaces and small equipment motors" or similar can be used to draft that language that would be in sync with the goal.

Commissioner Kerridge stated Rosanna Lacarra was right about the statute concerning leaf blowers. He stated he has noticed that since they no longer have a Code Enforcement Officer, the frequency of leaf blower usage has sky-rocketed - at least in his neighborhood, so that's worth bearing in mind.

Chair Price stated that even what Commissioner Kerridge said about traffic management, things can be listed to make a more encompassing statement.

Planning & Community Development Director Niles stated that Staff can come up with general language with the examples that have been provided. Over the next three to five years, Staff will be updating all the elements of the General Plan, not just these portions of these elements, so there will be a conservation element and all the regular elements like transportation / circulation of the Community Plan. These kinds of goals will fall into some of the other elements much better. Air quality is in the conservation element specifically, so staff can add specific language regarding the water quality and how the air quality relates to the water quality and then they can put more specific language in the upcoming elements as they come to Staff and perhaps they propose some different language for some of the Code Amendments that are coming up. She also advised Chair Price that a full-time Code Enforcement Officer has been hired who started last week and she will be going out and finding the people using leaf blowers.

Chair Price confirmed that this document will be forwarded to the City Council.

Planning & Community Development Director Niles stated that the document will be going to City Council. She provided an overview of all of the elements contained in the staff report that are being revised. The new permit contains new and revised provisions that the City must enforce. That will include the City making changes to its standards and doing different kinds of enforcement, so some of the things the City will have to comply with include:

- Modifications to private development application processing and documentation as required by low impact development standards (LID), so there will be changes to project designs that the City and residents will see on their projects to help with water quality, so the Design Review Board will be seeing a lot of different changes and requirements that the City will be placing on those developments that come through the City.

- She stated we have to do an annual inspection of all commercial sites. Currently, the City does not have to do that but every three years.

- The inspection of all special events and special event venues, like festivals and street fairs and farmer's markets. In the past, the City has not been required to inspect those and ensure that their operation meets any of the clean water

2C

MAR 0 3 2008 ITEM 11

**DRAFT**

standards.

Commissioner Kerridge asked if the responsibility of the inspection lies with the City or the organizers of the event.

Planning & Community Development Director Niles answered that the organizers of the event need to design the event to meet the standards. The City will help them when they are coming in for their permits for those events, and then it will be Joe DeStefano, the Clean Water Manager, who will do the inspection of those events.

Chair Price asked that since the Farmer's Market meets every week, if the City will need to conduct weekly inspections.

Clean Water Manager DeStefano responded that it was his understanding that once the City meets with them and set up a plan that ensures they meet all the standards required of the permit, it will result in an occasional inspection to make sure they are doing what they agreed to do.

Planning & Community Development Director Niles continued with the revisions and additions:

- Dual regulation and inspection of State-permitted construction industrial sites, which includes the Fairgrounds and at least one industrial site in town.

- The new watershed urban runoff management plan requirement specifically aimed at reducing priority pollutants.

- Increased requirements to comply with investigative and TMDL (Total Maximum Daily Load) orders, which are pretty complicated, so it will take awhile to explain those to the public.

- There's a significant increase in local and regional water quality monitoring requirements, so PBS&J and Clean Water Manager DeStefano will be doing a lot more monitoring and reporting of that monitoring to the Water Quality Control Board.

- Expanded regional education and program management requirements. The workshop that the Planning Department will be holding on February 25 will be part of the educational program that will be done to comply with the new standards.

- Upgrading the standard urban stormwater mitigation plan which is call the SUSUMP requirements and establishing hydromodification controls. Those are also pretty detailed and will be explained at the Council Meeting.

- Amending ordinances and the General Plan, which is what the Planning Commission is looking at this evening; the General Plan Amendments.

- Significant increase in data tracking documentation and reporting, as she indicated earlier. That includes when the planners go out and conduct site inspections on development projects that are under construction at the moment.

21

MAR 03 2008 ITEM 11

**DRAFT**

They will be writing out forms that indicate how that project construction is complying with the best management practices for erosion control and things and the City will keep a record of those so they can be forwarded in the Annual Report to the Regional Water Quality Control Board.

- Revise long-term assessment and physical reporting of the Clean Water Program. Clean Water Manager DeStefano and Rosanna Lacarra will be putting together a new program by which the City can document everything that is being done in the Clean Water program so that under the permit, the City will be able to highlight any questions that come up or keep track of anything they do in all areas under the requirements of the new permit.

- Other elements are regional, local educational materials. We participate in those; we have in the past and will continue to do that and distribution to the residents and businesses.

- Regional and Local Water Quality Monitoring municipal facility inspections, which we do now; all of our facilities are inspected and Rosanna Lacarra gives classes to all the staff several times a year on what we need to be doing to make sure we comply with the Clean Water standards.

- There will be a hotline citizen complaint line

- Annual municipal employee training

- Special investigation and studies

- Industrial and construction inspections

- Grant support for when there's an occasion where we need to do some additional work, we may be able to get some grant funding for some of the things we need to do to meet the requirements of the Permit.

- Modified municipal operations and maintenance for street sweeping and storm drain inlet cleaning. We are now required to do that more often and in a different manner.

- Dual regulation of sanitary sewage system with more reporting requirements

- Implementation of additional best management practices which we call (BMPs) to improve water quality.

She stated there are a lot of things that go into the requirements of the new Permit. It's spread out over a lot of things that we do in the City, not only as a municipal government, but the citizens as well. Staff will try to get everyone updated on what else needs to be done individually and as a City.

Commissioner Ehrenfeld asked on page 33, section M, there are many things there could potentially end up in Code is in terms of pervious landscaping footprint and giving numbers to that. He wanted to know what the process is that goes forward to creating numbers that go along with those things and how will those things begin to affect the

**DRAFT**

landscaped plans for projects.

Rosanna Lacarra deferred the question to Clean Water Manager DeStefano, who worked on the County's Handbook that PBS&J uses as a guidance document for LID. It shows the preliminary standards for design and inclusion of these types of features which include landscaping, irrigation systems, etc.

Clean Water Manager DeStefano stated that the Permit itself is requiring that specific LID components go into effect with this first iteration of permit changes. Within the next year, the copermittees, which are all the individual Cities, the County, the Airport Authority and Port District are actually going to develop the specific site standards by which impervious and pervious surfaces are going to be adjusted on site, so a lot of the individual details are not yet developed. While he still worked at the County, they created a program by which LID measures could be identified that work in the air environment which had not been done before. Much of the LID work had been done in Seattle and the east coast where rainfall is much higher and there are far less dry weather flows. In general, the areas the current permit and things the City will be enforcing soon have outlined areas that the City must implement at this time: disconnection of impervious surfaces so that parking lots don't sheet flow into the storm system; breaking them up so that they flow into areas of vegetation and that the vegetated areas have been designed to receive that runoff where possible infiltration. In larger developments, the most obvious example of that is in the use of landscaping medians in parking areas that have been crowned in such a way with curb cuts so that sheet flows towards the center parking lots so that they run through vegetated areas before discharge. It gives the opportunity for the natural vegetation to actually filter the water prior to discharge into the storm system. One of the other items the City is being required to do is the use of downspouts on rooftops focusing the water away from sheet-flowing down driveways and into vegetated areas, and wherever possible, the use of pervious pavers, pervious asphalt and pervious concrete in site design, with the idea being to mimic natural runoff flows and keeping much of the stormwater on site.

Commissioner Ehrenfeld asked if the addition of this would be an extra level of compliance for a permit, or if those things would be put into the City's own Code as time goes on.

Planning & Community Development Director Niles stated she thought some of these would be added as Code requirements, and Staff will be working on those during the next year, but they would be including some minor changes in the next review by Council.

Rosanna Lacarra added that because of the way the LID measures were written in the past, sometimes projects didn't incorporate the best designs and did not appeal to the aesthetics and the landscaping was done very roughly. To make it appealing to the public and to incorporate some of the aesthetics of some of these features, the idea is to offer something similar to a cafeteria menu of choices to the developer and architect so they aren't being locked in and projects can be designed with architecture that will blend in across the county; not just the City, to meet with the community desires. So the idea will be somewhat prescriptive but at the same time, allowing some flexibility, so that the Planning Commission can pick and choose what items best fit the design and features of the site.

MAR 03 2008 ITEM 11

# Appendix 2-B
# City Council Staff Report for Modifications to Del Mar Municipal Code Section 11.30 - March 3, 2008

# City of Del Mar
# Staff Report

**TO:** Honorable Mayor and City Council

**FROM:** Carmen Kasner, City Engineer CK
Rosanna Lacarra, Clean Water Program Technical Advisor
Linda Niles, Community Development Director
Via Karen Brust, City Manager KB

**DATE:** March 3, 2008

**SUBJECT:** Del Mar Municipal Code (DMMC) Chapter 11.30; Repeal of DMMC Chapter 11.30 and introduction of new DMMC Chapter 11.30 to comply with the San Diego Regional Water Quality Control Board Order 2007-0001.

**ISSUE:**

Whether to repeal DMMC Chapter 11.30 and introduce a new DMMC Chapter 11.30 Stormwater Management Ordinance to comply with the San Diego Regional Water Quality Control Board Order 2007-0001.

**FISCAL ANALYSIS:**

Funding for the NPDES/Stormwater Program (i.e., ordinance revisions, assessment of the General Plan, program development, etc.) was included in the approved budget.

**ENVIRONMENTAL REVIEW:**

In accordance with CEQA standards, the Jurisdictional Urban Runoff Management Program does not meet the definition of a project, and is therefore exempt from the provisions of CEQA.

**RECOMMENDATION:**

Repeal DMMC Chapter 11.30 and Introduce a new Chapter 11.30 Stormwater Management Ordinance included in Attachment "A".

---

## City Council Action:

**BACKGROUND:**

The San Diego Regional Water Quality Control Board (RWQCB) adopted new NPDES Permit requirements on January 24, 2007, Order No. 2007-0001, which increased the requirements for the City's regulation of urban runoff discharges. All of the Cities in San Diego County, including the City of Del Mar are listed in the Order as Copermittees and are required to update and implement a program of stormwater management that is even more rigorous then previously adopted. The permit requirements are very proscriptive and do not offer much flexibility for local interpretation.

**ANALYSIS:**

The major changes to the existing Ordinance include new and updated definitions to be in compliance with the new permit. Additional Best Management Practices (BMPs) and requirements for residential development are added, including stormwater treatment requirements for some projects. The definitions have been expanded to include new terminology such as Low Impact Development (LID), a design approach that requires minimizing hardscape and increasing pervious area in all development; establishment of new criteria for priority projects that are linked to Water Quality Sensitive Areas (WQSA), and requiring water quality treatment for priority projects with long term operation and maintenance requirements.

Another major change to this Ordinance is that under the Permit non-stormwater discharges need to be evaluated and verified not to cause or contribute pollutants to the receiving waters (beaches, creeks, lagoons). As a result of this assessment, it has been determined that discharges from landscape irrigation, irrigation water, and lawn watering should be considered a source of pollutants, but more importantly, the excessive flows that they can generate in the Municipal Separate Storm Sewer System (MS4) increase the possibility of moving pollutants through the MS4 and into the receiving waters that otherwise would have been stationary and subject to removal by regular MS4 maintenance and cleaning. Therefore, these irrigation and landscape water activities have been determined to have the possibility of discharging pollutants and are subject to BMPs. These BMPs are to be implemented by property owners and their contractors to control pollutants from these activities. The implementation of BMPs is considered significant in lieu of a prohibition of the discharge from these activities.

The Ordinance is supported by the Jurisdictional Urban Runoff Management Plan (JURMP) that is also being considered this evening. The staff report for that item includes an Executive Summary of the new permit and many more details regarding the new permit and the requirements for enforcement.

Attachment A – Draft Ordinance

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF DEL MAR, CALIFORNIA, REPEALING THE EXISTING CHAPTER 11.30 AND ADDING CHAPTER 11.30 IN THE MUNICIPAL CODE RELATING TO STORMWATER MANAGEMENT AND DISCHARGE CONTROL.

WHEREAS, the City of Del Mar intends to ensure the future health, safety, and general welfare of the citizens of the City of Del Mar by: 1) controlling non-stormwater discharges to the stormwater conveyance system; 2) eliminating discharges to the stormwater conveyance system from spills, dumping or disposal of materials other than stormwater; 3) reducing pollutants in stormwater discharges, including those pollutants taken up by stormwater as it flows over urban areas (Urban Runoff), to the maximum extent practicable; and 4) reducing pollutants in stormwater discharges in order to achieve applicable water quality objectives for surface waters in San Diego County; and

WHEREAS, the City of Del Mar intends to protect and enhance the water quality of its watercourses, water bodies, and wetlands in a manner pursuant to and consistent with the Clean Water Act and the San Diego Regional Water Quality Control Board Order Number No. R9-2007-0001 (NPDES Permit Number CAS0108758); and

WHEREAS, DMMC Chapter 11.30, Stormwater Management and Discharge Control, regulates and controls the discharge of non-stormwater discharges and quality of stormwater discharges.

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF DEL MAR DOES HEREBY ORDAIN AS FOLLOWS:**

**SECTION ONE:**

That the existing Chapter 11.30 of the Municipal Code is repealed and that a Chapter 11.30 is hereby added to the Del Mar Municipal Code to read as follows:

See Exhibit "A"

**SECTION TWO:**

This ordinance was introduced on _____

3

**SECTION THREE:**

The City Clerk is directed to prepare and have published a summary of this ordinance no less than five days prior to the consideration of its adoption and again within 15 days following adoption indicating votes cast.

**PASSED AND ADOPTED** this 3rd day of March of 2008, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____
David Druker, Mayor of the
City of Del Mar, California

**ATTEST AND CERTIFICATION**

I hereby certify that this is a true and correct copy of Ordinance No. _____, which has been published pursuant to law.

_____
Mercedes Martin, City Clerk
City of Del Mar, California

4

ATTACHMENT "A" TO ORDINANCE NO. ____

Chapter 11.30
STORMWATER MANAGEMENT AND DISCHARGE CONTROL

**11.30.010 Title**. This Chapter shall be known as the "City of Del Mar Stormwater Management, and Discharge Control Ordinance." [Ord. 652, 739, 752]

**11.30.020 Purposes and Intent**. The purposes of this Ordinance are to protect the health, safety and general welfare of City of Del Mar residents; to protect water resources and to improve water quality; to cause the use of management practices by the City and its citizens that will reduce the adverse effects of polluted runoff discharges on waters of the state; to secure benefits from the use of stormwater as a resource; and to ensure the City is compliant with applicable state and federal law. The Ordinance seeks to promote these purposes by:

- Prohibiting polluted non-stormwater discharges to the stormwater conveyance system;
- Establishing minimum requirements for stormwater management, including source control requirements, to prevent and reduce pollution;
- Establishing requirements for development project low impact development site design, to reduce stormwater pollution and erosion;
- Establishing requirements for the management of stormwater flows from development projects, both to prevent erosion and to protect and enhance existing water-dependent habitats;
- Establishing standards for the use of off-site facilities for stormwater management to supplement on-site practices at new development sites; and
- Establishing notice procedures and standards for adjusting stormwater and non-stormwater management requirements where necessary.

**11.30.030 Definitions**. The following definitions shall be applicable when the following words or phrases are used hereafter in this Ordinance (including use in the City Stormwater Standards Manuals), whether or not these words or phrases are capitalized:

Accelerated Erosion: means erosion caused by development activities that exceeds the natural processes by which the surface of the land is worn away. Erosion includes the movement or loss of soil by the action of water, wind, or chemical action.

Authorized Enforcement Staff: means any City employee assigned to duties involving permits and other City approvals, inspections, and enforcement related to this Ordinance.

Authorized Enforcement Official: means the City Manager or her/his designee.

Best Management Practices: means schedules of activities, pollution treatment practices or devices, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices or devices to prevent or reduce the discharge of pollutants directly or indirectly to Stormwater, Receiving Waters, or the Stormwater Conveyance System. Best Management Practices also include but are not limited to treatment practices, operating procedures, and practices to control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw materials storage. Best Management Practices may include any type of pollution prevention and pollution control measure that can help to achieve compliance with this Ordinance.

BMPs: means Best Management Practices.

BMP Upgrade: means a modification, retrofit or improvement of a stormwater BMP designed for an existing development site or activity that previously had either no stormwater management BMPs in place or that relied on BMPs inadequate to meet the stormwater management requirements of the site or activity. Channel: means a natural or improved watercourse with a definite bed and banks that conducts continuously or intermittently flowing water.

City: means the City of Del Mar.

City Stormwater Standards Manuals: means the manuals described in section 11.30.040 G. of this Ordinance.

Commercial Discharger: means a Discharger who operates a Regulated Commercial Facility.

Constructed Wetland: means a vegetated area that has been deliberately designed and constructed as a BMP to provide or enhance habitat, to provide water quality benefits, or to moderate water flow rates or velocities, that is inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions, commonly known as hydrophytic vegetation.

County: means the County of San Diego.

6

Detention: means the temporary storage of storm runoff in a manner that controls peak discharge rates and provides some gravity settling of pollutants.

Detention Facility: means a detention basin or alternative structure designed for the purpose of temporary storage of stream flow or surface runoff and gradual release of stored water at controlled rates.

Developer: means a person who seeks or receives permits for or who undertakes land development activities.

Development Project Proponent: means Developer.

Discharge: when used as a verb, means to allow pollutants to directly or indirectly enter stormwater, or to allow stormwater or non-stormwater to directly or indirectly enter the Stormwater Conveyance System or Receiving Waters, from an activity or operations that one owns or operates. When used as a noun, "Discharge" means the pollutants, stormwater and/or non-stormwater that are discharged.

Discharger: means any person or entity engaged in activities or operations or owning facilities, which will or may result in pollutants entering stormwater, the Stormwater Conveyance System, or Receiving Waters; and the owners of real property on which such activities, operations or facilities are located; provided however that a local government or public authority is not a discharger as to activities conducted by others in public rights of way.

Discharges Directly To: means that stormwater or non-stormwater enters

Receiving Waters from a facility or activity, without mixing with any stormwater or non-stormwater from another facility or activity prior to entering such Receiving Waters.

Drainage Easement: means a legal right granted by a landowner to a grantee allowing the use of private land for stormwater management purposes.

Dry Season: means May 1 through September 30 of each year.

Environmentally Sensitive Area: means areas that include but are not limited to all Impaired Water Bodies per Clean Water Act Section 303(d), areas designated as Areas of Special Biological Significance or with the RARE beneficial use by the SWRCB in the Water Quality Control Plan for the San Diego Basin (1994 and amendments), National Wildlife Refuges, and areas designated as

7

preserves for species-protection purposes by the State of California or a local government.

Erosion and Sediment Control Plan: means a Stormwater Management Plan that is designed to minimize the accelerated erosion and sediment runoff at a site during construction activities.

ESA: means Environmentally Sensitive Area

Forecast Rain Event: means a forecast rain event of greater than 1/10th of an inch with an equal or greater than 50% probability by the National Weather Services or comparable weather forecasting services.

Household Hazardous Waste: means a household hazardous material that no longer has a use and is discarded or intended to be discarded. The term includes but is not limited to paint and paint-related materials; yard and garden treatment products (i.e. fertilizers, herbicides); household cleaners; used oil; Vehicle fluids, batteries and oil filters; pesticides; and household batteries.

Hydrologic Soil Group: means the classification system for soil erodability set out in "Soil Survey - San Diego Area, California" (December 1973), issued by the U.S. Department of Agriculture Soil Conservation Service and U.S. Forest Service. (In this system soils are categorized into four runoff potential groups. The groups range from "A" soils, which have high permeability and little runoff production, to "D" soils, which have low permeability rates and produce much more runoff.)

Illegal Connection: means a pipe, facility, or other device connected to the Stormwater Conveyance System or Receiving Waters, which has not been reviewed and authorized by the City; or a permitted/authorized pipe, facility, or other device, which conveys Illegal Discharges.

Illegal Discharge: means any discharge into Stormwater, the Stormwater Conveyance System, or Receiving Waters that is prohibited by this Ordinance. This includes but is not limited to discharges of non-stormwater that are not exempt discharges listed in Section 11.30.060, any discharge from an Illegal Connection, and any discharge that contains additional pollutants due to the absence of a required BMP or the failure of a BMP unless it qualifies as an Upset. Discharges that require a City/County permit or an RWQCB permit that has not been issued or has not been acknowledged by the Discharger to be applicable are Illegal Discharges. Discharges regulated under an applicable RWQCB or City/County permit or SWPPP are Illegal Discharges for purposes of

8

this Ordinance unless compliance with all applicable permit and SWPPP conditions is maintained. [Ord. 752]

Impaired Water Body: means a water body that is listed by the SWRCB as impaired by a particular pollutant or pollutants, pursuant to section 303(d) of the Federal Clean Water Act. "303(d) listed water body" has the same meaning.

Impervious Cover or Impervious Surface: means constructed or modified surfaces that cannot effectively infiltrate rainfall. The term includes but is not limited to building rooftops, pavement, sidewalks, and driveways.

Impervious Surface Area: means the ground area covered or sheltered by an impervious surface, measured in plan view (i.e., as if from directly above). For example, the "impervious surface area" for a pitched roof is equal to the ground area it shelters, rather than the surface area of the roof itself.

Industrial Activity: means manufacturing, processing, or raw materials storage at a commercial, industrial or municipal facility. The term includes, but is not limited to, industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials; manufactured products, waste material, or by-product creation or storage; material handling; refuse storage or disposal; the application or disposal of process wastewaters; storage and maintenance of material handling equipment; treatment, storage or disposal of residuals; outdoor shipping and receiving; activities in manufacturing buildings; storage of raw materials and intermediate and finished products; and areas where significant industrial activity has taken place in the past and significant materials remain and are exposed to stormwater. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, finished product, by-product, or waste product. This includes activities of the 22nd District Agricultural Association.

Industrial Discharger: means a Discharger who operates a Regulated Industrial Facility.

Industrial Stormwater Permit: means the State General Industrial Stormwater Permit.

Infiltration: means the process of percolating stormwater or non-stormwater into the subsoil.

Infiltration BMPs or Infiltration Facility: means any structural treatment BMP designed primarily to percolate water into the

9

MAR 0 3 2008 ITEM 13

subsurface, such as an infiltration trench or infiltration basin. An infiltration facility may include filtering prior to or during infiltration. BMPs that infiltrate some water but which are designed primarily to retain water or to treat water, such as retention basins, constructed wetlands, or filtering swales are not infiltration facilities.

Jurisdictional Urban Runoff Management Program: means the detailed plans and procedures developed and implemented by the City and Dischargers for activities and areas associated with development planning, construction, residential, commercial, industrial, municipal components; education, public participation, program effectiveness assessment, and fiscal analysis of the programs; and the illegal discharge detection and elimination program.

JURMP: means Jurisdictional Urban Runoff Management Program.

Jurisdictional Wetland: means an area that is naturally inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions, commonly known as hydrophytic vegetation. This includes but is not limited to areas previously designated by the City as wetlands. Constructed wetlands are not jurisdictional wetlands.

Land Development Activity: means any activity or proposed activity that requires any of the permits or approvals listed in section 11.30.040 F. of this Ordinance.

Land Disturbance Activity: means any activity that moves soils or substantially alters the pre-existing vegetated or man-made cover of any land. This includes, but is not limited to, grading, digging, cutting, scraping, stockpiling or excavating of soil: placement of fill materials: paving, pavement removal, exterior construction: substantial removal of vegetation where soils are disturbed including but not limited to removal by clearing or grubbing: or any activity which bares soil or rock or involves streambed alterations or the diversion or piping of any watercourse. Land Disturbance Activity does not include routine maintenance to maintain original line and grade, hydraulic capacity, or the original purpose of the facility, nor does it include emergency construction activities (i.e., land disturbances) required to protect public health and safety.

Land Owner: means the holder of legal title to the land, and other persons or entities that exercise control over a land development project pursuant to rights granted in a purchase agreement, joint venture agreement, development agreement, or long term lease.

Maintenance [of a BMP]: means periodic action taken to maintain the

10

as-designed performance of a BMP, and includes but is not limited to operation of the BMPs as specified by the engineer, manufacturer or architect, repairs to the BMP as necessary, and replacement of the BMP by an equally effective or more effective BMP at the end of its useful life.

Maximum Extent Practicable: is the technologically-based standard for Best Management Practices (BMPs). When BMPs are required to meet this standard, the BMPs must be the most effective set of BMPs that is still practicable. A BMP is effective if it prevents, reduces or removes the pollutants that would otherwise be present in runoff due to human activity. A BMP is practicable if it complies with other regulations as well as stormwater regulations; is compatible with the area's land use, character, facilities, and activities; is technically feasible (considering area soil, geography, water resources, and other resources available); is economically feasible; and provides benefits that are reasonable in relation to costs.

MEP: means Maximum Extent Practicable.

Mobile Business: means any Regulated Commercial Business providing services at the client's premises (residential, municipal, commercial or industrial). Mobile businesses include, but are not limited to, activities providing commercial repair, maintenance, cleaning, manufacturing, food preparation or painting or any other activity determined by the City to have the potential to result in the discharge of non-stormwater or pollutants to stormwater.

Municipal Facility: means a facility owned or operated by the City that is used for a governmental purpose. Facilities on municipally owned land that are leased or rented to others to generate municipal revenues are not Municipal Facilities. (The commercial or industrial lessees of such facilities may, however, be subject to this Ordinance as Commercial Dischargers or Industrial Dischargers.)

NPDES Permit: means a National Pollutant Discharge Elimination System permit issued by the U.S. Environmental Protection Agency, the SWRCB, or the RWQCB.

NPDES Permit No. CAS 0108758: means RWQCB Order No. 2007-0001, NPDES Permit No. CAS 0108758, "Waste Discharge Requirements for Discharges of Urban Runoff From the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the County of San Diego, the Incorporated Cities of San Diego County, and the San Diego Unified Port District, and the San Diego County Regional Airport Authority."

Nuisance: as define the Porter-Cologne Water Quality Control Act means "anything which meets all of the following requirements: 1) Is injurious to health, or is indecent, or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property. 2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal. 3) Occurs during, or as a result of, the treatment or disposal of wastes."

Off-Site BMP: means a stormwater management measure located outside the subject property boundary of a facility or outside the boundary described in the permit application for a land development activity.

On-Site BMP: means a stormwater management measure located within the subject property boundary or a facility, or inside the boundary described in the permit application for a land development activity.

Performance Standard: means a requirement under this Ordinance that specifies a result that must be achieved (e.g., "minimize impervious surface area" or "do not impair receiving water quality") without specifying the means that must be used to achieve that result. (This Ordinance applies performance standards only to certain land development and redevelopment projects that require discretionary City/County permits; those permits will typically include enforceable project-specific requirements intended to achieve the result required by the performance standard.)

Pollutant: means any agent introduced to stormwater or non-stormwater through human activity that may cause or contribute to the degradation of water quality such that public health, the environment, or beneficial uses of waters may be affected. The term may include but is not limited to dredged spoil, rock, sand, or silt (excluding sediment, silt, or substances in quantities which would enter Stormwater from a natural undeveloped watershed); solid waste, sewage, garbage, or medical waste; wrecked or discarded equipment; radioactive materials; industrial waste; fecal coliform, fecal streptococcus, and enterococcus bacteria and other pathogens that pose a threat to human health; volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbons, total organic carbon, lead, copper, chromium, cadmium, silver, nickel, zinc, cyanides, phenols, and biocides; and any contaminant which can significantly degrade the quality of Receiving Waters by altering pH, total suspended or settleable solids, biochemical oxygen demand, chemical oxygen demand, nutrients, or temperature.

12

MAR 0 3 2008 ITEM 13

Primary Pollutant of Concern: means any Pollutant, if that pollutant may be discharged from a priority development project or redevelopment project, and is also a basis for a listing of the receiving water for the project as impaired pursuant to Section 303(d) of the federal Clean Water Act. [Ord. 752]

Priority Development Project: means a development project that falls within any of the following categories: [Ord. 752]

(1) *Housing subdivisions of 10 or more dwelling units.* This category includes single-family homes, multi-family homes, condominiums, and apartments.

(2) *Commercial developments greater than 1 acre.* This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than 1 acre. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; commercial airfields; and other light industrial facilities.

(3) *Developments of heavy industry greater than one acre.* This category includes, but is not limited to, manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.).

(4) *Automotive repair shops.* This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

(5) *Restaurants.* This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for the structural treatment BMP, numeric sizing criteria, and hydromodification requirements.

(6) *All hillside development greater than 5,000 square feet.* This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater.

(7) *Water Quality Sensitive Areas: All development and*

*redevelopment located within or directly adjacent to or discharging directly to an water quality sensitive area (where discharges from the development or redevelopment will enter receiving waters within the water quality sensitive area), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition.* "Directly adjacent" means situated within 200 feet of the water quality sensitive area. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

(8) *Parking lots 5,000 square feet or more or with 15 or more parking spaces and potentially exposed to urban runoff.* Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

(9) *Street, roads, highways, and freeways.* This category includes construction of any paved surface which is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. [Ord. 752]

(10) *Retail Gasoline Outlets (RGOs).* This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

(11) *Redevelopment projects.* Projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site that falls under the project categories or locations listed above (in (1) through (10)) where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in the City's SUSMP applies only to the addition, and not to the entire development. Where redevelopment results in an increase of more than fifty percent of the impervious surfaces of a previously existing development, the numeric sizing criteria applies to the entire development. Where a new Development Project feature, such as a parking lot, falls into a Priority Development Project Category, the entire project footprint is subject to SUSMP requirements.

Rainy Season: means, from October 1 through April 30. [Ord. 752]

Receiving Waters means surface bodies of water, which directly or indirectly receive discharges from urban runoff conveyance systems,

14

including naturally occurring wetlands, streams (perennial, intermittent, and ephemeral (exhibiting bed, bank, and ordinary high water mark)), creeks, rivers, reservoirs, lakes, lagoons, estuaries, harbors, bays and the Pacific Ocean. The City shall determine the definition for wetlands and the limits thereof for the purposes of this definition, which shall be as protective as the Federal definition utilized by the United States Army Corps of Engineers and the United States Environmental Protection Agency. Constructed wetlands are not considered wetlands under this definition, unless the wetlands were constructed as mitigation for habitat loss. Other constructed BMPs are not considered receiving waters under this definition, unless the BMP was originally constructed in receiving waters. [Ord. 754]

Redevelopment: means the creation, addition, and or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk construction, pedestrian ramps, or bikelane on existing roads; and routine replacement of damaged pavement, such as pothole repair.

Regulated Commercial Facility: means all non-residential facilities engaged in business or commerce, whether for profit or not-for-profit, or publicly or privately owned, including Mobile Businesses; plus residences used for commercial repair, maintenance, cleaning, manufacturing, food preparation or painting activity if that activity or any other activity has been determined by the City to have the potential to result in the discharge of non-stormwater or the discharge of pollutants to the stormwater conveyance system. It does not include Regulated Industrial Facilities and Municipal Facilities.

Regulated Commercial Business: means any Regulated Commercial Facility.

Regulated Industrial Facility: means any facility subject to the State General Industrial Stormwater Permit; any other facility primarily engaged in manufacturing, processing, storage or handling of raw materials, processed bulk materials, or refuse; and any other facility with a total outdoor uncovered area of more than two (2) acres that is used for an Industrial Activity. Municipal Facilities are not Regulated Industrial Facilities, unless they are

subject to the State General Industrial Stormwater Permit.

Residential Discharger: means, for an occupied residence, the occupants; and for a vacant residence, the owner and the manager of the residence.

RWQCB: means the California Regional Water Quality Control Board for the San Diego Region.

Secondary Pollutant of Concern: means any of the following Pollutants, discharged from a priority development project or redevelopment project that is not a primary pollutant of concern for that project. [Ord. 752]

Standard Urban Stormwater Mitigation Plan: means the SUSMP. [Ord. 752]

State General Construction Stormwater Permit: means NPDES Permit No. CAS000002, Waste Discharge Requirements for Discharges of Stormwater Associated with Construction Activities, and any amendments thereto.

State General Industrial Stormwater Permit: means NPDES Permit No.99-08-DWQ, Waste Discharge Requirements for Discharges of Stormwater Associated with Industrial Activities Excluding Construction Activities, and any amendments thereto.

Stop Work Order: means an order issued which requires that specifically identified activity or all activity on a site be halted.

Stormwater: means surface runoff and drainage associated with storm events.

Stormwater Conveyance System: means private and public drainage facilities other than sanitary sewers within the City by which urban run-off may be conveyed to Receiving Waters, and includes but is not limited to roads, streets, constructed channels, aqueducts, storm drains, pipes, street gutters, inlets to storm drains or pipes, or catch basins.

Stormwater Management: means the use of structural or non-structural BMPs that are designed to reduce urban run-off pollutant loads, discharge volumes, and/or peak discharge flow rates or velocities. When applied to the City or another municipality, stormwater management also includes planning and programmatic measures.

Stormwater Management Plan: means a plan, submitted on a City form or in a City-specific format in connection with a development

16

permit application for a City/County permit or other City/County approval, identifying the measures that will be used for stormwater and non-stormwater management during the permitted activity.

Stormwater Pollution Prevention Plan: means a document (other than a Stormwater Management Plan), which meets the requirements for a Stormwater Pollution Prevention Plan (SWPPP) set out in the State General Construction Stormwater Permit or State General Industrial Stormwater Permit. A SWPPP submitted to the City must describe the BMPs to be implemented and other steps to be taken by the Discharger to meet the requirements of this Ordinance.

Structural BMP: means a BMP that relies on either a physical condition (other than an entirely natural and undisturbed condition), or on a constructed or installed device to reduce or prevent pollutants in stormwater discharges and authorized non-stormwater discharges. Constructed or enhanced BMPs that depend on natural materials and processes (e.g., constructed drainage swales or buffers, or constructed wetlands), and that require periodic maintenance to function as designed, are Structural BMPs.

Structural Post-Construction BMP: means a structural BMP (other than a temporary construction-related BMP) put in place in connection with a land development or redevelopment project to prevent or reduce contamination in stormwater or Receiving Waters, or to prevent or reduce erosion and/or pollutant discharges downstream from the project.

Structural Treatment BMPs: means a structural post construction BMP that treats or filters stormwater to remove pollutants, or that infiltrates stormwater to soils. [Ord. 752]

SUSMP: means the Standard Urban Stormwater Mitigation Plan for Land Development Projects and Public Improvement Projects. [Ord. 752]

SWPPP: means Stormwater Pollution Prevention Plan.

SWRCB: means the State Water Resources Control Board.

Tributary To an Impaired Water Body: a facility or activity is tributary to an impaired water body if urban runoff from that facility or activity enters (1) the stormwater conveyance system at a place and in a manner that will carry pollutants for which that water body is impaired in that discharge to the impaired water; (2) a flowing stream that will carry pollutants for which that water body is impaired in that discharge to the impaired water; or (3) an ephemeral stream that reaches the impaired water during storm events and that will carry pollutants for which that water body is impaired from the facility or activity to the impaired water body

during such storm events.

Upset: means an exceptional incident in which there is unintentional and temporary noncompliance with technology based effluent limitations because of factors beyond the reasonable control of the discharger. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. [Ord. 752]

Urban Runoff: means all flows in a stormwater conveyance system in the City other than point source discharges in violation of a site-specific NPDES permit. Urban run-off includes but is not limited to stormwater, exempt non-stormwater discharges, and illicit discharges.

Vehicle: means any automobile, car, truck, bus, motor home or other self-propelled vehicle used or suited to use for on-road transportation: and any similar vehicle modified for off-road use; motorized equipment (cement mixers, compressors, etc.); and un-motorized equipment (trailers, campers, etc.)

Water Main: means a potable or recycled water delivery line greater than or equal to four (4) inches in diameter.

Watercourse: means a permanent or intermittent stream or other body of water, either natural or improved, which gathers or carries surface water.

Water Quality Sensitive Area: means the areas located within or discharging directly to, or Tributary To an ESAs (including open space, bluff/slope/canyon(s), and Floodway and Lagoon Habitat) that may be subject to additional BMP or other water quality protection measures to protect beneficial uses and comply with water quality standards. Development Projects, commercial and industrial dischargers located within WQSA are categorized as high priority because they pose a higher threat to water quality.

Water Quality Standards: are defined as the beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.) of water and the water quality objectives adopted by the SWRCB or the United States Environmental Protection Agency to protect those uses.

Waters of the United States: means water subject to the regulatory jurisdiction of the United States under the Federal Clean Water Act and applicable case law. (In general, this includes "navigable" waters, waters tributary to "navigable" waters, and adjacent wetlands.)

**11.30.040 General Provisions.**

A. Responsibility for Administration. This Ordinance shall be administered for the City of Del Mar by its Authorized Enforcement Officials.

B. Effective Date. This Ordinance shall take effect on XXXXX XX, 2008.

C. Construction and Application. Interpretation of the meanings of parts of this Ordinance shall assure consistency with the purpose and intent of this Ordinance. This includes but is not limited to consistency with the requirements of NPDES Permit No. CAS108758. This Ordinance is not intended to interfere with, abrogate or annul any other ordinance, rule or regulation, statute, or other provision of law. The requirements of this Ordinance should be considered minimum requirements, and where any provision of this Ordinance imposes restrictions different from those imposed by any other ordinance, rule or regulation, or other provision of law, whichever provisions are more restrictive or impose higher protective standards for human health or the environment shall take precedence.

D. Recycled Water. This Ordinance is not intended to prohibit or prevent the use of recycled water, or the discharge of recycled water after use. This Ordinance is intended to require the use of BMPs for such uses and discharges as necessary to protect human health and the environment.

E. Severability and Validity. If any section of this Ordinance is declared invalid by a court of law, the remaining sections shall remain valid.

F. City/County Permits and Approvals.

(1) Discretionary Permits. An application for any of the following discretionary permits or approvals shall be accompanied by plans demonstrating how the requirements of this Ordinance will be met, and the permit or approval shall not be approved unless the decision maker determines that the application complies with the requirements of this Ordinance: [Ord. 752]

a. Demolition Permit
b. Agricultural Exemption
c. Final Map Modification
d. Grading Plan (including Modification or Renewal)
e. Improvement Plan (including Modification)
f. Landscape Plan
g. Conditional Use Permit (including Modification or Minor Deviation)

h. Design Review Permit (including Modification, Minor Deviation, or Extension)
i. Land Conservation Permit
j. Parcel Map Modification
k. Reclamation Plan
l. Site Plan (including Amendment)
m. Solid Waste Facility Permit
n. Tentative Map (including Resolution Amendment or Time Extension)
o. Tentative Parcel Map
p. Variance
q. Watercourse Permit
r. Coastal Development Permit
s. Encroachment Permit - Discretionary

(2) Ministerial Permits. An application for any of the following ministerial permits or approvals shall be accompanied by plans demonstrating how the specifically applicable requirements, if any, set out in corresponding sections of the City Stormwater Standards Manuals will be met, and the permit or approval shall not be approved unless the decision maker determines that the application complies with those requirements.

a. Building Permit
b. Encroachment Permit - Ministerial
c. On Site Wastewater System Permit
d. Underground Tank Permit
e. Well Permit

G. City Stormwater Standards Manuals. The City adopts Stormwater Standards Manuals to standardize the process and requirements of compliance methods. Stormwater Standards Manuals are part of the City's JURMP. Authorized Enforcement Officials may provide additional flexibility using the Guidance Documents authorized in subsection 11.30.040 H. below. The SUSMP requirements shall be incorporated into the Stormwater Manuals of the City of Del Mar. [Ord. 752]

H. Guidance Documents. Any Authorized Enforcement Official may prepare, circulate for public comment, disseminate and maintain guidance documents addressing the use of pollution prevention practices and BMPs for specific activities or facilities, and the elimination of illicit connections, and illegal disposal to the Stormwater Conveyance System or Waters of the United States. Guidance Documents may be included or reference in the City JURMP. Guidance Documents may include the County of San Diego Low Impact Development Handbook, the California Stormwater Quality Association BMP handbooks, the County of San Diego's Project Clean Water

Toolbox (of BMPs), and other comparable resources.

These guidance documents may set out additional compliance alternatives that, in specified circumstances, can provide the same environmental protection that is afforded by the BMPs required by this Ordinance or specified in the City Stormwater Standards Manuals.

These guidance documents may also identify practices that have been determined by the Authorized Enforcement Official to be additional BMPs that may be implemented for Land Disturbance Activities and Land Development Activities to prevent or control pollution to the Maximum Extent Practicable (MEP). These additional BMPs shall become mandatory for affected Dischargers after being issued through an Order pursuant to subsection 11.30.040 I. below. Authorized Enforcement Officials and Authorized Enforcement Staff may also take these guidance documents into account when determining whether any practices used by a Discharger, or proposed in a grading plan, a Stormwater Pollution Prevention Plan (SWPPP), Stormwater Management Plan, an enforcement settlement offer, or any other submittal to the City, are BMPs that will prevent or control pollution to the MEP. These case-specific discretionary decisions may involve circumstances that were not anticipated when general guidance documents were prepared. Therefore, these guidance documents do not confer rights on Dischargers in these circumstances and do not constrain the discretion of Authorized Enforcement Officials or Authorized Enforcement Staff. Where appropriate, and provided the same protection is provided to the environment, Authorized Enforcement Officials and Authorized Enforcement Staff may depart from these guidance documents when making case-specific decisions authorized by this Ordinance.

I. Significant Sources of Pollutants. Authorized Enforcement Officials shall identify Discharges and categories of facilities and activities that are a significant source of contaminants to Waters of the United States, despite compliance with this Ordinance. If any such contamination problem is identified by the Authorized Enforcement Official or by Authorized Enforcement staff the Dischargers shall be Ordered by the Authorized Enforcement Official or by Authorized Enforcement Staff to install, implement and maintain additional BMPs to prevent or reduce contamination in stormwater and non-stormwater to the MEP. Any such Order shall specify a reasonable date by which those BMPs must be put in place. A failure to install, implement, or maintains additional BMPs as required by any such Order is a violation of this Ordinance.

J. Determining Whether a Discharge is "Tributary To" an Impaired Water Body. Areas within which facilities and sources will be presumed to be tributary to an impaired water body are identified by the City. The presumption that a discharge is

tributary to an impaired water body can be overcome for a particular discharge based on specific facts and analysis presented by a Discharger. In making a site-specific determination as to whether a discharge is tributary to an impaired water body, consideration may be given to the amount of water and pollutant discharged; to whether the pollutant for which the water body is impaired is a suspended or dissolved pollutant; to whether the pollutant is volatile or degradable; and to whether the pollutant is substantially removed during transport by any natural or man-made features or BMPs (sinks, infiltration areas, ponds or impoundments, vegetated swales or wetlands, media filtration devices, etc.) located between the site and the impaired water body. Any such analysis must consider common mechanisms for pollutant mobilization, remobilization, and transport over time. Any such analysis and determination shall be disclosed for public review and comment to the extent required by CEQA or by City procedures for permit issuance.

K. Collection and Use of Stormwater. An Authorized Enforcement Official may modify any requirement imposed by this Ordinance to allow the on-site collection and use of stormwater, or the collection of stormwater for delivery to and use at City-designated sites, provided the modified requirements are enforceable and provide equivalent environmental protection.

**11.30.050 Discharge Prohibitions**.

A. Illegal Discharges. The discharge of Pollutants directly or indirectly into the Stormwater Conveyance System or Receiving Waters in non-stormwater is prohibited, except as exempted in Section 11.30.060 of this Ordinance. The discharge of Pollutants directly or indirectly into the Stormwater Conveyance System or Receiving Waters in stormwater is prohibited, unless the applicable requirements of this Ordinance have been met.

B. Illegal Connection. The establishment of Illegal Connections is prohibited. The use of Illegal Connections is prohibited, even if the connection was established pursuant to a valid City/County permit and was legal at the time it was constructed.

C. Litter, Dumps, and Stockpiles. Throwing, depositing, leaving, abandoning, maintaining or keeping materials or wastes on public or private lands in a manner and place where they may result in an Illegal Discharge is prohibited unless written authorization is provided by the City.

D. Emergency Flares. The non-emergency use of flares is prohibited unless written authorization is provided by the City.

## 11.30.060 Discharges Exempted from Discharge Prohibitions

A. Categorically Allowed Discharges. The following categories of non-stormwater discharges are exempt from discharge prohibitions established by this Ordinance and are not subject to section 11.30.070. Dischargers must, however, comply with any Order issued pursuant to subsection 11.30.040 I. of this Ordinance; and must install, implement and maintain the specifically applicable minimum BMPs, if any, set out in the City Stormwater Standards Manuals:

- discharges from potable water sources not subject to NPDES Permit No. CAG679001
- air conditioning condensation;
- flows from emergency fire fighting activities;
- springs;
- water line flushing.
- diverted stream flows (provided required permits are obtained);
- flows from riparian habitats and wetlands;
- foundation drains
- individual residential washing of vehicles on private property;
- rising ground water;
- swimming pool and spa discharges (if dechlorinated to less than one PPM chlorine);
- uncontaminated ground water infiltration [defined in 40 CFR 35.2005(20)] to stormwater conveyance system;
- uncontaminated pumped ground water;
- water from crawl space pumps; and
- water from footing drains.

B. Exemptions to Protect Public Health and Safety. Discharges determined by any Authorized Enforcement Official or by Authorized Enforcement Staff to be necessary to protect public health and safety are exempt from discharge prohibitions established by this Ordinance, provided any conditions on such discharges imposed by

the Authorized Enforcement Official or Authorized Enforcement Staff are satisfied. In emergency circumstances, the determination of an Authorized Enforcement Official or Authorized Enforcement Staff that a discharge is necessary may initially be oral but must be promptly confirmed in writing by an Authorized Enforcement Official or by Authorized Enforcement Staff. In non-emergency situations, a prior written determination is required to exempt a discharge.

C. On-site wastewater systems. Discharges to the subsurface from permitted properly functioning on-site wastewater systems are not prohibited by this Ordinance.

D. Exemptions Not Absolute. Any discharge category described in subsection 11.30.060 A. above that is a significant source of pollutant to waters of the United States shall be prohibited from entering the stormwater conveyance system, or shall be subjected to a requirement to implement additional BMPs to reduce pollutants in that discharge to the MEP and as described in the Stormwater Standards Manuals. Such prohibitions shall be effective on a schedule specified by an Authorized Enforcement Official in a written notice to the Discharger. That schedule may take into account the nature and severity of any effects caused by the discharge; and the time required to design, engineer, fund, procure, construct and make appropriate BMPs operational.

**11.30.070 Best Management Practice Requirements and General Requirements of All Dischargers.**

A. Applicable Requirements. All Dischargers in the City must comply with the generally applicable prohibitions and requirements in sections 11.30.010 through 11.30.070 of this Ordinance, and must also comply with any other parts of this Ordinance that are applicable to the type of facility or activity owned or operated by that Discharger.

B. Minimum Best Management Practices for All Dischargers. All dischargers in the City must install, implement and maintain the minimum BMPs outlined in the City's Stormwater Standard Manuals. General categories of minimum BMPs include:

(1) Soil Erosion. Prior to a forecast rain event, Dischargers shall install BMPs to prevent erosion, and significant accumulations of eroded soils from slopes, previously disturbed by clearing or grading, to prevent sediment from entering the Stormwater Conveyance System or Receiving Waters.

(2) Pollution Prevention. Dischargers shall implement those stormwater pollution prevention practices that are generally recognized in that Discharger's industry or business as being

effective and economically feasible.

(3) Prevention of Illegal Discharges. Illicit connections must be eliminated (even if the connection was established pursuant to a valid permit and was legal at the time it was constructed), and illegal discharge practices eliminated.

(4) Slopes. Completed slopes that are more than five feet in height, more than 250 square feet in total area, and steeper than 3:1 (run-to-rise) that have been disturbed at any time by clearing, grading, or landscaping, shall be protected from erosion immediately following completion of the slope, and continuously thereafter.

(5) Storage of Materials and Wastes. All materials and wastes with the potential to pollute urban runoff shall be stored in a manner that either prevents contact with rainfall and stormwater, or the contaminated runoff contained for proper and legal treatment and disposal.

(6) Use of Materials. All materials with the potential to pollute urban run-off (including but not limited to cleaning and maintenance products used outdoors, fertilizers, pesticides and herbicides, etc.) shall be used in accordance with label directions. No such product may be disposed of or rinsed into Receiving Waters or the Stormwater Conveyance System.

C. Inspection, Maintenance, Repair and Upgrading of BMPs. BMPs at manned facilities must be inspected by the Discharger before forecast rain events and when safe and feasible during and after a rain event. BMPs at unmanned facilities must be inspected by the Discharger at least once during the rainy season and at least once between each rainy season. These BMPs must be maintained so that they continue to function as designed. BMPs that fail must be repaired as soon as it is safe to do so. If the failure of a BMP indicates that the BMPs in use are inappropriate or inadequate to the circumstances, the BMPs must be modified or upgraded to prevent any further failure in the same or similar circumstances.

D. Stormwater Pollution Prevention Plan. An Authorized Enforcement Official may require a Commercial, Industrial or Land Disturbance Activities Discharger to prepare and submit a SWPPP for approval by that official if (1) the Discharger does not come into compliance with this Ordinance after one or more warnings or other enforcement action, because BMPs are inadequate or are not being adequately maintained; or (2) the facility or activity at issue is a significant source of contaminants to the Stormwater Conveyance System or Receiving Waters despite compliance with this Ordinance. Any Discharger required to submit and to obtain approval of a SWPPP

should install, implement and maintain the BMPs specified in the approved SWPPP.

The SWPPP shall identify the BMPs that will be used by the Discharger to prevent or control pollution of stormwater to the MEP. If the facility is an industrial facility, the SWPPP submitted to the City shall at a minimum meet the requirements of the State General Industrial Stormwater Permit. If the activity at issue is a construction or land disturbance activity, the SWPPP submitted to the City shall at a minimum meet the requirements of the State General Construction Stormwater Permit.

Whenever submission of a SWPPP is required pursuant to this Ordinance, an Authorized Enforcement Official or Authorized Enforcement Staff may take existing City guidance documents into account when determining whether the BMPs proposed in the SWPPP will prevent or control pollution to the required level of MEP.

E. Notification of Spills, Releases and Illegal Discharges. Spills, releases, and illegal discharges of Pollutants to Receiving Waters or to the Stormwater Conveyance System shall be reported by the Discharger as required by all applicable state and federal laws. In addition, any such spills, releases and illegal discharges with the potential to endanger health, safety or the environment shall be reported to the City within 24 hours after discovery of the spill, release or discharge. If safe to do so, necessary actions shall be taken to contain and minimize the spill, release or illegal discharge.

F. Sampling, Testing, Monitoring, and Reporting. Commercial, Industrial or Land Disturbance Activities Dischargers shall perform the sampling, testing, monitoring and reporting required by this Ordinance. In addition, an Authorized Enforcement Official or Authorized Enforcement Staff may order a Discharger to conduct testing or monitoring and to report the results to the City if (1) the Authorized Enforcement Official determines that testing or monitoring is needed to determine whether BMPs are effectively preventing or reducing pollution in stormwater to the MEP, or to determine whether the facility is a significant source of contaminants to Receiving Waters; or (2) the Authorized Enforcement Official or Authorized Enforcement Staff determines that testing or monitoring is needed to assess the impacts of an illegal discharge on health, safety or the environment; or (3) an Illegal Discharge has not been eliminated after written notice by an Authorized Enforcement Official or Authorized Enforcement Staff; or (4) repeated violations have been documented by written notices from Authorized Enforcement Officials or Authorized Enforcement Staff; or (5) the RWQCB requires the City to provide any information related to the Discharger's activities.

Testing and monitoring ordered pursuant to this subsection may include the following:

(1) Visual monitoring of dry weather flows, wet weather erosion, and/or BMPs;

(2) Visual monitoring of premises for spills or discharges;

(3) Laboratory analyses of stormwater or non-stormwater discharges for Pollutants;

(4) Background or baseline monitoring or analysis; and

(5) Monitoring of Receiving Waters or sediments that may be affected by Pollutant discharges by the Discharger (or by a group of Dischargers including the Discharger).

The Authorized Enforcement Official or Authorized Enforcement Staff may direct the manner in which the results of required testing and monitoring are reported, and may determine when required sampling, testing or monitoring may be discontinued.

G. Mitigation. All Illegal Discharges must be mitigated within a reasonable period of time to correct or compensate for all damage to the environment caused by the illegal discharge. The Authorized Enforcement Official or Authorized Enforcement Staff, who issued notice to the Discharger that a discharge was illegal, or Authorized Enforcement Staff designated by that official, shall determine whether mitigation measures proposed or completed by the discharger meet this standard. The Authorized Enforcement Official or Authorized Enforcement Staff shall require the Discharger to submit a mitigation plan and schedule by a specified date prior to taking action, and to submit a summary of completed mitigation by a specified date.

H. Access for Inspections. All dischargers shall provide access to authorized enforcement staff, upon reasonable notice, for inspection of facilities and discharges subject to this Ordinance. [Ord. 752]

**11.30.080 Additional Minimum Best Management Practice Requirements for Residential Activities and Facilities**

A. Applicable Requirements. The requirements in this section apply to all Residential Dischargers and any Regulated Commercial Business conducting residential activities on behalf of a Residential Discharger. All Residential Dischargers conducting activities must install, implement and maintain the BMPs identified in Section 11.30.070 B. for all Dischargers, and at least the

additional minimum BMPs specified in the City's Stormwater Standards Manuals for the category of activities conducted by that Discharger including but not limited to:

(1) Vehicle maintenance;
(2) Vehicle washing;
(3) irrigation practices and management;
(4) irrigation system testing;
(5) landscape maintenance;
(6) fertilizer application;
(7) pesticide application;
(8) pest waste disposal;
(9) power washing;
(10) septic system maintenance;
(11) sanitary sewer system maintenance;
(12) minor home maintenance, repair and upgrades.

**11.30.090 Additional Minimum Best Management Practice Requirements for Commercial Activities and Facilities**

A. Priorities and Requirements. Regulated Commercial Facilities are classified in this section as High Priority, and additional requirements are imposed on those facilities by this section based on those classifications. All commercial Dischargers must install, implement and maintain at least the additional minimum BMPs, if any, specified in this section or in the City Stormwater Standards Manuals for the priority classification and category of activity or facility owned or operated by that Discharger. All Regulated Commercial Facilities shall review their facilities, activities, operations and procedures at least annually to detect and eliminate illicit connections and illegal discharges. Corrective training shall be provided as needed (and documented in training records) whenever an illegal disposal practice is discovered.

B. High Priority Commercial Facilities Identified. As required by NPDES Permit No. CAS 0108758, facilities in the City having any of the following characteristics are High Priority Commercial Facilities:

(1) The facility is a Regulated Commercial Facilities primarily engaged in any of the following commercial activities:

- Airplane mechanical repair, maintenance, fueling, or cleaning;
- Vehicle parking lots and storage facilities;

- Vehicle body repair or painting;
- Vehicle repair, maintenance, fueling, or cleaning;
- Botanical or zoological gardens and exhibits;
- Cement mixing or cutting;
- Cemeteries;
- Eating or drinking establishments, including food markets;
- Golf courses, parks and other recreational areas/facilities;
- Landscaping;
- Marinas;
- Masonry;
- Mobile Vehicle washing;
- Mobile carpet, drape or furniture cleaning;
- Nurseries and greenhouses operations;
- Painting and coating;
- Pest control services;
- Pool and fountain cleaning;
- Portable sanitary services;
- Retail or wholesale fueling;
- Building material retailers and storage;
- Animal facilities or services; or
- Power washing services.

(2) The facility is a Regulated Commercial Facility that has outdoor Industrial Areas totaling two (2) acres or more or an outdoor parking lot for 100 or more vehicles; and stormwater or runoff from the facility may adversely affect impaired

29

MAR 0 3 2008 ITEM 13

waters or waters within an ESA.

(3) The facility is a Regulated Commercial Facility and has been notified in writing by an Authorized Enforcement Official or Authorized Enforcement Staff that it is a High Priority Commercial Facility. Such designations shall take effect 90 days after mailing or service of this notice. These designations shall be made where the facility discharges a pollutant load in stormwater or runoff that causes or contributes to the violation of water quality standards.

C. Additional Minimum Best Management Practices for All Regulated Commercial Facilities. All Regulated Commercial Facilities shall install, implement and maintain the BMPs specified in the City Stormwater Standards Manuals in the following areas or for these activities:

- Employee training, including attendance logs;
- Stormwater pollution prevention plans;
- Storm drain tileage and signing;
- Pollution prevention;
- Materials and waste management loading and storage;
- Vehicles and equipment storage and operations;
- Building and Outdoor areas, including power washing and cleaning.

**11.30.100 Additional Minimum Best Management Practice Requirements for Industrial Activities and Facilities**

A. Priorities and Requirements. Regulated Industrial Facilities are classified in this section as High Priority, and additional requirements are imposed on those facilities by this section based on those classifications. All Industrial Dischargers must install, implement and maintain at least the additional minimum BMPs, if any, specified in this section or in the City Stormwater Standards Manuals for the priority classification and category of activity or facility owned or operated by that Discharger. All Regulated Industrial Facilities shall review their facilities, activities, operations and procedures at least annually to detect and eliminate illicit connections and illegal discharges. Corrective training shall be provided as needed (and documented in training records) whenever an illegal disposal practice is

30

discovered.

B. High Priority Industrial Facilities. Regulated Industrial Facilities that have any of the characteristics listed below are High Priority Industrial Facilities:

(1) The facility is subject to the State General Industrial Stormwater Permit, taking into account all of the provisions of that permit.
(2) The facility is a Regulated Industrial Facility and urban runoff from the facility is Tributary To or discharges directly to an Impaired Water Body, and the facility generates a pollutant for which that water body is impaired.
(3) The facility is a Regulated Industrial Facility and is located within or adjacent to (i.e., within 200 ft. of), or discharges directly to, a WQSA.
(4) The facility is subject to Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA).
(5) The facility was notified in writing by an Authorized Enforcement Official or Authorized Enforcement Staff that it has been designated a High Priority Industrial Facility. Such designations shall take effect 90 days after mailing or service of notice. These designations shall be made where the facility discharges a pollutant load in stormwater or runoff that causes or contributes to the violation of water quality standards.

C. Additional Minimum BMPs and Other Additional Requirements for High Priority Industrial Facilities.

(1) Notice of Intent. High Priority Industrial Dischargers required to comply with the State Industrial General Stormwater Permit shall maintain on site and make available for inspection on request by the City the state-issued Waste Discharge Identification Number (WDID) for the facility, and a copy of the Notice of Intent (NOI) filed with the SWRCB pursuant to comply with that permit. The Discharger shall submit the WDID and a copy of that NOI to the City by mail if directed to do so by an Authorized Enforcement Official or Authorized Enforcement Staff.

(2) Stormwater Pollution Prevention Plan. Dischargers required to prepare a SWPPP under the State General Industrial Stormwater Permit must prepare the Plan, implement the Plan and maintain it at the site readily available for review. If a High Priority Industrial Facility is not required to prepare a state SWPPP, the facility shall prepare a SWPPP, submit that SWPPP for approval or modification and approval, implement the SWPPP, and maintain it on site. Failure to comply with an

applicable state-required or City-required SWPPP is a violation of this Ordinance.

