Requirements for Treatment Control BMPs on Priority development and redevelopment projects were established by the Municipal Permit, Order No. 2001-01. The Copermittees developed a Model SUSMP, which included requirements for Treatment Control BMPs on Priority development and redevelopment projects. On June 12, 2002, the Regional Water Quality Control Board approved the Final Model SUSMP. Municipal Permit, Order No. 2001-01 provided a 180-day period for the Copermittees to incorporate the Model SUSMP in their local SUSMPs and implement its requirements. Accordingly, the Treatment Control BMP requirements went into effect on December 3, 2002. Attachment A of this report includes a list of Priority Development projects in the City that were subjected to SUSMP requirements during the current reporting period. The information provided in the Attachment includes the name of the project, category (residential, commercial, etc.), Inspection priority, status (under construction, pending, completed), type of Treatment Control BMPs, subdivision name, and neighborhood name.

The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority development project.

2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

The City started the process of Treatment Control BMPs inspection and verification in February 2008. A total of 117 Priority development projects were inspected before the end of the current reporting period. Attachment F of this report includes a list of projects inspected during that period. The list includes inspection dates, project names, types of BMPs installed, categories

(commercial, residential, etc.), priorities, development names, neighborhood names, and responsible parties for each project. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 107 notification letters were sent out to parties responsible for the maintenance of completed private Priority Development Projects (see City's JURMP document Appendix D). The City is in the process of sending out more verification letters as projects are completed and such verification will be reported in the future Annual Reports.

It should be noted that City's maintenance crews are responsible for the maintenance of Treatment Control BMPs on public facilities and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. Additionally, Storm Water Management staff conducts inspections of public Treatment Control BMPs to ensure that the level of maintenance is adequate.

Self-inspection and verification of Treatment Control BMPs by the responsible party for maintenance is unlike any current program within the City. Due to this new requirement, responsible party(ies) such as property management companies, Homeowner's Associations, property owners, and developers, are often unaware that Treatment Control BMPs have been installed on their properties and that they are responsible for annual inspection and maintenance of the units. The fact that such inspections and maintenance would create unexpected additional expenses to the responsible party(ies), City staff often encounters some resistance and has to explain the requirements. Because of this, the City has worked closely with the party(ies) to educate and guide them on the procedures to inspect and maintain the BMPs in the future. The City continues to re-evaluate its annual maintenance verification procedures and may modify the program if necessary.

The City requires annual verification of proper maintenance of all treatment control BMPs by the party responsible for maintenance prior to the start of each rainy season. The City issues to the responsible party, either electronically or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans. This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form that the treatment control BMPs are being properly maintained in accordance with the sites' maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form.

2.4.4.10 BMP VERIFICATION

The City's Public Works Inspectors are responsible for ensuring that Treatment Control BMPs, which are components of the project's drainage systems and grading works, are inspected and constructed in accordance with approved grading plans. Public Works Inspectors conduct frequent inspections of projects during their grading activities and verify that Treatment Control BMPs are constructed as per approved plans. During the reporting period, Storm Water Management staff conducted an additional comprehensive inspection of 117 completed private and public projects to evaluate their Treatment Control BMPs installation and maintenance, and opened communication with persons responsible for the maintenance of such BMPs.

In compliance with the Municipal Permit, the City has developed databases for tracking the verification, maintenance, and inspections of Treatment Control BMPs. Additionally, hard copy files, including information about each project's WQTRs, maintenance agreements, locations of Treatment Control BMPs, and correspondence with persons responsible for the maintenance of Treatment Control BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section immediately after their inspections of grading activities are completed and their inspections are no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting site hardscape construction. They will ensure the LID Site Design features are constructed as shown on approved grading and landscaping plans.

During the comprehensive inspection program for post-construction BMPs described above, it was determined that although major treatment facilities were constructed before occupancy of the project, some projects had not installed filter inserts or constructed vegetated swales prior to occupancy. Those projects were identified and responsible persons were required to install the deficient BMPs. With amendment in the verification process described above, the installation of all BMPs, including LID BMPs will be monitored during site construction on all Priority Projects.

2.4.4.11 SUSMP WAIVERS

The Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Project to be waived from treatment control numeric sizing criteria, if infeasibility can be established. During the reporting period, the City did not grant such waivers to any development projects.

2.4.4.12 SUSMP WAIVER MITIGATION

As mentioned above, during the reporting period, the City did not grant any treatment control numeric sizing criteria waivers to Priority Projects and, therefore, no waiver mitigation programs were implemented during the current reporting period.

2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN COLLABORATION

During the current reporting period, the Copermittees established a SUSMP and Hydromodification Management Workplan (HMP) workgroup and an HMP Technical Advisory Committee (TAC). The workgroup met frequently and hired a consultant to develop an updated SUSMP, Interim Hydromodification Criteria, and an HMP. The City was an active member of the workgroup and provided extensive comments on each draft document. City representatives attended almost all of the workgroup meetings. Although not members of the HMP TAC, City staff participated in meetings, were closely involved in the issues that were discussed, and obtained extensive information from expert presentations by consultants and others.

2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

An HMP is currently under development at the regional level. The Municipal Permit requires the HMP document to be incorporated into local SUSMPs after approval by the Regional Board (Permit Section D.1.g.(5)) and be implemented thereafter. It is anticipated that the implementation of HMP will commence in the first quarter of 2010. In the meantime, an Interim Hydromodification Criteria (IHC) was developed and incorporated into the City's Updated SUSMP. Such IHC requires that all development projects that disturb 50 acres or more of land should implement hydrologic controls to manage post-project runoff flow rates and durations as required by the IHC. The City's Manual sets the issuance of a grading or construction permit as lawful prior approval of a project. Therefore, IHC requirements do not apply to projects that had received their grading or construction permit before March 24, 2008, when the updated SUSMP went into effect.

Although the City underwent significant development during the years 2000 to 2006, due to the slump in the housing market and the current economic situation, the City receives very few development applications. Since March 24, 2008, when the IHC requirements went into effect, the only development that qualifies for IHC is the 300-acre Eastern Urban Center (EUC) project, which is planned for mixed uses including high-density multifamily residential, office, commercial, recreational, civic and cultural land uses. The EUC development project is currently undergoing the project review process and is required to comply with IHC requirements. The developer has proposed a combination of existing detention basins and proposed a new underground detention facility in addition to LID BMPs to comply with IHC requirements.

2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

Other than the development project listed above, all other development projects reviewed during the current reporting period were less than 50 acres in area and did not meet the criteria for IHC requirements. However, Priority Development Projects were all required to address hydrologic conditions of concern by comparing pre- and post-development peak discharge rates and durations, and demonstrate that the increased peak discharge rates and durations would not cause downstream erosion or habitat impact. Such discussions were required to be included in the submitted WQTRs.

2.4.4.16 PROJECTS DISTURBING 50 ACRES OR MORE

As mentioned in Section 2.4.4.14 of this report, the only project that was under review during the reporting period and met the conditions for IHC was the EUC development project. This project is currently under review by City staff. The developer has submitted preliminary WQTRs that discuss the IHC. However, City staff has determined that calculations are required to demonstrate that the proposed facilities, including existing detention basins, a proposed underground detention facility, and LID features are adequate to meet IHC requirements.

2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP verification inspections, the City determined that 21 out of 117 inspected projects were partially or totally deficient in the installation of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, 13 projects were brought into compliance. Work is being continued on the remaining 8 projects and it is anticipated that they will also be in compliance within a short period. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to bring their project to compliance in a timely manner. Such enforcement action may include Notices of Violation, Administrative Citations, and/or Civil or Criminal Penalties. At this time, the City has not initiated any enforcement action for development projects with deficient post-construction BMPs and trusts that working with the responsible persons is at this time a more efficient and effective method.

3.0 CONSTRUCTION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(b).ii - Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.

Permit Section J.3.a.(3)(b).iii - A description of modifications made to the construction and grading ordinances and approval processes.

Permit Section J.3.a.(3)(b).iv - Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.

Permit Section J.3.a.(3)(b).i - Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(b).v - Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.

Permit Section J.3.a.(3)(b).vi - A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.

Permit Section J.3.a.(3)(b).vii - For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.

Permit Section J.3.a.(3)(b).viii - A description of the general results of the inspections.

Permit Section J.3.a.(3)(b).ix - Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(b).x - The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

3.1 INTRODUCTION

Under the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by RWQCB staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and

grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the MEP.

3.2 SOURCE CHARACTERIZATION

The City has compiled and frequently updates a watershed-based inventory of all construction sites within its jurisdiction. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including project name, location, project developer and project size. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report.

3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, the City's construction site inventory was maintained current and up to date and was updated monthly by Storm Water Management staff. As a result of coordination between the Public Works Construction Inspection staff and Storm Water Management staff, mechanisms are in place in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Planning and Building Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of threat to water quality (TTWQ) prioritization, and inspection frequencies of active sites as needed.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and Discharge Control and Grading Ordinances were updated in 2008 and make the Manual enforceable. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met. The City's updated ordinances can be found in Attachment G.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all individual proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and will not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of BMPs during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual and the CASQA Storm Water BMP Handbook are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements

3.5 PROGRAM IMPLEMENTATION

The City's Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction

activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the project engineer submits an NOI to the State Water Resources Control Board and prepares a SWPPP, which is maintained at the construction site office for review by RWQCB and City inspectors.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet season, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of 7 or more consecutive calendar days. Recently, the City issued a formal letter to all developers with inactive construction sites. The purpose of the letter was to bring to the attention of developers the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's responsibility at both active and inactive sites to implement a plan to

address all potential non-storm water discharges. If a site was partially inactive, above requirements applied only to inactive areas of the site.

If the construction project was wholly or partially inactive or expected to remain inactive for a long period, the City required the developer to submit a construction site stabilization plan.

The stabilization plan was required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

3.5.1 MAXIMUM DISTURBED AREAS

The City's Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. On a case-by-case basis expansion of disturbed area requires approval by the Director of Public Works. Maximum disturbed area requirements are discussed in detailed in the City's Manual.

3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. If it is determined that a site poses a Exceptional TTWQ based on criteria outlined in the Manual, the site shall implement advance treatment controls to minimize the discharges from the construction site.

3.5.3 CONSTRUCTION SITE INSPECTIONS

The City construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one full-time Storm Water Compliance Inspector, two full-time Environmental Health Specialists, one Engineering Technician, and eight Public Works Inspectors who manage this effort.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. Unlike Order No. 2001-01, Order No. R9-2007-0001 does not require TTWQ Prioritization for construction sites. However, the City

has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites in this report, therefore, includes a column indicating TTWQ Prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of Order No. 2001-01 and Order No. 2007-07, as applicable. Please see Table 3-1 for the number of construction site inspections under each category. A complete list of inspected construction sites is included in Attachment F. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

Table 3-1 Construction Site Inspection Summary FY 2007-2008

INSPECTION SUMMARY	NO.
Formal Inspection Reports	548
Inspections During Wet Season	415
Inspections During Dry Season	122
Inspections of High Priority Sites	415
Inspections of Medium Priority Sites	123
Inspections of Low Priority Sites	10

During the construction phase, BMP implementation is evaluated by the City in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP as needed.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP.
- Failure to implement good housekeeping practices at the site.

Site inspections of both public and private developments are performed by City staff with inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements as per the Permit requirements and applicable ordinances and permits.

Inspections include the following:

- Proof of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Proper maintenance of the BMPs.
- Effectiveness of the BMPs.
- Verification that the party responsible for the implementation of the site SWPPP has received adequate training.
- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its ordinances and permit conditions at all construction sites, as necessary. The City's ordinances and permit conditions provide adequate legal authority for the City to enforce its ordinances on construction sites through Stop Work Notices, penalties, fines, and other enforcement procedures as necessary. City staff work with developers and contractors to frequently identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City staff initiates an enforcement action, which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 - Construction Enforcement Summary summarizes enforcement actions taken within the defined reporting period of this report:

Table 3-2 Construction Enforcement Summary FY 2007-2008

ENFORCEMENT ACTION	NO.
Written Notices of Violation (Includes Cease and Desist and/or Clean and Abate Orders)	3
Required Technical Reports	4
Stop Work Notices	4
Administrative Citations (Construction related)	4

As a result of the above enforcement actions, $6,400.00 in fines were issued. Follow-up inspections were conducted as necessary until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2007-2008. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

4.0 MUNICIPAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(c).i - Any updates to the municipal inventory and prioritization.

Permit Section J.3.a.(3)(c).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.

Permit Section J.3.a.(3)(c).iii - A description of inspections and maintenance conducted for municipal treatment controls.

Permit Section J.3.a.(3)(c).iv - Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.

Permit Section J.3.a.(3)(c).v - Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.

Permit Section J.3.a.(3)(c).vii - Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.

Permit Section J.3.a.(3)(c).viii - Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.

Permit Section J.3.a.(3)(c).x - Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xi - Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xii - Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xiii - Identification of the total distance of curb-miles swept.

Permit Section J.3.a.(3)(c).xiv - Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.

Permit Section J.3.a.(3)(c).xv - Amount of material (tons) collected from street and parking lot sweeping.

Permit Section J.3.a.(3)(c).xvi - A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.

Permit Section J.3.a.(3)(c).xvii - Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.

Permit Section J.3.a.(3)(c).xviii - A description of the general results of the inspections.

Permit Section J.3.a.(3)(c).xix - Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(c).xx - The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(c).xxi - A description of notable activities conducted to manage urban runoff from municipal areas and activities.

4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and

activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs. Inspections are scheduled to support continued implementation and maintenance of BMPs Citywide.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage, loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are classified as high, medium, or low TTWQ based on activities, functions, and various site-specific

factors. For more information on the facilities that have additional operations and activities, please see the City's JURMP. The inventory was updated in March 2008 during the JURMP update process. The same inventory has been used in this report. Future annual reports will include inventories as updated for that report.

4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

4.2.4 PROGRAM IMPLEMENTATION

4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities receive training on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. If the storm water inspector observes a violation of the City's storm water ordinance caused by negligence of City personnel, the inspector immediately informs the appropriate supervisor; works with supervisors to ensure that corrective actions are implemented; and provides training to the personnel. The supervisor will then take action against the violating staff member, as may be necessary, including warnings and other disciplinary measures. Notably, since Public Works staff has been trained for pollution prevention and BMP implementation in their daily activities, most deficiencies are taken care of upon the first notice. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City staff inspected all 62 high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected on an as needed basis. No medium or low priority facilities were determined to need inspection this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in Attachment F. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Along with the required storm water BMP compliance inspections, City Storm Water Management staff also inspects all municipal treatment control BMPs. The City maintains treatment control BMPs at the John Lippitt Public Works Operations Center; Fire Stations 6, 7, 8; Salt Creek Park; Veteran's Park; Sunset View Park; Harvest Park; Santa Cora Park; Mountain Hawk Park; Montevalle Park; Windingwalk Park; Horizon Neighborhood Park; Harborside Park; and the City of Chula Vista Civic Center. City crews service the structural treatment control BMPs on an as needed basis, and their condition is evaluated for effectiveness. Table 4-1 shows the municipal facilities within the City that have treatment control BMPs and their inspection dates.

Table 4-1 Municipal Facilities with Treatment Control BMPs

FACILITY NAME	NUMBER & TYPE OF TREATMENT CONTROL BMP	DATE INSPECTED
Montevalle Park	10 Filter Inserts	06/27/08
Salt Creek Park	1 CDS Unit	06/26/08
Windingwalk Neighborhood Park	1 Vegetated Swale	06/19/08
Harvest Park	1 Filter Insert	06/19/08
Sunset View Park	3 Filter Inserts	02/21/08
Mountain Hawk Park	20 Filter Inserts	06/27/08
Horizon Neighborhood Park	1 Filter Insert	06/27/08
Veterans Park	1 Vegetated Swale, 5 Filter Inserts	06/19/08
Chula Vista Civic Center	5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts	06/27/08
Fire Station 6	3 Filter Inserts	06/26/08
Fire Station 7	1 CDS Unit, non-storm water diverter	06/28/08
Fire Station 8	1 CDS Unit, non-storm water diverter	06/26/08
Harborside Park*	3 Filter Inserts	As needed
Santa Cora Park*	23 Filter Inserts	As needed
John Lippitt Public Works Center*	6 Filter Inserts	Annually

* – Not a SUSMP Project, but the City still inspects the inserts and maintains them

4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

Fertilizer, Pesticides, and Herbicides

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do no spray on windy days.
- All employees who spray pesticides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the state and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent material safety data sheet (MSDS) files.
- MSDS sheets for chemical being used must be kept with the applicator while applying pesticides.

Proper Planting Techniques

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation whenever possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

Minimize Runoff

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.
- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

4.3.2 SOURCE CHARACTERIZATION

Roads, streets, highways, and parking facilities are included as a high TTWQ facility in the Municipal Inventory (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the roads, streets, highways, and parking facilities. The City maintains 402 miles of roads, streets, and highways.

There is one standalone parking facility within the City in a commercial area which is swept on a monthly basis; the other 22 parking facilities are associated with City buildings and facilities and are swept as a part of the normal maintenance activities for the fixed facility they are associated with.

Roads, streets, and highways are further classified into high, medium, and low based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. The City is in the process of collecting data to refine this classification by working with its contractor to keep records of the quantities of trash and debris collected each day from various sections of the City.

4.3.3 BMP REQUIREMENTS

Street sweeping is another ongoing city function that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

4.3.4 PROGRAM IMPLEMENTATION

4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept 18,000 curb miles and removed 580 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular roadway maintenance is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, bus stops, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

- Commercial and industrial streets swept once per week
- Center islands and medians swept twice per month
- Centerlines, residential streets, and non-curbed streets swept once per month

Figure 4-1 Street Sweeping Schedule

4.4 MS4

4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants and potential pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through three primary activities: 1) catch basin maintenance, 2) channel maintenance, and 3) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drainage facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultants for dry weather field screening annually inspect over 50 outfall locations throughout the City and conduct upstream investigations based on field screening results. They call and report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to abate the pollution, cleanup, and inspect the drainage area.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible

pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris.

Currently, three vacuum trucks and three crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drainage systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drainage systems.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system used for collecting and tracking data about the work that the Department of Public Works performs in order to maintain the City's infrastructure. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

During the reporting period, the City installed new thermoplastic storm drain signage to curb inlets in the City. These stencils adhere to the concrete curb/gutter by heat treatment and are more durable than paint stencils or plastic markers using adhesive. Approximately 500 thermoplastic storm drain markers were permanently affixed to storm drain inlets with the prohibitive "No Dumping – Drains to Bay" message in two languages. In addition, citizens participating in Beautify Chula Vista Day in October 2007 stenciled 80 more storm drains. Notably, nearly all storm drain structures in the City are identified with stenciling, plastic markers, or permanent concrete stamping. In addition, the City plans to stencil more drains with the thermoplastic marker in the next reporting year and is maintaining a record of stenciled storm drains through GIS mapping.

4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4 which includes open channels, catch basins and inlets, and outfalls. The City's MS4 is included in the municipal facility inventory (Attachment C) as a high TTWQ facility. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

4.4.4 PROGRAM IMPLEMENTATION

4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2007 to June 30, 2008 is

summarized below. All high trash volume facilities were inspected at least once during May 1 – September 30. Table 4-2 details the amounts of waste cleaned from the City's storm drain system.

Catch Basins and Inlets

- There are 11,332 catch basins and inlets in the City
  - 7,908 catch basins and inlets were inspected
    - Out of these catch basins and inlets inspected, 3,601 catch basins and inlets were cleaned
- Data collection for catch basins with accumulated waste exceeding the cleaning criteria (33% or more full) started January 1, 2008. A total of 299 exceeded the criteria from January 1, 2008 – June 30, 2008.

MS4

- There are 184 miles of MS4 in the City
- The storm drain maintenance crews televised 0.57 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there is no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 1.31 miles of MS4 was cleaned. It should be noted that storm drain pipes are self-cleaning and under normal operation there should be no need for cleaning storm drain pipes.

Open Channels

- There are 298 miles of open channels in the City
- A total of 518,000 square feet of open channels were inspected and cleaned

Table 4-2 Amount of Waste Cleaned from the Storm Drain System FY 2007-2008

CATEGORY	AMOUNT (tons)
Catch Basins	9.92
Inlets	19.69
MS4	11.93
Open Channels	400.78
TOTAL	442.32

The City will continue to inspect its MS4 as required by the Municipal Permit and record inspection data collected during FY 2008-2009. After two fiscal years, the City will review its inspection record and determine which facilities will require inspections less than annually and report these facilities in its FY 2009-2010 annual report.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in protection of the MS4 system. If not properly maintained, the sewer system can

potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, and parasites, not to mention chemicals.

The City currently implements a Sewer Overflow Response and Prevention Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, the City is in the process of updating the plan and developing a Sewer Collection Management Plan and a Fats, Oils, and Grease (FOG) Monitoring Ordinance. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

4.5.2 SOURCE CHARACTERIZATION

There are 481 miles of sewer in the City. The sanitary sewer is included in the municipal inventory as a high threat to water quality facility (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system.

4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receives training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

4.5.4 PROGRAM IMPLEMENTATION

4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 440 miles of sewer main (includes critical maintenance areas) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, eliminating potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video

surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with diameters larger than 36 inches. The PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as powerwashing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. Powerwashing for graffiti removal is included in the municipal inventory as a high TTWQ (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including powerwashing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City powerwashing crews implement BMPs when powerwashing and receive regular training on storm water pollution prevention.

4.6.4 PROGRAM IMPLEMENTATION – POWERWASHING FOR GRAFFITI REMOVAL

4.6.4.1 MAINTENANCE AND INSPECTION

The City's Graffiti Abatement Program functions under the mission of: *"to deliver in a timely manner, a comprehensive, cost-effective, environmentally sound, and technically reliable graffiti removal, education, and prevention program for the residents of Chula Vista."* The City provides cost-free graffiti removal for the residents of Chula Vista.

The Graffiti Abatement Program utilizes various techniques for effective removal of graffiti Citywide, including power washing and sand blasting. In its commitment to this program and to utilize environmentally sound and cost-effective graffiti removal processes, City Council approved the spending of $63,000 for the purchase of highly specialized equipment to capture and treat residual wash water generated from graffiti abatement activities in early 2006. At the end of 2006, the new equipment was made available to the graffiti crews. The equipment includes the following:

- A Ford F450 Heavy Duty truck powered by a Triton V10 gasoline engine with an 8' x 12' flatbed.
- A Mi-T-M Industrial belt-driven pressure washer rated at 5.6 GPM output at 3,500 P.S.I.
- A diesel-fired burner for hot water rated at 470,000 BTUs per hour with adjustable temperature control up to steam.
- A Mi-T-M 6000 watt Generator powered by a 13 HP Honda gasoline engine provides power for the AquaKleen Vacuum Recovery system and Water Recycling System, which includes a commercial vacuum system that operates on two 120 volt vacuum motors.
- An automatic discharge pump with a check valve recovers the residual wash water through a Vacu-berm, and a 1.5" 25 foot-long pick up hose and pumps wash water into a 22 gallon oil/water separator system. The water then passes thru a series of 3 filters and a filtration bag that is changeable before it is returned to the storage tank for reuse. This high efficiency system is capable of recycling up to 80% of the wash water for reuse. The clean water tank holds 250 gallons.
- Speedflo PowerTwin 6900 gas powered hydraulic airless paint pump with 3000 PSI and two-gun capability with 100 feet of 0.25" paint hose on a spring-loaded retractable hose reel mounted in the rear corner of the truck bed. This pump is rated at 1.8 GPM.
- Side mount under-bed tool and accessory carryall baskets made of expanded metal for carrying five gallon buckets of paint and vacuum attachments are located on both sides of the truck.

As a part of the inspection process, City's Storm Water Management staff usually does a ride-along with the graffiti/powerwashing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

The City hosts a variety of special events, which include festivals, fairs, and other events for special causes and occasions. Many times these events involve the participation of outside organizations and community groups. The gathering of event participants and the presence of booths can be a source of trash and debris if BMPs are not implemented.

4.7.2 SOURCE CHARACTERIZATION

Special events are included in the City's municipal inventory as a high TTWQ activity (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping following major events, and having personnel especially dedicated to waste management during City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works together to ensure that adequate BMPs are implemented during special events.

4.7.4 PROGRAM IMPLEMENTATION

City Storm Water Management and Environmental Services staff are present at the majority of City events. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed protection. City Environmental Services staff notify hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(d).i -Any updates to the industrial and commercial inventory.

Permit Section J.3.a.(3)(d).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.

Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.

Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.

Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.

Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.

Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.

Permit Section J.3.a.(3)(d).ix - A description of efforts implemented to address mobile businesses.

Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.

Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.

5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity is mutually

exclusive, and that each is essential to the overall success of the program. The City has compiled a list of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

5.2.1 BACKGROUND

The City's industrial and commercial inventories include 1,368 facilities. Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, the City conducts an annual comprehensive inventory validation process of commercial and industrial sources Citywide.

A watershed-based inventory of the industrial and commercial sites within the City has been compiled. Information was obtained from the City's business license database (Permits Plus), the State of California database of industrial sites that have filed NOIs, inspection records, and previous experience. The inventories are updated annually through reviewing business license records for new businesses, performing routine inspections, and responding to reported incidents.

The inventory of industrial and commercial facilities within the City was updated during the development of the City's JURMP in 2008 and the same inventory is included in Attachments D and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Municipal Permit category
- Description of services
- Priority
- North American Industrial Classification System (NAICS) code

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- North American Industrial Classification System (NAICS) code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.

The inclusion of the APNs allows the City to track its inventories through the City's GIS program. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing industrial and commercial discharges of pollutants into MS4s. Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides the authority to require SWPPP for any industrial or commercial facility that may discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. The City also inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements as described in the JURMP are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities. Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection the City provides a copy of the findings to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

In all cases a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking" guide for food related businesses. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City.

- Industrial trade group presentation
- Print / Media distribution
- Industrial & commercial inspection activities

5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

During this reporting period, 204 industrial facilities and 1,164 commercial facilities including 353 mobile businesses were identified and inventoried. These facilities are identified in Attachments D and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, the following number of inspections were conducted to ensure compliance within the Permit requirements:

- 97 high priority commercial facilities
- 27 low priority commercial facilities
- 48 high priority industrial facilities
- 31 low priority industrial facilities

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b(3).
- Threat to Water Quality – Facilities that posed higher TTWQ were given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.

- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial/commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

5.2.4.2 PRIORITIZATION

The new Municipal Permit no longer requires industrial and commercial facilities to be prioritized as high, medium or low TTWQ. However, the City has prioritized both industrial and commercial businesses into either high or low priority, for inspection purposes.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge were also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- NAICS Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)

- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road (Sweetwater River)
  - Bay Boulevard (San Diego Bay; facilities within the Port jurisdiction are not included)
- Fast food chains
  This is due to frequent management and employee changes, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrap, etc. in the parking lot.
- Private golf courses
- Entertainment facilities
  For example, facilities such as the Cricket Wireless Amphitheatre, Knotts Soak City, etc.
- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note to update the inventory. If a new business has been determined to be included in the inventory, City Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, City Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Storm Water Management staff checks for coverage under the General Industrial Permit, where applicable.

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/stormwtr/groupmonitoring.html

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the

business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies City Storm Water Management staff during the walk-through to enable City staff to point out areas where correction are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, City Storm Water Management staff completes a Storm Water Quality Inspection for Commercial/Industrial Facilities compliance report. The responsible party is provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Notations for review of SWPPP or BMP plan and monitoring results
- Assessment of BMP implementation
- Recommended corrective action
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the form

City Storm Water Management staff does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person; educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while City Storm Water Management staff is at the site.

As discussed above, the business is also provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high or vice versa. Any such changes are reflected in the inventory update submitted in the JURMP Annual Reports.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachment F.

5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the use of a third party inspection program. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

5.2.4.5 VIOLATION AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate
- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

City Storm Water Management staff properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, City Storm Water Management staff conducts follow-up inspections to determine that if required corrective actions are adequately addressed.

Where City Storm Water Management staff observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the discrepancies. When necessary, City maintenance crews respond to illegal discharges, contain and capture pollutants before entering storm water conveyance system inlets, and stay at the scene until the illegal discharge is terminated by the responsible person. The affected areas and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the property owner. In any case in which City Storm Water Management staff determines that a noncompliant site poses a threat to human or environmental health, the City notifies the RWQCB by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illegal discharges from industrial and commercial businesses; this includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section, 9.5 of the City's JURMP.

See Table 5-1 – Industrial/Commercial enforcement Action Summary. A detailed account of enforcement actions taken during this reporting period is included in Attachment H.

Table 5-1 Industrial/Commercial Enforcement Action Summary FY 2007-2008

VIOLATION TYPE	NO.
Administrative Citations-Warning	6
Administrative Citations	17
Notice of Violation	4
Cease and Desist Orders	3
Clean and Abate Order	4

As a result of the above enforcement actions, $6,000.00 in fines were issued. The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

5.2.4.6 IDENTIFICATION OF NON-FILERS

If City Storm Water Management staff determines that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the RWQCB to determine if the facility is required to obtain coverage. At the same time, the RWQCB is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with RWQCB staff to assist in their site inspections. Each Annual Report includes a list of industrial facilities that the City has identified as candidates for coverage that have not filed NOIs. The list includes the name of the facility, address, contact information and NAICS code.

5.3 MOBILE SOURCES ELEMENT

5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Many mobile businesses can be difficult to identify because many do not have business licenses. On a continuous basis, new mobile businesses are started, existing mobile businesses go out of business or some mobile businesses do not renew their business license or operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses. Furthermore, City inspectors conduct weekend and night inspections to monitor BMP implementation by mobile businesses.

5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile Auto Detail
- Window Washing/Pressure Washing/ Street Sweeping
- Pool and Spa Cleaning
- Carpet Cleaning
- Plumbing/Handyman/Repairman
- Landscaping
- Dog Grooming
- Boat Cleaning/Hull Maintenance
- Fire Sprinkler Maintenance
- Mobile construction trades; cement, masonry and painting and coatings

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business applicant within the above categories are required to go through a storm water BMP training and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 71 mobile businesses have applied for a City Business License and have been approved and met the City's requirements and the standard BMPs for the specific type of business. See Table 5-2 – FY 07-08 Approved Mobile Business License Category.

Table 5-2 Approved Mobile Business License Category FY2007-2008

BUSINESS TYPE	NO.
Construction Related	16
Carpet Cleaning	12
Boat Cleaning & Maintenance	6
Auto Detailing	14
Pool & Spa Cleaning	3
Handyman/Repairman	5
Powerwashing/Window Cleaning	5
Plumbing	4
Landscaping	2
Mobile Oil Change	1
Sweeping	2
Dog Washing	1

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes; and costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge and Control, Spill Prevention, Control/Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed through the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. The approved applications and completed Storm Water Questionnaire and Certification Statement are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department receives application from mobile business owner
- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance and appropriate CASQA BMPs.
- The applicant is instructed that they must complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval and issuance of their business license
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.

5.3.4.1 EDUCATION AND OUTREACH

The City provides information, education materials and outreach regarding storm water quality to mobile business owners and operators during the business license application process. As stated above, businesses are given the education materials outlining pollution prevention measures and other BMP requirements related to their perspective activities prior to the license being issued and also during onsite inspections. The Storm Water Information Packet for Mobile Businesses are included in Appendix D, of the City's updated JURMP and the education program is described in detail in Section 10, of the City's updated JURMP.

5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobiles businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene City inspectors require the discharge to be immediately stopped and cleanup initiated and completed to the extent feasible and practical. If the business does not have materials required for the implementation of the BMPs available, the business will not be allowed to resume operations until such time that the business demonstrates that they have procured the materials and can properly use them. City Storm Water Management staff determines if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being able to resume business operations. See Table 5-3 – Enforcement Action Summary for Mobile Businesses.

Table 5-3 Enforcement Actions Summary for Mobile Businesses FY 2007-2008

BUSINESS TYPE	VIOLATION TYPE	NO.	TOTAL FINES
Construction Related	Administrative Citation	4	Warning
Construction Related	Administrative Citation	8	$1600
Powerwashing	Administrative Citation	8	$1800
Landscaping	Administrative Citation	1	Warning
Landscaping	Administrative Citation	1	$200
Carpet Care	Administrative Citation	1	$200
Auto Detailing	Administrative Citation	1	Warning
Auto Detailing	Administrative Citation	2	$400
Plumbing	Administrative Citation	1	$200
Pool Spa Maintenance	Administrative Citation	1	$200

6.0 RESIDENTIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.

Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.

Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.

Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.

Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.

Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.

Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.

6.1 INTRODUCTION

The City has developed the residential component of the JURMP based upon a multi-faceted approach including pollution prevention; residential complaint response and enforcement; and residential outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharge of pollutants into the MS4 and to support the long-term improvements of water quality through awareness and behavior modification.

6.2 SOURCE CHARACTERIZATION

It is also recognized that the nature of residential reporting can effectively characterize those activities and sources that may need to be targeted from year to year. As in previous reporting years, the City has taken a critical look at the complaints received in 2007-2008 as presented in Figure 6-1. Notably, home improvement related discharges continue to be prevalent in this reporting period. Compared to last year, the percentage of home improvement related discharges

decreased by 10%. This may be attributable to the public outreach programs conducted by City staff that provides invaluable information and education on the impacts of waste disposal. This type of critical look is an important tool in making management decisions on how to approach residential BMP implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

Figure 6-1 Percentage of Reported Residential Non-Storm Water Violations by Activity FY 2007-2008

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high TTWQ residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, residential areas within the City have been designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating residential BMP implementation is quite challenging, however, the City has developed a number of mechanisms through which information on BMPs are disseminated to the public and ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response & Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed have been detailed throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented through public education and enforcement action, where necessary.

6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted, so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses enforcement mechanisms when necessary to address particularly problematic individuals, activities, and areas.

6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Residents are educated about the disposal of such waste through the City's educational program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the California Integrated Waste Management Board (CIWMB). The program has the capacity to receive and process the used oil generated by City residents. The amount of used oil collected increased significantly since the last reporting period as presented in Table 4-1. We attribute this increase to public education and the City's active role in coordinating with Certified Centers in rebate claims program and the participation in filter exchange events. The South Bay Used Oil Recycling Program has been evaluated to be one of the most successful programs implemented by the City of Chula Vista, National City, and Imperial Beach in improving environmental quality. Residents of these cities may recycle oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. Residents of Chula Vista may also take used oil to the various facilities in the City for disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. The facility is open every Saturday from the hours of 9 AM to 1 PM. Because of the continuous high volume amount of HHW collected and demand from the public, the City decided to also open the facility on Wednesdays from 1 PM to 3 PM. The City also offers "door-to-door" collection of HHW for a small fee. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts.

Table 6-1 Amount of HHW and Used Oil Collected FY2007-2008

Household Hazardous Material	Quantity of waste collected (FY 06-07)	Quantity of waste collected (FY 07-08)
	254,583 lbs	220,008 lbs
Used Oil	Quantity of used oil collected (FY 06-07)	Quantity of used oil collected (FY 07-08)
	57,393.5 gallons	134,314.70 gallons

6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the water quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where enforcement actions may be necessary, where appropriate:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel

Further information about the City's hotline reporting system and Dry Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. The City will continue to develop measures to inspect and investigate areas of the City that are considered high TTWQ. City personnel investigate violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continued to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's database, George Butler Associates Work Management System (GBA) database, can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1. The expanding residential community that makes up the City defines

the residential component of the City's JURMP. As such, the Storm Water Management staff has sought to achieve success in the reduction of pollutants through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types resulting from such activities. As such, the Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad-based message of environmental stewardship and protection of water quality.

6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in the City's Storm Water Management and Discharge Control Ordinance and in Chula Vista Municipal Code Title 1. During this reporting period, Storm Water Compliance Inspectors responded to over 131 violations, of which 77 were residential. Forty-one of the investigations resulted in citations. The total amount of fines collected during this reporting period from residential violations was $3,900.00. Follow-up inspections were conducted when necessary to ensure that full compliance is achieved. Storm Water Management staff respond to reports of residential and other violations; investigate each case; take appropriate actions regarding containment of pollution; educate the violating party on existing laws and regulations; make follow-up visits, where necessary; and, proceed with enforcement action if voluntary compliance is not achieved.

Data management of past violations helps City staff to identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of reported violations are included in Attachment I.

6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step in working towards improving receiving water quality both locally and regionally. By increasing public awareness and encouraging a change in both the attitude and the behavior of the general public and the regulated community, the City may reduce or eliminate storm water pollution caused by common daily activities.

6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the Environmental Services Division and the Energy Conservation Department in the implementation of the Regional Residential Education Program. Storm water information is disseminated by actively participating in community events throughout the year. Informational booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise awareness of the City's storm water programs. Residents recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water

Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also available throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

Residential complaint response and enforcement relies heavily upon reporting of illegal activities. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting year, the City continued to collaborate with the Education and Residential Sources Workgroup to develop and implement the Regional Residential Education Program (Program). In order to develop this Program, the Copermittees contracted a consultant to develop Recommended Options for the San Diego Regional Storm Water Education Program. This document contains a number of recommended strategies, an extensive literature review, an analysis of existing educational programs, and a comprehensive list of public awareness surveys. The overall education goals of the Program are to increase storm water awareness and knowledge, improve attitudes toward storm water pollution, and provide a foundation for changing behaviors that contribute to storm water pollution. The program aims to develop a consistent storm water education message throughout the region, to leverage resources and utilize economies of scale, and make collaborative approaches.

The City is an active participant in the Education and Residential Education Workgroup and collaborates with other Copermittees on all aspects of joint activities and programs. The workgroup is in the process of developing a workplan to implement the Regional Residential Education Program and a Regional Education Program Five Year Implementation Schedule.

6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the impacts of improper waste disposal. A consistent message of stewardship through everyday actions and behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

The City uses another notable measure in certain residential areas where BMP implementation is regarded as especially important. The City's GBA database system collects data from residential inspection and violation reports and check for individuals with repeated non-storm water discharges or BMP issues. The City analyzes this data to identify areas where more attention should be focused as presented in Attachment J. The City sends out informational materials to residential areas that are believed to contribute to storm water pollution.

The City has a number of programs in place to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2007-2008 Illicit Discharge Detection and Elimination Component; copies of the City's 2008 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2008.

8.0 EDUCATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.

Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.

Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.

Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.

Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.

8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Programs target issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and BMPs to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of Citywide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting period, education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) implementation strategies. In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. While specific workshops have been organized in previous reporting years covering such topics as laws and regulations, water quality impacts, and applicable BMPs, a focus on internal SUSMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize site design techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of higher efficiency treatment control BMPs.

Most notably, and consistent with previous reporting years, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance

- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Transit
- Vehicle Maintenance
- Land Development
- Public Works Inspections

In addition, presentations by the manufacturers and vendors of structural BMPs were organized and arranged in the City, such as presentations on modular wetlands and porous pavement technologies.

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

Table 8-1 Municipal Staff Education FY 2007-2008

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
07/26/07	LID Training	City staff received training on LID concepts from UC Davis and County of San Diego	City of Chula Vista
11/08/07	IEA Seminar	City storm water staff attended this seminar on "The Greening of CA Businesses"	IEA
11/19/07	SUSMP and HMP Workshop	City storm water staff attended this workshop about SUSMP and HMP concepts	County of San Diego
01/11/08	CASQA	Annual Federal and State Stormwater and Water Quality Regulatory Programs Update	CASQA
01/11/08	Construction Inspector Training	Storm water inspection training for staff who perform inspections during the building phase of construction projects	City of Chula Vista
02/11/08	Bio Clean Presentation	Treatment control BMP training on Modular Wetlands	City of Chula Vista

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
02/25/08	San Diego County LID Requirements	City Engineering, Planning, and Storm Water staff attended training on LID requirements, benefits, and planning	APWA
02/27/08	San Diego County LID Requirements	City Engineering, Planning, and Storm Water staff attended training on LID requirements, benefits, and planning	APWA
03/14/08	New Municipal Permit – SUSMP Updates	Storm water staff provided training to Engineering and Land Development Staff about the updated SUSMP, WQTRs, pollutants of concern, BMP selection, maintenance, Construction Permit, and phased grading.	City of Chula Vista
03/25/08	LID Seminar	City staff received training on LID principles, the SD County LID guidelines, and treatment BMPs	San Diego County Department of Public Works
04/29/08	Segmental Pavers Seminar	Storm water staff received training on advanced pavement technology as a BMP	Filterra
05/13/08	WQTR Training	Storm water staff provided training to Engineering Staff about WQTRs	City of Chula Vista
05/21/08	NPDES General Training	Storm water staff provided training to Code Enforcement Staff on storm water concepts, enforcement, field observations, and reporting	City of Chula Vista
05/30/08	Program Effectiveness Assessment Workshop	Storm water staff attended program effectiveness assessment training given by CASQA	CASQA

8.3 EDUCATIONAL OUTREACH ELEMENT

8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

During this reporting year the CLEAN group, made up of the City's environmental departments and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. Your Choice."**

The culmination of efforts of the various involved departments has been embodied in the established CLEAN program, and will provide an effective and powerful body to guide the significant efforts envisioned for the program. It also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including billing inserts, bus signs, stickers, stationary, t-shirts, and a booth display continued to be implemented within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean has information about the environmentally focused departments in the City including Storm Water Management, Environmental Services, Conservation, and the Chula Vista Nature Center. The storm water section has information specific to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to be developed, a wide array of media outlets have been explored, and it is anticipated that the established branding will be incorporated into media developed in subsequent reporting years. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2007-2008, the City continued to use seasonal pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of such items as cooking grease and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging on such items as chip clips, pens, pencils, calculators, mini flashlights and rulers.

Figure 8-1 CLEAN Homepage

In capturing the array of concepts and ideas that have emerged through the collaborative development process of the City's Storm Water Management Section and CLEAN Stakeholders, a set of six trail displays (Figure 8-2) have been strategically placed through the City during the reporting year. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park
- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

This concept was conceived from the core concept of a broad environmental message that spans the entire City. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. The City plans to implement more displays from the Bay Front to the eastern territories, which would demonstrate the connectivity of environmental concerns throughout the City.

Figure 8-2 City of Chula Vista CLEAN Trail Display

School Education Efforts

Last reporting year, the City implemented the Salt Creek Critters Program, which focused on pollution prevention and watershed protection. The program's target group was elementary school children. Due to the success of the program, the City is in the planning phase for a similar program for implementation in fall 2008, called South Bay Water Warriors.

Community Events

The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. The City's Storm Water Management and Environmental Services staff participates in and sets up booths and displays at all major South Bay community events. City staff provides education and outreach materials regarding a variety of interrelated environmental issues facing the City of Chula Vista. Distributed information includes concerns over storm water pollution and the need to protect local waterways. By participating in these community events, City storm water staff has the opportunity to generate hundreds of thousands of impressions each fiscal year.

Chula Vista Nature Center

The City of Chula Vista Nature Center, located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Nature Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Nature Center's mission is to educate the public about the importance of coastal resource conservation and environmental stewardship. Through visits to the Nature Center and its offsite programs, nearly 72,000 people are exposed to these critical environmental messages each year. To help facilitate educational experiences, the Nature Center offers field trips, guided walks, classes, tours, and special projects. Annually, organized school programs (approximately 15,000 K-6 children, 2,000 7-12 graders, and another 2,000 college students) visit the Nature Center to learn about the watersheds of San Diego Bay and what they can do to protect San Diego Bay.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Nature Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Chula Vista Nature Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Nature Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Nature Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- In partnership with the U.S. Fish and Wildlife Service, Chevron, and the San Diego Zoo, a backpack program called Sweetwater Safari is offered to teachers who have already brought students to the Nature Center. In this hands-on program, students take backpacks containing binoculars, mini-microscopes, and other materials to discover plankton, birds, plants and animal tracks on the trails of the Sweetwater Marsh National Wildlife Refuge.

Students learn to recycle, reuse, and reduce waste. They also learn how to correctly use storm drains and the types of pollutants commonly identified in the storm drain system. The Chula Vista Nature Center and Conservation Department also conduct "Less Toxic Gardening" classes twice a month, dealing specifically with pesticide use, as well as composting classes.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

Table 8-2 Education Outreach Provided FY2007-2008

DATE	EVENT	EVENT DESCRIPTION	SITE NAME/ LOCATION
08/12/07	Lemon Festival	City staff manned a booth and distributed IPM Pest Tip cards and the CLEAN brochures	Downtown Chula Vista
09/08/07	Kid's Festival	City staff manned a booth and distributed information about pollution prevention and used oil recycling	New Hope Community Church
09/29/07	Bonitafest	City staff manned a booth and distributed CLEAN brochures and IPM Pest Tip Cards	Bonita Road Shopping Center
10/06/07	Chula Vista Fire Department Open House	Storm water staff had a booth at the open house and provided pollution prevention training to citizens	Fire Station 4
10/06/07	Beautify Chula Vista	Storm water staff provided pollution prevention training to citizens	Southwest Chula Vista
10/06/07	Go Green and Clean Day	Staff provided training on pollution prevention and provided CLEAN brochures and IPM Pest Tip cards	Otay Ranch Town Center
10/17/07	Citizen's Academy	City staff provided storm water training to citizens	Chula Vista Public Works Center
04/12/08	Day of the Child/ Put Your Butt in the Right Place	City staff provided storm water education to citizens	Memorial Park
04/19/08	Festival del Sol	City storm water staff had a booth at the event and provided information about storm water pollution prevention	Otay Ranch Town Center
04/30/08	Earth Day Booth	City staff provided education on hazardous waste disposal and pollution prevention	Imperial Beach Pier
05/30/08	AVID Presentation	City staff in collaboration with the airport, provided information about storm water principles to middle school kids.	Ocean View Hills School
06/03/08	Tow Yard Training	City staff provided training to tow yard owners and managers about general storm water concepts and storm water inspections	Chula Vista Police Department

Year-round	Watershed, Recycling, Storm Drain Pollution Education	Organized School Group Visitors to the Chula Vista Nature Center	Chula Vista Nature Center

Regional Outreach

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further development of the Regional Residential Storm Water Education Plan that was submitted to the RWQCB in March 2008. One of the most notable activities conducted during FY07-08 and into FY08-09 was Copermittee collaboration and sponsorship of the San Diego County Fair from June 14, 2008 – July 6, 2008. The City of San Diego, along with the San Diego Copermittees, used the Think Blue campaign branding during fair media exposure and for the fair displays. The Copermittees focused their efforts on educating the public about Integrated Pest Management (IPM) practices. The IPM pest tip card packets were distributed, along with other giveaways to promote storm drain pollution prevention. During the fair, the Copermittees administered a survey to over 1,200 fair attendees. Results of the survey will be reported in the FY08-09 annual report. The Copermittees are planning similar educational outreach events that are focused on region-wide education.

8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included various storm water educational events and workshops targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, the City's inspectors meet with the facility owners or managers and explain water quality issues relating to the particular type of industrial or commercial facility. BMPs relevant to the activities at each facility are explained and, corrective actions are proposed to bring the facility into compliance. Consequences of non-compliance are also brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, the education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- The City Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

8.3.3 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities and high-risk behaviors through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day
- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as calculators, mini-footballs, pencils, pens, and chip clips.

During the reporting period, the City, in cooperation with I Love a Clean San Diego, supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteer groups have the opportunity to participate in storm drain stenciling, cleanup of trash, graffiti removal, and plant trees. Efforts are usually focused in areas of the City where more attention is needed due to trash and graffiti problems. Over 800 volunteers participated in the Beautify Chula Vista Day in October 2007.

The graffiti program allows citizens to report graffiti in their neighborhoods by phone or by email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. There were over 1,500 emails and calls to the graffiti hotline (some duplicated) during the reporting period, showing that City staff and residents are taking an active role in promoting a clean City.

9.0 PUBLIC PARTICIPATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.

9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

9.2 PROGRAM IMPLEMENTATION

Beautify Chula Vista Day – October 6, 2007
Beautify Chula Vista Day is an annual event that involves citizen participation in activities that improve the City and provides opportunity for City staff to have direct interaction with the public. Volunteer citizens are able to participate in tree planting, graffiti removal, clean-up projects, and storm drain stenciling. With participation from over 800 volunteers of all ages, the group was able to remove more than one ton of debris including plastic bags, recyclable bottles and cans, mixed paper and cigarettes from various locations in urban areas of Chula Vista. Volunteers also erased over 500 square feet of graffiti, stenciled 80 storm drain inlets, and planted 29 trees throughout the City.

Put Your Butt in the Right Place Day/ Day of the Child Event – April 12, 2008
The Put Your Butt in the Right Place Day was an anti-cigarette litter campaign that the City implemented with the help of the Surfrider Foundation. The event was held in Memorial Park in Downtown Chula Vista. The event coincided with the Day of the Child Event, which provided an opportunity to have contact with Chula Vista citizens. Ten high school and college volunteers provided education about cigarette butt disposal and storm water pollution prevention to attendees at the event as well as shop patrons along Downtown 3rd Avenue. Volunteers distributed the City of Chula Vista cigarette butt informational flyer, personal ashtrays, Hold on to Your Butt Stickers, CLEAN footballs, and CLEAN calculators. Storm Water Management staff manned the Household Hazardous Waste Booth along with Environmental Services staff and handed out pamphlets about using less toxic chemicals in their homes and recycling information. They also distributed personal ashtrays, pens, pencils, calculators, footballs, and shopping bags with environmental and water quality messages.

Otay Valley Regional Park Cleanup
The Otay Valley Regional Park (OVRP) http://www.ovrp.org/ is being developed as a collaborative effort of the cities of Chula Vista and San Diego, City of San Diego Water Works, and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which

identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land. The Otay River Valley Cleanup Project (Cleanup Work Project) currently encompasses the Western Otay Valley Regional Park (Nester Creek east to I-805) and Eastern Otay Valley Regional Park – Proctor Valley (North End Upper Otay Lakes Reservoir).

The Cleanup Work Project encompasses efforts by many organizations including the OVRP Citizens Advisory Committee coordinating the Donovan Prison Community Crew, California Conservation Corp (CCC) coordinated by the City of San Diego WOVRP Rangers, County of San Diego Otay Lakes Park Rangers (provided dump truck and driver), Friends of the Park (coordinates Proctor Valley Cleanup), Allied Waste (delivering and picking up of large waste bins), City of San Diego Environmental Services, City of Chula Vista Public Works, and Hanson Aggregates (provided heavy equipment as needed).

Park cleanup activities include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, and placing signage identifying the OVRP. Table 9-1 details the cleanup and abatement work at the OVRP from July 1, 2007 through June 30, 2008.

Table 9-1 Cleanup and Abatement Work at the OVRP

DONOVAN COMMUNITY CREW AND CAC MEMBERS	
Labor Hours	4,752
Trips to Otay Land Fill	122
Tons of trash removed	169

I Love a Clean San Diego (ILACSD) 6th Annual Creek To Bay Cleanup

The 6th Annual Creek to Bay Cleanup occurred on Saturday April 26th, 2008. The City co-sponsored this cleanup event, which was coordinated by ILACSD. This year's cleanup was presented by the San Diego County Board of Supervisors through the support of Supervisor Greg Cox and Supervisor Pam Slater-Price. The event was able to bring together over 4,000 San Diegans who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Total volunteer count for this event was 4,039 participants. Volunteers accumulated a total of 200,000 pounds of debris from 154 miles of coastline and inland areas. Commonly found items included tires and beverage containers.

The event featured multiple cleanup sites in Chula Vista and surrounding areas including Del Rey Canyon, Rice Canyon, J Street Marina, and Otay Valley Regional Park. At the Chula Vista locations, 167 volunteers removed 1,093 pounds of trash and 277 pounds of recyclables from 5.5 miles of Chula Vista parks and inland waterways.

Hazardous Waste and Used Oil Recycling

The Household Hazardous Waste Facility at the City of Chula Vista Public Works Center started operation in January 2002. The City provides its residents and neighboring municipalities easy access for disposal of HHW. The Chula Vista facility is open every Saturday from the hours of 9am to 1 pm and Wednesdays from 1pm to 3 pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under this program, HHW is collected by appointment from residents that are unable to physically take the waste to the permanent facility or because of scheduling conflicts. During the reporting period approximately 2,255 households participated in the collection program. The facility is under 24-hour camera surveillance to avoid illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill.

Public IC/ID Reporting and Graffiti Hotline

The City encourages its citizens to participate in keeping the City clean by reporting any illegal discharges to the storm drain, as well as any graffiti in their neighborhoods. When the City receives a graffiti complaint, City crews will remove it using environmentally friendly powerwashing equipment and BMPs. Storm Water Management Section staff investigates illegal discharges and provides education and enforcement, and Public Works crews provide cleanup as needed. As mentioned in Section 7, the City had 131 calls and complaints about

illegal discharges to the storm drain system during the reporting period. There were over 1,500 calls and emails (some for duplicate complaints) to the graffiti program during the reporting year, showing that citizens are participating and taking an active part in keeping the City clean.

10.0 FISCAL ANALYSIS COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.

Permit Section G: Fiscal Analysis

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

10.1 INTRODUCTION

The first half of the current reporting period corresponded with compliance under the NPDES Municipal Permit Order No. 2001-01, while during the second half; the Copermittees were regulated by Order No. R9-2007-0001. Pursuant to Order No. R9-2007-0001, the Copermittees are required to develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs. The standardized method and

format is due for submittal to the Regional Board by January 31, 2009. In the meantime, fiscal analysis and reporting will continue as in previous reports. The City has decided to include an analysis of watershed and regional shared expenditures and budgets in the current report in order to bring the fiscal analysis and reporting as close to the requirements of Order No. R9-2007-0001 as possible, while the regional standardized method and format is under development.

10.2 FISCAL-YEAR EXPENDITURES AND BUDGETS

The City's storm water program budget and expenditures consist of the following components:

- Staff
- Operating Budget (non-staff)
- Drainage Capital Improvement Projects

City staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Planning Department reviews development projects for environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Engineering Land Development Section is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Section staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Division manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the GIS systems, and provides support to the Storm Water Management Section by mapping the City's storm water conveyance systems and data management.

- The Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Division, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Division is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections that provide support to the Storm Water Management Section in the fulfillment of the City's JURMP. Although those department, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

The City's NPDES jurisdictional expenditures for FY 2007-2008 and budgeted figures for FY 2008-2009 are listed in Tables 10-1 and 10-2:

Table 10-1 Chula Vista NPDES Expenditures for FY 2007-2008

DESCRIPTION	EXPENDITURES (APPROXIMATE)
A. Staff	
1. Public Works Maintenance	$589,843
2. Storm Water Management	$462,071
Sub-Total	**$1,051,914**
B. Operating Expenditures (Non-Staff)	
1. NPDES Permit Fee	$22,368
2. Professional Services	
a) Consultant Fees for Dry Weather Field Screening Program	$52,600
b) Consultant Fees Related to Regional Activities (City Share of County-Wide Cooperative Wet Weather Monitoring Program, HMP, CASQA Fees, Public Education)	$183,471
c) Consultant Fees for JURMP Update	$45,000
3. NPDES Outreach (Jurisdictional)	$21,444
4. Miscellaneous	$4,279
5. Street Sweeping Program	$292,737
6. Storm Drain Maintenance Materials and Equipment	$134,887
Sub-Total	**$756,786**
C. C.I.P. Appropriations	
1. Telegraph Canyon Channel Design DR118	$14,872
2. Drainage Basin east of Second Avenue DR120	$85,354
3. Telegraph Canyon/Poggi Flow Metering DR131	$6,500
4. Emerson Street Drainage Improvements DR133	$2,442,763
5. F Street Drainage Facilities DR160	$13,500
6. CMP Storm Drain Pipe Rehab Program Phase 4 DR169	$483,844
7. Bonita Long Canyon Erosion Study DR172	$391
8. Fifth Ave. Drainage Improvements DR173	$358,464
Sub-Total	**$3,405,688**
Grand Total	**$5,214,388**

Table 10-2 Chula Vista Budget for FY 2008-2009

DESCRIPTION	BUDGET
A. Staff	
1. Public Works Maintenance	$995,962
2. Storm Water Management	$654,192
Sub-Total	**$1,650,154**
B. Operating Budget (Non-Staff)	
1. NPDES Permit Fee	$24,500
2. Professional Services	
a) Consultant Fees for Dry Weather Field Screening Program	$66,000
b) Consultant Fees Related to Storm Sampling (City Share of County-Wide Cooperative Wet Weather Monitoring Program)	$76,000
c) Hydromodification	$44,500
d) Source ID/ABLM Monitoring	$53,000
e) Flow Meter Maintenance	$3,000
3. Watershed Activities	$25,000
4. Watershed Education	$10,000
5. NPDES Outreach	$70,000
6. Miscellaneous	$18,950
7. Street Sweeping Program	$264,709
8. Storm Drain Maintenance Materials and Equipment	$277,301
Sub-Total	**$932,960**
C. C.I.P. Appropriations	
1. Broadway Basin Project D St. to C St. (drainage) STM354	$1,500,000
2. Telegraph Canyon Drainage Study 3/L DR167	$500,000
3. Bonita Long Canyon Erosion Study DR172	$100,000
Sub-Total	**$2,100,000**
Grand Total	**$4,683,114**

10.3 REGIONAL EXPENDITURES AND BUDGETS

The City participates in regional activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, the following costs were included in the regional expenditures and budgets:

- Regional Monitoring Program
- Regional Outreach Program
- Hydromodification Management Plan
- CASQA Fees

City's share of the above expenditures was $183,471 for FY 2007-2008, as indicated by Item B.2.b in Table 10-1 above. It should be noted that the above cost does not include staff time that was spent to attend regional management committee or workgroup meetings or participate in the development and implementation of regional programs and reports.

The approved regional budget for FY 2008-2009 is $3,341,472. Considering that $685,281 was carried over from FY 2007-2008, the Copermittees will be invoiced $2,656,191. City's share of the total budget will be $164,198. The regional budget for FY 2008-2009 includes the following costs:

- Working Body Support
- Regional Monitoring Program
- Regional Outreach
- Mobile Business Program
- Recommended Land Use Planning Approaches
- Hydromodification Management Plan
- CASQA Fees

10.4 WATERSHED EXPENDITURES AND BUDGETS

During FY 2007-2008, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions and, therefore, no cost sharing occurred at the watershed level. Based on the Municipal Permit requirements for watershed activities, the City has allocated $25,000 for watershed activities and $10,000 for watershed education in its FY 2008-2009 budget. These budgeted items are included as Items B.3 and B.4 in Table 10-2 above.

10.5 FUNDING

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, it is difficult to quantify the amount of revenue captured from developer deposits for storm water related issues on development projects. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6*[9] *to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the San Diego Municipal Storm Water Copermittees to the Regional Water Quality Control Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in this report.

The 2004-2005 reporting year was highlighted by the San Diego County Storm Water Copermittees development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD). This comprehensive assessment incorporated water quality and source data collected by all Copermittees to date, and provided a critical first look at regional water quality presented per watershed.

In 2007-2008, the City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City has endeavored in 2007-2008 to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

Notably, in 2007-2008, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the development of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

Further, in 2007-2008 the City continued its source inventory validation process. This effort has been detailed in Section 5.0 of this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization

- BMP Selection
- Targeted Outcomes
- Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics is included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation in 2007-2008. It is important to recognize that the whole of this document represents an account of program implementation in 2007-2008, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluate the overall effectiveness of the City's Storm Water Management Program.

11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2001 as updated in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this concept continues to be perpetuated. The City has sought to integrate these key elements in order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

Source Characterization

Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially complied in 2001, and are updated annually. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS

systems and comprehensive business license tracking. In recognizing that source characterization will need to be increasingly matched to identified water quality concerns and program results in the years to come, the City will seek to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Section 5.0 of this report, the City has continued to take further steps to fortify source characterization in 2007-2008. In 2006-2007 and continued in 2007-2008, the City conducted an extensive source verification utilizing the City's Permits Plus program to identify all active industrial and commercial facilities Citywide. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data will be utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

BMP Selection

In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by Permit Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs.

Targeted Outcomes

The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes be established prior to program implementation to accurately provide measurability and accountability. Included within the regional long-term assessment framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

Figure 11-1 Hierarchy of Targeted Outcomes

Assessment Measures and Indicators

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period (2007-2008) has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes to water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional level.

11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the water quality of discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success of failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for agencies to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)

- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2004-2005, and will be addressed for the current permit cycle in the next ROWD. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The Chart on Page 11-8, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. A summary of this analysis with the latest available data (2007) is presented below:

11.3.2 PROGRAM ASSESSMENT

In 2007-2008, the City has sought to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2007-2008 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment.

Notably, the discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City based on various components of the Municipal Permit (Tables 11-1 – 11-6). In the following sections, these tables and their associated analyses are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation reflect the various activities prescribed under the Municipal Permit and provide a summary accounting of activities conducted by the City in 2007-2008.

11.3.2.1.1 LAND USE PLANNING

Due to the significant amount of growth that the City has experienced in recent years, the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. Based upon the significant achievements and refinements experienced in 2007-2008, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

Table 11-1 FY 2007-2008 Compliance with Activity-Based Requirements – Land Use Planning

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.1.e Land Use Planning	Development Projects	# Projects Needing SUSMP	# Projects Subjected to SUSMP	Actual/Target	%
		5	5	5/5	100
	High Priority Sites (Total Listed = 20)	# Sites Targeted for Inspection	# Sites inspected	Actual/Target	%
		20	20	20/20	100
	Medium Priority Sites (Total Listed = 45)	23	36	36/23	156
	Low Priority Sites (Total Listed = 194)	As Needed	58	As Shown	100

Jurisdictional Urban Runoff Management Program strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2007-2008

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

Development Storm Water Manual

The Manual, which was adopted by the City in February of 2008, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, including the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by

City staff, developers and consultants. The Manual supersedes a similar document titled "Development and Redevelopment Projects Storm Water Management Standards Requirements Manual," which was adopted in November of 2002.

Inter-Departmental Coordination

The City's SUSMP and development review process includes multiple entities throughout the City. As the City has been characterized by significant growth in recent years, the City has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Further, as the City continues to grow, albeit at a much slower rate than before, such coordination has continued in 2007-2008 to require refinement and augmentation as necessary to maintain compliance and ultimately improve water quality.

Dedicated Storm Water Management Section

The City Engineering and General Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to staff as well as project proponents. Storm Water Compliance Inspectors and Environmental Health Specialists also perform the function of post-construction BMP verification.

Information System Support

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. In addition to the GIS, Permits Plus, which is a specialized permits tracking software is utilized in tracking a variety of discretionary permits, and specifically is utilized by the Engineering and General Services Department to identify high priority SUSMP projects. Notably in 2007-2008, the GIS layer is being continuously updated to manage and provide easy access to project specific WQTRs and grading plans.

It should be noted that while no ineffective BMPs or management measures have been identified within this reporting period, the City recognizes the importance of an adaptive approach to various programmatic elements. As such, the following program areas have been identified for further development or augmentation in order to support overall program effectiveness:

Data Management

As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. It is noteworthy that such challenges have been addressed in 2007-2008 through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. For these reasons, during this reporting period, the Storm Water Management Section added an Engineering Technician to the team. The Engineering Technician is mainly responsible for developing databases and maintaining such databases for information related to the City's JURMP activities.

New Development and Redevelopment Project Design Elements
With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City is working with the development community to improve the design of proposed projects. While this focus has been stressed by the City in 2007-2008 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects, a more universal change in project design approach is necessary. It is anticipated that the City will continue to work with other Copermittees to evaluate the standardization of various BMP types in the future and through the SUSMP update processes required under the Municipal Permit.

11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2007-2008. Further, as construction activities continue, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

Table 11-2 FY 2007-2008 Compliance with Activity-Based Requirements – Construction

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.2.d Construction	High Priority Sites (Total Listed = 71)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		71	71	71/71	100
	Medium Priority Sites (Total Listed = 25)	25	25	25/25	100
	Low Priority Sites (Total Listed = 7)	7	7	7/7	100
	All Sites (Total Listed = 103)	Total sites identified	# in compliance or on a schedule for compliance	Actual/Target	%
		103	103	103/103	100
		# of inspections during dry season	# of inspections during wet season	Total # of inspections	N/A
		122	426	548	N/A

The following features distinguish the construction component of the City's JURMP:

Inspection and Enforcement
As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensure compliance with this JURMP component on construction sites. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

Education and Training
Storm water inspection staff invites and readily provides education and training to all entities related to construction activities including developers, site superintendents, and trades persons. This education and training capacity is further defined by ongoing storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, the Chula Vista storm water and public works inspection staff offers a strong asset and broad-based expertise in construction storm water management both locally and regionally.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2007-2008. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

BMP Maintenance
During the reporting period, BMP maintenance at construction sites continued to be an area of concern in construction activities. While inspection staff has noted appreciable efforts in BMP implementation, the maintenance needs associated with implemented BMP must be addressed on a consistent basis.

11.3.2.1.3 MUNICIPAL

As exemplified in the program descriptions included in other section of this report, the City prides itself on outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City functions such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. With such a well-rounded approach, the City has not identified any significant management measures with which to augment municipal program activities in 2007-2008. Further, no BMPs have been identified as ineffective within the reporting period of this report.

Table 11-3 FY 2007-2008 Compliance with Activity-Based Requirements - Municipal

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.a Municipal	High Priority Sites (Total Listed = 62)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		62	62	62/62	100
	Medium Priority Sites (Total Listed = 6)	As needed	As needed	As shown	100
	Low Priority Sites (Total Listed = 12)	As needed	As needed	As shown	100
	MS4	Estimated quantity of material targeted for removal from MS4 (Tons)	Quantity of material removed from MS4 (Tons)	Actual/Target	%
		442	442	442/442	100
	Streets/Parking Lots	Estimated distance of curb miles to be cleaned	Total curb miles cleaned	Actual/Target	%
		18,412	18,412	18,412/18,412	100
	Catch Basins/ Inlets	# of catch basins and inlets targeted to be inspected	# of catch basins and inlets inspected	Actual/Target	%
		7,908	7,908	7,908/7,908	100
		# of catch basins and inlets targeted to be cleaned	# of catch basins and inlets cleaned	Actual/Target	%
		3,601	3,601	3,601/3,601	100

The following features distinguish the Municipal component of the City's JURMP:

Municipal Facility Inspections

The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2007-2008, and as part of this comprehensive inspection process, storm water inspection staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

Environmental Programs
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have capitalized upon in 2007-2008 through the development of a broad-based outreach and educational campaign by the City. The details of this program are discussed further in Section 7 of this report.

Based on exemplary Municipal Pollution Prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for improvement at this time.

11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2007-2008 reporting year was primarily a maintenance year in terms of industrial and commercial activities within the City, highlighted by a significant source inventory validation and supplemental inspection efforts. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous facilities located within the City limits. With such a significant commercial and industrial community in the City, staff has recognized the need to target those areas and those business activities that remain high on the source priority list and to provide a consistent presence and strong enforcement standard.

The City's inventory of industrial/commercial facilities includes 204 industrial and 1164 commercial facilities (including 353 mobile businesses). In 2007-2008, Storm Water Management Staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

Table 11-4 FY2007-2008 Compliance with Activity-Based Requirements - Industrial/Commercial

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.b Industrial	High Priority Sites (Total Listed = 54)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		27	48	48/27	177
	Medium Priority Sites (Total Listed = 0)	As needed	As needed	N/A	N/A
	Low Priority Sites (Total Listed = 150)	As needed	31	N/A	N/A

		# Sites targeted for inspection	# Sites inspected	Actual/Target	%
D.3.c Commercial	High Priority Sites (Total Listed = 191)	96	97	97/96	101
	Medium Priority Sites (Total Listed = 0)	As needed	As needed	As shown	100
	Low Priority Sites (Total Listed = 973)	27	27	27/27	100

The following features distinguish the industrial/commercial component of the City's JURMP:

Integrated and Balanced Approach
With a dedicated Storm Water Compliance Inspector on staff, industrial and commercial facilities are effectively regulated in the City. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme in the City.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City defines the residential component of the City's JURMP. As such, the Storm Water Management staff has sought to achieve success in the reduction of pollutants through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types resulting from such activities. As such, the Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality in the future.

Table 11-5 FY 2007-2008 Compliance with Activity-Based Requirements – Residential

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.e Residential	Household Hazardous Material	Quantity of waste targeted for collections (lbs)	Quantity of waste collected (lbs)	Increase/Decrease	%
		254,583 (FY 06-07 data)	220,008 (FY 07-08)	34,575 Decrease	13.5% Decrease
	Used Oil	Quantity of used oil collected (Gallons FY 06-07)	Quantity of used oil collected (Gallons FY 07-08)	Increase/Decrease	%
		57,393.5	134,314.7	76,921.2 Increase	134% Increase

Residential Program Strengths:

Pollution Prevention
The City's residential component is strengthened by the various pollution prevention programs offered to residents. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, green waste, recyclables, used cooking oil, household hazardous materials, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

Residential Outreach and Education
The City has focused significant resources on residential outreach and education efforts in 2007-2008. While these activities are more fully described in Section 7.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

Residential Program Improvement Areas and Challenges:

Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to

local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts with such City entities as the Chula Vista Nature Center, the Conservation Department, the Regional Used Oil Recycling Program, and Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

Within the reporting period of this report, the City has not identified specific management measures by which to improve education and public participation activities. However, the City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

Education and Public Participation Program Strengths:

Environmental Program Collaboration

As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous environmental programs within the City. As such, the Storm Water Management Program has been able to reach a diverse audience as well as participate in a variety of public participation venues. Reporting Year 2007-2008 marks a more fully developed collaboration of programs culminated through the CLEAN program, and has resulted in clear and consistent messaging to the Chula Vista community.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. The connection of such programs including conservation activities, household hazardous waste collection, recycling programs, and storm water management is most effectively approached mutually. It has been recognized that the interrelationship of each of these programs collectively, is integral to the overall success of each of these programs individually. Finally, the City is fortunate to have the Chula Vista Nature Center to showcase the San Diego Bay and to provide tangible access to the resources the community is called to protect.

Internal Staff Training

Through formal or informal training, meetings or individual contact staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

Chula Vista CLEAN Program

Within the reporting period of this report, the City has taken significant steps to further develop an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been

built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment to water quality and watershed protection.

Education and Public Participation Program Improvement Areas and Challenges:

Education of the Development Community

During previous years, the development community had shown the most resistance to changing storm water requirements. However, during this reporting period the development community has shown improvement to change in terms of project design, high efficiency treatment control BMPs, and site design BMP implementation. This is in part due to the City's strong steps to ensure the effective design and utilization of appropriate construction and post-construction BMPs. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

Table 11-6 Compliance with Activity-Based Requirements – Education and Public Participation

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.g Education	Outreach (External)	# targeted training workshops, outreach events	# training workshops, outreach events conducted	Actual/Target	%
		14	14	14/14	100
		# Material, brochures targeted for distribution	# Materials, brochures distributed	Actual/Target	%
		General public contact	General public contact	N/A	N/A
	Staff Training	# Material, brochures targeted for distribution	# Materials, brochures distributed	Actual/Target	%
		14	14	14/14	100
	Opportunities for participation	Estimated # of opportunity events to be provided	# provided	Actual/Target	%
		6	6	6/6	100

11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program all support this critical programmatic element. The City provides a wide cross-section of information through the interrelationship of various environmental programs. In 2007-2008, the City has been able to significantly impact the level of knowledge and awareness within the community by influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Complaint Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years as these indicators become more wholly developed; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

Complaint Response Tracking

A comprehensive complaint response summary is presented in Attachment I – Complaint Response Summary. It is important to note that trends in complaints received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of complaints from FY 1997-1998 to FY 2007-2008. With slight fluctuations in numbers, it is difficult to draw any strong conclusions, however, it may be inferred that overall programmatic influences are strong throughout the community.

Figure 11-2 Chula Vista Storm Water Complaint Summary 1997-2008

Business License Application Screening Procedure
The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants, Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

Storm Water Web Site
The City's CLEAN website development and update continued into 2007-2008. While this site offers valuable information to a number of sectors, it is anticipated that this site will provide invaluable data to support predicted access to the site. Web statistics indicate that the community has visited the site on a regular basis. It is anticipated that through the incorporation of the web site into the larger CLEAN media campaign, the web site will continue to provide valuable resources to the Storm Water Management Program and provide data to support long-term effectiveness assessment.

Development Review Process
Through the required submission of Water Quality Technical Reports (WQTR) and the subsequent review by City staff, there has been a notable increase in knowledge and awareness within the development community in 2007-2008. A level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with Standard Urban Storm Water Management Plan (SUSMP) requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, and will continue to take this approach in subsequent reporting years.

11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

In 2007-2008, the City continued to implement BMP tracking measures into various components as reviewed in this report. Further, it has been recognized that through the implementation of well-developed BMP tracking measures, the City will be able to more fully evaluate BMP implementation and associated behavioral change. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation

Inspection Activities
As discussed in applicable sections of this report, the City has developed a comprehensive commercial, industrial, municipal, and construction inspection program. It is through these well-

developed inspection programs, that the City is able to utilize BMP implementation tracking mechanisms.

In support of BMP selection and evaluation throughout various community sectors, in 2005-2006 the City developed new inspection forms to document BMP implementation. These forms were used for inspection during 2007-2008. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities, are intended to provide a more fully developed BMP implementation tracking mechanism. Based upon data gathered from such activities, it is anticipated that the City will be able to take a more critical look at BMP selection and implementation Citywide, and further validate effectiveness trends in years to come.

SUSMP Implementation

Within the development community, implementation of post-construction phase BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction phase BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-1 are focused on municipal functions and programs:

Table 11-1 Load Reduction

ACTIVITY/FUNCTION	LOAD REDUCTION	POLLUTANT TYPE
Used Oil Recycling	134,314 Gallons	Motor Oil
Household Hazardous Waste Collection	220,008 Pounds	Antifreeze, Oils, Paints
MS4 Maintenance	11.93 Tons	Trash, Debris, Leaves, Grass, Rock, Silt
MS4 Inlets	19.69 Tons	Trash, Debris, Leaves, Grass
MS4 Catch Basins	9.92 Tons	Trash, Debris
Channel Maintenance	400.78 Tons	Trash, Debris
Street Sweeping	584.1 Tons	Trash, Debris, Sediment

11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators are the only persistent constituent of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program
- A comprehensive storm water conveyance system maintenance
- Street sweeping
- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that while Total Coliform and Enterococci are on an upward trend, Fecal Coliform exceedance has sharply declined during the past five years. These results can be interpreted as follows:

The City has expanded significantly during the past few years. As a result of new development, increased population, and creation of additional impervious areas, it is expected that bacterial contamination should increase. However, the implementation of BMPs as listed above, has resulted in decease in fecal coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout a long period of time. It is expected that the next regional ROWD will include a more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

12.0 SPECIAL INVESTIGATIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.

During this reporting period, the City did not encounter a situation where conducting Special Investigations was necessary.

13.0 NON-EMERGENCY FIRE FIGHTING

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.

