The expanded application of LID practices coupled with quantified IMPs lends direct support to the HMP component by providing a broad spectrum of design concepts aimed at minimizing the introduction of pollutants and offsetting the conditions of concern associated with changes in the hydrologic regime. In short, the updated method clearly accounts ever drop of water that leaves a site.

The updated SUSMP is available at the City of Oceanside – Development Services counter or may be downloaded from the City Clean Water Program website at:

http://www.oceansidecleanwaterprogram.org/pdf/OceansideSUSMP.pdf

or the City Engineering Division – Subdivision Section website at:

http://www.ci.oceanside.ca.us/pdf/OceansideSUSMP.pdf

By following the design procedure outlined in the updated SUSMP, applicants and design professionals can develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements.

2.2.4 Program Implementation

Program implementation is enabled by the General Plan, which was adopted by the City Council and recognized as a legally binding document. All applicable projects, including municipal projects are required to be consistent with the plan. In addition to the General Plan, the City addresses storm water pollution issues through the application of its Municipal Code. Chapter 40 of the Municipal Code is the Urban Runoff Management and Discharge Control Ordinance and is commonly referred to as the Storm Water Ordinance. The Ordinance contains multiple references to the current NPDES, Municipal Permit, and SUSMP as the governing storm water regulations. All new development and redevelopment projects are subject to updated SUSMP and the lawful prior approval provisions of the Municipal Permit.

All project applications are subject to a formal SUSMP Determination. Formal determinations are based upon a review of the Planning Division project application submittal. The minimum amount of information necessary to perform a SUSMP Determination includes a completed Storm Water Quality Assessment form, site plan, and project description and justification. The objective of the SUSMP Determination is to provide a consistent and thorough method for the initial review of development and redevelopment projects, with the overall purpose of categorizing projects and determining applicable SUSMP requirements. Development and redevelopment projects are categorized as; projects not subject to SUSMP Treatment requirements (Exempt Projects), Standard Development Projects (SDPs), or Priority Development Projects (PDPs). The SUSMP Determination also demonstrates to the RWQCB that each project receives a consistent review and enables the City to document project categorization and satisfy Municipal Permit requirements for reporting findings in the JURMP Annual Report.

Details on the completed and planned SUSMP updates may be found in Section 4.4.4.4 of the 2008 JURMP. In addition, information pertaining to the legal authority to implement a storm water program is located in Section 2 of the 2008 JURMP.

2.3 Environmental Review Process

The City has evaluated its established environmental review process for all development projects to determine compliance with the Municipal Permit. The City guides developers through the filing necessary documents and identifies which reports are required to be submitted and approved before development may begin. The current environmental review process places emphasis on the evaluation of water quality impacts and related issues that may result from the project development.

The Planning Division and Engineering Division of the Development Services Department are responsible for reviewing development projects for conformance with storm water requirements. The City will continue to assess all development and redevelopment projects for compliance with the California Environmental Quality Act (CEQA) by reviewing the Environmental Initial

Study completed by each project applicant. A copy of this checklist is included in Appendix D of the 2008 JURMP. The checklist contains questions to evaluate potential negative impacts on receiving water bodies. Projects which are determined to have "potentially significant impacts" to the surrounding environment and receiving waters are required to prepare Environmental Impact Reports (EIRs) for City review. Development projects that are not required to prepare EIRs proceed to the next phase of the approval process.

During the development of the 2008 JURMP, the City evaluated its current established environmental review process for all new development and redevelopment projects to determine compliance with the Municipal Permit. The City determined that the current environmental review process adequately addresses the requirements of the Municipal Permit. While the specific requirements evaluated during the environmental review process are expected to be updated periodically, the basic review structure did not require revision during this reporting period. Details of the current environmental review process are provided in Section 4.3 of the 2008 JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

The City has an established administrative and discretionary approval processes that provides multiple reviews by the Planning and Engineering Divisions. The Planning Division is responsible for determining acceptable land uses, development constraints, and identifying environmental issues. The Engineering Division is composed of various disciplines (i.e., Engineering Improvements, Grading and Drainage, Hydrology, Geotechnical, Storm Water, Traffic, and Landscape), which perform a coordinated review of all project applications. The Fire Department also performs multiple reviews and notifies the appropriate division in the event of a discrepancy or nonconformance with development regulations. In addition, the Building Division coordinates with Storm Water Development Review to ensure that new development, remodeling projects, additions, or demolitions are reviewed for compliance with storm water regulations. The coordinated involvement of all Divisions and disciplines provides an elevated degree of assurance that all projects are subjected to thorough scrutiny as part of a typical review process. Particulars surrounding the project approval and process verification are discussed in the following sections.

2.4.2 Source Characterization

Source characterization is an integral component of any urban runoff program. A wide variety of land use types and activities, if left unmitigated, are known to be sources of pollutants that have the potential to negatively affect the surrounding environment and the project receiving waters.

The March 2010 SUSMP identifies ten (10) separate "Priority Project Categories" (PDPs), which are cited as anticipated or potential sources of storm water pollution based upon particular land use types and specific site conditions, such as site topography and proximity to environmentally sensitive areas. During this reporting period the number of PDP categories was reduced from twelve to ten by expanding the definitions for Heavy Industry projects and projects with the potential to affect Water Quality Environmentally Sensitive Areas (WQESAs).

Source characterization augments the implementation of Site Design, Low Impact Development, Treatment Control, and flow control management practices that enable development and redevelopment project to reduce impacts to the receiving waters and demonstrate compliance with the Maximum Extent Practicable (MEP) standard. Priority Development Project and General Pollutant Categories appear in Table 1-1 of the updated SUSMP.

2.4.3 Best Management Practice Requirements

The Municipal Permit dictates minimum BMP requirements for all new development and redevelopment projects. The requirements are included in the City Storm Water Ordinance and SUSMP and shall include, but not be limited to, the implementation of the following BMPs and LID practices by the project proponent:

- Source Control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed outdoor material storage areas, properly designed trash enclosure areas, the implementation of Integrated Pest Management Principles (IPM) and the inclusion of efficient irrigation system, and drought tolerant/native species landscape design consistent with the City Water Efficient Landscaping Ordinance 10-OR0412-1.

- The inclusion of Low Impact Development (LID) practices that conserve natural topographic features, provide development setbacks from natural water bodies and conveyances, minimize site imperviousness, maximize infiltration, and retain and slow runoff;

- Buffer zones from natural water bodies, where feasible. Require the project proponent to implement other types of buffers such as trees or access restrictions where conventional setbacks are not feasible;

- Measures to mitigate discharges of pollutants that result during grading or construction activities as specified in the Section D.2 of the Municipal Permit; and

- Submittal and approval of a mechanism under which ongoing long-term maintenance of all structural post-construction BMPs will be conducted.

These minimum storm water BMP requirements are an integral part of the City standard conditions of approval and are required of all projects receiving administrative and discretionary permits. The City will not support the entitlement of a project or issue development permits until the appropriate SUSMP documents are reviewed by City staff and approved by the City Engineer. Any subsequent changes that affect the approved BMPs will be subject to an amendment process that includes review by City staff and approval by the City Engineer.

2.4.4 Program Implementation

2.4.4.1 SUSMP Revision

The SUSMP updates and expands storm water requirements for new development and redevelopment projects. Storm water treatment requirements have been made more widely

applicable and more stringent. New requirements include minimum standards for the implementation of Low Impact Development (LID) practices and the integration of flow control criteria designed to mitigate runoff peaks and durations from development sites. The updated SUSMP incorporates a unified LID procedure which combines site planning and design measures coupled with engineered, small-scale Integrated Management Practices (IMPs).

The updated SUSMP includes specific design information for dispersal of runoff to landscaped areas and for the integration of pervious pavements, bioretention facilities, flow-through planters, dry wells, infiltration basins, and cisterns into the project design. Where feasible and where permissible, the water in cisterns may be directed to non-potable uses to augment irrigation practices. Bioretention facilities and planter boxes may be designed with an impermeable barrier so that runoff does not saturate native soils. Instead, runoff is filtered through an engineered soil mix and captured in a subdrain and conveyed to a storm drain system. This configuration may be needed where native soils have low infiltration rates, where groundwater is high, contaminated, or where increasing soil moisture may present a hazard to foundations or slope stability. In limited and special circumstances, such as retrofit of existing drainage systems, some pedestrian-oriented developments, and roadway widening projects; where it can also be demonstrated it is not be feasible to construct any of these facilities, higher-rate surface biofilters or higher-rate vault based filtration units may be used to address treatment requirements.

Applicants are also required to incorporate design features to control pollutants from specified on-site sources, such as refuse areas, outdoor storage areas, and vehicle washing and repair facilities. The SUSMP contains a number of Source Control BMPs designed to address the types of sources to be controlled and a corresponding list of required source control measures.

In additions to disconnecting impervious surfaces and mitigation pollutant sources, applications for approval of Priority Development Projects (PDPs) are required to demonstrate compliance with the hydromodification management criteria of the NPDES permit. The SUSMP includes guidance for demonstrating compliance. Submittals for projects smaller than 50 acres may demonstrate compliance by using the integrated LID design procedure. For larger projects, the applicant may use a continuous simulation hydrologic computer model to simulate pre-project and post-project runoff, which includes analyzing the effect of LID facilities, detention basins, or other storm water management facilities, or may identify an exemption applicable to the site.

By following the design procedure, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements.

2.4.4.2 SUSMP Document Review

During this reporting period the City continued to implement requirements and practices cited in the Municipal Permit, Interim SUSMP, and updated SUSMP. The Clean Water Program continued to use a full-time staff member to perform storm water development review. Storm water development review includes indentifying applicability of SUSMP requirements and confirming that SUSMP documents are in conformance with the Municipal Permit and SUSMP. Review also involves confirming that related final engineering/construction plans are consistent with the approved SUSMP documents.

Each new development and redevelopment project is required to complete a Storm Water Quality Assessment form. The form and associated development plans; provide staff with information to perform a SUSMP determination. A SUSMP determination typically places the bulk of projects into a Priority Development Project or Standard Development Project category.

The majority of new development and redevelopment projects are subject to the provisions of the SUSMP. Projects are identified as Priority Development or Standard Development projects based upon land use categories and applicability of permanent storm water BMPs. A very limited number of projects are not required to submit a SUSMP document and are noted as SUSMP exemptions. Projects which are granted a SUSMP exemption typically involve incidental construction with negligible or no ground disturbance activities. Examples include the addition of an antenna to an existing cellular tower or interior tenant improvements to an existing building.

A SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of infeasibility to a Priority Development Project and does not anticipate granting waivers in the future; however, if waivers are necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed.

Projects which have been formally identified as Priority Developments or Standard Developments are required to submit a project specific Storm Water Mitigation Plan (SWMP). Entitlement project storm water plans and supporting documents are submitted to the Planning Division for distribution to Engineering and Storm Water Development Review staff. The storm water review of Priority and Standard Development Projects is an iterative process that entails examination of the SWMP for consistency with SUSMP and Municipal Permit requirements. SWMP reviews also comprise an evaluation the supporting documents that include (at a minimum); the Site Development Plan, Project Description and Justification, Hydrology Study, Geotechnical Report, Biological Study, Slope Analysis, and etc. Projects which are consistent with the Municipal Permit and SUSMP are deemed complete and forwarded to the City Development Engineer and City Engineer, respectively, for final review and approval. A digital image and hard copy of the original, wet-signed plan are retained for City records.

2.4.4.3 Priority Projects

Priority Projects are required to obtain an approved SWMP as part of the project entitlement process. The items required in a SWMP are described in Section 1.6 of the SUSMP. In summary, Priority Projects must determine the Primary Pollutants of Concern based upon source characterization and impacts to the 303(d) impaired receiving waters. This category of development is required to provide Source Control BMPs while implementing LID practices. The project must incorporate Integrated Management Practices/Structural Treatment Control BMPs into the site development. The selected IMPs/Treatment Control BMPs must have a medium to high removal efficiency for the identified Primary Pollutants of Concern. The Treatment Control BMPs with low pollutant removal efficiencies are not permissible in the City of Oceanside.

Priority Projects must also have an approved Operation and Maintenance Plan (O&M Plan) and enter into a Storm Water Facilities Maintenance Agreement (SWFMA) to ensure the long-term maintenance and operation of the Treatment Control BMPs. The City Engineer will not consider Priority Project structural Treatment Control BMPs "effective," and therefore will not accept storm water BMPs as meeting the MEP standard, unless a mechanism is in place that will ensure ongoing long-term maintenance of all structural BMPs. This mechanism shall be proposed by the project proponent as part of the SWMP and will be refined though the City's review process until satisfactory verification of maintenance is provided to the City Engineer. Such verification may include but is limited to covenants, legal agreements, maintenance agreements, and/or conditional use permits. A non-refundable security may be required. The security provides the City with funding to perform maintenance activities in the event of default by the owner.

2.4.4.4 Priority Project Example

The Harbor Aquatics Center is an example of a capital improvement project (CIP) applying for a regular coastal permit (RC-2-09). The site is located on the peninsula forming the western bank of Oceanside Harbor. The project developed a specific SWMP which is consistent with the Interim SUSMP and was approved on December 29, 2009.

The 1.4 acre site is located immediately south of the boat launch ramp; on the eastside of North Pacific Street, north of South Harbor Drive. The proposed development resides in the Lower Ysidora Hydrologic Sub-Area (902.11) of the Santa Margarita Hydrologic Unit (902.00), with historic drainage patterns tending from west to east and discharging directly into the Oceanside Harbor. Past site usage included storage of beach recreation and maintenance equipment. The lot was vacant at the time the SWMP was prepared.

The proposed development is categorized as a commercial development of greater than 1 acre, with a parking lot having greater than 15 spaces and potentially exposed to urban runoff, and being a site directly adjacent and discharging to a Water Quality Environmentally Sensitive Area (WQESA).

The project is comprised of a community center building and adjacent storage facility/building. The buildings are aligned parallel to each other, forming a parking court and drive aisle. Each building is fronted by a supporting row of parking spaces constructed of pervious pavers. A drive aisle, constructed of "Gravelpave^2®" porous pavement, serves as a common access to the site. The pervious paver and porous pavement parking areas are equipped with perforated subdrains that collect treated runoff from parking lot and adjacent roof and flatwork areas. Adjacent landscape areas are planted with native and drought tolerant species, and are designed to self treat by elevating the grated area drains, thereby increasing volume retention and time. Approximately 80% of the site is treated within the parking and landscape areas. The treated runoff from these areas is collected in a series of perforated and tight-line drains, and is then conveyed to a final, proprietary, cartridge type "Stormfilter®" manufactured by Contech®. The "Stormfilter®" is a final, "polishing" BMP before the discharge is released to the harbor.

The remaining 20% of the site is comprised of a wash area. The wash area is designed for "hosing-down" kayak, boogie board, and surfboard rentals. Equipment used to clean the beach of debris, trash, kelp, and etc will also be washed in this area to remove sand and salt; to increase

service life. No detergents will be used during washing operations. In addition, the area is exposed and subject to runoff due to precipitation. Therefore, a system had to be designed to address non-storm water flows due to wash activities, while being capable of separating and treating storm water runoff. To facilitate treatment, the flows generated in this area drain to a sump. Storm water runoff is collected in the sump and conveyed to a vegetated swale through a low-flow discharge pipe. The swale conveys and treats runoff prior to discharge to the harbor.

The source of non-storm water flows to this area is wash water. Non-stormwater flows are generated when a hose is activated. The sump is equipped with a diversion valve (Fox® Drain Diversion System) which is automatically actuated when maintenance personnel turn on the hose. The diversion valve redirects wash flow to an sand-oil separator (Jensen Precast®) before discharging the partially treated effluent to the City sanitary sewer system.

Although this project was submitted, reviewed, and approved prior to the release of the updated SUSMP and before the Oceanside Harbor was listed as an impaired waterbody; it [the project] incorporated the application of LID principles with discrete Drainage Management Areas (DMAs) and Integrated Management Practices (IMPs), to deliver a site that is composed of approximately 66% impervious surfaces and consistent with updated SUSMP.

2.4.4.5 Standard Development Projects

Development and redevelopment projects that are not identified as Priority Development Projects or are not determined to be exempt from SUSMP Treatment requirements, and receive a formal SUSMP Determination identifying the project as a "Standard Development Project" (SDP) are required to implement Source Control BMPs consistent with Section 2.7 of the SUSMP. Projects are also required to include LID features designed to conserve natural topographic features, provide development setbacks from natural water bodies and conveyances, minimize site imperviousness, maximize infiltration, and retain and slow runoff.

Standard Development Projects are required to implement a Standard Development Project SWMP. Clean Water Program staff may also require additional controls for Standard Development Projects, appropriate to the project, which may include treatment BMPs and LID IMPs such as infiltration or bioretention. If treatment facilities are included, provisions are to be made to ensure their long-term maintenance.

2.4.4.6 Adequacy of Proposed Plans

Staff will review submitted SUSMP documents and other relevant plans for compliance with the Municipal Permit and SUSMP requirements. The City Engineer may elect to approve proposed alternatives to the BMP requirements contained in the SUSMP if they are determined to be applicable and equally effective. Additional analysis or information may be required to enable staff to determine the adequacy of proposed BMPs and may be requested following the conclusion of a staff review cycle. A project SWMP will be deemed complete when the project complies with the requirements of the City SUSMP and Municipal Permit.

2.4.4.7 Inspection

The City has compiled a Treatment Control BMP inventory with information for all approved and/or constructed Priority Development Projects. The inventory is included in this report as

Attachment 2-A. All installed Treatment Control BMPs are regularly inspected by City Code Enforcement Inspectors to ensure intended function and proper maintenance. The Municipal Permit dictates that high priority sites shall be inspected annually and medium priority sites are to be inspected every two years. Low priority site are inspected as needed. In addition, the Municipal Permit requires a minimum of 20% of the total number of projects with approved Treatment Controls and a maximum of twice the average number of projects with Treatment Control BMPs approved per year will be inspected annually. The Municipal Permit dictates 50% of all medium priority sites with drainage inserts will be inspected annually. City Code Enforcement inspection staff performed a total of 37 treatment control bmp inspections during this reporting period.

It is the responsibility of the City Engineering Inspection staff to ensure that all BMPs proposed for a project have been built or installed according to the construction plans; before approving subsequent stages of construction. The City Engineer requires that all Priority Development Projects attached a duplicate of the approved SWMP BMP Exhibit to the construction plan set. The inspectors utilize the project plans to identify any missing or incorrectly constructed/installed Treatment Control BMPs. Engineering Inspection staff has the authority to stop a project from proceeding if BMPs are not constructed consistent with the approved SWMP. The SWMP is the governing document. Moreover, inspectors have the authority to withhold the Certificate of Occupancy (CO) and to deny approval for sites with observed problems. Inspectors also have the authority to withhold the release of bonds until plan requirements are adequately addressed. City Staff routinely inspects all development projects subject to SUSMP requirements to ensure that all LID, Source Control, and Treatment Control BMPs proposed for the project have been constructed in compliance with all approved plans and City permits and ordinances. This established method of ongoing inspection during site development and the ability to stop-work, withhold release of bonds, and/or occupancy, ensures developer compliance with the approved SWMP.

Inspections include examination of all Treatment Control BMPs at the site to verify that each Treatment Control BMP is in working order, being maintained properly, and is in compliance with all applicable City ordinances and permits. Inspection findings will be documented by the inspector using the City of Oceanside Treatment Control BMP Inspection form in Appendix D of the 2008 JURMP. Deficiencies in Treatment Control operation and maintenance are noted during the inspection, the responsible party is notified and appropriate enforcement actions take place as described in Section 4.4.4.9 of the 2008 JURMP, in order to achieve compliance.

The City requires annual verification of proper maintenance of all treatment control BMPs by the responsible party for maintenance prior to the start of the rainy season. The City Code Enforcement section is responsible for ensuring the proper long term maintenance and operation of post construction BMPs. The City requires all Priority Projects to include Operation and Maintenance checklists and a self-inspection log for the site's Treatment Control BMPs as found in the approved project SWMP. The City requires these forms to be completed by the site's responsible party and be submitted to the City Code Enforcement staff on an annual basis. See Attachment 2-A for sites that were inspected and/or have BMP maintenance verification on file for this reporting period

A detailed description of the different enforcement measures used by the City of Oceanside to enforce its storm water regulations can be found in Section 2 of the 2010 JURMP.

Enforcement of post-construction BMP maintenance after occupancy is the responsibility of City Code Enforcement officers. Code Enforcement uses a variety of methods to ensure long term maintenance objectives are met. Enforcement actions include verbal and written warnings and monetary penalties. Enforcement measures will escalate with continued violations as necessary. All enforcement actions are documented in the development project's database file. If a development site receives frequent citations or is not responsive to previously issued enforcement actions, more severe actions, such as court actions, will be used as necessary. Details surrounding the City Treatment Control BMP inspection program may be found in Section 4.4.4.7 of the 2008 JURMP.

2.4.4.8 2009-2010 SUSMP Document Submittal and Review Summary

A number of SUSMP document reviews were performed during the 2009-2010 reporting period. There were 45 Priority Development Project SWMP submittals which prompted 105 reviews with a total 17 of projects receiving approval. During the same period there were 13 Priority Projects that submitted Amendments to a previously approved SWMP that prompted 22 reviews and yielded 7 approvals. In addition, there were 4 Standard Development Projects that submitted an SWMP which prompted 8 reviews. During the 2009-2010 reporting period a total of 5 Standard Development SWMPs were approved.

During the reporting period there were 13 Priority Development Projects that submitted O&M plans as part of the final engineering process. There were a total of 30 reviews performed with a total of 6 O&M Plans receiving approval. The SWMFA is typically submitted with O&M Plan. Some projects elect to "trail" the SWFMA submittal. During this reporting period 8 project SWFMAs were submitted, prompting 18 reviews, resulting in 2 approved agreements.

All projects are subject to a SUSMP Determination. The determination process places the majority of developments into Priority Development Project or Standard Development Project categories. During this reporting period, a number of projects were found to be exempt from SUSMP requirements. Projects which are granted a SUSMP exemption typically involve minor construction with minimal, or no ground disturbance. Examples of projects that are eligible to receive an exemption include interior tenant improvements to an existing structure, or the addition of an antenna to an existing cellular tower. During this reporting period there were 74 reviews linked to the evaluation of 53 Urban Runoff Threat or Storm Water Quality Assessments; submitted as part of the SUSMP Determination process. At total of 52 projects were not categorized as a Priority or Standard Development Project and therefore were not required to submit an SWMP.

A SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of treatment control BMP infeasibility to a Priority Development Project and does not anticipate granting waivers in the future. However, if a waiver is deemed necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed. There were no SUSMP waivers of infeasibility granted during this reporting period. See Table 2-2 for more detail on project submittals and review results.

2.4.4.9 Outreach and Staff Training

City officials involved in planning and review of development projects received a comprehensive training on storm water requirements during this reporting period. See Table 2-3 for the departments and city officials that were provided training. Training topics during this reporting period focused on general water quality concepts, specific SUMSP requirements, LID components that can be recommended for specific projects, implementation procedures and minimal information about future HMP components.

Table 2-3. Staff Training during the 2009-2010 Reporting Period.

Department Division	Training Date	Number in Attendance
Building Inspectors	June 30, 2010	3
Engineering Inspectors	January 14, 2010	6
Planning Division	April 27, 2010	7

2.5 Development Planning Component Effectiveness Assessment

See Section 11.0 for an assessment of the development planning component of the City's JURMP.

2.6 Program Review and Modification

The Development Planning components of this Report, the City JURMP, and the SUSMP will be revised as necessary to conform to the future requirements of the Municipal Permit. Major revisions to the Development Planning component will be cited in Section 14 of the City JURMP.

THIS PAGE INTENTIONALLY LEFT BLANK

3.0 CONSTRUCTION COMPONENT

3.1 Introduction

Construction and grading activities have the potential to impact neighboring water bodies due to the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering the storm drain system.

The purpose of the construction component section of the City's JURMP is to provide guidance in order to limit the negative impact that construction and grading activities can have on receiving water bodies. The information in this section of the annual report describes how the City of Oceanside met the minimum requirements outlined in Section D.2 of the Municipal Permit Order 2007-0001 to reduce the release of pollutants into the storm drain system to the Maximum Extent Practicable (MEP) (Table 3-1).

Table 3-1. Order 2007-0001 Compliance Summary

J.3.a.(3)(d).iv Updated construction site inventory	See Section 3.2.1 of this Annual Report
J.3.a.(3)(d).i Ordinance update and approval process modifications	See Section 3.3 of this Annual Report
J.3.a.(3)(d).vi BMP Implementation	See Sections 3.4 and 3.5 of this Annual Report
J.3.a.(3)(d).ix Confirmation that sites went through urban runoff approval process	See Section 2.4.3 of this Annual Report
J.3.a.(3)(d).x and xi Inspection of construction sites	See Section 3.5.2 of this Annual Report
J.3.a.(3)(d).xiii and xiv Enforcement of construction sites	See Section 3.5.3 of this Annual Report
J.3.a.(3)(d).xii Inspection frequency and totals during dry and wet seasons	See Section 3.5.2.3 of this Annual Report
J.3.a.(3)(d).vii Requirements for application of erosion and sediment control BMPs	See Section 3.5 of this Annual Report
J.3.a.(3)(d).viii Construction sites requiring Advanced Treatment	See Section 3.5 of this Annual Report

A large portion of the Construction Component of the City's JURMP is described in three documents:

- Chapter 40 of the City Code or Ordinances
- City's Grading Regulations Manual
- City's *Construction Urban Runoff Requirements Manual* (Construction Manual).

All of these documents are available on-line via the Clean Water Program website at www.oceansidecleanwaterprogram.org.

The Construction Manual was developed by the City to provide construction projects with guidance in order to comply with the City Code and its ordinances. The Construction Manual is a living document and will change with time to ensure an effectively implemented program. Updated versions of the manual will be made available whenever modifications have been proposed and approved by the City. During this reporting period no changes were made to the Construction Manual. The City's full Construction Manual can be found in Appendix C of the 2008 JURMP Update. It is anticipated that this manual will change during this permit cycle once a new Construction Permit is adopted by the State Water Resources Control Board.

3.1.1 Notable Activities

During this reporting period several departments within the City moved forward with implementation of various data tracking systems. The Development Services Department, which includes Building, and Engineering, and the Code Enforcement division, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year. See section 3.2.1 for more information about the TRAKiT software. Since both of these systems were fully launched in this reporting period, the Clean Water Program will be reviewing the effectiveness of the new tracking tools and will continue to implement improvements in the use of the system in the coming years.

3.2 Source Characterization

3.2.1 Site Inventory

The City has compiled a watershed-based inventory of all active construction sites within its jurisdiction that may have a significant impact to local water bodies. The projects on this list are scheduled to be inspected by both engineering and building division inspectors. Small projects such as Tenant Improvements that do not require grading are not listed on the inventory. The inventory includes details on each construction site, including project name, location, and threat to water quality (TTWQ) as determined by the process described in Section 5.2.1.1 of the 2008 JURMP. A spreadsheet of active construction projects in the City's jurisdiction as of June 30, 2010 can be found in Attachment 3-A.

The inventory process for construction sites is based on information collected from construction projects when they are applying for a grading or building permit. When the permit is approved, this information is then entered into a database developed by the City. If a permit was previously issued for a project, then the database is updated to reflect the most up-to-date information.

In an effort to improve productivity, the Development Services Department worked with staff from Code Enforcement, Fire Prevention, Information Technologies and Water Utilities to institute an efficient permitting system to make it easier to do business at City Hall. Following evaluation of several systems, staff selected TRAKiT, permitting software by CRW Systems, Inc. In October of 2009, the City went live with TRAKiT; the data management capabilities of TRAKiT assist front-line staff with the inputting and organization of permit data, while the software's enhanced reporting tools provide management staff with pertinent statistics and data to evaluate workflows and allocate resources. The integration of the data management systems of multiple Development Services Implements TRAKiT Software departments makes it easier to

find and share this information, both with the public and among staff. In light of these benefits, the City plans to build on this system with electronic plan submittal, electronically filed field inspection/enforcement reports, and an Interactive Voice Response System. These features will facilitate better customer service, more efficient use of staff time, and increased collaboration between the various City disciplines involved in project review, permitting and code enforcement.

In early 2010, Oceanside launched an online version of TRAKiT, called eTRAKiT, which is made available to the public. Public users are able to access records and view the status of projects, permits and cases via the Internet. For more information, visit www.ci.oceanside.ca.gov and click on the "eTRAKiT-Online Permitting" Quick Link.

Since TRAKiT was fully launched in this reporting period, the Clean Water Program will be reviewing the effectiveness of the new tracking tools and will continue to implement improvements in the use of the system in the coming years.

3.2.2 Construction Site Prioritization

All construction sites within the City's jurisdiction are assigned a priority of high, medium, or low TTWQ. Following are criteria used to determine the level of TTWQ.

Construction sites that meet any of the following criteria are considered a **High** TTWQ:

- A site 50 acres or more in size where grading will occur during the wet season.
- A site one acre or more and tributary to a CWA section 303(d) water body segment impaired for sediment or within, directly adjacent to, or discharging directly to a receiving water within an ESA.
- A site that has been determined by the City or the RWQCB to pose a significant threat to water quality.

Sites that are greater than one acre but do not meet any of the above criteria are considered a **Medium** TTWQ.

Sites less than one acre and are not determined to be a significant threat to water quality are considered a **Low** TTWQ. See Table 3-2 at the end of this section for a list of active construction sites and their assigned TTWQ.

Construction projects determine their TTWQ priority by completing the City's Urban Runoff Threat Assessment Form (Appendix D of the 2008 JURMP Update). This form contains information from the City's Construction Urban Runoff Requirements Manual (Construction Manual) on how to evaluate a construction site's TTWQ. The Urban Runoff Threat Assessment form requires all construction sites to respond to the following questions when assigning priority:

- Item 1 – Project Size: Are you grading or otherwise disturbing soil of one acre or more?
- Item 2 – Planned period of grading: Will the project involve grading or soil disturbance?
- Item 3 – Vicinity of the Project to Environmentally Sensitive areas: Is the project tributary or adjacent to environmentally sensitive water bodies within the City?

- Item 4 – Presence of significant erodible slopes: Does the project include significant erodible slopes?
- Item 5 – Potential to produce significant non-storm water discharges or pollutants: Does the project have the potential to produce non-storm water discharges or pollutants?
- Item 6 – Project type: Will the project result in more than 5,000 square feet of impervious surface area?

All project proponents are directed to reference a prioritization matrix to determine the priority of the project. An example of the matrix is provided as Table 3-2 below. The matrix is used by first locating the appropriate row in the matrix according to the size of the project, then moving across the row. The proponent should refer to the answers given to the five questions above. If "Yes" was responded to a question, the corresponding box in the matrix provides the priority for the project. The use of this matrix was developed consistent with the requirements of the Permit Order 2007-0001. Under this process, construction sites that meet either of the following conditions must be classified as High Priority.

Table 3-2. Construction Project TTWQ Prioritization Matrix.

Project Size	Item 2	Item 3	Item 4	Item 5	Item 6	Default Priority
Greater than 50 acres	High	High	High	High	High	Medium
5□50 acres	□	High	High	High	High	Medium
1□5 acres	□	High	Medium	Medium	Medium	Medium
Less than 1 acre	□	Medium	Medium	Medium	Medium	Low

3.3 Updates to Ordinances and Approval Processes

During this reporting period, the City continued to actively participate in the Copermittee Workgroups, Sub-workgroups, and HMP-TAC. The combined Copermittee effort resulted in the release of the Countywide Model SUSMP in February 2010, adoption of the Hydromodification Management Plan by the RWQCB in June 2010, and completion of the Regional Construction BMP Guidelines in June 2010. The City also released an updated SUSMP in March 2010; consistent with the Countywide Model SUSMP and the Municipal Permit. Subsequent to the updated SUSMP, the City released a draft Storm Water Mitigation Plan (SWMP) template. The purpose of the template is to provide the design professional with a standardized presentation format while facilitating plan review. The SWMP template will become finalized upon complete implementation of the HMP.

The updated SUSMP and expands storm water requirements for new development and redevelopment projects. Storm water treatment requirements have been made more widely applicable and more stringent. New requirements include minimum standards for the implementation of Low Impact Development (LID) practices and the integration of flow control criteria designed to mitigate runoff peaks and durations from development sites. The updated SUSMP incorporates a unified approach to the application of LID practices which combines site planning and design measures coupled with engineered, small-scale Integrated Management Practices (IMPs).

In addition to the updated SUSMP, the City continued to require all development and redevelopment projects that cause land disturbance, including projects subject to the Statewide Construction General Permit (CGP), to complete and implement a City Erosion Control Plan. Erosion control plans are reviewed by Engineering Division staff and approved by the City Engineer. The Erosion Control Plan may appear to be a redundant document, as it typically overlaps the GCP SWPPP. However, the erosion control plan differs from the SWPPP because it requires a bond prior to approval. The erosion control bond creates a maintenance funding mechanism that assures funds will be available to repair or construct BMPs in the event of default by the Responsible Party. Plans are required to be updated on annual basis, prior to the rainy season, to assure that plans are consistent with site conditions and to update the erosion control bond.

3.4 Best Management Practice Requirements

The City has a set of minimum Best Management Practices (BMPs) that must be implemented at all construction sites regardless of TTWQ priority including implementing and maintaining general site management BMPs and erosion and sediment control BMPs to reduce, retain, and manage pollutant discharges to the MEP. Table 5-2 of the 2008 JURMP (pp. 5-4 and 5-5) outlines the minimum construction BMPs required by the City. The table also provides references to the corresponding BMP fact sheets obtained from the Caltrans Storm Water Quality BMP Handbook and California Stormwater Quality Association (CASQA) Construction BMP Handbook.

A Construction BMP brochure titled "A Pollution Prevention Guide for the Construction Industry" is provided to the developer during pre-development meetings. This brochure provides a sample drawing that illustrates the minimum BMPs that must be used at all construction sites to protect storm drains and minimize pollution. This brochure was provided as Attachment 3-B in the 2008-09 JURMP Annual Report. This brochure is also available at both the Engineering and Building Department counters of the City. Approximately 600 brochures were distributed to the public by building division staff during this reporting period.

3.5 Program Implementation

All construction sites are required to select, install, and maintain BMPs that meet or exceed the minimum BMP requirements described in the City Construction Manual and in Section 5.4.1 of the 2008 JURMP. There is no minimum threshold of disturbed area that relieves a project of the responsibility to implement erosion and sediment control BMPs. Moreover, all sites requiring a grading permit are obligated to implement an Erosion Control Plan as part of the Grading Plan review and permit process. Construction activities that result in a land disturbance equal to or greater than one acre are subject to the requirements of the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP). Projects that are subject to the CGP are required to file a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB), obtain a Waste Discharge Identification Number (WDID#), and develop and implement a site specific Storm Water Pollution Plan (SWPPP) prior to the commencement of any grading activities. SWPPPs are required to include a list of BMPs that will be implemented during each phase of construction to reduce pollution discharges to the MEP. In addition, selected projects governed by the CGP may be required to employ advanced treatment as part of their SWPPP. Each project will perform a site assessment that includes the determination of a

Sediment Risk Factor and a Receiving Water Risk Factor to ascertain a Combined Risk Level. Projects with Risk Levels associated with (Numeric Effluent Limits) NELs may find it necessary to implement an Advanced Treatment System (ATS) to achieve effluent standards. Projects faced with physical constraints that "inhibit the ability to construct a correctly sized sediment basin" may also elect to implement an ATS to comply with the MEP standard.

3.5.1 Education and Staff Training

Site owner/developer education and training

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents. Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of permits, construction site owners and developers meet during a pre-construction meeting with City staff and developer staff and/or contractors, subcontractors and superintendents. During these meetings City staff from various departments review what is expected of the project proponent in order to develop the project. At least one Clean Water Program staff person attends these meetings. Topics covered during these meetings specific to storm water pollution prevention include:

- Grading - Reference to the City of Oceanside Grading Regulations manual and the BMP Construction manual (both available on the City's website).
- Site Plan review for storm water inlets and associated BMPs
- Review of site-specific BMPs more applicable to the site and associated with the potential pollutants that could be generated from the proposed business operations
- Inspection Requirements and Frequency – Unannounced and upon call-outs from the public
- Expectations of BMPs during dry and wet seasons
- Construction BMP Brochure is provided

Prior to wet season, all currently permitted construction sites were contacted to remind site owners and developers to assess, repair and update their sites BMPs to reduce erosion potential and prevent storm water pollution. Site owners and developers are also advised to update their erosion control plans and SWPPPs that are applicable to the site.

Municipal Staff Training

City staff directly involved with development and construction sites are provided training on a departmental basis. For further details on topics covered during the City's construction educational program, please refer to Sections 10.2.2 and 10.3.1 of the City's 2008 JURMP. During this reporting period three groups were provided training in regards to erosion control and BMP installation and maintenance for construction sites. See Table 3-3 below for those who received training.

Table 3-3. Municipal Staff Training.

Training Date	Department Division	Number in Attendance
1/14/10	Engineering Inspectors	6
4/27/10	Planning Division	7
6/30/10	Building Inspectors	3

In addition to the in-house trainings listed above, city staff involved in land development attended other trainings provided by outside agencies. See Table 3-4 below for a list of these trainings and staff who attended.

Table 3-4. Municipal staff attendance at land development-related trainings.

Training Date	Topic	City Staff in Attendance	Presenter(s)
8/05/09	Web Conference California CGP Part I	Foley Lardner/Rick Engineering	State Construction General Permit
10/01/09	Web Conference California CGP Part II	Foley Lardner/Rick Engineering	State Construction General Permit
11/18/09	Web Conference California CGP Part III	Foley Lardner/Rick Engineering	State Construction General Permit

03/03/10	Model SUSMP Training	CWP Coordinator (1) Storm Water Plan Checker (1) Environmental Specialist (1)	County of San Diego
3/23/10	Environmental Enforcement Training	Cal/EPA	Conducting effective interviews, evidence to prove a violation, enviro crimes, enforcement options, case development & referrals
4/08/10	State Construction General Permit	SWRCB, RWQCB, Carlsbad Library	Risk levels, implementation schedule, SMARTS
5/4/10	State Construction General permit Overview (Webinar)	CWP Coordinator (1)	Foley and Lardner LLP (Private Firm)
6/23/10	State Construction General permit Overview (Webinar)	CWP Coordinator (1)	Foley and Lardner LLP (Private Firm)

3.5.2 Inspection of Construction Sites

Permit Order 2007-0001 requires that the City develop and implement an inspection program to ensure that each construction site properly complies with the City's relevant ordinances, permits, and the Permit Order 2007-0001. This section describes the City's inspection program for 2008-09 of construction sites developed in accordance with Part F.2.g of the Permit Order 2007-0001.

Each project was assigned an engineering and storm water inspector who was tasked with conducting inspections at the site throughout the construction phase of the project. All inspectors have been educated in the requirements of the Permit Order 2007-0001 and through in-house training and seminars, and/or construction-specific certificate training seminars.

3.5.2.1 Initial Site Inspections

Upon commencement of work at a construction site, a City inspector will visit the site and perform the following:

- Where applicable, a check for proof of coverage under the General Construction Permit.
- A review of the SWPPP (where applicable) and erosion control plans with the appropriate project proponent on site.
- A check for proper implementation of the BMPs outlined in the projects plans.
- A review of the maintenance schedule and procedures for each BMP.

All construction sites in the City's construction site inventory receive initial site inspections regardless of TTWQ priority. If any required documents or BMPs are found to be missing or deficient, the City may issue a stop work notice until the deficiencies are corrected.

3.5.2.2 Routine and Follow-Up Inspections

Once an initial site inspection is performed, additional routine inspections will be performed. The frequency of these routine inspections depends on the site's assigned TTWQ. The criteria used to determine a construction site's TTWQ presented in Section 5.2.1.1 were developed to correspond to the routine inspection frequencies required by the new Municipal Permit. Table 3-5 presents the different TTWQ categories and their corresponding minimum inspection frequencies for the wet (October 1 through April 30) and dry (May 1 through September 30) seasons.

Table 3-5. Construction Site Inspection Frequency

Construction Site TTWQ	Wet Season Inspection Frequency	Dry Season Inspection Frequency
High	Every two weeks	As needed
Medium	Monthly	
Low	As Needed	

3.5.2.3 Construction Site Inspection Frequencies

Attachment 3-A provides the number of inspections conducted during both rainy and dry seasons for active construction sites during the reporting period. This table provides inspection numbers from both engineering and building department staff.

It was determined that there were 54 active construction sites that may have a significant impact to local water bodies during this reporting period. As required by the Permit, these construction sites were assigned high, medium and low priority ratings based on the Permit requirements. Table 3-6 below provides the ratings of the priority construction sites and the minimum number of inspections required per the Permit for both rainy and dry seasons.

Table 3-6. Prioritized Construction Site Inventory Summary and Required Inspection Frequency.

Prioritized Construction Sites		Minimum Required Inspection Frequency		
Threat Priority		**Wet Season**	**Minimum number of required inspections**	**Dry Season - As Needed**
High	20	Bi-weekly over 32 weeks	320	As Needed
Medium	16	Monthly over 5 months	80	As Needed
Low	18		90	As Needed
Total	**54**		**490**	As Needed

The City conducted 728 wet season and 102 dry season storm water related inspections of prioritized construction sites. During the reporting period the City conducted inspections of construction sites in accordance with the requirements of the Permit. See table 3-7 below for a summary of the construction site inspections completed during wet and dry seasons.

Table 3-7. Inspection Frequency Verification Table.

Wet Season Inspections		Dry Season Inspections		Total Number of Prioritized Construction Site Inspections
Engineering Dept.	**Building Dept.**	**Engineering Dept.**	**Building Dept.**	
722	6	102	0	
728		102		830

3.5.3 Enforcement Measures for Construction Sites

The City will be responsible for enforcement of applicable local ordinances and permits at all construction sites in its jurisdiction. When violations are observed and documented during a site inspection, the City will implement appropriate enforcement measures based on the severity of the violation. Enforcement can range from written warnings to more severe enforcement such as stop work notices. Stronger enforcement measures will be used as necessary if proper corrective actions are not implemented during the allotted time frame or if the severity of the violation warrants stricter enforcement.

The typical progressive enforcement steps that the City will implement include the following:

- Written warnings
- Enforcement of contracts (Municipal projects)
- Stop work notices

- Administrative citations
- Denial or revocation of permits
- Civil and/or criminal court actions

Enforcement actions by Code Enforcement Officers for construction sites begin with a referral from another department, a site visit, or by a complaint lodged via phone. Depending on the severity of the violation, follow up activities may include phone calls, site visits, written correction notices with specified compliance timeframes, or administrative warnings. If these actions do not produce the required improvements, administrative citations (starting at $100 with a $1,000 maximum fine) and/or stop-work notices are given.

3.5.4 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of non-compliant sites in the City that are determined to pose a threat to human or environmental health. Verbal notification is required within 24 hours of the discovery of non-compliance and a written report should be submitted to the RWQCB within 5 days of the incident. The criteria established for determining when a site is not compliant and poses a threat to human or environmental health is described in Section 5.5.5 of the 2008 JURMP. No sites were issued stop work notices during this reporting period.

Four sites issued stop work notices during FY 2008-09 have not had those stop work notices lifted. All of these sites continue to be abandoned. The stop work notices will be lifted once they are in compliance with State and City general construction stormwater permit requirements. Table 3-7 below provides a list of these sites.

Table 3-7. Construction Sites issued Stop Work Notices in FY 2008-09

Project Name	WDID	Watershed	Address Location
Hi Hope Ranch	937C22214	San Luis Rey	Highway 76 and Melrose
Darwin Glen	937C325609	San Luis Rey	Darwin and Sagewood Drive
Darwin Knolls	937C325610	San Luis Rey	Darwin and Ocean Ridge Ct.
Ocean Heights	937C330740	San Luis Rey	Mission Avenue & Valley Heights Drive

One site that was issued a stop work notice in FY 2008-09 required code enforcement action during this reporting period. See Table 3-8 for code enforcement actions related to this construction site during this reporting period.

Table 3-8. Construction site Code Enforcement Actions during FY 2009-10

PROJECT NAME	WDID	WATERSHED	LOCATION	CODE ENFORCEMENT ACTION			
				Corrective Action Needed	Administrative Citation Date(s)	Administrative Abatement	Compliance Status
Hi Hope Ranch	937C322214	San Luis Rey	Melrose Drive & Hwy 76	BMP Maintenance	1/14/10, 1/27/10	0	In Compliance

3.6 Construction Activities Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the Construction Component of the City's JURMP.

3.7 Program Review and Modification

The Clean Water Program will continue to review and modify the construction component as needed. The Development Services Department, which includes Planning, Building, Engineering, and Code Enforcement, rolled out new tracking software, CRW Systems, Inc. TRAKiT, which will assist in tracking and reporting of stormwater data. See section 3.2.1 for more information about this tracking software.

THIS PAGE INTENTIONALLY LEFT BLANK

4.0 MUNICIPAL COMPONENT

4.1 Introduction

This section documents the activities conducted by the City of Oceanside at its municipally owned, leased and/or managed facilities during the 2009-2010 reporting period to meet the requirements of Section D.3 of Municipal Permit Order 2007-0001 (Table 4-1). The City of Oceanside owns and/or maintains a variety of municipal facilities including operation centers/facilities, public parks, administration buildings, fire stations, a fire training facility, industrial facilities, potable reservoirs, sewage pump stations, wastewater treatment facilities, public roads, streets and parking facilities and other miscellaneous facilities. Additionally, the City conducts activities that have a high threat to water quality such as power washing, street and sidewalk repair, painting, graffiti removal, parking meter maintenance, MS4 maintenance, and regular upkeep of the sanitary sewer system to prevent overflows and leaking.

Table 4-1. Order 2007-0001 Compliance Summary

D.3.a Municipal (Existing Development)	Section 4 of this Annual Report
J.3.a.(3)(c).i Updates to Municipal Inventory	See Section 4.1.1 of this Annual Report
J.3.a.(3)(c).ii BMP Implementation	See Section 4.2.3, 4.3.3, 4.4.3,4.5.3, 4.6.3, and 4.8.3 of this Annual Report
J.3.a.(3)(c).iii Inspection and maintenance of municipal treatment controls	See Sections 4.4.3 of this annual report
J.3.a.(3)(c).iv Number of catch basins and inlets, inspections, and cleaning	See Section 4.4.3 of this annual report
J.3.a.(3)(c).v Distance of MS4 inspected and cleaned	See Section 4.4.2 of this annual report
J.3.a.(3)(c).vi Distance of open channels inspected and cleaned	See Section 4.4.2 of this annual report
J.3.a.(3)(c).vi Amount of waste removed from MS4 and open channels	See Section 4.4.3 of this annual report
J.3.a.(3)(c).viii MS4 inspected less than annually	See Section 4.4.1 of this annual report
J.3.a.(3)(c).ix Implementation of BMPs for pesticides, herbicides, and fertilizers	See Section 4.3.3 of this Annual Report
J.3.a.(3)(c).x, xi, xii, xiii Curb miles	See Section 4.2.2 and 4.2.4, of this Annual Report
J.3.a.(3)(c).xiv Municipal parking lots	See Section 4.2.2, 4.2.4., and 4.2.5.1 of this Annual Report
J.3.a.(3)(c).xv Tonnage of debris removed from streets and parking lots	See Section 4.2.5.2 of this Annual Report
J.3.a.(3)(c).xvi	See Section 4.5 of this Annual Report

Prevention of infiltration from sanitary sewer	
J.3.a.(3)(c).xvii Sites inspected and frequency	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xviii Inspection results	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xix Inspections steps determined full compliance	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xx Violations and enforcement actions	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xxi Notable activities	See Section 4.1 and 4.5 of this Annual Report

To comply with the Municipal Permit, the City of Oceanside has developed a comprehensive program designed to reduce the amount of pollutants that are transported in urban runoff from municipal areas and municipal activities. Some of the significant activities include street sweeping, inspections of municipal facilities, and educational efforts geared toward municipal personnel.

The City continues to use its Municipal Urban Runoff Procedures Manual (Municipal Manual) as a useful reference document for training staff and developing and implementing educational programs. The Municipal Manual contains BMP requirements and related guidance for City facilities and employees and was circulated to relevant City staff directly involved with the Municipal NPDES Permit. This manual was first prepared as part of the JURMP in 2002 and updated and provided with the 2008 JURMP. See Appendix C.3 of the 2008 JURMP for this manual. No changes were made to this manual during this reporting period.

4.1.1 Notable Activities

GBA Master Series Software roll-out for tracking inspections

During this reporting year, several departments within the City moved forward with implementation of various data tracking systems. The Water and Sewer Divisions of the Water Utilities Department have been using GBA Master Series Software, a maintenance management tool, and gradually rolling it into the various programs for several years. The Clean Water Program purchased additional licenses and hired a consultant to help modify the software for use with the NPDES permit. The Clean Water Program began using GBA to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This annual report is the first report utilizing the new technology. The Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use or the system in the coming years.

4.1.2 Source Identification

As required in Section D.3.a(1) of Permit Order 2007-0001, the City of Oceanside has developed a prioritized, watershed-based inventory of municipal properties and activities. The City of Oceanside maintains a number of municipal facilities, including parks, administrative buildings, fire stations, and public works yards. The inventory of municipal facilities, including areas and

activities, is updated annually. The inventory used for fiscal year 2009-10 is Attachment 4-A to this report. Table 4-2 provides a summary of the facility categories within the City's inventory.

Table 4-2. Summary of Municipal Facilities by Category.

Facility Category	Number of Facilities
Park and Recreation Facilities	48
Public Works Operations Facilities	2
Municipal Landfills	2
Marinas	3
Municipal Airport	1
Potable Water Treatment Facilities	13
Wastewater Treatment Facilities and Lift Stations	37
Police and Fire Facilities	13
Other Fixed and Leased Facilities	24
Roads, Streets, Highways and Parking Facilities	33
Total Facilities	**176**

4.2 Roads, Streets, Highways, and Parking Facilities

4.2.1 Background

Roads, streets, highways, and parking facilities are an integral part of any functional City. These facilities can collect a variety of pollutants due to routine vehicle use and have a tendency to collect litter and debris from neighboring areas and activities. Regular maintenance is necessary to control the level of pollutants, such as sediment, metals, litter, and debris on roads, streets, highways, and parking facilities. Other City activities include building new roads, resurfacing existing roads, and similar construction-related activities. All construction-related activities conducted by the City will continue to be conducted under the requirements of the construction component, which is described in detail in Section 3 of this document.

4.2.2 Source Characterization

The City of Oceanside maintains approximately 571 miles of public roads and streets throughout the City and sweeps 28,954 curb miles. A parking facility is defined as a stand-alone parking facility, which is a parking facility that is not associated and/or adjacent to other inventoried municipal facilities. Parking facilities that are associated and/or adjacent to municipal facilities will continue to be included in regular maintenance activities of the associated municipal facility. Roads, streets, highways, and parking facilities are included in the City's municipal inventory, which is included as Attachment 4-A of this annual report. There are 33 parking facilities within the City.

4.2.3 Best Management Practice Requirements

Similar to municipal fixed facilities, the City will continue to utilize the City-developed Municipal BMP Manual to choose applicable BMPs to implement for public roads, streets, parking facilities and operational facilities within the City.

Street sweeping and cleaning continues to be the main BMP that is implemented for roads, streets, and parking facilities. The frequency of cleaning takes into account the following:

variations in climate conditions, surrounding land use, design of existing structures, traffic volume, frequency and quantity of accidental spills and leaks, and areas with historical trash and/or debris problems. Treatment control BMPs will be used for road sections subject to SUSMP.

The City will continue to implement an aggressive street sweeping program to reduce the amount of pollutants discharged from roads, streets, and parking facilities in the City with a particular focus on facilities that drain to environmentally sensitive areas (ESAs). If in the future negative impacts to ESAs associated with runoff from roads, streets, highways, or parking facilities are noted, the City will take the measures necessary to mitigate the negative impacts.

4.2.4 Program Implementation

As an effort to reduce the pollutant load entering local receiving water bodies, the City continued to implement a sweeping schedule for roads, streets, highways, and parking facilities to meet the requirements of the Municipal Permit. There have been no significant changes to the existing programs during the reporting period.

Roads, streets, and highways that have been observed as generating relatively high volumes of trash, sediment, and debris are included as high priority and will continue to be swept at least twice per month; medium priority streets are streets in the City that generate moderate volumes of trash, sediment, and debris and will continue to be swept at least monthly. Low priority streets have been observed as generating relatively low volumes of trash, sediment, and debris and will continue to be swept as needed, but not less than once per year. In the event of a National Holiday, sweeping is made up in a timely manner, usually by the next working day. Due to the City's proximity to the Pacific Ocean and as a means to target watershed constituents of concern, the City typically sweeps all streets within the City above baseline jurisdictional activity standards. Additional program details can be found in Section 6.3 of the 2008 JURMP.

All public streets in the City of Oceanside are swept at least monthly. There is a total of 571 miles of public streets that are swept regularly per the frequency outlined below. There were 28,954 curb miles swept during this reporting period. Some streets are swept more frequently than others.

- Every Monday, Wednesday, and Friday, the downtown commercial areas and other high use areas are swept using regenerative air vacuum street sweepers. These areas include the medians on Mission Avenue, Canyon Drive, and the Civic Center Drive Bridge, Wisconsin Avenue to Pacific Street to Ditmar Street, the Strand, and all downtown parking lots.
- The majority of all other public streets, not included in the areas listed above, are swept every other week. In some low use residential areas, the streets may be swept monthly.
- As necessary, sweepers or other clean up crews will respond to public or municipal staff reports to collect debris and/or sweep.
- Inspection of streets and curbs for cleaning is continuous. City employees are encouraged to identify areas that should be cleaned and to call the municipal employee reporting line, Oceanside Eyes. Residents are encouraged to call the Public Works Maintenance Hotline.

4.2.5 Inspection and Maintenance Results

4.2.5.1 Inspections

Inspections and maintenance activities were conducted throughout the reporting period as described in the previous section. Following is a review of the results form inspection and maintenance.

There are 33 parking lots in the Roads, Streets, Highway and Parking Facilities categories in addition to 571 miles of public roads. During this reporting period all 33 of these facilities were inspected by CWP staff. Some corrections were noted but were addressed by appropriate staff in a timely manner. Due to the fact that many of these parking facilities are swept at least once per week, debris and sediment are removed on a very frequent basis.

4.2.5.2 Maintenance

Street sweeping activities resulted in the collection of over 2,093 tons of waste from public streets and parking lots during the reporting period. These results are comparable with tonnage amounts from previous reporting years. See Table 4-3 for a summary of debris collected during this reporting period and in previous reporting periods.

Table 4-3. Summary of amount of street sweeping debris collected.

Reporting year	Tons
2003-2004	2,604
2004-2005	2,538
2005-2006	2,283
2006-2007	2,480
2007-2008	2,358
2008-2009	2,062
2009-2010	2,093

4.2.6 Roads, Streets, Highways, and Parking Facilities Element Effectiveness Assessment

See Section 11.0 for an assessment of the Municipal component of the City's JURMP.

4.3 Parks and Recreational Facilities

4.3.1 Background

The City of Oceanside is committed to providing the highest quality of service to its residents by providing the opportunity for them to enjoy a variety of recreational activities at both outdoor parks and indoor recreational facilities. Operating and maintaining 48 community attractions from public pools, beaches, parks and community centers, the City of Oceanside works hard every day to maintain the high level of service. The inspection and maintenance of these facilities in regards to storm water is important because of the number of facilities throughout the city and the public exposure that these facilities receive.

4.3.2 Source Characterization

The City regularly inspects, cleans and maintains 48 Parks and Recreational Facilities. Because of high public use these facilities have the potential to generate a variety of pollutants including trash and debris, organic material and sediment. See Attachment 4-A of is annual report for the updated Parks and Recreational Facilities inventory.

4.3.3 Program Implementation

The City has selected BMPs to implement at Parks and Recreational Facilities to reduce the contribution of pollutants associated with the application, storage, and disposal of pesticides, herbicides and fertilizers. These BMPs are detailed in the Municipal Manual. All 48 facilities were inspected during this reporting period and no potential storm water violations were noted.

Pesticides, herbicides and fertilizers are seldom used directly by the City, as it contracts out the majority of work involving these substances. To facilitate compliance with this Section of the Municipal Permit, the City has reviewed its landscaping contract and has integrated BMP requirements into the conditions of the contract.

4.4 Municipal Separate Storm Sewer System

4.4.1 Background

As required by Section D.3.a.(3) of the Municipal Permit, the City has implemented a schedule of maintenance activities for the City's entire Municipal Separate Storm Sewer System (MS4), including any structural controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures. The City has determined, through historical knowledge and records, the locations within the MS4 that require regular waste removal and those areas that are less likely to require any waste removal. The City has developed a comprehensive Flood Control Annual Maintenance Program which includes a list of the high priority areas, divided into zones, which are to be inspected annually using an inspection checklist. Approximately 110 sites are inspected and maintained annually. No sites are inspected and cleaned less than annually.

4.4.2 Source Characterization

The Public Works, Street Division, performs ongoing inspection and cleaning of storm drains and flood control facilities, as well as annual maintenance of all major facilities such as creeks, desilting basins, detention basins and rock and concrete lined channels. There are approximately 104 concrete and earthen channels that are inspected and maintained throughout the city. Over 49,000 linear feet of storm drains, catch basins, and concrete and earthen channels are maintained on at least an annual basis. In addition, the Street Division performs annual maintenance/cleaning in September, October, and November for all major MS4 facilities. The results of this work are recorded on an Annual Maintenance List that is available at the City Operations Center.

4.4.3 Best Management Practices

In order to inspect and clean storm drains as described above, during the May through September period, the City contracted with United Storm Water Inc. A total of 3,377 structures (catch basins, manholes, inlets, outlets, etc.) were inspected and cleaned during the reporting period by

the City contractors and City maintenance crews. A total of 81.88 tons of waste was removed. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt. During the inspections if a storm drain was not labeled with a marker, one was installed. During this reporting period 742 were labeled with a placard stating: "No Dumping – Drains to Creek" in both English and Spanish. See the photo below for a copy of the storm drain placard installed. See Table 4-4 for a summary of the amount of waste removed from catch basins, inlets, the MS4 and open channels by category.

Table 4-4. Waste removed from catch basins, inlets, the MS4 and open channels by category.

Structure	Number Inspected	Contractor or City Crew	Drain Markers Installed	Cleaned	Amount of Material Removed
Catch Basin/Inlet	3,297	Contractor	342	3,297	54.52 tons
Catch Basin/Inlet	136	City Staff		136	
Total Catch Basin/Inlet	3,433			3,433	
Open Channels	104	City Staff	N/A	49,455 ft.	840 tons
Drain Pipe	1,800 ft	City Staff	N/A	1,800 ft	

Trash Trap at the Oceanside Municipal Golf Course

Staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. In March 2009 City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. During this reporting period approximately 180 pounds of trash and organic debris were removed from this device. Photos of the trash trap were provided in Section 6.3.1 of the FY 2008-09 JURMP Annual Report.

4.5 Sanitary Sewer

4.5.1 Background

The City of Oceanside Sewer Division maintains the sanitary sewer system within the jurisdictional boundaries which includes sewer lines, lift stations, sewage treatment plants. This sanitary sewer system uses pipes to remove human waste from homes and businesses and transport that waste to one of two waste water treatment plants in the City. The two treatment plants are operated by city crews.

4.5.2 Source Characterization

The City regularly inspects, cleans and maintains 450 miles of sanitary sewer pipe, 35 sewer lift stations and two sewage treatment plants. The inventory was updated to reflect a sixth harbor sewer lift station. See Attachment 4-A for the 2009-10 wastewater Facilities inventory.

4.5.3 Best Management Practices

Since the City owns and operates the sewage system, these facilities are regularly inspected and maintained for proper operation and maintenance, and to ensure that BMPs are in place for the protection of receiving waters that may be impacted from the system. The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations.

In order to ensure that the sanitary sewer lines do not leak, the city has a long term plan to slip line the sewer pipes throughout the City. During this reporting period 3,481 feet of City sewer lines were slip lined. In addition 53 manholes were rehabilitated. Since the 2005-06 reporting period the City has slip-lined a total of 20,766 feet of sewer. The City also inspected and cleaned 236 miles (1,244,858 feet) of sanitary sewer.

4.6 City Operations Center

4.6.1 Background

The City Operations Center (COC) is a municipally owned and operated facility that houses several departments or divisions for the City including Public Works, fleet maintenance, road maintenance, parks and recreation maintenance and others. Because of the diverse activities of these departments and divisions, the City developed a Storm Water Pollution Prevention Plan (SWPPP) for the COC in the fall of 2002.

The COC includes the following areas: employee parking lot, COC main building (offices, storage and fleet maintenance), traffic control lot, back lot, city vehicle parking lot, large vehicle equipment lot, fueling area, waste disposal area, wash facilities, general use yard and west corner lot. The SWPPP has the following objectives:

- Identify and evaluate sources of pollutants from the facility that may affect the quality of urban runoff discharge and to identify and
- Implement site-specific best management practices to reduce or prevent pollutants in urban runoff discharges.

The SWPPP outlines BMPs to be implemented at each of the respective areas. A comprehensive training program was also developed and has been implemented in concert with the COC SWPPP.

4.6.2 Source Characterization

Due to the nature of the various activities from the departments and divisions it was determined that there are various activities that generate pollutants and have the potential to reach storm water conveyance systems. Some of these activities include vehicle washing, disposal of street sweeping debris, temporary storage of wrecked vehicles, and storage of various materials, including paints, solvents, metal piping and infrastructure materials. In addition steep hillside landscaped areas can be a potential pollutant source if BMPs are not managed properly.

4.6.3 Best Management Practices

Since the implementation of the SWPPP at the COC some permanent BMPs have been installed and continue to be used for protection of receiving waters. Following is a brief description of the BMPs in place at the COC and any new BMPs installed during this reporting period.

4.6.3.1 Wash Facility

The main wash facility is used for washing large vehicles and equipment, and collection of street sweeper and vactor truck contents. The main wash facility is a completely contained area, surrounded on all sides by berms and curbs. The entire area drains to the eastern corner of the pad where it enters a grated inlet that leads to a clarifier and then the sewer. An overflow is available if the drain to the sewer is clogged or the volume of water exceeds its capacity, however, this is not anticipated to happen frequently because the drain is maintained daily.

4.6.3.2 Pollution Prevention and Recycling

COC BMPs in place

There was no new pollution prevention BMPs installed at this facility during this reporting period and all existing BMPs were maintained during this reporting period. There were no potential storm water violations identified during the inspection of this facility.

4.6.4 Program Implementation

4.6.4.1 Facility Inspection

A thorough walk through inspection of the COC Facility was conducted by the operation manager of the facility and Clean Water Program inspectors on October 6, 2009. The facility was in compliance upon the first visit.

4.7 Other Facilities

4.7.1 Background

The City of Oceanside owns and operates two closed landfills (Maxson Street Landfill, WDID 9375005695 and Mission Avenue Landfill, WDID 9375005696). The City also operates and maintains eight fire fighting facilities including one at the COC in addition to one fire fighting training facility.

4.7.2 Source Characterization

The two closed landfills maintained by the City have the potential to generate pollutants that can negatively impact receiving waters. If potential storm water discharges are identified, appropriate BMPs are implemented to prevent pollutants from entering MS4.

Also fire fighting stations have the potential to generate pollutants such as trash and debris, organic materials and fluids and wash water from fire fighting vehicles. The two closed landfills and the fire fighting facilities are included in the City's municipal inventory, which is included as Attachment 4-A of this annual report.

4.7.3 Program Implementation

Closed Landfills

Both closed landfills are inspected quarterly per permit requirements and an annual report is prepared each for submittal to the Regional Water Quality Control Board. See Attachment 4-B for copies of the 2009-10 Annual Report for Storm Water Discharges Associated with Industrial Activities for these two landfills.

Fire Stations

All fire stations were inspected during this reporting period. During the station inspections no violations or potential violations were noted.

4.8 Special Events

The City of Oceanside hosts a variety of Special Events in the City. These events include major sporting events and community fairs and festivals. A Special Events Permit is required for any organized activity involving the use of, or having impact upon, public property, public facilities, parks, beaches, sidewalks street areas or the temporary use of private property in a manner that varies from its current land use. The permit process includes a BMP implementation plan. The City has a Special Events Committee comprised of various City Department representatives who review permit applications to insure events are held safely and do not adversely impact the community.

4.8.1 Source Characterization

The City issues Special Event permits for both internal city sponsored events and event organizations that coordinate events that may include vendors or various event related elements.

- Antiques on Mission
- Turkey Trot 5k Run
- Ironman Triathlon
- Race Across America
- Freedom Day Parade

Typically, special events have a high density use of people per square foot raising the potential for pollutant types at special events, such as:

- Setup and teardown of equipment booths
- Booth operation generating trash

- Food and drink preparation and consumption – illicit discharges and organic material
- Hydraulic rides – oil and grease
- Temporary portable restroom – chemicals and bacteria
- Hydration stations – water cups and other trash material

4.8.2 Best Management Practices

All special events are required to implement designated BMPs and comply with all applicable regulations outlined in the Oceanside Municipal Code. During pre-event application meetings for large events, event organizers are provided with an event permit packet that includes storm water related information including a copy of the Storm Water Compliance Guidelines for Special Events brochure and the Special Events Inspection Form. Copies of the brochure and inspection form are attached. It is explicitly stated that the company coordinating the event is required to leave the site as clean as the pre-event condition and shall not allow any materials or liquid to enter the storm drain system.

4.8.3 Program Implementation

4.8.3.1 Event Inspections

A storm water inspection report form has been developed for use before and after large special events. Storm water compliance inspection reports will be completed by City staff prior to the start of the event to ensure that appropriate BMPs are in place. A post-event inspection will ensure that the site is properly cleaned. A special events office representative will conduct pre- and post-inspections. This office may designate another city department representative to conduct the pre- or post-event inspections, when needed.

The Freedom Day parade was not held during this reporting period. Usually scheduled on the last weekend of June, the parade was scheduled for July 3, 2010.

During this reporting period one event was inspected which was the Ironman Triathlon was held on March 29, 2010 with staging starting in the harbor and beaches area. No stormwater related violations were noted during event set-up, during the event or after event. The pre- and post-event inspections it was determined that the site was clean and did not pose any potential storm water violations. See Attachment 4-C for copy of the inspection form for this event.

4.8.3.2 Street Sweeping

Most special events occur in the downtown area which is swept 5 days a week, with sweeping vehicles generally onsite within 12 hours from the end of the event.

For special events that cause an added impact to the community street sweeping is conducted immediately after the end of the event. On an annual basis, the City holds one parade in the downtown area after which street sweeping is immediately conducted.

4.8.3.3 Harbor and Beaches Maintenance

Large events held in the Harbor and Beaches area can have the potential to generate large quantities of trash. In addition to the above information, the Harbor and Beaches Maintenance

Division conducts the following activities after large events and holidays held in the Harbor and Beaches area:

- A litter abatement contractor provides staff to walk beach and hand pick up litter.
- City staff uses trucks and/or utility carts to follow and pick up items that are too large for the litter abatement contractor such as logs, furniture, etc.
- City staff further screens the beach using Cherrington beach sweeping machines.
- A pressure-washing contractor or City staff washes the hardscapes with all wash water being recovered and disposed of properly.

Cigarette Butt Service

The Harbor and Beaches Maintenance Division has contracted with a cigarette butt service company to install and service cigarette butt receptacles in the harbor, pier and beach areas. The receptacle selected is made by Butts Only Box and is designed to prevent rain and irrigation water from contacting the butts until collection. This prevents leaching of toxic compounds into sensitive habitats.

The company has several models to choose from, two of which have been installed in the City of Oceanside. The trail model is used along high foot traffic areas adjacent to the beach and harbor sidewalks. There are a total of 17 of these installed in the coastal areas of Oceanside: 11 in the harbor, 2 on the pier, and 4 on The Strand (the road that parallels a large section of beach). Two boat models were installed on two sport fishing boats docked in the harbor. See Figure 4-1 for an image of these two models.

Figure 4-1. Butts Only Box cigarette trash receptacles installed in beach areas and sport fishing boats.

Butts Only Boxes also has a sister company, Cigarette Butt Services, that services the boxes. The City of Oceanside subscribes to this service and the company provides a monthly statement that includes the number of butts removed and the weight of the debris.

During this reporting period a total of 73,439 cigarette butts were collected from the 17 trail models and two sport fishing models. The weight of this debris totaled 37.48 pounds.

The City plans to continue servicing boxes currently in place. The City will also seek additional funding to cover costs for purchasing, installation and servicing of additional receptacles within the jurisdiction.

4.9 Power Washing

4.9.1 Background

The City conducts a number of activities which are not designated and/or confined to a specific location. Because such activities are not confined to a fixed facility, where BMPs may be permanently implemented, BMPs must actively be implemented during all mobile municipal activities.

4.9.2 Source Characterization

Mobile activities that City employees may use during their day-to-day operations that have a potential to create polluted runoff include:

- Power Washing
- Infrastructure Maintenance
- Street and sidewalk repair
- Street striping
- Waste removal
- Traffic light maintenance
- Parking meter maintenance
- Landscape/Right-of-Way Maintenance

4.9.3 Best Management Practice Requirements

As previously mentioned, the City will continue to implement good housekeeping and general pollution prevention measures during municipal activities including the mobile activities listed above. City personnel will continue to be trained to collect all water generated by power washing activities. City personnel continue to use the City's Municipal BMP Manual to choose applicable BMPs to implement for municipal areas and activities. Pesticide, herbicide, and fertilizer management BMPs similar to those discussed in Section 6.2.3.1 of the City's 2008 JURMP will continue to be implemented during landscaping of City right of way such as medians.

4.9.4 Program Implementation

City field crews will continue to be actively trained to implement BMPs during all mobile activities including how to properly contain, control, and capture any discharge generated by power washing (or any other discharge-generating activities). The City uses fiber rolls, geo logs, silt fencing, check dams, gravel bags, and filter inserts during mobile activities, where applicable. City personnel involved in mobile activities are trained to be aware of Illicit Connections/Illicit Discharges and report them to the appropriate City staff promptly. More information about the City's education program, including municipal training activities, is included in Section 10 of this document.

4.10 Municipal Component Effectiveness Assessment

See Section 11.0 for an assessment of the municipal component of the City's JURMP.

4.11 Program Modification and Review

The Clean Water Program will continue to implement its SWPPP at the City Operations Center and continue its ongoing inspection and maintenance program for the facilities listed in the Municipal Inventory. Any changes to the program will be reported in the next annual report.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 Introduction

The City of Oceanside continues to implement a comprehensive program that aims to reduce and prevent industrial and commercial pollution discharges to and from the MS4 to the maximum extent practicable (MEP) to protect local receiving water bodies and to comply with the Municipal Permit. This section documents the activities conducted by the City of Oceanside during the 2009-2010 reporting period to meet the reporting requirements of Section J.1.a(3)(f) of Order 2007-0001 Municipal Permit (Table 5-1).

Table 5-1. Order 2007-0001 Reporting Summary.

Permit Section	Annual Report Section Reference
J.3.a.(3)(d).i -Any updates to the industrial and commercial inventory.	See Section 5.2.2 of this Annual Report
J.3.a.(3)(d).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	See Section 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	See Section 5.2.1 and 5.3.3 of this Annual Report
J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	See Section 5.2.2 of this Annual Report
J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	See Section 5.2.2, 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	See Section 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.	See Section 5.2.4.1 of this Annual Report
J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.	See Section 5.2.4.3 of this Annual Report
J.3.a.(3)(d).ix - A description of efforts implemented to address mobile businesses.	See Section 5.3 of this Annual Report
J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	See Section 5.2.4.2 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	See Section 5.2.4.1 and 5.2.4.2 of this Annual Report
J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	See Section 5.1.1 of this Annual Report

The City has compiled a list of industrial and commercial sources and developed BMP requirements, including pollution prevention measures, for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.1.1 Notable Activities

GBA Master Series Software roll-out for tracking inspections

During this reporting year, several departments within the City moved forward with implementation of various data tracking systems. The Water and Sewer Divisions of the Water Utilities Department have been using GBA Master Series Software, a maintenance management tool, and gradually rolling it into the various programs for several years. The Clean Water Program purchased additional licenses and hired a consultant to help modify the software for use with the NPDES permit. The Clean Water Program began using GBA to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This annual report is the first report utilizing the new technology. The Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use or the system in the coming years.