(3) Pollution Prevention Practices. High Priority Industrial Facilities shall consider and where determined to be appropriate by the facility shall implement the following measures to prevent the pollution of stormwater and runoff:

- The use of smaller quantities of toxic materials or substitution of less toxic materials;
- Changes to production processes to reduce waste;
- Decreases in waste water flows;
- Recycling of wastes as part of the production process;
- Segregation of wastes, and
- Treatment of wastes on site to decrease volume and/or toxicity.

(4) Non-Structural BMPs. High Priority Industrial Facilities shall incorporate into the SWPPP, and install implement and maintain, the following non-structural BMPs for the specified activities or areas. The implementation of these BMPs shall be consistent with specifications, if any, contained in the City Stormwater Standards Manuals.

- Material handling and storage
- Non-hazardous and hazardous waste handling and recycling;
- Employee training programs;
- Good housekeeping;
- Equipment and building preventive maintenance;
- Self inspection; and
- Spill response planning and prevention.

(5) BMPs for Specific Activities. High Priority Industrial Facilities shall incorporate into the SWPPP, and install implement and maintain BMPs as specified in the City Stormwater Standards Manuals for any commercial activities conducted at the facility (as identified in section 11.30.090 C.), and for areas at the facility where industrial activities

are conducted. Industrial areas or activities include but are not limited to the following:

- Raw or processes materials bulk storage;
- Mixing, where there is the potential for release of a pollutant;
- Cutting, trimming or grinding in connection with a production process;
- Casting, forging, or forming;
- Hazardous materials storage (including tanks);
- Construction, painting and coating;
- Pesticide or other chemical products formulation or packaging;
- Process water pre-treatment;
- Solid waste storage;
- Wastewater treatment;
- Welding;
- Blasting;
- Chemical treatment; and
- Power washing.

(6) Additional Structural BMPs. High Priority Industrial Facilities shall incorporate into the SWPPP, and install, implement and maintain one or more of the additional structural BMPs listed below where practicable, if use of such BMPs would significantly reduce pollution in run-off from the facility. The Discharger shall determine in the first instance which of these BMPs to implement. However, an Authorized Enforcement Official or Authorized Enforcement Staff can order that additional BMPs be used at a particular facility pursuant to section 11.30.040 I.

- Overhead coverage of outdoor work areas or chemical storage;
- Retention ponds, basins, or surface impoundments that

confine stormwater to the site;

- Berms and concrete swales or channels that divert run-on and runoff away from contact with pollutant sources;

- Secondary containment structures; and

- Treatment controls, e.g., infiltration devices and oil/water separators, to reduce pollutants in stormwater or authorized non-stormwater discharges.

D. Monitoring at High Priority Industrial Facilities. Dischargers owning or operating High Priority Industrial Facilities required to conduct monitoring under the State Industrial General Stormwater Permit shall make records of such monitoring available for inspection, and submit a copy of such records to the City if directed to do so by an Authorized Enforcement Official or Authorized Enforcement Staff. State exceptions from monitoring requirements are also applicable to this requirement, and group monitoring approved by the State is also acceptable to the City. The City may direct that any required records be submitted in a specified electronic format. Dischargers owning or operating manned High Priority Industrial Facilities that are not required to conduct monitoring under the State Industrial General Stormwater Permit, and which would not qualify for an exemption from monitoring under the terms of that permit if the permit were applicable, must develop and implement a monitoring program that meets the following minimum criteria:

(1) Quantitative stormwater data must be obtained from two storm events in a year;

(2) These monitoring events must address:

- Pollutants listed in any effluent guidelines subcategories applicable to the facility;

- Pollutants with effluent limits established by an existing NPDES permit for that facility;

- Oil/grease or total organic carbon;

- pH;

- Total suspended solids;

- Specific conductance; and

- Toxic chemicals and other pollutants likely to be present

34

MAR 0 3 2002 ITEM 13

in stormwater discharges.

This monitoring must be conducted under the conditions set out in the State Industrial General Stormwater Permit. The Discharger must retain records of such monitoring on site, make such records available for inspection, and submit a copy of such records to the City if directed to do so by an Authorized Enforcement Official or Authorized Enforcement Staff.

**11.30.110 Additional Minimum Best Management Practice Requirements for Agricultural Operations.**

A. Nursery and Greenhouse Operations. Pursuant to NPDES Permit No. CAS0108758, nursery and greenhouse operations are classified as commercial operations for purposes of this Ordinance, and are subject to all requirements for Regulated Commercial Facilities set out in this Ordinance.

B. Agricultural Grading and Clearing. The BMP requirements imposed by section 11.30.140 of this Ordinance for land disturbance activities apply to agricultural grading and clearing, whether or not a City/County-issued grading and clearing permit is required for that activity. Tilling or cultivating land exclusively for the purpose of growing plants or animals is not considered to be grading or clearing, provided all disturbed material remains on the same site, the tilling or cultivating will not block or divert any natural drainage way, and the land to be tilled or cultivated has been in agricultural production for at least one (1) of the preceding five (5) years.

C. Land Development Associated with Agricultural Operations. The requirements imposed by section 11.30.150 of this Ordinance for land development activities apply to such activities when they are associated with agricultural operations.

D. Manure Management.

(1) Where practicable, all runoff from areas where livestock, horses or other large animals are confined must be collected and managed in a manner that avoids a discharge to the stormwater conveyance system or receiving waters. Where this is not practicable, manure must be cleaned up at least twice weekly; and must either be composted, or stored prior to disposal.
(2) Areas used for storing or composting manure must be located, configured or managed to prevent runoff to receiving waters or the stormwater conveyance system.
(3) Animal wastes shall not be disposed to the stormwater conveyance system or receiving waters.

E. Other Agricultural Operations. Other agricultural operations are subject to the discharge prohibitions and other requirements set out in sections 11.30.010 through 11.30.070 of this Ordinance.

**11.30.120 Additional Best Management Practice Requirements for Municipal Activities and Facilities.**

A. Municipal Facilities. Municipal Facilities must meet the requirements set out in sections 11.30.010 through 11.30.070, and where applicable, sections 11.30.140 and 11.30.150 of this Ordinance. In addition, these facilities and activities must install, implement and maintain at least the additional minimum BMPs, if any, specified in section 11.30.090 or in the City Stormwater Standards Manuals, for municipal areas and activities at the municipal facility.

B. Public Improvement Projects. It is the policy of the City that public improvement projects in the City shall conform to the requirements this ordinance would impose on similar private development projects within the City. These projects must meet the requirements set out in this Ordinance, and must be designed and constructed in accordance with the SUSMP if applicable. [Ord. 752]

**11.30.130 City Stormwater Standards Manuals.**

A. City Stormwater Standards Manuals. All Dischargers who are required by this Ordinance to install, implement and maintain BMPs shall ensure that their selection of BMPs is consistent with the applicable specifications, if any, contained in the City Stormwater Standards Manual, for the category and priority of activity or facility owned or operated by that Discharger. All BMPs installed, implemented or maintained to meet the requirements of this Ordinance must conform to the applicable specifications, if any, set out in the City Stormwater Standards Manuals.

B. Existing Facilities. The City Stormwater Standards Manuals sets out minimum BMPs and other objective specifications for specific types and categories of existing facilities and activities. Where minimum BMPs and objective specification are specified, they are mandatory. Where no minimum BMPs have been specified in the City Stormwater Standards Manuals for a type and category of facility or activity, only the requirements set out in this Ordinance are applicable. Deviations from the minimum BMPs set out in the manuals are allowed in the following circumstances: (1) the City determines pursuant to subsection 11.30.040 I. of this Ordinance to issue an Order to require alternative BMPs, and provides the required written notice; or (2) a City Guidance

Document prepared pursuant to subsection 11.30.040 H. sets out additional compliance alternatives that may be used in lieu of the BMPs specified in the manuals, and the Discharger secures a permit enforceable by the City that requires the use of specific equally effective alternative BMPs.

C. Ministerial Land Development Projects. Requirements applicable to development projects requiring only the kinds of ministerial permits listed in subsection 11.30.040 F.(2) of this Ordinance are set out in separately identified sections of the manuals. Other requirements in the manuals are not applicable to these projects during the development process. However, some additional requirements will apply to completed projects when they become subject to this Ordinance as residential, commercial or industrial facilities.

D. Discretionary Land Development and Redevelopment Projects. The manuals set out minimum BMPs, other objective specifications, and Performance Standards for Land Development projects requiring one or more of discretionary permits listed in subsection 11.30.040 F.(1) of this Ordinance. The minimum BMPs and other objective specifications in the manuals are applicable to both ministerial and discretionary land development projects. The Performance Standards in the manuals are applicable to projects that require a discretionary City/County permit or approval, and shall be implemented through specific permit conditions. Development project proponents must determine whether their project low impact development design, source control and any required treatment control BMPs will meet these Performance Standards for their facility or activity, and must redesign their project and/or install, implement and maintain additional BMPs where needed to meet applicable Performance Standards.

**11.30.140 Additional Requirements for Land Disturbance Activities.**

A. Permit Issuance. No land owner or development project proponent shall receive any City/County grading, clearing, building or other land development permit required for Land Disturbance Activity without first meeting the requirements of this Ordinance with respect to the portion of the development project and the Land Disturbance Activity to which the permit at issue would apply.

B. Owners and Operators Both Responsible and Liable. Persons or entities performing Land Disturbance Activities (including but not limited to construction activities) in the City, and the owners of land on which Land Disturbance Activities are performed, are Dischargers for purposes of this Ordinance; provided however that a local government or public authority is not a Discharger as to

activities conducted by others in public rights of way.

C. Stormwater Management Plan. All applications to the City for a permit or approval associated with a Land Disturbance Activity must be accompanied by a Stormwater Management Plan, on a form or in a format specified by the City. The Stormwater Management Plan shall specify the manner in which the Discharger/Applicant will implement the BMPs required by this Ordinance for the activity at issue, including but not limited to the applicable BMPs required by subsection (d) below.

D. Additional Minimum BMPs for Land Disturbance Activities. Whether a City/County permit or approval is required or not, and whether a Stormwater Management Plan is required to be submitted or not, all Discharges engaged in Land Disturbance Activities shall implement General Site Management and Erosion and Sediment Control BMPs as detailed in the City Stormwater Standards Manuals. The BMPs shall be considered in the following additional areas if applicable to the project: [Ord. 752]

(1) General Site Management

- Pollution prevention, where appropriate.
- Development and implementation of a storm water management plan.
- Minimization of areas that are cleared and graded to only the portion of the site that is necessary for construction
- Minimization of exposure time of disturbed soil areas;
- Minimization of grading during the rainy season and correlation of grading with seasonal dry weather periods to the extent feasible.
- Limitation of grading to a maximum disturbed area as feasible for the site conditions and project phase before either temporary or permanent erosion controls are implemented to prevent storm water pollution. The City may temporarily increasing the size of disturbed soil areas by a set amount beyond the defined maximum, if the individual site implemented initial adequate BMPs prevent storm water pollution.
- Temporary stabilization and reseeding of disturbed soil areas as rapidly as feasible;
- Preservation of natural hydrologic features where feasible;
- Preservation of riparian buffers and corridors where feasible;
- Maintenance of all BMPs, until removed; and
- Retention, reduction, and proper management of all pollutant discharges on site to the MEP standard.

(2) Erosion and Sediment Controls

- Erosion prevention, as the primary BMP to keep sediment on site during construction;
- Sediment controls, as a supplement BMPs to erosion prevention;
- Slope stabilization on all inactive slopes during the rainy season and during rain events in the dry season;
- Slope stabilization on all active slopes during rain events regardless of the season; and
- Permanent revegetation or landscaping as early as feasible.

E. Advanced Treatment Control. The City will consider project Stormwater Management Plans using Advanced Treatment control for sediment as an alternative to the BMPs in subsections 11.30.140 D.(1) and 11.30.140 D.(2) if the applicant can demonstrate, to the satisfaction of the City, that the Advanced Treatment Control is at least as effective as General Site Management and Erosion and Sediment Controls.

F. Control to the Maximum Extent Practicable. All Dischargers engaged in Land Disturbance Activities must install, implement and maintain those additional BMPs, if any that are needed to prevent or reduce pollutant discharges in stormwater from land disturbance to the MEP.

G. Notice of Intent. Dischargers required to comply with the State Construction General Stormwater Permit shall maintain on site and make available for inspection on request by the City any state-issued Waste Discharge Identification Number (WDID) for the site, and a copy of the Notice of Intent (NOI) filed with the SWRCB pursuant to that permit.

H. Stormwater Pollution Prevention Plan. Dischargers required to prepare a SWPPP under the State General Construction Stormwater Permit must prepare the Plan, implement the Plan and maintain it at the site, readily available for review. Failure to comply with an applicable state-required SWPPP is a violation of this Ordinance.

I. Facility Monitoring. Dischargers required to conduct monitoring under the State Construction General Stormwater Permit must conduct such monitoring in conformance with requirements specified by the State, retain records of such monitoring on site, and make such records available for inspection by an Authorized Enforcement Official or Authorized Enforcement Staff.

**11.30.150 Additional Planning, Design and Post-Construction Requirements for All Land Development and Redevelopment Projects.**

39

MAR 0 3 2008 ITEM 13

A. Application to Development and Redevelopment Projects. No landowner or development project proponent in the City shall receive any City/County permit or approval listed in subsection 11.30.040 F. of this Ordinance for Land Development Activity or redevelopment activity unless the project meets or will meet the requirements of this Ordinance. Post-Construction BMP requirements imposed by this section and by the City Stormwater Standards Manuals shall not apply to those physical aspects of the project that have been completed or substantially completed pursuant to and as required by a valid City/County permit or approval, at the time a complete application for a subsequent permit or approval is submitted.

B. Owners and Developers Responsible and Liable. Developers, Development Project Proponents, and Land Owners for land on which Development Activities are performed, are Dischargers for purposes of this Ordinance; provided however that a local government or public authority is not a Discharger as to activities conducted by others in public rights of way.

C. Post-construction Best Management Practices Required. Land development and redevelopment projects with the potential to add pollutants to stormwater or to affect the flow rate or velocity of stormwater runoff after construction is completed, shall be designed to include and shall implement post-construction BMPs to ensure that pollutants and runoff from the development will be reduced to the MEP, will not significantly degrade receiving water quality, and will not cause or contribute to an exceedance of receiving water quality standards.

D. Post-construction BMPs shall be selected, designed, and sized for approval by the City as part of the development permit application by submitting the plans or documents specified in the City SUSMP and using the City templates or forms.

E. Post-Construction Stormwater Management Plan. All applications to the City for a permit or approval associated with a land development or redevelopment activity must be accompanied by a Post-Construction Stormwater Management Plan on a form or in a format specified by the City. The plan shall specify the manner in which the Discharger/Applicant will implement the post-construction BMPs required by this Ordinance. The plan must address those aspects of the project that, at the time a complete application is submitted, are subject to further environmental review pursuant to section 15162 of the California Environmental Quality Act.

F. Stormwater Management Plan Review Deposit. Stormwater Management Plan Review, including SWPPPs, fees may be set, from time to time, by resolution of the City Council.

40

G. Additional Minimum Post-Construction BMPs for Land Development Activities. Whether a City/County permit or approval is required or not, and whether a Post-Construction Stormwater Management Plan is required to be submitted or not, all Dischargers engaged in land development or redevelopment activities in the City shall implement post-construction BMPs in the following areas if applicable to the project:

(1) BMPs for permanent control of erosion from slopes. These BMPs can include structures to convey runoff safely from the tops of slopes, vegetation or alternative stabilization of all disturbed slopes, the use of natural drainage systems to the MEP, flow and velocity controls upstream of sites; and stabilization or permanent channel crossings, unless the crossing is not publicly accessible and is not frequently used.

(2) BMPs to control flows, velocity and erosion. These BMPs can include but are not limited to the use of energy dissipaters, such as riprap, at the outlets of storm drains, culverts, conduits, or lined channels that enter unlined channels to minimize erosion; installation of retention or equalization basins, or other measures. Flow control and downstream erosion protection measures shall prevent any significant increase in downstream erosion as a result of the new development, but shall not prevent flows needed to sustain downstream riparian habitats or wetlands.

(3) Pollution prevention and source control BMPs, to minimize the release of pollutants into Stormwater.

(4) Site design BMPs, such as impervious surface minimization; and appropriate use of buffer areas to protect natural water bodies.

(5) Site planning BMPs, such as siting and clustering of development to conserve natural areas to the extent practicable.

(6) The installation of storm drain tiles or concrete stamping, and appropriate signage to discourage illegal discharges.

(7) BMPs for trash storage and disposal and materials storage areas.

(8) Structural BMPs to treat and/or to infiltrate stormwater where a development project would otherwise cause or contribute to a violation of water quality standards in

receiving waters. Off-site structural BMPs may be used for treatment and infiltration necessary to meet water quality standards only if the conveyance of run-off to those facilities prior to treatment will not cause or contribute to an exceedance of water quality standards, or deprive wetlands or riparian habitats of needed flows. Offsite facilities shall not substitute for the use of any on-site source control BMPs required by the City Stormwater Standards Manuals.

(9) When an Infiltration BMPs is used, related BMPs set out in the City Stormwater Standards Manuals (including but not limited to siting constraints), to protect present uses of ground water, and future uses of that ground water as currently designated in the applicable RWQCB Basin Plan. (Discharges to infiltration BMPs may also require an RWQCB permit, and additional state requirements may also be applicable to these discharges.)

(10) Other applicable BMPs required by the City Stormwater Standards Manuals.

H. Control to the Maximum Extent Practicable. All Discharges engaged in Land Development and Redevelopment Activities shall install, implement and maintain post-construction BMPs as needed to prevent or reduce pollutant discharges in stormwater from land disturbance to the MEP.

I. Priority Development Projects. All priority development projects and redevelopment projects (including ministerial projects) shall be designed using the methods and including the studies and reviews described in the SUSMP. [Ord. 752]

**11.30.160 Maintenance of BMPs**

A. Existing Development. Residential, commercial, industrial, agricultural and municipal dischargers shall maintain the BMPs implemented to achieve and maintain compliance with this Ordinance.

B. New Development. The owners and occupants of lands on which structural post-construction BMPs have been installed to meet the requirements of this Ordinance shall ensure the maintenance of those BMPs, and shall themselves maintain those BMPs if other persons or entities who are also obliged to maintain those BMPs (by contract or covenant, or pursuant to this Ordinance) fail to do so.

C. Maintenance Obligations Assumed by Contract or Other Agreement. Primary responsibility to maintain a BMP may be transferred through a contract or other agreement. If that contract provides that it will be submitted to the City pursuant to this

Ordinance as part of a development permit application, and if that contract is so submitted, the person or entity accepting a maintenance obligation in such a contact or agreement will also be legally obliged to maintain that BMP pursuant to this Ordinance.

D. Obligation to Maintain BMPs Not Avoided by Contracts or Other Agreements. For purposes of City enforcement, no contract or other agreement imposing an obligation to maintain a BMP can relieve a person or entity of any obligation to maintain a BMP imposed by this Ordinance.

E. Disclosure of Maintenance Obligations: Any developer who transfers ownership of land on which a BMP is located or will be located, or who otherwise transfers ownership of a BMP or responsibility for the maintenance of a BMP to another person or entity, shall provide clear written notice of the maintenance obligations associated with that BMP to the new or additional responsible party prior to that transfer.

F. Maintenance Plans for Land Development Projects. The proponents of any land development project or redevelopment project that requires a discretionary City/County permit, shall provide to the City for review and approval prior to issuance of such permit, a plan for maintenance of all post-construction structural BMPs associated with the project. The plan shall specify the persons or entities responsible for maintenance activity, the persons or entities responsible for funding, schedules and procedures for inspection and maintenance of the BMPs, worker training requirements, and any other activities necessary to ensure BMP maintenance. The plan shall provide for servicing of all post-construction structural treatment -BMPs at least annually and prior to the start of the rainy season, and for the retention of inspection and maintenance records for at least three (3) years.

G. Access Easement/Agreement. The proponents of any land development project or redevelopment project that requires a discretionary City/County permit, shall provide to the City for review and approval prior to issuance of such permit an executed, permanent, easement onto the land on which post-construction structural BMPs will be located (and across other lands as necessary for access), to allow inspection, operation, and/or maintenance of those BMPs.

H. Assurance of Maintenance for Land Development Projects. The proponents of any land development or redevelopment project that requires a discretionary City/County permit, shall provide to the City prior to issuance of such permit, proof of a mechanism acceptable to the City which will ensure ongoing long-term maintenance of all structural post-construction BMPs associated

with the proposed project. The proponents shall be responsible for maintenance of BMPs unless and until an alternative mechanism for ensuring maintenance is accepted by the City and becomes effective.

**11.30.170 Inspection/Sampling**

A. Regulatory Inspections. Authorized Enforcement Officials and Authorized Enforcement Staff may inspect facilities, activities and residences subject to this Ordinance at reasonable times and in a reasonable manner to carry out the purposes of this Ordinance. If entry for a regulatory inspection is refused by the facility owner or operator, or by the occupant of a residence, an inspection warrant shall be obtained prior to inspection.

B. Access Easements. When any new structural BMP is installed on private property as part of a project that requires a City/County permit, in order to comply with this Ordinance, the property owner shall grant to the City an easement to enter the property at reasonable times and in a reasonable manner to ensure that the BMP is working properly. This includes the right to enter the property without prior notice once per year for routine inspections, to enter as needed for additional inspections when the City has a reasonable basis to believe that the BMP is not working properly, to enter for any needed follow-up inspections, and to enter when necessary for abatement of a nuisance or correction of a violation of this Ordinance.

C. Scope of Inspections. Inspections may include all actions necessary to determine whether any Illegal Discharges or Illegal Connections exist, whether the BMPs installed and implemented are adequate to comply with this Ordinance, whether those BMPs are being properly operated and maintained, and whether the facility or activity complies with the other requirements of this Ordinance. This may include but may not be limited to sampling, metering, visual inspections, and records review. Where samples are collected the owner or operator may request and receive split samples. Records, reports, analyses, or other information required under this Ordinance may be inspected and copied, and photographs taken to document a condition and/or a violation of this Ordinance.

**11.30.180 Enforcement** Authorized Enforcement Officials and Authorized Enforcement Staff may enforce this Ordinance and abate public nuisances as follows:

A. Administrative Authorities.

(1) Administrative Penalties. Administrative penalties may be imposed pursuant to Chapter 1, Division 8 of Title 1 of the County Code of Regulatory Ordinances (Sections 18.101 et

44

MAR 0 3 2002 ITEM 13

seq.), hereby adopted by reference. Any later-enacted administrative penalty provision in the County Code shall also be applicable to this Ordinance, unless otherwise provided therein.

(2) Warning Notices. Written and/or verbal warning notices of a violation may be issued for any impending Violation or Violation of this Ordinance including any Illegal Discharges and/or remove Illegal Connections.

(3) Notices of Violation. Written and/or verbal notices of violation may be issued for any Violation of this Ordinance including any Illegal Discharges and/or remove Illegal Connections. Issuance of a written and/or verbal Notice of Violation may also be subject to Enforcement provisions in Sections 1.08.010 through 1.08.050, and Administrative Citations in Chapter 1.10.

(4) Cease and Desist Orders. Written and/or verbal orders may be issued to stop Illegal Discharges and/or remove Illegal Connections.

(5) Notice and Order to Clean, Test, or Abate. Written and/or verbal orders may be issued to perform activities listed in Section 11.30.070 where conditions warrant.

(6) Public Nuisance Abatement. Violations of this Ordinance are deemed a threat to public health, safety, and welfare; and are identified as a public nuisance. If actions ordered pursuant to this chapter are not performed, the Authorized Enforcement Official may abate any public nuisance. City costs for pollution detection and abatement, if not paid in full by the Discharger in addition to any other penalties, may be made a lien against the property in accordance with this procedure.

(7) Stop Work Orders. Whenever any work is being done contrary to the provisions of this Ordinance, or other laws implemented through enforcement of this Ordinance, an Authorized Enforcement Official may order the work stopped by notice in writing served on any person engaged in the doing or causing such work to be done, and any such person shall immediately stop such work until authorized by the Authorized Enforcement Official to proceed with the work.

(8) Permit Suspension or Revocation. Violations of this Ordinance may be grounds for permit and/or other City license suspension or revocation.

B. Judicial Authorities.

(1) Civil penalties and remedies. The Del Mar City Attorney is hereby authorized to file civil actions in Superior Court to enforce this Ordinance, seeking civil penalties and/or other remedies as provided in this section and in Section 11.30.200 of this Ordinance. There is no requirement that administrative enforcement procedures be pursued before such actions are filed.

(2) Injunctive Relief. Any violation of this Ordinance may be enforced by a judicial action for injunctive relief.

(3) Arrest or Issue Citations. The assistance of a peace officer may be enlisted to arrest violators as provided in California Penal Code, and/or a citation and notice to appear as prescribed in DMMC Chapter 1.08 and/or Title 3, Part 2 of the Penal Code, including Section 853.6 (or as amended) may be issued. There is no requirement that administrative enforcement authorities be used before such actions are filed. The immunities prescribed in Section 836.5 of the Penal Code are applicable to Authorized Enforcement Officials and Authorized Enforcement Staff acting in the course and scope of their employment pursuant to this Ordinance.

**11.30.190 Other Acts and Omissions that are Violations** In addition to the violations identified in sections 11.30.010 through 11.30.170 of this Ordinance, the following acts and omissions are violations of this Ordinance, whether committed by a Discharger or by another person or entity:

A. Causing, Permitting, Aiding, or Abetting Non-compliance. Causing, permitting, aiding, or abetting non-compliance with any part of this Ordinance constitutes a violation of this Ordinance.

B. Concealment, Misrepresentation and False Statements. Any falsification or misrepresentation made to the City concerning compliance with this Ordinance, including any misrepresentation in a voluntary disclosure, any submission of a report that omits required material facts without disclosing such omission, and any withholding of information required to be submitted by or pursuant to this Ordinance in order to delay City enforcement action, is a violation of this Ordinance. Concealing a violation of this Ordinance is a violation of this Ordinance.

C. Failure to Promptly Correct Non-compliance. Violations of this Ordinance must be corrected with the time period specified by an Authorized Enforcement Official or Authorized Enforcement Staff. Each day (or part thereof) in excess of that period during which action necessary to correct a violation is not initiated and

diligently pursued is a separate violation of this Ordinance.

D. City/County Permits and SWPPPs. Any failure to conform to an applicable stormwater pollution prevention plan (SWPPP) prepared pursuant to this Ordinance; any failure to comply with stormwater-related provisions of a City/County-issued grading permit or grading plan prepared to secure such a permit; and any failure to comply with stormwater-related provisions in any other City/County permit or approval, is also a violation of this Ordinance. For purposes of this Ordinance a permit provision or condition of approval is "stormwater-related" if compliance with the provision or condition would have the effect of preventing or reducing contamination of stormwater or of moderating run-off flows rates or velocities, whether or not the provision or condition was initially imposed to promote those outcomes.

**11.30.200 Penalties**

A. Administrative Penalties. Administrative penalties may be imposed pursuant to Code of Regulatory Ordinances, Division 8, title 1, sections 18.101 et seq., hereby adopted by reference. Any later-enacted administrative penalty provision in the County Code shall also be applicable to Ordinance, unless otherwise provided therein.

B. Misdemeanor Penalties. Non-compliance with any part of this Ordinance, other than section 11.30.080 (Residential Activities), constitutes a misdemeanor and may be enforced and punished as prescribed in the Penal Code and Government Code of the State of California.

C. Penalties For Infractions. Authorized Enforcement Officials and Authorized Enforcement Staff may charge any violation of this Ordinance as an infraction at their discretion. Infractions may be abated as a nuisance or enforced and punished as prescribed in the Penal Code and Government Code of the State of California.

D. For Civil Actions. In addition to other penalties and remedies permitted in this Ordinance, a violation of this Ordinance may result in civil actions. Except where a maximum monetary amount is specified, the following may also be awarded without monetary limitations in any civil action:

- Injunctive relief;
- Costs to investigate, inspect, monitor, survey, or litigate;
- Costs to place or remove soils or erosion control materials, costs to correct any violation, and costs to restore

environmental damage or to end any other adverse effects of a violation;

- Compensatory damages for losses to the City or any other plaintiff caused by violations; and/or Restitution to third parties for losses caused by violations; and

- Civil Penalties.

As part of a civil action filed by the City to enforce provisions of this Ordinance, a court may assess a maximum civil penalty of $2500 per violation of this Ordinance for each day during which any violation of any provision of this Ordinance is committed, continued, permitted or maintained by such person(s).

In determining the amount of any civil liability to be imposed pursuant to this Ordinance, the superior court shall take into consideration the nature, circumstances, extent, and gravity of the violation or violations, whether any discharge caused the violation is susceptible to cleanup or abatement, and, with respect to the violator, the ability to pay, the effect on ability to continue in business, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, economic savings, if any resulting from the violation, an such other matters as justice may require.

Penalties and Remedies Not Exclusive. Penalties and remedies under this Article may be cumulative and in addition to other administrative, civil or criminal remedies.

# Appendix 2-D
# Example of Priority Development Project SUSMP Conditions Garden Del Mar Project

## Standard Stormwater Quality Conditions of Approved for the Gardens Del Mar Project

E-10 *[Detailed Grading Plan]*
Prior to issuance of Building Permits, the applicant shall obtain a Grading Permit from the City of Del Mar. A grading plan shall be prepared in accordance with the latest edition of City of Del Mar's "Applicant's Guide to Procedures for a Grading Permit." The Grading Plan shall be prepared to the satisfaction of the City Engineer and shall: … (stormwater quality related conditions listed below):

E-10 L Depict the location of erosion control devices to be implemented in the event of rainfall;

E-10 M The methods for providing temporary erosion control during the construction phase of the project, complete with the inclusion of standard grading and erosion control notes on the plans;

E-10 S Include landscaping plans consistent with the approved Stormwater Management Plan with characteristics that maximize infiltration, provide retention, reduce irrigation and storm water run-off, use efficient irrigation, and minimize the use of fertilizers, herbicides and pesticides;

E-10 T Include plans showing source control BMPs in place with an accompanying certified letter noting the implementation plans for said BMPs;

E-10 U NA

E-10 V Provide evidence of coverage under the State of California's statewide General NPDES permit for Storm Water Discharges Associated with Construction Activities at all times;

E-10 W Ensure that the grading and other construction activities meet the provisions specified in the California RWQCB, San Diego Region, Order 2007-0001 NPDES No. CAS0108758 – Section D.2 and subsequent orders;

E-10 X Specify the manner in which the proposed water feature will be drained. The plan shall specify that water feature drainage will be collected and conveyed into public storm drain systems unless otherwise required or authorized by the Planning Director. The plan shall also include the following note: water feature discharge water shall be dechlorinated, free of debris or litter, and the type and content of chemical additives must be verified to determine any residual pollutants that may have a detrimental impact on water quality downstream or contribute to pollutant discharges prior to discharge to City rights-of-way"; All water systems shall be protected from backflow contamination and shall be subject to review and inspection by the PW Department's Cross Connection Specialist.

E-10Y The BMPs described in the project's approved Storm Water Mitigation Plan (SWMP) shall only be replaced with comparable BMPs as outlined in the City's Standard Urban Stormwater Mitigation Plan (SUSMP). Such changes must be approved by the Community Development/Planning and Engineering departments. Any deletion or significant modification to the approved SWMP must receive formal approval by either an Administrative Substantial Conformance issued by the Community Development Department and the Development Review Board chair or the project's final approving authority (Planning Commission/Development Review Board/City Council) at a public

hearing. The determination of whatever action is required for changes to a project's approved SWMP shall be made by the Community Development/Planning and Engineering departments. A completed operation and maintenance certification letter must be signed by the responsible party.

E-10Z Incorporate Low Impact Development BMP design features (landscaping, pervious concrete, porous asphalt, unit pavers, and granular materials) that are properly designed, constructed, and include drainage from impervious areas (rooftops, parking lots, sidewalks, walkways, patios, etc.) to provide infiltration and treatment based on the site's soil conditions, slope and other pertinent factors. The recommended owner's operation and maintenance specifications for each of the BMPs shall be signed by the owner or responsible parties and included with the submittal.

E-10AA Incorporate Low Impact Development BMP design features that minimize the impervious footprint and minimize connectivity between pervious surfaces of the project by conserving natural areas, vegetation and soil; constructing impervious areas (sidewalks, streets, parking lots) to the minimum widths necessary to provide for public safety and a walkable environment; minimize soil compaction; and minimize disturbances to natural drainages (e.g., natural swales, topographic depressions, etc.). The recommended owner's operation and maintenance specifications for each of the BMPs shall be signed by the owner or responsible parties and included with the submittal.

E-10AB Incorporate Source Control BMP requirements that minimize storm water pollutants of concern in urban runoff; include storm drain system stenciling or signage on public property, as appropriate; included properly designed outdoor material storage and trash areas; and include efficient irrigation systems. The recommended owner's operation and maintenance specifications for each of the BMPs shall be signed by the owner or responsible parties and included with the submittal.

E-17 *[Long Term Maintenance of Treatment Control BMP's for Priority Projects]*

Prior to issuance of Development Permit and for all high priority projects that include treatment Best Management Practices (BMPs), the applicant shall enter into a Stormwater Treatment Control BMP Inspection, Operation and Maintenance Agreement (Agreement) with the City obliging the project proponent to inspect operate, maintain or repair, and replace the stormwater treatment control BMPs identified in the project's approved Storm Water Mitigation Plan (SWMP), as detailed in the O&M Plan into perpetuity. The Agreement shall be approved by the City Attorney and shall be recorded at the County Recorder's Office prior to issuance of any building permit. Security in the form of cash (or certificate of deposit payable to the City) or an irrevocable, City-Standard Letter of Credit shall be required prior to issuance of a precise grading permit. The amount of the security shall be equal to 10 years of inspection, operation, and maintenance costs, as identified by the O&M Plan. The O&M cost estimate shall be prepared by a registered civil engineer and approved by the City Engineering department.

At a minimum, Agreements shall require training and outreach (of staff for businesses, and contractors for residences), inspection, operation, and maintenance of all BMPs on an annual basis and no later than the start of the rainy season. Verification of completion of

annual inspection and maintenance is due to the City by August 1st of each year. The project proponent or responsible party shall implement and maintain the O&M Plan to document all maintenance activities. Parties responsible for the O&M Plan shall retain records at the subject property for at least 5 years. These documents shall be made available to the City for inspection upon request at any time.

The Agreement shall include a copy of executed onsite and offsite access easements necessary for the inspection, operation and maintenance of BMPs that shall be binding on the land throughout the life of the project to the benefit of the party responsible for the BMPs, until such time that the stormwater BMP requiring access is replaced, satisfactory to the City Engineer and/or Public Works Director. The Agreement shall be an integral part of the SWMP and the O&M Plan approved by the City Engineer and/or Public Works Director.

E-19 [*Identification of receiving waters]*
Prior to the issuance of Development Permits, the applicant shall submit, for City review and approval, a report that identifies water quality impaired receiving water bodies (as listed by the State Water Resources Control Board on the 303(d) list), applicable water-quality objectives (Regional Water Quality Control Board (RWQCB)) and pollutants of concern, and estimates of post-construction discharge rates (with all BMPs in place) and explains why the projected pollutant loads will not cause a violation of the water quality objectives.

E-20 *[Treatment Control Best Management Practices (BMPs)]*
Prior to issuance of development permits, the applicant shall submit a Stormwater Mitigation Plan (SWMP) with a site plan and supporting reports, for City review and approval that includes a combination of low impact development, source control and treatment control BMPs as specified in the City's SUSMP. Treatment control includes:

E-20-A Control the post-development peak storm water run-off discharge rates and velocities to maintain or reduce pre-development downstream erosion;
E-20-B Conserve natural areas and include buffer zones;
E-20-C Minimize pollutants of concern from urban runoff through implementation of source control BMPs;
E-20-D Remove pollutants of concern from urban runoff through implementation of structural BMPs;
E-20-E Avoid directly connected impervious areas where feasible;
E-20-F Protect slopes and channels from eroding;
E-20-G Include storm drain stenciling and signage;
E-20-H Include properly designed outdoor material storage areas;
E-20-I Include properly designed trash storage areas; and
E-20-J Ensure that post-development runoff does not contain pollutant loads which have not been reduced to the maximum extent practicable.
E-20-K Comply with the City of Del Mar Standard Urban Stormwater Mitigation Plan (SUSMP), including submittal of a Stormwater Mitigation Plan (SWMP) describing the BMP selection criteria and sizing based on pollutant loadings for the project area. . The SWMP and the project design plans indicating all post-construction BMPs must be recorded with the County Recorder.
E-20-L Include a detailed Operations and Maintenance Plan (O&M Plan) for all treatment control BMPs, that includes at a minimum, the designated responsible parties to manage the storm water BMPs, employee training program and duties, operating schedule, maintenance frequency, routine

service schedule, specific maintenance activities, copies of any additional required permits; cost estimate for implementation of the O&M Plan.

The structural BMPs required herein shall conform with the City's SUSMP and be designed so as to filter or treat the volume or flow outlined in the numeric sizing criteria outlined below:

Volume
Volume based BMPs shall be designed to filter or treat the volume of runoff produced from a 24-hour 85$^{th}$ percentile storm event, as determined from the local historical rainfall record; or
Flow
Flow based BMPs shall be designed to filter or treat the maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour of a storm event; or the maximum flow rate of runoff produced by the 85$^{th}$ percentile hourly rainfall intensity (for each hour of a storm event), as determine from the local historical rainfall record, multiplied by a factor of two.

E-21 *[BMP details]*
All post construction BMPs shall be shown in detail on the construction plans, be in conformance with the approved SWMP, and submitted to the City for review and approval.

E-22 *[SWPPP requirement]*
Prior to issuance of Development Permits, the applicant shall submit for City review and approval and implement a Storm Water Pollution Prevention Plan (SWPPP), per the latest Caltrans SWPPP Preparation Manual or equivalent as approved by the City Engineer, to manage storm water and non-storm water discharges from the site at all times. The SWPPP shall describe all BMPs to be implemented year round. Specific BMP implementation may be dependent upon wet or dry season operations. The SWPPP shall also emphasize that erosion prevention is the most important measure for keeping sediment on-site during construction.

E-23 *[Soil Stabilization]*
The applicant shall utilize sediment controls only as a supplement to erosion prevention for keeping sediment on-site during construction – NEVER as a single or primary method.

E-23-A The applicant shall clear and grade only the areas on the project site that are necessary for construction. These areas shall be clearly denoted on the plans and in the required SWPPP.

E-23-B The applicant shall minimize exposure time of disturbed soil areas.

E-23-C The applicant shall submit a schedule to the City for review and approval, with proposed dates, demonstrating the minimization of grading during the wet season and coinciding the grading with dry weather periods, permanent revegetation and landscaping as early as feasible, temporary stabilization and reseeding of disturbed soil areas as early as feasible.

E-23-D The applicant shall stabilize all slopes per City approved method.

E-23-E The applicant shall provide evidence of existing coverage under the State of California's statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities at all times.

E-27 *[Compliance with City of Del Mar JURMP]*
This project shall conform with City of Del Mar's Jurisdictional Urban Runoff Management Program (JURMP). In addition, the construction practices are subject to inspection, and must conform to the requirements set forth in Section 5, "Construction Component" of the JURMP.

**Special (non standard) Conditions of Approval:**

SC E-2 Prior to final plan approval, the applicant will be required to establish a clean water monitoring and reporting program to the satisfaction of the City Stormwater Manager. Sampling ports will be required at proposed storm drain connections to the satisfaction of the City Engineer and City Stormwater manager.

PW-4 The owners shall train and certify that maintenance firms who service water features contain a City Business License and are aware of the requirements of the City related to discharging water which shall be de-chlorinated, free of debris or litter, and the type and content of chemical additives must be verified to determine any residual pollutants that may have a detrimental impact on water quality downstream or contribute to pollutant discharges prior to discharge to City rights-of-way.

**BMPs approved in project SWMP:**

LID elements include: Utilization of Green Roofs and incorporation of landscape buffers to the MEP.

Source Control BMPs include: Owner, Tenant and Occupant education programs, stormwater quality guidelines, litter control guidelines, landscape maintenance guidelines and a spill contingency program shall be incorporated into the project CC&Rs. A BMP operation and maintenance certification program with annual reporting requirements will be required. Other source control BMPs include efficient irrigation systems, properly designed trash enclosure areas and storm drain system signage/stenciling.

Treatment Control BMPs:
Runoff from the site will be filtered and re-used for irrigation. Excess runoff will be processed through a clarifier to remove pollutants of concern prior to discharge into the City's MS4. In addition to the use of filtration devices, the project design will also utilize the proposed green roofs as bioretention facilities, and incorporate drain inserts and water quality inlets into the treatment train prior to discharging stormwater runoff from the site.

# Section 3
# Construction Component

## 3.1 Introduction

This section provides an overview to the City's efforts to comply with the Construction Component of its 2008 JURMP as required under the terms of the Municipal Permit.

## 3.2 Source Characterization

Construction sites in Del Mar are required to implement BMPs to control pollutants on-site and prevent their release to the MS4 and the environment. This section outlines the measures that the City includes in this program, in accordance with the Permit, to prevent pollution from being discharged from construction sites and provides confirmation that all construction sites were required to undergo the City's construction urban runoff approval process and meet the applicable construction requirements.

The City is required under the Permit to establish priority classifications for each construction site with regard to the potential threat that the site may have on the water quality of urban runoff. Section 5.2.1 of the 2008 JURMP defines the project priorities and describes the process used to perform the classification. No modifications in Section 5.2.1 of the 2008 JURMP have been recorded during this reporting period.

Section 5.2.3 of the 2008 JURMP provides a description of the steps taken to develop, and update monthly, a watershed-based inventory of all construction sites within the City's jurisdiction that are subject to storm water regulation and control. No modifications in Section 5.2.3 of the 2008 JURMP have been recorded during this reporting period. Appendix 3-A located at the end of this section provides confirmation that a regularly updated construction site inventory was developed, maintained, and managed. The City's inventory is fluid since construction project sites are constantly approved, cancelled (permits withdrawn by the applicant, denied by the City, expire, etc.), and completed.

In addition to the regular updates, staff continues to routinely patrol construction sites to "field truth" data received from the Planning and Building Departments, and annotate areas of surface disturbance that may, or may not be, permitted.

## 3.3 Updates to Ordinances and Approval Processes

The City is required by the Permit to review and update its grading ordinance as necessary for compliance with the Permit. Section 5.3 of 2008 JURMP provides a description of the modifications made to the City's construction-related regulations and provides updates to the grading ordinance and other applicable ordinances.

As indicated in Section 2.2.4, during this reporting period, City staff reviewed the applicable City ordinances and determined that revisions were needed in the City of Del Mar's Stormwater Management and Discharge Control Ordinance (DMMC Section 11.30) for consistency with the changes required by the new Permit. Because of the substantive changes required, and to make the ordinance easier to use by staff and the public, City staff proposed repealing DMMC

Chapter 11.30 in its entirety and introduced a new Chapter 11.30 on March 3, 2008. The Del Mar City Council accepted staff's recommendations. With the second reading on March 17, 2008, the new DMMC 11.30 went into effect, consistent with the City's JURMP and the requirements of the 2008 Permit.

No other modification to City Ordinances affecting construction activities were made during this reporting period, and no modifications in Section 5.3 of the 2008 JURMP have been recorded.

## 3.4 Best Management Practice Requirements

Section 5.4.1 of the 2008 JURMP provided a description of minimum BMPs that were implemented, or required to be implemented, including pollution prevention. No modifications in Section 5.4.1 of the 2008 JURMP have been recorded during this reporting period. This section provides confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.

## 3.5 Program Implementation

The 2008 JURMP Section 5.5 describes the steps taken by the City to implement the Construction Component of the JURMP. No modifications were made to Section 5.5 of the 2008 JURMP during this reporting period.

This section describes the steps that were taken by the City of Del Mar to require and verify the implementation of designated BMPs at all construction sites, including those reporting requirements outlined in Permit sections J.3.a.(3)(b) i and iv-xi). As required by the Permit and outlined in the 2008 JURMP, all permitted construction sites were required to undergo the City's construction urban runoff approval process and meet the applicable construction requirements; designated BMPs were required to be implemented for all construction sites.

As indicated in the JURMP, this information is tracked by the Clean Water Manager, and updated regularly via formal inspections. In addition to the formal inspection program, and as indicated previously, staff regularly patrols the City as part of other duties and activities to confirm inventory data and verify that perimeter BMPs are in place, and that appropriate controls are in place for deliveries and storage areas.

### 3.5.1 Maximum Disturbed Area for Erosion Controls

Section 5.4.3 of 2008 JURMP identifies one acre as the maximum disturbed area that the City allows to be graded before either temporary or permanent erosion controls are required. No modifications in Section 5.4.3 of the 2008 JURMP have been recorded during this reporting period. Although rarely applied in the small projects in Del Mar, the City confirms that the maximum disturbed area for grading was applied to applicable construction sites.

### 3.5.2 Advanced Treatment Methods

Section 5.4.4 of the 2008 JURMP identified and listed the construction site conditions that will require the use of advanced treatment methods. No modifications in Section 5.4.4 of the 2008 JURMP have been recorded during this reporting period.

During this reporting period, no construction site met the requirements necessitating advanced treatment methods, and as such, none were required nor tracked.

### 3.5.3 Inspection and Enforcement Measures for Construction Sites

This section describes the steps that were taken to require and verify the implementation of designated BMPs at all construction sites, and provides confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Section 5.5.5 of 2008 JURMP provided a description of several educational and compliance verification activities that are included as part of the City's inspections of construction sites and the general results of the inspections conducted on construction sites. No modifications in Section 5.5.5 of the 2008 JURMP have been recorded during this reporting period. This section

#### *Construction Inspections*

As required by the Permit and outlined in the 2008 JURMP, all permitted construction sites were required to undergo the City's construction urban runoff approval process, meet the applicable construction requirements, and implement designated BMPs.

As indicated in the JURMP, this information is tracked by the Department of Planning and Community Development, and updated regularly via both formal and informal inspections. Because of the small size of the community, staff has regular interaction with the applicants and contractors during the process and is able to do verify conditions when on routine patrol on a regular basis. In addition to the formal inspection program by staff, and as indicated above, the City regularly patrols sites in-route to other assignment and this allows staff to "field truth" data and verify that perimeter BMPs are in place, and that appropriate controls are in place for deliveries and storage areas.

The new Permit requirements went into effect on March 25, 2008. Since the defined rainy season only runs through March 31 of each year, the City of Del Mar's tracking system did not break down the information into the period of time (weeks) the site was active within the rainy season; the number of inspections conducted during the rainy season; the number of inspections conducted during the dry season; and the total number of inspections conducted for all sites.

Appendix 3-B contains a partial list of formal construction inspections conducted during the reporting period. During preparation of this report, some inspection forms were identified as deficient although staff performed the requisite inspections. The Clean Water Manager is working with staff on ensuring that all logging and documentation is in place. Although staff has been trained to perform inspections to address the JURMP guidelines, documentation of the inspections has become a priority of the City and was being stream lined at the end of the reporting period to better address the requirements of the new Permit. The improved tracking of inspections is being implemented in the current Fiscal Year and any updates to the process will be reporting in the next Annual Report.

#### *Enforcement Measures for Construction Sites*

This section provides the number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 5.5.6 of the 2008 JURMP provides a description of the general process for applying enforcement to construction sites for urban runoff related

violations. No modifications in Section 5.5.6 of the 2008 JURMP have been recorded during this reporting period.

Del Mar has implemented a policy of education first, with aggressive enforcement measures only being used when compliance is not achieved or requests are ignored. In general, contractors have been compliant with BMP requirements at their respective construction sites. In the majority of those instances where compliance has not been attained, a single verbal or written warning was all that was required to achieve compliance.

During this reporting period, nine (9) enforcement actions, including written warnings; Notices of Violation; and/or issuance of Administrative Citations were issued by staff. This does not include verbal warnings issued during informal patrols, unless the contractor failed to comply with the direction of the inspector. In one instance, a full Stop Work order was issued and construction halted for more than 24 hours until appropriate BMPs and permits were obtained from the City. Table 3.5-1 below provides a summary of formal enforcement actions taken by the City for construction activities not in compliance with BMP requirements under the City s 2008 JURMP.

## 3.6 Notable Activities

This section describes the notable activities conducted to manage urban runoff from construction sites by the City. This reporting period, the City worked closely with its largest resort property during the resort s proposed redevelopment. Although not a priority construction project by definition, the City gained the cooperation of the developer and resort owner in conducting the redevelopment of the resort in the same manner as a priority construction development. A SWPPP was required and the project was subject to increased scrutiny and inspection for BMP implementation during the construction process. Construction began on this project late 2007, and is largely complete, though smaller phases of the remodel are still underway.

## 3.7 Construction Activities Effectiveness Assessment

Section 5.7 of 2008 JURMP addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l). No modifications in Section 5.7 of the 2008 JURMP have been recorded during this reporting period. Efforts to better track inspections to satisfy the new Permit requirements, as outlined in the City s 2008 JURMP, were put into motion at the end of this reporting period and it is apparent that adjustments in record keeping are necessary to improve annual reporting. Staff has been notified of the new procedures and newly-created tracking data base which will be reflected in next year s Annual Report. In addition, staff is presently preparing a standard procedure manual for stormwater inspections and enforcement for use by all staff, and to assist in training and education.

## 3.8 Program Review and Modification

No modifications were made to Section 5 of the 2008 JURMP during this reporting period.

## Table 3.5-1
## Construction-related Enforcement Actions □ FY2007□2008

| Action No. | Date of Action | Contractor | Project Address | Warn | NOV Issued | Cite Issued | Cite No. | Stop Work | Fines | Comments |
|---|---|---|---|---|---|---|---|---|---|---|
| 08-001 | 2/1/2008 | JP Chambers Construction | 333 13th Street | | Yes | Yes | 633 | | □200 | Discharge of sediment via power wash into MS4. Inappropriate BMPs. |
| 08-003 | 2/14/2008 | Claus Construction & Demo | 529 Stratford Ct. | Yes | | | | Yes | | No BMPs in place during storm event - BMPs installed within hour of site visit. Stop Work ordered - No Demo Permit. |
| 08-004 | 2/15/2008 | Hughes Construction | 139-140 13th St. | Yes | | | | No | | Discharge of sediment into MS4. Cleanup and Abatement required. |
| 08-005 | 2/15/2008 | JP Chambers Construction | 333 13th St. | 2nd | Yes | Yes | Waived on Appeal | Yes | N/A | New potential for sediment ditch. Failure to Maintain BMPs, mudtrack in Street - Cleanup/Abatement Ordered |

# Section 4
# Municipal Component

## 4.1 Introduction

This section provides information on how the City of Del Mar developed and implemented the Municipal Component. In this section, an overview of the City's municipal operations and facilities is presented and the overall implementation for the various areas and facilities.

Permit Section D.3.a. establishes requirements for local jurisdictions to develop and implement a program to reduce municipal discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), and prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards.

The 2008 JURMP Municipal Component includes the areas and activities listed in the Permit and is organized using the recommended Copermittee regional outline dated July 2007. The City of Del Mar does not operate several of the areas or activities listed in the Permit, including: Flood Management Projects, Active or Closed Municipal Landfills, Publicly Owned Treatment Works, Solid Waste Transfer Facilities, Land Application Sites, and Municipal Airfields. All these non-existent areas and/or activities sections will not be included in this Annual Report as summarized below and in Table 4.1-1. This table also includes a cross-reference to the 2008 JURMP areas and activities by the section number and the Annual Report section that addresses it.

## 4.2 Operation and Maintenance of the Municipal Separate Storm Sewer System (MS4) and Structural Controls

### 4.2.1 Background

This section describes the program which aims at reducing the impact of storm drain operation and maintenance activities on storm water quality. Section 6.2 of the 2008 JURMP described the activities involved in the program to maintain the storm drain system so that pollutant discharges are minimized during storms. Section 6.2 of the 2008 JURMP lists the sources characterization approach, BMP requirements, and update BMP requirements. No modifications in Section 6.2 of the 2008 JURMP have been recorded during this reporting period, excepted as noted below.

The City's complete MS4 is shown in Figure 4.2-1 and reflects the most recently available system updates Included at the end of this component.

The City's MS4 inventory was updated as shown in Table 4.2-1 to reflect the most recently available information. The data necessary to verify the high and low trash designations is being collected by the Department of Public Works. This year was the first of two years of data collection of this effort.

## Table 4.1-1
## Municipal Component Annual Report Organization and Summary

| JURMP Municipal Areas and Activities Categories | Applicable in Del Mar | Municipal Areas and Activities Included in this Category | Annual Report Section |
|---|---|---|---|
| 6.2 O&M of MS4 and Structural Controls | YES | All structures and pipes that make up the MS4 | 4.2 |
| 6.3 Management of Pesticides, Herbicides, and Fertilizers | YES | All | 4.3 |
| 6.4 Sweeping of Municipal Areas | YES | All city streets, alleys and parking facilities | 4.4 |
| 6.5 Infiltration from Sanitary Sewer to MS4 / Preventive Maintenance | YES | All sanitary sewer structures and pipes, including pump and lift stations | 4.5 |
| 6.6 Roads, Streets, Highways, and Parking Facilities | YES | All city streets, alleys and parking facilities | 4.6 |
| Flood Management Projects and Flood Control Devices | NO | Not Applicable | Not Included |
| 6.7 Areas Tributary to 303(d) Water Body Segments / Adjacent or Discharging to ESAs | YES | All facilities or activities located within the drainage basins discharging to the latest 303(d) listed water bodies that have the pollutants of concern | 4.7 |
| Active or Closed Municipal Landfills | NO | Not applicable | Not Included |
| Publicly Owned Treatment Works | NO | Not applicable | Not Included |
| Solid Waste Transfer Facilities | NO | Not applicable | Not Included |
| Land Application Sites | NO | Not applicable | Not Included |
| 6.8 Corporate Yards | YES | Includes the City only public yard | 4.8 |
| Household Hazardous Waste Collection Facilities | NO | Not applicable | Not Included |
| Municipal Airfields | NO | Not applicable | Not Included |
| 6.9 Parks and Recreational Facilities | YES | All parks, beaches and other community event facilities | 4.9 |
| 6.10 Special Event Venues | YES | All parks, beaches and other community event facilities | 4.10 |
| 6.11 Power Washing | YES | Citywide and applicable to all municipal activities or areas | 4.11 |
| 6.12 Fire Services □ Non-emergency Fire Fighting | YES | Non-emergency fire fighting training and associated maintenance conducted at parks or fire stations | 4.12 |

## Table 4.2-1
## MS4 Operation and Maintenance Inventory □ Public Works

| City of Del Mar MS4 Facilities | Subtype | Total Length or Number of Features | Inspection | |
|---|---|---|---|---|
| | | | High Trash | Low Trash |
| Gravity Main Lines (underground) | All | 5.87 mi (31,000 ft) | TBD | TBD |
| Channels (surface flow) | Open Channel | 0.07 mi (352 ft) | TBD | TBD |
| | Swale | 2.78 mi (14,695 ft) | TBD | TBD |
| | *Total* | *2.85 mi (15,047 ft)* | TBD | TBD |
| Catch Basins/Inlets□ | Inlet | 218 | TBD | TBD |
| | Inlets w/ filters | 6 | TBD | TBD |
| | Percolation Pit | 7 | TBD | TBD |
| | *Total* | *231* | TBD | TBD |
| Junction Box | with manhole□□ | 49 | TBD | TBD |
| Pumped Inlets□□□ | Permanent | 3 | TBD | TBD |
| | Seasonal | 1 | TBD | TBD |
| | *Total* | *4* | TBD | TBD |

□Inlets include: manholes and clean outs in the GIS attributes

□□Junction Boxes with manhole are labeled as Network structures with cleanouts in GIS. Network structures without cleanouts and headwalls are cleaned when the connecting main lines are cleaned

□□□Pumped inlets are labeled as pump stations in GIS. These are minor structures that do not qualify as pump stations. The City of Del Mar does not own or maintain any detention basins, catch basins.

| Facilities Connected to Del Mar MS4 but Owned by Other Entities | Ownership | Subtype | Total Length or Number of Features |
|---|---|---|---|
| Gravity Main Lines | NCTD | All | 0.48 mi (2,557 ft) |
| | Private | All | 1.41 mi (7,440 ft) |
| Channels | NCTD | All | 1.77 mi (9,322 ft) |
| | Private | All | 0.76 mi (4,016 ft) |
| Inlets□ | NCTD | All | 40□□ |
| | Private | All | 0 |
| Network Structures□ | NCTD | All | 0 |
| | Private | All | 0 |
| Pump Stations□ | NCTD | All | 0 |
| | Private | All | 0 |

□The City□s GIS does not have a complete database of private or NCTD drainage system structures.

□□The City□s GIS does not have all NCTD inlets in the database but the City has knowledge of approximately 40 in NCTD□s drainage system within the City□s limits.

### 4.2.2 Program Implementation

The following report data has been collected to document MS4 operation and maintenance activities as required by the Permit and listed in Section 6.2.4.5 of the 2008 JURMP.

1. Confirmation that the designated BMPs were implemented, or required to be implemented during MS4 cleaning activities to eliminate waste discharges when cleaning is taking place.

   The City s Public Works employees implement BMPs for MS4 maintenance activities as outlined in the 2008 JURMP in order to prevent the release of pollutants downstream as a result of maintenance activities. Generally, dry clean methods are preferred; however if jetting is required, socks and waddles are used downstream to trap the wash water and the collected water is then vacuumed and disposed of in the sanitary sewer. Any sediment or debris collected from MS4 maintenance activities is disposed of in the landfill, along with other debris collected throughout the City. The city keeps logs of all MS4 inspection and maintenance activities in order to satisfy the reporting requirements of the JURMP Annual Report. Detailed information is provided in Section 4.2.3 below.

2. A description of inspections and maintenance conducted for municipal treatment controls, as applicable.

   ***Trash Guards Treatment Control***

   These grates have been installed on inlets on Camino del Mar to minimize the introduction of debris and trash into storm drain catch basins and maximize the effectiveness of street sweeping since the guards do not allow these materials to enter the drain and are more efficiently removed by the street sweeper. Inspections of the guards are performed to verify they are still operations and performing as planned.

   ***Inlet Filter Treatment Control– North County Transit District***

   As reported in Section 6.2.3.2 of the 2008 JURMP, the City of Del Mar has a Maintenance Agreement in place with the North San Diego County Transit Development Board as part of the Del Mar Stabilization Project 1 (Drainage Improvements and Landslide Warning System), which consists of fifty-four (54) structures. Fossil filters have been installed in some of the structures to address water quality and Permit requirements. The Maintenance Agreement requires the City to maintain fourteen (14) of the structures, while NCTD will be maintaining the remaining forty (40) structures. Out of the fourteen structures maintained by the City, six have been fitted with filters that are serviced by the City s contractor (Downstream Services, Inc.). This fiscal year, all six filters were inspected and five of them required maintenance. The Maintenance Agreement has been implemented to ensure that the structures will be maintained properly to address water quality.