13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods will be used to reduce the discharge of pollutants to the MEP. BMPs will be implemented when conducting the activities described in the following sections:

13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff will be directed either to the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment are cleaned where runoff will pond and evaporate and/or where runoff will filter through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

13.2.3 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When flowing water to an area where landscaping does not prevent runoff, the area selected is surveyed by the Officer-in-Charge prior to training activities to ensure that debris does not enter into the MS4 as a result of the drill.
- Areas with debris that could potentially enter the MS4 as a result of the drill activities are not used for training until the debris has been removed.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.

13.2.4 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and disposal of spilled material are in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site employees are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

13.2.5 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods can not be identified. In such cases, water usage and discharges to MS4s are kept to a minimum.

13.2.6 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory. Such facilities are inspected on an as needed basis. See Attachment C. Only one fire station; Fire Station No. 4/Training Tower, has training capabilities. The property is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter

- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism which diverts the wash water to the sanitary sewer system.

All employees that conduct washing are properly trained on using the diverter device and ensuring it is used appropriately. Similar to fueling activities, trucks from other stations that require cleaning are brought to the stations equipped with washing capabilities. In addition to the BMPs for washing activities discharges, which are not allowed to enter the storm water conveyance system, these facilities are equipped with treatment control BMPs for storm water discharges.

14.0 JURMP REVISIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(m).i A description of any proposed revisions to the JURMP.

Pursuant to the Municipal Permit, the City's JURMP was updated in March 2008. A copy of the City's updated JURMP was submitted to the RWQCB. Since the JURMP is a living document, it is continuously updated throughout the year. An account of the proposed updates will be included in the next JURMP Annual report, which is due for submittal to the RWQCB in September 2009.

15.0 CONCLUSIONS AND RECOMMENDATIONS

On January 24, 2007, the San Diego Regional Water Quality Control Board adopted the National Pollutant Discharge Elimination System Municipal Permit, Order No. R9-2007-0001. The new permit includes more prescriptive requirements than Permit Order No. 2001-01. Pursuant to the requirements of the new Municipal Permit, the City of Chula Vista updated its ordinances; permit processes; Standard Urban Storm Water Mitigation Plan (SUSMP), and Jurisdictional Urban Runoff Management Program (JURMP) document. This report, therefore, includes an account of the City's implementation of the old and new permits during fiscal year 2007-2008 (July 1, 2007 to June 30, 2008).

Well-developed program implementation and management in the City have defined the 2007-2008 reporting year. As reflected throughout this report, the City's Storm Water Management Program has matured and successfully met all programmatic goals set out for the defined reporting period, and has experienced overall success as reflected in the effectiveness assessment conducted in this report. It is vital to direct implementation and management strategies down a targeted, effective, and efficient path as to create a set of interrelated actions and to promote long-term effectiveness. The City recognizes the need to be steadfast and pragmatic toward programmatic development in order to foster long-term success achieved through water quality improvements.

The whole of the preceding document presents a comprehensive implementation narrative and accounting of results in 2007-2008. Further, a detailed effectiveness assessment exercise has supported an overall evaluation of programmatic elements. Taken collectively, the City has identified a variety of strengths and perceived some challenges that will impact program development and implementation in the years to come.

As a result of the re-issuance of the Municipal Permit, major programmatic updates and changes were introduced to the City's Storm Water Management Program. Such updates included data collection and management strategies, implementation approaches, and program planning with the goal of effective support of long-term methodologies on jurisdictional, watershed, and regional basis. It is expected that the programmatic updates to the Storm Water Management Program will result in the support of a seasoned approach to program implementation in future reporting years.

The City's Storm Water Management Program is served well through continued evolution and implementation of the CLEAN program introduced and detailed throughout this report. The City's integrated approach to public outreach and education is unique, and an approach that the City feels is well received by its diverse community with diverse environmental resources and interests. While many CLEAN concepts have come to fruition in 2007-2008, this program continues to grow in the coming years through ongoing efforts and commitment from the City of Chula Vista and its partners.

In subsequent reporting years, the City will continue to maintain a high standard of compliance with permit requirements through program planning and implementation and seek to continually evaluate and augment program elements as deemed necessary. Further, the City will seek to

more fully integrate watershed based programmatic planning and development to foster a more well rounded approach to program implementation and to support long-term effectiveness assessment at local, watershed, and regional levels.

FY 2007-2008 Inspection Action Summary

Treatment Control BMP Inspections

Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
5-Feb-08	Eastlake Parkway Professional Pla	MP-52 Drain Insert TC-30 Vegetated Swale	Commercial	High	Eastlake	Eastlake Professional	IRE Development
	Comments/Findings:	Conducted verification of installation of Post Construction BMPS. Filter inserts are not installed at all inlets as per WQTR. See attached documents.					
5-Feb-08	Eastlake Design District	TC-30 Vegetated Swale MP-52 Drain Inlet	Commercial	Low	Eastlake	Eastlake Design District	IRE Development
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Consruction BMPS. Recommend cleaning of filter inserts. See attached documents.					
5-Feb-08	Otay Lakes Medical Office	MP-52 Drain Insert	Commercial	High	Eastlake	Otay Lakes Medical	Otay Lakes Med. Condo Dev. LLC
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Recommend filter inserts cleaning and boom replacement. See attached documents.					
5-Feb-08	Fenton Business Center	MP-52 Drain Insert	Commercial	High	Eastlake	Fenton Business Center	Seymour/Lewis Development LTD
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMP as per plans, and site WQTR. * Recommend to clean filter inserts.					
5-Feb-08	Kohls Store -Eastlake Village East	MP-52 Drain Insert	Commercial	High	Eastlake	Eastlake Village East -Kohls	Kohls Department Store Inc.
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Eastside filter is growing vegetation.					
5-Feb-08	Eastlake Business Center-Hale Pl	MP-52 Drain Insert	Commercial	High	Eastlake	Business Center @ Harold	Tycoon Management
	Comments/Findings:	Conducted verification of installation of Post Construction BMPs. Filter inserts are not installed at all inlets per WQTR. See attached documents.					
5-Feb-08	Eastlake Village Center East	MP-52 Drain Insert	Commercial	Medium	Eastlake Village	Eastlake Village Center East	Gatlin Development Co.
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs.					
7-Feb-08	The Collections	MP-52 Drain Insert	Commercial	High	Eastlake	The Collections	Mar West Real Estate
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Recommend to clean filter inserts.					

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
13-Feb-08	Auto Park North	MP-52 Drain Insert	Commercial	High			Knowlton Realty Advisors, LLC
	Comments/Findings:	Conducted verification of installation of Post Construction BMPs. Filter inserts are not installed at all inlets. See attached documents.					
13-Feb-08	ADA Villas 1	MP-52 Drain Insert	Condo	Medium			
	Comments/Findings:	BMP items need to be implemented. **See attached document**					
28-Feb-08	Brisas Del Mar Village	MP-52 Drain Insert	Commercial/Mixed	Medium			McCormack Ragan
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Construction BMPs. Recommend filter inserts cleaning and replacement of filter media. Please see attached documents.					
28-Feb-08	Southbay Motorsports	MP-52 Drain Insert	Commercial	High			SB Land, LLC
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the post construction BMP. Recommend to clean filter inserts.					
28-Feb-08	Payless Auto Sales	MP-52 Drain Insert	Commercial	High			L-20 LLC c/o Floit Properties
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Construction BMPs. Recommend filter inserts cleaning. See attached documents.					
28-Feb-08	McCune Chrysler Dodge	MP-52 Drain Insert	Commercial	High			McCune Chrysler Jeep Dodge
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Recommend filter inserts cleaning. See attached documents.					
28-Feb-08	J&W Redwood	TC-11 Infiltration Basin	Commercial	Medium			J&W Redwood
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Basin needs minor maintenance. See attached documents.					
28-Feb-08	C.V. Commerce Center		Commercial	Medium			MarWest Real Estate
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. CDS unit needs cleaning. See attached documents.					
3-Mar-08	Chula Vista Crossings	TC-32 Bioretention MP-52 Drain Inlet	Commercial	Medium			NewMark Merrill
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Filter inserts require cleaning and repair. Inlets are covered with vegetation and mulch. See attached documents.					

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
4-Mar-08	Chula Vista Toyota-Main Street	MP-52 Drain Insert	Commercial	High			Sunroad Enterprises
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Construction BMPs. Filter inserts need cleaning. See attached documents.					
4-Mar-08	Eastlake Commerce- Business Ce	MP-52 Drain Insert TC-30 Vegetated Swale	Commercial	High	Eastlake	Eastlake Commerce	IRE Development
	Comments/Findings:	Conducted verification of installation of Post Construction BMPS. Filter inserts are not installed at all inlets per WQTR. See attached documents.					
4-Mar-08	Chevron Station-Olympic Parkway	MP-52 Drain Insert	Commercial	Medium			Chevron Station Inc.
	Comments/Findings:	Conducted verification on installation and maintenance of Post Construction BMPs. Filter inserts are not installed per WQTR.					
4-Mar-08	Sedona	MP-52 Drain Insert	Condo	Medium	Rolling Hills Ranch	Sedona	RH Community Asso. C/O**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Filter inserts need maintenance. See attached documents.					
4-Mar-08	Mar Brisa	MP-52 Drain Insert	Condo	Medium	Rolling Hills Ranch	Mar Bristas	Mar Brisa-C/O Prescott Co.
	Comments/Findings:	Conducted verification of installation and maintenance of Post Construction BMPs. Filter inserts are missing filter baskets and were improperly installed.					
6-Mar-08	The Shops at San Miguel Ranch	MP-51 Vortex Separator	Commercial	Low	San Miguel Ranch	The Shops at San Miguel Ranch	McMillin, San Miguel Ranch LLC
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Construction BMPs.Unable to remove the 36" manhole cover of the hydrodynamic separator to verify maintenance.					
7-Mar-08	Venture Commerce Center	MP-51 Vortex Separator MP-52 Drain Inlet	Commercial	Low	Eastlake	Venture Commerce Center	Heritage Real Estate Advisors
	Comments/Findings:	Conducted verification on the installation, cleaning, and maintenance of the Post BMPs. Unable to locate manhole cover of the hydrodynamic separator. See attached documents.					
11-Mar-08	C.V. Corporate Center	MP-52 Drain Insert	Commercial	High			Mar West Real Estate
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Control BMPS. Filter inserts need cleaning and maintenance. See attached documents.					
11-Mar-08	Walgreens @ Third Avenue	MP-52 Drain Insert	Commercial	High			Walvista, LLC
	Comments/Findings:	Conducted verificaiton on the cleaning and maintenance of the Post Construction BMPs. Filter inserts need cleaning. See attached documents.					

Inspection Date	Project Name	Type of BMP Installed		Category	Priority	Development	Neighborhood	Responsible Party
11-Mar-08	Bonita Library	MP-52 Drain Insert	TC-32 Bioretention	Municipal/County	High			Bonita-Sunnyside Branch Librar
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construcion BMP. Recommend filter inserts cleaning. See attached documents						
11-Mar-08	Walmart at 5305 Broadway	MP-51 Vortex Separator	MP-52 Drain Inlet	Commercial	Low			WAL-MART Stores Inc.
	Comments/Findings:	Conducted verificaiton on the installation of Post Construction BMPs. Filter inserts are not installed. See attached documents.						
11-Mar-08	Pharus Plaza	MP-51 Vortex Separator		Commercial	Low			Pharus Development LLC
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. CDS units need cleaning. See attached documents.						
11-Mar-08	Rancho Rios Condo	MP-52 Drain Insert		Condo Conversion	Medium			Rancho Coastal, LLC; C/O**
	Comments/Findings:	Conducted verification of the installation of Post Construction BMPS. There are missing filter inserts per WQTR. See attached documents.						
11-Mar-08	2380 Main Street	MP-52 Drain Insert		Residential	Low			Chula Vista Main, LLC**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Constructin BMPs. Filter inserts need cleaning. See attached documents.						
12-Mar-08	Aqua Clean	MP-52 Drain Insert		Commercial	Medium			Aqua Clean C/O Lou Brito
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Filter inserts need cleaning. See attached documents.						
12-Mar-08	Otay Ranch Town Center	MP-51 Vortex Separator		Commercial	Low	Otay Ranch	Otay Ranch Town Center	GCP-Otay Ranch LP
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Vortech units need cleaning. See attached documents.						
12-Mar-08	COSTCO at Broadway	MP-51 Vortex Separator		Commercial	Low			COSTCO Wholesale Corp.
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Vortech units need cleaning. See attached documents.						
14-Mar-08	Savon-CVS Pharmacy @ Fourth A	MP-52 Drain Insert		Commercial	High			CAM Commercial Properties
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Filter inserts need cleaning and maintenance.						

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
17-Mar-08	LA Fitness Eastlake Village Cente	MP-51 Vortex Separator MP-52 Drain Inlet	Commercial	Low	Eastlake Village Center	Eastlake Village West	EL Vill. Center Comm. Assc.**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Vortex unit needs maintenance and filter inserts need cleaning.					
17-Mar-08	Eastlake Terraces North	TC-30 Vegetated Swale MP-52 Drain Inlet	Commercial	Low	Eastlake	Eastlake Terraces North	Mar West Real Estate
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs.					
25-Mar-08	Home Depot Eastlake	MP-52 Drain Insert TC-50 Water Quality Inlet	Commercial	High	Eastlake	Home Depot	Home Depot USA, Inc.
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Filter inserts need cleaning.See attached documents.					
25-Mar-08	Eastlake Terrace-Walmart	MP-52 Drain Insert	Commercial	High	Eastlake	Walmart Eastlake Terraces	Wal-Mart Stores Inc.
	Comments/Findings:	Conducted verification of the cleaning and maintenance of the Post Construction BMPs. Filter inserts were observed to have trash and debris.					
25-Mar-08	Eastlake Terrace-Landswap	MP-52 Drain Insert	Commercial	High	Eastlake Terraces	Eastlake Landswap	Eastlake Holding, LP
	Comments/Findings:	Conducted verification on the installation, cleaning, and maintenance of the Post Construction BMPs.					
18-Apr-08	Eastlake Parkway 1- Kerstel to Hu	MP-52 Drain Insert	Commercial/Mixed	Medium	Eastlake	Kerstel Falls to Hunte Pkway	Brookefield Shea Otay, LLC
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Control BMPs. Filter inserts were observed to have trash and debris. **See attachment**

	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Units had minor trash and sediment accumulation.					
24-Apr-08	R-30A, Goldrush, Otay Ranch, V-5	MP-51 Vortex Separator	Residential	Low	Otay Ranch Village 5	R-30A/Goldrush	Otay Ranch 3, HOA**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Const. BMPs. CDS units were observed to have trash and debris.**See attached documents.					
24-Apr-08	R-30B, Winchester, Otay Ranch, V	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-5	R-30B/Winchester	Otay Ranch 3, HOA**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Const. BMPs. CDS units were observed to have debris and trash. ** See attached documents.					
24-Apr-08	R-30B, Stetson, Otay Ranch, V-5	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-5	R-30B2/Stetson	Otay Ranch 3, HOA **
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Cosnt. BMPs. CDS units were observed to have debris and trash. ** See attached documents.					
24-Apr-08	R-30B,Siver Sage, Otay Ranch, V	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-5	R-30B3/Siver Sage	Otay Ranch 3, HOA**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Const. BMPs. CDS units were observed to have debris and trash. **See attached documents.					
24-Apr-08	Villagio - Otay Ranch V5	MP-51 Vortex Separator	Commercial/Mixed	Low	Otay Ranch	Villagio	Villagio @ Lomas Verdes HOA
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construciton BMPs. CDS units appear to have trash and debris in the containment area.					
24-Apr-08	Doctor's Park	TC-30 Vegetated Swale	Commercial	Low	Eastlake	Doctor's Park	Otay Lakes Partners, LLC
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. All filter inserts were recently installed and were found clean. Vegetated swale was well established.					
24-Apr-08	R-23 / Azalea-Otay Ranch, V-11	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-11	R-23/Azatea	Windingwalk Association
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. CDS units were observed to have trash and debris.**See attachments**					

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
24-Apr-08	Rancho Vista Apartments	MP-51 Vortex Separator	Residential	Low	Eastlake Greens	Rancho Vista Apartments	CIC Eastlake, LP
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Const. BMPs. Could not access the CDS units. Cannot open manhole cover. **See attached documents.					
30-Apr-08	R-7/Belleme Chateau	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-6 ORC	R-7/Belleme Chateau	Hillsborough @ Otay HOA**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post BMPs. CDS units need cleaning.**See attached documents.					
30-Apr-08	R-8/Mir Soliel	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-6 ORC	R-8/Mir Soliel	Hillsborough @ Otay HOA**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. CDS units need cleaning.					
30-Apr-08	R-9B / Monet, Otay Ranch, V-6	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-6 ORC	R-9B/Monet	Pacific Coast Communities
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Control BMPs. Vortex unit appeared to have been maintained. **See attachment**					
30-Apr-08	Bella Sol	MP-51 Vortex Separator	Condo	Low	Sunbow	Bella Sol	Tyco Property Management Co.
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. CDS units were observed to have debris and trash in the containment areas.**See attached documents**					
5-May-08	R-10/Treviana, Otay Ranch, V-6	MP-52 Drain Insert	Residential	Medium	Otay Ranch V-6	R-10/Treviana	Treviana @ Lomas Verdes
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. Filter inserts are not installed on all inlets as per WQTR.					
8-May-08	Belleza - Neighborhood B	MP-51 Vortex Separator	Residential	Low	San Miguel Ranch	Belleza	Belleza @ SMR c/o**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. CDS units were observed to have debris and trash in the containment areas. **See attachment**					
9-May-08	Mantilla- Lot 5-Neighborhood C	MP-52 Drain Insert	Residential	Medium	San Miguel Ranch	Mantilla-Neighborhood C	San Miguel Ranch HOA
	Comments/Findings:	Conducted verification on the installation of Post Control BMPs. Filter inserts were not installed as per WQTR.**See attachment**					
13-May-08	Ventana I - Planning Area F	MP-52 Drain Insert	Residential	Medium	San Miguel Ranch	Ventana I	Trimark Pacific Homes
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post Control BMPs. Filter inserts are not installed in all inlets as per plan.					

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
13-May-08	Ventana II - Planning Area G	MP-52 Drain Insert	Residential	Medium	San Miguel Ranch	Ventana II	Trimark Homes
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post BMPs. Filter inserts were not installed in all inlets as per plan. **see attachment**					
13-May-08	Altamira II - Area E2	MP-52 Drain Insert	Residential	Medium	San Miguel Ranch	Altamira II	Buie Communities
	Comments/Findings:	Conducted verification on the cleaning and maintenance of Post BMPs. Filter inserts were not installed in all inlets as per plan. **see attachment**					
13-May-08	Seniors at Broadway	MP-52 Drain Insert	Residential	Medium			MAAC Project Community Develop
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Control BMPs. Filter inserts were missing at 4 of the 6 locations.**see attachment**					
13-May-08	Eastlake Marketplace	MP-51 Vortex Separator	Commercial	Low	Eastlake	Eastlake Marketplace	Eastlake Marketplace c/o**
	Comments/Findings:	Conducted verificaiton on the cleaning and maintenance of the Post Control BMPs. Units were observed to have trash and debris. **see attachment**					
14-May-08	Eastlake - Village Walk	TC-30 Vegetated Swale MP-51 Vortex Separator	Commercial	Low	Eastlake	Village Walk	Subberry Properties, Inc.
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment**					
14-May-08	Salt Creek Park	MP-51 Vortex Separator	Municipal	Low	Eastlake		City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. CDS units need maintenance. **see attachment**					
19-May-08	Windingwalk Park	TC-30 Vegetated Swale	Municipal	Low	Otay Ranch Village-11	Windingwalk Neighborhood	City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. All treatment facilities were properly maintained and requires no maintenance at this time. **see attachment**					
19-May-08	Montevalle Park	MP-52 Drain Insert	Municipal	Medium	Eastlake Woods		City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Two filter inserts were are missing and others need cleaning. Bid from Bio-Clean to install missing filters is attached.. **see attachment**					
23-May-08	Otay Ranch V1 West - R59C & R6	MP-52 Drain Insert	Residential	Low	Otay Ranch V1 West	R59C & R60	Otay Ranch Three HOA c/o**
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs.Filter inserts are not installed at all inserts as per site plan. **see attachment**					

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
26-May-08	Walmart at 5305 Broadway	MP-51 Vortex Separator MP-52 Drain Inlet	Commercial	Low			WAL-MART Stores Inc.
	Comments/Findings:	Extended installation date					
2-Jun-08	J&W Redwood	TC-11 Infiltration Basin	Commercial	Medium			J&W Redwood
	Comments/Findings:	Received maintenance verification package. **see attachment**					
2-Jun-08	R-9B / Monet, Otay Ranch, V-6	MP-51 Vortex Separator	Residential	Low	Otay Ranch V-6 ORC	R-9B/Monet	Pacific Coast Communities
	Comments/Findings:	Received Maintenance Verification Package 5/30/08 **see attachment**					
3-Jun-08	Eastlake Terrace-Walmart	MP-52 Drain Insert	Commercial	High	Eastlake	Walmart Eastlake Terraces	Wal-Mart Stores Inc.
	Comments/Findings:	Received verification package - Copy and forward next years inspection to Front Range Environmental **see attachment*					
3-Jun-08	Chevron Station-Olympic Parkway	MP-52 Drain Insert	Commercial	Medium			Chevron Station Inc.
	Comments/Findings:	Received verification package - Print quality of document is poor. Added text verification and approved by inspector - see file.					
3-Jun-08	2380 Main Street	MP-52 Drain Insert	Residential	Low			Chula Vista Main, LLC**
	Comments/Findings:	Received Verification Package **see attachment**					
6-Jun-08	Chula Vista Crossings	TC-32 Bioretention MP-52 Drain Inlet	Commercial	Medium			NewMark Merrill
	Comments/Findings:	Received verification package. **see attachment**					
9-Jun-08	Dixon Drive	MP-52 Drain Insert	Municipal/CIP	Medium			City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment** Forwarded to Storm Water Maintenance section for action.					
9-Jun-08	Tobias Drive	MP-52 Drain Insert	Municipal/CIP	Medium			City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment** Forwarded to Storm Water Maintenance section for action.					

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
9-Jun-08	WR-1 / The Gates	MP-51 Vortex Separator	Residential	Low	Eastlake Woods	WR-1/The Gates	City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment**					
9-Jun-08	WR-2 / Reserves	MP-51 Vortex Separator	Residential	Low	Eastlake Woods	WR-2/Reserves	City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment**					
9-Jun-08	WR-3 / The Woods	MP-51 Vortex Separator	Residential	Low	Eastlake Woods	WR-3/The Woods	City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment**					
9-Jun-08	WR-4 / Cornerstone	MP-51 Vortex Separator	Residential	Medium	Eastlake Woods	WR-4/Cornerston e	City Of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment**					
9-Jun-08	WR-5 / K Hovnanian	MP-51 Vortex Separator	Residential	Low	Eastlake Woods	WR-5/K Hovnanian	City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filters were observed to have trash and debris in containment areas. **see attachment**					
9-Jun-08	WR-6 / Meredian	MP-52 Drain Insert	Residential	Medium	Eastlake Woods	WR-6/Meredian	City of Chula Vista
	Comments/Findings:	Conducted verification on the cleaning and maintenance of the Post Construction BMPs. One insert was observed to have trash and debris in containment areas. **see attachment**

Chapter 14.20
STORM WATER MANAGEMENT AND DISCHARGE CONTROL

Sections:

14.20.010 Purpose and intent.
14.20.020 Scope.
14.20.030 Definitions.
14.20.040 Administration.
14.20.100 Discharge of non-storm water prohibited.
14.20.110 Exemptions to discharge prohibition.
14.20.120 Reduction of pollutants contacting or entering storm water required.
14.20.125 Additional Planning, Design, Construction, and Post-Construction Requirements for All Land Development and Redevelopment Projects.
14.20.130 Containment, cleanup, and notification of spills.
14.20.140 Watercourse protection.
14.20.150 Development in or adjacent to watercourse restricted – Land development, building, or watercourse permit required.
14.20.160 Illegal connection prohibited.
14.20.170 Proof of compliance required.
14.20.200 Inspection and sampling – General.
14.20.210 Inspection procedures – Additional requirements.
14.20.220 Authority to sample and establish sampling devices.
14.20.230 Testing, monitoring or mitigation required – When.
14.20.300 Concealment.
14.20.310 Administrative enforcement powers.
14.20.320 Administrative notice, hearing, and appeal procedures.
14.20.330 Judicial enforcement.
14.20.340 Violations deemed a public nuisance.
14.20.350 Remedies not exclusive.
14.20.360 Civil penalties to be deposited in the storm drain revenue fund.

14.20.010 Purpose and intent.

The purpose of this chapter is to promote the health, safety, and general welfare of the citizens of the City of Chula Vista by:

A. Prohibiting non-storm water discharges to the storm water conveyance system.

B. Preventing discharges to the storm water conveyance system from spills, dumping or disposal of materials other than storm water.

C. Reducing pollutants in storm water discharges, including those pollutants taken up by storm water as it flows over urban areas (urban runoff), to the maximum extent practicable.

D. Reducing pollutants in storm water discharges in order to achieve applicable water quality objectives for surface waters in San Diego County.

The intent of this chapter is to protect and enhance the water quality of our watercourses, water bodies, and wetlands in a manner pursuant to and consistent with the Clean Water Act (33 USCA Section 1251, et seq.) and its implementing regulations, the Porter-Cologne Water

Quality Control Act (California Water Code section 13020, et seq.) and its implementing regulations, and the San Diego Regional Water Quality Control Board (NPDES Permit No. CAS 0108758) and any subsequent amendments thereto.

14.20.020 Scope.

This chapter shall be interpreted in accordance with the definitions set forth herein and the provisions of this chapter shall apply to the direct or indirect discharge of pollutants into the City's storm water conveyance system.

Further, this chapter shall be interpreted in accordance with the requirements of the federal Clean Water Act and acts amendatory thereof or supplementary thereto; applicable implementing regulations; NPDES Permit No. CAS 0108758 and any amendment, revision, or reissuance thereof; and the purposes and intent of this chapter.

This chapter, among other things, provides for the prohibition of non-storm water discharges to the storm water conveyance system, the prohibition of illegal connections to the storm water conveyance system, the requirement that all persons reduce the volume and character of pollutants related to urban activity entering the storm water conveyance system to the maximum extent practicable, and the establishment of enforcement mechanisms for violation of this chapter, including civil and criminal fines and penalties.

14.20.030 Definitions.

When used in this chapter, the following terms shall have the meanings ascribed to them in this section:

A. "Basin plan" shall mean the "Comprehensive Water Quality Control Plan for the San Diego Basin" adopted by the Regional Water Quality Control Board, San Diego Region (September 1994), and approved by the State Water Resources Control Board, together with subsequent amendments.

B. "Best management practices (BMPs)" shall mean schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce, to the maximum extent practicable, the discharge of pollutants directly or indirectly to waters of the United States. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage.

C. "Building permit" shall mean a permit issued by the building official pursuant to Chapter 15.20 CVMC.

D. "California ocean plan" shall mean the "California Ocean Plan: Water Quality Control Plan for Ocean Waters of California" adopted by the State Water Resources Control Board in July, 2005, and any subsequent amendments.

E. "Clean Water Act" shall mean the federal Water Pollution Control Act enacted by Public Law 92-500, as amended by Public Laws 95-217, 95-576, 96-483, and 95-117 (33 USCA Section 1251, et seq.), and any subsequent amendments.

F. "County health officer" shall mean the health officer of the County of San Diego Department of Public Health or designee.

G. "Development" shall mean:

1. The placement or erection of any solid material or structure on land, in water, or under water;

2. The discharge or disposal of any dredged material or of any gaseous, liquid, solid, or thermal waste;

3. The grading, removing, dredging, mining, or extraction of any materials;

4. A change in the density or intensity of the use of land, including, but not limited to, a subdivision pursuant to the Subdivision Map Act (Government Code section 66410, et seq.) and any other division of land, except where the division of land is brought about in connection with the purchase of such land by a public agency for public recreational use;

5. A change in the intensity of the use of water, or of access thereto;

6. The construction, reconstruction, demolition, or alteration of the size of any structure, including any facility of any private, public, or municipal entity; and

7. The removal or harvesting of major vegetation other than for agricultural purposes.

As used in this definition, "structure" includes, but is not limited to, any building, road, pipe, flume, conduit, siphon, aqueduct, telephone line, and electrical power transmission and distribution line. (Source: Government Code section 65927).

H. "Employee training program" shall mean a documented employee training program for all persons responsible for implementing a storm water pollution prevention plan. The employee training program shall include, but is not limited to, the following topics:

1. Laws, regulations, and local ordinances associated with storm water pollution prevention, and an overview of the potential impacts of polluted storm water on the receiving waters of the San Diego region;

2. Proper handling of all materials and wastes to prevent spillage;

3. Mitigation of spills including spill response, containment and cleanup procedures;

4. Visual monitoring of all effluent streams to ensure that no illegal discharges enter the storm water conveyance system;

5. Discussion of the differences between the storm water conveyance system and the sanitary sewer system;

6. Identification of all on-site connections to the storm water conveyance system;

7. Preventive maintenance and good housekeeping procedures;

8. Material management practices employed by the facility to reduce or eliminate pollutant contact with storm water discharge.

I. "Enclosed bays and estuaries plan" means the "California Enclosed Bays and Estuaries Plan: Water Quality Control Plan for the Enclosed Bays and Estuaries of California," adopted by the State Water Resources Control Board on November 16, 1995, and all subsequent amendments.

J. "Enforcement agency" shall mean the City of Chula Vista or its authorized agents charged with ensuring compliance with this chapter.

K. "Enforcement official" shall mean the Director of Public Works or his or her designee.

L. "Hazardous materials" shall mean any substance or mixture of substances which is toxic, corrosive, flammable, an irritant, a strong sensitizer, or generates pressure through decomposition, heat or other means, if such a substance or mixture of substances may cause substantial injury, serious illness or harm to humans, domestic livestock, or wildlife.

M. "Illegal connection" shall mean any physical connection to the storm water conveyance system which has not been permitted by the City of Chula Vista or the San Diego Regional Water Quality Control Board, or which drains illegal discharges either directly or indirectly into the storm water conveyance system.

N. "Illegal discharge" shall mean any discharge to the storm water conveyance system that is not composed entirely of storm water, or is expressly prohibited by federal, state, or local

regulations, laws, codes, or ordinances, NPDES Permit No. CAS 0108758, or degrades the quality of receiving waters in violation of any plan water quality objective.

O. "Inland surface water plan" means the "California Inland Surface Waters Plan: Water Quality Control Plan for Inland Surface Waters of California" adopted by the State Water Resources Control Board on April 1991, and all amendments thereto.

P. "Land development permit" shall mean a permit issued by the Director of Engineering and General Services pursuant to Chapter 15.04 CVMC.

Q. "Maximum extent practicable (MEP)" shall mean the technology-based standard established by Congress in Clean Water Act Section 402(p)(3)(B)(iii) that municipal dischargers of storm water discharges must meet. MEP generally emphasizes pollution prevention and source control BMPs primarily in combination with treatment methods serving as a backup.

R. "National Pollutant Discharge Elimination System (NPDES) permit" shall mean a permit issued by the Regional Water Quality Control Board or the State Water Resources Control Board, pursuant to Chapter 5.5, Division 7 of the California Water Code, to control discharges from point sources to waters of the United States, including, but not limited to:

1. California Regional Water Quality Control Board, San Diego Region, (NPDES No. CAS 0108758), NPDES municipal permit – Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds of the County of San Diego, the Incorporated Cities of San Diego County, the San Diego Unified Port District, and the San Diego Count Regional Airport Authority

2. NPDES general permit for storm water discharges associated with industrial activities;

3. NPDES general permit for storm water discharges associated with construction activity; and

4. California Regional Water Quality Control Board, San Diego Region, general dewatering permits.

S. "NPDES general permit" shall mean a permit issued by the State Water Resources Control Board, including, but not limited to:

1. NPDES general permit for storm water discharges associated with industrial activities; and

2. NPDES general permit for storm water discharges associated with construction activity.

T. "Non-storm water" shall mean any water conveyed to the storm water conveyance system that is not entirely composed of storm water (also see definition of "storm water").

U. "Parking lot" shall mean an open area, other than a street or other public way, used for the parking of motorized vehicles, whether for a fee or free, to accommodate clients or customers, or to accommodate residents of multifamily dwellings (i.e., apartments, condominiums, townhomes, mobilehomes, dormitories, group quarters, etc.).

V. "Person" shall mean any individual, organization, business trust, company, partnership, entity, firm, association, corporation, or public agency, including the state of California and the United States of America.

W. "Plan water quality objective" means any or all applicable requirements of the basin plan, the enclosed bays and estuaries plan, the inland surface water plan, and the California ocean plan.

X. "Pollutant" may include, but is not limited to, solid waste, sewage, garbage, medical waste, wrecked or discarded equipment, radioactive materials, dredged soil, rock, sand, sediment, industrial waste, and any organic or inorganic contaminant whose presence degrades the quality of the receiving waters in violation of basin plan or California ocean plan standards. "Pollutant"

includes, but is not limited to, fecal coliform, fecal streptococcus, enterococcus, volatile organic carbon (VOC), surfactants, oil and grease, petroleum hydrocarbons, total organic carbon (TOC), lead, copper, chromium, cadmium, silver, nickel, zinc, cyanides, phenols, and biocides.

A "pollutant" also includes any substance defined as a pollutant under 40 CFR Section 122.2 and any contaminant which degrades the quality of the receiving waters in violation of basin plan or California ocean plan standards by altering any of the following parameters: pH, total suspended and settleable solids, biochemical oxygen demand (BOD), chemical oxygen demand (COD), nutrients, and temperature.

Y. "Premises" shall mean any building, lot, parcel, real estate, land, or portion of land, whether improved or unimproved.

Z. "Receiving waters" shall mean surface bodies of water, as described in NPDES Permit No. CAS 0108758, which serve as discharge points for the storm water conveyance system, including creeks, rivers, reservoirs, lakes, lagoons, estuaries, harbors, bays, and the Pacific Ocean.

AA. "Significant quantities" shall mean the volume, concentrations, or mass of a pollutant in a discharge that can cause or threaten to cause pollution, contamination, or nuisance; or adversely impact human health or the environment; or cause or contribute to a violation of any water quality standards applicable to the receiving water.

BB. "Storm water" shall mean urban runoff and snow melt runoff consisting of only those discharges which originate from precipitation events. Storm water is that portion of precipitation that flows across a surface to the storm water conveyance system or receiving waters.

For the purposes of this chapter, storm water runoff and drainage from areas that are in a natural state, have not been significantly disturbed or altered, either directly or indirectly, as a result of human activity, and the character and type of pollutants naturally appearing in the runoff that have not been significantly altered, either directly or indirectly, as a result of human activity, shall be considered "unpolluted" and shall satisfy the definition of "storm water" in this chapter.

CC. "Storm water conveyance system" means those municipal, private and/or natural facilities within the City of Chula Vista by which storm water may be conveyed to waters of the United States, including any roads with drainage systems, municipal streets, catch basins, and watercourses.

DD. "Storm water pollution prevention plan" shall mean a document which describes the on-site program activities to utilize BMPs to eliminate or reduce pollutant discharges to the storm water conveyance system to the maximum extent practicable.

A storm water pollution prevention plan prepared and implemented pursuant to any NPDES permit shall meet the definition of a "storm water pollution prevention plan" for the purposes of this chapter.

EE. "Watercourse" shall mean any natural or artificial stream, river, creek, ditch, channel, canal, conduit, culvert, drain, waterway, gully, ravine, arroyo or wash in which waters flow in a definite direction or course, either continuously or intermittently, and which has a definite channel and a bed or banks. A "channel" is not limited to land covered by minimal or ordinary flow but also includes land covered during times of high water. "Watercourse" does not include any surface drainage prior to its collection in a stream, river, creek, ditch, channel, canal, conduit, culvert, drain, waterway, gully, ravine, arroyo or wash.

FF. "Watercourse permit" shall mean a permit issued by the director of Engineering and General Services pursuant to Chapter 14.08 CVMC.

GG. “Wetlands” shall mean areas that are inundated or saturated by surface or ground waters at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. “Wetlands” generally includes swamps, marshes, bogs, and similar areas.

14.20.040 Administration.

The Enforcement Official shall administer, implement, and enforce the provisions of this chapter. Any powers granted to, or duties imposed upon, the Enforcement Official may be delegated by the enforcement official to persons in the employ of the City, or pursuant to contract.

When deemed necessary by the Enforcement Official, the Enforcement Official shall prepare and present to the City Council for approval regulations and programs consistent with the general policies established herein by the City Council. The Enforcement Official shall enforce Council-approved regulations necessary to the administration of this chapter, and may recommend that the Council amend such regulations and programs from time to time, as conditions require.

14.20.100 Discharge of non-storm water prohibited.

A. It is unlawful for any person to discharge non-storm water into the storm water conveyance system, except as provided in CVMC 14.20.110.

B. It is unlawful for any person to cause either individually or jointly any discharge into or from the storm water conveyance system that results in or contributes to a violation of any NPDES permit. Liability for any damage, abatement costs, or fines against the permit holder caused by such discharge shall be the responsibility of the person(s) causing or responsible for the discharge.

14.20.110 Exemptions to discharge prohibition.

The following discharges are exempt from the prohibition set forth in CVMC 14.20.100; provided, that they do not cause or significantly contribute to violations of the water quality standards set forth in any plan water quality objective or convey significant quantities of pollutants to receiving waters, or are a danger to public health and safety:

A. Any discharge or connection regulated under an NPDES permit issued to the discharger and administered by the state of California pursuant to Chapter 5.5, Division 7 of the California Water Code; provided, that the discharger is in compliance with all requirements of the permit and other applicable laws, and regulations, and programs.

B. Discharges from the following activities will not be considered a source of pollutants to waters of the United States:

1. Diverted steam flows;
2. Rising Ground Water;
3. Uncontaminated ground water infiltration [as defined in 40 CFR 35.2005(20)] to MS4s;
4. Uncontaminated pumped ground water;
5. Foundation drains;
6. Springs;
7. Water from crawl space pumps;
8. Footing drains;
9. Air conditioning condensation;
10. Flows from riparian habitats and wetlands;

11. Water line flushing;
12. Landscape irrigation;
13. Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks;
14. Irrigation water;
15. Lawn watering;
16. Individual residential car washing; and
17. Dechlorinated swimming pool discharges.

C. Any discharge which the enforcement agency, the County Health Officer, the Regional Water Quality Control Board and/or the U.S. Environmental Protection Agency determines in writing is necessary for the protection of the public health and safety.

14.20.120 Reduction of pollutants contacting or entering storm water required.

Any person engaged in activities which may result in pollutants entering the storm water conveyance system shall, to the maximum extent practical, undertake all measures to reduce the risk of illegal discharges. The following requirements shall apply:

A. Best Management Practices Implementation. It is unlawful for any person not to comply with BMPs and pollution control requirements established by the City or other responsible agency to eliminate or reduce pollutants entering the City's storm water conveyance system. BMPs shall be complied with throughout the life of the activity.

B. Storm Water Pollution Prevention Plan. When the enforcement official determines that a business or business-related activity causes or may cause an illegal discharge to the storm water conveyance system, then the enforcement official may require the business to develop and implement a storm water pollution prevention plan (SWPPP). Businesses which may be required to prepare and implement a SWPPP include, but are not limited to, those which perform maintenance, storage, manufacturing, assembly, equipment operations, vehicle loading, and/or cleanup activities partially or wholly out of doors.

C. Coordination with Hazardous Materials Response Plans and Inventory. Any activity subject to the hazardous materials inventory and response program, pursuant to Chapter 6.95 of the California Health and Safety Code, shall include provisions for compliance with this chapter in its hazardous materials response plan, including prohibitions of unlawful non-storm water discharges and illegal discharges, and provisions requiring the use of BMPs to reduce the discharge of pollutants in storm water.

D. Impervious Surfaces. Persons owning or operating a parking lot or an impervious surface (including, but not limited to, service station pavements or paved private streets and roads) used for automobile-related or similar purposes shall clean those surfaces as frequently and as thoroughly as is necessary, in accordance with BMPs, to prevent the discharge of pollutants to the City's storm water conveyance system. Sweepings or cleaning residue from parking lots or impervious surfaces shall not be swept or otherwise made or allowed to go into any storm water conveyance, gutter, or roadway, but must be disposed of in accordance with regional solid waste procedures and practices.

E. Compliance with NPDES Permit for Storm Water Discharges. Each discharger subject to any NPDES permit for storm water discharges shall comply with all requirements of such permit.

14.20.125 Additional Planning, Design, Construction, and Post-Construction Requirements for All Land Development and Redevelopment Projects.

The City of Chula Vista Development Storm Water Manual is a part of this Ordinance and is incorporated by reference as though set forth in full in this Ordinance. No land owner or development project proponent in the City of Chula Vista shall receive any City permit or approval for land development activity or significant redevelopment activity unless the project meets or will meet the requirements of this Ordinance and the Development Storm Water Manual.

The Development Storm Water Manual includes, among other requirements, the following requirements:

- Phased grading during construction (limitation of grading to a maximum disturbed area before either temporary or permanent erosion controls are implemented).
- Compliance with Low Impact Development (LID) principals.
- Compliance with Interim Hydromodification criteria and Hydrograph Modification Management Plan (HMP) requirements.
- Compliance with Post-Construction Best Management Practices self inspections, maintenance, record keeping, and maintenance certification.

The City of Chula Vista generally accepts standards established in the most up-to-date editions of the following documents for Best Management Practices, however, the City Engineer will make the final determination to approve or disapprove any proposed BMPs:

- Stormwater Best Management Practices Handbooks developed by the California Stormwater Quality Association
- CALTRANS Treatment BMP Technology Report
- County of San Diego Low Impact Development Handbook

Long-term maintenance obligations of all proposed Best Management Practices must be approved in an agreement that runs with the land in perpetuity prior to the issuance of a grading or other construction permit.

14.20.130 Containment, cleanup, and notification of spills.

It is unlawful for any person owning or occupying any premises who has knowledge of any release of significant quantities of materials, pollutants, or waste which may result in pollutants or non-storm water discharges entering the City's storm water conveyance system to not immediately take all reasonable action to contain, minimize, and clean up such release. Such person shall notify the City of Chula Vista of the occurrence and/or the County of San Diego Department of Health Services/Environmental Health Services Hazardous Materials Management Division, and any other appropriate agency of the occurrence as soon as possible, but no later than 24 hours from the time of the incident's occurrence.

14.20.140 Watercourse protection.

In addition to the prohibitions relating to watercourses and the requirements for watercourse permits set forth in Chapter 14.08 CVMC, it is unlawful for any person owning and/or occupying property through which a watercourse passes to fail or refuse to:

A. Keep and maintain that part of the watercourse within the property free of trash, debris, and other obstacles which would pollute, contaminate, or significantly retard the flow of water through the watercourse.

B. Maintain existing privately owned structures within or adjacent to a watercourse so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

C. Keep and maintain healthy bank vegetation in such a manner as to minimize the vulnerability of the watercourse to erosion.

14.20.150 Development in or adjacent to watercourse restricted – Land development, building, or watercourse permit required.

No person shall carry out development within 30 feet of the centerline of any watercourse or within 20 feet of the edge of any watercourse, whichever is the greater distance from the top of the creek bank, unless a land development, building, or watercourse permit has first been obtained. The City Officer issuing said permit is hereby granted the authority to establish controls on the volume and rate of storm water runoff from such new development as may be reasonable and appropriate to minimize the discharge and transport of pollutants to the maximum extent practicable in the granting or conditioning the granting of such permit.

14.20.160 Illegal connection prohibited.

It is unlawful for any person to establish, use, or maintain any illegal connection to the storm water conveyance system, regardless of whether such connection was made under a permit or other authorization or whether permissible under the law or practices applicable or prevailing at the time of the connection, except as authorized in CVMC 14.20.110(A).

14.20.170 Proof of compliance required.

Proof of compliance with this chapter may be required in a form acceptable to the City prior to or as a condition of a subdivision map, site plan, development improvement plan, building permit, grading permit or any other permit or activity which may affect the storm water conveyance system and/or the waters entering it. Proof of compliance shall be furnished upon request of the enforcement official.

14.20.200 Inspection and sampling – General.

A. After obtaining legal entry to any premises in accordance with CVMC 1.16.010 or by consent, the representative of the enforcement agency shall have the right to:

1. Carry out any inspection and sampling activities on the premises as may be necessary to enforce the provisions and requirements of this chapter. Upon request, split samples shall be given to the owner and/or occupant of the premises.

2. Inspect any vehicle on the premises reasonably suspected of causing, contributing to, or being used to transport an illegal discharge to the storm water conveyance system.

3. Conduct tests, analyses and evaluations to determine if a discharge of storm water is an illegal discharge or to determine if the requirements of this chapter have been met.

4. Photograph any effluent stream, material or waste, material or waste container, container label, vehicle, waste treatment process, waste disposal site, or condition contributing to storm water pollution and constituting a violation of this chapter found during an inspection.

5. Inspect and copy pertinent records relating to the facility's operations, including inventories, chemical usage, materials, sources, hazardous materials manifests and disposal records, treatment and operations log books, and materials invoices.

6. Review and obtain a copy of the storm water pollution prevention plan prepared by the owner and/or occupant or facility operator, if such a plan is required.

7. Require the owner and/or occupant or facility operator to retain evidence, as instructed by the inspector, for a period not to exceed 30 days.

8. Review and obtain copies of all storm water monitoring data compiled by the owner and/or occupant or facility operator, if such monitoring is required.

9. Review and obtain copies of all records related to handling of pollutants and hazardous materials.

B. The Enforcement Official may conduct routine or area inspections, which shall be based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this chapter, including, but not limited to, random sampling or sampling in areas with evidence of storm water contamination, illegal discharges, discharge of non-storm water to the storm water conveyance system, or similar factors.

C. All enforcement officials shall have adequate identification. Enforcement officials and other authorized personnel shall identify themselves when entering any property for inspection purposes or when inspecting the work of any contractor.

14.20.210 Inspection procedures – Additional requirements.

During the inspection, the Enforcement Official shall comply with all reasonable security, safety, and sanitation measures. In addition, the Enforcement Official shall comply with reasonable precautionary measures specified by the owner and/or occupant or facility operator.

At the conclusion of the inspection, and prior to leaving the site, the Enforcement Official shall make every reasonable effort to review with the owner and/or occupant or the facility operator each of the violations noted by the Enforcement Official and any corrective actions that may be necessary. A report listing any violation found by the Enforcement Official during the inspection shall be kept on file by the enforcement agency. A copy of the report shall be provided to the owner and/or occupant or facility operator, or left at the premises if no person is available. If corrective action is required, then the occupant, facility owner, and/or facility operator shall implement a plan of corrective action based upon a written plan of correction, submitted to the enforcement agency, which states the corrective actions to be taken and the expected dates of completion. Failure to implement a plan of correction constitutes a violation of this chapter.

14.20.220 Authority to sample and establish sampling devices.

With the consent of the property owner or occupant or pursuant to an inspection warrant, the Enforcement Official is authorized to establish on any property that discharges directly or indirectly to the municipal storm water conveyance system such devices as are necessary to conduct sampling or metering operations. During all inspections as provided herein, the Official may take samples of materials, wastes, and/or effluent as deemed necessary to aid in the pursuit of the inquiry or in the recordation of the activities on-site.

14.20.230 Testing, monitoring or mitigation required – When.

A. The Enforcement Official may require that any person engaged in any activity and/or owning or operating any facility which causes or may contribute to storm water pollution or contamination, illegal discharges, and/or discharge of non-storm water to the storm water conveyance system perform monitoring, including physical and chemical monitoring and/or analyses, and furnish reports as the Enforcement Official may specify, if:

1. The person, or facility owner or operator, fails to eliminate illegal discharges within a specified time after receiving a written notice to do so by the Enforcement Official; or

2. The Enforcement Official has documented repeated violations of this chapter by the person or facility owner, or operator, which have caused or contributed to storm water pollution.

It is unlawful for such person or facility owner or operator to fail or refuse to undertake and provide the monitoring, analyses, and/or reports specified. Specific monitoring criteria shall bear a relationship to the types of pollutants which may be generated by the person's activities or the facility's operations. If the enforcement agency has evidence that a pollutant is originating from a specific premises, then the enforcement agency may require monitoring for that pollutant regardless of whether said pollutant may be generated by routine activities or operations. The person or facility owner or operator shall be responsible for all costs of these activities, analyses and reports.

B. Any persons required to monitor, pursuant to subsection (A) of this section, shall implement a storm water monitoring program including, but not limited to, the following:

1. Routine visual monitoring for dry weather flows;

2. Routine visual monitoring for spills which may pollute storm water runoff;

3. A monitoring log including monitoring date, potential pollution sources, as noted in subsections (B)(1) and (2) of this section, and a description of the mitigation measures taken to eliminate any potential pollution sources.

C. If testing, monitoring or mitigation required pursuant to this chapter is deemed no longer necessary by the enforcement official, then any or all of the requirements contained in subsections (A) and (B) of this section may be discontinued.

D. A storm water monitoring program prepared and implemented pursuant to any state-issued NPDES general permit shall be deemed to meet the requirements of a monitoring program for the purposes of this chapter. All monitoring data and analytical evaluation/assessment reports required by such a permit shall be submitted to the City at the same time the data and reports are submitted to the Regional Water Quality Control Board.

14.20.300 Concealment.

Causing, permitting, aiding, abetting or concealing a violation of any provision of this chapter is unlawful and shall constitute a separate violation of this chapter..

14.20.310 Administrative enforcement powers.

The enforcement agency and Enforcement Official can exercise any enforcement powers as provided in CVMC Title 1. In addition to the general enforcement powers provided in CVMC Title 1, the enforcement agency and Enforcement Official have the authority to utilize the following administrative remedies as may be necessary to enforce this chapter:

A. Cease and Desist Orders. When the Enforcement Official finds that an illegal discharge has or is likely to occur or an illegal connection is in place, the Enforcement Official may issue an

order to cease and desist such discharge, practice, or operation likely to cause such discharge and direct that those persons not complying shall:

1. Comply with the applicable provisions and policies of this chapter;

2. Comply with a time schedule for compliance, which may consist of a duty to cease and desist immediately; and

3. Take appropriate remedial or preventive action to prevent the violation from recurring.

B. Notice to Clean and Abate. Whenever the Enforcement Official finds any oil, earth, dirt, grass, weeds, dead trees, tin cans, rubbish, refuse, waste or any other material of any kind in or upon the sidewalk abutting or adjoining any parcel of land, or upon any parcel of land or grounds, which may result in an increase in pollutants entering the City's storm water conveyance system or a non-storm water discharge to the City's storm water conveyance system, the enforcement official may issue orders and give written notice to remove same in any reasonable manner. The recipient of such notice shall undertake the activities as described in the notice.

C. Storm Water Pollution Prevention Plan. The enforcement official shall have the authority to establish elements of a storm water pollution prevention plan, and to require any owner or occupier of any premises to adopt and implement such a plan, pursuant to CVMC 14.20.120(B), as may be reasonably necessary to fulfill the purposes of this chapter.

D. Employee Training Program. The Enforcement Official shall have the authority to establish elements of an employee training program, as may be necessary to fulfill the purposes of this chapter, where such a program has been required as an element of a storm water pollution prevention plan.

E. Best Management Practices. The Enforcement Official may establish the requirements of BMPs for any premises pursuant to CVMC 14.20.040.

F. Civil Penalties. Notwithstanding any other provisions of the Municipal Code, a person who violates any of the provisions of this chapter or who fails to implement a storm water monitoring plan, violates any cease and desist order or notice to clean and abate, or fails to adopt or implement a storm water pollution prevention plan as directed by the enforcement official shall be liable for a civil penalty not to exceed $10,000 for each day such a violation exists. The violator shall also be charged for the full costs of any investigation, inspection, or monitoring survey which led to the detection of any such violation; for abatement costs; and for the reasonable costs of preparing and bringing legal action under this subsection. In addition to any other applicable procedures, the enforcement agency may utilize the lien procedures of Chapter 1.30 CVMC to enforce the violator's liability. The violator may also be liable for compensatory damages for impairment, loss or destruction to water quality, wildlife, fish and aquatic life.

G. Administrative Citations. Notwithstanding any other provision of the Municipal Code, a person who violates any provision of this chapter or disobeys an enforcement order may be issued an administrative citation by the enforcement official requiring immediate corrective action and imposing an administrative fine in an amount as set forth in CVMC 1.41.100(D)(1).

14.20.320 Administrative notice, hearing, and appeal procedures.

A. Service. Unless otherwise provided herein, any order, notice of violation, or other notice required to be given by the Enforcement Official under this chapter shall be in writing and served in accordance with CVMC 1.40.030.

B. Notice Contents. Notwithstanding any other provision of the Municipal Code, when the Enforcement Official determines that a violation of one or more provisions of this chapter exists

or has occurred, any violator(s) may be served with a written notice of violation and order. The notice and order shall state the Municipal Code section violated, describe how violated, the location, date(s) and time(s) of the violation(s), and describe the corrective action required. The notice and order may require immediate corrective action by the violator(s) and explain which method(s) of enforcement the City is utilizing. The notice and order shall explain the consequences of failing to comply. Finally, the notice and order shall identify all hearing/appeal rights and specify the issuing officer.

C. Hearings and Appeals. Notwithstanding any other provision of the Municipal Code, a violator may request a hearing to contest the Enforcement Official's determination that a violation has occurred. Such request must be in writing and received by the City within 10 calendar days of service of the notice of violation (or 30 calendar days for out-of-state residents) in a form approved by the Enforcement Official. If the City does not receive such a written request within 10 calendar days (or 30 calendar days for out-of-state residents), it shall constitute a waiver of the right to a hearing and adjudication of all or any portion of the notice and order. Once a request for hearing is received, the hearing shall be conducted pursuant to CVMC 1.40.020(B) through (I) and 1.40.070. If the violator(s) fails to attend the hearing, it shall constitute a waiver of the right to a hearing and adjudication of all or any portion of the notice and order.

14.20.330 Judicial enforcement.

A. Criminal Penalties. Notwithstanding CVMC 1.20.010, any person who violates any provision of this chapter or who fails to implement a storm water monitoring plan, violates any cease and desist order or notice to clean and abate, or fails to adopt or implement a storm water pollution prevention plan as directed by the enforcement official shall be punished, upon conviction, by a fine not to exceed $10,000 for each day in which such violation occurs, or imprisonment in the San Diego County jail for a period not to exceed one year, or both.

B. Injunction/Abatement of Public Nuisance. Whenever a discharge into the storm water conveyance system is in violation of the provisions of this chapter or otherwise threatens to cause a condition of contamination, pollution, or nuisance, the Enforcement Official may also cause the City to seek a petition to the superior court for the issuance of a preliminary or permanent injunction, or both, or an action to abate a public nuisance, as may be appropriate in restraining the continuance of such discharge.

C. Other Civil Action. Whenever a notice and order or Hearing Officer's decision is not complied with, the City Attorney may, at the request of the Enforcement Official, initiate any appropriate civil action in a court of competent jurisdiction to enforce such notice and order and decision, including the recovery of any unpaid storm drain fees and/or civil penalties provided herein.

14.20.340 Violations deemed a public nuisance.

In addition to the other civil and criminal penalties provided herein, any condition caused or permitted to exist in violation of any of the provisions of this chapter is a threat to the public health, safety, and welfare and is declared and deemed a public nuisance, which may be summarily abated and/or restored as directed by the Enforcement Official in accordance with the procedures identified in this chapter or Chapter 1.30 CVMC. A civil action to abate, enjoin or otherwise compel the cessation of such nuisance may also be taken by the City, if necessary.

The full cost of such abatement and restoration shall be borne by the owner of the property, and the cost thereof shall be a lien upon and against the property in accordance with the procedures set forth in Chapter 1.30 CVMC.

14.20.350 Remedies not exclusive.

Remedies set forth in this chapter are not exclusive but are cumulative to all other civil and criminal penalties provided by law, including, but not limited to, penalty provisions of the federal Clean Water Act and/or the State Porter-Cologne Water Quality Control Act. The seeking of such federal and/or state remedies shall not preclude the simultaneous commencement of proceedings pursuant to this chapter.

14.20.360 Civil penalties to be deposited in the storm drain revenue fund.

Any civil penalties collected by the City as a result of violations of this chapter shall be deposited in the storm drain revenue fund.

Chapter 15.04
EXCAVATION, GRADING, CLEARING, GRUBBING AND FILLS*

Sections:

15.04.005 Purpose and intent of provisions.
15.04.010 Definitions.
15.04.015 Permit required for all land development work and soil investigations.
15.04.017 Other required permits.
15.04.018 Additional Planning, Design, Construction, and Post-Construction Requirements for All Land Development and Redevelopment Projects.15.04.020 Compliance with conditions and specifications required – Deviations from standards permitted when.
15.04.025 Provisions not to affect other code requirements.
15.04.030 Facilities within public rights-of-way – Assignment of costs.
15.04.035 Commencement and completion of work – Extension of time.
15.04.040 Slopes – Design requirements generally.
15.04.045 Building pads – Design requirements.
15.04.050 Embankment requirements – Soil engineer may be required.
15.04.055 Expansive soil grading requirements.
15.04.060 Landscaping and irrigation system.
15.04.065 Slopes – Tops and toes to be rounded.
15.04.070 Slopes – Blending into existing terrain.
15.04.075 Slopes – Horizontal slope rounding.
15.04.080 Preservation of existing monuments.
15.04.085 Work in conjunction with subdivision of property – Requirements generally.
15.04.090 Work in conjunction with subdivision of property – Standard land development permit – Requirements.
15.04.095 Work in conjunction with subdivision of property – Contract for completion of improvements – Requirements – Bonds.
15.04.100 Building construction – Land development permit required – Prerequisite to building permit.
15.04.105 Damaged or disused public improvements – Notification – Corrective action required.
15.04.110 Public to be protected from hazards during construction – Fences and barricades required when.
15.04.115 Safety precautions.
15.04.120 Fence specifications – Modification permitted when.
15.04.125 Noncompliance.
15.04.130 Modification of approved plans.
15.04.135 Responsibility of permittee – Compliance with plans and requirements.
15.04.140 Completion of work – Final reports.
15.04.145 Notification of completion.
15.04.150 Exemptions from applicability designated.
15.04.155 Contractor – Qualifications required.
15.04.160 Work to be performed by licensed contractor.
15.04.165 Inspection of land development work – Responsibility therefor.

15.04.170 Transfer of responsibility for approval.
15.04.175 Plans and reports to be prepared by engineers.
15.04.180 Private contract performance bond – Required when – Issuance conditions generally.
15.04.185 Private contract performance bond – Conditions – Notice of default – Contents – Effect.
15.04.190 Private contract performance bond – Principal or surety liable for cost of completing work when.
15.04.195 Private contract performance bond – Liability of City for performance of certain work.
15.04.200 Private contract performance bond – Cash deposit accepted in lieu when – Default correction procedure.
15.04.205 Private contract performance bond – Not required when.
15.04.210 Private contract performance bond – Required from certain contractors when – Exception.
15.04.215 Private contract performance bond – Conditions – Compliance with certain terms and provisions required.
15.04.220 Private contract performance bond – Method of estimating amount – Schedule.
15.04.225 Release of bonds/security.
15.04.230 City Engineer – Enforcement responsibility and permit issuance authority.
15.04.235 City Engineer – Powers and duties generally.
15.04.240 City Engineer – Authority to determine applicable fees.
15.04.245 City Engineer – Duty to consider certain recommendations and deny certain applications.
15.04.250 City Engineer – Grounds for cancelling permit or amending plans.
15.04.255 Appeals – Authorized when – Determination authority.
15.04.260 Appeals – Time limit for filing – Form.
15.04.265 Permits – Application – Procedure generally – Detailed plan required.
15.04.270 Permits – Application – Detailed plans and specifications required.
15.04.275 Permits – Issuance – Prerequisites and contents.
15.04.280 Investigations authorized and required when – Fee.
15.04.285 Agreement required for uncontrolled embankments – Additional specifications.
15.04.290 Fees – Collection – Method of estimation – Verification – Payment required – Exemptions.
15.04.295 Fees – Schedule for computation.
15.04.305 Fees – To be doubled in certain cases – Effect of imposition.
15.04.310 Violations – Declared unlawful and public nuisance – Abatement authority.
15.04.315 Abatement of dangerous conditions.
15.04.320 Emergency abatement by City – Liability for costs.
15.04.325 Costs of abatement – Special assessment procedure – Statutory authority.
15.04.330 Conflicts.

* For statutory provisions authorizing cities to abate building nuisances, see Health and Safety Code § 17980, et seq.; for statutory requirement for cities to pass a soil testing ordinance, see Health and Safety Code §§ 17953 – 17957.

15.04.005 Purpose and intent of provisions.

The purpose of this chapter is to establish minimum requirements for land development work, to provide for the issuance of permits and for the enforcement of the requirements. These

provisions are supplementary and additional to the subdivision and zoning regulations of this code and shall be read and construed as an integral part of said regulations and the land development patterns and controls established thereby. It is the intent of the City Council to protect life and property and promote the general welfare; enhance and improve the physical environment of the community; and preserve, subject to economic feasibility, the natural scenic character of the City. In administering these provisions, the following goals should be respected:

A. Ensuring that future development of lands, particularly in the hilly areas of the City, occurs in the manner most compatible with surrounding areas and so as to have the least adverse effect upon other persons or lands, or upon the general public;

B. Ensuring that soil will not be stripped and removed from lands in the more scenic parts of the City, leaving the same barren, unsightly, unproductive, and subject to erosion and the hazards of subsidence and faulty drainage;

C. Encouraging the planning, design and development of building sites in such fashion as to provide the maximum in safety and human enjoyment, while adapting development to and taking advantage of the best use of the natural terrain;

D. Encouraging and directing special attention toward retaining, insofar as practical, the natural planting and a maximum number of existing trees;

E. Ensuring any impact to sensitive biological resources, as defined by CVMC 17.35.030, is consistent with the goals and policies of the Chula Vista MSCP subarea plan.

15.04.010 Definitions.

The following words and phrases, when used in this chapter, shall be construed as defined in this section:

"Appurtenant structures" means manmade structures related to and necessitated by the proposed grading and includes paved drainage ditches, inlet structures, lined channels, culverts, outlet structures and retaining walls.

"Building pad" means that portion of an embankment and/or excavation contained within an area bounded by a line five feet outside the foundation footing.

"Building site" means that portion of an embankment and/or excavation containing the building pad(s) and lying within an area bounded by the top of slopes and/or toe of slopes within the lot or parcel.

"Certify" or "certification" means a signed written statement that the specific inspection and tests which were required have been performed and that the works comply with the applicable requirements of this chapter, the plans, and the permit.

"Clearing" means the cutting of natural vegetation by any means, without disturbance to the soil and root system.

"Clearing and grubbing permit" means a permit issued pursuant to this chapter that allows clearing and grubbing that is not in association with other land development work.

"Compaction" means densification of a soil or rock fill by mechanical or other acceptable procedures.

"Contract, private" means an agreement between a property owner and a qualified contractor to do land development work.

"Contractor" means a contractor licensed by the state to do work covered by this chapter. A contractor may be authorized to act for a property owner in doing such work.

“Embankment” or “fill” means any act by which earth, sand, gravel, rock or any other material is deposited, placed, pushed, dumped, pulled, transported or moved to a new location and the conditions resulting therefrom.

“Embankment, uncontrolled” means any embankment constructed as land development on which no soil testing was performed or no compaction reports or other soil reports were prepared or submitted.

“Engineer, private” means a civil engineer registered by the state. A private engineer may be authorized to act for a property owner in doing work covered by this chapter.

“Engineering geologist” means a certified engineering geologist, registered by the state, who is engaged in the practice of applying geological principles and data to engineering problems dealing with naturally occurring rock and soil for the purpose of assuring that geological factors are recognized and adequately interpreted in engineering practice.

“Erosion” means the process by which the ground surface is worn away by the action of water or wind.

“Excavation or cut” means any earth, sand, gravel, rock or any similar material which is cut into, dug, quarried, uncovered, removed, displaced, relocated or bulldozed by man, and the conditions resulting therefrom.

“Grade” means the elevation and cross-sections established for the finished surface. All grades shall be based upon the official datum of the City.

“Grading” means any excavating or filling or combination thereof and shall include the land in its excavated or filled conditions.

“Grubbing” means the removal of natural vegetation by any means including removal of the root system.

“Land development permit” means a permit issued pursuant to this chapter to conduct land development work.

“Land development work” means the making of excavations and embankments on private property and the construction of slopes, drainage structures, fences and other facilities incidental thereto, where it is necessary to safeguard life, limb, health, property and public welfare by regulating and controlling the design, construction and quality of materials. Land development work also includes other associated grading, and clearing and/or grubbing conducted in preparation for such development.

“Landscape architect” means a landscape architect, registered by the state, who performs professional work in physical land planning and integrated land development, including the design of landscape planting programs.

“Landscape manual” means the current “City of Chula Vista Landscape Manual” approved by resolution of the City Council.

“Minor slope” means a slope four feet or less in vertical dimension in either cut or fill, between single-family lots and not parallel to any roadway.

“Natural terrain” means the original contour of a site prior to any grading.

“Permittee” means any person to whom a permit is issued pursuant to this chapter.

“Property owner” means the owner, subdivider or developer of real property which will be benefited by the proposed land development work.

“Property, public” means property owned in fee by the City, or dedicated for public use.

“Public improvement” means publicly owned construction, structures or facilities in the public right-of-way designed for the public use, safety or general welfare.

"Public rights-of-way" means public easements or dedications for streets, alleys and/or other use.

"Rough grading" is the condition where the ground surface approximately conforms to the design grade, generally within 0.5 feet.

"Slope" means the inclined exposed surface of a fill, excavation or natural terrain.

"Slope, natural" means the predominant slope or slopes of land in its original condition prior to any grading.

"Soil engineer" means a civil engineer registered by the state who submits evidence to the satisfaction of the City Engineer that:

1. He is engaged in the practice of civil engineering and spends a majority of his time in the field of applied soil mechanics and foundations engineering;

2. He has at least four years of responsible practical experience in the field of applied soil mechanics;

3. He is qualified to make the investigations and determinations, render the reports and opinions, and perform the duties of a soil engineer as required by this chapter.

All persons meeting the qualifications set forth above shall be recognized by the City Engineer as qualified to perform soil engineering under the provisions of this chapter.

"Soil, expansive" means any soil which swells more than three percent when prepared and tested by a method approved by the City Engineer.

"Subdivider" means a person, firm, corporation, partnership or association who causes land to be divided into one or more subdivisions for himself or others as defined by those sections of the Government Code known as the Subdivision Map Act.

15.04.015 Permit required for all land development work and soil investigations.

No person, either as property owner, contractor, private engineer or otherwise, shall do or shall cause to be done any land development work without first having obtained either a land development permit or clearing and grubbing permit to do such work and having held a pregrading or preclearing meeting if required by the City Engineer, except as provided in CVMC 15.04.150.

Soil investigations by a soil engineer or engineering geologist which involves trenching or scarifying of the natural terrain shall require a permit. A special investigation fee shall be paid prior to issuance of such permit.

15.04.017 Other required permits.

Prior to the City's issuance of a land development permit or clearing and grubbing permit, the applicant shall show compliance with a habitat loss and incidental take (HLIT) permit issued pursuant to Chapter 17.35 CVMC, for areas that contain sensitive biological resources, as defined by CVMC 17.35.030, and are within:

A. Development areas outside of covered projects, as defined by CVMC 17.35.030;

B. Seventy-five (75) to 100 percent conservation areas, as defined by CVMC 17.35.030; or

C. One hundred (100) percent conservation areas, as defined by CVMC 17.35.030.

Prior to the City's issuance of a land development permit or clearing and grubbing permit for areas that contain sensitive biological resources, as defined by CVMC 17.35.030, and are within the development areas of covered projects, as defined by CVMC 17.35.030, the applicant shall show compliance with all applicable provisions of previous project entitlements issued by the

City and with any applicable conditions of coverage listed in the Chula Vista MSCP subarea plan, as determined by the director of planning and building or designee.

Prior to the City's issuance of a land development permit or clearing and grubbing permit for areas that will result in impacts to wetlands or to listed noncovered species, as defined by CVMC 17.35.030, the applicant shall obtain, and show compliance with, all applicable federal and/or state permits.

15.04.018 Additional Planning, Design, Construction, and Post-Construction Requirements for All Land Development and Redevelopment Projects.

The City of Chula Vista Development Storm Water Manual is a part of this Ordinance and is incorporated by reference as though set forth in full in this Ordinance. No land owner or development project proponent in the City of Chula Vista shall receive any City permit or approval for land development activity or significant redevelopment activity unless the project meets or will meet the requirements of this Ordinance and the Development Storm Water Manaul.

The Development Storm Water Manual includes, among other requirements, the following requirements:

- Phased grading during construction (limitation of grading to a maximum disturbed area before either temporary or permanent erosion controls are implemented)
- Compliance with Low Impact Development (LID) principles
- Compliance with Interim Hydromodification Criteria and Hydrograph Modification Management Plan (HMP) requirements
- Compliance with post-construction Best Management Practices self inspections, maintenance, record keeping, and maintenance certification

The City of Chula Vista generally accepts standards established in the most up-to-date editions of the following documents for Best Management Practices, however, the City Engineer will make the final determinatiion to approve or disapprove any proposed BMPs:

- Stormwater Best Management Practice Handbooks developed by the California Stormwater Quality Association
- Caltrans Treatment BMP Technology Report
- County of San Diego Low Impact Development Handbook

Long-term maintenance obligations of all proposed Best Management Practices must be approved in an agreement that runs with the land in perpetuity prior to the issuance of a grading or other construction permit.

15.04.020 Compliance with conditions and specifications required – Deviations from standards permitted when.

Except as herein provided, all land development work done shall be done in accordance with the conditions of the required permit, and shall conform to the approved plans, standard drawings, specifications, landscape manual, subdivision manual, and general conditions as may be determined by the City Engineer to be applicable to the work. Such documents are on file in the office of the City Engineer and shall be kept for public distribution in accordance with fee schedules in said office. In connection with land development work, deviations from the requirements of these standards may be permitted by the City Engineer based upon written reports and recommendations by qualified and recognized authorities subject to review by the City.

15.04.025 Provisions not to affect other code requirements.

This chapter shall not affect the requirements of any other chapter of this code requiring permits, fees or other charges, including those for sewer and services, or affect any provisions concerning the granting of franchises.

15.04.030 Facilities within public rights-of-way – Assignment of costs.

The following provisions of this section shall apply unless provision is made by an agreement pursuant to CVMC 15.04.085 through 15.04.095:

A. The property owner shall pay the City for all the cost of placing, repairing, replacing or maintaining a City-owned facility within a public right-of-way when the City's facility has been damaged or has failed as a result of the construction or existence of the owner's land development work during the process of such work.

B. The costs of placing, replacing or maintaining the City-owned facility shall include the cost of obtaining a necessary alternate easement.

15.04.035 Commencement and completion of work – Extension of time.

All land development work shall be executed in accordance with the provisions of this chapter and the terms of the permit issued by the City Engineer. Once commenced, work shall be carried out diligently until completed. Unless otherwise specified upon the permit, all work shall be completed within 180 days from the date of issuance of the permit. The City Engineer may grant one extension of time for the completion of the work. Such extension shall not exceed the original length of time designated on the permit.

15.04.040 Slopes – Design requirements generally.

The inclination of each cut or fill surface resulting in a slope shall not be steeper than two horizontal to one vertical (2:1) except for minor slopes as herein defined.

All constructed minor slopes shall be designed for proper stability considering both geological and soil properties. A minor slope may be constructed no steeper than one and one-half horizontal to one vertical (1.5:1) contingent upon:

A. Submission of reports by both a soil engineer and a certified engineering geologist containing the results of surface and subsurface exploration and analysis. These results should be sufficient for the soil engineer and engineering geologist to certify that in their professional opinion the underlying bedrock and soil supporting the slope have strength characteristics sufficient to provide a stable slope and will not pose a danger to persons or property; and

B. The installation of an approved special slope planting program and irrigation system.

15.04.045 Building pads – Design requirements.

All building pads and building sites shall drain to an approved drainage facility unless otherwise approved by the City Engineer.

15.04.050 Embankment requirements – Soil engineer may be required.

A. Unless otherwise specified on the permit, all embankments for land development work shall be compacted in conformance with the provisions of the standard specifications. The permit may require that an engineering geologist and/or soil engineer, as appropriate, be responsible for the inspection and testing of the embankment work and inspection of excavations. The soil engineer and engineering geologist, if one or both are required by the permit, shall file with the City Engineer reports as required by CVMC 15.04.140 and 15.04.270(B).

B. Where, in the opinion of the City Engineer, the construction of an uncontrolled embankment would not be contrary to the public interest or welfare, a permit for such land development may be issued in accordance with CVMC 15.04.285. Plans for uncontrolled embankment shall be complete in all respects except for soil analysis and compaction requirements. Uncontrolled embankment slopes shall not be steeper than three horizontal to one vertical (3:1).

15.04.055 Expansive soil grading requirements.

If, during the land development work, expansive soil is found within two feet in cut or three feet in fill of the finished grade of any area intended or designed as the location for a building, the permittee shall cause such expansive soil to be removed from such building area to a minimum depth of two feet in cut or three feet in fill and replaced with nonexpansive soil properly compacted; provided, however, the City Engineer may, upon receipt of a report by a soil engineer certifying that he has investigated the property and recommending a design or footings or floor slab or other procedure that in his opinion will alleviate any problem created by such expansive soil, waive the requirement that such expansive soil be removed and replaced with nonexpansive soil.

15.04.060 Landscaping and irrigation system.

All cut and fill slopes shall be planted and irrigated in accordance with an approved plan. Said plan shall be prepared in accordance with the City landscape manual and shall be approved by the City Landscape Architect, and the Director of Planning and Building or designee, as necessary.

15.04.065 Slopes – Tops and toes to be rounded.

The tops and toes of all major slopes in public view shall be rounded in accordance with the City standard drawings.

15.04.070 Slopes – Blending into existing terrain.

All manmade slopes shall be blended into existing terrain to produce a natural-appearing transition from the face of manmade slopes into natural ground. This blending shall be accomplished in accordance with City of Chula Vista standard drawings. Undulating tops and toes of slopes and variable slope ratios should be used to achieve natural-appearing slopes.

15.04.075 Slopes – Horizontal slope rounding.

Rounding shall be accomplished in accordance with the City of Chula Vista standard drawings.

15.04.080 Preservation of existing monuments.

All existing survey monuments shall be shown on the grading plan. Evidence indicating that arrangements have been made for the preservation and/or relocation of existing monuments shall be submitted to the City Engineer prior to issuance of a land development permit.

15.04.085 Work in conjunction with subdivision of property – Requirements generally.

A subdivider of land required to do land development work as the result or condition of the approval of the tentative map shall perform such work under one of the following procedures, as set forth in CVMC 15.04.090 and 15.04.095.