5.2 Stationary Industrial and Commercial Sites Sources Element

5.2.1 Background

Section 7 of the City's 2008 JURMP, titled Industrial and Commercial Component, requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by industrial owners and/or operators pursuant to City Code to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. The City uses a variety of ways to educate and ensure that BMPs are implemented at industrial and commercial facilities including dissemination of the City's industrial and commercial BMP manuals, site inspections and enforcement.

5.2.2 Source Characterization

The City annually updates its watershed-based industrial/commercial inventory which contains the name, address, and description of all industrial sites within its jurisdiction, regardless of site ownership. During this reporting period a new asset management software tool was implemented. The existing inventory with commercial and industrial classifications, watershed location, and assigned priority was pulled into the new software. However, throughout the year, duplicate records, inadvertently changed priority levels, and missing, new, or out of business facilities were found. The software was updated throughout the year, but an extensive inventory review will be conducted during the next reporting period.

Attachment 5-A, the industrial inventory list and Attachment 5-B, the commercial inventory list, was used to conduct FY 2009-10 inspections and will be updated each reporting period. Attachment 5-C is the Mobile Business inventory for which current business licenses were on file. See section 5.3 of this report for mobile business tasks implemented during this reporting period.

In the City there are a total of 2,412 Industrial and Commercial businesses that have the potential to impact water quality. See Tables 5-2 and 5-3 below for a summary of the number of industrial and commercial businesses inventoried in the City according to watershed location.

Table 5-2. Industrial Businesses in the City by Watershed.

Watershed	Number of Industrial Business		
	2007-08 Inventory	2008-09 Inventory	2009-10 Inventory
San Luis Rey	95	13	14
Loma Alta	141	49	22
Buena Vista	5	0	0
Agua Hedionda	0	0	0
Total	**241**	**62**	**36**

Table 5-3. Commercial Businesses in the City by Watershed.

Watershed	Number of Commercial Businesses		
	2007-08 Inventory	2008-09 Inventory	2009-10 Inventory
San Luis Rey & Harbor	331	859	877
Loma Alta	338	966	996
Buena Vista	151	463	480
Agua Hedionda	6	23	14
Not Verified	10	0	9
Total	**836**	**2311**	**2376**

Based on this updated inventory, the City contains approximately 36 industrial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-4 provides a summary of the prioritization for industrial businesses.

Table 5-4. Industrial Businesses in the City by Priority.

Priority	Number of Industrial Business
High	9
Medium	7
Low	20
Total	**36**

Based on the 2009-2010 annual update of the inventory, the City contains approximately 2,376 commercial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-5 provides a summary of the prioritization for commercial businesses.

Table 5-5. Commercial Businesses in the City by Priority.

Priority	Number of Commercial Business
High	575
Medium	115
Low	1686
Total	**2376**

5.2.3 Best Management Practice Requirements

BMP Manuals

Two manuals originally developed in 2001, *Industrial Urban Runoff Requirements Manual* and *Commercial Urban Runoff Requirements Manual*, detail requirements of industrial and commercial businesses to comply with the City's Urban Runoff Management and Discharge Control Regulations. In order to ensure industrial and commercial owners and operators are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for industrial and commercial areas and activities located within the City, are specified in these two manuals.

The manuals were first produced in FY 2001-02 as a result of requirements under Municipal Permit Order No. 2001-01 and were revised in 2004 to include additional state requirements. These manuals were again reviewed and revised during the 2007-08 reporting period to ensure compliance with the new Municipal Permit Order No. R9-2007-0001. The main changes were the additional of categories and a list of specific BMPs for those industrial and commercial activities. Inspections, enforcement, and reporting and the definitions have not been changed. See this section of the 2007-08 report for a list of changes to both the industrial and commercial manuals.

The City conducted efforts to ensure industrial and commercial business owners and/or operators have received a copy of the Industrial Manual either through an annual inspection or a response to a complaint or concern reported through the Urban Runoff Hotline. In addition, copies of the Industrial Manual are available on the Clean Water Program website.

5.2.4 Program Implementation

Annual inspections of commercial and industrial businesses are conducted by Clean Water Program inspectors, Code Enforcement officers and a private contractor to ensure that applicable pollution prevention activities are implemented by industrial and commercial business owners and/or operators. In addition, inspections are conducted based on calls received on the Urban Runoff Hotline. All industrial and commercial businesses visited, through the annual inspection program or by complaint call acknowledged on the Hotline, receive follow-up visits until the industrial business is deemed in-compliance with City Code. All documentation pertaining to site visits are on file at the City. City staff conducted a total of 614 inspections during the 2009-2010 reporting year: 17 of industrial businesses, 597 of commercial businesses, including eating and drinking establishments and nursery or greenhouse businesses.

5.2.4.1 Inspections of Industrial Businesses

Inspections of industrial businesses will typically be conducted by designated Clean Water Program Inspectors and Code Enforcement personnel. Inspections will be tracked using the City's Urban Runoff Business database. Inspectors will utilize a Commercial and Industrial businesses Inspection Form provided in Appendix D of the 2008 JURMP. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Completion of 17 site inspections of industrial businesses during the reporting period.

- Completion of 8 of the 9 required annual inspections of high priority industrial businesses during the reporting period. The Oceanside School District Fleet Yard was the only high priority site that was not inspected by the Clean Water Program inspectors. The Fleet Yard Manager did not allow the annual inspection by the City. The manager stated that this facility is inspected annually by the County and the State and he sees no need for the city to conduct triplicate inspections of the site.
- Completion of 9 additional annual inspections of medium and low priority industrial businesses during the reporting period.
- Dissemination of the Industrial Manual to help industrial owners and/or operators become aware of the City Code requirements for BMP implementation, and information on applicable BMPs for specific industrial businesses and activities.
- Ensuring proper and continued training of the Code Enforcement officers and Clean Water Program compliance inspectors dedicated to the Clean Water Program.

5.2.4.2 Enforcement of Industrial Businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for enforcement of ordinances at an industrial site. This program was designed in accordance with part D.3.b.(3) of Municipal Permit Order 2007-0001. See Table 5-6 below for Table 5-5 presents the actions taken by Code Enforcement officers on industrial businesses within the City for this reporting year

Table 5-6. Accounting of Industrial Code Enforcement Actions for the 2009-2010 Reporting Year.

Action Type	Follow-up Phone Call	Follow-up Site Visit	Follow-up Office Visit	Written Notice	Letter Sent	Inspection Report	Admin. Warning	Administrative Monetary Citation	Referral to Other Dept.	Stop Work Notice
of Actions	2	33	0	0	2	39	0	0	0	0

5.2.4.3 Inspections of Commercial businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for conducting inspections of commercial businesses. This program was developed and implemented in accordance with part D.3.b.(3) of the Municipal Permit Order 2007-0001. As detailed in the JURMP, inspections of Medium and Low Priority Commercial Businesses are conducted as deemed necessary by the Code Enforcement personnel and CWP inspectors. Some inspections are initiated in response to a public or municipal staff report, an illicit discharge source investigation, or as a follow up to a previous inspection.

The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- A total of 597 commercial facilities were inspected during the reporting year. Eating and drinking establishments were inspected for the proper implementation and maintenance of storm water BMPs and grease control devices. Nursery and greenhouse operations

were inspected for compliance with urban runoff regulations within City Code Chapter 40.

- If the Clean Water Program Inspector found continued non-compliance after a second visit or gross non-compliance on an initial visit, the facilities were referred to Code Enforcement for further enforcement actions.
- Four hundred ninety (497) high priority commercial facility inspections were completed, including eating and drinking establishments and nurseries. Eighteen (18) facilities were inadvertently not inspected. It is estimated that three of these 18 facilities were inspected, but the records were lost. The transition to the new asset management software is the likely cause of this oversight and steps are being taken to ensure these issues are remedied. The remaining facilities in the inventory were either duplicate records or the facility was out of business.
- An additional 72 medium and 30 low priority commercial facility inspections were completed during the reporting year.
- Ensuring proper and continuing training of the Code Enforcement Officers and Clean Water Program inspectors dedicated to the Clean Water Program.

During the 2009-10 reporting period, all facility inspections were completed by City staff. The city is no longer using a third-party inspector for eating and drinking establishments.

Code Enforcement officers completed 10 inspections of nursery and greenhouse operations. Inspected. Three businesses on the nursery and greenhouse inventory were visited but were closed, thus no inspection of the facility was done. With drought restrictions and increasing water rates, the number of nursery and greenhouse operations has been decreasing each year. These sites, along with the larger agricultural facilities that are annually inspected by the County Agriculture, Weights and Measures Department, are visited several times a year by City staff due to the evolving nature of their business. With constant plowing and crop rotation, CWP staff not only complete annual inspections, but also complete a pre-rain event inspection and visit the agricultural areas frequently during the rainy season as well as during rain events. The City maintains a cooperative relationship with the U.S. Department of Agriculture NRCS for assisting the agricultural community in Oceanside in design and implementation of BMPs.

5.2.4.4 Enforcement of Commercial Businesses

Commercial businesses that are not in compliance after the second inspection are referred to Code Enforcement for follow-up. An accounting of all enforcement actions, taken by Code Enforcement Officers, is shown in Table 5-7.

Table 5-7. Accounting of Commercial Code Enforcement Actions for the 2009-2010 Reporting Year.

Action Type	Follow-up Phone Call	Follow-up Site Visit	Follow-up Office Visit	Written Notice	Letter Sent	Inspection Report	Admin. Warning	Administrative Monetary Citation	Referral to Other Dept	Stop Work Notice
of Actions	21	183	2	1	3	128	5	4	0	0

During this reporting period two commercial businesses had significant storm water violations that were referred directly to code Enforcement. See Table 5-8 below for code enforcement actions specific to these two businesses.

Table 5-8. Code Enforcement actions specific to two Commercial Businesses.

Businesses Name	Principal Products Services	1st Inspection Date	Corrective Action Needed	2nd Inspection Date	Code Enforcement Action	Compliance Status
Ruby s Diner	Eating and Drinking Est.	8/7/09	Drain pipe repair	8/10/9	Administrative Citations Issued	IC
McDonald s	Eating and Drinking Est.	11/20/08	Sewage spill due to grease blockage.	12/18/08	Administrative Citations Issued	IC

IC In Compliance

5.2.4.5 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of noncompliant sites in the City that are determined to pose a threat to human or environmental health. Oral notification is required within 24 hours of the discovery of noncompliance and a written report should be submitted to the RWQCB within five days of the incident. During this reporting period there were no sites to report to the RWQCB.

5.2.5 Stationary Industrial and Commercial Sites Sources Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

5.3 Mobile Sources Element

5.3.1 Background

Due to the lack of a stationary location for proper disposal of potentially hazardous liquids and materials, there is a major area of concern about where mobile businesses discharge water used in their line of work. Due to the nature of their activities, mobile businesses will continue to be regulated differently than other businesses. Mobile businesses can be difficult to identify because they may not have a City business license, they go out of business on a relatively regular basis and, though they may have a home base, they can cross jurisdictional lines to operate their

business. For the reasons regular inspections of mobile businesses will be challenging and time consuming in the future.

5.3.2 Source Characterization

The mobile businesses known to operate within the City's jurisdiction are noted on the City's commercial inventory. The following business types are addressed by the mobile sources element of the City's industrial and commercial program.

- Mobile automobile or other vehicle washing
- Pest control services
- Mobile carpet, drape or furniture cleaning
- Mobile construction trades
  - Painting and coating
  - Cement mixing or cutting
  - Masonry
  - Other contractors
- Landscaping
- Pool and fountain cleaning
- Power washing services

Because not all mobile businesses have obtained business licenses in the City or have a base of operations in the City, the City expects that a continual process of refining and updating its inventory will be needed. Sources for such inventory updates will include reported incidents, general observations by City staff, and available business licenses. See Attachment 5-C for the Mobile Business inventory for which current business licenses were on file during this reporting period.

As part of the regional outreach efforts implemented through the Industrial/Commercial Sources Workgroup, the City submitted their inventory in FY 2008-09 to the Industrial/Commercial Workgroup for the development of a regional inventory of Mobile Businesses. This inventory was created in order to send information to the businesses about the minimum BMP requirements specific to Mobile businesses.

During this reporting period the City of Oceanside mailed "Required Minimum BMPs For Mobile Businesses" education materials to 34 Oceanside Mobile Businesses with current business licenses. See attachment 8-A for a copy of these materials. Of the 34 mailed, four were returned to the City.

5.3.3 Best Management Practice Requirements

The City updated its Commercial Urban Runoff Requirements Manual during the 2007-08 reporting period with information on the required BMPs for both mobile and stationary sources. This updated manual can be referenced in Appendix C of the City's 2008 JURMP. One example of a BMP included in the updated manual is for outdoor vehicle detailing by a mobile business and the BMP explains how to capture and contain the rinse water so that it does not enter the storm drain system. Regardless of where the activity occurs, the City categorically prohibits illegal discharges from mobile businesses.

5.3.4 Program Implementation

5.3.4.1 Education Outreach

Because a specific element of the industrial and commercial program for mobile businesses is being newly developed, it is anticipated that some mobile businesses are not aware of storm water requirements and that education will need to be a significant portion of the program. The City of Oceanside will notify the owner/operator of each inventoried mobile business of applicable BMP requirements within the first three years of implementation of the City's 2008 JURMP.

5.3.4.2 Inter-Jurisdictional Cooperation

The City of Oceanside is participating in the Regional Industrial Commercial Sources workgroup which is developing a plan to educate mobile businesses about proper BMPs and protection of water quality. A complete report on these activities of this workgroup will be included in the Regional Urban Runoff Management Program report due to the RWQCB in January 2010.

5.3.4.3 Staff Training

Code Enforcement Division Officers and Clean Water Program Compliance Inspectors are responsible for conducting storm water compliance inspections and enforcement of mobile sources. Officers and inspectors are trained annually on inspection and enforcement procedures and BMP implementation as they relate to mobile businesses. City staff is encouraged to report potential illegal discharges from mobile businesses when working in the City to the urban runoff hotline.

During this reporting period the California EPA office conducted a training titled Environmental Enforcement Training. Five city staff attended this training and received a Certificate of Completion, including two Code Enforcement Officers and three Clean Water Program inspection staff. In addition these same staff completed an on-line training course titled, "Fundamental Inspector Course." See table 5-9 for a summary of the course dates and main topics conveyed during the trainings.

Table 5-9. Inspection trainings courses attended by City staff during FY 2009-10.

Title	Date	Attendees	Subjects Covered	Course length
Environmental Enforcement Training; Cal/EPA	3/23/10	Code Enforcement staff (2) Clean Water Program Inspectors (3)	▪Access, Entry and Warrants ▪Conducting Effective Interviews ▪Elements of a Violation ▪Evidence to Support a Violation ▪Report Writing ▪Environmental crimes ▪Enforcement Options ▪Case Development and Referral	8 hours
Fundamental Inspector Course-Online Training	March & February 2010	Code Enforcement staff (2) Clean Water Program Inspectors (3)	▪Environmental law ▪Environmental Science ▪Role of the Inspector ▪Health and Safety	6 Hours

5.3.4.4 Inspections

During this reporting period, inspection of mobile businesses was conducted on an as needed basis. The most common triggers for these inspections were from incident reports received over the Urban Runoff Hotline and direct visual observations by City staff.

5.3.4.5 Enforcement

During this reporting period Code Enforcement officers responded to complaint calls regarding mobile businesses that were allowing water to enter the storm drain system. During the site visit, depending on the nature of the complaint, Code Enforcement officers issued notices to comply and/or educated the operator on the proper BMPs that should be in place during their operation and provided them with the power washing brochure.

5.4 Industrial and Commercial Component Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

5.5 Program Review and Modification

During this reporting year, several departments within the City moved forward with implementation of various data tracking systems. The Water and Sewer Divisions of the Water Utilities Department have been using GBA Master Series Software, a maintenance management tool, and gradually rolling it into the various programs for several years. The Clean Water Program purchased additional licenses and hired a consultant to help modify the software for use with the NPDES permit. The Clean Water Program began using GBA to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This annual report is the first report utilizing the new technology. The Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use or the system in the coming years.

6.0 RESIDENTIAL COMPONENT

6.1 Introduction

A total of 39 percent of the City's 26,983 acres is designated as either multi- or single-family residential according to the San Diego Association of Governments (SANDAG). Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters in and around the City. The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the MEP.

This section documents the activities conducted by the City of Oceanside during the 2009-2010 reporting period to meet the requirements of Section D.3.c of the Municipal Permit (Table 6-1). The City continued the implementation of an enforcement program that responds to and monitors potential violation calls received on the Oceanside Urban Runoff Hotline (Hotline).

Table 6-1. Order 2007-0001 Compliance Summary.

D.3.c Residential Program	See Section 6 of this Annual Report
J.3.a.(3)(e).i High threat residential areas	See Section 6.2 of this Annual Report
J.3.a.(3)(e).ii Designated BMPs were implemented	See Section 6.3 of this Annual Report
J.3.a.(3)(e).iii Proper disposal of used oil and HHW	See Section 6.4.2 of this Annual Report
J.3.a.(3)(e).iv Amounts of HHW collected	See Section 6.4.2 of this Annual Report
J.3.a.(3)(e).v Evaluation of methods used for oversight of residential areas	See Section 6.2.1 of this Annual Report
J.3.a.(3)(e).vi Violations and enforcement actions	See Section 6.4.7 of this Annual Report
J.3.a.(3)(e).vii Collaboration on implementation of Regional Residential Education Program	See Section 6.5 of this Annual Report
J.3.a.(3)(e).viii Notable Activities	See Section 6.3.1 and 6.4.1 of this Annual Report

The City also utilizes its revised Urban Runoff Requirements Manual for Residents (Residential Manual) that contains BMP requirements and related guidance information for residents of the City. This manual has been made available to residents through the City's Clean Water Program Website. Changes to the Residential Manual were made during the 2007-08 reporting period.

6.1.1 Notable Activities

During this reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which

includes Water, Sewer, and the Clean Water Program, continued rolling out the GBA Masters Series software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year. Since both of these systems were fully launched in this reporting period, the Clean Water Program will be reviewing the effectiveness of the new tracking tools and will continue to implement improvements in the use of the system in the coming years.

6.2 Source Characterization

Residential neighborhoods can be the source of a variety of pollutants depending on the activities conducted in residentially developed areas. Pursuant to Section D.3.c.(1) of the Permit Order 2007-0001, the City identified High Priority Residential Areas and Activities in the JURMP. The following residential activities have been identified by the City to be High Priority Activities:

- Automobile or boat repair and maintenance.
- Automobile washing.
- Automobile parking.
- Home and garden care activities and product use.
- Disposal of household hazardous waste.
- Disposal of pet waste.
- Disposal of green waste.
- Any other residential activity that contributes a significant pollutant load to the MS4.
- Power washing activity (both do-it-yourself and contracting services).

The City has also identified residential areas of High Priority. These areas include the following:

- Any residential area tributary to a CWA section 303(d) impaired water body, where the residence generates pollutants for which the water body is impaired
- Any residential area within or directly adjacent to or discharging directly to a coastal lagoon or other receiving waters within an ESA

6.2.1 Evaluation of methods for oversight of residential areas and activities.

The Public Works storm drain maintenance staff has the best opportunity to inform the Clean Water Program staff about drainage areas that have a lot of trash and debris. On a regular basis the CWP staff request from public works maintenance staff areas within the city that are generating for two reasons:

1. To identify areas within the City where the public can become involved to assist in removing trash and debris from the specific areas where debris has collected, and
2. To target the residential areas for future outreach.

During the previous reporting period two residential areas were identified as contributing excessive trash to the MS4 and potentially the receiving waters. The first is a neighborhood that drains to Pilgrim Creek and eventually the San Luis Rey River. The second is a portion of MS4 that drains to Garrison Creek near El Camino High School and then Loma Alta Creek. See section 6.3.1 below for more specific information on these areas tasks implemented to address the pollutant sources.

6.3 Best Management Practice Requirements

The City's JURMP Residential Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by residents pursuant to City Code. In order to ensure residents are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for residential areas and activities, located within the City, are specified in the Residential Manual. This manual is found in Appendix C of the City's 2008 JURMP.

Education and outreach aimed at residents helps facilitate the implementation of BMPs, including pollution prevention methods. A detailed discussion of the City's education program can be found later in Section 10 of the 2008 JURMP. Details on education outreach to the residential community can be found in Sections 8 and 9 of this annual report.

6.3.1 BMP Implementation

Trash Trap at the Oceanside Municipal Golf Course

Staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. In March 2009 City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. During this reporting period approximately 180 pounds of trash and organic debris were removed from this device. Photos of the trash trap were provided in Section 6.3.1 of the FY 2008-09 JURMP Annual Report.

Non-Structural, Administrative BMP for Trash from Oceanside Unified School District

In the previous reporting period Public Works staff identified a section of MS4 where a large amount of tennis balls and plastic drink bottles accumulate after storm events where Garrison Creek daylights off of Mesa Boulevard. In the previous reporting period the director of the Oceanside Unified School District notified all area principals about the accumulation of trash and asked the principals to share the photos with staff and students using school newspapers, assemblies, and brochures.

During this reporting period the debris still accumulated in this section of Garrison Creek. Clean Water Program inspectors again contacted the school district to discuss the issue. Four storm drain inlets were identified as the potential point of entry of trash located downstream from a local high school, middle school, elementary school and several apartment and condominium complexes. It was determined that inlet filters are a BMP that could prevent the pollutants from entering the MS4. The City of Oceanside Engineering Division/CIP is planning to allocate funding in the next fiscal year to install the proposed inlet filters in four inlets in this area.

6.4 Program Implementation

6.4.1 Outreach

The most efficient way to encourage pollution prevention and BMP implementation and to restrict polluting practices is to educate residents on how to carry out their daily activities in ways that have the smallest potentials to discharge pollutants to the MS4. During this reporting period the Clean Water Program provided educational information and training to residents, in the following ways:

- Cleanup events
- Booths at public events
- Public television notices
- Presentations
- Website
- Email notifications
- Residential BMP Manual

During the 2008-09 reporting period the Clean Water Program discontinued mailing upcoming event notices to interested parties through the US Postal Service. In order to save time and money an email distribution list was created. This will allow for people to receive notifications by email which eliminates postage costs. Also, receivers of the information can easily forward the fliers to other people who may be interested in the specific information. During the reporting period almost 300 email addresses were compiled to which e-notices are provided for upcoming events.

Further outreach program details for this reporting period can be found in the Education and Public Participation, Section 8 and Section 9, of this document.

6.4.2 Household Hazardous Waste

The City continued to facilitate the proper management and disposal of used oil, toxic materials, and all other HHW to the residential audience. Residents have the opportunity to take used oil to approximately 12 private auto parts stores within the jurisdiction. In addition Waste Management, Inc., the City's franchise trash hauler, accepts HHW at its Oceanside facility. Residents may bring up to five gallons per day of used motor oil, used oil filters, and anti-freeze, Tuesday through Saturday from 8 a.m. to 4 p.m. without an appointment. HHW may be brought on Saturdays by appointment only. Details of the locations mentioned above can be found in Section 8.4.2 of the City's 2008 JURMP.

During the 2009-2010 reporting period, 3,356 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 154.75 tons of hazardous materials (including universal waste) during the reporting period.

As part of Oceanside Green Week (see Section 9.1.6 for more details) a free E-Waste drop-off event, open to the public, was held simultaneously during the Green Fair, thus providing a much needed service to the community, as participants enjoyed the benefit and entertainment of the fair itself. In most communities, disposing of all types of electronic waste can prove costly,

which oftentimes discourages the proper disposal of these materials. Via a partnership/sponsorship by E-World Recyclers, the City was able to provide this service free of charge to anyone who wished to participate in the Green Fair. At this event there were 6.55 tons of universal waste collected for proper recycling and disposal.

Furthermore, as part of the City's collection program, a 1,500-gallon used oil collection receptacle is provided at the City's harbor. This receptacle is available for residents who live on the boats in the Marina as well as for those boat owners and operators who rent a harbor slip to conveniently recycle the used motor oil and oil filters generated from the boats. During the reporting period 1,583 gallons of used oil were collected and recycled. In addition two 55-gallon barrels of used oil filters were collected from Harbor residents.

6.4.3 Clean Water Program Newsletters

Twice per year, educational newsletters titled *City of Oceanside Clean Water Program* are mailed with the utility bill to over 42,000 homes in the City. Topics in the newsletters explain storm water pollution, effects on water quality, pollutants of concern, illegal discharges, BMP implementation, and special events.

During this reporting period two Clean Water Program Newsletters were distributed to over 42,000 households. An overview of topics in these two newsletters is listed below. A copy of these two newsletters is included in Attachment 6-A this annual report.

Fall 2009

- Upcoming creek, river and beach cleanup events
- Pick up your pet waste campaign – Pet waste survey results
- Bacteria Source Tracking Project on the San Luis Rey River
- Water conservation water pollution prevention tips

Winter/Spring 2010

- Loma Alta Creek Cleanup event
- Pool draining tips to protect water quality
- Cigarette litter statistics you should know
- 2010 creek, river, and beach cleanup events

6.4.4 Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. Those households in the City who have access to the KOCT local channel are able to view this show. During this reporting period the Clean Water Program provided ten three-minute presentations. Table 6-2 provides an overview of the topics covered during each taping.

Table 6-2. Summary of 2009-10 Oceanside Update Topics by Month

Date	Topic Discussed
August 2009	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
September 2009	Girl Scout Troop 1215 □Pick Up Your Pet Waste
October 2009	Prepare your yard for the rainy season
November 2009	San Luis Rey River Cleanup Event
December 2010	Great pacific Garbage Patch (Gyre)
January 2010	Proper fertilizer application to prevent polluted runoff to water bodies
February 2010	City of Oceanside□s Green Week
April 2010	History of Earth Day; Creek to Bay Cleanup Event at Loma Alta Creek and beach
May 2010	Oceanside Water Bodies Overview

6.4.5 Website

The Clean Water Program maintains its own Website providing convenient electronic access to program information for residents and the general public. The address for this website is www.oceansidecleanwaterprogram.org. This Website provides the opportunity to learn about storm water pollution, the sources of this pollution, and what can be done to eliminate these pollutants from entering the storm drain system, thereby improving water quality in receiving waters. During this reporting period there were 60,319 hits to the Clean Water Program website. This number does not account for traffic from within the Oceanside network. This is a significant increase to the 35,647 hits from the previous reporting period.

Specific web pages available on the Clean Water Program Website are as follows:

- Commercial Business
- Development
- Events
- Industrial Business
- Just for Kids
- Water Quality Laws
- Other Websites
- Landslide Prevention
- Clean Water Projects
- Report Violations
- Residential/General
- Just for Educators
- Waterbodies

The residential web page offers the following information:

- An overview of pollutants in receiving waters and how those pollutants get there
- The difference between the storm drain system and the sewer system
- Links to pollutant factsheets in PDF format
- Links to brochures in PDF format
- Links to past Clean Water Program Newsletters in PDF format
- Link to the Residential Urban Runoff Requirements Manual

The Website address is disseminated to the public in a variety of ways:

- Listed in all Clean Water Program Newsletters
- Mentioned during each Oceanside Update Taping and shown at the bottom of the screen
- Listed on promotional items
- Listed on Clean Water Program staff business cards
- Listed in email notifications for upcoming events

6.4.6 Hotline

The City will continue to encourage public reporting of illicit discharges and illegal dumping through the City's Urban Runoff Hotline, which is run by the Water Utilities Department. The Hotline phone number is (760) 435-5800. All calls related to potential urban runoff violations were documented and forwarded to Code Enforcement.

The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, placement on brochures, click-message pens, pencils, and other promotional "give-aways", advertisement on the City's Clean Water Program webpage and in Clean Water Program newsletters. During the reporting period, two hundred fifty on (251) calls were received on the Urban Runoff Hotline by residents concerning potential urban runoff violations. This is a significant increase (100%) from the 124 calls received in the 2008-09, 55 calls received in the 2007-08 and the 14 calls received during the 2006-07 reporting period.

In addition to calls from the public to the hotline there were 136 referrals to the Clean Water Program from City staff. All storm water related calls to the City (387) either from residents or City staff referrals were entered into the GBA database system for tracking.

6.4.7 Enforcement

Section 8.4.4 of the JURMP describes the City's program for enforcement of ordinances in residential areas. The major activities and accomplishments undertaken by the City during this reporting period included:

- Code Enforcement responded to 84 urban runoff related cases, related to residential areas and activities, during the reporting period.
- An accounting of all residential enforcement actions, taken by Code Enforcement Officers, is shown in the following table.

See Table 6-3 for an accounting of Code Enforcement Actions during 2009-10.

Table 6-3. Accounting of Residential Code Enforcement Actions for the 2009-2010 Reporting Year.

Action Type	Follow-up Phone Call	Follow-up Site Visit	Follow-up Office Visit	Written Notice	Letter Sent	Admin. Warning	Administrative Monetary Citation	Referral to Other Dept	Stop Work Notice
of Actions	93	145	6	N/A	26	19	0	1	0

6.5 Collaboration to implement Regional Residential Education Program

During this reporting period the City of Oceanside elected to serve as Co-chair for the Education and Residential Sources Workgroup (ERS Workgroup) which is tasked with implementing the Regional Residential Education Program. The ERS workgroup was established as one of several workgroups under the Memorandum of Understanding amongst the San Diego County Copermittees (Copermittees). The chair of each of these workgroups presides over and provides leadership and direction to the workgroup. This includes serving as the point of contact to external entities, soliciting group input, developing meeting content, facilitating meetings, and coordinating with the Secretary to finalize work products for distribution to the workgroup. The City of Oceanside Co-chaired this workgroup with staff from the City of Imperial Beach. The City of Oceanside plans to continue serving as the co-chair for the ERS Workgroup.

Details of the activities of the ERS Workgroup will be provided in the submittal of the annual report of the Regional Urban Runoff Management Program due to the RWQCB in January 2011.

6.6 Residential Component Effectiveness Assessment

See Section 11.0 for an assessment of the education component of the City's JURMP.

6.7 Program Review and Modification

During this reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water, Sewer, and the Clean Water Program, continued rolling out the GBA Masters Series software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year. Since both of these systems were fully launched in this reporting period, the Clean Water Program will be reviewing the effectiveness of the new tracking tools and will continue to implement improvements in the use of the system in the coming years.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

This section is intended to document the activities conducted by the City of Oceanside during the 2009-2010 reporting period to manage illicit discharges and meet the requirements of Sections D.4 and J.3.a.(3)(f) of the 2007 Municipal Permit.

In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2009-10 Illicit Discharge Detection and Elimination Component, including the 2010 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2010.

THIS PAGE INTENTIONALLY LEFT BLANK

8.0 EDUCATION COMPONENT

8.1 Introduction

Education is an important step in working towards improving receiving water quality both locally and regionally. By increasing public awareness and encouraging a change in both the attitude and the behavior of the general public and the regulated community, the City may reduce or eliminate storm water pollution caused by common daily activities.

This section documents the activities conducted by the City of Oceanside during the 2009-2010 reporting period to meet the requirements of Section D.3.g of the Municipal Permit (Table 8-1). The City continued the implementation of an education outreach program for municipal staff, industrial and commercial businesses, and the general public.

Table 8-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(g).i Description of education efforts	See Section 8.0 of this Annual Report
J.3.a.(3)(g).ii Underserved target audiences	See Section 8.3.1 of this Annual Report
J.3.a.(3)(g).iii Education of municipal employees	See Section 8.2 of this Annual Report
J.3.a.(3)(g).iv Education of construction community	See Section 8.4 of this Annual Report
J.3.a.(3)(g).v City education efforts for residents, general public and school children	See Section 8.3 of this Annual Report

The City of Oceanside continued to provide a comprehensive storm water education program to achieve the following objectives:

- Measurably increase the knowledge of target communities regarding MS4s, impacts of urban runoff on receiving waters, and BMP solutions for the target audience.
- Measurably change the behavior of target communities, and thereby reduce pollutant releases to MS4s and the environment.

Educational programs and activities are tailored to meet the needs of the following target audiences:

- Municipal departments and personnel.
- Construction site owners and developers.
- Industrial and commercial owners and operators.
- Residential community, general public, and school children.
- “Underserved” target audiences, where applicable.

Many education outreach efforts are conducted on an ongoing basis, such as direct interaction during inspections, pre-construction meetings, or when fielding calls from the City’s Urban Runoff Hotline. Educational materials are also available throughout the year at special events and at the City’s Water Utilities Department counter. Targeted mailings, focused training

sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

8.2 Staff Training Element

City personnel are the eyes and ears of the City, and can provide valuable information on storm water related discharges and potential violations that may be occurring within the City. The City presents general storm water educational content, which is described in Section 10.3 of the 2008 JURMP, to all City departments. The City primarily educates its municipal personnel through classroom training, on-the-job training sessions, and the Municipal BMP Manual (Appendix C of the 2008 JURMP). Customized training programs are designed for personnel targeting fieldwork-related departments such as storm water compliance inspectors, building/engineering inspectors, public works, planning department staff, and park and recreation personnel. General informational storm water training sessions are provided for municipal personnel in other departments to review storm water regulations in the City, impacts of urban runoff and BMPs to be implemented to reduce or eliminate runoff.

During this reporting period twenty (21) City departments or divisions were provided a training on storm water related issues. In addition one division from the solid waste and recycling trash hauler for the City was provided with storm water training. A total of 190 City staff and 64 staff from the trash hauler attended storm water trainings.

During this reporting period one of two Storm Water Pollution Prevention Education Programs developed by a private company, EXCAL Visual, were used for municipal staff trainings. These programs include a 15-20 minute video and a quiz specific to the video. In addition some departments and divisions received a customized power point focused on their specific jurisdictional duties related to storm water.

Prior to the start of these training sessions using the programs mentioned above a multiple choice quiz was given to each participant to establish a baseline of knowledge for that individual. The quiz also served as the sign-in sheet for the individual attending each training session. After the completion of the video additional storm water related details were provided depending on the department or division being trained. Time was allotted for questions and answers toward the end of the training session. Prior to the end of the training session the same multiple choice quiz was given to each participant. One hundred forty-seven (147) municipal employees took both a pre and post-quiz during a municipal training session. For more information on the effectiveness of these training programs based on the pre- and post-quiz scores see Section 11.0 of this report.

One program titled “Storm Water Pollution Prevention - Storm Warnings” covers Everyday Best Management Practices for Industrial Facilities. Specific BMPs are covered to address the following issues related to industrial facilities:

- Good Housekeeping
- Materials Management
- Spill Response
- Equipment Fueling & Repair
- Outdoor Manufacturing
- Preventive Maintenance

- Waste Management
- Dust Producing Processes

Departments or Divisions that received this training were:

- Water Distribution – Operations
- Water Distribution – Maintenance
- Sewer Collections – La Salina Waste Water Treatment Plant
- Sewer Collections – San Luis Rey Waste Water Treatment Plant
- Water Distribution – Weese Plant (Drinking Water Treatment Plant)

The other program titled "Municipal Storm Water Pollution Prevention – Storm Watch" covers everyday BMPs for other municipal staff activities such as Parks and Recreation and Fleet Maintenance. Specific BMPs covered in this course are as follows:

- Good Housekeeping and Spill Prevention
- Vehicle and Equipment Washing
- Vehicle and Equipment maintenance
- Spill Reporting and Response
- Street Maintenance
- Outdoor Storage of Materials and Wastes
- Landscaping and Lawn Care

Departments or Divisions that received this training were:

- Streets Division – Street Repair and Maintenance
- Streets Division – Street Sweepers
- Streets Division – Parking Enforcement
- Parks and Recreation Maintenance Division
- Public Works – Solid Waste Division
- Fleet Maintenance Division
- Harbor Maintenance Staff
- Sewer Collections – Field Staff
- Water Utilities – Meter Services

Other Departmental staff received customized training because of their need for specific education that was not covered in these two programs or information covered in these programs was not needed to convey to these groups due to the nature of their work as municipal employees. The following departments were trained using a customized Power Point Presentation and an interactive format to allow for questions and answers throughout the training program:

- Building Division – Building Inspectors
- Engineering Division – Engineering Inspectors
- Harbor Police
- Harbor Police Volunteers
- Planning Division
- Police Dispatch
- Water Utilities Administration Division

Waste Management is the solid waste and recycling company that services residential and commercial/industrial businesses in the City of Oceanside. Though they are not a department or division of the City, they are an important entity to target with storm water related education programs due to the nature of their business. During this reporting period the trash haulers with Waste Management were targeted for storm water education. A customized power point presentation was used to emphasize the importance of proper handling of solid waste during servicing of trash cans and dumpsters and how to report potential storm water violations to Oceanside's Clean Water Program staff. The targeted audience was:

- Waste Management, Inc. – Trash, Recycling, and Green Waste Truck Drivers

8.2.1 Other Staff Trainings

Several city staff also attended additional training to increase their knowledge on storm water regulations, enforcement inspection protocols, and the new construction permit. Table 8-2 provides a list of stormwater related trainings attended by City staff.

8-2. Storm water-related trainings attended by City staff

Date	Title	Organizer	Overview	Attendee Name	Total hours for all attendees
8/05/09	Web Conference California CGP Part I	Foley Lardner/Rick Engineering	State Construction General Permit	Storm Water Development Review (1) CWP Coordinator (1)	4
10/01/09	Web Conference California CGP Part II	Foley Lardner/Rick Engineering	State Construction General Permit	Storm Water Development Review (1) CWP Coordinator (1)	4

8-2. Storm water-related trainings attended by City staff (continued)

Date	Title	Organizer (Course Hours)	Overview	Attendee Name	Total hours for all attendees
4/08/10	State Construction General Permit	SWRCB, RWQCB, Carlsbad Library	Risk levels, implementation schedule, SMARTS	Storm Water Development Review (1) Engineering Inspector (1)	4
5/4/10	State Construction General Permit Overview	Group Organizing: SWRCB	State Construction General Permit	CWP Coordinator (1)	3.5
6/3/10	Oil Spill Training Workshop	U.S. Coast Guard		CWP Coordinator (1)	2.5
6/23/10	State Construction General Permit Webinar	SWRCB	State Construction General Permit	CWP Coordinator (1)	1

8.3 Educational Outreach Element

Residential areas make up a large portion of the land use in the City, and therefore even small pollutant discharges can be magnified significantly and have the potential to affect the quality of the receiving waters. Activities such as residential car washing and over irrigation are harmful to receiving water bodies by contributing pollutants such as heavy metals, detergents, and nutrients. Providing residents with appropriate educational materials may help to increase overall awareness, and encourage residents to change harmful behaviors and subsequently reduce the potential for pollutants to enter the storm drain system and reach receiving water bodies.

Media

Twice per year, educational newsletters are mailed to all homes in the City with water utility bills. Topics in the newsletters explain storm water pollution, effects on water quality, pollutants of concern, illegal discharges, BMP implementation, and special events.

During this reporting period two Clean Water Program Newsletters were distributed to over 44,000 households. An overview of topics in these two newsletters is as follows:

Fall 2009

- Pick Up Your Pet Waste Campaign along the San Luis Rey Recreation Trail – Pet Waste Survey Results
- 2009 CA Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
- Water conservation and water pollution prevention tips

Winter/Spring 2010

- Loma Alta Creek Cleanup event
- 2010 River, Creek, and Beach Cleanup Events
- Cigarette Litter Statistics You Should Know!
- Pool Draining Tips to Protect Water Quality

A copy of these two newsletters are included as Attachment 6-A to this annual report.

Website

The City's Clean Water Program website also offers electronic copies of a variety of storm water fact sheets covering topics such as proper pesticide and fertilizer use, trash disposal, pet waste and lawn waste disposal, proper chlorine and other swimming pool chemical disposal, sedimentation, effects of soaps and detergents on receiving waters, and other storm water-related topics. During this reporting period there were 60,319 hits to the Clean Water Program website. This number does not account for traffic from within the Oceanside network. This is a significant increase from the years past. Table 8-1 below provide a summary of the number of hits to the webpage.

Table 8-1. Summary of Clean Water Program Webpage Hits

Fiscal year	of Website Hits
2009-10	60,319
2008-09	35,647
2007-08	38,146
2006-07	45,267
2005-06	42,367

Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. During this reporting period the Clean Water Program will provided nine three-minute presentations. Table 8-2 provides an overview of the topics covered during each taping.

Table 8-2. Summary of 2009-10 Oceanside Update Topics by Month

Date	Topic Discussed
August 2009	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
September 2009	Girl Scout Troop 1215 Pick Up Your Pet Waste
October 2009	Prepare your yard for the rainy season
November 2009	San Luis Rey River Cleanup Event
December 2010	Great pacific Garbage Patch (Gyre)
January 2010	Proper fertilizer application to prevent polluted runoff to water bodies
February 2010	City of Oceanside s Green Week
April 2010	History of Earth Day; Creek to Bay Cleanup Event at Loma Alta Creek and beach
May 2010	Oceanside Water Bodies Overview

Community Events – Booths and Outreach Activities

The Clean Water Program staff participated independently and in conjunction with other cities in the North County Storm Water Program by staffing a booth at several community events in Oceanside and north San Diego County. The Clean Water Program staff talked to residents, handed out educational materials, and responded to questions and concerns. Table 8-3 lists community events attended between July 2009 and June 2010 to encourage community participation and to educate participants of the effects of polluted urban runoff:

Table 8-3. 2009-10 Community Events.

Date	Event	Participants (Estimated)
10/10/09	Pride the Beach - Oceanside	250
12/18/09	Day without a Bag	300
3/8/10	Oceanside Green Fair	300
04/18/10	Fallbrook Avocado Festival	50,000
04/25/10	Earth Day North at Mission San Luis Rey	400
05/15/10	Operation Appreciation	500

School Education

Educating the City's youngest residents is important in two ways: ideally the good habits/behaviors learned will be carried into adulthood, and secondly, children may educate their families and friends around them with the information they have learned. Children are impressionable at a young age, and are therefore more likely to act upon the knowledge given to them now and throughout their life.

The City continued its outreach to school age children through the use of the watershed model during presentations. A total of twenty one presentations were conducted reaching 534 school-age children and 21 adults. Table 8-4 provides a list of groups and classrooms that were educated about storm water pollution via these presentations.

Table 8-4. 2009-10 School Age Children Watershed Presentations.

Date	Group	Children	Adults
2/23/2010	Reynolds Elementary (2nd Grade)	23	1
2/23/2010	Reynolds Elementary (2nd Grade)	24	1
2/23/2010	Reynolds Elementary (2nd Grade)	23	1
2/24/2010	Reynolds Elementary (2nd Grade)	23	1
2/24/2010	Reynolds Elementary (2nd Grade)	22	1
3/24/2009	Palmquist Elementary (4th Grade)	35	1
3/24/2009	Palmquist Elementary (4th Grade)	36	1

4/19/2010	Palmquist Elementary (5th Grade)	30	1
4/19/2010	Palmquist Elementary (5th Grade)	31	1
4/19/2010	Palmquist Elementary (5th Grade)	30	1
5/17/2010	Foussat Elementary (2nd Grade)	28	1
5/17/2010	Foussat Elementary (2nd Grade)	31	1
5/17/2010	Foussat Elementary (2nd Grade)	28	1
5/26/2010	Stuart Mesa Elementary Science	15	1

Date	Group	Children	Adults
	Discovery Day (3-5th grades)		
5/26/2010	Stuart Mesa Elementary Science Discovery Day (3-5th Grades)	14	1
5/26/2010	Stuart Mesa Elementary Science Discovery Day (3-5th Grades)	10	1
6/4/2010	Palmquist Elementary (2nd Grade)	25	1
6/4/2010	Palmquist Elementary (2nd Grade)	25	1
6/4/2010	Palmquist Elementary (2nd Grade)	24	1
6/4/2010	Palmquist Elementary (2nd Grade)	23	1
	Totals	**534**	**21**

Splash Lab

The San Diego County Office of Education Splash Science Mobile Lab (Splash Lab) is a completely self-contained mobile laboratory brought to local schools to provide students with hands-on experience with the following resources:

- Watershed/storm drain model presentations
- GIS computer stations
- Water Conservation Station
- San Diego Estuary Station
- Microscopes - with live specimens!
- Chemistry experiments
- State of the art computers
- Cooperative learning skills

The curriculum is designed for grade levels 4-6 and is aligned with California Science Content Standards.

Green Machine

The "Green Machine" is a hands-on interactive learning program brought directly into your classroom. Included are:

- A soils research station (complete with live earthworms)
- An integrated pest management station (complete with role play scenarios and puppets)
- A water cycle station (complete with dramatic role play and costumes)
- Musical and dramatic wrap-up designed to reinforce the learning
- Comprehensive teacher packet complete with pre and post "Green Machine" activities

During this reporting period 16 classes at four schools received the Splash Lab with the costs covered by the City Water Utilities Department. Also, eight classes at two schools received the Green Machine program. See Table 8-5 below for information on the schools and number of students who participated in the programs.

Table 8-5. Schools using Splash Lab & Green Machine during FY 2009/2010.

Date	School	Grade	Topic	Number Attended	Number of classes
10/12/2009	Foussat Elementary	3	Green Machine	113	4
11/12/2009	Laurel Elementary	4-5	Splash Lab	172	4

3/18/2010	Mission Elementary	4-5	Splash Lab	75 (est.)	4
3/22/2010	Stuart Mesa Elementary	4-6	Splash Lab	75 (est.)	4
Totals				**607**	**24**

Project SWELL (SWELL = Stewardship: Water Education for Lifelong Leadership)

The City continued to collaborate with San Diego CoastKeeper and the San Diego Unified School District (SDUSD) to customize and implement Project SWELL (Stewardship: Water Education for Lifelong Leadership), a water-based science curriculum, for different grade levels in the Oceanside Unified School District (OUSD). The City of Oceanside is currently implementing the 5th grade curriculum and is considering implementing the 6th grade and 4th grade curricula in the future.

The Project SWELL curriculum will foster a sense of stewardship for our natural environment and help to empower and educate these future leaders of America to understand and improve the condition of San Diego's coast and waterways. Project SWELL balances environmental and scientific studies as a comprehensive and hands-on K-12 water quality and pollution prevention curricula. More information about this curriculum can be found at http://www.projectswell.org/. This curriculum provides students with knowledge of water resources in San Diego County and Oceanside, watershed functions, water conservation, the effects of polluted urban runoff, and how students can help prevent water pollution.

5th Grade

During this reporting period the 5th grade level curriculum continued to be implemented. The OUSD adopted a slightly revised version of the FOSS (Full Option Science Systems) science kits used for K-5th grade levels for the 2009-10 school year. The curriculum was slightly revised to reflect the use of the revised FOSS kits. FOSS is a research-based science curriculum for grades K–8 developed at the Lawrence Hall of Science, University of California at Berkeley.

6th Grade

For 6th grade the OUSD and the SDUSD adopted different science kits for implementation during the 2008-09 school year. The SDUSD will need to change the 6th grade curriculum to reflect the materials that will be used in the new science kit. Once the SDUSD curriculum is revised the City of Oceanside will move forward with customizing the curriculum for Oceanside and hopefully piloting the curriculum during the 2010-11 school year.

In preparation for the 6th grade curriculum, the City of Oceanside developed a table that had specific information related to the various watersheds and water bodies in the northern watersheds of San Diego County. This table was completed during the previous reporting period (See Table 8-4 of Oceanside's 2007-08 JURMP Annual report.) With the 2008 303(d) list

scheduled to be adopted in 2010 this table will be updated during the 2010-11 reporting period to reflect any changes in water body listings with in the City of Oceanside.

Other Education Outreach opportunities

Communities Alive in Nature, a local non-profit organization, implements education outreach programs to local school districts in San Diego County. One component of their education outreach program is to educate high school age students about water quality and how to assess water quality based on water chemistry and the biological community of benthic macroinvertebrates living within the streams. The Clean Water Program was invited to participate in a hands-on field training for these students to demonstrate how to properly use field test kits for water quality analysis and the proper protocols for collection of benthic macroinvertebrates. This activity is reported in the Carlsbad WURMP Annual Report.

During FY 2009-10 one field sampling bioassessment training event was conducted on March 25, 2010. Two training events were scheduled for March 25 and April 1 but rain caused the cancellation of the April 1 training event. Due to the school classroom scheduling the second field sampling event was not able to be rescheduled.

Thirty students participated in the field sampling event on March 25 and were divided into three groups. Each group conducting the following tasks at three sites along Agua Hedionda Creek in the Dawson Reserve: Chemical analysis, physical assessment, and biological sampling. The benthic macroinvertebrate samples were taken back to the school where the students sorted the insects with the use of high-powered microscopes. 45 students who were not able to attend the April 1 field sampling event were provided classroom training on proper field sampling protocols.

The BMI samples that were collected on March 25th were sorted by all students in a series of five lab classes. The samples are at the Dawson Reserve and labeled with the March 25, 2010 date. Students were then asked to analyze the data from the physical, chemical and BMI counts and draw a conclusion about water quality in Agua Hedionda Creek (AHC) at the Dawson Reserve. In making their case for the conclusion, students were asked to use all the data and observations from the sampling day. The conclusion was to be drawn from the observations and facts not on speculation.

Over-Irrigation

Clean Water Inspectors continue to respond to and document over irrigation issues after receiving complaints from the general public or city staff. Inspectors investigated water sources and contacted property owners in person if possible or provided informational door hangers indicating the need to curtail overwatering or fix broken irrigation system if applicable, as well as provided information to educate the public to conserve water. After responding to complaints, inspector's maintained electronic files of all complaints and revisited locations to make sure over irrigation had stopped. In problematic areas where overwatering was caused by many property owners, the entire area was notified by door hangers and/or letters informing the property owners the need to conserve water and avoid polluting the storm drain systems. After the institution of Stage II Drought ordinance in FY 09-10, inspectors also enforced the new requirements for the time and duration of irrigation through out the City per the requirements of the new ordinance. If

the property owners did not curtail overwatering, the information was submitted to Code Enforcement for further processing of the violations.

Water meter reader personnel are trained to document and respond to urban runoff and over-irrigation issues as they come across such activities during their normal activities. While in the field these personnel will enter the address location into a hand-held meter of a site that may have an urban runoff violation. These addresses are then compiled and given to the Clean Water Inspectors for follow-up. When possible, the water meter reader personnel will also leave door hangers and report incidents of urban runoff. Depending on the situation a meter shop personnel will visit the site or the Clean Water Inspector will follow-up.

Residential Car Washing

Residents continued to be encouraged to use professional car washes or to implement BMPs at their homes to prevent water produced by residential car washing from entering the storm water conveyance system.

Pick Up Your Pet Waste Campaign

Pet waste left on grass, sidewalks, and along trails is not only a leading cause of bacterial contamination in waterways, but it is also an issue that concerns Oceanside residents. In FY 2008-09 the City of Oceanside Clean Water Program (CWP) implemented a Pick Up Your Pet Waste Campaign focused on a section of the San Luis Rey Recreation Trail (Trail) that travels parallel to the San Luis Rey River. Following is information on what was implemented during this reporting period.

During FY 2008-09 a relationship between the Clean Water Program (CWP) and Girl Scout Troop 1215 was established. Troop 1215 agreed to participate in an education outreach campaign encouraging dog owners and dog walkers to pick up after their pets along the Trail. This project is included as a Watershed Activity under the San Luis Rey Watershed Management Program.

To kick off the campaign, an intercept survey was conducted by members of Girl Scout Troop 1215. While walking along the trail, the Girl Scouts asked people the location of where they accessed the trail, the street name they lived on and if they walk a dog along the trail. The results of this intercept survey allowed for the next component of the program, a mail survey, to target the neighborhoods where most people come from to use the trail.

The next component was a brief survey that was mailed to 300 Oceanside households located in neighborhoods near the trail. More details about the survey results are provided in Section 9.1.5 of the FY 2008-09 JURMP Annual Report. The goal of the survey was to identify the reasons why people do or do not pick up after their pets on the trail and in other public areas. Among dog owners, the most common reasons cited for why someone might leave dog waste behind while walking the Trail were:

- Forgot to bring a bag
- Nowhere to throw it away
- No one else around to see them

Ninety-three percent of survey respondents agreed that more pet waste dispensers are needed in the community.

Survey Recommendations

The results of the survey provided clear recommendations for the Pick Up Your Pet Waste Campaign that included the installation of additional trash cans and pet waste bag dispensers as well as modifying signage to emphasize pet owner responsibility. As a result, the City moved forward with purchasing and installing four pet waste bag dispensers and two trash cans along the trail.

During this reporting period four pet waste bag dispensers were ordered but not installed. Also, a new sign was created to emphasize pet owner responsibility. Installation and assessment of the effectiveness of these dispensers and signs will be completed during the next reporting period.

8.3.1 Targeting Underserved Communities

Underserved communities are communities the City has determined may require increased educational efforts. The City targeted the following underserved communities and high-risk behaviors.

Mobile Businesses

Due to their nature, mobile businesses are typically not inspected during the routine industrial and commercial inspection program; therefore they may not be receiving the same educational material as other industrial and commercial businesses. The City continued to use Code Enforcement to respond to complaint calls related to mobile businesses at which time Mobile Business BMP information was given to the operator.

As part of the regional outreach efforts implemented through the Industrial/Commercial Sources Workgroup, the City submitted their inventory in FY 2008-09 to the Industrial/Commercial Workgroup for the development of a regional inventory of Mobile Businesses. This inventory was created in order to send information to the businesses about the minimum BMP requirements specific to Mobile businesses.

During this reporting period the City of Oceanside mailed “Required Minimum BMPs For Mobile Businesses” education materials to 34 Oceanside Mobile Businesses with current business licenses. See attachment 8-A for a copy of these materials. Of the 34 mailed only four were returned to the City.

Spanish-speaking population

The City will continue to target the large Spanish-speaking population in the City by offering a number of educational brochures and handouts, including the Green Wrench Guide and Integrated Pest Management tip cards in both English and Spanish. In addition there are posters available in Spanish for restaurants and automotive related businesses and are provided to these business where inspectors feel there is a need or upon request.

Nursery and Greenhouse Operations

Due to the amount of agricultural land use in the City, the City distributed a number of printed educational materials to agricultural/nursery/greenhouse site owners and operators. The City

continues to provide educational materials, when needed, to nursery and greenhouse operations during annual inspections and on unannounced visits throughout the year.

During this reporting period the City of Oceanside, in collaboration with the San Luis Rey and Carlsbad WURMP workgroups, implemented a workshop targeting nurseries and agricultural businesses. Held on June 24, 2010 at the San Diego County Farm Bureau in Escondido, four speakers provided this target audience with information on water quality runoff management, regulatory regulations and opportunities to collaborate on and water quality monitoring. More details on this workshop will be reported in the 2009-10 San Luis Rey and Carlsbad WURMP Annual Reports.

Education Materials Distributed

Materials are regularly developed and updated to provide residents, the general public, and students with information about urban runoff, water quality, BMPs, Clean Water Program projects, and the Urban Runoff Hotline number. These materials include brochures and promotional items that are distributed upon request and during community events where the Clean Water Program staffed a booth. No significant changes were made to any of the brochures during this reporting period. Copies of these brochures were submitted with previous annual reports. Table 8-6 lists the educational materials distributed during the 2009-2010 reporting period and Figure 8-1 provides a photo of the promotional materials.

Table 8-6. Educational Brochures and Promotional Items Developed and/or Distributed.

Education Material	Description	Number Distributed
Educational Brochures		
Urban Runoff Guidelines for Residents Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from residential activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	100
Pollution Prevention Tips for Gardening Activities Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from gardening activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	50
Urban Runoff Guidelines for Commercial Businesses Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from commercial and industrial business activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	100
Urban Runoff BMPs for Construction Projects handout	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from home-improvement activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	600

Urban Runoff Guidelines for Powerwashers	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from powerwashing activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	25
Guide to Oceanside Waterbodies Booklet	A colorful introduction to the waterbodies in Oceanside. The Guide is intended to help residents develop a sense of stewardship, as well as provide information about local creeks, rivers, lakes, wetlands, and lagoons, the history behind each waterbody, and stakeholder information. In addition, the Guide includes a description of a watershed and current monitoring programs implemented to test recreational water quality.	150
	Total number of educational brochures distributed during this reporting period.	**1,025**
Promotional Items		
Click Message Pen	Each pen has Oceanside's Urban Runoff Hotline number on the outside barrel number as well as the following messages inside that rotate when the pen is clicked: "Protect our Waterways: sweep sidewalks, all storm drains lead to the ocean, Sweep (don't hose off) driveways and sidewalks, pick up pet waste, www.OceansidCleanWaterProgram.org, Water saving tips:www.SaveWaterOceanside.com, Conserve water - don't overwater landscapes.	1,025
Pencils	Each pencil has Oceanside's Urban Runoff Hotline phone number and is made from recycled newsprint	5000
Tattoos	These tattoos have the slogan "Clean Water - Only Rain in the Storm Drain" and were distributed at community events.	100
Decals	These static cling decals have Oceanside's Urban Runoff Hotline phone number and can be placed on the windshield for quick reference to report potential storm water violations.	100
Gel Pen	These gel pens have Oceanside's Urban Runoff Hotline phone number and were distributed to City employees during municipal training sessions.	500
Goodie Bags	Reusable bags stuffed with storm water information, stickers and pencils with the Oceanside Urban Runoff Hotline were distributed to each school classroom and scout troop receiving a watershed model presentation.	25
T-shirts	T-shirts are offered as a give-away option for beach and creek cleanup volunteers.	1,000
Tote Bags	These reusable tote bags are made from recycled cotton and have the words "Protect and Conserve Oceanside Water". They were distributed to employees and as a give-away option for beach and creek cleanup volunteers.	500
Water bottles	These reusable steel Bisphenol A (BPA) free water bottles were distributed to employees and as a give-away option for beach and creek cleanup volunteers.	500

Rally Towels	These 11 x15 rally towels have the slogan Only Rain in the Strom Drain and were offered to beach and creek cleanup volunteers.	200
Bracelets	These translucent blue bracelets state I Love Clean Water City of Oceanside Clean Water Program and were distributed to children during community events and in goodie bags for classroom presentations.	400
Flap hats	These flap hats were provided as a raffle item during municipal training sessions.	20
Stickers	These stickers are provided to young children and have storm water related slogans such as You Are the Solution to Storm Water Pollution.	250
	Total number of promotional items distributed during this reporting period.	**6,620**

Figure 8-1. Promotional Items Distributed During Reporting Year 2009-10.

8.4 Education of Construction Community

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents.

Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of any permits, construction site owners and developers are either given printed educational material or referred to the Clean water Program website for information that includes the municipal permitting process, as well as the state and local storm water permit requirements for construction sites. Prior to the wet season, all currently permitted construction sites are contacted reminding site owners and developers to update their sites' BMPs to reduce erosion and prevent storm water pollution, as well as update erosion control plans and SWPPPs.

The Building Division counter in City Hall references websites that have the following documents for construction site owners and developers to reference:

- Clean Water Program Website to for a link to the General Construction Storm Water Permit
- The City's Construction Manual
- Construction related sections of the Municipal Storm Water Permit Order R9-2007-0001
- Standard Urban Storm Water Mitigation Plan, when applicable

In addition to referring the construction community to the documents mentioned above, a copy of the Urban Runoff BMPs for Construction Projects brochure is stapled on to the storm water related development plans for the project. This ensures that the construction community has received BMP information and is required to follow the minimum BMPs listed and shown in the brochure. Additional BMPs may be required by the City based on a review of the Storm Water Pollution Prevention Plan prepared by the project applicant. Storm water information is also disseminated to the construction community through storm water compliance inspections of construction sites.

8.5 Outreach Component Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the education component of the City's JURMP.

8.6 Program Review and Modification (Optional)

During this reporting period there were no changes to the Education Outreach component of Oceanside's Clean Water Program.

THIS PAGE INTENTIONALLY LEFT BLANK

9.0 PUBLIC PARTICIPATION COMPONENT

In order to ensure success with any City-wide program, the public must be involved. Stewardship and participation by the general public will increase the acceptance and willingness to comply with new regulations. The City of Oceanside has actively pursued public involvement in the Clean Water Program through the implementation of various programs and feedback mechanisms. This section documents the activities conducted by the City of Oceanside during the 2008-2009 reporting period to meet the requirements of Section D.6 of the Municipal Permit (Table 9-1).

Table 9-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(h).i Public Participation Efforts	See Entire Section 9 of this Annual Report

9.1 Local Public Participation Opportunities

The City of Oceanside encourages its residents to become involved in the Clean Water Program in various ways. The variety of ways the public can participate in the Clean Water Program include reporting potential violations to the Urban Runoff Hotline, beach and creek cleanup events, and attendance at community events.

9.1.1 Notable Activities

Beach Cleanup manual created

During this reporting period the Clean Water Program created a Beach Cleanup Manual to assist private groups in coordinating their own beach cleanup event. See Section 9.1.4 for more details.

Girl Scout Troop 1215 KOCT Airing

During this reporting period, three members of Girl Scout Troop 1215 gave a three minute presentation on KOCT Oceanside Update about the importance of picking up pet waste. See Section 9.1.6 for more information.

Green Oceanside Campaign

In late 2008, a group of city employees from various departments and divisions, including the Clean Water Program, discovered that they had a goal in common: to bring environmental awareness and stewardship to the citizens of Oceanside in a coordinated manner by educating them on how environmental protection covers many different arenas and is most effective when implemented collectively. They joined forces and became “The Green Team” and later the driving force behind the Green Oceanside campaign. See section 9.1.6 for detailed information about activities implemented for this campaign.

New tracking database for hotline calls

During this reporting year, the City moved forward with implementation of a data tracking systems to track hotline calls. The tracking system is the GBA Master Series Software, which is a maintenance management tool, but has been customized for various programs related to tracking information for the Clean Water Program. The Clean Water Program began using GBA to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This annual report is the first report utilizing the new

technology. The Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use or the system in the coming years.

9.1.2 Urban Runoff Hotline

The public can report potential storm water violations that could pollute the City's receiving waters through the Oceanside Urban Runoff Hotline (760) 435-5800. The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, placement on brochures, newsletters, click-message pens, pencils, and other promotional "give-aways", and advertisement on the City's Clean Water Program webpage.

During the reporting period, two hundred fifty nine (259) calls were received on the Urban Runoff Hotline by residents concerning potential urban runoff violations. This is a significant increase from the 124 calls received in the 2008-09 (102%), 55 calls received in the 2007-08 and the 14 calls received during the 2006-07 reporting period.

In addition to hotline calls from the public there were 137 referrals to the Clean Water Program from City staff. All storm water related calls to the City (396) either from residents or City staff referrals were entered into the GBA database system for tracking. Table 9-2 provides a summary of the nature of the calls received via the Hotline or by City staff referral. Of the calls received through the Hotline, nine (9) were referred directly to Code Enforcement for investigation.

Table 9-2. Urban Runoff Hotline calls and City staff referral summary

Department	Problem	City Employee Referral	Public Hotline	Total
Clean Water Program	Follow-up	0	16	16
	Leak Repair	0	2	2
	Other	1	11	12
	Over-irrigation/Broken irrigation	125	112	237
	Power Washing	0	8	8
	Spills/Dumping	2	24	26
	Street/Driveway Washing	1	12	13
	Unidentified water runoff	6	48	54
	Watering Time	0	5	5
	Yard waste/Landscape Activity	1	13	14
	Total For CWP	136	251	**387**
Referred Directly to Code Enforcement	Leak Repair	0	1	1
	Other	0	1	1
	Power Washing	0	1	1
	Spills/Dumping	0	5	5
	Street/Driveway Washing	1	0	1
	Total for CE	1	8	**9**

9.1.3 Oceanside Eyes

In addition to the Urban Runoff Hotline City Staff is encouraged to participate in the Clean Water Program through the use of a special City Enhancement Hotline specifically for Oceanside employees called "Oceanside Eyes." This hotline is call incentive driven and promoted internally. During storm water classes for municipal staff, this hotline is mentioned as an alternative for calling the Urban Runoff Hotline.

9.1.4 Cleanup Events

City Sponsored events

To increase Oceanside residents' stewardship toward our local waterways, the Clean Water Program hosts annual cleanup events at every major waterway in Oceanside including Buena Vista Creek, Loma Alta Creek, San Luis Rey River and City beaches. Between 70 and 300 volunteers participate in these cleanup events. During the 2009-10 reporting period, 1,561 volunteers removed over 6.5 tons of trash, debris, shopping carts and other unwanted material from Oceanside waterways during City-sponsored events. See Table 9-2 for data related to the City-sponsored events.

Private group sponsored events

Private groups regularly approach the city to coordinate their own cleanup event. The City of Oceanside including the Clean Water Program, Lifeguard division and the harbor maintenance staff support these groups by providing them guidance on what areas to target for cleanup, supplies for their event (bags and gloves), and safety instructions for the group.

To assist these groups in coordinating their own beach cleanup event the Clean Water Program created a Beach Cleanup manual. This manual provides the following information:

- How to coordinate a beach cleanup
- Day of cleanup instructions
- City of Oceanside "Beach Cleanup Pledge"
- Safety fact sheet
- Supply checklist
- Cleanup summary sheet

See Attachment 9-A for a copy of the Beach Cleanup Manual.

During this reporting period twelve private groups coordinated their own beach cleanup event in Oceanside. After the completion of their event, private groups are requested to provide the number of volunteers and the number of bags collected or pounds of trash removed from the target area. Every attempt is made to gather this data but some groups do not always keep track of the data or report back to the City. At least 1,004 volunteers removed 2,720 pounds of trash from Oceanside beaches and waterways. See Table 9-2 for data related to the private group sponsored events.

Between the City sponsored and private group sponsored events, 2,565 volunteers removed 15,795 pounds of trash and debris from Oceanside City beaches and three waterways that traverse the City of Oceanside. Table 9-2 lists cleanup events held between July 2009 and June 2010 including the number of volunteers and the pounds of trash removed from the waterways.

Table 9-2. Cleanup Events Held during the 2009-10 Reporting Year.

Date	Event	Number of Participants	Pounds Tonnage of Waste Removed
City Sponsored Cleanup Events			
7/6/2009	Morning After Mess	71	476
9/19/2009	Buena Vista Creek Cleanup	183	2,500
9/19/2009	Oceanside Beach Cleanup	410	880
9/19/2009	Buccaneer Beach Cleanup	154	527
11/07/2009	San Luis Rey River Cleanup	154	5,500
11/07/2009	Harbor Beach Cleanup	57	175
4/24/2010	Loma Alta Creek Cleanup	90	2,000
4/24/2010	Oceanside Beach Cleanup - Pier	188	205
4/24/2010	Buccaneer Beach Cleanup	192	812
	Total City Sponsored Events	**1,561**	**13,075 pounds**
Private Group Sponsored Events			
7/5/2009	San Gorgonio Girl Scouts	5	
8/14/2009	Vons Grocery Stores	25	
9/9/2009	Oceanside Tourism Council	90	
9/30/2009	Coca Cola	19	250
10/12/2009	Oceanside Pop Warner	100	
12/5/2009	Oceanside High School Surf Team	15	20
2/27/2010	Oceanside Baseball Team	50	
3/8/2010	Coastkeeper	230	450
3/13/2010	Julian Charter Academy	20	
5/1/2010	Escondido High School Leadership Group	30	
5/9/2010	Church of Latter Day Saints	370	2000
5/22/2010	GEAR UP (College Prep Group)	50	
6/12/2010	Coastkeeper		
	Total Private Group Events	**1,004**	**2,720 pounds**
	Grand Totals	**2,565**	**15,795 pounds**

Cleanup event mailing lists

In previous reporting years all volunteers were placed on a mailing list and were periodically mailed fliers with event information allowing them a sense of ownership and responsibility toward the program. In FY 2008-09 the Clean Water Program eliminated the mailing through the US Postal Service and created an email distribution list as a way to inform interested parties about upcoming cleanup events. This saved staff time to update mailing lists and eliminated the postage and printing costs for mailing these notifications. In FY 2009-10 two event fliers and two Clean Water Program Newsletters with cleanup event information were sent via email.

During FY 2009-10 there were approximately 300 email addresses on the distribution list. See Attachment 6-A for newsletters and Attachment 9-B for event fliers emailed to interested parties who registered to receive e-notifications during the 2009-10 reporting year.

9.1.5 Oceanside Update Show

Clean Water Program staff appears regularly on the Oceanside Update show broadcast through Oceanside Television Station KOCT. Each spot allows staff to spend three to five minutes discussing specific storm water pollution programs, pollution prevention tips, and BMPs to reduce impacts. The 30-minute show is broadcast twice daily at 7:00 a.m. and 7:00 p.m. Topics are varied with every taping of Oceanside Update, therefore the viewing audience learns about a multitude of BMPs. While KOCT is unable to determine the actual number of residents who watch Channels 17 and 18 regularly or for any length of time, both channels broadcast to approximately 45,000 Oceanside households. Table 9-3 summarizes topics discussed each month in which the Clean Water Program aired a spot.

Table 9-3. Summary of Oceanside Update Topics by Month.

Date	Topic Discussed
August 2009	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
September 2009	Girl Scout Troop 1215 Pick Up Your Pet Waste
October 2009	Prepare your yard for the rainy season
November 2009	San Luis Rey River Cleanup Event
December 2010	Great pacific Garbage Patch (Gyre)
January 2010	Proper fertilizer application to prevent polluted runoff to water bodies
February 2010	City of Oceanside s Green Week
April 2010	History of Earth Day; Creek to Bay Cleanup Event at Loma Alta Creek and beach
May 2010	Oceanside Water Bodies Overview

9.1.6 Additional Public Participation Opportunities

Other opportunities for local public participation during this reporting period are discussed in this section.

Pick Up Your Pet Waste Campaign

Pet waste left on grass, sidewalks, and along trails is not only a leading cause of bacterial contamination in waterways, but it is also an issue that concerns Oceanside residents. In FY 2008-09 the City of Oceanside Clean Water Program (CWP) implemented a Pick Up Your Pet Waste Campaign focused on a section of the San Luis Rey Recreation Trail (Trail) that travels parallel to the San Luis Rey River. Following is information on what was implemented during this reporting period.

During FY 2008-09 a relationship between the Clean Water Program (CWP) and Girl Scout Troop 1215 was established. Troop 1215 agreed to participate in an education outreach campaign encouraging dog owners and dog walkers to pick up after their pets along the Trail. This project is included as a Watershed Activity under the San Luis Rey Watershed Management Program.

To kick off the campaign, an intercept survey was conducted by members of Girl Scout Troop 1215. While walking along the trail, the Girl Scouts asked people the location of where they accessed the trail, the street name they lived on and if they walk a dog along the trail. The results of this intercept survey allowed for the next component of the program, a mail survey, to target the neighborhoods where most people come from to use the trail.

During this reporting period, three members of Girl Scout Troop 1215 prepared a script and presented information on the KOCT channel encouraging people to pick up after the pet and why it is important to do so. This aired during the month of September 2009.

The next component of the campaign was a brief survey that was mailed to 300 Oceanside households located in neighborhoods near the trail. More details about the survey results are provided in Section 9.1.5 of the FY 2008-09 JURMP Annual Report. The goal of the survey was to identify the reasons why people do or do not pick up after their pets on the trail and in other public areas. Among dog owners, the most common reasons cited for why someone might leave dog waste behind while walking the Trail were:

- Forgot to bring a bag
- Nowhere to throw it away
- No one else around to see them

Ninety-three percent of survey respondents agreed that more pet waste dispensers are needed in the community.