   Downstream Services, Inc. performs maintenance of the inlet structures without jetting or the use of any water in order to avoid flushes of polluted water downstream. All debris is removed either manually or by vacuum, stored in a 55-gallon drum, and taken to their facility for pollutant testing. In this manner, Downstream Services, Inc. can dispose of the removed debris properly, depending on the pollutants identified, if any. Downstream

Services, Inc. keeps inspection and maintenance records and provides them in a report to the City annually.

3. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria (33 capacity), and the number of catch basins and inlets cleaned.

   The City is responsible for the inspection and maintenance of 284 drainage structures that are part of the MS4, including inlets and catch basins (see Table 4.2-1 for the MS4 inventory). In FY2007/2008, 100 of the MS4 inlets and catch basins were inspected and cleaned. None of the structures were found to have accumulated waste exceeding 33 capacity.

4. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

   The City owns a total of 8.72 linear miles of MS4, of which mostly is gravity main lines (underground). 100 of the MS4 was inspected and cleaned (as needed) during FY2007/2008. A total of 51.19 cubic yards of waste were removed from the entire MS4 including inlets, catch basins and underground facilities for the reporting period, but no stretch of MS4 was reported as exceeding the cleaning criteria threshold.

5. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.

   There are 2.85 linear miles of open channel or swale type drainage in the City, and these drainage structures are considered to be part of the MS4 inventory (Table 4.2-1). All 100 of these drainage structures were inspected and cleaned. The City s inspection and maintenance records indicate that type of waste removed during cleaning consisted mostly of mud or sediment and plant material, but no observations of significant amounts of anthropogenic litter were noted.

6. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category. Proper disposal of waste removed pursuant to applicable laws. **Please Note:** *the Permit requires the material collected to be reported in tons, However, the City's measurements are in cubic yards. Cubic yards will be reported in tons using a 1,000 pound per cubic yard conversion.*

   The total amount of material removed from catch basins, inlets, open channels, and the MS4 for the FY2007/2008 was 51.19 cubic yards, or approximately 25.6 tons. By drainage structure category, it is estimated that approximately 7.1 tons of material were removed from catch basins and inlets (combined), 4.8 tons of material were removed from swales and open channels, and the remaining 13.7 tons of material was collected from the MS4 cleanings.

7. The City has the option to review the program after completion of the inspections completed in 2009 to reduce the inspection frequency. In order to assess this, the City

would identify any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

The City will assess the results of the FY2008/2009 MS4 inspection and maintenance activities to see if any MS4 facilities qualify for this reduction of inspection frequency. Any proposed changes will be included in the FY2008/2009 JURMP Annual Report.

### Additional Controls for Municipal Areas and Activities

The City coordinates with the 22nd District Agricultural Association (DAA) to ensure that additional pollutant loading from the DAA facilities does not contribute to pollution in the MS4. Although the City conducts MS4 maintenance activities along the DAA facility, the DAA does provide additional catch basin cleaning on an as-needed basis, especially during the high season, and reports its activities to the City. During FY2007/2008, the DAA performed two cleaning events of catch basins in addition to the City's MS4 maintenance efforts. Three curb-side inlets were cleaned on both occasions, yielding a total of 6.37 cubic yards of material, or approximately 3.2 tons. As noted above, although the Permit requires the material collected be reported in tons, the City records the measurement in cubic yards. Measurements will be reported in tons using a 1,000 pound per cubic yard conversion.

## 4.3 Management of Pesticides, Herbicides and Fertilizers

### 4.3.1 Background

This annual report section describes the activities implemented which aims at preventing or reducing the use of pesticides and fertilizers, and subsequently their entry or discharge into the MS4 and ultimately, receiving waters. Section 6.3 of 2008 JURMP described the activities involved in the program which is committed to the application of Integrated Pest Management (IPM) procedures and the use of updated BMPs to meet the goal of this program. No modifications in Section 6.3 of the 2008 JURMP have been recorded during this reporting period. This section also provides confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented as described in Section 6.3 of the 2008 JURMP.

### 4.3.2 Program Implementation

For annual reporting purposes, the City must provide confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities. Confirmation may be achieved through one of the following: 1) annual inspection conducted by the Clean Water Program of the pesticide application practices and implementation of BMPs; 2) supplemental information collected by the contracting departments; 3) additional contract compliance inspections of landscaped areas periodically conducted by City staff knowledgeable of the requirements; 4) any discrepancies with contract requirements are noted in Field Inspection Notices (FIN) which are forwarded to the contractor for corrective action within a specified timeframe (these inspections are mainly for contract compliance and to evaluate quality services, but serve indirectly to provide oversight for compliance with the requirements in this component).

The City of Del Mar contracts with Aztec Landscaping for all of the maintenance of its municipal landscaped areas including: fertilization, pest control, and herbicide application. All chemicals

are applied by licensed contractors and application of any landscaping-related chemicals is done per current San Diego County Department of Agriculture regulations and the City encourages manual weed and pest removal whenever possible; furthermore, any contract employee applying or mixing landscaping-related chemicals is required to possess a valid Qualified Applicators Certificate for Class B as issued by the State Department of Food and Agriculture. To regulate landscaping chemical use in the City, the contract company is required per its contract with the City to submit a proposed fertilization schedule prior to commencement of fertilization and to provide a monthly chemical application report to the City. In FY2007/2008, there were no perceived increases in landscaping-related chemicals as compared to previous years and as in other years, the pesticides included as part of the annual Dry Weather Monitoring Program were not detected in City-wide sampling.

## 4.4 Sweeping of Municipal Areas

### 4.4.1 Background

This section describes the City's established street sweeping program that is aimed at effectively removing pollutants anticipated in the areas that make up this program. Section 6.4 of 2008 JURMP described the activities involved in the program which is aimed at meeting minimum sweeping requirements for high, moderate, and low trash volume areas. No modifications in Section 6.4 of the JURMP 2008 have been recorded during this reporting period.

This section identifies the total distance of curb-miles of improved roads and streets identified as consistently generating high, moderate, and low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets. The section includes identification of the total distance of curb-miles swept and identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping. This information is presented in Table 4.4-1. Street sweeping includes both improved curb and gutter streets, and non-improved, rural design residential streets as shown in Figure 4.4-1.

Figure 4.4-1

# City of Del Mar

## Street Sweeping Schedule

### 4.4.2 Program Implementation

As required in the Permit and described in the City's JURMP, Section 6.4.4.10 for Sweeping of Municipal areas, the annual reported data is as follows:

1. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.

   As reported in the 2008 JURMP, the City has extensive recordkeeping in place that tracks the daily operations of the street sweeper including the total number of broom hours. The precise number of miles swept for each distinct high, moderate, and low volume area cannot be effectively tracked due to the method of operation of the equipment and the schedule which may include sweeping several combinations of the various areas within the same day or week. The City does have the ability to calculate the curb-miles based on the various daily data entries. The reported swept curb-miles provided in the annual report will be based on these calculations as reported below in item no. 4.

2. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.

   As reported in the 2008 JURMP, the City has extensive recordkeeping in place that tracks the daily operations of the street sweeper including the total number of broom hours. The precise number of miles swept for each distinct high, moderate, and low volume area cannot be effectively tracked due to the method of operation of the equipment and the schedule which may include sweeping several combinations of the various areas within the same day or week. The City does have the ability to calculate the curb-miles based on the various daily data entries. The reported swept curb-miles provided in the annual report will be based on these calculations as reported below in item no. 4.

3. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.

   As reported in the 2008 JURMP, the City has extensive recordkeeping in place that tracks the daily operations of the street sweeper including the total number of broom hours. The precise number of miles swept for each distinct high, moderate, and low volume area cannot be effectively tracked due to the method of operation of the equipment and the schedule which may include sweeping several combinations of the various areas within the same day or week. The City does have the ability to calculate the curb-miles based on the various daily data entries. The reported swept curb-miles provided in the annual report will be based on these calculations as reported below in item no. 4.

4. Identification of the total distance of curb-miles swept.

   This Fiscal Year, it is calculated that approximately 1,168.8 City curb-miles were swept.

5. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping:

   The two municipal parking lots in the City's municipal facility inventory are the 17th Street Lifeguard station parking lot and the City Hall Parking lot. Both are considered to be high trash volume designations and thus, are swept semi-monthly. Sweeping was completed as scheduled.

6. Amount of material (tons) collected from street and parking lot sweeping:

   The total amount of material collected from street sweeping activities of municipal areas for FY2007/2008 was 231 cubic yards*, or an estimated 115.5 tons* (see Table 4.4-1). This figure includes all three trash volume categories. **Please Note:** *the Permit requires the material collected to be reported in tons, however, the City's measurements are in cubic yards. Cubic yards are reported in tons using a 1,000 pound per cubic yard conversion.*

As mentioned in Section 4.2.3, the City coordinates with the 22nd District Agricultural Association (DAA) to ensure that additional pollutant loading from the DAA facilities does not contribute to pollution in the MS4. Although the City conducts street sweeping along the DAA facility, the DAA does provide additional street sweeping on an as-needed basis, especially during its high season.

## 4.5 Infiltration from Sanitary Sewer to MS4 Provide Preventive Maintenance of Both Elements

### 4.5.1 Background

This section describes the City's sanitary sewer operation and maintenance program which is the basis for the prevention of infiltration into the MS4 system. Section 6.5 of 2008 JURMP described the activities involved in the program which aimed at efficiently transporting all sewage and reducing and eliminating stoppages and/or spills by implementing a proactive preventive maintenance and capital improvement program. No modifications in Section 6.5 of the 2008 JURMP have been recorded during this reporting period.

The Public Works Department is responsible for operation and maintenance of both the sanitary sewer system and the MS4. The operation and maintenance program for the MS4 is included in Section 6.2 above. The operation and maintenance program for the sanitary sewer includes a comprehensive inspection, cleaning, repair, and maintenance program. The City's Capital Improvement Project (CIP) program includes funding for sanitary sewer replacement, improvements, and major repairs. The CIP program meets industry standards and other regulatory requirements.

***Sanitary Sewer Infrastructure***

The sanitary sewer system infrastructure in Del Mar includes approximately 24.75 miles of gravity main, 0.07 miles (or approximately 387ft) of force main and 387 service points. Del Mar's system includes three sewer pump/lift stations, 112 clean out facilities, and approximately 549 manhole structures.

## Table 4.4-1
## Street Sweeping Schedule and Implementation (2007 2008) Public Works

| SCHEDULE Sweeping by Trash Volume Designation | | | |
|---|---|---|---|
| | **High Volume** | **Moderate Volume** | **Low Volume** |
| Minimum Permit Required Frequency | Semi-monthly | Monthly | Annually |
| Permit Compliance Achieved | Yes | Yes | Yes |
| Areas Included | • Business District<br>• 17th Street Parking Lot (Lifeguard)<br>• City Hall Parking Lot | • Stratford Court<br>• Coast Boulevard<br>• Ocean Avenue<br>• Camino del Mar<br>• Via de la Valle<br>• Carmel Valley Road<br>• Jimmy Durante Blvd<br>• Crest Road | • All City streets 4th 15th Streets (West of Camino del Mar)<br>• All City Streets 10th 15th Streets (East of Camino del Mar)<br>• All City Streets 15th to San Dieguito (East side)<br>• All City Streets 15th to 29th Streets (West side)<br>• All City Streets Del Mar Heights to 10th Street (East of Camino del Mar) |

| ACTUAL Sweeping by Trash Volume Designation | | | |
|---|---|---|---|
| | **High Volume** | **Moderate Volume** | **Low Volume** |
| Frequency Implemented | Semi-monthly | Monthly | Annually |
| Volume (combined) | 231 CY | | |
| Weight (calculated) | 115.5 tons | | |
| Total Miles Swept | 1168.8 | | |
| Permit Compliance Achieved | Yes | Yes | Yes |

The municipal inventory in Appendix 4-A includes all sanitary sewer pump stations, and pipes as high priority sources that require minimum BMPs as specified in the table. Specifically, the City s sanitary sewer pump stations are considered a high priority source of pollutants due to the potential for spills and mechanical failure. The main pump stations are located at 21st Street, 7th Street and San Dieguito Road

### 4.5.2 Program Implementation

A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4 is provided in this section.

Sanitary sewer operation and maintenance procedures are established by the City and record keeping is utilized by the Public Works Department to increase implementation efficiency and the effectiveness through a work order system. The sanitary sewer inspection, maintenance, and cleaning logs are kept to ensure that the schedule shown in Appendix 4-A is implemented for permit compliance and the data and information is compiled for various regulatory annual reports.

Other means that can be used to document and record inspection results of the sanitary sewer system assessment include field notes, bacterial testing, timed and dated photographs, video, drawings, and maps. The video or visual inspection of the sanitary sewer is a very effective means of assessing infiltration into the MS4. All records are retained at the Public Works Yard for at least three years after the date the record was established. In some instances, records may require a five year retention time (see Attachment B of the Permit, Section 4.).

Recordkeeping of sewage and other spills entering the MS4 system will be tracked and reported according to the requirements outlined in Section 9  Illicit Discharge Detection and Elimination Component.

## 4.6 Roads, Streets, Highways, and Parking Facilities

### 4.6.1 Background

This section describes the City s activities that complement the street sweeping practices by focusing on parking facilities and the additional management measures implemented to minimize their pollutant contributions to the MS4. Section 6.6 of 2008 JURMP described the activities involved in this element which included the minimum BMPs required during maintenance and minor construction or repair activities for streets, roads, and parking facilities. No modifications in Section 6.6 of the JURMP 2008 have been recorded during this reporting period.

Del Mar has approximately 747 curb-miles of streets that are swept per year and two public parking lots or facilities (City Hall and Lifeguard Station) as shown on the map and table provided in Section 4.4 - Street Sweeping. The City does not maintain any highways and they are not addressed in this element.

The City is applying the street sweeping activity as the primary BMP to reduce pollutants from streets and parking facilities.

### 4.6.2 Program Implementation

#### 4.6.2.1 Sweeping of Municipal Areas Program

This section describes the steps that were taken to require and verify the implementation of the designated BMPs at roads, streets, and parking facilities or other municipal sites/ sources. Data and reporting for street sweeping is provided in Section 4.4.

#### 4.6.2.2 Litter Management Requirements

This section includes the amount of waste and litter (tons) removed from streets as part of the litter management program. Street Sweeping is the City's main BMP and means for litter removal from its streets; litter removal is documented in Section 4.4 as part of the Sweeping of Municipal Areas Program and in Section 4.2 as part of Operation and Maintenance of the Municipal Separate Storm Sewer System (MS4) and Structural Controls for removal of debris, litter and other materials.

#### 4.6.2.3 Notable Activities

This section describes the notable activities conducted to manage urban runoff from roads, streets, and parking facilities by the City.

The City works in conjunction with volunteers from Arc of San Diego in performing its litter removal program. In FY2007/2008, the Arc of San Diego volunteers collected approximately 6 tons of trash from the City's streets as well as parks and recreational facilities.

In addition to street sweeping activities, the City has also installed inlet trash and debris baskets at 2 locations where debris loading from the street has been noted to be moderate to heavy. These BMPs are being assessed for further implementation at other locations throughout the City. Any future additions will be noted in Annual Reports to follow, as necessary.

### 4.6.3 Roads, Streets, Highways, and Parking Facilities Element Effectiveness Assessment

Section 6.20 of 2008 JURMP addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l). No modifications in Section 6.20 of the 2008 JURMP have been recorded during this reporting period.

## 4.7 Areas Tributary to 303(d) Water Body Segments Adjacent or Discharging to ESAs

This section of the JURMP, describes the identified areas tributary to 303(d) listed water bodies in each of the relevant municipal activities and defines the priority areas for consideration in development planning decisions and to facilitate the selection of priority municipal areas/activities. Section 6.8 of the 2008 JURMP provided information on how the priority areas for consideration in development planning decisions are selected that facilitates the selection of priority municipal areas/activities. No modifications in Section 6.8 of the 2008 JURMP have been recorded during this reporting period.

## 4.8 Corporate Yards

This section describes the City's program that aims at ensuring that storm water pollution prevention and best management practices are considered when conducting activities at municipal facilities. Section 6.13 of the 2008 JURMP described the activities at this facility that generated waste, spills, and leaks that could potentially reach the storm drain system and receiving waters in storm water runoff or as non-storm water discharges. No modifications in Section 6.13 of the 2008 JURMP have been recorded during this reporting period.

The City's only corporate yard is the Public Works Yard, as shown in the updated municipal facility inventory provided in Appendix 4-A, and was inspected on June 26, 2008. The inspection revealed that all prescribed BMPs were being implemented by staff, and thus the facility was in compliance with JURMP requirements.

## 4.9 Parks and Recreational Facilities

This section describes the activities of the City's Community Services Department which provides primary oversight of the City's park and beach maintenance activities, community center activities and uses, and building maintenance at these facilities. Section 6.16 of 2008 JURMP described the activities including all routine maintenance activities at these facilities performed by the City. No modifications in Section 6.16 of the 2008 JURMP have been recorded during this reporting period. See Appendix 4-A for a complete list of municipal parks and recreational facilities.

### 4.9.1 Background

The Community Services Department overseas numerous functions of the City including Lifeguard Services, Parking Enforcement, Park Ranger operations, Beach Maintenance, and all facility use permits for the parks, beach area, and the Powerhouse Community Center.
The City of Del Mar has a written policy to encourage and regulate the use of City-owned parks and recreational facilities or right of ways by individuals and organizations for special community or personal events. The Community Services Department has oversight over parks and recreational facilities in Del Mar and all special events.

Events conducted at Del Mar's Powerhouse Community Center are subject to the City of Del Mar Community Services Facility Use Fees and Policies, and all events are staffed by the City. The City or its contractors perform all routine maintenance activities at these facilities, including landscaping which is covered in the Management of Pesticides, Herbicides, and Fertilizers Element found in Section 6.3 of 2008 JURMP.

### 4.9.2 Source Characterization

This section includes all the updates made to the City's parks and recreational facilities inventory and prioritization. No modifications in Section 6.16.2 of the 2008 JURMP have been recorded during this reporting period.

### 4.9.3 Best Management Practice Requirements

Section 6.16.3 of the 2008 JURMP identified and described updated BMP requirements for, City's parks and recreational facilities. This section described which BMPs will be implemented,

or required to be implemented for the City's parks and recreational facilities. No modifications in Section 6.16.3 of the 2008 JURMP have been recorded during this reporting period. This section provides confirmation that the designated BMPs were implemented, or required to be implemented, for all City's parks and recreational facilities.

### 4.9.4 Program Implementation

This section describes the steps that were taken to require and verify the implementation of the designated BMPs at City's parks and recreational facilities. Section 6.16.4 of 2008 JURMP identified and described updated BMP requirements for, City's parks and recreational facilities. This section described which BMPs will be implemented, or required to be implemented for City's parks and recreational facilities. No modifications in Section 6.16.4 of the 2008 JURMP have been recorded during this reporting period which includes inspection, maintenance, litter management, and enforcement practices at parks and other recreational facilities.

The results of the City's inspection of park and recreational facilities in found in Appendix 4-A.

### 4.9.5 Enforcement Measures for City's Parks and Recreational Facilities

This section provides the number of violations and enforcement actions (including types) taken for City's parks and recreational facilities, including information on any necessary follow-up actions taken.

The results of the City's inspection of park and recreational facilities are found in Appendix 4-A.

### 4.9.6 Notable Activities

This section describes the notable activities conducted to manage urban runoff from parks and recreational facilities by the City.

The City works in conjunction with volunteers from Arc of San Diego in performing its park litter removal program. In FY2007/2008, the Arc of San Diego volunteers collected approximately 6 tons of trash from the City's parks, streets, and recreational facilities.

This Fiscal Year, the City applied with the California Department of Conservation for a grant from its Beverage Container Recycling and Litter Reduction Program to assist in the City's litter clean up efforts. Disbursement of funds is determined by the California Department of Finance and the amount of the grant is contingent on the population of eligible cities or counties applying for the grant. The City of Del Mar received 5,000 for FY2007/2008 which was the maximum amount eligible. A portion of the grant money was used to fund beach clean-up activities as well as to purchase dog nuisance clean-up bag stations (Mutt Mitt Stations) for placement in parks and at Dog Beach; the remaining money was used to assist in the purchase of a new street sweeper to continue to effectively reduce the amount of trash and debris entering the MS4. The City has again applied for the grant and has received money for use in FY2008/2009. The results of where these funds are allocated will be reported in the next Annual Report.

### 4.9.7 City's Parks and Recreational Facilities Element Effectiveness Assessment

Section 6.20 of 2008 JURMP addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l). No modifications in Section 6.20 of the 2008 JURMP have been recorded during this reporting period.

## 4.10 Special Events Venues

This section describes the policy of the City to regulate the use of City-owned facilities or right-of-ways by individuals and organizations for either special community or personal events by requiring submittal of a Use of Public Facility Permit application and acknowledgment of all the applicable rules, regulations and fees. Section 6.17 of the 2008 JURMP described the public event policy and process enforced by the City which aimed at safeguarding the City s facilities and the environment. A Major Event is defined as an activity which entails *in excess of 200 participants and/or spectators* and which affects City personnel, resources, services, facilities, traffic circulation, or impacts the community and/or its citizens. Examples of past major events include the La Jolla Half Marathon, Concerts in the Park, and Holiday Wonderland in Del Mar.
No modifications in Section 6.17 of the 2008 JURMP have been recorded during this reporting period.

Table 4.10-1 provides a summary of the number of major events, number of inspections, and the inspection results recorded on the inspection form (2008 JURMP, Appendix 6-B). The completed inspection forms are kept on file by the Clean Water Program Manager. Some inspection form deficiencies were identified in the early implementation phase of the program and have been corrected with training of recently hired staff.

**Table 4.10-1**
**City of Del Mar Major Events FY2007 2008**

| Event Name | Event Date | Inspection Date(s) | Notes Comments |
|---|---|---|---|
| Concerts in the Park | 7/10/07 | Post-event inspection by clean up crews no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |
| Bocce Ball Tournament | 7/17/07 | Post-event inspection by clean up crews no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |
| Concerts in the Park | 8/14/07 | Post-event inspection by clean up crews no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |
| Concerts in the Park | 9/16/07 | Post-event inspection by clean up crews no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |
| Del Mar Village Association Winter Wonderland | 12/2/07 | During event by Clean Water Program staff no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |
| La Jolla Marathon | 4/24/08 | Post-event inspection by clean up crews no spills or incidents reported | |
| Special Olympics | 6/4/08 | Post-event inspection by clean up crews no spills or incidents reported | |
| Concerts in the Park | 6/17/08 | Post-event inspection by clean up crews no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |
| Del Mar Village Association Summer Solstice Event | 6/19/08 | Post-event inspection by clean up crews no spills or incidents reported | Additional trash receptacles and portable toilets provided by the City |

## 4.11 Power Washing

This section addresses power washing activities associated with municipal facilities or activities. Section 6.18 of 2008 JURMP described the power washing activities associated with municipal facilities or activities. No modifications in Section 6.18 of the JURMP 2008 have been recorded during this reporting period.

### 4.11.1 Background

This section addresses power washing activities associated with municipal facilities or activities. Due to its potential to introduce pollutants into the MS4 and thus receiving waters, power washing is limited as much as possible and regulated to comply with the Permit and Del Mar Municipal Code Title 11.30 Storm water Management and Discharge Control.

### 4.11.2 Source Characterization

Currently, there is no regularly scheduled power washing activities at specific locations. This activity is conducted in various areas of the City depending on the need and as a result of other maintenance functions. This activity and the BMPs listed below are considered to apply citywide for all municipal operations. Power washing may be conducted by City staff or under contract depending on the need.

### 4.11.3 Best Management Practice Requirements

Section 6.18.3 of 2008 JURMP identifies and describes updated BMP requirements for, power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. This section describes which BMPs will be implemented, or are required to be implemented for power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. No modifications in Section 6.18.3 of the 2008 JURMP have been recorded during this reporting period. This section provides confirmation that the designated BMPs were implemented, or required to be implemented for all power washing activities.

### 4.11.4 Program Implementation

This section describes the steps that were taken to require and verify the implementation of the designated BMPs during power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. Section 6.18.4 of 2008 JURMP identifies and describes updated BMP requirements for, power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. This section describes which BMPs will be implemented, or required to be implemented for power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. No modifications in Section 6.18.4 of the 2008 JURMP have been recorded during this reporting period.

### 4.11.5 Inspection and Maintenance requirements

This section provides a summary of inspections and maintenance activities conducted for power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable municipal outdoor surfaces. Included here are the identification of any power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor

surfaces found to require inspection less than annually following two years of inspection, including justification for the finding. This section includes identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections. A description of the general results of the inspections is also provided. Overall, this section provides confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

**Table 4.11-1**
**Municipal Facility Area Power Washing Inspection Summary**

| Sites Requiring Inspection | Inspections Conducted (Dates) | Notes/Comments |
|---|---|---|
| Side walk cleaning | April 2, 2008 | In compliance water collected |

As Table 4.11-1 indicates, only one municipal power washing activity was conducted during FY2007/2008. The inspection of the side walk power washing activity on April 2, 2008 revealed that the activity was in compliance with Permit and City Municipal Code requirements since all wash water was collected and vacuumed for proper disposal into the sanitary sewer. Thus, no additional pollutants were introduced into the MS4 as a result of this power washing activity.

### 4.11.6 Enforcement Measures for Power Washing Activities

This section provides the number of violations and enforcement actions (including types) taken for power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 6.1.3.5 of 2008 JURMP provides a description of the general process for applying enforcement to power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces for urban runoff related violations. No modifications in Section 6.1.3.5 of the 2008 JURMP have been recorded during this reporting period.

No violations were reported in FY2007/2008. As mentioned in Section 4.11.5, only one power washing event took place in FY2007/2008 and the event was in compliance with City and Permit requirements.

### 4.11.7 Notable Activities

This section describes the notable activities conducted to manage urban runoff from power washing activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces by the City.

The City limits its use of power washing as a means of cleaning municipal facilities and prefers to implement dry clean methods whenever possible. When power washing does take place, wash water recovery and proper disposal of wash water are two BMPs that are implemented.

### 4.11.8 Power Washing Activities Effectiveness Assessment

Section 6.20 of 2008 JURMP addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l). No modifications in Section 6.20 of the 2008 JURMP have been recorded during this reporting period.

## 4.12 Fire Services – Non-Emergency Fire Fighting

This section describes the City's program to reduce pollutants from non-emergency fire fighting flows (i.e. flows from controlled or practice blazes and maintenance activities) determined to be a significant source of pollutants to waters of the U.S. Section 6.19 of the 2008 JURMP described the City's program to reduce pollutants from non-emergency fire fighting flows. No modifications in Section 6.19 of the JURMP 2008 have been recorded during this reporting period.

## 4.13 Municipal Component Effectiveness Assessment

Section 6.20 of 2008 JURMP addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l). No modifications in Section 6.20 of the 2008 JURMP have been recorded during this reporting period.

## 4.14 Program Modification and Review

Section 6.21 of 2008 JURMP addresses the program modification and review requirements. No modifications in Section 6.21 of the 2008 JURMP have been recorded during this reporting period. No modifications have been noted for this reporting period to any sections of the Municipal Component as submitted in the 2008 JURMP.

# Section 5
# Industrial and Commercial Component

## 5.1 Introduction

This section provides introductory information that the City determined is relevant to the implementation of the Industrial and Commercial Component for the applicable reporting period.

## 5.2 Industrial Sites Sources Element

### 5.2.1 Background

The Industrial Component specifies best management practices for industrial areas and activities that occur within the City. These methods are industry site specific and are described below in Section 5.2.3. Industrial businesses are required to implement BMPs pursuant to the City s Storm water Ordinance. The City will enforce the implementation of these methods pursuant to the City s Storm Water Ordinance, Del Mar Municipal Code (DMMC) Section 11.30.

The procedures listed in this industrial component address the City s program as stated in Permit section D.3.b and the City s role to provide general oversight of industrial facilities covered under the General Storm Water Industrial Permit (Order 97-03-DWQ) and any subsequent amendments/addendums. The City is not directly responsible for the industrial facility s compliance with the General Storm Water Industrial Permit, as this is an activity performed by the San Diego RWQCB, but it does inspect and require compliance with DMMC to protect storm water quality and prevent urban runoff.

### 5.2.2 Source Characterization

Section 7.2.2 of the 2008 JURMP provided the methodology for industrial source characterization and a prioritized watershed-based inventory of all industrial sites/sources that could contribute a significant pollutant load to the MS4. No modifications in Section 7.2.2 or the industrial inventory in the 2008 JURMP have been recorded during this reporting period.

The industrial inventory for the City of Del Mar can be found in Appendix 5-A at the end of this component.

### 5.2.3 Best Management Practice Requirements

Section 7.2.3 of 2008 JURMP included a list and description of minimum BMPs to be implemented, or required to be implemented, for each industrial site/source, including pollution prevention. This reporting period, minor adjustments were made to the required BMPs listed in Appendix 5-A as compared to the BMP Inventory in Section 7.2.3 of the 2008 JURMP. The changes were based on applicability, or lack thereof, determined from the inspections conducted this reporting period. This section along with the BMPs listed in Appendix 5-A provides confirmation that the designated BMPs were implemented, or required to be implemented, for industrial sites/sources.

### 5.2.4 Program Implementation

This section describes the steps to require and verify the implementation of designated BMPs for industrial sources as described in Section 7.2.4 of the 2008 JURMP which detailed the different aspects of program implementation for priority industrial facilities. No modifications in Section 7.2.4 of the 2008 JURMP have been recorded during this reporting period. A description of efforts taken to notify owners/operators of industrial sites/sources of BMP requirements is provided below.

Inspection and education protocols for Priority Industrial facilities were followed as specified in the City's 2008 JURMP. During the inspection, the City inspector verified that BMPs throughout the facility were being implemented as indicated in the facility's industrial SWPPP. The facility operator was also made aware of the City's new Clean Water Program video, which could be incorporated in the annual employee training.

### 5.2.5 Inspection of Industrial Sites

This section describes the City's program for inspections of industrial sites. Section 7.2.5 of 2008 JURMP describes the City's program for inspections of industrial sites including inspection frequency, procedures, referrals, filing, and follow-up inspections. No modifications in Section 7.2.5 of the 2008 JURMP have been recorded during this reporting period.

This section identifies the total number of industrial sites/sources inventoried and the total number inspected. It also includes justification and rationale for why the industrial sites/sources inspected were chosen for inspection. The section also provides confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance. The section identifies the number of third party inspections conducted and provides identification of efforts conducted to verify third party inspection effectiveness.

The City of Del Mar has two priority industrial facilities in its inventory and only one, Eucalyptus Stoneware, is within the City's jurisdiction (see Appendix 5-A). As stated in the City's JURMP Section 7.2.5.1, 100% of the facilities were selected for inspection during the reporting period. The San Diego RWQCB led the inspection of the 22nd District Agricultural Association (22nd DAA) on August 22, 2007 with representation from the City Engineer. A routine inspection of Eucalyptus Stoneware was conducted on May 27, 2008 as shown in Table 5.2.-1. All steps to the inspection and follow-up activities as listed in the 2008 JURMP were completed for Eucalyptus. Since the inspection of the 22nd DAA was conducted by the San Diego RWQCB, it qualifies as a third party inspection. This is a unique situation because the third party inspection team is also the regulating party, so not all of the JURMP third party inspection requirements need be applied.

**Table 5.2-1**
**Industrial Facility Inspections**

| Facility Name | Regulatory Agency | SIC | Inspection Date | Comments |
|---|---|---|---|---|
| Del Mar Fair-grounds / Race Track (22nd DAA) | RWQCB | 9900 | 8/22/07 | Inspection conducted by RWQCB with City of Del Mar representation |
| Eucalyptus Stoneware | City of Del Mar | 3200 | 5/27/08 | Facility in compliance |

### 5.2.6 Enforcement Measures for Industrial Sites/Sources

This section provides the number of violations and enforcement actions (including types) taken for industrial sites/sources, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 7.2.5.7 of 2008 JURMP provides a description of the general process for applying enforcement to for industrial sites/sources urban runoff related violations. This section also describes the steps taken to identify non-filers and a list of non-filers identified by the City of Del Mar. No modifications in Section 7.2.5.7 of the 2008 JURMP have been recorded during this reporting period.

The RWQCB inspection of the 22nd DAA facility resulted in several violations being noted in the RWQCB inspection report; however, follow-up inspections and enforcement actions regarding these violations will be handled by the RWQCB since this facility is a State agency. Any resulting enforcement or compliance achievement will be reported in the next JURMP Annual Report. The City's annual inspection of its other priority industrial facility resulting in no enforcement measures since the facility was deemed to be in compliance with requirements.

**Table 5.2-2**
**Industrial Facility Enforcement**

| Facility Name | Regulatory Agency | Initial Compliance Action (Date) | Follow-up Action (Date) if applicable | Comments |
|---|---|---|---|---|
| Del Mar Fair-grounds / Race Track (22nd DAA) | RWQCB | 8/22/07 | Follow-up Inspection by RWQCB staff prior to rainy season. Updates to SWPPP required. | Routine non-sampling compliance inspection |
| Eucalyptus Stoneware | City of Del Mar | 5/27/08 | N/A | N/A |

Due to its limited Industrial Zoning area, there were no new priority industrial facilities in the City for FY2007/2008, thus no action was taken to identify non-filers. The procedure to identify non-filers in JURMP Section 7.2.5.8 will be followed as needed in the future.

### 5.2.7 Notable Activities

This section describes the notable activities conducted to manage urban runoff from industrial sites/sources by the City.

Notable activities included the City's participation providing comments to the 22nd DAA's Roof Arena project. Involvement included meetings, document review and written comments to various proposal and documents, including the proposed enclosure of the Arena facility by the addition of a roof structure. As a result of the City's participation, 22nd DAA has voluntarily included water quality measures, BMPs and other features to reduce the impact of urban runoff from operations at the arena and storm water runoff which is anticipated to increase due to the addition of the impervious surface (roof). It should be noted that the 22nd DAA, as a State agency, is not required to incorporate the City's SUSMP requirements, but did provide City staff the opportunity to comment on the development project.

Furthermore, the City produced an education video to be aired on the local television station as well as during a public stormwater awareness workshop. The video will be used for future outreach to industrial/commercial businesses.

### 5.2.8 Industrial Sites/Sources Effectiveness Assessment

This section addresses the effectiveness assessment requirements for industrial sites / sources element. Section 7.2.7 of 2008 JURMP provides the effectiveness assessment requirements for stationary industrial sites / sources element. No modifications in Section 7.2.7 of the 2008 JURMP have been recorded during this reporting period.

### 5.2.9 Program Review and Modification for Industrial Sites/Sources

This section addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. Section 7.2.8 of 2008 JURMP addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. No modifications in Section 7.2.8 of the 2008 JURMP have been recorded during this reporting period.

## 5.3 Stationary Commercial Sites/Sources Element

### 5.3.1 Background

This section contains the information required for stationary commercial businesses, pollution prevention methods and BMPs for priority commercial businesses, and related activities that occur within the City. The selected BMPs are activity and site specific and are described under Section 5.3.4 below. Commercial businesses are required to implement these methods pursuant to the City's Storm water Ordinance, DMMC 11.30. The City, through an inspection program described below, will verify implementation of pollution prevention methods and BMPs.

### 5.3.2 Source Characterization

Section 7.3.2 of 2008 JURMP provides a completed and prioritized watershed-based inventory of all commercial sites/sources that could contribute a significant pollutant load to the MS4. The commercial inventory is provided in Appendix 5-B located at the end of this component. No

modifications in Section 7.3.2 of the 2008 JURMP have been recorded during this reporting period. Appendix 5-C and this section contain any updates made to the commercial inventory from when it was populated for the 2008 JURMP.

### 5.3.3 Best Management Practice Requirements

Section 7.3.3 of the 2008 JURMP includes a list and description of minimum BMPs to be implemented, or required to be implemented, for each commercial site/source, including pollution prevention as noted in Appendix 5-B. This reporting period, minor adjustments were made to the required BMPs listed in Appendix 5-A as compared to the BMP Inventory in Section 7.3.3 of the 2008 JURMP. The changes were based on applicability, or lack thereof, determined from the inspections conducted this reporting period. For the facilities that were inspected this Fiscal Year the dates and types are shown in Appendix 5-C.

### 5.3.4 Program Implementation

This section describes the steps to require and verify the implementation of designated BMPs for commercial sources. Section 7.3.4 of 2008 JURMP described the steps to require and verify the implementation of designated BMPs for stationary commercial sources. This reporting period, inspection and education protocols were followed as prescribed in JURMP Section 7.3.4. Appendix 5-C indicates which commercial facilities were inspected during the reporting period. No modifications in Section 7.3.4 of the 2008 JURMP have been recorded during this reporting period. Outreach was provided to owners/operators of commercial facilities as part of commercial facility inspections as prescribed in JURMP Section 7.3.4. The City is in the process of developing a proactive outreach plan to notify all priority commercial facilities owner/operators of specific BMP requirements required of their specific type of business prior to their inspection. This outreach would likely minimize BMP violations at the time of inspection and increase the efficacy of the minimum BMP requirements.

### 5.3.5 Inspection of Commercial Sites

This section describes the City's program for inspections of commercial sites. Sections 7.3.4.3 to 7.3.4.8 of 2008 JURMP described the City's program for inspections of commercial sites including inspection frequency, procedures, referrals, filing, follow-up inspections, and third party inspections. No modifications in Sections 7.3.4.3 to 7.3.4.8 of the 2008 JURMP have been recorded during this reporting period.

This section identifies the total number of commercial sites/sources inventoried and the total number inspected. It also includes justification and rationale for why the commercial sites/sources inspected were chosen for inspection. The section also provides confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance. The section identifies the number of third party inspections conducted and provides identification of efforts conducted to verify third party inspection effectiveness.

The City's inspection summary is provided in Appendix 5-C at the end of this component. The total number of inspections conducted in the reporting year was 18 out of 40 priority facilities with one additional facility closing due to fire.

### 5.3.6 Enforcement Measures for Commercial Sites/Sources

This section provides the number of violations and enforcement actions (including types) taken for commercial sites/sources, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 7.3.4.9 of 2008 JURMP provides a description of the general process for applying enforcement to for commercial sites/sources urban runoff related violations. No modifications in Section 7.3.4.9 of the 2008 JURMP have been recorded during this reporting period. This section also describes the steps taken to identify business that have not obtained a business license with the City of Del Mar.

Enforcement action for this reporting period are found in Appendix 5-C at the end of this component.

### 5.3.7 Notable Activities

This section describes the notable activities conducted to manage urban runoff from commercial sites/sources by the City.

No notable activities were documented during this reporting year.

### 5.3.8 Stationary Commercial Sites/Sources Effectiveness Assessment

This section addresses the effectiveness assessment requirements for stationary commercial sites / sources element. Section 7.3.6 of 2008 JURMP provides the effectiveness assessment requirements for stationary commercial sites / sources element. No modifications in Section 7.3.6 of the 2008 JURMP have been recorded during this reporting period. Improved scheduling of routine and follow-up inspection will be instituted to meet the 100% inspection requirement in FY2008/2009.

### 5.3.9 Program Review and Modification for Commercial Sites/Sources

This section addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. Section 7.3.7 of 2008 JURMP addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. No modifications in Section 7.3.7 of the 2008 JURMP have been recorded during this reporting period.

## 5.4 Mobile Sources Element

### 5.4.1 Background

The City will use its business license database to annually update the list of those priority mobile businesses that pose a high threat to water quality. The City will also collaborate with the Copermittees in the development of a regional strategy to educate, inspect, and regulate mobile businesses. The section also includes a preliminary priority commercial source inventory for mobile businesses that have obtained a business license with the City in 2007 as part of the 2008 JURMP.

### 5.4.2 Source Characterization

This section provides a prioritized inventory of mobile sites / sources that have the potential to contribute pollutants to the MS4. Section 7.4.2 of 2008 JURMP provided a completed and prioritized watershed-based inventory of all mobile businesses that could contribute a significant pollutant load to the MS4. No modifications in Section 7.4.2 of the 2008 JURMP have been recorded during this reporting period. The updated mobile businesses inventory is found in Appendix 5-D at the end of this component.

### 5.4.3 Best Management Practice Requirements

Section 7.4.3 of 2008 JURMP included a list and description of minimum BMPs to be implemented, or required to be implemented, for each mobile businesses, including pollution prevention No modifications in Section 7.4.3 of the 2008 JURMP have been recorded during this reporting period. This section provides confirmation that the designated BMPs were implemented, or required to be implemented, for mobile businesses in Appendix 5-D.

### 5.4.4 Program Implementation

This section describes the steps to require and verify the implementation of designated BMPs for mobile businesses. Section 7.4.4 of 2008 JURMP described the steps to require and verify the implementation of designated BMPs for mobile businesses. It detailed the different aspects of program implementation for mobile businesses. No modifications in Section 7.4.4 of the 2008 JURMP have been recorded during this reporting period. A description of efforts implemented to address mobile businesses is provided in this section.

### 5.4.5 Inspection of Mobile Businesses

This section describes the City s program for inspections of commercial sites. Section 7.4.4.2 of 2008 JURMP described the City s program for inspections of mobile businesses including inspection frequency. No modifications in Section 7.4.4.2 of the 2008 JURMP have been recorded during this reporting period.

The inspections conduct of mobile businesses is provided in Appendix 5-E at the end of this component.

### 5.4.6 Enforcement Measures for Mobile Businesses

This section provides the number of violations and enforcement actions (including types) taken for mobile businesses, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 7.4.4.3 of 2008 JURMP provides a description of the general process for applying enforcement to for mobile businesses urban runoff related violations. No modifications in Section 7.4.4.3 of the 2008 JURMP have been recorded during this reporting period. Enforcement measures for mobile businesses will be conducted in the same manner as specified for commercial businesses.

Enforcement actions taken on mobile businesses are included in Appendix 5-E located at the end of this component.

### 5.4.7 Notable Activities

This section describes the notable activities conducted to manage urban runoff from mobile businesses by the City.

### 5.4.8 Mobile Sources Effectiveness Assessment

This section addresses the effectiveness assessment requirements for mobile sources element. Section 7.4.5 of 2008 JURMP provides the effectiveness assessment requirements for mobile sources element. No modifications in Section 7.4.5 of the 2008 JURMP have been recorded during this reporting period.

### 5.4.9 Mobile Businesses Effectiveness Assessment

This section addresses the effectiveness assessment requirements for mobile businesses element. Section 7.4.7 of 2008 JURMP provides the effectiveness assessment requirements for mobile businesses element. No modifications in Section 7.4.7 of the 2008 JURMP have been recorded during this reporting period.

### 5.4.10 Program Review and Modification for Mobile Businesses

This section addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. Section 7.4.8 of 2008 JURMP addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. No modifications in Section 7.4.8 of the 2008 JURMP have been recorded during this reporting period.

# Section 6
# Residential Component

## 6.1 Introduction

This section provides introductory information that the City of Del Mar determined is relevant to the implementation of the Residential Component for this reporting period. This section summarizes the program which was developed with the intent to reduce residential discharges of pollutants from the MS4 to the maximum extent practical and prevent residential discharges to the MS4 from causing or contributing to an exceedance of water quality standards.

## 6.2 Source Characterization

This section provides a list of residential areas and activities that were identified as having a high threat to water quality. Section 8.2 of the 2008 JURMP provided a list of residential areas and activities that were designated as a threat to water quality. No modifications in Section 8.2 of the 2008 JURMP have been recorded during this reporting period.

## 6.3 Best Management Practice Requirements

Section 8.3 of the 2008 JURMP provided a list of residential areas and activities that were designated as a threat to water quality, identifies updated BMP requirements for residential areas and activities, including pollution prevention, and provides a list of minimum BMPs that were required to be implemented when high priority residential activities are conducted within the City of Del Mar. Section 8.3 of the 2008 JURMP also includes a description of which pollution prevention methods will be encouraged to be used by Del Mar residents. No modifications in Section 8.3 of the 2008 JURMP have been recorded during this reporting period. This section provides confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.

## 6.4 Program Implementation

Section 8.4 of 2008 JURMP described the Residential education which included the local educational outreach program prepared by the City and the Regional Residential Education Program and it describes the strategy and tools used by the City of Del Mar Clean Water Program staff to require and encourage residents to implement the designated minimum BMPs. No modifications in Section 8.4 of the 2008 JURMP have been recorded during this reporting period.

The City continues implement and facilitate proper management and disposal of used oil and household hazardous materials as described in Section 8.4.3 of the 2008 JURMP.

This reporting period, the program to provide curbside pick-up and drop-off of household hazardous waste for City of Del Mar residents continued. Table 6.4-1 shows this year's user numbers by type of service, as provided by Clean Harbors Environmental Services, and compares to the previous year's totals.

**Table 6.4-1**
**Household Hazardous Waste Program**

| Fiscal Year | Pick-Up Service Users | Drop-off Service Users | Total Users | Total Weight of HHW Disposal | Waste Oil (gallons) |
|---|---|---|---|---|---|
| 2007-2008 | 130 | 34 | 164 | 11,698 lbs | 50 |
| 2006-2007 | 104 | 31 | 135 | 12,845 lbs | NA |

The City of Del Mar is also committed to continuing collaboration efforts with Regional Copermittee residential education efforts through the Copermittee Workgroups.

## 6.5 Inspection of Residential Areas and Activities

The City s methods for oversight of residential areas and activities are unchanged from the 2008 JURMP (Sections 8.3 and 8.4). The City evaluated program implementation and deems it complete and functional. No changes were made or have been identified this reporting period.

## 6.6 Enforcement Measures for Residential Areas and Activities

This section provides the number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 8.5 of the 2008 JURMP provides a description of the general process for applying enforcement to for residential areas and activities urban runoff related violations. No modifications in Section 8.5 of the 2008 JURMP have been recorded during this reporting period.

As indicated in Section 8.5 of the 2008 JURMP, education plays a significant role in the enforcement of stormwater regulations as it relates to residential activities. The majority of calls received by the Clean Water Manager, or Code Enforcement Officer, are related to construction operations in residential neighborhoods. These are documented in Section 3 of this report. However, during the reporting period, six (6) calls were received by the Clean Water Manager s Office regarding alleged illegal discharges from residential activities, not related to construction activities. One of these calls resulted in the issuance of a Notice of Violation and Warning to three (3) residents on the 100 Block of 13th Street in Del Mar. After further review by City staff, the NOVs were rescinded, and reduced to Written Warnings, with no further action necessary as noted in Table 6.6-1 below. A second call resulted in a NOV and Warning issued to the management company of the Del Mar Woods Apartment complex for power washing without recovery; the management was informed about the City s Stormwater and BMP requirements and informed of the potential escalating enforcement actions for further violations. The remainder of the calls resulted in no further action after investigation, or a verbal warning issued. Table 6.6-1 contains a summary of the residential complaints received, not related to construction operations, during this reporting period.

**Table 6.6-1**
**Residential Area and Activity Enforcement Action Summary**

| Action No. | Date | Complaint | Action Taken |
|---|---|---|---|
| RC08-001 | 2/25/2008 | Discharge of paint or stain into MS4 | NOV/Warnings issued to 3 residents. After further review, NOV rescinded. "Staining" was light sediment caused by runoff from ally in French Drains. Refer to public works for review of ally drainage. (NOV Nos. CW08-007; 008;009) |
| RC08-002 | 3/15/2008 | Excess water flow on 10th Street | Runoff caused by basement drains and landscape drains along 10th street. No action necessary. |
| RC08-003 | 3/31/2008 | Excess water flow along Stratford Court | Runoff from power washing operations. NOV/Warning issued; NOV No. CW08-016 |
| RC08-004 | 4/4/2008 | Excess water flow along Cuchara | Runoff caused by basement drains along 11th street. No action necessary. |
| RC08-005 | 5/16/2008 | Excess water flow on 10th Street | Overwatering of landscaped area due to timer failure at 1001 Highland. |
| RC08-006 | 5/28/2008 | Excess water flow along Cuchara | Unable to identify source of runoff. |

## 6.7 Notable Activities

This section describes the notable activities conducted to manage urban runoff from residential areas and activities by the City. During this reporting period the City of Del Mar has begun working on coordinating outreach related to emergency water conservation activities with stormwater requirements. During FY2008/2009, staff from the Del Mar Public Works Department and Clean Water Program will be jointly conducting outreach, including public workshops for the residents of Del Mar, to fully inform them of the requirements for water conservation and to prevent discharges, including low-flow or drip irrigation, metering, etc. As part of this outreach, discussion of enforcement mechanisms (including fines) will be presented.

The City of Del Mar also funds the Regional Residential Education Program in collaboration with the other Copermittees primarily through cost-sharing contributions to support the program activities. A summary of the Regional Residential Education Program is found in Appendix 6-A.

## 6.8 Residential Component Effectiveness Assessment

This section summarizes the effectiveness assessment of the Residential component which was based on the established regional effectiveness assessment guidelines. Section 8.7 of 2008 JURMP provides the effectiveness assessment of the Residential Component consisting of the educational and outreach efforts and BMP implementation in the residential sectors of the community. No modifications in Section 8.7 of the 2008 JURMP have been recorded during this reporting period.

## 6.9 Program Review and Modification

This section addresses the identification of the location in the JURMP of any changes made to the Residential component in order to meet the permit requirements. Section 8.8 of the 2008 JURMP addresses the identification of the location in the JURMP of any changes made to the JURMP in order to meet the permit requirements. No modifications in Section 8.8 of the 2008 JURMP have been recorded during this reporting period.

# Appendix 6-A
# Regional Residential Education Program

**Regional Education Activities FY 07/08**

The San Diego Regional Storm Water Copermittees sponsored the San Diego County Fair (Fair) in 2008 as an education and outreach activity. The sponsorship was a joint effort between the City of San Diego's Think Blue program and the regional Copermittees with each entity contributing approximately half towards the overall cost. The Fair was selected as a regional event due to its unique ability to potentially reach more than one million San Diegans and convey a strong environmental message. The Residential Sources and Outreach Workgroup (Outreach Workgroup) was responsible for overseeing sponsorship activities with the City of San Diego leading the coordination and implementation efforts.

The 2008 Fair was held June 14th through July 6th, spanning two fiscal years and will be included in both the FY 07/08 and FY 08/09 annual reports. The attendance for the fair was estimated at 1,235,698 persons for the 21 days the event occurred. Sponsorship for the Fair included staffing an outreach booth for 11 days, in which the majority of the jurisdictions provided staffing support. The outreach booth served as the primary method for educating the public about watershed protection and pollution prevention. The Outreach Workgroup elected to promote Integrated Pest Management (IPM) as the primary theme and collaborated on the distribution of IPM materials in both English and Spanish. Individual jurisdictions were invited to distribute their own materials in addition to the IPM materials. The Copermittees received billing as both a Flower & Garden Show sponsor and an Enviro-Fair sponsor.

Think Blue was designated as the brand for the Copermittees' during the event and signage demarking the symbol included banners, planter box displays and recycle bin stickers, which were visible at over 500 locations at the Fair. Media exposure included TV, radio and press releases. The sponsorship was printed in both the Fair program and included on the Fair map. Other promotions included newspaper advertisements, electronic messaging over the Jumbo Tron, website logos and links, and PA system announcements in both English and Spanish.

Think Blue, City of San Diego developed an event survey for the purposes of assessment. Over 1,200 survey cards were completed during the 11 days the booth was staffed. The questions focused on general storm water knowledge and awareness. The results are being tabulated and will be reported in FY 08/09.

# THINK BLUE EVENT SURVEY CARDS

**Before attending today's event, had you ever seen or heard the slogan, "Think Blue San Diego?"** ☐ Yes ☐ No

**In a few words of your own, what do you think that the slogan "Think Blue San Diego" is asking you to do?**

_____

_____

**When water goes into the storm drains in San Diego, does it go to a sewage treatment plant before it is released, or is it released into creeks or the ocean without treatment?**
☐ Treated ☐ Not Treated ☐ Don't Know

**How important of an issue is storm water pollution in San Diego?** (Please Circle)

| 1 | 2 | 3 | 4 |
|---|---|---|---|
| Not at All Important | Somewhat Important | Very Important | Extremely Important |

**As a result of the event today, how likely are you to take actions to prevent storm water pollution?** (Please Circle)

| 1 | 2 | 3 | 4 |
|---|---|---|---|
| Not at All Likely | Somewhat Likely | Very Likely | Extremely Likely |

**Name one thing you can do to help prevent storm water pollution:** _____

_____

**Would you like to hear about upcoming Think Blue events or promotions?** ☐ Yes ☐ No

# Section 7
# Illicit Discharge Detection and Elimination Component

This section of the Annual Report would describe all the notable activities conducted to manage illicit discharges and connections. In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City of Del Mar will submit the entire FY2007/2008 Illicit Discharge Detection and Elimination Component and attachments no later than December 15, 2008.

# Section 8
# Education Component

This section will provide a description of education efforts conducted by the City for each target community to satisfy the requirements under Section J.3.a.(3)(g)i) of the Permit.

## 8.1 Introduction

Section D.5 and J.3.a(3)(i) of the Permit identifies a comprehensive educational program designed to measurably increase awareness within target populations with respect to urban runoff, its impacts on receiving waters, and the rules and regulations under local, State, and federal law. This section will provide any introductory information that the City of Del Mar has determined to be relevant to the implementation of the Education Component (JURMP Section 10) for the 2007-2008 reporting period.

The City of Del Mar s 2008 JURMP outlined a reporting format that varies slightly from standardized regional format. The reason for the difference in the reporting format is the intent for this section to be consistent with the specified order of general and specific education requirements for the various target communities in the Permit. As a built-out coastal community, with extremely limited industrial discharges, the focus of education in the City of Del Mar is on the residential sector, food establishments, construction and re-development, and mobile services. A description of education efforts conducted for each target community is provided below.

## 8.2 Staff Training Element

This section will describe the education efforts conducted for municipal departments and personnel as required under Permit section J.3.a.(3)(g)iii. Section 10.3 of the 2008 JURMP described content, form and frequency of education efforts that will be conducted with municipal departments and personnel. No modifications in Section 10.3 of the 2008 JURMP have been recorded during this reporting period.

During this reporting period the City of Del Mar held multiple, focused training sessions to educate staff in all departments on basic stormwater principals and requirements. With the implementation of the new Permit, focus for staff has been specifically on the new stormwater requirements, including Low Impact Development requirements and inspection/enforcement. The City of Del Mar has a total of 51 full-time employees spread out over 7 departments. During the reporting period, 80 of all field and technical staff, 100 of all administrative staff, and 100 of all management staff received training on stormwater topics, including specific focused training on the new Permit requirements. In addition, public meetings and forums were utilized to ensure that the elected members of the City Council were educated as to specific permit requirements and program elements that they would encounter as part of the discretionary review and public hearing processes. All five (5) elected members of the City Council received training during the reporting period. Table 8.2-1, below provides a list of municipal staff trainings conducted during the reporting period,

## Table 8.2-1
## FY2007 2008 Municipal Staff Education and Training

Workshop attended by four (4) Staff Members from City of Del Mar. Total attendance at County of San Diego-sponsored workshop unknown.

## 8.3 Educational Outreach Element

This section describes education efforts conducted for each target community by the City of Del Mar. Section 10.4 of 2008 JURMP described the program which aimed at educating project applicants, developers, contractors, property owners, community planning groups, and other responsible parties. No modifications in Section 10.4 of the 2008 JURMP have been recorded during this reporting period.

### 8.3.1 Media Use in Outreach Activities

In an effort to reach the widest audience possible about the Clean Water Program, the regulatory requirements, and the requirements of the new Permit, the City of Del Mar developed a 12 minute video in April 2008. This video, entitled The Del Mar Clean Water Program: Keeping the Water Clean for You! highlights the municipal programs conducted by the City, and provides a complete overview of the Permit elements. The video is available on-demand on the City of Del Mar website (www.delmar.ca.us/cleanwater.htm), and was made into DVDs for distribution to public groups, residents, and schools. In addition, the video became the centerpiece for discussions at City Council Meetings during the annual budget workshop and during staff training. Table 8.3-1 below provides information on the number of times the video was viewed on the City s website since its release in April 2008.

**Table 8.3-1**
**FY2007 2008 Clean Water Video Webcasts**

| Month | No. Hits |
|---|---|
| April 2008 | 1 |
| May 2008 | 78 |
| June 2008 | 44 |

As part of an ongoing effort to reach the widest possible audience, all public workshops and all hearings related to the City s Clean Water Program are televised live via Del Mar Television (DMTV), and then replayed the next day in a standard timeslot. DMTV can be viewed on Time Warner Public Access Channel 24 within the 92014 zip code, and reaches approximately 2,000 subscribers in this area. Recently DMTV was made available to North County Time Warner Digital Cable customers, where it can now be viewed through Digital Cable on Time Warner Channel 130, which reaches approximately 65,000 subscribers. In addition, DMTV is streamed live 24 hours per day, 7 days per week on the DMTV website: www.delmartv.com. Table 8.3-2, below, includes all public broadcasts of the Clean Water Video, and all public workshops and hearings Clean Water topics via DMTV.

In addition to television and webcasts of the Clean Water Video and program-related workshops and hearings, the City of Del Mar began a media campaign through the local newspaper consisting of articles by the Mayor focusing on the program and the new requirements. The first two articles appeared in the Del Mar Times on June 20 and March 28, 2008, and provided a brief discussion on the Clean Water Program (and the Permit) as well as funding needs for the program.

### 8.3.2 Educational Efforts by Target Audience

This section provides a description of how education efforts targeted underserved target audiences, high-risk behaviors, and allowable behaviors and discharges. A description of education efforts conducted for the new development and construction communities is provided in this section, as well as to residents, the general public, and school children.

As indicated above, the City of Del Mar made a concerted effort to reach out to the residents and the general public regarding the Clean Water program through media and public workshops. In addition, in February 2008, the City Manager and City Council launched a new community outreach program called Community Conversations to actively listen to residents and businesses in two-way discussions about city services and budget priorities. The program included neighborhood and business coffee for informal discussions about city issues, an expansion of the City s email communications, and a Town Hall meeting in April. The neighborhood coffees were hosted by community residents and future discussions will be led by at least two council members and a senior city staff member. These informal discussions will give residents the opportunity not only to learn more about their city government but to also ask questions and share opinions about city services, facilities, and budget issues. A key topic on the Community Conversations agenda was the City s Clean Water Program and the funding aspects of the program.
Table 8.3-2 below provides a list of all public meetings, workshops, and Community Conversations in which water quality protection, the new Permit, and the City s Clean Water Program were focal points.

## Table 8.3-2

## 8.4 Outreach Component Effectiveness Assessment

The City s 2007-08 effectiveness assessment did not reveal any action items for the upcoming fiscal year as summarized in Section 11.