15.04.090 Work in conjunction with subdivision of property – Standard land development permit – Requirements.

Should the subdivider desire to do certain land development work prior to entering into a contract with the City to install and complete all subdivision and land development work, he may make application to do so under a standard land development permit or clearing and grubbing permit, if the land development work is limited to clearing and grubbing only. This application shall be accompanied by detailed plans and specifications based upon the approved tentative map and in conformity with the provisions of CVMC 15.04.017 and 15.04.040 through 15.04.075. A schedule and estimate based upon such plans and specifications shall accompany the application.

15.04.095 Work in conjunction with subdivision of property – Contract for completion of improvements – Requirements – Bonds.

A. Should the subdivider desire to do certain land development work in conjunction and concurrently with installation and construction of required public improvements, he may enter into a contract with the City to make, install and complete all improvements and land developments in accordance with approved plans and specifications.

B. Prior to any construction of improvements and/or land development work, the subdivider shall have complied with and performed the following requirements:

1. Subdivider shall file with the City Clerk detailed plans and specifications (or a statement that work will be accomplished in accordance with standards and specifications of the City) approved by the City Engineer for all public improvements and land development together with a detailed cost estimate approved by the City Engineer and an estimate of time reasonably necessary to complete the same.

2. Subdivider shall enter into a contract with the City to make, install and complete within the time fixed by the City Engineer, but in no case more than two years from the date of execution of said contract, all improvements and land development in accordance with the approved plans, and shall cause to be filed with the City Clerk a faithful performance bond payable to the City which shall ensure the performance of the contract and the completion of the improvements and land development work. The subdivider shall additionally file with the City Clerk a labor and material bond to inure to the benefit of those persons entitled to the protection of Part III, Title IV, Chapter II of the Code of Civil Procedure. A cash deposit or letter of credit may be submitted in lieu of bonds hereinbefore described. Bonds and other forms of guarantee

shall be in full conformity with the requirements for subdivision guarantees as set forth in the subdivision ordinance codified at CVMC Title 18.

3. The bond or other guarantee shall be based on the City Engineer's estimate of the cost of the work and in accordance with the following schedule:

a. Faithful performance bond:
Public improvements: 50 percent of cost estimate,
Land development: 50 percent of cost estimate;

b. Labor and material bond:
Public improvements: 50 percent of cost estimate,
Land development: 50 percent of cost estimate.

15.04.100 Building construction – Land development permit required – Prerequisite to building permit.

A. An owner of land desiring to do land development work incidental to and in connection with the construction of a building or structure shall present an application and obtain a land development permit or clearing and grubbing permit. The City Engineer may require an on-site field inspection of the rough grading phase of the work between representatives of the City's Engineering, Planning and Building Departments and the permittee; civil engineer; soil engineer; biologist, as defined by CVMC 17.35.030; and engineering geologist, as appropriate, before the issuance of a building permit. The permittee shall request a field inspection of the rough grading phase, if required, five working days prior to the inspection. The rough grading phase of the land development work described on form PW-E-106B shall be completed prior to the issuance of a building permit except as provided below. The City may suspend any building permit where it is found that land development work is being done or has been done without a land development permit or clearing and grubbing permit until a land development permit or clearing and grubbing permit is issued. The City may not certify to the completion of the building where land development work has been done until a land development permit is obtained and certified as complete.

B. Notwithstanding any provisions to the contrary in subsection (A) of this section, walls which are designed and constructed to retain earth and are also integral portions of buildings may be constructed under building permits concurrently with grading work within the project site.

15.04.105 Damaged or disused public improvements – Notification – Corrective action required.

The City Engineer shall notify the property owner of such damage or failure as set forth in CVMC 15.04.030. The City may withhold certification of the completion of a building or other permitted work where a notice has been issued.

15.04.110 Public to be protected from hazards during construction – Fences and barricades required when.

During the land development work, the contractor and owner shall take all necessary measures to eliminate any hazard resulting from the work to the public in its normal use of public property or right-of-way. Any fences or barricades installed shall be substantially constructed and shall be properly maintained as long as the hazard resulting from the work exists.

15.04.115 Safety precautions.

If at any stage of the work the City Engineer determines that further land development work as authorized is likely to endanger any public or private property or result in the deposition of debris on any public way or interfere with any existing drainage course, the City Engineer may require, as a condition to allowing the work to be continued, that such reasonable safety precautions be taken as he considers advisable to avoid such likelihood of danger. The permittee will be responsible for removing any silt and debris deposited upon adjacent and downstream public or private property resulting from his grading operations. Silt and debris shall be removed, and damage to adjacent and downstream property repaired, as directed by the City Engineer. Erosion and siltation control may require temporary or permanent siltation basins, energy dissipaters, or other measures as field conditions warrant, whether or not such measures are a part of approved plans.

15.04.120 Fence specifications – Modification permitted when.

A. Where a slope is created adjacent to a public right-of-way or other publicly used property, and the top of slope is within 10 feet of the property line and the height of the slope is three feet or greater and steeper than four horizontal to one vertical (4:1), a 48-inch-high fence shall be erected between property line and the top of slope. The design of said fence shall be approved by the City Engineer. "Publicly used property" is that property used frequently by persons other than the residents.

B. The City Engineer may modify or delete the above requirements where it is evident that the land development work will present no hazard to the adjacent property or public right-of-way.

15.04.125 Noncompliance.

A. If, in the course of fulfilling his responsibility under this chapter, the private engineer or the soil engineer or biologist, as defined in CVMC 17.35.030, finds that the work is not being done in substantial conformance with this chapter or the plans approved by the City Engineer or in accordance with accepted practices, he shall immediately notify the permittee, the person in charge of the land development work and the City Engineer, in writing, of the nonconformity and of the corrective measures which should be taken.

B. In the event the work does not conform to the permit or the plans or specifications or any instructions of the City Engineer, notice to comply shall be given in writing by the City Engineer to the permittee. As soon as practical after a notice to comply is given, the permittee or his contractor shall begin to make the corrections.

C. If the City Engineer finds any existing conditions not as stated in the application, land development permit, clearing and grubbing permit, or approved plans, he may refuse to approve work until approval is obtained for a revised grading or clearing and grubbing plan which will conform to the existing conditions.

15.04.130 Modification of approved plans.

A. Modifications of the approved grading or clearing and grubbing plan must be in writing and be approved by the City Engineer and/or his designated representative. All necessary soil and geological reports shall be submitted with any substantial proposal to modify the approved grading plan.

B. No land development work in connection with any proposed modifications shall be permitted without the approval of the City Engineer and/or his designated representative.

15.04.135 Responsibility of permittee – Compliance with plans and requirements.

All permits issued hereunder shall be presumed to include the provision that the permittee, his agent, contractors and employees shall carry out the proposed work in accordance with the approved plans and specifications and in compliance with all the requirements of the permit and this chapter. The civil engineer shall file a report as specified in CVMC 15.04.140.

15.04.140 Completion of work – Final reports.

Upon completion of the work the following reports shall be filed with the City Engineer unless waived by him:

A. A written statement by the private engineer that all land development work and/or associated drainage facilities have been completed in conformance with CVMC 15.04.165 and 15.04.225.

B. An as-built plan of the completed work prepared by a civil engineer.

C. A final as-built soil engineer's report which shall include a written statement that inspections and tests were made during the grading, and that in his opinion all embankments and excavations are in accordance with the provisions of this chapter and the permit and are acceptable for their intended use. Soil-bearing capacity (except where the City Engineer determines such is inapplicable), summaries of field and laboratory tests and locations of tests if not previously submitted, and the limits of compacted fill on an as-built plan shall be included in the report. The report shall include reference to the presence of any expansive soil or other soil problems which, if not corrected, would lead to structural defects in buildings constructed on the site. If such report discloses the presence of such expansive soil or such other soil problems, it shall include recommended corrective action designed to prevent structural damage to each building proposed to be constructed upon the site. The final as-built report shall also contain a seepage statement or study as appropriate.

D. A final as-built engineering geology report by an engineering geologist based on the as-built plan, including specific approval of the grading as affected by geological factors. Where required by the City Engineer, the report shall include a revised geologic map and cross-sections and recommendations regarding building restrictions or foundation setbacks.

E. A final biology report, if determined necessary by the Director of Planning and Building or designee, which includes an assessment of the impacts on sensitive biological resources affected by the land development work.

15.04.145 Notification of completion.

The permittee shall notify the City Engineer when the land development work is ready for final inspection. He shall also notify the City Landscape Architect and the Director of Planning and Building, or designee, when planting and irrigation are completed. Final approval shall not be given until all work, including installation of all drainage structures and facilities, sprinkler irrigation systems, planting and all protective devices, has been completed and any required planting established and all as-built plans and reports have been submitted. The City Engineer may accept in writing the completion of all work, or any portion of the work, required by the permit issued in accordance with this chapter and thereupon accept said work or portion thereof.

15.04.150 Exemptions from applicability designated.

No person shall do any land development work without first having obtained a land development permit or clearing and grubbing permit, except for the following:

A. The depositing of materials in any disposal area operated or licensed by the City;

B. The making of excavation on any site or contiguous sites held under one ownership, in which all of the following are characteristic of the work:

1. A cut slope having a maximum steepness of three horizontal to one vertical,

2. A cut having a maximum vertical depth of three feet at any point and a maximum average depth of 18 inches,

3. No adverse effect upon an existing drainage pattern,

4. A top of slope no closer than one foot from an exterior boundary line, and

5. The movement of less than 250 cubic yards of material;

C. The making of an embankment on any site or contiguous sites held under one ownership, in which all of the following are characteristic of the work:

1. None of the embankment exceeds three feet in vertical depth or has an average maximum depth in excess of 18 inches,

2. None of the embankment is placed on existing ground having a slope steeper than five horizontal to one vertical (5:1),

3. Proposed fill slopes are no steeper than three horizontal to one vertical (3:1),

4. The embankment does not change or adversely affect the existing drainage pattern,

5. Adequate provisions are proposed to protect the embankment from erosion,

6. The toe of the embankment is no closer than one and one-half feet to an exterior property line, and

7. The total volume of embankment does not exceed 250 cubic yards of material;

D. Excavation for foundations of buildings, structures, basements, cellars, swimming pools or basins which are authorized by appropriate permits obtained from the Planning and Building Department;

E. Excavation or embankment performed by a governmental agency, franchise holder, or its contractor incidental to the construction of roadways, pipelines, or utility lines within its rights-of-way;

F. "Foundations," as referred to herein, shall not be construed to include foundations for retaining walls, drainage structures, or other structures appurtenant to the land development;

G. Routine maintenance of ornamental landscaping;

H. Agricultural operations, as defined pursuant to CVMC 17.35.030;

I. Maintenance of vegetation in accordance with an approved habitat management plan, or other such similar plan, if consistent with such plan, and prepared pursuant to the Chula Vista MSCP subarea plan;

J. Maintenance of vegetation in a designated fuel modification zone, consistent with the Chula Vista MSCP subarea plan;

K. Clearing and grubbing in an area located entirely within a mapped development area, as defined by CVMC 17.35.030, where it has been demonstrated to the satisfaction of the director of planning and building, or designee, that no sensitive biological resources, as defined by CVMC 17.35.030, exist;

L. Clearing and grubbing entirely located in a development area outside of a covered project, as defined by CVMC 17.35.030, in an area that is one acre or less in size, is not part of a larger contiguous clearing and grubbing project, and does not impact sensitive biological resources, wetlands or listed noncovered species, as defined by CVMC 17.35.030.

15.04.155 Contractor – Qualifications required.

Every person doing land development work shall meet such qualifications as may be determined by the City Engineer and/or director of planning and building to be necessary to protect the public interest. The City Engineer and/or Director of Planning and Building may require an application for qualification which shall contain all information necessary to determine the person's qualifications to do the land development work.

15.04.160 Work to be performed by licensed contractor.

All land development work shall be performed by a contractor licensed by the state.

15.04.165 Inspection of land development work – Responsibility therefor.

A. City Engineer. The City Engineer shall be responsible for all inspections of work not otherwise delegated to some other person. These inspections include, but are not limited to, drainage facilities, fencing, and compliance with state and City regulations in regard to the health and safety of the general public.

B. Private Engineer. The private engineer shall be responsible for all surveying work necessary for proper construction of the grading and drainage facilities. He shall inspect the site to ensure that the embankment and cut slopes are placed at their proper line and grade. He shall, prior to the release of bonds and surety, provide a written statement that, in his professional opinion, all work incorporated in the grading and drainage plans, authorized under the grading permit to include grading, drainage, and construction of appurtenant structures, has been constructed to the lines and grades in substantial conformance with the approved plans, and any approved revisions thereto.

C. Soil Engineer. The soil engineer shall be responsible for the testing of compaction and determination of stability of the various slopes. He shall, prior to release of the bond and surety, provide a written statement that inspections and tests were made by him, or under his supervision, and that, in his professional opinion, all embankments have been compacted to City standards and in accordance with the earthwork specifications for the project.

D. Landscape Architect. All landscaping work shall be designed under the supervision of a landscape architect; however, a registered civil engineer or registered architect may be responsible for the inspection of all landscaping and irrigation required in accordance with the grading permit and plans if it is in conjunction with a project he has been contracted to do. He shall, prior to the release of the bond and surety, provide a written statement that in his professional opinion all work incorporated in the landscape and irrigation plans authorized under the permit has been constructed in accordance with the approved plans and revisions thereto.

E. Biologist. A biologist, as defined by CVMC 17.35.030, shall be required to inspect all land development or clearing and grubbing sites prior to work occurring in areas of sensitive biological resources, as defined by CVMC 17.35.030, to ensure compliance with the permit issued pursuant to this chapter. The biologist shall identify areas to be protected with appropriate staking and fencing, ensure that these sensitive biological resources, as defined by CVMC 17.35.030, are correctly identified on the grading or clearing and grubbing plan, and inspect the staking and fencing after installation to ensure installation according to plan. In addition, the biologist shall conduct an inspection after the work is completed. Prior to the release of the bond and surety, the biologist shall provide a written statement that in his/her professional opinion all work was conducted as authorized under the permit in accordance with approved plans and revisions thereto.

F. Prior to the release of building permits for any given lot or lots, the private engineer shall submit a statement (Form PW-E-106B) as evidence that rough grading for land development has been completed within standard tolerance in accordance with the approved plans, and that all embankments and cut slopes and pad sizing are as shown on the approved plans.

The soil engineer will submit a statement that all embankments, under his direction, have been completed to an indicated 90 percent relative compaction of dry density.

15.04.170 Transfer of responsibility for approval.

If the private engineer, soil engineer, landscape architect, engineering geologist, or biologist, as defined in CVMC 17.35.030, of record is changed during the course of the work, the work shall be stopped until the replacement has agreed to accept the responsibility within the area of their technical competence for approval upon completion of the work.

15.04.175 Plans and reports to be prepared by engineers.

A. Plans for public improvements and land development work authorized under this chapter shall be prepared by a civil engineer. Where soil or geologic reports or soil and geologic investigations are required, the reports and investigations shall be prepared and conducted by an engineering geologist and/or soil engineer as appropriate.

B. A seepage statement or study is required as a part of all soil reports. All soil engineering, geologic, and geologic engineering reports shall consist of a preliminary and a final as-built report. Whenever blasting is to be performed or bedrock is to be exposed, a seepage study must be performed to determine method of handling excess water infiltration.

C. Plans prepared for land development work, which includes clearing and grubbing only, shall be prepared with input from a biologist.

15.04.180 Private contract performance bond – Required when – Issuance conditions generally.

Persons performing private contract work under a permit issued in accordance with this chapter shall furnish a bond/bonds or cash deposit or instrument of credit executed by the owner or his agent, or both, as principal in accordance with the provisions codified in this section through CVMC 15.04.215.

The performance bond/bonds shall be issued by a surety company authorized to do business in the state and shall be approved as to form by the City Attorney. The bond/bonds shall be in favor of the City and shall be conditioned upon the completion, free of liens, of the work authorized by the permit in accordance with the requirements of this chapter and the conditions prescribed by the permit. Slope planting and irrigation bonds will be separate from the performance bond requirements for appurtenant structures and grading. They will be held in the office of the director of planning and building until satisfactory compliance with landscaping and irrigation has been accepted.

15.04.185 Private contract performance bond – Conditions – Notice of default – Contents – Effect.

The bond/bonds shall be conditioned upon the payment to the City of any costs incurred by the City or its agent in completing the required work or performing work necessary to leave the site in a nonhazardous condition and restoring habitat as may be needed. The bond/bonds shall be further conditioned upon the payment to the City or its agents in completing the work required to

protect or repair adjacent public or private properties from damage from work performed under the permit. Whenever the City Engineer finds that a default has occurred in the performance of any term or condition of work authorized by a permit, he shall give written notice of such default to the principal and surety of the bond. Such notice shall state the work remaining to be done, the estimated cost of completion and the time estimated by the City Engineer to be necessary for the completion of the work. After the receipt of such notice, the principal or the surety must, within the time specified, either complete the work satisfactorily or deposit with the City an amount equal to the City Engineer's estimate of the completion cost plus an additional sum equal to 25 percent of such cost.

15.04.190 Private contract performance bond – Principal or surety liable for cost of completing work when.

In the event that the principal or surety fails to complete such work within the time specified in the notice, or fails to deposit the estimated cost plus 25 percent with the City, the City Engineer may cause the required work to be completed. The principal and the surety shall be liable for the cost of completing such work.

15.04.195 Private contract performance bond – Liability of City for performance of certain work.

If the principal or surety deposits the estimated cost plus 25 percent as set forth in the notice, the City Engineer shall cause the required work to be completed. The unexpended money shall be returned to the depositor at the completion of such work, together with an itemized accounting of the cost. The principal and surety shall hold the City blameless from any liability in connection with the work so performed by the City or contractor employed by the City. The City shall not be liable in connection with such work other than for the expenditure of said money.

15.04.200 Private contract performance bond – Cash deposit accepted in lieu when – Default correction procedure.

In lieu of a bond, the permittee may post a cash deposit with the director of finance in an amount equal to the required bond. Notice of default as provided above shall be given to the principal, and if the default is not corrected within the time specified, the City Engineer should proceed without delay and without further notice of proceeding whatever to use the cash deposit or any portion of such deposit to complete the required work. The balance, if any, of such cash deposit shall, upon the completion of the work, be returned to the depositor or to his successors or assigns after deducting the cost of the work.

15.04.205 Private contract performance bond – Not required when.

No performance bond under the provisions of this chapter shall be required from the state, or any of its political subdivisions, or any governmental agency.

15.04.210 Private contract performance bond – Required from certain contractors when – Exception.

A contractor working for the state or any of its political subdivisions or any governmental agency shall present a performance bond unless proof is submitted that the work is covered by a bond inuring to the benefit of the state or agency.

15.04.215 Private contract performance bond – Conditions – Compliance with certain terms and provisions required.

Every bond or other performance guarantee shall include conditions that the permittee shall:

A. Comply with all provisions of this chapter;

B. Comply with all terms and conditions of the land development permit or clearing and grubbing permit;

C. Complete the land development work within the time limit specified in the land development permit or clearing and grubbing permit.

15.04.220 Private contract performance bond – Method of estimating amount – Schedule.

The amount of the bonds or cash deposits covering a specific job shall be based on the amount of the estimate submitted by the person doing the work and approved by the City Engineer and in accordance with the following schedule:

A. Appurtenant structures: 100 percent of the estimated cost of retaining walls, drainage facilities or other grading appurtenances;

B. Grading: 25 percent of the estimated cost. This percentage may be varied by the City Engineer to fit conditions which are unusual in his opinion;

C. Slope planting and irrigation: 100 percent of the estimated cost of required landscaping and irrigation facilities;

D. Maintenance of landscaping: 100 percent of the estimated cost of maintaining landscaping for the period specified upon the permit;

E. Habitat restoration: 100 percent of the estimated cost of repairing or replacing sensitive biological resources, as defined by CVMC 17.35.030, including short-term maintenance and long-term monitoring (typically five years), as specified by a biologist.

15.04.225 Release of bonds/security.

Bonds and other security shall be released 35 days after filing a "notice of completion" with the county recorder (recorded copy to City Engineer) for improvements accepted by this City and upon acceptance of completed Form PW-E-106 ("request for release of bonds") submitted by the permittee. This form is available in the office of the City Engineer. Such form may not be accepted until the end of the maintenance period for the required landscaping, unless a separate bond is or has been submitted to guarantee maintenance of landscaping.

15.04.230 City Engineer – Enforcement responsibility and permit issuance authority.

The City Engineer shall enforce the provisions of this chapter. He shall, upon application by qualified persons, issue permits in connection with land development work when all applicable conditions established by this chapter for such permits have been met.

15.04.235 City Engineer – Powers and duties generally.

The City Engineer shall cause land development work being done without a permit to be stopped until a permit has been obtained. He may require that such work done without a permit be removed or corrected, including habitat restoration, at the expense of the responsible person. Where land development work involves an embankment improperly constructed or constructed without adequate testing, he shall cause such embankment to be reconstructed or, in lieu thereof, shall cause a declaration of improper land development to be recorded in the office of the county recorder. He shall have work done in connection with land development to ensure compliance

with the provisions of this chapter and shall release the bond when such work is properly completed.

15.04.240 City Engineer – Authority to determine applicable fees.

The City Engineer shall determine the fees applicable under the provisions of this chapter.

15.04.245 City Engineer – Duty to consider certain recommendations and deny certain applications.

When the nature of the work requested is such that it comes within the requirements of, or affects the operation of, any other department of the City, the City Engineer shall obtain and consider the recommendations of applicable City departments in determining the disposition of the application. He shall deny applications which are not in the interest of the public health, safety or general welfare, or do not constitute a reasonable use of land as indicated by the existing zoning or an approved land use plan.

15.04.250 City Engineer – Grounds for cancelling permit or amending plans.

The City Engineer may cancel a permit or may require the plans to be amended when it is in the interest of public health, safety and welfare and under any of the following:

A. Upon the request of the permittee;

B. When the facts are not as presented by the permittee in application;

C. When work as constructed or as proposed to be constructed creates a hazard to public health, safety and welfare.

15.04.255 Appeals – Authorized when – Determination authority.

An applicant may appeal the City Engineer's denial of, or the conditions of approval of, an application for a land development or clearing and grubbing permit to the City council.

15.04.260 Appeals – Time limit for filing – Form.

The applicant for a permit issued pursuant to this chapter, or the permittee, may appeal to the City Council from any decision of the City Engineer within ten working days after said decision. Appeals shall be in writing and shall state the specific nature of the appeal. Appeals shall be filed with the City Clerk.

15.04.265 Permits – Application – Procedure generally – Detailed plan required.

Applications for permits authorizing land development work shall be made in accordance with procedures established by the City Engineer. Applications shall be accompanied by such detailed plans, specifications and schedules as listed in the subdivision manual, landscape manual, and as otherwise required by the City Engineer. See CVMC 15.04.290 and 15.04.295 regarding fees.

15.04.270 Permits – Application – Detailed plans and specifications required.

A. Detailed plans and specifications for land development shall include, but not be limited to:

1. Those requirements listed in the subdivision manual;

2. A vicinity sketch or other data adequately indicating the site location;

3. A plot plan showing the location of the land development boundaries, lot lines, and public and private rights-of-way lines;

4. A contour map showing the present contours of the land and the proposed contours or grid elevations. Contours will extend beyond the limits of grading at least 100 feet;

5. The location of any buildings or structures within the land development boundaries, and the location of any building or structure on adjacent property which is within fifteen feet of the land development boundary;

6. Typical sections showing details concerning proposed cut and fill slopes;

7. Adequate plans of all drainage devices, walk or other protective devices to be constructed in connection with, or as a result of, the proposed work, together with a map showing the drainage area of land tributary to the site and the estimated runoff of the area served by any drainage facilities and devices;

8. An estimate of the quantity of excavation and fill involved, quantities relative to construction of appurtenant structures, estimate of cost and estimated starting and completion dates;

9. A landscape and irrigation plan indicating the total landscaped square footage, plant quantity, spacing, type and location and the layout of the irrigation system, and an estimate of cost of the landscaping and irrigation facilities;

10. A map, prepared by a biologist, as defined by CVMC 17.35.030, illustrating the proposed land development work relative to sensitive biological resources in compliance with the applicable habitat loss and incidental take permit issued pursuant to Chapter 17.35 CVMC;

11. An erosion control plan as may be required by the City Engineer or the director of Planning and Building.

B. A soil investigation may be required to correlate surface and subsurface conditions with the proposed land development plan. The results of the investigation shall be presented in a soil report by a soil engineer which shall include, but not be limited to: location of faults; data regarding the nature, distribution, and strength of existing soil and rock on the site; the soil engineer's conclusion; recommendations for grading requirements, including the correction of weak or unstable soil conditions and treatment of any expansive soil that may be present; and his opinion as to the adequacy of building sites to be developed by the proposed land development operations. The soil engineer shall provide an engineering geology report by an engineering geologist when required by the City Engineer. A seepage statement or a study is required as a part of all soil reports. Whenever blasting is to be performed or bedrock is to be exposed, a seepage study must be performed to determine method of handling excess water infiltration.

C. The City Engineer may require other data or information as he deems necessary. He may eliminate or modify any of these requirements where, in his opinion, they will serve no practical purpose.

15.04.275 Permits – Issuance – Prerequisites and contents.

The City Engineer shall issue permits for land development work upon approval of applications and plans, receipt of the prescribed fees and bonds, and receipt of letters from the private engineer, soil engineer, engineering geologist, landscape architect, biologist, and others, as required by the City Engineer, that they have been retained by the permittee to perform the work specified in CVMC 15.04.165. The permits shall include, or refer to, the conditions, plans and specifications which shall govern the work authorized.

15.04.280 Investigations authorized and required when – Fee.

The City Engineer may require the payment of the prescribed fees for special investigations when the proposed work or inquiries necessitate that special work be performed by the City. Special investigations shall include all requests for time extensions or variance requests and shall be accompanied by the special investigation fee.

15.04.285 Agreement required for uncontrolled embankments – Additional specifications.

A. Applications for land development permits involving uncontrolled embankments shall be accompanied by an agreement signed by the property owner. The agreement shall be prepared by the City Engineer and shall contain the following provisions and such other provisions as may in the opinion of the City Engineer afford protection to the property owner and City:

1. The land development work shall be designated as an uncontrolled embankment and shall be constructed in accordance with plans approved by the City Engineer.

2. The owner acknowledges that, as an uncontrolled embankment, the site is not eligible for a building permit unless special soil analysis and foundation design are submitted.

3. The land development work shall be done and maintained in a safe and sanitary manner at the sole cost, risk and responsibility of the owner and his successors in interest, who shall hold the City harmless with respect thereto.

B. The agreement for uncontrolled embankments shall be approved by the City Council and recorded by the City Clerk in the Office of the County Recorder as an obligation upon the land involved. The notice shall remain in effect until release of the agreement is filed by the City Engineer.

15.04.290 Fees – Collection – Method of estimation – Verification – Payment required – Exemptions.

A. Fees required by this chapter shall be collected by the City Engineer and deposited with the director of finance. Such fees shall be as presently designated, or as may in the future be amended, in the master fee schedule.

B. No permit shall be issued, and no land development work shall be permitted until the City Engineer has received the fees applicable under this chapter.

C. The state or any of its political subdivisions or any governmental agency shall file applications for permits and shall be issued permits as required by this chapter. No fees shall be required when the work is done by persons working directly for the state or agency.

D. The City Manager, or his designee, may authorize, without advance appropriation, the refund of fees required by this chapter to be collected, or such portion of the fees deemed appropriate for refund by the City Manager (net of costs incurred by the City in processing the permit application or unless the City has used the fees to construct facilities for a development for which the fees were paid), if the City Manager finds that the permit for which they were collected has been revoked, surrendered or terminated without use by the permittee and the refund is less than $100,000. All other refunds shall be authorized by the City Council.

15.04.295 Fees – Schedule for computation.

Fees shall be as presently designated, or as may in the future be amended, in the master fee schedule

15.04.305 Fees – To be doubled in certain cases – Effect of imposition.

In the event that land development work is commenced without a land development or clearing and grubbing permit, the City Engineer shall cause such work to be stopped until a permit is obtained. The permit fee, in such instance, shall then be the normally required permit fee, plus $500.00. The payment of the increased permit fees shall not relieve any person from fully complying with the requirements of this chapter in the performance of the work. Such fee shall defray the expense of enforcement of the provisions of this chapter in such cases.

When land development work commences without a permit and results in damage to sensitive biological resources, as defined by CVMC 17.35.030, restoration requirements (including maintenance and monitoring) shall be imposed at the sole discretion of the director of planning and building and the full cost of the restoration shall be borne by the property owner.

When land development work is inconsistent with a permit issued pursuant to Chapter 17.35 CVMC and results in damage to sensitive biological resources, as defined by CVMC 17.35.030, restoration requirements (including maintenance and monitoring) shall be imposed at the sole discretion of the director of planning and building and the full cost of the restoration shall be borne by the property owner. The payment of such fees or penalties as described above shall not prevent the imposition of any penalty prescribed or imposed by this chapter, Chapter 1.41 CVMC, or other federal or state law.

15.04.310 Violations – Declared unlawful and public nuisance – Abatement authority.

Any land development work commenced, done, maintained or allowed, contrary to the provisions of this chapter, shall be, and the same is hereby declared to be, unlawful and a public nuisance. Upon order of the City Council, or upon the determination of the City Manager or the City Attorney, necessary proceedings for the abatement, removal and/or enjoinment of any such public nuisance shall be commenced in the manner provided by law. Alternatively, the procedures to abate under Chapter 1.30 CVMC may be used. Any failure, refusal, or neglect by a responsible party to obtain a permit as required by this chapter shall be prima facie evidence of the fact that a public nuisance has been committed in connection with any land development work commenced or done contrary to the provisions of this chapter.

15.04.315 Abatement of dangerous conditions.

Where the City Engineer determines that land development work has created a danger to public or private property or has resulted in the deposition of debris on any public way or interferes with any existing drainage course, the City Engineer shall serve written notice on the property owner, describing the condition and requiring that the property owner abate the dangerous condition within ten days after the notice is received. If the property owner fails to so abate the condition, the City Engineer may do so, in which event the property owner shall be liable for all costs of such abatement, including, but not limited to, reasonable attorney fees. The expenses of abatement shall be a lien against the property on which it is maintained and a personal obligation against the property owner.

15.04.320 Emergency abatement by City – Liability for costs.

If it appears to the City Engineer that an emergency exists because land development work has resulted in a danger to public or private property, then, without following the procedure established by CVMC 15.04.315, the City Engineer may order all work necessary to remove, abate or mitigate the condition creating such emergency. The City Engineer may do the work with his own employees or may contract to have the work done; in either event, the City

Engineer shall keep a record of the costs of the work and charge the cost of the work to the property owner who shall repay the City for the cost thereof.

15.04.325 Costs of abatement – Special assessment procedure – Statutory authority.

The costs of abating a dangerous condition within the meaning of this chapter shall be imposed as a special assessment against the land on which such abatement was done. Costs and assessment procedures will be in accordance with Chapters 1.40 and 1.41 CVMC. The property owner may raise and the City Manager shall consider, as a complete or partial defense to the imposition of the assessment, questions as to the necessity of the abatement and the means in which it was accomplished. Pursuant to Government Code Section 38773.5, abatement costs shall be transmitted to the tax collector for collection. This assessment shall have the same priority as other City taxes.

15.04.330 Conflicts.

Except for exempt projects, if a conflict occurs between this chapter and Chapter 17.35 CVMC, the stricter regulation shall apply.

ATTACHMENT H

FY 2007-2008 Enforcement Action Taken

(Residential, Industrial, Commercial, Construction, and Related Businesses)

Note: During this reporting period, 7/01/2007 to 6/30/2008, investigation of the following cases have resulted in the issuance of Notice of Code of Violation, Orders to Cease and Desist, Notice to Clean and Abate, and Admin Citation.

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
Commercial							
8-Aug-07	Atlas Pressure Washing Service	Power/Pressure Washing	Commercial	407 E ST	Issued citation-Fine $200.00	Atlas Pressure Washing Service	$200
	Nature of Violation:	14.20.100--Allowance of non storm water to enter storm water conveyance system. 14.20.120--Failure to utilize BMPs Atlas Pressure Company does not have business license in Chula Vista					
13-Aug-07	KFC-Y450114	Sewage Spill/Discharge	Commercial	1327 BROADWAY	Issued notice of violation.		
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the storm water conveyance system from sewer system back-up. 14.20.120--Failure to utilize adequate BMPs. 14.20.130--Failure to contain clean up, and notify the City of spills. See attached documents.					
20-Sep-07	Chevron Station #1946	Others/Unknown Discharge	Commercial	695 PALOMAR ST	Issued warning citation	Chevron Station #1946	
	Nature of Violation:	14.20.120--Failure to implement BMPs from wash water.					
27-Sep-07	Simplex Grinnell	Others/Unknown Discharge	Commercial	690 THIRD AV	Issued citation-Fine $200.00	Simplex Grinnell	$200
	Nature of Violation:	14.20.100--Allowance of non storm water to enter the storm water conveyance system in the form of broken sprinkler system. 14.20.120--Failure to utilize BMPs					
24-Oct-07	People Chevrolet	Power/Pressure Washing	Commercial	580 AUTOPARK DR	Issued citation-Fine $200.00	People Chevrolet	$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the stormm water conveyance system by power washing. 14.20.120--Failure to utilize BMPs.					

Date of Incident	Facility Name	Violation Category	Site Category	Address			Action Taken	Violator Business Name	Fine Amount
25-Oct-07	Coastline Communications	Sediment Discharge	Commercial	1027	THIRD	AV	Issued citation-Fine $200.00	Coastline Communications	$200
	Nature of Violation:	14.20.100--Discharge on non-storm water to storm water conveyance system in the form of oil and sediment discharge. 14.20.120--Failure to utilize BMPs City staff responded and performed clean up of the affected site.							
7-Nov-07	Marisol Nite Club	Grease/Food/Drink Disch.	Commercial	2638	MAIN	ST	Issuec 2nd violation-Fine $400	Marison Nite Club	$400
	Nature of Violation:	14.20.100--Discharge of non-storm water to storm water conveyance system in the form of wash water/food discharge. 14.20.120--Failure to utilize BMPs. Previous citation was issued on 5/16/2007.							
8-Nov-07	BJ's Rental Inc.	Power/Pressure Washing	Commercial	317	K	ST	Issued citation-Fine $200.00		$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the storm water conveyance system. 14.20.120--Failure to utilize BMPs. Commercial power washing by store manage.							
6-Dec-07	Ralphs #75	Grease/Food/Drink Disch.	Commercial	780	OTAY LAKES	RD	Issued violation-Fine $200.00	Ralphs #75	$200
	Nature of Violation:	14.20.100--Discharge of non-storm water to storm water conveyance system 14.20.120--Failure to utilize BMPs. 30 galloon of orange drink discharged to storm drain system.							
23-Jan-08	Mercado International 2000	Grease/Food/Drink Disch.	Commercial	1415	THIRD	AV	Issued citation-Fine $200.00	Mercado Intl. 2000	$200
	Nature of Violation:	14.20.100--Discharged on non-storm water to enter the storm drain system in the form of grease, rinse water, and food waste. 14.20.120--Failure to utilize BMPs; Failure to reduce pollutants of entering the storm drain system.							
23-Jan-08	Rancho Palomar LP	Sediment Discharge	Commercial	1315	THIRD	AV	Issued warning citation	Rancho Palomar LP	
	Nature of Violation:	14.20.100--Discharged of non-storm water to enter the drain system in the form of leaking water from underground pipe. 14.201120--Failure to utilize BMPs.							

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
24-Jan-08	Mazal Realty Investment	Grease/Food/Drink Disch.	Commercial	693 PALOMAR ST	Issued citation-Fine $200.00	Mazal Realty Invesments	$200
	Nature of Violation:	14.20.100--Discharged of non-storm water into the drainage system in the form of grease, oil due to sewage line stoppage. 14.20.120--Failure to utilize BMPs. City staff responded and performed cleanup to the affected site.					
4-Feb-08	C.V. Wholesale Furniture Store	Trash/Debris Discharge	Commercial	655 BROADWAY	Issued warning citation	CV Wholesale Furniture	
	Nature of Violation:	14.20.120--Failure to utilize BMPs.Trash, debris, junk and discarded furnitures were piled in the alley. 12.12.10--Removal of obstructions from streets is required. 8.24.040--Disposal of solid waste in public places is prohibited.					
12-Feb-08	Jack in the Box #68	Sewage Spill/Discharge	Commercial	4011 BONITA RD	Issued citation:Fine $2,000.00	Jack in the Box #68	$2000
	Nature of Violation:	14.20.100--Discharge in non-storm water is prohibited 14.20.120--Reductions of pollutants entering storm water system 14.20.130--Containment cleanup; Notification of sewage spills. $500 per violation is warranted. See attachment.					
10-Mar-08	Main Car Care Inc	Chemical Disharge	Commercial	2952 MAIN ST	Issued citation-Fine 100.00	Main Car Care	$100
	Nature of Violation:	14.20.120--Failure to utilize BMPs. House guest is discharging anti-freeze into storm drain system.					
14-Mar-08	Roman's Truck Body & Paint MJP	Saw Cutting/Sanding Disc.	Commercial	2513 MAIN ST	Issued citation-Fine $200.00	Roman's Truck Body & Paint	$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the storm drain system in the form of sand dust resulted from auto body sanding. 14.20.120--Failure to utilize BMPs.					
23-Apr-08	Furniture Mattress Expo	Trash/Debris Discharge	Commercial	1215 BROADWAY	Issued citation-Fine $400.00	Furniture Mattress Expo	$400
	Nature of Violation:	14.20.100--Discharge on non-storm water to storm drain system in the form of styrofoam packing materials. 14.20.120--Failure to utilize BMPS to reduce pollutants entering storm drain system.					

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
1-May-08	Jack in the Box #86	Sewage Spill/Discharge	Commercial	5 FOURTH AV	Issued citation - Fine	Jack in the Box #86	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed sewer discharge from sewer back up system into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
5-May-08	Rays Mobile Car Care	Vehicle oil discharge	Commercial	2555 FAIVRE ST	Issued citation - Fine	Rays Mobil Car Care	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of oil and grease from car into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
30-May-08	El Ranchero Factory Taco Shop #2	Slurry/Concrete Discharge	Commercial	3344 MAIN ST	Issued Citation-Fine	El Ranchero Factory	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of concrete slurry into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
9-Jun-08	Seafood City Market	Leaking Containers/Tanks	Commercial	1340 THIRD AV	Issued citation - Fine	Seafood City	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of grease and oil from leaking trash and grease containers into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
11-Jun-08	Chula Vista Auto Inc.	Painting-Sanding Residue	Commercial	24 BROADWAY	Issued citation- Fine	Chula Vista Auto Body	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of wet paint into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
		Incidents: 22					**$5,700.00**
Construction-Citations							
12-Sep-07	San Miguel Ranch-Montecito Ridge	Power/Pressure Washing	Construction-Citations	144 AVENIDA LORETTA	Issued citation-Fine $200.00	Trimark Pacific Homes	$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to storm water conveyance system from power washing. 14.20.120--Failure to utilize BMPs See attached documents

No further action necessary at this time.					
21-May-08	STREET	Residential	955	MONSERATE	AV	Complaint Response Enforcement
Comments Action Taken:	5/21/08---Responded to report of resident deliberately placing pipe in the SWCS. Inspection found white pipe placed in the SWCS. Spoke to resident and informed him of the CVMC. Issued order to remove pipe and verbal notice regarding violation. Resident removed the pipe. No further action necessary at this time.					
22-May-08	STREET	Residential	1179	AGUA TIBIA	AV	Unknown Discharge
Comments Action Taken:	5/21/08---Responded to report of unknown discharge from 1179 Agua Tibia Ave. Inspection found white water based paint in the SWCS. The paint residue was traceable to the above address. Issued administrative citation SW B0521083. No further action necessary at this time.					
23-May-08	STREET	Residential		TIFFANY	CT	Construction Debris & Waste
Comments Action Taken:	On 05/23/08, received notification of City contractor washing down construction debris into the storm drain. Arrived on-scene and observed contractor staff "wetting" fresh concrete from new ADA ramp. Contractor was using BMPs - (Berms and Sand Bags). No Further Action Required.					
23-May-08	STREET	Residential		TIFFANY	CT	Construction Debris & Waste
Comments Action Taken:	On 05/23/08, received notification of City contractor washing down construction debris into the storm drain. Arrived on-scene and observed contractor staff "wetting" fresh concrete from new ADA ramp. Contractor was using BMPs - (Berms and Sand Bags). No Further Action Required.					
29-May-08	STREET	Residential	1195	BOW WILLOW TRAIL	WY	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	5/29/08---Responded to report of leaking vehicle at 1195 Bow Willow Trail Way. Inspection of address in question and surrounding areas found no evidence of spill or violation. The resident at the address in question was washing his car. No violation was found. No further action necessary at this time.					
29-May-08	STREET	Residential		H	ST	Accident/Spill
Comments Action Taken:	5/29/08---Responded to report of diesel spill at eastbound H Street and 805. Inspection found that an accidental fire caused a diesel spill. Spill had been contained and responsible party was taken all appropriate measures to contain, remove and appropriately dispose of all diesel fuel spilled in the street, under the supervision of CVFD and County HAZMAT. Diesel fuel did not enter a storm drain inlet. This spill was completely remediated by the responsible party. This spill was unavoidable. No violation was found. No further action necessary at this time.					
30-May-08	STREET	Residential	1097	FOURTH	AV	Slulry/Concrete Discharge
Comments Action Taken:	5/30/08---Responded to report of concrete slurry spill at 1095 Fourth Ave. Inspection found concrete slurry flowing from said property and into the SWCS. Issued administrative citation SW1653. No further action necessary at this time.					
10-Jun-08	STREET	Residential	2875	MORNING CREEK	RD	Unknown Discharge
Comments Action Taken:	AIG Concrete Pumping washing down equipment into the conveyance system. Issued admin citation SW061008-01 (Warning).					
11-Jun-08	STREET	Residential	987	ROCA	PL	Construction Debris & Waste
Comments Action Taken:	6/11/08---Responded to report of sand/ dirt in the SWCS at 987 Roca Place. Inspection noted approximately one yard of sand dumped in the street. A door hanger was left at the address informing resident of violation, and to call. Spoke to resident who immediately complied with request to remove the sand in lieu of increased enforcement action by the City. No further action necessary at this time.					
23-Jun-08	STREET	Residential	168	SHASTA	ST	Slulry/Concrete Discharge
Comments Action Taken:	6/23/08---Responded to report of concrete slurry in the SWCS from 168 Shasta. Inspection noted evidence of non storm water discharges from address in question. Issued administrative citation SW1660. No further action necessary at this time.

Public Works Department

December 8, 2008

County of San Diego
Watershed Protection Program
5201 Ruffin Road, Suite P
San Diego, CA 92123

Attention: Mr. Jon Van Rhyn, Watershed Protection Program Manager

SUBJECT: SUBMITTAL OF JURMP ANNUAL REPORT NO. 28 SECTION 7.0 FOR FISCAL YEAR 2007-2008

Enclosed please find one hard copy and three CD-ROMs of the City of Chula Vista's Jurisdictional Urban Runoff Management Program Annual Report No. 28 Section 7.0 – Illicit Discharge Detection and Elimination Component for Fiscal-Year 2007-2008. Pursuant to the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 and Addendum No. 2 to Order No. R9-2007-0001, I request that the County of San Diego, as the Principal Copermittee, submits said report to the Regional Water Quality Control Board.

Should you have any questions please call me at (619) 397-6111. Thank you.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

7.1 INTRODUCTION

Illicit connections and illicit discharges (IC/ID) to the MS4 can potentially impact water quality if they are not eliminated. Examples of illicit discharges include wash-water, sediment, spilled chemicals, sewage releases, and pollutants from various sources. An illicit connection is a connection that conveys an illicit discharge to the MS4 via a pipe, drain, channel, etc. The City utilizes the following mechanisms to actively seek and eliminate illicit discharges and connections to the MS4:

1. Public complaint response and investigation
2. Inspection of local businesses and municipal facilities
3. Dry weather field screening and analytical monitoring
4. Municipal MS4 and sewer maintenance activities
5. Providing educational outreach to the community and business owners

This section provides a summary of public complaint responses and investigation; and spill response and reporting during FY 2007-2008. Also in this section is a summary of Dry Weather Field Screening and Analytical Monitoring activities conducted within the 2008 Dry Weather Monitoring Season (May 1 – September 30) and a summary of follow-up investigations conducted to determine the potential source(s) of pollutants that exceeded their respective action levels. Effectiveness assessment of the Illicit Discharge Detection and Elimination Component is included in Section 11.0 of this annual report.

Inspection of municipal facilities and industrial/commercial businesses are addressed in Sections 2.0 and 5.0 of this report. Municipal MS4 and sewer maintenance activities are described below and in Section 2.0 of this report. Educational outreach is described in Section 8.0.

7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

The City operates a hotline (619)397-6000 for residents, employees, and the general public to report any illicit discharges to storm water conveyance systems. The hotline is publicized through several venues such as the City's website, City bus signs, and various storm water educational materials and brochures. The hotline is answered by Public Works dispatch staff, who routes the concern(s) to the appropriate section(s) within the City's Public Works Department. All calls are entered into a database, and all potential IC/IDs are investigated by Storm Water Management Section staff. Storm Water Management Section Staff takes immediate action to respond, investigate, and provide education and enforcement as necessary. Staff also ensures that City crews or the responsible party contains and cleans any spills. Public

Works crews are equipped with vactor trucks to contain and clean large spills. All appropriate departments are notified as needed such as the Fire Department or the County of San Diego for hazardous materials response.

During the reporting year, there were 131 calls to the hotline, compared to 137 calls in FY 2006-2007. Figure 7-1 details the number of complaints from FY 1997-1998 through FY 2007-2008. As part of its education component, the City advertises the hotline on its website and trains employees to report any illegal discharges to the storm water conveyance system. Attachment I summarizes all calls to the hotline and describes the outcomes of each. Attachment H is a summary of all illegal discharges to the MS4 or other violations of the City's Storm Water Ordinance that resulted in enforcement actions for FY 2007-2008.

Figure 7-1 City of Chula Vista Storm Water Complaint Summary 1997-2008

7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

Section 9.0 of the City's JURMP document outlines the procedures for preventing discharges of sewage to the MS4 and the mechanism whereby notification of sewage spills from private laterals, septic systems, and others spills are received. City staff is trained to report all spills to the dispatch hotline and crews are prepared to respond, contain, and cleanup spills where necessary. In addition, Section 9.0 of the City's JURMP details the City's Sanitary Sewer Overflow Response Plan (SSORP) as required by RWQCB Order No. 96-04 and a Capacity, Management, Operations, and Maintenance (CMOM) program. The City is also in the process of developing a Fats, Oil, and Grease (FOG) Program to reduce the amount of FOG introduced into the sanitary sewer system by businesses.

Table 7-1 provides a summary of these discharges and spills and the number of each. All discharges and spills were immediately responded to, contained, cleaned, and eliminated.

Table 7-1 Types of Spills/Discharges and Number of Each During FY 2007-2008

TYPE OF SPILL/DISCHARGE	NUMBER
Chemical Discharge	3
Driveway-Trash Washing	2
Equipment Washing	4
Grease/Food/Drink Discharge	5
Leaking Containers/Tanks	4
Others/Unknown Discharge	7
Painting-Sanding Residue	3
Pool-Spa Residue	2
Power/Pressure Washing	11
Resident Cleaning Residue	3
Saw Cutting/Sanding Discharge	5
Sediment Discharge	5
Sewage Spill/Discharge	7
Slurry/Concrete Discharge	12
Trash/Debris Discharge	10
Vehicle Oil Discharge	3
Vehicle Washing/Dismantling	3
TOTAL	89

City inspectors are constantly on the lookout for illegal connections during their routine response to reported violations or industrial/commercial inspections. When a floor drain within a structure is suspected of being connected to the storm water conveyance system or discharging to the street gutter, such connection is verified by dye testing. If the indoor drain is connected to storm drains, it is considered illegal and ordered to be disconnected immediately. This reporting year, the City had some incidents of illegal connections dealing with washing machine and hand washing sink outlets. All illegal connections were immediately brought to the attention of the homeowner or business owner and were eliminated. In addition, the City's maintenance crews have been trained to look for illicit discharges and connections during their daily activities in the field. This process has resulted in the identification of several illicit discharges and connections each year.

7.4 URBAN RUNOFF MONITORING

The 2008 Dry Weather Field Screening and Analytical Monitoring Program Report has been submitted as Attachment K, along with an updated Dry Weather Field Screening and Analytical Stations Map. During the reporting period, the MS4 map and the dry weather monitoring maps were reviewed for inaccuracies, and no amendments were necessary. Fifty-eight primary monitoring sites were visited during the 2008 Dry Weather Monitoring Program, and samples were collected and analyzed for 57 of these sites. Site BAY-01 was found to be dry so an alternate location, SWR-03-E, was chosen to replace the site. Forty-two sites had measurable flow and 15 sites were ponded. Fifteen sites received laboratory analysis in addition to normal field screening. Table 7-2 provides a summary of exceedances for both field and laboratory analysis.

In previous years, the main round of monitoring was followed by a follow-up monitoring round within one or two months of each other. In this year's monitoring, the main round and follow-up monitoring were combined as required by NPDES Municipal Permit, Order No. R9-2007-0001.

Table 7-2 Summary of Action Level Exceedances for the 2008 Dry Weather Monitoring and Field Screening Analysis

FIELD SCREENING ANALYSIS (57 Samples)			
Analyte	**Number of Exceedances**	**% of Sites with Exceedances**	**Site(s) Exceeding Action Level**
pH	0	0	None
Conductivity	0	0	None
Turbidity	0	0	None
Surfactants (MBAS)	2	4	CEN-01, CEN-08
Ammonia-N	4	7	CEN-01, TCC-04, TCC-05, TCS
Nitrate-N	16	28	BAY-03, LAK-01, OVR-07, RCC-03, RCC-04, SCR-02, SCR-03, SCR-05, SUN-02, SUN-05, SUN-06, SUN-07, TCC-02, TCC-03, TCC-05, WOL-02
Orthophosphate-P	0	0	None
Glycol	5	9	BAY-02, CEN-01, POG-02, PRD-02, SCR-01

MBAS = Methylene Blue Active Substances

LABORATORY ANALYSIS (15 Samples)			
Analyte	**Number of Exceedances**	**% of Sites with Exceedances**	**Site(s) Exceeding Action Level**
Oil and Grease	0	0	None
Cadmium (Dissolved)	0	0	None
Copper (Dissolved)	0	0	None
Lead (Dissolved)	0	0	None
Zinc (Dissolved)	0	0	None
Diazinon	0	0	None
Chlorpyrifos	0	0	None
Total Coliforms	7	47	CEN-01, JUD-01, JUD-02, POG-02, RCC-03, SCR-01, SUN-02
Fecal Coliforms	2	13	JUD-02, POG-02
Enterococcus	4	27	CEN-01, POG-02, SCR-01, SVS-01

Note: Table data is based on routine visits only. Confirmation, follow-up and dry site visits are not included.

Since 2002, no exceedances have been measured for temperature, turbidity, cadmium, copper, lead, or chlorpyrifos.

The historical data for the results of field analysis presented in Figure 7-2 indicates a decreasing trend in ammonia concentrations. Orthophosphate exceedances have been very rare in all years since 2002. No discernable trend is apparent for glycol, nitrate, or surfactants results, which have fluctuated from year to year.

Figure 7-2 Percent of Sites with Field Constituents Exceedances by Year

* The action level for conductivity was numeric in the past but was later changed to best professional judgment.

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 16 sites. Also, bacteria were elevated at eight sites. All five of the glycol action level exceedances were within normal range at the confirmation visit. In addition, ammonia and surfactants tested above the action level at two sites. Upon the confirmation visit to the sites, both ammonia and surfactant levels had decreased to below the action level.

Historical data for laboratory analyses presented in Figure 7-3 indicates relatively high bacteria exceedance rates, although the fecal coliform exceedance rate has decreased somewhat over the years. Zinc and diazinon have not been detected above their action levels since 2003. Prior to 2003 the rates of exceedances were approximately 10% per year. Surfactants and oil and grease have generally had no exceedances or only a minimal number of exceedances over the years.

Additionally, a trash monitoring element was added to the dry weather monitoring program beginning this dry season, as required by the Municipal Permit. Of the 57 sites, 41% were found to be Optimal, 33% were Suboptimal, 17% were Marginal, 3% were Submarginal, and 5% were Poor. The main sources of trash came from transient, household, and school activities. As a part of trash assessment, sites were evaluated for potential threat to human or aquatic health. Two sites were found to have potential threats to human or aquatic health and were immediately cleaned by City crews. The three Submarginal and Poor sites were also cleaned by City crews and were noted as sites needing more routine maintenance and trash pick-up.

Figure 7-3 Percent of Sites with Laboratory Exceedances by Year

7.5 FOLLOW-UP AND ENFORCEMENT

Twenty-six sites had constituents above their respective action levels. Table 7-3 shows the sites with elevated constituent level and their probable sources based on upstream investigations.

Table 7-3 Summary of Upstream Investigations

SITE	UPSTREAM INVESTIGATION TARGET CONSTITUENT(S)		RESULTS/ PROBABLE SOURCE
	Field	Laboratory	
BAY-02	Glycol	-	Discarded container of anti-freeze
BAY-03	Nitrate-N	-	Unknown
CEN-01	Surfactants, Ammonia-N, Glycol	Total Coliforms, *Enterococcus*	Surfactants, ammonia-N, glycol – transient flow; Bacteria – catch basin with food grease on Jefferson Avenue
CEN-08	Surfactants	-	Car wash area in Cabrillo Mobile Lodge residential community
JUD-01	-	Total Coliforms	Significant trash at the site and from water discharging to the site from the west. City crews removed the trash from the channel.
JUD-02	-	Total Coliforms, Fecal Coliforms	Decaying vegetation and litter in a storm drain inlet on Connelly Circle, washed down by irrigation runoff. Bacteria are likely amplified in the site's slow-moving water and excessive vegetation.

Table 7-3 continued

LAK-01	Nitrate-N	-	Nitrate-enriched flow from landscaping activities
OVR-07	Nitrate-N	-	Nitrate-enriched groundwater seepage, possibly secondary to landscaping
POG-02	Glycol	Total Coliforms, Fecal Coliforms, *Enterococcus*	Glycol – transient flow; Bacteria – significant amounts of water fowl waste transported by irrigation runoff
PRD-02	Glycol	-	Recent automotive fluid spills in the residential complex immediately upstream, carried by irrigation runoff
RCC-03	Nitrate-N	Total Coliforms	Nitrate-N – nitrate-enriched groundwater seepage; Total Coliforms – thick layer of aquatic plant material at site, trash, and wildlife waste upstream
RCC-04	Nitrate-N	-	Nitrate-enriched groundwater seepage
SCR-01	Glycol	Total Coliforms, *Enterococcus*	Glycol – automotive fluid spills on nearby streets; Bacteria–combination of lawn clippings, excess irrigation, and possibly pet waste
SCR-02	Nitrate-N	-	Landscaping fertilization in new residential developments
SCR-03	Nitrate-N	-	Landscaping fertilization in new residential developments
SCR-05	Nitrate-N	-	Landscaping fertilization in new residential developments and over-irrigation
SUN-02	Nitrate-N	Total Coliforms	Nitrate-N – Groundwater seepage along landscaped hillside on the south side of East H Street/ Proctor Valley Road
SUN-05	Nitrate-N	-	Nitrate-enriched groundwater seepage
SUN-06	Nitrate-N	-	Landscaping fertilization in new residential developments and over-irrigation
SUN-07	Nitrate-N	-	Landscaping fertilization in nearby developments
SVS-01	-	*Enterococcus*	Transient flow
TCC-02	Nitrate-N	-	Nitrate-enriched groundwater seepage; landscaping fertilization of park
TCC-03	Nitrate-N	-	Nitrate-enriched groundwater seepage
TCC-05	Nitrate-N	-	Nitrate-enriched groundwater seepage
TCS	Ammonia-N	-	Storm drain clogged with trash allowing water to pond; shallow ponded water likely evaporates during the day, concentrating ammonia levels
WOL-02	Nitrate-N	-	Nitrate-enriched due to landscape seepage

Based on the results of the 2008 Dry Weather Field Screening and Analytical Monitoring Program as well as the Follow-Up Investigation Program, the City was provided with recommendations for dry weather monitoring sites and surrounding areas in need of cleaning and neighborhoods where storm water pollution prevention education is needed. The City is in the process of completing these recommended cleaning and education activities and is working to minimize illicit discharges. During the reporting period, there were no instances that require additional investigations or follow-up activities above and beyond those conducted during the 2008 Dry Weather Monitoring Program. More information about the recommendations from City's Dry Weather Monitoring and Field Screening Program and Follow-up Investigations can be found in Attachment K.

ATTACHMENT H

FY 2007-2008 Enforcement Action Taken

(Residential, Industrial, Commercial, Construction, and Related Businesses)

Note: During this reporting period, 7/01/2007 to 6/30/2008, investigation of the following cases have resulted in the issuance of Notice of Code of Violation, Orders to Cease and Desist, Notice to Clean and Abate, and Admin Citation.

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
Commercial							
8-Aug-07	Atlas Pressure Washing Service	Power/Pressure Washing	Commercial	407 E ST	Issued citation-Fine $200.00	Atlas Pressure Washing Service	$200
	Nature of Violation:	14.20.100--Allowance of non storm water to enter storm water conveyance system. 14.20.120--Failure to utilize BMPs Atlas Pressure Company does not have business license in Chula Vista					
13-Aug-07	KFC-Y450114	Sewage Spill/Discharge	Commercial	1327 BROADWAY	Issued notice of violation.		
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the storm water conveyance system from sewer system back-up. 14.20.120--Failure to utilize adequate BMPs. 14.20.130--Failure to contain clean up, and notify the City of spills. See attached documents.					
20-Sep-07	Chevron Station #1946	Others/Unknown Discharge	Commercial	695 PALOMAR ST	Issued warning citation	Chevron Station #1946	
	Nature of Violation:	14.20.120--Failure to implement BMPs from wash water.					
27-Sep-07	Simplex Grinnell	Others/Unknown Discharge	Commercial	690 THIRD AV	Issued citation-Fine $200.00	Simplex Grinnell	$200
	Nature of Violation:	14.20.100--Allowance of non storm water to enter the storm water conveyance system in the form of broken sprinkler system. 14.20.120--Failure to utilize BMPs					
24-Oct-07	People Chevrolet	Power/Pressure Washing	Commercial	580 AUTOPARK DR	Issued citation-Fine $200.00	People Chevrolet	$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the stormm water conveyance system by power washing. 14.20.120--Failure to utilize BMPs.					

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
25-Oct-07	Coastline Communications	Sediment Discharge	Commercial	1027 THIRD AV	Issued citation-Fine $200.00	Coastline Communications	$200
	Nature of Violation:	14.20.100--Discharge on non-storm water to storm water conveyance system in the form of oil and sediment discharge. 14.20.120--Failure to utilize BMPs City staff responded and performed clean up of the affected site.					
7-Nov-07	Marisol Nite Club	Grease/Food/Drink Disch.	Commercial	2638 MAIN ST	Issuec 2nd violation-Fine $400	Marison Nite Club	$400
	Nature of Violation:	14.20.100--Discharge of non-storm water to storm water conveyance system in the form of wash water/food discharge. 14.20.120--Failure to utilize BMPs. Previous citation was issued on 5/16/2007.					
8-Nov-07	BJ's Rental Inc.	Power/Pressure Washing	Commercial	317 K ST	Issued citation-Fine $200.00		$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the storm water conveyance system. 14.20.120--Failure to utilize BMPs. Commercial power washing by store manage.					
6-Dec-07	Ralphs #75	Grease/Food/Drink Disch.	Commercial	780 OTAY LAKES RD	Issued violation-Fine $200.00	Ralphs #75	$200
	Nature of Violation:	14.20.100--Discharge of non-storm water to storm water conveyance system 14.20.120--Failure to utilize BMPs. 30 galloon of orange drink discharged to storm drain system.					
23-Jan-08	Mercado International 2000	Grease/Food/Drink Disch.	Commercial	1415 THIRD AV	Issued citation-Fine $200.00	Mercado Intl. 2000	$200
	Nature of Violation:	14.20.100--Discharged on non-storm water to enter the storm drain system in the form of grease, rinse water, and food waste. 14.20.120--Failure to utilize BMPs; Failure to reduce pollutants of entering the storm drain system.					
23-Jan-08	Rancho Palomar LP	Sediment Discharge	Commercial	1315 THIRD AV	Issued warning citation	Rancho Palomar LP	
	Nature of Violation:	14.20.100--Discharged of non-storm water to enter the drain system in the form of leaking water from underground pipe. 14.201120--Failure to utilize BMPs.					

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
24-Jan-08	Mazal Realty Investment	Grease/Food/Drink Disch.	Commercial	693 PALOMAR ST	Issued citation-Fine $200.00	Mazal Realty Invesments	$200
	Nature of Violation:	14.20.100--Discharged of non-storm water into the drainage system in the form of grease, oil due to sewage line stoppage. 14.20.120--Failure to utilize BMPs. City staff responded and performed cleanup to the affected site.					
4-Feb-08	C.V. Wholesale Furniture Store	Trash/Debris Discharge	Commercial	655 BROADWAY	Issued warning citation	CV Wholesale Furniture	
	Nature of Violation:	14.20.120--Failure to utilize BMPs.Trash, debris, junk and discarded furnitures were piled in the alley. 12.12.10--Removal of obstructions from streets is required. 8.24.040--Disposal of solid waste in public places is prohibited.					
12-Feb-08	Jack in the Box #68	Sewage Spill/Discharge	Commercial	4011 BONITA RD	Issued citation:Fine $2,000.00	Jack in the Box #68	$2000
	Nature of Violation:	14.20.100--Discharge in non-storm water is prohibited 14.20.120--Reductions of pollutants entering storm water system 14.20.130--Containment cleanup; Notification of sewage spills. $500 per violation is warranted. See attachment.					
10-Mar-08	Main Car Care Inc	Chemical Disharge	Commercial	2952 MAIN ST	Issued citation-Fine 100.00	Main Car Care	$100
	Nature of Violation:	14.20.120--Failure to utilize BMPs. House guest is discharging anti-freeze into storm drain system.					
14-Mar-08	Roman's Truck Body & Paint MJP	Saw Cutting/Sanding Disc.	Commercial	2513 MAIN ST	Issued citation-Fine $200.00	Roman's Truck Body & Paint	$200
	Nature of Violation:	14.20.100--Allowance of non-storm water to enter the storm drain system in the form of sand dust resulted from auto body sanding. 14.20.120--Failure to utilize BMPs.					
23-Apr-08	Furniture Mattress Expo	Trash/Debris Discharge	Commercial	1215 BROADWAY	Issued citation-Fine $400.00	Furniture Mattress Expo	$400
	Nature of Violation:	14.20.100--Discharge on non-storm water to storm drain system in the form of styrofoam packing materials. 14.20.120--Failure to utilize BMPS to reduce pollutants entering storm drain system.					

Date of Incident	Facility Name	Violation Category	Site Category	Address	Action Taken	Violator Business Name	Fine Amount
1-May-08	Jack in the Box #86	Sewage Spill/Discharge	Commercial	5 FOURTH AV	Issued citation - Fine	Jack in the Box #86	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed sewer discharge from sewer back up system into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
5-May-08	Rays Mobile Car Care	Vehicle oil discharge	Commercial	2555 FAIVRE ST	Issued citation - Fine	Rays Mobil Car Care	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of oil and grease from car into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
30-May-08	El Ranchero Factory Taco Shop #2	Slurry/Concrete Discharge	Commercial	3344 MAIN ST	Issued Citation-Fine	El Ranchero Factory	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of concrete slurry into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
9-Jun-08	Seafood City Market	Leaking Containers/Tanks	Commercial	1340 THIRD AV	Issued citation - Fine	Seafood City	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of grease and oil from leaking trash and grease containers into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
11-Jun-08	Chula Vista Auto Inc.	Painting-Sanding Residue	Commercial	24 BROADWAY	Issued citation- Fine	Chula Vista Auto Body	$200
	Nature of Violation:	14.20.100 Discharge of non-strom water prohibited. Observed discharge of wet paint into the storm water conveyance system. **see attachment**. 14.20.120 Reduction of pollutants contacting or entering storm water required. Failure to utilize BMPs. **see attachment**					
		Incidents: 22					**$5,700.00**

July 1, 2008 - June 30, 2009

The bay begins at your front door.
Help keep our bay and waterways clean.

La bahía comienza en la puerta de su casa. Ayude a mantener limpios nuestros canales y nuestra bahía.

CITY OF CHULA VISTA

ACKNOWLEGEMENTS

This Report has been prepared by or under the supervision of:

Matt Little, Assistant Director of Public Works
Silvester Evetovich, Principal Civil Engineer
Khosro Aminpour, Senior Civil Engineer
Don Bergeson, Environmental Health Specialist
Marisa Fontanoz, Environmental Health Specialist
Mike Hice, Storm Water Compliance Inspector
Ramon Quicho, Engineering Technician

Staff from the following City of Chula Vista departments, divisions, or sections has contributed to the implementation of the JURMP in 2008-2009:

Public Works Inspection Services
Public Works Storm Water Management
Public Works Wastewater Management
Public Works Environmental Services
Office of Communications
Chula Vista Nature Center
Geographic Information Systems
Development Services – Land Development
Engineering Design
Planning Landscape Architecture
Environmental Planning
City Attorney's Office

The following organizations have contributed to the implementation of the JURMP in 2008-2009:

- D-MAX Engineering, Inc.
- I Love a Clean San Diego, Inc.
- Otay Valley Regional Park (OVRP)
- Members of the CLEAN Stakeholder Group

The City of Chula Vista wishes to thank:

- Volunteers who dedicated their time to improve water quality in Chula Vista
- Environmentally conscious citizens who reported illegal discharges
- Citizens, business owners, contractors, and developers who cooperated with City staff in implementing Best Management Practices

CITY OF CHULA VISTA

EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. Prior to that date, NPDES Municipal Permit, Order No. 2001-01 regulated discharges from urbanized areas of San Diego County. This report covers the implementation period of July 1, 2008 to June 30, 2009. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the Municipal Permit, Order No. R9-2007-0001.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has therefore been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2008 to June 30, 2009, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (to be submitted under separate cover on or before December 15, 2009, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

In previous years, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, the 2009 Dry Weather Field Screening report, and an analysis of its findings will be submitted to the Regional Board before December 15, 2009, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

During the current reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2008-2009 rainy season on January 31, 2010.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2008 to June 30, 2009. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

1.0 INTRODUCTION

1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (Regional Board), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 29 is an account of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2008 to June 30, 2009.

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Implemented inspection programs of high priority construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable Best Management Practices (BMPs) that can be implemented to reduce discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

- Participated in watershed and regional meetings and activities.

1.2 PURPOSE AND OBJECTIVES

Report No. 29 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of the Municipal Permit during the reporting period July 1, 2008 to June 30, 2009. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction Program
- Municipal Program
- Industrial and Commercial Program
- Residential Program

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0 together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2008.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management costs and budgets. Program costs during FY 2008-2009 and program budgets for FY 2009-2010 are included in two separate tables that show itemized and total figures. On January 29, 2009, the Copermittees developed a Standardized Fiscal Analysis Method and Format, which will be used to report fiscal analysis in the next Annual Report as required under Section G.3 of the Municipal Permit.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this Section, the need for special investigations did not arise during the current reporting period.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of this report is dedicated to descriptions of modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the Copermittee's JURMP effectiveness. These updates include changes to Appendix B of the JURMP, establishment of minimum mobile business Best Management Practices (BMPs), updates to the Dry Weather Monitoring Action Levels for Bacteria, and the establishment of the regional standardized fiscal analysis method.

- Since the City's JURMP document was developed recently and submitted to the RWQCB in March 2008, Appendix B of the JURMP has been updated during the current reporting period, which includes inventories of construction sites; municipal, commercial, and industrial facilities and activities; and treatment control BMPs.
- The Regional Industrial and Commercial Workgroup established minimum BMP requirements for mobile businesses. These minimum BMPs were incorporated into the City's Storm Water Information Packets that are provided to mobile businesses who apply for a business license application in the City.

- During the current reporting period, a study was conducted at the regional level to evaluate the accuracy of Dry Weather Monitoring Action Levels for Bacteria. The study resulted in some adjustments in Action Levels for Total and Fecal Coliform, and Enterococcus. Appendix E and Table E-3 of the JURMP document will be updated in the next Annual Report to reflect these adjustments. The new Action Levels will be implemented during the next Dry Weather Monitoring, which will occur during the summer of 2010.
- Lastly, pursuant to Order No. R9-2007-0001, the Copermittees developed a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The City plans conduct it annual fiscal analysis consistent with this standard method starting January 31, 2010.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

2.0 DEVELOPMENT PLANNING COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.

Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.

Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.

Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.

Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory

.

Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.

Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.

Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.

Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.

Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.

Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.

Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.

Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.

Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.

2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes actions taken during the defined reporting period by the City to minimize short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development (including construction or installation of a building or structure), creation of impervious surfaces, and capital improvement projects. Through the implementation of the Development Planning Component, the City minimizes and manages increases in runoff from development projects to the MEP to protect receiving waters.

2.2 LAND-USE PLANNING

2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to visions, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.
- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)
- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.
- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.
- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.
- Maximize the protection of potable water supply resources from pollutants.
- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the City's Development Storm Water Manual (Storm Water Manual), updated in 2008, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Storm Water Manual. The Storm Water Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Storm Water Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Storm Water Manual has been dedicated to the City's SUSMP. Another section of the Storm Water Manual outlines BMP requirements on construction sites during both rainy and dry seasons.

During the current reporting period, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

2.2.4 PROGRAM IMPLEMENTATION

During the reporting period, the City successfully completed implementation of the program under the Municipal Permit as described in Section 2.4.4 of this report.

During Fiscal Year 2007-08, in compliance with the NPDES Municipal Permit requirements, several of the City's implementation documents were updated, including:

- Jurisdictional Urban Runoff Management Plan
- Storm Water Management and Discharge Control Ordinance
- Grading Ordinance
- Development Storm Water Manual

During the process of updating the above-referenced documents, each of the City's implementation processes were objectively reviewed for any potential deficiencies and, based on extensive experience gained during the previous Municipal Permit implementation, significant improvements were made throughout all aspects of the program. Those improvements are reflected in the above referenced updated documents and are currently being implemented.

2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Division of the Development Services Department reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits and Land Development Divisions of the Development Services Department, and the Storm Water Management Section of the Public Works Department review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Environmental Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Development Services Department
- Public Works Department, Engineering
- Public Works Department, Operations - Storm Water Management Section

The Development Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Division of the Department Services Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Land Development Division for review and final approval.

Land Development Division staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Storm Water Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; Low Impact Development Site Design, Source Control, and Structural Treatment Control BMPs; calculations for sizing of treatment control BMPs; and a perpetual maintenance plan and funding mechanism. The applicants are required to sign an agreement with the City for the maintenance of post-construction BMPs. When necessary, the Land Development Division coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

The Land Development Division and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for Low Impact Development Site Design, Source Control, and Treatment Control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Land Development Division and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Land Development Division and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Land Development Division and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Public Works Department, Engineering. Public projects undergo the same review process as private developments. Engineering staff has received

training on SUSMP requirements, identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments, divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are therefore readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals.

2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP and the Storm Water Manual, which culminated in March 2008, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP.

2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to

discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 10 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the City's Storm Water Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's minimum BMP requirements for all development projects are outlined below and are included in the Storm Water Manual. All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.
- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.
- Provide buffer zones or other buffers for natural water bodies.
- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.
- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

During the project approval and verification process, all project submittals were reviewed for compliance with the minimum BMP requirements described above.

2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP document was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure that to the maximum extent practicable, development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual," available on the web at:

http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Storm Water Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

On February 19, 2008, City Council approved the updates to the City's SUSMP and Storm Water Manual. The Updated SUSMP and Storm Water Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the Municipal Permit. Concurrently, the City's Storm Water Management and Discharge Control and Grading Ordinances were updated to incorporate the Storm Water Manual (which includes the City's SUSMP) by reference.

2.4.4.1 NOTABLE ACTIVITIES

In 2008-2009, notable improvements in processes and protocols supporting SUSMP implementation have been made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates within the defined reporting period include:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Interim Hydromodification Criteria.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document and Maintenance Agreement links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.
- Site inspections of all development projects to ensure proper installation of construction and post-construction BMPs.

2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project requirements. Private development permit applications are tracked in Permits Plus, which is a project tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and digitally saved. Links have been provided between the above

referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Public Works Department, Engineering. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects subject to SUSMP requirements is included in Attachment A. This list includes the names of all Priority Development or Redevelopment projects from the inception of the SUSMP program on December 9, 2002 to the end of the current reporting period. The list is updated annually to include Priority Development Projects for which development applications have been received and SUSMP eligibility identified during that reporting period. The listed projects may be currently in different phases of review, construction, or occupancy. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Pending, 2) Under Construction, 2), or 3) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

The Municipal Permit establishes requirements for post-construction BMPs on Priority Development and Redevelopment Projects. In order to develop regional standards and criteria for compliance with Municipal Permit requirements, the Copermittees have developed Model and local SUSMPs. All project applicants are required to complete forms that are included in the City's Development Storm Water Manual to determine post-construction BMP requirements for their projects. City staff verifies proper completion of such forms and informs applicants of their required study reports and project submittals. Project submittals are then reviewed based upon this initial determination.

As required by the Municipal Permit, the City updated its local SUSMP on January 2008 to include Low Impact Development and Hydromodification Management requirements, as well as other construction and post-construction criteria and standards. Currently, the City's local SUSMP is the basis for approval of Priority Development Projects. However, the Municipal Permit requires an update of the Model SUSMP and the incorporation of its requirements into local SUSMPs. During 2008 and 2009, the Copermittees updated the Model SUSMP, which was later approved by the Regional Board on March 25, 2009. The Copermittees have to update their local SUSMPs for the second time and within 180 days from Regional Board's approval.

The Municipal Permit also requires the Copermittees to develop a Hydromodification Management Plan and require Priority Development Projects to comply with its requirements. The City's current local SUSMP includes Interim Hydromodification Criteria, which are being enforced by the City. A Final Hydromodification Management Plan is being developed by the Copermittees, which will replace the Interim Hydromodification Criteria after Regional Board's approval.

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Priority Development Projects without approved WQTRs do not move further along in the development review process, providing Land Development and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Project grading or construction plans are required to show all approved structural BMPs. Non-structural BMPs are described in the project's Water Quality Technical Report. Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes verification inspection and approval of installed or constructed structural treatment control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections and confirmation of SUSMP BMP applications of such Priority Development projects to ensure proper installation of post-construction BMPs before final Certificates of Occupancy are issued and bonds are released.