Survey Recommendations

The results of the survey provided clear recommendations for the Pick Up Your Pet Waste Campaign that included the installation of additional trash cans and pet waste bag dispensers as well as modifying signage to emphasize pet owner responsibility. As a result, the City moved forward with the recommendations.

During this reporting period four pet waste bag dispensers were ordered but not installed. Also, a new sign was created to emphasize pet owner responsibility. See Figure 9-1 of the Pet Waste Sign created during this reporting period. Four dispensers, fours signs and trash cans will be installed during the next reporting period where most people access specific sections of the trail.

Figure 9-1. Pet Waste Sign created during FY 2009-10 reporting period.

Interpublic Education. The City has developed programs to educate the public and various target communities of the JURMP and the numerous ways the public can contribute to reduce pollution of the City's waterways and receiving waters. However, the City recognizes that no matter how many educational programs it implements, there will always be a need for ongoing outreach to various audiences. Therefore, "spreading the word" is another significant effort that the public will be encouraged to participate in that will substantially contribute to the success of the JURMP. When speaking with the public about urban runoff issues, they are encouraged to speak with neighbors about how everyday activities can potentially pollute local waterways.

City Staff Activities. City staff is the public at work. Staff is encouraged to report potential violations and provide feedback on the implementation of the JURMP. City staff is the eyes and ears of the City, and can provide valuable information on which components and programs are working and provide suggestions or recommendations on improving the programs. The City staff is provided an incentive based hotline called Oceanside Eyes for reporting potential runoff violations as well as other problems that require remediation, such as road repair or infrastructure maintenance needs. In addition, City staff provides feedback during municipal training sessions, information meetings, and by direct contact with the Clean Water Program Manager and staff. Comments are discussed and if changes can be made to better improve the program, then they are planned and implemented.

Green Oceanside Campaign

Environmental protection and improvement requires ongoing education and awareness in order to enact behavioral change within a community. In late 2008, a group of city employees from various departments, and divisions, including the Clean Water Program, discovered that they had a goal in common: to bring environmental awareness and stewardship to the citizens of Oceanside in a coordinated manner by educating them on how environmental protection covers many different arenas and is most effective when implemented collectively. They joined forces and became "The Green Team" and later the driving force behind the Green Oceanside campaign.

Green Week

The Green Team's mission is to collaborate each year to present a highlighted week of educational programs and free services for the public that provides the tools needed for the community to be better stewards of the planet by recycling, reducing our waste, composting, conserving water, preventing water pollution and conserving energy. Activities during this week highlight programs and environmental habits that can be implemented collectively throughout the year by the community, non-profit organizations, businesses, and other local agencies.

The Green Team asked themselves how to best reach the citizens of Oceanside.

- How can citizens of all ages participate in environmentally related activities?
- Would it be best to coordinate a one-day green event or hold it on multiple days?
- Can an event be developed that would inherently establish and promote green behaviors by the community throughout the year?
- How can partnerships be established between the public/private sectors that would be mutually beneficial and provide a sense of environmental pride to everybody involved?
- What topics are of greatest importance in this era of the environmental movement?

The Green Team wanted to ensure that Oceanside citizens were aware of their City's active environmental departments, fostering collaboration between these departments, and other environmentally-conscious organizations, and that these collaborations are a vital link to the public to create long term environmental stewardship. Through this department collaboration and eventually through partnerships with outside entities, the City brainstormed a full week of environmentally related activities that citizens of all ages could participate in. The event was inclusive rather than exclusive, by being open and free to anyone who wanted to attend, welcoming visitors from other cities. This inherently provided the Green Oceanside community the opportunity to share their development of positive change with the greater population of North County San Diego. The team determined that this week of activities would best promote the continuation of green stewardship by being offered as an annual event. Since being "green" was the objective, the annual event was christened "Green Week" and was first presented to the public in March of 2009, with the second annual event held in March 2010.

Green Week 2010

Green Week 2010 was held March 8 – 13, 2010. Several activities were coordinated for Green Week, some prior to and some during the week.

- Green Oceanside Classroom Presentations – These complimentary presentations were available to classrooms and youth groups prior to and after Green Week. Presentation topics include Reduce Reuse Recycle, Water Conservation and Water Quality and are promoted throughout the year.
- Environmental Youth Art Contest – This poster contest was open to all Oceanside Unified School District students who were eligible to submit a poster and/or a video about "What does Green Oceanside mean to you?"
- Environmental Story-time and Crafts – The Oceanside Library offered environmental story time and crafts during Green Week.
- Environmental Film Festival – On Wednesday March 10 the film "Tapped" was shown to over 60 attendees. This film examines the role of the bottled water industry and its' effects on our health, climate change, pollution, and our reliance on oil.
- Green Fair – The culmination of Green Week ended with the Green Fair at which over 30 environmentally conscious organizations and businesses staffed a table to provide information and resources to the public.
- Electronic Waste Drop-off Event – The public had the opportunity to bring unwanted electronic waste for proper recycling and disposal. This event was located next to the Green Fair. At this event there were 6.55 tons of universal waste collected for proper recycling and disposal.
- Beach Cleanup – Coastkeeper sponsored a beach cleanup event on the morning of the Green Fair. 230 volunteers participated.
- Local Community Support – several local businesses provided sponsorship money that went toward the purchase of prizes for the youth contest winners and supplies for teachers who had a winning student in their classroom.
- Media/Marketing: In order to ensure the success and longevity of Green Week 2010, the Green Team pursued an assertive media/marketing plan that included coverage with local newspapers, local media/TV, city website, community college website, school bulletins, local announcement community boards, as well as extensive email notification chains

amongst the local environmental community. A Green Oceanside section in the local Oceanside magazine, highlighting Green Week 2010, was sent to over 44,000 households prior to the event. See Attachment 9-C for Green Oceanside information placed in the Oceanside Magazine. As part of the overall marketing campaign the Green Team created a logo to be placed on promotional materials. See figure 9-2 for an image of the logo.

Figure 9-2 Green Oceanside logo

9.2 Regional Public Participation Opportunities

This section describes those mechanisms available, at the regional level, for the public to participate in to assist in the implementation of regional JURMP related programs and to provide feedback to the Copermittees and contribute to the continuing development of the numerous JURMPs in effect around the County:

9.2.1 Media

Outreach to the public through the media serves as a widespread public education BMP and is an important element of public participation and keeps communication open between government staff and the public. The Oceanside Magazine is an economical and effective way to share storm water related information with residents of Oceanside. These magazines were directly mailed to over 44,000 Oceanside households. In addition to the mailing, the magazines are placed in several high traffic locations throughout the City for the public to pick-up.

During Fiscal year 2009-10 all cleanup events and other storm water related information were covered in the *Oceanside Magazine* within the Green Oceanside section:

- 2009-10 Fall-Winter issue
  - One Less Plastic Bag
  - Storm Drains Lead to the Nearest Waterway
  - 2010 River, Creek, and Beach Cleanup Events
  - Pick Up Your Pet Waste
- 2010 Spring issue
  - Tips for Draining Your Pool
  - 2010 River, Creek and Beach cleanup Events
  - 10 Water-Saving Tips for 2010

Copies of the media coverage are located in Attachment 9-C.

9.2.2 Regional Events

San Diego County Fair

The San Diego Regional Storm Water Copermittees sponsored the 2009 San Diego County Fair (Fair) as an education and outreach activity under the Regional Education and Residential Sources workgroup. This workgroup created branded the group as Think Blue San Diego Region and included a logo. The Fair was selected as a regional event due to its unique ability to potentially reach more than one million San Diegans and convey a strong environmental storm water and pollution prevention message. Details of the activities related to this event will be included in the FY 09/10 Regional Urban Runoff Management Program (RURMP) annual reports.

The 2009 Fair was held June 12th through July 5th, spanning two fiscal years. During this reporting period the "Think Blue San Diego Region" logo was placed in the San Diego County Fair program which is offered to fair-goers when entering the fair grounds.

During 2009 the Education and Residential Sources workgroup of the San Diego County copermittees staffed an outreach booth for one day during the EnviroFair. Two staff from the City of Oceanside's Clean Water Program staffed the booth on June 20, 2009. Fair attendance for that day was 58,045.

Copermittee Working Bodies

The Copermittees collectively developed ten (10) Working body groups to coordinate the implementation of regional programs required by the Municipal Permit. Each Copermittee is required to provide at least one representative to each working body. These working bodies meet at least four times per year unless a different meeting frequency is established through unanimous approval of all Copermittees.

During this reporting period the City of Oceanside participated in each working body. In addition the City of Oceanside Co-chaired the Educational and Residential Sources Workgroup. Activities related to each of these ten working bodies during FY 2009-10 will be provided in the Regional Urban Runoff Management Program (RURMP) annual report scheduled to be submitted to the RWQCB in January 2011.

Regional Hotlines and Website

The regional hotlines provide a direct connection for public participation. Historically, the hotlines have worked well and should continue to increase in use as more people are educated of the hotline phone number and the types of issues to report. The City will encourage reporting through its local hotlines, however, the regional hotlines will serve as an alternative to the local hotlines and also provide an opportunity for reporting by visitors to the City, from other areas in the County, who are not familiar with copermittee hotlines.

During FY 2009-10 the ERS Workgroup launched a new regional website: www.thinbkuesdregion.org. This website provides the public with a link to their own jurisdictional stormwater website, a phone number to report potential stormwater violations. And

resource links to get storm water related information. More detailed information on the successes of this website will be provided in the Regional Urban Runoff Management Program (RURMP) annual report scheduled to be submitted to the RWQCB in January 2011.

THIS PAGE INTENTIONALLY LEFT BLANK

10.0 FISCAL ANALYSIS COMPONENT

The City of Oceanside acquires the funds necessary to facilitate the City's storm water program through four departments or divisions in the City: Water Utilities Department, Public Works Department, Engineering Division and Code Enforcement Division. Much of City's storm water program falls under the responsibility of these four departments/divisions. Funds obtained for use in implementing the City's storm water program are utilized for a number of different programs, including jurisdictional, watershed, and regional programs. This section documents the activities conducted by the City of Oceanside during the 2009-2010 reporting period to meet the requirements of Section G of the Municipal Permit Order 2007-0001 (Table 10-1).

Table 10-1. Order 2007-0001 Compliance Summary.

G: Fiscal Analysis Component	See Entire Section 10 of this Annual Report
J.3.a.(3)(j).i Fiscal analysis of City urban runoff management program	See Entire Section 10 of this Annual Report

Effective programs require adequate funding to implement planned activities. The first step in securing adequate funding for the JURMP is to provide a strategy for effectively conducting a fiscal analysis of the JURMP in its entirety. This year's fiscal analysis included an evaluation of the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities described in the JURMP and required under investigation orders and Total Maximum Daily Loads (TMDLs) mandates.

10.1 Fiscal Analysis Methods

10.1.1 Program Funding

As previously mentioned, the City secures funding for the implementation of the storm water program through the Water Utilities, Public Works Departments, and Engineering Divisions in the City. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge. The surcharge is based on the customer's water consumption, so the surcharge is also designed as an incentive for individuals to conserve water. This amount is equal to $0.07 per unit of water used.

The City Engineering Division as part of the Development Services Department secures funding from development-related programs. The Engineering Division receives funding through fees assessed on developers for grading plan checks and inspections. Funding for Public Works departments is obtained through general fund allocations to the department.

10.1.2 Urban Runoff Management Programs

The City's storm water budget is used to support the following departments/divisions:

Water Utilities Department - Administration of the City's Clean Water Program

Development Service Department, Engineering Division – Storm water plan review, SUSMP and HMP

Development Service Department, Engineering Division - Capital Improvement Projects

Public Works Department - Storm Drain Maintenance
Public Works Department - Solid Waste
Public Works Department - Flood Control
Public Works Department - Street and Median Maintenance

Personnel from various City departments and divisions are involved in the implementation of the City's storm water program. Refer to Section 2 and the City's certification letter in Appendix A, pages 2 and 3, of the City's 2008 JURMP for further detail regarding the responsibilities of various departments. Other program expenditures include watershed and regional storm water activities.

10.1.3 Expenditure and Budget Reporting

Following are the expenditures for fiscal year 2009-10 as well as a proposed budget for the next fiscal year. The fiscal year expenditures are presented in tabular format with separate rows for different expenditure categories and the associated budget. The budget for the next fiscal year is presented in the same table.

The JURMP budgeting for the Water Clean Water Program which includes various departments is described in the following sections and summarized in Table 10-2 at the end of this section. Currently there is eight staff people dedicated to the City's Clean Water Program.

One full-time Clean Water Program Coordinator
Two full-time Environmental Specialists (focusing on water quality monitoring, education outreach, and program administration)
Two full-time CWP inspectors
One full-time Engineering Assistant (focusing on SUSMP and HMP)
Two full-time Code Enforcement Officers

10.1.3.1 Water Utilities Department

The surcharge rate described above under Program Funding is listed as a separate line item on Oceanside customers' utility bills. This allows for the clear delineation of the revenue being secured for the Clean Water Program in the Water Utilities section of the utility bill. The costs to administer the Clean Water Program during Fiscal Year 2009-10 totaled $882,559. It is anticipated that the Water Utilities Department will expend $1,121,688 during Fiscal year 2010-11.

10.1.3.2 Public Works

The City calculated the curb miles swept for the reporting period and they totaled 28,954 miles. The overall cost of the City's street sweeping program during FY 2009-10 was estimated to cost $981,000 during this reporting period. This includes $478,000 for equipment costs and $503,000 for staff costs. With a total of 28,954 curb miles swept in the City at a cost of $981,000, this averages out to $33.88 per curb mile.

The cost for inspection and maintenance of the MS4 was $369,597 during this reporting period. These costs are expected to increase to $523,000 during fiscal year 2010-11. During fiscal year

2009-10 the Public Works Department spent approximately $1,350,597. It is anticipated that the Public Works Department will expend $1,543,000 during Fiscal year 2010-11.

10.1.3.3 Engineering

Municipal Permit Order 2007-001 requires an increased focus and effort in development-related review and inspection, development of a Hydromodification Plan and revisions to the Standard Urban Storm Water Mitigation Plan. The approximate costs to implement this program during Fiscal year 2009-10 totaled $130,000. It is anticipated that Engineering Department will expend $130,000 during Fiscal year 2010-11.

10.1.3.4 Overall Clean Water Program Costs

During Fiscal Year 2009-10 approximately $2,799,055 was expended amongst four departments for the implementation of the Clean Water Program. It is anticipated that the total program costs for Fiscal Year 2010-11 will total $2,817,392.

Table 10-2. JURMP Budgeting for Water Utilities, Public Works and Engineering Departments/Divisions.

Department	Item	Fiscal Year 2008-2009	Fiscal Year 2009-2010	Projected Fiscal Year 2010-2010
Water Utilities	Personnel (including Code Enforcement)	557,023	$686,260	$655,435
	Misc. office supplies, postage, uniforms	$424	$4,700	$1,700
	Print Materials	$10,229	34,500	$20,000
	Monitoring Programs including lab materials, supplies and services	$41,733	89,000	$93,500
	Other Misc – Cleanups and booths	$24,027	2,000	$1,000
	Consultant Fees – Investigation Order, TMDL	$202,876	250,800	$321,660
	Independent Contractors	$39,000	0	0
	Permits	$27,178	25,000	$30,000
	Dues, Travel, Advertising	$934	8,950	$1,500
	Equipment	$0	5,000	$1,000
	Regional Copermittee Cost-share Monitoring, RURMP, WURMP	$117,159	$147,248	$146,000
Water Utilities	**Total**	**$1,020,583**	**$1,253,458**	**$1,271,795**
Public Works	Street Sweeping (Equipment)	$460,000	$478,000	$478,000
	Street Sweeping (staffing and /or contract costs)	$484,000	$503,000	$503,000
	Conveyance System Cleaning (Contracted Work and City Staff	$360,580	$369,597	$369,597
	Personnel for CWP Monitoring	$65,000	$65,000	$65,000
Public Works	**Total**	**$1,369,580**	**$1,415,597**	**1,415,597**
Engineering Division	Personnel	$260,000	$130,000	$130,000
	Hydromodification Plan	$15,006	$0,000	0
Engineering Division	**Total**	**$275,006**	**$130,000**	**$130,000**
	Grand Total	**$2,665,169**	**$2,799,055**	**2,817,392**

11.0 EFFECTIVENESS ASSESSMENT COMPONENT

11.1 Introduction

Effectiveness assessment is an important component of the JURMP because it can assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The San Diego County Copermittees developed two guidance documents to assist in the assessment of the JURMP components as well as the jurisdictions overall JURMP program. These two documents are titled *A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs* and the *Baseline Long-term Effectiveness Assessment* (BLTEA). The City participated in regional efforts to develop these documents in anticipation of the requirement to assess their JURMP programs.

The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level. In future reporting years, the issue of standardized assessment metrics and procedures will be addressed by the Copermittees. The City anticipates participation in the further development of these work products.

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes.

Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique. The effectiveness assessment approach developed by the Copermittees during the 2005-06 permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge/Awareness

- Level 3: Behavioral Change/BMP Implementation
- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality
- Level 6: Changes in Receiving Water Quality

The establishment of measurable outcomes is necessary for both incremental program component improvements and as a basis for future establishment of relationships between implementation and water quality improvement outcomes.

11.2 Effectiveness Assessment Results

The Municipal Permit Order 2007-0001 requires the City to assess the effectiveness of each significant activity specific to each program component, for each program component as a whole, and for the storm water program as a whole. Levels 1, 2, 3, 4, 5, and 6 outcomes are discussed in the text below. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome level assessments

Level 1 – Compliance with Activity-Based Permit Requirements: Documenting Activities

Compliance with Activity-based permit requirements is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City based on various components of the Municipal Permit. Level 1 outcomes take the form of a simple yes or no answer basically answering "Was the control measure completed?" or it may provide feedback that may be quantified, counted, or tracked over time to demonstrate effort or progress.

Level 2 – Changes in Knowledge/Awareness: Raising Awareness

An important goal of stormwater programs is to increase the level of knowledge and awareness among target audiences such as residents, businesses, and municipal employees. Level 2 outcomes provide program managers feedback on how effective the various control measures have been in raising awareness and changing attitudes of the target audience.

Level 3 – Behavioral Change/BMP Implementation: Changing Behavior

A key focus of the stormwater management program is to affect changes in behavior. By building increases in knowledge and awareness (Level 2), Level 3 outcomes provide program managers with feedback on how effective the program elements and control measures have been in motivating target audiences to change their behaviors and implement appropriate BMPs.

Level 4 – Load Reductions: Reducing Loads from Sources

Many control measures are intended to reduce the loading of pollutants from targeted sources. Load reductions should, in turn, result in improvements to discharge and

receiving water quality. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning.

Level 5 – Changes in Discharge Quality: Improving Runoff Quality

A primary focus of stormwater management programs is to reduce pollutants in stormwater to the maximum extent practicable, and to ensure that these discharges do not cause or contribute to violations of water quality standards in receiving waters. At this level baseline measurements of runoff quality are measured to allow comparison. Multi-year data sets are needed in order to have any confidence in the measured change.

Level 6 – Changes in Receiving Water Quality: Protecting Receiving Water Quality

The ultimate objective of stormwater management programs is the protection of water bodies. At level 6, program mangers will focus on outcomes such as compliance with water quality standards, protection of biological integrity, and beneficial use attainment.

Summary

Program elements and control measures will typically have outcomes at more than one of the levels described above and not all outcome levels will necessarily be applicable to all activities. The information submitted with this report will address levels 1, 2, 3 and 4. Section 7 of this report, IDDE, will be submitted prior to December 15 and will address level 5.

11.2.2 Overall Component Assessments

11.2.2.1 Development Planning

Interactions with the development community during the reporting period indicate a degree of frustration with what appear to be “ever changing and more restrictive” storm water regulations. Many voice the desire to address treatment control requirements through the implementation of “end-of-pipe” proprietary BMPs or “area-wide/assessment district” type facilities.

Conversely, the reissued Municipal Permit updates and expands stormwater requirements. Stormwater treatment requirements have been made more widely applicable and more stringent; minimum standards for Low Impact Development (LID) have been added, and the Copermittees are required to develop and implement criteria for the control of runoff peaks and durations from development sites. The following information highlights the Development Component of the City’s JURMP. Table 11-1 presents the level 1 effectiveness assessment for Development Planning.

Revised SUSMP Manual

The SUSMP updates and expands storm water requirements for new development and redevelopment projects. Storm water treatment requirements have been made more widely applicable and more stringent. New requirements include minimum standards for the implementation of Low Impact Development (LID) practices and the integration of flow control criteria designed to mitigate runoff peaks and durations from development sites. The updated SUSMP incorporates a unified LID procedure which combines site

planning and design measures coupled with engineered, small-scale Integrated Management Practices (IMPs).

The updated SUSMP includes specific design information for dispersal of runoff to landscaped areas and for the integration of pervious pavements, bioretention facilities, flow-through planters, dry wells, infiltration basins, and cisterns into the project design. Where feasible and where permissible, the water in cisterns may be directed to non-potable uses to augment irrigation practices. Bioretention facilities and planter boxes may be designed with an impermeable barrier so that runoff does not saturate native soils. Instead, runoff is filtered through an engineered soil mix and captured in a subdrain and conveyed to a storm drain system. This configuration may be needed where native soils have low infiltration rates, where groundwater is high, contaminated, or where increasing soil moisture may present a hazard to foundations or slope stability. In limited and special circumstances, such as retrofit of existing drainage systems, some pedestrian-oriented developments, and roadway widening projects; where it can also be demonstrated it is not be feasible to construct any of these facilities, higher-rate surface biofilters or higher-rate vault based filtration units may be used to address treatment requirements.

Applicants are also required to incorporate design features to control pollutants from specified on-site sources, such as refuse areas, outdoor storage areas, and vehicle washing and repair facilities. The SUSMP contains a number of Source Control BMPs designed to address the types of sources to be controlled and a corresponding list of required source control measures.

In additions to disconnecting impervious surfaces and mitigation pollutant sources, applications for approval of Priority Development Projects (PDPs) are required to demonstrate compliance with the hydromodification management criteria of the NPDES permit. The SUSMP includes guidance for demonstrating compliance. Submittals for projects smaller than 50 acres may demonstrate compliance by using the integrated LID design procedure. For larger projects, the applicant may use a continuous simulation hydrologic computer model to simulate pre-project and post-project runoff, which includes analyzing the effect of LID facilities, detention basins, or other storm water management facilities, or may identify an exemption applicable to the site.

By following the design approach, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements.

The updated SUSMP is available at the City of Oceanside – Development Services counter or may be downloaded from the City Clean Water Program website at:

http://www.oceansidecleanwaterprogram.org/pdf/OceansideSUSMP.pdf

or the City Engineering Division – Subdivision Section website at:

http://www.ci.oceanside.ca.us/pdf/OceansideSUSMP.pdf

Interdepartmental Coordination
The City's SUSMP and development review process involves multiple Departments and Divisions throughout the City. The City has taken necessary steps to maintain compliance with SUSMP requirements through the coordination of these multiple departments and divisions.

Dedicated Storm Water Management Program
The City established the Clean Water Program (CWP) in 2001 under the Water Utilities Department. During this reporting period the CWP program in conjunction with the Engineering Division provided the necessary oversight for all management components of the SUSMP.

Table 11-1. Development Planning – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Development Planning D.1.e	Development Projects	Projects requiring SWMP	Projects completing SWMP	Actual/Target	Percent (□) Completion
	Priority Projects (Required PDP-SWMP)	45	17	17/45	38
	Standard Projects (Require SDP-SWMP)	4	3	3/4	75
	SUSMP Inspections	Sites targeted for Inspection	Sites Inspected	Actual/Target	□
	High Priority Sites (Annual)	16	16	16/16	100
	All Sites (Target: 20□ of 141)	28	36	36/28	129

The 38% and 75% SWMP completion rates indicate that many of the projects that are required to submit a SWMP; remain active in the project review process. The actual number of SWMP reviews per project may vary significantly. Some projects obtain plan approval in the second review cycle, while others may require as many as ten review cycles to produce a sound SWMP. The average project can expect SWMP within 3 to 4 review cycles.

As the City develops more projects which are subject to the requirements of the Municipal Permit, the inherent challenges associated with data management will emerge such as tracking of post-construction BMPs, maintenances agreements, and associated documents become more numerous. To counter the possibility, the City Development Services Department, which includes Code Enforcement, Building, and Engineering Divisions, chose CRW Systems, Inc. program called TRAKiT® as a data tracking system

which was rolled out in this reporting year. See section 3.2.1 of this annual report for more detailed information about the TRAKiT® database.

11.2.2.2 Construction

The construction component of the City's JURMP continues to be effectively implemented through inspection and enforcement, education and training and BMP maintenance (Table 11-2). As construction activities continue, the City will maintain the level of performance established from past years, and continue to meet the regulatory standards mandated in the Municipal permit.

Table 11-2. Construction – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Development Planning D.2.d	Construction Projects	sites targeted for Inspection	sites inspected	Actual/Target	Percent (%) Completion
	High Priority Sites	20	20	20/20	100
	Medium Priority	16	16	16/16	100
	Low Priority Sites	18	18	18/18	100

11.2.2.3 Municipal

The municipal component of the City's JURMP continues to provide a well-rounded approach and will continue to implement a comprehensive education program along with inspections of municipal facilities, MS4 maintenance, sanitary sewer slip-lining and street sweeping.

Table 11-3 provides the Level 1 Compliance with Activity-Based Requirements and Level 4 - Load Reductions Reducing Loads from Sources.

Table 11-3. Municipal – Level 1: Compliance with Activity-Based Requirements; Level 4 - Load Reductions: Reducing Loads from Sources.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.a	Municipal Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent (□) Completion
	(High, Medium and Low priority facilities)	176	176	176/176	100
	MS4	of catch Basins to be cleaned	of catch Basins actually cleaned	Actual/Target	Percent (□) Completion
	Catch basins cleaned	3,350	3,433	3,433/3,350	102
	Sanitary Sewer	of feet to be slip-lined	of feet actually slip-lined	Actual/Target	Percent (□) Completion
	Feet of sewer slip-lined	4,000	3,481	3,481/4,000	87
	Street Sweeping	of miles of streets to be swept	of miles of streets actually swept	Actual/Target	Percent (□) Completion
	Curb miles of street swept	28,954	28,954	28,954/28,954	100

In addition the City implemented a training program that provided pre- and post-quizzes to assess the effectiveness of the training course specific to some departments or divisions. During the 2009-10 reporting year, 254 City and contractor staff was trained on the City's storm water program requirements. Pre- and post- tests were given to some groups to assess the level of knowledge before and after each training session. 147 City employees took both the pre- and post-test. The other 107 trainees either completed a pre or post test or their group only received a customized power point presentation.

Depending on the nature of the employee's department, the employee's were given a 15 or 20 question test. The 15-question test targeted City staff that worked in various departments including fleet maintenance, parks and recreation and street maintenance. The 20-question test targeted staff that work at and maintain industrial facilities. The average City pre-test score was 76% percent of the questions correct. The average City post-test score was 99% percent of the questions correct. Figure 11-1 presents the pre- and post-test scores by City department.

Figure 11-1. Municipal – Level 2: Changes in Knowledge/Awareness: Raising Awareness.

11.2.2.4 Industrial and Commercial

The City implements a comprehensive inspection program for industrial and commercial facilities including all restaurants and nursery and greenhouse operations. Table 11-4 provides an assessment for the inspections.

Table 11-4. Industrial and Commercial Component - Level 1: Compliance with Activity-Based Requirements.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.b	Industrial Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent ( ) Completion
	High Priority Facilities	9	8	8/9	89
	Industrial Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent ( ) Completion
	Medium and Low Priority Facilities	As Needed	9	N/A	N/A
	Commercial Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent ( ) Completion
	High Priority Facilities	515	497	497/515	97
	Commercial Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent ( ) Completion
	Medium and Low priority facilities	As needed	102	N/A	N/A

During this reporting period a new asset management software tool was implemented for the industrial and commercial NPDES inspections. Several discrepancies were found throughout the year, such as duplicate records, inadvertently changed priority levels, and missing, new, or out of business facilities. As these were found, the inventory list in the software was updated. However, as with any new technological tool, updating and using a changing list was a challenge in the first year. A full review of all 3,000 records is being completed and fewer with the goal of no missed facilities next year.

11.2.2.5 Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. The City is also conducting additional monitoring studies to help identify and mitigate residential sources of pollution more effectively. Although fewer households participated in dropping off household hazardous waste during this reporting period, more quantity of household hazardous waste was collected for proper disposal (Table 11-5).

Table 11-5. Residential Component - Behavioral Change/BMP Implementation Changing Behavior.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Residential D.3.e	Household Hazardous Material	Quantity of waste targeted	Quantity of waste collected	Actual/Target	Percent ( ) Completion
		130 tons	154.75 tons	154.75/130	119
	Households Participating in Program	of households targeted	of households participating	Actual/Target	Percent ( ) Completion
		3,500	3,356	3,356/3,500	96

11.2.2.6 IDDE

An assessment of this component will be provided in Section 7 when the City submits the entire FY 2009-10 Illicit Discharge Detection and Elimination Component, including the 2010 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2010.

11.2.2.7 Education and Public Participation

The City implements a comprehensive education outreach program for both municipal staff and the public as well as a comprehensive public participation program (Table 11-6). See 11.2.2.3 above for an assessment of the Municipal training program. The City prides itself on educating children within its jurisdiction through the use of a watershed model and the Project SWELL curriculum incorporated into the 5th grade science curriculum.

Table 11-6. Education and Public Participation Component - Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.g	Student Presentations	of presentations targeted	of presentations completed	Actual/Target	Percent ( ) Completion
		10	21	21/10	210
	CWP Newsletters	of newsletters targeted for completion	of newsletters completed	Actual/Target	Percent ( ) Completion
		2	2	2/2	100
	Oceanside Update Tapings	of tapings planned	of tapings completed	Actual/Target	Percent ( ) Completion
		6	9	9/6	150
	CWP Website	of targeted hits	of actual hits	Actual/Target	Percent ( ) Completion
		45,000	60,319	60,319/45,000	134

11.3 Program Review and Modification

No changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

THIS PAGE INTENTIONALLY LEFT BLANK

12.0 SPECIAL INVESTIGATIONS

12.1 Lower San Luis Rey Bacteria Source Identification Project

12.1.1 Overview

As part of the Proposition 50 Clean Beaches Initiative, the City of Oceanside has been awarded a grant to track the sources of bacteria in the Lower San Luis Rey River. The shoreline at the outlet of the San Luis Rey (SLR) River mouth in Oceanside, California is visited by thousands of people each year. Elevated levels of fecal indicator bacteria (FIB) have affected water quality in the river mouth and the adjacent shoreline. In 2007, this beach was posted due to bacterial exceedances for 54 days; in 2006, it was posted for 71 days; in 2005, this beach was posted for 209 days and 186 of those days were during one consecutive stretch. As a result of the exceedances, the river mouth and one-half mile of shoreline is listed as an impaired water body under section 303(d) of the Clean Water Act for exceedances of indicator bacterial standards. The beach is also listed as a Clean Beach Task Force priority beach.

A major objective of the San Luis Rey Watershed Urban Runoff Management Program (WURMP) led by the City of Oceanside is to identify sources of the FIB at the river mouth. As directed by the WURMP, the City of Oceanside and the County of San Diego have jointly sampled the San Luis Rey River since March of 2004 to determine if the river is the source of the high concentrations of FIB at the river mouth. Thus far, the results are inconclusive and indicate the need for focused sampling in the lower river and at the river mouth.

To address this issue, the City received $554,375 from the State Water Resources Control Board (SWRCB) and, with the assistance of other stakeholders, will match $141,750 to implement the source identification project in the lower river and river mouth. The City awarded MACTEC Engineering and Consulting, Inc. (MACTEC) and their team of leading field scientists, the lead contract for the organization and completion of the two-year study.

The overall goal of the proposed study is to identify the sources and quantify the loading of bacterial contamination using a tiered approach. The project will analyze for FIB to identify "hot spots" and to assess bacterial flux. Based on these results, genetic microbial and viral analyses on selected samples will be conducted to pinpoint potential sources and identify potential public health risks. The suite of analyses include *Bacteroides spp,* ESP gene quantification, enterovirus analyses using quantitative PCR (QPCR), sequencing of the enterovirus from the field samples, community based bacterial analyses, and *Enterococcus* speciation. In addition, the joint monthly monitoring program between the City of Oceanside and the County of San Diego will continue and the bacteria monitoring data will be collected and utilized throughout the duration of the project.

This approach will permit prioritization for mitigation of microbial contaminants and appropriate actions will be recommended to eliminate sources of fecal contamination. The three following objectives will be accomplished to achieve the overall goal set forward above:

- Identify point and non-point sources of bacteria contamination in the Lower San Luis Rey River and at the river mouth during the dry and wet season,
- Estimate the bacterial loading from tributaries and along the main stem of the San Luis Rey River during the dry and wet season, and
- Recommend Best Management Practices (BMPs) to reduce and/or eliminate bacterial sources.

12.1.2 Activities completed during previous reporting periods

Establishment of a TAC

The first TAC meeting was held on November 1, 2007 from 9:30 to noon. Members included six representatives from the Regional Water Quality Control Board, County of San Diego, City of Vista, and San Diego CoastKeeper in addition to three representatives from the City of Oceanside. An overview of the project and historical data was presented for the benefit of the stakeholders. The role of the TAC was discussed. The TAC will be involved in all aspects of the project, including final approval of the project approach and oversight of the monitoring and reporting. The meeting was concluded with a tour of the mouth of the San Luis Rey to orient members with the complexity of the river. A final list of the TAC was submitted to the SWRCB on January 10, 2008.

A second TAC meeting was held on February 4, 2008 with six representatives from the Regional Water Quality Control Board, County of San Diego, City of Vista, and San Diego CoastKeeper in addition to two representatives from the City of Oceanside. The MACTEC project team presented the proposed project approach to the TAC. The approach was discussed and the TAC made recommendations to be included in the Monitoring Plan and QAPP.

Consultant Selection

A Request for Proposals (RFP) was sent out on November 8, 2007 to solicit proposals from interested and experienced consultants to perform a bacteria source tracking project on the San Luis Rey River. Proposals were due to the City of Oceanside by December 4, 2007 and a subcommittee of the TAC reviewed the proposals on December 7, 2007. MACTEC Engineering and Consulting, Inc. was officially awarded and given a notice to proceed by City Council on February 20, 2008.

Monitoring Plan and Quality Assurance Project Plan Approval

Other important work included the development and approval by the SWRCB of the Monitoring Plan and Quality Assurance Project Plan (QAPP) by the MACTEC project team with input from the TAC. The consultants and members of the TAC and City staff participated in a conference call to discuss the draft Monitoring Plan and QAPP on March 28, 2008. These documents were reviewed by the SWRCB and revised based upon their comments. The SWRCB approved the Monitoring Plan and QAPP on June 19, 2008.

First Monitoring Event

The first dry season monitoring event took place on June 18 and 19, 2008. Dr. Rachel Noble traveled to San Diego to prepare for the first event with the project team and to participate in both days of monitoring. The project team collected bacteria samples and flow measurements at

six monitoring locations in the Lower San Luis Rey River. The bacteria samples were analyzed for fecal indicator bacteria and the remaining sample volume was filtered and frozen for molecular analysis. The river mouth was not sampled, as planned, due to construction of the Pacific Street Bridge.

The City of Oceanside and the County of San Diego implemented the changes to the joint monthly monitoring program during the June 2008 monitoring event. The program will continue using SWAMP protocols throughout the remainder of the source identification project allowing the bacteria data from monthly monitoring to supplement the dry and wet weather event data.

Second Monitoring Event

The second dry season event took place on July 23 and 24, 2008. The project team collected bacteria samples and flow measurements at five of six monitoring locations in the Lower San Luis Rey River. As part of the Visual Observation Program, observations were conducted July 23 and 24, 2008 within the Lower San Luis Rey River and upstream in the drainage basin to identify possible sources of bacteria. The river mouth was again not sampled, due to construction of the Pacific Street Bridge.

The City of Oceanside and the County of San Diego continued to use SWAMP protocols to allow for use of the monthly monitoring data to supplement the project monitoring event data.

Genetic Molecular Analysis

Based on the fecal indicator bacteria (FIB) results of the first two dry weather monitoring events, four of six project sampling sites (Murray Bridge, Douglas Bridge, Pilgrim Creek, and Sleeping Indian) were selected for additional genetic molecular analysis. Two were river sites and two were tributaries. Genetic molecular analysis was conducted on samples collected at these sites during days 1 and 2 of the June 2008 event. There were no FIB exceedances of standards during the July 2008 event and, therefore, none of those sites were chosen for additional analysis per the QAPP and Monitoring Plan.

Visual Observation Program

The City of Oceanside and the project team continued to develop the visual observation program based on the results from the July event, including modifications to the field forms, prioritization of the observation zones, and coordination of volunteer support with San Diego CoastKeeper.

Suspension of Funds from State Water Resource Control Board, Dept. of Finance

On December 19, 2008, the SWRCB issued a Budget Letter that suspended all projects including the Lower San Luis Rey Source Identification Project. All work on the Visual Observation Program and all planned wet and dry weather events were stopped. The work completed after this notice was primarily to assess the status of various elements of the project, including laboratory work and the effect of the stop work notice on genetic analysis. In addition, the potential for American Relief and Recovery Act (ARRA) funds was assessed and answers to the survey were researched and submitted on March 13, 2009. On April 6, 2009, The City of Oceanside received a conditional approval letter that the project was eligible for funding from the ARRA. Unfortunately on April 7, 2009 the City of Oceanside received a letter saying that

new guidance from the EPA regarding "shovel ready" projects indicated our project was no longer eligible for the ARRA funding.

With more time passing, the City of Oceanside requested an assessment from MACTEC of the molecular sample holding times for samples not yet analyzed and a summary from our contractors of what and where data that had been analyzed is located. Unfortunately, samples for two of the three types of genetic analyses had expired and are therefore no longer available for use to the program. Samples were analyzed for *Enterovirus A* by Dr. Jed Furman's laboratory at the University of Southern California. *Enterovirus A* was not detected in any of the samples.

The monthly joint monitoring program conducted by the City of Oceanside and the County of San Diego continued as modified for the grant project until June of 2009. In June 2009, the City and County agreed to continue the monitoring program, but the City brought the monitoring in-house to the San Luis Rey Wastewater Treatment Plan Laboratory. The same field procedures were followed, but the reporting limits changed to above SWAMP recommendations. This change is not expected to effect results, as bacteria levels are usually at or above these reporting limits.

12.1.3 Activities completed during current reporting period

Reinstatement of Funds from State Water Resource Control Board

On December 17, 2009, the State Water Resources Control Board gave the City of Oceanside notice that the Lower San Luis Rey Source Identification Project grant had been selected to restart. With an original grant end date of March 31, 2010, the City of Oceanside, on January 4, 2010, submitted a Request for Time Extension in order to complete the remaining two-thirds of the field and laboratory work required.

While awaiting an amended grant agreement, the monthly joint monitoring conducted by the City of Oceanside and the County of San Diego supplementing the grant field work did restart. On April 14, 2010, the City of Oceanside received the executed amendment to the Grant Agreement and work began immediately to restart the project. The deadline for the final project report was extended to June 1, 2011.

Third Monitoring Event

The third dry season monitoring event in the Lower San Luis Rey River/River Mouth was implemented on May 18, 19, and 20, 2010. On May 18, 2010, The City of Oceanside and the County of San Diego conducted the joint monitoring at 17 locations in Lower San Luis Rey River and the grant project team collected composite water samples and sediment samples at five locations in the River Mouth. In addition, the City of Oceanside collected additional samples at each Watershed monitoring location for potential further genetic analysis on upstream sites within the City boundary. On May 19 and 20, 2010, the grant project team collected composite water samples and sediment samples at five locations in the River Mouth and composite water samples at two river locations (Bonsall Bridge and Benet Bridge).

Visual Observation Program

The Visual Observations Program was implemented on the first day of sampling, May 18, 2010. Two teams of two walked a total of four locations adjacent to the river mouth. Teams were

looking for urban runoff and wildlife that could be affecting the river mouth. Observations that were recorded included human behavior, maintenance procedures, and wildlife distribution.

TAC Meeting

A third TAC meeting was held on June 28, 2010 to refresh ongoing members and educate new members about the work completed prior to the SWRCB stop work notice, what was lost during the year break, and how to restart the project with limited resources and time. It was decided that focus would be on the mouth of the river near the beach, where the impairment is currently listed. The final dry season event was scheduled for late July/early August and will focus on supporting the data from previous dry season events to answer the question of if bacteria are exceeding thresholds at the river mouth and if sediment could be a source of the bacteria. The next TAC meeting was tentatively scheduled for the beginning of the wet season to plan the final wet season monitoring activities.

12.2 Loma Alta Creek Ultraviolet Light Treatment Facility

12.2.1 Overview

Loma Alta Creek Lagoon and Buccaneer Beach, located in the City of Oceanside, have historically been impacted by high levels of bacteria. This is a family beach adjacent to a park with a large parking area, showers and an eating establishment that sees large crowds during the dry months. The City has determined that a key source of bacteria and nutrients in Loma Alta Creek is urban runoff that discharges into the creek. The source of water for Loma Alta Creek is from storm drain flows and hillside seepage from the Loma Alta watershed, which drains approximately 6,400 acres, and flows through densely developed residential, commercial, and industrial land uses.

In 2005, the City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the SWRCB to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. One hundred percent of the dry weather creek flows (averaging 300 to 700 gallons per minute) will be intercepted in the lagoon and diverted to the UV treatment facility, located on the northern bank of the creek. The treatment facility consists of piping flows from an exiting diversion structure by gravity from the lagoon through a 2 micron fine screen to a wet well where the flow is pumped into two large sand filters followed by two UV disinfection units housed in a reinforced concrete building. The treated water is discharged through a pipe extended along the existing section of rip-rap that runs along the north side of the Loma Alta creek outlet at Buccaneer Beach. During wet weather months (November through April), the lagoon would be opened to allow free flow to the ocean and the UV system would be bypassed. See Figure 12-1 for a photo of the facility.

Figure 12-1. Oceanside Loma Alta Creek UV Facility

12.2.2 Activities completed during previous reporting periods

The California Coastal Commission approved Permit No. 6-06-152 for construction of the outfall pipe associated with the UV treatment facility on June 14, 2007. Loma Alta Creek UV Treatment Facility project entered into the construction phase on August 13, 2007 when the official Notice to Proceed was issued to Orion Construction Corporation.

Each year the Loma Alta Creek Ultraviolet Light Treatment Facility is scheduled to start treatment in May and continue through September. In May 2009, during start-up procedures, it was discovered that the existing UV lamps were defective. In addition, in June 2009, the electrical system for the UV System bar screen/auger was upgraded. After the completion of these repairs and upgrades the plant began operation later in June 2009. The plant typically ran three to four days a week with average flows of 300 gallons per minute. No water was discharged onto the beach when the UV Facility was offline. Flows were lower than expected due to drought conditions and conservation efforts of Oceanside residents. See Figure 12-2 for a photo of treated water being released from the UV Outfall pipe.

Figure 12-2. Oceanside Loma Alta Creek UV Outfall pipe releasing treated water

Water samples were taken weekly from Buccaneer Beach directly in front of the discharge pipe and seventy-five feet north and south of the discharge pipe. The samples were tested for total and fecal coliform and Enterococcus. All samples taken during summer 2009 met California Department of Health Services AB411 Objectives and there were no postings due to bacterial levels exceeding standards set by the County Department of Environmental Health. The UV Facility ran through September 2009.

12.2.3 Activities completed during current reporting period

During the 2009-10 reporting year, Loma Alta Creek flows continued to be lower than expected during drought conditions warranting sporadic running of the UV facility. The facility began running in May 2010 for the summer dry season. It ran for five days in May and seven days in June of 2010. The facility will run through September 2010 unless heavy rains arrive earlier than expected.

13.0 NON-EMERGENCY FIRE FIGHTING

Emergency fire fighting flows (flows necessary for the protection of life or property) are allowed by the Municipal Permit and do not require implementation of BMPs. Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described below.

Order 2007-0001 Compliance Summary

J.3.a(3)(1)iv Non-Emergency Fire Fighting	See Entire Section 13 of this Annual Report

13.1 Best Management Practices

The City developed and implemented a program to reduce pollutants from non-emergency fire fighting flows, in accordance with Section B.3 of Permit Order 2007-0001. BMPs were implemented when the following activities were conducted:

- Regular Maintenance of Fire and Emergency Vehicles and Equipment
- Training Exercises
- Facilities Maintenance
- Post-Emergency Rehabilitation of Response Equipment

These activities were conducted in a way to either minimize or eliminate the discharge of pollutants to the MS4. Detailed descriptions of BMPs are given for each activity below:

Regular Maintenance of Fire and Emergency Vehicles and Equipment

- Vehicles and equipment were cleaned where runoff was directed to either the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment were cleaned where runoff would pond and evaporate and/or where runoff would filter through landscaped areas.
- Sewer drains in a vehicle cleaning area were outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits were available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents were minimized, and general cleaning solutions were disposed of into the sanitary sewer system.

Training Exercises

- Water used in training exercises was directed to landscaped areas whenever possible, and runoff from the training exercises was not allowed to discharge to the MS4.
- Live fire training activities were pre-planned to allow integration of barriers to off-site runoff that could contribute to non-storm water discharges.

Facilities Maintenance

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways were swept to remove debris. Debris was placed in the trash.
- Landscaped areas were maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems were monitored and maintained as required to reduce irrigation water from going off-site.

- Spills were cleaned up using spill kits provided at the work site, and disposal of spilled material was in accordance with applicable regulations.
- Spills that required a cleanup beyond the ability of the on-site employees were reported to the City's Public Works Department for assistance with appropriate resources.
- Maintenance and repair of structures were conducted using methods that do not contribute pollutants to the MS4.

Post-Emergency Rehabilitation of Response Equipment
Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency were restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. The use of water that could contribute to storm water discharges was used unless another practical and immediately available method was identified, and was performed in a manner that minimized discharges to the MEP.

13.2 Educational Methods

During live fire fighting training exercises all fire fighters were educated about the requirement to not allow water flows to enter the MS4. Fire fighters in attendance for training sessions about how to use high pressure fire fighting hoses were educated on how to direct the water to percolation basins that are permanently in place at the training grounds. Water that is directed to these basins was allowed to infiltrate into the soil and/or evaporate.

Prior to building structures at the training grounds being set on fire, perimeter controls were put in place to ensure that water from the non-emergency training session did not reach the MS4. Fire fighters in attendance were educated on the proper type and installation protocol of perimeter controls. These perimeter controls were also used for training sessions related to vehicle fires.

14.0 JURMP REVISIONS

There were no changes made to the City of Oceanside's 2008 JURMP during this reporting period. Updates were made to the 2008 JURMP during the 2008-09 reporting period. Details of these changes can be found in Section 14 of the 2008-09 JURMP Annual Report.

THIS PAGE INTENTIONALLY LEFT BLANK

15.0 CONCLUSIONS AND RECOMMENDATIONS

15.1 Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a., of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2009-2010 annual reporting period (July 1, 2009 – June 30, 2010).

15.2 Conclusions

This annual report presents the activities the City conducted from July 1, 2009 through June 30, 2010 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff within the City's jurisdiction on receiving water bodies. Improving water quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

As detailed in the Program Effectiveness Assessment Component, the City met all of the development planning targets and met the municipal targets. Long-term effectiveness assessment is an ongoing and iterative process and the City will continue to use this process to further improve its storm water program.

15.3 Recommendations

15.3.1 Database Tracking System for various departments and divisions

During this reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water and Sewer divisions, and the Clean Water Program, continued rolling out the GBA Masters Series software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, chose TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year. Since both of these systems were fully launched in this reporting period, the Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use of the system in the coming years.

15.3.2 Assessment of Education Program

During this reporting period the City of Oceanside continued the implementation of a comprehensive education outreach program along the San Luis Rey River Trail titled the Pick Up Your Pet Waste Campaign. Pet waste bag dispensers were purchased during this reporting period. Installation and assessment of the effectiveness of these dispensers and signs will be completed during the next reporting period.

15.3.3 Underserved Target Audience Outreach - Mobile Businesses

During this reporting period one underserved target audience, Mobile Businesses, was targeted with educational materials informing them of the minimum BMPs that should be applied during their business operations. See Section 8.3 for more information about this activity and attachment 8-A for a copy of materials mailed to this target audience.

Fax (916) 341-5543 • http://www.waterboards.ca.gov

Arnold Schwarzenegger
Governor

To Interested Parties:

2009-2010 ANNUAL REPORT ANNUAL REPORT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Storm Water Annual Reporting Module (SWARM) allows an individual discharger to file and submit their Annual Report electronically to the Regional Water Board. Currently SWARM is not a mandatory reporting method, but we encourage all dischargers to register and use SWARM.

To register to use SWARM please visit:
http://www.waterboards.ca.gov/water_issues/programs/ciwqs/chc_swarm.shtml
and download the SWARM registration form and instructions. Please fill out the form and mail it back to: SWARM Registration, P.O. Box 1977, Sacramento, CA 95812. Once a complete registration form is received, a login name and password will be emailed to you.

For SWARM registration questions or information please contact the SWARM help center at (916) 341-5536 or by email at smarts@waterboards.ca.gov.

To receive email updates on Storm Water Industrial permitting issues, please sign up at
http://www.waterboards.ca.gov/resources/email_subscriptions/swrcb_subscribe.shtml
The Storm Water program currently maintains five email lists:

- Storm Water Database Issues
- Storm Water Construction Permitting Issues
- Storm Water Industrial Permitting Issues
- Storm Water Municipal Permitting Issues
- Sustainable Development

For all other permitting questions please contact the Storm Water Section at (916) 341-5538 or by email at stormwater@waterboards.ca.gov.

Sincerely,

Storm Water Section

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
2009-2010 ANNUAL REPORT
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2009 through June 30, 2010

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: _____

   v. ☐ Received Local Agency Certification Cetification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 0 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☐ **YES** ☒ **NO, attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

E-2. Sampling and Analysis

First storm event of the season that produced a discharge occurred during non working hours.

4. For each storm event sampled, did you collect and analyze a sample from each of the facilitys' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____

6. Were all samples collected during the first hour of discharge? ☐ YES ☒ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☒ NO, **attach explanation**

8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☒ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler.
- Parameters tested.
- Name of analytical testing laboratory.
- Discharge location identification.
- Testing results.
- Test methods used.
- Test detection limits.
- Date of testing.
- Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**
Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

[x] **YES** [ ] **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers**. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September	[x] **YES**	[ ] **NO**	[ ] **N/A**	October-December	[x] **YES**	[ ] **NO**	[ ] **N/A**
January-March	[x] **YES**	[ ] **NO**	[ ] **N/A**	April-June	[x] **YES**	[ ] **NO**	[ ] **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**
Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September	[x] **YES**	[ ] **NO**	October-December	[x] **YES**	[ ] **NO**
January-March	[x] **YES**	[ ] **NO**	April-June	[x] **YES**	[ ] **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

[x] **YES** [ ] **NO** Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

[ ] **YES** [x] **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

i. name of each unauthorized non-storm water discharge.
ii. date and time of observation.
iii. source and location of each unauthorized non-storm water discharge.
iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
v. name, title, and signature of observer.
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers**. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occured during the last year.
   - outdoor wash and rinse areas.
   - process/manufacturing areas.
   - loading, unloading, and transfer areas.
   - waste storage/disposal areas.
   - dust/particulate generating areas.
   - erosion areas.
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

E-6. Sampling and Analysis

No samples were collected during the reporting period of 09-10. All storm water discharges occurred before or after working hours and were not preceded by 3 working days.

E-7. Sampling and Analysis

No samples were collected during the reporting period of 09-10. All storm water discharges occurred before or after working hours and were not preceded by 3 working days.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1. Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2. If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☐ YES	☒ NO	☐ NA
3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☐ NA
4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.swrcb.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

Section D (pages 5-6) of the General Permit.

- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accord with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

Arnold Schwarzenegger
Governor

To Interested Parties:

2009-2010 ANNUAL REPORT ANNUAL REPORT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Storm Water Annual Reporting Module (SWARM) allows an individual discharger to file and submit their Annual Report electronically to the Regional Water Board. Currently SWARM is not a mandatory reporting method, but we encourage all dischargers to register and use SWARM.

To register to use SWARM please visit:
http://www.waterboards.ca.gov/water_issues/programs/ciwqs/chc_swarm.shtml
and download the SWARM registration form and instructions. Please fill out the form and mail it back to: SWARM Registration, P.O. Box 1977, Sacramento, CA 95812. Once a complete registration form is received, a login name and password will be emailed to you.

For SWARM registration questions or information please contact the SWARM help center at (916) 341-5536 or by email at smarts@waterboards.ca.gov.

To receive email updates on Storm Water Industrial permitting issues, please sign up at
http://www.waterboards.ca.gov/resources/email_subscriptions/swrcb_subscribe.shtml
The Storm Water program currently maintains five email lists:

- Storm Water Database Issues
- Storm Water Construction Permitting Issues
- Storm Water Industrial Permitting Issues
- Storm Water Municipal Permitting Issues
- Sustainable Development

For all other permitting questions please contact the Storm Water Section at (916) 341-5538 or by email at stormwater@waterboards.ca.gov.

Sincerely,

Storm Water Section

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
2009-2010 ANNUAL REPORT
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2009 through June 30, 2010

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

REGIONAL BOARD INFORMATION:

2009-2010

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: _____

   v. ☐ Received Local Agency Certification Cetification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 0 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☐ **YES** ☒ **NO, attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

E-2. Sampling and Analysis

First storm event of the season that produced a discharge occurred during non working hours.

4. For each storm event sampled, did you collect and analyze a sample from each of the facilitys' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____

6. Were all samples collected during the first hour of discharge? ☐ YES ☒ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☒ NO, **attach explanation**

8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☒ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

       _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

       _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

       _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler.
- Parameters tested.
- Name of analytical testing laboratory.
- Discharge location identification.
- Testing results.
- Test methods used.
- Test detection limits.
- Date of testing.
- Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**
Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

[x] **YES** [ ] **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers**. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September	[x] **YES**	[ ] **NO**	[ ] **N/A**	October-December	[x] **YES**	[ ] **NO**	[ ] **N/A**
January-March	[x] **YES**	[ ] **NO**	[ ] **N/A**	April-June	[x] **YES**	[ ] **NO**	[ ] **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**
Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September	[x] **YES**	[ ] **NO**	October-December	[x] **YES**	[ ] **NO**
January-March	[x] **YES**	[ ] **NO**	April-June	[x] **YES**	[ ] **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

[x] **YES** [ ] **NO** Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

[ ] **YES** [x] **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

i. name of each unauthorized non-storm water discharge.
ii. date and time of observation.
iii. source and location of each unauthorized non-storm water discharge.
iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
v. name, title, and signature of observer.
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers**. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occured during the last year.
   - outdoor wash and rinse areas.
   - process/manufacturing areas.
   - loading, unloading, and transfer areas.
   - waste storage/disposal areas.
   - dust/particulate generating areas.
   - erosion areas.
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

E-6. Sampling and Analysis

No samples were collected during the reporting period of 09-10. All storm water discharges occurred before or after working hours and were not preceded by 3 working days.

E-7. Sampling and Analysis

No samples were collected during the reporting period of 09-10. All storm water discharges occurred before or after working hours and were not preceded by 3 working days.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1. Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2. If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☐ YES	☒ NO	☐ NA
3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☐ NA
4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.swrcb.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

Section D (pages 5-6) of the General Permit.

- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accord with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

CITY OF OCEANSIDE clean water program

Volume 7, Issue 2 - Fall 2009

California Coastal Cleanup Day & Buena Vista Creek Cleanup September 19, 2009 9 a.m. - 12 p.m.

Celebrate the 25th Anniversary of California Coastal Cleanup Day by participating in the ninth annual Buena Vista Creek Cleanup and Oceanside Beach Cleanup. The City of Oceanside, together with I Love a Clean San Diego, Coastkeeper, and 1-800-GOT-JUNK will be hosting a cleanup along the banks of Buena Vista Creek, as well as a beach cleanup, on September 19th, from 9 a.m. to 12 p.m. Volunteers will receive cleanup supplies, refreshments, community service hours, and a free give-away item. Call the Clean Water Program Event Information Line for more details at 760-435-5536.

Cleanup sites

- Behind Dicks Sporting Goods at Plaza Drive and College Boulevard (3514 College Boulevard)
- North of Fire Station #4 located at Thunder Drive and Lake Boulevard.
- Behind Kohl's store at College Boulevard and Marron Road
- South side of Oceanside Pier
- Buccaneer Beach at Pacific and Morse Streets (1500 South Pacific Street)

To register for this event click on www.cleanupday.org.

For more information about Oceanside cleanup events and how you can prevent water pollution, visit this Web site: www.oceansidecleanwaterprogram.org.

Pick Up Your Pet Waste Campaign along the San Luis Rey Recreation Trail

Pet Waste Survey Results

Pet waste left on grass, sidewalks, and along trails is not only a leading cause of bacterial contamination in waterways, but it is also an issue that concerns Oceanside residents. In the spring of 2009, the City of Oceanside Clean Water Program launched a Pick Up Your Pet Waste Campaign to encourage dog owners to clean up after their pets. The project focuses on the San Luis Rey River Trail which is used for a variety of recreational purposes including walking, running, and biking. Many people also bring their dogs with them to the Trail. Although most dog owners who use the trail clean up after their pets, some pet waste still accumulates along the trail.

To kick off the campaign, a brief survey was mailed to 300 Oceanside households located in neighborhoods near the Trail. The goal of the survey was to identify the reasons why people do or do not pick up after their pets on the Trail and in other public areas. Sixty-five percent of the households completed the survey and returned it to the City. Of those residents who completed the survey, 70 percent had visited the Trail in the past and 48 percent reported that they had a dog in their household.

Reasons for Picking Up Dog Waste

Both dog owners and non-dog-owners agree that it is important to pick up dog waste, rating the importance of the issue as 9.6 out of 10. The top-rated reasons for picking up dog waste and throwing it in the trash were because: "It is the right thing to do" and "It pollutes parks, rivers, and beaches."

Continued on back page

Please report anything other than rain water entering the storm drain.

760-435-5800 "Only Rain in the Storm Drain!"

Pet Waste Survey Results continued from front page

Barriers to Picking up Dog Waste

The vast majority of Oceanside dog owners who walk their dogs reported that they ***always*** pick up after their pet, but 17 percent stated that they sometimes leave their dog's waste behind without picking it up. Among dog owners, the most common reasons cited for why someone might leave dog waste behind while walking the Trail were:

- Forgot to bring a bag
- Nowhere to throw it away
- No one else around to see them

Survey Recommendations

The results of the survey provided clear recommendations for the Pick Up Your Pet Waste Campaign at the Trail including the installation of additional trash cans and pet waste bag dispensers as well as modifying signage to emphasize pet owner responsibility. Ninety-three percent of survey respondents agreed that more pet waste dispensers are needed in the community. As a result, the City plans to move forward with installing additional signage, trash cans, and pet waste bag dispensers along the Trail.

Scoop the Poop – It's a Dog Owner Doody!

The City asks that you keep the following tips in mind when you plan to walk your dog.

- Take a bag with you or use a personal pet waste bag dispenser
- Pick up and dispose of waste in a trash can, not along the side of the trail or sidewalk

For copies of the survey along with final survey results log on to www.oceansidecleanwaterprogram.org. Thank you for doing your part to protect water quality by picking up after your dog.

2009-2010 River, Creek, & Beach Cleanup Events

Please join the Clean Water Program staff and citizen volunteers to assist in removing trash and debris from our local rivers, creeks, and beaches.

Event Times: 9:00 a.m. - 12:00 p.m.
Event Details: 760-435-5536

- November 7, 2009: San Luis Rey River Cleanup
- April 24, 2010: Loma Alta Creek Cleanup
- July 5, 2010: Morning After Mess - City Beaches (8 - 11 a.m.)
- September 18, 2010: Buena Vista Creek Cleanup and California Coastal Cleanup Day
- November 6, 2010: San Luis Rey River Cleanup

Protect Water Quality and Conserve Water by following these simple tips

The City of Oceanside is committed to water conservation and water pollution prevention. Oceanside is in a Drought Level 2 with mandatory water restrictions to reduce its water use by at least 8 percent. Follow these simple tips to help conserve water and prevent water pollution.

- Repair broken or leaking hose bibs, sprinklers and valves.
- Eliminate water runoff.
- Sweep driveway, sidewalk, patio and deck. No hosing down of paved surfaces.
- Use a shutoff nozzle on your hose.
- Add 2" to 3" of mulch around trees and plants to reduce evaporation.
- Replace grass with low-water-use plants.
- Check faucets and toilets for leaks and fix promptly.
- Take shorter showers.

Online Resources

www.SaveWaterOceanside.com

The City of Oceanside now has a Web site dedicated to water conservation. Log onto www.SaveWaterOceanside.com for more water-saving tips and useful resource information.

www.bewaterwise.com

The Metropolitan Water District is offering free online low-water-use landscape classes for residents and professionals at www.bewaterwise.com. The following classes are available:

- Mini tutorials on the Basics: Four short lessons cover the key points of water-wise gardening. (15 minutes each)
- In-Depth tutorials for Home Gardeners: Residential gardeners can dig into these more detailed lessons. (60 minutes each)
- Professional Landscape Maintenance tutorials: If you landscape for a living, update your knowledge on landscape irrigation systems, fine tuning the controller, irrigation scheduling considerations, and much more.
- Seminarios Profesionales de Mantenimiento de Paisaje - Ahora en español: Si usted trabaja en mantenimiento de jardines, actualice su conocimiento en sistemas de riego, en ajustar el controlador, en el plan de riego, y mucho más.

Get a No-Cost Home Energy and Water Savings Kit from SDG&E

Save energy, save money, and help the environment with this complimentary kit which contains a low-flow shower head and three faucet aerators. When installed, they can help you save water and the energy used to heat it. To request your kit today, visit www.sdge.com/energykit, or call 1-800-644-6133.

CITY OF OCEANSIDE clean water program

Volume 8, Issue 1 - Winter/Spring 2010

Loma Alta Creek Cleanup
April 24, 2010
9 a.m. - 12 p.m.

Celebrate Earth Day by participating in the 11th Annual Creek to Bay Cleanup event on April 24, 2010. The City of Oceanside, together with event sponsors I Love a Clean San Diego and 1-800-GOT-JUNK, will be hosting a cleanup along the banks of Loma Alta Creek and at two sites on the Pacific Ocean.

Choose from five sites

- Buccaneer Park at 1500 Pacific Street (cross street is Morse Street))
- Behind Smart & Final on Oceanside Boulevard and I-5 (1701 Oceanside Boulevard)
- Mesa Drive between El Camino Real and Rancho Del Oro Drive
- Behind commercial buildings at 1629 Ord Way (Off Oceanside Boulevard between College Boulevard and Temple Heights Drive)
- South side of the Oceanside Pier

Join us while we remove unwanted materials from the creek and beach and help to improve Oceanside water quality. Volunteers will receive cleanup supplies, refreshments, community service hours, and a free T-shirt or other giveaway item. For more information call 760-435-5536 or 760-435-5807.

Receive event notices by email

To receive event announcements by email, send your email address to cleanwaterprogramevents@ci.oceanside.ca.us, or log on to the events tab at www.oceansidecleanwaterprogram.org to register.

Together we can prevent water pollution.

- 2010 creek, river and beach cleanup events

Pool Draining Tips to Protect Water Quality

Do you or your friends have a pool? Please read and share this important article with them to learn the proper steps to prepare pool water before draining to the curb and gutter.

With summer right around the corner, many Oceanside residents will be readying their swimming pools in anticipation of the season's heat. As part of this process, some pool owners like to drain old swimming pool water which has been sitting all winter. Though not a necessary task, the following tips are provided for you to properly drain pool water in order to protect the water resources in your community.

Whenever possible, it is best to drain your pool onto your landscape. This recycles your pool water, conserves irrigation water, and avoids the environmental risks associated with draining your pool to the street. Before draining your pool water to the street or to your landscape, be sure to follow the guidelines outlined below.

While draining pool water to the street is a common practice, it can prove harmful to the environment if the pool owner does not properly plan and prepare prior to draining. When pool water is drained to the street, it can carry other pollutants such as oil, grease, sediment, bacteria and trash down the storm drain and into the nearest creek, river, or the Pacific Ocean. Swimming pool water also often contains harmful additives and chemicals. If the water is not properly treated to remove these pollutants prior to draining, they can cause further damage to the health of our waterways and to the plants and animals that live there.

For **chlorine pools**, chlorine levels must be lowered to less than 1 part per million prior to draining. This can be done naturally, by simply allowing the pool water to sit in the sun for a minimum of three days. Alternatively, de-chlorination kits can be purchased at home supply stores at a very reasonable cost. These kits have the tools you need to reach the appropriate chlorine levels before draining your pool to the curb and gutter.

continued on next page

Urban Runoff Hotline - Help protect our local waterways

Please report anything other than rain water entering the storm drain.

760-435-5800 "Only Rain in the Storm Drain!"

Cigarette Litter Statistics You Should Know!

Do you or someone you know smoke cigarettes? Cigarette butts should be properly disposed in the trash can - not thrown out the car window or snuffed on the ground without being picked up. Below is information about cigarette litter.

Did you know?

- Over 50,000 cigarette butts are picked up from local beaches each year.
- Using a portable ashtray to store cigarette butts until they can be properly disposed in a trash can is simple and protects the environment.

Cigarette filters:

- are made of plastic
- take 15 - 20 years to decompose
- release toxins into the environment

Please share this information with friends, family, and co-workers so they learn the importance of properly dipsosing of cigarette butts.

Special thanks to think BLUE San Diego Region for use of these graphics.

Pool Draining Tips continued from front page

Some people have **salt water pool systems** which may be preferred due to the lower amount of chemicals required for their operation. However, these pools must not be drained to the storm drain system due to their high salt content relative to the fresh water systems they drain into. Total dissolved solids (TDS) must be below 500 parts per million in order to drain into the street.

"**Green pools**," which are pools in which algae is growing, also must not be drained to the street. In these instances, algae must first be killed and removed. This is usually done by chlorinating the swimming pool until the algae is gone, then lowering chlorine to the allowable discharge level. Cartridge filters or diatomaceous earth (DE) filters should be rinsed onto a pervious surface such as landscaped areas or grass. While DE is actually beneficial in your garden, it can build up in storm drains and clog them. DE residues can be scooped up and simply thrown in the trash or put to use fending off worms in your garden.

For more information on how to reach acceptable chemical and TDS levels, call your pool maintenance specialist. For questions about safe pool drainage, call the City of Oceanside's Urban Runoff Hotline at 760-435-5800. By taking these simple steps, you can enjoy your pool, stay cool, and protect the environment, too!

2010 River, Creek, & Beach Cleanup Events

Subject: Stormwater Pollution Prevention requirements for your mobile business

Dear Business Owner:

As part of local water quality regulations, cities in the San Diego region are required to work with businesses conducting mobile operations to prevent stormwater pollution. Best Management Practices, commonly referred to as "BMPs", are operational efforts consisting of housekeeping practices, spill control and prevention, and proper use and storage of materials that are designed to reduce the environmental impact from certain activities. Using BMPs will help prevent pollution from your business. Proper implementation and maintenance of BMPs are critical to their effectiveness.

To date, the cities have collaborated to develop a set of minimum BMPs for all mobile businesses operating in the San Diego region. The attached document identifies the required minimum BMPs for mobile businesses and provides details on how to satisfactorily implement each of the BMPs that pertain to your business. This list of minimum BMPs is required for every mobile businesses operating in the San Diego region, where applicable and feasible. Therefore, your business is required to implement the minimum BMPs identified in this notification. Additional details about the required BMPs for mobile businesses are available on the "Project Clean Water Toolbox" website (http://www.projectcleanwater.org/bmp/).

Please verify that you are in compliance with the regulations for the city or cities where you conduct business, as the BMP requirements for each city may vary slightly.

Please review and evaluate your business's BMPs and revise your practices as necessary to ensure that you do your part in preventing stormwater pollution. If you have any questions or concerns, please contact the City of Oceanside Clean Water Program at 760-435-5803.

Sincerely,

Mo Lahsaie, Ph.D., REHS
Clean Water Program coordinator

Required Minimum BMPs
For
Mobile Businesses

1) Storm Water Training:

Proper training is required to prevent the discharge of pollutants in to the storm water conveyance system. Train all workers to properly identify, transport and manage materials to prevent a discharge to the storm water conveyance system. Train all employees on discharge prohibitions, storm water best management practices (BMPs), pollution prevention and methods to control, contain and clean up spills.

2) Contain and Clean Up Spills (Spill Kits):

Keep written spill procedures and cleanup materials in each vehicle. Spill kits must be appropriate for materials used in the business activities. In the event of a spill immediately contain the spill on site. Use appropriate equipment and/or materials to clean up the spill. Immediately report any spill that cannot be completely contained to the jurisdiction where the spill occurred. Sweep up the material and dispose of it properly. If the spill is hazardous, contact the appropriate reporting agency and take appropriate clean up and disposal actions. In the City of Oceanside you can contact the following in case of a spill:

Nonhazardous spills: Urban Runoff Hotline at 760-435-5807

Hazardous spills: Fire Department at 760-435-4101.

3) Properly Handle All Waste (Solid, Liquid and Hazardous):

Before starting a job consider the weather conditions and determine how to dispose of all waste. Properly remove all waste from the worksite or place in proper waste containers with lids. Never pour liquids into trashcans, dumpsters or storm drains. Place liquid non-hazardous waste in sealed containers and remove from the worksite and dispose of properly. Inspect and label all hazardous waste containers prior to removal. For details on the management and disposal of specific chemical waste contact the County Hazardous Materials Division at (619) 338-2231.

4) Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)

The storm water conveyance system is a direct connection to creeks, rivers, bays and the ocean. At the work site, locate the probable pollutant discharge points and install appropriate materials to contain the pollutants. Capture and remove pollutants from your activity as close to the work area as possible. Properly dispose of any collected liquid waste. If doing businesses in the City of Oceanside contact the Clean Water Program (760-435-5800) prior to disposing liquid wastes to the sanitary sewer system (mop sink, toilet, etc.) or whether they can be directed to landscaped areas that will not run off into the storm water conveyance system.

5) Provide Proper Handling and Containment Of Materials:

To prevent spills or discharges, all materials must be properly contained during use and transport. Provide secondary containment, to the maximum extent practicable, for all liquids in the event of spills, punctures or leaks during use and transport. Store materials and equipment securely in the vehicle to prevent loss. Provide leak proof lids for liquids and cover all materials and waste while not in use and during transport. Maintain a materials inventory and material safety data sheet (MSDS) if hazardous materials are being used or transported. Keep a copy of (MSDS) sheets in a binder labeled MSDS and keep in vehicle. Inspect and label all chemical containers.

6) Provide Equipment Washout Area:

Equipment washout areas should be located away from any storm drain inlets or open drainage facilities. The washout area can be a container, a berm or a liner to collect and contain liquids and prevent runoff. Remove washout waste from the job site and dispose of properly.

For additional details on mobile business best management practices consult:

- Project Clean Water Tool Box at **www.projectcleanwater.org/bmp**
- California Storm Water BMP Handbook at **www.cabmphandbooks.com**
- Oceanside Clean Water Program at **www.OceansideCleanWaterProgram.org**

These practices represent the minimum requirements. Contact the City of Oceanside Clean Water Program for specific City requirements.