## 8.5 Program Review and Modification

Section 10.11 of 2008 JURMP described proposed or required modifications to the program after each annual assessment of the Education Component s effectiveness. While no specific modifications in Section 10.11 of the 2008 JURMP have been recorded during this reporting period, staff has identified several areas for specific education and outreach focus for the upcoming FY2008/2009, based on a review of program activities conducted during this reporting period. Details on the implementation of these items will be discussed in the following Annual Report. Table 8.5-1 below:

**Table 8.5-1**
**Focused Educational and Outreach for FY2008 2009**

| Targeted Audience | Proposed Format of Outreach or Education | Topic of Education Activity |
|---|---|---|
| Commercial Businesses: Mobile Operators (Auto Detailers, Power Washers, Mobile Pet Groomers, and Catering Businesses) | Direct one-on-one training of City-licensed mobile operators, and distribution of written materials and guidance. | JURMP and Focused BMP Requirements for Mobile Businesses |
| Commercial Businesses: Restaurants | Public Workshops and one-on-one staff training for local restaurateurs and their staff, in cooperation with the Del Mar Village Association (DMVA) | JURMP, Focused BMP Requirements for Restaurants, including staff training and documentation. |
| Municipal Training & Education: Special Events | Direct one-on-one training with Community Services staff | JURMP inspection requirements for permitted special events. |

# Section 9
# Public Participation Component

Section 11 of the 2008 JURMP described the public participation element which aimed at promoting the community's stewardship of the City's JURMP. No modifications in Section 11 of the 2008 JURMP have been recorded during this reporting period. This section describes the steps that were conducted to include public participation in the development and implementation of City of Del Mar's s JURMP. This section provides a description of public participation efforts conducted by the City.

## 9.1 Local Participation Element

The City conducted a comprehensive local public participation campaign during this reporting period. The campaigns focused on allowing the public multiple opportunities to provide input to the development of the JURMP, SUSMP, municipal code revisions, and other requirements during late 2007 and early 2008.

**Table 9.1-1**

| 5/20/2008 | Community Conversation Coffee | Clean Water Manager, and/or Staff | Direct Access to Staff and Management to provide feedback on programs and issues | Small Feedback Forum |

The complete tally of events and opportunities for public participation also serves as public education events since presentations include extensive information on the implementation of the Permit requirements, JURMP and BMPs as shown in Section 8. These also include beach clean-up events, organized by the City's Keep Del Mar Clean several times per year, and sponsored by the City of Del Mar.

## 9.2 Regional Participation Element

The City continues to participate and facilitate public participation through regional workgroups and public outreach such as Project Clean Water, the Regional Management Meetings, and the Regional Stormwater Hotline. Staff from the City utilized the Regional Hotline on two (2) separate occasions during this Reporting Period to provide information to the City of San Diego on stormwater runoff in the MS4 system outside of the City of Del Mar's jurisdictional

boundaries. In addition, the City regularly refers callers from the Del Mar Heights portion of the City of San Diego and other areas within the 92014 zip code, but outside of the City of Del Mar jurisdictional boundaries, to the regional stormwater hotlines.

# Section 10
# Fiscal Analysis Component

Section 12 of 2008 JURMP provided a strategy for effectively conducting a fiscal analysis of the Program in its entirety. The fiscal analysis evaluated in 2008 JURMP included the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Program. No modifications in Section 12 of the 2008 JURMP have been recorded during this reporting period. As indicated in Section 12.3.1 of 2008 JURMP, the Copermittees will prepare a standardized fiscal analysis method by January 31, 2009 that will allow the City of Del Mar to perform the review and annual reporting as required in Permit Section G starting in January 31, 2010. This section provides a fiscal analysis of the City's urban runoff management programs which meets all requirements of the Permit.

The City of Del Mar Clean Water Program is a multi-departmental program, which is funded as an enterprise fund in the City's Annual Budget. Enterprise funds account for operations that are financed and operated in a manner similar to private businesses, with the costs of providing the services recovered largely through user fees. Fund 55 (The Clean Water Fund), is one of three (3) enterprise funds in the City's budget, and was added to the City's budget in FY2003/2004 to account for the mandated costs of the City's NPDES responsibilities.

## 10.1 Clean Water Program Budget

For the FY2007/2008 reporting period, the final amended budget for Fund 55 totaled $544,749.00, or approximately 2.3% of the total City of Del Mar Operating Budget of $23.2M. Actual program expenditures during FY2007/2008 the City of Del Mar totaled $527,595.53 for NPDES related-activities. Table 10.1-1 below provides a breakdown of program budget by major budget category for FY2007/2008, while Appendix 10-A contains a complete report of the final adjusted budget and expenditures for FY2007/2008.

Prior to FY2007/2008, the City of Del Mar relied on subcontractors to oversee the City's Clean Water Program. In an effort to reduce program costs, and to ensure that the program continued to run smoothly, the City created a new "Clean Water Manager" position in September 2007. The new position was filled in January 2008. One of the first tasks assigned to the new Clean Water Manager was to streamline costs associated with the program, and to work with the City Manager to ensure that all required program elements were accounted for in the Program's budget. Based on a review of the requirements of the new Permit, and the projected expenditures from FY2007/2008, an updated budget for FY2008/2009 for the Clean Water Program was presented to the City Council at a public budget workshop held on June 23, 2008, and adopted as part of the City Manager's Proposed Budget by the City Council at a public hearing held on June 30, 2008.

For FY2008/2009, the adopted budget for the City's Clean Water Program totals $507,402, approximately 2.2% of the total City of Del Mar Operating Budget of $21.8M. Table 10.1-1 also includes a breakdown of the adopted budget by major category, while Appendix 10-B presents the Final Adopted budget for FY2008/2009, with a line-item breakdown of the budget components.

## Table 10.1-1
## Budget Summary □Clean Water Fund 55

| Account | | Amended Budget FY2009 | Adopted Budget FY2009 | Comments |
|---|---|---|---|---|
| 55-5220 | Clean Water Engineering | □292,500 | □85,500 | Engineering contractual services including: Program management (FY2008) water quality testing, development and distribution of educational materials, fees to agencies (FY2008), and engineering services. |
| 55-5530 | Clean Water Planning | 32,688 | 37,533 | Active enforcement of Clean water regulations including project plan review, permitting, construction monitoring and plan review of BMPs. |
| 55-5536 | Clean Water Code Enforcement | 10,800 | 28,464 | Active in-field enforcement clean water regulations, including response to resident complaints. |
| 55-5539 | Clean Water Management | 62,805 | 196,294 | Beginning mid-year FY2008, all program management and reporting activities, fees to agencies, and interaction with regional Copermittee groups. |
| 55-5840 | Public Works | 13,097 | 13,961 | Provides for administration and general support for all clean water programs for property and facilities, including supervision of maintenance staff. |
| 55-5841 | Flood Control & Drainage | 5,058 | 4,985 | Provides for necessary monitoring, water quality testing, and labor associated with program requirements when Flood Control pumps are operated. |
| 55-5845 | Street Maintenance | 92,056 | 98,464 | Provides for a portion of sidewalk and street cleaning including street sweeping and storm drain maintenance within the City limits of Del Mar. Also covers costs with testing, recording contents, and recovering all deposited materials that otherwise would discharge to the beach, river, or lagoon. |
| 55-5847 | Street Landscaping | 15,843 | 19,041 | Provides for landscape supervision, documentation, and controls for the Clean Water aspects of the street landscaping for medians, islands, street ends, and other street related areas. The program also provides for improved litter control, pesticide and fertilization monitoring and reporting. |
| 55-5848 | Park Maintenance | 19,902 | 23,212 | Provides for park maintenance supervision, documentation, and controls for the Clean Water aspects of the landscaping for parks and open space areas. The program also provides for improved litter control, pesticide and fertilization monitoring and reporting. |
| **Total Clean Water Program □Fund 55** | | **□544,749** | **□507,402** | |

## 10.2 Funding Sources

To provide funding for the Clean Water Fund, the City uses a combination of user fees, grant funding, and general fund monies. This section identifies the three (3) sources of funding for the Clean Water Program: (1) The Clean Water Service Charge; (2) City of Del Mar General Fund; and (3) grant monies and community partnerships. The following sections provide a discussion of each of these funding sources.

### 10.2.1 Clean Water Service Charge

In 2003, the City of Del Mar City Council created and adopted a user fee, called the Clean Water Service Charge, to offset the costs of the program. Initially, the rate was adopted to collect □100,000.00 of the estimated □300,000.00 for the program, with an escalator to achieve full cost recovery by 2009. Approximately mid-way through the five-year schedule, on July 24, 2006, the California Supreme Court published a decision in the case of Bighorn-Desert View Water Agency v. Verjil (2006) 39 Cal. 4th 205, which held that consumption-based rates such as water and sewer rates are subject to the notice and hearing requirements of California Constitution, Article XIIID, Section 6 (commonly known as "Proposition 218"). Therefore, on January 22, 2007 and February 5, 2007, the Del Mar City Council held public hearings to receive written protests to comply with Proposition 218. No majority protest was received; and the Council ratified the previously approved five-year rate schedule, including the City's Clean Water Service Charge. However, the adopted rate increases did not account for the actual increases in the costs associated program requirements.

As an additional measure to obtain voter approval of the five-year rate schedule for the City's Clean Water Service Charge, the Council directed staff on April 2, 2007 to start the process to perform a mail ballot election procedure. During the process of researching the mail ballot election procedures and the current rates, it became apparent that the process would immediately need to be repeated to set the Fiscal Year 2009-2010 rates and charges, since the current five-year rate schedule was due to expire in June of 2009. Due to the additional costs incurred in complying with the new requirements of the 2007 Permit, increases to the Clean Water Service Charge were proposed, including an annual 5□ escalator.

During FY2007/2008 approximately □295,216 were collected from the Clean Water Service Charge. All monies appropriated as part of the Clean Water Service Charge are directly identified for the Clean Water Program, and pursuant to Del Mar Municipal Code, may not be used by the City for any other purpose.

During the next reporting period, in compliance with Proposition 218, both the majority protest hearing and mail ballot process will be conducted for the proposed increases. Should mail ballot result in voter approval of the Clean Water Service Charge, the City will continue to have a secure funding source for the Clean Water Program, outside of general fund monies. These proposed increases are anticipated to result in approximately □392,900 during FY2008/2009, and approximately □505,624 in FY2009/2010.

### 10.2.2 General Fund Monies

The City of Del Mar General Fund accounts for all the revenues received by the City that are not designated for a specific purpose either by the City Council, State or Federal requirements, or special requirements such as those associated with bond debt. The City monitors the General Fund dollars most closely because these revenues fund the backbone of City government. The

major sources of General Fund revenues include property tax, sales tax, transient occupancy tax, and parking fees and fines.

During FY2007/2008, □249,533, or approximately 46□ of the program budget, was funded out of General Fund monies. During FY2008/2009, General Fund monies are anticipated to account for □109,502 or approximately 22□, of the funding for the Clean Water Program. If the Clean Water Service Charge passes, the amount of General Fund monies used will be greatly reduced beginning in FY2009/2010, and freed up for other services, including special projects.

### 10.2.3 Grant Monies and Community Partnerships

In an attempt to find alternatives to the use of General Fund monies to fund the Clean Water Program, the City of Del Mar continues to look for appropriate grants from the State of California and the Federal Government to assist in funding program elements and special projects.

As part of the California Beverage Container Recycling and Litter Reduction Act, the California Department of Conservation (DOC) distributes a portion of the California Refund Value (CRV) monies collected on sales of aluminum, glass, plastic and bi-metal beverage containers to jurisdictions to assist in programs aimed at beverage container recycling and litter cleanup activities. Incorporated cities and counties and unincorporated counties in California, as identified by the California Department of Finance, are eligible to receive funding under this program, with funding amounts dependent on population.

In FY2007/2008, the City applied for, and received, a DOC grant for □5,000 under this program (the maximum amount the City was eligible for). These funds were earmarked for litter and beach cleanup activities, and used to providing doggie cleanup bags (□mutt mitt stations□) at various locations throughout the city's parks and beaches. In addition, a portion of the funds were used to maintain/purchase a beach cleaner to help reduce any litter going into the ocean and the storm drain system.

For FY2008/2009, the DOC is distributing □10,500,000 to eligible cities and counties. The City again applied for these funds to assist with on-going litter and beach clean-ups throughout the City's parks and beaches, reducing the litter going into the ocean and the storm drain system. The funds have been earmarked for use in the funding education and outreach to pet owners, the purchase of portable □mutt mitt□dispensers and the printing of tip cards for distribution, and beach cleanups. The City was notified on June 27, 2008 that the grant application had been approved for FY2008/2009.

In addition to grant monies, the City of Del Mar is actively developing community partnerships with community groups and non-profit organizations to identify private funding sources and assistance to offset costs of implementing special projects and education/outreach activities as part of the program.

# Section 11
# Effectiveness Assessment Component

## 11.1 Introduction

As part of its Jurisdictional Urban Runoff Management Program, the City of Del Mar will conduct an annual effectiveness assessment of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, and as described in Permit Section I.1, this annual effectiveness assessment will include:

1. Specific assessment of the effectiveness of each of the following:
   - Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;
   - Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and
   - Implementation of the Jurisdictional Urban Runoff Management Program as a whole.

2. Identification of, and the use of measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed above.

3. The use of outcome levels 1-6 (as defined in Attachment C of the Permit) to assess the effectiveness of each of the items listed in Section 1 above, where applicable and feasible.

4. The use of monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section 1 above, where applicable and feasible.

5. The use of Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible (as defined in Attachment C of the Permit)

## 11.2 Effectiveness Assessment Approach

The City's approach to incorporating effectiveness assessment includes using the "Initial Standards for Reporting and Assessment of Copermittee Urban Runoff Management Programs" included in the Regional Urban Runoff Management Plan (RURMP) as Attachment 6, and adopting them as appropriate based on the program implementation and reporting strategies as presented in the JURMP. The City's 2007-08 effectiveness assessment was developed using the elements described in Section 11.1 above and following the annual reporting requirements itemized in Section J.3.a of the Permit.

Appendix 11-A is a compilation of all the required items of the Annual Report as listed in Section J.3 and also with determinations to the applicability in the City of Del Mar, that is, is or was the requirement subject to implementation in this jurisdiction, and then any quantifiable data related to the requirements and a suite of assessment questions to determine if action is required to

modify program activities to meet requirements or to improve effectiveness. The full explanation of any required action items to improve or correct any deficiencies are referenced back to the original component as noted in the far right hand column of the assessment table (Appendix 11-A).

The majority of the effectiveness assessment measures required under the Permit (Section J.3.a) fall into level 1, or are Activity based, since they relate to compliance tasks performed by the City, as shown in Appendix 11-A. Overall, the City's effectiveness in continuing the implementation of the program was high with some minor challenges due to the implementation of new Permit requirements combined with staff turnover in a few positions including the Code Enforcement Officer, Enforcement Technician, and Building Inspector. Notwithstanding these changes, City staff identified several areas of improvement as noted below:

- Improved documentation tracking and inspections related to the Construction Component
- Improved documentation for new or modified permit requirements such as the Major Special Events
- Preparations to complete 100% of commercial inspections for FY2008/2009.

Details of the program implementation and actions are found in each of the respective components.

## 11.3 Program Review and Modification

Based on the results of the effectiveness assessment, the City annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with Section A of the Permit. The City has developed an implement plan and schedule to address the identified modifications and improvements as stated in the JURMP Annual Report Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs may be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems may be required of potential dischargers, modified and improved to correct the water quality problems.

# Section 12
# Special Investigations

This section provides a description of any special investigations conducted by the City of Del Mar during the reporting period. Special investigations may include water quality studies, BMP pilot studies, surveys and other data collection activities to better understand the program's operations and effectiveness. Special investigations may also be undertaken as requirements under other mandates like 13267 letters, TMDLs, etc. and implemented either solely by the City or in collaboration with other agencies or non-profit organizations.

Special studies may be funded by grants or from the City's Clean Water Fund. Regardless, of the funding sources, these investigations, projects or studies may be scheduled in advance or be undertaken as the need arises during the course of the reporting year.

During this reporting period, the City of Del Mar actively participated in two separate Regional Total Maximum Daily Load (TMDL) studies. This Section provides a brief discussion of the City's involvement in these two studies. No other special investigation took place during the Reporting Period.

## 12.1 Los Peñasquitos Lagoon – Sediment TMDL

For FY2007/2008, the City actively participated in the Los Peñasquitos Lagoon TMDL Investigative Order No. R9-2006-076 by attending stakeholder and group management meetings, contributing funding under the cost-share agreement, and providing technical comments to various documents prepared for submittal to the San Diego RWQCB.

Notable activities in which City of Del Mar Clean Water Program staff has participated include:

- Review and comments of the projects Quality Assurance Program Project Plan (QAPPP)
- San Diego RWQCB's TMDL Model Selection Workshop (January 29, 2008)
- Preparation and execution of Cost Sharing Agreement or MOU
- Project funding
- Contractor scope of work
- Review and comment on quarterly reports to the San Diego RWQCB

The project schedule is provided in Figure 12-1. The City will continue to be actively involved in this program. The monitoring activities in the field were extensive during late 2007 and early 2008 during which time continuous monitoring data was collected from the pre-designated sampling locations, several storm events were monitored for water quality and also sediment sampling were all performed.

## 12.2 Bacteria TMDL

The City of Del Mar has also been actively following the development of the Bacteria TMDL for the San Diego Region, especially the Project 1 for Beaches and Creeks in the San Diego Region. During the next reporting period, the City will continue to follow the development of this project, and become involved as circumstances require and opportunities arise.

# Section 13
# Non-emergency Fire Fighting

This section provides a description of any efforts by the City of Del Mar conducted to reduce pollutant discharges from non-emergency fire fighting flows (i.e. flows from controlled or practice blazes and maintenance activities) determined to be a significant source of pollutants to waters of the U.S. As discussed in Section 4.12 of this JURMP Annual Report, Section 6.19 of the 2008 JURMP described the City's program to reduce pollutants from non-emergency fire fighting flows. During this reporting period, all training sessions were held at Regional Training facilities outside the City of Del Mar, and any vehicle maintenance (including washing) was conducted in accordance with Section 6.19 of the 2008 JURMP. No non-emergency fire fighting flows from training or other maintenance activities occurred which would require any additional efforts to reduce pollutant discharges.

# Section 14
# JURMP Revisions

Section 14 of 2008 JURMP emphasized the documentation of information pertinent to any changes made to the JURMP based on the results of the program review and effectiveness assessment. No modifications in Section 14 of the 2008 JURMP have been recorded during this reporting period.

During this reporting period, the City of Del Mar operated under two (2) different but similar JURMPs. In compliance with the 2007 Permit, City staff prepared and presented the 2008 JURMP to the Del Mar City Council on March 3, 2008, who accepted the document, and directed staff to begin its implementation. No significant modifications of the 2008 JURMP have been recorded, planned or proposed to date with the exception of those items, as shown in this Annual Report, that are dynamic and updated as part of the requirements, including inventories, minimum BMPs based on site or activity inspections, and minor corrections or enhancements to forms or data spreadsheets.

# Section 15
# Conclusions and Recommendations

During the FY2007/2008 reporting period, the City of Del Mar took the necessary steps to implement the new Municipal Permit requirements, including the expansion of the City's stormwater program and activities to meet or exceed levels required under the Permit. These program activities are outlined in the City's JURMP, which was revised and adopted during this reporting period. The City continues to support a comprehensive stormwater management program which is evident in, and reflected by, the City's significant efforts to implement the JURMP as described in this annual report.

The annual report generally consists of descriptions of what the City has done to implement various programs such as education, inspections, inventory maintenance, monitoring, and public participation. No updates to the 2008 JURMP were developed this reporting period. Overall, the City's effectiveness in the continued implementation of the program was high. While some minor challenges were identified, resulting from a combination of the new Permit requirements and staff turnover in a few positions, staff has identified areas of needed improvement and taken the steps to begin their implementation.

In assessing the first few months of the implementation of the new Permit requirements and transitioning from the 2001 Permit, the City has met its obligations under both permits and is looking toward the first year of full implementation of the 2007 Permit during FY2008/2009. The City will continue to take the appropriate actions required to implement the JURMP and compile the necessary information to track implementation progress and effectiveness.

Appendix 14-A: Revisions Made to the 2008 JURMP

# Executive Summary

The City of Del Mar (City) developed its Jurisdictional Urban Runoff Management Program (JURMP) in 2008 to meet the requirements of the Municipal Separate Storm Sewer System (MS4) Urban Runoff Discharge Permit (Order No. R9-2007-0001) (Permit) issued to the City and the Regional Copermittees by the California Regional Water Quality Control Board, San Diego Region (Regional Board). The Permit requires the Copermittees to individually, but collaboratively, develop and implement comprehensive programs to reduce and eliminate urban runoff pollutants that are discharged from their storm drain systems to the receiving waters. The City's program and activities, designed to meet these requirements, are described in detail in the City's 2008 JURMP.

The City has prepared this JURMP Annual Report to provide a comprehensive description of all the activities conducted by the City to comply with all the requirements of Section D of the Permit, as described in the 2008 City of Del Mar JURMP. This Annual Report covers the implementation of jurisdictional activities during the period from July 1, 2008 through June 30, 2009 (Reporting Period), and follows the standardized format developed by the Regional Copermittees and adapted as appropriate for the City.

During the Reporting Period, the City continued implementation its 2008 JURMP, including all baseline Permit requirements. The City believes that the core program activities outlined in the Permit: education; inspections; monitoring; and enforcement are the most effective at reducing pollutant generating activities. Within the City's program, the inspections and monitoring programs are not only implemented to identify wrongdoers, but provide the City with opportunities to educate the community. It is through the outreach and education of the general population that awareness and behaviors will change for the betterment of water quality. On the occasion where outreach is not effective at changing behaviors, the City uses its enforcement authorities to obtain compliance.

The City's diligent efforts towards BMP implementation is a key element for this year's report. City staff has been active and consistent in activity/area specific BMP implementation as demonstrated through the municipal facility inspection program. Another supporting effort for municipal activities has been data tracking and the ability to report the results of the City's own activities with ease. With each year of program implementation, the City becomes more effective and efficient at tracking meaningful data accurately – and this year was no exception. City staff has developed an elaborate system for tracking street sweeping, pipe cleaning, and call out activities such as power washing.

Some interesting and key numbers associated with the City staffs' efforts to implement the program follow:

- **23 tons** – The amount of debris, sediment and trash removed from the City's storm drain system thereby prevented from entering the lagoons and Pacific Ocean;
- **1,310 miles** – The number of miles the street sweeper swept during FY2008/2009;
- **126 tons** – The amount of material collected from street sweeping during FY2008/2009, and thereby prevented from entering the lagoons and Pacific Ocean.

Overall, the City's effectiveness in continuing the implementation of the program was high. However, City staff did identify areas for improvement, and have taken the appropriate steps to begin their implementation. Even with these changes, there were no substantive modifications to the 2008 JURMP identified as necessary during this Reporting Period.

The City remains an active voice in regional groups and activities as well by co-chairing a regional Copermittee workgroup and actively participating in other workgroups, both permit-mandated workgroups and other workgroups, such as the Los Peñasquitos Lagoon TMDL Workgroup, whose impact on the City's program is recognized.

Funding of municipal programs, including stormwater programs, continues to be an issue for all of the cities in San Diego County. The City of Del Mar is no exception. Given its economic ties to the beach and ocean, the City of Del Mar recognizes the importance of clean water and its NPDES program. As such, the City took steps to ensure that adequate funding is available on a more permanent basis. During the Reporting Period, the City took steps to bring the Clean Water Service Fee before the voters, following the requirements of Proposition 218. With the successful passage of the fee the City has ensured that a substantial portion of the program will continue to be funded into the future.

By and large, the City has been very successful at implementing its Clean Water Program. Residents, local businesses, and City staff are working diligently to protect the waterways and improve water quality at the beaches and lagoons, and will continue to carry out these efforts in the future.

# Certification Statement

## FY2008/2009 JURMP ANNUAL REPORT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

# Section 1
# Introduction

This document is the second annual report for the City of Del Mar's 2008 Jurisdictional Urban Runoff Management Plan (2008 JURMP) which went into effect March 25, 2008 in accordance with NPDES Order No. R9-2007-0001 (Permit), and subsequent amendments. The JURMP Annual Report generally follows the standardized format prepared and submitted to the San Diego Regional Water Quality Control Board (Regional Board) by the Copermittees in June 2007, and any deviations are minor and correspond to the format of the 2008 JURMP. The Reporting Period covered by this document is from July 1, 2008 through June 30, 2009.

## 1.1 Background

This section provides background information, including a brief overview, of the City of Del Mar Clean Water Program which implements its JURMP.

### 1.1.1 Overview of the City of Del Mar

The name Del Mar means "of the sea," and highlights the symbiotic relationship between the City and Pacific Ocean. The City of Del Mar is a coastal, primarily residential community in the northern section of San Diego County. Del Mar is bounded by Solana Beach to the north, San Diego to the south and east, and the Pacific Ocean to the west (see Figure 1.2-1). The City covers an area of approximately two square miles, with a population of approximately 4,500 residents. The main attraction of visitors is the beach and sunny weather. The annual San Diego County Fair, horse racing, and other events held at the Del Mar Fairgrounds bring in people from the surrounding area and beyond.

The Clean Water Program is a multi-departmental program coordinated by the City's Clean Water Manager and is an integral part of making the City of Del Mar a beautiful place to live, work and visit. Day-to-day compliance activities are conducted by staff from the Planning & Community Development Department, the Department of Public Works, the City Engineering Department, and the Department of Community Services. The Program is committed to ensuring city-wide compliance with the San Diego Regional Water Quality Control Board's Regional Municipal Stormwater Permit.

### 1.1.2 Watershed(s)

The City of Del Mar is part of the San Dieguito Hydrologic Unit and the Los Peñasquitos Hydrologic Unit, as shown in Figure 1.2-1 below.

## 1.2 Purpose and Objectives

The Annual Report is a comprehensive description of all the jurisdictional activities conducted by the City of Del Mar to comply with all the requirements of Section D of Order No. R9-2007-0001, as described in the 2008 JURMP, and covers the period from July 1, 2008 through June 30, 2008.

**Figure 1.2-1: The City of Del Mar and its location relative to its associated watersheds in San Diego County.**

# Section 2
# Development Planning Component

## 2.1 Introduction

Section 4 of the 2008 JURMP provides information on the implementation of the Development Planning Component of the Municipal Permit within the City of Del Mar, and was developed pursuant to Section D.1 of the Permit. This section of the JURMP Annual Report provides information relevant to the implementation of the Development Planning Component of the 2008 JURMP for the FY2008/2009 Reporting Period.

## 2.2 Land Use Planning

Section D.1.a of the Municipal Permit requires each Copermittee "revise as needed its General Plan or equivalent plan (e.g., Comprehensive, Master, or Community Plan) for the purpose of providing effective water quality and watershed protection principles and policies that direct land-use decisions and require implementation of consistent water quality protection measures for Development Projects." Appropriate modifications to the Del Mar Community Plan were adopted during FY 2007-2008, and no further modifications were made during this Reporting Period.

Chapter 11.30 of the Del Mar Municipal Code (DMMC), entitled "Stormwater Management and Discharge Control," was rewritten in its entirety to implement the requirements of the Municipal Permit, and adopted on March 17, 2008 by the Del Mar City Council. No further modifications were made during this Reporting Period.

## 2.3 Environmental Review Process

The City of Del Mar Environmental Review process is aimed at accurately evaluating water quality and cumulative impacts and identifying appropriate measures to avoid, minimize and mitigate development project impacts to water quality. There were no modifications to the environmental review process made during the reporting period.

## 2.4 Development Project Approval and Verification Process

This section provides a general description of the various activities conducted as part of the City's development project approval and verification processes.

### 2.4.1 Program Implementation

During the FY2008/2009 Reporting Period, all development projects were required to undergo review under the City's urban runoff approval process and meet applicable project requirements. However, given the City of Del Mar's relatively limited land development potential, a majority of the projects reviewed are redevelopment projects that are often small in size and scope. A description of the City's efforts toward conditioning development projects and verifying compliance with established conditions and minimum BMP requirements is described below.

#### *Development Project Approval Process and Project Requirements*

During this Reporting Period, a total of 149 permit applications were reviewed by the Planning and Community Development Department. Appendix 2-A contains a complete list of the permit applications reviewed by the Department during this Reporting Period.

During the Reporting Period, no new projects meeting the definition of a "Priority Development Project" (PDP) under the Permit were proposed. During the previous Reporting Period, four (4) PDP projects were either proposed or approved. These projects and their current status are found in Table 2-1 below. As indicated in Table 2-1 below, the Morotta/James Project, a single family residence, was designated as a PDP as a result of its proximity to the San Dieguito Lagoon. Appendix 2-B of this report includes a summary page demonstrating the application of SUSMP requirements to this project by the City of Del Mar.

During this Reporting Period, no priority development projects were allowed to implement treatment control BMPs with low removal efficiency rankings, and as such no feasibility analyses were conducted to exhibit that more effective BMPs were infeasible.

**Table 2-1: Priority Development Projects within the City of Del Mar**

| Project Name | Description | Status During FY2008/2009 |
|---|---|---|
| **PDP Projects with Permit Approval** | | |
| Garden Del Mar Specific Plan (SP-07-01; LCPA-08-02; CDP-08-17) | The proposed project is a mixed-use commercial development with restaurant, retail, and office uses situated in six two-story structures (totaling 19,600 square feet) built over a two-level subterranean parking garage. | Project was approved during the FY2008/2009 Reporting Period. However, due to funding issues, the project proponents have not moved forward with the project, and the property remains vacant and is currently for sale. |
| Riverview Project (CUP-08-01; CDP-08-19; FDP-08-02) | The project proposed to construct two, two-story, commercial office buildings totaling 23,293 square feet, with 83 parking spaces on two vacant parcels of land. The proposed project includes grading, hardscaping, and landscaping, and lies within 200 feet of the San Dieguito Lagoon. | Project was approved during the FY2008/2009 Reporting Period. However, the project proponents have not moved forward with the project, and the property remains vacant and undeveloped. |
| Pacifica Stratford (DRB-05-27, 28, 29, 30, 31) | The project proposes approval of a Final Subdivision Map which subdivides two existing legal lots into five two-unit condominium lots with required public improvements | The project received project approval in April 2006. However, no groundbreaking or demolition of the existing structures had occurred until February 2008. During FY2007/2008, staff reviewed project conditions and designs during permitting of the grading operations and required subsequent changes to the project to incorporate SUSMP BMPs on-site. The project is currently under construction. |
| **Completed Project(s)** | | |
| Morotta/James Single Family Residence (DRB-03-37) | This project is a single family residence on a previously vacant lot within 200 feet of an environmentally sensitive area (the San Dieguito Lagoon) | Construction drawings for this project were approved in April 2008. The project incorporates LID to the MEP through the use of minimal hardscape and the incorporation of a vegetated swales and bioretention areas. The structure itself is elevated, allowing for preservation of pervious surface conditions under what would otherwise be the building footprint. Signed certification of BMP implementation by the Project Engineers was submitted to the City in March 2009. |

### *Standard Urban Stormwater Mitigation Plan (SUSMP) Implementation and Development*

During the Reporting Period, the City of Del Mar continued to implement the requisite SUSMP requirements outlined in the 2008 JURMP. As discussed in the FY2007-2008 JURMP Annual Report, the City of Del Mar participated in the development of the Model SUSMP which was submitted to the

Regional Board in July 2008. The City also participated in the preparation of the revisions to the Model requested by the Regional Board in September 2008, and re-submitted to the Regional Board on January 2, 2009. The Copermittees, including the City of Del Mar, were notified that Model SUSMP was found adequate by the Regional Board on March 25, 2009. Pursuant to the Permit, the City has 365 days from the date of notification to implement the revised Model SUSMP. The City has begun developing revisions to its local SUSMP, including possible modifications to its plans and ordinances, and anticipates adoption of the revision by the March 25, 2010 due date. No modifications to the City's SUSMP were made during this Reporting Period.

### *Priority Treatment Control BMP Inventory Tracking and Maintenance*

The City has developed and is utilizing a watershed-based database to track and inventory approved treatment control BMPs along with maintenance within its jurisdiction. Because of the limited number of approved PDPs within the City of Del Mar, the database is a simple Excel® Spreadsheet which includes the required information on treatment control BMP type, location, watershed, date of construction, party responsible for maintenance, maintenance certifications or verifications, inspections, inspection findings, and corrective actions. No treatment control BMPs were approved during the last permit cycle, since no high priority projects qualified under the previous SUSMP criteria. As of June 30, 2009, only four (4) development applications for projects have triggered the PDP criteria. Appendix 2-C contains the current database (spreadsheet) for approved PDPs.

### *BMP Construction Verification*

As of June 30, 2008, the Morotta/James Project, a single family residence, is the only approved PDP under SUSMP provisions which has been constructed in the City of Del Mar. As outlined in the 2008 JURMP, prior to occupancy of a Project subject to SUSMP requirements, the Engineer of Record is required to inspect the constructed LID site design, source control, and treatment control BMPs to verify that they were constructed in compliance with all specifications, plans, permits, ordinances, and the Permit. The Engineer of Record conducted this required inspection, and submitted a signed certification to the City in March 2009.

### *Annual BMP Operation & Maintenance Verification*

As indicated above, as of June 30, 2009, only one (1) project, the Morotta/James Residence, has been approved under SUSMP provisions and constructed. The Engineer of Record conducted the required BMP Construction Verification in March 2009. As such, no Annual BMP O&M Verification has been conducted to date. The first verification, including a record of inspection, is not due to be submitted until Fall 2009, prior to the start of the wet season.

### *SUSMP Waiver Mitigation Program*

As of June 30, 2009, the City of Del Mar has not granted any SUSMP Waivers, and as such has not needed to implement a SUSMP waiver mitigation program.

### *Enforcement Measures for Development Projects*

This section provides the number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 4.4.4.3 of the 2008 JURMP provides a description of the general process for applying enforcement to urban runoff related violations by development projects. No modifications to this section of the 2008 JURMP were recorded during this Reporting Period.

No enforcement actions for development projects were taken during the Reporting Period. Enforcement actions related to construction activities are listed in Section 3 of this report.

### *Education Efforts Focused on Development and Redevelopment*

The City of Del Mar continued to focus on one-on-one education for the municipal staff, planning boards, project applicants, developers, contractors property owners and community planning groups water quality issues. As a full-time staff member of the Planning and Community Development Department, the Clean Water Manager attended weekly Department Meetings where projects were reviewed and discussed by the planning team. This provided the opportunity to discuss both project-specific water quality issues, and provide general updates to the team on changes that may have developed as a result of discussions among the Regional and Watershed Copermittees.

As indicated in the 2008 JURMP the City conducted regular coordination meetings organized by the Planning Department to discuss development review procedures, issues, cases, and other subjects. The meetings, which are attended by the Planning, Engineering, Building and Public Works departments, provided a forum for information exchange and to educate City staff on the federal, state and local water quality laws and regulations applicable to development projects; the nexus between land use decisions and short and long-term water quality impacts; and how impacts to receiving water quality resulting from development can be minimized. In addition, the Clean Water Manager regularly attended the City's weekly Executive Team/Department Head meetings to ensure that upper management is kept abreast of requirements.

Lastly, the Clean Water Manager also continued to meet one-on-one with developers and project proponents on an as-needed basis to assist them in understanding the requirements under both the Permit and the City's SUSMP.

### *Hydromodification*

The City of Del Mar revised its local SUSMP to accommodate LID and source control measures as required to meet the principles of hydromodification during a previous Reporting Period. The City has also participated in the development of the draft Hydromodification Management Plan (HMP) and submitted to the Regional Board, with staff from the Department of Engineering and the Department of Planning participating in the Regional Copermittee Workgroup, attending meetings on a regular basis, and providing substantive comments on the interim drafts of the Model HMP. A final iteration of the HMP is due to be submitted to the Regional Board in December 2009. Once approved by the Regional Board, the City of Del Mar will revise its local SUSMP to address any additional requirements under the HMP.

Of the four (4) identified Priority Development Projects listed in Table 2.4-1 above, none of them disturb 50 acres or more, and as such Interim HMP requirements were not applied.

### 2.4.2 Notable Activities

No notable activities other than those identified above were conducted during this Reporting Period.

## 2.5 Development Planning Component Effectiveness Assessment

A complete assessment of the effectiveness of the City's implantation of its 2008 JURMP, including the Development Component, is included as Chapter 11 of this Annual Report.

## 2.6 Program Review and Modification

No modifications were made to the Development Planning Component of the 2008 JURMP during this Reporting Period.

# Section 3
# Construction Component

## 3.1 Introduction

This section provides an overview to the City's efforts to comply with the Construction Component of its 2008 JURMP as required under the terms of the Permit.

## 3.2 Source Characterization

Section 5.2.2 of the 2008 JURMP describes how a watershed-based inventory of all construction sites is prepared by the City of Del Mar, while Section 5.2.3 provides a description of the steps taken to develop, and update this inventory on a monthly basis. As indicated in the FY 2007/2008 JURMP Annual Report, and included in the Supplemental Information provided to Regional Board Staff on February 17, 2009, the City of Del Mar updated its construction inspection tracking system in September 2008 to ensure that the system meets the reporting requirements outlined in Section J.3.a.(3)(b)vii of the Permit. The tracking system itself is a combined database which includes Geographical Information System (GIS) input, and spreadsheet tallies. Information is entered into the database on a regular basis, no less than monthly. City enforcement staff are tasked with maintaining the GIS information via "drive-by" verification of the status of all construction sites, and entering it into the GIS system. Monthly inventories of active construction sites are then produced for use in the field by staff. Regular patrols by City staff are also used to determine if a site's status has changed in the interim. In addition, the Clean Water Manager is notified by the staff when a Pre-Construction meeting has been held and/or construction commences at a site. This information is then used to assist in the population of the database.

Since construction project sites are constantly approved, cancelled (permits withdrawn by the applicant, denied by the City, expire, etc.), and completed, the City's inventory is fluid. In addition to the regular updates, staff continues to routinely patrol construction sites to "field truth" data received from the Planning and Building Departments, and annotate areas of surface disturbance that may, or may not be, permitted.

Appendix 3-A located at the end of this section provides a copy of the monthly construction site inventory, including the priority classification for each site.. Appendix 3-B includes printouts of the GIS Construction Site Inventory Maps for each month that the new system was in place, beginning with the start of the 2008/2009 Wet Season (October 1). As a result of the implementation of this inventory, minor modifications to Section 5.2.2 and Section 5.2.3 of the 2008 JURMP were made. The specific changes and program modifications are discussed below.

## 3.3 Updates to Ordinances and Approval Processes

The City is required by the Permit to review and update its grading ordinance as necessary. Section 5.3 of the 2008 JURMP provides a description of the modifications made to the City's construction-related regulations and provides updates to the grading ordinance and other applicable ordinances. No modification to City Ordinances affecting construction activities were made during this Reporting Period, and no modifications in Section 5.3 of the 2008 JURMP were recorded.

## 3.4 Best Management Practice Requirements

Section 5.4.1 of the 2008 JURMP provided a description of minimum BMPs that were implemented, or required to be implemented, including pollution prevention. No modifications in Section 5.4.1 of the 2008

JURMP have been recorded during this Reporting Period. All appropriate, designated BMPs were implemented, or required to be implemented, at all construction sites within the City of Del Mar in accordance with the requirements of the 2008 JURMP during FY2008/2009.

## 3.5 Program Implementation

As required by the Permit, and outlined in the 2008 JURMP, all permitted construction sites were required to undergo the City's construction urban runoff approval process, and meet the applicable construction requirements. Appropriate, designated BMPs were required to be implemented for all construction sites. Information regarding construction activities is tracked by the Clean Water Program, and updated via formal inspections by City Staff. In addition to the formal inspection program, and as discussed above, staff regularly patrol the City as part of other duties and activities to confirm inventory data and verify that perimeter BMPs are in place, and that appropriate controls are in place for deliveries and storage areas.

### 3.5.1 Maximum Disturbed Area for Erosion Controls

Section 5.4.3 of 2008 JURMP identifies one acre as the maximum disturbed area that the City allows to be graded before either temporary or permanent erosion controls are required. No modifications in Section 5.4.3 of the 2008 JURMP have been recorded during this Reporting Period. Although rarely applied in the small projects in Del Mar, the City confirms that the maximum disturbed area for grading was applied to applicable construction sites.

### 3.5.2 Advanced Treatment Methods

Section 5.4.4 of the 2008 JURMP identified and listed the construction site conditions that will require the use of advanced treatment methods. No modifications in Section 5.4.4 of the 2008 JURMP have been recorded during this Reporting Period. During FY2008/2009, no construction site met the requirements necessitating advanced treatment methods, and as such, none were required nor tracked.

### 3.5.3 Inspection and Enforcement Measures for Construction Sites

This section provides confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance with the 2008 JURMP. Section 5.5.5 of the 2008 JURMP provided a description of several educational and compliance verification activities that are included as part of the City's inspections of construction sites and the general results of the inspections conducted on construction sites. No modifications in Section 5.5.5 of the 2008 JURMP have been recorded during this Reporting Period.

#### *Construction Inspections*

As required by the Permit and outlined in the 2008 JURMP, all permitted construction sites were required to undergo the City's construction urban runoff approval process, meet the applicable construction requirements, including the implementation of appropriate designated BMPs. As indicated in the 2008 JURMP, this information is tracked by the Department of Planning and Community Development, and updated regularly via both formal and informal inspections.

Because of the small size of the community, staff has regular interaction with the applicants and contractors during the process and is able to verify conditions on a regular basis when on routine patrol. In addition to the formal inspection program by staff, and as indicated above, staff regularly patrols sites in-route to other assignments which allows staff to "field truth" data and verify that perimeter BMPs are in place, and appropriate controls are in place for deliveries and storage areas.

Appendix C of the Permit defines the wet season as October 1 through April 30 of each year, and prescribes minimum inspection frequencies for construction sites during this period as defined in Section

D.2.d. of the Permit. Section D.2.d.(1) of the Permit requires bi-weekly inspections of all construction sites meeting certain size requirements, or identified by either the Regional Board or the City of Del Mar as having a "significant threat to water quality." Section D.2.d.(2) of the Permit requires a minimum of monthly inspections of all construction sites with one acre or more of soil disturbance not meeting the criteria in Section D.2.d.(1) of the Permit. As indicated in Section 5.2.1 of the 2008 JURMP, the City of Del Mar does not differentiate between these "High" and "Medium" Classifications, and treats projects meeting the criteria of Section D.2.d.(2) of the permit as "High Priority" construction sites. During this Reporting Period, only one (1) active construction site met the criteria for this designation. This project, the Pacifica Stratford project, located on Stratford Court was inspected at a minimum of bi-weekly during the FY2008/2009 Wet Season. All remaining construction projects were classified as "Low" priority sites, and inspected as needed during the FY2008/2009 Wet Season. As required by Section D.2.d.(4) of the Permit, all construction sites, regardless of priority classification, continue to be inspected on an "as-needed" basis during the remainder of the year.

Appendix 3-C contains the construction inspection inventory, including a report of the period of time (in weeks) that the site was active within the rainy season, the number of inspection conducted during the rainy season, the number of inspections conducted during the dry season, and the total number of inspections for each site.

### *Enforcement Measures for Construction Sites*

Section 5.5.6 of the 2008 JURMP provides a description of the general process for applying enforcement to construction sites for urban runoff related violations. No modifications in Section 5.5.6 of the 2008 JURMP have been recorded during this Reporting Period.

This section provides the number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions taken to achieve compliance

Del Mar has implemented a policy of education first, with aggressive enforcement measures only being used when compliance requests are ignored and/or in the event of an actual discharge which has the potential to impact to receiving waters. In general, contractors have been compliant with BMP requirements at their respective construction sites. In the majority of those instances where compliance has not been attained, a single verbal or written warning was all that was required to achieve compliance.

During this Reporting Period, eight (8) enforcement actions, including any written warnings; Notices of Violation (NOVs); and/or Administrative Citations were issued by staff. This does not include verbal warnings issued during patrols which were handled immediately, unless the contractor failed to comply with the direction of the inspector. In one instance, a full "Stop Work" order was issued and construction halted for more than 24 hours until appropriate BMPs and permits were obtained from the City.

In general, the inspections conducted revealed that education efforts over the past several years have resulted in a high level of compliance. In those incidents where contractors were not in full compliance, it was either easily remedied by replacement or re-installation of BMPs. Only one (1) project site was a repeat offender. This project, the City's only "high priority" construction site, has a number of subcontractors. Failure to reinstall BMPs as a result of changes in contractors tended to be a problem. However, after multiple citations, on-site supervisors have made a noticeable effort to prevent further violations. Moreover, subcontractors on site have been cooperative and responsive to direction from City staff. Table 3-1 provides a summary of formal enforcement actions taken by the City for construction activities not in compliance with BMP requirements under the City's 2008 JURMP.

## Table 3-1: Construction-Related Enforcement Actions for FY2008/2009

| Case No.* | Date of Action | Contractor | Project Address | NOV | Cite Issued | Cite No. | Stop Work | Fine Levied | Comments/Action's Taken |
|---|---|---|---|---|---|---|---|---|---|
| 09-236 | 8/12/2008 | Superior Ready Mix | 963 Klish Way | Yes | Yes | 705 | No | $200 | Delivery at Klish Way - No BMPs in place. Fine dismissed by City Management. |
| 09-235 | 8/22/2008 | Allen Landscape Inc. | 1127 Cuchara | Yes | No | N/A | No | N/A | Partial BMPs in place/no business license. First offense. Contractor cleaned up site immediately, and installed additional BMPs. |
| 09-009 | 11/26/2008 | Pacifica Stratford | 100 blk. Stratford Ct. | Yes | No | N/A | No | N/A | Failure to adequately maintain BMPs and discharge of sediment from project site. |
| 09-009 | 12/3/2008 | Pacifica Stratford | 100 blk. Stratford Ct. | Yes | Yes | 740 | No | $200 | Repeat offense. Failure to adequately maintain BMPs and discharge of sediment from project site. |
| 09-009 | 02/6/2009 | Pacifica Stratford | 100 blk. Stratford Ct. | Yes | Yes | 718 | No | $400 | Repeat offense. Failure to adequately maintain BMPs and discharge of sediment from project site. Compliance was achieved after meeting with Clean Water Manager. |
| 09-059 | 4/2/2009 | Superior Ready Mix | 1344 Ocean Avenue | Yes | Yes | 748 | No | $100 | Concrete spill along Camino Del Mar beginning at Via De La Valle and ending at 1344 Ocean (approximately 0.75 miles long trail). Contractor-supplied street sweepers were immediately dispatched to the site, and compliance achieved. |
| 09-237 | 5/12/2009 | AT&T Fiber Optic Installation (SoCal Construction & Contracting) | 100 blk 10th Street | Yes | No | N/A | Yes | N/A | No BMPs. No Bus License. Discharge of sediment into MS4. Stop work order issued with immediate clean up required. |
| 09-242 | 11/10/2008 | Owner/Contractor J.C. Dyer Construction | 2720 Ocean Front | Yes | No | N/A | No | N/A | No BMPs in place. Contractor used hose to wash down construction debris. Order to clean up using wet vacuum. Contractor complied immediately. NOV issued. |

### 3.5.4 Notable Activities

This section describes the notable activities conducted to manage urban runoff from construction sites by the City. During this Reporting Period, the City of Del Mar continued its policy of education first and aggressive enforcement as necessary. With a relatively limited number of projects with any significant amount of surface disturbance within the City, and only one project meeting the criteria to be designated a "high priority" construction site, this policy continues to be successful in providing staff the opportunity to develop more cooperative working relationships with developers, many of whom live and work in the community, all while implementing the necessary programmatic elements to protect water quality.

As discussed above, the City of Del Mar also updated its Construction Inventory and Inspection Tracking System to better meet the reporting requirements of the Municipal Permit. The implementation of this new system is discussed above.

## 3.6 Construction Activities Effectiveness Assessment

A complete assessment of the effectiveness of the City's implementation of its 2008 JURMP, including the Construction Component, is included as Chapter 11 of this Annual Report.

## 3.7 Program Review and Modification

As indicated above, as a result of the program review conducted during the FY 2007-2008 Annual Report process, the City of Del Mar revised its construction inventory process, and implemented a new GIS-based tracking system. Modifications to Section 5.2.2 and Section 5.2.3 of the 2008 JURMP were made during this Reporting Period to reflect the implementation of the updated tracking and inventory systems implemented during this Reporting Period. The updated pages to the JURMP are provided as an Appendix in Section 14 of this Report. No other modifications to the Construction Component of the 2008 JURMP were made during this Reporting Period.

# Section 4
# Municipal Component

## 4.1 Introduction

This section describes the implementation of the Municipal Component of the 2008 JURMP during the Reporting Period. The Municipal Component was implemented to: (1) reduce municipal discharges of pollutants from the MS4 to the MEP, and; (2) prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards.

This section addresses two types of municipal operations: fixed or stationary facilities; and field activities. A fixed facility is a specific building or physical location at which municipal operations occur (e.g. a corporate yard). Conversely, field activities are actions or programs that staff or City contractors implement as a part of their work duties at various locations across the City (e.g. street maintenance).

## 4.2 Municipal Activities

### 4.2.1 Source Characterization

During the Reporting Period, there were no additions or deletions to the City's municipal activity inventory, including the: MS4 system; street sweeping routes; or, special event venues (Appendix 4-A). Additionally, there were no changes to the prioritization of the City's storm drain facilities.

The City's complete MS4 is shown in Figure 4.2-1 below and reflects the most recently available system updates.

### 4.2.2 Best Management Practice Requirements

During the Reporting Period, the City did not make changes to its BMP requirements for municipal activities. For more details on the current BMP requirements, please refer to the 2008 JURMP.

The required BMPs for all municipal activities were implemented and required to be implemented through contracts, agreements or permits.

### 4.2.3 Program Implementation

During the Reporting Period, the City made changes to its municipal activities program implementation. These changes were focused on the special events program. For more details on the changes, please see Section 14 (JURMP Revisions) of this Annual Report. No additional changes to the Municipal Component of the 2008 JURMP were made during the FY2008/2009 Reporting Period.

The following sub-sections discuss the program implementation for the municipal activities programs.

#### *Municipal Separate Storm Sewer System (MS4) Program*

During the Reporting Period, the City did not make changes to its MS4 program implementation. For more details on the City's MS4 program implementation please refer to the 2008 JURMP.

The following data and information was collected and is provided to document MS4 operation and maintenance activities as required by the Permit and the City's 2008 JURMP:

1. Confirmation that the designated BMPs were implemented or required to be implemented during MS4 cleaning activities to eliminate waste discharges when cleaning is taking place.

During the Reporting Period, the City's Public Works employees implemented BMPs for MS4 maintenance activities to prevent the release of pollutants downstream as a result of maintenance activities. Generally, dry clean methods were conducted; however if jetting was required, socks and waddles were used downstream to trap the wash water. The wash water was then vacuumed and disposed of in the sanitary sewer. Any sediment or debris collected from MS4 maintenance activities was disposed of in a landfill, along with other debris collected throughout the City. The City kept logs of all MS4 inspection and maintenance activities in order to satisfy the reporting requirements of the JURMP Annual Report.

2. A description of inspections and maintenance conducted for municipal treatment controls, as applicable.

Trash Guards Treatment Control: The purpose of the "trash guards", installed on the face of storm drain inlets along Camino del Mar, is to minimize the amount of debris and trash entering into storm drain catch basins and to maximize the effectiveness of street sweeping. The guards keep the trash and debris on the street in order for it to be removed by the street sweeper. Inspections of the guards were performed to verify they were still operational and performing as purposed.

Inlet Filter Treatment Control– North County Transit District: As reported in the 2008 JURMP, the City of Del Mar has a Maintenance Agreement in place with the North San Diego County Transit Development Board as part of the Del Mar Stabilization Project 1 (Drainage Improvements and Landslide Warning System), which consists of fifty-four (54) structures. Fossil filters have been installed in some of the structures to address water quality and Permit requirements. The Maintenance Agreement requires the City to maintain fourteen (14) of the structures, while NCTD maintains the remaining forty (40) structures. Out of the fourteen structures maintained by the City, six have been fitted with filters that are serviced by the City's contractor (Downstream Services, Inc.). This fiscal year, all six filters were inspected and five required maintenance.

Table 4-1 below represents a summary of the maintenance performed on the inlet filters.

**Table 4-1: Summary of Inlet Filter Maintenance for FY 2009-2009**

| ID # | Location | Inlet Type | Materials | %Vol used | Comments |
|---|---|---|---|---|---|
| 1 | West end of 4th Street | Combo | Dirt, Silt, or Sediment (D) 70% Gravel (G) 5% | 75% | Wired geoweb added, Clips & Gasket, Replaced (3) pouches. |
| 2 | West end of 8th Street | Grate | D 50% G 40% | 90% | Tied insert corner. |
| 3 | SW 11th Street | Curb | D 60% G 10% Organics (O) 5% | 75% | Replaced (2) pouches. |
| 4 | NW side of 11th Street | Curb | D 80% O 10% | 90% | Replaced (1) pouch. |
| 5 | W of 13th Street | Curb | D 95% O 5% | 100% | Replaced (2) pouches. |
| 6 | 50' SW of pedestrian RR crossing, between RR tracks and Coast Blvd. | Grate | O 15% | 15% | No maintenance required. |

3. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria (33% capacity), and the number of catch basins and inlets cleaned.

The City is responsible for the inspection and maintenance of 284 drainage structures that are part of the MS4, including inlets and catch basins. In FY2009, 100% (284) of the MS4 inlets and catch basins were inspected and cleaned. None of the structures were found to have accumulated waste exceeding 33% capacity.

4. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

The City owns a total of 5.87 lineal miles of MS4. The City's MS4 pipe inspection program consists of cleaning crews inspecting pipes based on accessibility and visually inspecting pipe conditions during the inspection or cleaning of inlets and catch basins. During the Reporting Period, the City visually inspected approximately 3,500 lineal feet of MS4 pipe and cleaned approximately 2,500 lineal feet of MS4 pipe. No pipes were reported as exceeding the cleaning criteria threshold.

5. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.

There are 2.85 linear miles of open channel or swale type drainage in the City, and these drainage structures are considered to be part of the MS4 inventory. During the Reporting Period, 100% (2.85 miles) of the open channels and swales was inspected. When necessary, the City cleaned sand, mud and sediment from the open channels and swales. The City's inspection and maintenance records indicate that no observations of significant amounts of anthropogenic litter were noted.

6. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category. Proper disposal of waste removed pursuant to applicable laws.

The total amount of material removed from catch basins, inlets, open channels, and the MS4 for the FY2009 was 46.9 cubic yards, or approximately 23.4 tons. By drainage structure category, it is estimated that approximately 18.4 tons of materials were removed from catch basins and inlets (combined inlets, basins and junctions), 3 tons of materials were removed from swales and open channels (headwall cleanings as channels), and the remaining estimated 2 tons of material was collected from the MS4 cleanings. *Please Note: the Permit requires the material collected to be reported in tons. However, the City's measurements are in cubic yards, and converted to tons for reporting purposes using a 1,000 pound per cubic yard conversion.*

### Street Sweeping Program

During the Reporting Period, the City did not make changes to its street sweeping implementation. For more details on the City's street sweeping implementation please refer to the 2008 JURMP.

The following data and information was collected and is provided to document street sweeping activities as required by the Permit and the City's 2008 JURMP.

1. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.

The total distance of curb-miles of improved roads and streets that consistently generate the highest volumes of trash and/or debris is approximately 5.7 miles, including curbed medians. The frequency at which these roads and streets are swept is at a minimum, weekly.

2. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.

The total distance of curb-miles of improved roads and streets that consistently generate moderate volumes of trash and/or debris is approximately 14.5, including curbed medians. The frequency at which these roads and streets are swept is at a minimum, bimonthly.

3. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.

The total distance of curb-miles of improved roads and streets that consistently generate low volumes of trash and/or debris is 31.2, including curbed medians. The frequency at which these roads and streets are swept is at a minimum, biannually.

4. Identification of the total distance of curb-miles swept.

During the FY2009 Reporting Period, the City swept a total of 1,310 curb miles. The brooms were engaged for a total of 183.4 hours.

5. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping:

The two municipal parking lots in the City's municipal facility inventory are the 17th Street Lifeguard Station parking lot and the City Hall Parking lot. Both are considered to be high trash volume designations and thus, were swept semi-monthly during the Reporting Period.

6. Amount of material (tons) collected from street and parking lot sweeping:

The total amount of material collected from street sweeping activities of municipal areas for FY2008/2009 was 251.5 cubic yards*, or an estimated 125.75 tons. This amount includes all three trash volume categories and parking lot sweeping for the Reporting Period. *Please Note: the Permit requires the material collected to be reported in tons. However, the City's measurements are in cubic yards, and converted to tons for reporting purposes using a 1,000 pound per cubic yard conversion.*

The City coordinates with the 22nd District Agricultural Association (22DAA) (aka Del Mar Fairgrounds) to ensure that additional pollutant loading from the 22DAA facilities does not contribute to pollution in the MS4. Although the City conducts street sweeping along the 22DAA facility, the City requires the 22DAA to provide additional street sweeping on an as-needed basis, especially during its high seasons – San Diego Fair and racing season. The City does not quantify the amount of sediment and debris that is collected by the DAA sweepings.

### *Pesticide, Herbicide and Fertilizer Management*

During the Reporting Period, the City did not make changes to its pesticide, herbicide and fertilizer management implementation. For more details on the City's pesticide, herbicide and fertilizer management implementation please refer to the 2008 JURMP.

The following data and information was collected and is provided to document pesticide, herbicide and fertilizer management activities as required by the Permit and the City's 2008 JURMP.

1. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities

The City confirms that during the Reporting Period, designated BMPs for pesticides, herbicides and fertilizers were required to be implemented and implemented for municipal areas and activities.

The City of Del Mar contracts with Aztec Landscaping for all of the maintenance of its municipal landscaped areas including: fertilization, pest control, and herbicide application. All chemicals are applied by licensed contractors and application of any landscaping-related chemicals is done per current San Diego County Department of Agriculture regulations and the City encourages manual weed and pest removal whenever possible; furthermore, any contract employee applying or mixing landscaping-related chemicals is required to possess a valid Qualified Applicators Certificate for Class B as issued by the State Department of Food and Agriculture. To regulate landscaping chemical use in the City, the contract company is required per its contract with the City to submit a proposed fertilization schedule prior to commencement of fertilization and to provide a monthly chemical application report to the City. In FY2008/2009, there were no apparent increases in landscaping-related chemicals as compared to previous years.

As in previous years, pesticides that are analyzed for as part of the annual Dry Weather Monitoring Program were not detected in City-wide sampling providing another validation of the proper use of the chemicals.

### *Sanitary Sewer Program*

The City's sanitary sewer system includes the collection system and various sanitary sewer systems. The sewer system infrastructure includes approximately 24.75 miles of gravity main, 0.07 miles (or approximately 387ft) of force main and 387 service points. Del Mar's system includes three sewer pump/lift stations, 112 clean out facilities, and approximately 549 manhole structures. These facilities all are required to implement minimum BMPs and for the most part are inspected to verify BMP implementation and compliance. A description of the City's efforts for these facilities is included below.

Of the approximately 24.75 miles of the sanitary sewer collection system, approximately 23.3 miles were cleaned as part of the regular schedule of inspection and cleaning. Some portions of the collection system were cleaned more than once due to priority and build up of materials. The City tracks "hot spot" portions of the sewer collection system and depending upon the likelihood of materials build up, will perform cleaning two, three or up to four times per year. During FY2008/2009, the City conducted multiple cleanings of 1.2 miles of collection lines.