In order to track confirmation of post-construction BMPs, and as an on-going activity, the City's GIS system was continuously updated throughout FY 2008-2009 with post-construction BMP information; further supporting project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the types of BMPs, and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. Most significantly, in FY 2008-2009, WQTR documents were made available through the GIS Grading Plan layer as they are linked to individual projects (Figure 2-1 – CVMapper GIS Layer). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly or privately maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 – GIS Layer: Grading Plans & WQTR Links). In addition, all privately or publicly maintained treatment control BMPs are being added to the BMP layer to facilitate their tracking and mapping. Also, files containing hard copies of grading plans, Water Quality Technical Reports, maintenance agreements, and other pertinent information are being created and maintained to support and facilitate construction verification and maintenance inspections of post-construction BMPs. (Figure 2-3 – GIS Layer: Post Construction BMPs).

Figure 2-1 CVMapper GIS Layer

Figure 2-2 GIS Layer: Grading Plans & WQTR

Figure 2-3: GIS Layer: Post Construction BMPs

All pending, under construction, or installed Post-Construction BMPs and Priority Projects are inventoried and tracked by Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/Capital Improvement Plan, Residential, Commercial, etc.)
- Project status (Pending, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings
- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking, for examples of SUSMP tracking forms.

Figure 2-4 GBA Master Series: SUSMP Verification and Maintenance Tracking Database A

Figure 2-6 GBA Master Series: SUSMP Verification and Maintenance Tracking Database C

2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

The City works with developers, planners, and consulting engineers to establish standards of Source Control, LID Site Design, and Treatment Control BMPs that meet the requirements of the Storm Water Manual and the Municipal Permit. An example of such cooperation was the High Tech High development. The High Tech High project is located in Otay Ranch Village 11, at the intersection of Discovery Falls Drive and Hunte Parkway. The project site is situated along a ridgeline between two drainage basins of Salt Creek and minor tributaries of the Otay River. The project is planned for a charter high school in Phase 1 and K-8 school in Phase 2.

The High Tech High project's Phase 1, the charter high school, is completed and is opening for the 2009-2010 school year. The project incorporates Site Design, Source Control, and Treatment Control BMPs, with particular emphasis on Low Impact Development principles for the post-construction storm water management. Low Impact Development features such as Bioretention/Biofiltration areas, grassy swales, decomposed granite for fire lanes and future pad areas of the Environmental Research Center are incorporated in the project. In addition to on-site BMPs, an existing regional water quality basin located off-site will act as the last line of defense in a treatment train for the treatment of site runoff.

The site of the High Tech High project is less than 50 acres in area and, therefore, exempt from the Interim Hydromodification Criteria requirements.

2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all Priority Development Projects that received grading, construction, or building permits from the City proposed medium or high-efficiency treatment control BMPs. No SUSMP projects were permitted to have low-efficiency treatment control BMPs.

2.4.4.7 TREATMENT CONTROL BMP INVENTORY

Attachment A of this report includes an inventory of all Priority Development projects in the City that were subjected to SUSMP requirements from the inception of this program on December 9, 2002. The information provided in the Attachment includes the name of the project, category (residential, commercial, etc.), inspection priority, status (under construction, pending, completed), type of Treatment Control BMPs, subdivision name, and neighborhood name.

The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority development project as well as post-construction BMPs inspection records.

2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

Storm Water Management Section staff is responsible for annual inspections of private and public constructed permanent BMPs as required by the Municipal Permit. Additionally,

responsible parties for the maintenance of permanent BMPs are required to conduct routine inspections of their treatment facilities. For public permanent BMPs, the City's Public Works Storm Drain Maintenance staff is responsible for conducting routine inspections and maintenance. This duplicate inspections program ensures that all permanent BMPs are maintained to high operational standards.

During the current reporting period, Storm Water Management staff conducted inspections of constructed permanent BMPs to verify their proper installation and maintenance. A summary of inspections is listed in Table 2-1 below, which includes both private and public permanent BMPs inspections. Where deficiencies were identified, notices were sent out to responsible parties, followed by further contacts to ensure that corrective actions were taken within the specified time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

Table 2-1 Treatment Control BMP Inspection Summary FY 2008-2009

PROJECT PRIORITY	TOTAL NUMBER OF PROJECTS	INSTALLED TREATMENT CONTROL BMP UNITS	NUMBER OF PROJECTS INSPECTED
High	26	108	26
Medium	50	359	43
Low	107	196	28
Total	183	663	97

Note: The total number of projects listed above includes some projects that are still under construction and permanent BMPs have yet to be installed. Also, some medium and low priority projects are partially occupied which have operational treatment control BMPs.

As can be seen from Table 2-1, a total of 97 Priority Development Projects were inspected during the current reporting period, which meets and exceeds Municipal Permit requirements. Attachment F to this report includes more detailed information about each project, such as, inspection dates, project names, types of BMPs installed, categories (commercial, residential, etc.), priorities, development names, neighborhood names, and responsible parties for each project. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

Public Works Department Storm Drain Maintenance Section conducts routine inspections and maintenance of publicly owned permanent BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders conducting inspection and scheduled maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-3 for a sample of Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

Figure 2-7 Sample Publicly Maintained Treatment Control BMP Inspection and Maintenance Report

2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 165 notification and inspection letters were sent out to parties responsible for the maintenance of completed private Priority Development Projects as shown in Table 2-2 (see City's JURMP document Appendix D).

Table 2-2 Summary of Project Maintenance Verification FY2008-2009

PROJECT PRIORITY	TOTAL NUMBER OF PROJECTS	INSTALLED TREATMENT CONTROL BMP UNITS	NUMBER OF PROJECTS VERIFIED
High	26	108	26
Medium	50	359	50
Low	107	196	89
Total	183	663	165

Note: The total number of projects listed above includes some projects that are still under construction and permanent BMPs have yet to be installed. Also, some medium and low priority projects are partially occupied which have operational treatment control BMPs.

It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and

projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs. By conducting random inspections of public Treatment Control BMPs, Storm Water Management Section ensures that the level of maintenance on such facilities is adequate.

During the previous reporting period, self-inspection and maintenance verification of Treatment Control BMPs by the responsible parties, such as property management companies, Homeowner's Associations, property owners, and developers was a new program and, therefore, City staff found that many property management companies or homeowner associations were unaware of the existence of storm water treatment facilities within their properties and were not familiar with their maintenance procedures. City staff expended significant time to conduct joint visits to the facilities and explain the function of the units and the reasons why such facilities had to be routinely maintained. Staff also brought to the attention of responsible parties their responsibilities and obligations under maintenance agreements.

During this reporting period, while responsible parties were generally more aware of their maintenance obligations, City staff encountered some resistance, which was mainly believed to be attributable to the current downturn in economy as well as factors such as the transfer of property ownership, a change in property management companies, and a change in the board membership of Homeowners' Association. For this reason, the City worked closely with the responsible parties to ensure that the BMPs were inspected and maintained. The City continues to re-evaluate its annual maintenance verification procedures and may modify the program if necessary to increase compliance.

Prior to the start of each rainy season, the City requires verification of proper inspection and maintenance of all treatment control BMPs by the responsible parties. Each year, the City issues to the responsible party, either electronically, by fax, or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) if necessary, a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans.

This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form and certify that the treatment control BMPs have been properly maintained in accordance with the site's maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form. If signed and certified verification forms are not received by the due date, City staff contacts the responsible parties and follows up until Treatment Control BMPs are maintained and verification form properly completed and returned to the City. Enforcement action may be initiated if a responsible party does not comply with the verification requirement after follow-up actions and proper service of a notice.

2.4.4.10 BMP CONSTRUCTION VERIFICATION

The City's Public Works Inspectors and Storm Water Management staff is responsible for ensuring that permanent BMPs, which are components of the project's drainage systems and grading works, are constructed in accordance with approved specifications and grading plans. Public Works Inspectors and Storm Water Management staff conducts frequent inspections of projects during their grading and construction activities and verify that permanent BMPs are constructed as per approved plans.

In compliance with the Municipal Permit, the City has developed databases for tracking Priority Development Projects that are under construction. Additionally, hard copy files, including information about each project's WQTRs and grading or construction site plans that show locations of permanent BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section staff immediately after their inspections of grading activities are completed and their presence on the project is no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting permanent BMPs while being constructed. They ensure that LID Site Design features are constructed as shown on approved grading, construction, or landscape plans and per approved specifications.

As a result of the comprehensive construction verification program for permanent BMPs as described above, it was determined that while major treatment facilities were constructed before occupancy of the project, some minor deficiencies still existed even after partial occupancy. Those projects were identified in each case and responsible persons were required to install the deficient BMPs. As a result of this finding, the City made adjustments and improvements in its construction verification process, which will ensure that all treatment control and other post-construction BMPs are fully operational and without any deficiencies even before the first occupancy of the project.

2.4.4.11 SUSMP WAIVERS

Section D.1.d.(11) of the Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Development Project to receive a waiver from the requirement of meeting numeric sizing criteria for Treatment Control BMPs, if infeasibility can be established. During the reporting period, the City did not grant waivers to any Priority Development Projects.

2.4.4.12 SUSMP WAIVER MITIGATION

During the reporting period, all Priority Development Projects were required to comply with the provisions of the City's local SUSMP. Therefore, the City did not grant waivers to any Priority Development Project during this period.

2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN COLLABORATION

Soon after Regional Board's adoption of the Municipal Permit on January 24, 2007, the Copermittees formed a Land Development Workgroup to develop Copermittees' Hydromodification Management Plan (HMP) and Model SUSMP, among other regional development related tasks. The Land Development Workgroup planned regular meetings, in which various topics, mainly the development of the HMP and Model SUSMP were discussed. The Copermittees decided to hire a consultant with expertise in those fields to work on the studies needed for this purpose. The consulting team of Brown and Caldwell was selected as the main consultant, with several sub-consultants providing expert services.

A Technical Advisory Committee (TAC), consisting of high-ranking and renowned experts in the fields of hydrology, hydromodification, and SUSMP issues were formed to oversee the Consultant's work, and to provide expert advice. During the reporting period, the TAC met on a regular basis, and while Copermittees were not on the TAC, they were encouraged to participate in their meetings. Brown and Caldwell developed submittals for the Interim Hydromodification Criteria and Model SUSMP, which were approved by the Regional Board and the Interim Hydromodification Criteria was incorporated in the first update of local SUSMPs.

During the reporting period, a draft of the Final HMP was submitted to the Regional Board and comments were received. Currently, Brown and Caldwell is working to address Regional Board's comments and submit the Final HMP within the schedule defined in the Municipal Permit. The Model SUSMP has been finalized and approved by the Regional Board, and Copermittees are required to incorporate its standards and criteria into their updated local SUSMPs by March 25, 2010.

City of Chula Vista representatives are active participants in all Land Development Workgroup and TAC meetings and activities, are closely involved in the issues that are discussed, review work products, and provide comments on all related draft documents.

City staff has attended all regional workshops and trainings related to HMP and SUSMP issues, including a 3-day training on Hydrologic Simulation Program Fortran (HSPF), which was organized by the County of San Diego and the American Public Works Association in June 2009. Details of these workshops and trainings are included in Section 8 of this report.

2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

Section D.1.g.(5) of the Municipal Permit requires the development of an HMP document at the regional level and incorporation of such HMP into individual local SUSMPs. The HMP is to include limitations on increases of runoff discharge rates and durations from all Priority Development Projects in order to prevent increased downstream channel erosion, sediment pollutant generation, or other impacts to beneficial uses and stream habitat.

Development of a draft HMP was a two-year effort by the Copermittees and their consultants. The Copermittees submitted the first draft HMP to the Regional Board in January 2009, with the final HMP implementation expected to commence in July 2010. In the meantime, the Municipal

Permit requires the implementation of an Interim Hydromodification Criteria (IHC) for development projects that are 50 acres or more. The IHC requirement was incorporated into updated local SUSMPs, which came into effect in January 2008.

Adoption of IHC requirements in January 2008 coincided with the collapse in the housing market, and almost all major development projects in Chula Vista came to an abrupt halt. Occasional major projects submitted for review by City staff have had extended project submittal, review, and permitting schedules and are still in the review phase. The following development projects in Chula Vista, which cover 50 or more acres each quality for IHC or HMP requirements and are currently under review by City staff:

1. Eastern Urban Center
2. Otay Ranch Village 8
3. Otay Ranch Village 9

During the reporting period, no Priority Development Projects that qualified for IHC received a grading permit or construction permit from the City of Chula Vista.

2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

Other than the development projects listed above, all other development projects reviewed during the current reporting period were less than 50 acres in area and did not meet the criteria for IHC requirements. However, Priority Development Projects were all required to address hydrologic conditions of concern by comparing pre- and post-development peak discharge rates and durations, and demonstrate that the increased peak discharge rates and durations would not cause downstream erosion or habitat impact. Such discussions were required to be included in the submitted WQTRs.

2.4.4.16 ROJECTS DISTURBING 50 ACRES OR MORE

As mentioned in Section 2.4.4.14 above, during the reporting period, there were only three project submittals that proposed to disturb 50 acres or more and met the conditions for IHC requirements. These projects are listed in Section 2.4.4.14.

2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP verification inspections, the City determined that 7 out of 97 inspected projects were partially or totally deficient in the installation of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, 3 projects were brought into compliance. Work is being continued on the remaining 4 projects and it is anticipated that they will also be in compliance within a short period. Deficiencies were also observed in the maintenance of some treatment control BMPs, which were satisfactorily addressed by the responsible persons after verbal notices. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to bring their project to compliance in a timely manner. Such enforcement action may include verbal and written warnings, Notices of Violation, Administrative Citations, and/or

Civil or Criminal Penalties. At this time, the City initiated enforcement actions, which included a Notice of Violation for one development project with deficient post-construction BMPs.

3.0 CONSTRUCTION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(b).i – Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(b).ii – Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.

Permit Section J.3.a.(3)(b).iii – A description of modifications made to the construction and grading ordinances and approval processes.

Permit Section J.3.a.(3)(b).iv – Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.

Permit Section J.3.a.(3)(b).v – Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.

Permit Section J.3.a.(3)(b).vi – A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.

Permit Section J.3.a.(3)(b).vii – For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.

Permit Section J.3.a.(3)(b).viii – A description of the general results of the inspections.

Permit Section J.3.a.(3)(b).ix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(b).x – The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(b).xi – A description of the notable activities conducted to manage urban runoff from construction sites.

3.1 INTRODUCTION

Pursuant to the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by Regional Board staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the Maximum Extent Practicable (MEP).

3.2 SOURCE CHARACTERIZATION

The City has compiled and monthly updates a watershed-based inventory of all construction sites within its jurisdiction as required by Municipal Permit Section D.2.b. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including project name, location, project developer and project size. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report.

3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, Storm Water Management staff maintained and monthly updated a construction site inventory. As a result of coordination between the Public Works Construction Inspection staff, Engineering Design staff, Development Services staff, and Storm Water Management staff, mechanisms have been established in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Development Services Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of Threat To Water Quality (TTWQ) prioritization, and inspection frequencies of active and inactive sites as needed.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Storm water compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and

Discharge Control and Grading Ordinances were updated in 2008 and make the Manual enforceable. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and will not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of Best Management Practices (BMPs) during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Development Storm Water Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual and the CASQA Storm Water BMP Handbook are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements
- Limitation of Grading
- Advanced Treatment
- Example Construction Best Management Practices

3.5 PROGRAM IMPLEMENTATION

The Development Storm Water Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit, it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the project engineer submits an NOI to the State Water Resources Control Board and prepares a SWPPP, which is maintained at the construction site office for review by Regional Board and City inspectors.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet season, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive or in distress. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of 7 or more consecutive calendar days. The City inspects inactive construction sites and issues formal letters to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such letter is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites. If a site is partially inactive, above requirements apply only to inactive areas of the site.

If a construction project is wholly or partially inactive or expected to remain inactive for some time, the City requires the developer to submit a Construction Site Stabilization Plan.

The Stabilization Plan is required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

3.5.1 MAXIMUM DISTURBED AREAS

The Development Storm Water Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. Maximum disturbed area requirements are discussed in detailed in the Development Storm Water Manual. During the reporting period, most major development activities came to a halt as a result of the downturn in the housing industry, and developers in Chula Vista did not undertake major new grading projects. The focus of City inspectors were to ensure that existing graded sites that intended to close down the site or slow down construction activities stabilized inactive areas and implemented adequate BMPs to minimize the discharge of sediment and other pollutants from their sites.

3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. These conditions are explained in Section 7.V of the Development Storm Water Manual. If it is determined that a site poses a Exceptional TTWQ based on criteria outlined in the Manual, the site shall implement advance treatment controls to minimize the discharges from the construction site.

3.5.3 CONSTRUCTION SITE INSPECTIONS

The City's construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one full-time Storm Water Compliance Inspector, two full-time Environmental Health Specialists, one Engineering Technician, and eight Public Works Inspectors who manage this effort on private and public construction projects.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. The Municipal Permit does not require TTWQ Prioritization for construction sites. However, the City has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites in this report, therefore, includes a column indicating TTWQ Prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of the Municipal Permit, as applicable. Please see Table 3-1 for the number of construction site inspections under each category. A complete list of inspected construction sites is included in Attachment G. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

Table 3-1 Construction Site Inspection Summary FY 2008-2009

INSPECTION SUMMARY	NO.
Formal Inspection Reports	469
Inspections During Wet Season	322
Inspections During Dry Season	147
Inspections of High Priority Sites	87
Inspections of Medium Priority Sites	289
Inspections of Low Priority Sites	93

City inspectors evaluate BMP implementation on construction sites in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP, monitoring results, training records, etc. for construction sites subject to the General Construction Permit.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP or CSWMP.
- Failure to implement good housekeeping practices at the site.
- Failure to comply with previous orders.

City inspectors who conduct site inspections of both public and private development projects have full inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements of the Municipal Permit, the Development Storm Water Manual, the erosion control plans, and any other development permit conditions imposed by the City prior to the issuance of a grading or construction permit.

Construction site inspections include the following:

- Verification of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Verification of proper maintenance of the BMPs.
- Evaluation of the effectiveness of the BMPs.
- Verification that the party responsible for the implementation of the site SWPPP has received adequate training.

- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its storm water ordinances and development permit conditions at all private and public construction sites, as necessary. The City's ordinances and development permit conditions provide adequate legal authority for the City to enforce its ordinances on construction sites through Stop Work Notices, penalties, fines, and other enforcement procedures as necessary. City's inspectors work with developers and contractors to identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City's inspectors initiate enforcement action which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 summarizes enforcement actions taken within the defined reporting period of this report.

Table 3-2 Construction Enforcement Summary FY 2008-2009

ENFORCEMENT ACTION	NO.
Written Notices of Violation (Includes Cease and Desist and/or Clean and Abate Orders)	7
Civil Penalty Order	1

As a result of the above enforcement actions, Chula Vista developers were fined a total of $7,500 in the current reporting period. Follow-up inspections were conducted as necessary until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2008-2009. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

4.0 MUNICIPAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(c).i – Any updates to the municipal inventory and prioritization.

Permit Section J.3.a.(3)(c).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.

Permit Section J.3.a.(3)(c).iii – A description of inspections and maintenance conducted for municipal treatment controls.

Permit Section J.3.a.(3)(c).iv – Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.

Permit Section J.3.a.(3)(c).v – Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.

Permit Section J.3.a.(3)(c).vii – Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.

Permit Section J.3.a.(3)(c).viii – Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.

Permit Section J.3.a.(3)(c).x – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xi – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xii – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xiii – Identification of the total distance of curb-miles swept.

Permit Section J.3.a.(3)(c).xiv – Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.

Permit Section J.3.a.(3)(c).xv – Amount of material (tons) collected from street and parking lot sweeping.

Permit Section J.3.a.(3)(c).xvi – A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.

Permit Section J.3.a.(3)(c).xvii – Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.

Permit Section J.3.a.(3)(c).xviii – A description of the general results of the inspections.

Permit Section J.3.a.(3)(c).xix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(c).xx – The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(c).xxi – A description of notable activities conducted to manage urban runoff from municipal areas and activities.

4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and

activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage, loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are classified as high, medium, or low TTWQ based on activities, functions, and various site-specific factors. For more information on the facilities that have additional operations and activities,

please see the City's JURMP. The inventory was updated in March 2008 during the JURMP update process. During the reporting period, no additional municipal facilities were constructed and, therefore, the same inventory has been used in this report. Currently, there are some public parks in the design or construction phase that will be added to the municipal inventory after they are completed.

4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

4.2.4 PROGRAM IMPLEMENTATION

4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities receive training on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City storm water staff inspected all 62 high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected on an as needed basis. No medium or low priority facilities were determined to need inspection this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in

Attachment H. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented. Enforcement on municipal facilities is in the form of disciplinary process against the responsible staff member when compliance is not met in a timely manner. If a violation of the City's Storm Water Ordinance or the Municipal Permit is observed, which is caused by negligence of City personnel, inspectors work with supervisors to ensure that corrective actions are implemented; provide training to the personnel; and immediately inform the appropriate supervisor. The supervisor will then take action against the violating staff member as necessary, including warnings and other disciplinary measures. City storm water staff is in regular contact with Public Works Maintenance staff and provides training on pollution prevention and BMP implementation, therefore, most deficiencies are taken care of upon first notice.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Public Works Maintenance staff inspects all municipal treatment control BMPs to ensure their proper operation. Additionally, Storm Water Management staff conducts random inspections of such facilities to provide a second layer of confidence and ensure that maintenance standards are met. The City maintains treatment control BMPs at the John Lippitt Public Works Operations Center; Fire Stations 6, 7, 8; Salt Creek Park; Veteran's Park; Sunset View Park; Harvest Park; Santa Cora Park; Mountain Hawk Park; Montevalle Park; Windingwalk Park; Horizon Neighborhood Park; Harborside Park; and the City of Chula Vista Civic Center. City crews clean the structural treatment control BMPs on an as needed basis, and their condition is evaluated for effectiveness. Any repairs are noted and carried out on a timely manner. Table 4-1 shows the municipal facilities within the City that have treatment control BMPs and their inspection dates.

Table 4-1 Municipal Facilities with Treatment Control BMPs

FACILITY NAME	NUMBER & TYPE OF TREATMENT CONTROL BMP	DATE INSPECTED
Montevalle Park	10 Filter Inserts	06/04/09
Salt Creek Park	1 CDS Unit	06/04/09
Windingwalk Neighborhood Park	1 Vegetated Swale	06/09/09
Harvest Park	1 Filter Insert	06/18/09
Sunset View Park	3 Filter Inserts	06/04/09
Mountain Hawk Park	20 Filter Inserts	06/04/09
Horizon Neighborhood Park	1 Filter Insert	06/05/09
Veterans Park	1 Vegetated Swale, 5 Filter Inserts	05/27/09
Chula Vista Civic Center	5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts	05/27/09
Fire Station 6	3 Filter Inserts	06/01/09
Fire Station 7	1 CDS Unit, non-storm water diverter	06/01/09
Fire Station 8	1 CDS Unit, non-storm water diverter	06/01/09
Harborside Park*	3 Filter Inserts	06/29/09
Santa Cora Park*	23 Filter Inserts	09/29/08
John Lippitt Public Works Center*	6 Filter Inserts	06/01/09

* – Not a SUSMP Project, but the City still inspects the inserts and maintains them

4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

Fertilizer, Pesticides, and Herbicides

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do not spray on windy days.
- All employees who spray pesticides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the state and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent material safety data sheet (MSDS) files.
- MSDS sheets for chemical being used must be kept with the applicator while applying pesticides.

Proper Planting Techniques

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation whenever possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

Minimize Runoff

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.
- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

4.3.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) designates roads, streets, highways, and parking facilities as high priority municipal areas for inspection purposes. Therefore, the Municipal Inventory (Attachment C) categorizes these facilities as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the roads, streets, highways, and parking facilities. The City maintains 406 miles of roads, streets, and highways.

The City has one stand-alone covered parking facility in downtown Chula Vista that generates a moderate volume of trash and debris that is swept twice per month and is inspected annually as a part of the City's Municipal Inspection Program. The other 22 parking facilities are associated with other municipal facilities (such as parks) and generate low volumes of trash and/or debris. These are swept on a monthly basis and are inspected annually.

For the purpose of street sweeping, roads, streets, and highways are further classified into high, medium, and low priority based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. Table 4-2 below provides more information about these classifications, the number of curb miles in each, the type of areas these classes cover, and their respective sweeping frequencies. The City is in the process of collecting data to refine this classification by working with its contractor to keep records of the quantities of trash and debris collected each day from various sections of the City.

Table 4-2 Street Sweeping Information Based on Class

CLASS	NUMBER OF CURB MILES	TYPE	SWEEPING FREQUENCY
High	127.75	Industrial and Commercial – 10.5 miles	Twice per week
		Commercial and Business – 117.25 miles	Once per week
Medium	71.6	Center Islands and Medians	Twice per month
Low	702.26	Residential – 656.36 miles	Once per month
		Center Lines – 45.9 miles	Twice per month

4.3.3 BMP REQUIREMENTS

Street sweeping is one of the ongoing city functions that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

The City has identified some streets as high Threat to Water Quality (HTTWQ) areas. The main pollutant in these areas is trash. Trash in these areas is mainly attributable to customers of recycling businesses located in the industrial areas of Energy Way and Nirvana Avenue. Also, trash trucks shedding some of their load while traveling to and from the Otay Landfill on Maxwell Road and Main Street east of I-805 are sources of trash on these two streets. As a proactive measure to minimize trash entering the storm drain system in these areas, the City has retrofitted existing curb inlets in these areas with filter inserts. The City's storm drain crew conducts regular inspections and cleaning of these filter inserts and replaces parts as necessary.

4.3.4 PROGRAM IMPLEMENTATION

4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept approximately 18,000 curb miles and removed 590 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular roadway maintenance is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, bus stops, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

- Commercial and industrial streets swept once per week
- Center islands and medians swept twice per month
- Centerlines and residential streets swept once per month

Figure 4-1 Street Sweeping Schedule

4.4 MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4)

4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants and potential pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through three primary activities: 1) catch basin maintenance, 2) channel maintenance, and 3) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drain facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultant for dry weather field screening annually inspects over 57 outfall locations throughout the City and conducts upstream investigations based on field screening results. They call and report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to abate the pollution, cleanup, and inspect the drainage area.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary. This multi-layer inspection program ensures that almost all MS4 facilities are inspected and maintained regularly.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all environmental regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris from areas that trash accumulation may cause flooding and damage to life or property. The City is in the process of obtaining environmental permits for maintaining areas that require the use of equipment.

Currently, three vacuum trucks and three crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drain systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drain systems in emergencies and other similar situations.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system universally used by the Public Works Department for collecting and tracking data about all its activities. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

During the reporting period, the City purchased an additional 200 thermoplastic storm drain stencils, and plans to install them in the next fiscal year. These stencils adhere to the concrete curb/gutter by heat treatment and are more durable than paint stencils or plastic markers using adhesive. Last Fiscal Year, 500 thermoplastic storm drain markers were permanently affixed to storm drain inlets with the prohibitive "No Dumping – Drains to Bay" message in two languages. In addition, citizens participating in Beautify Chula Vista Day in October 2008 stenciled 88 more storm drains. Notably, nearly all storm drain structures in the City are identified with stenciling, plastic markers, or permanent concrete stamping.

4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4, which includes open channels, catch basins and inlets, and outfalls. As required by the Municipal Permit Section D.3.a.(7), the City's MS4 is included in the municipal facility inventory (Attachment C) as a high priority facility for inspection purposes. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

4.4.4 PROGRAM IMPLEMENTATION

4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2008 to June 30, 2009 is summarized below. A total of 248 inlets were identified as accumulating a high volume of trash.

All high trash volume facilities were inspected at least once during May 1 – September 30. Table 4-3 details the amounts of waste collected from the City's storm drain system based on various facility and waste categories. Recently, the City has added green waste as a category of waste collected from the MS4 and will include this new data in the annual report for next fiscal year.

Catch Basins and Inlets

- There are 8,412 catch basins and inlets in the City
  - 7,343 catch basins and inlets were inspected
    - Out of these catch basins and inlets inspected, 5,183 catch basins and inlets were cleaned
- Data collection for catch basins with accumulated waste exceeding the cleaning criteria (33% or more full) started January 1, 2008. A total of 147 exceeded the criteria from July 1, 2008 – June 30, 2009.

MS4

- There are 181 miles of MS4 in the City
- The storm drain maintenance crews televised 0.63 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there was no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 0.62 miles of MS4 was cleaned. It should be noted that if storm drain pipes are self-cleaning and under normal operation, there should be no need for cleaning storm drain pipes.

Open Channels

- There are 31 miles of open channels in the City
- A total of 738,000 square feet of open channels were inspected and cleaned

Table 4-3 Amount of Waste Cleaned from the Storm Drain System FY 2008-2009

CATEGORY	AMOUNT (tons)
Catch Basins	**56.86**
Inlets	**39.46**
MS4	
Trash	2.23
Sediment	0.76
Landscaping Debris	8.75
Sub-Total	**11.74**
Open Channels	**367.08**
TOTAL	**475.14**

The City will continue to inspect its MS4 as required by the Municipal Permit and record collected inspection data. In addition, the City will review its inspection record and determine which facilities will require inspections less than annually and report these facilities in its FY 2009-2010 annual report.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in the protection of the MS4 system. If not properly maintained, the sewer system can potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, parasites, and chemicals.

The City currently implements a Sewer Overflow Response and Prevention Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, the City is in the final stages of updating the plan and developing a Sewer Collection Management Plan and a Fats, Oils, and Grease (FOG) Monitoring Ordinance. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

4.5.2 SOURCE CHARACTERIZATION

There are 485 miles of sewer pipes in the City. The Municipal Permit Section D.3.a.(7) requires sanitary sewer collection systems to be identified as high priority facilities for the purpose of inspections. The sanitary sewer system is included in the municipal inventory as such (please see Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system. The City of Chula Vista does not operate a Publicly Owned Treatment Works. Sewage generated in Chula Vista is collected and conveyed to the City of San Diego treatment works at Point Loma.

4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receive training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance and cleanup crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

4.5.4 PROGRAM IMPLEMENTATION

4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 443 miles of sewer main (includes critical maintenance areas) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is also conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, minimizing potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with diameters larger than 36 inches. PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as power washing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. The Municipal Permit Section D.3.a.(7) requires that power washing be identified as a high priority municipal activity for inspection purposes. Therefore, Attachment C has categorized power washing as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including power washing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City power washing crews implement BMPs during their activities and receive regular training on storm water pollution prevention.

4.6.4 PROGRAM IMPLEMENTATION – POWER WASHING FOR GRAFFITI REMOVAL

4.6.4.1 MAINTENANCE AND INSPECTION

The City's Graffiti Abatement Program functions under the mission of: *"To deliver in a timely manner, a comprehensive, cost-effective, environmentally sound, and technically reliable graffiti removal, education, and prevention program for the residents of Chula Vista."* The City provides cost-free graffiti removal for the residents of Chula Vista.

The Graffiti Abatement Program utilizes various techniques for effective removal of graffiti Citywide, including power washing and sand blasting. In its commitment to this program and to utilize environmentally sound and cost-effective graffiti removal processes, City Council approved the spending of $63,000 for the purchase of highly specialized equipment to capture and treat residual wash water generated from graffiti abatement activities in early 2006. At the end of 2006, the new equipment was made available to the graffiti crews and has been in use ever since. The equipment includes the following:

- A Ford F450 Heavy Duty truck powered by a Triton V10 gasoline engine with an 8' x 12' flatbed.
- A Mi-T-M Industrial belt-driven pressure washer rated at 5.6 GPM output at 3,500 P.S.I.
- A diesel-fired burner for hot water rated at 470,000 BTUs per hour with adjustable temperature control up to steam.
- A Mi-T-M 6000 watt Generator powered by a 13 HP Honda gasoline engine provides power for the AquaKleen Vacuum Recovery system and Water Recycling System, which includes a commercial vacuum system that operates on two 120 volt vacuum motors.
- An automatic discharge pump with a check valve recovers the residual wash water through a Vacu-berm, and a 1.5" 25 foot-long pick up hose and pumps wash water into a 22 gallon oil/water separator system. The water then passes thru a series of 3 filters and a filtration bag that is changeable before it is returned to the storage tank for reuse. This high efficiency system is capable of recycling up to 80% of the wash water for reuse. The clean water tank holds 250 gallons.
- Speedflo PowerTwin 6900 gas powered hydraulic airless paint pump with 3000 PSI and two-gun capability with 100 feet of 0.25" paint hose on a spring-loaded retractable hose reel mounted in the rear corner of the truck bed. This pump is rated at 1.8 GPM.

As a part of the inspection process, City's Storm Water Management staff annually conducts a ride-along with the graffiti/power washing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures. During this reporting year, City Storm Water Management staff observed the removal of graffiti from a sidewalk area, close to the curb/gutter. The graffiti crew implemented all BMPs and prevented any wash water from entering the storm drain system. All BMPs were in place and working properly.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

The City hosts a variety of special local events, which include festivals, fairs, and other events for special causes and occasions. Usually, these events involve the participation of outside organizations, community groups, and the general public. The gathering of event participants and crowds is generally a source of trash and debris if BMPs are not implemented.

4.7.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) requires that special events be designated as high priority for inspection purposes. Therefore, special events are included in the City's municipal inventory as high priority activities (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping immediately following major events taking place on a street, and having personnel dedicated to litter abatement throughout City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works in conjunction with other City departments and event organizers to ensure that adequate BMPs are implemented during special events.

4.7.4 PROGRAM IMPLEMENTATION

Storm Water Management and Environmental Services staff has active presence at the majority of City events. They set up booths, provide public education on environmental issues, and distribute informational materials. As necessary, they conduct surveys at the same time to evaluate general public's awareness and practice of BMPs. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed protection. City Environmental Services staff notifies hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(d).i – Any updates to the industrial and commercial inventory.

Permit Section J.3.a.(3)(d).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.

Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.

Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.

Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.

Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.

Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.

Permit Section J.3.a.(3)(d).ix – A description of efforts implemented to address mobile businesses.

Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.

Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.

5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City of Chula Vista to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity

is mutually exclusive, and that each is essential to the overall success of the program. The City has compiled an inventory of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

5.2.1 BACKGROUND

The City's industrial and commercial inventories include 1,383 facilities. Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, annually, the City conducts updates of its industrial and commercial facilities inventories by searching through its business license database and conducting visual observations of new or closed businesses during annual inspections. Additionally, every five years, the City conducts a comprehensive field validation of its industrial and commercial inventories Citywide. The industrial and commercial inventories are also updated on a continuous basis by adding businesses that cause incidents of pollutant discharge or are found to require regular inspections due to the type and amount of pollutants that they generate.

Watershed-based inventories of industrial and commercial sites within the City have been compiled. Information was obtained from the City's business license database (Permits Plus), the State of California database of industrial sites that have filed NOIs, inspection records, and previous experience.

Inventories of industrial and commercial facilities within the City were compiled during the development of the City's JURMP in 2008, which were later updated for the current reporting period and are included in Attachments D and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Municipal Permit category
- Description of services

- Priority
- North American Industrial Classification System (NAICS) code

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- Standard Industrial Classification (SIC) code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.

The inclusion of the APNs allows the City to track its inventories through the City's GIS program. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing industrial and commercial discharges of pollutants into MS4s. Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides the authority to require SWPPP for any industrial or commercial facility that may discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets because they conflict with Municipal Permit requirements or City's ordinances. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards. It has been determined that one-on-one interaction between City inspectors and business owners are more effective in knowledge and behavior change than conducting workshops or distributing informational materials, although latter methods are also effective to a lesser degree and are practiced by the City.

5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. The City also inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements, as described in the JURMP, are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities.

Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection, the City provides a copy of the inspection report to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

In all cases a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City.

- Providing one-on-one training and help to business owners to develop their activity and site specific BMPs
- Distributing informational printed materials
- Conducting industrial and commercial inspection and setting standards for compliance

5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

During this reporting period, 209 industrial facilities and 1,174 commercial facilities including 516 mobile businesses were identified and inventoried. These facilities are identified in Attachments D and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, the following number of inspections was conducted to ensure compliance within the Permit requirements (see Attachments I and J):

- 192 high priority commercial facilities
- 41 low priority commercial facilities
- 48 high priority industrial facilities
- 2 low priority industrial facilities

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b.(3).
- Threat to Water Quality – Facilities that posed a higher TTWQ were given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.
- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial and commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed for bringing the facility into compliance. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities and during administrative hearings.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

The Copermittees are in the process of standardizing industrial/commercial inspections. An Inspection Standards Workgroup was formed with the task of finding a way to standardize industrial-commercial inspections so that the results from each Copermittee's inspections are consistent. The goal of the workgroup is to create minimum regional standards while maintaining flexibility for each Copermittee to identify and apply their individual requirements that have been developed to match each Copermittee's respective storm water program.

5.2.4.2 PRIORITIZATION

The Municipal Permit no longer requires industrial and commercial inventories to be categorized into high or low priority for TTWQ, although Section D.3.b.(3) of the Municipal Permit requires inspections of sites determined to pose a high threat to water quality. Based on the City's past experience, prioritization of industrial and commercial facilities into high or low priority provides a powerful tool to identify facilities that require focused attention and more frequent inspections. Therefore, the inventories of industrial and commercial facilities have been prioritized in this report.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as

high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge are also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- SIC Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)
- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road (Sweetwater River)
  - Bay Boulevard (San Diego Bay; facilities within the Port jurisdiction are not included)
- Fast food chains
  This is due to frequent rotation of management and employees, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrappers, etc. in the parking lot.
- Private golf courses
- Entertainment facilities
  For example, facilities such as the Cricket Wireless Amphitheatre, Knotts Soak City, etc.
- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note

to update the inventory. If a new business has been determined to be included in the inventory, Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Storm Water Management staff checks for coverage under the General Industrial Permit, where applicable.

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/stormwtr/groupmonitoring.html

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies the Storm Water Compliance Inspector during the walk-through to enable City staff to point out areas where corrections are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, the Storm Water Compliance Inspector completes a Storm Water Quality Inspection Report for Commercial/Industrial Facilities. The responsible party is provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Results of the SWPPP review, BMP plan, and monitoring results
- Assessment of BMP implementation
- Recommended corrective actions
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the report

The Storm Water Compliance Inspector does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person. Educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while the Storm Water Compliance Inspector is at the site.

As discussed above, the business is provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high priority or vice versa. Any such changes are reflected in the inventory update submitted in the following JURMP Annual Report.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachments I and J.

5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the use of a third party inspection program. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

5.2.4.5 VIOLATIONS AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate
- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

Storm Water Compliance Inspectors properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, Storm Water Compliance Inspector conducts follow-up inspections to ensure that required corrective actions are adequately addressed.

Where the Storm Water Compliance Inspector observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the situation. When necessary, City's maintenance crews respond to illegal discharges, contain and capture pollutants before entering storm water conveyance system inlets, and stay at the scene until the illegal discharge is terminated by the responsible person. The affected areas

and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the business owner of the property owner. In any case in which Storm Water Compliance Inspectors determine that a noncompliant site poses a threat to human or environmental health, the City notifies the RWQCB by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illicit discharges or illegal connections from industrial and commercial businesses. This includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section 9.5 of the City's JURMP.

See Table 5-1 details the types of violations and the numbers of each during the fiscal year. A detailed account of enforcement actions taken during this reporting period is included in Attachment K.

Table 5-1 Industrial/Commercial Enforcement Action Summary FY 2008-2009

VIOLATION TYPE	NO.
Administrative Citations-Warning	5
Administrative Citations	12
Notice of Violation	1
Cease and Desist Orders	1
Clean and Abate Order	1

The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

5.2.4.6 IDENTIFICATION OF NON-FILERS

If Storm Water Compliance Inspectors determine that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the Regional Board to determine if the facility is required to obtain coverage. At the same time, the Regional Board is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with Regional Board staff to assist in their site inspections. Each Annual Report includes a list of industrial facilities that the City has identified during that reporting period as candidates for coverage that have not filed NOIs. The list includes the name of the facility, address, the respective SIC code, and the type of business.

During the current reporting period, the City identified facilities that may be eligible for coverage under the General Industrial Permit. These facilities are listed below in Table 5-2. The Regional Board makes the ultimate decision as to the applicability of the Industrial Permit to the listed facilities.

Table 5-2 Facilities Potentially Eligible for Coverage Under the General Industrial Permit

BUSINESS NAME	ADDRESS	SIC	BUSINESS TYPE
Gonzales Northgate Market	1058 Third Avenue Chula Vista, CA 91911	2099	Tortilla Manufacturing
Mercado Internacional 2000	1415 Third Avenue Chula Vista, CA 91911	2099	Tortilla Manufacturing
Selecta Mexican Foods	1340 3rd Ave. Chula Vista, CA 91911	2099	Tortilla Manufacturing
Tortillas de Harina Elice	1660 Broadway Chula Vista, CA 91911	2099	Tortilla Manufacturing
Tortilleria Santa Fe	2765Main Street Chula Vista, CA 91911	2099	Tortilla Manufacturing

5.3 MOBILE SOURCES ELEMENT

5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Many mobile businesses can be difficult to identify because many do not have business licenses. On a continuous basis, new mobile businesses are started, existing mobile businesses go out of business or some mobile businesses do not renew their business license or operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses. Furthermore, City inspectors conduct weekend and night inspections to monitor BMP implementation by mobile businesses.

5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile Auto Detail
- Window Washing/Pressure Washing/ Street Sweeping
- Pool and Spa Cleaning
- Carpet Cleaning
- Plumbing/Handyman/Repairman
- Landscaping
- Dog Grooming
- Boat Cleaning/Hull Maintenance
- Fire Sprinkler Maintenance

- Painting and coating
- Mobile construction trades, which include cement work and masonry

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business applicant within the above categories are required to go through a storm water BMP training and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 208 mobile businesses from the categories listed above applied for a City business license, were trained on BMPs related to their business, signed the certification statement, and received their business license. Table 5-2 details the types and numbers of mobile businesses approved during the reporting year.

Table 5-3 Approved Mobile Business Licenses by Category FY2008-2009

BUSINESS TYPE	NO.
Construction Related	16
Carpet Cleaning	12
Boat Cleaning & Maintenance	5
Auto Detailing	21
Pool & Spa Cleaning	12
Handyman/Repairman	40
Powerwashing/Window Cleaning	2
Plumbing	28
Landscaping	35
Fire Protection Systems	10
Painting and Coatings	19
Portable Sanitary Services	1
Pest Control	1
Miscellaneous/Others	6

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes as well as costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge Control and Spill Prevention, Control, and Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

In addition, as per the Municipal Permit, the Copermittees developed and implemented a set of minimum core BMPs for the various types of mobile businesses. The following BMPs specifically address the unique characteristics of mobile businesses.

- Storm water training
- Spill containment and cleanup (Spill Kits)
- Proper handling of all wastes (Solid, liquid and hazardous)
- Protecting storm water conveyance systems
- Providing proper handling and containment of materials
- Providing equipment washout areas

These practices represent only the minimum required BMPs. Mobile businesses are instructed to contact local jurisdictions where mobile business activities are to take place to find out about any additional or more stringent requirements.

The Copermittees are in the process of posting information about mobile business minimum BMPs as a resource in the Project Clean Water Toolbox website. Please see Figure 5-1 – Clean Water Toolbox for the home page of the website.

Figure 5-1 Clean Water Toolbox

5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed to the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. Approved applications and completed Storm Water Questionnaires and Certification Statements are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department receives application from mobile business owner

- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance, and appropriate CASQA BMPs relevant to the type of business activities.
- The applicant is instructed to complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval from the Storm Water Management Section before a business license can be issued.
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.
- In addition to the City's Mobile Business Database, the Copermittees have established a Regional Copermittee Mobile Business Database. The web-based database can make queries on locating a mobile business, finding and viewing violations, and watershed-based reporting. Jurisdictions are able to edit a mobile business that is located or does business in their jurisdiction. See Figure 5-2 – Regional Copermittee Mobile Business Database for a sample web page.

Figure 5-2 Regional Copermittee Mobile Business Database

Three types of reports can be generated from this database:

- All mobile businesses home based within a jurisdiction
- All mobile businesses operating within a jurisdiction

- All violations that have occurred within a jurisdiction

5.3.4.1 EDUCATION AND OUTREACH

During the business license application process, the City provides mobile business owners or operators necessary information, educational materials, and outreach related to storm water quality issues specific to their type of business. As stated above, businesses are given the educational materials outlining pollution prevention measures and other BMP requirements related to their perspective activities prior to the license being issued. A sample of the Storm Water Information Packets for Mobile Businesses is included in Appendix D of the City's updated JURMP. The education program is described in detail in Section 10, of the City's updated JURMP.

5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobile businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene, City inspectors require an immediate stop to any illegal discharge and instruct the responsible person to initiate containment and cleanup of the affected areas. If the business lacks materials and equipment required for the deployment of adequate BMPs, the responsible person is informed that they will not be able to resume activities until such time that they procure all necessary materials and equipment. Storm Water Compliance Inspectors find out if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being allowed to resume business operations. Enforcement action, including warnings, citations, civil penalties, or other enforcement measures are initiated where justified. During the current reporting period, a total of 4 administrative citations were issued to mobile businesses operating in Chula Vista.

5.3.4.2.1 NOTABLE ACTIVITIES

Because of both the City's and Regional education efforts focused on mobile businesses, there has been a significant decrease in enforcement. During the reporting period, the City continued its business license application processing combined with public education, which is considered a notable and very effective method of minimizing pollutant discharges from mobile business activities.

6.0 RESIDENTIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.

Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.

Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.

Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.

Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.

Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.

Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.

6.1 INTRODUCTION

The City has developed the residential component of the Jurisdictional Urban Runoff Management Plan (JURMP) based upon a multi-faceted approach including pollution prevention; complaint response and enforcement; and outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharges of pollutants into the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP) and to support the long-term improvements of water quality through awareness and behavior modification.

6.2 SOURCE CHARACTERIZATION

It is recognized that the information collected from reported illegal discharges and results of subsequent investigations can be analyzed to provide useful tools in effectively characterizing activities, sources, and areas within the City that contribute more to water quality impairment and that need to be targeted. These criteria may stay constant from year to year, or change each

year. However, knowledge of the pattern that they follow will provide the storm water manager an insight that is necessary to develop or modify an effective program. As in previous reporting years, the City has taken a critical look at the complaints received in 2008-2009 as presented in Figure 6-1. Notably, home improvement related discharges continue to be prevalent in this reporting period. Compared to last year, the percentage of home improvement related discharges decreased by 18%. Within two consecutive years, home improvement related illegal discharges have decreased by 28%. There may be several reasons for this declining pattern, one of which may be attributable to the public outreach programs conducted by City staff that provide invaluable information and education on the impacts of waste disposal to the general public and, therefore, is effective in changing habits. Further, characterizing the sources of pollutants can provide a resource in tailoring public education and outreach programs to the specific needs of the community and improving their effectiveness, while maintaining economic viability. This type of critical look is an important tool in making management decisions on how to approach residential Best Management Practices (BMPs) implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

Figure 6-1 Percentage of Reported Residential Non-Storm Water Violations by Activity FY 2008-2009

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high Threat To Water Quality (TTWQ) residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, every year certain residential areas of the City are designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating residential BMP implementation is quite challenging, however, the City has developed a number of mechanisms through which information on BMPs are disseminated to the public and

ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, door hangers, City's environmental website, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response & Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed above have been discussed in more detail throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented primarily through public education, and where necessary by enforcement action.

6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted, so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses public education and outreach together with enforcement mechanisms, when necessary, to ensure program implementation by residents and compliance with all federal, state, and local laws and regulations.

The City keeps accurate records of all reported residential illegal discharges and non-compliance with BMP requirements. This information can be used in many ways such as identification of pollutants of concern, areas of HTTWQ, increasing/decreasing trends in illegal discharges, and repeat violators. Such analysis is then used to develop new programs or modify existing programs to focus attention on program elements that result in higher effectiveness and quicker results. Map 1 – Violation Location Map was prepared to depict all areas of the City with concentrated illegal discharge reports. The City then targets such areas for more focused public education and surveillance. The one municipal violation shown on Map 1 was not due to municipal activities, but was caused by an illegal discharge by a transient in a City park.

6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Information pertaining to the household hazardous waste and the used oil and filter programs are distributed to residents annually during special events, presentations, point of purchase locations, mobile displays throughout the city offices and community centers, local realtors/associations, and property management offices. Residents are

educated about the disposal of such waste through the City's educational program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the California Integrated Waste Management Board (CIWMB). The program has the capacity to receive and process used oil generated by City residents. The amount of used oil collected from certified oil centers increased since the last reporting period as presented in Table 6-1. This increase can be attributed to public education and the City's active role in coordinating with Certified Centers in rebate claims program and participation in filter exchange events. Also, the oil collection increase can be credited to the City's certified centers and to a strong promotion program. The City encouraged residents to take a proactive approach to changing their oil by draining it first and uninstalling their filters and to take them along prior to visiting their local auto supply store. In this way, residents recycle used oil as they purchase their new oil and avoid an extra trip, one that would produce additional green house gases into the atmosphere. This method also prevents storm drain pollution, as unattended oil could intentionally or unintentionally spill and enter storm drain systems. The recent economic downturn can also be another reason for more people performing their own oil changes in an attempt to save money.

The South Bay Used Oil Recycling Program has been evaluated to be one of the most successful programs implemented by the City of Chula Vista, National City, Coronado, and Imperial Beach in improving environmental quality. Residents of these cities can leave oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. This used oil will be collected and recycled through the South Bay Used Oil Recycling Program. Residents of Chula Vista also have the option of taking their used oil to various used oil collection facilities in the City for recycling or disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. This facility accepts clean as well as used oil. Residents are limited to 15 gallons or 125 pounds per vehicle. The facility is open every Saturday from the hours of 9 AM to 1 PM. Because of the continuous high volume amount of HHW collected and demand from the public, the City decided to continue to keep the facility open on Wednesdays from 1 PM to 3 PM. The City also offers "door-to-door" collection of HHW for a small fee. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. Every used oil and HHW application has focused on pollution prevention, watershed protection, source reduction and making it easy for residents to do the right thing when it comes to proper disposal.

Table 6-1 Amount of HHW and Used Oil Collected FY 2008-2009

Household Hazardous Waste	Quantity of waste collected (FY 07-08)	Quantity of waste collected (FY 08-09)
	220,008 lbs	252,494 lbs
Used Oil	Quantity of used oil collected from certified centers (FY 07-08)	Quantity of used oil collected from certified centers (FY 08-09)
	30,779 gallons	49,287 gallons

6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where enforcement actions may be necessary, where appropriate:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel
- City's environmental website at: www.chulavistaca.gov/clean
- Analysis of data collected and managed in the Department of Public Works data management system GBA (George Butler Associates Management System)

Further information about the City's hotline reporting system and Dry Weather Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. By using a Geographic Information System program and the data collected from these mechanisms, every year residential areas of the City that have had higher numbers of violations, and outfall locations that exceeded pollutant standard limits are mapped (see Map 2– HTTWQ Residential Area Map and Map 3 – Violations Locations - Residential). City staff then develops programs to inspect and investigate areas of the City that are considered high TTWQ. City staff investigates violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continues to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's illegal discharge reports database can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1.

The residential areas and activities evaluation method described above indicates that: 1) residents are becoming more environmentally conscious, 2) residents take an active role in environmental protection by calling the City and reporting illegal discharges, 3) positive trends in urban runoff discharge quality is emerging. These results are encouraging and provide incentive to City staff to maintain their level of efforts and find innovative methods to accelerate the positive trend.

6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in Chula Vista Municipal Code Chapter 14.20, Storm Water Management and Discharge Control; and Chula Vista Municipal Code Title 1, General Provisions. During this reporting period, Storm Water Compliance Inspectors responded to over 144 complaint calls of which 106 were residential. Twenty-four of the complaint calls resulted in citations. The total amount of fines collected during this reporting period from residential violations was $10,000.00. Compared to last year, the number of residential complaint calls increased by 28%. Conversely, despite this increase, the number of actual violations/citations is down by 47%. This can be attributed to the ongoing public outreach programs conducted by City staff to increase public awareness of City's storm water programs and pollution prevention laws. Follow-up inspections were conducted when necessary to ensure that full compliance is achieved.

During the reporting period, Storm Water Compliance Inspectors responded to each report of residential and other violations; investigated each case; took appropriate actions regarding containment of pollution; educated the violating party on existing laws and regulations; made follow-up visits, where necessary; and, proceeded with enforcement action if voluntary compliance was not achieved.

Data management of past violations helps City staff to identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate illegal act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of reported violations are included in Attachment K.

6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step towards improving receiving water quality, both locally and regionally. Increasing public awareness and encouraging a change in both attitude and behavior of the general public and the regulated community, can directly lead to a reduction or elimination of storm water pollution caused by common daily residential activities. Due to the importance of public education and outreach in storm water programs, the Municipal Permit requires public education at jurisdictional, watershed, and regional levels. The following are brief accounts of the implementation of jurisdictional and regional education programs during the reporting period. Additionally, during the reporting period, the City collaborated with the Copermittees of the San Diego Bay Watershed to implement the Watershed Urban Runoff Management Program

(WURMP) residential education component. Details of such efforts are fully discussed in this year's WURMP Annual Report, which will be submitted to the Regional Board under a different cover.

6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the City's Environmental Services Division and the Conservation Department in the implementation of the Jurisdictional Residential Education Program. Pollution prevention and water quality regulation information is disseminated by actively participating in community events throughout the year. Informational booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise pubic awareness about the City's storm water regulations and requirements as well as Best Management Practices methods. Residents become aware of the importance of protecting their watersheds and water resources, and recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also distributed throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

The decision to select the types of educational materials to be disseminated throughout selected residential areas was based on an analysis of current and past residential violation reports, as well as results from the Dry Weather Field Screening and Analytical Monitoring program. During this reporting period, City Staff distributed 1,420 educational door hangers with educational pamphlets to various residential locations of the City (see table 6-2).

Table 6-2 Educational Materials Distributed Based on Dry Weather Monitoring Results

RESIDENTIAL AREA	EDUCATIONAL INFORMATION	NUMBER DISTRIBUTED
Jefferson Street	Household Grease Disposal	38
Cabrillo Mobile Lodge	Auto Maintenance and Washing	100
Palomar to Orange 3rd to 4th Avenue	Proper Trash Disposal	75
Connely Circle	Home and Garden Maintenance	107
Rolling Hills Ranch by Agua Vista and Coastal Hills Drive	Home and Garden Maintenance	179
Ridgeback Road and Lima del Rey	Auto Maintenance and Garden Maintenance	130
Torrey Pines Road and La Costa Avenue	Auto Maintenance	114
Stone Gate and Hawthorne Creek Drive	Home and Garden Maintenance	120
La Media Road south of Olympic Parkway	Home and Garden Maintenance	557
	Total:	**1420**

Residential complaint response and enforcement relies heavily upon reporting of illegal activities. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting period, the City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. Due to the many tasks that the ERS Workgroup had to undertake, they separated the workgroup into various sub-workgroups to complete their tasks. These sub-workgroups address media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Development of a regional brand that all Copermittees can use to represent their efforts in storm water education; 2) Development of a county-wide telephone survey to assess citizen storm water knowledge; 3) Development of a regional website that all Copermittees can link to, through their own jurisdictional websites; 4) Participation in regional community events such as the Envirofair at the San Diego County Fair, the Independence Jam, and Movies in the Park.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under separate cover.

6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the impacts of improper waste disposal. A consistent message of stewardship through everyday actions and behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

During fiscal year 2008-2009, the City identified several High Threat to Water Quality (HTTWQ) residential neighborhoods that required focused educational outreach (see Map 2). These areas have been targeted based on storm water inspection observations, complaint calls to the City's hotline and the dry weather monitoring upstream investigation program. Each of the homes in these neighborhoods received a general storm water pollution prevention brochure or door hanger in addition to a brochure targeting specific residential activities and their associated pollutants. The activities and pollutants that were focused on included: 1) vehicle washing and repair (detergents and vehicle fluids), 2) gardening (green waste, fertilizer, and over-irrigation discharge), 3) household activities (grease, paint, pet waste, and trash and debris). These areas and their corresponding activities and pollutants have been identified in Attachment K. In addition, the City plans to work with Homeowner's Associations to include storm water pollution prevention articles and messages into their community newsletters.

The City also targets HTTWQ residential areas by having cleanup events that provide residents the opportunity to volunteer to help cleanup their neighborhoods. The annual Beautify Chula Vista event focuses on a different neighborhood each year, frequently in underprivileged areas of the City, and provides graffiti cleanup, tree planting, trash pick-up, and storm drain stenciling. By participating in the event, residents are able to make a connection to their community and environment while learning about storm water pollution prevention.

Other than HTTWQ areas, the City has a number of programs in place for throughout the City to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

On September 10, 2008, the Regional Board adopted Addendum No. 2 to the Municipal Permit. The addendum recognized that Dry Weather Field Screening and Analytical Monitoring activities may continue until the end of September each year, and the results would not be available to be included in JURMP Annual Reports, which are also due for submittal on September 30 of each year. Therefore, submittal of Section 7.0 of the JURMP Annual Report (Illicit Discharge Detection and Elimination Component) was allowed to be postponed until December 15 of each year. Pursuant to this new requirement, the City of Chula Vista will submit the entire FY 2008-2009 Illicit Discharge Detection and Elimination Component; copies of the City's 2009 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2009.

8.0 EDUCATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.

Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.

Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.

Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.

Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.

8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Programs target issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and Best Management Practices (BMPs) to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of Citywide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting period, education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) implementation strategies. In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. While specific workshops have been organized in previous reporting years covering such topics as laws and regulations, water quality impacts, and applicable BMPs, a focus on internal SUSMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize site design techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of higher efficiency treatment control BMPs.

Most notably, and consistent with previous reporting years, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance

- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Transit
- Vehicle Maintenance
- Land Development
- Public Works Inspections

In addition, presentations by the manufacturers and vendors of structural BMPs were organized and arranged in the City, such as presentations on porous pavement and bioretention technologies.

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

Table 8-1 Municipal Staff Education FY 2008-2009

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
07/29/08	Permeable Pavements	City staff received training on permeable pavements and projects that have used permeable pavements	City of Chula Vista
10/15/08 10/16/08	Storm Water Awareness and BMP Implementation Training	City storm water staff provided Public Works staff with training on job-specific BMPs, watershed protection, and showed the "After the Storm" movie.	City of Chula Vista Storm Water Section
10/16/08 10/17/08	Storm Water Detention Basin Design Training	City engineering staff attended this training on the design of storm water detention basins and implementation techniques	The University of Wisconsin Madison
10/22/08 10/23/08	Industrial Environmental Association Seminar	City storm water staff attended this seminar; in addition the City of Chula Vista received an Environmental Stewardship Award for its CLEAN program	Industrial Environmental Association

Table 8-1 continued

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
11/14/08	CASQA Quarterly Meeting	City storm water staff attended this one day seminar about Low Impact Development and Hydromodification Management	CA Storm Water Quality Association
12/05/08	Storm Water Management Seminar	City storm water staff attended this training on treatment control BMPs, current regulations, and the new Construction Storm Water Permit	Rain for Rent and Hall & Foreman
02/10/09	Filterra®	City storm water, engineering, development, open space, and public works staff attended this presentation on updates to Filterra® systems	Filterra®
05/21/09	Storm Water Treatment and Detention/ Retention Systems	City public works engineering and operations divisions attended this training on storm water treatment and detention/retention systems	Bay Saver Technologies
05/28/09	Sizing Tool Training	City storm water, public works, and engineering staff attended this training about the HMP process, sizing calculator, and design examples	San Diego Storm Water Copermittees
06/01/09	Model SUSMP Training for Municipal Staff and Plan Checkers	City staff attended this training on the Model SUSMP and it application to development projects	San Diego Storm Water Copermittees
06/8/09 06/09/09 06/10/09	Hydrologic Simulation Program Fortran (HSPF) Training	City staff attended this training on geomorphology and HSPF computer program developed by the USEPA to develop watershed models	American Public Works Association (APWA)

8.3 EDUCATIONAL OUTREACH ELEMENT

8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

During this reporting year the CLEAN group, made up of the City's environmental divisions and sections, and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. Your Choice."**

The culmination of efforts of various involved City divisions has been embodied in the established CLEAN program, which provides an effective and powerful body to guide the significant efforts envisioned for the program. It is also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including pollution notification residential door hangers, stickers, stationery, t-shirts, and a booth display were distributed to the general public within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean has information about the environmentally focused divisions in the City including Storm Water Management, Environmental Services, Conservation, and the Chula Vista Nature Center. The storm water section has information specific to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to be developed, a wide array of media outlets have been explored, and established branding has been incorporated in them. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2008-2009, the City continued to use seasonal pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of such items as cooking grease and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging on such items as pet waste bag containers, calculators, notebooks, and rulers.

Figure 8-1 CLEAN Homepage

The City has continued to maintain six trail displays (Figure 8-2) throughout the City, near walking trails and parks. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. They demonstrate the connectivity of environmental concerns throughout the City. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park
- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

In addition, the same design has been used in a poster form, one of which is displayed in the John Lippitt Public Works center entryway. Chula Vista staff and customers pass this display on a daily basis. Passing this display reminds staff and citizens that they live in a watershed and of the simple actions they can take to protect their local waterways. Another poster is exhibited at the Chula Vista Public Library in downtown Chula Vista, which is intended to help increase the

number of residents and employees who are exposed to this message on a daily basis. A third poster is used in community events to explain the watershed concept to Chula Vista residents.

Figure 8-2 City of Chula Vista CLEAN Trail Display

Media Articles

During the reporting period, Storm Water Management Section staff contributed several articles about storm water pollution prevention to various publications aimed at residents living in the City. These included The Star News, My Hometown Otay Ranch/ Eastlake, and Your Guide to CLEAN and Your Guide to Green (which are included in residential trash bills). Altogether, these publications reach more than 100,000 households. The City will continue to contribute articles to, and place pollution prevention advertisements in these publications and explore more venues for reaching citizens through print media.

School Education Efforts

Due to the success of the Salt Creek Critters after-school program in east Chula Vista, the City implemented the South Bay Water Warriors Program in the west side of Chula Vista during October 2008. The after-school program, aimed at 3rd and 4th graders, focused on pollution prevention and watershed protection. Students were involved in a number of interactive and creative activities such as arts and crafts, games, and working with the EnviroScape Model. In order to assess the change in knowledge and awareness as a result of the program, pre- and post-tests were administered to the students. It was found that there was a significant increase in knowledge and awareness in students, showing that the program was effective at educating students about storm water and pollution prevention. The City will continue with school

programs such as this and consider branching out to different age groups, such as high school students.

Community Events

The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. During the reporting period, the Storm Water Management and Environmental Services staff participated in and set up booths and displays at all major South Bay community events. City staff provided education and outreach materials regarding a variety of interrelated environmental issues. Distributed information included the effects of storm water pollution on the environment and the need to protect local waterways. By participating in these community events, City storm water staff has the opportunity to generate large numbers of impressions each fiscal year.

Chula Vista Nature Center

The City of Chula Vista Nature Center, located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Nature Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Nature Center's mission is to educate the public about the importance of coastal resource conservation and environmental stewardship. Through visits to the Nature Center and its offsite programs, nearly 72,000 people are exposed to these critical environmental messages each year. To help facilitate educational experiences, the Nature Center offers field trips, guided walks, classes, tours, and special projects. Annually, organized school programs (approximately 15,000 K-6 children, 2,000 7-12 graders, and another 2,000 college students) visit the Nature Center to learn about the watersheds of San Diego Bay and what they can do to protect San Diego Bay.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Nature Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Chula Vista Nature Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Nature Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Nature Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- In partnership with the U.S. Fish and Wildlife Service, Chevron, and the San Diego Zoo, a backpack program called Sweetwater Safari is offered to teachers who have already brought students to the Nature Center. In this hands-on program, participants take backpacks containing binoculars, mini-microscopes, and other materials to discover plankton, birds, plants and animal tracks on the trails of the Sweetwater Marsh National Wildlife Refuge.

- Students learn to recycle, reuse, and reduce waste. They also learn how to correctly use storm drains and the types of pollutants commonly identified in the storm drain system. The Chula Vista Nature Center and Conservation Department also conduct "Less Toxic Gardening" classes twice a month, dealing specifically with pesticide use, as well as composting classes.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

Table 8-2 Education Outreach Provided FY 2008-2009

DATE	EVENT	EVENT DESCRIPTION	SITE NAME/ LOCATION
07/05/08	San Diego County Fair	City staff manned a booth and distributed IPM Pest Tip cards and reusable grocery bags as a part of the collaboration with the Regional Storm Water Copermittees	Del Mar Fairgrounds
08/10/08	Lemon Festival	City staff manned a booth and distributed information about pollution prevention	Downtown Chula Vista
08/17/08	Go Green and Clean Family Day	City staff manned a booth and distributed CLEAN brochures and IPM Pest Tip Cards	Otay Ranch Town Center
09/20/08	Children's Festival	Storm water staff had a booth at the festival and provided pollution prevention training to citizens	New Hope Church
09/27/08	BonitaFest	Storm water staff provided pollution prevention training to citizens	Bonita Road Shopping Center
10/04/08	Beautify Chula Vista	Storm water staff provided pollution prevention training to citizens	Southwest Chula Vista
04/18/09	Go Green and Clean Day	Staff provided training on pollution prevention and provided CLEAN brochures and IPM Pest Tip cards	Friendship Park
04/23/06	Earth Day	Storm water staff provided pollution prevention training to students	Eastlake Middle School
04/25/09	Day of the Child	Storm water staff provided pollution prevention training to citizens	Memorial Park

05/05/09	Cinco de Mayo	Storm water staff implemented a storm water awareness survey and provided pollution prevention education to citizens	Downtown Chula Vista, 3rd Avenue
06/20/09	Pet Fest and Doggy Dash	Storm water staff implemented a storm water awareness survey and provided pollution prevention education to citizens	Memorial Park
Year-round	Watershed, Recycling, Storm Drain Pollution Education	Organized School Group Visitors to the Chula Vista Nature Center	Chula Vista Nature Center

Regional Outreach

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further development of the Regional Residential Storm Water Education Plan that was submitted to the Regional Board in March 2008. One of the most notable activities conducted during FY07-08 and into FY08-09 was Copermittee collaboration and sponsorship of the San Diego County Fair from June 14, 2008 – July 6, 2008. The City of San Diego, along with the San Diego Copermittees, used the Think Blue campaign branding during fair media exposure and for the fair displays. The Copermittees focused their efforts on educating the public about Integrated Pest Management (IPM) practices. The IPM pest tip card packets were distributed, along with other giveaways to promote storm drain pollution prevention. During the fair, the Copermittees administered a survey to over 1,200 fair attendees. Results of the survey will be reported in the next annual report. In addition, the Copermittees manned a booth at the EnviroFair of the San Diego County Fair on June 20, 2009. The Copermittees are planning similar educational outreach events that are focused on region-wide education.

8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included dissemination of information via the County's Clean Water Project website targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, Storm Water Compliance Inspectors meet with facility owners or managers and explain water quality issues relating to the particular type of industrial or commercial facility. BMPs relevant to the activities at each

facility are explained and, corrective actions are proposed to bring the facility into compliance with the City's ordinances and BMP requirements. Consequences of non-compliance are also brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of Low Impact Development site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- The City Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

8.3.4 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day
- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as notebooks, dustpans, pencils, pens, and pet waste bag holders.

During the reporting period, the City, in cooperation with I Love a Clean San Diego, supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteer groups have the opportunity to participate in storm drain stenciling, cleanup of trash, graffiti removal, and plant trees. Efforts are usually focused in areas of the City where more attention is needed due to trash and graffiti problems. Over 500 volunteers participated in the Beautify Chula Vista Day in October 2008.

The graffiti program allows citizens to report graffiti in their neighborhoods by phone or by email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. There were over 1,900 web requests, emails, and calls to the graffiti hotline (some duplicated) during the reporting period, showing that City staff and residents are taking an active role in promoting a clean City.

9.0 PUBLIC PARTICIPATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.

9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

9.2 PROGRAM IMPLEMENTATION

Beautify Chula Vista Day – October 4, 2008

Beautify Chula Vista Day is an annual event that involves citizen participation and involvement in activities that enhance the environmental setting of the City. Every year, this event attracts several hundred volunteers and provides an opportunity for City staff to have direct interaction with the public to discuss environmental issues and the role that citizens can play in protecting their community's health and living standards. Volunteer citizens are able to participate in activities such as tree planting, graffiti removal, clean-up projects, and storm drain stenciling. During the 2008 event, with participation from over 500 volunteers of all ages, the group was able to remove more than 1,200 pounds of trash from City streets. Volunteers also erased over 1,500 square feet of graffiti, stenciled 88 storm drain inlets, and planted 32 trees.

Otay Valley Regional Park Cleanup

The Otay Valley Regional Park (OVRP) is being developed as a collaborative effort of the cities of Chula Vista and San Diego, City of San Diego Water Works, and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land. The Otay River Valley Cleanup Project (Cleanup Work Project) currently encompasses the Western Otay Valley Regional Park (Nester Creek east to I-805) and Eastern Otay Valley Regional Park – Proctor Valley (North End Upper Otay Lakes Reservoir).

The Cleanup Work Project encompasses efforts by many organizations including the OVRP Citizens Advisory Committee (CAC) coordinating the Donovan Prison Community Crew, California Conservation Corp (CCC) coordinated by the City of San Diego WOVRP Rangers,

County of San Diego Otay Lakes Park Rangers (provided dump truck and driver), Friends of the Park (coordinates Proctor Valley Cleanup), Allied Waste (delivering and picking up of large waste bins), City of San Diego Environmental Services, City of Chula Vista Public Works, and Hanson Aggregates (provided heavy equipment as needed).

Park cleanup activities include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, and placing signage identifying the OVRP. Table 9-1 details the cleanup and abatement work at the OVRP from July 1, 2008 through June 30, 2009.

More information about the Otay Valley Regional Park can be found on their website http://www.ovrp.org/

Table 9-1 Cleanup and Abatement Work at the OVRP FY 2008-2009

DONOVAN COMMUNITY CREW AND CAC MEMBERS	
Labor Hours	4,620
Trips to Otay Land Fill	48

Tons of trash removed	8
Tons of concrete and asphalt removed	10

I Love a Clean San Diego (ILACSD) 7th Annual Creek To Bay Cleanup

The Seventh Annual Creek to Bay Cleanup event occurred on Saturday, April 25, 2009. The City co-sponsored this cleanup event, which was coordinated by ILACSD. The San Diego County Board of Supervisors presented this year's cleanup event through the support of Supervisor Greg Cox and Supervisor Pam Slater-Price. The event was able to bring together over 4,000 volunteers who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Total volunteer count for this event was 4,463 participants. Volunteers accumulated over 100,000 pounds of trash and recyclables from 150 miles of coastline and inland areas. Commonly found items included plastic items and cigarette butts.

Cleanup sites within or adjacent to Chula Vista were Del Rey Canyon, in Chula Vista, J Street Marina, and two sites in the Otay Valley Regional Park. At the Chula Vista location, 36 volunteers removed 275 pounds of trash and 25 pounds of recyclables from 5 miles of Chula Vista inland waterways.

Household Hazardous Waste and Used Oil Recycling

The Household Hazardous Waste (HHW) Facility at the City of Chula Vista Public Works Center started operation in January 2002. It serves the Cities of Chula Vista, Imperial Beach, National City, and the County of San Diego. The facility is open every Wednesday and Saturday from 9am to 1pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. During the reporting period approximately 2,539 households participated in the collection program. The facility is under 24-hour camera surveillance to prevent illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill. Public participation in this program is expected to minimize the amount of hazardous materials that may otherwise enter storm drain systems.

Public IC/ID Reporting and Graffiti Hotline

The City encourages its citizens to partner with the City in keeping Chula Vista clean. Citizens can do so by reporting any illegal discharges to storm drains, as well as reporting any graffiti in their neighborhoods. The City provides free graffiti removal services on public or private property by using environmentally friendly power washing equipment and BMPs. Storm Water Management Section staff investigates illegal discharges to storm drain systems and provides education and enforcement. In cases of spills or pollutants entering storm drain systems, Public Works maintenance crews provide cleanup as needed. As mentioned in Section 7, during the reporting period the City received 148 calls and reports about illegal discharges to storm drain systems. There were over 1,900 calls, emails, and web requests (some duplicates) to the graffiti program during the reporting year, showing that citizens are participating and taking an active part in keeping the City clean.

CLEAN Business Program

As part of its efforts to involve local businesses in keeping the City clean, the CLEAN Team started the CLEAN Business Program in February 2008. The CLEAN Team is made up of the Storm Water Management Section, Environmental Services Division, and the Department of Conservation. The CLEAN Business Program was designed to help small businesses exercise environmentally safe practices and become sustainable. This goal could only be achieved by learning basic environmentally responsible and sound methods related to their specific daily activities. The program verifies and promotes businesses that demonstrate environmentally friendly practices and conserve resources. As part of the verification process, the business must complete a packet of checklists with minimum BMPs and request an inspection by the CLEAN Team to verify that the selected BMPs are adequate and have been correctly implemented. The CLEAN Team verifies that the BMPs are in place and functioning. Once a business becomes a CLEAN Business, they receive recognition on the City's website and receive a decal sticker to put on their front window to show consumers that they are shopping at a CLEAN Business. Six businesses in the City were verified in the 4 months that the program was in place during the reporting year. Businesses must receive verification on an annual basis in order to maintain their CLEAN Business status.

10.0 FISCAL ANALYSIS COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.

Permit Section G: Fiscal Analysis

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

10.1 INTRODUCTION

Pursuant to Order No. R9-2007-0001, the Copermittees are required to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. On January 31, 2009, the Copermittees submitted their standardized method and format report to the Regional Board as part of their Regional Urban Runoff Management Program Annual Report submittal. The Municipal Permit further requires the

Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. In the meantime, fiscal analysis and reporting will continue as in previous reports. The City has decided to include an analysis of watershed and regional shared expenditures and budgets in the current report in order to bring the fiscal analysis and reporting as close to the requirements of Order No. R9-2007-0001 as possible and in anticipation of the new method and format in a few months.

10.2 FISCAL-YEAR EXPENDITURES AND BUDGETS

The City's storm water program budget and expenditures consist of the following components:

- Staff
- Operating Budget (non-staff)
- Drainage Capital Improvement Projects

City staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Environmental Planning Division of the Development Services Department reviews development projects for environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Land Development Division of the Development Services Department is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Division staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Section of the Public Works Department manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the GIS systems, and provides support to the Storm Water Management Section by mapping the City's storm water conveyance systems and data management.