How to Coordinate a Beach Cleanup

Before the Cleanup

- Pick a date and time for your cleanup.
- Choose a location in need of a cleanup.
- Plan where volunteers will meet to check in, preferably a visible location or popular landmark.
- Think about parking. Find a site that has convenient parking for volunteers.
- Know who to contact in case of an emergency.
- Familiarize yourself with hazardous areas to be avoided so that you may inform your volunteers of possible dangers.
- Know what to do when hazardous items (like syringes and hazardous waste) or injured animals are found. See “Safety Fact Sheet”.
- Familiarize yourself with the particularly dirty areas to be targeted.
- Check the availability of restrooms on site and know whether or not they will be open during your cleanup.
- Check the availability and location of trash and recycling receptacles on-site.
- Speak with lifeguards and/or park rangers before cleanup so they are aware you will be conducting a cleanup on your chosen date and time.

Recruit volunteers and pick up supplies:

- Organize friends, co-workers and/or family to join you in your beach cleanup.
- Take a head count of participants to determine how many supplies will be needed. City will provide gloves and trash bags for up to 50 participants.
- All volunteers must fill out and sign a Liability Waiver. Any volunteer under the age of 18 must have a parent or guardian sign the waiver before participating. Waivers can be downloaded and printed from www.cleanwaterprogram.org.
- Pick up and/or organize all necessary items. See “Supply Checklist.”
- Also, encourage your volunteers to bring their own supplies (like gloves, bags, and/or buckets for trash) to reduce the waste generated at your cleanup.

Day of Cleanup

- Arrive at your cleanup site early so you are ready to collect waivers, sign up volunteers and hand out supplies.
- Set up table and any signage.
- Have your volunteers form groups of 2-5 people. Groups can share bags and data cards.
- Hand out supplies. One glove per person, one bag and one data card per group. It is important to make sure volunteers are not taking more supplies than necessary; you do not want to create excess trash. See the City of Oceanside "Beach Cleanup Pledge".
- Explain the procedure for filling out data cards (City will provide if desired).
- Give safety talk. See "Safety Fact Sheet".
- Point out any hazardous locations to be avoided.
- Remind volunteers that they should not pick up natural items (such as algae, kelp, driftwood, shells, etc.) these items are a part of the ecosystem you are trying to restore.
- Decide how long you will clean the beach and remind your volunteers what time to arrive back at the meeting point with their trash. Make sure volunteers know to bring back trash so that it can be weighed.
- Direct volunteers to remove trash from the streets near the beach, as well as from the beach, so this trash does not make its way onto the beach and eventually into the ocean.
- Start your cleanup!
- During cleanup, people may ask why you are out cleaning the beach. Be informed on the threats that trash poses to aquatic life. You may want to have informational brochures to hand out as well. For more information, contact Cynthia Mallett at:
  (760) 435-5807 or e-mail: cmallett@ci.oceanside.ca.us
- Brochures can be downloaded from www.OceansideCleanWaterProgram.org.
- Take photos of your cleanup.

City of Oceanside "Beach Cleanup Pledge"

I pledge to reduce the amount of waste generated at this beach cleanup by doing the following:

1) Providing drinking water from a cooler rather than from single use plastic bottles.
2) Encouraging volunteers to bring their own reusable water bottles.
3) Recycling all plastic, glass and aluminum bottles and cans found during the cleanup.
4) Providing one trash bag per group (not per person) and/or encouraging volunteers to bring their own bucket to use for picking up trash.
5) Only providing one glove per person and/or encouraging volunteers to bring their own work gloves.
6) If providing food for volunteers, buying food locally and with minimal packaging.
7) Not leaving any trash at cleanup location.

_____ _____

Name Printed Signature

Remember, you are at the beach today in an attempt to remove marine debris and restore the natural coastal ecosystem. Reduce the amount of trash generated in the process and you will have completed a successful cleanup!

Safety Fact Sheet

1. Do not go near any large drums or barrels.
2. Wear gloves and closed-toe shoes at all times, as well as protection from the sun, such as a hat and sun-block.
3. Stay away from any ecologically fragile areas (e.g. sand dunes, nesting areas, sensitive plants).
4. Don't lift anything too heavy; when in doubt, don't try!
5. Don't touch or pick up dead animals, or attempt to move injured animals. Make your cleanup captains or a lifeguard aware of the animals and where they are located.
6. Don't pick up syringes, needles, or any sharp objects. Mark the area and notify the cleanup captain or lifeguard of their location.
7. Make sure that fire pits are cold before reaching into them.
8. Always stay in teams of at least two.
9. Avoid over-exertion, sunburn, heat exhaustion, and dehydration. When in doubt, come in early.
10. If cleaning on or near streets please be on the lookout for cars and proceed with caution.
11. Children should always be supervised by an adult.

City of Oceanside Emergency Contact Information:

Please call the Oceanside Lifeguards at (760) 722-8000 for any of the following:

Injured Marine Animal or Other Injured Wildlife, Dead Animal, Hazardous Waste Items, Accidents/Injuries

Serious Injury or Life-Threatening Emergency: Call 911

UPCOMING EVENTS AT MISSION SAN LUIS REY

A Celebration of Life

9th Annual
Día de los Muertos
Sunday, November 1st • 10 am – 4 pm

A family-friendly event that has its roots in pre-Columbian cultures of Mexico and Central America.

Enjoy Music and Dancing on the Main Stage, Traditional Oaxacan Ofrendas (altars), Children's Crafts, Unique Retail Booths and Delicious Food

FREE ADMISSION
Fees will apply for parking and shuttle services.

Christmas at the Mission
Saturday, December 19th • 6 – 9 pm
A Night of a Thousand Lights & Christmas Carols
Enjoy a variety of tasty food from local restaurants and the Mission Kitchen.
Tickets: $35, includes food and 1 drink ticket

Visit www.sanluisrey.org for more details or call (760) 757-3651.

Green Oceanside

Promoting Environmental Sustainability and Conservation

Be sure to clip out and save these pages for reference.

One Less Plastic Bag

The decision is simple: Protect our environment, our local marine life and our beaches — take part in a greater Green Oceanside by saying no to plastics and, in particular, plastic bags.

Get a reusable tote from the Solid Waste and Recycling booth at the following upcoming events: Harbor Days, December's 18th "Day without a Bag" Green Oceanside Fair, and the Earth Day Sunset Market.

Did you see the new Green Oceanside logo? A special thanks goes to Joey Chavez Gallery and Studio, and Impact Design for the development of our new logo.

All types of plastics including plastic bags make up the greatest amount of litter debris in our streets, our waterways, and on our beaches. Plastic bags in particular are considered a significant component of litter in the environment due to their durability and light weight. In fact it takes approximately 1,000 years for a plastic bag to fully biodegrade. This single-use item basically equates to over ten lifetimes of existence. This is an impact on our environment everyone needs to consider the next time they go to the grocery store.

Even when disposed of properly, plastic bags are often blown out of trash and/or recycling containers, and are easily carried by the natural elements of wind and water to become entangled in vegetation, clog storm drains and contribute to free-floating plastic debris in the ocean. The California Coastal Commission estimates that 60% to 80% of all marine debris, and 90% of all floating debris is plastic. Plastic litter is mistaken for food and, unfortunately, often results in the death of sea life. It is a sad and not very uncommon sight to see a bird with plastic packaging wrapped around its foot, or worse, its neck and airways. This is just one reason why it is important that in our daily lives we make the conscious decision to forego the use of plastic bags and excess plastic packaging. These environmentally conscious acts are vital in protecting the earth.

Concern and efforts to reduce our use of plastic materials and, in particular, plastic bags, is not just a local movement but is a national and international one as well. Across the globe, communities are taking great strides to reduce the use and production of these types of single-use materials. Cities in the United States are taking the lead in implementing bans and resolutions that either eliminate the use of plastic bags, or at the very least, greatly reduce the use of these materials. The list of California communities taking action via bans, resolutions, or education and outreach, include but are not limited to San Francisco, Malibu, Santa Monica, Encinitas, and our very own "Green Oceanside." A couple of years ago in Los Angeles the "Day Without A Bag" event was first celebrated. Now the event has become a countrywide movement that has proven to be a success in many communities, including Oceanside. In 2008, the City of Oceanside encouraged the community to celebrate December 18th's "Day without a Bag" event for the first time, by giving back to the environment during the holidays by foregoing disposable plastic and paper bags in favor of reusable totes. Public facilities, along with local grocery stores and our very own Sunset Market, participated in the event. In fact over 4,000 reusable bags were handed out to the public during that event alone. Oceanside continues to distribute reusable bags as part of the "One Less Plastic Bag" campaign. Be sure to get a reusable tote from the Solid Waste and Recycling booth at the following upcoming events: Harbor Days, December's 18th "Day without a Bag" Green Oceanside Fair, and the Earth Day Sunset Market.

Reduce, Reuse, and Recycle!

Reduce: your use and consumption of all plastic materials and plastic bags. Buy materials with less plastic packaging.

Reuse: Next time at the grocery store, say no to plastic or paper bags. Make a difference by bringing your own reusable bag instead. It can be a stylish way to promote a sustainable community.

Recycle: Be sure to recycle any used plastic bags at a local grocery store. Recycle all other plastic packaging (#1-7) as well.

Did You Know That...

Storm Drains Lead to the Nearest Waterway

Help protect our local waterways. Please report if you see anything other than rain water entering the storm drain.

Urban Runoff Hotline (760) 435-5800

"Only Rain in the Storm Drain!"

Rain water (also called storm water) that flows off buildings, walkways and streets into storm drains ultimately flows to the Pacific Ocean. Unlike water that goes to the sanitary sewer system (like your sink, shower, and toilet water), storm water is not treated or filtered before it is discharged to the ocean. Storm water runoff can pick up pollutants from yards and streets that can have harmful effects on wildlife and the recreational uses of rivers, creeks and beaches. Sometimes area beaches are posted or closed due to pollution. It is important to keep storm water runoff clean.

What can you do?

- Don't dump anything down the storm drain. Remember "Only Rain in the Storm Drain!"
- Pick up pet waste promptly — it transmits disease.
- Place landscape clippings in curbside carts — don't sweep into streets or down storm drains.
- Wait three days after rain to apply fertilizers and pesticides.
- Visit www.OceansideCleanWaterProgram.org for more tips.

2010 River, Creek, and Beach Cleanup Events

The City of Oceanside Clean Water Program wants to make our waters clean for all residents and visitors. We need your help in order to improve water quality. There are several cleanup events throughout the year that get people outdoors and in touch with our environment. A big Thank You goes out to all volunteers who take the time out of their busy schedules to help with these important cleanup events. For 2010 there are four events scheduled, all from 9:00 am to 12:00 pm except for the July 5 Morning After Mess scheduled from 8:00-11:00 am. All volunteers will receive a T-shirt or other give-away item, cleanup supplies including bags and gloves, and refreshments. Please wear closed-toe shoes, hats and sunscreen. For more event details call 435-5536.

April 24 ..... Loma Alta Creek Cleanup

July 5 ..... Morning After Mess: City Beaches

September 18 ..... Buena Vista Creek Cleanup and California Coastal Cleanup Day

November 6 ..... San Luis Rey River Cleanup

Keep up to date on Oceanside's River, Creek, and Beach Cleanup Events and the quality of our surface water by receiving event notices and the Clean Water Program Newsletter. Pick Up Your Pet Waste

Pet waste left on grass, sidewalks, and along trails is not only a leading cause of bacterial contamination in waterways, but it is also an issue that concerns Oceanside residents. In the spring of 2009, the City of Oceanside Clean Water Program launched a Pick Up Your Pet Waste Campaign to encourage dog owners to clean up after their pets. The project focuses on the San Luis Rey River Trail which is used for a variety of recreational purposes including walking, running, and biking. Many people also bring their dogs with them to the trail. Although most dog owners who use the trail clean up after their pets, some pet waste still accumulates along the trail.

To kick off the campaign, a brief survey was mailed to 300 Oceanside households located in neighborhoods near the trail. The goal of the survey was to identify the reasons why people do or do not pick up after their pets on the trail and in other public areas. Sixty-five percent of the households completed the survey and returned it to the City. Of those residents who completed the survey, 70% had visited the trail in the past and 48% reported that they had a dog in their household.

Reasons for Picking Up Dog Waste

Both dog owners and non-dog-owners agree that it is important to pick up dog waste, rating the importance of the issue as 9.6 out of 10. The top-rated reasons for picking up dog waste and throwing it in the trash were: "It is the right thing to do" and "It pollutes parks, rivers, and beaches."

Barriers to Picking up Dog Waste

The vast majority of Oceanside dog owners who walk their dogs reported that they always pick up after their pet, but 17% stated that they sometimes leave their dog's waste behind without picking it up. Among dog owners, the most common reasons cited for why someone might leave dog waste behind while walking the trail were:

- Forgot to bring a bag
- Nowhere to throw it away
- No one else around to see them

Survey Recommendations

The results of the survey provided clear recommendations for the Pick Up Your Pet Waste Campaign at the trail including the installation of additional trash cans and pet waste bag dispensers as well as modifying signage to emphasize pet owner responsibility. Ninety-three percent of survey respondents agreed that more pet waste bag dispensers are needed in the community. As a result, the City plans to move forward with installing additional signage, trash cans, and pet waste bag dispensers along the trail.

Scoop the Poop: It's a Dog Owner Doody!

The City asks that you keep the following tips in mind when you plan to walk your dog.

- Take a bag with you or use a personal pet waste bag dispenser.
- Pick up and dispose of waste in a trash can, not along the side of the trail or sidewalk.

For copies of the survey along with final survey results log on to www.OceansideCleanWaterProgram.org. Thank you for doing your part to protect water quality by picking up after your dog.

Green Oceanside

Promoting Environmental Sustainability and Conservation

Green Week 2010

and the 2nd Annual Oceanside Green Fair

Green Oceanside is about teaching families in our local community how to be better stewards of the planet by recycling, composting, conserving water, conserving energy, and preventing water pollution.

The City of Oceanside invites you to participate in the 2nd Annual Green Week 2010. From March 8-13 the City will be honoring the event at various community events. Green Week is coordinated by the Green Oceanside campaign, which is a collaboration between several City Departments, local environmental organizations and businesses dedicated to educating the public about environmental conservation. Green Oceanside is about teaching families in our local community how to be better stewards of the planet by recycling, composting, conserving water, conserving energy, and preventing water pollution.

All Green Week events from March 8-13 will be FREE to the entire family. Events will include a Citywide environmental youth art contest, film festival, "Green" story time at the Library, a beach cleanup, an electronic waste collection event, and a Green Fair. The following is information about the week's activities and how you can be a part of Green Oceanside's Green Week 2010.

On Tuesday, March 9, the first-ever "Green Oceanside Environmental Film Festival" will be held at the Civic Center Community Rooms adjacent to the Library in downtown Oceanside. The feature film for the evening will be the movie "Tapped." From the producers of "Who Killed the Electric Car," "Tapped" is a timely documentary that provides a behind-the-scenes look into the unregulated and unseen world of the water bottle industry. The film cites the large amount of waste and pollution that is generated from single-use water bottles. Also at the Film Festival, we will be showcasing some of the audio-visual entries and top finalist poster entries as part of the environmental youth art contest.

The Citywide Environmental Youth Art Contest invites Oceanside Unified School District students (K-12) to identify what "Green Oceanside" means to them. Students will submit either an audio-visual entry or a poster entry that incorporates the following concepts: Reduce, Reuse, Recycle, Water Conservation, Pollution Prevention and/or Clean Earth. Due to the success of last year's Bookmark Art Contest, the City has expanded this year's contest. It will include the audio-visual portion and provide an opportunity for top finalists to have their entries showcased at our Film Festival. Please join us at this year's Green Fair to support our local eco-artists and cast a crowd's choice vote at the Film Festival. The awards ceremony at the Green Fair will honor top winners of each age group, as well as teachers/classrooms of winning contestants.

The Civic Center Library will also be having environment-themed story times throughout Green Week. These will be held at 10:30 am on Tuesday, Wednesday, and Thursday. On Friday, environmental story time will be held at 10:30 am at the Mission Branch Library

continued on page 34

Green Week Events March 8-13

Environmental Youth Art Contest. Posters and Audio Visual entries due March 3, 2010

Green Story Time at Libraries. March 9-12, 10:30 am

Beach Cleanup. Hosted by Coastkeeper, March 13, 9:00 am to 12:00 pm, South side of pier

Green Fair at Beach Amphitheatre. March 13, 11:00 am-4:00 pm

FREE E-waste Recycling Event. Next to Beach Amphitheatre. March 13, 11:00 am-4:00 pm

For specific event details log onto www.ci.oceanside.ca.us and look under "What Is New."

Tips for Draining Your Pool

With summer right around the corner, many Oceanside residents will be readying their swimming pools in anticipation of the season's heat. As part of this process, some pool owners like to drain old swimming pool water which has been sitting all winter. Though this task is not necessary, please follow these tips to properly drain pool water in order to protect the water resources in your community.

Whenever possible, it is best to drain your pool onto your landscape. This recycles your pool water, conserving irrigation water, and avoids the environmental risks associated with draining your pool to the street. Before draining your pool water to the street or to your landscape, be sure to follow the guidelines outlined below.

While draining pool water to the street is a common practice, it can prove harmful to the environment if the pool owner does not properly plan and prepare prior to draining. When pool water is drained to the street, it can carry other pollutants such as oil, grease, sediment, bacteria and trash, down the storm drain and into the nearest creek, river, or the Pacific Ocean. Swimming pool water also often contains harmful additives and chemicals. If the water is not properly treated to remove these pollutants prior to draining, they can cause further damage to the health of our waterways and to the plants and animals that live there.

For chlorine pools, chlorine levels must be lowered to less than 1 part per million prior to draining. This can be done naturally, by simply allowing the pool water to sit in the sun for a minimum of three days. Alternatively, de-chlorination kits can be purchased at home supply stores at a very reasonable cost. These kits have the tools you need to reach the appropriate chlorine levels before draining your pool to the curb and gutter.

Some people have salt water pool systems which may be preferred due to the lower amount of chemicals required for their operation. However, these pools must not be drained to the storm drain system due to their high salt content relative to the fresh water systems they drain into. Total dissolved solids (TDS) must be below 500 parts per million in order to drain into the street.

"Green pools," which are pools in which algae is growing, also must not be drained to the street. In these instances, algae must first be killed and removed. This is usually done by chlorinating the swimming pool until the algae is gone, then lowering chlorine to the allowable discharge level. Cartridge filters or diatomaceous earth (DE) filters should be rinsed onto a pervious surface such as landscaped areas or grass. While DE is actually beneficial in your garden, it can build up in storm drains and clog them. DE residues can be scooped up and simply thrown in the trash or put to use fending off worms in your garden.

For more information on how to reach acceptable chemical and TDS levels, call your pool maintenance specialist. For questions about safe pool drainage, call the City of Oceanside's Urban Runoff Hotline at 760-435-5800

By taking these simple steps, you can enjoy your pool, stay cool, and protect the environment, too!

Green Week, from page 33

location. Educating our children at an early age is the key to environmental preservation for generations to come.

Green Week 2010 will have its grand finale on March 13 at a Beach Cleanup and our 2nd Annual Green Fair. Coastkeeper will be hosting this beach cleanup to be held from 9:00 am to 12:00 pm. The registration site for this Beach Cleanup event will be on the south side of the pier. Interested groups can log onto www.sdcoastkeeper.org. Help us keep our beaches beautiful and clean.

After the Beach Cleanup we invite the entire family to join us at the 2nd Annual Green Fair, from 11:00 am to 4:00 pm at the Oceanside Amphitheater located at the south side of the pier. The Fair will have environmentally related booths that will be distributing information and free green goodies to all who attend. Also confirmed for the event will be the Oceanside High School Jazz Band, which will be performing in the afternoon. Top Finalists and Grand Prize winners of the Environmental Youth Art Contest will be announced at the Award Ceremony in the afternoon at the Amphitheater. Please join us in celebrating our creative youth as they shed light on environmental conservation and preservation.

Another highlight of the Green Fair will be the opportunity to drop off your Electronic Waste to recycle for free. This is courtesy of E-World Recyclers. The drop-off event will be held from 11:00 am to 4:00 pm, at Betty's Parking Lot, immediately adjacent to the Green Fair at the Amphitheater.

For more information about Green Week 2010 events and the Green Fair log onto the City of Oceanside Web site at www.ci.oceanside.ca.us and look under "What's New" for a link to Green Week 2010. Thank you for being a part of Green Oceanside.

Recycle Your Used Motor Oil

Did you know that used motor oil never wears out? It just gets dirty and can be recycled, cleaned, and used again. Recycling used motor oil conserves a natural resource (oil) and is good for the environment too! Motor oil poured onto the ground or into storm drains, or tossed into trash cans (even in a sealed container) can contaminate and pollute the soil, groundwater, streams, rivers, and beaches (and it's illegal!). Recycling your used motor oil reduces this pollution threat. When you take your used oil to a certified center for recycling, you are protecting the environment, conserving a valuable resource, and getting paid for it. That's a winning combination!

You can do your part by simply following these steps:

- Remove the oil filter from your car and drain it for at least 24 hours; then place it in a plastic bag
- Drain the oil from your car into a clear, reusable plastic container
- If you can't take the oil and filter to the recycling center right away, store it away from children and pets
- Most State-certified recycling centers take up to 5 gallons of used oil per person, per day
- Don't leave oil behind if the center is closed for the day

For more information please call the Recycling Hotline at 760-435-5015, and find out when the next free used oil filter exchange event will be held in Oceanside.

Ocean Hills Country Club 'Woodchucks' Collect Cans for a Worthy Cause

About three years ago, the "Woodchucks," a club of about 100 woodworking members residing at Ocean Hills Country Club, started an annual practice of making beautiful wooden toys for Marine Corps families at Camp Pendleton for Christmas. In addition to the toys they make in their wood shop, they also collect toys purchased from other residents, and then donate all of the toys collected at Ocean Hills Country Club to families at Camp Pendleton in need.

The Woodchucks help subsidize their charitable campaign by collecting aluminum cans in their community, and then using the funds collected from recycling them towards the cause. Recently, Mr. Mellman, who is a member of the Woodchucks, contacted the City of Oceanside's Solid Waste & Recycling Division, interested in joining the Cash for Cans program and adopting a recycling container for their cause. The program provides recycling containers to nonprofit organizations, schools, clubs, etc., in Oceanside, in order to assist with the collection of recyclable beverage containers for fundraising needs. The Solid Waste & Recycling Division was happy to deliver a large recycling container to help support the cause without delay. It gives City employees great pride to be a part of something so special that is also a worthy cause. As a bonus, more recycling gets done in their community because of their charity work.

For more information about how you can join the City of Oceanside's Cash for Cans Program, please call the Recycling Hotline at 435-5015.

Five of our popular Cash for Cans containers

2010 River, Creek and Beach Cleanup Events

All Oceanside residents are encouraged to actively participate in the protection and improvement of our waterways.

Every year, approximately 10 million tons of plastic ends up in the ocean as plastic bags, water bottles, toys, and many, many other items that have been thrown away or littered. Much of this plastic is swept out to sea on ocean currents, some if which is eventually trapped in the Pacific Ocean Gyre, which has now become a swirling mass of trash larger than the state of Texas. Plastic particles are mistaken for food by small fish, then work their way up the food chain right back to us. As a coastal city, Oceanside residents can be instrumental in reducing the influx of trash into the ocean.

The City of Oceanside's Clean Water Program would like to encourage all Oceanside residents to actively participate in the protection and improvement of our waterways. We have a number of opportunities for everyone to get outdoors and get involved with river, creek, and beach cleanup events scheduled throughout the year. By participating in these cleanup events you are taking one step toward reducing trash that has the potential to be part of the Pacific Ocean Gyre.

There are four events scheduled for 2010, all from 9:00 am until noon except for the event on July 5th, from 8:00 am until 11:00 am. For the river and beach cleanups there is always at least one registration site at the beach and multiple river or creek sites as well. For the July 5th cleanup there is just one registration site, at the beach. All volunteers are provided with cleanup supplies and rewarded with refreshments, community service hours, and one free give-away item. Please wear closed-toe shoes, hats and sunscreen. We look forward to seeing you there!

April 24 • Saturday
Creek to Bay Cleanup Event • Loma Alta Creek

July 5 • Monday
Morning After Mess • Oceanside Harbor and beaches

September 25 • Saturday
California Coastal Cleanup Day • Buena Vista Creek

November 6 • Saturday
San Luis Rey River Clean Up Event

For more information and event details, call 760-435-5536. To keep up to date on cleanups and other ways that you can keep our local waterways free from pollution, please sign up for Oceanside Clean Water Program Event notifications by entering your e-mail address on the City of Oceanside's Clean Water Program Web site, events page: www.oceansidecleanwaterprogram.org/signup.asp.

Recycling Mandate: In 1989 the California legislature passed Assembly Bill 939 (AB 939), requiring all California cities to divert a minimum of 50% from landfill disposal. Additionally, the Oceanside City Code (chapter 13) requires that you properly dispose of solid waste and recycling materials.

CITY OF OCEANSIDE RECYCLING SERVICES

GOT RECYCLING? Need recycling containers?

The City of Oceanside offers various recycling services whether you are a resident or business owner. Please review the following information and determine which recycling service works best for you. Recycling helps preserve our natural resources, and it's easy! If you need recycling containers or more information about multifamily or commercial recycling, mail the bottom portion with your utility bill or send to: City of Oceanside, Attn: Jessica Moen, 4927 Oceanside Blvd., Oceanside, CA 92056.

WHAT CAN BE RECYCLED?

ALUMINUM, BI METAL & TIN CANS
- Aluminum beverage cans
- Tin Cans (i.e., canned vegetables and soups)

GLASS
- Beverage bottles (ALL colors)
- Food jars (i.e., sauces & pickles)

NO DISHES, DRINKING GLASSES, LIGHT BULBS, WINDOWS OR MIRRORS.

PLASTIC (NO plastic bags!)
- Plastic beverage containers with recycling symbols numbered 1—7
- Empty bottles from household cleaners with recycling symbols numbered 1—7 (i.e., shampoo, laundry detergent, window cleaners, etc.)

Any CRV Material (California Redemption Value)

PAPER AND CARDBOARD
- Newspaper, mixed paper (all colors), cardboard
- Catalogs, magazines, telephone books, shoe boxes, cereal boxes (remove liners)
- Any color computer/fax paper, junk mail, paper bags and flattened cardboard

GREEN WASTE

Yard waste such as grass clippings, leaves, weeds and other prunings. Prunings and branches must be tied into 4-foot sections in bundles not to exceed 18 inches in diameter. DO NOT use wire for bundles. Please use string. Place green waste cart on the curb by 6 a.m. on your regular trash day. **DO NOT USE PLASTIC BAGS. Green waste in plastic bags will not be collected.**

If you need information regarding Recycling or Solid Waste Services, please call the Recycling Hotline at (760) 435-5015 or visit www.ci.oceanside.ca.us

SINGLE FAMILY / CURBSIDE PICK-UP

- Curbside Recycling Crates:
  - Glass, Plastics 1—7, Cans & Bi-metals (NO PLASTIC BAGS)
  - Mixed paper (all colors), junk mail, catalogs, magazines, flattened cardboard & newspapers (REMOVE PLASTIC BAGS)
- Green Waste carts (NO PLASTIC BAGS FOR GREEN WASTE)
- Curbside solid waste cans, sealed trash bags or wheeled cart
- Large item pick-up (by appointment): Call WM at 760-439-2824

NO PLASTIC BAGS IN RECYCLING CONTAINERS PLEASE
(Plastic Bags may be recycled at local grocery or discount retail stores)

Sharps, E-Waste, Light Bulbs, Batteries & Household Hazardous Waste (HHW) can be taken to the WM Recycling Center at 2880 Industry St. (HHW requires an appt.; call 760-439-2824.)

MULTIFAMILY (Condos, Apartments, etc.)

- Wheeled Recycling Carts (96 gallon):
  - Glass, Plastics 1—7, Cans & Bi-metals (NO PLASTIC BAGS)
  - Mixed paper (all colors), junk mail, catalogs, magazines, flattened cardboard & newspapers (REMOVE PLASTIC BAGS)
  - Green Waste (NO PLASTIC BAGS)
- 3 Yard Bins
  - Solid Waste (large green bins)
  - Flattened cardboard (large white bins)
  - Green Waste (NO PLASTIC BAGS)

NO PLASTIC BAGS IN RECYCLING CONTAINERS PLEASE
(Plastic Bags may be recycled at local grocery or discount retail stores)

Sharps, E-Waste, Light Bulbs, Batteries & Household Hazardous Waste (HHW) can be taken to the WM Recycling Center at 2880 Industry St. (HHW requires an appt.; call 760-439-2824.)

COMMERCIAL / INDUSTRIAL / SMALL BUSINESS

- Wheeled Recycling Carts (96 gallon):
  - Glass, Plastics 1—7, Cans & Bi-metals (NO PLASTIC BAGS)
  - Mixed Paper (all colors), junk mail, catalogs, magazines, flattened cardboard & newspapers (REMOVE PLASTIC BAGS)
  - Green Waste (NO PLASTIC BAGS)
- 3 & 4 Yard Bins:
  - Trash collection
  - Recyclables: same as mentioned above (for larger quantities)

NO PLASTIC BAGS IN RECYCLING CONTAINERS PLEASE

Please fill out, detach and return the bottom portion with your utility bill or mail to: City of Oceanside, Attn: Jessica Moen, 4927 Oceanside Blvd., Oceanside, CA 92056

REDUCE. REUSE. RECYCLE. Funded by the California Department of Conservation.

CaliforniaFIRST Program

Financing of renewable energy, energy-efficiency and water-efficiency improvements for residential, commercial, and industrial properties.

The City of Oceanside adopted a resolution in January 2010 to allow the financing of renewable energy, energy-efficiency and water-efficiency improvements on private property, called the CaliforniaFIRST Program. If approved by the State Public Utilities Commission, the CaliforniaFIRST program would allow property owners to finance renewable energy, energy-efficiency and water-efficiency improvements on their properties.

If a property owner chooses to participate, the improvements will be financed by the issuance of bonds by California Communities, which is a joint powers authority sponsored by the League of California Cities and the California State Association of Counties.

The member agencies of California Communities include all 58 counties and more than 400 other local agencies throughout California, including the City of Oceanside. California Communities will levy "contractual assessments" on the owner's property to repay the bonds issued to finance the improvements on that property.

The benefits to the property owner include:

- Only property owners who choose to participate in the program will have assessments imposed on their property.
- In today's economic environment, there may not be attractive private enterprise alternatives for property owners to finance renewable energy/energy-efficiency/water-efficiency improvements.
- Even if there were private enterprise alternatives, most private loans are due on sale of the benefited property, which makes it difficult for property owners to match the life of the repayment obligation with the useful life of the financed improvements. Under the CaliforniaFIRST Program, the assessment obligation will transfer with the property upon sale.
- The property owner can choose to pay off the assessments at any time, subject to applicable prepayment penalties.
- By virtue of regional aggregation provided by the CaliforniaFIRST Program, small projects, both residential and commercial, can have access to the municipal bond market, which may produce a lower borrowing cost.

The benefits to the City include:

- As in conventional assessment financing, the City is not obligated to repay the bonds issued by California Communities or to pay the assessments levied on the participating properties.
- California Communities handles all assessment administration, bond issuance and bond administration functions. A participating city can provide financing of renewable energy, energy-efficiency and water-efficiency improvements to property owners through the CaliforniaFIRST Program — thereby meeting its political and environmental goals - while committing virtually no staff time to administer the program.

This program is very important as a catalyst for installation of energy-and water-efficiency improvements. The upfront costs of making residential, commercial, or industrial improvements of this kind, along with the fact that most commercial loans for that purpose are due on the sale of the property, prevents many property owners from installing these improvements.

The City of Oceanside is anxious to begin implementing components of the CaliforniaFIRST Program in Oceanside but cannot move forward until approval by the State Public Utilities Commission. A program status update will be published in the next issue of the *Oceanside Magazine*. For more information about this program, please contact the Water Utilities Department at (760) 435-5800.

Save Our Water Releases:

10 Water-Saving Tips for 2010

The water-saving tips include:

1. **Fix those drips.** A dripping faucet can waste 20 gallons of water a day, while a leaking toilet can waste 90,000 gallons in a month.
2. **Shorten that shower.** Cut five minutes off your shower time and save up to 25 gallons a day.
3. **Slow the flow.** Inexpensive faucet aerators can save gallons of water per person every day.
4. **Turn off the tap.** When brushing your teeth or shaving, turn off the tap and save eight gallons a day.
5. **Go low-flow.** Replace your old showerhead with a low-flow model and cut your water use by 20% or more every time you shower.
6. **Update those appliances.** When it's time to update your appliances, go for a front-loading washing machine and a water-efficient dishwasher. You'll save both water and energy.
7. **Replace that water-guzzling toilet.** If possible, replace your old toilet with a modern, water-efficient one and use about half the water per flush.
8. **Sweep up savings.** Instead of hosing your driveway or sidewalk, use a broom.
9. **Think beyond the lawn.** Choose plants appropriate to your climate when you landscape. They'll need much less water.
10. **Irrigate like a pro.** Your lawn probably needs less water than you think. And your sidewalk doesn't need any.

The complete list, along with other water-saving tips and resources, can be found at http://www.saveourh2o.org/index.cfm/what-you-can-do/10-water-saving-tips-for-2010/.

The Save Our Water program, launched in April 2009, aims to provide ongoing education for Californians about the State's water challenges and encourage greater water conservation. You can also visit www.SaveWaterOceanside.com.

New Water Conservation Web Site

The City of Oceanside now has a Web site dedicated to water conservation. Log onto www.SaveWaterOceanside.com to learn about:

- Rebates for water-saving devices
- Tips, facts, and resources to save water
- How to report water wasters
- Water-wise gardening and plants
- Water news and events
- Free landscaping workshops
- Drought Response Conservation Ordinance
- Free residential programs to help save water indoors and outdoors

Water Awareness Month Poster Contest

May is California's Water Awareness Month! Therefore, each year the City of Oceanside joins other agencies in North San Diego County in sponsoring the Fourth Grade Water Awareness Poster Contest. This year's theme is "Water is Life" and all fourth grade students are being asked to imagine and illustrate the importance of water and how it affects their lives. Students are encouraged to use their water conservation knowledge to creatively share their ideas on how to use water wisely.

The contest is for fourth grade students in the Oceanside Unified School District area. The top three winning entries will be awarded a special prize, have their posters published in the North County Water Agencies' 2011 calendar, and receive recognition by the City. The calendars are distributed throughout the county. To participate, obtain an official entry form, or for information about the contest, please visit www.SaveWaterOceanside.com or contact Oceanside Water Utilities Department at 435-5800. The deadline for entries is March 31, 2010.

Sustainable Communities and Organics Management "Building Healthy Communities — from the Ground Up"

In Oceanside, what was once considered waste has become a resource. The **El Corazon Compost Facility** takes in landscape trimmings both from residential curbside pick-up and from local landscapers. The grass and brush is then put through the composting or mulching process to create finished products that benefit local soils by reducing the need for chemical fertilizers and pesticides. The facility processes over 100 tons of yard trimmings a day from Oceanside's residential pick-up alone; that's over 25% of the entire waste stream in the City of Oceanside! Not only does the facility create useful products, but it helps the City reduce costs through proper waste and resource management. Locally recycling organics offers an opportunity to conserve natural resources, purify local waters, reduce greenhouse gas emissions, and generate Green Jobs in our local economy.

Oceanside residents benefit with access to high quality organic compost and mulches at no cost. This special **Give-Away Program** was the first of its kind in California. Residents can shovel compost and mulch for use in their home gardens and landscapes Monday – Saturday. On the 1st and 3rd Saturdays of the month, they can have their truck or trailer filled for a small $2 fee.

Using compost and mulch jump-starts plants and improves success rates, which save money in labor and replacement costs. They provide slow-release nutrients, organics to increase water-holding capacity, and beneficial microbes to build healthy soils and plants. This also allows us to minimize the application of nitrogen fertilizers, reduce our potable water usage, and benefit from soil and plant health.

Total Erosion Control, Inc., a sister company to Agri Service, Inc., offers a line of products that utilize the composted organics from the El Corazon Compost Facility and a patented filter sock process. These "compost socks" provide watershed quality with proven superiority by binding petro-chemicals, nutrients, and heavy metals for cleaner runoff. The City of Oceanside has implemented compost socks as part of its erosion control strategy for the trail extension work along the San Luis Rey River.

The El Corazon Compost Facility is located at 3210 Oceanside Boulevard and is open from 7:30 am-5:00 pm Monday-Friday and 8:00 am-4:00 pm on Saturday. The facility phone number is 760-439-9920 if you have any questions.

CITY OF OCEANSIDE
WATER UTILITIES DEPARTMENT

RE: STATEMENT OF CERTIFICATION
CITY OF OCEANSIDE JURISDICTIONAL URMP

I certify under penalty of law that the Illicit Discharge, Detection, and Elimination Section (Section 7) of the Jurisdictional Urban Runoff Management Program Annual Report for 2009-2010 was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for knowingly submitting false information, including the possibility of fine and imprisonment for knowing violations.

M. A. Lahsaiezadeh

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2009-2010 reporting period to manage illicit discharges and meet the requirements of Sections D.4 and J.3.a.(3)(f) of the 2007 Municipal Permit. A directory of the subsections within the Municipal Permit Section J.3.a. and corresponding Annual Report compliance sections are listed in Table 7-1.

Table 7-1. Order No. R9-2007-0001 Compliance Summary.

J.3.a(3)(f)i. MS4 corrections and the Dry Weather Field Screening Map	See Section 7.7.3 and Attachment 7-A of this Annual Report
J.3.a(3)(f)ii. Reporting of all dry weather field screening and analytical monitoring results	See Section 7.4.3 and Attachment 7-A of this Annual Report
J.3.a(3)(f)iii. Dry weather consultant reports	N/A
J.3.a(3)(f)iv. Brief description of any other investigations and follow-up activities	See Section 7.5 of this Annual Report
J.3.a(3)(f)v. and vi. Number and descriptions of IC/IDs identified and eliminated	See Section 7.4.3, Section 7.5, and Attachment 7-A of this Annual Report
J.3.a(3)(f)vii. Spills to the MS4	See Section 7.3.3 of this Annual Report
J.3.a(3)(f)viii. Activities to prevent spills from entering the MS4	See Section 7.3.1 of this Annual Report
J.3.a(3)(f)ix. Notification of sewage spills	See Section 7.3.2 of this Annual Report
J.3.a(3)(f)x. Hotline calls	See Section 7.2 of this Annual Report
J.3.a(3)(f)xi. Public reporting of illicit discharges	See Section 7.2 and Section 8 of this Annual Report
J.3.a(3)(f)xii. Violations and enforcement actions	See Section 7.5 of this Annual Report
J.3.a(3)(f)xiii. Description of notable activities	See Section 7.1 of this Annual Report

7.1 Introduction

Illicit connections and illicit discharges (IC/IDs) can result in unauthorized discharges of pollutants to MS4s. IC/IDs can be defined as the following:

- An ***illicit connection*** is a connection that conveys an illicit discharge to the MS4 (pipe, drain, channel, catch basin, grated inlet, junction box, etc.).
- An ***illicit discharge*** is the act of disposing of any pollutant that is prohibited by the City either intentionally or unintentionally to the MS4. This does not include non-storm water exemptions and discharges resulting from emergency fire fighting activities. A list of non-prohibited, non-storm water discharges is provided in Chapter 3 of the City's JURMP Update (2007).

The main objective of the illicit discharge, detection, and elimination (IDDE) component of the City's storm water program is to seek and eliminate IC/IDs into the MS4. Eliminating IC/IDs helps minimize potentially negative impacts of human activities on receiving water bodies.

The City uses its municipal personnel to assist in actively seeking, identifying, and reporting IC/IDs during their daily activities. Detection and prevention of IC/IDs is achieved by:

- Operating a public complaint hotline,
- Inspecting local businesses and municipal facilities,
- Conducting dry weather field screening and analytical monitoring,
- Conducting MS4 monitoring through the regional program (detail presented in Regional Report),
- Conducting Coastal Storm Drain Monitoring Program (detail presented in Regional Report),
- Maintaining municipal MS4 and sewer systems, and
- Educating the local community.

The City investigates, inspects, and follows-up on every IC/ID that is reported or detected, to identify the source or sources of the discharge. Voluntary compliance and escalating enforcement mechanisms are implemented to immediately eliminate the IC/ID once the source has been identified when appropriate. Educational materials are distributed to help prevent future IC/ID occurrences.

Notable Activities

To reduce the risk of sanitary sewer overflows, the City Sewer Department installed one additional sewer monitoring alarm system in a high priority area. This is in addition to the five that were installed during the previous reporting year. These systems continuously monitor water level and at a predetermined high water mark, an alarm is sent to on-duty personnel to inspect the line to prevent a spill.

Also during this reporting year, the Clean Water Program within the City moved forward with implementation of data tracking system to stream line and track hotline calls and inspector responses. The Water and Sewer Divisions of the Water Utilities Department have been using GBA Master Series Software, a maintenance management tool, and gradually rolling it into the various programs for several years. The Clean Water Program purchased additional licenses and hired a consultant to help modify the software for use with the NPDES permit. The Clean Water Program began using GBA to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This annual report is the first report utilizing the new technology. The Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use or the system in the coming years.

7.2 Public Reporting of Illicit Discharges and Connections

To aid the process of identifying illicit discharges, the City encourages the public and City staff to report illicit discharges and connections. A public complaint hotline specifically for urban runoff has been developed, and is currently operated by the Water Utilities Department:

Oceanside Urban Runoff Hotline
(760) 435-5800

The hotline is answered during business hours by City staff. Bilingual staff is available to answer calls by Spanish speakers. For after hours, holidays and weekend calls, callers needing

immediate assistance are referred to the Oceanside Police and/or Fire Departments and the remaining are prompted to leave a message. Maintenance and operations staff are also trained to promptly refer potential storm water violations observed in the field to the Hotline (details of municipal staff training are in Section 10.2).

IDDE related public complaints may also be reported directly to Code Enforcement:

Code Enforcement
(760) 435-3944

Once a complaint is received, it is logged into a Code Enforcement database for documentation and tracking purposes. The complaint is then forwarded to either a Clean Water Program Inspector or a Code Enforcement Officer. City personnel investigate every complaint logged through the hotline to determine if pollutants are in fact being discharged to the MS4. If investigators find evidence of a violation or other IC/ID, every effort is made to find the responsible party and inform them of the complaint or issue a violation.

A total of 259 public complaints were received through the Urban Runoff Hotline during the 2009-2010 reporting period compared to 98 calls in the previous reporting period. In addition to hotline calls from the public there were 137 referrals to the Clean Water Program from City staff. All storm water related calls to the City (396) either from residents or City staff referrals were entered into the GBA database system for tracking. Table 7-2 provides a summary of the nature of the calls received via the Hotline or by City staff referral. Of the calls received through the Hotline, nine (9) were referred directly to Code Enforcement for immediate investigation. Figure 7-1 is a summary of the nature of calls made to the Urban Runoff Hotline.

Code Enforcement reported 112 cases for storm water/Clean Water Program complaints; the exact same number from the previous reporting period. Of these 112 cases, 87 of these cases did detect an IC/ID and 86 of these were eliminated. The majority (57) of the cases were complaints of spills or dumping. Additional detail for Code Enforcement cases are provided in Section 7.5.

The Urban Runoff Hotline is publicized in the *Oceanside Community Magazine*, the City's website, the Clean Water Program website, on a monthly local TV program, KOCT Oceanside Update, informational literature for public distribution, and at local community events and meetings. In addition, education to the public stresses the importance of reporting discharges and describes the critical role that the public plays in the identification and elimination of urban runoff pollution related problems.

Table 7-2. Urban Runoff Hotline calls and City Staff Referral Summary.

Department	Problem	City Employee Referral	Public Hotline	Total
Clean Water Program	Follow-up	0	16	16
	Leak Repair	0	2	2
	Other	1	11	12
	Over-irrigation/Broken irrigation	125	112	237
	Power Washing	0	8	8
	Spills/Dumping	2	24	26
	Street/Driveway Washing	1	12	13
	Unidentified water runoff	6	48	54
	Watering Time	0	5	5
	Yard waste/Landscape Activity	1	13	14
	Total For CWP	136	251	**387**
Referred from the Hotline Directly to Code Enforcement	Leak Repair	0	1	1
	Other	0	1	1
	Power Washing	0	1	1
	Spills/Dumping	0	5	5
	Street/Driveway Washing	1	0	1
	Total for CE	1	8	**9**

Figure 7-1. Summary of Urban Runoff Hotline Calls during the 2009-2010 Reporting Year.

7.3 Spill Reporting, Response, and Prevention

The City implements spill reporting, spill response, and spill prevention mechanisms to prevent, respond to, contain, and clean up all sewage and other spills that discharge to its MS4 from any source.

7.3.1 Spill Prevention

7.3.1.1 Sanitary Sewers

The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations. The programs provide for the routine monitoring, inspection, cleaning, and related maintenance of all components of the collection system in order to reduce the potential of sanitary sewer overflows (SSO) and other structural failures. Potential problems are noted and maintenance schedules adjusted accordingly. If necessary, repairs are initiated by City maintenance crews. Larger more complex projects are referred for inclusion in the capitol improvement projects (CIP) process for planning, design, and construction.

When system malfunctions do occur, such as SSO main stoppages, electrical outages, and mechanical breakdowns, the cause of the problem is investigated and analyzed. Maintenance schedules are then adjusted accordingly. If appropriate, the infrastructure component is referred for repair or replacement by maintenance crews.

Cleaning schedules are analyzed and adjusted for proper scheduling. During the 2009-10 reporting year, 236 miles (1,244,858 feet) of sanitary sewer were cleaned.

In order to ensure that the sanitary sewer lines do not leak, the city has a long term plan to slip line the sewer pipes through the City. During this reporting period 3,481 feed of City sewer lines were slip lines and an additional 53 manholes were rehabilitated.

A total of six SmartCover sewer monitoring and alarm systems are being used within the City in high priority areas. These systems continuously monitor water level and at a pre-determined high water marks an alarm is sent to on-duty personnel to inspect the line to prevent a spill. Five were installed during the previous reporting year and one was installed during the current 2009-10 reporting year.

Private Sewer Laterals and Septic Systems

The City requires that private sewer laterals and septic systems be designed and operated in accordance to industry standards. The City also requires the proper maintenance of these facilities in order to avoid spills, breakages, and failures.

7.3.1.2 Other Spills

The City prevents spills from private businesses and residents through required BMPs, education, and enforcement of relevant regulations for the storage and usage of hazardous materials.

The City also received funds from the California Integrated Waste Management Board to establish a permanent household hazardous waste (HHW) collection facility for its residents. The City's objective was to encourage a convenient, proper disposal and collection of HHW materials for its residents. This facility is currently open Monday through Friday for used oil, paint, and antifreeze disposal and every Saturday for collection of the following materials:

- Aerosols
- All purpose cleaners
- Ammonia
- Antifreeze
- Automobile cleaners
- Barbecue lighter fluid
- Batteries
- Brake fluid
- Chlorine bleach
- Detergents
- Disinfectants
- Drain opener
- Furniture polish
- Gasoline
- Glass cleaner
- Herbicides
- Mothballs
- Motor oil
- Oven cleaner
- Paint
- Paint thinner
- Pesticides
- Rubber cement
- Rug/upholstery cleaner
- Scouring powder
- Silver polish
- Toilet bowl cleaner
- Transmission fluid
- Tube and tile cleaner
- Turpentine varnish
- Water sealant
- Wood finish

The HHW collection facility is periodically promoted by the City through the *Oceanside Community Magazine*, the *North County Times* newspaper, on the Clean Water Program website and at local community events and meetings where literature is distributed. There is also literature available to the public at the City offices.

During the 2009-10 reporting period, 3,356 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 154.75 tons of hazardous materials (including universal waste) during the reporting period. An additional 126 tons of E-waste was recycled in the same reporting year. In addition, as part of Oceanside Green Week (see Section 9.1.6 for more details) a free E-Waste drop-off event, open to the public, was held simultaneously during the Green Fair. Thirteen thousand one hundred eleven (13,111) additional pounds of E-waste were collected during this event.

The City provides information to the public on used motor oil recycling and identifies the local state certified collection centers in the City. Furthermore, as part of the City's collection program, a 1,500-gallon used oil collection receptacle is provided at the City's harbor for use by harbor slip renters. During FY 2009-10, 1,583 gallons of oil were recycled along with two 55-gallon barrel of used oil filters.

7.3.1.3 Prevention of Fugitive Trash

In addition to spills from sewer overflows or hazardous waste dumping activities, the City is also addressing the prevention of trash getting into our receiving waters.

As discussed in detail in Section 4 of the 2009-10 Annual Report, 571 miles of public streets in the City of Oceanside are swept at least monthly. During this reporting year, 28,954 curb miles were swept. Last year's estimate of 1,142 curb miles (length of total street miles in the City doubled) was an underestimation compared to the actual tracked amount during the 2009-2010 reporting period by the City's Public Works Department. Street sweeping activities resulted in

the collection of over 2,093 tons of waste from public streets and parking lots during this reporting year. In addition, a total of 3,433 structures (catch basins, manholes, inlets, outlets, etc.) were inspected and cleaned during the reporting period. A total of 54.52 tons of waste were removed from the structures, as well as 840 tons of waste from open channels and drain pipes. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt.

Trash Trap at the Oceanside Municipal Golf Course

In addition to standard maintenance, staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. City staff installed a trash trap downstream of this priority residential area and upstream of Pilgrim Creek in the open channel that parallels the driving range at the municipal golf course. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. This trash trap was installed in March 2009 (Figure 7-2). During the 2009-10 reporting year, 180 pounds of trash and organic debris were captured and removed from the trash trap.

Trash trap immediately after installation

Trash trap with debris

Figure 7-2. Trash BMP installed at the Oceanside Municipal Golf Course.

Cigarette Butt Boxes in the Harbor and at the Beach

The Harbor and Beaches Maintenance Division has contracted with a cigarette butt service company to install and service cigarette butt receptacles in the harbor, pier and beach areas. The receptacle selected is made by Butts Only Box and is designed to prevent rain and irrigation water from contacting the butts until collection. This prevents leaching of toxic compounds into sensitive habitats.

The company has several models to choose from, two of which have been installed in the City of Oceanside. The trail model is used along high foot traffic areas adjacent to the beach and harbor sidewalks. There are a total of 17 of these installed in the coastal areas of Oceanside: 11 in the harbor, 2 on the pier, and 4 on The Strand (the road that parallels a large section of beach). Two boat models were installed on two sport fishing boats docked in the harbor (Figure 7-3).

Figure 7-3. Butts Only Box cigarette trash receptacles installed in beach areas and sport fishing boats.

Cigarette Butt Services, a sister company to Butts Only Boxes, services the boxes. The City of Oceanside subscribes to this service and the company provides a monthly statement that includes the number of butts removed and the weight of the debris.

During this reporting period a total of 73,439 cigarette butts were collected from the 17 trail models and two sport fishing models. The weight of this debris totaled 37.48 pounds.

The City plans to continue servicing boxes currently in place. The City will also seek additional funding to cover costs for purchasing, installation and servicing of additional receptacles within the jurisdiction.

7.3.2 Spill Reporting

7.3.2.1 Public Reporting of Spills

Spills entering the MS4 may be discovered during routine maintenance activities, scheduled monitoring, or observed and reported to the City by citizens. Citizens may use the Urban Runoff Hotline, Code Enforcement, or Oceanside Police Department phone numbers to report spills. Any reports by the public or City staff are referred to the Wastewater Division of the Water Utilities Department.

7.3.2.2 City Spill Reporting

The City complies with the sewage spill reporting requirements outlined in Table 7-3 and detailed in Section 9 of the JURMP Update:

Table 7-3. Summary of Sewage Spill Reporting Requirements

Spill Volume	Criteria	Agency Receiving Report	Reporting Period
Any	Spills to waters of the State	SWRCB online RWQCB DEH	3 days (initial) 24 hours Immediate
Any	Municipal Permit non-compliance threatening human or environmental health	RWQCB SWRCB online	24 hours verbal and 5 days written 3 days (initial)
Any	Mitigated spills (absorbed, cleaned up, or captured)	DEH	24 hours
Any	Unmitigated spills to areas with potential public contact	DEH	Immediate
Any	Unmitigated spills to areas without potential public contact	DEH	24 hours
>1000 gallons	Anywhere	OES RWQCB DEH SWRCB online	Immediate 24 hours Immediate 3 days (initial)

County of San Diego Department of Environmental Health (DEH)
State Office of Emergency Services (OES)
Regional Water Quality Control Board (RWQCB)
State Water Resources Control Board (SWRCB)

7.3.3 Spill Response

Responses to sewer spills are conducted in accordance to the City's Sewer Overflow Response Plan and the responsible agencies are summarized in Table 7-4.

Table 7-4. Responsible Agency for Sewage Spills

Source	Responsible Agency
Leaks and spills from publicly owned collection system	City of Oceanside
Private residence (failing septic systems)	County DEH
Any spill reaching MS4	City of Oceanside

During the 2009-2010 reporting period, the City responded to ten sewer spills, four of which were privately owned. This is the least number of sewer spills from City owned lines within recent years. Three of the City's six spills reached the receiving water. New SmartCover alarm systems have aided in the decrease of sewer spills in high priority areas. The SmartCover sewer monitoring systems continuously monitor water level and at a predetermined high water mark, an alarm is sent to on-duty personnel to inspect the line to prevent a spill. In addition, the Clean Water Program and the Wastewater Division of the Water Utilities Department continued the public outreach effort initiated in the last reporting year for residential contribution of grease in the sanitary sewer. As a result, there were fewer spills this year with grease as the primary cause. The remaining causes of spills were primarily because of debris or roots. Notifications of

these spills are submitted to the Regional Water Quality Control Board (RWQCB) through quarterly reports. A summary of SSO overflows during 2009-2010 is presented in Table 7-5.

Responses to other spills are conducted by the Fire Department or qualified personnel in the Public Works Department, as appropriate to the situation. Both small and large spills are handled following HAZMAT Incident Response Team (HIRT) Policies and Procedures as issued by the Unified San Diego County Emergency Services Organization. The Oceanside Fire Department responded to all of the non-sewer related spills during the 2009-2010 permit year. A summary of the 15 spills is presented in Table 7-6. The majority of the spills were small fuel and oil spills from leaking vehicles.

Table 7-5. Summary of SSO Overflows during the 2009-2010 Fiscal Year.

Overflow Start Date Time	Overflow End Date Time	Total Overflow Volume (gal)	Overflow Volume Released to Environment (gal)	Overflow Cause	Did the SSO Enter a Storm Drain?	Did the SSO Reach Other Surface Waters?	Initial Secondary Receiving Waters	Prevention Corrective Measures
7/5/2009 10:30	7/5/2009 11:30	180	140	Private lateral - cause unknown	Yes	Yes	Libby Lake	Condo's were requested to put main lateral on maintenance schedule
8/6/2009 13:00	8/6/2009 21:00	3,120	3,120	Private line break	No	Yes	Pacific Ocean	Plummer made corrective repairs to broken lateral
8/11/2009 9:45	8/11/2009 10:35	100	20	Private grease interceptor failed	Yes	No	N/A	Restaurant cited and meeting has been arranged to discuss maintenance schedule.
9/3/2009 7:20	9/3/2009 8:00	600	200	Unknown blockage	Yes	Yes	Buena Vista Creek	Line was cleaned the day before and line was inspected visually and televised after.
12/10/2009 12:05	12/10/2009 12:35	150	150	Roots	Yes	No	N/A	CCTV crew is scheduled to televise and find root infiltration and severity.
12/12/2009 17:07	12/12/2009 17:55	240	240	Roots	Yes	Yes	Buena Vista Creek	Scheduled CCTV Inspection for root infiltration.
1/21/2010 11:20	1/21/2010 13:50	22,500	22,500	Rain caused capacity issues	No	No	N/A	All upstream lines will be inspected during and after storm to note significant changes in flow.
1/26/2010 7:00	1/26/2010 7:01	50	1	Biosolid spill from trailer	Yes	No	N/A	Better management of biosolids' condition in trailer
2/20/10 9:40	2/20/10 10:05	625	625	Grease Stoppage in city main	Yes	Yes	Golf Course Pond	Jetted line and dropped 100 pounds of chlorine tablets upstream.
5/20/10 unknown time	5/20/10 11:45	500	250	Stoppage in private lateral	Yes	No	N/A	Owner was cited

Table 7-6. Summary of Non-SSO Spills during the 2009-2010 Fiscal Year.

Fire Dept. Arrival Date Time	Last Unit Cleared Date Time	Incident Number	Substance reported spilled	Amount of spilled substance	Primary Action Taken	Secondary Action Taken	Description
7/29/2009 9:31	7/29/2009 9:39	0009218	Transmission and motor oil	4 Quarts	Applied absorbent to spill		Traffic accident caused transmission and engine oil leak
8/8/2009 10:01	8/8/2009 10:04	0009705	Oil	Unknown	Established safe area		Older truck had minor oil leak that went into storm drain when sprinkler from up the street caused some runoff
8/26/2009 20:52	8/26/2009 21:17	0010559	Oil	2 quarts	HazMat spill control and confinement	Applied absorbent to spill	Motorcycle had leaked oil in the street
9/7/2009 13:31	9/7/2009 14:00	0011131	Oil	Unknown	HazMat spill control and confinement	Owner was given instructions on further mitigation	Truck had used oil in bed of their truck that leaked
11/7/2009 19:39	11/7/2009 19:53	0013928	Oil and other combustible liquid spill	Unknown	HazMat spill control and confinement	Applied absorbent to spill	Car ran over engine block in the center of road causing a transmission and engine oil leak
11/8/2009 0:58	11/8/2009 1:05	0013935	Fuel	Unknown	Container was placed to collect leaking fuel	Applied absorbent to spill and was removed	Car collision caused a small gas leak from one of the vehicles
11/8/2009 13:04	11/8/2009 14:01	0013953	Fuel	Unknown	Plugged leak in vehicle	Spread absorbent and removed material	City car with a fuel leak
12/1/2009 15:36	12/1/2009 15:42	0014959	Fuel spill	2-3 quarts	Home owner was directed to clean up and dispose of fuel		Small fuel spill at a residential home
1/19/2010 9:50	1/19/2010 10:24	0000964	Diesel Fuel/Fuel oil	2,000-3,000 sq ft of sheen on water	OES Warning Center was notified		Fuel from a boat leaked into the Oceanside harbor.

Fire Dept. Arrival Date Time	Last Unit Cleared Date Time	Incident Number	Substance reported spilled	Amount of spilled substance	Primary Action Taken	Secondary Action Taken	Description
1/30/2010 10:54	1/30/2010 11:01	0001488	Oil	10 quarts	Applied absorbent to spill	Public works was notified to remove materials left in street	Oil was found to be running down the street along the curb line
2/14/2010 16:43	2/14/2010 17:19	0002252	Fuel	5 gallons	Applied absorbent to spill and was removed		Two vehicles in parking lot found with leaks caused by running over aluminum in street
2/17/2010 14:04	2/17/2010 14:06	0002381	Oil	1 quart	Investigate	Applied absorbent to spill	Small oil spill in street
3/19/2010 7:17	3/19/2009 7:38	0003735	Fuel	1 Gallon	Leak was stopped	Applied absorbent to spill and was removed	School bus had fuel leak
5/3/2010 10:16	5/3/2010 10:26	0005700	Oil	Unknown	Identify and Analyze Hazardous Material	Decontaminate area	Truck had leaked oil into gutter but was mitigated before arrival. Did not reach storm drain
6/16/2010 21:32	6/16/2010 22:14	0007652	Oil	1 Gallon	Called SDG&E HazMat	Notified Storm Water Runoff	SDG&E truck leaked oil into storm drain

7.4 Urban Runoff Monitoring

The Urban Runoff Monitoring Program includes MS4 Outfall Monitoring, Source Identification Monitoring, and the Dry Weather Field Screening and Analytical Monitoring Program.

7.4.1 MS4 Outfall Monitoring

In accordance with RWQCB Order R9-2007-0001, the Copermittees developed the MS4 Outfall Monitoring Program Work Plan through a collaborative effort in 2007–2008 and submitted the final Work Plan on June 25, 2008 (County of San Diego Copermittees, 2008). The MS4 Outfall Monitoring Work Plan is the framework for random dry and random wet monitoring and the targeted dry and targeted wet monitoring. The collection and analysis of water samples discharging from MS4 outfalls to receiving waters during all four types of sampling will be used to address Core Management Question 3:

> What is the relative urban runoff contribution to the receiving water problem(s)?

Random sampling was conducted to address the following subquestions identified in the MS4 Outfall Work Plan:

1. What are the characteristics of the discharges from MS4 outfalls in regard to high-priority pollutants?

2. Are constituent loadings changing over time?

Targeted sampling was conducted to address the following subquestions:

1. Which of the targeted MS4 outfalls have the greatest pollutant loading?

2. Are the pollutant loadings decreasing over time from these MS4 outfalls?

The City of Oceanside is responsible for targeted dry weather sampling at 13 sites throughout Oceanside. A regional water quality monitoring contractor is hired by the Copermittees for the collection of the random dry, random wet and targeted wet weather samples throughout San Diego County.

In FY 2009-10, the City of Oceanside visited the 13 targeted dry weather monitoring sites. The one Buena Vista site was flowing; four of the five Loma Alta sites were flowing; and two of the eight San Luis Rey River sites were flowing. One site in Loma Alta was not accessible due to construction of a box culvert around the original sampling area. Table 7-7 presents the targeted dry weather monitoring sites visited during the 2009-10 fiscal year and the priority pollutants analyzed for each site. A contractor for the Copermittees conducted the random dry, random wet, and targeted wet weather sampling throughout San Diego County.

Table 7-7. FY 2009-10 City of Oceanside Targeted Dry Weather Monitoring Sites.

StationID	Sample Date	WaterFlow	FlowRate (gpm)	Analytes Monitored
Carlsbad Watersheds				
B002	05/24/10	Flowing	4	Bacteria, TDS, TSS, Total Nitrogen-N, Total Phosphorus-P
L009	05/13/10	Flowing	112	Bacteria, TDS, Total Nitrogen-N, Total Phosphorus-P
L027	05/12/10	Flowing	130	
L054	05/13/10	Not Accessible		
L111	05/24/10	Flowing	4	
San Luis Rey River Watershed				
S006	05/13/10	Flowing	1	Bacteria, Chlorides, TDS, Total Nitrogen-N, Total Phosphorus-P
S075	05/24/10	Dry	0	
S106	06/16/10	Dry	0	
S107	06/16/10	Dry	0	
S116	06/16/10	Dry	0	
S119	06/16/10	Dry	0	
S122	06/16/10	Flowing	1	
S123	06/16/10	Dry	0	

The results of all three types of monitoring are presented in detail in Section 12 and each WMA Section of the 2009-10 Regional Urban Runoff Monitoring Report. At this time, additional data is still needed to properly characterize the pollutant discharges from MS4 outfalls in each WMA. It is anticipated that more meaningful spatial comparisons can be made as a more robust data set is developed and will be presented in the Long Term Effectiveness Assessment (LTEA) 5-year document.

7.4.2 Source Identification Monitoring

The Source Identification Program is a requirement of San Diego RWQCB Order R9-2007-0001 (Section B.2 of the Receiving Waters and Urban Runoff Monitoring and Reporting Program). The Copermittees provided a framework for source identification studies entitled "Urban Runoff Source Identification Program in San Diego County Watersheds" (County of San Diego Copermittees, 2008). This framework described the conceptual monitoring to be conducted over the course of the Permit. The original framework stated two sites would be monitored: one from the City of Carlsbad and one from the City of La Mesa. The City of Carlsbad study area was changed to the City of Del Mar in 2008-09. The La Mesa study area was monitored in the previous fiscal year, but changed to a site within the City of Oceanside for 2009-10. For the 2009-10 Monitoring Season, the workplan entitled *2009–2010 Source Identification Monitoring Wet Weather Residential Area Runoff Assessment* was designed to assess wet weather runoff from residential areas at one site within each jurisdiction.

The primary goal of this study was to collect residential land use discharge data for application to regional assessments since residential land uses comprise the most common land uses in urban areas. This study will build on the information collected from the dry weather residential source identification study conducted during the 2008–09 monitoring season. A secondary goal of collecting the data was to compare data collected in San Diego County to data collected from an

intensive residential land use runoff study under a Proposition 50 Grant in Orange and Sacramento Counties (Haver, 2007[1]).

In accordance with the Permit, the Copermittees developed the 2009–10 Source Identification Workplan with respect to collecting data useful in addressing the goals and management questions listed in the Permit. The Permit provided flexibility in developing the Source Identification Study and the questions were tailored to fit the Copermittees' needs. More detailed information about the 2009-10 Source Identification Monitoring is presented in Section 12 of the 2009-10 Regional Urban Runoff Monitoring Report. A summary of the study questions and results to date are presented below:

1. What are the flow volumes during storm conditions from single-family residences?

Flow volumes varied considerably during storm events both between storm events and between the two study locations. Flow volumes in Del Mar ranged from 1,011 cf to 17,353 cf over the three storms. Oceanside flow volumes were generally much greater than those at Del Mar, due in part to the larger size of the watershed and its higher percentage of impervious area. Flow volumes in Oceanside ranged from 1,697 cf during the January 26, 2010 storm to 103,501 cf during the January 18, 2010 storm. Rainfall during the three monitored storms ranged from 0.13 inches in both Del Mar and Oceanside on January 26, 2010 to 1.28 inches in Del Mar on December 7, 2009 and to 1.20 inches in Oceanside on January 18, 2010.

2. What is the water quality and load of constituents of wet weather flows from single-family residences?

Del Mar had five constituents with results above benchmarks for wet weather in more than 50% of the samples (high priority constituents), whereas Oceanside had two high priority constituents. Both fecal coliforms and bifenthrin were categorized as high priority constituents in both Del Mar and Oceanside. Turbidity, dissolved copper, and cyfluthrin were the other high priority constituents in Del Mar. Medium priority constituents, which were analytes above benchmarks in greater than 25% to less than or equal to 50% of samples, included TSS, L-cyhalothrin, and permethrin in Del Mar, and turbidity and L-cyhalothrin in Oceanside. Malathion was the only low priority constituent in Del Mar, whereas in Oceanside, TDS, cyfluthrin, dissolved copper, and dissolved zinc were low priority constituents. These results indicate that TSS, turbidity, synthetic pyrethroids, dissolved metals, and the pesticide malathion may occur in concentrations above benchmarks in single family residential land use areas.

Wet weather flow at the Oceanside location (198,338 cf) was more than six times higher than the flow in Del Mar. Wet weather loads per acre for the Oceanside drainage area, however, were not

[1] The results of the Proposition 50 Nonpoint Source Pollution Control Program Grant entitled "Evaluating Best Management Practices (BMPs) Effectiveness to Reduce Volumes of Runoff and Improve the Quality of Runoff from Urban Environments" is being conducted by Dr. Darren Haver of the UC Davis. Dr. Haver is coordinating the collection of wet and dry samples from four residential communities in Sacramento and four residential communities in Orange County. Work currently is suspended at the request of the State of California.

substantially higher in Oceanside than in Del Mar for most of the constituents measured. Dissolved metal loads per acre for copper and zinc were approximately 3 to 4 orders of magnitude greater in Del Mar than in Oceanside.

3. How does the pollutant loading compare between dry weather nuisance flows and wet weather storm flows?

To answer this question, wet and dry weather loads collected from the same single family residential area in Del Mar were compared. Overall, the dry weather loads from 3 months of nuisance flow were considerably lower in comparison to wet weather loads from the three storm events for most constituents. General chemistry and nutrient loads were one to two orders of magnitude greater during wet weather than during dry weather, whereas synthetic pyrethroid loads of bifenthrin, cyfluthrin, danitol, esfenvalerate, fluvalinate, L-cyhalothrin, and permethrin were approximately two to seven orders of magnitude greater during wet weather than during dry weather. Similarly, bacteria loads for fecal coliforms, enterococcus, total coliforms, and *E. coli* were approximately two orders of magnitude greater during wet weather than during dry weather. The load of malathion (an organophosphorus pesticide) was greater during wet weather, as it was measured in two of the three storm events but was not detected during dry weather. Metals loads for dissolved copper and dissolved zinc were approximately two orders of magnitude greater during wet weather than during dry weather. Use of copper and zinc in roofing materials and copper in automobile brake pads may be potential sources of these dissolved metals in runoff during wet weather.

7.4.3 Dry Weather Field Screening and Analytical Monitoring

The requirements of the current Dry Weather Monitoring Program component in the 2007 Municipal Permit (Order 2007-001) built upon the requirements of the previous Municipal Permit (Order 2001-01). The dry weather analytical and field screening monitoring components consist of 1) field observations (site description and qualitative observations), 2) field screening monitoring (testing of sample while at site and flow estimation), and 3) analytical monitoring on a subset of sites (performing further tests of sample later at a laboratory). The current Municipal Permit also added a trash assessment component and now requires follow-up investigations to be conducted within two business days of receipt of results.

The City's complete 2010 Dry Weather Monitoring Report is provided as Attachment 7-A to this submission. This report includes:

- Reporting of all dry weather field screening and analytical monitoring results.
- Dry weather field screening and analytical monitoring report.
- Corrections for the Dry Weather Monitoring stations.
- The number and brief description of any IC/IDs found and eliminated during Dry Weather Monitoring.
- Description of activities conducted to manage IC/IDs found during Dry Weather Monitoring.

Below is a summary of the findings.

Dry weather monitoring is conducted at each site at least once between May 1st and September 30th each year. During the 2010 monitoring season, 67 primary sites were visited. Two of those

sites were inaccessible and an additional eleven were dry. Twenty six alternate sites were visited. Nineteen of the ponded or flowing sites had additional analysis completed in the lab for chemistry and microbiology (28%).

When field measurements and/or laboratory analysis showed an exceedance of established action levels, the site was revisited within two business days to confirm the initial results. When follow-up sampling confirms continued exceedance of action levels, the City conducted further investigations to identify the source of the exceedance.

Seventeen sites required confirmation for an initial field screening exceedance. The most common exceedance was for MBAS and ammonia. Of the 17 initial exceedances, only four sites required an IC/ID investigation. Of the 19 sites chosen for laboratory analysis, there were no exceedances for chemistry results. Microbiology analysis resulted in five exceedances for total coliforms, three for fecal coliforms, and four for Enterococcus. Only one site with a continued total coliform and fecal coliform exceedance required an upstream investigation.

During the 2010 Dry Weather season it was determined that, historically, orthophosphate (PO_4) results have been compared to an action level for orthophosphate as phosphorus (PO_4-P). This has therefore resulted in more historical exceedances, and an overly conservative valuation, since the results for orthophosphate are higher than the results for orthophosphate-P. The historical comparison of action level exceedances from 2007 through 2010 in the Dry Weather Monitoring Report has corrected the number of exceedances as best as possible and the reporting reflects the conversion.

In the historical comparison, both ammonia and MBAS initial exceedances have decreased since the beginning of the permit cycle. The primary reason for the decrease in ammonia exceedances is likely due to equipment change and using the best technology for the water being sampled to avoid false positives. The number of bacteria exceedances has remained relatively stable throughout this permit cycle.

Follow-up IC/ID investigations were conducted at sites with ongoing exceedances. The 2010 monitoring year resulted in a much reduced list of follow-ups necessary and resulted in the least number of initial exceedances and the least number of IC/ID investigations required in the past four years. Of the 17 initial field screening exceedances, only four potential IC/ID investigations were required and only one was suspected to be an actual illegal discharge. That one discharge was not considered eliminated because the discharge ceased before the source could be found. The remaining exceedances were due to equipment malfunction or ponding of water. The pH exceedance at S110 was likely an equipment malfunction. The ammonia exceedance at site B024 was likely due to the ponding of water with decaying organic matter. The MBAS exceedance at B023 was likely due to interference with the test kit method, as the laboratory result was below action levels. Finally, at A016, the increased turbid flow while sampling was likely due residential vehicle washing and had stopped by the time sampling was concluded. Details for each follow-up are provided in Attachment 7-A.