A total of six (6) sanitary sewer overflows occurred during the Reporting Period, three (3) from City mains and three (3) from private laterals. Out of the total of 3,611 gallons that spilled, 2,925 gallons were recovered with the remaining 686 gallons discharged to the environment. All of the overflows were reported both to the Regional Board (via CIWQS) and the County of San Diego Department of Environmental Health (via fax).

### *Special Events*

During the Reporting Period, the City did not make changes to its special events program implementation. For more details on the special events program, please see the 2008 JURMP submitted in March 2008.

Table 4-2 below provides a summary of the major events that were monitored by the City staff. All special events had City staff present who have been trained on Clean Water Program requirements to make observations and implement corrective actions as necessary during the events. In addition to the staff presence during the events, City staff responsible for each venue would inspect and take corrective actions the morning following special events. The City is in the process of revising its Special Events protocols to better reflect current procedures to continue to ensure that all Clean Water Program requirements are met for special events and special event venues.

**Table 4-2: Major Event Summary Table**

| Event Name | Event Date | Estimated Attendance | Venue | Inspection Date(s) & Comments |
|---|---|---|---|---|
| Bocce Ball Championships | 7/12/2008 | 600 | North Beach | Post-event inspection by cleanup crews – no spills or incidents reported |
| Summer Twilight Concert Series | 7/15/2008 | 3,000 | Powerhouse Park | Post-event inspection by cleanup crews – no spills or incidents reported |
| Summer Twilight Concert Series | 8/19/2009 | 3,000 | Powerhouse Park | Post-event inspection by cleanup crews – no spills or incidents reported |
| MS Society Walk | 9/5/2008 | 325 | Streets through Del Mar | Post-event inspection by cleanup crews – no spills or incidents reported |
| Dog Surf Event | 9/7/2008 | 5,000 | North Beach | Post-event inspection by cleanup crews – no spills or incidents reported |
| Summer Twilight Concert Series | 9/21/2008 | 3,000 | Powerhouse Park | Post-event inspection by cleanup crews – no spills or incidents reported |
| MS Bike Tour | 10/12/2008 | 800 | Streets of Del Mar | Post-event inspection by cleanup crews – no spills or incidents reported |
| NPT Breast Cancer 3Day LLC | 11/21/2008 | 4,000 | Streets of Del Mar | Post-event inspection by cleanup crews – no spills or incidents reported |
| Del Mar Village Association Winter Wonderland | 12/7/2008 | 2,500 | Del Mar Village | Post-event inspection by cleanup crews – no spills or incidents reported |
| Tour de Cure | 4/18/2009 | 450 | Streets of Del Mar | Post-event inspection by cleanup crews – no spills or incidents reported |

| Event Name | Event Date | Estimated Attendance | Venue | Inspection Date(s) & Comments |
|---|---|---|---|---|
| La Jolla 1/2 Marathon | 4/26/2009 | 5,000 | Streets of Del Mar | Post-event inspection by cleanup crews – no spills or incidents reported |
| San Diego Century Bicycle Tour | 5/16/2009 | 1,000 | Streets of Del Mar | Post-event inspection by cleanup crews – no spills or incidents reported |
| Iron Girl 10K & 5K | 6/7/2009 | 3,000 | Solana Beach to Fairgrounds | Post-event inspection by cleanup crews – no spills or incidents reported |
| Summer Twilight Concert Series | 6/16/2009 | 3,000 | Powerhouse Park | Post-event inspection by cleanup crews – no spills or incidents reported |
| Summer Solstice | 6/18/2009 | 600 | Powerhouse Park | Post-event inspection by cleanup crews – no spills or incidents reported |

### *Beach Cleaning*

The City's beaches are a vital part of the City's community – not only for the natural settings they provide, but also for the economic sustainability of the City. In an effort to prevent pollutants from entering the Pacific Ocean and causing the potential impairment to the receiving waters, the City implements a regular beach cleaning program. The program is described in Section 14, JURMP revisions.

During the Reporting Period, the beach cleaner was operated two to three times per week during the spring and summer and more frequently for holidays when the beach has the most use. The primary collections for disposal included plastic bottles and paper trash. The kelp is sorted and left on the beach

The City does not track the amount of debris collected from the beaches, as the cleaner dumps the debris at the Public Works Yard into a trash dumpster that is mixed with other refuse and waste.

### *Power Washing*

Currently, the City does not regularly schedule power washing activities at specific locations. This activity is conducted in various areas of the City depending on the need and as a result of other maintenance functions. This activity and the BMPs identified in the City's 2008 JURMP are considered to apply citywide for all municipal operations. Power washing may be conducted by City staff or under contract depending on the need.

The City utilizes dry cleaning methods as its primary cleaning method. The use of power washing is limited. However, the City conducted three power washing activities during the Reporting Period as shown in Table 4-3 below. The City confirms that all applicable BMPS were implemented during the power washings. The BMPs include vacuum collection of all wash water and disposal into the sanitary sewer system.

**Table 4-3: Municipal Power Washing Activities**

| Location | Date | BMPs Implemented | Comments |
|---|---|---|---|
| Powerhouse Park | 3/9/09 | Yes | Power wash all walkways, decks and sidewalks. All wash water was collected and disposed of into the sanitary sewer system. |
| 17th Street Lifeguard Tower | 10/8/08 | Yes | Power wash building and remove bird guano from roof. All wash water was collected and disposed of into the sanitary sewer system. |

| Location | Date | BMPs Implemented | Comments |
|---|---|---|---|
| 25th Street Lifeguard Tower and Bathrooms | 10/7/08 | Yes | Power wash tower and bathrooms. All wash water was collected and disposed of into the sanitary sewer system. |

## 4.3 Municipal Facilities

### 4.3.1 Source Characterization

During the Reporting Period, there were no additions or deletions to the City's municipal facility inventory. The municipal facilities inventory is located in Appendix 4-A.

In general, the municipal facilities include the following types:

1. MS4 System,
2. Roads and Streets,
3. Public Facilities,
4. Municipal Facilities, and
5. Sanitary Sewer.

Discussion of the stormwater program implementation for these facilities is addressed in Section 4.2.3 above.

The City's roads and streets network includes 747 curb miles of streets and two public parking lots. As described in Section 4.2.3 above, street sweeping is the primary BMP implemented for the roads network.

The City's public facilities primarily include parks and recreational facilities, beaches and the Powerhouse Community Center. All of these facilities all are required to implement minimum BMPs are inspected to verify BMP implementation and compliance. A description of the City's efforts for these facilities is included below.

The City's municipal facilities include the Public Works Yard, City Hall, and various potable water reservoirs. These facilities all are required to implement minimum BMPs and are inspected to verify BMP implementation and compliance. A description of the City's efforts for these facilities is included below.

The City's sanitary sewer system includes approximately 24.75 miles of gravity main, 0.07 miles (or approximately 387ft) of force main and 387 service points. Del Mar's system includes three sewer pump/lift stations, 112 clean out facilities, and approximately 549 manhole structures. The sewer facilities were inspected as a part of the municipal inspections as described below.

### 4.3.2 Best Management Practice Requirements

During the Reporting Period there were no updates to the BMP requirements for municipal facilities described in the 2008 JURMP. The City confirms that required BMPs were implemented at all facilities.

### 4.3.3 Inspections

Per the 2008 JURMP, the City formally inspects all high priority municipal sites. Municipal sites are considered to be fixed facilities where high priority municipal activities occur. The streets and road network are routinely inspected under various programs such as street sweeping, streets maintenance, and MS4 inspections. Formal inspection forms are not generated for the general routine inspections performed of these municipal network areas.

The City conducted facility inspections for each of its high priority facilities during FY2009. The purpose of these inspections was to ensure that BMPs (including those for pollution prevention) were being implemented. Of the high priority municipal areas, 24 are actual municipally operated sites/facilities, while the remainders are networks including streets and roads.

All inspections conducted during FY2008/2009 addressed all of the required inspection steps to determine full compliance by utilizing the City's standard municipal inspection form. The results of the inspections can be found in Appendix 4-B. For each facility, recommendations for follow-up corrective actions were listed if applicable.

## 4.4 Enforcement

There were no violations or enforcement actions taken at any municipal activities or facilities during FY2008/2009.

## 4.5 Notable Activities

The City works in conjunction with volunteers from Arc of San Diego in performing its litter removal program. In FY2008/2009, the Arc of San Diego volunteers collected approximately 7 cubic yards (3.5 tons) of trash from the City's streets as well as parks and recreational facilities.

This Fiscal Year, the City once again applied with the California Department of Conservation for a grant from its Beverage Container Recycling and Litter Reduction Program to assist in the City's litter cleanup efforts. Disbursement of funds is determined by the California Department of Finance and the amount of the grant is contingent on the population of eligible cities or counties applying for the grant. The City of Del Mar received $5,000 for FY2009 which was the maximum amount eligible for a jurisdiction of its size. A portion of the grant money was used to fund beach clean-up activities as well as to purchase dog nuisance clean-up bags ("Mutt Mitt") for distribution to the general public at City outreach events; the remaining money was used to assist in public cleanup days to continue to effectively reduce the amount of trash and debris entering the MS4 and the City's waterways. The City has again applied for the grant and has received money for use in FY2010. The results of where these funds are allocated will be reported in the next Annual Report.

## 4.6 Program Review and Modification

Minor modifications to the Municipal Component (Section 6) of the 2008 JURMP were recorded during the FY2008/2009 Reporting Period as a result of comments from Regional Board Staff. These minor revisions are discussed in Section 14 of this Annual Report.

# Section 5
# Industrial/Commercial Component

## 5.1 Introduction

The City continued to implement the Industrial and Commercial Component of its 2008 JURMP in FY2008/2009 to prevent and reduce pollutants in runoff from industrial and commercial facilities within the City.

## 5.2 Stationary Industrial and Commercial Sites/Sources Element

### 5.2.1 Background

This section focuses on fixed business sources, combining industrial and commercial businesses as defined by their activities. Fixed business sources are defined as businesses that have a stationary location where business activities are conducted. The referenced businesses are those that are identified in Order R9-2007-0001.

### 5.2.2 Source Characterization

A watershed-based inventory and prioritization of known industrial and commercial facilities within the City's jurisdiction has been updated for the FY2008/2009 Reporting Period and is included as Appendix 5-A. This inventory is based on multiple sources of information including the City's business license list, the Statewide General Industrial Storm Water database and other sources of information, as appropriate. The current inventory lists 41 stationary businesses facilities within the City of Del Mar. Of the 41 inventoried stationary facilities the City considers all to be "high" threats to water quality (TTWQ). One of the 41 businesses is also a high TTWQ industrial facility.

One deletion from the City's inventory that occurred during the Reporting Period is the 22nd District Agricultural Association (22DAA). The 22DAA is a state entity for which the City does not have the responsibility to regulate. During the Reporting Period, City staff corresponded with Regional Board staff and together determined that the City does not hold the responsibility for regulation of the 22DAA for urban runoff issues. A copy of the email correspondence between Regional Board Staff and the City is included as Appendix 5-B. However, the City continues to coordinate with the 22DAA on urban runoff issues related to 22DAA Operations which may impact the City of Del Mar.

### 5.2.3 Best Management Practice Requirements

During the Reporting Period, the City did not make changes to its BMP requirements for the commercial and industrial facilities. The requisite BMPs for all commercial and industrial facilities were required to be implemented through the City's 2008 JURMP and municipal code.

### 5.2.4 Program Implementation

During FY2008/2009, the City provided notification to owners/operators of industrial and commercial businesses of the applicable BMP requirements. This information was specific to automotive and food establishment businesses. Only three (3) businesses operating within the City of Del Mar did not fall into one of these two categories. These included two (2) animal facilities and one (1) waste management (recycling) site. These notification efforts will continue through FY2009/2010 and will be reported on in the next annual report.

### Inspections

The City performed an inspection of all businesses on the City's industrial and commercial inventory (e.g. one industrial facility and 40 commercial facilities). The City considers all of the businesses on the inventory to be a high TTWQ. Appendix 5-C has a summary of all of the inspections conducted during the Reporting Period.

All inspections conducted during FY2008/2009 addressed all of the required inspection steps to determine full compliance by utilizing the City's standard industrial/commercial inspection form.

During implementation of the inspection program, no businesses were found to be in violation of the City's Municipal Stormwater Ordinance, or the requirements of the Permit. Some businesses were given verbal warnings about potential violations, while others were provided with guidance for proper implementation of BMPs.

Under inspection procedures outlined in the 2008 JURMP, facilities may require follow-up inspections if they are found to be in violation of the City's Municipal Stormwater Ordinance for a BMP-related deficiency. Based on the results of the FY2008/2009 Industrial and Commercial Inspections, three (3) follow-up inspections were recommended and will be conducted during the FY2009/2010 reporting period.

### Enforcement

The City's enforcement process is to perform a follow-up visit for those businesses found to be out of compliance during inspections. If after the follow-up visit, the business is still out of compliance, the City Code Enforcement is notified and upon a visit, if there is no evidence of compliance, a Notice of Violation (NOV) or citation is issued. Although three (3) businesses were noted as requiring follow-up inspections, during FY2008/2009 no NOVs were issued to businesses as a result of the City's inspection program. As noted above, follow-up inspections for these three (3) facilities will be conducted during the FY2009/2010 Reporting Period.

In addition to inspection follow-ups, the City also receives complaints or initiates investigations based on staff's observations of stormwater violations. After reviewed the facts of the case, the Code Enforcement Officer or Clean Water Manager determines the level of violation (if any) and may issue an NOV and/or administrative citation as appropriate. The City has made it a policy that education is to play a significant role in the enforcement of stormwater regulations. In most cases, a verbal warning is all that is necessary, and compliance is achieved. However, in some instances, further enforcement action is required. At present, the City does not actively track contacts made with local businesses that result in verbal warnings only. However, during FY2008/2009, four (4) investigated incidents involving commercial or industrial operations warranted formal NOV and/or issuance of Administrative Citations by the City. Table 5-1 below provides a detail of enforcement actions taken against commercial or industrial operations.

**Table 5-1: Commercial/Industrial Activity Enforcement Action Summary**

| Case No. | Date | Business | Complaint | Action Taken |
|---|---|---|---|---|
| *Commercial/Industrial Activity - Stationary* | | | | |
| 09-018 | 08/12/2008 | Sbicca: An American Bistro | Illegal discharge of wash water and food waste from kitchen | Repeat violation. Written Warning and NOV issued. Owner met with staff to discuss remedy. Administrative Citation and fine issued $200.00. |
| 09-234 | 9/5/2008 | Poseidon Restaurant | Illegal discharge of wash water and food waste from enclosed wash racks. Failure of BMPs. | First violation. Written Warning and NOV issued. Owner and Executive Chef met with staff to discuss remedy, modifications made to facility and process. |
| 09-013 | 9/6/2008 | En Fuego Restaurant | Power wash of Patio and walkways no BMP or reclamation | Second violation within 1 year. NOV/Citation issued with fine of $200.00. |
| 08-172 | 12/31/2008 | Avenue Montaigne Investments | Power wash of Patio and walkways no BMP or reclamation | First violation. Written Warning and NOV issued. |

## 5.3 Mobile Sources Element

### 5.3.1 Background

This section focuses on mobile business sources; those defined as businesses not having a stationary business location and their business activities are conducted at various locations throughout the City or in some cases, the region. Due to the nature of their activities, mobile businesses are regulated differently than other businesses.

### 5.3.2 Source Characterization

An inventory of known mobile businesses within the City's jurisdiction has been updated for FY2009 and is included as Appendix 5-D. This inventory is based on the City's business license list, and is updated on a regular basis. The current inventory lists over 590 mobile businesses operating within the City of Del Mar and, all are presently considered high TTWQ facilities. During FY2009/2010, the City will be reviewing this inventory to refine the prioritization of these mobile businesses and address education and outreach opportunities for these mobile sources.

### 5.3.3 Best Management Practice Requirements

During the Reporting Period, the City did not make changes to its BMP requirements for the mobile businesses. The most important BMPs for most mobile businesses typically involve non-stormwater discharge control, and spill prevention, control, and cleanup.

BMPs for all mobile businesses were required to be implemented in accordance with the 2008 JURMP and the Del Mar Municipal Code.

### 5.3.4 Program Implementation

During the FY2008/2009 Reporting Period, the City continued to provide notification to owners/operators of mobile business of the BMP requirements applicable to their businesses. New mobile businesses registering with the City for business licenses are required to meet briefly with the Clean Water Manager to discuss the BMP requirements for their businesses. During the Reporting Period, the Clean Water Manager met with 3 new mobile businesses owners/operators. During the FY2009-2010 Reporting Period, these practices will be expanded through the development of additional educational materials for mobile businesses. In addition, the City plans to conduct additional targeted

outreach to licensed mobile businesses regarding BMP implementation for catering, power washing operations, and mobile auto detailing operations during FY2009/2010.

### Enforcement

During the FY2008/2009 Reporting Period, the City investigated no public complaints involving mobile businesses. However, during routine patrols of the City by enforcement staff, nine (9) mobile businesses were identified operating without appropriate BMPs and/or causing illegal discharge. Table 5-2 below includes enforcement actions for stormwater violations which were taken against mobile businesses during the FY2008/2009 Reporting Period. Please note: Enforcement actions against mobile businesses related to construction operations, including concrete operations, and delivery of goods and materials, are included in Section 3.5.3 above (Construction Component), and are not duplicated here.

**Table 5-2: Mobile Business Enforcement Action Summary**

| Case No. | Date | Business | Complaint | Action Taken |
|---|---|---|---|---|
| 09-238 | 8/26/2008 | Sō-Cal Mobile Auto Detail– 2120 Jimmy Durante Blvd. | Mobile detailing operation conducting business with no BMPs in place. Limited water use, and no discharge noted. | First offense. Written Warning and NOV issued to contractor. Contractor cleaned up site immediately. |
| 09-239 | 9/16/2008 | Torrey Pines Landscape Co., Inc. – 709 Stratford Ct. | Power washing operations with no BMPs or water capture. Erodible soils exposed, no BMPs. | First offense. Verbal warning issued to English speaker on-site, with direction stop work until BMPs installed. |
| 08-177 | 09/21/2008 | Residential Landscape Contractor– 1407 Luneta | Landscaper identified using hose to wash down driveway and walk ways | First offense. Written Warning and NOV issued to property owner. |
| 08-176 | 09/24/2008 | Residential Landscape Contractor– 152 27th Street | Landscaper identified using hose to wash down walk ways | First offense. Written Warning and NOV issued to property owner. |
| 08-175 | 09/24/2008 | Residential Landscape Contractor – 160 27th Street | Landscaper identified using hose to wash down walk ways | First offense. Written Warning and NOV issued to property owner. |
| 08-178 | 9/26/2008 | Independent Contractors – 639 Stratford Court | Contractors power washing walkways with no reclamation or BMPs in place. | First offense. Contractor warned verbally, with written Warning and NOV issued to owners and contractor. |
| 09-240 | 12/04/2008 | Schmuckle Painting– 2704 Ocean Front | Contractor BMPs and Reclamation Unit Failure during power washing operation. | Onsite contractors contacted, immediately ceased operations and restored BMPs. Discharge reclaimed with wet vacuum. No discharge to waterway occurred. Written warning sent to owner. |
| 09-032 | 12/10/2008 | Residential Landscape Contractor – 1219 Stratford Court | Landscaper identified using hose to wash down walk ways | First offense. Contractor warned verbally, with written Warning and NOV issued to property owner. |
| 09-241 | 3/10/2009 | Pacific Coast Kwik Dry Carpet Cleaners - Del Mar Woods 269 Stratford Court | Direct Discharge to MS4 of Line Prime Water (Tap). | First offense. Contractor warned verbally, and instructed on BMP use. Written follow-up issued. |

**To:** Joseph DeStefano
**Subject:** RE: Del Mar Fairgrounds

Joe,

Yes, that is correct. This is why many of our enforcement actions (e.g., NOVs and ACLs) are against school districts and other state districts (because we are the only ones regulating them, at least where storm water is concerned).

Pete

>>> "Joseph DeStefano" <jdestefano@delmar.ca.us> 4/9/2009 4:57 PM >>>
Thank you Pete. A couple of additional questions -- in a similar vein.
Am I correct, then, that State Parks, State Lands Commission, and North County Transit Authority would be in the same position (as State Agencies), and not subject to our regulation? What about School Districts (as Phase II Designees).

Thanks again,

Joe

Subject: Del Mar Fairgrounds

Joe,

Pursuant to your request, I am documenting the Regional Board's assertion that the Del Mar Fairgrounds, as a State Agricultural District and also current applicant for Phase II status under the Small MS4 Permit Program is exempt from regulatory oversight under the City of Del Mar's Municipal Storm Water Program. As I mentioned in our earlier discussion on the phone,the 22nd Agricultural District owns and operates its MS4 and, as a State agency and "nontraditional Small MS4 owner" is directly regulated by the Regional Board instead of being subject to the City of Del Mar's regulatory oversight. We are currently reviewing the District's Storm Water Management Plan and we intend to hold the District to a high standard given the extremely sensitive environment in which the Fairgrounds is located. I have added you to the list of interested parties and we will keep you updated regularly.

Pete Peuron

# Section 6
# Residential Component

## 6.1 Introduction

Section 6 of this JURMP Annual Report provides information that the City of Del Mar determined is relevant to the implementation of the Residential Component for this Reporting Period. The program was developed with the intent to reduce residential discharges of pollutants to the MS4 to the maximum extent practical and prevent residential discharges to the MS4 from causing or contributing to an exceedance of water quality standards.

## 6.2 Source Characterization

Section 8.2 of the 2008 JURMP provided a list of residential areas and activities that were designated as a high threat to water quality (TTWQ). No modifications in Section 8.2 of the 2008 JURMP have been recorded during this Reporting Period.

## 6.3 Best Management Practice Requirements

Section 8.3 of the 2008 JURMP identifies updated BMP requirements for residential areas and activities, including pollution prevention methods to be encouraged, and provides a list of minimum BMPs that were required to be implemented when high TTWQ residential activities are conducted within the City of Del Mar. No modifications in Section 8.3 of the 2008 JURMP have been recorded during this Reporting Period. During FY2008/2009, the designated BMPs were required to be implemented for residential areas and activities.

## 6.4 Program Implementation

Section 8.4 of 2008 JURMP described the Residential education including the Regional Education Program and the local educational outreach program prepared by the City which incorporated the strategy and tools used by the City of Del Mar Clean Water Program staff to require and encourage residents to implement the designated minimum BMPs. No modifications in Section 8.4 of the 2008 JURMP have been recorded during this Reporting Period.

The City continues to implement and facilitate proper management and disposal of used oil and household hazardous materials as described in Section 8.4.3 of the 2008 JURMP. During this Reporting Period, the City's contractor, Clean Harbors Environmental Services, continued to provide, curbside pick-up and drop-off of household hazardous waste for City of Del Mar residents. Table 6-1 below provides a summary of the HHW collection for FY2008/2009 as compared to the two previous reporting periods.

**Table 6-1: Household Hazardous Waste Program Summary Table**

| Fiscal Year | Pick-up Service Users | Drop-off Service Users | Total Users | Total Weight of HHW Disposal | Waste Oil Disposal |
|---|---|---|---|---|---|
| FY2008/2009 | 96 | 16 | 112 | 12,542 lbs | 6.9 gal* |
| FY2007/2008 | 130 | 34 | 164 | 11,698 lbs | 50 gal |
| FY2006/2007 | 104 | 31 | 135 | 12,845 lbs | ND |

** The specific amount of waste oil collected was not tracked by the City's contractors during the FY2008/2009 Reporting Period. This number represents participation by residents in the program, and is based on participation (0.001%) multiplied by the total amount collected (6,884 gal).*

The City of Del Mar also continued collaboration efforts with other Copermittees in the implementation of the Regional Residential Education Program during FY 2008/2009. The City of Del Mar provides funds for the Regional Residential Education Program in collaboration with the other Copermittees primarily through cost-sharing contributions to support the program activities. A complete discussion of the Regional Education Program can be found in the Regional Urban Runoff Management Program, submitted to the Regional Board under separate cover.

## 6.5 Oversight of Residential Areas and Activities

During FY 2008/2009 the City continued to utilize a combination of residential education, complaint investigation and code enforcement as methods for oversight of residential areas and activities as noted in the 2008 JURMP (Sections 8.3 and 8.4). The City evaluated the methods for oversight of residential areas and activities and deemed it complete and functional. Therefore, no changes were made or have been identified during this reporting period.

## 6.6 Enforcement Measures for Residential Areas and Activities

This section provides the number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 8.5 of the 2008 JURMP provides a description of the general process for applying enforcement for residential areas and activities urban runoff related violations. No modifications in Section 8.5 of the 2008 JURMP have been recorded during this Reporting Period.

All reports of alleged illegal discharges are investigated by the City, and appropriate is action taken. As indicated in Section 8.5 of the 2008 JURMP, education plays a significant role in the enforcement of stormwater regulations as it relates to residential activities. During the Reporting Period, 26 calls were received by the Clean Water Manager's Office regarding alleged illegal discharges from residential activities, not related to construction activities. The majority of these calls related to allowable discharges from foundation drains and other residential activities allowed under Section B.2 of the Municipal Permit and allowed under the City's Stormwater Management and Discharge Control Ordinance (Section 11.30 of the Del Mar Municipal Code). However, three (3) of these calls resulted in the issuance of Notices of Violation (NOVs) and Written Warnings to residents as a result of substantial over-irrigation or illegal power washing activities. As part of regular patrols of the City, the City's code enforcement staff identified nine (9) additional discharges which warranted the issuance of a formal Notice of Violation. Two (2) of these incidents resulted in discharges that warranted the issuance of Administration Citations with appropriate fines being levied. The remainder of the calls resulted in no further action after investigation, or a verbal warning issued. Table 6-2 below contains a summary of the residential complaints received, not related to construction operations, during this Reporting Period. Please note: enforcement actions related to Construction Activities in residential areas are documented in Section 3 of this Annual Report and are not duplicated here.

**Table 6-2: Residential Area Enforcement Action Summary**

| Date | Residential Address | Complaint | Action Taken |
|---|---|---|---|
| 06/15/2009 | 212 22nd Street | Residential Discharge: Power washing no reclamation or BMPs in place. | First offense. Resident stopped discharge immediately. Written Warning and NOV issued. |
| 09/16/2009 | Villa Cresta Condominiums HOA, 460 Camino Del Mar | Power washing operations with no BMPs or Water Capture – Pool area. Discharge to MS4. | Warning issued to property manager onsite, with direction to install the BMPs, and refrain from additional discharge. |
| 06/10/2009 | 215 10th Street | Discharge from over-Irrigation | First offense. Discharge stopped immediately. Written Warning and NOV issued. |
| 06/10/2009 | 403 10th Street | Discharge from over-Irrigation | First offense. Written Warning and NOV issued. |
| 06/10/2009 | 407 10th Street | Discharge from over-Irrigation | First offense. Written Warning and NOV issued. |
| 06/11/2009 | 524 Zuni Street | Discharge from over-Irrigation | First offense. Written Warning and NOV issued. |
| 06/15/2009 | 225 11th Street | Discharge from over-Irrigation | First offense. Written Warning and NOV issued. |
| 11/24/2008 | 1407 Ocean Front | Resident washing vehicles with no reclamation of water | First offense. Written Warning and NOV issued. |
| 11/12/2008 | 135 9th Street | Illegal discharge of chlorinated pool water | NOV and Administrative Citation issued for failure to dechlorinate pool water prior to discharge. $100.00 fine issued. |
| 7/15/2008 | 615 Stratford Court | Resident hosing down drive way, leaving hose to run unattended for more than 1 hour. | NOV and Administrative Citation issued for excessive discharge. $100.00 fine issued. |
| 7/29/2008 | 1425 Ocean Avenue | Building maintenance crew using hose to wash down walkways | Verbal warning issued, with order to implement BMPs to prevent discharge of sediment into MS4. On return, BMPs had been installed incorrectly. Written Warning and NOV issued to owner and management firm. |

## 6.7 Notable Activities

This section describes the notable activities conducted to manage urban runoff from residential areas and activities by the City. During this Reporting Period the City of Del Mar has begun working on coordinating outreach related to emergency water conservation activities with stormwater requirements. During FY2008/2009, staff from the Del Mar Public Works Department and Clean Water Program began jointly conducting outreach, including public workshops to the residents of Del Mar, to fully inform them of the requirements for water conservation and to prevent discharges, including low-flow or drip irrigation, metering, etc. In addition, during this Reporting Period, the Del Mar City Council established an Ad-Hoc Water Conservation Citizen's Advisory Committee to look at the City's ordinances and policies related to conservation practices City-wide. As part of this work, the Committee will be reviewing issues relating to over-irrigation, which may have a direct impact on the implementation of the Residential Component of the 2008 JURMP. City of Del Mar Water Conservation workshop(s) are scheduled for July 2009, and will be reported on in the next annual report.

## 6.8 Residential Component Effectiveness Assessment

A complete assessment of the effectiveness of the City's implementation of its 2008 JURMP, including the Residential Component, is included as Chapter 11 of this Annual Report.

## 6.9 Program Review and Modification

No modifications were made to the Residential Component of the 2008 JURMP during this Reporting Period.

# Section 7
# Illicit Discharge Detection and Elimination Component

This section of the Annual Report would describe all the notable activities conducted to manage illicit discharges and connections. In accordance with requirements of Addendum No. 2 to Order R9-2007-0001, which was adopted by the Regional Board on September 10, 2008, the City of Del Mar will submit the entire FY2008/2009 Illicit Discharge Detection and Elimination Component and its attachments no later than December 15, 2009.

This page intentionally left blank
for reproduction purposes.

# Section 8
# Education Component

This section provides a description of education efforts conducted by the City for each target community to satisfy the requirements under Section J.3.a.(3)(g) of the Permit.

## 8.1 Introduction

Section D.5 and J.3.a(g) of the Permit identifies a comprehensive educational program designed to measurably increase awareness within target populations with respect to urban runoff, its impacts on receiving waters, and the rules and regulations under local, State, and federal law. This section will provide any introductory information that the City of Del Mar has determined to be relevant to the implementation of the Education Component (JURMP Section 10) for the FY2008/2009 Reporting Period.

The City of Del Mar's 2008 JURMP outlined a reporting format that varies slightly from standardized regional format. The reason for the difference in the reporting format is the intent for this section to be consistent with the specified order of general and specific education requirements for the various target communities in the Permit. As a built-out coastal community, with extremely limited industrial discharges, the focus of education in the City of Del Mar is on the residential sector, food establishments, construction and re-development, and mobile services. A description of education efforts conducted during the reporting period for each target community is provided below.

## 8.2 Staff Training Element

This section will describe the education efforts conducted for municipal departments and personnel as required under Permit section J.3.a.(3)(g)iii. Section 10.3 of the 2008 JURMP described content, form and frequency of education efforts that will be conducted with municipal departments and personnel. No modifications in Section 10.3 of the 2008 JURMP have been recorded during this Reporting Period.

During this Reporting Period, the City of Del Mar held two (2) focused training sessions to educated field staff on job-specific stormwater principals and requirements, including the required "pre-wet season" training for construction inspections held for planning and code enforcement staff. 100% of the staff from the Planning and Community Development Department and the Public Works Department (including management) attended these trainings. The Clean Water Manager also arranged for attendance at the California Stormwater Quality Association (CASQA) Quarterly Meeting via Webcast for planners from the Planning and Community Development Department to review issues relating to Low Impact Design and Stormwater Harvesting and Re-use. As an ongoing part of staff training, the Clean Water Manager regularly attended the weekly Planning and Community Service Department Staff Meetings, where he provided feedback on project-specific stormwater issues and gave staff direction on JURMP and SUSMP implementation. In addition, the Clean Water Manager regularly attended the City's bi-weekly Executive Team Meetings to ensure that Departmental and City Management were kept abreast of issues related to program implementation. Lastly, the Clean Water Manager informally met with the City's Park Ranger, Community Service Officer(s), Code Enforcement Officer, and Code Enforcement Technician on a regular basis to provide clarification of stormwater BMP requirements under the Permit and the City's Stormwater Management and Discharge Control Ordinance.

During the Reporting Period, 75% of all field and technical staff, and 100% of all management staff received some training on stormwater topics, including specific focused training on Permit requirements.

In addition, public meetings and forums were utilized to ensure that the elected members of the City Council were educated on specific permit requirements and program elements they would encounter as part of the discretionary review and public hearing processes. Table 8-1, below provides a list of municipal staff trainings conducted during the Reporting Period.

**Table 8-1: Staff Education and Training Summary**

| Date. | How Conducted | Conducted By | Education Topic | Attendees |
|---|---|---|---|---|
| 09/30/2008 | Planning and Community Development Staff Training Session | Clean Water Manager | Overview of JURMP Construction Inspection Requirements | Departmental Staff & Line Management |
| 05/15/2009 | CASQA Quarterly Workshop Webcast | CASQA | LID: Stormwater Harvesting and Reuse | Planning & Community Development Staff |
| 06/11/2009 | Public Works Department Training Session | Clean Water Manager | Overview of JURMP Municipal Requirements, BMPs | Departmental Staff & Line Management |
| Weekly | Planning and Community Development Weekly Staff Meeting Discussions | Clean Water Manager | Project Specific Stormwater Discussion | Departmental Staff & Management |
| Bi-Weekly | Executive Meeting Discussions | Clean Water Manager | Misc. Program Issues Relating to Stormwater | Executive and Departmental Management |
| Ongoing | In-service/Field Training | Clean Water Manager | Stormwater Enforcement Issues | Community Service Officer(s); Park Ranger; Code Enforcement Officer; Code Enforcement Technician |

Additional training will be provided during the next Reporting Period to staff from Community Services Department and the City of Del Mar Fire Department to target 100% training for City field staff.

## 8.3 Educational Outreach Element

This section describes education efforts conducted for each target community by the City of Del Mar. Section 10.4 of the 2008 JURMP described the program which aimed at educating project applicants, developers, contractors, property owners, community planning groups, and other responsible parties. No modifications in Section 10.4 of the 2008 JURMP have been recorded during this Reporting Period.

### 8.3.1 Media Use in Outreach Activities

The City of Del Mar developed a 12 minute video in April 2008 in an effort to reach and educate a wide audience about the Clean Water Program and regulatory requirements. This video, entitled "The Del Mar Clean Water Program: Keeping the Water Clean for You!" highlights the municipal programs conducted by the City, and provides a complete overview of the Permit elements. The video continues to remain available "on-demand" on the City of Del Mar website (www.delmar.ca.us/cleanwater.htm), and was made into DVD's for distribution to public groups, residents, and schools. In addition, the video has been used for discussions at City Council Meetings and during staff training. During the previous Reporting Period, the Clean Water Video was reviewed more than 150 times via the City's Website. Table 8.3-1 below provides a breakdown by month on the number of times the video was viewed on the City's website during the FY2008/2009 Reporting Period.

### Table 8-2: Clean Water Video Webcast Summary

| Month | Number of Views |
|---|---|
| Jul-08 | 119 |
| Aug-08 | 15 |
| Sep-08 | 8 |
| Oct-08 | 0 |
| Nov-08 | 0 |
| Dec-08 | 0 |
| Jan-09 | 2 |
| Feb-09 | 6 |
| Mar-09 | 3 |
| Apr-09 | 0 |
| May-09 | 0 |
| Jun-09 | 1 |
| **TOTAL VIEWS** | **154** |

Another ongoing effort the City conducted to try to reach a wide audience, includes the live broadcast of all public workshops and hearings related to the City's Clean Water Program on Del Mar Television (DMTV). The public workshops and hearings are then replayed the next day in a standard timeslot. DMTV can be viewed on Time Warner Public Access Channel 24 within the 92014 zip code, and reaches approximately 2,000 subscribers in this area. Recently DMTV was made available to North County Time Warner Digital Cable customers, where it can now be viewed through Digital Cable on Time Warner Channel 130, which reaches approximately 65,000 subscribers. In addition, DMTV is streamed live 24 hours per day, 7 days per week on the DMTV website: www.delmartv.com. During FY2008/2009, the 2008 Clean Water Program Workshop held in May 2008 was replayed numerous times to ensure the public was adequately informed about the program and its responsibilities. Table 8-3 below provides a listing of all broadcasts of workshops related to the Clean Water Program.

### Table 8-3: FY2008/2009 Public Workshop & Hearing Broadcast Summary

| Date | Event Type | Presenter | Topic | Public Involvement Mechanism |
|---|---|---|---|---|
| 7/7/2008 | City Council Hearing | Staff | Clean Water Service Charge | Noticed Public Hearing |
| 7/26/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 7/31/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/2/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/3/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |

| Date | Event Type | Presenter | Topic | Public Involvement Mechanism |
|---|---|---|---|---|
| 8/6/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/7/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/9/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/10/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/14/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/14/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/16/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/20/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/23/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/25/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 8/30/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/1/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/3/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/6/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/10/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/13/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/15/2008 | Replay: Clean Water Workshop (Original Broadcast 5/14/2008) | Clean Water Manager and City Engineer | Overview of Clean Water Program | Rebroadcast of Noticed Public Workshop and Forum |
| 9/22/2008 | City Council Hearing | Staff | Jurisdictional Urban Runoff Management Program (JURMP) Annual Report | Noticed Public Hearing |

| Date | Event Type | Presenter | Topic | Public Involvement Mechanism |
|---|---|---|---|---|
| 9/22/2008 | City Council Hearing | Staff | Ordinance Change: Water Conservation and Emergency Water Management | Noticed Public Hearing |
| 9/22/2008 | City Council Hearing | Staff | Clean Water Service Charge Mail Ballot Proceeding | Noticed Public Hearing |
| 11/10/2008 | City Council Hearing | Staff | Statewide Beach Monitoring Program. | Noticed Public Hearing |
| 11/10/2008 | City Council Hearing | Staff | Establishment of an Ad Hoc Water Conservation Citizens' Advisory Committee. | Noticed Public Hearing |
| 11/17/2008 | City Council Hearing | Staff | Establishment of an Ad Hoc Water Conservation Citizens' Advisory Committee | Noticed Public Hearing |
| 12/15/2008 | City Council Hearing | Staff | 2009 Street, Drainage and Water Improvements Project. | Noticed Public Hearing |
| 4/6/2009 | City Council Hearing | Staff | Membership and Makeup of the Ad Hoc Water Conservation Citizens' Advisory Committee | Noticed Public Hearing |
| 4/20/2009 | City Council Hearing | Staff | Appointments to the Ad Hoc Water Conservation Citizens' Advisory Committee. | Noticed Public Hearing |
| 5/4/2009 | City Council Hearing | Staff | Contract with Mikhail Ogawa Engineering to provide as needed inspection services for the Clean Water Program | Noticed Public Hearing |
| 5/20/2009 | City Council Hearing | Staff | Overview of Proposed Two Year Budget for Fiscal Years 2009/2010 and 2010/2011 | Noticed Public Hearing |
| 5/21/2009 | City Council Hearing | Staff | City Budget Workshop (continued), including presentation on Clean Water Program | Noticed Public Hearing |
| 6/8/2009 | City Council Hearing | Staff | Grant Application to the California Department of Conservation to Assist with Litter Cleanup and Outreach Activities as Part of the Clean Water Program. | Noticed Public Hearing |
| 6/22/2009 | City Council Hearing | Staff | Declaration of Stage 2 – Drought Alert, including implementation of water management measures | Noticed Public Hearing |

In addition to the televised and webcast workshops and hearings, DMTV regularly broadcasts public service announcements (PSAs) related to stormwater. Shorter PSAs, including ThinkBlue San Diego PSA's produced by the City of San Diego are aired in-between scheduled programs an average of 2-3 times per day, 365 days per year. Table 8-4 below provides a summary of the PSAs aired during FY2008/2009 on DelMar TV.

**Table 8-4: FY2008/2009 Clean Water PSA Summary**

| Program or PSA | Source | Number of Airings |
|---|---|---|
| City of Del Mar's Clean Water Program: Keeping the Water Clean for You! | Del Mar Clean Water Program | 40 |
| PSA: Wild, Wild Wet West | Ventura County Stormwater Program | 7 |
| PSA: It! Terror from the Stormdrain | Ventura County Stormwater Program | 7 |
| PSA: Ventura's Green | Ventura County Stormwater Program | 4 |
| PSA: Save It for Me | Ventura County Stormwater Program | 16 |
| PSA: Razzle Dazzle | Ventura County Stormwater Program | 10 |
| Clean Water Tip and Information Cards | DMTV Community Bulletin Board | Airs daily every 5 minutes between 12pm-3pm & 12am-9am |
| ThinkBlue San Diego! (Various) | City of San Diego Stormwater Program | Airs daily 2-3 times per day |

As an additional education and outreach tool, the City of Del Mar began a media campaign through the local newspaper consisting of articles by the Mayor focusing on the program and the new requirements. These articles began appearing in June 2008. During FY2008/2009, two (2) articles appeared in the Del Mar Times on topics related to the City's Clean Water Program. The first was on August 14, 2009 and focused on the requirements of the Permit and the need for adequate funding. The second appeared on April 9, 2009, and looked at water conservation in general, and discussed ways to prevent water quality impacts while saving water. Both articles appeared in print and on the web.

### 8.3.2 Additional Educational Outreach by Target Audience

As indicated above, the City of Del Mar made a concerted effort to reach out to the residents and the general public regarding the Clean Water program through media and public workshops. Table 8-5 below provides a summary description of the education efforts conducted to reach target audiences including the general public, residents, school children and commercial and mobile business owners and operators.

**Table 8-5: Educational and Outreach Efforts by Target Audience**

| Date. | Activity | Conducted By | Education Topic | Target Audience |
|---|---|---|---|---|
| 5/3/2009 | Outreach Booth: Fiesta de Los Peñasquitos | Staff and Regional Copermittees | General Watershed and Stormwater Information | General Public, Residents, and School-aged Children |
| 6/20/2009 | Outreach Booth: San Diego County Fair Flower and Garden Pavilion | Staff and Regional Copermittees | General Watershed and Stormwater Information | General Public, Residents, and School-aged Children |
| 4/19/2009 | Outreach Booth: San Dieguito Lagoon Day | Staff and Community Volunteers | General Watershed Information | General Public, Residents, and School-aged Children |
| May 2009 | Outreach as Part of Commercial Inspections | Staff and Consultants | Commercial Specific BMPs and Regulations | "High Risk" Commercial Operators |

| Date. | Activity | Conducted By | Education Topic | Target Audience |
|---|---|---|---|---|
| Ongoing | Outreach to Mobile Businesses | Staff | Mobile Business Specific BMPs and Regulations | "High Risk" Commercial Operators – Mobile |

## 8.4 Outreach Component Effectiveness Assessment

A complete assessment of the effectiveness of the City's implementation of its 2008 JURMP, including the Education Component, is included as Chapter 11 of this Annual Report.

## 8.5 Program Review and Modification

Section 10.11 of 2008 JURMP described proposed or required modifications to the program after each annual assessment of the Education Component's effectiveness. While no specific modifications in Section 10.11 of the 2008 JURMP have been recorded during this Reporting Period, staff has identified several areas for specific education and outreach focus for the upcoming FY2009/2010, based on a review of program activities conducted during this Reporting Period, the extent of which will be dependent on funding and staff availability. Details on the implementation of these items will be discussed in the following Annual Report. Table 8-6 below contains a list of focused education and outreach identified for FY2009/2010.

**Table 8-6: Focused Outreach by Target Audience for FY2009/2010**

| Targeted Audience | Format of Outreach | Education Topic |
|---|---|---|
| Community Services Department Staff: Life Guards & Special Events Staff | Staff Training Session/Online Media | Stormwater and Job Related Water Quality Information (JURMP Related) |
| Commercial Businesses: Mobile Operators | Continued Direct One-on-One Training of City-licensed mobile operators, with distribution of written materials and guidance | JURMP and Focused BMP Requirements for Mobile Businesses |
| Commercial Business: Restaurants | Public workshops and one-on-one staff training for local restaurateurs in cooperation with Del Mar Village Association (DMVA) | Requirements for Restaurants, including staff training and documentation |
| Residential Community | Public Workshops and Flyers/Bill Inserts | Water conservation and its effect on water quality pollution (i.e. adjusting irrigation sprays, use of hose to clean impermeable surfaces, etc.) |

# Section 9
# Public Participation Component

This section of the JURMP Annual Report provides a description of public participation efforts conducted by the City, and the steps that were conducted to include public participation in the implementation of City of Del Mar's JURMP.

## 9.1 Local Participation Element

During FY2008/2009 the City continued to encourage and provide multiple opportunities for, public participation in all aspects of its Clean Water Program.

### 9.1.1 General Public Feedback Mechanisms

The City continues to maintain an active website (www.delmar.ca.us) which provides the public with opportunities to contact City staff directly, and find information regarding any of the City's programs. The Clean Water Program has its own webpage that is updated as needed (http://www.delmar.ca.us/Government/dept/Pages/CleanWater.aspx) and allows the public to contact the Clean Water Manager and Code Enforcement Officer to report potential violations of the City's Stormwater Management and Discharge Control Ordinance (Section 11.30 of the Del Mar Municipal Code). The webpage also allows the public to ask questions regarding water use and runoff, and download information on the City's JURMP, and contains links to the Citizen's Complaint Form, the City's various BMP Manuals, the City's Clean Water video, and the Regional Board's website and the Permit itself.

The City also continues to maintain a specific e-mailbox and hotline for reporting issues. This email address (CleanWater@delmar.ca.us) and hotline (858) 755-9313 x172 are directly answered by the City's Clean Water Manager. Every attempt is made to respond to any inquiry by the close of the next business day. When inquiries are made from areas within the 92014 zip code, but outside the City's jurisdiction (i.e. the "Del Mar Heights" portion of the City of San Diego), City of Del Mar staff attempt to respond to the complaint directly, and notify City of San Diego staff for follow-up.

The City continues to provide opportunities for the general public to become involved with the implementation of the JURMP, by working with the community in reducing pollutant discharge through recycling opportunities, eliminating off-site drainage, and other activities aimed at protecting water quality through the reduction of water waste.

### 9.1.2 Formal Public Hearings and Workshops

The general public is given the opportunity to provide testimony and provide feedback on issues related to the Clean Water Program at regular meetings and workshops held by the Del Mar City Council, the Del Mar Planning Commission, and other City Committees. This can include public testimony on development planning and capital improvement projects relating to the project-specific implementation of stormwater controls. All testimony, concerns, and input are then referred to staff for review, comment, and action as appropriate.

During the FY2008/2009 Reporting Period, the Del Mar City Council held 40 public meetings (including two (2) public workshops) in which the general public was given the opportunity to provide feedback on the Clean Water Program, or any topics they wished to bring before the elected officials of the City. During the Reporting Period, there were sixteen (16) specific agenda items relating to the Clean Water Program and/or the implementation of the JURMP, not including development project-specific items. To

reach the widest audience possible, these hearings and workshops are streamed live over the internet, broadcast live on DelMarTV (Time Warner Cable Channels 19 & 24), replayed in their entirety the day following the hearing on DelMarTV, and available on-demand through the City's website. Table 9-1 below provides a list of the specific City Council Agenda items relating to the Clean Water Program and JURMP for the FY2008/2009 Reporting Period.

**Table 9-1: FY2008/2009 Del Mar City Council Agenda Items Relating to the Clean Water Program**

| Hearing Date | Agenda Item | Subject |
|---|---|---|
| 7/7/2008 | Item 10 | Majority protest public hearing regarding a proposed Clean Water Service Charge |
| 9/22/2008 | Item 07 | Jurisdictional Urban Runoff Management Program (JURMP) Annual Report Submittals to the San Diego Regional Water Quality Control Board. |
| 9/22/2008 | Item 17 | An Ordinance of the City of Del Mar, California, amending the Del Mar Municipal Code regarding Water Conservation and Emergency Water Management, Sections 21.70.110 through 21.70.140 and deleting Sections 21.70.150 through 21.70.170. |
| 9/22/2008 | Item 18 | Results of the Clean Water Service Charge Mail Ballot Proceeding for the existing Clean Water Service Charge Rate Structure and the proposed Fiscal Year 2009-2010 Clean Water Service Charge Rate Structure. |
| 11/10/2008 | Item 11 | Letter to the State Water Resources Control Board in support of restoring the funding for the statewide beach monitoring program. |
| 11/10/2008 | Item 13 | Establishment of an Ad Hoc Water Conservation Citizens' Advisory Committee. |
| 11/17/2008 | Item 07 | Resolution establishing an Ad Hoc Water Conservation Citizens' Advisory Committee for the review of the ordinances. |
| 12/15/2008 | Item 08 | 2009 Street, Drainage and Water Improvements Project. |
| 4/6/2009 | Item 09 | Membership and Makeup of the Ad Hoc Water Conservation Citizens' Advisory Committee |
| 4/20/2009 | Item 06 | Appointments to the Ad Hoc Water Conservation Citizens' Advisory Committee. |
| 5/4/2009 | Item 09 | Contract with Mikhail Ogawa Engineering to provide as needed inspection services for the Clean Water Program in a not-to-exceed amount of $6,500. |
| 5/20/2009 | Item 02 | Overview of Proposed Two Year Budget for Fiscal Years 2009/2010 and 2010/2011 |
| 5/21/2009 | Item 01 | City Budget Workshop (continued), including presentation on Clean Water Program |
| 6/8/2009 | Item 09 | Grant Application to the California Department of Conservation to Assist with Litter Cleanup and Outreach Activities as Part of the Clean Water Program. |
| 6/22/2009 | Item 06 | Authorization for the City Manager to negotiate Professional Engineering Services contracts to provide City Engineering and As-Needed Engineering Services. |
| 6/22/2009 | Item 17 | Declaration of Stage 2 – Drought Alert, including implementation of water management measures |

In November 2008, the Del Mar City Council established the Ad-Hoc Citizen's Water Conservation Citizen's Advisory Committee, staffed by the City's Clean Water Manager. The Committee is tasked specifically with the review of the City's ordinances relating to water conservation and landscape planning. This includes reviewing the City's Stormwater Management and Discharge Control Ordinance. The Committee met biweekly, beginning in March 2009, and is actively looking at issues such as resident

education and outreach with regard to overwatering and irrigation runoff, and water conservation techniques which will have a direct impact on urban runoff.

### 9.1.3 Staff as Feedback Mechanism

As indicated in the 2008 JURMP, the City of Del Mar believes that City Staff are the public at work. More importantly, field staff are the eyes and ears of the City, interacting with the general public during their day-to-day work. Staff is continually encouraged to report violations and provide feedback to the City's Clean Water Manager on the implementation of the JURMP, and can provide valuable information on which systems and programs are working and suggestions on improving the programs. Often, it is field staff that identifies potential issues and/or violations and reports them to the Clean Water Manager, enabling program staff to address it in a prompt manner. During FY 2008/2009 the City continued to utilize and encourage staff feedback and reporting of potential violations.

## 9.2 Regional Participation Element

The City continues to participate and facilitate public participation through regional workgroups and public outreach such as Project Clean Water, the Regional Management Meetings, and the Regional Stormwater Hotline. Staff from the City utilized the Regional Hotline on at least three (3) separate occasions during this Reporting Period to provide information to the City of San Diego on stormwater runoff in the MS4 system outside of the City of Del Mar's jurisdictional boundaries. In addition, the City regularly refers callers from the "Del Mar Heights" portion of the City of San Diego and other areas within the 92014 zip code, but outside of the City of Del Mar jurisdictional boundaries, to the regional stormwater hotlines. In addition, when City of Del Mar residents use the Regional Stormwater Hotline to report problems or ask questions, City of San Diego and County of San Diego staff manning the hotlines are able to promptly refer the issues to the Clean Water Manager for follow-up.

## 9.3 Program Review and Modification

No modifications in Section 11 of the 2008 JURMP were recorded during the FY2008/2009 Reporting Period.

This page intentionally left blank
for reproduction purposes.

# Section 10
# Fiscal Analysis Component

Section 12 of 2008 JURMP provided a strategy for effectively conducting a fiscal analysis of the Program in its entirety. The fiscal analysis evaluated in 2008 JURMP included the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Program. No modifications in Section 12 of the 2008 JURMP were made during this Reporting Period. On January 29, 2009, the San Diego Municipal Copermittees produced their final "Standardized Fiscal Method and Format" which will allow the City of Del Mar and the other Copermittees to perform the review and annual reporting as required in Permit Section G starting in January 31, 2010. This section provides a fiscal analysis of the City's urban runoff management programs which meets all requirements of the Permit.

The City of Del Mar Clean Water Program is a multi-departmental program, funded as an enterprise fund in the City's Annual Budget. Enterprise funds account for operations that are financed and operated in a manner similar to private businesses, with the costs of providing the services recovered largely through user fees. Fund 55 (The Clean Water Fund), is one of three (3) enterprise funds in the City's budget, and was added to the City's budget in FY2003/2004 to account for the mandated costs of the City's responsibilities Municipal Permit.

## 10.1 Clean Water Program Budget

For the FY2008/2009 Reporting Period, the final amended budget for Fund 55 totaled $511,781.00, or approximately 4.5% of the total City of Del Mar budget for General Operations and Maintenance of $11.4 million. Table 10-1 below provides a breakdown of program budget by major budget category for FY2008/2009. Actual program expenditures during FY2008/2009 totaled $441,678.90 for NPDES related-activities. Appendix 10-A contains a complete report of the final adjusted budget and expenditures for FY2008/2009.

The City of Del Mar Operating and Capital Improvement Budgets for FY2009/2010 and FY2010/2011 were presented to the Del Mar City Council in a series of public workshops held in May and June 2009, and was adopted by the City Council at a public hearing held on June 22, 2009. At that time, the Del Mar Clean Water Program budget was adopted as part of the City Manager's Proposed Budget. For FY2009/2010, the adopted budget for the City's Clean Water Program totals $467,258, approximately 4.2% of the total City of Del Mar budget for General Operations and Maintenance of $11.1M. For FY2010/2011, the adopted budget increases slightly to $467,258, approximately 4.2% total City of Del Mar budget for General Operations and Maintenance of $11.0M. Appendix 10-B presents the Final Adopted budgets for FY2009/2010 & FY2010/ 2011, with a line-item breakdown of the budget components.

**Table 10-1: Budget Summary – Clean Water Fund 55**

| Fund Account | | Amended Budget FY2008/2009 | Adopted Budget FY2009/2010 | Description/Comments |
|---|---|---|---|---|
| 55-5220 | Clean Water Engineering | $85,500.00 | $82,200.00 | Engineering contractual services including: Program management (FY2008) water quality testing, development and distribution of educational materials, fees to agencies (FY2008), and engineering services. |
| 55-5530 | Clean Water Planning | $37,533.00 | $25,623.00 | Active enforcement of Clean water regulations including project plan review, permitting, construction monitoring and plan review of BMPs. |
| 55-5536 | Clean Water Code Enforcement | $30,984.00 | $29,657.00 | Active in-field enforcement clean water regulations, including response to resident complaints |
| 55-5539 | Clean Water Program Management | $191,242.00 | $196,050.00 | Beginning mid-year FY2008, all program management and reporting activities, fees to agencies, and interaction with regional Copermittee groups. |
| 55-5840 | Public Works (General) | $19,111.00 | $16,527.00 | Provides for administration and general support for all clean water programs for property and facilities, including supervision of maintenance staff. |
| 55-5841 | Flood Control & Drainage | $4,985.00 | $4,351.00 | Provides for necessary monitoring, water quality testing, and labor associated with program requirements when Flood Control pumps are operated. |
| 55-5845 | Street Maintenance | $100,173.00 | $81,699.00 | Provides for a portion of sidewalk and street cleaning including street sweeping and storm drain maintenance within the City limits of Del Mar. Also covers costs with testing, recording contents, and recovering all deposited materials that otherwise would discharge to the beach, river, or lagoon. |
| 55-5847 | Street Landscaping | $19,041.00 | $18,207.00 | Provides for landscape supervision, documentation, and controls for the Clean Water aspects of the street landscaping for medians, islands, street ends, and other street related areas. The program also provides for improved litter control, pesticide and fertilization monitoring and reporting. |
| 55-5848 | Park Maintenance | $23,212.00 | $12,944.00 | Provides for park maintenance supervision, documentation, and controls for the Clean Water aspects of the landscaping for parks and open space areas. The program also provides for improved litter control, pesticide and fertilization monitoring and reporting. |
| **Total Clean Water Program Budget – Fund 55** | | $439,009.00 | $467,258.00 | |

## 10.2 Funding Sources

To ensure adequate funding for the Clean Water Program, the City uses a combination of user fees, grant funding, and general fund monies. This section identifies the three (3) sources of funding for the Clean Water Program: (1) The Clean Water Service Charge; (2) City of Del Mar General Fund; and (3) grant monies and community partnerships, and provides a discussion of each of these funding sources.

### 10.2.1 Clean Water Service Charge

In 2003, the City of Del Mar City Council created and adopted a user fee, called the Clean Water Service Charge, to offset the costs of the program. Initially, the rate was adopted to collect $100,000.00 of the estimated $300,000.00 for the program, with an escalator to achieve full cost recovery by 2009. Mid-way through the five-year schedule, on July 24, 2006, the California Supreme Court published a decision in the case of Bighorn-Desert View Water Agency v. Verjil (2006) 39 Cal. 4th 205, which held that consumption-based rates such as water and sewer rates are subject to the notice and hearing requirements of California Constitution, Article XIIID, Section 6 (commonly known as "Proposition 218"). Therefore, on January 22, 2007 and February 5, 2007, the Del Mar City Council held public hearings to receive written protests to comply with Proposition 218. No majority protest was received; and the Council ratified the previously approved five-year rate schedule, including the City's Clean Water Service Charge. However, the adopted rate increases did not account for the actual increases in the costs associated program requirements.

As an additional measure to obtain voter approval of the five-year rate schedule for the City's Clean Water Service Charge, the Council directed staff on April 2, 2007 to start the process to perform a mail ballot election procedure. During the process of researching the mail ballot election procedures and the current rates, it became apparent that the process would immediately need to be repeated to set the Fiscal Year 2009-2010 rates and charges, since the current five-year rate schedule was due to expire in June of 2009. Due to the additional costs incurred in complying with the new requirements of the 2007 Permit, increases to the Clean Water Service Charge were proposed, including an annual 5% rate escalator.

All monies appropriated as part of the Clean Water Service Charge are directly identified for the Clean Water Program, and pursuant to Del Mar Municipal Code, may not be used by the City for any other purpose.

During the FY2008/2009 Reporting Period, in compliance with Proposition 218, both the majority protest hearing and mail ballot process were conducted for the proposed increases. Both the ratification of the existing rate structure (required by Proposition 218), and the new rates, including the rate escalator, passed by more than 62%. As a result of the passage of the Clean Water Service Charge, the City will continue to have a secure funding source for the Clean Water Program, outside of general fund monies. Based on current water allocations for the City of Del Mar, the projected revenues from the Clean Water Service Fee will be $459,579.40 for FY2009/2010 and $471,068.89 in FY2010/2011.