- The Operations Division of the Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Section, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Section of the Public Works Department is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections provide support to the Storm Water Management Section in the fulfillment of the City's JURMP and are instrumental in the implementation of that program. Although those departments, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

The City's NPDES jurisdictional expenditures for FY 2008-2009 and budgeted figures for FY 2009-2010 for drainage related Capital Improvement Projects that are intended to minimize infiltration from sanitary sewer systems, discharge of pollutants into storm drainage systems, and improve water quality are listed in Tables 10-1 and 10-2:

Table 10-1 Chula Vista NPDES Expenditures for FY 2008-2009

DESCRIPTION	EXPENDITURES (APPROXIMATE)
A. Staff	
1. Public Works Maintenance	$672,443
2. Storm Water Management	$538,582
Sub-Total	**$1,211,025**
B. Operating Expenditures (Non-Staff)	
1. NPDES Permit Fee	$27,178
2. Consultant Fees for Dry Weather Field Screening Program	$53,474
3. Regional Shared Costs (Wet Weather Monitoring, Regional Public Education, CASQA Membership Fees, Etc.)	$160,283
4. City's Share of the Sweetwater River Maintenance Costs	$3,731
5. Stream Flow Metering	$6,084
6. Jurisdictional Public Education	$3,972
7. Street Sweeping Program	$244,824
8. Maintenance Materials and Equipment	$158,055
Sub-Total	**$657,601**
C. C.I.P. Appropriations	
1. Telegraph Canyon Channel Design DR118	$48,559
2. Emerson Street Drainage Improvements DR133	$69,598
3. CMP Storm Drain Pipe Rehab Program Phase 4 DR169	$15,567
4. Fifth Ave. Drainage Improvements DR173	$174
5. Telegraph Canyon Drainage Study 3/L, DR167	$12,320
6. North Broadway Reconstruction STM354	$140,330
Sub-Total	**$286,548**
Grand Total	**$2,155,174**

Table 10-2 Chula Vista Budget for FY 2009-2010

DESCRIPTION	BUDGET
A. Staff	
1. Public Works Maintenance	$668,177
2. Storm Water Management	$563,072
Sub-Total	**$1,231,249**
B. Operating Budget (Non-Staff)	
1. NPDES Permit Fee	$24,500
2. Consultant Fees for Dry Weather Field Screening Program	$66,000
3. Regional Shared Costs (Wet Weather Monitoring, Regional Public Education, CASQA Membership, Etc.)	$173,500
4. Watershed Shared Costs	$35,000
5. Stream Flow Metering	$3,000
6. Jurisdictional Public Education	$70,000
7. Street Sweeping Program	$264,709
8. Maintenance Materials and Equipment	$300,031
9. Miscellaneous	$18,755
Sub-Total	**$955,495**
C. C.I.P. Appropriations	
1. Telegraph Canyon Channel Improvements DR182	$950,000*
2. Telegraph Canyon Drainage Study DR183	$300,000*
3. Emergency Storm Drain Replacement DR180	$1,200,000
4. North Broadway Reconstruction STM354	$2,368,000
Sub-Total	**$4,818,000**
Grand Total	**$7,004,744**

* Items marked thus are proposed projects and their schedule may change.

10.3 REGIONAL EXPENDITURES AND BUDGETS

The City participates in regional activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, the following costs were included in the regional expenditures and budgets:

- Regional Program Planning Subcommittee and Workgroups costs
- Regional Monitoring Program
- Regional Outreach Program
- Hydromodification Management Plan
- CASQA Fees

City's share of the above expenditures was $160,283 for FY 2007-2008, as indicated by Item B.2.b in Table 10-1 above. It should be noted that the above cost does not include staff time that was spent to attend regional management committee or workgroup meetings or participate in the development and implementation of regional programs and reports.

The approved regional budget for FY 2009-2010 is $3,075,832. City of Chula Vista's share of the total budget is estimated to be $169,170. The regional budget for FY 2009-2010 includes the following costs:

- Working Body Support
- Regional Monitoring Program
- Regional Outreach
- Mobile Business Program
- Recommended Land Use Planning Approaches
- CASQA Fees

10.4 WATERSHED EXPENDITURES AND BUDGETS

During FY 2008-2009, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions and, therefore, no cost sharing occurred at the watershed level. Based on the Municipal Permit requirements for watershed activities, the City has allocated $25,000 for watershed activities and $10,000 for watershed education in its FY 2009-2010 budget. These budgeted items are included as Item B.4 in Table 10-2 above.

10.5 FUNDING

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, these vary significantly from year to year, depending on the level of development activities within the City. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6*[9] *to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the Copermittees to the Regional Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in other sections of this report.

The 2004-2005 reporting year was highlighted by the Copermittees' regional development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD). This comprehensive assessment incorporated water quality and source data collected by all Copermittees and provided a critical first look at regional water quality presented per watershed.

In 2008-2009, the City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City has endeavored in 2008-2009 to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

Notably, in 2008-2009, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the continued implementation of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

Further, in 2008-2009 the City continued its source inventory validation process. This effort has been detailed in Sections 2.0 through 6.0 of this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization
  - BMP Selection

- Targeted Outcomes
- Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics is included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation in 2008-2009. It is important to recognize that the whole of this document represents an account of program implementation in 2008-2009, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluates the overall effectiveness of the City's Storm Water Management Program.

11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2001 as updated in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this concept continues to be perpetuated. The City has sought to integrate these key elements in order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

Source Characterization

Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by the previous Municipal Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially complied in 2001, and have been updated annually ever since. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS systems and comprehensive business license tracking. In recognizing

that source characterization needs to be increasingly matched to identified water quality concerns and program results, the City seeks to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Sections 2.0 through 6.0 of this report, the City has continued to take further steps to fortify source characterization in 2008-2009. Comprehensive field verification of source inventories is conducted once every five years with the renewal of the Municipal Permit, while inventory updates based on existing information in the City's databases and observations during regular inspections are conducted annually. In 2006-2007 and continued in 2007-2008, the City conducted an extensive source verification utilizing the City's Permits Plus program combined with field verification to identify all active industrial and commercial facilities Citywide. The Municipal inventory is updated continuously as new facilities are constructed or acquired. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data is utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

BMP Selection

In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by the previous Municipal Permit's Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. These minimum BMPs were visited during the City's JURMP Update in 2008 and changes were made as needed. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs.

Targeted Outcomes

The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes be established prior to program implementation to accurately provide measurability and accountability. Included within the regional long-term assessment framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

Figure 11-1 Hierarchy of Targeted Outcomes

Assessment Measures and Indicators

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period (2008-2009) has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes in water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses

on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional level.

11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the water quality of discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success of failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for the Copermittees to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)
- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2004-2005, and will be addressed for the current Municipal Permit cycle in the next ROWD. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The Chart on Page 11-8, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent-specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. A summary of this analysis with the latest available data (2008) is presented below:

11.3.2 PROGRAM ASSESSMENT

In 2008-2009, the City continued to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2008-2009 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment.

Additionally, during this reporting period the City started a survey to measure public awareness and behavior on various storm water quality related issues. Based on the City's population of about 220,000, 95% confidence level, and 4 confidence intervals, it was determined that at least 599 people had to be surveyed to obtain results that were statistically significant. In this reporting period, Storm Management Section staff used the opportunity provided by various public events to establish contact with citizens and conduct the survey. To date, 500 surveys have been gathered and the remaining 99 will be completed within the next few community events. Final analysis of the survey will be reported in FY 2009-2010 annual report. Further, a comparison will also be made with the results of a similar survey that was administered in FY 2005-2006 as a baseline survey. This comparison will provide the City with a clear understanding of the effectiveness of the general JURMP implementation effectiveness.

The discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City, based on various components of the Municipal Permit (Tables 11-1 – 11-8). In the following sections, these tables and their associated analysis are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation, reflecting various elements of the Municipal Permit, and provide a summary accounting of activities conducted by the City in 2008-2009.

11.3.2.1.1 LAND USE PLANNING

In view of the recent update to the City's local Standard Urban Storm Water Mitigation Plan (SUSMP), and inclusion of Low Impact Development (LID) and Interim Hydromodification Criteria (IHC), the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. During the current reporting period, as a result of the slowdown in development activities, the number of projects submitted to the City for approval and permit issuance were

drastically reduced. As can be seen from Table 11-1, only 10 SUSMP projects received approval. However, the number of total cumulative projects that have implemented post-construction BMPs and, therefore, the number of projects inspected for post-construction BMPs remained high.

During this reporting period, BMP maintenance verification letters were sent to responsible parties reminding them of their responsibility to clean, inspect, and maintain storm water treatment facilities (see Table 11-2). Responsible parties were required to provide the City with proof of maintenance of the treatment facilities within a set time frame. This process provided yet another mechanism to ensure proper maintenance and effectiveness of all treatment facilities and compliance with Municipal permit provisions.

The following tables summarize City of Chula Vista's activities during the reporting period towards ensuring compliance with SUSMP implementation and the review, inspection, and maintenance verification of SUSMP projects.

Table 11-1 FY 2008-2009 Compliance with Activity-Based Requirements – Land Use Planning

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.1 Land Use Planning	Development Projects	# SUSMP Projects Submitted	# SUSMP Projects Approved	Actual/Target	%
		10	10	10/10	100
	High Priority Sites (Total Listed = 26)	# Sites Targeted for Inspection	# Sites inspected	Actual/Target	%
		26	26	26/26	100
	Medium Priority Sites (Total Listed = 50)	25	42	42/25	168
	Low Priority Sites (Total Listed = 104)	As Needed	28	As Shown	100

Table 11-2 FY 2008-2009 Post Construction BMP Maintenance Verification

Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
High Priority Sites (Total Listed = 26)	# Projects sent BMP maintenance notification letter	# Projects returned BMP maintenance verification letter	Actual/Target	%
	26	26	26/26	100
Medium Priority Sites (Total Listed = 50*)	43	43	43/43	100
Low Priority Sites (Total Listed = 104*)	90	90	90/90	100

* It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs.

Based upon the significant achievements and refinements experienced in 2008-2009, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

JURMP strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2008-2009

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

Development Storm Water Manual

The Manual, which was adopted by the City in February of 2008, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, including the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by City staff, developers, and consultants. The Manual supersedes a similar document titled "Development and Redevelopment Projects Storm Water Management Standards Requirements Manual," which was adopted in November of 2002, and will be updated again in March 2010 to incorporate the updated Model SUSMP and Hydromodification Management Plan requirements.

During this reporting period City staff continued to actively participate in the Regional Land Development Workgroup meetings and activities and collaborated with other participants to

update the Model SUSMP and develop a Hydromodification Management Plan (HMP). On March 25, 2009, the Regional Board approved the updated Model SUSMP and the Copermittees have 365 days to incorporate Model SUSMP's requirements into their local SUSMPs. The Copermittees have submitted a draft HMP to the Regional Board and are in the process of addressing Regional Board's comments. The HMP requirements are expected to come into effect in the second quarter of 2010.

Inter-Departmental Coordination

The City's SUSMP and development review process includes multiple entities throughout the City. As the City continue to grow, it has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Although the City's growth during the past two years has occurred at a much slower rate than before, such coordination has continued in 2008-2009 to require refinement and augmentation as necessary to maintain compliance and ultimately improve water quality.

Dedicated Storm Water Management Section

The Development Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to City staff and assist project proponents and consultants. Storm Water Compliance Inspectors and Environmental Health Specialists also perform the function of post-construction BMP construction verification, inspection, and maintenance verification.

Information System Support

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. Additionally, Permits Plus, which is a specialized permits tracking software, is utilized in tracking a variety of discretionary permits, and specifically is used by the Development Services Department to identify and track Priority Development Projects. Further, Permits Plus is utilized in annual inventory updates. Notably, in 2008-2009, the GIS layer was continuously updated to manage and provide easy access to project specific WQTRs and grading plans.

Data Management

As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. It is noteworthy that such challenges have been addressed in 2008-2009 through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. Since the addition of an Engineering Technician from last reporting period, the City continues to maintain up-to-date data and effectively track all information related to JURMP activities such as inventories, inspections, violations, and post-construction BMPs.

New Development and Redevelopment Project Design Elements

With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City continued to work with the development community to improve the design of storm water design features of proposed projects. While this focus was stressed by the City in 2008-2009 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects, a more universal change in project design approach will occur when the updated Model SUSMP requirements are incorporated into local SUSMPs and become effective. Through the regional Land Development Workgroup, the City of Chula Vista will continue to work with other Copermittees to develop regional standards and methods that will streamline the process of project design and review for water quality.

11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component demonstrated successes and underwent programmatic developments and enhancements. Through identified needs and associated management decisions, the City fortified its jurisdictional construction management component in 2008-2009. As a result of the slowdown in development, many construction sites remained inactive or faced sever reductions in construction activities. Within the reporting period, the City worked closely with developers to stabilize inactive construction sites; promote pollution prevention and BMP implementation; and ensure proper maintenance of BMPs to prevent polluted discharges from construction sites. This was a challenge as many developers claimed that they had limited financial resources and were unable to provide the necessary resources. City staff worked with developers to identify cost-effective BMPs and in some instances initiated enforcement action until full compliance was achieved. Mechanisms were identified to promote pollution prevention techniques as described in section 3 of this report. The City continues to maintain the regulatory standards mandated by the Municipal Permit and as developed and improved through previous years by the City irrespective of prevailing conditions.

Table 11-3 FY 2008-2009 Compliance with Activity-Based Requirements – Construction

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.2.d Construction	High Priority Sites (Total Listed = 7)	# Sites targeted for inspection	# Sites inspected	Actual/ Target	%
		7	7	7/7	100
	Medium Priority Sites (Total Listed = 27)	27	27	27/27	100
	Low Priority Sites (Total Listed = 75)	75	75	75/75	100
	All Sites (Total Listed = 109*)	Total sites identified	# in compliance or on a schedule for compliance	Actual/ Target	%
		109	109	109/109	100
		# of inspections during dry season	# of inspections during wet season	Total # of inspection s	N/A
		147	322	469	N/A

* Note: Of the total number of construction sites listed above, it is estimated that about 70% to 80% were inactive during the reporting period. Therefore, active sites were inspected according to the Municipal Permit requirements and inactive sites were inspected on an as needed basis.

The following features distinguish the construction component of the City's JURMP:

Inspection and Enforcement

As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensure compliance with this JURMP component on construction sites. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been fully achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

Education and Training

Storm Water Management staff provides education and training to all entities related to construction activities including developers, site superintendents, sub-contractors, and trades persons. During the previous years, this education and training capacity was further defined by storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, Chula Vista Storm Water

Management staff offered a strong asset and broad-based expertise in construction storm water management both locally and regionally. During the reporting period, due to the slowdown in development, regional seminars were not held as in previous years and City staff did not have the opportunity to speak at regional seminars for the construction industry. However, the City is willing and prepared to contribute to such events once development gains momentum. During the reporting period, City staff continued their efforts in educating members of the construction industry at the local level during meetings and site inspections.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2008-2009. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

BMP Maintenance

During the reporting period, due to an increase in the number of inactive construction sites, BMP maintenance on construction sites continued to be an area of concern. While inspection staff noted significant efforts in BMP implementation, the maintenance needs associated with implemented BMPs did not match implementation efforts on a consistent basis. As a reminder, the City issued a formal letter to all developers with inactive construction sites reiterating their responsibility for BMP implementation as discussed in details in section 3 of this report.

11.3.2.1.3 MUNICIPAL

As exemplified in program descriptions included in other sections of this report, the City prides itself for outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City functions such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. The following table summarizes

Table 11-4 FY 2008-2009 Compliance with Activity-Based Requirement – Municipal

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.a Municipal	High Priority Sites (Total Listed = 65[1])	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		62	62	62/62	100
	Medium Priority Sites (Total Listed = 6)	As needed	1	As shown	100
	Low Priority Sites (Total Listed = 13)	As needed	0	As shown	100
	MS4	Estimated quantity of material targeted for removal from MS4 (Tons)	Quantity of material removed from MS4 (Tons)	Actual/Target	%
		475	475	475/475	100
	Streets/Parking Lots	Estimated distance of curb miles to be cleaned	Total curb miles cleaned	Actual/Target	%
		17,889	17,889	17,889/17,889	100
	Catch Basins/ Inlets	# of catch basins and inlets targeted to be inspected	# of catch basins and inlets inspected	Actual/Target	%
		7,393	7,393	7,393/7,393	100
		# of catch basins and inlets targeted to be cleaned	# of catch basins and inlets cleaned	Actual/Target	%
		5,183	5,183	5,183/5,183	100

[1] Three categories listed in the Municipal Inventory as follows are inspected on a regular and as needed basis and are not included in the total number of sites targeted for annual inspections:

- MS4
- Roads, Streets, and Highways
- Special Events

With such a well-rounded approach, the City has not identified any significant management measures with which to augment municipal program activities in 2008-2009. Further, no BMPs have been identified as ineffective within the reporting period of this report.

The following features distinguish the Municipal component of the City's JURMP:

Municipal Facility Inspections
The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2008-2009, and as part of this comprehensive inspection process, Storm Water Management staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

Environmental Programs
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have continued to capitalize upon in 2008-2009 through the development of a broad-based outreach and educational campaign by the City. In this reporting period the City adopted the Clean Business program, which builds partnerships between the City and local businesses that operate in a socially responsible manner and protect the environment. Details of these programs are discussed further in Section 7 of this report.

Based on exemplary Municipal Pollution Prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for program improvement or modification at this time.

11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2008-2009 reporting year was a continued maintenance year in terms of industrial and commercial activities within the City. Inventory validation and supplemental inspection efforts remain the highlights of this year's activities. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous industrial and commercial facilities operating within the City. With such a significant variety of commercial and industrial activities in Chula Vista, staff has recognized the need to target those areas and business activities that remain high on the source priority list, and to provide a consistent presence and strong enforcement standard.

The City's FY 2008-2009 inventory of industrial/commercial facilities includes 209 industrial and 1174 commercial facilities (including 353 mobile businesses). In 2008-2009, Storm Water Management staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Municipal Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

Table 11-5 FY 2008-2009 Compliance with Activity-Based Requirements – Industrial/Commercial

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.b Industrial	High Priority Sites (Total Listed = 53[1])	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		48	48	48/48	100
	Low Priority Sites (Total Listed = 149)	As needed	2	As shown	100
D.3.c Commercial	High Priority Sites (Total Listed = 192)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		192	192	192/192	100
	Low Priority Sites (Total Listed = 984[2])	As needed	41	As shown	100

[1] Five high priority industrial facilities included in the industrial inventory are owned by the San Diego Unified Port District and are inspected by that agency

[2] 348 commercial facilities included in the commercial inventory are mobile businesses that are regulated differently from other businesses. The Municipal Permit does not require their annual inspection.

The following features distinguish the industrial/commercial component of the City's JURMP:

Integrated and Balanced Approach

With a dedicated Storm Water Compliance Inspection staff, industrial and commercial facilities are effectively regulated. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme. Further, Public Works maintenance and landscape crews, whose working environment is in the field, have been trained and educated in storm water pollution prevention and report any observed illegal activities or discharges. As such, they are considered the "eyes and ears" of the Storm Water Management Section.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City of Chula Vista defines the residential component of the City's

JURMP. Any small changes in behavior of residents are magnified due to the effect of numbers. As such, the Storm Water Management staff has sought to achieve continued success in the reduction of pollutants from residential areas through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types associated with such activities. The Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality.

Table 11-6 FY 2008-2009 Compliance with Activity-Based Requirements – Residential

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.e Residential	Household Hazardous Material	Quantity of HHW[1] targeted for collection	Quantity of HHW collected	Actual/Target	%
		220,008 lbs (FY 07-08)	252,494 lbs (FY 08-09)	252,494/ 220,008	114
	Used Oil	Quantity of used oil collected from certified collection centers (FY 06-07)	Quantity of used oil collected from certified collection centers (Gallons FY 06		%
		30,779 gallons	49,287 gallons	49,287/ 30,779	160

[1] HHW= Household Hazardous Waste

Residential Program Strengths:

Pollution Prevention

The City's residential component is strengthened by the various pollution prevention programs offered to residents. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, green waste, recyclables, used cooking oil, household hazardous waste, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

Residential Outreach and Education

The City continued to focus significant resources on residential outreach and education efforts in 2008-2009 and constantly endeavored to devise different avenues in reaching the public. While these activities are more fully described in Section 7.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

Residential Program Improvement Areas and Challenges:
Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts with such City entities as the Chula Vista Nature Center, the Conservation Department, the Regional Used Oil Recycling Program, and Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Management Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

While the City continuously strives to improve its JURMP implementation program, it has not identified specific management measures by which to improve education and public participation activities. Notably, the City has added the Clean Business program in one of its participation activities. The City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

Education and Public Participation Program Strengths:

Environmental Program Collaboration
As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous environmental programs within the City. As such, the Storm Water Management Program has been able to reach more diverse audiences and participate in a greater variety of public participation venues. This collaboration of programs that culminated in the creation of the CLEAN program has resulted in clear and consistent messaging to Chula Vista residents and has reinforced City's resources toward more effective and holistic environmental programs.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. Through the collaboration of environmental programs such as conservation, household hazardous waste collection, recycling, and storm water management citizens receive consistent and interrelated messages, and participate in activities that demonstrate various facets of environmental protection. Such coordinated public education and participation programs have far reaching and lasting effects that ultimately result in general acceptance of environmental concepts and changes in behavior. It has been recognized that the interrelationship of each of these programs collectively, is integral to the overall success of each of these programs

individually. Finally, the City is fortunate to have the Chula Vista Nature Center to showcase the San Diego Bay and to provide tangible access to the resources the community is called to protect.

Internal Staff Training

Through formal or informal training, meetings or individual contact staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

Chula Vista CLEAN Program

Within the reporting period of this report, the City continued to take significant steps to further implement an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment and a sense of ownership to the community's environment, water resources and waterhseid.

Education and Public Participation Program Improvement Areas and Challenges:

Education of the Development Community

During the previous reporting periods, one of the challenges facing the City was the development community's resistance to changing regulations and requirements of the Municipal Permit and the City's SUSMP. Due to increased cost to development projects, developers were hesitant to implement high-efficiency treatment control BMPs and site design features. Consultants were also unfamiliar with available methods and technologies for pollution prevention on development projects. During this reporting period the development community has shown acceptance of changes in terms of project design, high efficiency treatment control BMPs, and site design BMP implementation. This can be attributed in part to the City's strong steps to ensure the effective design and utilization of appropriate construction and post-construction BMPs. After the issuance of the current Municipal Permit, the Storm Water Management staff expanded its inspections and enforcement of post-construction BMPs to ensure BMP implementation and maintenance on development projects. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

Table 11-7 Compliance with Activity-Based Requirements – Education and Public Participation

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.g Education	Outreach (External)	# targeted training workshops, outreach events	# training workshops, outreach events conducted	Actual/Target	%
		12	12	12/12	100
		# Material, brochures targeted for distribution	# Materials, brochures distributed	Actual/Target	%
		General public contact	General public contact	N/A	N/A
	Staff Training	# Training sessions	# Training sessions	Actual/Target	%
		11	11	11/11	100
	Opportunities for participation	Estimated # of opportunity events to be provided	# Provided	Actual/Target	%
		3	3	3/3	100

11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program all support this critical programmatic element. During the reporting period, the City provided a wide cross-section of information through the interrelationship of various environmental programs. The City was able to significantly impact the level of knowledge and awareness within the community through its continued effort in influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Complaint Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years as these indicators become more wholly developed; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

Complaint Response Tracking

A comprehensive complaint response summary is presented in Attachment L – Complaint Response Summary. It is important to note that trends in complaints received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of complaints from FY 1997-1998 to FY 2008-2009. With slight fluctuations in numbers, it is difficult to draw any strong conclusions, however, it may be inferred that overall programmatic influences are strong throughout the community.

Figure 11-2 Chula Vista Storm Water Complaint Summary 1997-2009

Business License Application Screening Procedure

The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants, Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

During this reporting period, through the collaboration efforts of the Copermittees, a regional mobile business website was created. The website includes a compilation of all approved mobile business applications in the region, which is categorized by jurisdiction. The creation of regional source inventory is a significant improvement in mobile business database management, which can provide essential information in monitoring and tracking mobile business activities in the entire region.

Storm Water Web Site

The City's CLEAN website development and update continued into 2008-2009. This site offers valuable information to Chula Vista residents and businesses and is intended to facilitate public education on environmental issues, including storm water. The website also provides a means for residents to report illegal discharges to storm drain systems. Due to technical constraints, it is not possible at this time to count the number of people accessing the website. It is hoped that this technical difficulty will be overcome in the future in order to provide a method to assess the usefulness of the website. In the meantime, Storm Water Management Section staff plans to resort to other means of assessment such as surveys.

Development Review Process

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals. The City's JURMP includes a comprehensive flow chart to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. Through the required submission of Water Quality Technical Reports (WQTR) for Priority Development Projects; subsequent review by City staff; and project meetings, in 2008-2009 a notable increase in knowledge and awareness within the development community was observed. The level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with SUSMP requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. A detailed description of the review process has been discussed in section 2 of this report. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, including Low Impact Development features, and will continue to take this approach in subsequent reporting years.

11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

During this reporting period, the City continued to implement BMP tracking measures into various components as reviewed in this report. It has been recognized that through the implementation of well-developed BMP tracking measures, the City is able to more fully evaluate BMP implementation and associated behavioral change. As discussed earlier in this section, in this reporting period, the City initiated its second survey to measure public awareness and behavior on various storm water quality related issues. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation

Inspection Activities
As discussed in applicable sections of this report, the City has developed comprehensive commercial, industrial, municipal, and construction inspection programs. It is through these well-developed inspection programs, that the City is able to utilize BMP implementation tracking and assessment mechanisms.

In the reporting year 2007-2008, the Storm Water Management Section started using the GBA database management system to track source inventories, inspection activities, and other data relevant to the assessment of storm water management programs. In the current reporting period, the use of the GBA was expanded and refined to better serve the purposes of the new Municipal Permit. Through this database program, Storm Water Management staff is able to view the historical activities such as inspections and violations of commercial, industrial, municipal, and construction sites. Further, in support of BMP selection and evaluation throughout various community sectors, staff uses the inspection forms that were developed in FY 2005-2006. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities are intended to provide fully developed BMP implementation tracking mechanisms.

Based on data gathered from such activities, the City is able to take a critical look at BMP selection and implementation Citywide, and be able to evaluate behavioral change within business communities and further validate effectiveness trends in years to come.

SUSMP Implementation
Within the development community, implementation of post-construction BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-8 are focused on municipal functions and programs:

Table 11-8 FY 2008-2009 Load Reduction

ACTIVITY/FUNCTION	LOAD REDUCTION	POLLUTANT TYPE
Used Oil Recycling	49,287 gallons	Motor Oil
Household Hazardous Waste Collection	252,494 Pounds	Antifreeze, Oils, Paints
MS4 Maintenance	11.74 Tons	Trash, Debris, Leaves, Grass, Rock, Silt
MS4 Inlets	39.46 Tons	Trash, Debris, Leaves, Grass
MS4 Catch Basins	56.86 Tons	Trash, Debris
Channel Maintenance	367.08 Tons	Trash, Debris
Street Sweeping	596.76 Tons	Trash, Debris, Sediment

11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators are the only persistent constituent of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program
- A comprehensive storm water conveyance system maintenance
- Street sweeping
- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that the majority of pollutants are on a declining trend in this reporting period. Particularly, significant decreases in Total Coliform and Fecal Coliform are encouraging. These results can be interpreted as follows:

The City expanded its public education and outreach in this reporting period. This effort was aimed at increased awareness and changes in public behavior. Based on current and past results from the dry-weather monitoring program, and past violation reports, specific residential areas that were identified as High Threat To Water Quality (HTTWQ) were targeted for disseminating educational materials specific to the type of pollutants and violation activities. Moreover, the implementation of BMPs as described above, is considered effective in important deceases in fecal coliform and total coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. Further, due to the slowdown in construction

activities, creation of urban impervious areas slowed down during the reporting period, which may also contribute to decreased instances of observed pollutant discharges. Low rainfall levels may also be another factor. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout a long period of time. It is expected that the next regional ROWD will include a more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

12.0 SPECIAL INVESTIGATIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.

During this reporting period, the City did not encounter a situation where conducting Special Investigations was necessary. However, if the need arises at any time in the future, the City will not hesitate to embark on special studies. Currently, the City plans to study the effects of groundwater seepage or discharge on the quality of surface water bodies. This will be a long-term study, in which City staff will identify the locations of groundwater discharge points on a map and attempt to find a correlation with observed pollutants that are thought to originate from ground contamination or natural pollutants within the soil.

13.0 NON-EMERGENCY FIRE FIGHTING

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.

13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods will be used to reduce the discharge of pollutants to the MEP. BMPs will be implemented when conducting the activities described in the following sections:

13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff will be directed either to the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment are cleaned where runoff will pond and evaporate and/or where runoff will filter through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

13.2.2 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When water flows to an area where landscaping does not prevent runoff, the Officer-in-Charge surveys the area prior to training activities to ensure that drill activities do not wash debris or sediment to storm drain systems.
- Prior to drill activities, debris is removed from downstream areas that could potentially discharge to storm drain systems.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.

13.2.3 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept regularly to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and the disposal of spilled materials is in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site personnel are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

13.2.4 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods cannot be identified. In such cases, water usage and discharges to MS4s are kept to a minimum and BMPs are implemented.

13.2.5 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory. Such facilities are inspected on an as needed basis (See Attachment C). Only one fire station (Fire Station No. 4/Training Tower) has training capabilities. This facility is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter

- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism, which diverts the wash water to the sanitary sewer system and rainwater to storm drain systems.

All personnel who conduct washing activities are properly trained on using the diverter device and ensuring it is used appropriately. Trucks that require cleaning from other stations are brought to the stations equipped with washing capabilities.

14.0 JURMP REVISIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(m)i – A description of any proposed revisions to the JURMP.

The following paragraphs detail proposed updates to the City's JURMP. Each JURMP component is shown as a heading, followed by the specific description of the proposed update.

APPENDIX B

Since the City's JURMP document was developed and submitted to the Regional Board in March 2008, Appendix B of the JURMP has been updated during the current reporting period, which includes inventories of construction sites; municipal, commercial, and industrial facilities and activities; and Priority Development Projects with treatment control BMPs. Updated inventories are included in Attachments A to E of this report.

INDUSTRIAL AND COMMERCIAL COMPONENT

Mobile Business Best Management Practice Updates

The regional Industrial and Commercial Workgroup established minimum BMPs that all mobile businesses with the potential to pollute must implement in order to be in compliance. These BMPs include: 1) Storm water training, 2) Contain and clean up spills, 3) Properly handle all waste, 4) Protect the storm water conveyance system, 5) Provide proper handling and containment of materials, and 6) Provide equipment washout areas. In addition to the BMPs, the workgroup also developed a Regional Mobile Business Database with the help of a consultant. As a part of it's mobile business application approval process, the City plans to add all mobile businesses that receive approval to this regional database.

ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

Dry Weather Field Screening and Analytical Monitoring Update

During the reporting year, the regional Dry Weather Monitoring Sub-workgroup (Dry Weather Workgroup) conducted a study to evaluate and update the dry weather monitoring Action Levels for Total Coliform, Fecal Coliform, and Enterococcus. Action Levels are pollutant concentrations beyond which upstream investigations are initiated to identify and eliminate the source of pollution. The current Action Levels were based on data from one year of monitoring in 2002.

The recent study conducted by the Dry Weather Monitoring Sub-Workgroup was based on available monitoring data from 2002 to 2007. Data were analyzed using three different methods: ranked percentile analysis, statistically based population parameters, and confidence interval. Based on the analysis, the Copermittees determined that the 80th percentile approach would be the best fit to meet the needs of the Dry Weather Monitoring Program. Details of their evaluation are posted on the Project Clean Water Website at:

http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf

Table 14-1 details the updated Action Levels for Total Coliform, Fecal Coliform, and Enterococcus. The Copermittees will use these Action Levels in their Dry Weather Monitoring Program for 2010.

Table 14-1 Updated Bacteria Action Levels for Dry Weather Monitoring

CONSTITUENT	NEW ACTION LEVEL	PREVIOUS ACTION LEVEL
Total Coliform	130,000 MPN/100mL	50,000 MPN/100mL
Fecal Coliform	13,000 MPN/100mL	20,000 MPN/100mL
Enterococcus	7,000 MPN/100mL	10,000 MPN/100mL

Action levels for all other constituents of the Dry Weather Monitoring Program were deemed to be appropriate and were not included in the above study.

FISCAL ANALYSIS COMPONENT

Fiscal Analysis Update

As required by sections G, J.1.a(3)(k), and J.1.c.(1)(d) of NPDES Order No. R9-2007-0001, the Copermittees developed a new Standardized Fiscal Analysis Method to analyze and report their urban runoff management program (jurisdictional, watershed, and regional) expenditures, and outline the funding sources for their programs in a uniform format. As required by Section G.3 of the Municipal Permit, the City will use the new Standardized Fiscal Analysis Method starting January 31, 2010 to conduct its fiscal analysis for the reporting period. This annual report is based on the previously developed method for fiscal analysis.

15.0 CONCLUSIONS AND RECOMMENDATIONS

On January 24, 2007, the San Diego Regional Water Quality Control Board adopted the National Pollutant Discharge Elimination System Municipal Permit, Order No. R9-2007-0001. The new permit includes more prescriptive requirements than Permit Order No. 2001-01, which it superseded. In March 2008, and pursuant to the requirements of the new Municipal Permit, the City of Chula Vista updated its ordinances; permit processes; Standard Urban Storm Water Mitigation Plan (SUSMP), and Jurisdictional Urban Runoff Management Program (JURMP) Document. Implementation of the City's Storm Water Management Program during the reporting period of July 1, 2008 to June 30, 2009 was therefore based on the requirements of the new Municipal Permit and the current report is an account of the City's implementation of the new Municipal Permit during Fiscal Year 2008-2009.

Well-developed program management and implementation defined the City's 2008-2009 reporting year. As reflected throughout this report, the City's Storm Water Management Program has matured and successfully met all programmatic goals set out for the defined reporting period, and has experienced overall success as reflected in the effectiveness assessment conducted in this report. It is vital to direct implementation and management strategies down a targeted, effective, and efficient path as to create a set of interrelated actions and to promote long-term effectiveness. The City recognizes the need to be steadfast and pragmatic toward programmatic development in order to foster long-term success achieved through water quality improvements.

The whole of the preceding document presents a comprehensive implementation narrative and accounting of results in 2008-2009. Further, a detailed effectiveness assessment exercise has supported an overall evaluation of programmatic elements. Taken collectively, the City has identified a variety of strengths and perceived some challenges that will impact program development and implementation in the years to come.

As a result of the re-issuance of the Municipal Permit, major programmatic updates and changes were introduced to the City's Storm Water Management Program. Such updates included new data collection and management strategies, implementation approaches, and program planning with the goal of effective support of long-term methodologies on jurisdictional, watershed, and regional basis. It is expected that the programmatic updates to the Storm Water Management Program will result in the support of a seasoned approach to program implementation and ultimately improvement in the quality of receiving waters regionally.

The City's Storm Water Management Program is served well through continued evolution and implementation of the CLEAN program introduced and detailed throughout this report. The City's integrated approach to public outreach and education is unique, and an approach that the City feels is well received by its diverse community with diverse environmental resources and interests. While many CLEAN concepts have come to fruition in 2008-2009, this program continues to grow in the coming years through ongoing efforts and commitment from the City of Chula Vista and its partners.

In subsequent reporting years, the City will continue to maintain a high standard of compliance with permit requirements through program planning and implementation and seek to continually evaluate and augment program elements as deemed necessary. Further, the City will seek to more fully integrate watershed based programmatic planning and development to foster a more well rounded approach to program implementation and to support long-term effectiveness assessment at local, watershed, and regional levels.

Low Impact Development (LID) and Hydromodification Management Plan (HMP) were the two major additional requirements to the new Municipal Permit. They required substantial resources from the Copermittees. The first update to local SUSMPs were submitted to the Regional Board in March 2008, and included interim conditions until the final Model SUSMP and HMP documents were developed. During the current reporting period, the updated Model SUSMP was completed and approved by the Regional Board. The HMP document is currently being finalized. The Copermittees' next major task would be the incorporation of these documents in their local SUSMP.

Additionally, both these concepts are relatively new to the development community of Southern California. Therefore, the City of Chula Vista expects challenges in enforcing these two requirements in its development review and approval process as the development community passes through the learning curve.

During the reporting period, the City of Chula Vista faced challenges created by additional requirements of the updated Municipal Permit and, financial problems due to the current economic downturn. Despite these challenges, the City placed highest priority on the protection of the region's water resources and the implementation of its JURMP. Dedicating significant sums from its General Fund to the Storm Water Management Program, the City was able to maintain the high standards of performance that were established in previous years.

Attachment I

FY 2008-2009 Commercial Inspections

Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.

Inspection Date	Facility Name	APN Number	Address			Category	Priority	SIC Number
25-Jul-08	Jiffy Lube #897	5652402700	593	E	ST	Cat (i-v) Auto Related	High	7549

FY 2008-2009 Construction Inspections

Construction Inspection records are included in the inspection reports and are on file for each specific project. Detailed inspection logs are maintained in the City's database system and are availabe upon request. ***Inspected construction sites with discrepancies had a verbal or written follow-up notice.*** *During this reporting period, all High Priority construction sites were inspected bi-weekly during the rainy season, and all Medium and Low Priority construction sites were inspected at least monthly. Construction projects that were inspected during this reporting period are listed below:*

Subdivision	Project Name	Neighborhood	Project Status	Work Order No	Priority
San Miguel Ranch

FY 2008-2009 Complaint Response Summary

Incident Date	Structure Category	Site Category	Address			Type of Violation
1-Jul-08	STREET	Commercial	720	H	ST	Slulry/Concrete Discharge

Comments Action Taken: On 07/01/08 - Arrived on-scene and observed Western Pump staff conducted preliminary concrete cuts to replace concrete section around UST access. Observed discharge of slurry buildup in the parking lot and minor buildup on 3 feet of curbline. Discharge did not enter catch basin. Spoke with superintendent and he instructed his staff to immediately conduct cleanup using brooms and shovels. He contacted local crew to deliver shop-vac and gravel bags to contain during cutting operations. City vactor crew assisted the cleanup of the area affected on the property. Issued Administrative Citation SW070108-01 (Warning) to Western Pump. No Further Action Required.

1-Jul-08	STREET	Commercial	696	BROADWAY		Leaking Vehicle

Comments Action Taken: On 07/01/08 - Received phone call from CVFD Engine 52 - Battalion Chief of a sump sludge/used oil spill at A-1 Auto Detail & Repair. Arrived on-scene and observed approx. 1500 ft of curbline contaminated with sump sludge & used oil. CVFD and County HIRT Team on-scene to investigate and contain. CVFD personnel contained spill utilizing earthen berms to prevent the spill from entering open storm channel downstream. Property owner contracted North -State environmental services to conduct clean up of the site. City staff to conduct follow up on August 1, 2008. See continuation on Customer Tab

On 07/29/08 conducted follow-up to ensure that Sump and illegal connection was plugged or capped. Permanent caps were placed over PVC and glued to prevent removal. SE corner box was filled with concrete. Deep sink in maintenance bay was disconnected. No further action required.

8-Jul-08	STREET	Residential	587	FOURTH	AV	Leaking Vehicle

Comments Action Taken: 7/8/08---Responded to report of leaky vehicle. Inspection oil stains on street in front of reported address, but no vehicle. Unable to trace origins of this leak.

7/9/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/11/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/14/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found. Spoke to complainant and explained that enforcement action could not be taken since evidence could not be found linking leak to responsible party. Left public education materials at homes in the area.

7/14/08---City crews spread absorbent, scrubbed area and swept area clean to eliminate the stain. No further action necessary at this time.

10-Jul-08	STREET	Residential	819	CORNELL	AV	Dirt Tracking

Comments Action Taken: 7/10/08---Responded to report of unknown discharge from residence at 819 Cornell. Inspection found evidence of water discharged from address in question. Also found sediment and sand that appeared to be washed away. Spoke to homeowner who stated that he had washed off his driveway. He also stated that he was not using any sand or dirt. Administrative citation warning SW 1662 was issued. City crews cleaned all areas of the storm drain system impacted by this spill. No further action necessary at this time.

10-Jul-08	STREET	Residential	819	CORNELL	AV	Dirt Tracking

Comments Action Taken: 7/10/08---Responded to report of unknown discharge from residence at 819 Cornell. Inspection found evidence of water discharged from address in question. Also found sediment and sand that appeared to be washed away. Spoke to homeowner who stated that he had washed off his driveway. He also stated that he was not using any sand or dirt. Administrative citation warning SW 1662 was issued. City crews cleaned all areas of the storm drain system impacted by this spill. No further action necessary at this time.

14-Jul-08	STREET	Residential		F	ST	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	7/14/08---Responded to report of unknown discharge from motor home at 673 F Street. Inspection found evidence of small discharge from gray water tank of motor home in question. Spoke to vehicle owner who stated that she knew about the leak and that she was planning on getting it fixed. Issued administrative citation warning SW1663 with the requirement to repair the tanks and provide city with copies of receipts. Also issued order to immediately drive the motor home to the local RV dump station. 7/22/08--- Received call from vehicle owner stating that all repairs had been made and asking if copies were ok by mail. Waiting for mailed copies before case can be closed. 7/25/08---Received documents. No further action necessary at this time.					
14-Jul-08	STREET	Residential	687	FOURTH	AV	Accident/Spill
Comments Action Taken:	7/14/08----Called in request for street crews to clean up oil spill in front of 687 Fourth Ave. 7/14/08---Conducted follow-up inspection and crews had cleaned up spill to the MEP.					
16-Jul-08	STREET	Residential	1369	MARTIN	PL	Accident/Spill
Comments Action Taken:	On 7/16/08---Otay Water District reported a fuel spill at 1369 Martin Place. Storm Water staff responded and observed small diesel fuel spill from residents driveway and minor contamination of approx. 30 feet of curbline. Spill was old and already dried. Small amount of accumulation located 2 houses down. Residents son arrived home and stated that his employer's bobcat leaked the fuel and was supposed to clean up before he left. Instructed resident to conduct proper cleanup and remain at location and contact City staff for follow-up that the spill was properly cleaned. City staff conducted follow-up approximately 1.5 hours later and observed that the resident purchased oil absorbent materials from Pep Boys and properly cleaned the spill. Issued resident City Storm Water education Package for Mobile Construction Related Businesses. Instructed resident to inform employer to relocate bobcat from his resident and to conduct refueling at construction site and utilize BMPs such as plastic sheeting, containment pans and to refuel away from impervious areas. NFA Required.

29-Jul-08	STREET	Commercial		AUTO PARK	AV	Accident/Spill
Comments Action Taken:	On 07/28/08 received notification via email of City of San Diego's Waste Water Division on the storage of some drum of used oil, antifreeze drums at Peoples Chevrolet. Arrived on-scene and observed that the City of San Diego's concerns were met. No compliance issues were observed. No further action required.					
29-Jul-08	STREET	Residential		PARK	LN	Sewage Spill Going Down Storm Drair
Comments Action Taken:	7/29/08---Responded to report of illegal dumping by driver of motor home at 600 blk of East Park Lane. Inspection found that the same motor home involved in an illegal dumping incident on 7/23/08 was reportedly also involved in this incident. Please refer 08_003351. No further action necessary at this time.					
30-Jul-08	STREET	Construction		CORRAL CANYON	RD	Power Washing
Comments Action Taken:	7/30/08---Responded to report of power washing without BMPs. Inspection noted construction workers at Long Canyon Park power washing. Rinse water was flowing into grassy areas. Evidence of a violation was not found, however, the construction crew Forman was advised to stop power washing. No further action necessary at this time.					
4-Aug-08	STREET	Residential	1364	EL LUGAR	ST	Dirt Tracking
Comments Action Taken:	8/4/08---Responded to report of dirt/ sediment tracking into the SWCS. Inspection noted severe tracking and discharge of sediment into the SWCS. Issued administrative citation warning SW1666. No further action necessary at this time.					
8-Aug-08	STREET	Residential	1225	FRONTAGE	RD	Sewage Spill Going Down Storm Drair
Comments Action Taken:	SEWER SPILL IN THE GUTTER,SENT 336 FOR CONTAINMENT,WE HAVE BEEN THERE BEFORE.MIKE HICE WAS SENT THERE ALSO.					
	8/8/08---Responded to call of sewage discharge into the SWCS from 1225 Frontage Rd. Inspection noted sewage discharged from two uncapped sewage cleanouts discharging into the SWCS. Property manager Yvonne Cerda stated that a plumber had inspected the sewer system at the mobile home park on 8/4/08 and recommended that the sewer lines be cleaned. The property owner refused the sewer line cleaning service. Issued administrative citation SW B0808081. No further action necessary at this time.					
12-Aug-08	STREET	Residential	375	JASON	PL	Other
Comments Action Taken:	THE RESIDENT AT 375 JASON PL IS SPRAYING GUTTER WITH WEED KILLER.					
	8/19/08---Responded to report of illegal discharge of pesticides at 375 Jason Place. Inspection did not find any evidence indicating that pesticides were discharge into the SWCS. Some watermarks were found in the gutter in front of the home. Left a door hanger with note for homeowner to call me. I received call from homeowner, Robert Boyd (619) 254-8956. Mr. Boyd stated that he sprayed Round-Up on the weeds in front of his home, but that he used the product in minimal amounts in accordance to the directions on the bottle.					
	8/20/08---As part of a second call I left a message explaining to Mr. Boyd that Round-Up weed killer can be used within his property; but that when it came to the sidewalk, curb, and gutter he should notify the City for weed removal at (619) 397-6100. No violation was found. No further action necessary at this time.

13-Aug-08	STREET	Commercial	1408	THIRD	AV	Sewage Spill Going Down Storm Drair

Comments Action Taken:

SEWER SPILL FROM JACK IN THE BOX,SENT MARTINEZ AND PALMER TO DO CONTAINMENT.

8/13/08---Responded to report of sewage discharge into the SWCS from 1408 Third Ave. Inspection noted sewage discharged from improperly capped sewage cleanout discharging into the SWCS. Issued administrative citation SW B0813081. No further action necessary at this time.

14-Aug-08	STORM DRAIN PIPE	Residential	279	D	ST	Sewage Spill Going Down Storm Drair

Comments Action Taken:

GRAY WATER BEING DUMPED IN THE BACKYARD.

On 08/14/08 responded to a reported discharge of sewage/gray water into the storm drain system. Arrived onscene and did not observe or smell of any evidence of the discharge coming form the property. No further action is required.

On 8/22/08 received pictures via email from complainant of the alleged discharge. Photos showed a drain on the inside of the house and it appeared to be coming from the laundry room of the home. Photos did not show a private sewer cleanout at this location. The discharge appeared to be washwater from either a deep sink of washing machine. Small discharged was flowing into homes side yard and was not discharging onto the storm drain system. Referred complainant to DEH and Community Relations Officer for other concerns. No further action is required.

14-Aug-08	STREET	Residential	575	PARKSIDE	DR	Power Washing

Comments Action Taken:

On 08/14/08, received notification of resident powerwashing front walkway and patio. Arrived on-scene and observed a small stream of water coming from the residents curb drain. Heard resident powerwashing in the back but could not make contact due to the noise level. Issued Pollution Notice door hanger for resident to contact Storm Water Section.

On 08/15/08 received phone call from a Mr. Romero of the subject address. Mr. Romero explained that he was using measures to minimize the discharge to the gutter. He stated that he blocks off his area drain on the patio concrete and washes the water into his landscaping and does not use any chemicals. He has invited Storm Water staff to observe on the practices he uses next time that he intends to clean the area again. Explained to him to that his wash water is a violation of the CVMC and that he should utilize additional measures to prevent the discharge into the gutter. It was also explained that future complaints could result in increased enforcement actions.

18-Aug-08	STREET	Residential	176	F	ST	Leaking Vehicle

Comments Action Taken:

RESIDENT WAS CITED FOR RELEASING RADIATOR ANTI-FREEZE FROM AUTO,SENT 2907 MARTINEZ & PALMER TO DO CONTAINMENT

8/18/08---Resident at 176 F Street was discharging non storm water into the SWCS as a result of radiator repair work. Issued administrative citation SW1667. No further action necessary at this time.

19-Aug-08	STREET	Residential	1123	OCALA	AV	Construction Debris & Waste

Comments Action Taken:

THEY ARE WASHING DOWN MATERIALS IN GUTTER.

8/19/08---Responded to report of TJD in the public right-of-way/ SWCS. Inspection found construction discards had been staged at the curb for pick up. Issued verbal notice to tenant Mr. Salvador Armas to have TJD removed by 10AM the following day.

8/20/08---Re-inspection confirmed that all debris was removed from public right-of-way. No further action necessary at this time.

2-Sep-08	STREET	Commercial	730	BROADWAY		Power Washing

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	THEY WERE POWER WASHING THE SIDEWALKS,THEY DID NOT HAVE ANY(BMPS)TO CONTAIN FROM GOING INTO STORM DRAIN . 8/29/08---Responded to report of power washing sidewalks without BMPs. Inspection noted JR Power Sweeping staff power washing sidewalks and discharging wash waster into SWCS. Issued Administrative Citation warning SW1668. No further action necessary at this time.					
10-Sep-08	STREET	Residential	318	NOCTURNE	CT	Leaking Vehicle
Comments Action Taken:	9/9/08---Responded to report of vehicle leaking oil onto the street. Inspection noted white Chevy van LIC 14523(DP) leaking oil onto SWCS. Issued verbal warning to park van in driveway, repair leaks on van, or place drip pan underneath the van daily. Additionally, the vehicle owner was asked to clean the oil from the street. A re-inspection will be conducted on 9/12/08. 9/17/08-A reinspection found that the vehicle owner had cleaned all oil stains from the street and placed a drip pan underneath the vehicle to catch any oil potentially leaking from the vehicle. No further action necessary at this time.					
10-Sep-08	STREET	Residential		THIRD	AV	Slulry/Concrete Discharge
Comments Action Taken:	9/9/08---Responded to report of concrete slurry spill at the intersection of Third Ave. and D Street. Inspection noted some concrete slurry spilled into the SWCS. Violator remained on site and cleaned a significant portion of this spill before city crews arrived. Administrative citation warning SW1670 was issued. No further action is necessary at this time.					
10-Sep-08	STREET	Municipal	333	OXFORD	ST	Complaint Response Enforcement
Comments Action Taken:	HOMELESS ARE USING SDGE BOX TO GO TO LATRINE. 9/10/08---inspection did not find evidence of any discharge or potential for a discharge. No further action necessary at this time.					
11-Sep-08	STREET	Residential	1295	THIRD	AV	Washing Vehicle in Street
Comments Action Taken:	LIQUID LEAKING THRU A PIPE OPENING AT THE CURB,AND THRU A WALL ADJOINING HER PROPERTY AT 286 PALOMAR ST. 9/10/08-Responded to complaint call of water being discharged from curb drain onto Palomar St. Inspection noted that the root cause of this discharge is from customers pre-washing their cars in front of the on-site car wash, and wash water entering the adjacent drain and ultimately discharging at Palomar St. Spoke with business owner Sameer Shrouki and pointed out the violation. Mr. Shrouki stated that he wanted some time to try different solutions to the problem. 9/25/08---Administrative citation warning SW B0910082 was issued. This warning included a deadline of 10/1/08 for the implementation of solutions. A reinspection will be conducted to ensure that a permanent solution has been implemented for this case. 10/21/08--- A re-inspection of 1295 Third Ave. noted that the curb drain at Palomar Ave. was sealed off and no longer discharging. Manager Sameer Shrouki stated that he has implemented an internal policy among gas station staff that requires residual water from the car wash be mopped up as much as possible. No further action necessary at this time.					
16-Sep-08	STREET	Residential	1010	JEFFERSON	AV	Complaint Response Enforcement
Comments Action Taken:	9/16/08---Responded to complaint call regarding illegal discharge of wastewater. Inspection found no evidence of any discharge into the public right-of-way. Case was referred to Code Enforcement for sewer discharges between properties and unpermitted dwellings. No further action is necessary at this time.					
16-Sep-08	STREET	Residential	1009	PLAZA SINUOSO		Over-Irrigation/Pesticide

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	A SEDIMENT DISCHARGE ON SIDEWALK FROM RESIDENT HOME.					
	9/12/08---Responded to complaint call regarding illegal discharge of sediment. Inspection noted that dirt and sediment is flowing from unlandscaped section of side yard near mailbox, and onto the sidewalk, curb and gutter. Left a door hanger and asked to contact city regarding the discharge. 3/12/09--- after leaving several monthly door hangers with notes to call me, I finally made contact with homeowner Juana Reyes (619) 410-8101. The nature of the violation was explained to Ms. Reyes, who responded by agreeing to correct the problem. A follow up inspection will be made on 3/20/09. 4/3/09---Follow up inspection noted that the violation had been corrected. Ms. Reyes and staff had fixed the irrigation system and cleaned all sediment and debris. Photos on file. No further action necessary at this time.					
16-Sep-08	STORM CHANNEL	Residential	1391	SOUTH HILLS	DR	Other
Comments Action Taken:	RESIDENT IS PUTTING PLANT CONTAINERS IN DRAIN.					
	9/12/08---Responded to complaint call regarding resident placing plant containers in the drain. Inspection found no evidence of any discharge into the public right-of-way. . No further action is necessary at this time.					
17-Sep-08	STREET	Residential	2403	EASTRIDGE	LP	Fuel/Oil/Gas Spill
Comments Action Taken:	COMPLAINTANT BELIEVES THAT IT IS OIL AND TRANSMISSION FLUID INTO THE GUTTER.					
	9/17/08---Responded to complaint call regarding oil being washed into the street by resident at 2403 East Ridge Loop. Inspection noted a large puddle of oil in the street in front of the address in question. Streets division staff was summoned to contain the oil with dirt/ absorbent. Left door hanger asking resident to contact the city regarding violation. Spoke to property owner, Mr Rigoberto Cardenas who stated that he drove away early in the morning to find that his car had leaked out all oil and subsequently broke down. He was unaware of the oil in front of his home. He was asked to clean all oil and absorbent and repeat the process until spill is cleaned. 9/18/08---A re-inspection on noted that all oil and absorbent had been cleaned. No further action is necessary at this time.					
22-Sep-08	STREET	Residential	658	GUAVA	AV	Dirt/Sediments
Comments Action Taken:	HOSING DOWN YARD WASTE INT GUTTERS EVERY NIGHT,GOING INTO CATCH BASINS.,VERY UNCOOPERATIVE NEIGHBOR.					
	On 9/22/08 did not observe any unusual buildup into storm drain. Left Door Hanger. Work Request Cancelled.					
22-Sep-08	STREET	Residential	2616	MOONLIGHT TRAIL	LN	Paint Discharge
Comments Action Taken:	On 9/22/08 responded to a reported paint spill. Arrived on-scene and observed partially dried white latex paint that was spilled into the street. Gravel was placed on spill to prevent tracking. Left door hangers at residences located near the spill. City vactor crews conducted cleanup. No further action required.					
23-Sep-08	STREET	Residential	1297	WHEATLAND	ST	Construction Debris & Waste
Comments Action Taken:	WASH DOWN DEBRIS INTO GUTTER,IT IS ALL OVER THE NEIGHBORHOOD.					
	9/23/08---Responded to complaint call regarding illegal discharge of dirt/ sediment into the SWCS. Inspection noted that dirt and sedimented water was discharged from concrete wall footings at the rear section of the property. Tenant, Rosemary Staub stated that the property owner had contracted workers to build a retaining wall at the rear of the property. Workers were discharging dirt/ sediment as part of dewatering the wall footings. Administrative citation SW B0923082 was issued to property owner Lourdes N. Silva. No further action necessary at this time.					

Incident Date	Structure Category	Site Category	Address			Type of Violation
24-Sep-08	STREET	Residential		NAPLES	ST	Carpet Cleaning

Comments Action Taken: CARPET CLEANING MATERIALS DOWN THE GUTTER.

10/3/08---Responded to complaint call of carpet cleaner discharging wash water into the SCWS at 1117 Hilltop Dr. Inspection noted that We Care Carpet cleaners had discharged wash water into the SWCS. Administrative citation warning SW 1672 was issued with the requirement to pay a full cost recovery invoice for all costs associated with the clean up of the spill and to register as a mobile business with the Storm Water Management section. No further action is necessary at this time.

26-Sep-08	STREET	Residential	915	RIGLEY	ST	Slulry/Concrete Discharge

Comments Action Taken: CEMENT SLURRY RUNNING DOWN STREET.

Arrived at the site on 09-26-08. Resident had hired a concrete contractor to do concrete work at his house. Contractor was rinsing out a wheel barrel into the landscaping. Observed potable water entering the storm drain immediately downstream of the home. Water was clear and free of concrete. Vactor crews arrived onsite and flushed the curb and gutter and collected water at the storm drain. Provided education to the homeowner and contractor about concrete BMPs. No further action required. A verbal warning was issued to the homeowner.

30-Sep-08	STREET	Residential	1001	PASEO DEL PASO		Power Washing

Comments Action Taken: RESIDENT IS WASHING HIS ROOF.

9/30/08---Responded to report of red colored water flowing from 1001Paseo Del Paso. Inspection noted red sediment laden water flowing from said property as a result of workers washing off red clay roof and not implementing BMPs. Administrative citation SW B0930081 was issued to the property owner. No further action is necessary at this time.

1-Oct-08	STREET	Residential	153	INKOPAH	ST	Sewage Spill Going Down Storm Drair

Comments Action Taken: MOTORHOME LEAKING UNKNOWN SUBSTANCE.MOTORHOME BUTTOMED OUT ON SWAIL.

10/1/08---Responded to report of sewer spill from a motor home into the street at 157 Inkopah. Inspection noted a sewer spill beginning at the cross gutter of the intersection of Inkopah Street and Helix Ave. and ending at the intersection of Jamul Ave. and Melrose Ave. Scrape marks at the beginning of the spill indicate an accidental motor home sewer system break. Responsible party could not be determined. City staff conducted a thorough cleaning of all public areas impacted by this accidental spill. No further action is necessary at this time.

2-Oct-08	STREET	Residential	2616	MOONLIGHT TRAIL	LN	Paint Discharge

Comments Action Taken: PAINT SPILL FROM TRASH TRUCK.

On 10/02/08 received notification from dispatch of a paint spill from a Allied Waste vehicle. Arrived on scene and observed "absorbent" material (pea gravel) ands paint at the location. Allied did not respond to calls. City vactor crew conducted final cleanup of site.

2-Oct-08	STREET	Residential	1044	GUATAY	AV	Automotive Work

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	WASHING THEIR CAR ENGINE INTO THE GUTTER. 10/2/08---Responded to report of resident at 1042 Guatay Ave. washing vehicle engines and allowing wash water to flow into the SWCS. Inspection did not find any evidence of a violation. Called complainant Laura Badgett (619) 420-1448 for additional information. Ms. Badgett acknowledged the illegal discharges had occurred hours prior to the report and that evidence was no longer present. Ms. Badgett agreed to call dispatch as soon as illegal discharges are witnessed. 2/13/09---After various windshield inspections no evidence was found. Home at 1042 Guatay has been vacated. Suspected tenants are no longer living at this home. No further action necessary at this time.					
3-Oct-08	CATCH BASIN	Residential	290	SECOND	AV	Sewage Spill Going Down Storm Drair
Comments Action Taken:	On 10/03/08 received notification of sewage spill at the above location. Arrived on-scene and observed small coming from private sewer cleanout and discharging onto private storm drain sump. 17-Mar-09	STREET	Commercial	690	E	ST	Fuel/Oil/Gas Spill
Comments Action Taken:	HOT WATER FROM WASHING PARKING LOT. 3/17/09---Responded to report of an illegal discharge at the Denny's restaurant at 690 E Street. Complainant George Donavan (619) 581-5060 stated that he noticed the discharge coming from the restaurant and onto E Street. Inspection did not find any evidence of a violation. A verbal notice was issued to restaurant manager Cindy Gegenworth that non-storm water discharges into the storm water conveyance system are a violation of the City's municipal code. No further action necessary at this time.					
18-Mar-09	STREET	Residential	734	COLORADO	AV	Washing Vehicle in Street
Comments Action Taken:	A NEIGHBOR WASHED A CAR ENGINE IN FRONT OF HIS HOME AND LET WATER AND OIL RUN INTO STORM DRAIN CHANNEL. 3/18/09---Responded to report of engine washing in the street. Inspection noted a trail of oil from 753 Woodlawn Ave. to 734 Colorado Ave. via Kearny Street. At the time of inspection no evidence was found leading to the responsible party. City crews spread absorbent and cleaned up the spill.					
20-Mar-09	STREET	Commercial		FOURTH	AV	Accident/Spill

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	3/20/09---Responded to report of oil spill in the street and potentially leading into the SWCS. Inspection noted a trail of oil from the private parking lot and into the private street in front of Dixiline Lumber (Brisbane St.) Origin of oil spill was from a semi truck owned by Glesby Building Materials. Spoke to Rick Gotterman of Glesby (800) 339-3729. Mr. Gotternan stated that he had hired a private clean up and response company to respond. I provided traffic control assistance until National City Fire and Police department responded to the spill. National City Fire Captain Sergio Mora asked for assistance from Chula Vista Public Works crews. Street Division Supervisor Nelson Rivera approved the assistance and dispatched crews to the scene to assist National City Fire department. No further action necessary at this time.					
24-Mar-09	STREET	Residential	128	ELDER	AV	Possible Dumping into Catch Basin
Comments Action Taken:	NEIGHBOR DUMPING GREY WATER INTO BACKYARD.FROM WASHER. 3/24/09---Responded to report of resident discharging gray water from a washer machine and potentially leading into the SWCS. Resident Marco Diaz stated that they had already fixed the plumbing leading from the washer machine. Inspection noted all gray water was plumbed into the sewer system. No further action necessary at this time.					
25-Mar-09	STREET	Residential	783	AVENIDA SOLARIA		Leaking Vehicle
Comments Action Taken:	RED FORD P/U LEAKING OIL INTO STORM DRAIN. 3/25/09---Responded to report of oil spill in front of 783 Avenida Solaria. Inspection noted that absorbent had been spread to contain and clean up the spill. Inspection did not find evidence necessary to identify the responsible party. A follow up inspection will be conducted to ensure that the absorbent is swept up. Please see request 09_001696					
27-Mar-09	STREET	Residential	1225	CIMA DEL REY		Complaint Response Enforcement
Comments Action Taken:	RUNNING WATER FROM SIDEWALK DRAIN (ALGAE BUILD UP) BEEN RUNNING FOR SEVERAL MONTHS. 3/27/09---Responded to report of constant water flow coming from curb drain at 1225 Cima Del Rey. Inspection noted a constant trickle of water from the curb drain. Spoke to homeowner Cheryl Flora (619) 656-4662 who stated that Otay water had investigated and found that the discharge was attributed to ground water. Explained to Ms. Flora that I would be contacting Otay Water and that I would contact her regarding my findings and the status of this case. 4/13/09---Received call back from David Charles with Otay Water who states that there is no record of an investigation or report at 1225 Cima Del Rey. Will investigate further.					
1-Apr-09	STREET	Residential	765	THIRD	AV	Slulry/Concrete Discharge
Comments Action Taken:	RESIDENTS ARE SAW CUTTING WITHOUT CONTAINMENT. 4/1/09---Responded to report of contractors saw cutting contract without BMPs. Inspection noted HCI staff working for AT&T allowing a small amount of cement slurry trickle onto the sidewalk. Informed Forman, Alejandro Campos (760) 644-0840 of the need to clean up and only continue working if implementing BMPs. He and his staff immediately complied. Verbal warning was issued. No further action necessary at this time.					
1-Apr-09	STREET	Residential		BRANDYWINE	AV	Possible Dumping into Catch Basin
Comments Action Taken:	4/1/09---Responded to report of oil spill on the street at the bus stop located on the southwest corner of the intersection of Olympic Parkway and Brandywine Ave. A spill of approximately one gallon was found. No evidence was found leading to the responsible party. Established a perimeter around the spill and called for city crews to clean up. City staff cleaned up spill. No further action necessary at this time.					
8-Apr-09	STREET	Commercial	556	BROADWAY		Power Washing

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	POWER R WASHING STRUCTURE WITHOUT CONTAINMENT. 4/8/09---Responded to report of power washing in the rain at 556 Broadway. Inspection found no evidence of a violation. No further action necessary at this time.					
9-Apr-09	STREET	Residential	783	AVENIDA SOLARIA		Leaking Vehicle
Comments Action Taken:	3/26/09---Received report of oil stain at 783 Avenida Solaria. Inspection verified complaint and left door hanger instructing homeowner to contact the inspector. 4/2/09---Made contact with homeowner who said that he would spread absorbent on the spill to clean it up. 4/7/09---Noted that absorbent had been spread on the stain. 4/9/09---Re-inspection noted that the stain was cleaned to the maximum extent practical.					
9-Apr-09	STREET	Residential	1142	VISTA	WY	Slulry/Concrete Discharge
Comments Action Taken:	CONCRETE SLURRY COMING OUT OF THIS ADDRESS INTO CATCH BASIN. 4/9/09---Received report of pool filter residue discharged into the street. At 1142 Vista Way. Inspection noted some residue from the above address in the gutter. Discharge did not enter the storm drain inlet. Spoke to Juan DeLaVega regarding spill. Mr. DeLaVega stated that he would be cleaning up the discharge residue. 4/9/09---Re-inspection noted that the spill had been cleaned.					
16-Apr-09	STREET	Construction Sites	1834	CORTE GALEANA		Sewage Spill Going Down Storm Drair
Comments Action Taken:	SEWER MAIN SPILL USED (2) FLUSHERS FOR CONTAINMENT. On 04/16/09 received call from Ken Lightbody, Public Works Inspector, of a sewer overflow located at San Miguel Ranch. City crews were dispatched using 2 vactor crews. Crews contained and clean blockage caused by plug and construction debris. Discharge did not reach water quality basin. Overflow location is new inactive development and not the responsibility of the City. Full cost recovery to be the responsibility of Resmark Development, Owner. No further action required.					
16-Apr-09	STREET	Construction Sites	1834	CORTE GALEANA		Sewage Spill Going Down Storm Drair
Comments Action Taken:	SEWER MAIN SPILL USED (2) FLUSHERS FOR CONTAINMENT. On 04/16/09 received call from Ken Lightbody, Public Works Inspector, of a sewer overflow located at San Miguel Ranch. City crews were dispatched using 2 vactor crews. Crews contained and clean blockage caused by plug and construction debris. Discharge did not reach water quality basin. 22-Apr-09	STREET	Residential	891	DATE	AV	Other
Comments Action Taken:	Received email from Doug Roberts from Sweetwater Authority with a voicemail message attached. The voicemail was from a resident who was complaining about a neighbor (891 Date Ave) who was discharging pool water for 1.5 hours on 04/21/09 and again 04/22/09. The resident did not leave any contact information, nor did he provide a description of the water being discharged. Drove by residence on 04/22/09 around 5pm. There was some water in the curb gutter area on the street on the same side as the address, but there was no evidence of water marks or staining coming from the address. On 04/23/09, called Doug Roberts and informed him that I drove by the residence and did not see evidence of pool discharge from this address. I explained to him that pool water, as long as it is clear and free of debris, is exempt from regulation. I told him to have the resident call me if he has any further questions.					

Incident Date	Structure Category	Site Category	Address	Type of Violation
30-Apr-09	CATCH BASIN	Residential	EXPLORATION FALLSDR	Power Washing

Comments Action Taken: On 4/24/09 received report of mobile Detailer conducting washing of vehicles in the street discharging soapy water into the storm drain system. Observed Xtreme Mobile Cleaning Vehicle at the location with wash water in the curbline from the clean of a red SUV. Contacted owner who stated that he sold the box van to his brother-in-law and previously instructed him to remove all advertising from the sides of the vehicle and that he informed him that he was in violation of the storm water regulations. Verbal Warning issued. Business does have inactive business license. Owner will renew within 7 days. No further action required.

6-May-09	STREET	Residential	1205 CRYSTAL SPRINGS	DR	Leaking Vehicle

Comments Action Taken: SILVER MERCEDES LIC 4GKS959.

5/4/09---After several inspections at various times of the day inspector noted that no action had been taken by the vehicle owner. Will try early mornings before normal work hours.

5/5/09---Re-inspection noted vehicle had not been removed. No calls received from vehicle owner.

5/12/09---Re-inspection noted that the spill had been cleaned.

6-May-09	STREET	Residential	418 QUEEN ANNE	DR	Leaking Vehicle

Comments Action Taken: BLUE DATSUN OIL CHANGE BEING DONE WITHOUT CONTAINMENT.

5/6/09---Received call regarding a blue vehicle changing oil in the street at 418 Queen Anne Street. Inspection noted a blue Mazda with Tennessee license plate 452-NVB parked in the street with an oil pan underneath. Left a tag with notice of City code and instructions to call inspector.

5/7/09---Re-inspection noted vehicle had been removed and the oil stain had been cleaned.

7-May-09	STREET	Residential	1164 CHIMNEY FLATS	LN	Accident/Spill

Comments Action Taken: ALLIED WASTE TRUCK SPILLED HYDRAULIC FLUID.

On 05/07/09 received phone complaint that Allied Waste vehicle blew hydraulic hose at subject location and did a poor job on cleanup. Contacted Allied Waste staff of complaint. Allied dispatched additional crew to re-clean area using dry methods. Spill was properly cleaned per the satisfaction of the citizen. No further action required.

11-May-09	STREET	Commercial	J	ST	Complaint Response Enforcement

Comments Action Taken: 5/11/09---Received report of roadside fruit stand operator throwing cherries into the storm drain. Inspection noted a handful of cherries had rolled into the storm drain catch basin. Issued verbal warning to vendor to take precautions so that nothing could fall into the storm drain. During the inquiry the vendor stated that he did not have a business license, permit, or permission from the property owner to operate on the property he was selling from. The vendor stated that he did not want to get a fine from the city and on his own accord, broke down stand and left.

18-May-09	STREET	Residential	1109 DEL MAR	AV	Possible Dumping into Catch Basin

Comments Action Taken: GREY WATER FROM WASHER RUNNING INTO THE GUTTER.

05/18/2009 Responded to the illegal discharge report. Resident was discharging washing machine waste to the street via a black plastic hose. Wastewater did not enter storm inlets as the sidewalk was unpaved. The resident was instructed to discontinue illegal discharge and connect to a toilet or sink inside the building. The resident complied and removed the hose. Follow-up inspection is required to ensure that the incident is not repeated.

22-May-09	STREET	Residential	469	HIDDEN VISTA	DR	Washing Vehicle in Street

Comments Action Taken: HE IS WASHING HIS BOAT IN THE STREET.MIKE HICE SAID IT WAS OK.

5/22/09---Notice issued to inspector from dispatcher indicated residential washing of a vehicle and water running into street. Public information regarding the use of BMPs has been left at this address.

22-May-09	STREET	Commercial	1128	BAY	BL	Possible Dumping into Catch Basin

Comments Action Taken: HE DUMPED HIS LOAD OF WATER INTO THE STORM DRAIN

5/22/09---Received report of carpet cleaning van discharging into the private storm drain inlet at 1128 Bay. Evidence of the discharge was not found. After speaking to the business owner it was clear that he was fully aware of all the NPDES requirements. However, his business did not have a license to operate in Chula Vista and therefore had not been registered with the City's Mobile Business Stormwater Education Program. This business was issued verbal notice to obtain a City of Chula Vista business license and complete the Mobile Business Stormwater Education Program and has complied.

29-May-09	STREET	Residential	32	ORLANDO	CT	Slulry/Concrete Discharge

Comments Action Taken: 5/26/09---Received report of concrete pump discharge at 32 Orlando Ct. Inspection did not find any evidence of a discharge. Spoke to property owner Francisco Delgado who stated that he and his family had poured concrete a few days prior, but that they were very careful to use BMPs. A courtesy notice was issued to Mr. Delgado to continue ensuring that all the all his contractors use BMPs.

1-Jun-09	STREET	Residential		OTAY LAKES	RD	Pool Filter Discharge

Comments Action Taken: 5/26/09---Received report of pool filter discharge at Rutgers and Otay Lakes Rd. Inspection did not find any evidence of a pool discharges. Some areas of the gutter were stained with dry concrete that appeared white in color. The concrete stains were years old and cannot be cleaned.

2-Jun-09	STREET	Construction Sites	397	INKOPAH	ST	Construction Debris & Waste

Comments Action Taken: CONSTRUCTION BEING DONE AND WATER IS RUNNING DOWN FROM THIS ADDRESS.

6/2/09---Received report of concrete pump operator washing into the street at 395 Inkopah St.. Inspection found evidence of discharges. Concrete pump operator said he was in the process of cleaning it and finished the clean up while the inspector was still there. Discharge was contained due to over growing vegetation in the gutter. Issued verbal warning to concrete pump operator to always clean up spills immediately.

3-Jun-09	STREET	Residential	2627	FAIVRE	ST	Fuel/Oil/Gas Spill

Comments Action Taken: 6/4/09---Received report of motor home discharging sewer at 2627 Faivre St. Initial inspection did not find evidence of a discharge. Will re-inspect on a different day and time to try and make contact with motor home owner and to ensure the motor home is not leaking.

7/13/09---Periodic visits failed to find the suspect motor home. Spoke the business owner Cristobal Campos of Chula Vista Auto Repair (619) 429-6994. Issued verbal warning regarding municipal code and reminder that he and ultimately the property owner are responsible for preventing and controlling any spills from vehicles on the property including motor homes he or his staff is repairing. Mr Campos agreed and said that he would immediately report any motor homes discharging on the street. No further action is necessary at this time.