The 2010 Dry Weather Monitoring Program is the third year for assessing the amount and extent of trash at each dry weather monitoring location. Approximately 94% of the sites were either

"optimal", "suboptimal", or "marginal" and did not require the detailed trash evaluation, compared to 73% during the last monitoring year. This is a large reduction in sites that were considered submarginal and poor in all watersheds. The majority of the trash found in the sites that required further trash evaluation was either food packaging or household waste. These items were most commonly at the sites via littering or from upstream. And, the most common source of the food packaging and household wastes are households and transients. These are consistent results with the previous trash assessment year.

Water conservation and urban runoff outreach, as well as beach and creek clean-ups continues year-round as the City continues the effort to detect and eliminate illicit discharges to the storm drain system.

To address MS4 inaccuracies and update the GIS layer of the MS4 map, the City purchased two Trimble GeoXH units in FY 2008-09 to be used collaboratively between Public Works, Engineering, and the Water Utilities Departments. One of the many uses of these units is to verify the accuracy of the MS4 map and relay the information gathered in the field to the Engineering Department to update the GIS layer. During the 2008-09 fiscal year, the City created the data dictionary needed to collect consistent and necessary data for the storm drain system update and field tested the units. During this fiscal year, in April 2010, the Clean Water Program and Engineering Department solicited the assistance of one unpaid 30-hour per week student volunteer to assist with water quality monitoring and data gathering for support of the Dry Weather Program and MS4 map update. Throughout the summer of 2010, the volunteer was assisting with field monitoring and began mapping the MS4s. The completion date for the project is estimated for FY 2012-13.

7.5 Follow-up and Enforcement

The City implements and enforces its ordinances, orders, or other legal authority to prevent illicit discharges and connections to its MS4. Enforcement mechanisms are implemented on an escalating scale to enforce compliance, and follow-up inspections are conducted to ensure compliance has been achieved.

The administrative and judicial tools listed below are used as necessary to eliminate IC/IDs:

- Written administrative warnings and citations
- Stop work notices
- Public nuisance abatement
- Denial or revocation of permits
- Civil and/or Criminal Court Actions
- Additional penalties or fines

The nature of the City's enforcement approach is determined on a case-by-case basis and is based on factors such as the severity of the violation, the threat to human or environmental health, site-specific circumstances, and past compliance history.

A total of 112 Code Enforcement cases potentially related to the requirements of the Municipal Permit were reported, the exact same number of cases as in the previous reporting year. Of these, 87 cases did detect an IC/ID and 86 were eliminated within the fiscal year. The one case

that is still open without resolution involves an issue about illegally draining a washing machine and other violations on the property. The IC/ID was resolved and eliminated on 11/29/2010, but the case remains open pending other, non-storm water related issues. Table 7-8 presents a summary of the IC/ID investigations by Code Enforcement officers initiated during the 2009-2010 reporting year. The summary includes a brief description and the number of follow-ups and enforcement actions taken to achieve compliance. This year, there were no additional investigations by the Clean Water Program that were not a part of the Dry Weather Program or presented in the Code Enforcement cases.

Table 7-8. Summary of 2009/10 IC/ID Investigation by Code Enforcement Officers

Case Number	Occupancy Status	Date Received	Nature of Complaint	Actions Taken	IC ID Identified	IC ID Eliminated	First Contact	Last Contact	Site Visits	Office Visits	Phone Contacts	Written Notices	Letters Sent	Stop Work Notices	Admin-istrative Warning	Admin-istrative Citations	Criminal Citation	Case Closed?
009-0094	COMMERCIAL	1/14/2009	MONITORING HABITAT RESTORATION	Received inquiry via Mo concerning proper BMP installation on property. This inquiry has to do with the restoration of habitat. No further issues at this time. Property management and planning have taken the lead on this property. Will reopen if enforcement is needed	N	N/A	1/12/2009	3/10/2010	12	1	0	0	0	0	0	0	0	Yes
009-1775	COMMERCIAL	5/20/2009	STORM WATER COMPLIANCE	Site visit. PC to Property manager about proper maintenance / cleaning of dumpster enclosure areas and grease barrels. Manager stated that they will address the issue. Site visit. Property in compliance.	N	N/A	5/27/2009	10/8/2009	14	0	3	0	0	0	1	5	0	Yes
009-2258	COMMERCIAL	7/1/2009	ILLEGAL DISCHARGE	Site visit. Observed major spill from grease trap system. Spill affected entire parking lot and drive through as cars and people were allowed to drive/walk through the area. Absorbent placed on spill to soak up oil/grease. Spoke with day manager (Rosa) about situation. She stated that spill happened Sunday afternoon (2 days prior). A cleaning business was contacted for cleanup but did not show. Directed manager to get a cleanup crew on site immediately and to rope off affected area to reduce tracking. Issued Admin Warning cite 12383 to manager for discharge. Main operations manager(Ernesto) arrived shortly after. Remained on site until clean up crew arrived to provide proper instruction. Site visit. Business still not in compliance. Required a second cleaning of area.Site visit. Business in compliance at this time.	Y	Y	6/30/2009	7/8/2009	3	0	0	0	0	0	1	0	0	Yes
009-2275	RESIDENTIAL	7/2/2009	DRAINAGE COURSE BLOCKED W / VEGETATION	Received email from M.Sabelis with photos attached dated 6-19-09 requesting notification be sent to this address for drainage course maintenance. 7.6 Illicit Discharge, Detection, and Elimination Component Effectiveness Assessment

Effectiveness assessment is an important component of the JURMP because it can assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The San Diego County Copermittees developed two guidance documents to assist in the assessment of the JURMP components as well as the jurisdictions overall JURMP program. These two documents are titled *A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs* and the *Baseline Long-term Effectiveness Assessment* (BLTEA). The City participated in regional efforts to develop these documents in anticipation of the requirement to assess their JURMP programs.

The effectiveness assessment approach developed by the Copermittees during the 2005-06 permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below:

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge/Awareness
- Level 3: Behavioral Change/BMP Implementation
- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality
- Level 6: Changes in Receiving Water Quality

The establishment of measurable outcomes is necessary for both incremental program component improvements and as a basis for future establishment of relationships between implementation and water quality improvement outcomes.

This section discusses the effectiveness assessment of the IDDE components of the JURMP. Overall program effectiveness assessment is discussed in Section 11 of the 2009-2010 City of Oceanside JURMP Annual Report submitted September 30, 2010.

A large effort of the IDDE element is the City's Dry Weather Monitoring Program. Table 7-9 provides a summary of the Level 1 activity-based compliance assessment of the program. This was the third year the City used a replacement program for dry or inaccessible sites. While there were 67 sites on the primary site list, thirteen were either dry or inaccessible. An additional 26 sites were visited to find ponded or flowing water. The City continued laboratory sampling at more sites than required which resulted in a 112% completion rate. All initial site exceedances of action levels were confirmed within two business days resulting in a 100% completion rate. Ninety sites, even those without ponded or flowing water, were assessed for trash extent and amount which resulted in a 134% completion rate.

Table 7-9. Dry Weather Monitoring Component - Level 1: Compliance with Activity-Based Requirements.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
IDDE D.4	Site Visits	Primary Dry Weather Sites Listed	Primary & Alternate Dry Weather Sites Visited	Actual/Target	Percent ( ) Completion
		67	93	93/67	139
	Field Screening	Primary Dry Weather Sites Listed	Number of Sites Screened with Flowing/Ponded Water	Actual/Target	Percent ( ) Completion
		67	68	68/67	101
	Laboratory Analysis	Number of Sites Required for Lab Analysis	Number of Sites Sampled for Lab Analysis	Actual/Target	Percent ( ) Completion
		17	19	19/17	112
	Follow-Ups (Within Two Business Days)	Number of Sites Requiring Confirmation	Number of Site Follow-up within Two Business Days	Actual/Target	Percent ( ) Completion
		17	17	17/17	100
	Trash Assessment	Number of Field Screening or Analytical Monitoring Stations	Number of Trash Assessments Conducted	Actual/Target	Percent ( ) Completion
		67	90	90/67	134

The City's Dry Weather Monitoring program was first implemented in 2002 and then amended in 2007. The program has evolved and the number of sites and location of sites has varied, but some level of assessment of discharge water quality can be made (Level 5 assessment) within the current permit cycle. Figure 7-4 provides a summary of the percent of action level exceedances for selected field screening parameters from 2007 through 2010. Monitoring year 2007 is provided as a reference to past conditions and was part of the former permit cycle monitoring program. The percentage of sites with exceedances has decreased during the 2010 monitoring year. The percentage of sites exceeding field screening action levels was less than 10% for all constituents this monitoring year.

Figure 7-5 provides a summary of the percentage of action level exceedances for microbiology parameters from 2007 through 2010. For bacteriological exceedances, there was an action level change for the 2010 monitoring year. The total coliform action level increased from 50,000 MPN/100ml to 130,000 MPN/100ml. The fecal coliform action level decreased from 20,000 MPN/100ml to 13,000 MPN/100ml, as did the Enterococcus action level which decreased from 10,000 MPN/100ml to 7,000 ml. For ease of comparison, the exceedances provided in figure 7-5

reflect the 2010 action level for all years, as opposed to the number of exceedances in previous reports. Bacterial exceedances have been under 10% of all sites since the beginning of this permit cycle. No trends are apparent within the last four years and the results continue to stay steady. More information about the action level change is provided in Attachment 7-A.

1-In the 2010 Dry Weather Monitoring Report, a discussion of the reporting of historical orthophosphate data is presented. In previous years, the results have been reported as orthophosphate and compared to an action level for orthophosphate-P. This has therefore resulted in more exceedances, and an overly conservative valuation, since the results for orthophosphate are higher than the results for orthophosphate-P. The number of exceedances for previous years has been corrected and noted where possible. In 2008, two results were reported as 5mg/L PO_4, and thus it cannot be determined if the action level was exceeded for PO_4-P.

Figure 7-4. Dry Weather Monitoring – Level 5: Changes in Discharge Quality. Summary of Field Screening Action Level Exceedances from 2007 - 2010.

The action level for total coliforms, fecal coliforms, and Enterococcus changed for the 2010 monitoring year. For this data assessment, the 2010 action levels were used for comparison to all other reporting years to calculate the presented number of sites exceeding.

Figure 7-5. Dry Weather Monitoring – Level 5: Changes in Discharge Quality. Summary of Bacteriological Action Level Exceedances from 2007 - 2010.

7.7 Program Review and Modification

7.7.1 Database Tracking System for various departments and divisions

During this reporting year, several departments within the City moved forward with implementation of various data tracking systems. The Water and Sewer Divisions of the Water Utilities Department have been using GBA Master Series Software, a maintenance management tool, and gradually rolling it into the various programs for several years. The Clean Water Program purchased additional licenses and hired a consultant to help modify the software for use with the NPDES permit. The Clean Water Program began using GBA to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This annual report is the first report utilizing the new technology. The Clean Water Program will be reviewing the effectiveness of the new tracking tool and will continue to implement improvements in the use or the system in the coming years.

7.7.2 Maintenance of MS4 Maps using GIS Technology

To address MS4 inaccuracies and update the GIS layer of the MS4 map, the City purchased two Trimble GeoXH units in FY 2008-09 to be used collaboratively between Public Works, Engineering, and the Water Utilities Departments. One of the many uses of these units is to verify the accuracy of the MS4 map and relay the information gathered in the field to the Engineering Department to update the GIS layer. During the 2008-09 fiscal year, the City created the data dictionary needed to collect consistent and necessary data for the storm drain system update and field tested the units. During this fiscal year, in April 2010, the Clean Water Program and Engineering Department solicited the assistance of one unpaid 30-hour per week student volunteer to assist with water quality monitoring and data gathering for support of the Dry Weather Program and MS4 map update. Throughout the summer of 2010, the volunteer was assisting with field monitoring and began mapping the MS4s. The completion date for the project is estimated for FY 2012-13.

1 INTRODUCTION

1.1 Program Summary

In February 2001, the San Diego Regional Water Quality Control Board issued Order No. 2001-01 to the communities of San Diego County. As part of Order 2001-01, the City of Oceanside was required to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. In 2007, the San Diego Regional Water Quality Control Board issued a new five-year permit for Receiving Waters and Urban Runoff Monitoring and Reporting, Order No. 2007-0001. The Copermittees in San Diego County were required, as part of their Jurisdictional Urban Runoff Management Program (JURMP), to update their Dry Weather Program to meet or exceed the requirements of Order No. 2007-0001. The City of Oceanside's Dry Weather Program was reviewed and updated and the details of the current program are included in the City of Oceanside 2008 JURMP Update.

The purpose of the dry weather program is to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. Information collected from dry weather monitoring is used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary to detect and eliminate the sources of these pollutants.

This report presents the results of the City of Oceanside's 2010 Dry Weather Field Screening and Analytical Monitoring Program.

1.2 City of Oceanside Drainage Summary

The City of Oceanside lies on the northern coast of San Diego County, 35 miles north of the City of San Diego and 83 miles south of the City of Los Angeles. The City is bounded to the west by the Pacific Ocean, the north by Camp Pendleton Marine Corps Base, the east by unincorporated areas of the County of San Diego and the City of Vista, and the south by the City of Carlsbad. The City covers approximately 42 square miles with a population of just over 173,000 people. California's main highway, Interstate 5, runs through the City, as does Highway 78, which provides southeast access to Interstate 15. Highway 76, which runs northeast, also provides access to Interstate 15.

The City's boundaries include two major watersheds; the San Luis Rey Watershed, which includes the San Luis Rey River and the Carlsbad Hydrologic Unit, which includes Loma Alta Creek, Buena Vista Creek, and Calavera Creek a tributary to Agua Hedionda Creek.

1.2.1 San Luis Rey Watershed

1.2.1.1 San Luis Rey River

The San Luis Rey Watershed is the northernmost watershed within the City of Oceanside. It is approximately 558 square miles and extends inland to encompass a large portion of

the northern unincorporated areas of the County of San Diego. The San Luis Rey River is the primary watercourse of the watershed and discharges to the Pacific Ocean near the northern border of the City of Oceanside. While the San Luis Rey Watershed is the largest hydrologic unit in the San Diego region, 92.5% of the watershed lies within the unincorporated part of the County, and not within the City of Oceanside. However, a wide floodplain is prominent through the City, including levees on either side of the river to protect the surrounding developments, adjacent to or within the historical floodplain, from future storm events.

The one named tributary within the City's boundaries is Pilgrim Creek, which drains a relatively undeveloped portion of the City with some residential areas and a municipal golf course in addition to an undeveloped area of Camp Pendleton. The remaining drainage areas within the City include areas of agricultural, residential, and some industrial land uses.

1.2.2 Carlsbad Watershed

1.2.2.1 Loma Alta Creek

Loma Alta Creek is the northernmost watershed in the Carlsbad Hydrologic Unit. It flows alongside Oceanside Boulevard, beginning as a rising spring just west of Melrose Drive in the City of Vista and ending at Buccaneer Beach Park where it enters the Pacific Ocean. Approximately five percent of the Loma Alta Creek Watershed is in the City of Vista, and the remaining portion is entirely in the City of Oceanside. Loma Alta Creek is over seven miles long and encompasses nearly 6,300 acres of land, 70 percent of which is developed. Almost 90% of the land within the watershed is privately owned.

Several tributaries drain into Loma Alta Creek, however, the only named tributary is Garrison Creek, located along Garrison Street west of El Camino Real. Much of the creek has been modified throughout the years, with the use of fully or partially concrete-lined channels to stabilize the creek-bed slopes. Loma Alta winds through a highly industrial area towards the western portion of the creek. Other land uses include residential and commercial uses.

1.2.2.2 Buena Vista Creek

The Buena Vista Watershed extends approximately 10.6 miles inland from the coast, totaling 14,437 acres and draining 21 square miles. The Watershed begins on the western slopes of the San Marcos Mountains, flows through areas of the County of San Diego and the Cities of Vista, Carlsbad, and Oceanside, turns into a lagoon and then ends at the Pacific Ocean. A weir was built in 1940 to stop tidal flow at the mouth and the lagoon now functions as a freshwater lagoon.

In the City of Oceanside, Buena Vista Creek parallels Highway 78. The lagoon is located south of Highway 78 and west of Jefferson Street. The upper and western basins of the Buena Vista Watershed are primarily in the City of Vista, the southeastern portions are primarily in the San Diego County jurisdiction, and the lower basin is straddled between the Cities of Carlsbad and Oceanside as the Creek weaves its way between the two cities. Approximately 80% of the Buena Vista Watershed is developed, primarily with

commercial and residential land uses. Some agricultural activities also exist in the watershed. Because of the intense development in the watershed, large sections of Buena Vista Creek have been concrete-channelized to reduce the chance of flooding private property.

1.2.2.3 Agua Hedionda Creek

A small portion of the City of Oceanside lies within the watershed of a tributary of Agua Hedionda Creek, called Calavera Creek. Beginning in an undeveloped portion of land just west of Highway 78, Calavera Creek's headwaters start in Vista, proceed through a pocket of San Diego County unincorporated area, head into Oceanside, and then eventually drain to Lake Calavera. Lake Calavera was created by the building of a dam in the 1940s. While the creekbed downstream of the lake is typically dry, the creek reforms in wet weather to wind its way through Carlsbad and joins the major artery of Agua Hedionda Creek. Near the Pacific Ocean, Agua Hedionda Creek opens up into a lagoon. The entire Calavera Creek Basin is approximately 3,770 acres. The primary land use in the portion of the Agua Hedionda Watershed that lies within the City of Oceanside's boundaries is residential.

2 SAMPLING LOCATIONS

2.1 Site Selection

City monitoring staff worked with a consultant experienced in dry weather monitoring to update the City's Dry Weather Monitoring Program site locations during the 2008 JURMP Update process. This process involved preparing maps integrating the City's drainage system, watersheds, major water bodies, current dry weather monitoring locations, and land use. The sites were referenced against major drainage lines to see if any major lines were not being sampled, if any existing sites captured only very small drainage areas, or if any existing sites were redundant in that two or more neighboring sites provided data about essentially the same area. Historical data was also evaluated to determine which sites had routinely been dry in recent years and monitoring staff identified sites that had been found to be inaccessible. During this process it was determined that approximately 40 percent of the City's existing sites were routinely dry, were inaccessible, and/or assessed only very small drainage areas. Assessment of existing sites and prepared maps also found that the existing sites missed larger drainage areas or did not capture some of the recently developed areas. A list of potential new sites was drafted based on the following criteria:

- The site was downstream of any sources of suspected illicit discharge or illicit activity.
- The location took into account hydrological conditions, total drainage area, traffic density, age of the structures or buildings, history, and land use types.
- The site was located at the farthest downstream manhole or other accessible location in the drainage area being assessed.

A primary and an alternate site list were created after verification of accessibility was assessed. As a result of this process, a number of inaccessible or dry sites were removed, several sites with small drainage areas were redesignated as alternate sites, and several new sites were selected. The City's revised program now provides a more thorough, overall coverage of its MS4 while more efficiently allocating resources to sites that provide useful data. For a detailed list of site changes see the 2008 JURMP Update.

The updated list of 67 primary monitoring stations, their locations, land uses, and drainage areas is presented in Table 1. Alternate dry weather monitoring stations have been selected and are listed in Table 2. These stations are used as replacements for primary stations where no flowing or ponded water is observed. A map of the MS4 with primary and alternate sampling station locations is included as Figure 1.

2.2 Site Descriptions

Site visits were attempted at the 67 primary monitoring stations. Two of the primary stations were inaccessible and twelve were dry, so an additional 26 alternate stations were visited. This section includes a detailed description of each monitoring station.

The site identification numbers are not arranged by location (for example, from east to west) because over the course of the Dry Weather Program, sites have been eliminated and added to best represent the City's MS4. The site identification numbers do either

start with an A, B, L, or S which corresponds with the Agua Hedionda Creek (A), Buena Vista Creek (B), Loma Alta Creek (L), or the San Luis Rey River (S). For example, Site S112 would have been sampled from San Luis Rey River at location 112. The site locations are shown in Figure 1 and described below. The site identification numbers, descriptions, GPS coordinates, and conveyance structure types of the primary stations are listed in Table 1 and of the alternate stations in Table 2. Photos of each site visited are included as Appendix A.

Figure 1. 2010 City of Oceanside Dry Weather Monitoring Stations.

2.2.1 Agua Hedionda Site Descriptions

A002
Site A002 is a 74-inch RCP located at the end of Cannon Road. The outlet drains the residential areas along Cannon Road. Access to the site is from Cannon Road. Field screening and laboratory samples were collected from flowing water.

A004a
Site A004a is a 48-inch RCP located below Spinnaker Ridge adjacent to the pump station off of Cannon Road. The outlet drains the residential areas south and east of the outlet. Access to the site is from Cannon Road to the pump station access road. Field screening and laboratory samples were collected from ponded water.

A004b
Site A004b is a brow ditch located below Spinnaker Ridge adjacent to the pump station off of Cannon Road. The concrete drainage ditch drains the irrigated areas on the slope behind the residences on Spinnaker Ridge. Access to the site is via Cannon Road to the pump station access road. Field screening and laboratory samples were collected from the flowing water.

A013
Site A013 is a 36-inch RCP located at the intersection of Lake Boulevard and Alameda Drive, south of Agua Hedionda Creek. The outlet drains the residential areas south of the site. Access to the site is from Lake Boulevard. Field screening and laboratory samples were collected from the flowing water.

A014
Site A014 is a 36-inch RCP located east of the intersection of Lake Boulevard and Alameda Drive, north of Agua Hedionda Creek. The outlet drains the school and residential areas north of Lake Boulevard. Access to the site is from Lake Boulevard. Field screening samples were collected from the flowing water.

A015
Site A015 is a 48-inch RCP located south of Lake Boulevard and south of the creek. The outlet drains the residential areas south and east along Lake Boulevard. Field screening and laboratory samples were collected from the flowing water.

A016
Site A016 is a 36-inch RCP located southeast of the intersection of Amigos Court and Serena Lane, south of Lake Boulevard. The outlet drains the residential areas north across Lake Boulevard. Access to the site is through open space off of Lake Boulevard. Field screening and laboratory samples were collected from the flowing water.

A019
Site A019 is a 36-RCP located in Oak Riparian Park off of Lake Boulevard, north of Agua Hedionda Creek. The outlet drains the residential and park areas north and south of

Lake Boulevard. Access to the site is from the parking lot off of Lake Boulevard. Field screening samples were collected from the ponded water.

A021
Site A021 is a 36-inch RCP located off of Sky Haven Lane, north of Agua Hedionda Creek. The outlet drains the residential areas to the north of the outfall. Access to the site is from a residential driveway and down a steep embankment in the middle of a densely vegetated area. Field screening samples were collected from the ponded water.

A022
Site A022 is an alternate site. It is a concrete box outlet located at the southwest corner of Lake Boulevard and Southridge Road, north of Agua Hedionda Creek. The outlet drains the residential areas to the north of the outfall. Access to the site is from Southridge Road. Field screening samples were collected from the ponded water.

A023
Site A023 is an alternate site. It is a RCP outlet located on the south side of Lake Boulevard west of Evening Canyon Road. Access to the site is from Lake Boulevard. Field screening samples were collected from the ponded water.

A024
Site A024 is an alternate site. It is a RCP outlet located on the south side of Lake Boulevard east of Emerald Drive. Access to the site is from Lake Boulevard. Field screening samples were collected from the ponded water.

2.2.2 Buena Vista Creek Site Descriptions

B002
Site B002 is a 72-inch RCP located on Lagoon View Drive, north of the Buena Vista Lagoon. The outlet drains the commercial and residential areas north of SR-78. Access to the site is via Lagoon View Drive. Field screening and laboratory samples were collected from the flowing water.

B022
Site B022 is a 48-inch RCP constructed in the north side of the Buena Vista Creek channel wall, east of the Thunder Drive Bridge. The outlet drains the residential area north of Buena Vista Creek. Access to the site is from within the Buena Vista Creek channel. Field screening and laboratory samples were collected from the flowing water.

B023
Site B023 is a 36-inch RCP located west of 3524 Lake Boulevard south of Buena Vista Creek. The outlet drains the residential areas southeast of Lake Boulevard. Access to the site is from Lake Boulevard. Field screening samples were collected from the flowing water.

B024
Site B024 is a 36-inch RCP located on the southwest corner of College Boulevard Bridge on the south side of Buena Vista Creek. The outlet drains the residential areas east and west of College Boulevard south of the creek. Access to the site is from College Boulevard. Field screening samples were collected from the ponded water.

B026
Site B026 is a 48-inch RCP located south of the Tri-City Crossroads Plaza off of Plaza Drive on the north of Buena Vista Creek. The outlet drains the commercial areas around Plaza Drive. Access to the site is from Tri-City Crossroads Plaza or the open lot to the east of the plaza. Field screening samples were collected from the flowing water.

B027
Site B027 is located off of Haymar Drive at South Coast Material yard north of Buena Vista Creek. The outlet drains the residential and commercial areas north of SR-78. Access to the site is from Haymar Drive. Access to the site is located in South Coast Material yard at the first right hand turn. Field screening samples were collected from the flowing water.

B030
Site B030 is an alternate site. It is a 36-inch RCP located within a sewer easement south of SR-78, west of AAA and north of Buena Vista Creek. The outlet drains the residential areas north of SR-78. Access to the site is from the sewer easement road, however, the area around the site was overgrown and the outlet was inaccessible.

B031
Site B031 is an alternate site. It includes four 54-inch RCPs located between Haymar Drive and SR-78, across from Camino Real County Club, and north of Buena Vista Creek. The western-most outfall is sampled. This outlet drains the golf course, commercial, and residential areas north of SR-78. Access to the site is off of Haymar Drive on the sewer easement road. This site was not visited during the 2010 dry weather season.

B032
Site B032 includes two 60-inch RCPs located between Haymar Drive and SR-78, across from Carlsbad Plaza, north of Buena Vista Creek. Both pipes are from the same source. The outlet drains the golf course and commercial areas north of SR-78. Access to the site is from Haymar Drive. Field screening samples were collected from the flowing water.

B033
Site B033 is a 42-inch RCP located north of SR-78 behind the Black Angus restaurant, north of Buena Vista Creek. The outlet drains the commercial areas north of SR-78 into a large catch basin with ponded water. The outfall that was sampled is the largest input to the basin. Access to the site is from SR-78. Field screening samples were collected from the flowing water.

B034
Site B034 is a 36-inch RCP located north of SR-78 behind Burger King at the Jefferson Street exit. The outlet drains the commercial areas north of SR-78. Access to the site is from SR-78. Field screening samples were collected from the flowing water.

B102
Site B102 is a 36-inch CMP located within a sewer easement south of SR-78 and north of Buena Vista Creek. The outlet drains the residential and commercial areas north of SR-78. Access to the site is from the sewer easement road. The sewer road was slightly overgrown and the surrounding areas were very overgrown. The storm drain could not be found in the vegetation and the trail previously used was inaccessible.

B103
Site B103 is located at the end of Lagoon View Drive, north of the Buena Vista Lagoon. The outlet drains the commercial areas north of SR-78. Access to the site is via Lagoon View Drive. Field screening samples were collected from the flowing water.

B104
Site B104 is a manhole on the southeast corner of South Coast Highway and Eaton Street. The outlet drains the commercial and residential areas on the east side of South Coast Highway. This site replaced B001 by moving it upstream approximately 230 yards out of tidal influence. Access to the site is from South Coast Highway. Field screening samples were collected from the ponded water.

B105
Site B105 is a large manhole capped with an open grate on the El Camino Golf Course and the end of Nicklaus Way. The storm drain carries flows from the large residential area to the north east of the site and the golf course. Access to the site is from Nicklaus Way. Field screening samples were collected from the flowing water.

B106
Site B106 is a 72 inch RCP outlet just north of Buena Vista Creek off of College Boulevard. The storm drain system begins just under a mile upstream and drains a large commercial and residential area north of Buena Vista Creek along College. Access to the site is from Nicklaus Way. Field screening and laboratory samples were collected from the flowing water

B108
Site B108 is a manhole on the El Camino Country Club golf course. The storm drain system drains a large residential area north and east of the manhole. Access to the site is from Viscaya Way. This site was not visited during the 2010 dry weather season.

2.2.3 Loma Alta Creek Site Descriptions

L001
Site L001 is a 48-inch RCP located at the intersection of North Avenue and Vista Pacific Drive, north of Loma Alta Creek. The outlet drains the industrial areas south of North Avenue. Access to the site is via North Avenue. Field screening samples and analytical lab samples were collected from the flowing water.

L002
Site L002 is a 66-inch RCP located northwest of the intersection of North Avenue and Vista Pacific Drive, north of Loma Alta Creek. The outlet drains the industrial areas east of the outlet. Access to the site is from a walking path off of North Avenue. Field screening samples were collected from the flowing water.

L003
Site L003 is a 48-inch RCP located off of North Avenue and east of Autumn Drive, south of Loma Alta Creek. The outlet drains the residential area southeast of North Avenue. Access to the site is via North Avenue. Field screening and laboratory samples were collected from the flowing water.

L004
Site L004 is an alternate site. It includes three 24" RCPs on North Avenue east of Autumn. The south eastern outfall was sampled. It drains a small residential area. Access to the site is via North Avenue. Field screening samples were collected from the ponded water.

L005
Site L005 is an alternate site. It includes two 24" and one 36" RCP at North Avenue & Autumn. It drains a small residential area. Access to the site is via North Avenue. No dry weather flows were observed.

L006
Site L006 is an alternate site. It is an RCP outfall at the intersection of North Ave. and Season Road south of Loma Alta Creek. It drains a small residential area. Access to the site is via North Avenue. Field screening samples were collected from the ponded water.

L007
Site L007 is an alternate site. It is a 48-inch RCP located north of North Avenue west of Seasons Road, south of Loma Alta Creek. The outlet drains the residential areas on the hillside south of North Avenue. The outlet is partially submerged with ponded water. Access to the site is from North Avenue. Field screening samples were collected from the ponded water.

L008
Site L008 is an alternate site. It is a 40-inch RCP located on the corner of Westridge Drive and Quailridge Drive, north of Loma Alta Creek. The outlet drains the residential areas on the hillside north of Oceanside Boulevard. Access to the site is from Westridge Drive. Field screening samples were collected from the ponded water.

L009
Site L009 is under College Boulevard at the Loma Alta Creek crossing. Three box culverts are present and drain the residential and commercial areas east of College Boulevard. Access to the site is via College Boulevard. Field screening and analytical lab samples were collected from the flowing water.

L010
Site L010 are two 36-inch RCP located west of College Boulevard near the railroad tracks. The outlet drains the residential areas on the hillside south of Loma Alta Creek adjacent to College Boulevard. Access to the site is from College Boulevard. Field screening samples were collected from the ponded water.

L013
Site L013 is a manhole located south of the shopping center on the corner of Oceanside Boulevard and College Boulevard, north of Loma Alta Creek. The outlet is no longer accessible due to overgrown vegetation, but the manhole upstream of the outlet is now sampled. Access to the site is from the parking lot behind ReMax. Field screening samples were collected from the flowing water.

L016
Site L016 is an alternate site. It is a 36-inch RCP inside a manhole on Rancho Del Oro. This site has been altered by North County Transit District with the Sprinter Railway and is not accessible.

L019
Site L019 is a 48-inch RCP, located south of the intersection of Corporate Centre Drive and Oceanside Boulevard, north of Loma Alta Creek. The outlet drains the industrial and commercial areas located north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. Field screening and analytical laboratory samples were collected from ponded water.

L020
Site L020 is a 36-inch RCP located east of the intersection of Corporate Centre and Oceanside Boulevard, north of Loma Alta Creek. The outlet drains the commercial areas located north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. Field screening samples were collected from the flowing water.

L024
Site L024 is a 36-inch RCP located south of Oceanside Boulevard at the west end of the Evergreen Nursery. The outlet drains the commercial and open space area located north

of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. No dry weather flows were observed.

L027
Site L027 is located on Garrison Creek upstream of Oceanside Boulevard. The site is sampled where the creek is a natural channel. The channel drains the residential and commercial areas located northeast of Oceanside Boulevard. Access to the site is from Garrison Street. Field screening and laboratory samples were collected from the flowing water.

L029
Site L029 is an alternate site. It is a manhole at 3060 Industry Way. This site is the beginning of the short storm drain line that drains the surrounding commercial and industrial area. Access to the site is from Industry Way. Field screening samples were collected from the ponded water.

L032
Site L032 is a 64-inch RCP located south of the intersection of Camelot Drive and Industry Way, north of Loma Alta Creek. The outlet drains the industrial and commercial area north of Industry Way. Access to the site is through a private business from Industry Way. Field screening samples were collected from the ponded water.

L034
Site L034 is an alternate site. It is a 24-inch RCP located between Waste Management and a self storage lot south of Oceanside Boulevard. Field screening samples were collected from the ponded water.

L036
Site L036 is located adjacent to the intersection of Skylark Drive and Downs Street, south of the Loma Alta Creek. The outlet is now in the Sprinter rail right of way, so the manhole upstream of the outlet was visited. The outlet drains the residential area north of Loma Alta Creek. Access to the site is via Skylark Drive. Field screening samples were collected from the ponded water.

L037
Site L037 is an alternate site. It is an earthen channel south of Loma Alta Creek. The channel drains the commercial area south of Loma Alta Creek. The site is at the east end of South Oceanside Boulevard. Dry weather flows were not observed at this site.

L040
Site L40 is an open concrete trapezoidal channel north of Loma Alta Creek. The outlet drains the commercial and residential areas located adjacent and to the north of Oceanside Boulevard. Access to the site is through the Vons parking lot off of Oceanside Boulevard. Field screening and laboratory samples were collected from the flowing water in the channel.

L046

Site L046 is a 24-inch RCP constructed in the north wall of the Loma Alta Creek channel just east of the Coast Highway Bridge. This outfall conveys flow from commercial and residential area north of Loma Alta Creek. Access to the site is from Coast Highway. Field screening samples were collected from the ponded water.

L050
Site L050 is a 24-inch RCP constructed in the north wall of the Loma Alta Creek channel. The outlet drains the Casitas Trailer Park located north of the Loma Alta Creek. Access to the site requires going into Loma Alta Creek channel. Dry weather flows were not observed at this site.

L052
Site L052 is a 36-inch RCP located just west of the I-5 overpass on the south side of Loma Alta. The outlet drains Cavalier Trailer Park. Access to the site requires going into Loma Alta Creek channel. Dry weather flows were not observed at this site.

L054
Site L054 is a 24-inch RCP constructed in the south wall of Loma Alta Creek. The outlet is located southwest of the intersection of Hillside and Evergreen Lane. Site L054 drains the trailer park, Marshall Park, and the residential area to the south. Access to the site requires entering the Loma Alta Creek channel. A flood gate was installed at this location and was and was closed. The next upstream point of access had also been altered with a concrete basin. The flow was inaccessible.

L102
Site L102 is a 36-inch RCP inside a manhole on Esperanza Way. The site drains a residential area on the south side of Loma Alta. No dry weather flows were observed at this site.

L103
Site L103 is a 72-inch RCP located west of Corporate Centre, north of Loma Alta Creek. The outlet drains the industrial and commercial areas located north of Oceanside Boulevard off of Corporate Centre. Access to the site is from Corporate Center Drive. Field screening samples were collected from the ponded water.

L105
Site L105 is a manhole located on Industry Way, north of Loma Alta Creek. The outlet within the manhole drains the residential and commercial area located north of Industry Way. Access to the site is from Industry Way. Field screening samples were collected from the flowing water.

L107
Site L107 has historically been a 36-inch RCP outlet located on the north side of Loma Alta Creek near the intersection of Crouch Street and Oceanside Boulevard. Due to Sprinter rail construction and other changes to the channel walls, the site was moved upstream to a manhole at the corner of Crouch and Oceanside Boulevard. The storm

system drains the commercial and residential areas located north of Oceanside Boulevard. Field screening samples were collected from the ponded water.

L108
Site L108 is a concrete channel that flows into Loma Alta Creek west of Interstate 5 from the north. This site replaced L050 because it is in the same general area, but has a larger watershed and has continuous flow. Access to the site is from Loma Alta Creek through Cavalier Trailer Park. In 2010 field screening samples were collected from the flowing water in the main channel (Loma Alta Creek), and not the tributary. Historically this site is the tributary to the north of the creek.

L109
Site L109 is a 24-inch RCP constructed in the south wall of the Loma Alta Creek channel. The outlet drains the trailer park and the residential area south of Loma Alta surrounding La Salina Street. Access to the site requires going into Loma Alta Creek channel. Dry weather flows were not observed at this site.

L110
Site L110 is an outlet from Garrison Creek at Mesa Boulevard and Parsley. Access to the site is from Mesa Boulevard through a locked fence at an open field. Field screening samples were collected from the ponded water.

L111
Site L111 was added as an alternate site during the 2008 Dry Weather Monitoring season. This area is undergoing commercial and light industrial growth and was added to the alternate list to capture these land uses. The outlet is northeast of the intersection of Rancho del Oro and Oceanside Boulevard. Access is from Seagate Drive. Field screening samples were collected from flowing water.

L114
Site L114 was added as an alternate site during the 2008 Dry Weather Monitoring season. This outfall is located under the Pacific Coast Highway Bridge on the northwest side. The drainage area has not been identified, but it is likely from the areas north along the Coast Highway. Access to the site requires going into Loma Alta Creek channel. Field screening samples were collected from the ponded water.

L115
Site L115 was added as an alternate site during the 2009 Dry Weather Monitoring season. The site is a pipe inside a manhole at the end of Gem View Drive and replaced site L102. The land use in the drainage area is residential. The eastern outfall in the box was sampled. No dry weather flows were observed.

2.2.3 San Luis Rey Site Descriptions

S006

Site S006 is a 36-inch corrugated metal pipe (CMP) located under Interstate 5. Access to Site S006 is from Carmelo Drive. Site S006 conveys flows from the residential area south of Camp Pendleton and east of Interstate 5 to the north side of the trail under I-5. Field screening and laboratory samples were collected from the flowing water.

S025

Site S025 is an alternate site. It is located on the north side of the San Luis Rey River on West Airport Road across from a junkyard. S025 is a 24-inch RCP in a headwall that drains the junkyard located just north of the outlet. No dry weather flows were observed.

S032

Site S032 is a 36-inch RCP with a flap gate installed and is located on the south side of the San Luis Rey River. The S032 outlet conveys flows from the residential, commercial, and open space areas located on the south side of SR-76. Access to the site is from Foussat Road to the access road that runs parallel to the River on the south side. No dry weather flows were observed.

S035

Site S035 is located on the south side of the San Luis Rey River. Site S035 is a 42-inch RCP with a flap gate installed. Access to the site is from Douglas Drive to the access road south of the San Luis Rey River. Dry weather flows were not observed at this site.

S043

Site S043 is a 30-inch RCP with a flap gate installed and is located on the south side of the San Luis Rey River under the College Boulevard Bridge. The site collects dry weather flows from the residential area immediately south of the outlet. Access to the site is via College Boulevard to the access road on the south side of the River. No dry weather flows were observed. No dry weather flows were observed.

S044

Site S044 is an open channel located on the south side of the San Luis Rey River. It conveys flows from residential and commercial areas. Access to the site is at northeast corner of Frazee Road and Oleander Drive. Field screening samples were collected from the flowing water.

S045

Site S045 is at the outfall of three 4-foot by 6-foot boxes on the south side of the San Luis Rey River. S045 conveys flows from the residential areas south of Frazee Road to the River. Access to the site is via Frazee Road. Field screening samples were collected from the flowing water.

S065
Site S065 is located within the open channel of Pilgrim Creek prior to confluence with the San Luis Rey River. Access to the site is from the San Luis Rey Wastewater Treatment Plant via North River Road to the access road located on the north side of San Luis Rey River. Site S065 conveys dry weather flows from a municipal golf course, residential, agricultural, parks, and open areas located to the north to the San Luis Rey River. Field screening and laboratory samples were collected from ponded water.

S072
Site S072 is a 60-inch RCP with a flap gate installed and is located on the north side of the San Luis Rey River. Access to the site is from River Tree Drive at Marlado Park. Site S072 conveys dry weather flows to the River from the park and residential community located north of the outlet. Field screening samples were collected from ponded water.

S075
Site S075 is a 24-inch RCP in a headwall located on the north side of the San Luis Rey River. Access to the site is from the access road that runs parallel to the River between Benet and Foussat Roads. Site S075 conveys dry weather flows from the new residential developments north of the San Luis Rey River. No dry weather flows were observed at this site.

S077
Site S077 is an open channel south of SR-76 and upstream of Guajome Lake. Access to the site is from Hitching Post Drive. The runoff consists primarily of residential and commercial flows from east of the outlet. Samples are collected where the channel is concrete. Downstream of the sampling point, the channel is a natural swale that leads to Guajome Regional Park. Field screening samples were collected from the flowing water.

S085
Site S085 is an alternate site. It includes two 24-inch RCPs located at North Santa Fe Avenue and Champlain Street. The outlet drains into a concrete channel south of the San Luis Rey River. S085 conveys the dry weather flows from the residential area to the south of North Santa Fe Avenue. Access to the site is from North Santa Fe Avenue. Field screening samples were collected from the ponded water.

S088
Site S088 is a 36-inch RCP located at the intersection of Mesa Drive and North Santa Fe Avenue. The site is located west of the Guajome Regional Park and south of the San Luis Rey River. Site S088 conveys dry weather flows from the residential area to the west into Guajome Regional Park. Access to the site is via North Santa Fe Avenue. Field screening samples were collected of the ponded water.

S102
Site S102 is located north of SR-76 between North Santa Fe Road and Guajome Lake Road, south of the San Luis Rey River. It is a 24-inch RCP that drains a residential area

immediately east. Access to the site is from SR-76 and requires entering private property; therefore, access is limited. Field screening samples were collected of the ponded water.

S103
Site S103 is located south of the San Luis Rey River. Access to the site is from the park east of 5396 Gooseberry Way. The outlet drains the residential and park areas in the neighborhood to the south. Field screening samples were collected from the flowing water.

S104
Site S104 in a 24-inch RCP located south of the San Luis Rey River. Access to the site is from the sewer easement and tomato fields northwest of the site. The outlet drains the residential area south of the site. Field screening samples were collected from the flowing water.

S106
Site S106 includes four 36-inch plastic pipes at the intersection of North River Road and Sleeping Indian Road on the north side of the San Luis Rey River. The outlet drains the agricultural and residential area immediately north of the site. Access to the site is from North River Road. No dry weather flows were observed.

S107
Site S107 is a natural channel that crosses under North River Road on the north side of the San Luis Rey River. The channel drains the agricultural area immediately north of the site. Access to the site is from North River Road. Dry weather flows were not observed.

S108
Site S108 is a natural channel that crosses under Via Puerta del Sol on the north side of the San Luis Rey River. The channel drains residential areas and agricultural areas in the immediate vicinity. Access to the site is at the intersection of Via Puerta del Sol and Big View Road. Dry weather flows were not observed.

S109
Site S109 is an 18-inch RCP located on the south side of the San Luis Rey River. The site conveys the runoff from the residential area immediately south of the outlet. Access to the site is from the access road to the east of College Boulevard. Dry weather flows were not observed.

S110
Site S110 is located on the north side of the San Luis Rey River. S110 is a 30-inch RCP with a flap gate installed. Access to Site 110 is from Rainier Way east of Douglas Drive. Field screening samples were collected from the ponded water.

S111
Site S111 is a concrete channel adjacent to Fireside Park, east of San Luis Rey River. The channel drains residential and commercial areas east of the site. Access to the site is from Fireside Street. Field screening samples were taken from the ponded water.

S113
Site S113 is located off of Capistrano Drive across from Capistrano Park. The site conveys flows from Camp Pendleton and from Capistrano Park south to the San Luis Rey River. The cliff appears to have eroded into the river and access to the outfall was not possible. No dry weather flows were observed.

S115
Site S115 is an open concrete channel between Mission Avenue and SR-76 west of El Camino Real. The site conveys flows from the commercial area to the east along Mission Avenue towards Douglas Drive. Access to the site is from Mission Avenue. Field screening samples were collected from the ponded water.

S116
Site S116 is located off of North River Road across from Del Rio Elementary School. The outfall conveys flows from the school and the residential area north of North River Road. It consists of two six-foot by six-foot boxes. Access to the site is from North River Road. This site replaced the historically dry S052 sampling site. Dry weather flows were not observed.

S117
Site S117 is a 48-inch RCP located northwest of North Sante Fe Road and Champlain Road. The outfall conveys flows from the residential areas east and south along North Santa Fe Road. Access to the site is from North Santa Fe Road. Field screening and laboratory samples were collected from the flowing water.

S118
Site S118 is an alternate site. It is located at the southwest corner of College and Silver Bluff. It consists of two pipes originating from the same source. The largest pipe, a 72-inch RCP, was sampled, which conveys flows from the residential area to the north and east along Silver Bluff and Mosaic. This site was added to the Dry Weather Monitoring Program as a replacement for S085. Access to the site is from Silver Bluff. Field screening samples were collected from the ponded water.

S119
Site S119 is an alternate site. It is an open concrete channel located off of Douglas Drive at the municipal golf course. The site conveys flows from the residential areas south and east, as well as the golf course. Access to the site is from Douglas Drive. No dry weather flows were observed at this site.

S120
Site S120 is an alternate site. It is a 36-inch RCP outfall at the east end of Jeffries Ranch Road. It conveys flows from the residential area west of the outfall. Access to the site is from Jeffries Ranch Road. Dry weather flows were not observed.

S121
Site S121 is an alternate site. It consists of two partially submerged 48-inch RCPs at the northwest intersection of College Boulevard and Frazee Road. It conveys flows from the residential area southeast of the intersection. Access to the site is from Frazee Road through a gate, which was locked, so samples could not be obtained.

S122
Site S122 is an alternate site. It is a RCP with a flap gate at the end of Tishmal Court. It conveys flows from the residential area north of the river. Access to the site is from the sewer easement path and pedestrian path on the north side of the river. Field screening and analytical labratory samples were collected from the flowing water.

S123
Site S123 is an alternate site. It is a concrete channel from the Fireside Road drainage basin. It conveys flows from the residential area to the east and the commercial area to the south. Access to the site is from the easement/foot path on the southeast side of the river. Dry weather flows were not observed.

THIS PAGE INTENTIONALLY LEFT BLANK

3 METHODS

Dry weather monitoring is conducted at least once at each primary station where flowing or ponded water is observed during the dry season (May 1 – September 30). If a primary site is visited and no flowing or ponded water is present, this information is documented on the field sheet (or electronically in the field tablet) and a station from the alternate list is then visited. Dry weather monitoring is only conducted when there has been at least 72 hours of dry weather prior to the time of the sampling. Grab samples are collected for laboratory analysis at a minimum of 25% of the stations where water is present.

The following describes the City of Oceanside's Dry Weather Program components including field site visits, laboratory analysis of water samples, and IC/ID investigations. The general site description and atmospheric conditions were recorded for each site visit whether or not runoff was observed. An example of the hard copy data sheet is provided in Appendix B. In 2010, a new database was used for electronic data entry in the field by City staff using a Dell Rugged Laptop. This database, gbaMS, was created for the Oceanside's Clean Water Program and is the same one used for inspections, other monitoring, the Water and Sewer Departments, and GIS. A photograph was also taken at each site (Appendix A). Monitoring was not conducted during any rain event or within 72 hours of the end of any rain event greater than one tenth of an inch.

Midway through the season, the City contracted with D-Max Engineering Inc. to assist with approximately 30 field screenings. The hard copy field datasheets were submitted to the City, entered into the City's database, and all follow-ups were completed by City staff.

3.1 Qualitative Observations

Qualitative field observations were made during each site visit where ponded or flowing water was observed and sampled. These observations were intended to provide a general assessment of the runoff and include parameters such as odor, water clarity, and the presence of floatables, visible deposits, stains and aquatic life. These descriptions were recorded on the field data sheet or electronically in the field tablet.

3.2 Flow Measurement

Flow measurements can be used to estimate pollutant mass loading, prioritize storm drains for future investigations, or to identify significant changes in flow that may be indicative of an illegal release upstream. Since all of the sample locations lack a permanent flow measurement installation, several field methods were employed to estimate flow rates for different flow types such as an open channel, outfall, or drainage pipe. These methods have been adapted from the County of San Diego's Dry Weather Monitoring Program Quality Assurance Project Plan[1].

[1] County of San Diego. 2004. Quality Assurance Project Plan for the County of San Diego's Dry Weather Monitoring Program. April 2004.

Velocity-area method - This method requires the physical measurement of the velocity (V), depth (D), and width (W) of flowing water. Discharge is determined as follows:

$$\text{Discharge} = V \times D \times W \qquad \text{Eq. (1)}$$

Where the water depth was adequate, a Global Flow Probe was used to get the average velocity in feet per second. Stream depth and width were recorded on the field data sheet and the discharge in cubic feet per second (cfs) was calculated using Eq. (1).

Where the flow was too slow or the water too shallow to measure the velocity using the probe, the velocity was estimated by timing the travel of a piece of floating debris (e.g., a leaf). The velocity was calculated by dividing the travel distance (feet) by the recorded travel time (seconds).

Fill a bottle method - If the flowing water was able to be captured, such as from a raised pipe, the fill-a-bottle method was used. The time it took to fill a known volume was recorded. Discharge was calculated by dividing the volume by the time and converting that value into cubic feet per second.

3.3 Field Screening

Water physicochemical properties (e.g., pH, conductivity, turbidity, dissolved oxygen (DO), and temperature) are important indicators of water quality. The Hydrolab Quanta 5-parameter probe was used to measure:

- pH.
- Conductivity.
- Turbidity.
- Dissolved oxygen.
- Water temperature.

If the water was deep enough, the probe was placed horizontally in the water column. If water was shallow, a syringe was used to collect water and transfer into a sampling cup and then the properties were measured. The Hydrolab Quanta has a built-in circulator to more accurately assess *in situ* measurements. The Quanta was calibrated daily prior to use in the field using the standard calibration solutions or secondary standards as well as a two-point pH calibration.

At each site with ponded or flowing water, water samples were collected and analyzed in the field for:

- Ammonia as N (NH_3-N) using CHEMetrics K-1403.
- Nitrate as N (NO_3-N) using CHEMetrics K-6923 or K-6933.
- Orthophosphate as P (PO_4-P) using CHEMetrics K-8513.
- MBAS (Surfactants) using CHEMetrics K-9400.

Ammonia, nitrate, orthophosphate, and MBAS were measured in the field using CHEMetrics field test kits. Each test kit contained a sample mixing container, necessary reagent-filled ampoules, the appropriate color standards for colorimetric analysis, filters

for photometric analysis, and instructions for each kit. The test kits for ammonia, nitrate, and orthophosphate used the V-2000 photometer. The test kit for MBAS uses a visual color comparator. The procedures instructed by CHEMetrics were followed.

During the 2010 Dry Weather season, there were no changes to field test kit methods. However, it was realized that historically orthophosphate (PO_4) results have been compared to an action level for orthophosphate as phosphorus (PO_4-P). Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the orthophosphate result must be multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31 g/mol) to PO_4 (95 g/mol), to reach the orthophosphate-P result. In previous years, the results have been reported as orthophosphate, and compared to an action level for orthophosphate-P. This has therefore resulted in more exceedances, and an overly conservative valuation, since the results for orthophosphate are higher than the results for orthophosphate-P. The number of exceedances for previous years has been corrected and noted where possible in Section 5.2, Historical Data Comparison.

3.4 Laboratory Water Quality Analyses

Laboratory samples were collected at a minimum of 25% of the sites with flowing or ponded water. Samples were submitted to the City of Oceanside San Luis Rey Wastewater Treatment Plant Laboratory and EnviroMatrix Analytical Inc. for chemistry and microbiology analysis. Below is the complete list of laboratory analytes:

- Oil and Grease
- Total Hardness
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Enterococcus Bacteria
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- Chlorpyrifos
- Diazinon

All samples were analyzed using Standard Methods or EPA Methods by the laboratories.

3.5 IC/ID Investigations

Each station is visited at least once per dry weather season, if accessible and safe. When field measurements and/or laboratory analysis showed an exceedance of established action levels, the site was revisited within two business days to confirm the initial results. When follow-up sampling confirms continued exceedance of action levels, the City conducted further investigations to identify the source of the exceedance. Upstream investigations were not conducted when exceedances were not noted during the follow-up visit, as without a high constituent level to track, the investigation is unlikely to identify any sources.

The action levels used for the 2010 dry weather monitoring period are presented in Table 3. If the initial results were confirmed and an exceedance continued, an upstream investigation was initiated. In addition, any potential IC/IDs found visually or with any other evidence of gross contamination, an IC/ID investigation was pursued immediately (e.g., substantial petroleum sheen, excessive turbidity, extremely high ammonia concentration, evidence of sewage release, etc.).

The Regional Monitoring Workgroup in November 2009 requested that the Dry Weather Monitoring Sub-workgroup evaluate the dry weather action levels that have been used since 2003. It was determined that the bacteriological action levels required further analysis, but the remaining chemistry and field analytes would not change. The Dry Weather Sub-workgroup contracted the services of D-Max Engineering through the City of La Mesa to conduct the evaluation of historical bacterial data collected from dry weather monitoring from 2002 through 2007. Details of their evaluation are posted on the Project Clean Water Website at http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf. The Regional Monitoring Workgroup selected the 80th percentile values to be proposed as the dry weather action levels for bacterial indicators beginning on May 1, 2010. The levels were submitted in 2008-09 JURMP Annual Report and are presented in Table 3 for use during the 2010 monitoring year.

Table 3. 2010 Dry Weather Monitoring Action Levels

Analyte	Action Level
Field Measurements	
pH	6.5-9.0 pH units
Conductivity	N/A
Turbidity	N/A
Analyte	**Action Level**
Dissolved Oxygen	Not a required analyte
Temperature	N/A
Ammonia-N	1.0 mg/L
Nitrate- N	10.0 mg/L
Orthophosphate-P	2.0 mg/L
Surfactants (MBAS)	1.0 mg/L
Laboratory Measurements	
Oil and Grease	15 mg/L
Total Hardness	N/A
Cadmium (Dissolved)	California Toxics Rule (CTR)
Copper (Dissolved)	California Toxics Rule (CTR)
Lead (Dissolved)	California Toxics Rule (CTR)
Zinc (Dissolved)	California Toxics Rule (CTR)
Total Coliform Bacteria	130,000 MPN/100mL
Fecal Coliform Bacteria	13,000 MPN/100mL
Enterococcus	7,000 MPN/100mL
Chlorpyrifos	0.5 µg/L
Diazinon	0.5 µg/L

In general, IC/ID investigations include identifying pollution sources and correcting or eliminating them. Various methods can be used for source identification, for example, observation by following flows or discharges upstream, field measurements or laboratory analysis of water samples. The correction and elimination of identified sources may be achieved by outreach/education, best management practices (BMPs) implementation, and enforcement when necessary.

3.6 Trash Assessment

Section II.B.3.C (7) of the 2007 Municipal Permit requires Copermittees to assess the presence of trash in receiving water and urban runoff at each dry weather field screening or analytical monitoring station. A work plan for trash assessment was finalized in August of 2007 which outlined procedures and created field assessment forms to be used by the Copermittees[2]. The field form is included in Appendix B.

The assessment is primarily a qualitative assessment. The assessment includes five categories with a narrative description and a range of number of pieces. The five categories are:

- *Optimal:* On first glance, no trash is visible. Little or no trash (<10 pieces) is evident when the evaluated area is closely examined for litter and debris.
- *Suboptimal:* On first glance, little or no trash is visible. After close inspection, small levels of trash (~10-50 pieces) are evident in the evaluated area.
- *Marginal:* Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing are present.
- *Submarginal:* Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing are present.
- *Poor:* Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human and/or aquatic health is assessed at each site. The definitions for these threats were amended to clarify and streamline the designations in this reporting year. The following definitions are also found on the 2010 Trash Assessment Form:

- *Potential Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or

[2] Weston Solutions and Brown and Caldwell. 2007. Final Monitoring Workplan for the Assessment of Trash in San Diego County Watersheds. Prepared for the County of San Diego. August 30, 2007.

laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.

- *Potential Threat to Aquatic Health* – Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic item such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

If a site falls into the poor or submarginal category, then the type of trash is denoted and ranked and the potential routes and sources are identified. Options for types, routes and sources are listed below:

Types of Trash	*Potential Routes*	*Potential Sources*
Automotive	Dumping	Household
Biohazard Waste	Littering	Construction
Business Related	Upstream	Commercial
Cigarette Butts	Unable to Determine	Industrial
Construction		School
Fabric/Clothing		Transient
Food Packaging		Unable to Determine
Food Waste		
Household		
Shopping Carts		
Toxic		
Yard Waste		

4 RESULTS

The dry weather monitoring program was conducted between May 1, 2010 and September 30, 2010. A site visit at all 68 of the primary sites was attempted, however two of those sites were inaccessible or deemed unsafe. An additional twelve primary sites were dry. A total of 93 sites were visited, 68 were ponded or flowing and field screening was conducted, and of those, 19 were chosen for additional laboratory analysis (Table 4).

The results of the qualitative observations, flow measurements, field measurements and laboratory measurements are presented in the following sections.

Table 4. 2010 Summary of Dry Weather Monitoring Sites Visited.

Watershed	No. Primary Sites Listed	No. Primary Sites Inaccessible	No. Primary Sites Dry	No. Alternate Sites Visited	No. Sites Sampled for Lab Analysis	Total No. Sites Visited
Agua Hedionda	9	0	0	3	6	12
Buena Vista	14	1	0	1	3	15
Loma Alta	20	1	1	15	6	35
San Luis Rey	24	0	10	7	4	31
TOTAL	67	2	11	26	19	**93**

4.1 Qualitative Observations

Qualitative observations are a routine and important part of the field screening program. Weather conditions were recorded at each site and any evidence of dry weather flows were documented. Visual observations of the sample water and the vicinity of the sampling location such as odor, color, clarity, floatable materials, vegetation and biological organisms were also recorded. Observations from the 91 accessible sites are summarized below and presented in Table 5.

Light Conditions

Sixty eight of the 91 accessible sites had sunny conditions during site visits. Seventeen sites had overcast conditions, and six sites had partly cloudy conditions.

Odor

Fifty nine of the sites with water had no distinguishable odor associated with the storm drain outlets. Five sites had a musty odor, two sites smelled of rotten eggs, and two sites had a chemical odor, and one had an odor designated as other.

Color

Fifty three of the sites with water had no observed color. Twelve sites had a yellow color, one site had a white color and one site had a green color. One site also had brown color.

NS – Not Sampled (dry)
NA – Not Accessible

Clarity
Sixty two of the sites with water were clear with negligible suspended particles observed. Four of the sites sampled were slightly cloudy and two of the samples were opaque.

Floatable Materials
The categories of floatable materials were trash, bubbles/foam, sheen, fecal matter, algae and other and each site had the potential to have multiple categories of floatable materials listed. Thirty two sites were observed to have no floatable materials. Nineteen sites were observed to have trash in or near the sampling location. Seven sites were observed to have bubbles and/or foam. Five sites had a visible sheen. Fifteen sites had algae present. Six sites observed also had floatable materials outside of the categories listed; those materials were, leaf debris, and/or duckweed.

Deposits
The categories of deposits were coarse particulates (sediment/gravel), fine particulates, stains, oily deposits, and other. Multiple types of deposits could have been identified at each site. Twelve sites did not have any deposits at the sampling site. Eighteen sites had fine particulate deposits. Forty sites had course particulate deposits of sediment and/or gravel. One site had some type of stain at the sampling point. Twenty sites had deposits with particulates that were both course and fine.

Vegetation
The categories for amount of vegetation present at and around the sampling area were none, limited, normal, and excessive. Twenty seven sites had no vegetation present. Five sites had limited vegetation growth signifying some type of eradication program. Fifty five sites observed had normal vegetation growth. Four sites had excessive vegetation growth around the sampling area.

Biology
The categories for types of life present at the sites were insects, algae, fish, snails, and mussels/barnacles. Multiple types of life could have been identified at each site. Forty three of the sites had algae present; forty of those sites also having some other type of life present. Twenty seven sites had snails present. Thirty nine sites had insects present. Six sites had fish present. Three sites had some “other” type of life present; they were tadpoles, leeches and crawfish. Thirty six sites did not have any visible life present at the sampling site.

4.2 Field Water Quality Results

Field analyses were conducted at all sites with flowing or ponded water. The field analyses were conducted using a Hydrolab Quanta and CHEMetrics field test kits. A summary of the initial screening results from field analysis is presented in Table 6. If action levels were exceeded, the site was revisited to confirm the initial results and an IC/ID investigation was initiated. Follow-up investigations are presented in Section 4.4.

Bold/Highlighted values indicate action level exceedances.

Flow Rate
Thirty two of the 68 sites with water were ponded. The flow rates at the sites with measurable flow ranged from <1 gpm at B027 to 130 gpm at L027.

Water Temperature
Water temperature was measured in the field immediately upon sample collection at each site with flowing or ponded water. Temperature readings ranged from 13.30˚C at B024 on August 30, 2010 to 28.46˚C at L040 on June 30, 2010. The average temperature was 21.52˚C with a standard deviation of 2.57˚C.

pH
pH is a term used to indicate the alkalinity or acidity of a substance as ranked on a scale from 1.0 to 14.0. Acidity increases as the pH gets lower. Figure 2 presents the pH of some common liquids.

Figure 2. pH of Selected Liquids.

pH affects many chemical and biological processes in the water. For example, different organisms flourish within different ranges of pH. The largest varieties of aquatic animals prefer a range of 6.5-8.0. pH outside this range reduces the diversity in the stream because it stresses the physiological systems of most organisms and can reduce reproduction. Low pH can also allow toxic elements and compounds to become mobile and "available" for uptake by aquatic plants and animals. This can produce conditions that are toxic to aquatic life. Changes in acidity can be caused by atmospheric deposition (acid rain), surrounding rock, and certain wastewater discharges. An unusually high pH reading could be an indicator of an industrial discharge in the sample area; therefore, pH is used as an indicator of illicit discharges.

The pH values taken from the ponded or flowing water ranged from 6.53 at A013 to 9.43 at S110. The median pH value observed during field screening was 7.80; the average pH value was 7.70 with a standard deviation of 0.48. The one site that was outside of the acceptable range was S110. There were no sites that had pH levels below the acceptable range. S110 was ponded and is associated with a concrete channel or pipe. Concrete is known to be basic and have high pH values associated with the cement components. This may be a cause of the high pH values.

Conductivity
Conductivity is a measure of the ability of water to pass an electrical current. Conductivity in water is affected by the presence of inorganic dissolved solids such as chloride, nitrate, sulfate, and phosphate anions (ions that carry a negative charge) or sodium, magnesium, calcium, iron, and aluminum cations (ions that carry a positive charge). Organic compounds like oil, phenol, alcohol, and sugar do not conduct electrical current very well and therefore have a low conductivity when in water. Conductivity is also affected by temperature: the warmer the water, the higher the conductivity. In addition, discharges to streams can also change the conductivity depending on their make-up. A failing sewage system would raise the conductivity because of the presence of chloride, phosphate, and nitrate; an oil spill would lower the conductivity. The conductivity values ranged from 0.38 mS/cm at L019 to 12.88 mS/cm at B023. The median conductivity value observed during field screening was 3.31mS/cm. The average conductivity value was 3.48 mS/cm with a standard deviation of 2.57 mS/cm.

Turbidity
Turbidity is a measure of water clarity, how much of the material suspended in water decreases the passage of light through the water. Suspended materials include soil particles (clay, silt, and sand), algae, microbes and other substances. Turbidity can affect the color of the water.

Higher turbidity increases water temperatures because suspended particles absorb more heat. This, in turn, reduces the concentration of dissolved oxygen because warm water holds less dissolved oxygen than cold. Higher turbidity also reduces the amount of light penetrating the water, which reduces photosynthesis and the production of dissolved oxygen. Suspended materials can clog fish gills, reducing resistance to disease in fish, lowering growth rates, and affecting egg and larval development. As the particles settle, they can blanket the stream bottom, especially in slower waters, and smother fish eggs.

Turbidity can be useful as an indicator of the effects of runoff from construction, agricultural practices, logging activity, discharges, and other sources. Turbidity often increases sharply during a rainfall, especially in developed watersheds, which typically have relatively high percentages of impervious surfaces. The flow of storm water runoff from impervious surfaces rapidly increases stream velocity, which increases the erosion rates of stream banks and channels. Turbidity can also rise sharply during dry weather if earth-disturbing activities are occurring in or near a stream without erosion control practices in place. The turbidity values ranged from <1 NTU at B032 to >200 NTU at A016. The median turbidity value observed during field screening was 4 NTU.

Dissolved Oxygen
Dissolved oxygen analysis measures the amount of gaseous oxygen dissolved in an aqueous solution. Oxygen gets into water by diffusion from the surrounding air, by aeration, and as a waste product of photosynthesis.

Adequate dissolved oxygen is necessary for good water quality. Oxygen is a necessary element to all forms of life. Natural stream purification processes require adequate oxygen levels in order to provide for aerobic life forms. As dissolved oxygen levels in the water drop below 5.0 mg/L, aquatic life is put under stress. The lower the concentration, the greater the stress is on aquatic life. The dissolved oxygen values ranged from 2.16 mg/L at A024 to 17.33 mg/L at S110. The median dissolved oxygen value observed during field screening was 5.8 mg/L. All but three of the sites that had DO levels less than 5.0 mg/L were ponded or had little flow. Frequently, ponded water has higher turbidity and nutrient levels, indicating nutrient breakdown which leads to low DO levels.

Ammonia

Ammonia is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment, however, in higher quantities it can become toxic to fish and other organisms. The ammonia values range from <0.2 mg/L to >3 mg/L. The median ammonia value observed during the field screening was 0.3 mg/L. Four of the five sites that exceeded the action level for ammonia were ponded or had flow that was <1gpm and were likely caused by decaying organic matter in the ponded water.

Orthophosphate

Both phosphorus and nitrogen are essential nutrients for the plants and animals that make up the aquatic food web. Since phosphorus is the nutrient in short supply in most fresh waters, even a modest increase in phosphorus can, under the right conditions, set off a chain of undesirable events in a stream including accelerated plant growth, algae blooms, and low dissolved oxygen. Locally, in San Diego County, however, the pH of soils here is higher than 8.0, which creates an unavailability to plant life.

There are many sources of phosphorus, both natural and human. These include soil and rocks, wastewater treatment plants, runoff from fertilized lawns and cropland, failing septic systems, runoff from animal manure storage areas, disturbed land areas, drained wetlands, water treatment, and commercial cleaning preparations. The orthophosphate values ranged from <0.3 mg/L to 5.2 mg/L at A016. The median orthophosphate value observed during field screening was 0.15 mg/L. Two sites exceeded the action level, of which, one was ponded.

Nitrate-N

Nitrate is the most readily available form of nitrogen for plant uptake and is a limiting factor in plant growth. Nitrates are naturally occurring in soil and rocks, but are also added to watersheds from anthropogenic sources such as fertilizers, failing septic systems, and animal waste. The nitrate-N values from the 2010 dry weather monitoring season ranged from <0.4 mg/L to 15.1 mg/L at S111. The median nitrate-N value was 1.07 mg/L. B104 and S111 were the only two sites that exceeded the action level for nitrate.

Surfactants (MBAS)

Surfactants or MBAS were previously analyzed in the laboratory, but in the current permit are required as part of the field screening. Surfactants are analyzed to detect detergent

pollution from residential, commercial, or industrial washing activities. Several Copermittees hvee reported exceedances in the field screening data at sites with higher conductivity levels, but when the samples were taken to the laboratory, there were no exceedances. MBAS results were greater than or equal to the action level of 1.0 mg/L at five of the initial screening sites. Two of those sites had conductivity results greater that 5 mS/cm. One site continued to exceed, but was due to high conductivity. A lab sample was taken and the result was below the detection limit of 0.5 mg/L.

4.3 Laboratory Water Quality Results

Laboratory analysis was conducted at 19 sites, representing 28% of the sites with ponded or flowing water. Laboratory chemistry results are summarized and presented in Table 7 and microbiology results in Table 8. If action levels were exceeded, the site was revisited to confirm the initial results and an IC/ID investigation was initiated. Follow-up investigations are presented in Section 4.4 and Appendix C.

Oil and Grease

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities. Oil and grease was detected at three sites, but all three results were well below the action level of 15 mg/L.

Total Hardness

Total hardness measures the amount of polyvalent cations in water. It generally represents calcium and magnesium ions in a water sample because they are the most common cations. Results are expressed in mg/L of $CaCO_3$. The California Toxics Rule (CTR) applies hardness-based water quality objectives to dissolved metals. Increasing hardness has the effect of decreasing the toxicity of metals[3]. The hardness values ranged from 406 mg/L as $CaCO_3$ at L019 to 2,300 mg/L as $CaCO_3$ at A013 with a median value of 890 mg/L as Ca CO_3. The average hardness value was 1,068mg/L of $CaCO_3$ and a standard deviation of 589 mg/L as $CaCO_3$.

Dissolved Metals

Metal concentrations in the environment can originate from a variety of sources including automobiles, automobile repair facilities, car washing, and industrial activities, as well as natural geologic processes. The laboratory samples collected during the 2010 Dry Weather Monitoring Program were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Results were compared to the hardness-based CTR CMC (1-hour) criterion. There were no exceedances of dissolved copper, lead, cadmium or zinc at any of the sites visited.

Chlorpyrifos and Diazinon

Chlorpyrifos and diazinon are organophosphate pesticides used to control insects, fleas and ticks. As of December 31, 2004, it became unlawful to sell diazinon outdoor, non-agricultural products. Chlorpyrifos can now only be used for nursery production, golf courses and road medians. Diazinon was detected at one location (A015) but was below the action level. Chlorpyrifos was not detected at any of the laboratory sampling sites.

Total Coliform Bacteria
Total coliform bacteria are mostly harmless bacteria that are ubiquitous in the environment living in soil, water, and mammalian digestive tracts. Water samples are analyzed for total coliform bacteria to indicate the presence of other more harmful pathogenic (disease causing) organisms that are associated with coliform but are difficult to test for because they are present in much smaller quantities. During the dry weather monitoring period total coliform results ranged from 700 MPN/100mL to 1,600,000 MPN/100 ml. Five of the 19 sites sampled for laboratory analysis exceeded total coliform action levels.

Fecal Coliform and Enterococcus
Members of two bacteria sub-groups, fecal coliforms and Enterococcus, are used as indicators of possible sewage contamination because they are specifically found in human and animal digestive tracks. Although they are generally not harmful themselves, they indicate the possible presence of pathogenic bacteria, viruses, and protozoans that also live in human and animal digestive systems. Since it is difficult, time-consuming, and expensive to test directly for the presence of a large variety of pathogens, these fecal indicator bacteria are used. Sources of fecal contamination to surface waters include wastewater treatment plants, on-site septic systems, domestic and wild animal manure, and storm water runoff.

In addition to the possible health risk associated with the presence of elevated levels of fecal bacteria, they can also cause cloudy water, unpleasant odors, and an increased oxygen demand. Fecal coliform results ranged from 20 MPN/100mL to 300,000 MPN/100 ml. Three of the 19 sites sampled for laboratory analysis exceeded the fecal coliform action level. Enterococcus results ranged from 97 MPN/100mL to 72,700 MPN/100mL. Four of the 19 sites sampled exceeded the Enterococcus action level. Two sites, A004a and A016, exceeded all three microbiology action levels.

4.4 IC/ID Investigations

Sites that exceeded one or more action level were revisited and resampled to confirm the initial result. If the confirmation result also exceeded an action level, an IC/ID investigation was initiated. Seventeen sites had one or more action level exceedances that required confirmation. Four of those sites, upon confirmation, required an IC/ID investigation

The most common exceedances for field screening analytes were MBAS and ammonia; 5 sites had an initial exceedance for each pollutant. Only one MBAS and one ammonia exceedance required an IC/ID investigation. In addition, one site that exceeded the pH action level required an IC/ID. Figure 3 provides the number of sites by watershed exceeding the initial field screening action levels.