### 10.2.2 General Fund Monies

The City of Del Mar General Fund accounts for all the revenues received by the City that are not designated for a specific purpose either by the City Council, State or Federal requirements, or special requirements such as those associated with bond debt. The City monitors the General Fund dollars most closely because these revenues fund the backbone of City government. The major sources of General Fund revenues include property tax, sales tax, transient occupancy tax, and parking fees and fines.

During FY2008/2009, $163,385, or approximately 31% of the program budget, was funded out of General Fund monies. With the passage of the Clean Water Service Fee, the amount of General Fund monies used

are expected to be greatly reduced beginning in FY2009/2010, and freed up for other services, including special projects. However, the City of Del Mar has committed the necessary funds to meet all permit requirements, should the Clean Water Service Fee not cover all costs of the program.

### 10.2.3 Grant Monies and Community Partnerships

In an attempt to find alternatives to the use of General Fund monies to fund the Clean Water Program, the City of Del Mar continues to look for appropriate grants from the State of California and the Federal Government to assist in funding program elements and special projects. As part of the California Beverage Container Recycling and Litter Reduction Act, the California Department of Conservation (DOC) distributes a portion of the California Refund Value (CRV) monies collected on sales of aluminum, glass, plastic and bi-metal beverage containers to jurisdictions to assist in programs aimed at beverage container recycling and litter cleanup activities. Incorporated cities and counties and unincorporated counties in California, as identified by the California Department of Finance, are eligible to receive funding under this program, with funding amounts dependent on population.

In FY2008/2009, the City applied for, and received, a DOC grant for $5,000 under this program (the maximum amount the City was eligible for). These funds were earmarked for litter and beach cleanup activities, and used to providing doggie cleanup bags ("mutt mitt stations") at various locations throughout the city's parks and beaches. In addition, a portion of the funds were used to maintain/purchase a beach cleaner to help reduce any litter going into the ocean and the storm drain system.

For FY2009/2010, the DOC has continued the funding of this program. The City again applied for these funds to assist with on-going litter and beach clean-ups throughout the City's parks and beaches, reducing the litter going into the ocean and the storm drain system. The funds have been earmarked for use in the funding education and outreach to pet owners, the purchase of portable "mutt mitt" dispensers and the printing of tip cards for distribution, and beach cleanups. The City was notified in June that the City's grant application had once again been approved, and $5,000 in funding would be received for FY2009/2010.

In addition to grant monies, the City of Del Mar is actively developing community partnerships with community groups and non-profit organizations to identify private funding sources and assistance to offset costs of implementing special projects and education/outreach activities as part of the program. The City will continue this strategy in an effort to fund projects and opportunities which arise outside of the normal permit-required activities that have a direct benefit on water quality.

# Section 11
# Effectiveness Assessment

## 11.1 Introduction

The City of Del Mar conducts an annual effectiveness assessment of its JURMP implementation. At a minimum, and as described in Permit Section I.1, this annual effectiveness assessment includes:

1. Specific assessment of the effectiveness of each of the following:
   - Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;
   - Implementation of each major component of the JURMP (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and
   - Implementation of the JURMP as a whole.
2. Identification of, and the use of measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed above.
3. The use of outcome levels 1-6 (as defined in Attachment C of the Permit) to assess the effectiveness of each of the items listed in Section 1 above, where applicable and feasible.
4. The use of monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section 1 above, where applicable and feasible.
5. The use of Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible (as defined in Attachment C of the Permit)

This component evaluates the progress of the City's program towards the overall goal of reducing pollutants associated with stormwater and urban runoff. The objectives of the assessment component are to assess the performance of the City's JURMP, assess the effectiveness of improving receiving water quality, and identify changes that will increase the effectiveness of the program.

In the past, the RWQCB has noted deficiencies in the effectiveness assessment strategy for nearly all the Copermittees in the region; therefore a regional effort was started and continues to improve upon standardizing a process of effectiveness assessment. The Copermittees continued to meet during the permit cycle to develop a more appropriate strategy.

A guidance document was prepared by the Copermittees and submitted to the RWQCB on October 16, 2003, titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs". This guideline presents a comprehensive assessment strategy that initially focuses on programmatic assessments and moves toward water quality-based assessments to determine program effectiveness. More specifically, it addresses six levels of assessment:

1. Compliance with Activity-based Permit Requirements
2. Changes in Knowledge/Awareness
3. Behavioral Changes
4. Load Reductions
5. Changes in Discharge Quality

6. Changes in Receiving Water Quality

The City has begun adopting this assessment strategy and will more fully adopt it as the regional program strategy becomes available. The levels of assessment have been limited to four rather than six this year because there is limited data available to assess all six levels on a jurisdictional basis. The City believes that levels 5 & 6 are more appropriately assessed at the watershed level.

The first level is Level 1: Compliance with Activity-based Permit Requirements, and includes the assessment tables from the JURMP. Level 2 and 3 are combined and discuss the program strengths (accomplishment and outcomes) for each component. Level 4: Load Reductions, is partially addressed this year. Level 5 and 6 are combined to present a water quality assessment and at this time are addressed only at a regional level. The strategy uses both quantitative and qualitative measures of program effectiveness.

## 11.2 Effectiveness Assessment Results

### 11.2.1 Compliance with Activity-Based Permit Requirements (Level 1)

The table in Appendix 11-A summarizes the activities that have been tracked by the program to demonstrate compliance with the Permit and the City's JURMP.

### 11.2.2 Changes in Knowledge/Awareness and Behavioral Changes (Levels 2 & 3)

The City has begun the process of collecting information necessary to gauge the changes in knowledge and awareness with respect to urban runoff. The City hopes to assess the changes in knowledge and awareness through questions posed to commercial and industrial dischargers. Any results of the assessment will be included in future JURMP Annual Reports.

In general, City staff have found that knowledge and awareness with respect to urban runoff at construction activities is relatively high. Therefore, the City intends to provide more of a focus on BMP implementation rather than awareness for construction activities in order to utilize its resources and staff efficiently.

### 11.2.3 Load Reductions (Level 4)

Due to the lack of regionally standardized accurate load reduction estimating tools and methods, only limited load reductions have been assessed for the program. At this time the City does not have the means to accomplish load reductions beyond the collected information directly related to physical removal of materials (e.g., debris, sediments, etc.). As regional standards are developed, the City will participate in collection of standardized information and perform further load reduction estimates. The load reduction information available is summarized in the table in Appendix 11-A.

### 11.2.4 Significant Activities Assessment

In Table 11-1 below, the identified significant activities are listed along with the measured outcomes from FY 2008/2009 implementation. The City's assessment demonstrates effectiveness for all significant activities

.

**Table 11-1: Effectiveness Assessment – Significant Activities, Methods, Measures and Targeted Outcomes**

| Component | Significant Activity | Method | Measure | Level | Targeted Outcome | Result | Program Effective? YES/NO | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | Compliance Level 1 | Knowledge Change Level 2 | Behavior Change Level 3 | Load Reduction Level 4 |
| Land Development | 1. Post construction BMP inspection: inspections performed/inspections required. | Confirmation | Performed /Required | Compliance (1) | 100% | Not applicable yet | Yes | N/A | N/A | N/A |
| Construction | 1. Were all required inspections performed during the wet season? | Confirmation | Performed /Required | Compliance (1) | 100% | 100% | Yes | N/A | N/A | N/A |
| Municipal | 1. Were all required inspections performed during the fiscal year? | Confirmation | Performed /Required | Compliance (1) | 100% | 100% | Yes | N/A | N/A | Yes |
| | 2. Were all required catch basin inspections performed? | Confirmation | Performed /Required | Compliance (1) | 100% | 100% | | | | |
| | 3. How much debris was removed from the MS4 prior to the rainy season? | Direct Measure | Tons | Load Reduction (4) | N/A | 23.4 | | | | |
| | 4. How much debris was removed from street sweeping activities? | Direct Measure | Tons | Load Reduction (4) | N/A | 125.75 | | | | |
| | 5. Were all special events applications reviewed for potential coverage under City requirements? | Confirmation | # Reviewed /Total | Compliance (1) | 100% | 100% | | | | |

| Component | Significant Activity | Method | Measure | Level | Targeted Outcome | Result | Program Effective? YES/NO | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | Compliance Level 1 | Knowledge Change Level 2 | Behavior Change Level 3 | Load Reduction Level 4 |
| Commercial-Industrial | 1. Were all inspections performed as required? | Confirmation | Performed /Required | Compliance (1) | 100% | 100% | Yes | No | No | N/A |
| IDDE | 1. Were all urban runoff related complaints responded to and resolved? | Confirmation | # Responses /Total Complaints | Compliance (1) | 100% | 100% | Yes | N/A | N/A | N/A |
| Education | 1. Were changes in knowledge demonstrated or verified (i.e. quizzes?) | Analysis | Average Score Before/After | Knowledge Change (2) | %Change | N/A | N/A at this time | N/A at this time | N/A | N/A at this time |

## Appendix 11-A: Effectiveness Assessment Permit Component Table

| | No. | Compliance Item | Outcome Level | Assessment Method | Confirmation and/or result | Section / Appendix |
|---|---|---|---|---|---|---|
| Development Planning | 1 | A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements. | 1 | Confirmation | No Changes | 2.2 |
| | 2 | Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked. | 1 | Confirmation | Confirmed | 2.4.1 |
| | 3 | A listing of the development projects to which SUSMP requirements were applied. | 1 | Confirmation | See Appendix 2-A for listing | |
| | 4 | Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked. | 1 | Confirmation | Confirmed | 2.4.1 |
| | 5 | At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs. | 1 | Confirmation | See Appendix 2-B for example | |
| | 6 | A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible. | 1 | Confirmation | None | |
| | 7 | An updated treatment control BMP inventory. | 1 | Confirmation | See Appendix 2-C | |
| | 8 | The number of treatment control BMPs inspected, including a summary of inspection results and findings. | 1 | Confirmation | 0 - Not Applicable | 2.4.1 |
| | 9 | A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings. | 1 | Confirmation | See Section 2.4.1 | |
| | 10 | Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked. | 1 | Confirmation | Confirmed | 2.4.1 |
| | 11 | A listing of any projects which received a SUSMP waiver. | 1 | Confirmation | No Waiver Program In Place - No waivers issued | |
| | 12 | A description of implementation of any SUSMP waiver mitigation program. | 1 | Confirmation | | |
| | 13 | A description of Hydromodification Management Plan (HMP) development collaboration and participation. | 1 | Confirmation | See Section 2.4.1 | |
| | 14 | A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented. | 1 | Confirmation | Since the interim HMP requirements took effect, there have been no development projects that trigger HMP requirements | |
| | 15 | A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements. | 1 | Confirmation | | |
| | 16 | A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project. | 1 | Confirmation | | |
| | 17 | The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 1 | Confirmation / Tabulation | None | 2.4.1 |
| | 18 | A description of notable activities conducted to manage urban runoff from development projects | 1 | Confirmation | None | 2.4.2 |

| | No. | Compliance Item | Outcome Level | Assessment Method | Confirmation and/or result | Section / Appendix |
|---|---|---|---|---|---|---|
| Construction | 1 | Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked. | 1 | Confirmation | Confirmed | 3.5 |
| | 2 | Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed. | 1 | Confirmation | Confirmed | 3.2 |
| | 3 | A description of modifications made to the construction and grading ordinances and approval processes. | 1 | Confirmation | Completed changes in FY 2008 | 3.3 |
| | 4 | Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites. | 1 | Confirmation | Confirmed | 3.4 |
| | 5 | Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites. | 1 | Confirmation | Since the maximum disturbed area and advanced treatment requirements took effect, no projects have triggered these requirements | 3.5.1 |
| | 6 | A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites. | 1 | Confirmation | | 3.5.2 |
| | 7 | For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites. | 1 & 3 | Confirmation / Tabulation / Inspection | See Section 3.5.3 and Appendix 3-C | |
| | 8 | A description of the general results of the inspections. | 1 | Confirmation | Confirmed | 3.5.3 |
| | 9 | Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance. | 1 | Confirmation | Confirmed | 3.5.3 |
| | 10 | The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 1 | Confirmation / Tabulation | NOV = 8<br>Citation = 4 | 3.5.3 |
| | 11 | A description of notable activities conducted to manage urban runoff from construction sites. | 1 | Confirmation | 3.5.4 | |

# Section 12
# Special Investigations

This section provides a description of special investigations conducted, or participated in, by the City of Del Mar during the FY2008/2009 Reporting Period. Special investigations may include water quality studies, BMP pilot studies, surveys and other data collection activities to better understand the program's operations and effectiveness. Special investigations may also be undertaken as requirements under other mandates like 13267 letters, TMDLs, etc. and implemented either solely by the City or in collaboration with other agencies or non-profit organizations. Special studies may be funded by grants or from the City's Clean Water Fund. Regardless, of the funding sources, these investigations, projects or studies may be scheduled in advance or be undertaken as the need arises during the course of the reporting year.

During this Reporting Period, the City of Del Mar participated in the development process for the Los Peñasquitos Sediment Total Maximum Daily Load (TMDL), and the Residential Area Runoff Assessment Program conducted by Weston Solutions, Inc. on behalf of the Regional Copermittee Monitoring Workgroup, as part of the Regional Source Identification Monitoring Residential Area Runoff Assessment. This Section provides a brief discussion of the City's involvement in these programs. No other special investigations took place during the Reporting Period.

## 12.1 Lagoon TMDL Studies: Los Peñasquitos Lagoon Sediment TMDL

During the FY2008/2009 Reporting Period, the City actively participated in the Los Peñasquitos Lagoon TMDL development by taking part in both the Investigative Order No. R9-2006-076 process and the Regional Board driven coordination process.

The City participated in the Investigative Order process by attending stakeholder and group management meetings, contributing funding under the cost-share agreement, and providing technical comments to various documents prepared for submittal to the Regional Board. The primary work product developed by the Copermittees was the Los Peñasquitos Lagoon TMDL-Watershed Phase I Sediment Source Identification Study (Weston Solutions). This document was completed in June 2009. The report works in conjunction with the previously published 2007-2008 TMDL Monitoring for Sedimentation/Siltation in the Los Peñasquitos Lagoon Report, also prepared by Weston Solutions. These reports have been provided to the Regional Board to be used in the TMDL development process.

The other major TMDL development effort that the City has participated in is the TMDL development coordination process with the Regional Board. During the Reporting Period, the Regional Board approached some of the Los Peñasquitos watershed dischargers and asked for them to participate in the lagoon TMDL development process. As a part of this process, the City has been attending meetings with the Regional Board and the other dischargers to discuss a problem statement, points of compliance and other TMDL related topics. While unable to regularly attend the weekly coordination meetings, the City is actively following the process, and will continue to provide input and review documents produced during the process. As the TMDL development continues, the City will participate in the development as resources allow.

## 12.2 Regional Source Identification Monitoring Residential Area Runoff Assessment

During the spring of 2009, the City of Del Mar was one of two jurisdictions selected as subject sites for the 2008-2009 Regional Source Identification Monitoring Program. The Source Identification Program is

required under Regional Board Order R9-2007-0001 as part of the Receiving Waters and Urban Runoff Monitoring and Reporting Program. As discussed in the 2008-2009 Workplan, submitted to the Regional Board, the goal of this study is to compare dry weather residential land use discharge data in San Diego County to data collected from an intensive residential land use runoff study under a Proposition 50 Grant in Orange County. The data would then provide information on of dry weather nuisance flows from single family residences. It is the Copermittees' hope that this data could then be used to develop effective BMP strategies for residential areas, which is one of the most common land uses in the San Diego region. As indicated in the submitted workplan, the study is being conducted in coordination with the separate jurisdictional programs conducted by the City of La Mesa and the City of Del Mar.

As part of the study, flow monitoring and water quality sampling was conducted from April 1, 2009 through June 30, 2009. Water quality sampling conducted during all three sampling events. In addition to providing one the study area, the City worked with Weston Solutions to obtain the necessary clearances to work in the City, and worked with the Copermittee Monitoring Workgroup to ensure the success of the program. Detailed discussion and information on the Regional Source Identification Monitoring program, including the Residential Area Runoff Assessment will be included in Regional Submittals provided by the County of San Diego under separate cover.

For FY2009-2010, the City of Del Mar will continue to participate in the Residential Area Runoff Assessment. The proposed work for the 2009-2010 San Diego County Source Identification Monitoring Program includes expanding on the work done in the Anderson Canyon Drainage Area in the City, and to collect wet weather residential land use discharge data building on the data collected during the 2008-2009 Dry Weather Source Identification Program. These data would then be used by Copermittees to develop effective strategies to reduce dry weather nuisance flows and potentially reduce pollutant loads in wet weather runoff from residential areas. The City will continue to work with the County's subcontractors to facilitate data collection in the area, provide input on Del Mar specific information, and review work products as needed.

## 12.3 Other Special Investigations or Studies

No other special investigations took place during the Reporting Period. During the FY2009-2010 Reporting Period, the City is reviewing other potential study areas to address dry weather flows resulting from foundation drains and irrigation runoff from residential areas in the south end of the City. Implementation of these studies will depend entirely on availability of resources and funding.

# Section 13
# Non-Emergency Fire Fighting Flows

This section provides a description of any efforts by the City of Del Mar conducted to reduce pollutant discharges from non-emergency fire fighting flows (i.e. flows from controlled or practice blazes and maintenance activities) determined to be a significant source of pollutants to waters of the U.S.

As discussed in Section 4 of this JURMP Annual Report, Section 6.19 of the 2008 JURMP described the City's program to reduce pollutants from non-emergency fire fighting flows. During this Reporting Period, all training sessions were held at Regional Training facilities outside the City of Del Mar, and any vehicle maintenance (including washing) was conducted in accordance with Section 6.19 of the 2008 JURMP. No non-emergency fire fighting flows from training or other maintenance activities occurred which would require any additional efforts to reduce pollutant discharges.

This page intentionally left blank
for reproduction purposes.

# Section 14
# JURMP Revisions

In response to comments received from the Regional Board during the FY2008/2009 Reporting Period, the City made minor revisions to its 2008 JURMP. These four (4) specific revisions were made to portions of the Municipal Component, Section 6 of the 2008 JURMP, and Appendix 7-D and Appendix 7-G of the Industrial/Commercial Component, Section 7 of the 2008 JURMP. These modifications are summarized in Table 14-1 below. A copy of the revised Section 6 of the 2008 JURMP in "redline/strikethrough" format is included as Appendix 14-A of this Annual Report. Appendices 7-D and 7-G are replaced by the new version included as part of Appendix 14-A.

**Table 14-1: Summary of Revisions to 2008 JURMP Made During FY2008/2009**

| Revised JURMP Section | Revisions Made |
|---|---|
| Municipal Component Section 6.3.3.1 | Additional language that describes BMPs for unused pesticides, herbicides and fertilizers |
| Municipal Component Section 6.5.4.5 | Correction to Sanitary Sewer Overflow Orders from SWRCB and RWQCB |
| Municipal Component Table 6.1-1 | Addition of reference to CASQA BMP Handbooks for BMP titles in Table 6.1-1 |
| Industrial/Commercial Component Appendix 7-D & Appendix 7-G | Additions to appendices to reflect accurate procedures for commercial and industrial inspections. |

As discussed in the FY2007/2008 Annual Report, prior to January 2008, the Clean Water Program was managed by an outside consultant. At the end of January 2008, the City hired a full-time, in-house Clean Water Manager to oversee the program. As part of his responsibilities, the Clean Water Manager has been tasked with reviewing the City's Program, and looking for ways to be more efficient and cost effective at meeting the Permit requirements. As part of this internal program efficiency "audit", the Clean Waster Manager is in the process of reviewing its 2008 JURMP, and working with each Department to find better, more efficient ways, to document and implement the Clean Water Program requirements. FY2008/2009 represents the first full year of program implementation under the current Clean Water Manager, and during this time, program areas have been identified that could benefit from revisions to improve program documentation, implementation, and effectiveness.

The City estimates completion of this program "audit" by the end of the 2nd quarter of the FY 2009/2010 Reporting Period. While the City may provide JURMP updates prior to the next Annual Report, it is likely that any revisions made to the program will be provided as a part of the FY 2009/2010 JURMP Annual Report.

# Section 6
# Municipal Component

## 6.1 Introduction

This section provides information on how the City of Del Mar developed and will implement the Municipal Component. In this section, an overview of the City's municipal operations and facilities is presented and the overall implementation for the various areas and facilities.

Approximately 4,500 people live in Del Mar and enjoy the city amenities including its beaches, parks and downtown. Effective management of the municipal infrastructure (streets, parks, beaches, facilities, open space, sewer system and stormwater system) is required to maintain the quality of life that the population enjoys and to minimize its impact on the surrounding environment and water bodies.

Order No. 2007-0001 (Permit) Section D.3.a. establishes requirements for local jurisdictions to develop and implement a program to reduce municipal discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), and prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards.

Urban runoff originating from existing municipal facilities or activities can a source of pollutants and the sources have been identified and listed below as described in the Permit; included are the minimum BMPs based on the type of activities or operations, potential to generate pollutants, location and other factors.

The goal of this component is to minimize or avoid the impacts of municipal activities on receiving waters and other environmental resources in Del Mar and to enhance the quality of these resources. In support of this goal, this component addresses the following primary objectives:

1. To implement policies and practices that minimize the impacts of municipal activities on Del Mar's receiving waters and water quality sensitive areas and to provide useful guidance to City staff in developing programs for municipal activities that will meet and in some cases exceed compliance obligations under Order No. 2007-0001.
2. To identify appropriate BMPs for high priority and non-priority municipal areas/activities.
3. To maintain compliance with NPDES permit requirements and other applicable environmental laws and regulations.
4. To establish and maintain a viable balance between the municipality's obligations and the protection of its environmental resources.
5. To evaluate program effectiveness and modify the City's efforts when appropriate.

### 6.1.1 Source Identification and Prioritization Overview

In 2002, the City of Del Mar developed and has continued to update annually a watershed-based inventory of all municipal areas and activities that includes the facility's name, address (if applicable), a description of the area/activity, the potential pollutants generated by the area/activity, and identification of whether the area/activity is tributary to a CWA section 303(d) water body segment and generates pollutants for which the water body segment is impaired. The City's complete inventory is provided in Table 6.1-1 located at the end of this section "Municipal Areas and Activities Inventory" as required in the Permit.

It is also important to note that, within the geographical boundaries of the City of Del Mar, there are other governmental entities with areas and activities that contribute stormwater and may have urban runoff discharges in and around Del Mar. There are three State government entities, the 22nd District Agricultural Association (22nd DAA), North County Transit District, and Torrey Pines State Beach. Each of these agencies has its own responsibility to protect water quality and comply with various permits; however, all of these agencies work with the City towards enhancing water quality.

This section complies with the J.1.a.(3)(e) for the JURMP to meet the requirements of this component by providing:

1. A completed inventory of all municipal facilities and activities.
2. A description of which BMPs will be implemented, or required to be implemented, for municipal facilities and activities, including pollution prevention.

Del Mar has considered the types of municipal areas and activities within the jurisdiction and has verified program priorities and requirements based on the criteria defined in the Permit. All municipal areas and activities have been classified as either "high priority" or "non-priority". The high priority areas and activities designations include a complete review of all the areas and activities listed in Permit Sections D.3.a.(3) through D.3.a(7) to determine the degree to which they pose a high threat to water quality.

1. **High Priority Areas and Activities.** The previous Permit (Order No. 2001-01) required municipal areas and activity prioritization into High, Medium and Low Threat to Water Quality. The current Permit requires a complete inventory of all areas and activities, and annual inspections for high priority areas and activities (Permit section D.3.a.(7)). The City of Del Mar has completed a revision of its existing inventory as of August 30, 2007 and designated each area/activity as high priority or non-priority based on a variety of criteria including the type, location, pollutant sources, past inspection results, etc. The priority designations are included as part of the inventory in Table 6.1-1. The 2007 prioritization has resulted in several facilities being "upgraded" and classified as high priority compared to their previous listing as medium or low priority. Examples of high priority areas and activities include: all parks and beaches with restroom facilities; areas or activities tributary to a CWA 303(d) impaired water body segment, where an area or activity generates pollutants for which the water body segment is impaired; areas and activities that discharge directly to 303(d) listed water bodies; and areas or activities with a higher risk of illegal discharges or accidental spills or leaks like sanitary sewer pump stations. In most cases, the change in prioritization is due to the 2007 Permit revisions and not as a result of increase or known sources or pollutants from the specific areas/activities.

2. **Non-Priority Areas and Activities.** Several municipal areas and activities have been identified as not posing a threat to water quality since no measurable pollutants are known to exist or excessive pollutant discharges have not been recorded or measured from these sites during the last five-year permit cycle. Also, the majority of the areas and activities do not include storage areas or buildings, thus eliminating potential pollutant sources. A number of ancillary areas or activities associated with these facilities are covered in other main categories such as: management of pesticides, herbicides, and fertilizers; parking facilities; power washing; and special events. Nevertheless, areas and activities designated to be non-priority will be subjected to the specific minimum BMPs listed in Table 6.1-1. In some cases, non-priority areas and

activities include other minimum BMPs for the specific type of operation or maintenance performed at the site or location. The detailed and site specific selection of BMPs is provided in Table 6.1-1 and will be modified at minimum on a yearly basis as part of the JURMP Annual Report based on new information, inspection results, or modification to the area or activity.

### 6.1.2 Municipal Component Organization

The Municipal component includes the areas and activities listed in the Permit and is organized using the recommended Copermittee regional outline dated July 2007. The City of Del Mar does not operate several of the areas or activities listed in the Permit, including: Flood Management Projects, Active or Closed Municipal Landfills, Publicly Owned Treatment Works, Solid Waste Transfer Facilities, Land Application Sites, and Municipal Airfields. All the areas and/or activities sections will be included in this component to preserve the numbering integrity of the regional outline but noted as “Not Applicable” when not found within the City of Del Mar.

Detailed information for each of the High Priority areas or activities is included in this component and organized as summarized below and in Table 6.1-2 located at the end of this section. This table also includes a cross-reference to the main areas and activities covered by the section and the Permit section that it addresses. In some cases, areas and activities overlap and may not include information that would be repeated and instead the reader will find a reference to the appropriate section. Examples include: Management of Pesticides, Herbicides, and Fertilizers (Section 6.3) which is an activity that may be implemented in Parks and Recreational Facilities (Section 6.16) which are municipal area, and Sweeping of Municipal Areas (Section 6.4) which is an activity that serves as a BMP for Roads, Streets, Highways, and Parking Facilities (Section 6.6) which are municipal areas in which sweeping is applied.

### 6.1.3 Municipal Component Implementation

The following sections describe common or general implementation procedures applicable to the entire Municipal Component. If more specific implementation procedures, such as Standard Operating Procedures (SOPs), are used by the City for a specific municipal area or activity (i.e. Operations & Maintenance of MS4 and Structural Controls, Management of Pesticides, Herbicides, and Fertilizers, etc.) they are considered an augmentation of the general implementation procedures.

#### 6.1.3.1 Education and Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Training is provided by Clean Water Program staff or a knowledgeable manager or supervisor for that area or activity.

Employees also receive job-specific training which is described in each Municipal component area or activity as appropriate.

#### 6.1.3.2 Contract Specifications

Procurement of contract municipal services includes participation by City department(s) administering the contractor. During the bid preparation stage, the City includes specific requirements in the scope of work that identify the minimum BMPs that should be included as

part of the activity or service, or the City includes minimum BMPs as part of the final contract with the selected bidder.

The minimum BMPs for contract municipal operations are specified in the section for that type of service. For example, landscaping service contractors would implement the BMPs found in Section 6.3 - Management of Pesticides, Herbicides, and Fertilizers.

The city department administering the contractor is responsible for ensuring that the minimum BMP requirements are communicated and implemented by the contractor, and the Clean Water Program staff is responsible for independent verification of compliance with the minimum BMP requirements. The Clean Water Program staff will verify compliance in the same manner that compliance is verified for these activities or areas, as if being performed by City employees, and use the same procedures and forms outlined in Section 6.1.3.4 below. Enforcement procedures are applicable to municipal contractors as described in this component and may in addition include suspension, revision or termination of the contract in order to achieve compliance with this component, the JURMP, and the Permit.

The source identification and prioritization does not change as a result of an activity being performed or area being serviced by an independent contractor working on behalf of the City. The high priority designations identified in Table 6.1-1 apply unless specifically amended and recorded by the City. Any such amendments would be included in the corresponding JURMP Annual Report.

### 6.1.3.3 Administrative Controls (internal processes, policies, procedures, etc.)

The City's BMPs and SOPs are strictly followed by employees assigned to any of the duties related to areas or activities in this Municipal component. Employees are trained prior to performing these assignments and must adhere to these BMPs and SOPs in order to receive acceptable employee performance ratings. Newly hired or promoted employees are subject to probationary periods and performance evaluations that include performing their job functions according to established city processes and procedures. Employee performance policies are followed by all departments.

Specific administrative controls apply to specific areas or activities included in this component.

### 6.1.3.4 Compliance Assessment – Municipal Area/Activity Inspections

Del Mar will strive to achieve compliance at municipal areas/activities by implementing, at a minimum, the water quality protection requirements and applicable BMPs prescribed in this component and verify their effectiveness through site inspections, review of self-audits by facility managers or staff, enforcement procedures, and other means as described in this section.

1. **Inspection Responsibilities.** Del Mar has revised its inspection program to better assess compliance with the 2007 revisions to the JURMP, applicable ordinances, and the Permit. Del Mar has revised site inspection procedures to ensure that municipal area/activities implement an effective combination of BMPs to meet water quality protection requirements, based upon the site's threat to water quality prioritization. Del Mar has in place enforcement procedures requiring that corrective actions be undertaken when these requirements are not met. The program includes the following elements:

a. Inspections by Clean Water Program staff;
b. Area/Activity manager or supervisor self-inspections consisting of implementation, maintenance, monitoring and revision of BMPs; and
c. Enforcement procedures.

2. **Clean Water Program Staff Inspection Procedures and Frequencies.** The City's trained Clean Water Program (stormwater) staff is committed to inspecting all high priority areas/activities annually. The inspection consists of a walk-through or visual observation of each area/activity, evaluating existing Pollution Prevention Measures and BMPs, determining if the prescribed minimum BMPs are protective of receiving water bodies and offer the most cost-effective water quality protection. Clean Water Program staff will also recommend self-inspections to appropriate area/activity supervisors, crew leaders, or other responsible party so that all municipal areas/activities are in compliance. If the inspected site does not meet Del Mar's minimum BMP requirements or there is a discharge related to municipal activities, Clean Water Program or Code Enforcement staff will immediately provide direction and advise on the applicable steps to take to comply and conduct follow-up inspections as necessary to confirm that compliance is attained. Additional inspections will be conducted as necessary to ensure continued compliance.

   Del Mar has developed inspection requirements, procedures, and forms to, at a minimum, complete the following:

   a. Ensure that all applicable JURMP and Permit requirements are met;
   b. Verify that required Pollution Prevention Measures are being followed;
   c. Verify that there is an effective combination of BMPs implemented and maintained to prevent the discharge of pollutants into stormwater conveyances and receiving waters; and
   d. Ensure that municipal facilities implement their stormwater management plan on a year round basis, as applicable.

The City's municipal area and activity inspection checklist used by Clean Water Program staff is included in Appendix 6-A. Alternatively, Clean Water Program staff may use written letter reports and/or photo reports to document inspection findings and actions to facility owners and operators. Any self-inspections conducted by activity or area supervisors can be logged using the checklist found in Appendix 6-A, but the inspections are not mandatory, unless requested or required by the Clean Water Program as a result of a failed inspection or other recommendation.

These checklists are used to determine if minimum BMPs for municipal activities are being implemented and are in good condition at each area/activity. The recommended minimum BMP requirements can be found in sections 6.2 through 6.19 in this component and summarized in Table 6.1-1, as noted earlier. The minimum BMP requirements are intended to be easy to interpret field observations that allow an assessment of site conditions during both dry and wet conditions. Inspectors may verify whether minimum BMPs are adequate for water quality protection at any time during the year during dry or wet weather.

3. **Area and Activity Self-Inspections.** Stormwater management is a dynamic operation where changes are expected. Minimum BMPs for stormwater management require frequent maintenance to sustain their effectiveness and may require relocation, revision, and re-installation, particularly as the area/activity changes. Therefore, facility manager

or supervisor self-inspections are important particularly just prior and during the rainy season. The five goals of the self-inspections are:

- To ensure accountability for stormwater management by each area/activity supervisor or other responsible party;
- To ensure that BMPs are properly implemented and functioning effectively;
- To identify BMP maintenance (e.g., material removal) and repair needs;
- To ensure the proper implementation of pollution prevention measures; and
- To ensure staff's awareness of the stormwater management requirements.

Self-inspections should be performed by the facility managers, supervisors, or designated employees. At a minimum, a self-inspection checklist such as the one provided in Appendix 6-A, noting date, time, BMP condition, and any actions taken, should be kept on-site and made available for inspection, if requested. Self-inspections should be performed periodically and preferably no less than once a year and preferably prior to the onset of the rainy season, or October 1st.

4. **Inspection Frequencies.** Del Mar has established inspection frequencies and priorities as determined by the threat to water quality prioritization described in Section 6.1.2. At a minimum each area/activity that is determined to be high priority will be inspected annually by Clean Water Program staff. Inspections by Clean Water Program staff are the most comprehensive inspections and satisfy the requirements of Permit Section D.3.a.(7)(a). Additional inspections conducted by area/activity supervisors are considered minor in scope (to correct a BMP, etc.) and serve to supplement the inspection requirement. In some cases, these two may be combined, but must be comprehensive and use the inspection checklist found in Appendix 6-A

   Additional inspections conducted by area/activity supervisors, preferably prior to the rainy season, are considered secondary and can only fulfill the requirements in Permit section D.3.a.(7)(a) if the inspection form in Appendix 6-A is used.

### 6.1.3.5 Municipal Area/Activity Enforcement Measures

If BMPs are lacking or being implemented improperly, this section provides a discussion of appropriate enforcement actions. If the inspected area/activity does not meet the minimum BMP and water quality protection requirements, inspectors shall follow-up within a reasonable time frame to assure that all applicable requirements are implemented by the area/activity supervisor or other identified responsible party.

The City has an established organizational structure (See Figure 2.1-1 in Section 2.1) and identified responsibilities for Permit compliance. The City's Clean Water Program is considered primarily responsible for identifying any deficiencies in the selection and implementation of minimum BMP or program implementation by other City departments. The Clean Water Program is part of the Planning Department is responsible for reporting any deficiencies, violations, or corrective actions directly to the area/activity supervisor or responsible party in order to effectively implement the requirements in a timely manner. Clean Water Program staff is required to notify the Supervisor and/or Department Director, if the conditions warrant additional attention from the area/activity department director. Clean Water Program staff must facilitate compliance and prepare written documentation and records (e.g. photos, emails) to demonstrate the deficiencies, as necessary. The City Manager may act to resolve any disputes

that may arise regarding stormwater compliance actions, responsibilities, efforts, and costs, at the request of any department director.

In some instances and for the most severe cases, the enforcement procedures may include those described below.

### *Enforcement Actions*

Del Mar is required under the Permit to develop an enforcement program to obtain compliance with the Permit at its municipal facilities. Enforcement procedures for non-compliance at municipal facilities will be specific to the jurisdiction, and in Del Mar's case are primarily handled by the Clean Water Program. The Clean Water Program staff/inspectors will conduct enforcement of stormwater pollution prevention requirements for municipal activities and at municipal facilities. The inspectors in accordance with Del Mar's procedures for recording violations shall document observed violations. Depending on the severity of the violation, enforcement can range from a verbal warning to disciplinary actions. If the non-compliance is a result of negligence by a contractor hired by the City, the enforcement action(s) are comparable and can range from a verbal warning to the assessment of fines. Del Mar's enforcement program goals are the following:

1. To educate the regulated community (municipal staff and contractors);
2. To promote compliance of the laws and regulations;
3. To return violators to compliance in a timely manner;
4. To initiate and conclude enforcement activities in a timely manner;
5. To penalize violators, as appropriate, and to deprive violators of any significant benefit gained from violations; and
6. To treat similar facility owners and operators equally and consistently with regard to the same types of violations.

Del Mar's Clean Water Program staff/inspectors conduct follow-up inspections to determine if corrective actions have been taken in accordance with Del Mar's ordinances and minimum BMP requirements. Escalating enforcement steps have been defined but also provide flexibility for the inspectors to select the appropriate level of enforcement and establish appropriate compliance time frames on a case-by-case basis that will ensure compliance.

The Clean Water Program or enforcement staff/inspector will inform a responsible party to cease a discharge if a significant and/or immediate threat to water quality is observed. The site or activity-specific threat to water quality shall be assessed by inspectors; examples of such situations are runoff from a construction site that will not be reasonably controlled by the measures in place or if failure of a BMPs is resulting in the release of sediments or other pollutants to a degree that may be substantially degrading water quality. The typical progressive enforcement steps that Del Mar will apply to the municipal inspection program are:

1. Verbal or written warning;
2. Written notices of violation;
3. Disciplinary actions;
4. Enforcement of contracts (municipal activities performed by City contractors);
5. Cease and Desist orders (municipal activities performed by City contractors);
6. Notice and Order to Clean, Test, or Abate (municipal activities performed by City contractors);
7. Stop Work Orders (municipal activities performed by City contractors);

8. Permit Suspension or Revocation (municipal activities performed by City contractors);
9. Civil or Criminal Action (municipal activities performed by City contractors).

A discussion of these measures is provided below. These are just some of the tools Del Mar will use to enforce the Permit and ordinance requirements. All enforcement actions related to municipal areas or activities are to be reviewed by the City Manager.

1. **Verbal or Written Warning.** A common initial method of requesting corrective action and enforcing compliance is a verbal or written warning from Clean Water Program enforcement staff/inspector to the responsible party. Verbal warnings are often sufficient to achieve correction of the violation, often while the inspector is present. The inspector should notify the responsible party and the facility supervisor of the violation, document the violation and the notification to the project supervisor in the inspection file. A specific time frame for correcting the problem and a follow-up inspection date should be documented by the inspector. In judging the degree of severity, the enforcement staff/inspector may also take into account any history of similar or repeated violations by the responsible party at this or other sites.

2. **Written Notice of Violation.** If the deficiency noted in a verbal warning is not corrected by the next inspection or the violation is more severe, a written Notice Of Violation (NOV) shall be issued. The NOV shall describe the nuisance or infraction that is to be corrected, the time frame for correction, and date of the follow-up inspection. A copy of the NOV should be given to the responsible party and facility supervisor and placed in the active inspection file. If the violation has been corrected to the satisfaction of the inspector, the inspector will document compliance in the inspection file.

3. **Disciplinary Actions.** If a City of Del Mar employee causes or contributes to non-compliant activities, the City may choose to take disciplinary actions against the employee in accordance with established procedures. These records are kept as part of the employee's official personnel files and access will be limited.

4. **Enforcement of Contracts.** If a contractor is performing contract work for the City, then the City can use the provisions within the contract for enforcement of non-compliance. Del Mar will confirm language is included in all contracts that allows the City the right to refuse payment, stop work (without time penalties), or revocation of contracts if the contractors performing the activities do not comply with appropriate contract requirements, permits, laws, regulations and ordinances.

5. **Cease and Desist Orders**. If an NOV has not been addressed by the next inspection; or if the contractor has not complied with their permit requirements; *or if a significant threat to water quality is observed* (such as a failure of BMPs resulting in a significant release of pollutants off site), a cease and desist order may be issued by the appropriate Clean Water Program staff or Code Enforcement. Cease and desist orders prohibit further activity until the problem is resolved and provide a time frame for correcting the problem. The cease and desist order should describe the infraction and specify what corrective action must be taken. A copy of the cease and desist order should be given to the responsible party and the facility manager/supervisor and placed in the active inspection file. To restart work once a cease and desist order has been issued, the project supervisor must request the inspector to re-inspect the project and verify that the deficiencies have been satisfactorily corrected. If the inspector is satisfied with the

corrections, the inspector may sign off on that phase of the project, and activities may resume. The cease and desist order is equivalent to a stop work order.

6. **Notice and Order to Clean, Test, or Abate**. If an NOV has not been addressed by the next inspection; or if the contractor has not complied with their permit requirements; *or if a significant threat to water quality is observed* (such as a failure of BMPs resulting in a significant release of pollutants off site), a notice and order to clean, test, or abate may be issued by the appropriate Clean Water Program staff or Code Enforcement. Notices and orders to clean, test, or abate are issued to further correct a violation, illegal discharge and/or remove an illicit connection problem. The notice and order should describe the infraction and specify what corrective action must be taken. Corrective actions typically include any clean-up of the discharge, testing to monitor pollutants in the discharge in the MS4 or receiving waters, and other abatement measures as deemed appropriate by the City. A copy of the notice and order should be given to the responsible party and the facility manager/supervisor and placed in the active inspection file.

7. **Stop Work Orders**. If an NOV has not been addressed by the next inspection; or if the contractor has not complied with their permit requirements; *or if a significant threat to water quality is observed* (such as a failure of BMPs resulting in a significant release of pollutants off site), a stop work order may be issued by the appropriate Clean Water Program staff or Code Enforcement. Stop work orders prohibit further activity until the problem is resolved and provide a time frame for correcting the problem. The stop work order should describe the infraction and specify what corrective action must be taken. A copy of the stop work order should be given to the responsible party and the facility manager/supervisor and placed in the active inspection file. To restart work once a stop work order has been issued, the project supervisor must request the inspector to re-inspect the project and verify that the deficiencies have been satisfactorily corrected. If the inspector is satisfied with the corrections, the inspector may sign off on that phase of the project, and work may proceed.

8. **Denial or Revocation of Permits.** In severe cases of non-compliance or significant discharges, it may be appropriate to revoke the business license, building or grading permits, or any other permit that a municipal contractor is working under or deny future permits on the project. The project proponents would then have to re-apply for permits and meet any requirements that Del Mar may place on the project.

9. **Civil and Criminal Court Actions.** As a final resort, Del Mar may use Civil and or Criminal court actions under the State Porter Cologne Water Quality Act or the Federal Clean Water Act, which may result in significant fines levied upon the non-compliant municipal contractor.

### 6.1.3.6 RWQCB Notifications

Notifications to the RWQCB shall be in accordance with Permit requirements in Attachment B, Section 5.e.(1) through (3) as quoted below:

> *"Twenty-four hour reporting* [40 CFR Section 122.41(l)(6)]
> (1) The Copermittee shall report any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the Copermittee becomes aware of the circumstances. A written submission shall also be

provided within five (5) days of the time the Copermittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.
(2) The following shall be included as information, which must be reported within 24 hours under this paragraph:
i) Any unanticipated bypass that exceeds any effluent limitation in the Order (See 40 CFR 122.41(g)).
ii) Any upset which exceeds any effluent limitation in this Order.
(3) The Regional Board may waive the above-required written report under this provision on a case-by-case basis if the oral report has been received within 24 hours.

#### 6.1.3.7 Annual Reporting and Recordkeeping

Del Mar has centralized JURMP annual reporting responsibilities led by the Clean Water Program. The City uses a variety of data tracking systems, logs, and records to document the compliance activities described in this component. All data is collected during the reporting year by the individual departments implementing the activity and BMPs. Ultimately the data is compiled, reviewed, and assembled for reporting purposes by the Clean Water Program. Any deficiencies in data collection or reporting are identified by the Clean Water Program and reported to various departments as applicable. The Clean Water Program works with and supports the departments with any modifications or adjustments to data compilation and reporting to effectively prepare the JURMP Annual Reports.

Specific recordkeeping varies by activity or area and may be included in each of the sections below as necessary to ensure that appropriate documentation is kept to comply with reporting requirements.

## 6.2 Operation and Maintenance of Municipal Separate Storm Sewer System (MS4) and Structural Controls

### 6.2.1 Background

This program component is applicable to Del Mar's Municipal Separate Storm Sewer System (MS4) which functions primarily to collect and convey surface runoff to receiving waters during storms. This section describes the program requirements to comply with Section D.3.a.(3) of the Permit. It is a common activity to maintain the storm drain system so that it functions hydraulically as intended during storms. The goal of this program is to reduce the impact of storm drain operation and maintenance activities on stormwater quality.

In 2007, the City of Del Mar completed a comprehensive review and update of the MS4 GIS database. The spatial and informational accuracy of each storm drainage feature was assessed during this update and accuracy is being verified. Printing of the latest version of the City of Del Mar's MS4 map book using this updated GIS data will be conducted upon completion of peer review (2008). This map book will serve as a vital tool for City staff that operate and maintain the MS4.

According the most current GIS data summarized in Table 6.2-1, the City's MS4 includes approximately 5.9 miles of storm drain pipeline, approximately three miles of open channels and swales which are mostly narrow swales in lieu of curve and gutter, 231 inlets (including catch basins), 49 junction boxes, four pumped inlets of which three are permanent located at 20th Street, 27th Street and 29th Streets and one seasonal pumped inlet located at 28th Street, and approximately 30 outfalls. The City's complete MS4 is shown on Figure 6.2-1 located at the end of this section. The City does not own or maintain any detention or retention basins.

North County Transit District (NCTD) also owns, operates and maintains its own storm drainage system as part of the protection and preservation of its rail system within its right-of-way. The City's GIS these sections are identified as approximately 2,500 feet of storm drain pipeline and 1.8 miles of channel owned and maintained by NCTD. A portion of the City's MS4 system drains into NCTD's MS4 system and vice versa. As part of an agreement with NCTD, the City maintains fossil filter inserts which have been installed at each of the City's six inlets to the NCTD system. This maintenance agreement is described in Section 6.2.3.2. The City has also identified private storm drain facilities in its GIS that include approximately 7,400 ft of underground drainage lines and 4,000 ft of swales. The majority of the remaining private storm drain facilities are under the jurisdiction of 22nd District Agricultural Association also known as the Del Mar Fairgrounds.

### 6.2.2 Source Characterization

City staff has reviewed several past years' dry weather monitoring, ICID reports, source identification activity results, and MS4 cleaning activities and field observations, complaints, and compliance and enforcement records; and based on this review, has verified that the MS4 is a high priority area and activity. Also, maintenance and cleaning activities associated with the MS4 constitute a BMP.

As detailed in Table 6.1-1, the MS4 can be a source of pollutants from all residential, commercial and municipal activities, and storm event and urban runoff flows. Even if unpolluted, storm discharges can result in the mobilization of accumulated materials and pollutants to the receiving waters. Regular cleaning and maintenance can reduce and eliminate most of these discharges and benefits water quality in the receiving waters.

Potential pollutants of concern discharged from the MS4 include: sediment, trash, organic matter (leaf litter), oils & grease, petroleum hydrocarbons, pesticides, herbicides, fertilizers, bacteria, metals, nutrients and detergents originating from residential and commercial activities, roadways and other impervious surfaces.

The City of Del Mar is a coastal community that includes several distinct water bodies. As a result, the majority of the City's MS4 outfalls discharge to the Pacific Ocean on the west side, some to San Dieguito Lagoon in the northern end of the City, and a very small area flowing south to the Los Peñasquitos Lagoon.

### 6.2.3 Best Management Practice Requirements

As noted above, Del Mar has verified that the MS4 is a high priority area and activity, and that maintenance and cleaning activities associated with the MS4 constitute a BMP.

The implementation of the various JURMP components has a positive impact on pollutant sources and prevents pollutants from making their way into the MS4. The minimum BMPs

associated with the operation and maintenance of the MS4 overlap with other JURMP components.

The Public Works Department is responsible for the implementation of the Operation and Maintenance of the MS4 section with support from the Clean Water Program for any illicit and illegal discharges that may be detected by Public Works crews.

Public Works staff uses a variety of cleaning methods to remove debris and litter from the MS4 including manual and mechanical methods when accessing inlets or catch basins and flushing with downstream capture and removal of wash water. All operation and maintenance activities are conducted by trained Public Works staff and in a manner that minimizes and prevents the discharge of materials found in the MS4.

### 6.2.3.1 Updated BMP Requirements

The following are the updated and required JURMP Municipal activities or programs that include specific BMPs that support an effective operation and maintenance of the MS4 that reduces the introduction of pollutants to the system and minimizes storm related discharges:

1. Implement the Management of Pesticides, Herbicides, and Fertilizers component of the JURMP (Section 6.3)
2. Implement the Sweeping of Municipal Areas component of the JURMP(Section 6.4)
3. Implement the Infiltration from the Sanitary Sewer to the MS4 and Provide Preventive Maintenance Program for the Sanitary Sewer and MS4 (Section 6.5)
4. Inspection of Municipal Areas and Activities

    a. Corporate and Maintenance yards (Section 6.13)
    b. Park and recreation facilities (Section 6.16)
    c. Special events (Section 6.17)
    d. Power washing (Section 6.18)
    e. Perform non-emergency MS4 facility repairs and construction.
    f. Perform emergency MS4 facility repairs and construction as needed/year round.
    g. Implement the Illicit Discharge Detection and Elimination Component (Section 9.0)
    h. Handle and dispose of all waste removed during maintenance activities in a manner that will not re-release the material into the MS4 or the receiving waters.

### 6.2.3.2 Additional Controls for Municipal Areas and Activities

#### *Inlet Filter Treatment Control– North County Transit District*

The City of Del Mar has a Maintenance Agreement in place with the North San Diego County Transit Development Board as part of the Del Mar Stabilization Project 1 – Drainage Improvements and Landslide Warning System which consists of fifty-four (54) structures. Fossil filters installed in some of the structures to address water quality and Permit requirements. The Maintenance Agreement requires the City to maintain fourteen (14) of the structures, while NCTD will be maintaining the remaining forty (40) structures. Out of the fourteen structures maintained by the City, six have been fitted with filters that are services by a contractor. The Maintenance Agreement has been implemented to ensure that the structures will be maintained properly to address water quality.

### 6.2.4 Program Implementation

This section describes the various steps used to verify the implementation of designated minimum BMPs and compliance with the Permit, beyond the general component implementation steps described in Section 6.1.

#### 6.2.4.1 Education and Staff Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Employees in the Public Works Department also receive job-specific training to perform the tasks associated with MS4 operation and maintenance. The City's cleaning methodology is also relayed to employees as part of its training. The City's cleaning methodology is updated as necessary and training is implemented immediately after revisions are completed. In Del Mar the MS4 and the sanitary sewer are operated and maintained by the same Public Works crew(s) which results in a very knowledgeable workforce that is familiar with both systems and the intricacies of the two systems.

#### 6.2.4.2 Inspection, Cleaning and Preventive Maintenance Practices

The City of Del Mar has a comprehensive MS4 inspection, cleaning, and preventive maintenance program implemented using the MS4 cleaning methodology described below. This program follows a pre-established schedule as shown in Table 6.2-2 found at the end of this chapter. MS4 structures that are part of the program include catch basins, inlets, underground storm drain pipes, pump stations, percolation pits, and inlet filters. The inspection and cleaning frequency and schedule is shown by structure type in Table 6.2-2. The MS4 operation and maintenance activities have been verified against the Permit requirements and are determined to be in compliance.

The Permit requires that MS4 catch basins and inlets that are known to collect a high volume of trash and debris areas be inspected at least once a year between May 1 and September 30. All other MS4 facilities are inspected at least once annually throughout the year. The City of Del Mar will select the "high volume trash and debris" catch basins and inlets by documenting those that have greater than 33% of design capacity (by volume) between May 1 and September 30, 2008. Once this data is collected the City will be refining the inventory of "high volume trash and debris" catch basins and inlets and reporting the update in the corresponding annual report.

During any year, any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of design capacity will be cleaned in a timely manner. Open channels shall be cleaned of observed anthropogenic litter in a timely manner and no less than annually. The City of Del Mar only has one channel at the end of 17$^{th}$ Street.

Following two years of inspections, that is, starting on May 1, 2010 the City may evaluate the inspection and cleaning records to determine which MS4 facilities require inspection and cleaning less than annually and change the frequency to be inspected as needed, but not less that every other year. In which case those MS4 facilities would be inspected on even numbered years, if started the program is modified in 2010.

The City's MS4 inspection and cleaning methodology is relayed to employees as part of their training. The City generally divides the City's MS4 into four quadrants that are the basis for systematic cleaning of the system starting on the northwest end going south to Torrey Point,

and going east up the hill, then back south to north, according to a pre-established schedule following the City's MS4 map. Headwalls and network structures without manholes are cleaned when the pipeline is cleaned.

### 6.2.4.3 Administrative Controls (Internal Processes, Policies, Procedures, etc.)

As noted above the City's cleaning methodology is strictly followed by employees assigned to the operation and maintenance of the MS4. Employees are trained prior to performing these assignments and must adhere to these methods in order to receive acceptable employee performance ratings. Newly hired or promoted employees are subject to probationary periods and performance evaluations that include performing their job functions according to established processes and procedures. Employee performance policies are followed.

### 6.2.4.4 Compliance Assessment

The City verifies adherence to the established MS4 operation and maintenance practices and schedule and with ample leeway to perform any necessary follow-up activities to comply with Permit requirements and the practices established in this JURMP component section. The MS4 operation and maintenance activities (and any deficiencies) will be reported in the JURMP Annual Report and corrective actions identified.

### 6.2.4.5 MS4 Facility Inspections Procedures and Recordkeeping

MS4 facility operation and maintenance procedures established by the City and record keeping is effectively implemented by the Public Works Department to increase implementation efficiency through a work order system. The MS4 inspection and cleaning logs are kept to ensure that the schedule shown in Table 6.2-2 is implemented for Permit compliance and the data and information is compiled for the Annual Report. The Public Works Department has an established work order system that tracks all proposed, pending, and completed tasks assigned to its crews. The work order system is used to schedule and track completion of the MS4 facility inspection and cleanings every year. Public Works staff completes a work order and turns it in to the department's administrative section for data entry. MS4 inspection and cleaning documentation contain the following information:

1. The date and time the inspection/cleaning was performed;
2. Name of the inspector;
3. Items inspected/cleaned;
4. Locations of facilities inspected or cleaned;
5. Overall amount of material removed (estimated in either volume or dry weight, preferably by weight);
6. Type of material;
7. Problems noted;
8. Illegal/illicit connection detected;
9. Corrective action required;
10. Date corrective action was taken; and
11. Issue notices of violation as needed.

Other means used to document and record inspection results are field notes, timed and dated photographs, video, drawings, and maps. All records are retained at the Public Works Department for at least three years after completion of the task or activity, as required in Attachment B of the Permit.

### *Annual Report Recordkeeping*

For annual reporting purposes, the following data will be collected to document MS4 operation and maintenance activities:

1. Confirmation that the designated BMPs were implemented, or required to be implemented during MS4 cleaning activities to eliminate waste discharges when cleaning is taking place.
2. A description of inspections and maintenance conducted for municipal treatment controls, as applicable. This requirement applies to the NCTD inlet filters and any others installed in the future.
3. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria (33% capacity), and the number of catch basins and inlets cleaned.
4. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.
5. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.
6. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category. Proper disposal of waste removed pursuant to applicable laws. NOTE: The City does not have the ability to provide the removed waste and litter in tons and will report it in cubic yards using a 1,000 pound per cubic yard conversion.
7. The City has the option to review the program after completion of the inspections completed in 2009 to reduce the inspection frequency. In order to assess this, the City would identify any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

### 6.2.5 Operation and Maintenance of MS4 and Structural Controls Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

The City may have the ability to measure the effectiveness of the MS4 inlet filter treatment control based on the performance or effectiveness data reported by the manufacturer, if supported or verified independently. This additional effectiveness assessment data or information will be provided in JURMP annual reports, if it becomes available or is deemed appropriate for pollutant loading removal estimations. The City may use this assessment in the future as part of TMDLs or other regulatory requirements.

## 6.3 Management of Pesticides, Herbicides, and Fertilizers

### 6.3.1 Background

This program component is applicable to all City properties and facilities utilizing pesticides and fertilizers. Pesticides are defined in this section as all chemical applications used to control or reduce various types of pests including pesticides, rodenticides, fungicides, algaecides,

herbicides, etc. all of which are designated as "pesticides" in this section. The goal of this program is to prevent or reduce the use of pesticides and fertilizers, and subsequently their entry or discharge into the MS4 and ultimately, receiving waters. This section describes the City's program to comply with Section D.3.a(4) of the Permit.

The City of Del Mar is committed to the application of Integrated Pest Management (IPM) procedures and the use of updated BMPs to meet the goal of this program. The City's applicators (employees or contractors) must meet these requirements and follow the City's minimum BMPs and comply with this JURMP section. The City's current practice is to contract landscaping activities, including pesticide applications, and it has in place the minimum BMPs for all the pesticide application activities which are included in the contract(s) with these service providers. City employees do not engage in pesticide applications that require licensing. They are only involved in minor applications of Round-up and receive the appropriate annual pesticide safety training.

### 6.3.2 Source Characterization

Del Mar has identified several areas and activities associated with Pesticides, Herbicides, and Fertilizers as high priority. The high priority areas and activities are locations that have the highest potential as a source of these pollutants and non-priority to those that do not pose a high threat to water quality. The extensive regulation and oversight of this activity makes it feasible to designate high priority to a set number of areas such as large parks and to use them as the basis for the selection of additional or future BMP at both high and non-priority locations. This approach allows the City to give a non-priority designation to similar lower threat to water quality areas. Non-priority Pesticides, Herbicides, and Fertilizers areas and activities are still assigned minimum BMPs but are subjected to lesser inspection and oversight by Clean Water Program staff. In the event that new or innovative BMPs are found to apply to high priority areas/activities, they will be assessed for their appropriateness and application at non-priority areas.

Municipal sources of pesticides may include areas and activities such as buildings, parks, and paved areas. Fertilizers are more likely to originate from landscaped areas. Pesticide entry into the MS4 is more likely to occur from:

1. Runoff from improper or over-irrigation after the application of pesticides and fertilizers;
2. Application of pesticides and fertilizers during or prior to storm events, thus causing the chemicals to flow into the MS4;
3. Use of improper pesticides or fertilizers that do not absorb into the soil or the plant and are then likely to enter the MS4; and
4. Over spray during pesticide applications discharging into the MS4.

The following are possible sources of pesticides and fertilizers from Municipal areas or activities that may enter the MS4:

1. Buildings
2. Parks
3. Landscaped grounds
4. Right-of-ways
5. Open space
6. Waterways (may require an Aquatic Pesticide Permit from the SWRCB)

7. Paved areas
8. Recreational trails

### 6.3.3 Best Management Practice Requirements

#### 6.3.3.1 Updated BMP Requirements

The minimum BMPs shown in Table 6.1-1 have been established for all City pesticides and fertilizers applications. Adjustments to these BMPs should be made as a result of inspections, complaints, other regulatory changes, or at least evaluated on an annual basis as part of the JURMP Annual Report preparation and program assessment.

Landscaping and pest control services for the City are provided by outside contractors. No large quantities of unused pesticides, herbicides or fertilizers are stored at City facilities. Pursuant to the contracts, all service providers must collect and store unused quantities of the materials at their own facilities, and dispose of any unused quantities in accordance with State and County guidelines.

Occasionally, City staff use a minimal amount of herbicide, "Round Up", for touch up applications. Storage of the herbicide amounts to less than two gallons. Unused portions are stored in an enclosed, hazardous material shed, with secondary containment, located at the City Public Works Yard for use as needed. Empty containers are rinsed and disposed of in accordance with State and County guidelines.