15-Jun-09	STREET	Residential	514	OCEAN VIEW	LN	Fuel/Oil/Gas Spill

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	6/16/09---Responded to report of oil in the street at the 514 Ocean View Ln. Did not find oil stain. Mistakenly visited Ocean Breeze Ln. 6/17/09---Visited 514 Ocean View Ln. Found oil stain and spread absorbent over the stain. 6/18/09---E-mailed the complainant as requested and called dispatch to establish a work request for street crews to sweep up the absorbent.					
16-Jun-09	STREET	Residential	161	VANCE	ST	Leaking Vehicle
Comments Action Taken:	OIL SPILL IN THE GUTTER. 6/10/09---Received report resident at 161 Vance St. changing oil in the street and allowing discharges flow in to the gutter. Inspection notes some oil stains on the street that we're not traceable to the address. Left note on door for resident to contact the inspector. 6/15/09---Made contact with resident who stated that they had washed the street and utilized proper BMPs to capture, contain and appropriately dispose of all wash water. A re-inspection confirmed that all had been cleaned.					
17-Jun-09	CATCH BASIN	Residential	2347	FOREST OAKS	DR	Possible Dumping into Catch Basin
Comments Action Taken:	6/17/09---Responded to call of carpet cleaner discharging into the storm drain. inspection noted that the van-mounted carpet cleaning equipment was leaking clean water into the street, and that the carpet cleaning staff was inside the house. Issued verbal notice to stop work until the machine could be fixed. Carpet cleaning staff stated that they did not know the machine was leaking and would immediately stop work and have a replacement van dispatched out. Issued verbal warning to carpet cleaning staff informing them of CVMC14.20., and that replacement equipment would also be held to the municipal codes requirements. Carpet cleaning staff packed up equipment and left to get another van. No further action necessary at this time.					
18-Jun-09	STREET	Residential	514	OCEAN VIEW	LN	Accident/Spill
Comments Action Taken:	6/18/09---Please see request 09_002810					
19-Jun-09	STREET	Residential	115	GLOVER	AV	Possible Dumping into Catch Basin
Comments Action Taken:	6/19/09-Received report of motor home dumping sewage into the street adjacent to the storm drain inlet at 115 N. Glover Ave. Inspection noted approximately 20 gallons of raw sewage dumped into the street, curb and gutter. Some of the sewage flowed near the inlet, but did not enter. Summoned city crews to contain, clean and appropriately dispose of sewage. Quality Lift Trucks staff shared surveillance video showing a motor home potentially discharging sewage into the street at the same location on 6/18/09 at 10pm. Further review of the evidence and investigation is will be conducted to determine the exact cause of the discharge and the party responsible.					
22-Jun-09	STREET	Residential	62	MINOT	AV	Sewage Spill Going Down Storm Drair
Comments Action Taken:	On 06/22/09 received notification of a private sewer lateral leaking into the street. Reporting party anonymous and there is no such address. Could not find any evidence of a sewer discharge. No further action required.					
25-Jun-09	STREET	Residential	1541	MELROSE	AV	Leaking Vehicle
Comments Action Taken:	On 06/25/09 responded to the subject location on leaking vehicles. Spoke with homeowner who stated that he will park any leaking vehicles in driveway and put down drip pans. Owner stated that the vehicles are his family members. No further action required.					
25-Jun-09	STREET	Residential	533	PLAZA DEL CID		Leaking Vehicle

Incident Date	Structure Category	Site Category	Address	Type of Violation
Comments Action Taken:	On 6/26/09 responded to the complaint at the above address. Observed significant oil staining from a leaking vehicle. Vehicle was not located at this time. City staff left a Pollution notice at the location. Received phone call from owner of vehicle who stated that she did not have the means to repair the leak at this time. City staff instructed her park the vehicle in the driveway and place a drip pan under the vehicle. Resident complied. No further action required at this time.			
29-Jun-09	STREET	Residential	1368 OLEANDER AV	Construction Debris & Waste
Comments Action Taken:	CONTRACTOR IS THROWING ALL KINDS OF MATERIALS BEHIND 1368 OLEANDER AVE INTO CITY PROPERTY. On 06/29/09, responded to complaint and observed slurry spills, concrete and yard waste along open space slope. Contact owner of the property who stated that he will ensure that the contractors promptly conduct the cleanup of all the waste. No further action is required at this time.			
30-Jun-09	STREET	Residential	421 HIDDEN VISTA DR	Slulry/Concrete Discharge
Comments Action Taken:	CONCRETE RESIDUE IN THE GUTTER.IT IS A CONTINUING THING 6/30/09---Responded to report of concrete slurry in the street from 421 Hidden Vista Dr. Inspection noted dry grout mix in the gutter from this address and to the corner of the block. Spoke to Jorge Elizande, (619) 481-9807 at the home who said that he would sweep and mop up all the dry grout mix. A re-inspection a few hours later noted that all grout mix had been cleaned. No further action necessary at this time.

FY 2008-2009 Industrial Inspections

Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.

Inspection Date	Facility Name	APN Number	Address	Category	Priority	WDID Number	SIC Number
19-Jun-09	Arise/Waco Scafolding	6180103100	676 MOSS ST	Wholesale	High	No WDID	5082
	Comments/Findings:	On 6/19/2009 conducted annual inspection of the facility. Found food trash around work areas, sediment discharge from parking lot, trash not contained. Need to replace filters at east drain section. Discrepancies must be corrected/acted upon within 10 days of inspection. **see attachment**					
19-Jun-09	Action Auto Dismantlers Inc	6291001400	151 REED CT	Auto Dismantlers	High	937I004000	5015
	Comments/Findings:	On 6/19/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
19-Jun-09	Profil Institute for Clinical Researcl	5734606400	855 THIRD AV	Others	Low	No WDID	8011
	Comments/Findings:	On 6/19/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. SWPP is not signed, missing WDID, rain observation documents, and sampling data. Obtain required data within specified time allotted. **see attachment**					
19-Jun-09	Hanson Aggregates	6290300500	116 7TH ST	Concrete Work	High	937I015523	3271
	Comments/Findings:	On 6/19/2009 conducted annual inspection of the facility. Found trash and debris at the northeast corner of the property. **see attachment** Correct the the item listed within 10 days of the inspection.					
11-Jun-09	United Rentals Inc	5623501000	501 C ST	Heavy Equipment Rer	High	9371019886	7359
	Comments/Findings:	On 6/11/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
10-Jun-09	Kleen Blast Industrial Services	6180103100	676 MOSS ST	Retail/Sales	High	No WDID	5084
	Comments/Findings:	On 6/10/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
10-Jun-09	Standard Auto Recycling	6291000400	150 REED CT	Auto Dismantlers	High	9371010775	5015
	Comments/Findings:	On 6/10/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
10-Jun-09	West Auto Wreckers	6221902600	2365 MAIN ST	Auto Dismantlers	High	9371001046	5015
	Comments/Findings:	On 6/10/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. Sample results showed elevated values. Take necessary actions to bring values within parameters.**see attachment** No further action required.					

Inspection Date	Facility Name	APN Number	Address	Category	Priority	WDID Number	SIC Number
9-Jun-09	SOS Metals San Diego LLC	6221115700	635 ANITA ST	Recycling	High	9371013260	5093
	Comments/Findings:	On 6/9/2009 conducted annual inspection of the facility. BMPs are in place. Site is in good order. Sampling test results shows elevated levels of specific conductance. Staff is in the process of increasing BMPs. **see attachment** No further action required.					
9-Jun-09	United Parcel Service	5953000300	2300 BOSWELL CT	Postal Service	High	9371002086	4215
	Comments/Findings:	On 6/9/2009 conducted annual inspection of the facility. Small section of erosion control fence needs repair. Found large amount of debris at west wall and SW drain. Correct items listed within 10 days of inspection. **see attachment**					
5-Jun-09	Prudential Overall Supply	56709000300	740 F ST	Service	High	No WDID	7213
	Comments/Findings:	On 6/5/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
5-Jun-09	Estes Express Lines	5634521200	120 PRESS LN	Trucking	High	937I007126	4231
	Comments/Findings:	On 6/5/2009/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
4-Jun-09	Veolia Transportation -MTS	6232502100	3650 MAIN ST	Transportation	High	9371011017	4111
	Comments/Findings:	On 6/4/2009 conducted annual inspection of the facility. All BMPs are in place. Site is in good order. Sample data results are above limits. Implement necessary BMPs to bring levels within parameters.**see attachment** No further action required.					
4-Jun-09	MMC Energy -Peak Power Plant	6290620400	3497 MAIN ST	Power Generations	High	9371020087	4911
	Comments/Findings:	On 6/4//2009 conducted annual inspection of the facility. BMPs are in place. Site is in good order. Sampling data from rain events on 11/4/08 and 12/22/08 showed UMHOS/cm results at 842 and 561. Regulatory contractor will address the findings within 30 days. **see attachment** On 6/17/2009 MMC conducted SWPPP training to employees. Further, brush and excess growth were removed at the sample area.					
13-May-09	Otay Valley Rock- Rimrock Quarry	6440600600	2041 HERITAGE RD	Others	High	No WDID	1429
	Comments/Findings:	On 5/13/2009 conducted annual inspection of the facility. Sediment basin near office needs maintenance. Inlets along entrance road not protected. Discrepancies must be corrected/acted upon within 10 days of inspection. **see attachment**					
6-May-09	Import Auto Wrecking	6441812900	793 ENERGY WY	Auto Dismantlers	High	937I016877	5015
	Comments/Findings:	On 5/6-2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
6-May-09	California Sports Auto Wrecking	6441811800	781 ENERGY WY	Auto Dismantlers	High	937I021145	5015
	Comments/Findings:	On 5/6/2009 conducted annual inspection of the site. SWPPP is current. Facility is a member of GMP Brash. Sampled on 2/26/2008. Added new gravel for better flirtation.. Site is in good order. **see attachment** No further action required.					

Inspection Date	Facility Name	APN Number	Address			Category	Priority	WDID Number	SIC Number
6-May-09	Montoya's Auto Wrecking	6441811800	781	ENERGY	WY	Auto Dismantlers	High	937I021427	5015
	Comments/Findings:	On 5/6/2009 conducted annual inspection of the site. SWPPP is current and up to date. Member of GMP Brash. . Site is in good order. **see attachment** No follow up action required.							
6-May-09	All Japanese Auto Recycling	6441811900	775	ENERGY	WY	Auto Dismantlers	High	937I015706	5015
	Comments/Findings:	On 5/6-2009 conducted annual inspection of the site. SWPPP is current. Facility is a member of GMP Brash. Sampled on 12/17/2009 (High TSS). Added additional gravel along drainage channel. Site is in good order. **see attachment** No further action required.							
1-May-09	Advance Auto Wrecking	6441812300	777	ENERGY	WY	Auto Dismantlers	High	937i020612	5015
	Comments/Findings:	On 5/01/2009 conducted annual inspection of the site. Facility is currently member of group monitoring program with Brash Industries. Samples were taken on 12/15/08. Results are good. SWPPP is current and up to date. Overall site is in good clean condition. No follow up is required.							
1-May-09	Pacific Auto Wrecking	6441812000	795	ENERGY	WY	Auto Dismantlers	High	9371015058	5015
	Comments/Findings:	On 5/01/2009 conducted annual inspection of the site. Facility is currently member of group monitoring program with Brash Industries. Samples were taken on 12/15/08. Results are good. SWPPP is current and up to date. Overall site is in good clean condition. No follow up is required.							
1-May-09	Freeway Auto Wrecking	6441812200	783	ENERGY	WY	Auto Dismantlers	High	937I021643	5015
	Comments/Findings:	On 5/01/2009 conducted annual inspection of the site. Facility is a member of group monitoring group, Brash Industries. SWPPP is current. Overall site is in good, clean condition.This is a new facility. No follow up is required.							
1-May-09	RC Import Auto Recycler	6441812300	777	ENERGY	WY	Auto Dismantlers	High	9371010144	5015
	Comments/Findings:	On 5/01/2009 conducted annual inspection to the site. All BMPs are in place. Site is in good order. Member of GMP Brash program. All paperwork is current and up to date **see attachment** No further action required.							
1-May-09	Onager Corporation	6441812800	789	ENERGY	WY	Auto Dismantlers	High	9371010014	5015
	Comments/Findings:	On 5/01/2009 conducted annual inspection to the site. All BMPs are in place. Site is in good order. Facility is a member of group monitoring group Brash Industries. SWPPP is current. **see attachment** No further action required.							
21-Apr-09	FJ Willert Cont Co.	6441810200	1869	NIRVANA	AV	Storage	High	937I016993	4953
	Comments/Findings:	On 4/21/2009 conducted annual inspection to the site. Site need to conduct cleaning of drainage ditch. Manager was informed to correct the discrepancy within 10 days of the inspection.							
21-Apr-09	Rossin Steel Inc.	6441810900	1880	NIRVANA	AV	Fabrications	High	9371020898	3441
	Comments/Findings:	On 4/21/2009 conducted annual inspection to the site. Site is in good clean condition. No further action is required.							

Inspection Date	Facility Name	APN Number	Address	Category	Priority	WDID Number	SIC Number
21-Apr-09	Brenntag Pacific Inc	6441810800	1888 NIRVANA AV	Chemical Storage	High	No WDID	5169
	Comments/Findings:	On 4/21/2009 conducted annual inspection to the site. Site needs to obtain Industrial General Permit as per notice of non compliance issued by Ca. Regional Board dated 10/03/2007 and 2/18/2008. Site need to provide copy of notice of intend and SWPPP within 45 days of the report. Correct items listed on the attachment. **see attachment**					
9-Apr-09	Ecology Auto Wrecking 3	6441821200	800 ENERGY WY	Auto Dismantlers	High	937I003280	5015
	Comments/Findings:	On 4/09/2009 conducted annual inspection to the following site: 800 Energy Way; 825 Energy Way; 850 Energy Way. Sites were observed to be in good conditions. 825 Energy Way is converting the facility to capture all run-off to be sued for the Shredder operations. Ecology anticipates all three facilities to be converted to capture all run-off. Need to maintain housekeeping measures. 850 Energy Way was notified of the eroded slope along the access road coming from Pick Your Parts Recycling site. Erosion causes discharge of sediment to storm drain system. SWPPP is current and samples were taken. City to conduct further investigation. No follow up is required at Ecology.					
9-Apr-09	Ecology Auto Wrecking	6441820100	825 ENERGY WY	Auto Dismantlers	High	937I003325	5015
	Comments/Findings:	On 4/09/2009 conducted annual inspection to the following site: 800 Energy Way; 825 Energy Way; 850 Energy Way. Sites were observed to be in good conditions. 825 Energy Way is converting the facility to capture all run-off to be sued for the Shredder operations. Ecology anticipates all three facilities to be converted to capture all run-off. Need to maintain housekeeping measures. 850 Energy Way was notified of the eroded slope along the access road coming from Pick Your Parts Recycling site. Erosion causes discharge of sediment to storm drain system. SWPPP is current and samples were taken. City to conduct further investigation. No follow up is required at Ecology.					
9-Apr-09	Ecology Auto Wrecking 2	6441821000	850 ENERGY WY	Auto Dismantlers	High	937I019445	5015
	Comments/Findings:	On 4/09/2009 conducted annual inspection to the following site: 800 Energy Way; 825 Energy Way; 850 Energy Way. Sites were observed to be in good conditions. 825 Energy Way is converting the facility to capture all run-off to be sued for the Shredder operations. 26-Mar-09	Asian Kars Auto Recycling	6441812300	777 ENERGY WY	Auto Dismantlers	High	937I017467	5015
	Comments/Findings:	On 3/26/2009 conducted annual inspection to the site. Need to remove buildup of weeds, sediment, and trash from the drainage channel. Ensure stockpile of engine parts is removed. Store used oil under cover and place secondary containment. Clean up residual used oil. SWPPP is current. Follow up inspection to be conducted within 7 days.					
26-Mar-09	Japan Tech Auto Wrecking		ENERGY WY	Auto Dismantlers	High	937I020121	5015
	Comments/Findings:	On 3/26/2009 conducted annual inspection to the site. Remove or cover stockpile of parts. Engines on the ground located throughout the facility must be stored properly. Conduct proper housekeeping and removed oil stains in the graveled area. SWPPP is current. Follow up inspections to be conducted within 30 days.					
25-Mar-09	Japanese Auto Wrecking	6441811500	811 ENERGY WY	Auto Dismantlers	High	No WDID	5015
	Comments/Findings:	On 3/25/2009 conducted annual site inspection. Site is in general good condition. Did not have a representative on site. SWPPPP was unavailable for review. Follow up to be conducted at Japan Tech Auto- same owner the inspected site.					
25-Mar-09	Texano Auto Recycling		805 ENERGY WY	Recycling	High	937I1021577	5015
	Comments/Findings:	On 3/25/2009 conducted annual inspection to the site. Site is in general good condition. SWPPP is current. Samples were taken February 2009. This is a new business at this address. No follow up required.					

Inspection Date	Facility Name	APN Number	Address			Category	Priority	WDID Number	SIC Number
25-Mar-09	Pick Your Part Auto Wrecking	6441820800	880	ENERGY	WY	Auto Dismantlers	High	937I012114	5015
	Comments/Findings:	On 3/25/2009 conducted annual inspection. The site is in general good condition. SWPPP is current. Facility has sampled on 12/22/2008 and 02/16/2009. Need to cover drums in used oil storage area. Conduct general housekeeping specifically at crushing dismantling area. Follow up to be conducted within the next 5 days.							
25-Mar-09	All Toyota/Lexus Wrecking	6441811500	805	ENERGY	WY	Auto Dismantlers	High	937I018543	5015
	Comments/Findings:	On 3/25/2009 conducted annual inspection to the site. Site is general good condition except for the following: Parts storage area in the back of the facility needs cover. Need to remove stockpile of parts at the dismantling area. SWPPP is current. Samples taken with results pending. Follow-up to be conducted on 04/03/2009.							
25-Mar-09	South Bay Auto Wreckers	6441820200	811	ENERGY	WY	Auto Dismantlers	High	9371004495	5015
	Comments/Findings:	On 3/25/2009 conducted annual inspection to the site. Site is in general good condition. SWPPP is current and samples were taken Feb 2009. Results are pending. No follow-up is required.							
23-Mar-09	Calumet Auto Wrecking Inc	6441821400	891	ENERGY	WY	Auto Dismantlers	High	937I004393	5015
	Comments/Findings:	On 3/23/209 conducted annual inspection. Site is in general good condition with the following exceptions: a) Observed dumpster leaking fluids and batteries leaking fluids in the concrete containment area b) Recommend engines and parts on the pallets located behind main building be covered. SWPPP is current, site is member of group monitoring program. Items observed have been corrected and no follow up inspection is required.							
23-Mar-09	Allied Waste Services	6441821600	881	ENERGY	WY	Waste Management	High	937I014355	4953
	Comments/Findings:	On 3/23/2009 conducted annual inspection. Site is in general good condition with the following exceptions: a) Observed several oil stains in the service parking area b) Absorbent boom located at the southwest inlet needs replacement c) Recommend e-waste and hot water heaters be covered. During inspection discrepancies have been addressed. SWPPP is current, samples were taken for two rain events. No follow-up inspection is required.							
23-Mar-09	Honda Acura Parts Auto Recycling	6441821500	895	ENERGY	WY	Auto Dismantlers	High	937i011394	5015
	Comments/Findings:	Site is in general good condition. Recommend to cover parts stockpiled until recycled. Put hoods down at the end of business day. Site has liner installed to prevent seepage into soil. Member of Nest Environmental Group program. SWPPP is current. Sample date 11/07. No follow up inspection is required.							
23-Mar-09	ABF Freight System Inc.	6441821700	875	ENERGY	WY	Transportation	High	937I013254	4213
	Comments/Findings:	Site is in general good condition at the time of inspection. Need minor housekeeping of blown trash and debris. Sweep absorbents around storage area. Sampling data and SWPPP were not available at the time of inspection. Follow up to be conducted for SWPPP inspection in 14 days.							
17-Mar-09	GCE Industries Inc.	6441813300	1891	NIRVANA	AV	Manufacturing	High	No WDID	3443
	Comments/Findings:	Conducted follow-up inspection as a requested by City of San Diego IWCP. Observed non-storm water discharges from jet cleaning system. Found illegal connection of parts washing water. There is 55 gallon drum of alkaline near storm drain inlet. Recommend to contain and capture wash water and dispose of properly. Removed illegal connections divert to landscaping or sewer system. Deploy sandbags to protect drain inlets and relocate the 55 gallon alkaline drum either indoors or place secondary containment. Company was given 14 days to correct the discrepancies.							

Inspection Date	Facility Name	APN Number	Address	Category	Priority	WDID Number	SIC Number
7-Mar-09	2 Heavy Equipment/Cons.Recyclir	6441820300	855 ENERGY WY	Metal Recycling	High	No WDID	5093
	Comments/Findings: BMPs need to be implemented. Correct all items listed on the attachment. **see attachment**						
4-Mar-09	H&M Wrought Iron Factory Inc	6221113200	2560 MAIN ST	Manufacturing	High	No WDID	3315
	Comments/Findings: Some BMPs need to be implemented. Site is in general good condition. **see attachment**						
20-Feb-09	Hydro Scape Products Inc.	5634313000	375 TROUSDALE DR	Retail/Sales	High	No WDID	5039
	Comments/Findings: The site is generally clean and orderly. Continue to maintain area around the outside storage of fertilizer.						
4-Dec-08	Parts Heaven	6111812100	791 ENERGY WY	Auto Dismantlers	High	No WDID	5015
	Comments/Findings: On 12/4/09 conducted routine and annual inspection of the above facility. Overall site was in good condition. Facility is not a member of Group Monitoring Program and thus requires wet weather sampling. Owner was notified to correct the discrepancies within specified time.**see attachment**						
24-Jul-08	Flag Crafters	6170800700	1095 BAY BL	Manufacturing	High	No WDID	2399
	Comments/Findings: Conducted annual inspection. The site is clean and orderly. The outdoor loading area is clean. No further action required.						
24-Jul-08	First Appearance Copy Printing &	6231921800	3156 MAIN ST	Printing/Copy Service	High	No WDID	7334
	Comments/Findings: Conducted annual inspection. Business appears to be closed and vacant. The front is clean and orderly. Will follow up if business is still in operation. No further action required.						
5-Jul-08	Vallarta Iron Works	6221902000	2555 FAIVRE ST	Welding Services	Low	No WDID	7692
	Comments/Findings: Conducted annual inspection. All BMPs are in place. Site is in good order. **see attachment**. No further action required.						
5-Jul-08	Lopez Iron Works Repairs		FAIVRE ST	Welding Services	High	No WDID	7692
	Comments/Findings: All BMPs are in place. Site is in good order. **see attachment**						

Total Inspections: **50**

FY 2008-2009 Municipal Inspections

Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.

Inspection Date	Facility Name	APN Number	Address	Category	Priority
20-Feb-09	Paseo Del Rey Park	6401412500	750 PASEO DEL REY	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/20/2009 conducted annual inspection of the site. Site is in good order. Need to replace fiber rolls at the south end of the channel.**see attachment** No further action required.			
20-Feb-09	Valle Lindo Park	6440102600	545 SEQUOIA ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/20/2009 conducted annual inspection of the site. BMPs are in place. Site is in good order. **see attachment** No further action required.			
20-Feb-09	Marisol Park	5933803600	916 RANCHO DEL REY PW	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/20/2009 conducted annual inspection of the site. BMPs are in place. Site is in good order. There is a dog waste station at the entrance of the trails on the east side of the park.**see attachment** No further action required.			
20-Feb-09	Santa Venetia Park	6430512700	1500 MAGDALENA AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/20/2009 conducted annual inspection of the site. Overall, site is in good condition. Two pet waste bag stations observed. **see attachment** No further action required.			
20-Feb-09	Voyager Park	6400901900	1178 J ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/20/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.			
25-Feb-09	Rohr Park	5932400500	4548 SWEETWATER RD	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/25/2009 conducted annual inspection of the site. BMPs are in place. Site is in good order. Pet waste bag stations were observed at the walking trails around the park. **see attachment** No further action required.			
25-Feb-09	Old Public Works Yard	5670312700	707 F ST	Public Work Facilities	High
	Comments/Findings:	On 2/25/2009 conducted annual inspection of the site. Need to reduce amount of storage outdoors. Perform a thorough cleaning of the yard to remove accumulated trash and debris. Properly dispose any hazardous wastes. Sewer storm drain underneath concrete bridge need to be cleaned to remove sediment accumulation. City Parks Manager was notified on 3/4/2009 to correct discrepancies.			

Inspection Date	Facility Name	APN Number	Address			Category	Priority
25-Feb-09	H Street Land Application	5740300800		H	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 2/25/2009 conducted annual inspection of the site. Need to clean oil stain in the yard. Notified Parks Manager on 3/4/2009. Item was corrected.					
6-Mar-09	Parkway CommunityCenter	5683004300	373	PARK	WY	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/6/2009 conducted annual inspection of the site. BMPs are in place. Site is in good order. Consider installing a cigarette butt waste container near the stairs at the NW corner of the building **see attachment** No further action required.					
6-Mar-09	Otay Park & Recreation Center	6232302600	3554	MAIN	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/6/2009 conducted annual inspection of the site. Storm drain at end to channel (SE end of Park) needs cleaning. One pet waste station found. Overall, site is in good order. **see attachment** Notified City Parks Manager to clean storm drain on 3/10/2009.					
6-Mar-09	Los Ninos Park	6243411200	150	TEAL	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/06/2009 conducted annual inspection of the site.BMPs are in place. Site is in good order. **see attachment** No further action required.					
6-Mar-09	Norman Park and Recreation Center	5683331100	270	F	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/6/2009 conducted annual inspection of the site. BMPs are in place. Site is in good order. **see attachment** No further action required.					
6-Mar-09	Memorial Park	5683004300	373	PARK	WY	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/06/2009 conducted annual inspection of the site. Need to remove trash and shopping cart in the channel. Lock storm drain grates to prevent trespassing. **see attachment** Notified City Parks Manager to correct the discrepancy on 3/10/2009.					
6-Mar-09	Otay Park & Recreation Center	6232302700	1613	ALBANY	AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/06/2009 conducted annual inspection of the site. Overall, site is in good condition. One pet waste bag stations observed. Storm drain at end of channel needs cleaning.**see attachment**					
26-Mar-09	Nature Center	5650102900	1000	UNPOWDER POIN	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 3/26/2009 conducted annual inspection of the site.The facility was designed to drain storm water and waste aquarium water into a vegetated swale that leads into a settling pond. If the pond is filled, it would spill over into San Diego Bay. At the time of inspection, the settling pond was approx. 3/4 full. The swale appeared to be in good condition and working properly. Plese provide employee training that includes spill response and prevention, dry methods of clean up, and general pollution prevention measures. **see attachment** No further action required.					

Inspection Date	Facility Name	APN Number	Address			Category	Priority
27-Apr-09	Horizon Neighborhood Park	6410721600	970	PALOMAR	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 4/27/2009 conducted annual inspection of the site. No pet waste bag station observed. Found trash/debris, car engine block on trash bin floor area located at the entrance of the park. Site is in good order. **see attachment** Notify City Park Manager to correct the discrepancy. On 5/7/2009 city crew corrected the discrepancy. No further action required.					
27-Apr-09	Harvest Park	6425814800	1381	PALOMAR	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 4/27/2009 conducted annual inspection of the site. No pet waste bag observed. Site is in good order. **see attachment** No further action required.					
27-Apr-09	Cottonwood Park	6424210600	1778	PALOMAR	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 4/28/2009 conducted annual inspection of the site. No pet waste bag observed. Site is in good order. **see attachment** No further action required.					
27-Apr-09	Heritage Park & Community Center	6425601100	1550	PALOMAR	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 4/27/2009 conducted annual inspection of the site. No pet waste bag station observed. Trash bin floor area at the SE corner of the park full of trash/debris.. Site is in overall good order. Notified Parks Manager on 5/4/2009 **see attachment** On 5/7/2009 discrepancy was corrected.					
1-May-09	Explorer Park	6400301900		NORELLA	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/01/2009 conducted annual inspection of the site. No pet waste bag station observed. Found broken sprinkler heads at the SE of the park next to basketball court. There are traces of sediments on the walkways. Drain inlet located at NW end of park is covered with sediments. Recommend to put gravel bags around inlet opening.. **see attachment** Notified City Park Manager to correct discrepancies. On 5/19/2009 all discrepancies were corrected by City staff.					
1-May-09	Discovery Park	6423930700	700	BUENA VISTA	WY	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/01/2009 conducted annual inspection of the site.Need to replace broken fiber rolls on the SE and SW end to the park. Need to clean trash/debris on concrete brow ditch at the NE and NW end of the park. Site is in general good order. **see attachment** City Park Manager was notified to correct the discrepancies. On 5/15/2009 all discrepancies were corrected by park division.					
7-May-09	Loma Verde Park & Recreation Cente	6240107200	1420	LOMA	LN	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/7/2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
7-May-09	Conneley Park	6233143300	1559	CONNOLEY	AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/7/2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					

Inspection Date	Facility Name	APN Number	Address			Category	Priority
7-May-09	Hilltop Park	5744104600	780	HILLTOP	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/7/2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
8-May-09	Tiffany Park	6420302900	1713	ELMHURST	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/08/2009 conducted annual inspection of the site. Found trash and green waste on the concrete V-ditch at the north end of the park (see photo). Overall, site is in good order. **see attachment** Notified City Park Manager on 5/14/2009. On 5/18/2009 trash and green waste were removed from the v-ditch.					
8-May-09	Veteran's Park Recreation Center	6411221000	785	PALOMAR	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/08/2009 conducted annual inspection of the site. Overall, site is in good condition. There are pet waste stations in the dog park area. Need to dispose of all trash and debris from the gated storage area near rec. center. Sweep inside trash dumpster. **see attachment**					
8-May-09	Sunridge Park	6400502000	952	BEECHGLEN	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 6/02/2009 conducted annual inspection of the site. Overall, site is in good condition. **see attachment** No further action is required.					
8-May-09	Terra Nova Park	5921922700	450	HIDDEN VISTA	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/08/2009 conducted annual inspection of the site. Overall, site is in good condition. Need to replace damaged gravel bags around storm drain at the north end of the park near tennis court. **see attachment** On 5/19/2009 City staff replace damaged gravel bags.					
8-May-09	Rancho Del Rey Park	6422800300	1131	BUENA VISTA	WY	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/08/2009 conducted annual inspection of the site. Overall, site is in good condition. Found 1 pet bag waste station. Leaking irrigation control should be inspected and fixed.**see attachment** On 5/12/2009 City staff repair leaking irrigation control.					
13-May-09	Eucalyptus Park	5651200300	47	FIFTH	AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/13/2009 conducted annual inspection of the site. Found trash/debris/plastic bags in the channel located at NW end of the park (see photo). Site is in general good order. **see attachment** Notified City Park Manager on 5/18/2009. On 5/22/2009 City staff cleaned and vacuum trash and vegetation.					
13-May-09	Friendship Park	5681530100	365	F	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/13/2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					

Inspection Date	Facility Name	APN Number	Address			Category	Priority
13-May-09	Bay Boulevard Park	5670213202		BAY	BL	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/13/2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
13-May-09	Chula Vista Women's Club	5683004200	357	G	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/13/2009 conducted annual inspection of the site. All BMPs are in place. Site is in good order. **see attachment** No further action required.					
15-May-09	Mini Park	5952145100	753	ASHBROOK	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/15/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.					
15-May-09	Mackenzie Creek Park	5955700200	2275	MACKENZIE CREEK	RD	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/15/2009 conducted annual inspection of the site. Overall, site is in good condition. **see attachment** No further action is required.					
15-May-09	Salt Creek Park & Community Center	6434830200	2710	OTAY LAKES	RD	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/15/2009 conducted annual inspection of the site. Overall, site is in good condition. **see attachment** No further action is required.					
15-May-09	Mountain Hawk Park	6435180200	1475	LAKE CREST	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/15/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.					
15-May-09	Windingwalk Neighborhood Park	6436101500	1675	XPLORATION FALL	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/15/2009 conducted annual inspection of the site. Overall, site is in good condition. Recommend to adjust irrigation system to prevent erosion on small slope at winding sidewalk. Post "No Smoking" sign and install trash container at the skate park area. **see attachment** City staff repaired irrigation system. Trash container will not be added and sign will not be posted due to vandalism.					
18-May-09	Downtown Parking Facility	5682702900	340	F	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/18/2009 conducted annual inspection of the site. Facility is maintained by Smiser Family Management. Observed sporadic oil stains on ground level parking lot. Overall, facility is n good order.Parking lot is power sweep twice a month, power blow/hand sweep as needed and power wash at least once a year. *see attachment** Notified property management to correct discrepancy within 20 days of the notification.					

Inspection Date	Facility Name	APN Number	Address			Category	Priority
18-May-09	Gayle McCandliss Park	6390301300	415	J	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/18/2009 conducted annual inspection of the site. BMPs are in place. Site is in good order. **see attachment** No further action required.					
20-May-09	Greg Rogers Park	6200600300	1189	OLEANDER	AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/7/2009 conducted annual inspection of the site. Found drain inlet located at the SE end of the park (bottom of hill) is covered with sediments (see photo). Site is clean and in general good order. **see attachment** Notify City Park Manager to correct discrepancy. On 5/20/2009 conducted follow up inspection. Sediments at drain inlet have been cleared.					
20-May-09	Lancerlot Park	5711701800	750	K	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/20/2009 conducted annual inspection of the site. Site is in good condition. **see attachment** No further action required.					
20-May-09	Lauderbach Park	6192113700	333	OXFORD	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/20/2009 conducted annual inspection of the site. Site is in good condition. **see attachment** No further action required.					
20-May-09	Harborside Park	6182005900	670	OXFORD	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/20/2009 conducted annual inspection of the site. Site is in good condition. **see attachment** No further action required.					
27-May-09	Sunset View Park	6430330100	1390	GREENSVIEW	DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the site. Site is in general good order. There is pet station near trail. Need to sweep curb gutter areas in parking lot to remove accumulated leaves **see attachment** On 6/3/2009 accumulated leaves on curb gutter were removed by City Parks staff.					
27-May-09	Sherwood Park	6233211900	69	SHERWOOD	ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the park. Site is in general good order. Need to replace gravel bags along the dirt slope to stabilize it. **see attachment** On 6/17/2009 gravel bags were replace by City Staff.					
27-May-09	Santa Cora Park	6420804000	1365	SANTA CORA	AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the site. Overall, site is in good condition. Need to remove vegetation and trash from storm drain filter inserts. **see attachment** On 6/11/2009 filter insert was cleaned by City staf.					

Inspection Date	Facility Name	APN Number	Address	Category	Priority
27-May-09	Orange Avenue Fields	6240107200	160 ORANGE AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the site. Overall, site is in good condition. Need to empty trash bins to prevent overflowing. **see attachment** City staff empty trash bin. Recommend to have Little League to provide additional trash can to the site.			
27-May-09	Reinstra Ball Fields	6240107300	1500 MAX AV	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the site. Overall, site is in good condition. There were some trash bags thrown outside the waste dumpster.Consider posting "No Dumping" sign near the dumpster area. **see attachment** City staff contacted Little League who owns the trash bins.			
27-May-09	Palomar Park	6200504900	1359 PARK DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 6/02/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.			
27-May-09	SDGE Park	6230720700	1438 HILLTOP DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 6/02/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.			
27-May-09	Montevalle Park & Community Center	5957360600	840 DUNCAN RANCHRD	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the site. Overall, site is in good condition. Pet waste station installed in the dog park. **see attachment** No further action is required.			
27-May-09	Sunbow Park	6402725100	690 NAPLES ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/27/2009 conducted annual inspection of the site. Overall, site is in good condition. **see attachment** No further action is required.			
29-May-09	Chula Vista Community Park	5953200200	1060 EASTLAKE PW	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/29/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment**			
29-May-09	Independence Park	6423205600	1248CALLE SANTIAGO	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/29/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.			

Inspection Date	Facility Name	APN Number	Address	Category	Priority
29-May-09	Breezewood Park	6425004600	1091 BREEZEWOOD DR	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 5/29/2009 conducted annual inspection of the site. Overall, site is in good condition. No pet waste bag stations observed. **see attachment** No further action is required.			
1-Jun-09	John Lippit PWC & Admin Building	6442301100	1800 MAXWELL RD	Other Fixed Facilities	High
	Comments/Findings:	On 6/01/2009 conducted annual inspection of the facility. Recommend 1) to reduce outdoor storage and dispose of/recycle equipment that is no longer needed. 2) Broom sweep around all outdoor areas to reduce trash, dirt, and debris build-up. 3) Remove and replace damaged fiber roll and install erosion control BMPs along slopes to prevent sediment from entering the storm drain during rain events. **see attachment**			
2-Jun-09	Power Washing-Graffiti Removal			Mobile Mun Activities	High
	Comments/Findings:	On 6/02/2009 conducted annual inspection of the graffiti removal operation. Crew showed an example site at the corner of 3rd and Ash St. All necessary BMPs are implemented including geo-logs, vacuum equipment, and brooms for directing water flow. The crew used as little water as possible. . **see attachment**			
2-Jun-09	Animal Care Facility	6290605400	130 BEYER WY	Animal Facilities	High
	Comments/Findings:	On 6/02/2009 conducted annual inspection of the site. Overall, site is in good condition. BMPs are in place **see attachment** No further action is required.			
2-Jun-09	Bonita Long Canyon Park	5941100500	1745 COLTRIDGE LN	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 6/2/2009 conducted annual inspection of the facility. Site is in good condition. No pet waste stations observed. **see attachment** No further action required.			
2-Jun-09	Community Youth Center	5723001100	465 L ST	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 6024/2009 conducted annual inspection of the site. Overall site is in good condition. Need to sweep the curb/gutter areas and clean out storm drains in the parking lot **see attachment** On 6/9/2009 city staff clean curb/gutter and vacuum storm drains.			
19-Jun-09	Chula Vista Municipal Golf Course	5932402400	4475 BONITA RD	Parks-Landscape-Rec Areas	High
	Comments/Findings:	On 6/19/2009 conducted annual inspection of the site. Need to close dumpster lids and sweep around dumpster in the restaurant area. Keep spill kits on-hand and used oil storage area. Pick up oil stains in the equipment parking area and move metal plate that was covering ground water well. **see attachment**			

Total Inspections: **62**

FY 2008-2009 Inspection Action Summary

Treatment Control BMP Inspections

Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
22-Sep-08	Ada Terraces	MP-52 Drain Insert	Condo	Medium	Ada Street	Ada Street	Paul Miller Company
	Comments/Findings: On 9/22/2008, send notification letter regarding inspection and maintenance of storm water treatment facilities.						
29-Oct-08	New Hope Church	TC-30 Vegetated Swale MP-52 Drain Inlet	Miscelleneous	Low	Eastlake Vistas	New Hope Community	New Hope Community Church
	Comments/Findings: Conducted inspection on the installation of the required vegetated swales. Swale guard pre-filters are installed per plan.						
13-May-09	C.V. Commerce Center	MP-51 Vortex Separator	Miscelleneous	Medium	Main Street	Main Street	MarWest Real Estate
	Comments/Findings: On 5/13/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .The hydrodynamics separator unit (CDS) were observed to have trash & debris in the containment area.. Provide proof of the cleaning and maintenance of the unit by 6/12/2009. **see attachment**						
25-May-09	Eastlake Terrace-Landswap	MP-52 Drain Insert	Miscelleneous	High	Eastlake Terraces	Eastlake Landswap	Gatlin Development
	Comments/Findings: On 05/25/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters by 6/12/2009. **see attachment**						
26-May-09	The Collections @ Eastlake	MP-52 Drain Insert	Commercial	Low	Eastlake	Eastlake Business District	Mar West Real Estate
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. Drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters. **see attachment**						

Inspection Date	Project Name	Type of BMP Installed		Category	Priority	Development	Neighborhood	Responsible Party
26-May-09	Eastlake Business Center-Hale Pl	MP-52 Drain Insert		Miscelleneous	High	Eastlake	Eastlake Business District	Tycoon Management
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters by 6/12/2009. **see attachment**							
26-May-09	Eastlake Village East - Kohls	MP-52 Drain Insert		Miscelleneous	High	Eastlake	Eastlake Village Center East	DENTCO Exterior Services Mgmt
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .Drain filter inserts were observed to have accumulation of trash and debris in the containment area. The loading dock area have significant amount of trash and debris.Provide proof of the cleaning and maintenance of the filters and loading area by 6/12/2009. **see attachment**							
26-May-09	Otay Lakes Medical Office	MP-52 Drain Insert		Miscelleneous	High	Eastlake	Eastlake Business District	Otay Lakes Med. Condo Assoc.
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. . Storm drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters by 6/12/2009. **see attachment**							
26-May-09	Fenton Business Center	MP-52 Drain Insert		Miscelleneous	High	Eastlake	Eastlake Business District	Jason Chases
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All storm drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters by 6/12/2009 **see attachment**							
27-May-09	Eastlake Commerce- Business Ce	MP-52 Drain Insert		Miscelleneous	High	Eastlake	Eastlake Business District	IRE Development
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All units were observed to have minor accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters. **see attachment**							
27-May-09	Eastlake Parkway Professional Pl	MP-52 Drain Insert	TC-30 Vegetated Swale	Miscelleneous	High	Eastlake	Eastlake Business District	IRE Development
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All units were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters. **see attachment**							

Inspection Date	Project Name	Type of BMP Installed	Category	Priority	Development	Neighborhood	Responsible Party
27-May-09	Eastlake Village Center East	MP-52 Drain Insert	Miscelleneous	High	Eastlake	Eastlake Village Center East	Gatlin Development Co.
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All units were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters. **see attachment**						
27-May-09	C.V. Corporate Center	MP-52 Drain Insert	Miscelleneous	High	Main Street	Main Street	Mar West Real Estate
	Comments/Findings: On 5/27/2009 conducted verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filter inserts were observed to have trash and debris in containment areas. **see attachment** Please provide proof of cleaning and maintenance records by 6/12/2009.						
28-May-09	Chevron Station-Olympic Parkway	MP-52 Drain Insert	Commercial	Low	Eastlake	Eastlake Terraces	Chevron Station Inc.
	Comments/Findings: On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All units were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters. **see attachment**						
29-May-09	Enterprise Administration Bldg.	MP-52 Drain Insert	Miscelleneous	High	Autopark	Autopark	Floit Properties
	Comments/Findings: On 5/28/2009 conducted annual inspection and verification on the cleaning and maintenance of the Post Construction BMPs. Storm drain filter inserts were observed to have minor accumulation of trash and debris. Please correct all BMP items listed. Send notification letter to Floit properties.**see attachment**						
29-May-09	Southbay Motorsports	MP-52 Drain Insert	Commercial	High	Autopark	Autopark	SB Land, LLC

SUBJECT: SUBMITTAL OF JURMP ANNUAL REPORT NO. 29 SECTION 7.0 FOR FISCAL YEAR 2008-2009

Enclosed please find one hard copy and three CD-ROMs of the City of Chula Vista's Jurisdictional Urban Runoff Management Program Annual Report No. 29 Section 7.0 – Illicit Discharge Detection and Elimination Component for Fiscal-Year 2008-2009 and the City of Chula Vista Dry Weather Field Screening and Analytical Monitoring Program 2009. The main report was submitted on September 28, 2009 under separate cover. Pursuant to the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 and Addendum No. 2 to Order No. R9-2007-0001, I request that the County of San Diego, as the Principal Copermittee, submits said report to the Regional Water Quality Control Board.

Should you have any questions please call me at (619) 397-6111. Thank you.

EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. Prior to that date, NPDES Municipal Permit, Order No. 2001-01 regulated discharges from urbanized areas of San Diego County. This report covers the implementation period of July 1, 2008 to June 30, 2009. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the Municipal Permit, Order No. R9-2007-0001.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has therefore been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2008 to June 30, 2009, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (to be submitted under separate cover on or before December 15, 2009, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Section 7.0 of this report includes a summary of the City's 2009 Dry Weather Field Screening and Analytical Monitoring Program report, follow-up investigations, as well as a summary of the Illicit Discharges and Connections program for FY 2008-2009. As mandated by Addendum No. 2 to Order No. R9-2007-0001, the County of San Diego, as Principal Copermittee, will submit this section as a part of the unified JURMP to the Regional Board by December 15, 2009. As required under Section III.A.2 of the Receiving Waters and Urban Runoff Monitoring and Reporting Program, the Principal Copermittee will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2008-2009 monitoring season on January 31, 2010.

During the current reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2008-2009 rainy season on January 31, 2010.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2008 to June 30, 2009. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

7.1 INTRODUCTION

Illicit connections and illicit discharges (IC/ID) to the MS4 can potentially impact water quality if they are not eliminated. Examples of illicit discharges include wash-water, sediment, spilled chemicals, sewage releases, and pollutants from various sources. An illicit connection is a connection that conveys an illicit discharge to the MS4 via a pipe, drain, channel, etc. The City utilizes the following mechanisms to actively seek and eliminate illicit discharges and connections to the MS4:

1. Public complaint response and investigation
2. Inspection of local businesses and municipal facilities
3. Dry weather field screening and analytical monitoring
4. Municipal MS4 and sewer inspection and maintenance activities
5. Providing educational outreach to the community and business owners

This section provides a summary of:

- Reported illegal discharges and investigation by City staff
- Spill response and reporting
- Dry Weather Field Screening and Analytical Monitoring activities conducted within the 2009 Dry Weather Monitoring Season (May 1 – September 30)
- Follow-up investigations conducted to determine the potential source(s) of pollutants that exceeded their respective action levels.

Effectiveness assessment of the Illicit Discharge Detection and Elimination Component is included in Section 11.0 of this annual report.

Inspection of municipal facilities and industrial/commercial businesses are addressed in Sections 2.0 and 5.0 of this report. Municipal MS4 and sewer maintenance activities are described below and in Section 2.0 of this report. Educational outreach is described in Section 8.0.

7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

The City operates a hotline (619)397-6000 for residents, employees, and the general public to report any illicit discharges to storm water conveyance systems. The hotline is publicized through several venues such as the City's website, City bus signs, and various storm water educational materials and brochures. The hotline is answered by Public Works dispatch staff, who routes the concern(s) to the appropriate section(s) within the City's Public Works Department. All calls are entered into a database, and all potential IC/IDs are investigated by Storm Water Management Section staff. Storm Water Management Section staff takes

immediate action to respond, investigate, provide education, and take enforcement actions as necessary. Staff also ensures that City crews or the responsible party contains and cleans any spills. Public Works crews are equipped with vactor trucks to contain and clean large spills. When hazardous materials are involved, all appropriate City departments or other agencies such as the Fire Department or the County of San Diego are notified as necessary.

During the reporting year, there were 144 calls to the hotline, compared to 131 calls in FY 2007-2008. Figure 7-1 compares the number of complaints from FY 1997-1998 through FY 2008-2009. As part of its education component, the City advertises the hotline on its website and trains City employees to report any illegal discharges. Attachment L summarizes all calls to the hotline and describes the outcomes of each. Attachment K is a summary of all illegal discharges to the MS4 or other violations of the City's Storm Water Ordinance that resulted in enforcement actions for FY 2008-2009.

Figure 7-1 City of Chula Vista Storm Water Complaint Summary 1997-2009

7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

Section 9.0 of the City's JURMP document outlines the procedures for preventing discharges of sewage to the MS4 and the mechanism whereby notification of sewage spills from private laterals, septic systems, and others spills are received. City staff is trained to report all spills to the dispatch hotline and crews are prepared to respond, contain, and cleanup spills where necessary. In addition, Section 9.0 of the City's JURMP details the City's Sanitary Sewer Overflow Response Plan (SSORP) as required by RWQCB Order No. 96-04 and a Capacity, Management, Operations, and Maintenance (CMOM) program. The City has also developed a

Fats, Oil, and Grease (FOG) Monitoring Program to reduce the amount of FOG introduced into the sanitary sewer system by businesses.

Table 7-1 provides a summary of illegal discharges and spills and the number of each. All discharges and spills were immediately responded to, contained, cleaned, and eliminated.

Table 7-1 Types of Spills/Discharges and Number of Each During FY 2008-2009

TYPE OF SPILL/DISCHARGE	NUMBER
Construction BMPs Violation	4
Driveway-Trash Washing	1
Grease/Food/Drink Discharge	3
Leaking Containers/Tanks	2
Others/Unknown Discharge	1
Painting-Sanding Residue	4
Power or Carpet Wash Water	2
Resident Cleaning Residue	1
Saw Cutting/Sanding Discharge	2
Sediment Discharge	9
Sewage Spill/Discharge	3
Slurry/Concrete Discharge	3
Trash/Debris Discharge	1
Vehicle Oil Discharge	4
Vehicle Washing/Dismantling	1
TOTAL	41

City inspectors are constantly on the lookout for illegal connections during their routine response to reported violations or industrial/commercial inspections. When a floor drain within a structure is suspected of being connected to the storm water conveyance system or discharging to the street gutter, such connection is verified by dye testing. If the indoor drain is connected to storm drains, it is considered illegal and ordered to be disconnected immediately. In addition, the City's maintenance crews have been trained to look for illicit discharges and connections during their daily activities in the field. This process has resulted in the identification of several illicit discharges and connections each year.

7.4 URBAN RUNOFF MONITORING

The 2009 Dry Weather Field Screening and Analytical Monitoring Program Report has been submitted as Attachment M, along with an updated Dry Weather Field Screening and Analytical Stations Map. During the reporting period, the MS4 map and the dry weather monitoring maps were reviewed for inaccuracies, and no amendments were necessary. Fifty-seven primary monitoring sites were visited during the 2009 Dry Weather Monitoring Program, and samples were collected and analyzed at 55 of these sites. Sites CEN-08 and TCS were dry, so two alternate locations, SWR-03-E and SCR-06, were chosen to replace these sites. Thirty-six sites had measurable flow and 21 sites were ponded. Fifteen sites received laboratory analysis in

addition to normal field screening. Table 7-2 provides a summary of exceedances for both field and laboratory analysis.

Under the previous Municipal Permit, the main round of monitoring was followed by a follow-up monitoring round within one or two months of each other. Under the current Municipal Permit, the main round and follow-up monitoring are combined.

Table 7-2 Summary of Action Level Exceedances for the 2009 Dry Weather Monitoring and Field Screening Analysis

FIELD SCREENING ANALYSIS (57 Samples)			
Analyte	**Number of Exceedances**	**% of Sites with Exceedances**	**Site(s) Exceeding Action Level**
pH	2	4	BAY-01, CEN-04
Conductivity	0	0	None
Turbidity	0	0	None
Surfactants (MBAS)	4	7	CEN-08, OVR-09, SCR-05, SUN-02
Ammonia-N	4	7	OVR-14, SCR-04, SUN-03, SWB-03
Nitrate-N	11	19	OVR-07, RCC-03, RCC-04, SCR-02, SCR-05, SUN-02, SUN-06, SWB-03, TCC-03, TCC-05, WOL-02
Orthophosphate-P	2	4	BAY-02, SCR-04
Glycol	1	2	SVS-02

MBAS = Methylene Blue Active Substances

LABORATORY ANALYSIS (15 Samples)			
Analyte	**Number of Exceedances**	**% of Sites with Exceedances**	**Site(s) Exceeding Action Level**
Oil and Grease	0	0	None
Cadmium (Dissolved)	0	0	None
Copper (Dissolved)	0	0	None
Lead (Dissolved)	0	0	None
Zinc (Dissolved)	0	0	None
Diazinon	0	0	None
Chlorpyrifos	0	0	None
Total Coliforms	4	27	RCC-01, SCR-01, SUN-05, SWR-03-E
Fecal Coliforms	2	13	SCR-01, SWR-03-E
Enterococcus	4	27	JUD-01, SCR-01, SUN-05, SWR-03-E

Note: Table data is based on routine visits only. Confirmation, follow-up and dry site visits are not included.

Since 2002, no exceedances have been measured for temperature, cadmium, copper, lead, or chlorpyrifos.

The historical data for the results of field analysis presented in Figure 7-2 indicates a decreasing trend in ammonia concentrations. Orthophosphate exceedances have been very rare in all years, with two exceedances this year. No discernable trend is apparent for glycol or surfactants results, which have fluctuated from year to year.

Figure 7-2 Percent of Sites with Field Constituents Exceedances by Year

* The action level for conductivity was numeric in the past but was later changed to best professional judgment.

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 11 sites, an improvement from 16 exceedances in the previous year. The possible sources of nitrate-nitrogen exceedances include fertilizer runoff from overwatering and possible groundwater seepage into the storm drain system. Bacteria was elevated at 10 sites. The one glycol action level exceedance was tested within normal range at the confirmation visit. Ammonia tested above the action level at four sites. Upon the confirmation visits, three sites were dry and one still had an elevated ammonia level, which was due to decaying organic material in ponded water. Surfactants tested above the action level at four sites. Upon confirmation visits, two sites were found to be below in the action level, indicating a transient source; the other two sites had evidence of equipment and vehicle washing in the areas upstream. Orthophosphate-P was above the action level at two sites. Upon their confirmation visits, it was determined that both action level exceedances were caused by transient sources.

Historical data for laboratory analyses presented in Figure 7-3 indicates relatively high bacteria exceedance rates, although the fecal coliform exceedance rate has decreased somewhat over the years. Zinc and diazinon have not been detected above their action levels since 2003. Prior to

2003 the rates of exceedances were approximately 10% per year. Surfactants and oil and grease have generally had no exceedances or only a minimal number of exceedances over the years.

Figure 7-3 Percent of Sites with Laboratory Exceedances by Year

The City continued to implement the trash monitoring program, as required by the Municipal Permit. Of the 57 sites, 44% were found to be Optimal, 37% were Suboptimal, 14% were Marginal, 5% were Submarginal, and 0% were Poor. The main sources of trash came from household, commercial, and transient sources. As a part of trash assessment, sites were evaluated for potential threat to human or aquatic health. One site was found to have potential threat to aquatic health and was immediately cleaned by City crews. The 11 Marginal and Submarginal sites were noted to City crews as sites needing more routine maintenance and trash pick-up.

In addition, the City began implementation of the MS4 Outfall Monitoring Program – Dry Targeted Portion during this dry season, in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan, and as required by the Municipal Permit. Ten dry weather monitoring sites were laboratory analyzed for constituents as detailed in Table 7-3 below. These results were reported in regional spreadsheet database as a part of the Regional Monitoring Program. As there are no established water quality standards for MS4 results, these data will be compared relative to each other beginning in dry season 2010.

Table 7-3 MS4 Outfall Monitoring Locations and Constituents Analyzed

OUTFALL NAME	CONSTITUENTS ANALYZED
BAY-01	Bacteria and Dissolved metals
CEN-01	Bacteria, Dissolved metals, and TDS
JUD-01	Bacteria and Dissolved metals
PRD-02	Bacteria and Dissolved metals
RCC-02	Bacteria, Dissolved metals, and TDS
SCR-01	Bacteria and Dissolved metals
SUN-06	Bacteria, Dissolved metals, and TDS
SVS-01	Bacteria, Dissolved metals, and TDS
TCC-03	Bacteria, Dissolved metals, and TDS
TCC-04	Bacteria, Dissolved metals, and TDS

7.5 FOLLOW-UP AND ENFORCEMENT

Twenty-five sites had constituents above their respective action levels. Table 7-3 shows the sites with elevated constituent level and their probable sources based on upstream investigations.

Table 7-4 Summary of Upstream Investigations

SITE	UPSTREAM INVESTIGATION TARGET CONSTITUENT(S)		RESULTS/ PROBABLE SOURCE
	Field	Laboratory	
BAY-01	pH	-	Decreased CO2 due to photosynthesis and reduced CO2 solubility due to high water temperature.
BAY-02	Orthophosphate-P	-	Transient flow
CEN-04	pH	-	Decreased CO2 due to photosynthesis and reduced CO2 solubility due to high water temperature
CEN-08	Surfactants	-	Car wash area in Cabrillo Mobile Lodge residential community
JUD-01	-	Enterococcus	Trash in the channel immediately upstream of the site
OVR-07	Nitrate-N	-	Nitrate-enriched groundwater seepage, possibly secondary to landscaping
OVR-09	Surfactants	-	Equipment washing by upstream business
OVR-14	Ammonia-N	-	Ammonia-N levels likely concentrated by evaporation of ponded water
RCC-01	-	Total Coliform	Dish washing behind China China restaurant; dirty grease bin a possible source
RCC-03	Nitrate-N	-	Nitrate-enriched groundwater seepage
RCC-04	Nitrate-N	-	Nitrate-enriched groundwater seepage

Table 7-4 continued on next page

Table 7-4 continued

SCR-01	-	Total Coliform, Fecal Coliform, Enterococcus	Combination of plant debris, excess irrigation, and possibly pet waste; stagnant water in MS4 may promote bacterial growth
SCR-02	Nitrate-N	-	Nitrate-enriched groundwater seepage, possibly secondary to landscaping
SCR-04	Orthophosphate-P, Ammonia-N	-	Landscaping fertilization in new residential community, possibly concentrated by evaporating water
SCR-05	Nitrate-N, Surfactants	-	Nitrate-N: Landscaping fertilization and over-irrigation in new residential developments Surfactants: Transient flow
SUN-02	Nitrate-N, Surfactants	-	Nitrate-N: Groundwater seepage along landscaped hillside on the south side of East H Street/ Proctor Valley Road Surfactants: Transient flow
SUN-03	Ammonia-N	-	Decomposing aquatic fauna and evaporating ponded water
SUN-05	-	Total Coliform, Enterococcus	Decomposing plant debris
SUN-06	Nitrate-N	-	Landscaping fertilization in new residential developments and possible seepage of nitrate-containing groundwater
SVS-02	Glycol	-	Transient flow
SWB-03	Ammonia-N, Nitrate-N	-	Landscaping fertilization, possibly concentrated by evaporating water
SWR-03-E	-	Total Coliform, Fecal Coliform, Enterococcus	Transient flow
TCC-03	Nitrate-N	-	Nitrate-enriched groundwater seepage
TCC-05	Nitrate-N	-	Nitrate-enriched groundwater seepage
WOL-02	Nitrate-N	-	Landscaping fertilization in new residential developments

Based on the results of the 2009 Dry Weather Field Screening and Analytical Monitoring Program as well as the Follow-Up Investigation Program, the City was provided with recommendations for dry weather monitoring sites and surrounding areas in need of cleaning and neighborhoods where storm water pollution prevention education is needed. The City is in the process of completing these recommended cleaning and education activities and is working to minimize illicit discharges. During the reporting period, there were no instances that required additional investigations or follow-up activities above and beyond those conducted during the 2009 Dry Weather Monitoring Program. More information about the recommendations from City's Dry Weather Monitoring and Field Screening Program and Follow-up Investigations can be found in Attachment M.

Attachment L

FY 2008-2009 Complaint Response Summary

Incident Date	Structure Category	Site Category	Address			Type of Violation
1-Jul-08	STREET	Commercial	720	H	ST	Slulry/Concrete Discharge

Comments Action Taken: On 07/01/08 - Arrived on-scene and observed Western Pump staff conducted preliminary concrete cuts to replace concrete section around UST access. Observed discharge of slurry buildup in the parking lot and minor buildup on 3 feet of curbline. Discharge did not enter catch basin. Spoke with superintendent and he instructed his staff to immediately conduct cleanup using brooms and shovels. He contacted local crew to deliver shop-vac and gravel bags to contain during cutting operations. City vactor crew assisted the cleanup of the area affected on the property. Issued Administrative Citation SW070108-01 (Warning) to Western Pump. No Further Action Required.

Incident Date	Structure Category	Site Category	Address			Type of Violation
1-Jul-08	STREET	Commercial	696	BROADWAY		Leaking Vehicle

Comments Action Taken: On 07/01/08 - Received phone call from CVFD Engine 52 - Battalion Chief of a sump sludge/used oil spill at A-1 Auto Detail & Repair. Arrived on-scene and observed approx. 1500 ft of curbline contaminated with sump sludge & used oil. CVFD and County HIRT Team on-scene to investigate and contain. CVFD personnel contained spill utilizing earthen berms to prevent the spill from entering open storm channel downstream. Property owner contracted North -State environmental services to conduct clean up of the site. City staff to conduct follow up on August 1, 2008. See continuation on Customer Tab

On 07/29/08 conducted follow-up to ensure that Sump and illegal connection was plugged or capped. Permanent caps were placed over PVC and glued to prevent removal. SE corner box was filled with concrete. Deep sink in maintenance bay was disconnected. No further action required.

Incident Date	Structure Category	Site Category	Address			Type of Violation
8-Jul-08	STREET	Residential	587	FOURTH	AV	Leaking Vehicle

Comments Action Taken: 7/8/08---Responded to report of leaky vehicle. Inspection oil stains on street in front of reported address, but no vehicle. Unable to trace origins of this leak.

7/9/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/11/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/14/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found. Spoke to complainant and explained that enforcement action could not be taken since evidence could not be found linking leak to responsible party. Left public education materials at homes in the area.

7/14/08---City crews spread absorbent, scrubbed area and swept area clean to eliminate the stain. No further action necessary at this time.

Incident Date	Structure Category	Site Category	Address			Type of Violation
10-Jul-08	STREET	Residential	819	CORNELL	AV	Dirt Tracking

Comments Action Taken: 7/10/08---Responded to report of unknown discharge from residence at 819 Cornell. Inspection found evidence of water discharged from address in question. Also found sediment and sand that appeared to be washed away. Spoke to homeowner who stated that he had washed off his driveway. He also stated that he was not using any sand or dirt. Administrative citation warning SW 1662 was issued. City crews cleaned all areas of the storm drain system impacted by this spill. No further action necessary at this time.

Incident Date	Structure Category	Site Category	Address			Type of Violation
14-Jul-08	STREET	Residential		F	ST	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	7/14/08---Responded to report of unknown discharge from motor home at 673 F Street. Inspection found evidence of small discharge from gray water tank of motor home in question. Spoke to vehicle owner who stated that she knew about the leak and that she was planning on getting it fixed. Issued administrative citation warning SW1663 with the requirement to repair the tanks and provide city with copies of receipts. Also issued order to immediately drive the motor home to the local RV dump station. 7/22/08--- Received call from vehicle owner stating that all repairs had been made and asking if copies were ok by mail. Waiting for mailed copies before case can be closed. 7/25/08---Received documents. No further action necessary at this time.					
14-Jul-08	STREET	Residential	687	FOURTH	AV	Accident/Spill
Comments Action Taken:	7/14/08----Called in request for street crews to clean up oil spill in front of 687 Fourth Ave. 7/14/08---Conducted follow-up inspection and crews had cleaned up spill to the MEP.					
16-Jul-08	STREET	Residential	1369	MARTIN	PL	Accident/Spill
Comments Action Taken:	On 7/16/08---Otay Water District reported a fuel spill at 1369 Martin Place. Storm Water staff responded and observed small diesel fuel spill from residents driveway and minor contamination of approx. 30 feet of curbline. Spill was old and already dried. Small amount of accumulation located 2 houses down. Residents son arrived home and stated that his employer's bobcat leaked the fuel and was supposed to clean up before he left. Instructed resident to conduct proper cleanup and remain at location and contact City staff for follow-up that the spill was properly cleaned. City staff conducted follow-up approximately 1.5 hours later and observed that the resident purchased oil absorbent materials from Pep Boys and properly cleaned the spill. Issued resident City Storm Water education Package for Mobile Construction Related Businesses. Instructed resident to inform employer to relocate bobcat from his resident and to conduct refueling at construction site and utilize BMPs such as plastic sheeting, containment pans and to refuel away from impervious areas. NFA Required.					
21-Jul-08	STREET	Residential	1096	FOREST LAKE	DR	Paint Discharge
Comments Action Taken:	7/21/08---Responded to report of paint in the SWCS from 1096 Forest Lake Dr. Inspection noted evidence of water based paint discharges from address in question. Issued administrative citation warning SW B0721081. No further action necessary at this time.					
23-Jul-08	STREET	Industrial	811	ENERGY	WY	Dirt Tracking
Comments Action Taken:	7/1/08--- Responded to report of over irrigation, storm drains full of trash and debris, and damaged "No Dumping" signs at inlet. Inspection found inlets clean and free of trash and debris, no evidence of over irrigation, some sections of the curb and gutter had pine needles, and small amounts of trash, and all "No Dumping" plaques were in good condition. Notified street sweeping regarding pine needles. No violations were observed. No further action is necessary at this time.					
23-Jul-08	STREET	Industrial	855	ENERGY	WY	Construction Debris & Waste
Comments Action Taken:	7/1/08--- Responded to report of storm drains full of trash and debris, and damaged "No Dumping" signs at inlet. Inspection found inlets clean and free of trash and debris, and all "No Dumping" plaques were in good condition. No violations were observed. No further action is necessary at this time.					
23-Jul-08	STREET	Industrial	850	ENERGY	WY	Leaking Vehicle
Comments Action Taken:	7/2/08--- Responded to report of oil spills onto the ground from vehicles waiting to be dismantled, open top trash containers, and damaged "No Dumping" signs on inlets. Inspection found all areas clean and free of oil spills, and all "No Dumping" plaques were in good condition. No violations were observed. No further action is necessary at this time.					
23-Jul-08	STREET	Commercial	1751	FOURTH	AV	Street Sweeping Needed
Comments Action Taken:	7/2/08---Responded to report of uncovered dumpsters, trash and bottle caps littered on the ground, and lack of sweeping. Inspection found several open top containers used for handling and containment of recyclable commodities, facility and public right-of-way in front of this business were in good clean order. No violations were observed. No further action necessary at this time.					

Incident Date	Structure Category	Site Category	Address			Type of Violation
23-Jul-08	STREET	Residential	640	ASH	AV	Sewage Spill Going Down Storm Drair
Comments Action Taken:	7/23/08---Responded to call of illegal dumping by driver of a motor home (Lic. 3MDD932). Inspection noted sewage spilled in the alley at the 600 blk of East Park Lane. Issued administrative citation warning SW B0723081. No further action necessary at this time.					
25-Jul-08	STREET	Commercial		THIRD	AV	Slulry/Concrete Discharge
Comments Action Taken:	7/25/08---Responded to report of concrete from a rental concrete trailer spilled into the SWCS at the intersection of Third and D Street. Inspection noted evidence of concrete in the SWCS. Called for City Crews to clean up spill. No further action necessary at this time.					
25-Jul-08	STREET	Commercial	501	FIFTH	AV	Slulry/Concrete Discharge
Comments Action Taken:	7/25/08---Responded to report of concrete from a rental concrete trailer spilled into the SWCS at the intersection of Third and D Street. Inspection noted evidence of concrete in the SWCS. This report also included identical spills at the intersection of North Glover Ave. & Third Ave, the intersection of Fifth Ave. & C Street, and in front of 501 C Street. Issued administrative citation SW1665. No further action necessary at this time.					
25-Jul-08	STREET	Commercial		GLOVER	AV	Slulry/Concrete Discharge
Comments Action Taken:	7/25/08---Responded to report of concrete from a rental concrete trailer spilled into the SWCS at the intersection of Third and D Street. Inspection noted evidence of concrete in the SWCS. Called for City crews to clean up spill. No further action necessary at this time.					
28-Jul-08	STREET	Commercial		HALSEY	ST	Sewage Spill Going Down Storm Drair
Comments Action Taken:	GOT CALLED ABOUT A MOTORHOME THAT DUMPS INTO THE STREET.SEE REQ 08_003437					
28-Jul-08	MISC	Residential		PARK	LN	Accident/Spill
Comments Action Taken:	motorhome dumped into the gutter.SEE REQ. 08_003437.					
29-Jul-08	MISC	Residential		HALSEY	ST	Accident/Spill
Comments Action Taken:	MOTORHOME DUMPED INTO THE STREET,BY THE TIME WE GOT THERE IT WAS GONE SEE REQ. 08_003437					
29-Jul-08	STREET	Commercial		AUTO PARK	AV	Accident/Spill
Comments Action Taken:	On 07/28/08 received notification via email of City of San Diego's Waste Water Division on the storage of some drum of used oil, antifreeze drums at Peoples Chevrolet. Arrived on-scene and observed that the City of San Diego's concerns were met. No compliance issues were observed. No further action required.					
29-Jul-08	STREET	Residential		PARK	LN	Sewage Spill Going Down Storm Drair
Comments Action Taken:	7/29/08---Responded to report of illegal dumping by driver of motor home at 600 blk of East Park Lane. Inspection found that the same motor home involved in an illegal dumping incident on 7/23/08 was reportedly also involved in this incident. Please refer 08_003351. No further action necessary at this time.					
30-Jul-08	STREET	Construction		CORRAL CANYON	RD	Power Washing
Comments Action Taken:	7/30/08---Responded to report of power washing without BMPs. Inspection noted construction workers at Long Canyon Park power washing. Rinse water was flowing into grassy areas. Evidence of a violation was not found, however, the construction crew Forman was advised to stop power washing. No further action necessary at this time.					
4-Aug-08	STREET	Residential	1364	EL LUGAR	ST	Dirt Tracking

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	8/4/08---Responded to report of dirt/ sediment tracking into the SWCS. Inspection noted severe tracking and discharge of sediment into the SWCS. Issued administrative citation warning SW1666. No further action necessary at this time.					
8-Aug-08	STREET	Residential	1225	FRONTAGE	RD	Sewage Spill Going Down Storm Drair
Comments Action Taken:	SEWER SPILL IN THE GUTTER,SENT 336 FOR CONTAINMENT,WE HAVE BEEN THERE BEFORE.MIKE HICE WAS SENT THERE ALSO.					
	8/8/08---Responded to call of sewage discharge into the SWCS from 1225 Frontage Rd. Inspection noted sewage discharged from two uncapped sewage cleanouts discharging into the SWCS. Property manager Yvonne Cerda stated that a plumber had inspected the sewer system at the mobile home park on 8/4/08 and recommended that the sewer lines be cleaned. The property owner refused the sewer line cleaning service. Issued administrative citation SW B0808081. No further action necessary at this time.					
12-Aug-08	STREET	Residential	375	JASON	PL	Other
Comments Action Taken:	THE RESIDENT AT 375 JASON PL IS SPRAYING GUTTER WITH WEED KILLER.					
	8/19/08---Responded to report of illegal discharge of pesticides at 375 Jason Place. Inspection did not find any evidence indicating that pesticides were discharge into the SWCS. Some watermarks were found in the gutter in front of the home. Left a door hanger with note for homeowner to call me. I received call from homeowner, Robert Boyd (619) 254-8956. Mr. Boyd stated that he sprayed Round-Up on the weeds in front of his home, but that he used the product in minimal amounts in accordance to the directions on the bottle.					
	8/20/08---As part of a second call I left a message explaining to Mr. Boyd that Round-Up weed killer can be used within his property; but that when it came to the sidewalk, curb, and gutter he should notify the City for weed removal at (619) 397-6100. No violation was found. No further action necessary at this time.					
13-Aug-08	STREET	Commercial	1408	THIRD	AV	Sewage Spill Going Down Storm Drair
Comments Action Taken:	SEWER SPILL FROM JACK IN THE BOX,SENT MARTINEZ AND PALMER TO DO CONTAINMENT.					
	8/13/08---Responded to report of sewage discharge into the SWCS from 1408 Third Ave. Inspection noted sewage discharged from improperly capped sewage cleanout discharging into the SWCS. Issued administrative citation SW B0813081. No further action necessary at this time.					
14-Aug-08	STORM DRAIN PIPE	Residential	279	D	ST	Sewage Spill Going Down Storm Drair
Comments Action Taken:	GRAY WATER BEING DUMPED IN THE BACKYARD.					
	On 08/14/08 responded to a reported discharge of sewage/gray water into the storm drain system. Arrived onscene and did not observe or smell of any evidence of the discharge coming form the property. No further action is required.					
	On 8/22/08 received pictures via email from complainant of the alleged discharge. Photos showed a drain on the inside of the house and it appeared to be coming from the laundry room of the home. Photos did not show a private sewer cleanout at this location. The discharge appeared to be washwater from either a deep sink of washing machine. Small discharged was flowing into homes side yard and was not discharging onto the storm drain system. Referred complainant to DEH and Community Relations Officer for other concerns. No further action is required.					
14-Aug-08	STREET	Residential	575	PARKSIDE	DR	Power Washing

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	On 08/14/08, received notification of resident powerwashing front walkway and patio. Arrived on-scene and observed a small stream of water coming from the residents curb drain. Heard resident powerwashing in the back but could not make contact due to the noise level. Issued Pollution Notice door hanger for resident to contact Storm Water Section. On 08/15/08 received phone call from a Mr. Romero of the subject address. Mr. Romero explained that he was using measures to minimize the discharge to the gutter. He stated that he blocks off his area drain on the patio concrete and washes the water into his landscaping and does not use any chemicals. He has invited Storm Water staff to observe on the practices he uses next time that he intends to clean the area again. Explained to him to that his wash water is a violation of the CVMC and that he should utilize additional measures to prevent the discharge into the gutter. It was also explained that future complaints could result in increased enforcement actions.					
18-Aug-08	STREET	Residential	176	F	ST	Leaking Vehicle
Comments Action Taken:	RESIDENT WAS CITED FOR RELEASING RADIATOR ANTI-FREEZE FROM AUTO,SENT 2907 MARTINEZ & PALMER TO DO CONTAINMENT 8/18/08---Resident at 176 F Street was discharging non storm water into the SWCS as a result of radiator repair work. Issued administrative citation SW1667. No further action necessary at this time.					
19-Aug-08	STREET	Residential	1123	OCALA	AV	Construction Debris & Waste
Comments Action Taken:	THEY ARE WASHING DOWN MATERIALS IN GUTTER. 8/19/08---Responded to report of TJD in the public right-of-way/ SWCS. Inspection found construction discards had been staged at the curb for pick up. Issued verbal notice to tenant Mr. Salvador Armas to have TJD removed by 10AM the following day. 8/20/08---Re-inspection confirmed that all debris was removed from public right-of-way. No further action necessary at this time.					
2-Sep-08	STREET	Commercial	730	BROADWAY		Power Washing
Comments Action Taken:	THEY WERE POWER WASHING THE SIDEWALKS,THEY DID NOT HAVE ANY(BMPS)TO CONTAIN FROM GOING INTO STORM DRAIN . 8/29/08---Responded to report of power washing sidewalks without BMPs. Inspection noted JR Power Sweeping staff power washing sidewalks and discharging wash waster into SWCS. Issued Administrative Citation warning SW1668. No further action necessary at this time.					
10-Sep-08	STREET	Residential	318	NOCTURNE	CT	Leaking Vehicle
Comments Action Taken:	9/9/08---Responded to report of vehicle leaking oil onto the street. Inspection noted white Chevy van LIC 14523(DP) leaking oil onto SWCS. Issued verbal warning to park van in driveway, repair leaks on van, or place drip pan underneath the van daily. Additionally, the vehicle owner was asked to clean the oil from the street. A re-inspection will be conducted on 9/12/08. 9/17/08-A reinspection found that the vehicle owner had cleaned all oil stains from the street and placed a drip pan underneath the vehicle to catch any oil potentially leaking from the vehicle. No further action necessary at this time.					
10-Sep-08	STREET	Residential		THIRD	AV	Slulry/Concrete Discharge
Comments Action Taken:	9/9/08---Responded to report of concrete slurry spill at the intersection of Third Ave. and D Street. Inspection noted some concrete slurry spilled into the SWCS. Violator remained on site and cleaned a significant portion of this spill before city crews arrived. Administrative citation warning SW1670 was issued. No further action is necessary at this time.					
10-Sep-08	STREET	Municipal	333	OXFORD	ST	Unknown Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	HOMELESS ARE USING SDGE BOX TO GO TO LATRINE.					
	9/10/08---inspection did not find evidence of any discharge or potential for a discharge. No further action necessary at this time.					
11-Sep-08	STREET	Residential	1295	THIRD	AV	Washing Vehicle in Street
Comments Action Taken:	LIQUID LEAKING THRU A PIPE OPENING AT THE CURB,AND THRU A WALL ADJOINING HER PROPERTY AT 286 PALOMAR ST.					
	9/10/08-Responded to complaint call of water being discharged from curb drain onto Palomar St. Inspection noted that the root cause of this discharge is from customers pre-washing their cars in front of the on-site car wash, and wash water entering the adjacent drain and ultimately discharging at Palomar St. Spoke with business owner Sameer Shrouki and pointed out the violation. Mr. Shrouki stated that he wanted some time to try different solutions to the problem. 9/25/08---Administrative citation warning SW B0910082 was issued. This warning included a deadline of 10/1/08 for the implementation of solutions. A reinspection will be conducted to ensure that a permanent solution has been implemented for this case. 10/21/08--- A re-inspection of 1295 Third Ave. noted that the curb drain at Palomar Ave. was sealed off and no longer discharging. Manager Sameer Shrouki stated that he has implemented an internal policy among gas station staff that requires residual water from the car wash be mopped up as much as possible. No further action necessary at this time.					
16-Sep-08	STREET	Residential	1010	JEFFERSON	AV	Unknown Discharge
Comments Action Taken:	9/16/08---Responded to complaint call regarding illegal discharge of wastewater. Inspection found no evidence of any discharge into the public right-of-way. Case was referred to Code Enforcement for sewer discharges between properties and unpermitted dwellings. No further action is necessary at this time.					
16-Sep-08	STREET	Residential	1009	PLAZA SINUOSO		Over-Irrigation/Pesticide
Comments Action Taken:	A SEDIMENT DISCHARGE ON SIDEWALK FROM RESIDENT HOME.					
	9/12/08---Responded to complaint call regarding illegal discharge of sediment. Inspection noted that dirt and sediment is flowing from unlandscaped section of side yard near mailbox, and onto the sidewalk, curb and gutter. Left a door hanger and asked to contact city regarding the discharge. 3/12/09--- after leaving several monthly door hangers with notes to call me, I finally made contact with homeowner Juana Reyes (619) 410-8101. The nature of the violation was explained to Ms. Reyes, who responded by agreeing to correct the problem. A follow up inspection will be made on 3/20/09. 4/3/09---Follow up inspection noted that the violation had been corrected. Ms. Reyes and staff had fixed the irrigation system and cleaned all sediment and debris. Photos on file. No further action necessary at this time.					
16-Sep-08	STORM CHANNEL	Residential	1391	SOUTH HILLS	DR	Other
Comments Action Taken:	RESIDENT IS PUTTING PLANT CONTAINERS IN DRAIN.					
	9/12/08---Responded to complaint call regarding resident placing plant containers in the drain. Inspection found no evidence of any discharge into the public right-of-way. . No further action is necessary at this time.					
17-Sep-08	STREET	Residential	2403	EASTRIDGE	LP	Fuel/Oil/Gas Spill

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	COMPLAINTANT BELIEVES THAT IT IS OIL AND TRANSMISSION FLUID INTO THE GUTTER.					
	9/17/08---Responded to complaint call regarding oil being washed into the street by resident at 2403 East Ridge Loop. Inspection noted a large puddle of oil in the street in front of the address in question. Streets division staff was summoned to contain the oil with dirt/ absorbent. Left door hanger asking resident to contact the city regarding violation. Spoke to property owner, Mr Rigoberto Cardenas who stated that he drove away early in the morning to find that his car had leaked out all oil and subsequently broke down. He was unaware of the oil in front of his home. He was asked to clean all oil and absorbent and repeat the process until spill is cleaned. 9/18/08---A re-inspection on noted that all oil and absorbent had been cleaned. No further action is necessary at this time.					
22-Sep-08	STREET	Residential	658	GUAVA	AV	Dirt/Sediments
Comments Action Taken:	HOSING DOWN YARD WASTE INT GUTTERS EVERY NIGHT,GOING INTO CATCH BASINS.,VERY UNCOOPERATIVE NEIGHBOR.					
	On 9/22/08 did not observe any unusual buildup into storm drain. Left Door Hanger. Work Request Cancelled.					
22-Sep-08	STREET	Residential	2616	MOONLIGHT TRAIL	LN	Paint Discharge
Comments Action Taken:	On 9/22/08 responded to a reported paint spill. Arrived on-scene and observed partially dried white latex paint that was spilled into the street. Gravel was placed on spill to prevent tracking. Left door hangers at residences located near the spill. City vactor crews conducted cleanup. No further action required.					
23-Sep-08	STREET	Residential	1297	WHEATLAND	ST	Construction Debris & Waste
Comments Action Taken:	WASH DOWN DEBRIS INTO GUTTER,IT IS ALL OVER THE NEIGHBORHOOD.					
	9/23/08---Responded to complaint call regarding illegal discharge of dirt/ sediment into the SWCS. Inspection noted that dirt and sedimented water was discharged from concrete wall footings at the rear section of the property. Tenant, Rosemary Staub stated that the property owner had contracted workers to build a retaining wall at the rear of the property. Workers were discharging dirt/ sediment as part of dewatering the wall footings. Administrative citation SW B0923082 was issued to property owner Lourdes N. Silva. No further action necessary at this time.					
24-Sep-08	STREET	Residential		NAPLES	ST	Carpet Cleaning
Comments Action Taken:	CARPET CLEANING MATERIALS DOWN THE GUTTER.					
	10/3/08---Responded to complaint call of carpet cleaner discharging wash water into the SCWS at 1117 Hilltop Dr. Inspection noted that We Care Carpet cleaners had discharged wash water into the SWCS. Administrative citation warning SW 1672 was issued with the requirement to pay a full cost recovery invoice for all costs associated with the clean up of the spill and to register as a mobile business with the Storm Water Management section. No further action is necessary at this time.					
26-Sep-08	STREET	Residential	915	RIGLEY	ST	Slulry/Concrete Discharge
Comments Action Taken:	CEMENT SLURRY RUNNING DOWN STREET.					
	Arrived at the site on 09-26-08. Resident had hired a concrete contractor to do concrete work at his house. Contractor was rinsing out a wheel barrel into the landscaping. Observed potable water entering the storm drain immediately downstream of the home. Water was clear and free of concrete. Vactor crews arrived onsite and flushed the curb and gutter and collected water at the storm drain. Provided education to the homeowner and contractor about concrete BMPs. No further action required. A verbal warning was issued to the homeowner.					
30-Sep-08	STREET	Residential	1001	PASEO DEL PASO		Power Washing

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	RESIDENT IS WASHING HIS ROOF.					
	9/30/08---Responded to report of red colored water flowing from 1001Paseo Del Paso. Inspection noted red sediment laden water flowing from said property as a result of workers washing off red clay roof and not implementing BMPs. Administrative citation SW B0930081 was issued to the property owner. No further action is necessary at this time.					
1-Oct-08	STREET	Residential	153	INKOPAH	ST	Sewage Spill Going Down Storm Drair
Comments Action Taken:	MOTORHOME LEAKING UNKNOWN SUBSTANCE.MOTORHOME BUTTOMED OUT ON SWAIL.					
	10/1/08---Responded to report of sewer spill from a motor home into the street at 157 Inkopah. Inspection noted a sewer spill beginning at the cross gutter of the intersection of Inkopah Street and Helix Ave. and ending at the intersection of Jamul Ave. and Melrose Ave. Scrape marks at the beginning of the spill indicate an accidental motor home sewer system break. Responsible party could not be determined. City staff conducted a thorough cleaning of all public areas impacted by this accidental spill. No further action is necessary at this time.					
2-Oct-08	STREET	Residential	2616	MOONLIGHT TRAIL	LN	Paint Discharge
Comments Action Taken:	PAINT SPILL FROM TRASH TRUCK.					
	On 10/02/08 received notification from dispatch of a paint spill from a Allied Waste vehicle. Arrived on scene and observed "absorbent" material (pea gravel) ands paint at the location. Allied did not respond to calls. City vactor crew conducted final cleanup of site.					
2-Oct-08	STREET	Residential	1044	GUATAY	AV	Automotive Work
Comments Action Taken:	WASHING THEIR CAR ENGINE INTO THE GUTTER.					
	10/2/08---Responded to report of resident at 1042 Guatay Ave. washing vehicle engines and allowing wash water to flow into the SWCS. Inspection did not find any evidence of a violation. Called complainant Laura Badgett (619) 420-1448 for additional information. Ms. Badgett acknowledged the illegal discharges had occurred hours prior to the report and that evidence was no longer present. Ms. Badgett agreed to call dispatch as soon as illegal discharges are witnessed. 2/13/09---After various windshield inspections no evidence was found. Home at 1042 Guatay has been vacated. Suspected tenants are no longer living at this home. No further action necessary at this time.					
3-Oct-08	CATCH BASIN	Residential	290	SECOND	AV	Sewage Spill Going Down Storm Drair
Comments Action Taken:	On 10/03/08 received notification of sewage spill at the above location. Arrived on-scene and observed small coming from private sewer cleanout and discharging onto private storm drain sump. Spoke with Mr. Montoya, rep for property owner, who will dispatch crew to clean out backup. Mr. Montoya will clean private sumps at the site. City staff to look into lateral separation located from lateral to city main. NFA required.