None of the 19 sites sampled for laboratory chemistry analysis required an upstream investigation. Six of the 19 sites chosen for laboratory analysis had at least one indicator bacteria exceedance. There were five exceedances for total coliforms, three for fecal coliforms, and four for Enterococcus. One of the five total coliform exceedances required an upstream investigation. One of the three fecal coliform confirmation samples and none of the Enterococcus confirmation samples required an IC/ID investigation. Figure 4 provides the number of sites by watershed that exceeded the microbiology action levels.

Figure 3. Number of Initial Field Screening Exceedances by Analyte and Watershed.

Figure 4. Number of Microbiology Exceedances by Analyte and Watershed.

Appendix C contains a detailed description of the confirmation and IC/ID investigations at each site and the actions that were taken to reduce contaminants.

4.5 Trash Assessment

Ninety sites were assessed for trash amount and extent. The majority of sites were in the top-range of the assessment and were either optimal or marginal. Table 9 and Figure 5 present a summary of trash assessment throughout the City. San Luis Rey Watershed was the only watershed to include sites with a "poor" rating. The distribution across watersheds is presented in four charts that make up Figure 6. In addition, Figures 7 and 8 provide an orthophotograph of the San Luis Rey and Carlsbad Watersheds and the distribution of trash assessment ratings throughout each watershed.

4.5.1 Threat to Human or Aquatic Health

The threat to human and aquatic health was assessed at each site. Detailed definitions for these threats are found in Section 2.8. In general, a threat to human health includes trash and debris that have the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria or have the potential for physical harm. In 2009 the presence of mosquito larvae was specifically added as cause for a threat to human health if the water was ponded due to trash. A threat to aquatic health includes trash and debris such as small floatable material that is persistent and can be transported long distances that resemble food and may be ingested. The threat also includes debris that has the potential for entanglement or oil or chemicals that could harm aquatic life.

One site (1.1% of all sites) was deemed a threat to human health in the 2010 dry weather survey; site B022. Site B022 was an assessment of both the storm drain and receiving water. Several dirty diapers were found at this site in the receiving water. An ongoing problem at this site appears to be residents of the condominium complex throwing trash into the channelized creek.

One site (1.1% of all sites) was deemed a threat to aquatic health; Site A004a. Site A004a had quite a bit of yard waste present in and around the sample area.

4.5.2 Submarginal and Poor Site Assessment

Four of the 90 sites (4%) assessed were deemed submarginal and 1 of the 90 (1%) were deemed poor. Table 10 presents a summary of the sites that were submarginal and poor and identifies the ranking for the types of trash found. For example, a rank of “1” for Household and “2” for Food Packaging would mean that there was more household waste than food packaging waste. In addition, up to two potential routes and sources were identified and are listed in the Table 10.

Seventy eight percent of the trash found at submarginal and poor sites fell into the household or food packaging categories (Figure 9). There were no “automotive,” “biohazard,” “food waste,” or “toxic” waste found at any of the assessment locations. The two most common potential routes of trash entering the area were upstream (47%) or littering (29%). Household waste was the most common potential source of the trash (28%). Twenty four percent of the trash also listed “transient” as a potential source, and 18% listed “unable to determine” as a potential source. (Figure 10).

Table 10. Summary of Trash Type and Potential Routes and Sources for Submarginal and Poor Sites During the 2010 Dry Weather Monitoring Program.

StationID	Trash Type	Rank	Potential Route	Additional Potential Route (if needed)	Potential Source	Additional Potential Source (if needed)
Submarginal Sites						
B106	Cigarette butts	1	Littering	-	Household	Transient
	Household	2	Littering	Upstream	Household	Transient
	Food packaging	3	Littering	Upstream	Household	Transient

5 DISSCUSION

5.1 2010 Dry Weather Summary

The 2010 Dry Weather Monitoring season marked the third year for implementation of Order No. 2007-0001, the San Diego Region's Municipal Permit. In the City's 2008 JURMP Update, sites were reassessed and procedures were refined to fit the new requirements. The City has a list of 67 primary sites and 30 alternate sites to visit between May 1 and October 30 of each year. If a primary site is inaccessible or dry, an alternate site, ideally from the same watershed, is screened. If samples from any site with ponded or flowing water exceed Dry Weather Monitoring action levels, those sites are resampled within two business days. If the site continues to exceed action levels then an IC/ID investigation is initiated. A trash assessment is completed at each site.

During the 2010 monitoring season, the 67 primary sites were visited. Two of those sites were inaccessible and an additional eleven were dry. Twenty six alternate sites were visited. Nineteen of the ponded or flowing sites had additional analysis completed in the lab for chemistry and microbiology (28%).

Seventeen sites required confirmation for an initial field screening exceedance. Of those, only four required an IC/ID investigation. Figure 11 represents the percentage of sites in each watershed that exceeded an initial field screening analyte. The most common exceedance was for MBAS and ammonia.

Figure 11. Percentage of Initial Exceedances in Each Watershed.

Of the 19 sites chosen for laboratory analysis, no site had an exceedance for chemistry results. Microbiology analysis resulted in five exceedances for total coliforms, three for fecal

coliforms, and four for Enterococcus. Only one site with a continued total coliform and fecal coliform exceedance required an upstream investigation.

The majority of field screening exceedances were from ponded or very low flow water (less than one gpm of flow). The prevailing source of historical ponded and flowing water is from residential and commercial over-irrigation. On May 9, 2009, the Oceanside City Council voted to declare a Drought Level 2 with new water use restrictions for residents and businesses taking effect on July 1, 2009 and continuing to the present. Level 2 restrictions include:

- No washing down of paved surfaces.
- Stop water waste from inefficient landscape irrigation.
- Water before 10:00am and after 6:00pm.
- Wash vehicles using a bucket and hand-held hose equipped with a positive shut-off nozzle.
- Serve and refill water in restaurants only upon request.
- Offer hotel guests the option of not laundering towels and linens daily.
- Limit residential and commercial landscape irrigation to no more than 3 assigned days per week.
- Water landscaped areas, including trees and shrubs not irrigated by a landscape irrigation system, no more than 3 assigned days per week using a bucket, hand held hose with positive shut-off nozzle, or low-volume non-spray irrigation.
- Limit lawn watering and landscape irrigation using sprinklers to no more than 10 minutes per water station per assigned day.
- Sop operating ornamental fountains unless re-circulated water is used.
- Repair all leaks within 72 hours of notification by the City of Oceanside.

These efforts may be a reason for the decrease in field screening exceedances during the 2010 monitoring season. Since mid-2009, staff outreach to respond to complaints, violations, and Dry Weather Monitoring exceedances have included face-to-face outreach by two Clean Water Program Compliance Inspectors. In addition, new door-hangers that can be personalized were created and utilized by the Inspectors and field monitoring crew when inhabitants were not home. The City Water Utilities Department water meter crew also has been crucial in identifying and reporting city-wide over-irrigation runoff cases to the Clean Water Program Compliance Inspectors for further follow-up investigations. In addition to two inspectors, the Water Utility Department hired an outreach coordinator specifically for water conservation education in November of 2008.

The Water Conservation Specialist and Clean Water Program Environmental Specialists conducted water conservation and water quality outreach in many forms. Informational inserts, press releases, and fliers have been placed in water bills and distributed throughout the reporting year. The inserts include information about water saving incentive programs, community workshops, water-wise landscape suggestions, and repeated information about reducing water consumption particularly on outside landscaping. Outreach is also being provided on the local public access channel, the Oceanside Magazine, public education to schools, scout troops, and having staff available at community events such as Harbor Days and the local farmer's market.

5.2 Historical Data Comparison

In February 2001, the San Diego Regional Water Quality Control Board issued Order No. 2001-01 to the communities of San Diego County. As part of Order 2001-01, the City of Oceanside was required to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. The Dry Weather Program under this order was implemented in the 2002 Dry Weather season. In 2007, the San Diego Regional Water Quality Control Board issued a new five-year permit for Receiving Waters and Urban Runoff Monitoring and Reporting, Order No. 2007-0001. The Copermittees in San Diego County were required, as part of their Jurisdictional Urban Runoff Management Program (JURMP), to update their Dry Weather Program to meet or exceed the requirements of Order No. 2007-0001. The City of Oceanside's Dry Weather Program was reviewed and updated and the details of the current program are included in the City of Oceanside 2008 JURMP Update.

Throughout the nine years of Dry Weather Monitoring implementation, trial and error and technological upgrades have led to more accurate results. Test kits appropriate for urban runoff samples have been identified. For example, before 2009, the City was using a test kit for ammonia that was more appropriate for drinking water samples and tended to give false positive readings for runoff samples. Also prior to 2009, technology for field test kits were centered on a visual color comparator as opposed to automated field equipment for color comparator readings.

In addition, the way in which different forms of the pollutants are reported has been reviewed. In 2007 it was discovered that the City had not been using a conversion factor for nitrate to nitrate-N, and thus reporting more exceedances than actually were occurring. This year, it was discovered that the City had not been using a conversion factor for orthophosphate to orthophosphate-P, and thus reporting more orthophosphate exceedances than actually were occurring. Prior to the new permit, it cannot be determined if these conversions had been occurring, and thus only the historical data from the 2007 permit are presented in the historical data comparison.

Table 11 provides a summary of the current data and the previous three years of dry weather monitoring data including the number of sites monitored and the number of exceedances of these specific field and laboratory analytes. The data from 2007 are included as a reference and fell under the requirements of the previous permit. The majority of exceedances were MBAS, ammonia, and bacterial indicators (primarily total coliform and fecal coliform).

Both ammonia and MBAS exceedances have decreased since the beginning of the permit cycle. The primary reason for the decrease in ammonia exceedances was likely due to equipment change and using the best technology for the water being sampled. The new test kit method has reduced the occurrence of false positives. The MBAS test kit has not changed. False positives have also been the case with MBAS and not one historical exceedance that has been followed up with a laboratory sample has exceeded the action level. Higher dissolved solids and conductivity values have shown to interfere with the field test method.

Table 11. 2007-2010 Dry Weather Monitoring Report Data Comparison.

Monitoring Year	2010	2009	2008	2007
Total No. of Sites Visited	93	97	85	93
No. of Sites Sampled for Initial Field Screening	68	67	66	61
No. of Sites Exceeding Nitrate Action Level	2	1	3	3
No. of Sites Exceeding Orthophosphate Action Level[1]	2	1	2[2]	0
No. of Sites Exceeding Ammonia Action Level	5	5	9	15
No. of Sites Exceeding MBAS Action Level	5	8	13	N/A
No. of Sites Sampled for Laboratory Analysis	19	19	19	18
No. of Sites Exceeding Total Coliform Action Level[3]	5	4	3	6
No. of Sites Exceeding Fecal Coliform Action Level[3]	3	5	2	5
No. of Sites Exceeding Enterococcus Action Level[3]	4	3	2	2

1-In the 2010 Dry Weather Monitoring Report, a discussion of the reporting of historical orthophosphate data was presented. Previous reports indicated that orthophosphate reported in monitoring years 2006 through 2009 reported as PO_4, as opposed to PO_4-P. Reporting years 2005 and prior may also have been reported erroneously. Without converting to the appropriate form of orthophosphate to compare to the set action levels, the number of exceedances was likely erroneously high. These numbers have been changed to reflect the conversion to PO_4-P.
2-In 2006 and 2008, the results were reported as 5mg/L PO_4, and thus it cannot be determined if the action level was exceeded for PO_4-P and thus an exceedance is assumed for the purpose of this table.
3-The action level for total coliforms, fecal coliforms, and Enterococcus changed for the 2010 monitoring year. For this data assessment, the 2010 action levels were compared to all reporting years to calculate the number of exceeding sites.

For bacteriological exceedances, there was an action level change for the 2010 monitoring year. The total coliform action level increased from 50,000 MPN/100ml to 130,000 MPN/100ml. The fecal coliform action level decreased from 20,000 MPN/100ml to 13,000 MPN/100ml, as did the Enterococcus action level which decreased from 10,000 MPN/100ml to 7,000 ml. For ease of comparison, the exceedances provided in Table 11 reflect the 2010 action level for all years, as opposed to the number of exceedances in previous reports. The number of bacteria exceedances have remained relatively stable throughout this permit cycle.

In addition to methodology factors, a reduction in initial exceedances may be attributed to the drought ordinance and water conservation factors. Less runoff from over-irrigation means less water traveling to the storm drains and fewer pollutants being conveyed to the receiving waters.

5.3 Trash Assessment

The 2010 Dry Weather Monitoring Program is the third year for assessing the amount and extent of trash at each dry weather monitoring location. Approximately 94% of the sites were either “optimal”, “suboptimal”, or “marginal” and did not require the detailed trash evaluation, compared to 73% during the last monitoring year. This is a large reduction in sites that were considered submarginal and poor in all watersheds. Comparison statistics for the trash assessment are presented in Table 12.

Table 12. 2008 – 2010 Trash Assessment Comparison.

Monitoring Year	2010	2009	2008
Total No. of Sites Visited	90	88	81
No. of Sites Considered Optimal, Suboptimal, or Marginal	85	64	53
No. of Sites Considered Submarginal or Poor	5	24	28
No. of Sites With Better Rating than Previous Year	46	23	N/A
No. of Sites With Worse Rating than Previous Year	7	13	N/A
Two Most Common Types of Trash	Food Packaging (56%), Household (22%)	Food Packaging (38%), Household (31%)	Food Packaging (36%), Household (31%)
Two Most Common Potential Routes	Upstream (47%), Littering (29%)	Littering (49%), Upstream (42%)	Littering (46%), Upstream (40%)
Two Most Common Potential Sources	Household (28%), Transient (24%)	Household (56%), Transient (18%)	Household (55%), Transient (27%)
No. of Sites with a Threat to Human Health	1	2	3
No. of Sites with a Threat to Aquatic Health	1	3	9

The majority of the trash found in the sites that required further trash evaluation was either food packaging or household waste. These items were most commonly at the sites via littering or from upstream. And, the most common source of the food packaging and household wastes are households and transients. These are consistent results with the previous trash assessment year.

One site (1% of all sites) was deemed a threat to human health in the 2010 dry weather survey. Used diapers were observed. Another site (1% of all sites) was deemed a threat to aquatic health. This site had a lot of yard waste present.

The 2009 trash assessment was used to identify sites that would be good candidates for City-sponsored and private clean-up events. The City of Oceanside coordinates four clean-up events per year. These four clean-up events include multiple sites throughout the watershed at each event. In addition to the City coordinated events, 12 times on average throughout the year, private citizen groups conduct beach and watershed clean-ups with City supplies and council. Both of these types of clean-ups utilized the 2009 trash assessment to identify high priority sites which were then included as a location for a clean-up.

In addition to clean-up events, the City identified two key sites where a structural and non-structural BMP was needed in previous fiscal years. The historic and future trash assessments will help in identifying these high priority areas for future BMP placement. The two BMPS are discussed below.

Trash Trap at the Oceanside Municipal Golf Course (Dry Weather Site S119)

Staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. This trash trap was installed in March 2009. Annual amounts of debris collected and more information is provided in the 2010 JURMP Annual Report Section 7.3.1.3

Non-Structural, Administrative BMP for Trash from Oceanside Unified School District (Dry Weather Site L110)

Public Works staff identified a section of MS4 that had a large amount of tennis balls and other trash, such as plastic bottles, after storm events where Garrison Creek daylights off of Mesa Boulevard. It appeared that a large amount of the trash, including tennis balls, softballs, plastic drink bottles, and food wrappers, was likely coming from El Camino High School and Martin Luther King, Jr. Middle School. The Clean Water Program Coordinator notified the Maintenance and Operations Director of the Oceanside Unified School District of the problem. On January 22, 2009, the Director notified all area principals about the accumulation of trash and asked the principals to share the photos with staff and students using school newspapers, assemblies, and brochures.

During this reporting period the debris still accumulated in this section of Garrison Creek. Clean Water Program inspectors again contacted the school district to discuss the issue. Four storm drain inlets were identified as the potential point of entry of trash located downstream from a local high school, middle school, elementary school and several apartment and condominium complexes. It was determined that inlet filters are a BMP that could prevent the pollutants from entering the MS4. The City of Oceanside Engineering Division/CIP is planning to allocate funding in the next fiscal year to install the proposed inlet filters in four inlets in this area.

Trash accumulation at Garrison Creek.

6 CONCLUSIONS

The City of Oceanside's boundaries include two major watersheds; the San Luis Rey Watershed, which includes the San Luis Rey River, and the Carlsbad Hydrologic Unit, which consists of Loma Alta Creek, Buena Vista Creek, and Agua Hedionda Creek. As part of Order 2001-01, the San Diego Regional Water Quality Control Board required all Copermittees to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program beginning in 2002. The purpose of the program was to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain system, minimizing the negative impacts of human activities on these water bodies. In 2007 the San Diego Regional Water Quality Control Board issued a new five-year permit for Receiving Waters and Urban Runoff Monitoring and Reporting, Order No. 2007-0001. The Copermittees in San Diego County were required, as part of their Jurisdictional Urban Runoff Management Program (JURMP), to update their Dry Weather Program to meet or exceed the requirements of Order No. 2007-0001. The key changes to the 2007 Municipal Permit were adding a trash assessment component and requiring follow-up investigations to be conducted within two business days of receipt of results.

This report presents the results of the City of Oceanside's 2010 Dry Weather Field Screening and Analytical Monitoring Program which includes the revisions to the program required by Order No. 2007-0001.

The City's Dry Weather Monitoring Program, as outlined in the 2008 JURMP Update with site updates from 2008 and 2009, includes 67 primary monitoring stations and 30 alternate monitoring stations. If one of the primary stations was dry, alternate stations were visited until a site with ponded or flowing water was found and field screening was completed. Trash assessments were completed at every accessible site, whether the site was dry or had water.

During the 2010 monitoring season, the 67 primary sites were visited. Two of those sites were inaccessible and an additional eleven were dry. Twenty six alternate sites were visited. Nineteen of the ponded or flowing sites had additional analysis completed in the lab for chemistry and microbiology (28%).

Seventeen sites required confirmation for an initial field screening exceedance. Of those, only four required an IC/ID investigation. The most common exceedance was for MBAS and ammonia. Of the 19 sites chosen for laboratory analysis, no site had an exceedance for chemistry results. Microbiology analysis resulted in five exceedances for total coliforms, three for fecal coliforms, and four for Enterococcus. Only one site with a continued total coliform and fecal coliform exceedance required an upstream investigation.

During the 2010 Dry Weather season it was determined that, historically, orthophosphate (PO_4) results have been compared to an action level for orthophosphate as phosphorus (PO_4-P). This has therefore resulted in more historical exceedances, and an overly conservative valuation, since the results for orthophosphate are higher than the results for orthophosphate-

P. The historical comparison of action level exceedances from 2007 through 2010 has corrected the number of exceedances as best as possible and Table 11 reflects the conversion.

In the historical comparison, both ammonia and MBAS exceedances have decreased since the beginning of the permit cycle. The primary reason for the decrease in ammonia exceedances was likely due to the change in test kit methodology and using the best technology for the water being sampled. The number of bacteria exceedances has remained relatively stable throughout this permit cycle. In addition to methodology factors, a reduction in initial exceedances may be attributed to the drought ordinance and water conservation factors. Less runoff from over-irrigation means less water traveling to the storm drains and fewer pollutants being conveyed to the receiving waters.

The 2010 Dry Weather Monitoring Program is the third year for assessing the amount and extent of trash at each dry weather monitoring location. Approximately 94% of the sites were either “optimal”, “suboptimal”, or “marginal” and did not require the detailed trash evaluation, compared to 73% during the last monitoring year. This is a large reduction in sites that were considered submarginal and poor in all watersheds. The majority of the trash found in the sites that required further trash evaluation was either food packaging or household waste. These items were most commonly at the sites via littering or from upstream. And, the most common source of the food packaging and household wastes are households and transients. These are consistent results with the previous trash assessment year.

Follow-up investigations continue to be conducted at sites with ongoing exceedances, although the 2010 monitoring year resulted in a much reduced list of follow-ups necessary. Overall, the 2010 monitoring year had the least number of initial result exceedances and the least number of IC/IDs required in the last four years. Of the 17 initial field screening exceedances, the Dry Weather Monitoring program during 2010, detected four potential IC/IDs, of which none were eliminated. The pH exceedance at S110 was likely an equipment malfunction. The ammonia exceedance at site B024 was likely due to the ponding of water with decaying organic matter. The MBAS exceedance at B023 was likely due to interference with the test kit method, as the laboratory result was below action levels. Finally, at A016, the increased turbid flow while sampling was likely due residential vehicle washing and had stopped by the time sampling was concluded.

Water conservation and urban runoff outreach, as well as beach and creek clean-ups continues year-round as the City continues the effort to detect and eliminate illicit discharges to the storm drain system.

COMMENTS: _____

San Diego Stormwater Copermittees

Land Use Types for Dry Weather Monitoring

(Adopted by the Dry Weather Monitoring Workgroup, April 20, 2004)

1. **Residential**

   Residential (general)
   Single- and multi-family homes, mobile home parks, etc.

   Rural residential (For the County of San Diego and other appropriate Copermittees)
   Single family homes located in rural areas with lot sizes of approximately 1 to 10 acres. Rural residential estates may have small orchards, fields or small storage buildings associated with the residential dwelling unit, etc.

2. **Commercial**

   Offices, schools, shopping centers, auto dealerships, government/civic centers, cemeteries, churches, libraries, post offices, fire/police stations, military use, jails, prisons, border patrol holding stations, dormitories, hotels, motels, resorts, and casinos, etc.

3. **Agricultural**

   Orchards, vineyards, nurseries, greenhouses, flower fields, dairies, livestock, poultry, equine ranches, row crops and grains, pasture, fallow, etc.

4. **Industrial**

   Shipbuilding, airframe, aircraft manufacturing, industrial parks, manufacturing uses such as lumber, furniture, paper, rubber, stone, clay, and glass; auto repair services/recycling centers; warehousing, wholesale trade; mining, sand and gravel extraction, salt evaporation; junkyard, dumps/landfills; auto wrecking/dismantling and recycling centers, etc.

5. **Parks**

   Recreation areas and centers, neighborhood parks, wildlife and nature preserves, golf courses, accessible sandy areas along the coast or major water bodies allowing swimming and picnicking, etc.

6. **Open**

   Vacant and undeveloped lands, etc.

APPENDIX C

2010 IC/ID INVESTIGATIONS

THIS PAGE INTENTIONALLY LEFT BLANK

A004a	Dry Weather 2010	8/23/2010

Site Summary:

Site A004a is 48-inch RCP located below Spinnaker Ridge adjacent to the pump station off of Cannon Road. The outlet drains the residential areas immediately south of the outlet.

Investigatory Actions

Date	Action	Staff
8/23/2010	Initial investigation conducted. Laboratory results showed exceedances for the following parameters: Total Coliforms: 240,000 MPN/100mL Fecal Coliforms: 22,000 MPN/100mL Enterococcus: 7,910MPN/100mL	Witheridge/ Mark
8/30/2010	A confirmation sample for total coliforms, fecal coliforms and enterococcus was collected. Official receipt of results was on 9/1/2010, however preliminary results were used to initiate the sampling: Total Coliforms: 34,000 MPN/100mL Fecal Coliforms: 1,900 MPN/100mL Enterococcus: 1,950 MPN/100mL	Witheridge/ DeCurtins/ Mark

Investigatory Status

A confirmation investigation for total coliforms, fecal coliforms and Enterococcus was performed and total coliforms, fecal coliforms and Enterococcus were below the action levels and thus no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

A015	Dry Weather 2010	8/09/2010

Site Summary:
Site A015 is a 48-inch RCP located south of Lake Park, off of Lake Boulevard, south of Agua Hedionda Creek. The outlet drains the residential areas east along Lake Boulevard Drive. Access to the site is from Lake Boulevard Drive.

Investigatory Actions

Date	Action	Staff
8/09/2010	Initial investigation conducted. Laboratory screening showed exceedances for the following parameters: Total Coliforms: 130,000 MPN/100mL Fecal Coliforms: 50,000 MPN/100mL	Witheridge/ DeCurtins
8/16/2010	A confirmation sample for total and fecal coliforms was collected. Official receipt of results was on 8/25/2010, however preliminary results were used to initiate the sampling. Total and fecal coliform results were under the action levels: Total Coliforms: 17,000 MPN/100mL Fecal Coliforms: 2,200 MPN/100mL	Witheridge/ Mark

Investigatory Status
A015 has been subject to an ongoing investigation to locate the source of persistent white foam in runoff since 2004. Historically, total coliform exceedances and low pH also seem to be a common characteristic in this area. Previous investigations show similar depositions of foam as well as unique geologic crystalline formations in the watershed. This monitoring year, upon confirmation, all laboratory results were under the action levels and no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

A016	Dry Weather 2010	7/26/2010

Site Summary:

Site A016 is a 36-inch RCP located east of Amigos Court, south of Lake Boulevard, and north of Calavera Creek at the border of Oceanside and Carlsbad. The outlet drains the residential areas to the north and south of Lake Boulevard.

Investigatory Actions

Date	Action	Staff
7/26/2010	Initial investigation conducted. Field and laboratory screening showed an exceedance for the following parameters: MBAS: 1.5 mg/L Orthophosphate-P: 5.22 mg/L Ammonia-N: 1.22 mg/L Total Coliforms: 1,600,000 MPN/100ml Fecal Coliforms: 300,000 MPN/100ml Enterococcus: 72,700 MPN/100ml Flow was measured at 25.82gpm. During the initial field screening the flow increased considerably while samples were being taken then slowed down, but water was still turbid. It was determined that there was an illegal discharge, so an upstream investigation was conducted. Search was initiated at the Rancho Calavera Mobile Home Park based on previous ICID investigations (A016D). The manhole on the south side of the pond was wet, but no flow was observed. A nearby maintenance worker could have been watering plants or washing down area, but when asked, he said he didn't know anything. Possible overland flow was tracked to lower residential area on Palmas Ct. The curb was wet and had sediment residue, overland flow was likely from car/truck or driveway being washed. Discharge had stopped and therefore difficult to locate a definite overland flow source was not identified.	Witheridge/ DeCurtins/ Mark

<table>
<tr><td>7/28/2010</td><td>A confirmation sample was taken for MBAS, orthophosphate-P and ammonia-N. All samples were found to be below action levels.
<table><tr><td>MBAS</td><td>0.63 mg/L</td></tr><tr><td>Orthophosphate-P</td><td>0.37 mg/L</td></tr><tr><td>Ammonia-N</td><td>0.28 mg/L</td></tr></table>Flow was estimated at 2.19gpm.</td><td>Witheridge/ DeCurtins/ Mark</td></tr>
<tr><td>8/2/2010</td><td>A confirmation sample for total coliforms, fecal coliforms and Enterococcus was collected. Official receipt of results was 8/25/2010, however preliminary results were used to initiate the sampling:
.
<table><tr><td>Total Coliforms</td><td>220,000 MPN/100ml</td></tr><tr><td>Fecal Coliforms</td><td>30,000 MPN/100ml</td></tr></table>Flow was estimated at 1.18 gpm.</td><td>Witheridge/ DeCurtins</td></tr>
<tr><td>8/16/2010</td><td>An ICID investigation was conducted for total and fecal Coliforms. Results showed that total and fecal coliform were below action levels.

(A016)
<table><tr><td>Total Coliforms</td><td>30,000 MPN/100ml</td></tr><tr><td>Fecal Coliforms</td><td>2,300 MPN/100ml</td></tr></table>Flow was estimated at 1.87 gpm.

An upstream investigation was conducted the same day for total and fecal coliforms. Flow was identified in the next upstream manhole, but it could not be sampled due to the depth of the manhole. Sample was taken from the south side of lake in Rancho Calavera Mobile Home Park

(A016D)
<table><tr><td>Total Coliforms</td><td>700 MPN/100ml</td></tr><tr><td>Fecal Coliforms</td><td>230 MPN/100ml</td></tr></table></td><td>Witheridge/ Mark</td></tr>
</table>

Investigatory Status:
The follow-up investigation showed MBAS, orthophosphate-P and ammonia-N results were under the Dry Weather Monitoring Program action levels. Total coliforms and fecal coliform results continued to exceed the action levels. An upstream ICID investigation was conducted on 8/16/2010 at the Rancho Calavera Mobile Home park's on site lake. Both samples taken at the outfall and the lake showed that total and fecal coliform were below action levels. The possible source of the initial exceedance was most likely

attributed to overland flow in the nearby residential neighborhood on Las Palmas Court. It appeared that a muddy truck could have been washed, which is a legal activity if appropriate drought regulations for vehicle washing were followed. Historical investigations at this site have led to identification of illegal discharges in 2007 and 2009 from the lake of the mobile home park, but during this investigation the lake bacteria sample results were well below action levels and no discharges were identified.

Attachments:

A016 D. Lake at the Rancho Calavera Mobile Home Park

THIS PAGE INTENTIONALLY LEFT BLANK

A021	Dry Weather 2010	8/30/2010

Site Summary:

Site A021 is a 36 inch RCP located off of Sky Haven Lane, north of Calaveras Creek. The outlet drains the residential areas to the north of the outfall. Access to the site is from a residential driveway and down an embankment.

Investigatory Actions

Date	Action	Staff
8/30/2010	Initial investigation conducted. Field Screening from the ponded water showed exceedances for the following parameters: Ammonia-N: 1.3 mg/L	D-Max
8/31/2010	Follow up investigations from the ponded water showed that ammonia-N results were below action levels. Ammonia-N: 0.5mg/L	D-Max

Investigatory Status

Upon confirmation, results for ammonia-N were under the action levels and no further action was required. Upon confirmation it was noted that there was trash and decaying organic matter that most likely contributed to ammonia exceeding action levels.

THIS PAGE INTENTIONALLY LEFT BLANK

A024	Dry Weather 2010	9/13/2010

Site Summary:
Site A024 is an alternate site. It is a RCP outlet located on the south side of Lake Boulevard east of Emerald Drive.

Investigatory Actions

Date	Action	Staff
9/13/2010	Initial investigation conducted. Field Screening from ponded water showed an exceedance for the following parameter: Ammonia-N: 1.2 mg/L	D-Max
9/14/2010	Follow up investigation from ponded water showed an exceedance for the following parameter: Ammonia-N: 0.7mg/L	D-Max

Investigatory Status
A confirmation investigation for ammonia-N was performed and results showed that ammonia-N levels were below action levels and no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

B023	Dry Weather 2010	8/30/2010

Site Summary:

Site B023 is a 36-inch RCP located west of the intersection of Lake Boulevard and Thunder Drive south at 3524 Lake Blvd. The outlet drains the residential areas south of Lake Boulevard.

Investigatory Actions

Date	Action	Staff
8/30/2010	Initial investigation conducted. Field screening results showed conductivity levels to be exceed the action level: MBAS 1.25 mg/L	D-Max
8/31/2010	Follow-up investigation conducted. Field screening showed MBAS levels to be exceeding the action level: MBAS 1.25 mg/L	D-Max
9/8/2010	A laboratory sample was collected for MBAS. The result was below the laboratory reporting limit: MBAS < 0.5 mg/L	Witheridge/ DeCurtins

Investigatory Status

Conductivity at this site ranged between 10.01 mg/L and 14.50 mg/L. Previous investigations have shown this to be a result of groundwater seepage. Because elevated conductivity is suspected to interfere with the MBAS field test kit, a laboratory sample was taken for measurement of MBAS. Laboratory analysis resulted in a non-detect for MBAS at B023.

THIS PAGE INTENTIONALLY LEFT BLANK

B024	Dry Weather 2010	8/30/2010

Site Summary:

Site B024 is a 36-inch RCP located on the southwest corner of College Boulevard Bridge over Buena Vista Creek. The outlet drains the residential areas east of College Boulevard. Access to the site is from College Boulevard.

Investigatory Actions

Date	Action	Staff
8/30/2010	Initial investigation conducted. Field Screening showed an exceedance for ammonia-N. Ammonia-N: >3 mg/L	D-max
8/31/2010	Follow-up investigation showed ammonia-N still exceeding action levels. Ammonia-N: 1.57 mg/L	D-Max
9/8/2010	Ammonia-N continued to exceed action levels. Ammonia-N: >3 mg/L An ICID investigation was conducted upstream. The immediate upstream manholes were in the middle of a busy street (College Blvd.) and intersection (College Blvd. and Lake Blvd.) and were unsafe to access. One upstream manhole was identified on College Blvd. south of Lake Blvd that was accessible. There was a small amount of water in the storm drain but not enough to sample (B024A). A potential overland source was identified on the southeast corner of College Blvd and Lake Blvd. Ponded water from a manhole outlet was sampled, B024B. No flow was leaving the outlet. Ammonia was found to be below action levels. Ammonia-N: <0.2 mg/L	Witheridge /DeCurtins

Investigatory Status:
Ammonia-N results continued to exceed action levels at the outfall. There was an abundance of leaf debris in the ponded water. An ICID investigation was conducted. The immediate upstream manholes were unsafe to access. B024A was identified as the safest upstream manhole to access; it is located on College Blvd. south of Lake Blvd. There was a small amount of water in the storm drain cleanout but not enough to sample. Overland flow was identified on the south east corner of College Blvd. and Lake Blvd. (B024B). There was a private drain entering the manhole from the apartment complex above but no flow was observed from the private drain into the manhole. It appeared the ponded water at one time had been flowing into the curb on Lake Blvd.

The ponding of water and a large amount of leaf debris at the B024 outfall was most likely responsible for the continued exceedance of ammonia-N.

Attachments:

B024A

B024B

B024B

B026	Dry Weather 2010	8/31/2010

Site Summary:

Site B026 is a 48-inch RCP located south of the Tri-City Crossroads Plaza off of Plaza Drive on the north of Buena Vista Creek.

Investigatory Actions

Date	Action	Staff
8/31/2010	Initial investigation conducted. Field Screening showed the exceedances for the following parameters: MBAS >3 mg/L Flow was estimated at 3.53 gpm	D-Max
9/01/2010	Follow-up investigation was conducted, MBAS level within acceptable parameters: MBAS <0.3 mg/L Flow was estimated at 1 gpm	D-Max

Investigatory Status

Follow-up investigation showed MBAS level within acceptable parameters, no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

B104	Dry Weather 2010	7/26/2010

Site Summary:

Site B104 is a manhole on the southeast corner of South Coast Highway and Eaton Street. The outlet drains the commercial and residential areas on the east side of South Coast Highway. This site replaced B001 by moving it upstream approximately 230 yards out of tidal influence. Access to the site is from South Coast Highway.

Investigatory Actions

Date	Action	Staff
7/26/2010	Initial investigation conducted. The ponded water in the catch basin was sampled. Field screening analysis showed exceedances for the following parameter: Nitrate-N: 14.6 mg/L	Witheridge/ DeCurtins/ Mark
7/28/2010	Follow-up investigation was completed within two business days. Results showed that the field screening no longer exceeded the action level for Nitrate-N Nitrate-N: 8.1 mg/L	Witheridge/ DeCurtins/ Mark

Investigatory Status

Upon confirmation, nitrate-N levels from the ponded water in the catch basin no longer exceeded action levels. During the initial field screening there were grass clippings and leaf debris in the ponded water which were likely the cause of the nitrate-N exceedance.

Attachments:

Leaf debris in B104

THIS PAGE INTENTIONALLY LEFT BLANK

L001	Dry Weather 2010	6/30/2010

Site Summary:

Site L001 is a 48-inch RCP located at the intersection of North Avenue and Vista Pacific Drive, north of Loma Alta Creek. The outlet drains the industrial and commercial areas south of North Avenue. Access to the site is via North Avenue.

Investigatory Actions

Date	Action	Staff
6/30/2010	Initial investigation conducted. Laboratory results showed exceedances for the following parameter: Enterococcus: 8,560 MPN/100mL Flow estimated at 0.75 gpm	Witheridge/ DeCurtins/ Mark
7/8/2010	A confirmation sample for enterococcus was collected. Official receipt of results was on 7/20/2010, however preliminary results were used to initiate the sampling: Enterococcus: 870 MPN/100mL Flow estimated at 1.53	Witheridge/ DeCurtins/ Mark

Investigation Status

Upon confirmation Enterococcus results were below action levels and no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

L003	Dry Weather 2010	8/09/2010

Site Summary:

48-inch RCP located off of North Avenue and east of Autumn Drive, south of Loma Alta Creek.

Follow-up Actions

Date	Action	Staff
8/09/2010	Initial investigation conducted. Field screening showed exceedances for the following parameter: Total Coliforms: 170,000 MPN/100mL Flow was estimated at 4.05 gpm	Witheridge/ DeCurtins/ Mark
8/16/2010	A confirmation investigation for total coliforms was performed. Official receipt of results was on 8/25/2010, however preliminary results were used to initiate the sampling. Total coliforms were observed to be below the action level. Total Coliforms: 11,000 MPN/100mL Flow was estimated at 6.03 gpm	Witheridge/ Mark

Investigatory Status

A confirmation investigation for total coliforms was performed and the results were below the action levels. No further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

L019	Dry Weather 2010	6/30/2010

Site Summary:

Site L19 is a 48-inch RCP, located south of the Corporate Centre and Oceanside Boulevard intersection, north of Loma Alta Creek. The outlet drains the commercial and open space areas located on the hill north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard

Investigatory Actions

Date	Action	Staff
6/30/2010	Initial investigation conducted. Field screening results showed MBAS to equal the action level. MBAS: 1.0 mg/L	Witheridge/ DeCurtins/ Mark
7/1/2010	A follow up was conducted. Field screening results showed the MBAS level to be below action levels. MBAS: 0.5 mg/L	Witheridge/ DeCurtins/ Mark

Investigaton Status

During the field screening analysis the color of the sample used for MBAS was green from the water collected. The sample could not be match up to the MBAS comparator so a conservative estimate of 1 mg/L was given. A confirmation investigation was performed, the color of the water had changed due to overcast conditions and the MBAS result was below the action level.

THIS PAGE INTENTIONALLY LEFT BLANK

L107	Dry Weather 2010	9/09/2010

Site Summary:

Site L107 is a manhole at the corner of Crouch and Oceanside Boulevard.

Investigatory Actions

Date	Action	Staff
9/09/2010	Initial investigation conducted. Field Screening showed exceedances for the following parameters: Orthophosphate-P: 2.4 mg/L MBAS: 1.5 mg/L	D-Max
9/10/2010	A follow up investigation was conducted for orthophosphate-P and MBAS. Orthophosphate-P: 0.63 mg/L MBAS: 0.91 mg/L	D-Max

Investigatory Status

A follow up investigations was conducted for orthophosphate-P and MBAS. The results for both orthophosphate-P and MBAS were below action levels and no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

S104	Dry Weather 2010	9/03/2010

Site Summary:

Site S104 in a 24-inch RCP located south of the San Luis Rey River. Access to the site is from the sewer easement and tomato fields northwest of the site. The outlet drains the residential area south of the site.

Investigatory Actions

Date	Action	Staff
9/03/2010	Initial investigation conducted. Field Screening results showed an exceedance for the following parameter: Ammonia-N: 1.2 mg/L Flow was estimated at 0.5 gpm.	D-Max
9/07/2010	Follow-up investigation conducted for ammonia-N within two business days of receipt of results. The ammonia result was below the detection limit. Ammonia-N: <0.2 mg/L	D-Max

Investigation Status

Upon confirmation the ammonia-N result was below the detection limit so no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

S110	Dry Weather 2010	7/08/2010

Site Summary:

S110 is a 30-inch RCP with a flap gate installed. Access to Site 110 is from Rainier Way east of Douglas Drive.

Investigatory Actions

Date	Action	Staff
7/08/2010	Initial investigation conducted. Field Screening results showed an exceedance for pH. pH: 9.4 pH unit	Witheridge/ DeCurtins/ Mark
7/12/2010	Follow-up investigation was conducted within two business days for pH and the result showed that pH was still exceeding action levels. pH: 9.1 pH unit An equipment malfunction was suspected.	Witheridge
7/28/2010	Another follow-up investigation was conducted and pH was below action levels. pH: 7.9 pH unit Flow estimated at 1.75 gpm	Witheridge/ DeCurtins/ Mark

Investigation Status

Upon confirmation, the pH level was still exceeding. The exceedance for pH may have been attributed to a faulty pH meter. The reference solution was replaced in the Hydrolab Quanta after 7/12/2010 and another follow-up investigation was conducted on 7/28/2010 and the pH result was below the Dry Weather Monitoring action level.

THIS PAGE INTENTIONALLY LEFT BLANK

S111	Dry Weather 2010	9/7/2010

Site Summary:

Site S111 is a concrete channel adjacent to Fireside Park, east of the San Luis Rey River. The channel drains the residential area east of the site.

Investigatory Actions

Date	Action	Staff
9/07/2010	Initial investigation conducted. Field Screening results showed an exceedance for nitrate-N. Nitrate-N: 15.1 mg/L	D-Max
9/08/2010	Follow-up investigation was conducted for nitrate-N and result showed nitrate-N to be below the action level. Nitrate-N: 5.8 mg/L	D-Max

Investigation Status

Upon confirmation, the nitrate-N result was below the Dry Weather Monitoring action level and no further action was required.

THIS PAGE INTENTIONALLY LEFT BLANK

S122	Dry Weather 2010	6/16/2010

Site Summary:

S122 is a RCP with a flap gate at the end of Tishmal Court. It conveys flows from the residential area north of the river. Access to the site is from the sewer easement path and pedestrian path on the north side of the river.

Investigatory Actions

Date	Action	Staff
6/16/2010	Initial investigation conducted. Laboratory results were equal to or exceeding action levels for the following parameters: Total Coliform: 130,000 MPN/100mL Enterococcus: 21,400 MPN/100mL	Witheridge/ DeCurtins
6/23/2010	Follow-up investigation for total coliforms and Enterococcus was conducted. Official receipt of results was on 7/27/2010, however preliminary results were used to initiate the sampling. Both total coliforms and Enterococcus were below action levels. Total Coliforms: 17,000 MPN/100mL Enterococcus: 3,000 MPN/100mL An upstream investigation was conducted the same day as the confirmation sampling. Ponded water was sampled from the north side of Toopal Drive just east of Tismal Court (S122B). **S122B** Total Coliforms: 22,000 MPN/100mL Enterococcus: 8,550 MPN/100mL The next accessible upstream site was a manhole on the north side of Benet Road west of Walla on a asphalt path between a series of homes. **S122C:** Total Coliforms: 3,500 MPN/100mL Enterococcus: 272 MPN/100mL	Witheridge/ DeCurtins/ Mark

Investigatory Status:
A confirmation was conducted on 6/23/10 for total coliforms and Enterococcus receipt of preliminary lab results. Results of the confirmation for total coliforms and Enterococcus were both below action levels. To be proactive, City staff did an upstream investigation the same day as the confirmation sampling. The first site, S122A was a manhole in the middle of Tismal Ct. The water was flowing but was too deep to sample. The next site upstream was S122B. This site was located on the north side of Toopal Road and east of Tismal Court. A sample was taken at a ponded area that drained from a vegetated bio-swale into a D-25 curb outlet. The ponded water seemed to be from irrigation runoff. The final site sampled was S122C. S122C is near an asphalt path in a vegetated area on Benet Road west of Wala Drive, lab results showed that both total coliforms and Enterococcus were below action levels. The bacteria exceedance for S122 was probably attributed to ponded landscape runoff upstream from S122.

RE: **STATEMENT OF CERTIFICATION**
CITY OF OCEANSIDE JURISDICTIONAL URMP

I certify under penalty of law that the Jurisdictional Urban Runoff Management Program Annual Report for 2010-2011 was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for knowingly submitting false information, including the possibility of fine and imprisonment for knowing violations.

THIS PAGE INTENTIONALLY LEFT BLANK

ES EXECUTIVE SUMMARY

Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2007-2008 annual reporting period (July 1, 2010 – June 30, 2011).

Report Organization

Section J of Municipal Permit 2007-0001 defines the requirements for the Jurisdictional Urban Runoff Management Program (JURMP) Annual Report and states that each JURMP Annual Report shall, at a minimum, contain a comprehensive description of all activities conducted by the Copermittee for each required component. Table ES-1 presents these components and the section in which they are discussed.

Table ES-1. Municipal Permit 2007-0001 Reference Table.

Municipal Permit 2007-0001 Components	Annual Report Section
Development Planning Component	Section 2.0
Land-Use Planning	Section 2.2
Environmental Review Process	Section 2.3
Development Project Approval and Verification Process	Section 2.4
Construction Component	Section 3.0
Municipal Component	Section 4.0
Industrial and Commercial Component	Section 5.0
Residential Component	Section 6.0
Illicit Discharge Detection and Elimination Component	Section 7.0
Education Component	Section 8.0
Public Participation	Sections 9.0
Fiscal Analysis Component	Section 10.0
Effectiveness Assessment Component	Section 11.0
Special Investigations	Section 12.0
Non-Emergency Fire Fighting	Section 13.0
JURMP Revisions	Section 14.0
Conclusions and Recommendations	Section 15.0

Pursuant with the Municipal Permit this document contains all of the required information.

Program Highlights

Below is a summary of each section which describes the Clean Water Program activities appearing in this Annual Report. Please refer to the individual section for more detailed information.

Section 2.0 Development Planning Component

The development planning component focuses on the collective effort to mitigate impacts which may result from new development and redevelopment projects. The process of verifying compliance with the Municipal Permit is accomplished through the consistent application of storm water principles and regulations during all phases of development.

During this reporting period, the City continued to actively participate in the Copermittee Workgroups, Sub-workgroups, and HMP-TAC. The combined Copermittee effort resulted in the release of the updated Countywide Model SUSMP in March 2011.

During this same period, the City released a number of updated storm water documents which included the following documents:

- Oceanside SUSMP
- Storm Water Quality Assessment form
- Standard Development Plan-Storm Water Mitigation Plan (SDP-SWMP) Template
- Priority Development Project-Storm Water Mitigation Plan (PDP-SWMP) Template
- Planning Division – Development Processing Guidelines

Other notable activities that took place during this reporting period included the continued implementation of data tracking systems by multiple divisions within the City Water Utilities and Development Services Departments.

Section 3.0 Construction Component

The City of Oceanside Clean Water Program provided an updated inventory of construction sites with the 2008 JURMP and has revised that inventory during this reporting period. During the reporting period, the Clean Water Program inspected 47 construction sites to ensure they were in compliance with the City Code.

Section 4.0 Municipal Component

The City of Oceanside Clean Water Program utilized its end of fiscal year 2008-09 municipally owned inventory and inspected 176 municipal areas to ensure these facilities are in compliance with the City Code. A total of 2,342 tons of waste was removed as a result of street sweeping and a total of 840 tons of waste was removed from the storm drain system (MS4) as part of the annual cleaning. Three hundred and two (302) feet of City sewer pipes were slip lined during this reporting period.

Section 5.0 Industrial and Commercial Component

The City annually updates its watershed-based industrial/commercial inventory which contains the name, address, and description of all industrial sites within its jurisdiction, regardless of site ownership. The inventory now includes 1,927 Industrial and Commercial businesses that have a

potential to contribute pollutants to the MS4 system. Twenty-four (24) industrial businesses and 661 commercial businesses were inspected during this reporting period, to ensure these facilities are in compliance with City Code.

During the previous reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water and Sewer Divisions, and the Clean Water Program, continued rolling out the GBA Masters Series software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year

During this reporting period the Clean Water Program reviewed the effectiveness of the new tracking tools and implemented improvements in the use of the system to better track Stormwater related data.

Section 6.0 Residential Component

The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the maximum extent practical (MEP). The City of Oceanside Clean Water Program received 353 calls on the Urban Runoff Hotline which included 183 referrals from City Staff. Code Enforcement responded to 75 urban runoff cases related to residential areas and activities, during the reporting period. Extensive educational efforts were made to help Oceanside residents understand watersheds, water quality and urban runoff impacts through presentations on a local television channel, Clean Water Program newsletters mailed to approximately 44,000 households, and through information available on the Clean Water Program Website.

Section 7.0 Illicit Discharges Detection and Elimination Component

This section is intended to document the activities conducted by the City of Oceanside during the 2010-2011 reporting period to manage illicit discharges. In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2010-11 Illicit Discharge Detection and Elimination Component, including the 2010 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2011.

Section 8.0 Education Component

The City of Oceanside Clean Water Program continued to use a variety of avenues to educate various internal and external groups about the Clean Water Program and the requirements of Municipal Permit Order 2007-0001. These outreach activities included municipal staff training, CWP newsletters, staffing community booths, conducted watershed education presentations, continued implementation of a 5th grade curriculum titled Project SWELL and targeting under-served audiences with educational materials.

Section 9.0 Public Participation Component

The Clean Water Program continued to sponsor beach and creek cleanup events and supported private groups who wanted to coordinate their own cleanup events. During this reporting period a total of 1,054 volunteers participated in these events, removing more than ten tons of trash, and

debris, from the local waterways. In addition the City installed four pet waste bag dispensers stations along the San Luis Rey Recreation Trail as part of its Pick up your Pet Waste Campaign.

Section 10.0 Fiscal Component

The City of Oceanside Clean Water Program continued to acquire funding from various sources to implement programs to meet Municipal Permit Order 2007-0001. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge that is delineated on the utility bills for each household and is based on the customer's water consumption. Approximate expenditures for the 2010-11 fiscal year is provided in Section 10 as well as the budget for the 2011-12 reporting period.

Section 11.0 Effectiveness Component

The City implemented an effectiveness assessment program to assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level.

Section 12.0 Special Investigations

The City of Oceanside received funding from two sources to implement two water quality related projects: the San Luis Rey Bacteria Source Tracking Study and the Loma Alta Creek Ultraviolet Treatment Facility.

Lower San Luis Rey Bacteria Source Tracking

As part of the Proposition 50 Clean Beaches Initiative, the City of Oceanside was awarded $554,375 to track the sources of bacteria in the Lower San Luis Rey River. This study project has a goal to identify the sources and quantify the loading of bacterial contamination in the lower San Luis Rey River using a tiered approach. This approach will permit prioritization for mitigation of microbial contaminants and appropriate actions will be recommended to eliminate sources of bacterial contamination.

During this reporting period dry season and wet season monitoring events were implemented and all monitoring activities had been completed for the Grant Project. The Draft Final Report is due to the SWRCB on August 1, 2011. The Final Report is due September 1, 2011. Final results will be reported in the FY 2011-12 JURMP Annual Report.

The Loma Alta Creek Ultraviolet Treatment Facility

The City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the State Water Resources Control Board to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. The anticipated project goal is to eliminate beach closures during the dry season at Buccaneer Beach in Oceanside, California. This will be achieved by diverting the flow from the Loma Alta Lagoon through a UV treatment facility prior to discharging the flow onto the shoreline.

The Loma Alta Creek Ultraviolet Light Treatment Facility first started treatment in June 2009 and operated during the summers of 2010 and 2011. Water samples were taken weekly from Buccaneer Beach directly in front of the discharge pipe and seventy-five feet north and south of

the discharge pipe. The samples were tested for total and fecal coliform and Enterococcus. All samples taken during this reporting period met California Department of Health Services AB411 Objectives and there were no postings due to bacterial levels exceeding standards set by the County Department of Environmental Health.

Section 13.0 Non-Emergency Fire Fighting

Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described in Section 13.

Section 14.0 JURMP Revisions

During this reporting period no revisions were made to the 2008 JURMP.

Section 15.0 Conclusions and Recommendations

This section presents the conclusions from the 2010-2011 reporting period and provides recommendations for future activities and management actions for JURMP program components.

During the previous reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water and Sewer Divisions, and the Clean Water Program, continued using the Lucity (previously GBA Masters Series) software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year

During this reporting period the Clean Water Program reviewed the effectiveness of the new tracking tools and implemented improvements in the use of the system to better track Stormwater related data. Additional improvement may be implemented during the next reporting period.

1.0 INTRODUCTION

This annual report document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) (referred to in this document as the Municipal Permit) draining the Watersheds of the County of San Diego, which include agencies with land use authority including the incorporated Cities of San Diego County, the County of San Diego, the San Diego Unified Port District, and the San Diego County Regional Airport Authority (collectively called Copermittees). Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2010-2011 annual reporting period (July 1, 2010 – June 30, 2011).

This Municipal Permit is based on the Federal Clean Water Act (CWA), the Porter–Cologne Water Quality Control Act, applicable state and federal regulations, all applicable provision of statewide Water Quality Control Plans and Polices adopted by the State Water Resources Control Board (SWRCB), the Water Quality Control Plan for the San Diego Basin adopted by the Regional Water Quality Control Board (RWCQB), the California Toxics Rule, and the California Toxics Rule Implementation Plan. This Annual Report addresses the renewed NPDES Permit No. CAS0108758, which was first issued on July 16, 1990 (Order No. 90-42), renewed on February 21, 2001 (Order No. 2001-01), and renewed again on January 24, 2007

In the interests of communicating consistent messages to the community regarding the most efficient and effective means of reducing storm water and urban runoff pollution, and as directed under Part J.5 of the Municipal Permit, this document was developed following the standardized format developed and agreed upon by the Copermittees. For the most part, compliance with the Municipal Permit was undertaken by the Copermittees through the development and implementation of the JURMP; therefore this Annual Report is organized in a similar format as the 2008 JURMP.

1.1 Background

Urban development typically involves conversion of natural space to developed areas that include impervious surfaces such as streets, buildings, and parking lots. With the increase in human population and impervious surfaces associated with developed areas there tends to be higher runoff volume and velocity due to the impervious area's incapacity to absorb and hold rainwater. Also, human use of developed areas is associated with a number of pollutants that can be conveyed to the municipal separate storm sewer system (MS4) by a rain event or non-storm water discharges. This is called non-point source pollution. Non-point source pollution, such as urban runoff discharges to the MS4, is a large source of pollutants to receiving water bodies in the San Diego region and throughout the United States. Pollutants commonly associated with urban runoff include sediments, pesticides, fertilizers, herbicides, trash, oil and grease, and heavy metals. Such pollutants are generated by everyday activities such as construction, landscaping and vehicle use and maintenance.

Pollutants that reach receiving water bodies, such as streams, lakes, bays, lagoons, and the ocean, have the potential to significantly impact human and environmental health as well as wildlife that utilize these water bodies and surrounding habitat for survival. Notably, environmentally sensitive areas (ESA) are especially threatened by urban development because such areas tend to have lower capacities to withstand pollutants entering the area.

1.2 Purpose and Objectives

The purpose of this annual report is to present the activities the City conducted during the Fiscal reporting period of July 1, 2010 through June 30, 2011 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. Improving the quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

Table 1-1 presents the organization of the City's JURMP Annual Report and a summary of the corresponding permit requirement in Order No. 2007-0001. Some Report sections and permit requirements overlap and will be found in multiple locations throughout the document.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 Introduction

Development and re-development projects are typically associated with land disturbance activities and increases in impervious area. When development projects substitute pervious areas with impervious roofs, pavement, and flatwork; the ability of the site to absorb and infiltrate precipitation is markedly reduced. This in turn affects the hydrologic characteristics of a site by increasing the rate of runoff, flow duration, runoff volume, and discharge velocity. In natural channels or channels which are not "significantly hardened", the effect is to cause physical alteration to the channel; causing negative impacts to the biological integrity of the receiving water. To counter these impacts, the City has developed and implemented a storm water development planning program which is designed to mitigate the negative effects associated with development and redevelopment projects.

The Development Planning section of the JURMP Annual Report documents the activities performed by the City of Oceanside during the reporting period beginning July 1, 2010 and ending on June 30, 2011. During this reporting period, the City has continued to implement a comprehensive Development Planning Component consistent with Section D.1 of the San Diego RWQCB Order No. R9-2007-0001 (Municipal Permit). Table 2-1 contains a tabulation of the applicable Municipal Permit subsections and corresponding sections of the Annual Report.

Table 2-1 Compliance Summary

Municipal Permit Section	Annual Report Section

J.3.a.(3)(a).xviii – Notable Activities	Section 2.2.1.1

2.2 Land Use Planning

2.2.1 Background

The SUSMP Development Planning component focuses on the City Development Services – Engineering, Planning, and Building Division efforts to comply with Municipal Permit requirements that mitigate impacts which may result from new development and redevelopment projects. The process of verifying compliance with the Municipal Permit is accomplished through the consistent screening of all permit applications and subsequent implementation of SUSMP requirements are each phase of project development.

The 2003 General Plan Land Use Element incorporated watershed protection measures aimed at improving water quality by managing natural resources, while meeting the needs of the community and addressing development concerns. There were no water quality amendments to the General Plan during this reporting period. Section 4.2.3 of the 2008 Jurisdictional Urban Runoff Management Plan summarizes the addresses watershed protection measures contained in the Oceanside General Plan.

2.2.1.1 Notable Activities

During this reporting period, the City continued to actively participate in the Copermittee Land Development workgroup, the Construction sub-workgroup, and by contributing to the HMP-TAC and BMP Sizing Tool sub-workgroup.

The combined Copermittee effort resulted in the release of the updated Countywide Model SUSMP in March 2011 which included additional references to support implementation of the HMP, including but not limited to, applicability decision matrixes and facility sizing tables. During the same period in March, the Copermittees released the Final Hydromodification Management Plan (HMP) which addresses specific flow attenuation requirement and standards including applicability, performance criteria, design goals, determination of stream susceptibility, partial duration calculations, drawdown calculations, BMP selection, inspection, maintenance, and monitoring. In addition to the Final HMP, the Copermittees released the BMP Sizing Tool and the supporting Draft San Diego BMP Sizing Calculator Methodology guidance document. The BMP Sizing tool enables less complex projects to meet HMP requirements. Because of the simplicity of the tool, the applicability is very limited. The supporting guidance document provides users with full descriptions of five Low Impact Development (LID) practices that function as Integrated Management Practices (IMPs) while addressing HMP requirements. And finally during this period, the Copermittees initiated an independent, third-party review (by Clear Creek Solutions, Inc.) of the BMP Sizing Tool. In addition to validating the Sizing Tool, Clear Creek Solutions, Inc. was tasked with verifying parameters contained in their proprietary continuous simulation model, the "San Diego Hydrology Model 2011" or SDHM2011. The SDHM2011 is based upon the Western Washington Hydrology Model (WWHM) and is accepted as being consistent with HSPF, therefore parameter verification should validate the San Diego continuous simulation model. Findings of the BMP Sizing Tool validation and SDHM2011 parameters were not available during this reporting period.

During this same period, the City released a number of updated storm water documents which included the following documents:

- Oceanside SUSMP
- Storm Water Quality Assessment form
- Standard Development Plan-Storm Water Mitigation Plan (SDP-SWMP) Template
- Priority Development Project-Storm Water Mitigation Plan (PDP-SWMP) Template
- Planning Division – Development Processing Guidelines

In addition, Development Services Staff with assistance from Information Technology Staff began a significant revision to the City website. Completion of the website revision was pending at the close of this reporting period.

The update to the City SUSMP mirrored the form and content of the Countywide Model SUSMP by providing additional information to support implementation of the HMP which included several decision matrixes and HMP facility sizing tables. The City update also includes direct references to the Final Hydromodification Management Plan (HMP), BMP Sizing Tool, and Draft San Diego BMP Sizing Calculator Methodology guidance document.

The Storm Water Quality Assessment (SWQA) form is a tool that ensures all projects applying for administrative and discretionary permits receive uniform screening to determine applicability of Municipal Permit and SUSMP requirements. During this reporting period, the SWQA incorporated an additional Priority Development Project category. The additional category

includes "all other pollutant generating Development Projects that result in the disturbance of one acre or more of land", in accordance with Municipal Permit Section D.1.d.(1)(b).

The Standard Development and Priority Development Project templates were developed as an aid to the design professional and development community. The templates are designed to provide a standardized form and content that aims to address Municipal Permit development planning requirements, while facilitating storm water plan review. The SWMP templates are a work in progress and will receive periodic updates as necessary to remain consistent with Municipal Permit and SUSMP requirements, while addressing the interests of the development community.

The revision to the Planning Division-Development Processing Guidelines targeted updates to procedures and reference documents to be consistent with current Municipal Permit and SUSMP standards. Emphasis is placed on storm water requirements that typically coincide with discretionary and administrative permit processing.

In addition to these aforementioned program changes and document updates, the City continued to implement data tracking systems in the Development Services Department and the City Water Department. The City Development Services Department encompasses the Planning, Engineering, and Building Divisions. Projects which submit permit applications to Development Services are entered into a tracking database (TRAKiT by CRW Systems®) which enables monitoring of projects from initial submittal through the entitlement, preliminary grading, precise grading, engineering construction, building construction, and final occupancy phases of a project. Permit applications are routed to each discipline; Planning, Engineering (Entitlement, Final, Geotechnical, Landscape, Storm Water, and Traffic), Building, Fire, and Water for review and comment. This procedure enables a coordinated review process between Divisions and Departments prior to project entitlement or granting of a permit; whichever is applicable.

An online version of TRAKiT, called eTRAKiT is available to the public. Users may access public records and review and permit status via the web. For more information, visit www.ci.oceanside.ca.gov and click on the "eTRAKiT-Online Permitting" Quick Link.

2.2.2 Source Characterization

An integral component of the City urban runoff program is source control characterization. Unmitigated activities associated with various land use types are known to be sources of pollutants that have the potential to negatively impact the environment and receiving waters. Land use source characterization is addressed through the implementation of unified Low Impact Development practices that include Treatment Control BMPs and HMP flow attenuation measures that enable Priority Development Projects to reduce impacts to the receiving waters, while demonstrating compliance with the Maximum Extent Practicable (MEP) standard.

The updated SUSMP identifies eleven (11) separate "Priority Project Categories" (PDP). Each PDP is identified as a potential or anticipated source of storm water pollutants and is based upon specific land use, proximity to environmentally sensitive areas, topography, and disturbed area. During this reporting period PDP categories were increased by one by including "all other

pollutant generating Development Projects that result in the disturbance of one acre or more of land", consistent with Municipal Permit Section D.1.d.(1)(b). Priority Project Categories and General Pollutant Categories appear in Table 1-1 of the updated SUSMP.

2.2.3 Best Management Practice Requirements

There are established minimum design requirements for all development projects, which are discussed in Section 4.4.3 of the 2008 JURMP. In addition, the Land Use Planning Element of the General Plan contains policies to protect water quality that are discussed in Section 4.2.3 of the 2008 JURMP.

The SUSMP was updated during this reporting period to address the current requirements of the Municipal Permit. Updated requirements include implementation of a unified Low Impact Development (LID) approach with the integration of HMP flow attenuation design to mitigate runoff discharges development sites. The unified LID approach addresses, at a minimum, all site runoff by identifying discrete Drainage Management Areas (DMAs) composed of quantified surface types that self-treat, self-retain, drain to a self-retaining area, or drain an Integrated Management Practice or IMP. Proposed Treatment Control BMPs and IMPs are required to meet the medium removal efficiency standard for the identified Primary Pollutants of Concern for each development project. The implementation of Treatment Control BMPs with low removal efficiency is not permissible.

Perhaps the most significant enhancement to the City and Countywide approach to storm water mitigation is the full implementation of the Hydromodification Management Plan or HMP. Application of HMP now applies to all Priority Development and redevelopment projects, except for select projects that qualify for narrowly defined exemptions. The expanded application of HMP is intended to address sediment transport impacts to all non-hardened conveyances, thereby reducing subsequent impacts to the receiving water. The projected benefits of HMP will be observed by and documented by the Copermittees as part of a long-term quality assurance program.

The updated SUSMP is available at the City of Oceanside – Development Services counter or may be downloaded from the Engineering Division – Subdivision Section webpage at: http://www.ci.oceanside.ca.us/gov/dev/eng/stormwater/default.asp.

By following the design procedure outlined in the updated SUSMP, applicants and design professionals can develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements. The implementation of a unified LID approach coupled with HMP provides the development community with a broad spectrum of design alternatives that will enable projects to achieve the Maximum Extent Practicable as cited in the Municipal Permit.

2.2.4 Program Implementation

Program implementation is enabled by the General Plan, which was adopted by the City Council and is recognized as a legally binding document. All applicable projects, including municipal projects are required to be consistent with the plan. In addition to the General Plan, the City addresses storm water pollution issues through the application of its Municipal Code. Chapter 40 of the Municipal Code is the Urban Runoff Management and Discharge Control Ordinance and is commonly referred to as the Storm Water Ordinance. The Ordinance contains multiple references to the current NPDES, Municipal Permit, and SUSMP as the governing storm water regulations. All new development and redevelopment projects are subject to updated SUSMP and the lawful prior approval provisions of the Municipal Permit.

All project applications are subject to a formal SUSMP Determination. Formal determinations are based upon a review of the Planning Division project application submittal. The minimum amount of information necessary to perform a SUSMP Determination includes a completed Storm Water Quality Assessment (SWQA) form, site plan, and project description and justification. The objective of the SUSMP Determination is to provide a consistent and thorough method for the initial review of development and redevelopment projects, with the overall purpose of categorizing projects and determining applicable SUSMP requirements. Development and redevelopment projects are categorized as; projects not subject to SUSMP Treatment requirements (Exempt Projects), Standard Development Projects (SDPs), or Priority Development Projects (PDPs). The SUSMP Determination also demonstrates to the RWQCB that each project receives a consistent review and enables the City to document project categorization and satisfy Municipal Permit requirements for reporting findings in the JURMP Annual Report.

Details on the completed and planned SUSMP updates may be found in Section 4.4.4.4 of the 2008 JURMP. In addition, information pertaining to the legal authority to implement a storm water program is located in Section 2 of the 2008 JURMP.

2.3 Environmental Review Process

The City has evaluated its established environmental review process for all development projects to determine compliance with the Municipal Permit. The City guides developers through the filing necessary documents and identifies which reports are required to be submitted and approved before development may begin. The current environmental review process places emphasis on the evaluation of water quality impacts and related issues that may result from the project development.

The Planning Division and Engineering Division of the Development Services Department are responsible for reviewing development projects for conformance with storm water requirements. The City will continue to assess all development and redevelopment projects for compliance with the California Environmental Quality Act (CEQA) by reviewing the Environmental Initial Study completed by each project applicant. A copy of this checklist is included in Appendix D of the 2010 JURMP. The checklist contains questions to evaluate potential negative impacts on receiving water bodies. Projects which are determined to have “potentially significant impacts” to the surrounding environment and receiving waters are required to prepare Environmental

Impact Reports (EIRs) for City review. Development projects that are not required to prepare EIRs proceed to the next phase of the approval process.

During the development of the 2008 JURMP, the City evaluated its current established environmental review process for all new development and redevelopment projects to determine compliance with the Municipal Permit. The City determined that the current environmental review process adequately addresses the requirements of the Municipal Permit. While the specific requirements evaluated during the environmental review process are expected to be updated periodically, the basic review structure did not require revision during this reporting period. Details of the current environmental review process are provided in Section 4.3 of the 2008 JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

The City has an established administrative and discretionary approval processes that provides multiple reviews by the Planning and Engineering Divisions. The Planning Division is responsible for determining acceptable land uses, development constraints, and identifying environmental issues. The Engineering Division is composed of various disciplines (i.e., Engineering Improvements, Grading and Drainage, Hydrology, Geotechnical, Storm Water, Traffic, and Landscape), which perform a coordinated review of all project applications. The Fire Department also performs multiple reviews and notifies the appropriate division in the event of a discrepancy or nonconformance with development regulations. In addition, the Building Division coordinates with Storm Water Development Review to ensure that new development, remodeling projects, additions, or demolitions are reviewed for compliance with storm water regulations. The coordinated involvement of all Divisions and disciplines provides an elevated degree of assurance that all projects are subjected to thorough scrutiny as part of a typical review process. Particulars surrounding the project approval and process verification are discussed in the following sections.

2.4.2 Source Characterization

Source characterization is an integral component of any urban runoff program. A wide variety of land use types and activities, if left unmitigated, are known to be sources of pollutants that have the potential to negatively affect the surrounding environment and the project receiving waters.

The updated SUSMP identifies eleven (11) separate “Priority Project Categories” (PDPs), which are cited as anticipated or potential sources of storm water pollution based upon particular land use types and specific site conditions, such as site topography and proximity to environmentally sensitive areas. During this reporting period PDP categories were increased by one to include “all other pollutant generating Development Projects that result in the disturbance of one acre or more of land”, consistent with Municipal Permit Section D.1.d.(1)(b). Priority Project Categories and General Pollutant Categories appear in Table 1-1 of the updated SUSMP.

Source characterization augments the implementation of unified Low Impact Development practices and flow control practices (HMP) that enable development and redevelopment project to reduce impacts to the receiving waters and demonstrate compliance with the Maximum Extent

Practicable (MEP) standard. Priority Development Project and General Pollutant Categories appear in Table 1-1 of the updated SUSMP.

2.4.3 Best Management Practice Requirements

The Municipal Permit dictates minimum BMP requirements for all new development and redevelopment projects. The requirements are addressed in the Oceanside Standard Urban Standard Management Plan (SUSMP) and Chapter 40 of the Oceanside City Code (i.e. the Storm Water Ordinance) included in the City Storm Water Ordinance and SUSMP and shall include, but not be limited to, the implementation of the following BMPs and LID practices by the project proponent:

- Source Control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed outdoor material storage areas, properly designed trash enclosure areas, the implementation of Integrated Pest Management Principles (IPM) and the inclusion of efficient irrigation system, and drought tolerant/native species landscape design consistent with the City Water Efficient Landscaping Ordinance 10-OR0412-1.

- The inclusion of Unified Low Impact Development (LID) practices that conserve natural topographic features, provide development setbacks from natural water bodies and conveyances, minimize site imperviousness, maximize infiltration, and retain and slow runoff, while addressing pollutant mitigation requirements;

- Implementation of development buffer zones from natural water bodies requires the project proponent to implement other types of buffers such as trees or access restrictions where conventional setbacks are not feasible;

- Measures to mitigate discharges of pollutants that result during grading or construction activities as specified in the Section D.2 of the Municipal Permit; and

- Submittal and approval of a mechanism under which ongoing long-term maintenance of all structural post-construction BMPs will be conducted.

Addressing storm water BMP requirements is required during the planning/permit application phase of a project. Projects must demonstrate compliance with Municipal Permit requirements prior to scheduling a public hearing. In addition, implementation of BMPs is a City standard condition of approval. The City will not support the entitlement of a project or issue development permits until the appropriate SUSMP documents are reviewed by City staff and approved by the City Engineer. Any subsequent changes that affect the approved BMPs will be subject to a formal Amendment process that includes review by City staff and approval by the City Engineer.

2.4.4 Program Implementation

2.4.4.1 SUSMP Revision

The updated SUSMP expands storm water requirements for new development and redevelopment projects. Storm water treatment requirements have been made more widely applicable and more stringent. New requirements include minimum standards for the implementation of Low Impact Development (LID) practices and the integration of flow control criteria designed to mitigate runoff peaks and durations from development sites. The updated SUSMP incorporates a unified LID procedure which combines site planning and design measures coupled with engineered, small-scale Integrated Management Practices (IMPs).

The updated SUSMP includes specific design information for dispersal of runoff to landscaped areas and for the integration of pervious pavements, bioretention facilities, flow-through planters, dry wells, infiltration basins, and cisterns into the project design. Where feasible and where permissible, the water in cisterns may be directed to non-potable uses to augment irrigation practices. Bioretention facilities and planter boxes may be designed with an impermeable barrier so that runoff does not saturate native soils. Instead, runoff is filtered through an engineered soil mix and captured in a subdrain and conveyed to a storm drain system. This configuration may be needed where native soils have low infiltration rates, where groundwater is high, contaminated, or where increasing soil moisture may present a hazard to foundations or slope stability. In limited and special circumstances, such as retrofit of existing drainage systems, some pedestrian-oriented developments, and roadway widening projects; where it can also be demonstrated it is not be feasible to construct any of these facilities, higher-rate surface biofilters or higher-rate vault based filtration units may be used to address treatment requirements. Applicants are also required to incorporate design features to control pollutants from specified on-site sources, such as refuse areas, outdoor storage areas, and vehicle washing and repair facilities. The SUSMP contains a number of Source Control BMPs designed to address the types of sources to be controlled and a corresponding list of required source control measures.