#### 6.3.3.2 Additional Controls for Municipal Areas and Activities

This section describes the minimum BMPs that will be implemented, or required to be implemented, for the Pesticides, Herbicides, and Fertilizer component including pollution prevention practices to comply with Permit sections D.3.a.(1)-(2), D.3.a.(4), and J.1.a.(3)(e).
Del Mar has a three-prong approach to pesticide and fertilizer application BMPs by implementing:

1. Minimum BMPs that are compatible with other requirements and practices for application of pesticides
2. Integrated Pest Management practices
3. BMPs established for high priority areas

These three BMP approaches are described in more detail below.

The Federal Pesticide, Fungicide, and Rodenticide Act and California Title 3, Division 6, Pesticides and Pest Control Operations place strict controls over pesticide application and handling and specify training, annual refresher, and testing requirements. The regulations generally cover: a list of approved pesticides and selected uses, updated regularly; general application information; equipment use and maintenance procedures; and record keeping. The California Department of Pesticide Regulations and the County Agricultural Commission coordinate and maintain the licensing and certification programs. All public agency employees who apply pesticides and herbicides in "agricultural use" areas such as parks, golf courses, rights-of-way and recreation areas should be properly certified in accordance with state regulations. Contracts for landscape maintenance should include similar requirements.

All City employees or contractors who handle pesticides are familiar with the most recent MSDS for the materials being handled and used. Additional required BMPs include: always use caution when handling any hazardous product; read and follow use instructions, use up all of the product before disposing; do not dispose of product down storm drains, into creeks, onto the ground, or by burning.

The City has established a very comprehensive set of supplemental BMPs from the CASQA Handbook describing the minimum performance standards for pesticide application, storage, safety, application schedule, and mixing and loading. In addition, supplemental BMP information can be found in the City's Storm Water Manual. The procedures and requirements for pesticide application are adhered to by all City employees and contractors authorized to handle, use, and apply pesticides and fertilizers. Any applications conducted by City staff are recorded on a log.

### 6.3.4 Program Implementation

This section describes the various activities or steps used to require and verify the implementation of designated BMPs for the application of pesticides and fertilizers.

#### 6.3.4.1 Education and Staff Training

In addition to the education and training described in Section 6.1, all applicators must either hold a California Department of Pesticides Regulation Qualified Applicator Certificate or have undergone annual pesticide safety training. The City's applicators (employees or contractors) must meet these requirements and follow the City's minimum BMPs.

Employees in the Public Works and Community Services Departments also receive job-specific training to identify any issues associated with pesticide application conducted by employees or contractors and may refer the matter to the Clean Water Program for additional review or BMP implementation. The City's current practice is to contract landscaping activities, including pesticide applications, and it has in place the minimum BMPs for all the pesticide application activities which are included in the contract(s) with these service providers.

City employees receive the annual pesticide safety training in order to perform the minimal pesticide applications they perform (RoundUp).

Inspections of landscaped areas are periodically conducted by City staff knowledgeable of the requirements, and any discrepancies with contract requirements are noted in Field Inspection Notices (FIN) and are forwarded to the contractor for corrective action within the specified timeframe. The City may withhold payment for failure to meet the requirements in the FIN.

#### 6.3.4.2 Contract Specifications

See Section 6.1.3.2 for a description of municipal services contract specifications and procedures. Additional landscaping contract specifications include monetary disincentives (deducted from the invoice) for various wasteful practices including over-watering and by controlling chemical usage, as noted in Section 6.3.4.4.

#### 6.3.4.3 Administrative Controls (Internal Processes, Policies, Procedures, etc.)

See Section 6.1.3.3 for a description of the citywide Administrative Control policies and procedures applicable to the Municipal component.

### 6.3.4.4 Direct implementation of BMPs

In addition to the minimum BMPs selected for this area and activity, the City will continue to implement the IPM procedures described below.

#### *Integrated Pest Management (IPM) Procedures*

Specific IPM practices which have been implemented by the City of Del Mar include the following:

1. Central Irrigation Control System: The City maintains the irrigation control system to minimize water use and runoff to the public right-of-way. Inspections are required of the contractor on a weekly basis for automatic systems and on a monthly basis for the entire system to ensure satisfactory performance. Wasting water is discouraged with monetary disincentives in the contract.
2. Aerification of Turf Areas. Aerification improves overall health and growth of turf grasses, thereby suppressing unwanted weed growth. This cultural practice generally reduces the need for other weed control measures such as herbicide treatments.
3. Use of Fertilizers: Application rates are specified by the City and strictly controlled with oversight of the purchased and delivered amounts of fertilizers used by contractors. The application of coated urea fertilizers is preferred and gives turf a more even nutrient availability. Slow release fertilizers reduce potential nutrient leaching and promote more even turf growth, generally with less fertilizer use. Water methods are also prescribed to manage the dissolution of fertilizers and prevent discharge and runoff.
4. Pest Monitoring and Developing Threshold Limits: Pest populations are monitored and cultural control methods are implemented to keep populations within tolerable limits. Pesticides are only considered once population threshold limits are exceeded. All individuals who supervise the mixing and application of herbicides, pesticides and rodenticides shall possess valid Qualified Applicators Certificate for Category B issued to them by the State Dept. of Food and Agriculture.
5. Use of Mechanical Weed Control: Mechanical weed control is preferable. Chemical weed control is used as a last resort.
6. Use of Mulches: Mulches are used to suppress weed growth on bare soil areas. Other benefits of mulches include improved soil flocculation and water infiltration. Mulching allows reuse wood chips generated by municipal tree trimming operations.

#### *Pollution Prevention*

Consider specific alternative, safer, or less toxic (or non-toxic) products in lieu of current pesticide formulations to control insects, fungi, and weeds.

### 6.3.4.5 Compliance Assessment

Compliance assessment is performed through area/activity inspections as described in Section 6.1.3.4 above.

### 6.3.4.6 Facility Inspections and Improvements

The City's annual inspection program for Municipal areas and activities includes high priority areas with landscaping that will serve to verify the implementation of the IPM procedures and minimum BMPs described in this section. Inspection of these high priority areas serves as the

basis for identifying modifications to the procedures or BMPs for all areas in which pesticides and fertilizers are applied. These inspections are conducted by Clean Water Program staff. Any procedural or BMP modifications to the high priority areas will be applied to non-priority areas as well.

The same regulations that govern pesticide application and handling also cover storage and inspection. These requirements apply to appropriate City staff or contractors which are included in landscape maintenance contracts. The following is a brief summary of the applicable portions of the regulations:

1. The Qualified Applicator Certificate holder will conduct monthly inspections to monitor storage, handling and disposal of the pesticides.
2. At least quarterly, the County Agricultural Commissioner will consult with public agencies concerned with air and water quality, fish and wildlife, and others, to identify past or potential problems associated with the use of pesticides.
3. The Commissioner may enter and inspect any fields, areas, structures and greenhouses where pesticides are handled, stored, or applied.

Additional contract compliance inspections of landscaped areas are periodically conducted by City staff knowledgeable of the requirements, and any discrepancies with contract requirements are noted in Field Inspection Notices (FIN) and are forwarded to the contractor for corrective action within the specified timeframe. The City may withhold payment for failure to meet the requirements in the FIN. These inspections are mainly for contract compliance and to evaluate quality services, but serve indirectly to provide oversight for compliance with the requirements in this section.

#### 6.3.4.7 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

#### 6.3.4.8 RWQCB Notifications

The City's RWQCB notification procedures are outlined in Section 6.1.3.6.

#### 6.3.4.9 Annual Reporting

All pesticide applications are recorded as part of the California Department of Pesticide Regulations. The City's JURMP Annual Report will include a summary of the BMP verification activities as outlined in Section 6.1.3.7.

For annual reporting purposes, the City must provide confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities. This will be achieved through an annual inspection conducted by the Clean Water Program of the pesticide application practices and implementation of BMPs. Supplemental information may be used that is collected by the contracting departments.

### 6.3.5 Pesticides, Herbicides, and Fertilizers Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(I).

## 6.4 Sweeping of Municipal Areas Element

### 6.4.1 Background

Street sweeping is widely recognized as an effective method of reducing the amount of pollutants (litter, green waste, oils and grease bound to particles, and sediment) on street surfaces that may impact stormwater. The City of Del Mar has in place an established street sweeping program that is effective at removing these pollutants.

It should be noted that this section overlaps in content with Section 6.6 – Roads, Streets, Highways, and Parking Facilities Element. The City has determined that the street sweeping activity is a BMP and that the municipal area defined as roads, streets, and parking facilities are priority areas to which the BMP applies.

Section D.3.a.(5) of the Permit requires that the City implement a sweeping program on improved (possessing curb and gutter) roads, streets, and parking facilities. The program must meet minimum sweeping requirements for high, moderate, and low trash volume areas. The City evaluated the entire street sweeping schedule and all routes to determine compliance with these requirements.

The City of Del Mar conducts street sweeping on improved streets and other streets regardless of the presence of curve and gutter. It should be noted that the City of Del Mar features rural street design in the majority of its residential areas. Street sweeping includes both improved curve and gutter streets, and non-improved, rural design residential streets as shown in Figure 6.4-1.

### 6.4.2 Source Characterization

This section provides an inventory of roads, streets, highways, and parking facilities in the City of Del Mar that are subject to street sweeping as required in Permit sections D.3.a.(5) and J.1.a.(3)(e).

The City does not have jurisdiction over any highways. The road, street and parking lot inventory provided in Table 6.4-1 at the end of this chapter shows the three designations for high, moderate, and low trash and/or debris volume as identified by the City based on knowledge from several years of street sweeping. Based on Permit language, the City of Del Mar is required to sweep high volume areas at least twice per month, moderate volume areas at least monthly, and low volume areas at least once per year.

The City of Del Mar has concluded that it is meeting the minimum street sweeping requirements in the Permit based on the source characterization and analysis presented in this section and as shown in Table 6.4-1.

### 6.4.3 Best Management Practice Requirements

#### 6.4.3.1 Updated BMP Requirements

This section will describe which BMPs will be implemented, or required to be implemented, for street sweeping, including pollution prevention to comply with Permit sections D.3.a.(5), and J.1.a.(3)(e).

It should be noted that street sweeping is considered a BMP and that the street sweeping activity is implemented as a BMP by the City of Del Mar to remove pollutants on the roads, streets and parking facilities listed as part of its municipal inventory. The City designates roads, streets, and parking facilities as high priority municipal areas to comply with Permit section D.3.a.(7) and addresses them in Section 6.6, the Roads, Streets, Highways, and Parking Facilities Element of this JURMP.

The minimum BMPs shown in **Table 6.1-1** for streets apply in addition to street sweeping of these areas at the established frequencies described in Section 6.4.2. More information is provided in Section 6.6 - Roads, Streets, Highways, and Parking Facilities Element.

#### 6.4.3.2 Additional Controls for Municipal Areas and Activities

Not applicable.

### 6.4.4 Program Implementation

Based on the Copermittee template for the JURMP, the following program implementation activities apply for Sweeping of Municipal Areas.

#### 6.4.4.1 Education and Staff Training

See section 6.1.3.1 for education and staff training procedure for City employees. In order to increase cleaning efficiency, sweeper operators are advised to familiarize themselves with the equipment's maximum performance specifications as specified by the manufacturer, including optimal driving speed during sweeping. The City maintains and keeps the street sweeper in optimum working condition to effectively perform this activity.

#### 6.4.4.2 Maintenance Inspections

Not applicable to street sweeping activity.

#### 6.4.4.3 Contract Specifications

Not applicable to street sweeping activities at this time. General contract specifications and procurement procedures would apply per Section 6.1.3.2.

#### 6.4.4.4 Administrative Controls (Internal Processes, Policies, Procedures, etc.)

See Section 6.2.4 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

#### 6.4.4.5 Direct Implementation of BMPs (e.g., street sweeping)

In areas of chronic hindrances due to parked cars, the City crew will either post temporary "No Parking" signs. Crews also remove large litter (cardboard boxes, etc.) and broken glass from streets. The sweeper operator will make note of problem areas and generate a work order for additional cleaning or inspection, as appropriate.

***Visual Observations***

The street sweeper operator(s) shall note street and inlet problem areas and potential pollutant sources on their daily routes and report those items as "work orders" so they can be resolved including spills, and illegal discharges or activities. The Clean Water Program may also be contacted to handle any illegal spill or discharge investigations.

### 6.4.4.6 Compliance Assessment

The sweeper operator(s) will be able to identify problems early on because of the frequency of street sweeping in high traffic areas. In addition to this effort, all public rights-of-way are thoroughly inspected periodically. Public Works personnel conduct any follow-up inspections of the streets and parking lots (including gutters) when reported by the street sweeper operator. Spills or illegal discharges may be reported to the Fire Department for potentially hazardous materials, or the Clean Water Program for special handling and any follow-up investigations.

### 6.4.4.7 Facility Inspections and Improvements

See Sections 6.4.4.5 and 6.4.4.6 above for details.

### 6.4.4.8 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

### 6.4.4.9 RWQCB Notifications

The City's RWQCB notification procedures are outlined in Section 6.1.3.6.

### 6.4.4.10 Annual Reporting

The City's annual reporting and recordkeeping procedures are found in Section 6.1.3.7.

The annual reporting requirements for street sweeping include:

1. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.
2. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.
3. Identification of the total distance of curb-miles of improved roads and streets identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads and streets.
4. Identification of the total distance of curb-miles swept.
   NOTE for items no. 1-4 above: the City has extensive recordkeeping in place that tracks the daily operations of the street sweeper including the total number of broom hours, the precise number of miles swept for each distinct high, moderate and low volume area cannot be effectively tracked due to the method of operation of the equipment and the schedule which may include sweeping several combinations of the various areas in a within the same day or week. The City does have the ability to calculate the curb-miles based on the various, daily data entries. The reported swept curb-miles provided in the annual report will be based on these calculations.

5. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.
6. Amount of material (tons) collected from street and parking lot sweeping. NOTE: The Permit requires the material collected be reported in tons, yet the City's measurement is in cubic yards. Cubic yards will be reported in tons using a 1,000 pound per cubic yard conversion.

### 6.4.5 Sweeping of Municipal Areas Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.5 Infiltration from Sanitary Sewer to MS4/Provide Preventive Maintenance of Both Elements

This section is applicable to Del Mar's sanitary sewer system. The MS4 operation and maintenance activities and programs related to infiltration overlap with Section 6.2 – Operation and Maintenance of Municipal Separate Storm Sewer System (MS4) and Structural Controls. The detection of infiltration of sanitary sewer wastewater may also be determined through the implementation of the Illegal Discharge Detection and Elimination program described in Section 9 of this JURMP.

The sanitary sewer system functions primarily for the collection and conveyance of sewerage from commercial and residential properties, as well as the 22nd District Agricultural Association property, also known as the Del Mar Fairgrounds. Sewage is ultimately delivered to the City of San Diego for treatment. The goal of this program is to efficiently transport all sewage and reduce and eliminate stoppages and/or spills by implementing a proactive preventive maintenance and capital improvement program.

The City's sanitary sewer operation and maintenance program is the basis for the prevention of infiltration into the MS4 system. The City of Del Mar's existing programs have been evaluated to verify that they meet the requirements and comply with Permit per D.3.a.(6). This section provides a description of those programs and the City's determination that they are comprehensive and do not require modification to satisfy the requirements in the Permit.

### 6.5.1 Background

The City maintains the sanitary sewer system and is subjected to various WDRs and permits for its operation and maintenance. This section provides an overview of the City's implementation of various sanitary sewer maintenance plans and programs to comply with mandates from the San Diego RWQCB and SWRCB.

The Public Works Department is responsible for operation and maintenance of both the sanitary sewer system and the MS4. The operation and maintenance program for the MS4 is included in Section 6.2 above. The operation and maintenance program for the sanitary sewer includes a comprehensive inspection, cleaning, repair, and maintenance program. The City's Capital Improvement Project (CIP) program includes funding for sanitary sewer replacement, improvements, and major repairs. The CIP program meets industry standards and other regulatory requirements.

The City's sanitary sewer program includes preventive maintenance activities to reduce the risk of failure and leaks that could lead to the infiltration of sanitary sewage to the MS4 or releases to the receiving waters (directly or indirectly). As needed, the City contracts and uses closed-circuit television inspection of sanitary sewer and underground MS4 pipes to assist City crews in identifying specific problem areas and sewer system leaks infiltrating the MS4.

### 6.5.2 Source Characterization

This section provides an explanation of the City's inventory of the sanitary sewer system and prioritization assignments to comply with Permit sections D.3.a.(1) and J.1.a.(3)(e).

#### *Sanitary Sewer Infrastructure*

The sanitary sewer system infrastructure in Del Mar includes approximately 24.75 miles of gravity main, 0.07 miles (or approximately 387ft) of force main and 387 service points. Del Mar's system includes three sewer pump/lift stations, 112 clean out facilities, and approximately 549 manhole structures.

The municipal inventory in Table 6.1-1 includes all sanitary sewer pump stations, and pipes as high priority sources that require minimum BMPs as specified in the table. Specifically, the City's sanitary sewer pump stations are considered a high priority source of pollutants due to the potential for spills and mechanical failure. The main pump stations are located at 21st Street, 7th Street and San Dieguito Road.

### 6.5.3 Best Management Practice Requirements

#### 6.5.3.1 Updated BMP Requirements

This section will describe which BMPs will be implemented, or required to be implemented when operation and maintenance activities associated with the sanitary sewer are performed by City personnel or contractors. This section provides a listing of BMPs, including pollution prevention to comply with Permit section D.3.a.(6)and J.1.a.

Del Mar implements or will be implementing within the course of this five-year permit, three overlapping layers for the operation and maintenance of the sanitary sewer system, as a result of multiple and overlapping regulations and requirements. As a result no additional measures (BMPs) are necessary to comply with the Municipal Stormwater Permit. The three layers of implementation are:

1. The City's Sanitary Sewer Standard Operating Procedures
2. Minimum BMPs or procedures compatible with other permits or JURMP components (e.g. construction component, Illegal Discharge Detection and Elimination)
3. Sanitary Sewer Overflow (SSO) response plan; and Fats, Oil and Grease (FOG) Prevention Program to comply with other state permits.

Activity specific minimum BMPs associated with the task of operation and maintenance of the sanitary sewer system by Public Works Department staff are listed in Table 6.1-1. These minimum BMPs were specifically selected from the CASQA BMP manual for Municipal activities and are augmented by additional measures through the other overlapping programs mentioned above.

#### 6.5.3.2 Additional Controls for Municipal Areas and Activities

See Section 6.5.3.1 above.

### 6.5.4 Program Implementation

This section will describe the steps taken to require and verify the implementation of designated BMPs for the operation and maintenance of the sanitary sewer system to comply with Permit sections D.3.a.(6) and J.1.a.(3)(e).

This section describes the various activities or steps used to require and verify the implementation of designated BMPs.

#### 6.5.4.1 Education and Staff Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Employees in the Public Works Department also receive job-specific training to perform the tasks associated with the operation and maintenance practices for the operation and maintenance of the sanitary sewer system. The City practices in place for all its sanitary sewer operation and cleaning activities and they are the basis for job-specific training implemented for this component. The City's procedures are updated periodically and training is implemented immediately after revisions are completed.

#### 6.5.4.2 Inspection, Cleaning and Preventive Maintenance Practices

The City of Del Mar has a comprehensive sanitary sewer inspection, cleaning and preventive maintenance program implemented as described above and the City implements a pre-established schedule as shown in Table 6.5-1 included at the end of this chapter.

Sanitary sewer structures inspected, cleaned, and maintained include pump/lift stations, underground pipes, and manhole structures. The frequency and schedule is shown by structure type and a description of the activity is included. The specific sanitary sewer operation and maintenance activities have been verified against the Permit requirements as shown in Table 6.5-1.

#### 6.5.4.3 Contract Specifications

General contract specifications and procurement procedures would apply per Section 6.1.3.2.

#### 6.5.4.4 Administrative Controls (internal processes, policies, procedures, etc.)

See Section 6.1.3.3 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

#### 6.5.4.5 Direct Implementation of BMPs

Del Mar ~~has implemented~~ implements the following specific Best Management Practices for sewer conveyance, to the maximum extent practicable, and those specific requirements under ~~SDRWQCB Order 96-04~~State Board Order 2006-003-DWQ and Regional Board Order R9-2007-005.

1. Inspecting and cleaning underground sanitary sewer system pipes using the vacuum truck or other methods as appropriate as noted in the schedule (Table 6.5-1);
2. Inspecting and cleaning known priority areas (or hot spots) at a higher frequency (semiannually);
3. Inspecting all pump stations at least twice weekly for preventive maintenance;
4. Performing non-emergency sewer facility repairs and construction as needed;
5. Performing emergency sewer facility repairs and construction as needed;
6. In all cases, properly handling materials and disposing of waste removed during maintenance activities in a manner that will not release the material to the storm drain system, or in any other way contaminate stormwater runoff; and
7. Posting receiving waters as required by the Department of Health.

### 6.5.4.6 Compliance Assessment

The City verifies adherence to the established sanitary sewer system operation and maintenance practices and schedule in order to reallocate or allocate additional resources to perform any necessary follow-up activities to comply with the various regulatory requirements. The sanitary sewer system operation and maintenance activities (and any deficiencies) will be reported in the JURMP Annual Report and corrective actions identified.

### 6.5.4.7 Facility Inspections and Improvements

Sanitary sewer system operation and maintenance procedures are established by the City and record keeping is utilized by the Public Works Department to increase implementation efficiency and the effectiveness through a work order system. The sanitary sewer system inspection and cleaning logs are kept to ensure that the schedule shown in Table 6.5-1 is implemented for various permit compliance requirements, including this JURMP Municipal component element, and the data and information is compiled for the Annual Report. The Public Works Department has an established work order system that tracks all proposed, pending, and completed tasks assigned to its crews. The work order system is used to schedule and track completion of the sanitary sewer system inspections and cleanings. Public Works staff completes a work order and turns it in to the department's administrative section for data entry. Sanitary sewer system inspection and cleaning documentation will contain the following information:

1. The date and time the inspection/cleaning was performed;
2. Name of the inspector;
3. Items inspected/cleaned;
4. Locations of facilities inspected or cleaned;
5. Overall amount of material removed (estimated in either volume or weight);
6. Type of material;
7. Problems noted;
8. Illegal – illicit connection detected;
9. Corrective action required;
10. Date corrective action was taken; and
11. Issue notices of violation as needed.

Other means used to document and record inspection results are field notes, timed and dated photographs, video, drawings, and maps. All records are retained at the Public Works Department for at least three years after completion of the task or activity, as required in Attachment B of the Permit.

#### 6.5.4.8 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

#### 6.5.4.9 RWQCB Notifications

The City's RWQCB notification procedures to comply with the Permit 2007-0001 requirement are outlined in Section 6.1.3.6. It should be noted that the City may be subject to additional reporting requirements based on other state permits and regulations associated with reporting of sanitary sewer overflows, and beach posting and closures.

#### 6.5.4.10 Annual Reporting and Recordkeeping

Sanitary sewer operation and maintenance procedures are established by the City and record keeping is utilized by the Public Works Department to increase implementation efficiency and the effectiveness through a work order system. The sanitary sewer inspection, maintenance, and cleaning logs are kept to ensure that the schedule shown in Table 6.5-1 is implemented for permit compliance and the data and information is compiled for various annual reports. The Public Works Department has an established work order system that tracks all proposed, pending, and completed tasks assigned to its crews. The work order system is used to schedule and track completion of tasks and is verified on a quarterly basis. Public Works staff completes a work order and turns it in to the department's administrative section for data entry. Annual Reporting to comply with the requirements of the Permit with respect to sanitary sewer inspection and cleaning includes at minimum the following:

1. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4

Other means that can be used to document and record inspection results of the sanitary sewer system assessment include field notes, bacterial testing, timed and dated photographs, video, drawings, and maps. The video or visual inspection of the sanitary sewer is a very effective means of assessing infiltration into the MS4. All records are retained at the Public Works Yard for at least three years after the date the record was established. In some instances, records may require a five year retention time (see Attachment B of the Permit, Section 4.).

Recordkeeping of sewage and other spills entering the MS4 system will be tracked and reported according to the requirements outlined in Section 9 – Illicit Discharge Detection and Elimination Component.

### 6.5.5 Infiltration from Sanitary Sewer to MS4/Preventive Maintenance Effectiveness Assessment (Optional)

The Infiltration from Sanitary Sewer to MS4/Preventive Maintenance Effectiveness Assessmetn can be included in this section (optional) or in Section 13. The City will address all JURMP effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l) in Section 13.

## 6.6 Roads, Streets, Highways, and Parking Facilities Element

### 6.6.1 Background

Del Mar has approximately 747 curve miles of streets that are swept per year and two public parking lots or facilities (City Hall and Lifeguard Station) as shown on the map in Figure 6.4-1 found at the end of this chapter. The City does not maintain any highways and they are not addressed in this element.

The City's street sweeping program described in Section 6.4 applies to this element and provides the basis of the prioritization and minimum BMPs to comply with the requirements in the Permit. The City has deemed street sweeping as the minimal BMP for the City's streets and parking facilities.

This element will complement the street sweeping practices by focusing on parking facilities and the additional management measures implemented to minimize their pollutant contributions to the MS4. This element will also include the minimum BMPs required during maintenance and minor construction or repair activities for streets, roads, and parking facilities. Major construction BMPs for roads, streets, and parking facilities are further described in Section 5 of the JURMP and complement this section.

### 6.6.2 Source Characterization

This section provides a completed inventory of streets, alleys, and parking facilities to comply with Permit sections D.3.a.(1) and J.1.a.(1)(e)i).

The City has prioritized its streets based on high, moderate, or low trash volume to comply with the street sweeping element of the Municipal component (Section 6.4) and for consistency is applying that prioritization in this element. The City is also applying the street sweeping activity as the primary BMP to reduce pollutants from streets and parking facilities. The street and parking facility inventory and potential pollutants are shown in Table 6.1-1 found at the end of this chapter.

The City has identified the two city public parking facilities as a high priority source and has designated minimum BMPs for these parking facilities, as shown in Table 6.1-1. Additional activities generating pollutants in parking lots or facilities may include:

1. Power Washing (of vehicles and/or structures by mobile cleaners)
2. Degreasing of surfaces
3. Leaks from vehicles and equipment

### 6.6.3 Best Management Practice Requirements

#### 6.6.3.1 Updated BMP Requirements

This section describes which BMPs will be implemented, or required to be implemented for streets, roads, and parking facilities, including pollution prevention to comply with Permit sections D.3.c.(2), (3), (4), and (5), and J.1.a.(1)(e)ii, iii, v, vi, vii, and viii.

The City has identified minimum BMPs for streets and two individual public parking facilities as shown in Table 6.1-1 found at the end of this chapter. In addition, specific BMPs have been selected that are appropriate for certain activities associated with minor repair and maintenance of this type of infrastructure.

#### *Routine Street Cleaning Operations (Street Sweeping)*

Street sweeping has been deemed the most appropriate BMP to reduce pollutants from the City's streets and parking facilities. The street sweeping program is described in detail in Section 6.4 of this JURMP component which includes the street sweeping prioritization and schedule.

### *Litter Management*

The Public Works and Community Services Departments are responsible for litter management throughout the City using municipal staff (permanent or contract employees) or several contractual services.

For example, the City's landscape contractor is responsible for litter removal from the City's trash receptacles at parks, in the business district area near bus stops, landscaped medians including median curbs and noses, sidewalks, and foot paths, curbs and gutters adjacent to landscaped areas on the streets, cleaning the parking areas of City Hall, the City Library and other properties. Community Services and/or its contractors remove litter from the business district (downtown) and bus stops, the beach area and beach trash receptacles, and city facilities it manages such as the Powerhouse Community building and surrounding areas . The City has a specialized contractor that removes litter from the city's arterial streets leading to the business district and bus stops during the peak tourist season. Furthermore, businesses also perform litter management around their properties located in the downtown business district.

In summary, the City has a comprehensive litter management program that covers all of the city's public areas.

### *Street and Parking Facility Repair Activities*

Routine repair and maintenance activities for streets and parking facilities include: asphalt sealing, filling potholes, minor construction or repair of sidewalks and curbs and gutters. Minor construction, repair, and maintenance of City streets and parking facilities follow the procedures and applicable minimum BMPs noted in Table 6.1-1, and in addition include:

1. Repairing potholes to reduce sediment loss and erosion. Minor repairs and temporary repairs of major problems are to be completed as soon as possible;
2. Ensuring that all materials are kept secured or collected once the job is completed;
3. Additional sweeping to ensure debris/dirt are removed from the worksite at the end of the workday.

### *Parking Facilities*

The Public Works Department is responsible for the sweeping and minor repair of parking facilities. The Clean Water Program is responsible for verifying that the parking facilities are meeting the BMPs and that all departments which utilize these facilities informed of stormwater requirements. Both of these parking facilities are used by the general public and have generally

unrestricted access. Activities in and around parking facilities may generate waste, spills, and leaks that could potentially reach the MS4 and receiving waters as stormwater runoff or as non-stormwater discharges. The minimum BMPs for the two high priority parking facilities are shown in Table 6.1-1. In addition to the minimum BMPs, the following measures also support controlling non-stormwater discharges and pollutants:

### *Routine Facility Cleaning (Power Washing)*

Whenever possible, the City will employ dry cleaning methods rather than power washing for cleaning activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. In cases where power washing is deemed necessary or appropriate, the City requires that all wash water resulting from power washing be captured prior to entering the MS4 and disposed pursuant to applicable laws; this will serve as the minimum BMP for this activity. Power washing is conducted, mainly for the City's downtown or business district sidewalks, by the City's Public Works Department using a capture and vacuum method. In order to maintain compliance with Order 2007-0001 and the City's Municipal Code Section 11.30.050 – Discharge Prohibitions, this minimum BMP shall be properly applied and enforced with any City power washing activities in order to prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards. Any contracted power washing services will conform to the contract specification in JURMP Section 6.1.3.2. For more details on municipal power washing activities and procedures, see JURMP Section 6.18.

*Parking Restrictions*
Parking restrictions are enforced throughout the City to minimize overnight or extended parking or vehicle storage. This reduces the potential for spills, leaks, debris, and trash associated with overnight campers, parking, maintenance and repair, and vehicle storage.

*Housekeeping Practices*

1. Vehicle washing in the City's public parking lots is prohibited.
2. Trash receptacles are provided.
3. Routine sweeping, litter pick up and disposal is performed.

Additional BMPs may be appropriate for street and parking lot construction activities and are found in the Construction component of this JURMP.

### 6.6.3.2 Additional Controls for Municipal Areas and Activities

This section describes any additional controls the City will implement for municipal areas and activities tributary to CWA section 303(d) impaired water body segments where an area or activity generates pollutants for which the water body segment is impaired, or for municipal areas and activities within, adjacent to, or discharging directly to coastal lagoons or other receiving waters within water quality sensitive areas (Permit section D.3.a.(2)(e)).

The October 2006 303(d) list includes designations of impairment for the mouth of San Dieguito River. The City has designated several high priority municipal areas and activities to meet the minimum requirements and BMPs to control discharges to San Dieguito Lagoon and the mouth.

### 6.6.4 Program Implementation

This section will describe the steps that will be taken to require and verify the implementation of designated BMPs for municipal areas and activities as described in Permit sections D.3.c.(6), (7), and (8), and J.1.a.(1)(d)iv, ix, and x.

#### 6.6.4.1 Education and Staff Training

See section 6.1.3.1 for education and staff training procedure for City employees.

#### 6.6.4.2 Inspections

The City's inspection procedures for high priority facilities are described in Section 6.1.3.4 and are applicable to this element.

#### 6.6.4.3 Contract Specifications (e.g., for power washing, cleaning)

General contract specifications and procurement procedures would apply per Section 6.1.3.2.

#### 6.6.4.4 Administrative controls (internal processes, policies, procedures, etc.)

See Section 6.1.3.3 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

#### 6.6.4.5 Direct implementation of BMPs

The street sweeping element described in Section 6.4 is directly applied as a BMP for streets, roads and parking facilities in Del Mar.

#### 6.6.4.6 Compliance Assessment

The City verifies adherence to the established street and parking lot BMP and sweeping schedule. Prior to the end of the fiscal year any necessary follow-up activities to comply with the various regulatory requirements will be conducted, to the degree practicable.

The sweeper operator(s) will be able to identify problems in a timely manner due to the frequency of this activity. In addition to this effort, all public rights-of-way are thoroughly inspected periodically for defects and repair needs. Clean Water Program staff will conduct any follow-up inspections of the streets and parking lots when reported by the street sweeper operator for illegal discharges or spills, as appropriate.

#### 6.6.4.7 Facility Inspections

The inspection procedures are described in Sections 6.4.4.5 and 6.4.4.6 under street sweeping.

#### 6.6.4.8 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

#### 6.6.4.9 RWQCB Notifications

The City's RWQCB notification procedures to comply with the Permit 2007-0001 requirement are outlined in Section 6.1.3.6.

#### 6.6.4.10 Annual Reporting

The City's annual reporting and recordkeeping procedures are found in Section 6.1.3.7. The street sweeping component in Section 6.4 includes all documentation necessary for annual reporting of the roads, streets and parking facility BMP.

### 6.6.5 Roads, Streets, Highways, and Parking Facilities Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.7 Flood Management Projects and Flood Control Devices Element

This element is not applicable in the City of Del Mar.

## 6.8 Areas Tributary to 303(d) Water Body Segments/Adjacent or Discharging to ESAs Element

The areas tributary to 303(d) listed water bodies have been identified in each of the relevant municipal activities and BMPs designated within each section to facilitate implementation. The City has also prepared a local Water Quality Sensitive Area (WQSA) map shown in Figure 1.1-2 that defines the priority areas for consideration in development planning decisions and to facilitate the selection of priority municipal areas/activities.

### 6.8.1 Background

This section provides background information that the City believes is relevant to this specific element of the Municipal Component.

### 6.8.2 Source Characterization

The mouth of San Dieguito River and Anderson Canyon are 303(d) listed for bacterial indicators, and Los Penasquitos Lagoon is listed for sediment/siltation in the October 2006 version of the impaired water quality bodies list. As a result, BMPs have been evaluated to reduce bacterial indicators, to the maximum extent practical from municipal operations. The area within Del Mar that discharges to Los Peñasquitos Lagoon is a limited to one small residential area with minimum municipal activities. Discharges to the Anderson Canyon beach outfall also include flows from the North County Transit District MS4.

### 6.8.3 Best Management Practice Requirements

#### 6.8.3.1 Updated BMP Requirements

This section describes the BMPs that will be implemented, or required to be implemented, for areas and activities tributary to 303(d) listed water bodies, including pollution prevention (Permit sections D.3.c.(2), (3), (4), and (5), and J.1.a.(1)(e)ii, iii, v, vi, vii, and viii).

The City has identified the municipal areas surrounding and contributing to the MS4 into San Dieguito River as a high priority area for BMPs that reduce bacterial indicator discharges. The City has designated street sweeping of parking facilities and streets at a high frequency to reduce the contribution of sediment that may contain bacterial indicators. The specifics of the program are described in Section 6.6.3.2.

In addition, the City has designated all three sanitary sewer lift stations and conveyance system as high priority to minimize this potential source of bacterial indicators by implementing the Infiltration from Sanitary Sewer to MS4/Provide Preventive Maintenance of Both Element described in Section 6.5 above.

Street sweeping of areas discharging to Los Peñasquitos Lagoon are control for sediment discharges by performing street sweeping on a moderate (bimonthly) and low (biannual) frequency.

#### 6.8.3.2 Additional Controls for Municipal Areas and Activities

See above.

### 6.8.4 Program Implementation

See above.

### 6.8.5 Areas Tributary to 303(d) Water Body Segments/Adjacent or Discharging to ESAs Effectiveness Assessment (Optional)

Not applicable.

## 6.9 Active or Closed Municipal Landfills Element

This element is not applicable in the City of Del Mar.

## 6.10 Publicly Owned Treatment Works Element

This element is not applicable in the City of Del Mar.

## 6.11 Solid Waste Transfer Facilities Element

This element is not applicable in the City of Del Mar.

## 6.12 Land Application Sites Element

This element is not applicable in the City of Del Mar.

## 6.13 Corporate Yards Element

### 6.13.1 Background

The City has a main Public Works Corporation Yard located near Jimmy Durante Boulevard and San Dieguito Road. The yard also includes storage areas or sheds used by various City departments and/or temporary use by contractors and a centralized trash management area.

This section is applicable to the Public Works and Community Services departments that operate vehicle and equipment maintenance, and material storage facilities as described in the Permit. Activities at this facility may generate waste, spills, and leaks that could potentially reach the storm drain system and receiving waters in stormwater runoff or as non-stormwater discharges. The goal of this element is to ensure that stormwater pollution prevention practices and best management practices are considered when conducting activities at these municipal facilities.

For the purposes of this element, public vehicle and equipment maintenance, and material storage facilities are determined to be any City-owned or operated facility or portion thereof that: conducts municipal activities; operates equipment; handles materials; performs fleet vehicle maintenance including repair, maintenance, washing, and fueling; performs maintenance and/or repair of heavy machinery/equipment; and stores chemicals, raw materials, or waste materials in quantities that require a hazardous materials business plan or a Spill Prevention, Control, and Counter-measures (SPCC) plan.

### 6.13.2 Source Characterization

The City has designated the Public Works Corporation Yard as a high priority facility as noted in Table 6.1-1 found at the end of this chapter and includes assigned minimum BMPs to correspond with the high priority designation.

At a minimum, the potential to discharge the following pollutants shall be addressed by the BMPs implemented at this facility:

1. Waste oil;
2. Paint and cleaning products;
3. Used antifreeze;
4. Used oil filters;
5. Oily rags or towels;
6. Sediment;
7. Trash and refuse associated with daily operations
8. Pesticides and fertilizer storage;
9. Wash water.

### 6.13.3 Best Management Practice Requirements

#### 6.13.3.1 Updated BMP Requirements

The minimum BMPs are in place at these facilities to provide for stormwater pollution prevention and protection from non-stormwater discharges. Public Works Department staff is located at this facility and they are the stewards of the facility. The Clean Water Program is responsible for inspecting the facility and providing recommendations to the Public Works Department on BMP implementation and compliance with this JURMP section and the Permit. The same BMPs apply to other users of the facility, including Community Services, the Fire Department, and any City contractors located on or using the premises.

The minimum BMPs for the maintenance yard are listed in Table 6.1-1 found at the end of this chapter.

The City's main equipment and vehicle wash pad is located at the Public Works Yard and is used to wash and clean all City vehicles and equipment. Additional vehicle was areas connected to the sanitary sewer are located at 17th Street and 25th Street Lifeguard Stations where Community Services vehicle and equipment washing takes place.

The City's main trash bin area is located at the Public Works yard. This area is surrounded by a berm and drainage is directed to the sanitary sewer system.

#### 6.13.3.2 Additional Controls for Municipal Areas and Activities

This section describes any additional controls that the City will implement or require implementation of for municipal areas and activities tributary to CWA section 303(d) impaired water body segments (where an area or activity generates pollutants for which the water body segment is impaired), or for municipal areas and activities within, adjacent to, or discharging directly to coastal lagoons or other receiving waters within water quality sensitive areas (Permit section D.3.a.(2)(e)).

The Corporation Yard has not been deemed to have a high probability of contributing bacterial indicators to the receiving waters in San Dieguito River which are 303(d) listed for this pollutant. No additional controls have been identified at this time.

### 6.13.4 Program Implementation

This section will describe the steps taken to require and verify the implementation of designated BMPs for the corporation yard to comply with Permit sections D.3.a.(6) and J.1.a.(3)(e).

This section describes the various activities or steps used to require and verify the implementation of designated BMPs.

#### 6.13.4.1 Education and Staff Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Employees in the Public Works Department also receive job-specific training to perform the tasks associated with the operation and maintenance practices at the yard or related to the activities being performed. The City has in place Standard

Operating Procedures (SOPs) for numerous tasks and activities and job-specific training is implemented for each of those tasks or activities. The City's SOPs are updated periodically and training is implemented immediately after revisions are completed. The City's overall education and training program is provided in Section 6.1.3.1. The Clean Water Program is responsible for providing annual training and information to the Public Works and Community Services departments regarding compliance with this JURMP section, BMPs and other applicable requirements in the Permit.

The BMPs applicable at the City's Corporation Yard are included in the facility's Storm Water Management Plan and activity specific BMPs are posted near the work areas or sites throughout the yard for easy reference.

### 6.13.4.2 Inspection, Cleaning and Preventive Maintenance Practices

The City's inspection procedures for high priority facilities are described in Section 6.1.3.4 and are applicable to this element.

### 6.13.4.3 Contract Specifications

General contract specifications and procurement procedures would apply per Section 6.1.3.2.

### 6.13.4.4 Administrative Controls (internal processes, policies, procedures, etc.)

See Section 6.1.3.3 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

### 6.13.4.5 Direct Implementation of BMPs

See Section 6.13.3 for the minimum BMPs and implementation strategies.

### 6.13.4.6 Compliance Assessment

Compliance assessment is performed through area/activity inspections as described in Section 6.1.3.4 above.

### 6.13.4.7 Facility Inspections and Improvements

See section 6.1.3.4 for a description of the facility inspection procedures applicable to the Municipal component.

### 6.13.4.8 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

### 6.13.4.9 RWQCB Notifications

The City's RWQCB notification procedures to comply with the Permit 2007-0001 requirement are outlined in Section 6.1.3.6. It should be noted that the City may be subject to additional reporting requirements based on other state permits and regulations applicable to the Corporation Yard.

#### 6.13.4.10 Annual Reporting and Recordkeeping

See section 6.1.3.7 for the overall reporting and recordkeeping strategy for the Municipal component. This facility will be inspected annually for compliance with the BMP requirements, stormwater management plan elements and the Permit. The results will be summarized in the annual report.

### 6.13.5 Corporate Yards Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.14 Household Hazardous Waste Collection Facilities Element

This element is not applicable in the City of Del Mar. Household Hazardous Waste disposal for residents is provided at remote facilities located in Poway and Vista. The Poway facility is located at 12325 Crosthwaite Circle on Saturdays only. The Vista facility is located at 1145 E. Taylor Street and is open on Saturdays only.

## 6.15 Municipal Airfields Element

This element is not applicable in the City of Del Mar.

## 6.16 Parks and Recreational Facilities Element

### 6.16.1 Background

The Community Services Department overseas numerous functions of the City including Lifeguard Services, Parking Enforcement, Park Ranger operations, Beach Maintenance, and all facility use permits for the parks, beach area, and the Powerhouse Community Center. The Community Services Department is the steward and provides primary oversight of the City's park and beach maintenance activities, community center activities and uses, and building maintenance at these facilities.

The City of Del Mar has a written policy to encourage and regulate the use of City-owned parks and recreational facilities or right of ways by individuals and organizations for special community or personal events. The Community Services Department has oversight over parks and recreational facilities in Del Mar and all special events. The majority of the activities conducted by residents and other users are covered under an event permit and are included as part of the Special Events Element in Section 6.17 below.

Events conducted at Del Mar's Powerhouse Community Center are subject to the City of Del Mar Community Services Facility Use Fees and Policies, and all events are staffed by the City. The City or its contractors performs all routine maintenance activities at these facilities, including landscaping which is covered in the Management of Pesticides, Herbicides, and Fertilizers Element found in Section 6.3 above.

### 6.16.2 Source Characterization

The City's parks and recreational facilities have been identified in the inventory (Table 6.1-1) as either high-priority or non-priority areas based on best professional judgment and the designation for these facilities is based primarily on presence of landscaped area and restroom facilities. Examples of facilities included in this element are all parks, beaches, the city's community center, and tennis court facilities.

Del Mar has identified several areas and activities associated with Pesticides, Herbicides, and Fertilizers as high priority (as noted in Section 6.3). The high priority areas and activities are locations that have the highest potential as a source of these pollutants. The extensive regulation and oversight of this activity makes it feasible to designate high priority to a set number of areas such as large parks and to use them as the basis for the selection of additional or future BMP. This approach allows the City to give a non-priority designation to similar lower threat to water quality areas. Non-priority Pesticides, Herbicides, and Fertilizers areas and activities are still assigned minimum BMPs but are subjected to lesser inspection and oversight by the Clean Water Program. In the event that new or innovative BMPs are found to apply to high priority areas/activities, they will be assessed for their appropriateness and application at non-priority areas.

The Powerhouse Community Center is a contained facility that has public restrooms that serve the center and adjacent parks, and the beach; and may be a source of pollutants from outdoor cleaning or power washing. The most important BMP implemented at the Community Center is trash management which is provided by the City year-round. No other sources have been identified from this facility.

The City's recreational facilities also include two tennis courts with trash as the primary source of pollutants. Trash management is provided on a daily basis.

The Community Services Department also includes the Lifeguard program housed at the Main Lifeguard station which includes a parking lot at the end of 17$^{th}$ Street. Two other lifeguard stations are located at the end of 20$^{th}$ and 25$^{th}$ streets. The City's three lifeguard stations are considered high priority due to their proximity to the Pacific Ocean and the availability of restroom facilities. The Main Lifeguard station also includes storage, vehicle or equipment fueling, and other activities that can be a source of pollutants. The lifeguard stations have existing stormwater management plans that further describe the applicable BMPs included in Table 6.1-1.

The most attractive recreational area in the City of Del Mar is the 2.8 miles of beaches, especially the stretch near the Community Center. The beach is cleaned daily by a beach maintenance crew to control trash and debris. In addition, the City holds beach clean-up events to supplement trash management efforts through the Keep Del Mar Clean organization. These clean-up events cover the parks and beaches, and are further described in the Outreach Section of this JURMP.

### 6.16.3 Best Management Practice Requirements

#### 6.16.3.1 Updated BMP Requirements

The minimum BMPs for the parks and recreational facilities are identified as part of the inventory listing in Table 6.1-1. The minimum BMPs apply at each facility and as noted in Section 6.17 – Special Event Venues Element below may be modified to accommodate special events and therefore would required any additional BMPs as listed in Section 6.17.3.

#### 6.16.3.2 Additional Controls for Municipal Areas and Activities

The City does not allow smoking on public beaches and parks which minimizes or eliminates cigarette butt litter, has a high level of trash collection and control at all parks and beaches with daily litter and trash removal from facilities on a year-round basis. Litter removal on the beach includes the use of a beach comber machine that sifts litter from the sand.

### 6.16.4 Program Implementation

#### 6.16.4.1 Education and Staff Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Employees in the Community Services Department also receive job-specific training to perform the tasks associated with the operation and maintenance practices at parks and recreational facilities, or related to the activity being performed such as pesticide application, if applicable. The City has in place operating procedures for numerous tasks and activities (as presented in this Municipal component of the JURMP) and job-specific training is implemented for each of those tasks or activities. The City periodically updates its procedures and conducts training of its employees. The City's overall education and training program is provided in Section 6.1.3.1 and specific Education activities are covered in more detail in Section 10 – Education in this JURMP.

#### 6.16.4.2 Inspection, Cleaning and Preventive Maintenance Practices

The City's inspection procedures for high priority facilities are described in Section 6.1.3.4 and are applicable to this element.

#### 6.16.4.3 Contract Specifications

General contract specifications and procurement procedures would apply per Section 6.1.3.2.

#### 6.16.4.4 Administrative Controls (internal processes, policies, procedures, etc.)

See Section 6.1.3.3 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

#### 6.16.4.5 Direct Implementation of BMPs

See Section 6.16.3 for the minimum BMPs and implementation strategies.

#### 6.16.4.6 Compliance Assessment

Compliance assessment is performed through area/activity inspections as described in Section 6.1.3.4 above.

#### 6.16.4.7 Facility Inspections and Improvements

See section 6.1.3.4 for a description of the facility inspection procedures applicable to the Municipal component.

#### 6.16.4.8 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

#### 6.16.4.9 RWQCB Notifications

The City's RWQCB notification procedures to comply with the Permit 2007-0001 requirement are outlined in Section 6.1.3.6.

#### 6.16.4.10 Annual Reporting and Recordkeeping

See section 6.1.3.7 for the overall reporting and recordkeeping strategy for the Municipal component.

### 6.16.5 Parks and Recreational Facilities Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.17 Special Event Venues Element

### 6.17.1 Background

The City of Del Mar has a policy to regulate the use of City-owned facilities or right-of-ways by individuals and organizations for either special community or personal events by requiring submittal of a Use of Public Facility Permit application and acknowledgment of all the applicable rules, regulations and fees. Once submitted to the City, a review of the application for Use of Public Facility by Community Services staff ensures that the event will be held safely with minimum disruption to the surrounding community; and that the cost of the event is borne by the organizers.

The City of Del Mar enforces public event policy and process which safeguards the City's facilities and the environment.

## 6.17.2 Source Characterization

### 6.17.2.1 Event Definitions and Applicability

The Use of Facility Permit applies to various special events by size and potential impact on City services and facilities. The City has determined that only Major Events have the potential to generate significant amounts of trash and litter. Major events will be subject to inspection as a municipal area and activity as required in Section D.3.a.(7)(a)vii of the Municipal Storm Water Permit.

1. **Special Event:** A Special Event is any scheduled or planned non-emergency event occurring within the City of Del Mar which can reasonably be expected to require increased or modified emergency or non-emergency services or support by City government and/or personnel. "Major Events" and "Minor Events" are defined as "Special Events."
2. **Major Events:** A Major Event is defined as an activity which entails *in excess of 200 participants and/or spectators* and which affects City personnel, resources, services, facilities, traffic circulation, or impacts the community and/or its citizens. Examples of past major events include the La Jolla Half Marathon, Concerts in the Park, Taste of Del Mar, and Holiday Wonderland in Del Mar.
3. **Minor Events:** A Minor Event is defined as any activity *for a small and/or specialized group of less than 200 participants and/or spectators that does not add special burden* on City personnel, resources, services, facilities, traffic circulation or impact the community and/or its citizens.

Any event over 200 people is considered a Major Event and requires submittal and approval of a Use of Public Facility application including use of the City's beachfront parks (Powerhouse and Seagrove). Commercial Use of Public Property is regulated under section 6.48 of the Del Mar Municipal Code (DMMC) and includes additional requirements and fees. Events that include large assemblage of 50 or more people require an Operation Permit per DMMC 6.52 even if held on private property if it is to affect the public.

The Community Services Department has the discretion to circulate the application to the Office of the City Manager, Public Works, Fire Department, Planning Department, and Clean Water Program for their review and input. If applicable, once concurrence is received from all departments, a contract is issued.

## 6.17.3 Best Management Practice Requirements

Best Management Practices should be imposed by the City on Major Event organizers based on the information provided to the City regarding the event and the City's knowledge of the potential impact the event may pose on the MS4 and the receiving waters, especially from trash and litter. The City's Community Services Department is the lead in coordinating with other City Departments to include additional BMPs to control the most common pollutants at these events, which may include: litter and trash, wash water, and spills (food waste, beverages). BMPs for each Major Event are discussed and documented during the initial coordination meetings with the event organizers or sponsors. The BMP requirements are recorded on the Major Event Clean Water and Pollution Control Checklist (Appendix 6-B).

### 6.17.3.1 Updated BMP Requirements

#### *Major Event BMP List*

The Municipal Storm Water Permit requires that the City consider six (6) types of controls or BMPs to eliminate of reduce trash and litter from leaving the event area and potentially entering both the MS4 and/or receiving waters. The Community Services Department will consider the following BMPs for all Major Events held at the City's facilities or the public right-of-way.

The City of Del Mar has reviewed the controls listed in Permit Section D.3.a.(2)(f)i through D.3.a.(2)(f)vi and has determined their applicability and effectiveness during Major Events.

#### *Major Event BMPs:*

1. Temporary screens on catch basins and storm drain inlets; catch basin, drop inlet, and curb inlet structures are all considered "inlets" to the MS4 in this section. Temporary screens may not be feasible in all cases due to size variations and locations. Del Mar has determined that gravel or sand bags are not an acceptable method to protect inlets or secure fabric materials around inlets because they can rupture and contribute debris to the MS4. Ruptured bags can also reduce inlet cleaning efficiency.

    a. Drop inlets (parking lots and other areas). Del Mar may need to consider drop inlet protection when special events are conducted. One of two methods may be used on drop inlets: 1) drop inlets that are located within the areas used for Major Events will be temporarily covered or sealed to prevent trash and debris from entering; or 2) drop inlets can be inspected after each event and scheduled for cleaning, as necessary, after the event and prior to the next storm. See Item 4 below for additional details. The second alternative is less desirable, since it takes additional city resources and provides less protection of the MS4.
    b. Curb inlets. Curb inlet protection will be provided on a case by case basis and will depend on the type of event. The method selected will be determined by the City during the Major Event pre-event BMP requirement and coordination meeting. One of two methods may be used on curb inlets: 1) cover or seal curve inlets to provide protection; or 2) curb inlets may be inspected and cleaned, as necessary, after the event and prior to the next storm. The second alternative is less desirable, since it takes additional city resources and provides less protection of the MS4.

2. Temporary fencing to prevent windblown trash from entering adjacent water bodies and MS4 channels; Del Mar's Major Events are a very limited number and are the type of events that do not facilitate the installation and use of temporary fencing. Past experience during the last couple of years managing these events has not shown windblown trash to be a concern due to the diligence of the City's trash and litter management practices. Major Events such as concerts, art walks, and other community events are routinely staffed during and immediately after the event for trash removal and cleaning. The most feasible alternative to this BMP is a combination of proper trash and litter management (Item 3) and, as needed, inlet protection (Item 1) and cleaning following the event (Item 4).

3. Proper management of trash and litter; The Community Services Department staffs all Major Events to monitor the implementation and repair of planned BMPs, including trash

and litter management. Expanded trash services are implemented at all Major Events and are augmented by trash management requirements imposed on the event organizers or sponsors. Beach trash and litter pickup is performed by foot patrol on a daily basis and trash receptacles are emptied. Parks are patrolled to monitor trash receptacle capacity and emptied as needed.

4. Catch basin cleaning following the special event and prior to an anticipated rain event; inspecting and cleaning drop or curb inlets may be more feasible and performed in lieu of temporary covers or screens, if they are located such that covering or sealing them may result in a tripping hazard to pedestrians or interfere with the Americans with Disability Act (ADA) requirements.

   Inspection of inlets within and near the Major Event area will be conducted immediately after the event, and if necessary, cleaning will be scheduled to take place as soon as feasible and no later than the next anticipate storm event. Additional information regarding MS4 cleaning activities can be found in Section 6.2.

5. Sweeping of streets and parking facilities following the major event; Del Mar will determine the extent of street sweeping following a Major Event, either during the pre-event coordination meeting or the post-event inspection. Additional information regarding the City's routine street sweeping program can be found in Section 6.4.

6. Other equivalent controls.

   a. Smoking prohibition. The City prohibits the smoking of tobacco in public places, parks, beaches, and places of employment except in designated smoking areas per DMMC 11.08. This restriction is a BMP that eliminates cigarette butts from public areas and has a positive effect on water quality and litter control. Cigarette butts are considered one of the most prevalent forms of litter in public places. This prohibition acts as a BMP that is in effect at all Major events.
   b. Pet restrictions. The City has prohibited the presence of dogs and specified the time periods and locations at several public beaches and parks (DMMC 4.08) where this is enforced. The City also provides doggie waste bags where dogs are permitted.
   c. Trash receptacles and trash removal must be provided by the event organizers.
   d. Portable toilet facilities. Permanent restroom facilities are located at the Powerhouse Community Center which is readily accessible from these two locations. Portable toilets may be considered for other Major Events on a case-by-case basis.
   e. Washing or cleaning activities. Washing and cleaning of any temporary or portable equipment or materials (chairs, tables, tents, etc.) used during the events is not allowed. Sidewalk or street wash down has to be performed in such a manner that wash water is not allowed to enter the storm drains and must be captured and removed for offsite disposal.
   f. Decorations and other materials such as flower petals, rice, confetti, etc. are absolutely prohibited at special events.

### *Minor Events Applicability and Procedures*

The City of Del Mar has reviewed its policies and procedures for Minor Events. Minor Events require a permit from the Community Services Department and have been determined not to be a significant source of trash and litter requiring the implementation of additional controls or BMPs. Their designation as Minor Events does not imply that BMPs will not apply, only that they

will not be specifically documented and tracked for reporting purposes under the Permit, instead the City will rely on the oversight by City staff, routine and daily trash and litter management practices, and inspection and cleaning of the MS4 (described in Section 6.2 above) and complaint mechanisms to identify persistent problems and consider modifications to these procedures.

The City has strict requirements for all organized use of City park facilities. Use permits are required for:

1. Use specific to a particular time or location in a park or beach
2. Use by a group of more than 25 people

Groups of larger than 25 persons require special consideration for locations including the beach. Applications must be submitted in advance. Persons requesting use of a City facility are required to pay applicable fees.

The Community Services Department has the discretion to circulate the application to the Office of the City Manager, Public Works, Fire Department, Planning Department, and Clean Water Program for their review and input. If applicable, once concurrence is received from all departments, a contract is issued. Only one event is scheduled per park or beach area per day.

### *Minor Event BMP List*

Del Mar has determined that Minor Events are not a significant source of trash and litter and do not pose a risk to water quality degradation, but will require implementation of minimum BMPs or controls. These BMPs were in place prior to the Permit requirement for special events. Use restrictions will also apply. Minor events at the Powerhouse Community Center are always staffed and strictly controlled, especially outdoor areas.

Minor Events located at City parks and beaches are permitted by the Community Services Department and are not specifically staffed by the City. Community Services and other City department staff monitor Minor Events year-round or an as-needed or random basis, including weekends and holidays. Litter and trash management staffing is increased during the high season (late May through early September).

### *Minimum BMPs for Minor Events*

The Permit issued by the Community Services Department to each applicant has specific terms and conditions that include conditions of use listed in the permit and are provided in writing. Examples of BMPs included in the use permit are:

1. Permittee is responsible for ensuring that the park is left clean;
2. All trash and debris associated with the event must be picked up and removed from the beach or park by the applicant;
3. Smoking is not allowed.

The City also implements BMPs for the same locations that act as an additional BMP or control for parks and beaches:

1. Trash and Litter Management. Beach trash and litter pickup is performed by foot patrol and trash receptacles are emptied on a daily basis. Parks are patrolled to monitor trash receptacle capacity and emptied as needed.
2. Facility Cleaning. Restroom facilities are monitored and cleaned at least once daily, including weekends and holidays and more often during the high season, as needed. Restrooms are located at the Powerhouse Community Center.

#### 6.17.3.2 Additional Controls for Municipal Areas and Activities

Not applicable. See Section 6.17.3.1 which includes all controls for events.

### 6.17.4 Program Implementation

#### 6.17.4.1 Education and Staff Training

The special events procedures described in this section have been in place for several years and have worked effectively to prevent pollutants from entering the City's MS4 and receiving waters. The City has augmented the program, to meet Permit requirements, by adding documentation of meetings and activities conducted between City staff and the event organizers as well as documentation of inspections of the major events. The documentation and the process to follow-up on any deficiencies are all minor improvements that will require staff training during the first year of implementation.