24-Feb-09	STREET	Construction Sites	11 WALNUT	DR	Slulry/Concrete Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	2/24/09---Responded to report of saw cutting without BMPs. Inspection noted Loya construction staff saw cutting sidewalk without using BMPs. Notified business owner Pablo Loya of violation and of requirement to implement BMPs. Loya construction staff stopped cutting activity and began to clean all slurry. Mr. Loya stated that he would wait until later when a professional saw cutting company that uses BMPs could come out and perform the saw cutting instead. No further action necessary at this time.					
26-Feb-09	STREET	Residential	908	WAYNE	AV	Leaking Vehicle
Comments Action Taken:	2/26/09---Responded to report of vehicle leaking oil onto the street in front of 926 Wayne Ave. Inspection noted that a white Ford pickup License plate 6J76670 belonging to San Diego Sweeping Services was leaking oil onto the street. Notified Steve J. Reid of said co. and asked that he clean up the spill. Mr. Reid stated that he or his staff would take care of the matter immediately. A follow up inspection noted that the vehicle had been removed and the oil spill cleaned. No further action necessary at this time.					
2-Mar-09	CATCH BASIN	Residential	729	ANZA	WY	Over-Irrigation/Pesticide
Comments Action Taken:	WATER RUNNING FROM YARD INTO STORM DRAIN PIPE IN FRON OF THIS ADDRESS. 3/4/09---Inspection noted trickle of water coming from sai address. Left bus. card with not for homeowner to call me. 3/9/09---Met with homeowner Cesar Murillo. Noted that the yard drains were possibly clogged, retaining irrigation water, and releasing the water at a trickle slow enough to allow algae to form. Mr. Murillo explained how he is working to unclog the drain pipe and that if he was not successful he would call a plumber. I issued Mr. Murillo more time to fix the problem. A follow up call or visit will occur on 3/16/09. 3/16/09---A follow up inspection noted that the violation had been corrected. Homeowner Cesar Murillo stated that the problem was a secondary valve in his irrigation system. No further action necessary at this time.					
2-Mar-09	CATCH BASIN	Residential		BLUE FALLS	DR	Slulry/Concrete Discharge
Comments Action Taken:	SAW CUTTING SLURRY WENT INTO CATCH BASIN.ALREADY DRY.					
4-Mar-09	STREET	Residential		FIRST	AV	Construction Debris & Waste
Comments Action Taken:	WHEN IT RAINS CONSTRUCTION DEBRIS (ASPHALT & CONCRETE)DEPOSITS INTO DRAIN. AT INTERSECTION. 3/12/09---inspection found no evidence of a storm water violation. Photos on file. No further action necessary at this time.					
4-Mar-09	STREET	Commercial	1266	THIRD	AV	Unknown Discharge
Comments Action Taken:	GREASE OVERFLOWING FROM CONTAINER. 3/3/09--- responded to complaint regarding an overflowing restaurant oil grease container. Inspection noted that the oil grease container at El Norteno Taco shop was overflowing and did not have the lids in place. Notice was given to business owner Daniel Amador of the need to provide proper containment for oil and grease. A follow up inspection was agreed upon. 3/12/09---A follow up inspection of El Norteno noted that all spills had been cleaned and a new container was in place. No further action is necessary at this time.					
4-Mar-09	STREET	Residential	1337	TIERRA BONITA	PL	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	OIL SPILL/MR .FRANK YORK 204-7585 ALSO CALLED ON THIS. ON (3/06/09) 3/2/09---Responded to report of vehicle leaking oil onto the street in front of 1337 Tierra Bonita. Inspection noted large oil stains on driveway of said address and out into street. Left business card with message to call me. 3/4/09---Left second door hanger with message to call me 3/5/09---Met with homeowner Christine Pelayo (619) 421-5314. Notified Ms. Pelayo of the violation and of the need to clean all oil from the public right of way and her driveway to avoid potential discharges or tracking. Ms. Pelayo stated that she would have the oil cleaned. We agreed that on 3/10/09 a follow up inspection would occur. 3/11/09---A follow up inspection noted that all oil had been cleaned as agreed. No further action necessary at this time.					
9-Mar-09	STREET	Residential	4	PAISLEY	ST	Fuel/Oil/Gas Spill
Comments Action Taken:	CLEANING GRAFFITI WITH UNKNOWN SUBSTANCE. 3/9/09---Responded to report of gasoline spill at 4 Paisley Street. Inspection did not find any evidence of a spill at the said address or the surrounding areas. Photos on file. No further action is necessary at this time.					
16-Mar-09	STREET	Residential	1400	OLEANDER	AV	Possible Dumping into Catch Basin
Comments Action Taken:	3/16/09---Inspection did not find any evidence of a storm water violation. No further action necessary at this time.					
17-Mar-09	STREET	Commercial	690	E	ST	Fuel/Oil/Gas Spill
Comments Action Taken:	HOT WATER FROM WASHING PARKING LOT. 3/17/09---Responded to report of an illegal discharge at the Denny's restaurant at 690 E Street. Complainant George Donavan (619) 581-5060 stated that he noticed the discharge coming from the restaurant and onto E Street. Inspection did not find any evidence of a violation. A verbal notice was issued to restaurant manager Cindy Gegenworth that non-storm water discharges into the storm water conveyance system are a violation of the City's municipal code. No further action necessary at this time.					
18-Mar-09	STREET	Residential	734	COLORADO	AV	Washing Vehicle in Street
Comments Action Taken:	A NEIGHBOR WASHED A CAR ENGINE IN FRONT OF HIS HOME AND LET WATER AND OIL RUN INTO STORM DRAIN CHANNEL. 3/18/09---Responded to report of engine washing in the street. Inspection noted a trail of oil from 753 Woodlawn Ave. to 734 Colorado Ave. via Kearny Street. At the time of inspection no evidence was found leading to the responsible party. City crews spread absorbent and cleaned up the spill.					
20-Mar-09	STREET	Commercial		FOURTH	AV	Accident/Spill
Comments Action Taken:	3/20/09---Responded to report of oil spill in the street and potentially leading into the SWCS. Inspection noted a trail of oil from the private parking lot and into the private street in front of Dixiline Lumber (Brisbane St.) Origin of oil spill was from a semi truck owned by Glesby Building Materials. Spoke to Rick Gotterman of Glesby (800) 339-3729. Mr. Gotternan stated that he had hired a private clean up and response company to respond. I provided traffic control assistance until National City Fire and Police department responded to the spill. National City Fire Captain Sergio Mora asked for assistance from Chula Vista Public Works crews. Street Division Supervisor Nelson Rivera approved the assistance and dispatched crews to the scene to assist National City Fire department. No further action necessary at this time.					
24-Mar-09	STREET	Residential	128	ELDER	AV	Possible Dumping into Catch Basin

Incident Date	Structure Category	Site Category	Address		Type of Violation
Comments Action Taken:	NEIGHBOR DUMPING GREY WATER INTO BACKYARD.FROM WASHER.				
	3/24/09---Responded to report of resident discharging gray water from a washer machine and potentially leading into the SWCS. Resident Marco Diaz stated that they had already fixed the plumbing leading from the washer machine. Inspection noted all gray water was plumbed into the sewer system. No further action necessary at this time.				
25-Mar-09	STREET	Residential	783 AVENIDA SOLARIA		Leaking Vehicle
Comments Action Taken:	RED FORD P/U LEAKING OIL INTO STORM DRAIN.				
	3/25/09---Responded to report of oil spill in front of 783 Avenida Solaria. Inspection noted that absorbent had been spread to contain and clean up the spill. Inspection did not find evidence necessary to identify the responsible party. A follow up inspection will be conducted to ensure that the absorbent is swept up. Please see request 09_001696				
27-Mar-09	STREET	Residential	1225 CIMA DEL REY		Complaint Response Enforcement
Comments Action Taken:	RUNNING WATER FROM SIDEWALK DRAIN (ALGAE BUILD UP) BEEN RUNNING FOR SEVERAL MONTHS.				
	3/27/09---Responded to report of constant water flow coming from curb drain at 1225 Cima Del Rey. Inspection noted a constant trickle of water from the curb drain. Spoke to homeowner Cheryl Flora (619) 656-4662 who stated that Otay water had investigated and found that the discharge was attributed to ground water. Explained to Ms. Flora that I would be contacting Otay Water and that I would contact her regarding my findings and the status of this case. 4/13/09---Received call back from David Charles with Otay Water who states that there is no record of an investigation or report at 1225 Cima Del Rey. Will investigate further.				
1-Apr-09	STREET	Residential	765 THIRD	AV	Slulry/Concrete Discharge
Comments Action Taken:	RESIDENTS ARE SAW CUTTING WITHOUT CONTAINMENT.				
	4/1/09---Responded to report of contractors saw cutting contract without BMPs. Inspection noted HCI staff working for AT&T allowing a small amount of cement slurry trickle onto the sidewalk. Informed Forman, Alejandro Campos (760) 644-0840 of the need to clean up and only continue working if implementing BMPs. He and his staff immediately complied. Verbal warning was issued. No further action necessary at this time.				
1-Apr-09	STREET	Residential	BRANDYWINE	AV	Possible Dumping into Catch Basin
Comments Action Taken:	4/1/09---Responded to report of oil spill on the street at the bus stop located on the southwest corner of the intersection of Olympic Parkway and Brandywine Ave. A spill of approximately one gallon was found. No evidence was found leading to the responsible party. Established a perimeter around the spill and called for city crews to clean up. City staff cleaned up spill. No further action necessary at this time.				
8-Apr-09	STREET	Commercial	556 BROADWAY		Power Washing
Comments Action Taken:	POWER R WASHING STRUCTURE WITHOUT CONTAINMENT.				
	4/8/09---Responded to report of power washing in the rain at 556 Broadway. Inspection found no evidence of a violation. No further action necessary at this time.				
9-Apr-09	STREET	Residential	783 AVENIDA SOLARIA		Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	3/26/09---Received report of oil stain at 783 Avenida Solaria. Inspection verified complaint and left door hanger instructing homeowner to contact the inspector. 4/2/09---Made contact with homeowner who said that he would spread absorbent on the spill to clean it up. 4/7/09---Noted that absorbent had been spread on the stain. 4/9/09---Re-inspection noted that the stain was cleaned to the maximum extent practical.					
9-Apr-09	STREET	Residential	1142	VISTA	WY	Slulry/Concrete Discharge
Comments Action Taken:	CONCRETE SLURRY COMING OUT OF THIS ADDRESS INTO CATCH BASIN. 4/9/09---Received report of pool filter residue discharged into the street. At 1142 Vista Way. Inspection noted some residue from the above address in the gutter. Discharge did not enter the storm drain inlet. Spoke to Juan DeLaVega regarding spill. Mr. DeLaVega stated that he would be cleaning up the discharge residue. 4/9/09---Re-inspection noted that the spill had been cleaned.					
16-Apr-09	STREET	Construction Sites	1834	CORTE GALEANA		Sewage Spill Going Down Storm Drair
Comments Action Taken:	SEWER MAIN SPILL USED (2) FLUSHERS FOR CONTAINMENT. On 04/16/09 received call from Ken Lightbody, Public Works Inspector, of a sewer overflow located at San Miguel Ranch. City crews were dispatched using 2 vactor crews. Crews contained and clean blockage caused by plug and construction debris. Discharge did not reach water quality basin. Overflow location is new inactive development and not the responsibility of the City. Full cost recovery to be the responsibility of Resmark Development, Owner. No further action required.					
22-Apr-09	STREET	Residential	891	DATE	AV	Other
Comments Action Taken:	Received email from Doug Roberts from Sweetwater Authority with a voicemail message attached. The voicemail was from a resident who was complaining about a neighbor (891 Date Ave) who was discharging pool water for 1.5 hours on 04/21/09 and again 04/22/09. The resident did not leave any contact information, nor did he provide a description of the water being discharged. Drove by residence on 04/22/09 around 5pm. There was some water in the curb gutter area on the street on the same side as the address, but there was no evidence of water marks or staining coming from the address. On 04/23/09, called Doug Roberts and informed him that I drove by the residence and did not see evidence of pool discharge from this address. I explained to him that pool water, as long as it is clear and free of debris, is exempt from regulation. I told him to have the resident call me if he has any further questions.					
30-Apr-09	CATCH BASIN	Residential		EXPLORATION FALLS	DR	Power Washing
Comments Action Taken:	On 4/24/09 received report of mobile Detailer conducting washing of vehicles in the street discharging soapy water into the storm drain system. Observed Xtreme Mobile Cleaning Vehicle at the location with wash water in the curbline from the clean of a red SUV. Contacted owner who stated that he sold the box van to his brother-in-law and previously instructed him to remove all advertising from the sides of the vehicle and that he informed him that he was in violation of the storm water regulations. Verbal Warning issued. Business does have inactive business license. Owner will renew within 7 days. No further action required.					
6-May-09	STREET	Residential	1205	CRYSTAL SPRINGS	DR	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	SILVER MERCEDES LIC 4GKS959.					
	5/4/09---After several inspections at various times of the day inspector noted that no action had been taken by the vehicle owner. Will try early mornings before normal work hours.					
	5/5/09---Re-inspection noted vehicle had not been removed. No calls received from vehicle owner.					
	5/12/09---Re-inspection noted that the spill had been cleaned.					
6-May-09	STREET	Residential	418	QUEEN ANNE	DR	Leaking Vehicle
Comments Action Taken:	BLUE DATSUN OIL CHANGE BEING DONE WITHOUT CONTAINMENT.					
	5/6/09---Received call regarding a blue vehicle changing oil in the street at 418 Queen Anne Street. Inspection noted a blue Mazda with Tennessee license plate 452-NVB parked in the street with an oil pan underneath. Left a tag with notice of City code and instructions to call inspector.					
	5/7/09---Re-inspection noted vehicle had been removed and the oil stain had been cleaned.					
7-May-09	STREET	Residential	1164	CHIMNEY FLATS	LN	Accident/Spill
Comments Action Taken:	ALLIED WASTE TRUCK SPILLED HYDRAULIC FLUID.					
	On 05/07/09 received phone complaint that Allied Waste vehicle blew hydraulic hose at subject location and did a poor job on cleanup. Contacted Allied Waste staff of complaint. Allied dispatched additional crew to re-clean area using dry methods. Spill was properly cleaned per the satisfaction of the citizen. No further action required.					
11-May-09	STREET	Commercial		J	ST	Unknown Discharge
Comments Action Taken:	5/11/09---Received report of roadside fruit stand operator throwing cherries into the storm drain. Inspection noted a handful of cherries had rolled into the storm drain catch basin. Issued verbal warning to vendor to take precautions so that nothing could fall into the storm drain. During the inquiry the vendor stated that he did not have a business license, permit, or permission from the property owner to operate on the property he was selling from. The vendor stated that he did not want to get a fine from the city and on his own accord, broke down stand and left.					
18-May-09	STREET	Residential	1109	DEL MAR	AV	Unknown Discharge
Comments Action Taken:	GREY WATER FROM WASHER RUNNING INTO THE GUTTER.					
	05/18/2009 Responded to the illegal discharge report. Resident was discharging washing machine waste to the street via a black plastic hose. Wastewater did not enter storm inlets as the sidewalk was unpaved. The resident was instructed to discontinue illegal discharge and connect to a toilet or sink inside the building. The resident complied and removed the hose. Follow-up inspection is required to ensure that the incident is not repeated.					
22-May-09	STREET	Residential	469	HIDDEN VISTA	DR	Washing Vehicle in Street
Comments Action Taken:	HE IS WASHING HIS BOAT IN THE STREET.MIKE HICE SAID IT WAS OK.					
	5/22/09---Notice issued to inspector from dispatcher indicated residential washing of a vehicle and water running into street. Public information regarding the use of BMPs has been left at this address.					
22-May-09	STREET	Commercial	1128	BAY	BL	Unknown Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	HE DUMPED HIS LOAD OF WATER INTO THE STORM DRAIN					
	5/22/09---Received report of carpet cleaning van discharging into the private storm drain inlet at 1128 Bay. Evidence of the discharge was not found. After speaking to the business owner it was clear that he was fully aware of all the NPDES requirements. However, his business did not have a license to operate in Chula Vista and therefore had not been registered with the City's Mobile Business Stormwater Education Program. This business was issued verbal notice to obtain a City of Chula Vista business license and complete the Mobile Business Stormwater Education Program and has complied.					
29-May-09	STREET	Residential	32	ORLANDO	CT	Slulry/Concrete Discharge
Comments Action Taken:	5/26/09---Received report of concrete pump discharge at 32 Orlando Ct. Inspection did not find any evidence of a discharge. Spoke to property owner Francisco Delgado who stated that he and his family had poured concrete a few days prior, but that they were very careful to use BMPs. A courtesy notice was issued to Mr. Delgado to continue ensuring that all the all his contractors use BMPs.					
1-Jun-09	STREET	Residential		OTAY LAKES	RD	Pool Filter Discharge
Comments Action Taken:	5/26/09---Received report of pool filter discharge at Rutgers and Otay Lakes Rd. Inspection did not find any evidence of a pool discharges. Some areas of the gutter were stained with dry concrete that appeared white in color. The concrete stains were years old and cannot be cleaned.					
2-Jun-09	STREET	Construction Sites	397	INKOPAH	ST	Construction Debris & Waste
Comments Action Taken:	CONSTRUCTION BEING DONE AND WATER IS RUNNING DOWN FROM THIS ADDRESS.					
	6/2/09---Received report of concrete pump operator washing into the street at 395 Inkopah St.. Inspection found evidence of discharges. Concrete pump operator said he was in the process of cleaning it and finished the clean up while the inspector was still there. Discharge was contained due to over growing vegetation in the gutter. Issued verbal warning to concrete pump operator to always clean up spills immediately.					
3-Jun-09	STREET	Residential	2627	FAIVRE	ST	Fuel/Oil/Gas Spill
Comments Action Taken:	6/4/09---Received report of motor home discharging sewer at 2627 Faivre St. Initial inspection did not find evidence of a discharge. Will re-inspect on a different day and time to try and make contact with motor home owner and to ensure the motor home is not leaking.					
	7/13/09---Periodic visits failed to find the suspect motor home. Spoke the business owner Cristobal Campos of Chula Vista Auto Repair (619) 429-6994. Issued verbal warning regarding municipal code and reminder that he and ultimately the property owner are responsible for preventing and controlling any spills from vehicles on the property including motor homes he or his staff is repairing. Mr Campos agreed and said that he would immediately report any motor homes discharging on the street. No further action is necessary at this time.					
15-Jun-09	STREET	Residential	514	OCEAN VIEW	LN	Fuel/Oil/Gas Spill
Comments Action Taken:	6/16/09---Responded to report of oil in the street at the 514 Ocean View Ln. Did not find oil stain. Mistakenly visited Ocean Breeze Ln.					
	6/17/09---Visited 514 Ocean View Ln. Found oil stain and spread absorbent over the stain.					
	6/18/09---E-mailed the complainant as requested and called dispatch to establish a work request for street crews to sweep up the absorbent.					
16-Jun-09	STREET	Residential	161	VANCE	ST	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
Comments Action Taken:	OIL SPILL IN THE GUTTER. 6/10/09---Received report resident at 161 Vance St. changing oil in the street and allowing discharges flow in to the gutter. Inspection notes some oil stains on the street that we're not traceable to the address. Left note on door for resident to contact the inspector. 6/15/09---Made contact with resident who stated that they had washed the street and utilized proper BMPs to capture, contain and appropriately dispose of all wash water. A re-inspection confirmed that all had been cleaned.					
17-Jun-09	CATCH BASIN	Residential	2347	FOREST OAKS	DR	Unknown Discharge
Comments Action Taken:	6/17/09---Responded to call of carpet cleaner discharging into the storm drain. inspection noted that the van-mounted carpet cleaning equipment was leaking clean water into the street, and that the carpet cleaning staff was inside the house. Issued verbal notice to stop work until the machine could be fixed. Carpet cleaning staff stated that they did not know the machine was leaking and would immediately stop work and have a replacement van dispatched out. Issued verbal warning to carpet cleaning staff informing them of CVMC14.20., and that replacement equipment would also be held to the municipal codes requirements. Carpet cleaning staff packed up equipment and left to get another van. No further action necessary at this time.					
18-Jun-09	STREET	Residential	514	OCEAN VIEW	LN	Accident/Spill
Comments Action Taken:	6/18/09---Please see request 09_002810					
19-Jun-09	STREET	Residential	115	GLOVER	AV	Unknown Discharge
Comments Action Taken:	6/19/09-Received report of motor home dumping sewage into the street adjacent to the storm drain inlet at 115 N. Glover Ave. Inspection noted approximately 20 gallons of raw sewage dumped into the street, curb and gutter. Some of the sewage flowed near the inlet, but did not enter. Summoned city crews to contain, clean and appropriately dispose of sewage. Quality Lift Trucks staff shared surveillance video showing a motor home potentially discharging sewage into the street at the same location on 6/18/09 at 10pm. Further review of the evidence and investigation is will be conducted to determine the exact cause of the discharge and the party responsible.					
22-Jun-09	STREET	Residential	62	MINOT	AV	Sewage Spill Going Down Storm Drair
Comments Action Taken:	On 06/22/09 received notification of a private sewer lateral leaking into the street. Reporting party anonymous and there is no such address. Could not find any evidence of a sewer discharge. No further action required.					
25-Jun-09	STREET	Residential	1541	MELROSE	AV	Leaking Vehicle
Comments Action Taken:	On 06/25/09 responded to the subject location on leaking vehicles. Spoke with homeowner who stated that he will park any leaking vehicles in driveway and put down drip pans. Owner stated that the vehicles are his family members. No further action required.					
25-Jun-09	STREET	Residential	533	PLAZA DEL CID		Leaking Vehicle
Comments Action Taken:	On 6/26/09 responded to the complaint at the above address. Observed significant oil staining from a leaking vehicle. Vehicle was not located at this time. City staff left a Pollution notice at the location. Received phone call from owner of vehicle who stated that she did not have the means to repair the leak at this time. City staff instructed her park the vehicle in the driveway and place a drip pan under the vehicle. Resident complied. No further action required at this time.					
29-Jun-09	STREET	Residential	1368	OLEANDER	AV	Construction Debris & Waste
Comments Action Taken:	CONTRACTOR IS THROWING ALL KINDS OF MATERIALS BEHIND 1368 OLEANDER AVE INTO CITY PROPERTY. On 06/29/09, responded to complaint and observed slurry spills, concrete and yard waste along open space slope. Contact owner of the property who stated that he will ensure that the contractors promptly conduct the cleanup of all the waste. No further action is required at this time.					

Incident Date	Structure Category	Site Category	Address			Type of Violation
30-Jun-09	STREET	Residential	421	HIDDEN VISTA	DR	Slulry/Concrete Discharge

Comments Action Taken:

CONCRETE RESIDUE IN THE GUTTER.IT IS A CONTINUING THING

6/30/09---Responded to report of concrete slurry in the street from 421 Hidden Vista Dr. Inspection noted dry grout mix in the gutter from this address and to the corner of the block. Spoke to Jorge Elizande, (619) 481-9807 at the home who said that he would sweep and mop up all the dry grout mix. A re-inspection a few hours later noted that all grout mix had been cleaned. No further action necessary at this time.

ACKNOWLEDGEMENTS

This Report has been prepared by or under the supervision of:

Matt Little, Assistant Director of Public Works
Silvester Evetovich, Principal Civil Engineer
Khosro Aminpour, Senior Civil Engineer
Don Bergeson, Environmental Health Specialist
Marisa Fontanoz, Environmental Health Specialist
Mike Hice, Storm Water Compliance Inspector
Ramon Quicho, Engineering Technician
Kimberly Corbilla, Storm Water Intern

Staff from the following City of Chula Vista departments, divisions, or sections has contributed to the implementation of the JURMP in 2009-2010:

Public Works Storm Water Management
Public Works Inspection Services
Public Works Wastewater Management
Public Works Environmental Services
Department of Conservation and Environmental Services
Office of Communications
Chula Vista Nature Center
Geographic Information Systems
Development Services – Land Development
Engineering Design
Planning Landscape Architecture
Environmental Planning
City Attorney's Office

The following organizations have contributed to the implementation of the JURMP in 2009-2010:

- D-MAX Engineering, Inc.
- I Love a Clean San Diego, Inc.
- Otay Valley Regional Park (OVRP)
- The CLEAN Stakeholder Group

The City of Chula Vista wishes to thank:

- Volunteers who dedicated their time to improve water quality in Chula Vista
- Environmentally conscious citizens who reported illegal discharges
- Citizens, business owners, contractors, and developers who cooperated with City staff in implementing Best Management Practices

EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. This is the third annual report submitted under the current permit and covers the implementation period of July 1, 2009 to June 30, 2010. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the stipulations of Section J.3.a of the Municipal Permit.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports, which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has, therefore, been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2009 to June 30, 2010, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (this section will be submitted under a separate cover on or before December 15, 2010, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Prior to the 2007-2008 report, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, the 2010 Dry Weather Field Screening report, and an analysis of its findings will be submitted to the Regional Board before December 15, 2010, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

During this reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2009-2010 rainy season on January 31, 2011.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2009 to June 30, 2010. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

1.0 INTRODUCTION

1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (Regional Board), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority, and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 30 is an account of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2009 to June 30, 2010.

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Implemented inspection programs of high priority construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable Best Management Practices (BMPs) that can be implemented to reduce discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

- Participated in watershed and regional meetings and activities.

1.2 PURPOSE AND OBJECTIVES

Report No. 30 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of the Municipal Permit during the reporting period July 1, 2009 to June 30, 2010. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction Program
- Municipal Program
- Industrial and Commercial Program
- Residential Program

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0 together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2010.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management fiscal resources as required by Section G of the Municipal Permit. The Copermittees developed a Standardized Fiscal Analysis Method and Format, dated January 29, 2009, which has been used in this report as a basis for the City's fiscal analysis in this section.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this section, the City has determined that groundwater intrusion to surface receiving waters may have notable impacts on surface water quality and, therefore, during the current reporting period initiated a study to identify locations where groundwater is discharged to surface waters and, to characterize potential pollutants being discharged. This is an on-going study, which is expected to provide valuable insight in identifying sources of surface water contamination.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of this report is dedicated to descriptions of modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the City's JURMP effectiveness.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

2.0 DEVELOPMENT PLANNING COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.

Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.

Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.

Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.

Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory

.

Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.

Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.

Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.

Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.

Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.

Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.

Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.

Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.

Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.

2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes actions taken during the defined reporting period by the City to minimize short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development (including construction or installation of a building or structure), creation of impervious surfaces, and capital improvement projects. Through the implementation of the Development Planning Component, the City minimizes and manages increases in runoff from development projects to the MEP to protect receiving waters.

2.2 LAND-USE PLANNING

2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to visions, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.
- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)
- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.
- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.
- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.
- Maximize the protection of potable water supply resources from pollutants.
- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including

urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the Chula Vista Development Storm Water Manual (Manual), updated in 2010, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Manual. The Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Manual has been dedicated to the City's SUSMP. Another section of the Manual outlines BMP requirements on construction sites during both rainy and dry seasons.

During the current reporting period, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

2.2.4 PROGRAM IMPLEMENTATION

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP as described in Section 2.4.4 of this report.

During Fiscal Year 2009-2010, in compliance with NPDES Municipal Permit requirements, the following document was updated:

- Chula Vista Development Storm Water Manual (including the City's SUSMP)

During the process of updating the above-referenced document, each of the City's implementation processes were objectively reviewed for any potential deficiencies and, based on extensive experience gained during the previous Municipal Permit implementation, significant

improvements were made throughout all aspects of the program. Those improvements are reflected in the above referenced updated document dated March 2010.

2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Division of the Development Services Department reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits and Land Development Divisions of the Development Services Department, and the Storm Water Management Section of the Public Works Department review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Environmental Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Development Services Department
- Public Works Department, Engineering
- Public Works Department, Operations - Storm Water Management Section

The Development Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Division of the Development Services Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Land Development Division for review and final approval.

Land Development Division staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; Low Impact Development Site Design, Source Control, and Structural Treatment Control BMPs; calculations for sizing of treatment control BMPs; and a perpetual maintenance plan and funding mechanism. The applicants are required to sign an agreement with the City for the maintenance of post-construction BMPs. When necessary, the Land Development Division coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

The Land Development Division and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for Low Impact Development Site Design, Source Control, and Treatment Control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Land Development Division and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the planning and design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Land Development Division and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Land Development Division and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Public Works Department, Engineering, Design Section. Public projects undergo the same review process as private developments. Engineering staff has received training on SUSMP requirements, identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments,

divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are therefore readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals. City staff reviewed fifteen projects that were required to implement SUSMP requirements as per the Manual.

2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP and the Manual, which culminated in March 2008 and March 2010 respectively, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP.

2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 12 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's minimum BMP requirements for all development projects are outlined below and are included in the Manual. All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.

- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.

- Provide buffer zones or other buffers for natural water bodies.

- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.

- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

During the project approval and verification process, all project submittals were reviewed for compliance with the minimum BMP requirements described above.

2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP document was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure that to the maximum extent practicable, development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual," available on the web at:

http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

In March, 2010, City Council approved the updates to the City's SUSMP and Manual. The Updated SUSMP and Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the Municipal Permit. Concurrently, the City's Storm Water Management and Discharge Control and Grading Ordinances were updated to incorporate the Manual (which includes the City's SUSMP) by reference.

2.4.4.1 NOTABLE ACTIVITIES

In 2009-2010, notable improvements in processes and protocols supporting SUSMP implementation have been made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates within the defined reporting period include:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Interim Hydromodification Criteria.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document and Maintenance Agreement links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.
- Site inspections of all development projects to ensure proper installation of construction and post-construction BMPs.

2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project requirements. Private development permit applications are tracked in Permits Plus, which is a project tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and digitally saved. The City maintained the database necessary to link the above referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Public Works Department, Engineering. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column

showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects subject to SUSMP requirements is included in Attachment A. This list includes the names of all Priority Development or Redevelopment projects from the inception of the SUSMP program on December 9, 2002 to the end of the current reporting period. The list is updated annually to include Priority Development Projects for which development applications have been received and SUSMP eligibility identified during that reporting period. The listed projects may be currently in different phases of review, construction, or occupancy. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Pending, 2) Inactive, 3) Under Construction, or 4) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

The Municipal Permit establishes requirements for post-construction BMPs on Priority Development and Redevelopment Projects. In order to develop regional standards and criteria for compliance with Municipal Permit requirements, the Copermittees have developed Model and local SUSMPs. All project applicants are required to complete forms that are included in the Manual to determine post-construction BMP requirements for their projects. City staff verifies proper completion of such forms and informs applicants of their required study reports and project submittals. Project submittals are then reviewed based upon this initial determination.

As required by the Municipal Permit, the City updated its local SUSMP in January 2008 to include Low Impact Development and Interim Hydromodification Management requirements, as well as other construction and post-construction criteria and standards. Subsequently, the Copermittees updated their Model SUSMP and submitted it for the Regional Boards approval in July 2008. The Regional Board approved the Model SUSMP on March 25, 2009. In March 2010, the City again updated its local SUSMP to incorporate the provisions of the Model SUSMP. In July 2009 and December 2009, the Copermittees submitted their draft and final Hydromodification Management Plans to the Regional Board. The Regional Board considered and approved the final Hydromodification Management Plan for approval on July 14, 2010. The Copermittees have 180 days after approval of the Regional Board to incorporate the HMP into their local SUSMP and implement the HMP for all applicable Priority Development Projects. The City's local SUSMP is the basis for approval of Priority Development Projects.

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Priority Development Projects without approved WQTRs do not move

further along in the development review process, providing Land Development and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Project grading or construction plans are required to show all approved structural BMPs. Non-structural BMPs are described in the project's WQTR. Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes verification inspection and approval of installed or constructed structural treatment control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections and confirmation of SUSMP BMP applications of such Priority Development projects to ensure proper installation of post-construction BMPs before final Certificates of Occupancy are issued and bonds are released.

In order to track confirmation of post-construction BMPs, and as an on-going activity, the City's GIS system was continuously updated throughout FY 2009-2010 with post-construction BMP information; further supporting project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the types of BMPs, and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. Most significantly, in FY 2009-2010, WQTR documents were made available through the GIS Grading Plan layer as they are linked to individual projects (Figure 2-1 – CVMapper GIS Layer). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly or privately maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 – GIS Layer: Grading Plans & WQTR Links). In addition, all privately or publicly maintained treatment control BMPs are being added to the BMP layer to facilitate their tracking and mapping. Also, files containing hard copies of grading plans, WQTRs, maintenance agreements, and other pertinent information are being created and maintained to support and facilitate construction verification and maintenance inspections of post-construction BMPs. (Figure 2-3 – GIS Layer: Post Construction BMPs).

Figure 2-1 CVMapper GIS Layer

Figure 2-2 GIS Layer: Grading Plans and WQTR

Figure 2-3: GIS Layer: Post Construction BMPs

All pending, inactive, under construction, or installed Post-Construction BMPs and Priority Projects are inventoried and tracked by Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/Capital Improvement Plan, Residential, Commercial, etc.)
- Project status (Pending, inactive, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings
- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking, for examples of SUSMP tracking forms.

2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

The City works with developers, planners, and consulting engineers to establish standards of Source Control, LID Site Design, and Treatment Control BMPs that meet the requirements of the Manual and the Municipal Permit. An example of such cooperation was with the Chula Vista Elementary School District Bus Corp Yard. The District Bus Corp Yard project is located on 10 acres of land on Maxwell Road. The project site is bounded on the south by an existing industrial facility; on the east by steep slopes and the Otay Industrial Park; on the north by a temporary auto storage facility; and, on the west by Maxwell Road. The project is planned for a bus parking facility and temporary office buildings in Phase 1 and a bus maintenance building in Phase 2.

The Chula Vista Elementary School District Bus Corp Yard Phase 1 is completed and operational. The project incorporates Site Design, Source Control, and Treatment Control BMPs, with particular emphasis on Low Impact Development principles for post-construction storm water management. Low Impact Development features include vegetated swales and an underground detention system. Storm water runoff from approximately 6.5 acres of the project is captured and conveyed to the underground detention system through a system of vegetated swales. Then storm water runoff from the facility travels in a southerly direction and eventually discharges into the Otay River.

The site of the Chula Vista Elementary School District Bus Corp Yard project is less than 50 acres in area and, therefore, was exempt from the Interim Hydromodification Criteria requirements.

2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all Priority Development Projects that received grading, construction, or building permits from the City proposed medium or high-efficiency treatment control BMPs. No SUSMP projects were permitted to have low-efficiency treatment control BMPs.

2.4.4.7 TREATMENT CONTROL BMP INVENTORY

In Chula Vista there are 247 priority development projects inventoried from the inception of the SUSMP requirements to date. Projects that are still in the review stage are not included in the inspections list and are not prioritized until the final WQTR is approved. Attachment A of this report includes an inventory of all Priority Development projects in the City that were subjected to SUSMP requirements from the inception of this program on December 9, 2002. The information provided in Attachment A includes the name of the project, category (residential, commercial, etc.), inspection priority, status (under construction, pending, inactive, and completed), and type of Treatment Control BMPs. The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority development project as well as post-construction BMPs inspection records.

2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

Storm Water Management Section staff is responsible for annual inspections of private and public constructed permanent BMPs as required by the Municipal Permit. Additionally, responsible parties for the maintenance of permanent BMPs are required to conduct routine inspections of their treatment facilities. For public permanent BMPs, the City's Public Works Storm Drain Maintenance staff is responsible for conducting routine inspections and maintenance. This duplicate inspections program ensures that all permanent BMPs are maintained to high operational standards.

During the current reporting period, Storm Water Management staff conducted inspections of all constructed permanent BMPs to verify their proper installation and maintenance, which exceeds Permit requirements. A summary of inspections is listed in Table 2-1 below, which includes both private and public permanent BMPs inspections. Where deficiencies were identified, notices were sent out to responsible parties, followed by further contacts to ensure that corrective actions were taken within the specified time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

Table 2-1 Treatment Control BMP Inspection Summary FY 2009-2010

PROJECT PRIORITY	TOTAL NUMBER OF PROJECTS	NUMBER OF PROJECTS INSPECTED
High	44	44
Medium	48	48
Low	82	82
Total	174	174

Note: In addition to the total number listed above, 73 projects are under review, inactive, or still under construction and the permanent BMPs have yet to be installed. Also, some of the projects are partially occupied which have operational treatment BMPs.

As can be seen from Table 2-1, a total of 174 Priority Development Projects were inspected during the current reporting period, which meets and exceeds Municipal Permit requirements. Attachment F to this report includes more detailed information about each project, such as, inspection dates, project names, types of BMPs installed, categories (commercial, residential, etc.), priorities, development names, and neighborhood names. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

Public Works Department Storm Drain Maintenance Section conducts routine inspections and maintenance of publicly owned permanent BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders for conducting inspection and scheduling maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-7 for a sample of Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 137 notification and inspection letters were sent out to parties responsible for the maintenance of completed private Priority Development Projects. (see City's JURMP document Appendix D).

It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs. By conducting random inspections of public Treatment Control BMPs, Storm Water Management Section ensures that the level of maintenance on such facilities is adequate.

During this reporting period, responsible parties were aware of their BMP cleaning and maintenance obligations. City staff encountered some resistance, which was mainly believed to be attributable to the current downturn in economy as well as factors such as the transfer of property ownership, changes in property management companies, and a change in the board membership of Homeowners' Associations. For this reason, the City worked closely with the responsible parties to ensure that the BMPs were inspected and maintained. The City continues

to re-evaluate its annual maintenance verification procedures and may modify the program if necessary.

Prior to the beginning of the rainy season, the City requires annual verification of proper inspection and maintenance of all treatment control BMPs by the responsible parties. Each year, the City issues to the responsible party, either electronically, by fax, or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) if necessary, a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans.

This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form and certify that the treatment control BMPs have been properly maintained in accordance with the site's maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form. If signed and certified verification forms are not received by the due date, City staff contacts the responsible parties and follows up until Treatment Control BMPs are maintained and verification forms properly completed and returned to the City. Enforcement action may be initiated if a responsible party does not comply with the verification requirement after follow-up actions and proper service of a notice.

2.4.4.10 BMP CONSTRUCTION VERIFICATION

The City's Public Works Inspectors and Storm Water Management staff is responsible for ensuring that permanent BMPs, which are components of the project's drainage systems and grading works, are constructed in accordance with approved specifications and grading plans. Public Works Inspectors and Storm Water Management staff conducts frequent inspections of projects during their grading and construction activities and verify that permanent BMPs are constructed as per approved plans.

In compliance with the Municipal Permit, the City has developed databases for tracking Priority Development Projects that are under construction. Additionally, hard copy files, including information about each project's WQTRs and grading or construction site plans that show locations of permanent BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section staff immediately after their inspections of grading activities are completed and their presence on the project is no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting permanent BMPs while being constructed. They ensure that LID Site Design features are constructed as shown on approved grading, construction, or landscape plans and per approved specifications.

As a result of the comprehensive construction verification program for permanent BMPs as described above, it was determined that while major treatment facilities were constructed before occupancy of the project, some minor deficiencies still existed even after partial occupancy. Those projects were identified in each case and responsible persons were required to install the deficient BMPs. As a result of this finding, the City made adjustments and improvements in its construction verification process, which will ensure that all treatment control and other post-construction BMPs are fully operational and without any deficiencies even before the first occupancy of the project.

2.4.4.11 SUSMP WAIVERS

Section D.1.d.(11) of the Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Development Project to receive a waiver from the requirement of meeting numeric sizing criteria for Treatment Control BMPs, if infeasibility can be established. During the reporting period, the City did not grant waivers to any Priority Development Projects.

2.4.4.12 SUSMP WAIVER MITIGATION

During the reporting period, all Priority Development Projects were required to comply with the provisions of the City's local SUSMP. Therefore, the City did not grant waivers to any Priority Development Project during this period.

2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN COLLABORATION

Soon after Regional Board's adoption of the Municipal Permit on January 24, 2007, the Copermittees formed a Land Development Workgroup to develop Copermittees' Hydromodification Management Plan (HMP) and Model SUSMP, among other regional development related tasks. The Land Development Workgroup planned regular meetings in which various topics, mainly the development of the HMP and Model SUSMP, were discussed. The Copermittees decided to hire a consultant with expertise in those fields to work on the studies needed for this purpose. The consulting team of Brown and Caldwell was selected as the main consultant, with several sub-consultants providing expert services.

A Technical Advisory Committee (TAC), consisting of high-ranking and renowned experts in the fields of hydrology, hydromodification, and SUSMP issues were formed to oversee the Consultant's work, and to provide expert advice. During the reporting period, the TAC continued to meet on a regular basis, and while Copermittees were not on the TAC, they were encouraged to participate in their meetings. Brown and Caldwell developed submittals for the Interim Hydromodification Criteria, Final Hydromodification Management Plan, and Model SUSMP, which were subsequently approved by the Regional Board. The Interim Hydromodification Criteria and the Model SUSMP have been incorporated in the updates of the City's SUSMP and the Final Hydromodification Plan will be incorporated before January 2011.

During the reporting period, notable milestones included the submittal of the final HMP to the Regional Board in December 2009 and the second update of the City of Chula Vista's local SUSMP in March 2010.

City of Chula Vista representatives are active participants in all Land Development Workgroup and TAC meetings and activities. They are closely involved in the issues that are discussed, review work products, and provide comments on all related draft documents.

City staff has attended all regional workshops and trainings related to HMP and SUSMP issues, including a 3-day training seminar on Hydrologic Simulation Program Fortran (HSPF).

2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

Section D.1.g.(5) of the Municipal Permit requires the development of an HMP document at the regional level and incorporation of such HMP into individual local SUSMPs. The HMP is to include limitations on increases of runoff discharge rates and durations from all Priority Development Projects in order to prevent increased downstream channel erosion, sediment pollutant generation, or other impacts to beneficial uses and stream habitat.

Development of a draft HMP was a two-year effort by the Copermittees and their consultants. The Copermittees submitted the first draft HMP to the Regional Board in January 2009. In the meantime, the Municipal Permit required the implementation of an Interim Hydromodification Criteria (IHC) for development projects that were 50 acres or more. The IHC requirement was incorporated into updated local SUSMPs, which came into effect in January 2008.

Adoption of IHC requirements in January 2008 coincided with the collapse in the housing market, and almost all major development projects in Chula Vista came to an abrupt halt. Occasional major projects submitted for review by City staff have had extended project submittal, review, and permitting schedules.

During the reporting period, 3 major projects were under review as follows:

1. Eastern Urban Center
2. Otay Ranch Village 8
3. Otay Ranch Village 9

These projects qualified for IHC requirements but have not yet received their grading or construction permits. Such projects are expected to meet the requirements of the final HMP, which will come into effect on January 2011.

2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

Development projects for which grading or construction permits were issued during the current reporting period were less than 50 acres in area and did not meet the criteria for IHC requirements. However, Priority Development Projects were all required to address hydrologic conditions of concern by comparing pre- and post-development peak discharge rates and durations, and demonstrate that the increased peak discharge rates and durations would not cause

downstream erosion or habitat impact. Such discussions were required to be included in the submitted WQTRs.

2.4.4.16 PROJECTS DISTURBING 50 ACRES OR MORE

During the reporting period, three projects were under review that proposed to disturb 50 acres or more and met the conditions for IHC requirements. These projects are listed in Section 2.4.4.14.

2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP verification inspections, the City determined that nine out of 174 inspected projects were partially or totally deficient in the inspection and maintenance of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, eight projects were brought into compliance. Work is being continued on the remaining one project. Deficiencies were observed in the cleaning and maintenance of some treatment control BMPs, which were satisfactorily addressed by the responsible persons after written notices. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to bring their project to compliance in a timely manner. Such enforcement action may include verbal and written warnings, Notices of Violation, Administrative Citations, and/or Civil or Criminal Penalties. At this time, the City initiated enforcement actions, which included a Notice of Violation for one development project with deficient post-construction BMPs.

3.0 CONSTRUCTION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(b).i – Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(b).ii – Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.

Permit Section J.3.a.(3)(b).iii – A description of modifications made to the construction and grading ordinances and approval processes.

Permit Section J.3.a.(3)(b).iv – Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.

Permit Section J.3.a.(3)(b).v – Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.

Permit Section J.3.a.(3)(b).vi – A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.

Permit Section J.3.a.(3)(b).vii – For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.

Permit Section J.3.a.(3)(b).viii – A description of the general results of the inspections.

Permit Section J.3.a.(3)(b).ix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(b).x – The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(b).xi – A description of the notable activities conducted to manage urban runoff from construction sites.

3.1 INTRODUCTION

Pursuant to the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by Regional Board staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the Maximum Extent Practicable (MEP).

3.2 SOURCE CHARACTERIZATION

The City has compiled and monthly updates a watershed-based inventory of all construction sites within its jurisdiction as required by Municipal Permit Section D.2.b. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including project name, location, project developer and project size. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report and includes all completed projects.

3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, Storm Water Management staff maintained and monthly updated a construction site inventory. As a result of coordination between the Public Works Construction Inspection staff, Engineering Design staff, Development Services staff, and Storm Water Management staff, mechanisms have been established in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Development Services Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of Threat to Water Quality (TTWQ) prioritization, and inspection frequencies of active and inactive sites as needed.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Storm water compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and

Discharge Control and Grading Ordinances incorporate, by reference, the Development Storm Water Manual, hence providing legal authority for the enforcement of the Manual's requirements. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and do not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of Best Management Practices (BMPs) during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Development Storm Water Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual and the CASQA Storm Water BMP Handbook are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements
- Limitation of Grading
- Advanced Treatment
- Example Construction Best Management Practices

3.5 PROGRAM IMPLEMENTATION

The Development Storm Water Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit, it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the project engineer electronically submits a Notice of Intent and a SWPPP through the State Water Resources Control Board Storm Water Multiple Application and Report Tracking System (SMARTS). The SWPPP is maintained with the proper personnel for review by request of the Regional Board.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet and dry seasons, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive or in distress. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of seven or more consecutive calendar days. The City inspects inactive construction sites and issues formal letters to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such letter is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites. If a site is partially inactive, above requirements apply only to inactive areas of the site.

If a construction project is wholly or partially inactive or expected to remain inactive for some time, the City requires the developer to submit a Construction Site Stabilization Plan.

The Stabilization Plan is required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

3.5.1 MAXIMUM DISTURBED AREAS

The Development Storm Water Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. Maximum disturbed area requirements are discussed in detailed in the Development Storm Water Manual. During the reporting period, most major development activities remained inactive as a result of the downturn in the housing industry, and developers in Chula Vista did not undertake major new grading projects. The focus of City inspectors were to ensure that existing graded sites that intended to close down the site or slow down construction activities stabilized inactive areas and implemented adequate BMPs to minimize the discharge of sediment and other pollutants from their sites.

3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. These conditions are explained in Section 7.V of the Development Storm Water Manual. If it is determined that a site poses an Exceptional TTWQ based on criteria outlined in the Manual, the site will be required to implement advanced treatment controls to minimize the discharges from the construction site.

3.5.3 CONSTRUCTION SITE INSPECTIONS

The City's construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one full-time Storm Water Compliance Inspector, two full-time Environmental Health Specialists, one Engineering Technician, and eight Public Works Inspectors who manage this effort on private and public construction projects.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. The Municipal Permit does not require TTWQ Prioritization for construction sites. However, the City has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites, therefore, includes a column indicating TTWQ Prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of the Municipal Permit, as applicable. Please see Table 3-1 for the number of construction site inspections under each category. A complete list of inspected construction sites is included in Attachment G. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

Table 3-1 Construction Site Inspection Summary FY 2009-2010

INSPECTION SUMMARY	NO.
Formal Inspection Reports	303
Inspections During Wet Season	286
Inspections During Dry Season	17
Inspections of High Priority Sites	39
Inspections of Medium Priority Sites	182
Inspections of Low Priority Sites	82

City inspectors evaluate BMP implementation on construction sites in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of

a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP, monitoring results, training records, etc. for construction sites subject to the General Construction Permit.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP or CSWMP.
- Failure to implement good housekeeping practices at the site.
- Failure to comply with previous orders.

City inspectors who conduct site inspections of both public and private development projects have full inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements of the Municipal Permit, the Development Storm Water Manual, the erosion control plans, and any other development permit conditions imposed by the City prior to the issuance of a grading or construction permit.

Construction site inspections include the following:

- Verification of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Verification of proper maintenance of the BMPs.
- Evaluation of the effectiveness of the BMPs.
- Verification that the party responsible for the implementation of the site SWPPP has received adequate training.
- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its storm water ordinances and development permit conditions at all private and public construction sites, as necessary. The City's ordinances and development permit conditions provide adequate legal authority for the City to enforce its ordinances on construction sites through Stop Work Notices, penalties, fines, and other enforcement procedures as necessary. City's inspectors work with developers and contractors to identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City's inspectors initiate enforcement action which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 summarizes enforcement actions taken within the defined reporting period of this report.

Table 3-2 Construction Enforcement Summary FY 2009-2010

ENFORCEMENT ACTION	NO.
Written Notices of Violation (Includes Cease and Desist and/or Clean and Abate Orders)	5
Civil Penalty Order	2

As a result of the above enforcement actions, Chula Vista developers were fined a total of $9,000.00 in the current reporting period. Follow-up inspections were conducted as necessary until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2009-2010. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

4.0 MUNICIPAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(c).i – Any updates to the municipal inventory and prioritization.

Permit Section J.3.a.(3)(c).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.

Permit Section J.3.a.(3)(c).iii – A description of inspections and maintenance conducted for municipal treatment controls.

Permit Section J.3.a.(3)(c).iv – Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.

Permit Section J.3.a.(3)(c).v – Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.

Permit Section J.3.a.(3)(c).vii – Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.

Permit Section J.3.a.(3)(c).viii – Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.

Permit Section J.3.a.(3)(c).x – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xi – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xii – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xiii – Identification of the total distance of curb-miles swept.

Permit Section J.3.a.(3)(c).xiv – Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.

Permit Section J.3.a.(3)(c).xv – Amount of material (tons) collected from street and parking lot sweeping.

Permit Section J.3.a.(3)(c).xvi – A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.

Permit Section J.3.a.(3)(c).xvii – Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.

Permit Section J.3.a.(3)(c).xviii – A description of the general results of the inspections.

Permit Section J.3.a.(3)(c).xix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(c).xx – The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(c).xxi – A description of notable activities conducted to manage urban runoff from municipal areas and activities.

4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Open Space
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Nature Center
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage,

loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are classified as high, medium, or low TTWQ based on activities, functions, and various site-specific factors. For more information on the facilities that have additional operations and activities, please see the City's JURMP. The inventory was updated in March 2008 during the JURMP update process. During the reporting period, no additional municipal facilities were constructed and, therefore, the same inventory has been used in this report. Currently, there are some public parks in the design or construction phase that will be added to the municipal inventory after they are completed.

4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

4.2.4 PROGRAM IMPLEMENTATION

4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities receive training on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City storm water staff inspected all 61 high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected on an as needed basis. No medium or low priority facilities were determined to need inspection

this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in Attachment H. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented. Enforcement on municipal facilities is in the form of disciplinary process against the responsible staff member when compliance is not met in a timely manner. If a violation of the City's Storm Water Ordinance or the Municipal Permit is observed, which is caused by negligence of City personnel, inspectors work with supervisors to ensure that corrective actions are implemented; provide training to the personnel; and immediately inform the appropriate supervisor. The supervisor will then take action against the violating staff member as necessary, including warnings and other disciplinary measures. City storm water staff is in regular contact with Public Works Maintenance staff and provides training on pollution prevention and BMP implementation, therefore, most deficiencies are taken care of upon first notice.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Public Works Maintenance staff inspects all municipal treatment control BMPs to ensure their proper operation. Additionally, Storm Water Management staff conducts random inspections of such facilities to provide a second layer of confidence and ensure that maintenance standards are met. The City maintains treatment control BMPs at several of its facilities. City crews clean the structural treatment control BMPs on an as needed basis, and their condition is evaluated for effectiveness. Any repairs are noted and carried out on a timely manner. Table 4-1 shows the municipal facilities within the City that have treatment control BMPs and their inspection dates.

Table 4-1 Municipal Facilities with Treatment Control BMPs

FACILITY NAME	NUMBER & TYPE OF TREATMENT CONTROL BMP	DATE INSPECTED
Montevalle Park	10 Filter Inserts	06/29/10
Salt Creek Park	1 CDS Unit	06/11/10
Windingwalk Neighborhood Park	1 Vegetated Swale	05/17/10
Harvest Park	1 Filter Insert	05/17/10
Sunset View Park	3 Filter Inserts	05/07/10
Mountain Hawk Park	20 Filter Inserts	06/01/10
Horizon Neighborhood Park	1 Filter Insert	05/07/10
Veterans Park	1 Vegetated Swale, 5 Filter Inserts	05/17/10
Chula Vista Civic Center	5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts	06/21/10
Fire Station 6	3 Filter Inserts	05/11/10
Fire Station 7	1 CDS Unit, non-storm water diverter	06/21/10
Fire Station 8	1 CDS Unit, non-storm water diverter	06/04/10
Harborside Park*	3 Filter Inserts	06/01/10
Santa Cora Park*	23 Filter Inserts	07/12/09
John Lippitt Public Works Center*	6 Filter Inserts	09/01/09

* – Not a SUSMP Project, but the City still inspects the inserts and maintains them

4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

Fertilizer, Pesticides, and Herbicides

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do not spray on windy days.
- All employees who spray pesticides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the state and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent material safety data sheet (MSDS) files.
- MSDS sheets for chemical being used must be kept with the applicator while applying pesticides.

Proper Planting Techniques

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation and convert existing turf areas to drought tolerant, sustainable landscaping when possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

Minimize Runoff

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.

- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

4.3.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) designates roads, streets, highways, and parking facilities as high priority municipal areas for inspection purposes. Therefore, the Municipal Inventory (Attachment C) categorizes these facilities as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by roads, streets, highways, and parking facilities. The City maintains 414 miles of roads, streets, and highways.

The City has one stand-alone covered parking facility in downtown Chula Vista that generates a moderate volume of trash and debris that is swept twice per month and is inspected annually as a part of the City's Municipal Inspection Program. The other 22 parking facilities are associated with other municipal facilities (such as parks) and generate low volumes of trash and/or debris. These are swept on a monthly basis and are inspected annually.

For the purpose of street sweeping, roads, streets, and highways are further classified into high, medium, and low priority based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. Table 4-2 below provides more information about these classifications, the number of curb miles in each, the type of areas these classes cover, and their respective sweeping frequencies. The City is in the process of collecting data to refine this classification by working with its contractor to keep records of the quantities of trash and debris collected each day from various sections of the City.

Table 4-2 Street Sweeping Information Based on Class

CLASS	NUMBER OF CURB MILES	TYPE	SWEEPING FREQUENCY
High	131.61	Industrial and Commercial – 10.5 miles	Twice per week
		Commercial and Business – 121.11 miles	Once per week
Medium	75.47	Center Islands and Medians	Twice per month
Low	702.26	Residential – 656.36 miles	Once per month
		Center Lines – 45.9 miles	Twice per month

4.3.3 BMP REQUIREMENTS

Street sweeping is one of the ongoing city functions that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

The City has identified some streets as high Threat to Water Quality (HTTWQ) areas. The main pollutant in these areas is trash. Trash in these areas is mainly attributable to customers of recycling businesses located in the industrial areas of Energy Way and Nirvana Avenue. Also, trash trucks shedding some of their load while traveling to and from the Otay Landfill on Maxwell Road and Main Street east of I-805 are sources of trash on these two streets. As a proactive measure to minimize trash entering the storm drain system, the City has retrofitted existing curb inlets in these areas with filter inserts. The City's storm drain crews conduct regular inspections and cleaning of these filter inserts and replace parts as necessary.

4.3.4 PROGRAM IMPLEMENTATION

4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept approximately 18,000 curb miles and removed approximately 940 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular street sweeping is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, bus stops, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

Figure 4-1 Street Sweeping Schedule

4.4 MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4)

4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through four primary activities: 1) Inspections, 2) catch basin maintenance, 3) channel maintenance, and 4) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drain facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultant for dry weather field screening annually inspects over 57 outfall locations throughout the City and conducts upstream investigations based on field screening results. They report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to inspect the drainage area, abate the pollution, and conduct cleanup.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary. This multi-layer inspection program ensures that almost all MS4 facilities are inspected and maintained regularly.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all environmental regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris from areas that trash accumulation may cause flooding and damage to life or property.

Currently, three vacuum trucks and three crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drain systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drain systems in emergencies and other similar situations.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system universally used by the Public Works Department for collecting and tracking data about all its activities. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

During this reporting period, the City installed 150 thermoplastic storm drain stencils in addition to the 500 that had already been installed in previous fiscal years. These stencils adhere to the

concrete curb/gutter by heat treatment and are more durable than paint stencils or plastic markers using adhesive. These thermoplastic storm drain markers permanently affix to storm drain inlets with the prohibitive "No Dumping – I Live Downstream" message in two languages. Notably, nearly all storm drain structures in the City are identified with stenciling, plastic markers, or permanent concrete stamping.

Figure 4-2 Thermoplastic Storm Drain Stencil

4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4, which includes open channels, catch basins and inlets, and outfalls. As required by the Municipal Permit Section D.3.a.(7), the City's MS4 is included in the municipal facility inventory (Attachment C) as a high priority facility for inspection purposes. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

4.4.4 PROGRAM IMPLEMENTATION

4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2009 to June 30, 2010 is summarized below. A total of 273 inlets were identified as accumulating a high volume of trash. All high trash volume facilities were inspected at least once during the dry season (May 1 – September 30). Table 4-3 details the amounts of waste collected from the City's storm drain system based on various facility and waste categories.

Catch Basins and Inlets

- There are 8,801 catch basins and inlets in the City
  - 8,480 catch basins and inlets were inspected
    - Out of these catch basins and inlets inspected, 4,444 catch basins and inlets were cleaned
- Data collection for catch basins with accumulated waste exceeding the cleaning criteria (33% or more full) started January 1, 2008. A total of 351 exceeded the criteria from July 1, 2009 – June 30, 2010.

MS4

- There are 184 miles of MS4 in the City
- The storm drain maintenance crews televised 4.31 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there was no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 0.16 miles of MS4 was cleaned. It should be noted that the City's storm drain pipes are designed to be self-cleaning under normal operation.

Open Channels

- There are 31 miles of open channels in the City
- A total of 286,714 square feet of open channels were inspected and cleaned

Table 4-3 Amount of Waste Cleaned from the Storm Drain System FY 2009-2010

CATEGORY	AMOUNT (tons)
Catch Basins	**28.18**
Inlets	**48.94**
MS4	
Trash	6.71
Landscaping Debris	8.30
Sediment	20.10
Sub-Total	**35.11**
Open Channels	**280.47**
TOTAL	**427.81**

The City will continue to inspect its MS4 as required by the Municipal Permit and record collected inspection data. During this reporting year, the City reviewed its inspection record and determined that there were no facilities that required inspections less than annually.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in the protection of the MS4 system. If not properly maintained, the sewer system can potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, parasites, and chemicals.

The City currently implements a Sewer System Management Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, in April 2009 the City developed a Sewer System Management Plan. The City is currently working on developing a Fats, Oils, and Grease (FOG) Monitoring Ordinance. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

4.5.2 SOURCE CHARACTERIZATION

There are 487 miles of sewer pipes in the City. The Municipal Permit Section D.3.a.(7) requires sanitary sewer collection systems to be identified as high priority facilities for the purpose of inspections. The sanitary sewer system is included in the municipal inventory as such (please see Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system. The City of Chula Vista does not operate a Publicly Owned Treatment Works. Sewage generated in Chula Vista is collected and conveyed to the City of San Diego treatment works at Point Loma.

4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receive training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance and cleanup crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

4.5.4 PROGRAM IMPLEMENTATION

4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 586 miles of sewer main (includes critical maintenance areas, which were cleaned multiple times) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is also conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, minimizing potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with

diameters larger than 36 inches. PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as power washing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. The Municipal Permit Section D.3.a.(7) requires that power washing be identified as a high priority municipal activity for inspection purposes. Therefore, Attachment C has categorized power washing as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including power washing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City power washing crews implement BMPs during their activities and receive regular training on storm water pollution prevention.

4.6.4 PROGRAM IMPLEMENTATION – POWER WASHING FOR GRAFFITI REMOVAL

4.6.4.1 MAINTENANCE AND INSPECTION

The City's Graffiti Abatement Program functions under the mission of: *"To deliver in a timely manner, a comprehensive, cost-effective, environmentally sound, and technically reliable graffiti removal, education, and prevention program for the residents of Chula Vista."* The City provides cost-free graffiti removal for the residents of Chula Vista.

The Graffiti Abatement Program utilizes various techniques for effective removal of graffiti Citywide, including power washing and sand blasting. In its commitment to this program and to utilize environmentally sound and cost-effective graffiti removal processes, City Council approved the spending

of $63,000 for the purchase of highly specialized equipment to capture and treat residual wash water generated from graffiti abatement activities in early 2006. At the end of 2006, the new equipment was made available to the graffiti crews and has been in use ever since.

As a part of the inspection process, City's Storm Water Management staff annually conducts a ride-along with the graffiti/power washing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures. During this reporting year, City Storm Water Management staff observed the removal of graffiti from a sidewalk area, close to the curb/gutter. The graffiti crew implemented all BMPs and prevented any wash water from entering the storm drain system. In addition, the crew made used the least amount of water necessary to complete the job. All BMPs were in place and working properly.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

The City hosts a variety of special local events, which include festivals, fairs, and other events for special causes and occasions. Usually, these events involve the participation of outside organizations, community groups, and the general public. The gathering of event participants and crowds is generally a source of trash and debris if BMPs are not implemented.

4.7.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) requires that special events be designated as high priority for inspection purposes. Therefore, special events are included in the City's municipal inventory as high priority activities (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping immediately following major events taking place on a street, and having personnel dedicated to litter abatement throughout City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works in conjunction with other City departments and event organizers to ensure that adequate BMPs are implemented during special events.

4.7.4 PROGRAM IMPLEMENTATION

Storm Water Management and Environmental Services staff has active presence at the majority of City events. They set up booths, provide public education on environmental issues, and distribute informational materials. As necessary, they conduct surveys at the same time to evaluate general public's awareness and practice of BMPs. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed

protection. City Environmental Services staff notifies hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(d).i – Any updates to the industrial and commercial inventory.

Permit Section J.3.a.(3)(d).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.

Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.

Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.

Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.

Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.

Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.

Permit Section J.3.a.(3)(d).ix – A description of efforts implemented to address mobile businesses.

Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.

Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.

5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City of Chula Vista to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity is mutually exclusive, and that each is essential to the overall success of the program. The City has compiled an inventory of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

5.2.1 BACKGROUND

The City's industrial and commercial inventories include 1,426 facilities. Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, annually, the City conducts updates of its industrial and commercial facilities inventories by searching through its business license database and conducting visual observations of new or closed businesses during annual inspections. Additionally, every five years, the City conducts a comprehensive field validation of its industrial and commercial inventories Citywide. The industrial and commercial inventories are also updated on a continuous basis by adding businesses that cause incidents of pollutant discharge or are found to require regular inspections due to the type and amount of pollutants that they generate.

Watershed-based inventories of industrial and commercial sites within the City have been compiled. Information was obtained from the City's business license database (Permits Plus), the State Water Resources Control Board database of industrial sites that have filed NOIs, inspection records, and previous experience.

Inventories of industrial and commercial facilities within the City were compiled during the development of the City's JURMP in 2008, which were later updated for the current reporting period and are included in Attachments D.1 and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Municipal Permit category
- Description of services
- Priority

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- Standard Industrial Classification (SIC) code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.

The inclusion of the APNs allows the City to track its inventories through the City's GIS program. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing discharges of pollutants into MS4s from existing industrial and commercial facilities. Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes

- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides legal authority for the City to require a SWPPP for any industrial or commercial facility that may potentially discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets because they are less stringent than, and conflict with Municipal Permit requirements or City's ordinances. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards. It has been determined that one-on-one interaction between City inspectors and business owners are more effective in knowledge and behavior change than conducting workshops or distributing informational materials, although latter methods are also effective to a lesser degree and are practiced by the City.

5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. As per the permit, during the reporting period, the City mailed approximately 1,200 BMP notification letters to stationary commercial and industrial business owners/managers. The notification letters provided information on the BMPs that businesses must implement in order to be in compliance with storm water regulations. A Storm Water BMP Fact Sheet was provided that outlines what the business need to know about

the City's storm water ordinance as well as the general pollution prevention BMPs. The remaining industrial and commercial businesses were notified of BMP requirements during inspections. The City inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements, as described in the JURMP, are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities. Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection, the City provides a copy of the inspection report to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

In all cases a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Providing one-on-one training and helping business owners to develop their activity and site specific BMPs
- Distributing informational printed materials
- Conducting industrial and commercial inspections and setting standards for compliance

5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

During this reporting period, 198 industrial facilities and 1,228 commercial facilities including 333 mobile businesses were identified and inventoried. These facilities are identified in Attachments D.1 and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections

were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, the following number of inspections was conducted to ensure compliance with Permit requirements (see Attachments I and J):

- 201 high priority commercial facilities
- 28 low priority commercial facilities
- 48 high priority industrial facilities
- 2 low priority industrial facilities

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b.(3).
- Threat to Water Quality – Facilities that posed a higher TTWQ was given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.
- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial and commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed for bringing the facility into compliance. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities and during administrative hearings.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

The Copermittees have standardized industrial/commercial inspections. An Inspection Standards Workgroup was formed with the task of finding a way to standardize industrial-commercial inspections so that the results from each Copermittee's inspections are consistent. The goal of the workgroup was to create minimum regional standards while maintaining flexibility for each Copermittee to identify and apply their individual requirements that have been developed to match each Copermittee's respective storm water program.

5.2.4.2 PRIORITIZATION

The Municipal Permit no longer requires industrial and commercial inventories to be categorized into high or low priority for TTWQ, although Section D.3.b.(3) of the Municipal Permit requires inspections of sites determined to pose a high threat to water quality. Based on the City's past experience, prioritization of industrial and commercial facilities into high or low priority provides a powerful tool to identify facilities that require focused attention and more frequent inspections. Therefore, the inventories of industrial and commercial facilities have been prioritized in this report.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge are also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- SIC Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)
- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road (Sweetwater River)
  - Bay Boulevard (San Diego Bay; facilities within the Port jurisdiction are not included)
- Fast food chains
  This is due to frequent rotation of management and employees, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrappers, etc. in the parking lot.
- Private golf courses
- Entertainment facilities
  Cricket Wireless Amphitheater and Knotts Soak City

- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note to update the inventory. If a new business has been determined to be included in the inventory, Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Where applicable, Storm Water Management staff checks for coverage under the General Industrial Permit

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/groupmonitoring.shtml

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies the Storm Water Compliance Inspector during the walk-through to enable City staff to point out areas where corrections are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, the Storm Water Compliance Inspector completes a Storm Water Quality Inspection Report for Commercial/Industrial Facilities. The responsible party is provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Results of the SWPPP review, BMP plan, and monitoring results, where applicable
- Assessment of BMP implementation

- Recommended corrective actions
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the report

The Storm Water Compliance Inspector does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person. Educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while the Storm Water Compliance Inspector is at the site.