In addition to disconnecting impervious surfaces and mitigation pollutant sources, applications for approval of Priority Development Projects (PDPs) are required to demonstrate compliance with the Hydromodification Management Plan (HMP) consistent with the Municipal Permit. Applicants are directed to the HMP Applicability Determination matrix (HMP Figure 6-1) to determine if a proposed project is obligated to implement hydromodification controls. The HMP Decision Matrix applies to all PDPs. As a rule of thumb, application of flow controls to redevelopment projects would only be required if the redevelopment project increases impervious area or peak flow rates as compared to pre-project conditions. Please note that all Priority Development Projects, regardless of HMP applicability, remain subject to Municipal Permit unified LID and water quality treatment requirements.

By following the design procedure, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements.

2.4.4.2 SUSMP Document Review

During this reporting period the City continued to implement requirements and practices cited in the Municipal Permit, Interim SUSMP, and updated SUSMP. The Clean Water Program continued to use a full-time staff member to perform storm water development review. Storm water development review includes indentifying applicability of SUSMP requirements and confirming that SUSMP documents are in conformance with the Municipal Permit and SUSMP. Review also involves confirming that related final engineering/construction plans are consistent with the approved SUSMP documents.

As part of the administrative and discretionary permit application process, each development or redevelopment project is required to complete a permit application form, a Storm Water Quality Assessment form, and provide a project description and justification with supporting site development and architectural plans. The complete project application is reviewed by Storm Water Review staff with the underlying task of providing a formal SUSMP Determination. The determination clearly identifies the project type and subsequent SUSMP requirements.

The majority of new development and redevelopment projects are subject to the provisions of the SUSMP. Projects are identified as Priority Development or Standard Development projects based upon land use categories and applicability of permanent storm water BMPs. A very limited number of projects are not required to submit a SUSMP document and are noted as SUSMP exemptions. Projects which are granted a SUSMP exemption typically involve incidental construction with negligible or no ground disturbance activities. Examples include the addition of an antenna to an existing cellular tower or interior tenant improvements to an existing building.

A SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of infeasibility to a Priority Development Project and does not anticipate granting waivers in the future; however, if waivers are necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed.

Projects which have been formally identified as Priority Developments or Standard Developments are required to submit a project specific Storm Water Mitigation Plan (SWMP). Entitlement project storm water plans and supporting documents are submitted to the Planning Division for distribution to Engineering and Storm Water Development Review staff. The storm water review of Priority and Standard Development Projects is an iterative process that entails examination of the SWMP for consistency with SUSMP and Municipal Permit requirements. SWMP reviews also comprise an evaluation the supporting documents that include (at a minimum); the Site Development Plan, Project Description and Justification, Hydrology Study, HMP Study, Geotechnical Report, Biological Study, Slope Analysis, and etc. Projects which are consistent with the Municipal Permit and SUSMP are deemed complete and forwarded to the City Development Engineer and City Engineer, respectively, for final review and approval. A digital image and hard copy of the original, wet-signed plan are retained for City records.

2.4.4.3 Priority Projects

Priority Projects are required to obtain an approved SWMP as part of the project entitlement process. The items required in a SWMP are described in Section 1.6 of the SUSMP. In summary, Priority Projects must determine the Primary Pollutants of Concern based upon source characterization and impacts to the 303(d) impaired receiving waters. This category of development is required to provide Source Control BMPs while implementing LID practices. The project must incorporate Integrated Management Practices/Structural Treatment Control BMPs into the site development. The selected IMPs/Treatment Control BMPs must have a medium to high removal efficiency for the identified Primary Pollutants of Concern. The Treatment Control BMPs with low pollutant removal efficiencies are not permissible in the City of Oceanside.

Priority Projects are also required to obtain an approved Operation and Maintenance Plan (O&M Plan) and enter into a Storm Water Facilities Maintenance Agreement (SWFMA) to ensure the long-term maintenance and operation of the Treatment Control BMPs. The City Engineer will not consider Priority Project structural Treatment Control BMPs to be effective without the assurance of a long-term maintenance component, and therefore will not accept storm water BMPs as meeting the MEP standard, unless a mechanism is in place that will ensure ongoing long-term maintenance of all structural BMPs. This mechanism shall be proposed by the project proponent as part of the SWMP and will be refined though the City review process until satisfactory verification of maintenance is provided to the City Engineer. Such verification may include, but is not limited to, covenants, legal agreements, maintenance agreements, and/or conditional use permits. A non-refundable security may be required. The security provides the City with funding to perform maintenance activities in the event of default by the owner.

2.4.4.4 Priority Project Example

The Tyson-Wisconsin Parking Lot and Coastal Rail Trail is a Capital Improvement Project that was conceived by City staff as a means of replacing coastal access parking that will be displaced by the development of the Downtown City Mark project. Although significantly constrained by surrounding development and negligible topographic relief, the 284-space parking lot capitalizes on Low Impact Development (LID) strategies by incorporating an efficient site layout that disperses runoff from impervious areas to pervious surfaces that support treatment BMPs or Integrated Management Practices (IMPs). The extension of the Coastal Rail Trail provides an additional use element while enhancing public access.

The project is located west of, and adjacent to, the North County Transit District (NCTD) rail lines between Tyson Street and Wisconsin Avenue in the north-central coastal zone of Oceanside. The project is situated between the existing residential properties fronting Myers Street and the rail line. The site is approximately 700-feet from the Pacific Ocean Shoreline receiving water and is not located within 200-feet of a Water Quality Environmentally Sensitive Area (WQESA) or in a FEMA Flood Hazard Zone.

Application of the HMP Applicability Determination matrix indicates <u>this project is exempt from the requirements of the HMP</u> consistent with Node 5 of the decision matrix and RWQCB Order No. R9-2007-0001, Section D.1.g.(3) which states HMP "does not apply to Development

Projects where the project discharges stormwater runoff into… underground storm drains discharging to bays or the ocean…" In accordance with the Permit, hardened conveyance systems can include existing concrete channels, storm drain systems, riprap channels, and etc.
The site is a denuded, vacant strip of land 63 feet wide and approximately 2,500 feet long, encompassing an area of approximately 3.6 acres. The underlying soils are identified as Group B per Appendix A – Hydrologic Soil Groups Map of the San Diego County Hydrology Manual, June 2003. There is an existing 0.4 acre impervious, public parking lot, located at the southern terminus of the project, adjacent to Wisconsin Avenue that will be removed, reconfigured, and replaced, as part of the overall project improvements.

The topography may be described as gentle, with longitudinal slope gradients approaching flat; to cross slopes varying from 0% to 1%. Elevations range from approximately 37.0 MSL at Oak Street in the south, to 45.0 MSL at Tyson Street in the northern portion of the site. The present site topography creates an isolated project watershed with no major drainage courses; framed by existing development. The easterly project watershed boundary is the centerline of the western most NCTD rail. Sheet flow emerges from the track ballast and continues westerly, as sheet flow, either through the existing residential yards, or to the intersecting Tyson, Fir, Pine, Elm, Ash, and Oak streets, to outfall locations along Myers Street. Flows that reach Myers Street are conveyed north by gutter flow to existing storm drain located in Wisconsin Avenue. There, flows form a confluence with upstream offsite runoff and then are conveyed west to an established outfall west of the intersection of Wisconsin Avenue and The Strand.

The project is constrained by adjacent existing development and storm drainage infrastructure that place significant limitations on site grading while limiting the amount of available hydraulic head. This constraint is evident in the amount of elevation differential available to provide longitudinal slope across the length of the site. Drainage is further constrained by shallow existing storm drain structures located near the southern terminus of the site. An additional constraint is the adjacent to the NCTD rail, where grading must be performed in such a manner as to "disturb the rail ballast". Additional grading consideration was required due to multiple building and structure encroachments onto City property by rear-yards of residents fronting Myers Street. There are no geotechnical considerations that constrain the site development and there are no environmental constraints associated with this project.

The project is a coastal access parking lot containing 284 parking spaces with an adjacent Coastal Rail Bike Trail. The project design incorporates features that minimize impervious areas by optimizing the site layout. The parking lot utilizes one-way vehicular circulation, coupled with compact parking spaces and minimal width drive aisles to reduce site imperviousness while maximizing the land use element. LID practices are integrated into the landscape features, low-traffic areas, and pervious areas that receive runoff from adjacent impervious surfaces.

The site is divided into seventy discrete Drainage Management Areas (DMAs) to achieve compliance with the Municipal Permit. Each DMA is either self retaining, drains to a self retaining area or disperses runoff to an LID Integrated Management Practice (IMP). There are no self treating areas within the project. The site also uses the limited application of proprietary Treatment Control BMPs in select DMAs, where LID practices or structural BMPs are not practicable.

The project Low Impact Development design incorporates thirty-six (36)Self-Retaining Areas. Self-Retaining Areas (also referred to as a zero-discharge area) are designed to retain the first one inch of rainfall without producing any runoff. The Self-Retaining Areas are distributed along the east and west sides of the parking lot and are comprised entirely of isolated landscape islands; contained by a 6-inch perimeter curb. To facilitate the required capture depth, the finish grade within each landscape DMA is set 0.15 foot below the surrounding curb low-point. Setting the interior finish grade in this manner compensates for sloping finish top-of-curb grade. To ensure the required capture depth, each DMA is equipped with a 4" area drain and atrium grate, which is set 1-inch above the interior landscape finish grade. Each area drain is piped to a 4-inch perforated sub-drain that also services an adjacent bioretention swale or media filter. The combined flows are conveyed within the sub-drain to a curb inlet. The curb inlet is a component of the municipal storm drain that conveys area-wide flows to an existing outfall location west of terminus of Wisconsin Avenue, on the Pacific Ocean shoreline.

The Tyson-Wisconsin Parking Lot contains twenty-three (23) separate "Areas That Drain to Self-Retaining Areas". Each retaining DMA utilizes a minimum 7.5-inch pervious concrete section within the delineated low traffic areas and assumes 40% void to obtain the required minimum 3-inches of water depth over the available pervious area while not exceeding the maximum ratio of 2 parts impervious area to 1 part pervious area. The soil infiltration rate is cited as 0.05-inches per hour, as excerpted from the "Preliminary Geotechnical Investigation" prepared by Taylor Group, Inc, dated March 3, 2009. The study categorizes the onsite soils as "Group C". These findings are not consistent with the San Diego County Hydrology Manual, June 2003, Appendix A – Hydrologic Soil Groups Map, which indicates the site is within area comprised Group B soils. However, for purposes of this Plan, the more conservative study findings (Group C soils) were used to determine BMP infiltration drain-down times. Infiltration BMPs will drain-down in sixty hours; well within the ninety-six hour maximum. It is anticipated drain-down times will be less than due to seasonal evapotranspiration rates.

The Tyson-Wisconsin Parking Lot and Coastal Rail Trail storm water mitigation design incorporates a total of eight (8) areas that drain to Integrated Management Practices or IMPs. The IMPs that service these areas are comprised of bioretention swales and media filter trenches. The western half of the site utilizes a single media filter trench with three (3) bioretention swales, whereas the eastern half of the site includes four (4) media filter trenches.

The three bioretention swales are more precisely located between the western project boundary and adjacent curb and gutter, and drain from north to south. Concentrated flows enter each bioretention swale through a series of 12-inch wide curb openings, spaced approximately one-half station apart and located in the in the middle of the adjacent parking space.

The swales are trapezoidal, with a 3-foot top width, a 1-foot base and a depth of 6-inches. The longitudinal slope corresponds to the adjacent curb and gutter, with gradients varying between 0.3% and 0.5%. The side slopes and portions of the swale base are stabilized with 2-4-inch cobble; resembling a dry-riverbed feature. Landscape coverage and drought-tolerant plant material within the swale is consistent with the function and aesthetics of the dry-riverbed feature.

The relatively flat longitudinal slope slows the low-flows that enter the swale; promoting infiltration through the swale cross-section. The cross-section is comprised of an 18-inch lift of engineered soil mix, with sufficient organic material to promote plant growth, while maintaining a minimum 5-inch/hour percolation rate. The layer of engineered soil mix is underlain with 12-inch sub-drain section composed of a 2-inch lift of washed pea gravel over a 10-inch layer of ¾-inch clean, open graded, crushed, angular, washed-stone. The bioretention swale section is equipped with a 4-inch PVC perforated sub-drain. The drain directs filtrate to a Type B curb inlet. Treated flows and exceedance flows, which are treated by a proprietary curb insert, are combined within the inlet, and conveyed south in an RCP storm drain to an existing RCP storm drain located in Wisconsin Avenue. Onsite flows form a confluence with runoff from the upstream watershed, and are conveyed to an existing stabilized outfall location on the Pacific Ocean shoreline.

The IMP design includes four media filter trenches. One media filter trench is located on the west half of the site, near the Wisconsin Avenue parking lot exit. The trench services a DMA comprised of landscape, AC bike trail, and a strip of pervious concrete. The remaining three media filter trenches are located in the eastern half of the site. This series of trenches mitigates flows from the railroad ballast, AC bike trail, and strip of pervious concrete. The media filter trenches are more precisely located behind the curb and gutter between the AC bike trail or railroad ballast.

Runoff entering the media filter trench is comprised of sheet flow from the adjacent AC bike trail and/or railroad ballast. The cross section of the media filter trench is similar to that of the bioretention swale with the exception that it is not designed to support plant life. Rather than having a planted layer, the sand media filter is stabilized by a 2-inch lift of pervious PCC concrete. The section underlying the pervious concrete is comprised of an 18-inch lift of engineered soil mix with a minimum 5-inch/hour percolation rate, such as clean, washed concrete sand. Beneath the layer of engineered soil mix is a 12-inch sub-drain section composed of a 2-inch lift of washed pea gravel over a 10-inch layer of ¾-inch clean open graded, crushed, angular, washed stone. As with the bioretention swale, the sand media filter trench section is equipped with a 4-inch PVC perforated sub-drain. The drain directs filtrate to a Type B curb inlet. Treated flows and exceedance flows are combined within the inlet, and conveyed south in an RCP storm drain to an existing RCP storm drain located in Wisconsin Avenue, which as previously stated, are treated by a proprietary curb insert. Onsite flows form a confluence with runoff from the upstream watershed, and are conveyed to an existing stabilized outfall location on the Pacific Ocean shoreline.

There are areas within the site comprised of PCC curb and gutter and incidental areas that drain to the curb and gutter. The primary function of the curb and gutter is to convey runoff that exceeds the treatment flows. The only practicable method of addressing this negligible amount of treatment flow is by employing a proprietary treatment control BMP. The anticipated pollutants from this limited watershed include trash and debris. A curb inlet basket was selected to mitigate these secondary pollutants of concern. The project will implement the BMP in the five proposed curb inlets.

The IMPs are sized using methods described in Section 4 of the City SUSMP. Areas draining to IMPs are multiplied by a sizing factor to calculate the required minimum size of the IMP. The minimum permissible IMP size (i.e. footprint) for a bioretention or media filter IMP is 4% of the total DMA. The identification of DMA surface types and runoff factors are enumerated in a Tabulation of Areas Draining to DMAs.

2.4.4.5 Standard Development Projects

Development and redevelopment projects that are not identified as Priority Development Projects or are not determined to be exempt from SUSMP Treatment requirements, and receive a formal SUSMP Determination identifying the project as a "Standard Development Project" (SDP) are required to implement Source Control BMPs consistent with Section 2.7 of the SUSMP. Projects are also required to include LID features designed to conserve natural topographic features, provide development setbacks from natural water bodies and conveyances, minimize site imperviousness, maximize infiltration, and retain and slow runoff.

Standard Development Projects are required to implement a Standard Development Project SWMP. Clean Water Program staff may also require additional controls for Standard Development Projects, appropriate to the project, which may include treatment BMPs and LID IMPs such as infiltration or bioretention. If treatment facilities are included, provisions are to be made to ensure their long-term maintenance.

2.4.4.6 Adequacy of Proposed Plans

Staff is tasked with review of submitted SUSMP documents and other relevant plans for compliance with the Municipal Permit and SUSMP requirements. The City Engineer may elect to approve proposed alternatives to the BMP requirements contained in the SUSMP if they are determined to be applicable and equally effective. Additional analysis or information may be required to enable staff to determine the adequacy of proposed BMPs and may be requested following the conclusion of a staff review cycle. A project SWMP will be deemed complete when the project complies with the requirements of the City SUSMP and Municipal Permit.

2.4.4.7 Inspection

The City has compiled a Treatment Control BMP inventory with information for all approved and/or constructed Priority Development Projects. The inventory is included in this report as Attachment 2-A. All installed Treatment Control BMPs are regularly inspected by City Code Enforcement Inspectors to ensure intended function and proper maintenance. The Municipal Permit dictates that high priority sites shall be inspected annually and medium priority sites are to be inspected every two years. Low priority sites are inspected on an "as needed" basis. In addition, the Municipal Permit requires a minimum of 20% of the total number of projects with approved Treatment Controls and a maximum of twice the average number of projects with Treatment Control BMPs approved per year will be inspected annually. The Municipal Permit dictates 50% of all medium priority sites with drainage inserts will be inspected annually. City Code Enforcement inspection staff performed a total of 37 treatment control BMP inspections during this reporting period.

It is the responsibility of the City Engineering Inspection staff to ensure that all BMPs proposed for a project have been built or installed according to the construction plans; before approving

subsequent stages of construction. The City Engineer requires that all Priority Development Projects attached a duplicate of the approved SWMP BMP Exhibit to the construction plan set. The inspectors utilize the project plans to identify any missing or incorrectly constructed/installed Treatment Control BMPs. Engineering Inspection staff has the authority to stop a project from proceeding if BMPs are not constructed consistent with the approved SWMP. The SWMP is the governing document. Moreover, inspectors have the authority to withhold the Certificate of Occupancy (CO) and to deny approval for sites with observed problems. Inspectors also have the authority to withhold the release of bonds until plan requirements are adequately addressed. City Staff routinely inspects all development projects subject to SUSMP requirements to ensure that all LID, Source Control, and Treatment Control BMPs proposed for the project have been constructed in compliance with all approved plans and City permits and ordinances. This established method of ongoing inspection during site development and the ability to stop-work, withhold release of bonds, and/or occupancy, ensures developer compliance with the approved SWMP.

Inspections include examination of all Treatment Control BMPs at the site to verify that each Treatment Control BMP is in working order, being maintained properly, and is in compliance with all applicable City ordinances and permits. Inspection findings will be documented by the inspector using the City of Oceanside Treatment Control BMP Inspection form in Appendix D of the 2010 JURMP. Deficiencies in Treatment Control operation and maintenance are noted during the inspection, the responsible party is notified and appropriate enforcement actions take place as described in Section 4.4.4.9 of the 2010 JURMP, in order to achieve compliance.

The City requires annual verification of proper maintenance of all treatment control BMPs by the responsible party for maintenance prior to the start of the rainy season. The City Code Enforcement section is responsible for ensuring the proper long term maintenance and operation of post construction BMPs. The City requires all Priority Projects to include Operation and Maintenance checklists and a self-inspection log for the site's Treatment Control BMPs as found in the approved project SWMP. The City requires these forms to be completed by the site's responsible party and be submitted to the City Code Enforcement staff on an annual basis. See Attachment 2-A for sites that were inspected and/or have BMP maintenance verification on file for this reporting period

A detailed description of the different enforcement measures used by the City of Oceanside to enforce its storm water regulations can be found in Section 2 of the 2008 JURMP.

Enforcement of post-construction BMP maintenance after occupancy is the responsibility of City Code Enforcement officers. Code Enforcement uses a variety of methods to ensure long term maintenance objectives are met. Enforcement actions include verbal and written warnings and monetary penalties. Enforcement measures will escalate with continued violations as necessary. All enforcement actions are documented in the development project's database file. If a development site receives frequent citations or is not responsive to previously issued enforcement actions, more severe actions, such as court actions, will be used as necessary. Details surrounding the City Treatment Control BMP inspection program may be found in Section 4.4.4.7 of the 2010 JURMP.

2.4.4.8 2010-2011 SUSMP Document Submittal and Review Summary

This Section identifies the SUSMP document reviews that were performed during the 2010-2011 reporting period.

There were 26 Priority Development Project SWMP submittals which prompted 67 reviews with a total of 11 projects receiving approval. During the same period there were 15 Priority Projects that submitted Amendments to a previously approved SWMP that prompted 35 reviews and yielded 11 approvals. In addition, there were 3 Standard Development Projects that submitted an SWMP which prompted 8 reviews. One Standard Development Project SWMP was approved during the 2010-2011 reporting period.

During the reporting period there were 13 Priority Development Projects that submitted O&M plans as part of the final engineering process. There were a total of 33 reviews performed with a total of 8 O&M Plans receiving approval. The SWMFA is typically submitted with O&M Plan. Some projects elect to "trail" the SWFMA submittal. During this reporting period 8 project SWFMAs were submitted, prompting 19 reviews, resulting in 2 approved agreements.

All projects were subjected to a SUSMP Determination. The determination process places the majority of developments into Priority Development Project or Standard Development Project categories. During this reporting period, a number of projects were found to be exempt from SUSMP requirements. Projects which are granted a SUSMP exemption typically involve minor construction with minimal, or no ground disturbance. Examples of projects that are eligible to receive an exemption include interior tenant improvements to an existing structure, or the addition of an antenna to an existing cellular tower. During this reporting period there were 41 reviews linked to the evaluation of 29 project submittals as part of the SUSMP Determination process. At total of 24 projects were not categorized as a Priority or Standard Development Project and therefore were not required to submit an SWMP.

As previously stated, a SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of treatment control BMP infeasibility to a Priority Development Project and does not anticipate granting such waivers in the future. However, if a waiver is deemed necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed. There were no SUSMP waivers of infeasibility granted during this reporting period. See Table 2-2 for more detail on project submittals and review results.

2.4.4.9 Outreach and Staff Training

City officials involved in planning and review of development projects received a comprehensive training on storm water requirements during this reporting period. See Table 2-3 for the departments and city officials that were provided training. Training topics during this reporting period focused on general water quality concepts, specific SUMSP requirements, LID components that can be recommended for specific projects, implementation procedures and minimal information about future HMP components.

Table 2-3. Staff Training during the 2010-2011 Reporting Period

Department/Division	Training Date	Number in Attendance
Building Inspectors	June 30, 2010	3
Engineering Inspectors	January 14, 2010	6
Planning Division	April 27, 2010	7

2.5 Development Planning Component Effectiveness Assessment

See Section 11.0 for an assessment of the Development Planning component of the City's JURMP.

2.6 Program Review and Modification

The Development Planning components of this Report, the City JURMP, and the SUSMP will be revised as necessary to conform to the future requirements of the Municipal Permit. Major revisions to the Development Planning component will be cited in Section 14 of the City JURMP.

THIS PAGE INTENTIONALLY LEFT BLANK

3.0 CONSTRUCTION COMPONENT

3.1 Introduction

Land disturbance activities associated with grading and construction when left unmitigated, are known to cause negative impacts to the receiving waters. The JURMP provides guidance designed to address potential impacts associated with construction and grading activities. The Construction Component of the Annual Report briefly describes the measures implemented by the Engineering Division – Engineering Inspection that are intended to meet the requirements of the Municipal Permit while reducing impacts to the receiving water to the Maximum Extent Practicable (MEP). A summary of applicable sections of the Municipal Permit and the corresponding Annual Report sections are presented in Table 3-1.

Table 3-1. Order 2007-0001 Compliance Summary

J.3.a.(3)(d).iv Updated construction site inventory	See Section 3.2.1 of this Annual Report
J.3.a.(3)(d).i Ordinance update and approval process modifications	See Section 3.3 of this Annual Report
J.3.a.(3)(d).vi BMP Implementation	See Sections 3.4 and 3.5 of this Annual Report
J.3.a.(3)(d).ix Confirmation that sites went through urban runoff approval process	See Section 2.4.3 of this Annual Report
J.3.a.(3)(d).x and xi Inspection of construction sites	See Section 3.5.2 of this Annual Report
J.3.a.(3)(d).xiii and xiv Enforcement of construction sites	See Section 3.5.3 of this Annual Report
J.3.a.(3)(d).xii Inspection frequency and totals during dry and wet seasons	See Section 3.5.2.3 of this Annual Report
J.3.a.(3)(d).vii Requirements for application of erosion and sediment control BMPs	See Section 3.5 of this Annual Report
J.3.a.(3)(d).viii Construction sites requiring Advanced Treatment	See Section 3.5 of this Annual Report

Portions of the JURMP Construction Component are based upon the following municipal documents:

- Chapter 40 of the City Code or Ordinances
- City of Oceanside Grading Regulations Manual
- City of Oceanside *Construction Urban Runoff Requirements Manual* (Construction Manual).

The documents are available on the City website.

The Construction Manual was developed by the City to provide construction projects with guidance in order to comply with the City Code and its ordinances. The Construction Manual is a living document and will change with time to ensure an effectively implemented program. Updated versions of the manual will be made available whenever modifications have been proposed and approved by the City. During this reporting period no changes were made to the Construction Manual. The City's full Construction Manual can be found in Appendix C of the 2008 JURMP Update. It is anticipated that this manual will change during this permit cycle once a new Construction Permit is adopted by the State Water Resources Control Board.

3.1.1 Notable Activities

During this reporting period the Development Services Department, which includes Building, Engineering, and Code Enforcement Divisions, continued to implement TRAKiT® permitting software. In addition, the City continued to provide public access to select through the online version of TRAKiT™, called eTRAKiT™. Public users are able to access records and view the status of projects, permits and cases via the Internet. For more information, visit www.ci.oceanside.ca.gov and click on the "eTRAKiT-Online Permitting" Quick Link. The Clean Water Program will be reviewing the effectiveness of the new tracking tools and will continue to implement improvements. See Section 3.2.1 for additional information regarding TRAKiT® software.

3.2 Source Characterization

3.2.1 Site Inventory

The City has compiled a watershed-based inventory of all active construction sites within its jurisdiction that may have a potential impact on receiving waters. Projects that appear in the inventory are subject to grading permit and erosion control plan requirements. Engineering Division Inspection staff and Building Division Inspection staff are tasked with performing regularly scheduled site inspections to ensure development is executed as planned and erosion controls are implemented consistent with each stage of development. Small projects that are not associated with ground disturbance and do not require a grading permit, such as cell-tower retrofit or tenant improvement, are not included in the inventory, however still receive inspection.

The inventory process begins when information is collected from construction projects at the time of grading or building permit application. When the permit is approved, this information is then entered into a database developed by the City. If a permit was previously issued for a project, then the database is updated to reflect the most current information. In an effort to improve productivity, the Development Services Department coordinated Code Enforcement, Fire Prevention, Information Technologies, and Water Utilities Department to institute an efficient permitting system and streamline processing. Permit processing and tracking has been improved since the October 2009 implementation of TRAKiT® permitting software by CRW Systems, Inc. The data management capabilities of TRAKiT assist specifically trained and dedicated Development Services Technicians (DSTs) as the "front-line" staff with regard to daily organization, input, and revision of permit data for every active project. The software contains

enhanced reporting tools to provide management staff with pertinent statistics and data to evaluate workflows and resource allocation.

The inventory includes details on each construction site, including project name, location, and threat to water quality (TTWQ) as determined by the process described in Section 5.2.1.1 of the 2008 JURMP. Construction sites that were active during this reporting period may be found in Attachment 3-A.

3.2.2 Construction Site Prioritization

All construction projects are required to hold an onsite pre-construction meeting. The meeting is scheduled after obtaining grading permit and prior to commencement of any grading activities. The purpose of the "pre-con" meeting is to acquire and disseminate project specific information, identify key participants, and determine the project Threat-To-Water-Quality (TTWQ) by completing an Urban Runoff Threat Assessment. Required attendees include, but are not limited to, the owner, general contractor, project superintendant, grading contractor, geotechnical consultant, other pertinent subcontractors (environmental, archeological, and etc), and the City inspector assigned to the project.

The completed Urban Runoff Threat Assessment enables the determination of the project TTWQ. Projects are categorized as a low, medium, or high TTWQ, which determines the minimum construction inspection frequency. The project attributes that are used to assess a construction project include:

- Project Size
- Item 2 – Planned Grading/Soil Disturbance Period
- Item 3 – Proximity to Water Quality Environmentally Sensitive Area (WQESA)
- Item 4 – Presence of Significant Erodible Slopes
- Item 5 – Potential to Produce Non-Storm Water Pollutants or Discharges
- Item 6 – Amount of Proposed Impervious Area

All project proponents are directed to reference a prioritization matrix (Table 3-2) to determine the TTWQ priority of the project. To use the matrix, first locate the project size and then identify each item that applies to the project, within the row. Each item in the row corresponds to a level of prioritization, i.e. high, medium, or low. By determining the average prioritization within the applicable row based upon project size, a project will be assigned a high, medium, or low TTWQ and construction inspection frequency. The use of this matrix was developed consistent with the requirements of the Municipal Permit.

Table 3-2. Construction Project TTWQ Prioritization Matrix.

Project Size	Item 2	Item 3	Item 4	Item 5	Item 6	Default Priority
Greater than 50 acres	High	High	High	High	High	Medium
5–50 acres	—	High	High	High	High	Medium
1–5 acres	—	High	Medium	Medium	Medium	Medium
Less than 1 acre	—	Medium	Medium	Medium	Medium	Low

3.3 Updates to Ordinances and Approval Processes

During this reporting period, the City continued to actively participate in the Copermittee Workgroups, Sub-workgroups, and HMP-Technical Advisory Committee. The combined Copermittee effort resulted in the release of the Countywide Model SUSMP in February 2010, adoption of the Hydromodification Management Plan by the RWQCB in June 2010, and completion of the Regional Construction BMP Guidelines in June 2010. The City also released an updated SUSMP in March 2010; consistent with the Countywide Model SUSMP and the Municipal Permit. Subsequent to the updated SUSMP, the City released a draft Storm Water Mitigation Plan (SWMP) template. The purpose of the template is to provide the design professional with a standardized presentation format while facilitating plan review. The SWMP template will become finalized upon complete implementation of the HMP.

The updated SUSMP expands storm water requirements for new development and redevelopment projects. Storm water treatment requirements have been made more widely applicable and more stringent. New requirements include minimum standards for the implementation of Low Impact Development (LID) practices and the integration of flow control criteria designed to mitigate runoff peaks and durations from development sites. The updated SUSMP incorporates a unified approach to the application of LID practices which combines site planning and design measures coupled with engineered, small-scale Integrated Management Practices (IMPs).

In addition to the updated SUSMP, the City continued to require all development and redevelopment projects that cause land disturbance, including projects subject to the Statewide Construction General Permit (CGP), to complete and implement a City Erosion Control Plan. Erosion control plans are reviewed by Engineering Division staff and approved by the City Engineer. The Erosion Control Plan may appear to be a redundant document, as it typically overlaps the GCP SWPPP. However, the erosion control plan differs from the SWPPP because it requires a bond prior to approval. The erosion control bond creates a maintenance funding mechanism that assures funds will be available to repair or construct BMPs in the event of default by the Responsible Party. Plans are required to be updated on annual basis, prior to the rainy season, to assure that plans are consistent with site conditions and to update the erosion control bond.

3.4 Best Management Practice Requirements

The City has a set of minimum Best Management Practices (BMPs) that must be implemented at all construction sites regardless of TTWQ priority including implementing and maintaining general site management BMPs and erosion and sediment control BMPs to reduce, retain, and manage pollutant discharges to the MEP. Table 5-2 of the 2008 JURMP (pp. 5-4 and 5-5) outlines the minimum construction BMPs required by the City. The table also provides references to the corresponding BMP fact sheets obtained from the Caltrans Storm Water Quality BMP Handbook and California Stormwater Quality Association (CASQA) Construction BMP Handbook.

A Construction BMP brochure titled “A Pollution Prevention Guide for the Construction Industry” is provided to the developer during pre-development meetings. This brochure provides a sample drawing that illustrates the minimum BMPs that must be used at all construction sites to

protect storm drains and minimize pollution. This brochure was provided as Attachment 3-B in the 2008-09 JURMP Annual Report. This brochure is also available at both the Engineering and Building Department counters of the City. Approximately 200 brochures were distributed to the public by building division staff during this reporting period.

3.5 Program Implementation

All construction sites are required to select, install, and maintain BMPs that meet or exceed the minimum BMP requirements described in the City Construction Manual and in Section 5.4.1 of the 2008 JURMP. There is no minimum threshold of disturbed area that relieves a project of the responsibility to implement erosion and sediment control BMPs. Moreover, all sites requiring a grading permit are obligated to implement an Erosion Control Plan as part of the Grading Plan review and permit process. Construction activities that result in a land disturbance equal to or greater than one acre are subject to the requirements of the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP). Projects that are subject to the CGP are required to file a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB), obtain a Waste Discharge Identification Number (WDID#), and develop and implement a site specific Storm Water Pollution Plan (SWPPP) prior to the commencement of any grading activities. SWPPPs are required to include a list of BMPs that will be implemented during each phase of construction to reduce pollution discharges to the MEP. In addition, selected projects governed by the CGP may be required to employ advanced treatment as part of their SWPPP. Each project is required to perform a site assessment that includes the determination of a Sediment Risk Factor and a Receiving Water Risk Factor to ascertain a Combined Risk Level. Projects with Risk Levels associated with Numeric Effluent Limits (NELs) may find it necessary to implement an Advanced Treatment System (ATS) to achieve effluent standards. Projects faced with physical constraints that "inhibit the ability to construct a correctly sized sediment basin" may also elect to implement an ATS to comply with the MEP standard.

3.5.1 Education and Staff Training

Site owner/developer education and training

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents. Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of permits, construction site owners and developers meet during a pre-construction meeting with City staff and developer staff and/or contractors, subcontractors and superintendents. During these meetings City staff from various departments review what is expected of the project proponent in order to develop the project. At least one Clean Water Program staff person attends these meetings. Topics covered during these meetings specific to storm water pollution prevention include:

- Grading - Reference to the City of Oceanside Grading Regulations manual and the BMP Construction manual (both available on the City's website).

- Site Plan review for storm water inlets and associated BMPs
- Review of site-specific BMPs more applicable to the site and associated with the potential pollutants that could be generated from the proposed business operations
- Inspection Requirements and Frequency – Unannounced and upon call-outs from the public
- Expectations of BMPs during dry and wet seasons
- Construction BMP Brochure is provided

Prior to wet season, all currently permitted construction sites were contacted to remind site owners and developers to assess, repair and update their sites BMPs to reduce erosion potential and prevent storm water pollution. Site owners and developers are also advised to update their erosion control plans and SWPPPs that are applicable to the site.

Municipal Staff Training

City staff directly involved with development and construction sites are provided training on a departmental basis. For further details on topics covered during the City's construction educational program, please refer to Sections 10.2.2 and 10.3.1 of the City's 2008 JURMP. During this reporting period three groups were provided training in regards to erosion control and BMP installation and maintenance for construction sites. See Table 3-3 below for those who received training.

Table 3-3. Municipal Staff Training.

Training Date	Department/Division	Number in Attendance
11/10/10	Engineering Inspectors	3
11/10/10	Engineering Admin	6
11/10/10	Building Inspectors	3

In addition to the in-house trainings listed above, city staff involved in land development attended other trainings provided by outside agencies. See Table 3-4 below for a list of these trainings and staff who attended.

Table 3-4. Municipal staff attendance at land development-related trainings.

3.5.2 Inspection of Construction Sites

Permit Order 2007-0001 requires that the City develop and implement an inspection program to ensure that each construction site complies with City ordinances and permits, and the Section F.2.g. of the Municipal Permit. This section describes the City inspection of construction sites during the reporting period 2010-2011.

Each project was assigned an Engineering Inspector who was tasked with conducting site inspections throughout the life of the project. All inspectors have been educated in the requirements of the Permit Order 2007-0001 and City erosion control requirements through City personnel training and/or construction-specific certificate training seminars.

3.5.2.1 Initial Site Inspections

Upon commencement of work at a construction site, a City inspector will visit the site and perform the following:

- Where applicable, confirm coverage under the General Construction Permit
- Review City required Erosion Control Plans to confirm site implementation and consistency with the project SWPPP
- Check for field implementation of the BMP as indicated on supporting plans
- Review BMP maintenance procedures/schedule

All construction sites in the City construction site inventory receive initial site inspections as part of the pre-construction meeting, regardless of TTWQ priority. If any required documents or BMPs are found to be missing or deficient, the City may issue a citation, notice of correction, or stop work notice until the deficiencies are corrected.

3.5.2.2 Routine and Follow-Up Inspections

The initial site inspection is followed by additional, regularly scheduled inspections. The minimum frequency of the routine inspections is dependent upon the site TTWQ. The criteria used to determine the site TTWQ was developed to correspond to the routine inspection frequencies required by the Municipal Permit, as discussed in Section 5.2.1.1. Table 3-5 presents the different TTWQ categories and their corresponding minimum inspection frequencies for the wet (October 1 through April 30) and dry (May 1 through September 30) seasons. Note these are minimum storm water inspection frequencies. The Engineering inspector is present onsite many times during a normal work week and when present, performs visual inspections of all the construction components of the project.

Table 3-5. Construction Site Inspection Frequency

Construction Site TTWQ	Wet Season Inspection Frequency	Dry Season Inspection Frequency
High	Bi-weekly (Every two weeks)	As needed
Medium	Monthly	
Low	As Needed	

3.5.2.3 Construction Site Inspection Frequencies

Attachment 3-A provides the number of inspections conducted during both rainy and dry seasons for active construction sites during the reporting period. This table provides the number of inspections performed by the Engineering and Building department staff.

There were 47 active construction sites included in the inventory summary. The construction sites were assessed to be a high, medium, and low TTWQ. Table 3-6 below provides the ratings of the priority construction sites and the minimum number of inspections required by the Municipal Permit for both rainy and dry seasons.

Table 3-6. Prioritized Construction Site Inventory Summary and Required Inspection Frequency.

Prioritized Construction Sites		Minimum Required Inspection Frequency		
Threat Priority		**Wet Season**	**Minimum number of required inspections**	**Dry Season - As Needed**
High	18	Bi-weekly over 30 weeks	270	As Needed
Medium	17	Monthly over 7 months	119	As Needed
Low	12		84	As Needed
Total	**47**		**473**	As Needed

The City conducted 876 wet season and 177 dry season storm water related inspections of prioritized construction sites. During the reporting period the City conducted inspections of construction sites in accordance with the requirements of the Permit. See table 3-7 for a summary of the construction site inspections completed during wet and dry seasons.

Table 3-7. Inspection Frequency Verification Table.

Wet Season Inspections		Dry Season Inspections		Total Number of Prioritized Construction Site Inspections
Engineering Dept.	Building Dept.	Engineering Dept.	Building Dept.	
855	21	175	2	
876		177		1,050

3.5.3 Enforcement Measures for Construction Sites

The City will be responsible for enforcement of applicable local ordinances and permits at all construction sites in its jurisdiction. When violations are observed and documented during a site inspection, the City will implement appropriate enforcement measures based on the severity of the violation. Enforcement can range from written warnings to more severe enforcement such as stop work notices. Stronger enforcement measures will be used as necessary if proper corrective actions are not implemented during the allotted time frame or if the severity of the violation warrants stricter enforcement.

The typical progressive enforcement steps that the City will implement include the following:

- Written warnings
- Enforcement of contracts (Municipal projects)
- Stop work notices
- Administrative citations
- Denial or revocation of permits
- Civil and/or criminal court actions

Enforcement actions by Code Enforcement Officers for construction sites begin with a referral from another department, a site visit, or by a complaint lodged via phone. Depending on the severity of the violation, follow up activities may include phone calls, site visits, written

correction notices with specified compliance timeframes, or administrative warnings. If these actions do not produce the required improvements, administrative citations (starting at $100 with a $1,000 maximum fine) and/or stop-work notices are given.

3.5.4 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of non-compliant sites in the City that are determined to pose a threat to human or environmental health. Verbal notification is required within 24 hours of the discovery of non-compliance and a written report should be submitted to the RWQCB within 5 days of the incident. The criteria established for determining when a site is not compliant and poses a threat to human or environmental health is described in Section 5.5.5 of the 2008 JURMP. No sites were issued stop work notices during this reporting period.

Two sites issued stop work notices during FY 2008-09 have not had those stop work notices lifted. These sites continue to be abandoned. The stop work notices will be lifted once they are in compliance with State and City general construction stormwater permit requirements. Table 3-7 provides a list of these sites.

Table 3-7. Construction Sites issued Stop Work Notices in FY 2008-09

Project Name	WDID #	Watershed	Address/Location
Darwin Glen	937C325609	San Luis Rey	Darwin and Sagewood Drive
Darwin Knolls	937C325610	San Luis Rey	Darwin and Ocean Ridge Ct.

Two sites required code enforcement action during this reporting period. See Table 3-8 for code enforcement actions related to these construction sites during this reporting period.

Table 3-8. Construction site Code Enforcement Actions during FY 2010-11

PROJECT NAME	WDID	WATERSHED	LOCATION	CODE ENFORCEMENT ACTION			
				Corrective Action Needed	Administrative Citation Date(s)	Administrative Abatement	Compliance Status
Fresh and Easy Market	937C35521	Loma Alta	1640 Oceanside Blvd	SWPPP Requirements and BMP Installation	10/6/10, 10/7/10, 10/8/10, 12/7/10, 12/28/10	0	In Compliance
Libby Elementary Renovation		San Luis Rey	423 W. Redondo Drive	Erosion Control	Notice 3/1/11	0	In Compliance

3.6 Construction Activities Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the Construction Component of the City's JURMP.

3.7 Program Review and Modification

The Clean Water Program will continue to review and modify the construction component as needed. The Development Services Department, which includes Planning, Building, Engineering, and Code Enforcement, rolled out new tracking software, CRW Systems, Inc. TRAKiT, which will assist in tracking and reporting of stormwater data. See section 3.2.1 for more information about this tracking software.

THIS PAGE INTENTIONALLY LEFT BLANK

4.0 MUNICIPAL COMPONENT

4.1 Introduction

This section documents the activities conducted by the City of Oceanside at its municipally owned, leased and/or managed facilities during the 2010-2011 reporting period to meet the requirements of Section D.3 of Municipal Permit Order 2007-0001 (Table 4-1). The City of Oceanside owns and/or maintains a variety of municipal facilities including operation centers/facilities, public parks, administration buildings, fire stations, a fire training facility, industrial facilities, potable reservoirs, sewage pump stations, wastewater treatment facilities, public roads, streets and parking facilities and other miscellaneous facilities. Additionally, the City conducts activities that have a high threat to water quality such as power washing, street and sidewalk repair, painting, graffiti removal, parking meter maintenance, MS4 maintenance, and regular upkeep of the sanitary sewer system to prevent overflows and leaking.

Table 4-1. Order 2007-0001 Compliance Summary

D.3.a Municipal (Existing Development)	Section 4 of this Annual Report
J.3.a.(3)(c).i Updates to Municipal Inventory	See Section 4.1.1 of this Annual Report
J.3.a.(3)(c).ii BMP Implementation	See Section 4.2.3, 4.3.3, 4.4.3,4.5.3, 4.6.3, and 4.8.3 of this Annual Report
J.3.a.(3)(c).iii Inspection and maintenance of municipal treatment controls	See Sections 4.4.3 of this annual report
J.3.a.(3)(c).iv Number of catch basins and inlets, inspections, and cleaning	See Section 4.4.3 of this annual report
J.3.a.(3)(c).v Distance of MS4 inspected and cleaned	See Section 4.4.2 of this annual report
J.3.a.(3)(c).vi Distance of open channels inspected and cleaned	See Section 4.4.2 of this annual report
J.3.a.(3)(c).vi Amount of waste removed from MS4 and open channels	See Section 4.4.3 of this annual report
J.3.a.(3)(c).viii MS4 inspected less than annually	See Section 4.4.1 of this annual report
J.3.a.(3)(c).ix Implementation of BMPs for pesticides, herbicides, and fertilizers	See Section 4.3.3 of this Annual Report
J.3.a.(3)(c).x, xi, xii, xiii Curb miles	See Section 4.2.2 and 4.2.4, of this Annual Report
J.3.a.(3)(c).xiv Municipal parking lots	See Section 4.2.2, 4.2.4., and 4.2.5.1 of this Annual Report
J.3.a.(3)(c).xv Tonnage of debris removed from streets and parking lots	See Section 4.2.5.2 of this Annual Report
J.3.a.(3)(c).xvi	See Section 4.5 of this Annual Report

Prevention of infiltration from sanitary sewer	
J.3.a.(3)(c).xvii Sites inspected and frequency	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xviii Inspection results	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xix Inspections steps determined full compliance	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xx Violations and enforcement actions	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xxi Notable activities	See Section 4.1 and 4.5 of this Annual Report

To comply with the Municipal Permit, the City of Oceanside has developed a comprehensive program designed to reduce the amount of pollutants that are transported in urban runoff from municipal areas and municipal activities. Some of the significant activities include street sweeping, inspections of municipal facilities, and educational efforts geared toward municipal personnel.

The City continues to use its Municipal Urban Runoff Procedures Manual (Municipal Manual) as a useful reference document for training staff and developing and implementing educational programs. The Municipal Manual contains BMP requirements and related guidance for City facilities and employees and was circulated to relevant City staff directly involved with the Municipal NPDES Permit. This manual was first prepared as part of the JURMP in 2002 and updated and provided with the 2008 JURMP. See Appendix C.3 of the 2008 JURMP for this manual. No changes were made to this manual during this reporting period.

4.1.1 Notable Activities

The Clean Water Program continued to utilize the Lucity (previously GBA Master Series Software) during this reporting period to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This software program was updated to accept data for NPDES tracking purposes during the 2010-11 reporting period.

4.1.2 Source Identification

As required in Section D.3.a(1) of Permit Order 2007-0001, the City of Oceanside has developed a prioritized, watershed-based inventory of municipal properties and activities. The City of Oceanside maintains a number of municipal facilities, including parks, administrative buildings, fire stations, and public works yards. The inventory of municipal facilities, including areas and activities, is updated annually. The inventory used for fiscal year 2010-11 is Attachment 4-A to this report. Table 4-2 provides a summary of the facility categories within the City's inventory.

Table 4-2. Summary of Municipal Facilities by Category.

Facility Category	Number of Facilities
Park and Recreation Facilities	48
Public Works Operations Facilities	1
Municipal Landfills	2
Marinas	3
Municipal Airport	1
Potable Water Treatment Facilities	13
Wastewater Treatment Facilities and Lift Stations	37
Police and Fire Facilities	12
Other Fixed and Leased Facilities	25
Roads, Streets, Highways and Parking Facilities	34
Total Facilities	**176**

4.2 Roads, Streets, Highways, and Parking Facilities

4.2.1 Background

Roads, streets, highways, and parking facilities are an integral part of any functional City. These facilities can collect a variety of pollutants due to routine vehicle use and have a tendency to collect litter and debris from neighboring areas and activities. Regular maintenance is necessary to control the level of pollutants, such as sediment, metals, litter, and debris on roads, streets, highways, and parking facilities. Other City activities include building new roads, resurfacing existing roads, and similar construction-related activities. All construction-related activities conducted by the City will continue to be conducted under the requirements of the construction component, which is described in detail in Section 3 of this document.

4.2.2 Source Characterization

The City of Oceanside maintains approximately 571 miles of public roads and streets throughout the City and sweeps 28,954 curb miles. A parking facility is defined as a stand-alone parking facility, which is a parking facility that is not associated and/or adjacent to other inventoried municipal facilities. Parking facilities that are associated and/or adjacent to municipal facilities will continue to be included in regular maintenance activities of the associated municipal facility. Roads, streets, highways, and parking facilities are included in the City's municipal inventory, which is included as Attachment 4-A of this annual report. There are 34 parking facilities within the City.

4.2.3 Best Management Practice Requirements

Similar to municipal fixed facilities, the City will continue to utilize the City-developed Municipal BMP Manual to choose applicable BMPs to implement for public roads, streets, parking facilities and operational facilities within the City.

Street sweeping and cleaning continues to be the main BMP that is implemented for roads, streets, and parking facilities. The frequency of cleaning takes into account the following: variations in climate conditions, surrounding land use, design of existing structures, traffic volume, frequency and quantity of accidental spills and leaks, and areas with historical trash

and/or debris problems. Treatment control BMPs will be used for road sections subject to SUSMP.

The City will continue to implement an aggressive street sweeping program to reduce the amount of pollutants discharged from roads, streets, and parking facilities in the City with a particular focus on facilities that drain to environmentally sensitive areas (ESAs). If in the future negative impacts to ESAs associated with runoff from roads, streets, highways, or parking facilities are noted, the City will take the measures necessary to mitigate the negative impacts.

4.2.4 Program Implementation

As an effort to reduce the pollutant load entering local receiving water bodies, the City continued to implement a sweeping schedule for roads, streets, highways, and parking facilities to meet the requirements of the Municipal Permit. There have been no significant changes to the existing programs during the reporting period.

Roads, streets, and highways that have been observed as generating relatively high volumes of trash, sediment, and debris are included as high priority and will continue to be swept at least twice per month; medium priority streets are streets in the City that generate moderate volumes of trash, sediment, and debris and will continue to be swept at least monthly. Low priority streets have been observed as generating relatively low volumes of trash, sediment, and debris and will continue to be swept as needed, but not less than once per year. In the event of a National Holiday, sweeping is conducted in a timely manner, usually by the next working day. Due to the City's proximity to the Pacific Ocean and as a means to target watershed constituents of concern, the City typically sweeps all streets within the City above baseline jurisdictional activity standards. Additional program details can be found in Section 6.3 of the 2008 JURMP.

All public streets in the City of Oceanside are swept at least monthly. There is a total of 571 miles of public streets that are swept regularly per the frequency outlined below. There were 28,954 curb miles swept during this reporting period. Some streets are swept more frequently than others.

- Every Monday, Wednesday, and Friday, the downtown commercial areas and other high use areas are swept using regenerative air vacuum street sweepers. These areas include the medians on Mission Avenue, Canyon Drive, and the Civic Center Drive Bridge, Wisconsin Avenue to Pacific Street to Ditmar Street, the Strand, and all downtown parking lots.
- The majority of all other public streets, not included in the areas listed above, are swept every other week. In some low use residential areas, the streets may be swept monthly.
- As necessary, sweepers or other clean up crews will respond to public or municipal staff reports to collect debris and/or sweep.
- Inspection of streets and curbs for cleaning is continuous. City employees and residents are encouraged to call the Public Works Maintenance Hotline.

4.2.5 Inspection and Maintenance Results

4.2.5.1 Inspections

Inspections and maintenance activities were conducted throughout the reporting period as described in the previous section. Following is a review of the results form inspection and maintenance.

There are 34 parking lots in the Roads, Streets, Highway and Parking Facilities categories in addition to 571 miles of public roads. During this reporting period all 34 of these facilities were inspected by CWP staff. Some corrections were noted but were addressed by appropriate staff in a timely manner. Due to the fact that many of these parking facilities are swept at least once per week, debris and sediment are removed on a more frequent basis.

4.2.5.2 Maintenance

Street sweeping activities resulted in the collection of over 2,093 tons of waste from public streets and parking lots during the reporting period. These results are comparable with tonnage amounts from previous reporting years. See Table 4-3 for a summary of debris collected during this reporting period and in previous reporting periods.

Table 4-3. Summary of amount of street sweeping debris collected.

Reporting year	Tons
2003-2004	2,604
2004-2005	2,538
2005-2006	2,283
2006-2007	2,480
2007-2008	2,358
2008-2009	2,062
2009-2010	2,093
2010 -2011	2,342

4.2.6 Roads, Streets, Highways, and Parking Facilities Element Effectiveness Assessment

See Section 11.0 for an assessment of the Municipal component of the City's JURMP.

4.3 Parks and Recreational Facilities

4.3.1 Background

The City of Oceanside is committed to providing the highest quality of service to its residents by providing the opportunity for them to enjoy a variety of recreational activities at both outdoor parks and indoor recreational facilities. Operating and maintaining 48 community attractions from public pools, beaches, parks and community centers, the City of Oceanside works hard every day to maintain the high level of service. The inspection and maintenance of these facilities in regards to storm water is important because of the number of facilities throughout the city and the public exposure that these facilities receive.

4.3.2 Source Characterization

The City regularly inspects, cleans and maintains 48 Parks and Recreational Facilities. Because of high public use these facilities have the potential to generate a variety of pollutants including trash and debris, organic material and sediment. See Attachment 4-A of this annual report that includes an inventory for Parks and Recreational Facilities.

4.3.3 Program Implementation

The City has selected BMPs to implement at Parks and Recreational Facilities to reduce the contribution of pollutants associated with the application, storage, and disposal of pesticides, herbicides and fertilizers. These BMPs are detailed in the Municipal Manual. All 48 facilities were inspected during this reporting period. Some corrections were noted but were addressed by appropriate staff in a timely manner.

Pesticides, herbicides and fertilizers are seldom used by City staff, as it contracts out the majority of work involving these substances. To facilitate compliance with this Section of the Municipal Permit, the City has reviewed its landscaping contract and has integrated BMP requirements into the conditions of the contract.

4.4 Municipal Separate Storm Sewer System

4.4.1 Background

As required by Section D.3.a.(3) of the Municipal Permit, the City has implemented a schedule of maintenance activities for the City's entire Municipal Separate Storm Sewer System (MS4), including any structural controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures. The City has determined, through historical knowledge and records, the locations within the MS4 that require regular waste removal and those areas that are less likely to require any waste removal. The City has developed a comprehensive Flood Control Annual Maintenance Program which includes a list of the high priority areas, divided into zones, which are to be inspected annually using an inspection checklist. Approximately 110 sites are inspected and maintained annually. At minimum all sites are inspected and cleaned annually.

4.4.2 Source Characterization

The Public Works, Street Division, performs ongoing inspection and cleaning of storm drains and flood control facilities, as well as annual maintenance of all major facilities such as creeks, desilting basins, detention basins and rock and concrete lined channels. There are approximately 104 concrete and earthen channels that are inspected and maintained throughout the city. Over 49,000 linear feet of storm drains, catch basins, and concrete and earthen channels are maintained on at least an annual basis. In addition, the Street Division performs annual maintenance/cleaning in September, October, and November for all major MS4 facilities. The results of this work are recorded on an Annual Maintenance List that is available at the City Operations Center.

4.4.3 Best Management Practices

In order to inspect and clean storm drains as described above, during the May through September period, the City utilizes a contractor to inspect and clean the majority of the storm drain inlets. The contractor work spans two fiscal years but their reporting data is a compilation of all their work during their summer cleaning period.

During the 2009-10 reporting period, MS4 cleaning data was reported incorrectly because it utilized data from both the summer of 2010 and 2011. The correct data for each of the reporting periods is described below and provided in two tables.

FY 2010-11 MS4 Maintenance Data

During FY 2010-11 the Public Works Department contracted with West Coast Storm who inspected and cleaned a total of 3,297 structures (catch basins, manholes, inlets, outlets, etc.). A total of 54.52 tons of waste was removed. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt. During the inspections if a storm drain was not labeled with a marker, one was installed. During the FY 2010-11 reporting period 342 were labeled with a placard stating: "No Dumping – Drains to Creek" in both English and Spanish. See the photo below for a copy of the storm drain placard installed. See Table 4-4 for a summary of the amount of waste removed from catch basins, inlets, the MS4 and open channels by category during this reporting period.

Table 4-4. Waste removed from catch basins, inlets, the MS4 and open channels by category during FY 2010-11.

Structure	Number Inspected	Contractor or City Crew	Drain Markers Installed	Cleaned	Amount of Material Removed
Catch Basin/Inlet	3,297	Contractor	342	3,297	54.52 tons
Catch Basin/Inlet	136	City Staff		136	
Total Catch Basin/Inlet	3,433			3,433	
Open Channels	104	City Staff	N/A	49,455 ft.	840 tons
Drain Pipe	1,800 ft	City Staff	N/A	1,800 ft	

FY 2009-10 MS4 Maintenance Data

During FY 2009-10 the Public Works Department contracted with United Storm Water who inspected and cleaned a total of 3,241 structures (catch basins, manholes, inlets, outlets, etc.). A

total of 81.88 tons of waste was removed. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt. During the inspections if a storm drain was not labeled with a marker, one was installed. During the FY 2009-10 reporting period 742 structures were labeled with the placard mentioned above: See Table 4-5 for a summary of the amount of waste removed from catch basins, inlets, the MS4 and open channels by category during FY 2009-10.

Table 4-5. Waste removed from catch basins, inlets, the MS4 and open channels by category during FY 2009-10.

Structure	Number Inspected	Contractor or City Crew	Drain Markers Installed	Cleaned	Amount of Material Removed
Catch Basin/Inlet	3,241	Contractor	742	3,241	81.88 tons
Catch Basin/Inlet	136	City Staff		136	
Total Catch Basin/Inlet	3,377			3,377	
Open Channels	104	City Staff	N/A	49,455 ft.	672 tons
Drain Pipe	900 ft	City Staff	N/A	900 ft	

Trash Trap at the Oceanside Municipal Golf Course

Staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. In March 2009 City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. During this reporting period approximately 325 pounds of trash and organic debris were removed from this device. Photos of the trash trap were provided in Section 6.3.1 of the FY 2008-09 JURMP Annual Report.

4.5 Sanitary Sewer

4.5.1 Background

The City of Oceanside Sewer Division maintains the sanitary sewer system within the jurisdictional boundaries which includes sewer lines, lift stations, sewage treatment plants. This sanitary sewer system uses pipes to remove human waste from homes and businesses and transport that waste to one of two waste water treatment plants in the City. The two treatment plants are operated by city crews.

4.5.2 Source Characterization

The City regularly inspects, cleans and maintains 450 miles of sanitary sewer pipe, 34 sewer lift stations and two sewage treatment plants. See Attachment 4-A that includes the 2010-11 wastewater Facilities inventory.

4.5.3 Best Management Practices

Since the City owns and operates the sewage system, these facilities are regularly inspected and maintained for proper operation and maintenance, and to ensure that BMPs are in place for the protection of receiving waters that may be impacted from the system. The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations.

In order to ensure that the sanitary sewer lines do not leak, the city has a long term plan to slip line the sewer pipes throughout the City. During this reporting period 302 feet of City sewer lines were slip lined. Since the 2005-06 reporting period the City has slip-lined a total of 21,068 feet of sewer. The City also inspected and cleaned 318.5 miles (1,681,908 feet) of sanitary sewer.

4.6 City Operations Center

4.6.1 Background

The City Operations Center (COC) is a municipally owned and operated facility that houses several departments or divisions for the City including Public Works, fleet maintenance, road maintenance, parks and recreation maintenance and others. Because of the diverse activities of these departments and divisions, the City developed a Storm Water Pollution Prevention Plan (SWPPP) for the COC in the fall of 2002.

The COC includes the following areas: employee parking lot, COC main building (offices, storage and fleet maintenance), traffic control lot, back lot, city vehicle parking lot, large vehicle equipment lot, fueling area, waste disposal area, wash facilities, general use yard and west corner lot. The SWPPP has the following objectives:

- Identify and evaluate sources of pollutants from the facility that may affect the quality of urban runoff discharge and to identify and
- Implement site-specific best management practices to reduce or prevent pollutants in urban runoff discharges.

The SWPPP outlines BMPs to be implemented at each of the respective areas. A comprehensive training program was also developed and has been implemented in concert with the COC SWPPP.

4.6.2 Source Characterization

Due to the nature of the various activities from the departments and divisions it was determined that there are various activities that generate pollutants and have the potential to reach storm water conveyance systems. Some of these activities include vehicle washing, disposal of street sweeping debris, temporary storage of wrecked vehicles, and storage of various materials, including paints, solvents, metal piping and infrastructure materials. In addition steep hillside landscaped areas can be a potential pollutant source if BMPs are not managed properly.

4.6.3 Best Management Practices

Since the implementation of the SWPPP at the COC some permanent BMPs have been installed and continue to be used for protection of receiving waters. Following is a brief description of the BMPs in place at the COC and any new BMPs installed during this reporting period.

4.6.3.1 Wash Facility

The main wash facility is used for washing large vehicles and equipment, and collection of street sweeper and vactor truck contents. The main wash facility is a completely contained area, surrounded on all sides by berms and curbs. The entire area drains to the eastern corner of the pad where it enters a grated inlet that leads to a clarifier and then the sewer. An overflow is available if the drain to the sewer is clogged or the volume of water exceeds its capacity, however, this is not anticipated to happen frequently because the drain is maintained daily.

4.6.3.2 Pollution Prevention and Recycling

COC BMPs in place

There was no new pollution prevention BMPs installed at this facility during this reporting period and all existing BMPs were maintained during this reporting period.

4.6.4 Program Implementation

4.6.4.1 Facility Inspection

A thorough walk through inspection of the COC Facility was conducted by the operation manager of the facility and Clean Water Program inspectors on October 5, 2010. There were no potential storm water violations identified during the inspection of this facility.

4.7 Other Facilities

4.7.1 Background

The City of Oceanside owns and operates two closed landfills (Maxson Street Landfill, WDID 9375005695 and Mission Avenue Landfill, WDID 9375005696). The City also operates and maintains eight fire fighting facilities including one at the COC in addition to one fire fighting training facility.

4.7.2 Source Characterization

The two closed landfills maintained by the City have the potential to generate pollutants that can negatively impact receiving waters. If potential storm water discharges are identified, appropriate BMPs are implemented to prevent pollutants from entering MS4.

Also fire fighting stations have the potential to generate pollutants such as trash and debris, organic materials and fluids and wash water from fire fighting vehicles. The two closed landfills and the fire fighting facilities are included in the City's municipal inventory, which is included as Attachment 4-A of this annual report.

4.7.3 Program Implementation

Closed Landfills

Both closed landfills are inspected quarterly per permit requirements and an annual report is prepared each for submittal to the Regional Water Quality Control Board. See Attachment 4-B for copies of the 2010-11 Annual Report for Storm Water Discharges Associated with Industrial Activities for these two landfills.

Fire Stations

All fire stations were inspected during this reporting period. During the station inspections no violations or potential violations were noted.

4.8 Special Events

The City of Oceanside hosts a variety of Special Events in the City. These events include major sporting events and community fairs and festivals. A Special Events Permit is required for any organized activity involving the use of, or having impact upon, public property, public facilities, parks, beaches, sidewalks street areas or the temporary use of private property in a manner that varies from its current land use. The permit process includes a BMP implementation plan. The City has a Special Events Committee comprised of various City Department representatives who review permit applications to insure events are held safely and do not adversely impact the community.

4.8.1 Source Characterization

The City issues Special Event permits for both internal city sponsored events and event organizations that coordinate events that may include vendors or various event related elements.

- Turkey Trot 5k Run
- Ironman Triathlon
- Freedom Day Parade

Typically, special events have a high density use of people per square foot raising the potential for pollutant types at special events, such as:

- Setup and teardown of equipment booths
- Booth operation generating trash
- Food and drink preparation and consumption – illicit discharges and organic material
- Hydraulic rides – oil and grease
- Temporary portable restroom – chemicals and bacteria
- Hydration stations – water cups and other trash material

4.8.2 Best Management Practices

All special events are required to implement designated BMPs and comply with all applicable regulations outlined in the Oceanside Municipal Code. During pre-event application meetings for large events, event organizers are provided with an event permit packet that includes storm water related information including a copy of the Storm Water Compliance Guidelines for Special Events brochure and the Special Events Inspection Form. Copies of the brochure and inspection form are attached. It is explicitly stated that the company coordinating the event is required to leave the site as clean as the pre-event condition and shall not allow any materials or liquid to enter the storm drain system.

4.8.3 Program Implementation

4.8.3.1 Event Inspections

A special event storm water inspection form was developed for use before and after large special events. Storm water compliance inspection reports will be completed by City staff or event contractors prior to the start of the event to ensure that appropriate BMPs are in place. A post-event inspection will ensure that the site is properly cleaned. City staff or event contractors will also complete post-inspection reports.

During this reporting period one event was inspected which was the Ironman Triathlon was held on March 29, 2010 with staging starting in the harbor and beaches area. No stormwater related violations were noted during event set-up, during the event or after event. The pre- and post-event inspections it was determined that the site was clean and did not pose any potential storm water violations. See Attachment 4-C for copy of the inspection form for this event.

4.8.3.2 Street Sweeping

Most special events occur in the downtown area which is swept 5 days a week, with sweeping vehicles generally onsite within 12 hours from the end of the event.

For special events that cause an added impact to the community street sweeping is conducted immediately after the end of the event. On an annual basis, the City holds one parade in the downtown area after which street sweeping is immediately conducted.

4.8.3.3 Harbor and Beaches Maintenance

Large events held in the Harbor and Beaches area can have the potential to generate large quantities of trash. In addition to the above information, the Harbor and Beaches Maintenance Division conducts the following activities after large events and holidays held in the Harbor and Beaches area:

- A litter abatement contractor provides staff to walk beach and hand pick up litter.
- City staff uses trucks and/or utility carts to follow and pick up items that are too large for the litter abatement contractor such as logs, furniture, etc.
- City staff further screens the beach using Cherrington beach sweeping machines.
- A pressure-washing contractor or City staff washes the hardscapes with all wash water being recovered and disposed of properly.

Cigarette Butt Service

The Harbor and Beaches Maintenance Division has contracted with a cigarette butt service company to install and service cigarette butt receptacles in the harbor, pier and beach areas. The receptacle selected is made by Butts Only Box and is designed to prevent rain and irrigation water from contacting the butts until collection. This prevents leaching of toxic compounds into sensitive habitats.

The company has several models to choose from, two of which have been installed in the City of Oceanside. The trail model is used along high foot traffic areas adjacent to the beach and harbor sidewalks. There are a total of 18 of these installed in the coastal areas of Oceanside: 11 in the

harbor, 2 on the pier, 4 on The Strand (the road that parallels a large section of beach) and one new receptacle installed during this reporting period at Buccaneer Beach.. See Figure 4-1 for an image of the Buccaneer Beach receptacle.

Figure 4-1. Butts Only Box cigarette trash receptacle installed at Buccaneer Beach during FY 2010-11.

Butts Only Boxes also has a sister company, Cigarette Butt Services, that services the boxes. The City of Oceanside subscribes to this service and the company provides a monthly statement that includes the number of butts removed and the weight of the debris.

During this reporting period a total of 138,705 cigarette butts were collected from the 17 trail models. The weight of this debris totaled 52.01 pounds.

The City plans to continue servicing boxes currently in place. The City will also seek additional funding to cover costs for purchasing, installation and servicing of additional receptacles within the jurisdiction.

4.9 Power Washing

4.9.1 Background

The City conducts a number of activities which are not designated and/or confined to a specific location. Because such activities are not confined to a fixed facility, where BMPs may be permanently implemented, BMPs must actively be implemented during all mobile municipal activities.

4.9.2 Source Characterization

Mobile activities that City employees may use during their day-to-day operations that have a potential to create polluted runoff include:

- Power Washing
- Infrastructure Maintenance
- Street and sidewalk repair

- Street striping
- Waste removal
- Traffic light maintenance
- Parking meter maintenance
- Landscape/Right-of-Way Maintenance

4.9.3 Best Management Practice Requirements

As previously mentioned, the City will continue to implement good housekeeping and general pollution prevention measures during municipal activities including the mobile activities listed above. City personnel will continue to conduct the proper collection protocol to collect all water generated by power washing activities. City personnel continue to use the City's Municipal BMP Manual to choose applicable BMPs to implement for municipal areas and activities. Pesticide, herbicide, and fertilizer management BMPs similar to those discussed in Section 6.2.3.1 of the City's 2008 JURMP will continue to be implemented during landscaping of City right of way such as medians.

4.9.4 Program Implementation

City field crews will continue to receive refresher training to implement BMPs during all mobile activities including how to properly contain, control, and capture any discharge generated by power washing (or any other discharge-generating activities). The City uses fiber rolls, geo logs, silt fencing, check dams, gravel bags, and filter inserts during mobile activities, where applicable. City personnel involved in mobile activities are trained to be aware of Illicit Connections/Illicit Discharges and report them to the appropriate City staff promptly. More information about the City's education program, including municipal training activities, is included in Section 10 of this document.

4.10 Municipal Component Effectiveness Assessment

See Section 11.0 for an assessment of the municipal component of the City's JURMP.

4.11 Program Modification and Review

The Clean Water Program will continue to implement its SWPPP at the City Operations Center and continue its ongoing inspection and maintenance program for the facilities listed in the Municipal Inventory. Any changes to the program will be reported in the next annual report.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 Introduction

The City of Oceanside continues to implement a comprehensive program that aims to reduce and prevent industrial and commercial pollution discharges to and from the MS4 to the maximum extent practicable (MEP) to protect local receiving water bodies and to comply with the Municipal Permit. This section documents the activities conducted by the City of Oceanside during the 2010-2011 reporting period to meet the reporting requirements of Section J.1.a(3)(f) of Order 2007-0001 Municipal Permit (Table 5-1).

Table 5-1. Order 2007-0001 Reporting Summary.

Permit Section	Annual Report Section Reference
J.3.a.(3)(d).i -Any updates to the industrial and commercial inventory.	See Section 5.2.2 of this Annual Report
J.3.a.(3)(d).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	See Section 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	See Section 5.2.1 and 5.3.3 of this Annual Report
J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	See Section 5.2.2 of this Annual Report
J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	See Section 5.2.2, 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	See Section 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.	See Section 5.2.4.1 of this Annual Report
J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.	See Section 5.2.4.3 of this Annual Report
J.3.a.(3)(d).ix - A description of efforts implemented to address mobile businesses.	See Section 5.3 of this Annual Report
J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	See Section 5.2.4.2 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	See Section 5.2.4.1 and 5.2.4.2 of this Annual Report
J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	See Section 5.1.1 of this Annual Report

The City has compiled a list of industrial and commercial sources and developed BMP requirements, including pollution prevention measures, for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.1.1 Notable Activities

There were no notable activities during this reporting period.

5.2 Stationary Industrial and Commercial Sites/Sources Element

5.2.1 Background

Section 7 of the City's 2008 JURMP, titled Industrial and Commercial Component, requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by industrial owners and/or operators pursuant to City Code to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. The City uses a variety of ways to educate and ensure that BMPs are implemented at industrial and commercial facilities including dissemination of the City's industrial and commercial BMP manuals, site inspections and enforcement.

5.2.2 Source Characterization

The City annually updates its watershed-based industrial/commercial inventory which contains the name, address, and description of all industrial sites within its jurisdiction, regardless of site ownership.

Attachment 5-A, the commercial inventory list and Attachment 5-B, the industrial inventory list is an update to the inventories submitted with the 2008 JURMP and the 2009-10 annual report. The attached inventory was updated to include changes from the FY 2010-11 inspections and will be used for the FY 2011-12 inspections. This table does not include mobile businesses that have City of Oceanside business licenses. See section 5.3 of this report for mobile business information.

The 2010-11 inventory was provide in the 2009-10 Annual Report and utilized for inspections during FY 2010-11. In the City there were a total of 1,928 Industrial and Commercial businesses that have a potential storm water pollution threat. See Tables 5-2 and 5-3 below for a summary of the number of industrial and commercial businesses inventoried in the City according to watershed location.

Table 5-2. Industrial Businesses in the City by Watershed at beginning of FY 2010-11.

Watershed	Number of Industrial Business		
	2007-08 Inventory	2008-09 Inventory	2010-11 Inventory
San Luis Rey	95	13	14
Loma Alta	141	49	22
Buena Vista	5	0	0
Agua Hedionda	0	0	0
Total	**241**	**62**	**36**

Table 5-3. Commercial Businesses in the City by Watershed at beginning of FY 2010-11.