#### 6.17.4.2 Maintenance Inspections

This section is not applicable to this activity.

#### 6.17.4.3 Contract Specifications (e.g., for landscape services)

The City of Del Mar enters into agreements, in the form of permits and other letter agreements, with individuals or organizations holding any major event. Information on the requirements and regulations that apply to special events are found on the City's website or by contacting the Community Services Department.

#### 6.17.4.4 Administrative Controls (internal processes, policies, procedures, etc.)

The Administrative Controls applicable to this section are generally described in Section 6.1.3.3. Additional administrative controls specific to Special Event coordination and implementation are described in this section.

#### 6.17.4.5 Direct Implementation of BMPs

The process to identify major events and determine the appropriate BMPs is described in more detail in Sections 6.17.2 and 6.17.3 above. In summary:

***Major Event Application Procedures***

The City requires an application and issues a permit for all major events. Major events have oversight by the City. The Community Services Department is the lead coordinator for Major Events in the City of Del Mar and will complete the Major Event Clean Water and Pollution

Control Checklist (Appendix 6-B) to document the required BMPs and post-event inspection results.

The Major Events in Del Mar include:

1. Taste of Del Mar
2. The La Jolla Half Marathon
3. Concerts in the Park
4. Holiday Wonderland in Del Mar

Moderate Events: No moderate event definition will apply in Del Mar. Events are either classified as Major or Minor.

BMPs are required as applicable and determined during coordination meetings with the event sponsors or organizers.

### 6.17.4.6 Compliance Assessment

The City's Community Services Department will be assessing compliance for all major events to verify implementation and compliance with the specified BMPs. The assessments will be conducted during the event, as appropriate, and at the conclusion of the event.

### 6.17.4.7 Facility Inspections and Improvements

The City's Community Services Department will be conducting inspections of all major events to verify implementation and compliance with the BMPs selected for the event, as shown on the completed form (Appendix 6-B) for each major event. Inspections and any immediate corrective actions will be determined during the event and documented on the form. The post-event inspection will also serve to identify any improvements needed in both the application and in the permitting process for BMP selection for the type of event, and any additional BMPs for future events. The post-event inspection will provide the feedback mechanism to improve the program, as needed.

### 6.17.4.8 Enforcement Measures

Any follow-up activities related to non-compliance, clean-up or enforcement will be initiated by the Community Services Department upon completion of the post-event inspection. Any follow-up activities will be documented in the form and completed in the prescribed timeframe. The Clean Water Program may also assist the Community Services Department upon request.

### 6.17.4.9 RWQCB Notifications

Although none are anticipated, any RWQCB notifications as a result of conducting special events in the City of Del Mar would comply with the Permit 2007-0001 requirement are outlined in Section 6.1.3.6.

### 6.17.4.10 Annual Reporting

The City will be reporting the number of major events and a summary of the inspection results recorded on the inspection form (Appendix 6-B). The completed forms will be provided to the Clean Water Program Manager to summarize the program as part of the annual reporting

process. Any modification to the policies, procedures or BMPs will also be reported annually. Also see Section 6.1.3.7.

### 6.17.5 Special Event Venues Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.18 Power Washing Element

### 6.18.1 Background

This section addresses power washing activities associated with municipal facilities or activities. Due to its potential to introduce pollutants into the MS4 and thus receiving waters, power washing is limited as much as possible and regulated to comply with the Permit and Del Mar Municipal Code Title 11.30 – Stormwater Management and Discharge Control.

### 6.18.2 Source Characterization

Currently, there are no regularly scheduled power washing activities at specific locations. This activity is conducted in various areas of the City depending on the need and as a result of other maintenance functions. This activity and the BMPs listed below are considered to apply citywide for all municipal operations. Power washing may be conducted by City staff or under contract depending on the need.

### 6.18.3 Best Management Practice Requirements

#### 6.18.3.1 Updated BMP Requirements

Whenever possible, the City will employ dry cleaning methods rather than power washing for cleaning activities involving buildings, windows, parking lots, sidewalks, and any other applicable outdoor surfaces. In cases where power washing is deemed necessary or appropriate, the City requires that all wash water resulting from power washing to be captured prior to entering the MS4 and disposed pursuant to applicable laws; in areas where it is appropriate wash water may be directed to the sanitary sewer. Generally this may take place by capturing and disposing of the wash water at the City's Corporation Yard where a wash rack is located. These practices will satisfy the minimum BMP requirements for municipal power washing activities. In order to maintain compliance with Order 2007-0001 and the City's Municipal Code section 11.30, this minimum BMP shall be properly employed and enforced with any City power washing activities in order to prevent municipal discharges from the MS4 from causing or contributing to a violation of water quality standards. Any contracted power washing services will conform to the contract specification in JURMP Section 6.1.3.2 and the BMPs designated for Power Washing described in this section.

#### 6.18.3.2 Additional Controls for Municipal Areas and Activities

The BMPs and protocols listed above offer a high level of source control for the introduction of pollutants into the MS4 and thus do not require additional controls for municipal areas and activities.

### 6.18.4 Program Implementation

#### 6.18.4.1 Education and Staff Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Additional information regarding employee training is provided in Section 6.1.3.1. The City's Public Works Department employees implement the power washing activities related to municipal areas and are trained in the proper BMPs described in this section.

#### 6.18.4.2 Contract Specifications

See Section 6.1.3.2 for a description of municipal services contract specifications and procedures.

#### 6.18.4.3 Administrative Controls (internal processes, policies, procedures, etc.)

See Section 6.1.3.3 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

#### 6.18.4.4 Compliance Assessment

Compliance assessment is performed through area/activity inspections as described in Section 6.1.3.4 above.

#### 6.18.4.5 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

#### 6.18.4.6 RWQCB Notifications

The City's RWQCB notification procedures are outlined in detail in Section 6.1.3.6.

#### 6.18.4.7 Annual Reporting

The City's Annual Report will include a summary of the BMP verification activities as outlined in Section 6.1.3.7.

### 6.18.5 Power Washing Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.19 Fire Services – Non-Emergency Fire Fighting

### 6.19.1 Background

This section describes the City's program to reduce pollutants from non-emergency fire fighting flows (i.e. flows from controlled or practice blazes and maintenance activities) determined to be a significant source of pollutants to waters of the U.S. According to the Permit, emergency fire fighting flows (i.e. flows necessary for the protection of life or property) do not require BMPs and need not be prohibited.

### 6.19.2 Source Characterization

Since 2001, the City's Fire Department conducts very few, and only minor non-emergency fire fighting exercises most training is held at regional facilities outside of the City. The current non-emergency fire fighting exercises are limited to hand line training conducted at the Del Mar Fairgrounds. Any other exercises or training events (non-emergency activities) would be scheduled and coordinated with the Clean Water Program to incorporate the minimum BMPs for the specific activity. The Public Works Department would work with the Fire Department to coordinate such training exercises if there is any potential for flooding or excessive flows to the MS4. This is important because some segments of the MS4 include pump stations.

A secondary source of pollutants associated with non-emergency fire fighting may originate from fire fighting equipment maintenance and cleaning. The Fire Department conducts all equipment cleaning at the Public Works Corporation Yard located near the fire station. Cleaning is performed at the wash rack that is connected to the sanitary sewer system.

Discharges other than stormwater runoff are not allowed to enter the City's MS4, and activities associated with maintenance or upkeep of fire equipment is included in the prohibition. The BMPs described in the following section shall be implemented when non-emergency fire fighting activities are performed in Del Mar.

### 6.19.3 Best Management Practice Requirements

#### 6.19.3.1 Updated BMP Requirements

This section describes which BMPs will be implemented, or required to be implemented for non-emergency fire fighting and associated maintenance activities for equipment, including pollution prevention measures to comply with Permit sections B.3.

The minimum BMPs for non-emergency fire fighting are limited to minor training exercises and include the following:

### *Runoff and Pollution Prevention*

Fire Department staff will conduct hand line training at designated areas of the Del Mar Fairgrounds that do not discharge runoff water to the MS4 or receiving waters (beaches or San Dieguito lagoon). Water discharged from fire equipment shall be limited in time and the area of discharge so that it can infiltrate into porous areas.

### *Storm Drain Inlets*

Any additional training exercises that have an increase volume or duration may increase the runoff potential based on the flow and length of time of the training event. These training events shall be coordinated with the Public Works Department or Clean Water Program staff to identify any inlets or other storm drain structures that will need to be blocked or covered to prevent the introduction of discharges and/or pollutants from land (i.e. fertilizer, sediment from landscaped areas). Public Works may also need to be contacted if any discharges are anticipated to the storm drain system to verify pump station operations.

### 6.19.3.2 Additional Controls for Municipal Areas and Activities

No additional controls are anticipated or require implementation for non-emergency fire fighting activities tributary to CWA section 303(d) impaired water body segments, or for municipal areas and activities within, adjacent to, or discharging directly to coastal lagoons or other receiving waters within environmentally sensitive areas (Permit section D.3.a.(2)(e)).

The Fire Department is aware that any changes to non-emergency fire fighting activities or training exercises must be reviewed by Clean Water Program staff to verify Permit compliance, and that each activity must take into account implementing BMPs to the MEP.

## 6.19.4 Program Implementation

### 6.19.4.1 Education and Staff Training

City of Del Mar employees receive annual training on storm water regulations and JURMP program implementation strategies. Employees in the Fire Department also receive job-specific training to perform the tasks associated with the BMPs described in Section 6.19.1 through 6.19.3 above regarding the sources and BMPs associated with non-emergency fire fighting activities.

### 6.19.4.2 Inspection, Cleaning and Preventive Maintenance Practices

The City's inspection procedures for high priority facilities are described in Section 6.1.3.4 and are applicable to this element.

#### 6.19.4.3 Contract Specifications

General contract specifications and procurement procedures would apply per Section 6.1.3.2, but are not anticipated for this activity.

#### 6.19.4.4 Administrative Controls (internal processes, policies, procedures, etc.)

See Section 6.2.4.3 for a description of the citywide Administrative control policies and procedures applicable to the Municipal component.

#### 6.19.4.5 Direct Implementation of BMPs

See Section 6.19.3 for the minimum BMPs and implementation strategies for non-emergency fire fighting and associated maintenance activities.

#### 6.19.4.6 Compliance Assessment

Compliance assessment is performed through area/activity inspections as described in Section 6.1.3.4 above.

#### 6.19.4.7 Facility Inspections and Improvements

See section 6.1.3.4 for a description of the facility inspection procedures applicable to the Municipal component.

#### 6.19.4.8 Enforcement Measures

The City's enforcement measures and procedures are outlined in Section 6.1.3.5.

#### 6.19.4.9 RWQCB Notifications

The City's RWQCB notification procedures to comply with the Permit 2007-0001 requirement are outlined in Section 6.1.3.6.

#### 6.19.4.10 Annual Reporting and Recordkeeping

See section 6.1.3.7 for the overall reporting and recordkeeping strategy for the Municipal component.

### 6.19.5 Other Non-Emergency Fire Fighting Activities that May Contribute a Significant Pollutant Load to the MS4

All such activities have been included above.

## 6.20 Municipal Component Effectiveness Assessment (Optional)

Section 13.0 addresses the effectiveness assessment requirements of Permit sections I.1 and J.1.(3)(l).

## 6.21 Program Modification and Review

The City will be identifying and documenting future modifications to the Municipal Component in this section. Section 14.0 will also identify the location in the JURMP of any changes made to the JURMP to meet the requirements of the Permit.

# City of Del Mar
# Commercial and Industrial Facility Inspection Procedures

(Rev. February 2009)

These procedures have been developed to ensure compliance with the minimum inspection requirements outlined in Section D.3.b.(3) of the 2007 San Diego County Municipal Permit (R9-20070001). Commencing in FY 2008-2009, 100% of all industrial facilities will be inspected annually, except when such facility has been inspected by Regional Board staff during that given year (Municipal Permit Section D.3.b.(3)(f)). Inspections may be conducted by City of Del Mar Staff or third party contractors. In the event that third party inspectors are used, all inspector certification and audit requirements identified in Municipal Permit Section D.3.b.(3)(d) will be included in the program.

## Step 1: Initiation of Inspection

An inspection is initiated as a result of one of the following:

- As part of the annual schedule for priority industrial/commercial sites/sources
- A public or municipal staff reporting of illicit/non-stormwater discharges or related investigation
- As a follow up to a previous inspection, violation, or citation
- In response to a referral by an inspector of a different program or agency
- Identification of potential threat to water quality from a industrial facility or business identified by staff during routine patrols of the City.

The inspectors will conduct a complete inspection of the business using one of the following as appropriate:

1) The City of Del Mar Industrial Facility Inspection Form (included as Appendix 7-D-1 of the City of Del Mar's 2007 JURMP);
2) The City of Del Mar Commercial Facility Inspection Form (included as Appendix 7-G-1 of the City of Del Mar's 2007 JURMP); or
3) By preparing an inspection letter with or without a photo report (City of Del Mar Staff Inspectors Only).

In cases of non-routine or follow-up inspections, the focus of the inspection should primarily be on any issue(s) that were identified during the initiation inspection.

## Step 2: Pre-Inspection Preparation

Before visiting a facility, the inspector should access the existing site (commercial or industrial) inventory facility folder and complete the following actions:

1) Print out or copy an inspection form and any relevant information for the site, such as previous inspection records.

2) The inspector should review the information to determine the following:
   - The site's identified potential threat to water quality;
   - The site's primary commercial or industrial activity based on SIC Code;
   - The proximity to CWA 303(d) listed water body segments

- The minimum BMPs that it should be implemented and other relevant information.
- Any new 303(d) listings shall be addressed with additional BMPs, as appropriate, to ensure that the site does not contribute to the impairment of its 303(d) receiving water.
- Confirm the potential threat to water quality based on criteria outlined in Municipal Permit Section §D.3.b.(3)(c).
- The inspector should also note incomplete portions of the facility's profile so as to attempt to complete the information during the inspection.

3) The inspector should review any existing Stormwater Pollution Prevention Plans or BMP Implementation Plans for the facility.

**Step 3: The Site Visit**

**1) Arrival**

Before entering the facility grounds, the inspector should make note of the following:

- Nearby conveyances or water bodies.
- Visible discharge points along perimeter of the site.
- Outdoor areas of intensive activity.
- The condition of outdoor trash storage and used oil/grease storage areas, if applicable
- Signs of recent additions or remodels.

**2) The Management Office**

After introductions, the inspector can obtain the following information from this initial contact with the facility operator:

- Update of information for the industrial inventory, including changes in ownership or operations
- Verification of SIC code and other facility descriptions
- Clarification of observations noted before entering the facility, (i.e. any changes in activities, materials, or physical structures)
- Other considerations, such as existing pollution prevention plans or an environmental management system.
- Check for coverage under the General Industrial Permit (Notice of Intent (N01) and/or Waste Discharge Identification No.), if applicable;
- Review of facility monitoring data, if the site monitors its runoff, and confirm submittal to the Regional Board as necessary.

**3) Facility Walk-through with Management or Facility Supervisor**

A site map, if available, should be used to assess areas in which on-site activities and areas are exposed to precipitation, increasing the risk of pollutants entering storm water. Attention should also be paid to run-on and runoff in these areas, as well as pollution prevention measures. From the walk-through, an inspector can assess the following:

- Accuracy of site map, industrial activities, materials list, and any existing pollution prevention plan
- Confirmation of additions or changes observed while approaching the facility

- Evidence of illegal discharges (i.e. on-going leaks or recent spills or connections not authorized under an NPDES permit)
- Effectiveness of BM P implementation for each area or activity
- Any new receiving water 303(d) listings which require additional BMPs, as appropriate, to ensure that the site does not contribute to the impairment of the receiving water
- Photo documentation of any potential storm water violations identified during the inspection.

**Step 3: Completion of Inspection Forms**

Whenever possible, the inspector should complete the inspection form while on-site (during or at the conclusion of the inspection) or prepare the necessary notes to complete a letter report to be sent at a later date. If the form is completed on-site, a signature on the form shall be obtained by the responsible person, or designated responsible person, at the business.

**Step 4: Follow-up**

Once the inspection is completed, the inspector will complete the following steps (as appropriate):

1) Provide copies of all inspection report forms to the responsible person, or designated responsible person, at the each business.
2) In the event that inadequacies are identified, a follow-up inspection should be scheduled within 21 days. Determination of potential Notices of Violation and or issuances of Administrative Citations shall be made by the City's Clean Water Manager or Code Enforcement Officer. Such decision shall be made based on facility compliance record, severity of inadequacy, and existence of illicit discharge.
3) Based on the results of the facility inspection, notify the City's Clean Water Manager if any changes to the sites activities results in a change to the facility's potential threat to water quality. If there is a change, the facility records should be modified to reflect this change.
4) Provide follow-up education and training on storm water pollution prevention, as conditions warrant.
5) Log the inspection reports in the appropriate log, or provide documentation to clerical staff for data entry.
6) For industrial sites, the Inspector will notify the Clean Water Manager of any industrial activity which may require coverage under the General Industrial Permit, for which an NOl has not been filed. A log of Industrial Non-Filers will be kept by the Clean Water Manager, and will include the name, address, and SIC code of the business, and included in the City's JURMP Annual Report.
7) For those sites inspected by a third party, on behalf of the City of Del Mar, these additional follow-up steps will be taken:
   - All inspection findings will be reported to the City of Del Mar within one week of the inspection being conducted, including any transmittals of photo documentation.
   - The City of Del Mar will be notified of *any* significant potential violations within 24 hours of the inspection. Appropriate follow-up and/or enforcement actions for any potential stormwater violations identified during the inspections will be completed within two (2) business days of the inspection or receipt of the report of potential violation.

# Section 15
# Conclusions and Recommendations

During the FY2008/2009 Reporting Period, the City of Del Mar implemented the Municipal Permit requirements and the activities described in the City's 2008 JURMP. The City continues to support a comprehensive stormwater management program, which is evident in, and reflected by, the City's efforts to implement its JURMP. This Annual Report documents the City's efforts to implement various JURMP programs such as education, inspections, inventories, monitoring, and public participation. These activities and their compliance are reflected in Permit Component Tables contained in the Effectiveness Assessment addressed in Section 11 of this Annual Report.

In addition to the activities identified in the Permit Component Tables, the City has been involved in several other regional efforts including:

- Continued contributions to the San Dieguito and Los Peñasquitos WURMP implementation;
- Los Peñasquitos Lagoon TMDL development; and
- Co-chairing the Regional Copermittees' Municipal Workgroup

This section draws conclusions from the collected data contained in this Annual Report, and makes appropriate recommendations based on the review of program implementation during the FY2008/2009 Reporting Period.

## 15.1 Recommendations and Program Modifications

The City's Clean Water Program continued to evolve during the FY2008/2009 Reporting Period. As indicated in the City's 2008 JURMP, the program will require periodic revision. The City remains committed to working with its staff, other Copermittees and the Regional Board to improve and adapt its plan and make all efforts necessary to comply with the Permit requirements and to make improvements to water quality. As lessons are learned, and as a result of City staff input, modifications may be required to make sure that the City's program continues to be effective.

As described in Section 14 of this Annual Report, the City has made some modifications to its program as outlined in the 2008 JURMP to reflect existing program implementation, and to improve processes and procedures necessary to implement the Permit requirements. Some of these modifications were made as a result of the Regional Board review of the 2008 JURMP and FY2007/2008 Annual Report, and were outlined in the City's response from February 2009. All modifications made were directly related to the program effectiveness assessment described in Section 12.

Some of the key recommendations for program implementation during FY2009/2010 are as follows:

- Continue implementation of the City's 2008 JURMP, as revised;
- Modify staff training to address all employees – including seasonal staff – consideration may be given to electronic training sessions;
- Continue improvements to activity/document tracking systems;

- In depth assessment of the operating procedures as related to the City's 2008 JURMP – focusing particularly on field implementation of the requirements, and whether the efficiency of implementation can be improved;
- Continue to engage and involve the community in the program implementation; and
- Continue to coordinate with the Regional Copermittees for consistent approaches to program implementation.

## 15.2 Conclusions

As evidenced in the Permit Component Tables, the City has largely been successful at implementing its clean water program. With continued review and modifications of its 2008 JURMP, and ongoing input on the implementation of its program, the partnership between residents, local businesses, and City staff will continue to allow the City to work diligently in protecting its waterways, and improve water quality at its beaches and lagoons.

# Executive Summary

The City of Del Mar (City) developed its Jurisdictional Urban Runoff Management Program (JURMP) in 2008 to meet the requirements of the Municipal Separate Storm Sewer System (MS4) Urban Runoff Discharge Permit (Order No. R9-2007-0001) (Permit) issued to the City and the Regional Copermittees by the California Regional Water Quality Control Board, San Diego Region (Regional Board). The Permit requires the Copermittees individually, but collaboratively, to develop and implement comprehensive programs to reduce and eliminate urban runoff pollutants that are discharged from their storm drain systems to the receiving waters. The City's program and activities, designed to meet these requirements, are described in detail in the City's 2008 JURMP.

The City has prepared this JURMP Annual Report to provide a comprehensive description of all the activities conducted by the City to comply with all the requirements of Section D of the Permit, as described in the 2008 City of Del Mar JURMP. This Annual Report covers the implementation of jurisdictional activities during the period from July 1, 2009 through June 30, 2010 (Reporting Period), and follows the standardized format developed by the Regional Copermittees and adapted as appropriate for the City.

During the Reporting Period, the City continued implementation its 2008 JURMP, including all baseline Permit requirements. The City believes that the core program activities outlined in the Permit: education; inspections; monitoring; and enforcement are the most effective at reducing pollutant generating activities. Within the City's program, the inspections and monitoring programs are not only implemented to identify wrongdoers, but provide the City with opportunities to educate the community. It is through the outreach and education of the general population that awareness and behaviors will change for the betterment of water quality. On the occasion where outreach is not effective at changing behaviors, the City uses its enforcement authorities to obtain compliance.

The City's diligent efforts towards best management practice (BMP) implementation are, once again, a key element for this year's report. City staff has been active and consistent in activity/area specific BMP implementation as demonstrated through the municipal facility inspection program. Another supporting effort for municipal activities has been data tracking and the ability to report the results of the City's own activities with ease. With each year of program implementation, the City becomes more effective and efficient at tracking meaningful data accurately – and this year was no exception. Staff continues to use and refine the elaborate system for tracking street sweeping, pipe cleaning, and call out activities such as power washing developed by City staff in previous reporting periods.

Some interesting and key numbers associated with the City staffs' efforts to implement the program follow:

**43.2 tons** – The amount of debris, sediment and trash removed from the City's storm drain system thereby prevented from entering the lagoons and Pacific Ocean;

**1,156 miles** – The number of miles the street sweeper swept during Fiscal Year 2009-2010;

**117.25 tons** – The amount of material collected from street sweeping during Fiscal Year 2009-2010, and thereby prevented from entering the lagoons and Pacific Ocean.

Overall, the City's effectiveness in continuing the implementation of the program was high, and there were no substantive modifications to the 2008 JURMP identified as necessary during this Reporting Period.

The City remains an active voice in regional groups and activities as well by co-chairing a regional Copermittee workgroup and actively participating in other workgroups, both permit-mandated workgroups and other workgroups, such as the Los Peñasquitos Lagoon TMDL Workgroup, whose impact on the City's program is recognized. In addition, the City continues to be involved in other workgroups that, while not directly related to Municipal Permit requirements, work toward water quality protection and water conservation goals of the City's program. This includes the San Dieguito Lagoon Joint Powers Authority (JPA), the San Dieguito Lagoon Restoration Project, the County Water Authority Water Conservation Committee, and the City's own San Dieguito Lagoon Committee.

Funding of municipal programs, including stormwater programs, continues to be an issue for all of the cities in San Diego County. The City of Del Mar is no exception. Given its economic ties to the beach and ocean, the City of Del Mar recognizes the importance of clean water and its NPDES program. During Fiscal Year 2008-2009, the City took steps to ensure that adequate funding is available on a more permanent basis through voter-approved passage of the Clean Water Service Charge. This fee continues to fund a substantial portion of the program. In addition the City continues to seek other sources of funding, including State and Federal grants, for special projects and to make up the deficit between the cost of implementing the program and the portion covered by the Clean Water Service Charge.

By and large, the City continues to be very successful at implementing its Clean Water Program. Residents, local businesses, and City staff are working diligently to protect the waterways and improve water quality at the beaches and lagoons, and will continue to carry out these efforts in the future.

# Certification Statement

## FISCAL YEAR 2009-2010 JURMP ANNUAL REPORT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Signature _____ Date 9/27/10

Karen P. Brust, City Manager
City of Del Mar

# Section 1
# Introduction

This document is the third annual report for the City of Del Mar's 2008 Jurisdictional Urban Runoff Management Plan (2008 JURMP) which went into effect March 25, 2008 in accordance with NPDES Order No. R9-2007-0001 (Permit), and subsequent amendments. The JURMP Annual Report generally follows the standardized format prepared and submitted to the San Diego Regional Water Quality Control Board (Regional Board) by the Copermittees in June 2007, and any deviations are minor and correspond to the format of the 2008 JURMP. The Reporting Period covered by this document is from July 1, 2009 through June 30, 2010.

## 1.1 Background

This section provides background information, including a brief overview, of the City of Del Mar Clean Water Program which implements its JURMP.

### 1.1.1 Overview of the City of Del Mar

The name Del Mar means "of the sea," and highlights the symbiotic relationship between the City and Pacific Ocean. The City of Del Mar is a coastal, primarily residential community in the northern section of San Diego County. Del Mar is bounded by Solana Beach to the north, San Diego to the south and east, and the Pacific Ocean to the west (see Figure 1-1). The City covers an area of approximately two square miles, with a population of approximately 4,500 residents. The main attraction of visitors is the beach and sunny weather. The annual San Diego County Fair, horse racing, and other events held at the Del Mar Fairgrounds bring in people from the surrounding area and beyond.

The Clean Water Program is a multi-departmental program coordinated by the City's Clean Water Manager and is an integral part of making the City of Del Mar a beautiful place to live, work and visit. Day-to-day compliance activities are conducted by staff from the Planning & Community Development Department, the Department of Public Works, the City Engineering Department, and the Department of Community Services. The Program is committed to ensuring city-wide compliance with the San Diego Regional Water Quality Control Board's Regional Municipal Stormwater Permit.

### 1.1.2 Watershed(s)

The City of Del Mar is part of the San Dieguito Hydrologic Unit and the Los Peñasquitos Hydrologic Unit, as shown in Figure 1-1, below.

## 1.2 Purpose and Objectives

The Annual Report is a comprehensive description of all the jurisdictional activities conducted by the City of Del Mar to comply with all the requirements of Section D of Order No. R9-2007-0001, as described in the 2008 JURMP, and covers the period from July 1, 2009 through June 30, 2010.

**Figure 1-1: The City of Del Mar and its location relative to its associated watersheds in San Diego County.**

# Section 2
# Development Planning Component

## 2.1 Introduction

Section 4 of the 2008 JURMP provides information on the implementation of the Development Planning Component of the Municipal Permit within the City of Del Mar, and was developed pursuant to Section D.1 of the Permit. This section of the JURMP Annual Report provides information relevant to the implementation of the Development Planning Component of the 2008 JURMP for the Fiscal Year 2009-2010 Reporting Period.

## 2.2 Land Use Planning

Section D.1.a of the Municipal Permit requires each Copermittee "revise as needed its General Plan or equivalent plan (e.g., Comprehensive, Master, or Community Plan) for the purpose of providing effective water quality and watershed protection principles and policies that direct land-use decisions and require implementation of consistent water quality protection measures for Development Projects." Appropriate modifications to the Del Mar Community Plan were adopted during Fiscal Year 2007-2008, and no further modifications were made during this Reporting Period.

Chapter 11.30 of the Del Mar Municipal Code (DMMC), entitled "Stormwater Management and Discharge Control," was rewritten in its entirety to implement the requirements of the Municipal Permit, and adopted on March 17, 2008 by the Del Mar City Council. No further modifications were made during this Reporting Period.

## 2.3 Environmental Review Process

The City of Del Mar Environmental Review process is aimed at accurately evaluating water quality and cumulative impacts and identifying appropriate measures to avoid, minimize and mitigate development project impacts to water quality. There were no modifications to the environmental review process made during the reporting period.

## 2.4 Development Project Approval and Verification Process

This section provides a general description of the various activities conducted as part of the City's development project approval and verification processes.

### 2.4.1 Program Implementation

During the Reporting Period, all development projects were required to undergo review under the City's urban runoff approval process and meet applicable project requirements. However, given the City of Del Mar's relatively limited land development potential, a majority of the projects reviewed are redevelopment projects that are often small in size and scope. A description of the City's efforts toward conditioning development projects and verifying compliance with established conditions and minimum BMP requirements is described below.

#### 2.4.1.1 Development Project Approval Process and Project Requirements

During this Reporting Period, a total of 122 permit applications were reviewed by the Planning and Community Development Department. Appendix 2-A contains a complete list of the permit applications reviewed by the Department during this Reporting Period.

During the Reporting Period, no new projects meeting the definition of a "Priority Development Project" (PDP) under the Permit were proposed. During previous reporting periods, a total of four (4) PDP projects were either proposed or approved. These projects and their current status are found in Table 2-1 below. For an example of how the City of Del Mar applies SUSMP requirements to Priority Development Projects, please see Appendix 2-B of the Fiscal Year 2008-2009 JURMP Annual Report.

During this Reporting Period, no priority development projects were allowed to implement treatment control BMPs with low removal efficiency rankings, and as such no feasibility analyses were conducted to exhibit that more effective BMPs were infeasible.

**Table 2-1: Priority Development Projects within the City of Del Mar**

| Project Name | Description | Status During Fiscal Year 2009-2010 |
|---|---|---|
| **PDP Projects with Permit Approval** | | |
| Garden Del Mar Specific Plan (SP-07-01; LCPA-08-02; CDP-08-17) | The proposed project is a mixed-use commercial development with restaurant, retail, and office uses situated in six two-story structures (totaling 19,600 square feet) built over a two-level subterranean parking garage. | Project was approved during the Fiscal Year 2008-2009 Reporting Period. However, due to funding issues, the project proponents have not moved forward with the project, and the property remains vacant and is currently for sale. |
| Riverview Project (CUP-08-01; CDP-08-19; FDP-08-02) | The project proposed to construct two, two-story, commercial office buildings totaling 23,293 square feet, with 83 parking spaces on two vacant parcels of land. The proposed project includes grading, hardscaping, and landscaping, and lies within 200 feet of the San Dieguito Lagoon. | Project was approved during the Fiscal Year 2008-2009 Reporting Period. However, the project proponents have not moved forward with the project, and the property remains vacant and undeveloped. It should be noted that during the RWQCB site visit in November 2009, this site was identified as a concern by RWQCB Staff as it was being used as an unimproved parking lot by local businesses. This use was resulting in minor sediment discharges to the City's MS4. City staff worked with the property owner, the site has been secured eliminating this potential discharge. |
| Pacifica Stratford (DRB-05-27, 28, 29, 30, 31) | The project proposes approval of a Final Subdivision Map which subdivides two existing legal lots into five two-unit condominium lots with required public improvements | The project received project approval in April 2006. During Fiscal Year 2009-2010, two of the five proposed two-unit condominiums were completed. Staff will begin inspection of the limited treatment control BMPs implemented for these units during Fiscal Year 2010-2011. The remaining portions of the project are unbuilt, and construction activity has been suspended on-site due to economic considerations.. Staff continues to monitor the project site on a regular basis. |
| **Completed Project(s)** | | |
| Morotta/James Single Family Residence (DRB-03-37) | This project is a single family residence on a previously vacant lot within 200 feet of an environmentally sensitive area (the San Dieguito Lagoon) | Construction drawings for this project were approved in April 2008. The project incorporates LID to the MEP through the use of minimal hardscape and the incorporation of a vegetated swales and bioretention areas. The structure itself is elevated, allowing for preservation of pervious surface conditions under what would otherwise be the building footprint. Signed certification of BMP implementation by the Project Engineers was submitted to the City in March 2009. As discussed below, City staff conducted their annual inspection of the site on September 30, 2010, and found the site to be well maintained and in conformance with the project conditions of approval. |

### 2.4.1.2 Standard Urban Stormwater Mitigation Plan (SUSMP) Implementation and Development

During the Reporting Period, the City of Del Mar continued to implement the requisite SUSMP requirements outlined in the 2008 JURMP. Pursuant to the requirements of D.1.d.(1)(b) of the Permit, on January 22, 2010 the City implemented modifications to the definition of a Priority Development Project to include "all other pollutant generating Development Projects that result in the disturbance of one acre or more of land." This modification was implemented by Departmental policy memo, and subsequently adopted as part of modifications to the Del Mar Municipal Code (DMMC), Chapter 11.30 (Stormwater Management and Discharge Control) during the City Council Hearing held on April 19, 2010. Copies of the department policy email and the City Council Staff Report for April 19, 2010 are included as Appendix 2-B of this Annual Report.

During the previous reporting period, the Copermittees, including the City of Del Mar, were notified that the Model SUSMP, submitted to the Regional Board in January 2009, was found adequate on March 25, 2009. Pursuant to the Permit, the City had 365 days from the date of notification to implement the revised Model SUSMP. During the Fiscal Year 2009-2010 Reporting Period, the City revised its local SUSMP to reflect the Regional Model SUSMP. The City's new SUSMP was implemented on March 24, 2010, as required under the Municipal Permit. A copy of the City's SUSMP is included as 2-C.

### 2.4.1.3 Priority Treatment Control BMP Inventory Tracking and Maintenance

The City has developed and is utilizing a watershed-based database to track and inventory approved treatment control BMPs along with maintenance within its jurisdiction. Because of the limited number of approved PDPs within the City of Del Mar, the database is a simple Excel® Spreadsheet which includes the required information on treatment control BMP type, location, watershed, date of construction, party responsible for maintenance, maintenance certifications or verifications, inspections, inspection findings, and corrective actions. No treatment control BMPs were approved during the last permit cycle, since no high priority projects qualified under the previous SUSMP criteria. As of June 30, 2010, only four (4) development applications for projects have triggered the PDP criteria. Appendix 2-D contains the current database (spreadsheet) for approved PDPs.

### 2.4.1.4 BMP Construction Verification

As of June 30, 2010, the Morotta/James Project, a single family residence, is the only approved PDP under SUSMP provisions which has been fully constructed in the City of Del Mar. As outlined in the 2008 JURMP, prior to occupancy of a Project subject to SUSMP requirements, the Engineer of Record is required to inspect the constructed LID site design, source control, and treatment control BMPs to verify that they were constructed in compliance with all specifications, plans, permits, ordinances, and the Permit. The Engineer of Record conducted this required inspection, and submitted a signed certification to the City in March 2009. No additional PDP projects have been full constructed in the City to date.

### 2.4.1.5 Annual BMP Operation & Maintenance Verification

As indicated above, as of June 30, 2010, only one (1) project, the Morotta/James Residence, has been approved under SUSMP provisions and constructed. The Engineer of Record conducted the required BMP Construction Verification in March 2009. The first annual BMP O&M Verification was conducted by the City of Del Mar on September 30, 2009, prior to the start of the wet season. During that inspection, it was noted that minor modifications to the BMPs had been made by landscaping crews. In response, the City issued a Notice of Violation (NOV) and Compliance Order on October 1, 2009

requesting that the Treatment Control BMPs be repaired. This was corrected by the owner, and noted during follow-up inspections by the City of Del Mar on October 14, 2009. No further action was required. No other BMP O&M Verifications were required or necessary during the Reporting Period.

#### 2.4.1.6 SUSMP Waiver Mitigation Program

As of June 30, 2010, the City of Del Mar has not granted any SUSMP Waivers, and as such has not needed to implement a SUSMP waiver mitigation program.

#### 2.4.1.7 Enforcement Measures for Development Projects

This section provides the number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The section also exhibits that compliance has been achieved and describes the actions that were being taken to achieve compliance. Section 4.4.4.3 of the 2008 JURMP provides a description of the general process for applying enforcement to urban runoff related violations by development projects. No modifications to this section of the 2008 JURMP were recorded during this Reporting Period.

With the exception of the Notice of Violation and Compliance Order issued for the Morotta/James Residence discussed above, no other enforcement actions for development projects were taken during the Reporting Period. Enforcement actions related to construction activities are listed in Section 3 of this report.

#### 2.4.1.8 Education Efforts Focused on Development and Redevelopment

The City of Del Mar continued to focus on one-on-one education for the municipal staff, planning boards, project applicants, developers, contractors property owners and community planning groups water quality issues. As a full-time staff member of the Planning and Community Development Department, the Clean Water Manager attended weekly Department Meetings where projects were reviewed and discussed by the planning team. This provided the opportunity to discuss both project-specific water quality issues, and provide general updates to the team on changes that may have developed as a result of discussions among the Regional and Watershed Copermittees.

As indicated in the 2008 JURMP the City conducted regular coordination meetings organized by the Planning Department to discuss development review procedures, issues, cases, and other subjects. The meetings, which are attended by the Planning, Engineering, Building and Public Works departments, provided a forum for information exchange and to educate City staff on the federal, state and local water quality laws and regulations applicable to development projects; the nexus between land use decisions and short and long-term water quality impacts; and how impacts to receiving water quality resulting from development can be minimized. In addition, the Clean Water Manager regularly attended the City's weekly Executive Team/Department Head meetings to ensure that upper management is kept abreast of requirements.

Lastly, the Clean Water Manager also continued to meet one-on-one with developers and project proponents on an as-needed basis to assist them in understanding the requirements under both the Permit and the City's SUSMP.

#### 2.4.1.9 Hydromodification

The City of Del Mar revised its local SUSMP to accommodate LID and source control measures as required to meet the principles of hydromodification during a previous Reporting Period. The City has also participated in the development of the draft Hydromodification Management Plan (HMP). Staff from

the Department of Engineering and the Department of Planning participated in the Regional Copermittee Workgroup, attending meetings on a regular basis, and providing substantive comments on the interim drafts of the Model HMP, including submittal of comments to the Regional Board during Hearings on the final iteration of the HMP. The final iteration of the HMP was heard by the Regional Board during their July 2010 hearing. The City of Del Mar will revise its local SUSMP to address any additional requirements under the adopted HMP during the Fiscal Year 2010-2011 reporting period.

Of the four (4) identified Priority Development Projects listed in Table 2.4-1 above, none of them disturb 50 acres or more, and as such Interim HMP requirements were not applied.

### 2.4.2 Notable Activities

No notable activities other than those identified above were conducted during this Reporting Period.

## 2.5 Development Planning Component Effectiveness Assessment

A complete assessment of the effectiveness of the City's implantation of its 2008 JURMP, including the Development Component, is included as Chapter 11 of this Annual Report.

## 2.6 Program Review and Modification

No modifications were made to the Development Planning Component of the 2008 JURMP during this Reporting Period.

## Joseph DeStefano

**From:** Joseph DeStefano
**Sent:** Tuesday, January 12, 2010 12:41 PM
**To:** Planning; Tim Thiele; Richard Lucera; 'SCARTWRIGHT rbf.com'
**Cc:** 'Mikhail Ogawa'
**Subject:** IMPORTANT CHANGE IN SUSMP IMPLEMENTATION - EFFECTIVE FRIDAY, JANUARY 22, 2010

**Importance:** High

EFFECTIVE FRIDAY, JANUARY 22, 2010

In addition to the Project Categories described in the City s Interim Standard Urban Stormwater Mitigation Plan (SUSMP) which are identified as Priority Development Projects (PDPs), the City now considers ANY development that disturbs one acre or more of land to be a PDP. PDP projects are required to implement incorporate post-construction BMPs into their project, including LID Site Design, Source Control and Treatment Control BMPs.

Appropriate revisions to the City s Code, Documents and Forms will be completed to include the new PDP category as soon as possible. This change is being made in preparation for the adoption of the new Model SUSMP approved by the Regional Board, and in accordance with requirements in the Municipal Permit.

If you should have any questions, please contact me.

Thanks,

Joe

# City of Del Mar
# Staff Report

TO: Honorable Mayor and City Council Members

FROM: Joseph M. DeStefano II, Clean Water Manager
Via Karen P. Brust, City Manager

DATE: April 19, 2010

SUBJECT: An ordinance amending Del Mar Municipal Code (DMMC) Chapter 11.30 relating to Stormwater Management and Discharge Control to comply with the requirements of the San Diego Regional Water Quality Control Board Order R9-2007-0001.

ISSUE:

Whether to approve the recommended revisions to DMMC Chapter 11.30, and introduce an ordinance amending the Chapter.

FISCAL IMPACT:

The City's Clean Water Program is supported by the Clean Water Service Fee, which is paid by all users connected to the City's water distribution system. The funds are collected and deposited in the Clean Water Fund. Funding for the Clean Water Program was included in the approved budget. The recommended ordinance revisions do not result in any changes to the approved budget.

ENVIRONMENTAL IMPACT:

The activity is not a "Project" as defined under Section 15378 of the State CEQA Guidelines. Moreover, adoption of these proposed revisions to the DMMC constitute an action for the protection of the environment and, as such, the action is exempt from environmental review pursuant to Section 15308 of the State CEQA Guidelines.

---

City Council Action:

APR 19 2010 ITEM 12

RECOMMENDATION:

Conduct a public hearing; introduce the proposed ordinance amending DMMC Chapter 11.30 (Stormwater Management & Discharge Control) included in Attachment "A."

BACKGROUND:

The San Diego Regional Water Quality Control Board (Regional Board) adopted new National Pollutant Discharge Elimination System Permit requirements on January 24, 2007 under Regional Board Order R9-2007-0001 (Order), which increased the requirements for the City's regulation of urban runoff discharges. All of the Cities in San Diego County, including the City of Del Mar are listed in the Order as Copermittees and are required to update and implement a program of stormwater management that is even more rigorous than previously adopted. The permit requirements are very prescriptive and do not offer much flexibility for local interpretation.

DISCUSSION:

On March 3, 2008, the City Council adopted Ordinance 802 which implemented the initial requirements of the Order. However, the Order also provided for staged implementation of certain requirements including changes in classification of projects as Priority Development Projects, and inclusion of hydromodification requirements. In accordance with the requirements of the Section D.1.d.(1)(b) of the Order, as of January 24, 2010, all jurisdictions were required to consider any "pollutant generating project" that results in "a disturbance of one acre or more of land" as a Priority Development Project. This requirement was incorporated as an official policy change by the Planning and Community Development Department on January 23, 2010. The major change to the existing Ordinance being made at this time reflects the codification of this policy change.

In addition, the Proposed Ordinance includes definitions that have been added to reflect new terminology from the Order not included in Ordinance 802, and corrects minor typographical errors. Staff has also included an underline/strikethrough version of the relevant sections of DMMC Chapter 11.30 to clearly mark the revisions included in this Ordinance.

CONCLUSION:

Staff recommends that Council conduct the public hearing, and introduce the Ordinance approving the proposed revisions in DMMC Chapter 11.30 (Stormwater Management & Discharge Control).

Attachment A: Proposed Ordinance No. XXXX amending DMMC Chapter 11.30 (Stormwater Management & Discharge Control)

Attachment B: Underline/strike-out version of the relevant sections of DMMC Chapter 11.30 reflecting the proposed revisions

ATTACHMENT A

For City Council Report dated April 19, 2010

4

APR 19 2010 ITEM 12

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF DEL MAR, CALIFORNIA AMENDING CHAPTER 11.30 OF THE DEL MAR MUNICIPAL CODE RELATING TO STORMWATER MANAGEMENT AND DISCHARGE CONTROL.

WHEREAS, the City of Del Mar intends to ensure the future health, safety, and general welfare of the citizens of the City of Del Mar by: 1) controlling non-stormwater discharges to the stormwater conveyance system; 2) eliminating discharges to the stormwater conveyance system from spills, dumping or disposal of materials other than stormwater; 3) reducing pollutants in stormwater discharges, including those pollutants taken up by stormwater as it flows over urban areas (Urban Runoff), to the maximum extent practicable; and 4) reducing pollutants in stormwater discharges in order to achieve applicable water quality objectives for surface waters in San Diego County; and

WHEREAS, the City of Del Mar intends to protect and enhance the water quality of its watercourses, water bodies, and wetlands in a manner pursuant to and consistent with the Clean Water Act and the San Diego Regional Water Quality Control Board Order Number No. R9-2007-0001 (NPDES Permit Number CAS0108758); and

WHEREAS, DMMC Chapter 11.30, Stormwater Management and Discharge Control, regulates and controls the discharge of non-stormwater discharges and quality of stormwater discharges.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF DEL MAR DOES HEREBY ORDAIN AS FOLLOWS:

SECTION ONE:

That Section 11.30.030 of the Municipal Code is amended to add the following new definitions, with the remaining sub-subsections re-alphabetized accordingly:

Hydromodification: The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport. In addition, alteration of stream and river channels, installation of dams and water impoundments, and excessive streambank and

5

APR 19 2010 ITEM 12

shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes.

Hydromodification Management Plan (HMP): A plan to manage increases in runoff discharge rates and durations from all Priority Development Projects, where such increased rates and durations are likely to cause increased erosion of channelbeds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

Low Impact Development (LID): A storm water management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions.

Source Control BMP: Land use or site planning practices, or structural or nonstructural measures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff.

Treatment Control BMP: Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

SECTION TWO:

That definition of "Priority Development Project" in Section 11.30.030 of the Municipal Code is amended to add a new category to read as follows:

(12) *Projects that disturb one (1) acre or more.* All other pollutant generating Development Projects that result in the disturbance of one acre or more of land.

6

APR 19 2010 ITEM 12

SECTION THREE:

That Section 11.30.080 of the Municipal Code is amended to read as follows:

11.30.080 Additional Minimum Best Management Practice Requirements for Residential Activities and Facilities

A. Applicable Requirements. The requirements in this section apply to all Residential Dischargers and any Regulated Commercial Business conducting residential activities on behalf of a Residential Discharger. All Residential Dischargers conducting activities must install, implement and maintain the BMPs identified in Subsection B of Section 11.30.070 for all Dischargers, and at least the additional minimum BMPs specified in the City's Stormwater Standards Manuals for the category of activities conducted by that Discharger including but not limited to:

(1) vehicle maintenance;
(2) vehicle washing;
(3) irrigation practices and management;
(4) irrigation system testing;
(5) landscape maintenance;
(6) fertilizer application;
(7) pesticide application;
(8) pet waste disposal;
(9) power washing;
(10) septic system maintenance;
(11) sanitary sewer system maintenance;
(12) minor home maintenance, repair and upgrades.

SECTION FOUR:

That Sub-subsection 1 of subsection B of Section 11.30.070 of the Municipal Code is amended to read as follows:

(1) Soil Erosion. Dischargers shall install BMPs to prevent erosion, and significant accumulations of eroded soils from slopes, previously disturbed by clearing or grading, to prevent sediment from entering the Stormwater Conveyance System or Receiving Waters.

7

APR 19 2010 ITEM 12

SECTION FIVE:

This Ordinance was introduced on April 19, 2010.

SECTION SIX:

PASSED, APPROVED AND ADOPTED at a regular meeting of the City Council held on the _____ day of _____ 2010.

_____
RICHARD EARNEST, Mayor

Proposed Language Revisions to DMMC Chapter 11.30
Stormwater Management and Discharge Control

***Please Note:*** *For clarity, all proposed language inserted is shown as double-underlined text, while proposed deletions are shown as ~~strike through text~~. All other existing language in Chapter 11.30 remains unchanged.*

**11.30.030 Definitions**. The following definitions shall be applicable when the following words or phrases are used hereafter in this Ordinance (including use in the City Stormwater Standards Manuals), whether or not these words or phrases are capitalized:

Hydromodification: The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport. In addition, alteration of stream and river channels, installation of dams and water impoundments, and excessive streambank and shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes.

Hydromodification Management Plan (HMP): A plan to manage increases in runoff discharge rates and durations from all Priority Development Projects, where such increased rates and durations are likely to cause increased erosion of channelbeds and banks, sediment pollutant generation, or other impacts to beneficial uses
and stream habitat due to increased erosive force.

Low Impact Development (LID): A storm water management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions.

Priority Development Project: means a development project that falls within any of the following categories: [Ord. 752]

(1) *Housing subdivisions of 10 or more dwelling units*. This category includes single-family homes, multi-family homes, condominiums, and apartments.

(2) *Commercial developments greater than 1 acre*. This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than 1 acre. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; commercial nurseries; multi-apartment buildings; car wash

10

APR 19 2010 ITEM 12
6439

facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; commercial airfields; and other light industrial facilities.

(3) *Developments of heavy industry greater than one acre.* This category includes, but is not limited to, manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.).

(4) *Automotive repair shops.* This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

(5) *Restaurants.* This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for the structural treatment BMP, numeric sizing criteria, and hydromodification requirements.

(6) *All hillside development greater than 5,000 square feet.* This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater.

(7) *Water Quality Sensitive Areas: All development and redevelopment located within or directly adjacent to or discharging directly to a water quality sensitive area (where discharges from the development or redevelopment will enter receiving waters within the water quality sensitive area), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition.* "Directly adjacent" means situated within 200 feet of the water quality sensitive area. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

(8) *Parking lots 5,000 square feet or more or with 15 or more parking spaces and potentially exposed to urban runoff.*

Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

(9) *Street, roads, highways, and freeways*. This category includes construction of any paved surface which is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. [Ord. 752]

(10) *Retail Gasoline Outlets (RGOs)*. This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

(11) *Redevelopment projects*. Projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site that falls under the project categories or locations listed above (in (1) through (10)) where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in the City's SUSMP applies only to the addition, and not to the entire development. Where redevelopment results in an increase of more than fifty percent of the impervious surfaces of a previously existing development, the numeric sizing criteria applies to the entire development. Where a new Development Project feature, such as a parking lot, falls into a Priority Development Project Category, the entire project footprint is subject to SUSMP requirements.

(12) *Projects that disturb one (1) acre or more*. All other pollutant generating Development Projects that result in the disturbance of one acre or more of land.

Source Control BMP: Land use or site planning practices, or structural or nonstructural measures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff.

Treatment Control BMP: Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

12

**11.30.070 Best Management Practice Requirements and General Requirements of All Dischargers.**

B. Minimum Best Management Practices for All Dischargers. All dischargers in the City must install, implement and maintain the minimum BMPs outlined in the City's Stormwater Standard Manuals. General categories of minimum BMPs include:

(1) Soil Erosion. ~~Prior to a forecast rain event,~~ Dischargers shall install BMPs to prevent erosion, and significant accumulations of eroded soils from slopes, previously disturbed by clearing or grading, to prevent sediment from entering the Stormwater Conveyance System or Receiving Waters.
treatment and disposal.

**11.30.080 Additional Minimum Best Management Practice Requirements for Residential Activities and Facilities**

A. Applicable Requirements. The requirements in this section apply to all Residential Dischargers and any Regulated Commercial Business conducting residential activities on behalf of a Residential Discharger. All Residential Dischargers conducting activities must install, implement and maintain the BMPs identified in Section 11.30.070 B. for all Dischargers, and at least the additional minimum BMPs specified in the City's Stormwater Standards Manuals for the category of activities conducted by that Discharger including but not limited to:

(1) vehicle maintenance;
(2) vehicle washing;
(3) irrigation practices and management;
(4) irrigation system testing;
(5) landscape maintenance;
(6) fertilizer application;
(7) pesticide application;
(8) ~~pest~~ pet waste disposal;
(9) power washing;
(10) septic system maintenance;
(11) sanitary sewer system maintenance;
(12) minor home maintenance, repair and upgrades.

March 25, 2010

Mr. David Gibson, Executive Officer
San Diego Regional Water Quality Control Board (Regional Board)
9174 Sky Park Court, Suite 100
San Diego, California 92123

**2010 CITY OF DEL MAR STANDARD URBAN STORMWATER MITIGATION PLAN (SUSMP)**

Dear Mr. Gibson:

Enclosed, you will find an electronic copy of the City of Del Mar Standard Urban Stormwater Mitigation Plan (SUSMP) as revised and implemented by the City of Del Mar effective March 24, 2010. It is being submitted to the Regional Board pursuant to the requirements of Section J.2.b. of the San Diego County Municipal Stormwater Permit (Permit).

The updated Del Mar SUSMP incorporates the requirements outlined in the Regional Model SUSMP as approved by the Regional Board, on March 25, 2009, with minor modifications to reflect local conditions, and consistent with the requirements of Section D.1.d.(8)(c) of the Permit.

I certify under penalty of law that this document and all the attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for knowingly submitting false information, including the possibility of fine and imprisonment.

If you have any questions regarding the submittal, or require additional information, please feel free to contact me directly at (858) 755-9313 x172, or by email at jdestefano@delmar.ca.us.

Sincerely,

JOSEPH M. DE STEFANO II, M.Sc., CPP, CSI, CCIS™
Clean Water Manager

## 2010 STANDARD URBAN STORMWATER MITIGATION PLAN (SUSMP)

In January 2007, the San Diego Regional Water Quality Control Board reissued a municipal stormwater permit (Municipal Permit) to San Diego area municipal Copermittees, including the City of Del Mar. The reissued permit updated and expanded stormwater requirements for new developments and redevelopments. Stormwater treatment requirements have been made more widely applicable and more stringent; minimum standards for Low Impact Development (LID) have been added, and the Copermittees are required to develop and implement criteria for the control of runoff peaks and durations from development sites.

In 2002, the City of Del Mar implemented a Standard Urban Stormwater Mitigation Plan (SUSMP) document that described the specific requirements and process for meeting the stormwater requirements for new development and redevelopment projects outlined in the 2001 Municipal Permit. The SUSMP was updated in 2008 to meet the requirements of the 2007 Municipal Permit. The City is also required to update the SUSMP to incorporate new requirements and standards.

Effective Thursday, March 25, 2010, the City's revised SUSMP document (attached) shall be implemented for all development projects in the City of Del Mar. As discussed in the SUSMP, certain projects of limited scope and scale are exempt from SUSMP requirements. However, the list of project types not subject to at least a portion of these requirements is limited.

Staff is presently preparing revised implementation tools to assist staff and applicants through the process. In the meantime, the Clean Water Manager will be working with staff to ensure that projects are able to comply with these requirements. Thank you in advance for your cooperation in this matter.

Sincerely,

JOSEPH M. DE STEFANO II, M.Sc., CPP, CSI, CCIS™
Clean Water Manager

# Glossary

| | |
|---|---|
| **Best Management Practice (BMP)** | Any procedure or device designed to minimize the quantity of pollutants that enter the storm drain system. |
| **California Association of Stormwater Quality Agencies (CASQA)** | Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com. Successor to the Storm Water Quality Task Force (SWQTF). |
| **California BMP Method** | A method for determining the required volume of stormwater treatment facilities. Described in Section 5.5.1 of the California Stormwater Best Management Practice Manual (New Development) (CASQA, 2003). |
| **Conditions of Approval (COAs)** | Requirements a municipality may adopt for a project in connection with a discretionary action (e.g., adoption of an EIR or negative declaration or issuance of a use permit). COAs may include features to be incorporated into the final plans for the project and may also specify uses, activities, and operational measures that must be observed over the life of the project. |
| **Continuous Simulation Modeling** | A method of hydrological analysis in which a set of rainfall data (typically hourly for 30 years or more) is used as input, and runoff rates are calculated on the same time step. The output is then analyzed statistically for the purposes of comparing runoff patterns under different conditions (for example, pre- and post-development-project). |
| **Copermittee** | See **Dischargers**. |
| **Detention** | The practice of holding stormwater runoff in ponds, vaults, within berms, or in depressed areas and letting it discharge slowly to the storm drain system. See definitions of **infiltration** and **retention**. |
| **Directly Connected Impervious Area** | Any impervious surface which drains into a catch basin, area drain, or other conveyance structure without first allowing flow across pervious areas (e.g. lawns). |
| **Direct Infiltration** | Infiltration via methods or devices, such as dry wells or infiltration trenches, designed to bypass unsaturated surface soils and transmit runoff directly to groundwater. |
| **Dischargers** | The agencies named in the **stormwater NPDES permit** (see definition): the County of San Diego; the Cities of Carlsbad, El Cajon, La Mesa, Poway, Solana Beach, Chula Vista, Encinitas, Lemon Grove, San Diego, Vista, Coronado, Escondido, National City, San Marcos, Del Mar, Imperial Beach, Oceanside, and Santee; the San Diego Unified Port District, and the San Diego County Regional Airport Authority. |
| **Drainage Management Areas** | Areas delineated on a map of the development site showing how drainage is detained, dispersed, or directed to **Integrated Management Practices**. There are four types of Drainage Management Areas, and specific criteria apply to each type of area. See Chapter 4. |

| | |
|---|---|
| **Drawdown time** | The time required for a stormwater detention or infiltration facility to drain and return to the dry-weather condition. For detention facilities, drawdown time is a function of basin volume and outlet orifice size. For infiltration facilities, drawdown time is a function of basin volume and infiltration rate. |
| **Environmentally Sensitive Areas** | Areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and County of San Diego; and any other equivalent environmentally sensitive areas which have been identified by the City of Del Mar. |
| **Flow Control** | Control of runoff rates and durations as required by the Hydromodification Management Plan. |
| **Head** | In hydraulics, energy represented as a difference in elevation. In slow-flowing open systems, the difference in water surface elevation, e.g., between an inlet and outlet. |
| **Higher-Rate Biofilter** | A biofilter with a design surface loading rate higher than the 5 inches per hour rate specified in this document for bioretention facilities and planter boxes. |
| **Hydrograph** | Runoff flow rate plotted as a function of time. |
| **Hydromodification Management Plan (HMP)** | A Regional Plan implemented by the City so that post-project runoff shall not exceed estimated pre-project rates and/or durations, where increased runoff would result in increased potential for erosion or other adverse impacts to beneficial uses. Also see definition for **flow control.** |
| **Hydrologic Soil Group** | Classification of soils by the Natural Resources Conservation Service (NRCS) into A, B, C, and D groups according to infiltration capacity. |
| **Impervious surface** | Any material that prevents or substantially reduces infiltration of water into the soil. See discussion of imperviousness in Chapter Two. |
| **Infeasible** | As applied to best management practices, impossible to implement because of technical constraints specific to the site. |

| | |
|---|---|
| **Infiltration** | Seepage of runoff into soils underlying the site. See definition of **retention.** |
| **Infiltration Device** | Any structure, such as a dry well, that is designed to infiltrate stormwater into the subsurface and, as designed, bypasses the natural groundwater protection afforded by surface or near-surface soil. See definition for **direct infiltration**. |
| **Integrated Management Practice (IMP)** | A facility **(BMP)** that provides small-scale treatment, retention, and/or detention and is integrated into site layout, landscaping and drainage design. See **Low Impact Development.** |
| **Integrated Pest Management (IPM)** | An approach to pest management that relies on information about the life cycles of pests and their interaction with the environment. Pest control methods are applied with the most economical means and with the least possible hazard to people, property, and the environment. |
| **Interim Hydromodification Criteria** | Pursuant to NPDES permit Provision D.1.d.g.(6), the Copermittees prepared Interim Hydromodification Management criteria, which apply to projects disturbing 50 acres or more. The criteria are described in Chapter 2 and in memoranda on the Project Clean Water website. |