As discussed above, the business is provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high priority or vice versa. Any such changes are reflected in the inventory update submitted in the following JURMP Annual Report.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachments I and J.

5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the use of a third party inspection program. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

5.2.4.5 VIOLATIONS AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate
- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

Storm Water Compliance Inspectors properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, Storm Water Compliance Inspector conducts follow-up inspections to ensure that required corrective actions are adequately addressed.

Where the Storm Water Compliance Inspector observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the situation. When necessary, City's maintenance crews respond to illegal discharges, contain and capture pollutants before entering storm water conveyance system inlets, and stay at the scene until the illegal discharge is terminated by the responsible person. The affected areas and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the business owner of the property owner. In any case in which Storm Water Compliance Inspectors determine that a noncompliant site poses a threat to human or environmental health, the City notifies the RWQCB by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illicit discharges or illegal connections from industrial and commercial businesses. This includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section 9.5 of the City's JURMP.

Table 5-1 details the types of violations and the numbers of each during the reporting period. A detailed account of enforcement actions taken during this reporting period is included in Attachment K.

Table 5-1 Industrial/Commercial Enforcement Action Summary FY 2009-2010

VIOLATION TYPE	NO.
Administrative Citations-Warning	6
Administrative Citations	31
Notice of Violation	5
Civil Penalties	1
VIOLATION CATEGORY	**NO.**
Commercial	38
Industrial	5

Total penalties of $16,400 were issued to the enforcement actions above.

The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

5.2.4.6 IDENTIFICATION OF NON-FILERS

If Storm Water Compliance Inspectors determine that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the Regional Board to determine if the facility is required to obtain coverage. At the same time, the Regional Board is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with Regional Board staff to assist in their site inspections. Each Annual Report includes a list of industrial facilities that the City has identified during that reporting period as candidates for coverage that have not filed NOIs. The list includes the name of the facility, address, applicable SIC code(s), and the type of business.

During the current reporting period, the City did not identify any non-filer facilities that may be eligible for coverage under the General Industrial Permit.

5.3 MOBILE SOURCES ELEMENT

5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Mobile businesses can be difficult to regulate because many do not have permanent locations in the City or may not have a business license. On a continual basis, new mobile businesses are started, existing mobile businesses go out of business, some mobile businesses do not renew their business license, or some operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses. Furthermore, City inspectors conduct weekend and night inspections to monitor BMP implementation by mobile businesses.

5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile auto detail/ maintenance
- Window washing/pressure washing/ street sweeping
- Pool and spa cleaning
- Carpet cleaning
- Plumbing/ handyman/ repairman
- Landscaping
- Dog grooming
- Boat cleaning/ hull maintenance

- Fire sprinkler maintenance
- Painting and coating
- Mobile construction trades, which include cement work and masonry

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business license applicant within the above categories are required to go through a storm water BMP training, and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 164 mobile businesses from the categories listed above applied for a City business license, were trained on BMPs related to their business, completed the City of Chula Vista Storm Water Questionnaire and Certification Statement, and received their business license. Attachment D.2 is a list of the businesses that went through this process during the reporting period. Table 5-2 details the types and numbers of mobile businesses approved during the reporting year.

Table 5-2 Approved Mobile Business Licenses by Category FY2009-2010

BUSINESS TYPE	NO.
Construction Related	10
Carpet Cleaning	8

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both

indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes as well as costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge Control and Spill Prevention, Control, and Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

In addition, as per the Municipal Permit, the Copermittees developed a set of minimum core BMPs for the various types of mobile businesses. The following BMPs specifically address the unique characteristics of mobile businesses.

- Storm water training
- Spill containment and cleanup (Spill Kits)
- Proper handling of all wastes (Solid, liquid and hazardous)
- Protecting storm water conveyance systems
- Providing proper handling and containment of materials
- Providing equipment washout areas

These practices represent only the minimum required BMPs. Mobile businesses are instructed to contact local jurisdictions where mobile business activities are to take place to find out about any additional or more stringent requirements.

The Copermittees are in the process of posting information about mobile business minimum BMPs as a resource in the Project Clean Water Toolbox website. Please see Figure 5-1 – Clean Water Toolbox for the home page of the website.

Figure 5-1 Clean Water Toolbox

5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed to the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. Approved applications and completed Storm Water Questionnaires and Certification Statements are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department receives application from mobile business owner

- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance, and appropriate CASQA BMPs relevant to the type of business activities.
- The applicant is instructed to complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval from the Storm Water Management Section before a business license can be issued.
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.
- In addition to the City's Mobile Business Database, the Copermittees have established a Regional Copermittee Mobile Business Database. The web-based database can make queries on locating a mobile business, finding and viewing violations, and watershed-based reporting. Jurisdictions are able to edit a mobile business that is located or does business in their jurisdiction. See Figure 5-2 – Regional Copermittee Mobile Business Database for a sample web page.

Figure 5-2 Regional Copermittee Mobile Business Database

Three types of reports can be generated from this database:

- All mobile businesses home-based within a jurisdiction
- All mobile businesses operating within a jurisdiction

- All violations that have occurred within a jurisdiction

5.3.4.1 EDUCATION AND OUTREACH

During the business license application process, the City provides mobile business owners or operators the necessary information, educational materials, and outreach related to storm water quality issues specific to their type of business. As stated above, businesses are given the educational materials outlining pollution prevention measures and other BMP requirements related to their respective activities prior to the license being issued. A sample of the Storm Water Information Packets for Mobile Businesses is included in Appendix D of the City's updated JURMP. The education program is described in detail in Section 10, of the City's updated JURMP.

5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobile businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene, City inspectors require an immediate stop to any illegal discharge and instruct the responsible person to initiate containment and cleanup of the affected areas. If the business lacks materials and equipment required for the deployment of adequate BMPs, the responsible person is informed that they will not be able to resume activities until such time that they procure all necessary materials and equipment. Storm Water Compliance Inspectors find out if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being allowed to resume business operations. Enforcement action, including warnings, citations, civil penalties, or other enforcement measures are initiated where justified. During the current reporting period, a total of 17 administrative citations totaling $3,100 in fines were issued to mobile businesses operating in Chula Vista.

5.3.4.2.1 NOTABLE ACTIVITIES

During the reporting period, the City continued its mobile business license application processing combined with public education, which is considered a notable and very effective method of minimizing pollutant discharges from mobile business activities.

6.0 RESIDENTIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.

Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.

Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.

Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.

Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.

Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.

Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.

6.1 INTRODUCTION

The City has developed the residential component of the Jurisdictional Urban Runoff Management Program (JURMP) based upon a multi-faceted approach including pollution prevention; complaint response and enforcement; and outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharges of pollutants into the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP) and to support the long-term improvements of water quality through awareness and behavior modification.

6.2 SOURCE CHARACTERIZATION

The information collected from reported illegal discharges and results of subsequent investigations can be analyzed to provide useful tools in effectively characterizing activities, sources, and areas within the City that contribute more to water quality impacts and that need to be targeted. These criteria may stay constant from year to year, or change each year. However,

knowledge of the pattern that they follow will provide the storm water manager an insight that is necessary to develop or modify an effective program. As in previous reporting years, the City has taken a critical look at the complaints received in 2009-2010 as presented in Figure 6-1. Home improvement related discharges continue to be prevalent in this reporting period. Compared to last year, the percentage of home improvement related discharges decreased by 14%. There may be several reasons for this declining pattern, one of which may be attributable to the public outreach programs conducted by City staff that provide invaluable information and education on the impacts of waste disposal to the general public and, therefore, is effective in changing habits. Further, characterizing the sources of pollutants can provide a resource in tailoring public education and outreach programs to the specific needs of the community and improving their effectiveness, while maintaining economic viability. This type of critical look is an important tool in making management decisions on how to approach residential Best Management Practices (BMPs) implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

Figure 6-1 Percentage of Reported Residential Non-Storm Water Violations by Activity FY 2009-2010

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high Threat To Water Quality (TTWQ) residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, every year certain residential areas of the City are designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating residential BMP implementation is quite challenging, however, the City has developed a number

of mechanisms through which information on BMPs are disseminated to the public and ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, door hangers, City's environmental website, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response & Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed above have been discussed in more detail throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented primarily through public education, and where necessary by enforcement action.

6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted, so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses public education and outreach together with enforcement mechanisms, when necessary, to ensure program implementation by residents and compliance with all federal, state, and local laws and regulations.

The City keeps accurate records of all reported residential illegal discharges and non-compliance with BMP requirements. This information can be used in many ways such as identification of pollutants of concern, areas of HTTWQ, increasing/decreasing trends in illegal discharges, and repeat violators. Such analysis is then used to develop new programs or modify existing programs to focus attention on program elements that result in higher effectiveness and quicker results. Map 1 – Violation Location Map was prepared to depict all areas of the City with a visual demonstration of reported illegal discharge distributions. The City then targets higher density areas for more focused public education and surveillance.

6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Information pertaining to the household hazardous waste and the used oil and filter programs are distributed to residents annually during special events, presentations, point of purchase locations, mobile displays throughout the city offices and community centers, local realtors/associations, and property management offices. Residents are

educated about the disposal of such waste through the City's public education program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the Cal Recycle (formerly the California Integrated Waste Management Board). The program has the capacity to receive and process used oil and filters generated by City residents. The amount of used oil collected from certified oil centers decreased since the last reporting period as presented in Table 6-1. This decrease can be attributed to a change in the data tracking requirements as set forth by the CalRecycle. The City continues encouraging residents to take a proactive approach to changing their oil by draining it, uninstalling their oil filters and taking filters along prior to visiting their local auto supply store. In this way, residents recycle used oil as they purchase their new oil and avoid an extra trip, one that could have added green house gases into the atmosphere. This method also prevents storm drain pollution, as unattended oil could intentionally or unintentionally spill and enter storm drain systems.

The South Bay Used Oil Recycling Program has been evaluated by CalRecycle as a successful program implemented by the City of Chula Vista, National City, and Imperial Beach in terms of improving environmental quality. Residents of Chula Vista can leave oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. This used oil will be collected and recycled through the South Bay Used Oil Recycling Program. Residents of Chula Vista also have the option of taking their used oil to various used oil collection facilities in the City for recycling or disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. This facility accepts oil, both clean and contaminated as well as residential hazardous waste. Residents are limited to 15 gallons or 125 pounds of used oil or hazardous waste per vehicle. The facility is open every Saturday and Wednesday from the hours of 9 AM to 1 PM. The City also offers "door-to-door" collection of HHW for a small donation. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. Every used oil and HHW application has focused on pollution prevention, watershed protection, source reduction and making it easy for residents to do the right thing when it comes to proper disposal.

Table 6-1 Amount of HHW and Used Oil Collected FY 2009-2010

Household Hazardous Waste	Quantity of waste collected (FY 08-09)	Quantity of waste collected (FY 09-10)
	252,494 lbs	294,217 lbs
Used Oil	Quantity of used oil collected from certified centers (FY 08-09)	Quantity of used oil collected from certified centers (FY 09-10)
	49,287 gallons	22,399 gallons

6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where enforcement actions may be necessary, where appropriate:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel
- City's environmental website at: www.chulavistaca.gov/clean
- Analysis of data collected and managed in the Department of Public Works data management system GBA (George Butler Associates Management System)

Further information about the City's hotline reporting system and Dry Weather Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. By using a Geographic Information System program and the data collected from these mechanisms, every year residential areas of the City that have had higher numbers of violations, and outfall locations that exceeded pollutant standard limits are mapped (see Map 2– HTTWQ Residential Area Map and Map 3 – Violations Locations - Residential). City staff then develops programs to inspect and investigate areas of the City that are considered high TTWQ. City staff investigates violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continues to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's illegal discharge reports database can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1.

The residential areas and activities evaluation method described above indicate that: 1) residents are becoming more environmentally conscious, 2) residents take an active role in environmental

protection by calling the City and reporting illegal discharges, 3) a positive trend in urban runoff discharge quality is emerging. These results are encouraging and provide incentive to City staff to maintain their level of efforts and find innovative methods to accelerate the positive trend.

6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in Chula Vista Municipal Code Chapter 14.20, Storm Water Management and Discharge Control; and Chula Vista Municipal Code Title 1, General Provisions. During this reporting period, Storm Water Compliance Inspectors responded to over 256 reported violations of which 102 were residential. Fifty-eight of the reported violations resulted in citations. The total amount of fines collected during this reporting period from residential violations was $11,800.00. Compared to last year, the number of residential reported violations increased by 44% and the number of actual violations/citations increased by 59%. This unexpected increase in the number of reported violations needs further investigation. Future data will be used to determine the root cause of this increase and if any actions or adjustments in this City's procedures and programs are necessary.

During the reporting period, Storm Water Compliance Inspectors responded to each report of residential and other violations; investigated each case; took appropriate actions regarding containment of pollution; educated the violating party on existing laws and regulations; made follow-up visits, where necessary; and, proceeded with enforcement action if voluntary compliance was not achieved.

Data management of past violations helps City staff to identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate illegal act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of reported violations are included in Attachment K.

6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step towards improving receiving water quality, both locally and regionally. Increasing public awareness and encouraging a change in both attitude and behavior of the general public and the regulated community, can directly lead to a reduction or elimination of storm water pollution caused by common daily residential activities. Due to the importance of public education and outreach in storm water programs, the Municipal Permit requires public education at jurisdictional, watershed, and regional levels. The following are brief accounts of the implementation of jurisdictional and regional education programs during the reporting period. Additionally, during the reporting period, the City collaborated with the Copermittees of the San Diego Bay Watershed to implement the Watershed Urban Runoff Management Program (WURMP) residential education component. Details of such efforts are fully discussed in this year's WURMP Annual Report, which will be submitted to the Regional Board under a different cover.

6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the City's Environmental Services Division and the Conservation Department in the implementation of the Jurisdictional Residential Education Program. Pollution prevention and water quality regulation information is disseminated by actively participating in community events throughout the year. Informational booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise pubic awareness about the City's storm water regulations and requirements as well as Best Management Practices methods. Residents become aware of the importance of protecting their watersheds and water resources, and recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also distributed throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of reported violations, and other similar factors.

The decision to select the types of educational materials to be disseminated throughout selected residential areas was based on an analysis of current and past residential violation reports, as well as results from the Dry Weather Field Screening and Analytical Monitoring program. During this reporting period, City Staff distributed 3,030 educational door hangers with educational pamphlets to various residential locations of the City (see Table 6-2).

Table 6-2 Educational Materials Distributed Based on Dry Weather Monitoring Results and Storm Water Hotline

RESIDENTIAL AREA	EDUCATIONAL INFORMATION	NUMBER DISTRIBUTED
Cabrillo Mobile Homes	Vehicle Washing	130
Otay Ranch area along La Media Drive, south of Olympic Parkway, north of Fleishbein Street	Landscaping Activities	350
Otay Ranch along Exploration Falls Drive	Landscaping Activities	320
Eastlake around Eastlake Greens neighborhood	Landscaping Activities	300
Rolling Hills Ranch and Eastlake Woods	Landscaping Activities	850
San Miguel Ranch in Cabo Bahia and Lago Madero areas	Vehicle Washing	350
San Miguel Ranch by San Miguel Ranch Road and Proctor Valley Road	Landscaping Activities	250
North end of East J Street by Plaza Ultima	Automobile Maintenance	20
Otay Ranch near the corner of La Media and Otay Lakes Road, on Santa Cora Avenue	Landscaping Activities	350
Foxboro neighborhood by Nantucket Drive and Hampshire Lane	Vehicle Washing	110
		TOTAL: 3,030

Residential hotline calls, response, and enforcement rely heavily upon citizen participation and awareness. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting period, the City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. The workgroup is broken down into sub-workgroups that focus on one, or more of the various components undertaken by the ERS. These sub-workgroups address media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Development and implementation of comprehensive media program including ads on TV, radio, movie theaters, and bus shelters; 2) Development and implementation of a county-wide telephone survey to assess citizen storm

water knowledge; 3) Development and distribution of the regional 2010 Storm Water Calendar; 4) Completed the development of a regional website that all Copermittees can link to, through their own jurisdictional websites; 5) Continued participation in regional community events such as the Envirofair at the San Diego County Fair, High Tech High Science Fair, and 6) Continued development through the quarterly Edu TAC meetings.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under a separate cover.

6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the negative impacts of improper waste disposal. A consistent message of stewardship through everyday actions and behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

During fiscal year 2009-2010, the City identified several High Threat to Water Quality (HTTWQ) residential neighborhoods that required focused educational outreach (see Map 2). These areas have been targeted based on storm water inspection observations, reported violations to the City's hotline and the dry weather monitoring upstream investigation program. Each of the homes in these neighborhoods received a general storm water pollution prevention brochure or door hanger in addition to a brochure targeting specific residential activities and their associated pollutants. The activities and pollutants that were focused on included: 1) vehicle washing and repair (detergents and vehicle fluids), 2) gardening (green waste, fertilizer, and over-irrigation discharge), 3) household activities (grease, paint, pet waste, and trash and debris). These areas and their corresponding activities and pollutants have been identified in Attachment K. In addition, the City plans to work with Homeowner's Associations to include storm water pollution prevention articles and messages into their community newsletters.

The City also targets HTTWQ residential areas by having cleanup events that provide residents the opportunity to volunteer to help cleanup their neighborhoods. The annual Beautify Chula Vista event focuses on a different neighborhood each year, frequently in under-privileged areas of the City, and provides graffiti cleanup, tree planting, trash pick-up, and storm drain stenciling. By participating in the event, residents are able to make a connection to their community and environment while learning about storm water pollution prevention.

Other than HTTWQ areas, the City has a number of programs in place throughout the City to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

On September 10, 2008, the Regional Board adopted Addendum No. 2 to the Municipal Permit. The addendum recognized that Dry Weather Field Screening and Analytical Monitoring activities may continue until the end of September each year, and the results would not be available to be included in JURMP Annual Reports, which are also due for submittal on September 30 of each year. Therefore, submittal of Section 7.0 of the JURMP Annual Report (Illicit Discharge Detection and Elimination Component) was allowed to be postponed until December 15 of each year. Pursuant to this requirement, the City of Chula Vista will submit the entire FY 2009-2010 Illicit Discharge Detection and Elimination Component; copies of the City's 2010 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2010.

8.0 EDUCATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.

Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.

Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.

Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.

Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.

8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public, and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay/ East County Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Program targets issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and Best Management Practices (BMPs) to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of Citywide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting year, Storm Water Management staff received training as well as provided training to municipal staff (including Public Works Engineering and Development Services Departments) about the new General Construction Permit. Training included general permit overview, risk levels, sampling and monitoring, inspections, reporting, and certification requirements. Notably, two City Storm Water Management Section staff became Qualified SWPPP Practitioners (QSP) by obtaining their Certified Erosion, Sediment, and Storm Water Inspector (CESSWI) certification. As construction projects begin to implement the General Construction Permit, the Storm Water Management Section staff will continue its efforts to educate itself as well as municipal staff.

Education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) implementation strategies. In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. A continuing focus on internal SUSMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize Low Impact Development (LID) techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of

higher efficiency treatment control BMPs. In addition, presentations by the manufacturers and vendors of structural BMPs have been organized and hosted by the City.

As in previous reporting year, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance
- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Transit
- Vehicle Maintenance
- Land Development
- Public Works Inspections

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

Table 8-1 Municipal Staff Education FY 2009-2010

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
07/16/09	Filtrexx Presentation	Training on construction site sediment control, post-construction storm water management, stream bank restoration, and slope stabilization.	City of Chula Vista
10/13, 15, 19, 22/09	Storm Water Pollution Prevention Refresher Training for Firefighters	Topics included a general overview of the storm water permit, BMPs, and the review of the City's program for non-emergency fire fighting flows.	City of Chula Vista

Table 8-1 continued on next page

Table 8-1 continued

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
10/14/09 through 11/12/09	Storm Water Refresher Training for Public Works Staff	City of Chula Vista Storm Water staff provided training to all public works departments about storm water BMPs related to their job activities.	City of Chula Vista
10/30/09	Storm Water Compliance and New Construction Permit Training Seminar	Seminar covered risk levels, general permit overview, monitoring, certifications, advance treatment BMPs, and the online reporting system.	Rick Engineering
11/02/09	General Construction Permit: Tools for Implementation Workshop	Introduction to the General Construction Permit requirements, risk levels, monitoring, certifications, and online reporting system.	CASQA
11/06/09	CEQA Basics	Introduction to CEQA and exemptions from CEQA, negative declarations, EIRs, legal challenges and defense, coordination with NEPA, and case studies.	Association of Environmental Professionals
11/11/09	4-Hour Storm Water Pollution Prevention Forum	Training on obtaining Construction Permit coverage, sampling requirements and reporting, legal implications of permit requirements, and municipality response to requirements.	Associated General Contractors of America (ACG)
12/03/09	New General Construction Permit Seminar	Construction risk level assessments, grandfathering, LUPs, monitoring guidelines, inspector/SWPPP certifications.	Shea with City of Chula Vista Storm Water Staff as a panelist
01/02/10	New General Construction Permit Training	City storm water staff provided training to civil engineers and land developers about the General Construction Permit, NOIs, SWPPPs, annual reporting, and risk levels.	City of Chula Vista Storm Water Section Staff
02/12/10	SUSMP Training for Engineers	Updates on Model SUSMP, HMP, LID, new General Construction Permit, WQTR preparation, BMPs, and inspection and maintenance requirements.	City of Chula Vista Storm Water Section Staff

Table 8-1 continued on next page

Table 8-1 continued

DATE	EVENT	EVENT DESCRIPTION	ORGANIZER
03/23/10	Environmental Enforcement Training	Conducting effective inspection interviews, access and entry, violations, reporting writing, environmental crimes, and enforcement options	Cal EPA
04/08/10	New General Construction Permit Workshop	Construction permit overview, differences between old and new permits, SMARTS program, and Q&A session.	SDRWQCB
04/15/10	BioClean	Properties and effectiveness of modular wetlands and various configurations of installed units throughout CA.	Bio Clean Environmental Services
04/21/10	Storm Water Workshop	Numeric limits, LID, storm water regulation and policy topics, water board issues, and urban runoff.	Law Seminars International
05/21/10	Construction Permit SWPPP Training Workshop	Training covered what is needed in a SWPPP, how to obtain coverage, sampling requirements, BMP implementation, qualifications and training requirements.	Rick Engineering
06/22/10	Storm Water Multiple Application and Report Tracking System (SMARTS)	City Storm Water Staff conducted training on the SMARTS website and covered data entry, re-certifying NOIs, Annual Reports, NOTs, and SWPPPs.	City of Chula Vista Storm Water Staff
07/16/10	SUSMP and LID Training	City Storm Water Staff provided training on development and redevelopment requirements of the Permit, SUSMP, treatment control BMPs, HMP, and site design.	City of Chula Vista Storm Water Staff

8.3 EDUCATIONAL OUTREACH ELEMENT

8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

The CLEAN group, made up of the City's environmental departments and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. *Your Choice*."**

The culmination of efforts of various involved City divisions has been embodied in the established CLEAN program, which provides an effective and powerful body to guide the significant efforts envisioned for the program. It is also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including pollution notification residential door hangers, stickers, stationery, and various brochures were distributed to the general public within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean has information about the environmentally focused divisions in the City including Storm Water Management, Environmental Services, Conservation, and the Chula Vista Nature Center. The storm water section has information specific to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to evolve, a wide array of media outlets have been explored, and established branding has been incorporated in them. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2009-2010, the City continued to use pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of items such as recyclables, cooking grease, and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging on such items as pet waste bag containers, towels, pens, pencils, and rulers. During this reporting year, the CLEAN group and stakeholders collaborated to produce a comprehensive environmental guide that covers various topics such as storm water pollution prevention, recycling, alternative transportation, green gardening, and conservation. This guide is distributed by all CLEAN stakeholders at community events.

Figure 8-1 CLEAN Homepage

The City has continued to maintain six trail displays (Figure 8-2) throughout the City, near walking trails and parks. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. They demonstrate the connectivity of environmental concerns throughout the City. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park
- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

A poster form of the trail display is also displayed in the City's John Lippit Public Works Center and the Chula Vista Public Library. Chula Vista staff and residents pass this display on a daily basis, reminding them that the City is within the Sweetwater and Otay Watersheds and of the simple actions they can take to protect their local waterways. Another poster is used for community events to explain watershed concepts and pollution prevention to Chula Vista residents.

Figure 8-2 City of Chula Vista CLEAN Trail Display

Media Articles

During the reporting period, Storm Water Management Section staff contributed several articles about storm water pollution prevention to various publications aimed at residents living in the City. These included The Star News, My Hometown Otay Ranch/ Eastlake, and Your Guide to CLEAN, which are included in residential trash bills. Altogether, these publications reach more than 70,000 households. The City will continue to contribute and place pollution prevention advertisements and articles in these publications as well as continue to explore more venues for reaching citizens through print media.

School Education Efforts

Due to the previous success of the Salt Creek Critters and the Southbay Water Warriors after-school programs in east and west Chula Vista, respectively, the City decided to implement a storm water education program for high school students in west Chula Vista during the reporting year. With the help of I Love a Clean San Diego, the City provided storm water education presentations to students at Castle Park and Chula Vista High Schools. The presentation focused on pollutant types and their sources, pollution prevention, watershed protection, and volunteer opportunities. A pre- and post-test were administered to the students receiving the presentations. In addition, an interactive activity was done with each class to enforce the concepts taught in the presentations. Overall, both students and teachers felt that the presentations were beneficial and increased knowledge and interest in environmental issues in their community. The City will continue with school programs such as these into the coming fiscal year, as funding permits.

Community Events
The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. During the reporting period, the Storm Water Management and Environmental Services staff participated in and set up booths and displays at all major South Bay community events. City staff provided education and outreach materials regarding a variety of interrelated environmental issues. A variety of brochures and pamphlets were distributed to the general public about the effects of storm water pollution on the environment and ways that residents can prevent pollution of their waterways. By participating in these community events, City storm water staff has the opportunity to generate large numbers of impressions each fiscal year. In addition, City staff displayed the EnviroScape model at several community events in order to teach residents about watershed concepts and to reinforce the connection between everyday actions and water quality.

Chula Vista Nature Center
The City of Chula Vista Nature Center, located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Nature Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Nature Center's mission is to educate the public about the importance of coastal resource conservation and environmental stewardship. Through visits to the Nature Center and its offsite programs thousands of people are exposed to these critical environmental messages each year. To help facilitate educational experiences, the Nature Center offers field trips, guided walks, classes, tours, and special projects. During the reporting year, there were over 430 scheduled tours to the Nature Center, resulting in over 10,500 children and over 1,800 adults learning about San Diego Bay watersheds and watershed protection.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Nature Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Chula Vista Nature Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Nature Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Nature Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- Students learn to recycle, reuse, and reduce waste. They also learn how to correctly use storm drains and the types of pollutants commonly identified in the storm drain system. The Chula Vista Nature Center and Conservation Department also conduct "Less Toxic Gardening", dealing specifically with pesticide use, as well as weekly composting classes.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

Table 8-2 Education Outreach Provided FY 2009-2010

DATE	EVENT	EVENT DESCRIPTION	SITE NAME/ LOCATION
08/09/09	Lemon Festival	City storm water staff manned a booth and distributed information about pollution prevention	Downtown Chula Vista
09/19/09	Children's Festival	City storm water staff had a booth at the festival and provided pollution prevention training to citizens	New Hope Community Church
09/26/09	BonitaFest	City storm water staff provided pollution prevention training to citizens	Bonita Shopping Center
10/03/09	Fire Station Open House	City storm water staff manned a booth and provided education about pollution prevention to citizens	City of Chula Vista Fire Station #4
10/14/09	Citizen's Leadership Academy	City storm water staff provided storm water education and explained the purpose of the Storm Water Management Section to citizens who were a part of this special group.	John Lippitt Public Works Center
10/17/09	Beautify Chula Vista	City storm water staff provided pollution prevention training to citizens	Memorial Park
02/26/10	Storm Water Training for Tortilleria Santa Fe	City staff provided training on storm water pollution prevention and the General Industrial Permit to Santa Fe Tortilla staff	Tortilleria Santa Fe Shop
04/17/10	Go Green and Clean Family Day	City staff provided training on pollution prevention and provided CLEAN brochures, IPM Pest Tip cards, and displayed the EnviroScape watershed model	Otay Ranch Town Center

DATE	EVENT	EVENT DESCRIPTION	SITE NAME/ LOCATION
04/24/10	Day of the Child	Storm water staff manned a booth and provided storm water pollution prevention brochures, IPM tip cards, storm water calendars, and environmental giveaways	Memorial Park
06/19/10	Pet Fest and Doggy Dash	Storm water staff implemented a pet waste survey, provided pollution prevention education, and environmental giveaways to citizens	Memorial Park
06/26/10	Southbay Homeowners Resources Fair	City staff provided pollution prevention education to homeowners.	Chula Vista City Hall Courtyard
Year-round	Watershed, Recycling, Storm Drain Pollution Education	Organized School Group Visitors to the Chula Vista Nature Center	Chula Vista Nature Center

Regional Outreach

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further development of the Regional Residential Storm Water Education Plan that was submitted to the Regional Board in March 2008. This reporting year, the Copermittees collaborated on a regional storm water website (www.thinkbluesdregion.com), developed and distributed a regional storm water education calendar, had a booth at the High Tech High fair in March 2010, and had a booth at the EnviroFair at the San Diego County Fair in June 2010.

8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included dissemination of information via the County's Clean Water Project website targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, Storm Water Compliance Inspectors meet with facility owners or managers and explain water quality issues relating to the particular type of industrial or commercial facility. BMPs relevant to the activities at each facility are explained and, corrective actions are proposed to bring the facility into compliance with the City's ordinances and BMP requirements. Consequences of non-compliance are also

brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

During this reporting year, City Storm Water Management Section Staff provided storm water training to a tortilla manufacturing business in the City. During a storm water inspection of the business, the City found that hazardous wastes were not stored properly. As a result, the City issued the business a Notice of Violation. At the request of the business, the City provided a one-hour storm water pollution prevention training in both English and Spanish to workers at the factory. The training, given to both managers and key staff at the factory, focused on BMPs directly applicable to their business operations and gave an overall review of the General Industrial Permit.

8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of Low Impact Development site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- The City Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

8.3.4 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day
- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as notebooks, dustpans, pencils, pens, and pet waste bag holders. This reporting year, the CLEAN Team and Stakeholders collaborated to produce an all-inclusive environmental brochure called CLEAN – Your Environmental Guide for Green Living. The brochure covers a wide range of environmental topics such as storm water pollution prevention, water conservation, energy, green living, transportation, recycling, and green gardening.

During the reporting period, the City, with the help of I Love a Clean San Diego, supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteers have participated in a number of activities during this event, including storm drain stenciling, cleaning of trash, graffiti removal, and planting trees. Efforts are usually focused in areas of the City where more attention is needed due to trash and graffiti problems. Over 500 volunteers participated in the Beautify Chula Vista Day in October 2009.

The Graffiti Abatement Program allows citizens to report graffiti in their neighborhoods by phone or by email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. There were over 2,850 web requests, emails, and calls to the graffiti hotline during the reporting period (some duplicated), showing that City staff and residents are taking an active role in promoting a clean City.

9.0 PUBLIC PARTICIPATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.

9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

9.2 PROGRAM IMPLEMENTATION

Beautify Chula Vista Day – October 17, 2009

Beautify Chula Vista Day is an annual event that involves citizen participation and involvement in activities that enhance the environmental setting of the City. Every year, this event attracts several hundred volunteers and provides an opportunity for City staff to have direct interaction with the public to discuss environmental issues and the role that citizens can play in protecting their community's health and living standards. Volunteer citizens are able to participate in activities such as tree planting, graffiti removal, clean-up projects, and storm drain stenciling. During the 2009 event, with participation from over 500 volunteers of all ages, the group was able to remove more than 2,000 pounds of trash from City streets.

Otay Valley Regional Park Cleanup

The Otay Valley Regional Park (OVRP) is being developed as a collaborative effort of the cities of Chula Vista and San Diego and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land. The Otay River Valley Cleanup Project (Cleanup Work Project) currently encompasses the Western Otay Valley Regional Park (Nester Creek east to I-805) and Eastern Otay Valley Regional Park – Proctor Valley (North End Upper Otay Lakes Reservoir).

The Cleanup Work Project encompasses efforts by many organizations including the OVRP Citizens Advisory Committee (CAC) coordinating the Donovan Prison Community Crew,

California Conservation Corp (CCC) coordinated by the City of San Diego WOVRP Rangers, County of San Diego Otay Lakes Park Rangers (provided dump truck and driver), Friends of the Park (coordinates Proctor Valley Cleanup), Allied Waste (delivering and picking up of large waste bins), City of San Diego Environmental Services, City of Chula Vista Public Works, and Hanson Aggregates (provided heavy equipment as needed).

Park cleanup activities include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, and placing signage identifying the OVRP. More information about the Otay Valley Regional Park can be found on their website http://www.ovrp.org/

I Love a Clean San Diego (ILACSD) 7th Annual Creek To Bay Cleanup

The Seventh Annual Creek to Bay Cleanup event occurred on Saturday, April 24, 2010. The City co-sponsored this cleanup event, which was coordinated by ILACSD. The San Diego County Board of Supervisors presented this year's cleanup event through the support of Supervisor Greg Cox and Supervisor Pam Slater-Price. The event was able to bring together over 4,500 volunteers who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Volunteers accumulated over 150,000 pounds of trash and recyclables from 185 miles of coastline and inland areas. Commonly found items included plastic items and cigarette butts.

Cleanup sites within or adjacent to Chula Vista included the Sweetwater Regional Park, J Street Marina, and the western side of Otay Valley Regional Park. At these locations, over 440 volunteers removed over 2,100 pounds of trash and over 390 pounds of recyclables from almost 10 miles of Chula Vista inland waterways.

Household Hazardous Waste and Used Oil Recycling

The Household Hazardous Waste (HHW) Facility at the City of Chula Vista Public Works Center started operation in January 2002. It serves the Cities of Chula Vista, Imperial Beach, National City, and the County of San Diego. The facility is open every Wednesday and Saturday from 9am to 1pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under the door-to-door program, HHW is collected by appointment from residents who are unable to take the waste to the permanent facility or because of scheduling conflicts. The facility is under 24-hour camera surveillance to prevent illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill. Public participation in this program is expected to minimize the amount of hazardous materials that may otherwise enter storm drain systems. During the reporting period approximately 2,800 households participated in the collection program.

Public IC/ID Reporting and Graffiti Hotline

The City encourages its citizens to partner with the City in keeping Chula Vista clean. Citizens can do so by reporting any illegal discharges to storm drains, as well as reporting any graffiti in their neighborhoods. The City provides free graffiti removal services on public or private property by using environmentally friendly power washing equipment and BMPs. Storm Water

Management Section staff investigates illegal discharges to storm drain systems and provides education and enforcement. In cases of spills or pollutants entering storm drain systems, Public Works maintenance crews provide cleanup as needed. During the reporting period the City received over 240 calls and reports about illegal discharges to storm drain systems. There were over 2,850 calls, emails, and web requests from citizens to the graffiti program during the reporting year (some duplicated), showing that citizens are participating and taking an active part in keeping the City clean.

CLEAN Business Program

As part of its efforts to involve local businesses in keeping the City clean, the CLEAN Team started the CLEAN Business Program in February 2008. The CLEAN Team is made up of the City's Storm Water Management Section, Environmental Services Division, and the Department of Conservation. The CLEAN Business Program was designed to help small businesses exercise environmentally safe practices and become sustainable. This goal could only be achieved by learning basic environmentally responsible and sound methods related to their specific daily activities. The program verifies and promotes businesses that demonstrate environmentally friendly practices and conserve resources. As part of the verification process, the business must complete a packet of checklists with minimum BMPs and request an inspection by the CLEAN Team to verify that the selected BMPs are adequate and have been correctly implemented. The CLEAN Team verifies that the BMPs are in place and functioning. Once a business becomes a CLEAN Business, they receive recognition on the City's website and receive a decal sticker to put on their front window to show consumers that they are shopping at a CLEAN Business. Five businesses in the City were verified during the reporting year. Businesses must receive verification on an annual basis in order to maintain their CLEAN Business status.

10.0 FISCAL ANALYSIS COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.

Permit Section G: Fiscal Analysis

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

10.1 INTRODUCTION

The Municipal Permit requires the Copermittees to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The Standardized Fiscal Analysis Method and Format (Fiscal Analysis Method) was collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis

Method document was submitted to the San Diego Regional Water Quality Control Board by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009. The Municipal Permit further requires the Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. The fiscal analysis incorporated in this section is based on the standardized method. This is the first year that the standardized method is being used.

10.2 GENERAL BUDGET INFORMATION

The Standardized Fiscal Analysis Method includes a Standardized Fiscal Analysis Reporting Form, which consists of three tables separating jurisdictional, watershed, and regional expenditures. Jurisdictional expenditures are divided into components that mirror those included in the Municipal Permit as follows:

- Administration
- Development Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Illegal Discharge Detection and Elimination (IDDE)
- Education
- Public Participation
- Special Investigations
- Non-Emergency Firefighting

Further, each of the above categories may be broken down into sub-categories. Potential Sub-categories may include:

- Land Use Planning
- Environmental Review
- Development Project Approval and verification
- Public Construction Projects
- Private Construction Projects
- Public Reporting of Illicit Connection or Illegal Discharges (ICIDs)
- Jurisdictional Urban Runoff Monitoring Programs
- Other

Expenditure items to be considered for each category or sub-category may include:

- Administration
- Permitting and Licensing
- Project Planning and Engineering
- Maintenance Inspections
- Compliance Inspection and Enforcement

- BMP Implementation
- Educational Outreach
- Waste Collection and Recycling
- Jurisdictional Urban Runoff and Receiving Water Monitoring
- Other Expenditures

For reporting purposes, only the table incorporating major jurisdictional components will be used. Sub-categories and expenditure items are intended to provide standardization of expenditures and need not be shown in the final report.

City of Chula Vista staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Environmental Planning Division of the Development Services Department reviews development projects for compliance with the California Environmental Quality Act, assesses potential environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Land Development Division of the Development Services Department is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Division staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Section of the Public Works Department manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the City's GIS systems, and provides support to

the Storm Water Management Section by mapping the City's storm water conveyance systems and data management.

- The Operations Division of the Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Section, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Section of the Public Works Department is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections provide support to the Storm Water Management Section in the fulfillment of the City's JURMP and are instrumental in the implementation of that program. Although those departments, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

10.3 FISCAL ANALYSIS METHODS

The fiscal analysis method used in this report is based on the standardized fiscal analysis method and format dated January 29, 2009, developed by the Copermittees of the San Diego County NPDES Municipal Permit, Order No. R9-2007-0001.

10.4 FISCAL ANALYSIS RESULTS

10.4.1 EXPENDITURES

10.4.1.1 JURISDICTIONAL

The City's jurisdictional expenditures for FY 2009-2010 related to compliance with the Municipal Permit are listed in Table 10-1 to 10-3.

Table 10-1 NPDES Jurisdictional Expenditures for FY 2009-2010

JURISDICTIONAL COMPONENT		MULTIPLE PROGRAMS	PRIOR PROGRAM
Administration	$301,523		
Development Planning	$136,759		
Construction	$237,552		
Municipal	$1,200,865		
Industrial and Commercial	$138,963		
Residential	$71,180		
IDDE	$349773		
Education	$54,180		
Public Participation	$1,000		
Special Investigations	$1,780		
Non-Emergency Firefighting	$8,149		
Jurisdictional Total	**$2,501,724**		

Table 10-2 NPDES Jurisdictional Shared Program Expenditures for FY 2009-2010

JURISDICTIONAL COMPONENT SHARED PROGRAMS		MULTIPLE PROGRAMS	PRIOR PROGRAM
Used Oil Recycling	$11,840	x	x
Household hazardous Waste Management	$264,438		
Wastewater Collection Systems Maintenance	$4,266,158	x	x
Flood Management Projects and Flood Control Devices	$169,537	x	x
Jurisdictional Shared Programs Total	**$4,711,973**		

Table 10-3 Jurisdictional Shared Programs For Which Expenditures are Not Readily Available

JURISDICTIONAL COMPONENT SHARED PROGRAMS FOR WHICH COSTS ARE NOT READILY AVAILABLE	MULTIPLE PROGRAMS	PRIOR PROGRAM
Land Use Planning	x	x
Environmental Review	x	x
Development Project Approval and Verification	x	x
Management of Pesticides, Herbicides, and Fertilizers	x	x
Roads, Streets, Highways, and Parking Facilities	x	x
Parks and Recreational Facilities	x	x

10.4.1.2 WATERSHED

The standardized Fiscal Analysis method and format provides a form for total watershed expenditures which is divided into various watersheds draining each Copermittee's jurisdictional boundaries. The City of Chula Vista is wholly located within the San Diego Bay watershed and, therefore, the sum total of all expenditures associated with watershed activities is shown as one number under Watershed Total.

Table 10-4 NPDES Watershed Expenditures for FY 2009-2010

WATERSHED COMPONENT		MULTIPLE PROGRAMS	PRIOR PROGRAMS
Chula Vista's Share of the Watershed Total	**$32,594**		

During FY 2008-2009, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions and, therefore, no cost sharing occurred at the watershed level. Based on the Municipal Permit requirements for watershed activities, the City allocated $25,000 for watershed activities and $10,000 for watershed education in its FY 2009-2010 budget.

10.4.1.2 REGIONAL

Table 10-5 for total regional expenditures shows the City's share of total regional costs that are determined by using cost share formulae included in the Memorandum of Understanding dated November 16, 2007, and signed by all Copermittees.

The City participates in regional meetings and activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, costs associated with activities of the following workgroups were included in the regional expenditures and budgets:

- Program Planning Subcommittee
- Fiscal, Reporting, and Assessment Workgroup
- Education and Residential Sources Workgroup
- Monitoring Workgroup
- Land Development Workgroup
- Municipal Workgroup
- Industrial and Commercial Sources Workgroup
- Regional WURMP Workgroup

Additionally, City staff time for attending regional workgroup meetings has been included in regional expenditures for Fiscal Year 2009-2010. Finally, annual fees for membership in the California Storm Water Quality Association is paid as a regional expenditures and the

appropriate share of the City of Chula Vista has been included in the following regional expenditure analysis.

Table 10-5 NPDES Regional Expenditures for FY 2009-2010

REGIONAL COMPONENT		MULTIPLE PROGRAMS	PRIOR PROGRAMS
Chula Vista's Share of the Regional Total	**$244,655**		

As shown in Table 10-5, City's share of the above expenditures was $244,655 for FY 2009-2010.

10.4.2 FUNDING SOURCES

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, these vary significantly from year to year, depending on the level of development activities within the City. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

Table 10-6 Funding Sources for FY 2009-2010

No.	FUNDING SOURCE	PROGRAM ELEMENT
1	General Fund	Storm Water Management Program
		Storm Drain Maintenance
2	Storm Drain Fee	Storm Water Management Program
3	Sewer Fee	Wastewater Collection System Maintenance
4	Special Assessment District Fees	Storm Drain Maintenance
		Wastewater Collection System Maintenance
5	Grant Funds	Used Oil Recycling
		Drainage Capital Improvement Projects
6	Solid Waste Fee	Household Hazardous Waste Management Waste Management Recycling
7	Developer Deposits and Fees	Environmental Reviews
8	Loans	Drainage Capital Improvement Projects
9	Transnet	Drainage Capital Improvement Projects

11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6*[9] *to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the Copermittees to the Regional Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in other sections of this report.

The 2004-2005 reporting year was highlighted by the Copermittees' regional development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD). This comprehensive assessment incorporated water quality and source data collected by all Copermittees and provided a critical first look at regional water quality presented per watershed.

The City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City continued to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

During the reporting period, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the continued implementation of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

Notably, in FY 2008-2009 and into the current reporting period, the City of Chula Vista administered a survey instrument designed to measure public awareness of various storm water quality related issues. Analysis of the survey has been detailed in Attachment M. In addition, the City continued its source inventory validation process. This effort has been detailed in Sections 2.0 through 6.0 of this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization
  - BMP Selection
  - Targeted Outcomes
  - Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics are included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation during the reporting period. It is important to recognize that the whole of this document represents an account of program implementation in 2009-2010, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluates the overall effectiveness of the City's Storm Water Management Program.

11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2001 as updated in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this concept continues to be perpetuated. The City has sought to integrate these key elements in order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

Source Characterization
Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by the previous Municipal Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially compiled in 2001, and have been updated annually ever since. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS systems, GBA database, and comprehensive business license tracking. In recognizing that source characterization needs to be increasingly matched to identified water quality concerns and program results, the City seeks to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Sections 2.0 through 6.0 of this report, the City has continued to fortify source characterization in 2009-2010. Comprehensive field verification of source inventories is conducted once every five years with the renewal of the Municipal Permit, while inventory updates based on existing information in the City's databases and observations during regular inspections are conducted annually. In this reporting period, the City continued its extensive source verification utilizing the City's Permits Plus program combined with field verification to identify all active industrial and commercial facilities Citywide. Notably in FY 2009-2010, the City mailed BMP education letters and notifications as required by Permit section D.3.b.(2)(c) to all commercial and industrial businesses that are not required to be inspected by the Municipal Permit. Source inventories were updated based on returned letters. The Municipal inventory is updated continuously as new facilities are constructed or acquired. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data is utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

BMP Selection
In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by the previous Municipal Permit's Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. These minimum BMPs were visited during the City's JURMP update in 2008 and changes were made as needed. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs. As previously mentioned, letters detailing the City's BMP requirements were sent to all commercial and industrial businesses within the City.

Targeted Outcomes
The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes be established prior to program implementation to accurately provide

measurability and accountability. Included within the regional long-term assessment framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

Figure 11-1 Hierarchy of Targeted Outcomes

Assessment Measures and Indicators

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes in water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional level.

11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the water quality of discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success or failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for the Copermittees to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)
- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2004-2005, and will be addressed for the current Municipal Permit cycle in the next ROWD. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The graph on the following page, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent-specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. Graphs detailing the action level exceedences for each pollutant are on the following pages.

11.3.2 PROGRAM ASSESSMENT

In 2009-2010, the City continued to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2009-2010 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment. As mentioned in the preceding paragraphs, Copermittees continued to collaborate in an effort to establish a comprehensive assessment in developing a standardize framework for assessing the effectiveness of Jurisdictional Urban Runoff Management Program.

Additionally, during this reporting period the City administered a survey to measure public awareness and behavior on various storm water quality related issues. Based on the City's population of about 220,000, a 95% confidence level, and 4 confidence intervals, it was determined that at least 599 people had to be surveyed to obtain results that were statistically significant. In this reporting period, Storm Management Section staff used the opportunity provided by various public events to establish contact with citizens and conduct the survey. A total of 662 surveys were collected. This number exceeds the minimum requirement thus increasing the general level of survey accuracy. Survey data and analysis is detailed in Attachment M. The report presents the analysis approach, a summary of data, and a comparison with the results of a similar survey that was administered in the City's FY 2005-2006 baseline survey. Analysis results provide the City with more understanding of general JURMP implementation effectiveness as well as potential areas where the City's storm water program can be improved or enhanced. The City will use this data to better focus its storm water education efforts.

The discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City, based on various components of the Municipal Permit (Tables 11-1 – 11-8). In the following sections, these tables and their associated analysis are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation, reflecting various elements of the Municipal Permit, and provide a summary accounting of activities conducted by the City in 2009-2010.

11.3.2.1.1 LAND USE PLANNING

In view of the recent update to the City's local Standard Urban Storm Water Mitigation Plan (SUSMP), and inclusion of Low Impact Development (LID) and Interim Hydromodification Criteria (IHC), the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. During the current reporting period, development activities remains slow and the number of projects submitted to the City for approval and permit issuance was low. As can be seen from Table 11-1, ten SUSMP projects were submitted and one SUSMP project received approval. However, the number of total cumulative projects that have implemented post-construction BMPs and the number of projects inspected for post-construction BMPs remains high.

During this reporting period, BMP maintenance verification letters were sent to responsible parties reminding them of their responsibility to clean, inspect, and maintain storm water treatment facilities (see Table 11-2). Responsible parties were required to provide the City with certification of maintenance of the treatment facilities within a set time frame. Additionally, the City has added another GIS layer in our GBA tracking system identifying all public and private treatment category BMPs. These processes provided yet another mechanism to ensure proper maintenance and effectiveness of all treatment facilities and compliance with Municipal permit provisions.

The following tables summarize City of Chula Vista's activities during the reporting period towards ensuring compliance with SUSMP implementation and the review, inspection, and maintenance verification of SUSMP projects.

Table 11-1 FY 2009-2010 Compliance with Activity-Based Requirements – Land Use Planning

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.1 Land Use Planning	Development Projects	# SUSMP Projects Submitted	# SUSMP Projects Approved	Actual/Target	%
		11	1	N/A	N/A
	High Priority Sites (Total Listed = 42)	# Sites Targeted for Inspection	# Sites inspected	Actual/Target	%
		42	42	42/42	100
	Medium Priority Sites (Total Listed = 50)	25	36	36/25	144
	Low Priority Sites (Total Listed = 89)	As Needed	58	As Shown	100

Table 11-2 FY 2009-2010 Post Construction BMP Maintenance Verification

Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
High Priority Sites (Total Listed = 42)	# Projects sent BMP maintenance notification letter	# Projects returned BMP maintenance verification letter	Actual/Target	%
	42	42	42/42	100
Medium Priority Sites (Total Listed = 50*)	41	34	34/41	83
Low Priority Sites (Total Listed = 89*)	76	68	68/76	89

* It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. At the end of the reporting period, there were 22 municipal treatment control facilities that did not require a BMP notification letter. These facilities can be found in Attachment A.

Based upon the significant achievements and continued refinements experienced in 2009-2010, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

JURMP strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2009-2010

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

Development Storm Water Manual

The Manual, updated in March 2010, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by City staff, developers, and consultants. The Manual supersedes a similar document titled "Development and Redevelopment Projects Storm Water Management Standards Requirements Manual," which was adopted in November of 2002.

During this reporting period City staff actively participated in the Regional Land Development Workgroup meetings and activities and collaborated with other participants to update the Model SUSMP and develop a Hydromodification Management Plan (HMP). As mentioned earlier, in

March 2009, the Regional Board approved the updated Model SUSMP. Copermittees were given 365 days to incorporate the Model SUSMP requirements into their local SUSMPs. Likewise, Copermittees submitted a draft HMP to the Regional Board, which was approved in July 2010. HMP requirements are expected be in effect six months after its approval (January 2011). The City of Chula Vista has met all the deadlines for updating its local SUSMP. The Final HMP will be incorporated in the City's SUSMP before January 14, 2011.

Inter-Departmental Coordination

The City's SUSMP and development review process includes multiple entities throughout the City. As the City continues to grow, it has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Although the current economic situation has slowed down the City's growth during the past three years, such coordination has continued in 2009-2010 to require refinement and augmentation, as necessary, to maintain compliance and ultimately improve water quality.

Dedicated Storm Water Management Section

The Development Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to City staff and assist project proponents and consultants. Storm Water Compliance Inspectors and Environmental Health Specialists also perform the functions of post-construction BMP construction verification, inspection, and maintenance verification.

Information System Support

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. Additionally, Permits Plus, which is a specialized permits tracking software, is utilized in tracking a variety of discretionary permits, and specifically is used by the Development Services Department to identify and track Priority Development Projects. Further, Permits Plus is utilized in annual inventory updates. Notably, in 2009-2010, the GIS layer was continuously updated to manage and provide easy access and tracking of post-construction BMP Treatment facilities. A recent update was an addition of a layer identifying public and private categories of post-construction BMP Treatment facilities.

Data Management

As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. The City continues to address these challenges through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. The City continues to maintain up-to-date data and effectively track all information related to JURMP activities such as inventories, inspections, violations, notifications, and post-construction BMPs.

New Development and Redevelopment Project Design Elements

With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City continued to work with the development community to improve the design of storm water design features of proposed projects. The City continuously stressed this focus in 2009-2010 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects. The recently approved Model SUSMP, which was incorporated in the City SUSMP requirements, will provide a new approach in the level of analysis and project design elements for the development community.

11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component continued to demonstrate success by consistent programmatic developments and enhancements. Through identified needs and associated management decisions, the City fortified its jurisdictional construction management component in 2009-2010. As the slowdown in development continued, many construction sites remained inactive or faced sever reductions in construction activities. Within the reporting period, the City worked closely with developers to stabilize inactive construction sites; promote pollution prevention and BMP implementation; and ensure proper maintenance of BMPs to prevent polluted discharges from construction sites. Because of sagging economy, this was a challenge as many developers claimed that they had limited financial resources and were unable to provide the necessary resources. City staff worked with developers to identify cost-effective BMPs and in some instances initiated enforcement action until full compliance was achieved. Mechanisms were identified to promote pollution prevention techniques as described in Section 3 of this report. The City continues to maintain the regulatory standards mandated by the Municipal Permit and as developed and improved through previous years by the City irrespective of prevailing conditions.

Table 11-3 FY 2009-2010 Compliance with Activity-Based Requirements – Construction

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.2.d Construction	High Priority Sites (Total Listed = 7)	# Sites targeted for inspection	# Sites inspected	Actual/ Target	%
		7	7	7/7	100
	Medium Priority Sites (Total Listed = 27)	27	27	27/27	100
	Low Priority Sites (Total Listed = 70)	70	70	70/70	100
	All Sites (Total Listed = 104*)	Total sites identified	# in compliance or on a schedule for compliance	Actual/ Target	%
		104	104	104/104	100
		# of inspections during dry season	# of inspections during wet season	Total # of inspection s	N/A
		17	286	303	N/A

*Note: Of the total number of construction sites listed above, it is estimated that about 70% to 80% were inactive during the reporting period. Therefore, active sites were inspected according to the Municipal Permit requirements and inactive sites were inspected on an as needed basis.

The following features distinguish the construction component of the City's JURMP:

Inspection and Enforcement

As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensure compliance with this JURMP component on construction sites. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been fully achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

Education and Training

Storm Water Management staff provides education and training to all entities related to construction activities including developers, site superintendents, sub-contractors, and trades persons. During the previous years, this education and training capacity was further defined by storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, Chula Vista Storm Water Management staff continues to offer a strong asset and broad-based expertise in construction storm water management both locally and regionally. The adoption of the new General

Construction Permit necessitates further education and trainings to all entities related to construction activities. During this reporting period, City staff was given the opportunity to speak at a regional seminar for the construction industry. City staff continued their efforts in educating members of the construction industry at the local level during meetings and site inspections.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2009-2010. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

BMP Maintenance

During the reporting period, due to an increase in the number of inactive construction sites, BMP maintenance on construction sites continued to be an area of concern. While inspection staff noted significant efforts in BMP implementation, the maintenance needs associated with implemented BMPs did not match implementation efforts on a consistent basis. As a reminder, the City issued a formal letter to all developers with inactive construction sites reiterating their responsibility for BMP implementation as discussed in details in section 3 of this report.

11.3.2.1.3 MUNICIPAL

As exemplified in program descriptions included in other sections of this report, the City prides itself for outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City functions such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. The following table summarizes functions' data.

Table 11-4 FY 2009-2010 Compliance with Activity-Based Requirement – Municipal

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.a Municipal	High Priority Sites (Total Listed = 64[1])	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		61	61	61/61	100
	Medium Priority Sites (Total Listed = 5)	As needed	0	N/A	N/A
	Low Priority Sites (Total Listed = 19)	As needed	0	N/A	N/A
	Catch Basins, Inlets, MS4, Open Channels	Estimated quantity of waste targeted for removal (Tons)	Quantity of waste removed (Tons)	Actual/Target	%
		427	427	427/427	100
	Streets/Parking Lots	Estimated distance of curb/park miles to be cleaned	Total curb/park miles cleaned	Actual/Target	%
		18,000	18,000	18,000/18,000	100
	Catch Basins/ Inlets	# of catch basins and inlets in the City	# of catch basins and inlets inspected	Actual/Target	%
		8,801	8,480[2]	8,480/8,801	96
		# of catch basins and inlets targeted to be cleaned	# of catch basins and inlets cleaned	Actual/Target	%
		4,444	4,444	4,444/4,444	100

[1] Three categories listed in the Municipal Inventory as follows are inspected on a regular and as needed basis and are not included in the total number of sites targeted for annual inspections:

- MS4
- Roads, Streets, and Highways
- Special Events

[2] Out of 8,801 catch basins and inlets, 8,480 were inspected in this reporting period. The remaining 321 catch basins and inlets are scheduled for inspection in FY 2010-2011.

With such a well-rounded approach, the City has a significant number of management measures to accurately assess the effectiveness of municipal program component. Further, no BMPs have been identified as ineffective within the reporting period of this report.

The following features distinguish the Municipal component of the City's JURMP:

Municipal Facility Inspections
The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2009-2010, and as part of this comprehensive inspection process, Storm Water Management staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

Environmental Programs
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have continued to capitalize upon in 2009-2010 through the development of a broad-based outreach and educational campaign by the City. The City's CLEAN Business program adopted in 2008 continued to promote partnerships between the City and local businesses that operate in a socially responsible manner and protect the environment. The program was well received by local businesses and has increased in membership since its adoption.

Based on exemplary municipal pollution prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for program improvement or modification at this time.

11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2009-2010 reporting year was a continued maintenance year in terms of industrial and commercial activities within the City. Inventory validation and supplemental inspection efforts remain the highlights of this year's activities. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous industrial and commercial facilities operating within the City. With such a significant variety of commercial and industrial activities in Chula Vista, staff has recognized the need to target those areas and business activities that remain high on the source priority list, and to provide a consistent presence and strong enforcement standard. Notably in this reporting period, Storm Water Section staff initiated an educational training program on storm water pollution prevention and BMP implementation to specific industrial facilities that have a track record of violations and were identified as High Threat To Water Quality.

The City's FY 2009-2010 inventory of industrial/commercial facilities includes 198 industrial and 1,228 commercial facilities (which includes 333 mobile businesses). In 2009-2010, Storm Water Management staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Municipal Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not

identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

Table 11-5 FY 2009-2010 Compliance with Activity Based Requirements – Industrial/Commercial

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.b Industrial	High Priority Sites (Total Listed = 48[1])	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		48	48	48/48	100
	Low Priority Sites (Total Listed = 150)	As needed	2	As shown	100
D.3.c Commercial	High Priority Sites (Total Listed = 201)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		201	201	201/201	100
	Low Priority Sites (Total Listed = 1,022[2])	As needed	28	As shown	100

[1] Four high priority industrial facilities included in the industrial inventory are owned by the San Diego Unified Port District and are inspected by that agency

[2] 333 commercial facilities included in the commercial inventory are mobile businesses that are regulated differently from other businesses. The Municipal Permit does not require their annual inspection.

The following features distinguish the industrial/commercial component of the City's JURMP:

Integrated and Balanced Approach

With a dedicated Storm Water Compliance Inspection staff, industrial and commercial facilities are effectively regulated. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme. Further, Public Works maintenance and landscape crews, whose working environment is in the field, have been trained and educated in storm water pollution prevention and report any observed illegal activities or discharges. As such, they are considered the "eyes and ears" of the Storm Water Management Section.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City of Chula Vista defines the residential component of the City's JURMP. Any small changes in behavior of residents are magnified due to the effect of numbers. As such, the Storm Water Management staff has sought to achieve continued success in the reduction of pollutants from residential areas through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types associated with such activities. The Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality. Table 11-6 shows the quantity of Household Hazardous Waste and used oil collected from residents in the City of Chula Vista for FY 2009-2010. The significant increase in quantity collected in HHW can be attributed to an aggressive effort by the City on residential outreach and educational efforts. Conversely, the quantity of used oil collected came down dramatically in this reporting period. In previous years, the California Integrated Waste Management Board (now CalRecyle) allowed estimates given by center operators. Numbers given in the previous years are overestimated. In 2010, the State now only accepts numbers from claims submitted to the Board. Collection centers get reimbursed for the number of gallons they accept from the public. This number represents a more accurate quantity of used oil collected and will be the baseline data for tracking in the forthcoming years.

Table 11-6 FY 2009-2010 Compliance with Activity-Based Requirements – Residential

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.e Residential	Household Hazardous Material	Quantity of HHW[1] targeted for collection	Quantity of HHW collected	Actual/Target	%
		252,494 lbs (FY 08-09)	294,217 lbs (FY 09-10)	294,217/ 252,494	116
	Used Oil	Quantity of used oil collected from certified collection centers (FY 08-09)	Quantity of used oil collected from certified collection centers (FY 09-10)		%
		48,287[2] gallons	23,560[3] gallons	N/A	N/A

[1] HHW= Household Hazardous Waste

[2] In previous years the California Integrated Waste Management Board (now CalRecyle) allowed estimates given by center operators. Numbers given in the previous years are overestimated.

[3] In 2010 the State only accepts numbers from claims submitted to the Board. Collection centers get reimbursed for the number of gallons they accept from the public.

Residential Program Strengths:

Pollution Prevention
The City's residential component is strengthened by various pollution prevention programs offered to residents. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, oil filters, green waste, recyclables, used cooking oil, household hazardous waste, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

Residential Outreach and Education
The City continued to focus significant resources on residential outreach and education efforts in 2009-2010 and constantly endeavored to devise different avenues in reaching the public. While these activities are more fully described in Section 7.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

Residential Program Improvement Areas and Challenges:
Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts with such City entities as the Chula Vista Nature Center, the Conservation Department, the Regional Used Oil Recycling Program, and Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Management Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

While the City continuously strives to improve its JURMP implementation program, it has not identified specific management measures by which to improve education and public participation activities. The added Clean Business program was the latest measure added in our public participation activities. The City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

Education and Public Participation Program Strengths:

Environmental Program Collaboration
As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous

environmental programs within the City. As such, the Storm Water Management Program has been able to reach more diverse audiences and participate in a greater variety of public participation venues. This collaboration of programs that culminated in the creation of the CLEAN program has resulted in clear and consistent messaging to Chula Vista residents and has reinforced City's resources toward more effective and holistic environmental programs.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. Through the collaboration of environmental programs such as conservation, household hazardous waste collection, recycling, and storm water management citizens receive consistent and interrelated messages, and participate in activities that demonstrate various facets of environmental protection. Such coordinated public education and participation programs have far reaching and lasting effects that ultimately result in general acceptance of environmental concepts and changes in behavior. It has been recognized that the interrelationship of each of these programs collectively, is integral to the overall success of each of these programs individually. Finally, the City is fortunate to have the Chula Vista Nature Center to showcase the San Diego Bay and to provide tangible access to the resources the community is called to protect.

Internal Staff Training

Through formal or informal training, meetings or individual contact staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

Chula Vista CLEAN Program

The City continued to take significant steps to further implement an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment and a sense of ownership to the community's environment, water resources and watershed.

Education and Public Participation Program Improvement Areas and Challenges:

Education of the Development Community

The recently adopted Model SUSMP, which was incorporated in the City's local SUSMP required extra efforts by City staff, Developers, and consultants. The development community, which was used to meeting water quality requirements of their projects by mainly incorporating mechanical treatment BMPs in their drainage systems, was now faced with LID requirements. LID principles are based on site planning for the minimization of impervious areas, utilizing landscaped areas for the benefit of water quality, water conservation, and other natural site design BMPs that mimic the pre-development hydrologic conditions of the site.

The new LID concepts require site planning at the earliest stages of the project conception. A change in perspective and a closer cooperation between architects, planners, and engineers, as well as cross training among these groups are needed. Because of these reasons, and the inevitable fact that normally there is reluctance to change of acquired habits and established procedures, City staff faced the challenge of returning project submittals and meeting with project applicants, on occasions several times, before acceptable site plans were achieved. Through regional and jurisdictional efforts, developers and consultants are becoming familiar with the new requirements and are making the necessary adjustments to incorporate LID principles into their project plans. After the issuance of the current Municipal Permit, the Storm Water Management staff expanded its inspections and enforcement of post-construction BMPs to ensure BMP implementation and maintenance on development projects, often exceeding minimum requirements of the Permit. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

Table 11-7 Compliance with Activity-Based Requirements – Education and Public Participation

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measure of Success	
D.3.g Education	Outreach (External)	# targeted training workshops, outreach events	# training workshops, outreach events conducted	Actual/Target	%
		12	12	12/12	100
		# Material, brochures targeted for distribution	# Materials, brochures distributed	Actual/Target	%
		General public contact	General public contact	N/A	N/A
	Staff Training	# Training sessions FY 08-09	# Training sessions FY 09-10	Actual/Target	%
		11	17	17/11	155
	Opportunities for participation	Estimated # of opportunity events to be provided	# Provided	Actual/Target	%
		3	3	3/3	100

11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program all support this critical programmatic element. Notably, in 2009-2010, the City of Chula Vista completed the survey instrument designed to measure public awareness of various storm water quality related issues. The survey intends to measure the level of knowledge and associated behavioral change. Analysis of the survey has been detailed in Attachment M. During the reporting period, the City provided a wide cross-section of information through the interrelationship of various environmental programs. The City was able to significantly impact the level of knowledge and awareness within the community through its continued effort in influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Hotline Call Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years as these indicators become more wholly developed; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

Hotline Call Response Tracking

A comprehensive hotline call response summary is presented in Attachment L – Hotline Call Response Summary. It is important to note that trends in hotline calls received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of hotline calls from FY 1998-1999 to FY 2009-2010. There is a dramatic increase in hotline calls in this reporting period. This significant increase can be attributed to the expanded effort by the City in its public education and outreach that gained substantial increase in public awareness of various storm water quality issues. It may be inferred that overall programmatic influences are strong throughout the community.

Figure 11-2 Chula Vista Storm Water Hotline Call Summary 1998-2010

Business License Application Screening Procedure

The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants, Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

The City continued to utilize the regional mobile business database website. The website includes a compilation of all approved mobile business applications in the region, which is categorized by jurisdiction. The creation of regional source inventory is a significant improvement in mobile business database management, which can provide essential information in monitoring and tracking mobile business activities in the entire region.

Storm Water Web Site

The City's CLEAN website development and update continued into 2009-2010. This site offers valuable information to Chula Vista residents and businesses and is intended to facilitate public education on environmental issues, including storm water. The website also provides a means for residents to report illegal discharges to storm drain systems. Due to technical constraints, it is not possible at this time to count the number of people accessing the website. It is hoped that this technical difficulty will be overcome in the future in order to provide a method to assess the

usefulness of the website. In the meantime, Storm Water Management Section will continue to resort to other means of assessment such as surveys.

Development Review Process

During the current reporting period, the City continued implementing the environmental review process for all development and redevelopment project submittals. The City's JURMP includes a comprehensive flow chart to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. Through the required submission of Water Quality Technical Reports (WQTR) for Priority Development Projects; subsequent review by City staff; and project pre-con meetings, in 2009-2010 a notable increase in knowledge and awareness within the development community was observed. The level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with SUSMP requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. A detailed description of the review process has been discussed in section 2 of this report. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, including Low Impact Development features, and will continue to take this approach in subsequent reporting years.

11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

During this reporting period, the City continued to implement BMP tracking measures into various components as reviewed in this report. It has been recognized that through the implementation of well-developed BMP tracking measures, the City is able to more fully evaluate BMP implementation and associated behavioral change. As discussed earlier in this section, in this reporting period, the City completed its second survey to measure public awareness and behavior on various storm water quality related issues. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation
- Survey

Inspection Activities

As discussed in applicable sections of this report, the City has developed comprehensive commercial, industrial, municipal, and construction inspection programs. It is through these well-developed inspection programs, that the City is able to utilize BMP implementation tracking and assessment mechanisms.

In the reporting year 2009-2010, the Storm Water Management Section continued using the GBA database management system to track source inventories, inspection activities, and other data relevant to the assessment of storm water management programs. The use of the GBA was

expanded and refined to better serve the purposes of the new Municipal Permit. Through this database program, Storm Water Management staff is able to view the historical activities such as inspections and violations of commercial, industrial, municipal, and construction sites. Further, in support of BMP selection and evaluation throughout various community sectors, staff uses the inspection forms that were developed in FY 2005-2006. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities are intended to provide fully developed BMP implementation tracking mechanisms.

Based on data gathered from such activities, the City is able to take a critical look at BMP selection and implementation Citywide, and be able to evaluate behavioral change within business communities and further validate effectiveness trends in years to come.

SUSMP Implementation

Within the development community, implementation of post-construction BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

Survey

During the reporting period, the City implemented an 11-question survey designed to measure public awareness of various storm water quality related issues and their relationship to behavioral change. A similar survey was administered in 2005 and serves as a general baseline for comparison. Although the survey in general is an assessment of public awareness, a few questions were designed to measure behavioral change. The focus of the survey was residential behaviors related to auto maintenance, landscaping, pet care, and swimming pool maintenance. Overall, results show that residents are aware of pollution prevention methods to protect waterways. Results show that some improvement can be made regarding educating residents watershed knowledge, the difference between the storm drain and the sewer system, and on BMPs for vehicle washing. Results suggest that although residents know in general how to prevent pollution, they still may not know the fundamentals of why they should prevent pollution. The City will take this knowledge and use it to better focus its education program. Attachment M provides a more detailed analysis of the survey.

11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-8 are focused on municipal functions and programs.

Table 11-8 FY 2009-2010 Load Reduction

ACTIVITY/FUNCTION	LOAD REDUCTION	POLLUTANT TYPE
Used Oil Recycling	23,560 gallons	Motor Oil
Household Hazardous Waste Collection	294,217 pounds	Antifreeze, Oils, Paints, Aerosols, etc
MS4 Maintenance	35.11 tons	Trash, Debris, Leaves, Grass, Rock, Silt
MS4 Inlets	48.94 tons	Trash, Debris, Leaves, Grass
MS4 Catch Basins	28.18 tons	Trash, Debris
Channel Maintenance	280.47 tons	Trash, Debris
Street Sweeping	940 tons	Trash, Debris, Sediment

11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators and nitrate are the persistent constituents of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses. Nitrate is commonly associated with landscaping activities and groundwater intrusion. Notably, the City began a special investigation this reporting year to learn more about the sources of nitrate within the City, particularly those areas that show a consistent flow of groundwater into the storm drain system. The City will continue this special study in order to characterize these areas and to better focus its efforts in the improvement of water quality.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program
- A comprehensive storm water conveyance system maintenance
- Street sweeping
- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that the majority of pollutants are on a declining trend in this reporting period. Particularly, significant decreases in Total Coliform and Fecal Coliform are encouraging. These results can be interpreted as follows:

The City expanded its public education and outreach in this reporting period. This effort was aimed at increased awareness and changes in public behavior. Based on current and past results from the dry-weather monitoring program, and past violation reports, specific residential areas

that were identified as High Threat To Water Quality (HTTWQ) were targeted for disseminating educational materials specific to the type of pollutants and violation activities. Moreover, the implementation of BMPs as described above, is considered effective in important deceases in fecal coliform and total coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. Further, due to the slowdown in construction activities, creation of urban impervious areas slowed down during the reporting period, which may also contribute to decreased instances of observed pollutant discharges. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout a long period of time. It is expected that the next regional ROWD will include a more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

12.0 SPECIAL INVESTIGATIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.

12.1 GROUNDWATER SPECIAL STUDY

The City has identified several locations where there is a consistent flow of groundwater into the City's storm drainage system. Previous dry weather monitoring reports have identified areas where there is seepage into storm drain pipes or where groundwater is freely flowing from the ground. In order to better characterize groundwater discharges within the City, a special investigation was undertaken to identify these areas. With the help of a consultant, the City identified five areas where groundwater is consistently seeping into the storm drain system. Water samples were taken from these areas and field observations were recorded. Samples were analyzed for physiochemical parameters (pH, conductivity, total dissolved solids (TDS), and turbidity) and constituents commonly associated with groundwater (nitrate, nitrite, total kjeldahl nitrogen, and total nitrogen). In addition, analysis for residual chlorine was done to determine if samples were potable water discharges. Based on preliminary review of the data, it was determined that these samples were not potable water discharges. Nitrate-nitrogen levels above the dry weather action level in addition to high TDS levels suggest that these samples are consistent with groundwater discharge characteristics. Historically, Chula Vista was largely an agricultural area in the eastern portion. Agricultural activities especially those related to fertilization could have contributed to the high nitrate levels in the soil. Recent development in Chula Vista has caused increased grading, which has mobilized soil and re-suspended nitrogen through the nitrogen cycle. Nitrate-rich groundwater in addition to fertilizers in soil may be contributing to elevated nitrogen levels observed in this special study.

The City will continue this long-term special study to identify and characterize the areas where groundwater is discharging to the storm drain system. Potential future directions involve identifying and sampling these areas, in addition to creating a map to mark and track these areas over time.

13.0 NON-EMERGENCY FIRE FIGHTING

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.

13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods will be used to reduce the discharge of pollutants to the MEP. BMPs will be implemented when conducting the activities described in the following sections:

13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff will be directed to the sanitary sewer system.
- Vehicles and equipment are cleaned where runoff will pond and evaporate and/or where runoff will filter through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

13.2.2 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When water flows to an area where landscaping does not prevent runoff, the Officer-in-Charge surveys the area prior to training activities to ensure that drill activities do not wash debris or sediment to storm drain systems.
- Prior to drill activities, debris is removed from downstream areas that could potentially discharge to storm drain systems.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.
- On October 13, 15, 19 and 22, 2009, Storm Water Management Staff provided Storm Water Pollution Prevention Refresher Training to approximately 110 Fire Department personnel. Topics included a general overview of the storm water permit, BMPs, and the review of the City's program for non-emergency fire fighting flows.

13.2.3 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept regularly to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and the disposal of spilled materials is in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site personnel are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

13.2.4 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods cannot be identified. In such cases, water usage and discharges to MS4s are kept to a minimum and BMPs are implemented.

13.2.5 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory. Such facilities are inspected on an as needed basis (See Attachment C). Only one fire station (Fire Station No. 4/Training Tower) has training capabilities. This facility is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter
- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism, which diverts the wash water to the sanitary sewer system and rainwater to storm drain systems.

All personnel who conduct washing activities are properly trained on using the diverter device and ensuring it is used appropriately. Trucks that require cleaning from other stations are brought to the stations equipped with washing capabilities.

14.0 JURMP REVISIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(m)i – A description of any proposed revisions to the JURMP.

The following paragraph details proposed updates to the City's JURMP.

APPENDIX B

Since the City's JURMP document was developed and submitted to the Regional Board in March 2008, Appendix B of the JURMP has been updated during the current reporting period, which includes inventories of construction sites; municipal, commercial, and industrial facilities and activities; and Priority Development Projects with treatment control BMPs. Updated inventories are included in Attachments A to E of this report.

15.0 CONCLUSIONS

The present report is an accounting of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2009 to June 30, 2010. It has been prepared in compliance with the requirements of the San Diego Regional Water Quality Control Board's Order No. R9-2007-0001, National Pollutant Discharge Elimination System Municipal Permit No. CAS0108758. The report format follows the regional standardized reporting format developed by the Copermittees as required under Section M.6 of the Municipal Permit.