Watershed	Number of Commercial Business		
	2007-08 Inventory	2008-09 Inventory	2010-11 Inventory
San Luis Rey & Harbor	331	859	885
Loma Alta	338	966	732
Buena Vista	151	463	267
Agua Hedionda	6	23	7
Not Verified	10	0	0
Total	**836**	**2311**	**1891**

Based on this updated inventory, the City contains approximately 37 industrial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-4 provides a summary of the prioritization for industrial businesses.

Table 5-4. Industrial Businesses in the City by Priority.

Priority	Number of Industrial Business
High	10
Medium	19
Low	8
Total	**37**

Based on the 2010-11 inventory, the City contains approximately 1891 commercial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-5 provides a summary of the prioritization for industrial businesses.

Table 5-5. Commercial Businesses in the City by Priority.

Priority	Number of Commercial Business
High	556
Medium	108
Low	1227
Total	**1891**

5.2.3 Best Management Practice Requirements

BMP Manuals

Two manuals originally developed in 2001, *Industrial Urban Runoff Requirements Manual* and *Commercial Urban Runoff Requirements Manual,* detail requirements of industrial and commercial businesses to comply with the City's Urban Runoff Management and Discharge Control Regulations. In order to ensure industrial and commercial owners and operators are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for industrial and commercial areas and activities located within the City, are specified in these two manuals.

The manuals were first produced in FY 2001-02 as a result of requirements under Municipal Permit Order No. 2001-01 and were revised in 2004 to include additional state requirements. These manuals were again reviewed and revised during the 2007-08 reporting period to ensure compliance with the new Municipal Permit Order No. R9-2007-0001. The main changes were the additional of categories and a list of specific BMPs for those industrial and commercial activities. Inspections, enforcement, and reporting and the definitions have not been changed. See this section of the 2007-08 report for a list of changes to both the industrial and commercial manuals.

The City conducted efforts to ensure industrial and commercial business owners and/or operators have received a copy of the Industrial Manual either through an annual inspection or a response to a complaint or concern reported through the Urban Runoff Hotline. In addition, copies of the Industrial Manual are available on the Clean Water Program website.

5.2.4 Program Implementation

Annual inspections of commercial and industrial businesses are conducted by Clean Water Program inspectors and Code Enforcement officers to ensure that applicable pollution prevention activities are implemented by industrial and commercial business owners and/or operators. In addition, inspections are conducted based on calls received on the Urban Runoff Hotline. All industrial and commercial businesses visited, through the annual inspection program or by complaint call acknowledged on the Hotline, receive follow-up visits until the industrial business is deemed in-compliance with City Code. All documentation pertaining to site visits are on file at the City. City staff conducted a total of 685 inspections during the 2010-2011 reporting year: 24 of industrial businesses, 661 of commercial businesses, including eating and drinking establishments, and 12 nursery or greenhouse businesses.

5.2.4.1 Inspections of Industrial Businesses

Inspections of industrial businesses are conducted by designated Clean Water Program Inspectors and Code Enforcement personnel. Inspections are tracked using two tracking software programs Lucity (previously GBA) and TRAKiT, a permitting software by CRW Systems, Inc. Inspectors utilized a Commercial and Industrial businesses inspection form that utilizes fields customized in Lucity to address all inspection components required under the permit. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Completion of 24 site inspections of industrial businesses during the reporting period.
- Completion of 10 required annual inspections of high priority industrial businesses during the reporting period.
- Completion of 14 of the required annual inspections of medium and low priority industrial businesses during the reporting period.
- Completion of 23 follow-up visits either in response to the initial inspection or response to a complaint.
- Dissemination of the Industrial Manual to help industrial owners and/or operators become aware of the City Code requirements for BMP implementation, and information on applicable BMPs for specific industrial businesses and activities.
- Ensuring proper and continued training of the Code Enforcement officers and Clean Water Program compliance inspectors dedicated to the Clean Water Program.

5.2.4.2 Enforcement of Industrial Businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for enforcement of ordinances at an industrial site. This program was designed in accordance with part D.3.b.(3) of Municipal Permit Order 2007-0001. There was no enforcement action required for Industrial businesses during this reporting period.

5.2.4.3 Inspections of Commercial businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for conducting inspections of commercial businesses. This program was developed and implemented in accordance with part D.3.b.(3) of the Municipal Permit Order 2007-0001. As detailed in the JURMP, inspections of High and Low Priority Commercial Businesses are conducted as deemed necessary by the Code Enforcement personnel and CWP inspectors. Some inspections are initiated in response to a public or municipal staff report, an illicit discharge source investigation, or as a follow up to a previous inspection.

The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Three hundred seventy five (375) eating and drinking establishments were inspected at least once for the proper implementation and maintenance of storm water BMPs and grease control devices. The inspector forwarded all facilities that were not in-compliance with storm water regulations to Code Enforcement Officers.
- One hundred sixty nine (169) inspections of high priority commercial businesses were inspected, excluding restaurants and agricultural operations
- One hundred five (105) inspections of medium and low priority commercial businesses were inspected, excluding restaurants and agricultural operations
- Twelve (12) inspections of nursery and greenhouse operations within the City of Oceanside were conducted for compliance to urban runoff regulation City Code Chapter 40.
- Ensuring proper and continuing training of the Code Enforcement Officers and Clean Water Program inspectors dedicated to the Clean Water Program.

During the 2010-11 reporting period, all eating and drinking establishments were inspected for compliance with the City's urban runoff regulations and adequate implementation and maintenance of BMPs. These 375 inspections were conducted by CWP inspectors.

When CWP Inspectors and Code Enforcement Officers conduct inspections at high priority areas, they target the entire commercial/industrial complex, because these areas often contain a mix of industrial and commercial operations. Rather than just focus on the High Priority businesses located in these areas, CWP Inspectors and Code Enforcement officers inspect all businesses in the complex to ensure owners and/or operators understand their BMP requirements and can work collaboratively with their neighbors to implement BMPs or solve drainage problems.

Code Enforcement officers inspected 12 nursery and greenhouse operations. The inventory of operating nurseries and greenhouses continues to decline each year. In 2010-11, approximately half of the nurseries on the inventory had been closed. These sites, along with the larger

agricultural facilities that are annually inspected by the County of San Diego Ag Weights and Measures Department, are visited several times a year by City staff due to the evolving nature of their business. With constant plowing and crop rotation, CWP staff not only complete annual inspections, but also complete a pre-rain event inspection and visit the agricultural areas frequently during the rainy season as well as during rain events. The City maintains a cooperative relationship with the U.S. Department of Agriculture Natural Resources Conservation District (NRCS) for assisting the agricultural community in Oceanside in design and implementation of BMPs.

5.2.4.4 Enforcement of Commercial Businesses

After the second inspection visit, all but 16 commercial businesses were in compliance. These 16 commercial businesses were referred to the Code Enforcement Division. Code Enforcement (CE) conducted an inspection upon the referral date upon which the owner/operator completed with requests. No additional code enforcement action was taken against these businesses. See Table 5-6 below for inspection information on these two businesses.

Table 5-6. Code Enforcement action for Commercial Businesses.

Businesses Name	Principal Products & Services	1st Inspec. Date	Corrective Action Needed	2nd Inspec. Date	Corrective Action Needed	Referred to CE Date	Code Enforcement Inspection Date	Compliance Status
Ruby's Diner	Restaurant	n/a		n/a	Properly store materials to prevent discharge	7/17/10	7/17/10 8/17/10	IC
Capozzoli's Pizzeria & Restaurant	Restaurant	4/20/10	Properly store materials to prevent discharge	7/10/10	Same	8/12/11	8/21/10 10/6/10	IC
Roberto's Taco Shop	Restaurant	n/a		n/a	Properly store materials to prevent discharge	4/4/11	4/4/11 4/18/11	IC

IC = In Compliance

5.2.4.5 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of noncompliant sites in the City that are determined to pose a threat to human or environmental health. Oral notification is required within 24 hours of the discovery of noncompliance and a written report should be submitted to the RWQCB within five days of the incident. During this reporting period there were no industrial or commercial businesses reported to the RWQCB as all came into compliance after follow-up inspections.

5.2.5 Stationary Industrial and Commercial Sites/Sources Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

5.3 Mobile Sources Element

5.3.1 Background

Due to the lack of a stationary location for proper disposal of potentially hazardous liquids and materials, there is a major area of concern about where mobile businesses discharge water used in their line of work. Due to the nature of their activities, mobile businesses will continue to be regulated differently than other businesses. Mobile businesses can be difficult to identify because they may not have a City business license, they go out of business on a relatively regular basis and, though they may have a home base, they can cross jurisdictional lines to operate their business. For these reasons regular inspections of mobile businesses are challenging and time consuming.

5.3.2 Source Characterization

The mobile businesses known to operate within the City's jurisdiction are noted on the City's commercial inventory. During this reporting period the City of Oceanside compiled their inventory in conjunction in a format agreed upon by the San Diego County regional Copermittees. Attachment 5-C provides an updated inventory of the commercial businesses.

The following business types are addressed by the mobile sources element of the City's industrial and commercial program.

- Mobile automobile or other vehicle washing
- Pest control services
- Mobile carpet, drape or furniture cleaning
- Mobile construction trades
  - Painting and coating
  - Cement mixing or cutting
  - Masonry
  - Other contractors
- Landscaping
- Pool and fountain cleaning
- Power washing services

Because not all mobile businesses have obtained business licenses in the City or have a base of operations in the City, the City expects that a continual process of refining and updating its inventory will be needed. Sources for such inventory updates will include reported incidents, general observations by City staff, and available business licenses.

5.3.3 Best Management Practice Requirements

The City updated its Commercial Urban Runoff Requirements Manual during the 2007-08 reporting period with information on the required BMPs for both mobile and stationary sources. This updated manual can be referenced in Appendix C of the City's 2008 JURMP. One example of a BMP included in the updated manual is for outdoor vehicle detailing by a mobile business and the BMP explains how to capture and contain the rinse water so that it does not enter the storm drain system. Regardless of where the activity occurs, the City categorically prohibits illegal discharges from mobile businesses.

5.3.4 Program Implementation

5.3.4.1 Education Outreach

Because a specific element of the industrial and commercial program for mobile businesses is being newly developed, it is anticipated that some mobile businesses are not aware of storm water requirements and that education will need to be a significant portion of the program. During the FY 2009-10 reporting period Mobile Business education materials were developed by the Regional Industrial Commercial Workgroup of the San Diego County Copermittees. The City of Oceanside sent these educational materials to the owner/operator of each of the businesses on the 2008 JURMP Mobile Business Inventory.

5.3.4.2 Inter-Jurisdictional Cooperation

The City of Oceanside is participating in the Regional Industrial Commercial Sources workgroup which developed a plan during FY 2009-10 to educate mobile businesses about proper BMPs and protection of water quality. Details of this task can be found in the Regional Urban Runoff Management Program report sent to the RWQCB in January 2011. A complete report on the activities of this workgroup for the current reporting period will be included in the Regional Urban Runoff Management Program report due to the RWQCB in January 2011.

5.3.4.3 Staff Training

Code Enforcement Division Officers and Clean Water Program Compliance Inspectors are responsible for conducting storm water compliance inspections and enforcement of mobile sources. Officers and inspectors are trained annually on inspection and enforcement procedures and BMP implementation as they relate to mobile businesses. City staff is encouraged to report potential illegal discharges from mobile businesses when working in the City to the storm water hotline.

5.3.4.4 Inspections

During this reporting period, inspection of mobile businesses was conducted on an as needed basis. The most common triggers for these inspections were from incident reports received over the Urban Runoff Hotline and direct visual observations by City staff.

5.3.4.5 Enforcement

During this reporting period Code Enforcement officers did respond to complaint calls regarding mobile businesses that were allowing water to enter the storm drain system. During the site visit, depending on the nature of the complaint, Code Enforcement officers issued notices to comply and/or educated the operator on the proper BMPs that should be in place during their operation and provided them with the power washing brochure.

5.4 Industrial and Commercial Component Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

5.5 Program Review and Modification

During the previous reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which

includes Water, Sewer, and the Clean Water Program, continued rolling out the GBA Masters Series software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year

During this reporting period the Clean Water Program reviewed the effectiveness of the new tracking tools and implemented improvements in the use of the system to better track Stormwater related data.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 RESIDENTIAL COMPONENT

6.1 Introduction

A total of 39 percent of the City's 26,983 acres is designated as either multi- or single-family residential according to the San Diego Association of Governments (SANDAG). Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters in and around the City. The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the MEP.

This section documents the activities conducted by the City of Oceanside during the 2010-2011 reporting period to meet the requirements of Section D.3.c of the Municipal Permit (Table 6-1). The City continued the implementation of an enforcement program that responds to and monitors potential violation calls received on the Oceanside Urban Runoff Hotline (Hotline).

Table 6-1. Order 2007-0001 Compliance Summary.

D.3.c Residential Program	See Section 6 of this Annual Report
J.3.a.(3)(e).i High threat residential areas	See Section 6.2 of this Annual Report
J.3.a.(3)(e).ii Designated BMPs were implemented	See Section 6.3 of this Annual Report
J.3.a.(3)(e).iii Proper disposal of used oil and HHW	See Section 6.4.2 of this Annual Report
J.3.a.(3)(e).iv Amounts of HHW collected	See Section 6.4.2 of this Annual Report
J.3.a.(3)(e).v Evaluation of methods used for oversight of residential areas	See Section 6.2.1 of this Annual Report
J.3.a.(3)(e).vi Violations and enforcement actions	See Section 6.4.7 of this Annual Report
J.3.a.(3)(e).vii Collaboration on implementation of Regional Residential Education Program	See Section 6.5 of this Annual Report
J.3.a.(3)(e).viii Notable Activities	See Section 6.1.1 and 6.3.1 of this Annual Report

The City also utilizes its revised Urban Runoff Requirements Manual for Residents (Residential Manual) that contains BMP requirements and related guidance information for residents of the City. This manual has been made available to residents through the City's Clean Water Program Website. Changes to the Residential Manual were made during the 2007-08 reporting period.

6.1.1 Notable Activities

1. Two new residential areas were prioritized for outreach during this reporting period:
   - An apartment complex community with an accumulation of litter and trash.
   - A row-house residential area with an accumulation of pet waste.

2. BMP installation in one prioritized neighborhood was conducted during this reporting period.
   - Installation of automatic retractable screens in storm drain inlets to prevent debris from entering MS4.
3. BMP maintenance of a trash trap at the Oceanside Municipal Golf Course

See section 6.3.1 below for more details on these prioritized residential areas and the activities implemented to address the specific pollutant.

6.2 Source Characterization

Residential neighborhoods can be the source of a variety of pollutants depending on the activities conducted in residentially developed areas. Pursuant to Section D.3.c.(1) of the Permit Order 2007-0001, the City identified High Priority Residential Areas and Activities in the JURMP. The following residential activities have been identified by the City to be High Priority Activities:

- Automobile or boat repair and maintenance.
- Automobile washing.
- Automobile parking.
- Home and garden care activities and product use.
- Disposal of household hazardous waste.
- Disposal of pet waste.
- Disposal of green waste.
- Any other residential activity that contributes a significant pollutant load to the MS4.
- Power washing activity (both do-it-yourself and contracting services).

The City has also identified residential areas of High Priority. These areas include the following:

- Any residential area tributary to a CWA section 303(d) impaired water body, where the residence generates pollutants for which the water body is impaired
- Any residential area within or directly adjacent to or discharging directly to a coastal lagoon or other receiving waters within an ESA

6.2.1 Evaluation of methods for oversight of residential areas and activities.

The Public Works storm drain maintenance staff has the best opportunity to inform the Clean Water Program staff about drainage areas that have a lot of trash and debris. On a regular basis the CWP staff request from public works maintenance staff areas within the city that are generating pollutants of concern for two reasons:

1. To identify areas within the City where the public can become involved to assist in removing trash and debris from the specific areas where debris has collected, and
2. To target the residential areas for future outreach.

Reports by citizens and City staff are additional sources of identifying, assessing and prioritizing residential areas. See section 6.3.1 below for more specific information on the tasks implemented in these areas to address the pollutant sources.

6.3 Best Management Practice Requirements

The City's JURMP Residential Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by residents pursuant to City Code. In order to ensure residents are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for residential areas and activities, located within the City, are specified in the Residential Manual. This manual is found in Appendix C of the City's 2008 JURMP.

Education and outreach aimed at residents helps facilitate the implementation of BMPs, including pollution prevention methods. A detailed discussion of the City's education program can be found later in Section 10 of the 2008 JURMP. Details on education outreach to the residential community can be found in Sections 8 and 9 of this annual report.

6.3.1 BMP Implementation

Structural BMP to address debris accumulation along Mesa Drive

In FY 2008-09 Public Works staff identified debris accumulation after storm events in a section of MS4 where Garrison Creek daylights adjacent to Mesa Drive. This MS4 is located in the Loma Alta Watershed. The debris consists of tennis and sports balls, plastic drink bottles and organic debris. Four storm drain inlets along Mesa Drive were identified as the primary collection point of the debris. Within this section of Mesa Creek there is one high school, one middle school, one elementary school, one community park with sports fields, a skate park and playground and several apartment complexes. These areas have several ball fields including tennis, soccer, baseball, and football fields. This is also a heavily traveled walkway between the schools and the residential areas.

During the 2010-11 reporting period the City of Oceanside Engineering Division allocated funding to install eight Automatic Retractable Screens (ARS) on four storm drain inlets to prevent sports balls, sports drink bottles, organic debris and other material to enter the storm drain prior to street sweeping. The devices allow the street sweeper to retrieve this material before it can enter the storm drain system and eventually into the daylighted creek area. The ARS unlocks and retracts upon variable flow rates, which is important during storm water events to prevent flooding. See Figure 6.1 below for a picture of one inlet with two ARS installed and a photo of debris collected in front of the ARS.

Figure 6.1 Automatic Retractable Screens installed at one storm drain inlet prior to rain event and after rain event.

Trash problem in Los Arbolitos neighborhood

During this reporting period a manager of a local apartment complex in the Los Arbolitos community contacted the Clean Water Program requesting assistance in eliminating trash and debris from the neighborhood. This neighborhood is located in the San Luis Rey Watershed north of Highway 76 and east of El Camino Real.

The reporting party stated that there is a lot of litter and trash on the ground and in the streets specifically along Fredericks Ave. The neighborhood consists of several condominium and apartment complexes. The manager was willing to provide her tenants with any educational material that would help address the problem.

Clean Water Program inspectors contacted the manager and formulated a plan to reach out to the condominium and apartment complex units in the area. 500 copies of the inside of a door hanger were disseminated to each unit within the three complexes (See Attachment 6-A). During the next reporting period CWP inspectors will canvas the area to determine if there is a reduction in litter in this priority neighborhood.

Pet waste in downtown row-house neighborhood

During this reporting period City staff noticed an accumulation of pet waste in a downtown neighborhood area. Pet waste piles (specifically dog waste) were seen in the landscape area between the sidewalk and the road in 12 city residential blocks.

Clean Water Program Inspectors distributed education materials to the targeted area. The total homes contacted were 214 by means of a door hanger (See Attachment 6-A) with an attached letter (See Attachment 6-B). Inspectors covered 12 blocks between Civic Center Drive and Neptune Way, on both sides of Tremont Street and Cleveland Street. Inspectors also provided personal pet waste bag dispensers to four people while distributing the information pieces. These dispensers attach to the dog leash or collar and have ten bags inside allowing dog walkers to have the resources at hand to pick up pet waste.

An assessment in the area after the education outreach campaign showed that there was less pet waste left in the landscaped area. This prioritized residential area will be monitored during the next reporting period.

Trash Trap at the Oceanside Municipal Golf Course

During FY 2008-09 staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the golf course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. In March 2009 City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. During this reporting period approximately 260 pounds of trash and organic debris were removed from this device. Photos of the trash trap were provided in Section 6.3.1 of the FY 2008-09 JURMP Annual Report.

6.4 Program Implementation

6.4.1 Outreach

The most efficient way to encourage pollution prevention and BMP implementation and to restrict polluting practices is to educate residents on how to carry out their daily activities in ways that have the smallest potentials to discharge pollutants to the MS4. During this reporting period the Clean Water Program provided educational information and training to residents, in the following ways:

- Cleanup events
- Booths at public events
- Public television notices
- Presentations
- Website
- Email notifications
- Residential BMP Manual

During the 2008-09 reporting period the Clean Water Program discontinued mailing upcoming event notices to interested parties through the US Postal Service. In order to save time and money an email distribution list was created. This allows people to receive notifications by email which eliminates postage costs. Also, receivers of the information can easily forward the fliers to other people who may be interested in the specific information. During this reporting period additional email addresses were obtained creating a total of approximately 317 email addresses in the distribution list to which e-notices were sent for upcoming events.

Further outreach program details for this reporting period can be found in the Education and Public Participation, Section 8 and Section 9, of this document.

6.4.2 Household Hazardous Waste

The City continued to facilitate the proper management and disposal of used motor oil, toxic materials, and all other HHW to the residential audience. Residents have the opportunity to take used motor oil to approximately 12 private auto parts stores within the jurisdiction. In addition Waste Management, Inc., the City's franchise trash hauler, accepts HHW at its Oceanside facility. Residents may bring up to five gallons per day of used oil, used oil filters, and anti-freeze, Monday through Friday from 8 a.m. to 4 p.m. without an appointment. HHW may be brought on Saturdays by appointment only between 9 a.m. and 1 p.m. Details of the locations mentioned above can be found in Section 8.4.2 of the City's 2008 JURMP.

During the 2010-2011 reporting period, 2,289 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 146.5 tons of hazardous materials (including universal waste) during the reporting period.

As part of Oceanside Green Week (see Section 9.1.6 for more details) a free electronic waste (E-Waste) drop-off event, open to the public, was held simultaneously during the Green Fair, thus providing a much needed service to the community, as participants enjoyed the benefit and entertainment of the fair itself. In most communities, disposing of all types of E-Waste can prove

costly, which oftentimes discourages the proper disposal of these materials. Via a partnership/sponsorship by 1-800-GOT-JUNK?, the City was able to provide this service free of charge to anyone who wished to participate in the Green Fair. At this event there were 11.5 tons of universal waste collected for proper recycling and disposal.

Furthermore, as part of the City's collection program, a 750-gallon used oil collection receptacle is provided at the City's harbor. This receptacle is available for residents who live on the boats in the Marina as well as for those boat owners and operators who rent a harbor slip to conveniently recycle the used oil and used oil filters generated from the boats. During the reporting period 1,583 gallons of used oil were collected and recycled. In addition two 55-gallon barrels of used oil filters were collected from Harbor residents.

6.4.3 Clean Water Program Newsletters

Twice per year, educational newsletters titled *City of Oceanside Clean Water Program* are mailed with the utility bill to over 42,000 homes in the City. Topics in the newsletters explain storm water pollution, effects on water quality, pollutants of concern, illegal discharges, BMP implementation, and special events.

During this reporting period two Clean Water Program Newsletters were distributed to over 42,000 households. An overview of topics in these two newsletters is listed below. A copy of these two newsletters is included in Attachment 6-C of this annual report.

Fall 2010

- River, creek and beach cleanup event information
- Pick Up Your Pet Waste Campaign - Bag dispensers installed
- Bacteria Source Tracking Project Update

Spring 2011

- Loma Alta Creek Cleanup - April 30, 2011
- Bacteria Source Tracking Project Update
- How many Oceanside water bodies can you name?
- 2011 River, Creek and Beach Cleanup Event Information

6.4.4 Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. Those households in the City who have access to the KOCT local channel are able to view this show. During this reporting period the Clean Water Program provided seven three-minute presentations. Table 6-2 provides an overview of the topics covered during each taping.

Table 6-2. Summary of 2010-11 Oceanside Update Topics by Month

Date	Topic Discussed
September 2010	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
October 2010	San Luis Rey River Cleanup event info
December 2010	Green Holiday Season tips
January 2011	Green Week events (March 2011); 2011 Cleanup Events
February 2011	Proper brow ditch maintenance
April 2011	Creek to Bay Cleanup Event at Loma Alta Creek and beach
June 2011	July 5 Beach cleanup; Five tips to prevent water pollution

6.4.5 Website

The Clean Water Program maintains its own Website providing convenient electronic access to program information for residents and the general public. The address for this website is www.oceansidecleanwaterprogram.org. This Website provides the opportunity to learn about storm water pollution, the sources of the pollution, and what can be done to eliminate these pollutants from entering the storm drain system, thereby improving water quality in receiving waters. During this reporting period there were 72,086 hits to the Clean Water Program website. This number does not account for traffic from within the Oceanside network. This is a significant increase to the 60,319 hits from the previous reporting period.

Specific web pages available on the Clean Water Program Website are as follows:

- Commercial Business
- Development
- Events
- Industrial Business
- Just for Kids
- Water Quality Laws
- Other Websites
- Landslide Prevention
- Clean Water Projects
- Report Violations
- Residential/General
- Just for Educators
- Waterbodies

The residential web page offers the following information:

- An overview of pollutants in receiving waters and how those pollutants get there
- The difference between the storm drain system and the sewer system
- Links to pollutant factsheets in PDF format
- Links to brochures in PDF format
- Links to past Clean Water Program Newsletters in PDF format
- Link to the Residential Urban Runoff Requirements Manual

The Website address is disseminated to the public in a variety of ways:

- Listed in all Clean Water Program Newsletters
- Mentioned during each Oceanside Update Taping and shown at the bottom of the screen

- Listed on promotional items
- Listed on Clean Water Program staff business cards
- Listed in email notifications for upcoming events

6.4.6 Hotline

The City will continue to encourage public reporting of illicit discharges and illegal dumping through the City's Urban Runoff Hotline, which is run by the Water Utilities Department. The Hotline phone number is (760) 435-5800. All calls related to potential urban runoff violations were documented and forwarded to Code Enforcement and/or the City's Clean Water Program Compliance Inspectors.

The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, placement on brochures, click-message pens, pencils, and other promotional "give-aways", advertisement on the City's Clean Water Program webpage and in Clean Water Program newsletters. During the reporting period, three hundred fifty three (353) calls were received on the Urban Runoff Hotline by residents concerning potential urban runoff violations. This is a significant increase (71%) from the 251 calls received during 2009-10, 124 calls received in 2008-09, 55 calls received in the 2007-08 and the 14 calls received during the 2006-07 reporting period. Of these calls to the hotline there were 183 referrals from City staff. All storm water related calls to the City either from residents or City staff referrals were entered into the Lucity (previously GBA) database system for tracking.

6.4.7 Enforcement

Section 8.4.4 of the JURMP describes the City's program for enforcement of ordinances in residential areas. The major activities and accomplishments undertaken by the City during this reporting period included:

- Code Enforcement responded to, 75 urban runoff related cases, related to residential areas and activities, during the reporting period.
- An accounting of all residential enforcement actions, taken by Code Enforcement Officers, is shown in the following table.

See Table 6-3 for an accounting of Code Enforcement Actions during 2010-11.

Table 6-3. Accounting of Residential Code Enforcement Actions for the 2010-2011 Reporting Year.

Action Type	Follow-up Phone Call	Follow-up Site Visit	Follow-up Office Visit	Written Notice	Letter Sent	Admin. Warning	Administrative Monetary Citation	Referral to Other Dept	Stop Work Notice
# of Actions	63	119	9	0	18	17	0	0	0

6.5 Collaboration to implement Regional Residential Education Program

During this reporting period the City of Oceanside continued to serve as Co-chair for the Education and Residential Sources Workgroup (ERS Workgroup) which is tasked with implementing the Regional Residential Education Program. The ERS workgroup was established as one of several workgroups under the Memorandum of Understanding amongst the San Diego County Copermittees (Copermittees). The chair of each of these workgroups presides over and provides leadership and direction to the workgroup. This includes serving as the point of contact to external entities, soliciting group input, developing meeting content, facilitating meetings, and coordinating with the Secretary to finalize work products for distribution to the workgroup. The City of Oceanside Co-chaired this workgroup with staff from the City of Imperial Beach.

Details of the activities of the ERS Workgroup will be provided in the submittal of the annual report of the Regional Urban Runoff Management Program due to the RWQCB in January 2012.

6.6 Residential Component Effectiveness Assessment

See Section 11.0 for an assessment of the education component of the City's JURMP.

6.7 Program Review and Modification

During the previous reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water, Sewer, and the Clean Water Program, continued rolling out the GBA Masters Series software. The Development Services Department, which includes Code Enforcement, Building, and Engineering, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year

During this reporting period the Clean Water Program reviewed the effectiveness of the new tracking tools and implemented improvements in the use of the system to better track Stormwater related data.

THIS PAGE INTENTIONALLY LEFT BLANK

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

This section is intended to document the activities conducted by the City of Oceanside during the 2010-2011 reporting period to manage illicit discharges and meet the requirements of Sections D.4 and J.3.a.(3)(f) of the 2007 Municipal Permit.

In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2010-11 Illicit Discharge Detection and Elimination Component, including the 2010 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2011.

THIS PAGE INTENTIONALLY LEFT BLANK

8.0 EDUCATION COMPONENT

8.1 Introduction

Education is an important step in working towards improving receiving water quality both locally and regionally. By increasing public awareness and encouraging a change in both the attitude and the behavior of the general public and the regulated community, the City may reduce or eliminate storm water pollution caused by common daily activities.

This section documents the activities conducted by the City of Oceanside during the 2010-2011 reporting period to meet the requirements of Section D.3.g of the Municipal Permit (Table 8-1). The City continued the implementation of an education outreach program for municipal staff, industrial and commercial businesses, and the general public.

Table 8-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(g).i Description of education efforts	See Section 8.0 of this Annual Report
J.3.a.(3)(g).ii Underserved target audiences	See Section 8.3.1 of this Annual Report
J.3.a.(3)(g).iii Education of municipal employees	See Section 8.2 of this Annual Report
J.3.a.(3)(g).iv Education of construction community	See Section 8.4 of this Annual Report
J.3.a.(3)(g).v City education efforts for residents, general public and school children	See Section 8.3 of this Annual Report

The City of Oceanside provides a comprehensive storm water education program to achieve the following objectives:

- Measurably increase the knowledge of target communities regarding MS4s, impacts of urban runoff on receiving waters, and BMP solutions for the target audience.
- Measurably change the behavior of target communities, and thereby reduce pollutant releases to MS4s and the environment.

Educational programs and activities are tailored to meet the needs of the following target audiences:

- Municipal departments and personnel.
- Construction site owners and developers.
- Industrial and commercial owners and operators.
- Residential community, general public, and school children.
- "Underserved" target audiences, where applicable.

Many education outreach efforts are conducted on an ongoing basis, such as direct interaction during inspections, pre-construction meetings, or when fielding calls from the City's Urban Runoff Hotline. Educational materials are made available throughout the year at special events and at the City's Water Utilities Department counter. Targeted mailings, focused training

sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

8.2 Staff Training Element

City personnel are the eyes and ears of the City, and can provide valuable information on storm water related discharges and potential violations that may be occurring within the City. The City presents general storm water educational content, which is described in Section 10.3 of the 2008 JURMP, to all City departments. The City primarily educates its municipal personnel through classroom training, on-the-job training sessions, and the Municipal BMP Manual (Appendix C of the 2008 JURMP). Customized training programs are designed for personnel targeting fieldwork-related departments such as storm water compliance inspectors, building/engineering inspectors, public works, planning department staff, and park and recreation personnel. General informational storm water training sessions are provided for municipal personnel in other departments to review storm water regulations in the City, impacts of urban runoff and BMPs to be implemented to reduce or eliminate runoff.

During this reporting period eighteen (18) City departments or divisions were provided a training on storm water related issues. In addition one division from the solid waste and recycling trash hauler for the City was provided with storm water training. A total of 268 City staff and 50 staff from the trash hauler attended storm water trainings.

As in past reporting periods one of two Storm Water Pollution Prevention Education Programs developed by a private company, EXCAL Visual, were used for most municipal staff trainings. These programs include a 15-20 minute video and a quiz specific to the video. Some departments and divisions received a customized power point focused on their specific jurisdictional duties related to storm water that are not covered in the EXCAL Visual products.

Prior to the start of these training sessions using the programs mentioned above a multiple choice quiz was given to each participant to establish a baseline of knowledge for that individual. The quiz also served as the sign-in sheet for the individual attending each training session. After the completion of the video, additional storm water related details were provided depending on the department or division being trained. Time was allotted for questions and answers at the end of the training session. Prior to the end of the training session the same multiple choice quiz was given to each participant. One hundred and five (105) municipal employees took both a pre and post-quiz during a municipal training session. For more information on the effectiveness of these training programs based on the pre- and post-quiz scores see Section 11.0 of this report.

One program titled “Storm Water Pollution Prevention - Storm Warnings” covers Everyday Best Management Practices for Industrial Facilities. Specific BMPs are covered to address the following issues related to industrial facilities:

- Good Housekeeping
- Materials Management
- Spill Response
- Equipment Fueling & Repair
- Outdoor Manufacturing
- Preventive Maintenance

- Waste Management
- Dust Producing Processes

Departments or Divisions that received this training were:

- Water Distribution – Operations
- Water Distribution – Maintenance
- Sewer Treatment – La Salina Waste Water Treatment Plant
- Sewer Treatment – San Luis Rey Waste Water Treatment Plant
- Water Distribution – Weese Plant (Drinking Water Treatment Plant)

The other program titled "Municipal Storm Water Pollution Prevention – Storm Watch" covers everyday BMPs for other municipal staff activities such as Parks and Recreation and Fleet Maintenance. Specific BMPs covered in this course are as follows:

- Good Housekeeping and Spill Prevention
- Vehicle and Equipment Washing
- Vehicle and Equipment maintenance
- Spill Reporting and Response
- Street Maintenance
- Outdoor Storage of Materials and Wastes
- Landscaping and Lawn Care

Departments or Divisions that received this training were:

- Streets Division – Street Repair and Maintenance
- Streets Division – Street Sweepers
- Streets Division – Parking Enforcement
- Parks and Recreation Maintenance Division
- Public Works – Solid Waste Division
- Fleet Maintenance Division
- Harbor Maintenance Staff
- Sewer Collections – Field Staff
- Water Utilities – Meter Services

Other Departmental staff received customized training because of their need for specific education that was not covered in these two programs or information covered in these programs was not needed to convey to these groups due to the nature of their work as municipal employees. The following departments were trained using a customized Power Point Presentation and an interactive format to allow for questions and answers throughout the training program:

- Building Division – Building Inspectors
- Engineering Division – Engineering Inspectors and administrative staff
- Police Officers
- Water Utilities Administration Division

Waste Management is the solid waste and recycling company that services residential and commercial/industrial businesses in the City of Oceanside. Though they are not a department or

division of the City, they are an important entity to target with storm water related education programs due to the nature of their business. During this reporting period the trash haulers with Waste Management were targeted for storm water education. A customized power point presentation was used to emphasize the importance of proper handling of solid waste during servicing of trash cans and dumpsters and how to report potential storm water violations to Oceanside's Clean Water Program staff. The targeted audience was:

- Waste Management, Inc. – Trash, Recycling, and Green Waste Truck Drivers

8.2.1 Other Staff Trainings

Several city staff also attended additional training to increase their knowledge on storm water regulations, enforcement inspection protocols, and the new construction permit. Table 8-2 provides a list of stormwater related trainings attended by City staff.

Table 8-2. Storm water-related trainings attended by City staff

Training Date	Topic	City Staff in Attendance	Presenter(s)

8.3 Educational Outreach Element

Residential areas make up a large portion of the land use in the City, and therefore even small pollutant discharges can be magnified significantly and have the potential to affect the quality of the receiving waters. Activities such as residential car washing and over irrigation are harmful to receiving water bodies by contributing pollutants such as heavy metals, detergents, and nutrients. Providing residents with appropriate educational materials may help to increase overall awareness, and encourage residents to change harmful behaviors and subsequently reduce the potential for pollutants to enter the storm drain system and reach receiving water bodies.

Media

Twice per year, educational newsletters are mailed to all homes in the City with water utility bills. Topics in the newsletters explain storm water pollution, effects on water quality, pollutants of concern, illegal discharges, BMP implementation, and special events.

During this reporting period two Clean Water Program Newsletters were distributed to over 44,000 households. An overview of topics in these two newsletters is as follows:

Fall 2010

- River, creek and beach cleanup event information
- Pick Up Your Pet Waste Campaign - Bag dispensers installed
- Bacteria Source Tracking Project Update

Spring 2011

- Loma Alta Creek Cleanup - April 30, 2011
- Bacteria Source Tracking Project Update
- How many Oceanside water bodies can you name?
- 2011 River, Creek and Beach Cleanup Event Information

A copy of these two newsletters are included as Attachment 6-C to this annual report.

Website

The City's Clean Water Program website also offers electronic copies of a variety of storm water fact sheets covering topics such as proper pesticide and fertilizer use, trash disposal, pet waste and lawn waste disposal, proper chlorine and other swimming pool chemical disposal, sedimentation, effects of soaps and detergents on receiving waters, and other storm water-related topics. During this reporting period there were 72,086 hits to the Clean Water Program website. This number does not account for traffic from within the Oceanside network. This is a significant increase from the years past. Table 8-1 below provide a summary of the number of hits to the webpage.

Table 8-1. Summary of Clean Water Program Webpage Hits

Fiscal year	# of Website Hits
2010-11	72,086
2009-10	60,319
2008-09	35,647
2007-08	38,146
2006-07	45,267
2005-06	42,367

Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. During this reporting period the Clean Water Program will provided nine three-minute presentations. Table 8-2 provides an overview of the topics covered during each taping.

Table 8-2. Summary of 2010-11 Oceanside Update Topics by Month

Date	Topic Discussed
September 2010	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
October 2010	San Luis Rey River Cleanup Event, Stormwater hotline
December 2010	Protecting the environment with reusable, bags, utensils and bottles
January 2011	Upcoming river and beach cleanups as well as Green Week events
February 2010	How to prevent erosion around the house
April 2011	Loma Alta Creek Cleanup and Pollution Prevention Tips
June 2011	Morning After Mess beach cleanup

Community Events – Booths and Outreach Activities

The Clean Water Program staff participated independently and in conjunction with other cities in the North County Storm Water Program by staffing a booth at several community events in Oceanside and north San Diego County. The Clean Water Program staff talked to residents, handed out educational materials, and responded to questions and concerns. Table 8-3 lists community events attended between July 2010 and June 2011 to encourage community participation and to educate participants of the effects of polluted urban runoff:

Table 8-3. 2010-11 Community Events.

Date	Event	Participants (Estimated)
10/2 and 3/2010	Harbor Days	1000
12/16/2010	Day without a Bag	300
3/12/11	Oceanside Green Fair	300
04/17/11	Fallbrook Avocado Festival	50,000

School Education

Educating the City's youngest residents is important in two ways: ideally the good habits/behaviors learned will be carried into adulthood, and secondly, children may educate their families and friends around them with the information they have learned. Children are

impressionable at a young age, and are therefore more likely to act upon the knowledge given to them now and throughout their life.

The City continued its outreach to school age children through the use of the watershed model during presentations. A total of twenty two presentations were conducted reaching 471 school-age children and 27 adults. Table 8-4 provides a list of groups and classrooms that were educated about storm water pollution via these presentations.

Table 8-4. 2010-11 School Age Children Watershed Presentations.

Date	Group	Children	Adults
11/02/2010	Girl Scout Troop (4th Grade)	10	3
2/24/2011	Brownie Troop 1777 (2nd Grade)	12	1
2/24/2011	Brownie Troop 1675 (2nd Grade)	12	1
2/25/2011	Libby Elementary (3rd Grade)	26	1
2/25/2011	Libby Elementary (3rd Grade)	22	1
2/25/2011	Libby Elementary (3rd Grade)	25	1
4/13/2011	Reynolds Elementary (2nd Grade)	23	1
4/13/2011	Reynolds Elementary (2nd Grade)	22	1
4/13/2011	Reynolds Elementary (2nd Grade)	24	1
4/20/2011	Reynolds Elementary (2nd Grade)	23	1
4/20/2011	Reynolds Elementary (2nd Grade)	24	1
4/26/2011	Laurel Elementary (1st Grade)	23	1
4/26/2011	Laurel Elementary (1st Grade)	23	1
4/26/2011	Laurel Elementary (1st Grade)	23	1
5/09/2011	Libby Elementary (2nd Grade)	23	1
5/09/2011	Libby Elementary (2nd Grade)	23	1
5/09/2011	Libby Elementary (2nd Grade)	23	1
5/19/11	Vail Elementary (4th grade)	31	1
5/20/2011	Del Rio Elementary (4th Grade)	25	1
5/20/2011	Del Rio Elementary (4th Grade)	33	1
5/20/2011	Del Rio Elementary (4th Grade)	30	1
6/3/2011	Brownie Troop #4309	14	4
	Totals	**471**	**27**

Splash Lab

The San Diego County Office of Education Splash Science Mobile Lab (Splash Lab) is a completely self-contained mobile laboratory brought to local schools to provide students with hands-on experience with the following resources:

- Watershed/storm drain model presentations
- GIS computer stations
- Water Conservation Station
- San Diego Estuary Station
- Microscopes - with live specimens!
- Chemistry experiments
- State of the art computers
- Cooperative learning skills

The curriculum is designed for grade levels 4-6 and is aligned with California Science Content Standards.

During this reporting period a total of 627 students from 20 classes at five schools received the Splash Lab with the costs covered by the City Water Utilities Department. See Table 8-5 below for information on the schools and number of students who participated in the programs.

Table 8-5. Schools using Splash Lab during FY 2010-11.

Date	School	Grade	Topic	Number Attended	Number of classes
2/22/2011	Libby Elementary	4-5	Splash Lab	150	4
2/28/2011	Ivey Ranch Elementary	4	Splash Lab	127	4
3/10/2011	North Terrace Elementary	3-5	Splash Lab	98	4
3/14/11	Stuart Mesa Elementary	4-5	Splash Lab	126	4
5/10/11	St. Mary Star of the Sea	4-7	Splash Lab	126	4
Totals				**627**	**20**

Project SWELL (SWELL = Stewardship: Water Education for Lifelong Leadership)

The City continued to collaborate with San Diego CoastKeeper and the San Diego Unified School District (SDUSD) to customize and implement Project SWELL (Stewardship: Water Education for Lifelong Leadership), a water-based science curriculum, for different grade levels in the Oceanside Unified School District (OUSD). The City of Oceanside is currently implementing the 5th grade curriculum and is considering implementing the 6th grade curriculum in the future.

The Project SWELL curriculum will foster a sense of stewardship for our natural environment and help to empower and educate these future leaders of America to understand and improve the condition of San Diego's coast and waterways. Project SWELL balances environmental and scientific studies as a comprehensive and hands-on K-12 water quality and pollution prevention curricula. More information about this curriculum can be found at http://www.projectswell.org/. This curriculum provides students with knowledge of water resources in San Diego County and Oceanside, watershed functions, water conservation, the effects of polluted urban runoff, and how students can help prevent water pollution.

5th Grade

During this reporting period the 5th grade level curriculum continued to be implemented. The OUSD adopted a slightly revised version of the FOSS (Full Option Science Systems) science kits used for K-5th grade levels for the 2009-10 school year. The 5th grade curriculum was slightly revised to reflect the use of the revised FOSS kits. FOSS is a research-based science curriculum for grades K–8 developed at the Lawrence Hall of Science, University of California at Berkeley.

6th Grade

For 6th grade the OUSD and the SDUSD adopted different science kits for implementation during the 2008-09 school year. The SDUSD changed the 6th grade curriculum to reflect the materials that will be used in the new science kit. During this reporting period a curriculum

writer customized the 6th grade curriculum for Oceanside. The curriculum is proposed for piloting during the 2011-12 school year.

Other Education Outreach opportunities

Oceanside Citizen's Academy

During this reporting period the City of Oceanside Human Resources Department coordinated a Citizen's Academy, which is a group of Oceanside residents interested in learning more about the City's various Departments. Several meetings were held over a five month period during which speakers from City Departments were invited to provide an overview of their department and to answer any questions.

On August 19, 2010 Clean Water Program staff gave a 30 minute presentation about the following surface water quality related topics to Citi Academy members:

- Goal of the Clean Water Program
- Overview of various CWP programs:
  - Monitoring
  - Bacteria Source tracking Project
  - Education outreach
  - River and Beach Cleanup Event
  - Stormwater related inspections
  - Code enforcement involvement
- Regulatory reporting

Attendees were given 10 minutes for questions and answers. They were also provided with a reusable toe bag and reusable bottle and encouraged to use them.

Over-Irrigation

Clean Water Inspectors continue to respond to and document over irrigation issues after receiving complaints from the general public or city staff. Inspectors investigated water sources and contacted property owners in person when possible or provided informational door hangers indicating the need to curtail overwatering or fix broken irrigation system if applicable, as well as provided information to educate the public to conserve water. After responding to complaints, inspector's maintained electronic files of all complaints and revisited locations to make sure over irrigation had stopped. In problematic areas where overwatering was caused by many property owners, the entire area was notified by door hangers and/or letters informing the property owners the need to conserve water and avoid polluting the storm drain systems. After the institution of Stage II Drought ordinance in FY 09-10, inspectors also enforced the new requirements for the time and duration of irrigation through out the City per the requirements of the new ordinance. If the property owners did not curtail overwatering, the information was submitted to Code Enforcement for further processing of the violations.

Water meter reader personnel are trained to document and respond to urban runoff and over-irrigation issues as they come across such activities during their normal activities. While in the field these personnel will enter the address location into a hand-held meter of a site that may have an urban runoff violation. These addresses are then compiled and given to the Clean Water Inspectors for follow-up. When possible, the water meter reader personnel will also leave door

hangers and report incidents of urban runoff. Depending on the situation a meter shop personnel will visit the site or the Clean Water Inspector will follow-up.

Residential Car Washing

Residents continued to be encouraged to use professional car washes or to implement BMPs at their homes to prevent water produced by residential car washing from entering the storm water conveyance system.

Pick Up Your Pet Waste Campaign

The Pick Up Your Pet Waste Campaign was initiated in FY 2008-09 to address the accumulation of dog waste along the San Luis Rey Recreation Trail (Trail) which travels adjacent to the San Luis Rey River on both the north and south sides. For more detailed information about this campaign please refer to Section 9.1.5 of this annual report.

8.3.1 Targeting "Underserved" Communities

Underserved communities are communities the City has determined may require increased educational efforts. The City targeted the following underserved communities and high-risk behaviors.

Mobile Businesses

Due to their nature, mobile businesses are typically not inspected during the routine industrial and commercial inspection program; therefore they may not be receiving the same educational material as other industrial and commercial businesses. The City continued to use Code Enforcement to respond to complaint calls related to mobile businesses at which time Mobile Business BMP information was given to the operator.

As part of the regional outreach efforts implemented through the Industrial/Commercial Sources Workgroup, the City submitted their inventory in FY 2008-09 to the Industrial/Commercial Workgroup for the development of a regional inventory of Mobile Businesses. This inventory was created in order to send information to the businesses about the minimum BMP requirements specific to Mobile businesses.

During the 2009-10 reporting period the City of Oceanside mailed "Required Minimum BMPs For Mobile Businesses" education materials to 34 Oceanside Mobile Businesses with current business licenses. See attachment 8-A of the 2009-10 Annual report for a copy of these materials. Of the 34 mailed only four were returned to the City.

Spanish-speaking population

The City will continue to target the large Spanish-speaking population in the City by offering a number of educational brochures and handouts, including the Green Wrench Guide and Integrated Pest Management tip cards in both English and Spanish. In addition there are posters available in Spanish for restaurants and automotive related businesses and are provided to these business where inspectors feel there is a need or upon request.

Nursery and Greenhouse Operations

Due to the amount of agricultural land use in the City, the City distributed a number of printed educational materials to agricultural/nursery/greenhouse site owners and operators. The City continues to provide educational materials, when needed, to nursery and greenhouse operations during annual inspections and on unannounced visits throughout the year.

Education Materials Distributed

Materials are regularly developed and updated to provide residents, the general public, and students with information about urban runoff, water quality, BMPs, Clean Water Program projects, and the Urban Runoff Hotline number. These materials include brochures and promotional items that are distributed upon request and during community events where the Clean Water Program staffed a booth. No significant changes were made to any of the brochures during this reporting period. Copies of these brochures were submitted with previous annual reports. Table 8-6 lists the educational materials distributed during the 2010-2011 reporting period.

Table 8-6. Educational Brochures and Promotional Items Developed and/or Distributed.

Education Material	Description	Number Distributed
Educational Brochures		
Urban Runoff Guidelines for Residents Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from residential activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	50
Pollution Prevention Tips for Gardening Activities Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from gardening activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	25
Urban Runoff Guidelines for Commercial Businesses Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from commercial and industrial business activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	50
Urban Runoff BMPs for Construction Projects handout	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from home-improvement activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	200
Urban Runoff Guidelines for Powerwashers	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from powerwashing activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	25
	Total number of educational brochures distributed during this reporting period.	**350**

Promotional Items		
Personal Pet Waste Bag Dispensers	These convenient dispensers are small enough to hook onto the dog leash so they are conveniently available when walking the dog. The image on the dispenser is the same image as on the sign used along the San Luis Rey Recreation Trail. Each dispenser holds ten small bags. Bag refills are available at pet stores.	250
Click Message Pen	Each pen has Oceanside's Urban Runoff Hotline number on the outside barrel number as well as the following messages inside that rotate when the pen is clicked: "Protect our Waterways: sweep sidewalks, all storm drains lead to the ocean, Sweep (don't hose off) driveways and sidewalks, pick up pet waste, www.OceansidCleanWaterProgram.org, Water saving tips:www.SaveWaterOceanside.com, Conserve water – don't overwater landscapes.	500
Pencils	Each pencil has Oceanside's Urban Runoff Hotline phone number and is made from recycled newsprint	750
Decals	These static cling decals have Oceanside's Urban Runoff Hotline phone number and can be placed on the windshield for quick reference to report potential storm water violations.	50
Gel Pen	These gel pens have Oceanside's Urban Runoff Hotline phone number and were distributed to City employees during municipal training sessions.	200
T-shirts	T-shirts are offered as a give-away option for beach and creek cleanup volunteers.	1,000
Tote Bags	These reusable tote bags are made from recycled cotton and have the words "Protect and Conserve Oceanside Water". They were distributed to employees and as a give-away option for beach and creek cleanup volunteers.	500
Water bottles	These reusable steel Bisphenol A (BPA) free water bottles were distributed to beach and creek cleanup volunteers employees and as a raffle item.	1,500
Rally Towels	These 11"x15" rally towels have the slogan "Only Rain in the Strom Drain" and were offered to beach and creek cleanup volunteers.	100
Flap hats	These flap hats were provided as a raffle item during municipal training sessions.	10
Stickers	These stickers are provided to young children and have storm water related slogans such as Only Rain in the Storm Drain and "You Are the Solution to Storm Water Pollution".	250
Ceramic Coffee Mugs	These reusable ceramic coffee mugs were provided as a raffle item during municipal training sessions.	25
	Total number of promotional items distributed during this reporting period.	**5,135**

8.4 Education of Construction Community

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents.

Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of any permits, construction site owners and developers are either given printed educational material or referred to the Clean water Program website for information that includes the municipal permitting process, as well as the state and local storm water permit requirements for construction sites. Prior to the wet season, all currently permitted construction sites are contacted reminding site owners and developers to update their sites' BMPs to reduce erosion and prevent storm water pollution, as well as update erosion control plans and SWPPPs.

The Building Division counter in City Hall references websites that have the following documents for construction site owners and developers to reference:

- Clean Water Program Website to for a link to the General Construction Storm Water Permit
- The City's Construction Manual
- Construction related sections of the Municipal Storm Water Permit Order R9-2007-0001
- Standard Urban Storm Water Mitigation Plan, when applicable

In addition to referring the construction community to the documents mentioned above, a copy of the Urban Runoff BMPs for Construction Projects brochure is stapled to the storm water related development plans for the project. This ensures that the construction community has received BMP information and is required to follow the minimum BMPs listed and shown in the brochure. Additional BMPs may be required by the City based on a review of the Storm Water Pollution Prevention Plan prepared by the project applicant. Storm water information is also disseminated to the construction community through storm water compliance inspections of construction sites.

8.5 Outreach Component Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the education component of the City's JURMP.

8.6 Program Review and Modification (Optional)

During this reporting period there were no changes to the Education Outreach component of Oceanside's Clean Water Program.

THIS PAGE INTENTIONALLY LEFT BLANK

9.0 PUBLIC PARTICIPATION COMPONENT

In order to ensure success with any City-wide program, the public must be involved. Stewardship and participation by the general public will increase the acceptance and willingness to comply with new regulations. The City of Oceanside has actively pursued public involvement in the Clean Water Program through the implementation of various programs and feedback mechanisms. This section documents the activities conducted by the City of Oceanside during the 2010-2011 reporting period to meet the requirements of Section D.6 of the Municipal Permit (Table 9-1).

Table 9-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(h).i Public Participation Efforts	See Entire Section 9 of this Annual Report

9.1 Local Public Participation Opportunities

The City of Oceanside encourages its residents to become involved in the Clean Water Program in various ways. The public can participate in the Clean Water Program including reporting potential violations through the Urban Runoff Hotline, beach and creek cleanup events, and attendance at community events.

9.1.1 Notable Activities

Green Oceanside Campaign

In late 2008, a group of city employees from various departments and divisions, including the Clean Water Program, joined forces and organized "The Green Team" which was a driving force behind the creation of the Green Oceanside campaign. This campaign continued during this reporting period. See section 9.1.5 for detailed information about activities implemented for this campaign.

9.1.2 Urban Runoff Hotline

The public and City employees can report potential storm water violations that could pollute the City's receiving waters through the Oceanside Urban Runoff Hotline (760) 435-5800. The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, placement on brochures, newsletters, click-message pens, pencils, and other promotional "give-aways", and advertisement on the City's Clean Water Program webpage.

During the reporting period, a total of three hundred and fifty three (353) storm water related calls were received through the Urban Runoff Hotline. This is a significant increase (71%) from the 251 calls received in the 2009-10 reporting period, 124 calls received in the 2008-09 reporting period, 55 calls received in the 2007-08 and the 14 calls received during the 2006-07 reporting period. This demonstrates that the general public and City employees are more aware of urban runoff issues and are reporting potential violations to the City.

Of the 353 Urban Runoff Hotline calls one hundred and seventy (170) were received by residents concerning potential urban runoff violations. There were also one hundred and eighty three (183) referrals from City staff.

All storm water related calls to the City (353) either from residents or City staff referrals were entered into the GBA database system for tracking. These calls were then forwarded to either the Clean Water Program inspectors or Code Enforcement staff, depending on the nature of the call.

Table 9-2 provides a summary of the nature of the calls received via the Hotline or by City staff referral. Of the calls received through the Hotline, sixteen (16) were referred directly to Code Enforcement for investigation.

Table 9-2. Urban Runoff Hotline calls and City staff referral summary

Department	Problem	City Employee Referral	Public Hotline	Total
Clean Water Program	Follow-up	0	9	9
	Over-irrigation/Broken irrigation	174	62	236
	Power Washing	1	3	4
	Spills/Dumping	6	17	23
	Street/Driveway Washing	0	1	1
	Unidentified water runoff	2	73	75
	Yard waste/Landscape Activity	0	5	5
	Total For CWP	183	170	**353**
Referred Directly to Code Enforcement	Over-irrigation/Broken irrigation	2	0	2
	Power Washing	1	0	1
	Spills/Dumping	2	8	10
	Street/Driveway Washing	0	2	2
	Unidentified water runoff	0	1	1
	Total for CE	5	11	**16**

9.1.3 Cleanup Events

City Sponsored events

To increase Oceanside residents' stewardship toward our local waterways, the Clean Water Program hosts annual cleanup events at every major waterway in Oceanside including Buena Vista Creek, Loma Alta Creek, San Luis Rey River and City beaches. Between 70 and 300 volunteers participate in these cleanup events. During the 2010-11 reporting period, 970 volunteers removed over 10 tons of trash, debris, shopping carts and other unwanted material from Oceanside waterways during City-sponsored events. See Table 9-3 below for data related to the City-sponsored events.

Private group sponsored events

Private groups regularly approach the city to coordinate their own cleanup event. The City of Oceanside including the Clean Water Program, Lifeguard division and the harbor maintenance

staff support these groups by providing them guidance on what areas to target for cleanup, provide supplies for their event (bags and gloves), and provide safety instructions for the group.

To assist these groups in coordinating their own beach cleanup event the Clean Water Program created a Beach Cleanup manual. This manual provides the following information:

- How to coordinate a beach cleanup
- Day of cleanup instructions
- City of Oceanside "Beach Cleanup Pledge"
- Safety fact sheet
- Supply checklist
- Cleanup summary sheet

A copy of the Beach Cleanup Manual is included as Attachment 9-A in the 2009-10 Annual Report.

During this reporting period three private groups coordinated their own beach cleanup event in Oceanside. After the completion of their event, private groups are requested to provide the number of volunteers and the number of bags collected or pounds of trash removed from the target area. Every attempt is made to gather this data but some groups do not always keep track of the data or report back to the City. 84 volunteers removed 150 pounds of trash from Oceanside beaches and waterways. See Table 9-3 for data related to the private group sponsored events.

Between the City sponsored and private group sponsored events, 1,054 volunteers removed 20,520 pounds of trash and debris from Oceanside City beaches and three waterways that traverse the City of Oceanside. Table 9-3 lists cleanup events held between July 2010 and June 2011 including the number of volunteers and the pounds of trash removed from the waterways.

Table 9-3. Cleanup Events Held during the 2010-11 Reporting Year.

Date	Event	Number of Participants	Pounds/Tonnage of Waste Removed
City Sponsored Cleanup Events			
7/5/2010	Morning After Mess	170	275
9/25/2010	Buena Vista Creek Cleanup	61	3,000
9/25/2010	Oceanside Beach Cleanup	307	436
11/06/2010	San Luis Rey River Cleanup	87	4,000
11/06/2010	Harbor Beach Cleanup	55	190
4/30/2011	Loma Alta Creek Cleanup	60	12,000
4/30/2011	Oceanside Beach Cleanup - Pier	230	469
	Total City Sponsored Events	**970**	**20,370 pounds**
Private Group Sponsored Events			
7/30/2010	Church of Jesus Christ of Latter Day Saints	33	75
3/13/2011	Ivey Ranch Elementary	25	30
3/13/2011	Human Development Club	26	45
	Total Private Group Events	**84**	**150 pounds**
	Grand Totals	**1,054**	**20,520 pounds**

Cleanup event email lists

In FY 2010-11 two event fliers and two Clean Water Program Newsletters with cleanup event information were sent via email to approximately 315 email addresses on an event notification email distribution list. See Attachment 6-C for newsletters and Attachment 9-A for event fliers emailed to interested parties during this reporting period who registered to receive e-notifications.

In addition two newspaper advertisements announcing the April 30, 2011 Loma Alta Creek Cleanup was published in two local newspapers: the North County Times and the Coast News. See Attachment 9-B for a copy of the advertisements.

9.1.4 Oceanside Update Show

Clean Water Program staff appears regularly on the Oceanside Update show broadcast through Oceanside Television Station KOCT. Each spot allows staff to spend three to five minutes discussing specific storm water pollution programs, pollution prevention tips, and BMPs to reduce impacts. The 30-minute show is broadcast twice daily at 7:00 a.m. and 7:00 p.m. on channels 17 and 18 in Oceanside. Topics are varied with every taping of Oceanside Update, therefore the viewing audience learns about public participation events and water quality BMPs. While KOCT is unable to determine the actual number of residents who watch Oceanside Update regularly or for any length of time, both channels broadcast to approximately 45,000 Oceanside households. Table 9-4 summarizes Oceanside Clean Water Program topics discussed during each of the seven tapings which aired during this reporting period.

Table 9-4. Summary of Oceanside Update Topics by Month.

Date	Topic Discussed
September 2010	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
October 2010	San Luis Rey River Cleanup Event, Stormwater hotline
December 2010	Protecting the environment with reusable, bags, utensils and bottles
January 2011	Upcoming river and beach cleanups as well as Green Week events
February 2010	How to prevent erosion around the house
April 2011	Loma Alta Creek Cleanup and Pollution Prevention Tips
June 2011	Morning After Mess beach cleanup

9.1.5 Additional Public Participation Opportunities

Other opportunities for local public participation during this reporting period are discussed in this section.

Pick Up Your Pet Waste Campaign

The Pick Up Your Pet Waste Campaign was initiated in FY 2008-09 to address the accumulation of dog waste along the San Luis Rey Recreation Trail (Trail) which travels adjacent to the San Luis Rey River on both the north and south sides. An intercept survey component was implemented to identify the neighborhoods where most people come from to use the Trail.

The next component of the campaign was a brief survey that was mailed to 300 Oceanside households located in neighborhoods near the Trail. The goal of the survey was to identify the reasons why people do or do not pick up after their pets on the Trail and in other public areas. Among dog owners, the most common reasons cited for why someone might leave dog waste behind while walking the Trail were:

- Forgot to bring a bag
- Nowhere to throw it away
- No one else around to see them

Ninety-three percent of survey respondents agreed that more pet waste dispensers are needed along the Trail.

During this reporting period the City installed four pet waste bag dispensers (Mutt Mitt brand) and four additional trash cans where most people access specific sections of the trail. Modified signage was also installed at the dispenser stations to emphasize pet owner responsibility. See Figure 9-1 for a photo of one of the installed pet waste bag dispenser stations.

Figure 9-1. Pet waste bag dispenser station installed along San Luis Rey Recreation Trail.

One week prior to installation and one week after installation a Action Research was contracted to count, pick up and weigh pet waste piles on both the north and south sides of the Trail. The south side of the Trail which is paved heavily used by bicycle riders, walkers and runners, did not have as much as the north side of the Trail. This may be due to the fact that the north Trail is not as heavily used as the south trail and the peer pressure to pick after their pets because someone is watching them is not as prevalent as on the south side Trail. Figure 9-2 provides a chart of the number of pet waste piles found on both the north and south side Trails prior to installation and after installation of the dispensers and trash cans. The south side Trail does not show much change in the number of piles. The north side Trail does show a reduction in the piles. But there is still a significant amount of pet waste left along both sides of the Trail even with resources provided for pickup and proper disposal. Additional assessment and outreach is needed to address the ongoing problem of pet waste left along these Trails.

Figure 9-2. Number of pet waste piles found along Trail prior to and after installation of pet waste bag dispenser stations.

One week after installation of the dispensers and trash cans, a contractor was used to assess the specific types of bags being used to dispose of pet waste. The contractor retrieved all of the bags that had pet waste inside from each of the four trash cans. The bags were then categorized to determine the types of bags used to pickup and dispose of pet waste. The majority of the bags used were from the new dispensers. Other bag types used were plastic grocery bags, newspaper

bags, and other miscellaneous bags. Figure 9-3 provides a graph of the types of bags used one week after installation of the dispenser stations.

Figure 9-3. Types of bags used along Trail after dispenser station installation.

Ongoing maintenance and stocking of bags is conducted by public works staff throughout the year. During this reporting period approximately 4000 pet waste bags were used from these four dispensers. The number of dispenser bags found in the trash can and the number of bags being replaced in the dispensers demonstrates that this resource is being used by the public. See Attachment 9-C for a copy of the final report for the Pick up your Pet Waste Campaign.

Green Oceanside Campaign

In 2008, a group of city employees from various departments, and divisions, including the Clean Water Program, initiated the Green Oceanside campaign. Green Oceanside is a community awareness campaign that promotes environmental sustainability with support from Oceanside residents and businesses. The mission is to provide the community with the tools needed to be better stewards of the planet through recycling, reducing waste, composting, conserving water, preventing water pollution and conserving energy.

The Green Oceanside campaign includes the implementation of one week of environmental activities that the public can attend. Activities during this week highlight programs and environmental habits that can be implemented collectively throughout the year by the community, non-profit organizations, businesses, and other local agencies. Following is a summary of the Green Week activities.

Green Week 2011

Green Week 2011 was held March 7 – 13, 2011. Several activities were coordinated for Green Week, some prior to and some during the week.

- Green Oceanside Classroom Presentations – These free presentations were available to classrooms and youth groups prior to and after Green Week. Presentation topics included Reduce/Reuse/Recycle, Water Conservation and Water Quality and are promoted throughout the year.

- Youth Art Contest– This poster contest was open to all Oceanside Unified School District students in K-6th grade levels. The theme was "What does Green Oceanside mean to you?"
- Environmental Film Festival – On Tuesday March 8 the film "Bag It" was shown to approximately 60 attendees. This film examines the role of the plastics industry and its effects on our health, climate change, pollution, and our reliance on petroleum oil.
- Green Fair – The culmination of Green Week ended with the Green Fair on March 12, 2011 at which over 30 environmentally conscious organizations and businesses staffed tables to provide information and resources to the public.
- Electronic Waste Drop-off Event – The public had the opportunity to bring unwanted electronic waste for proper recycling and disposal. This event was held on March 12 and was located next to the Green Fair. At this event there were 11.5 tons of universal E-Waste collected for proper recycling and disposal.
- Beach Cleanup – Coastkeeper sponsored a beach cleanup event on the morning of the Green Fair. 315 volunteers participated and removed 411 pounds of trash including 8,799 cigarette butts.
- Local Community Support – several local businesses provided sponsorship money that went toward the purchase of prizes for the youth contest winners and supplies for teachers who had a winning student in their classroom.
- Media/Marketing: In order to ensure the success and longevity of Green Week 2011, the Green Team pursued an assertive media/marketing plan that included coverage with local newspapers, local media/TV, city website, community college website, school bulletins, local announcement community boards, as well as extensive email notification chains amongst the local environmental community. A Green Oceanside section in the local Oceanside magazine, highlighting Green Week 2011, was sent to over 44,000 households prior to the event. See Attachment 9-D for the spring 2011 Oceanside Magazine that included Green Week event information.

Interpublic Education. The City has developed programs to educate the public and various target communities about the JURMP and the numerous ways the public can contribute to reduce pollution of the City's waterways and receiving waters. However, the City recognizes that no matter how many educational programs it implements, there will always be a need for ongoing outreach to various audiences. Therefore, "spreading the word" is another significant effort that the public will be encouraged to participate in that will substantially contribute to the success of the JURMP. When speaking with the public about urban runoff issues, they are encouraged to speak with neighbors about how everyday activities can potentially pollute local waterways.

City Staff Activities. City staff is the public at work. Staff is encouraged to report potential violations and provide feedback on the implementation of the JURMP. City staff is the eyes and ears of the City, and can provide valuable information on which components and programs are working and provide suggestions or recommendations on improving the programs. The City staff is encouraged to use the Oceanside Urban Runoff Hotline (760) 435-5800 for reporting potential runoff violations. In addition, City staff provides feedback during municipal training sessions, information meetings, and by direct contact with the Clean Water Program Manager and staff. Comments are discussed and if changes can be made to better improve the program, then they are planned and implemented.

9.2 Regional Public Participation Opportunities

This section describes those mechanisms available, at the regional level, for the public to participate in to assist in the implementation of regional JURMP related programs and to provide feedback to the Copermittees and contribute to the continuing development of the numerous JURMPs in effect around the County:

9.2.1 Media

Outreach to the public through the media serves as a widespread public education BMP and is an important element of public participation and keeps communication open between government staff and the public. The *Oceanside Magazine* is an economical and effective way to share storm water related information with residents of Oceanside (Attachment 9-D). These magazines were directly mailed to over 44,000 Oceanside households. In addition to the mailing, the magazines are placed in several high traffic locations throughout the City for the public to pick-up.

During Fiscal year 2010-11 all cleanup events and other storm water related information were covered in the *Oceanside Magazine* within the Green Oceanside section:

- 2010 Fall issue
  - Upcoming Green Oceanside events and booths
  - Buena Vista Creek and San Luis Rey River Cleanup events
- 2010 Winter issue
  - Green Week events and Green Fair information
  - Loma Alta Creek Cleanup
  - 2011 River, Creek and Beach cleanup Events
  - Day Without A Bag
  - Water Conservation still necessary
  - Bacteria Source Tracking project update
- 2011 Winter issue
  - Green Week 2011
  - Loma Alta Creek Cleanup
  - 2011 River, Creek and Beach cleanup Events
  - Backyard composting
- 2011 Summer Issue
  - How many Oceanside water bodies can you name?
  - 2011 River, Creek and Beach cleanup Events
  - Easy and convenient ways to save water
  - Free irrigation workshop announcement

During this reporting period two Clean Water Program Newsletters were distributed to over 42,000 households. An overview of topics in these two newsletters is listed below. A copy of these two newsletters is included in Attachment 6-C this annual report.

Fall 2010

- River, creek and beach cleanup event information
- Pick Up Your Pet Waste Campaign - Bag dispensers installed
- Bacteria Source Tracking Project Update

Spring 2011

- Loma Alta Creek Cleanup - April 30, 2011
- Bacteria Source Tracking Project Update
- How many Oceanside water bodies can you name?
- 2011 River, Creek and Beach Cleanup Event Information

Regional Events

San Diego County Fair

The San Diego Regional Storm Water Copermittees sponsored the Envirofair at the 2011 San Diego County Fair (Fair) as an education and outreach activity under the Regional Education and Residential Sources workgroup. The Envirofair was held on Jun 18, 2011 and was selected as a regional event due to its unique ability to potentially reach more than one million San Diegans and convey a strong environmental storm water and pollution prevention message. Details of the activities related to this event will be included in the FY 10/11 Regional Urban Runoff Management Program (RURMP) annual reports.

Copermittee Working Bodies

The Copermittees collectively developed ten (10) Working body groups to coordinate the implementation of regional programs required by the Municipal Permit. Each Copermittee is required to provide at least one representative to each working body. These working bodies meet at least four times per year unless a different meeting frequency is established through unanimous approval of all Copermittees.

During this reporting period the City of Oceanside participated in each working body. In addition the City of Oceanside Co-chaired the Educational and Residential Sources Workgroup. Activities related to each of these ten working bodies during FY 2010-11 will be provided in the Regional Urban Runoff Management Program (RURMP) annual report scheduled to be submitted to the RWQCB in January 2012.

Regional Hotlines and Website

The regional hotlines provide a direct connection for public participation. Historically, the hotlines have worked well and should continue to increase in use as more people are educated of the hotline phone number and the types of issues to report. The City will encourage reporting through its local hotlines, however, the regional hotlines will serve as an alternative to the local hotlines and also provide an opportunity for reporting by visitors to the City, from other areas in the County, who are not familiar with copermittee hotlines.

During FY 2009-10 the ERS Workgroup launched a new regional website: www.thinkbluesdregion.org. This website provides the public with a link to their own jurisdictional stormwater website, a phone number to report potential stormwater violations. And resource links to get storm water related information. More detailed information on the successes of this website will be provided in the Regional Urban Runoff Management Program (RURMP) annual report scheduled to be submitted to the RWQCB in January 2012.

10.0 FISCAL ANALYSIS COMPONENT

10.1 Introduction

The City of Oceanside acquires the funds necessary to facilitate the City's storm water program through four departments or divisions in the City: Water Utilities Department, Public Works Department, Engineering Division and Code Enforcement Division. Much of City's storm water program falls under the responsibility of these four departments/divisions. Funds obtained for use in implementing the City's storm water program are utilized for a number of different programs, including jurisdictional, watershed, and regional programs. This section documents the activities conducted by the City of Oceanside during the 2010-2011 reporting period to meet the requirements of Section G of the Municipal Permit Order 2007-0001 (Table 10-1).

Table 10-1. Order 2007-0001 Fiscal Analysis Compliance Summary.

G.1: Each Copermittee shall secure the resources necessary to meet all requirements of the Municipal Permit.	See Section 10.1 of this Annual Report
G.2. Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities).	See Section 10.2 of this Annual Report
G.3. Each Copermittee shall conduct an annual fiscal analysis.	See Section 10.2.3 of this Annual Report
J.3.a.(3)(j).i Fiscal analysis of City urban runoff management program	See Entire Section 10 of this Annual Report

Effective programs require adequate funding to implement planned activities. The first step in securing adequate funding for the JURMP is to provide a strategy for effectively conducting a fiscal analysis of the JURMP in its entirety. This year's fiscal analysis included an evaluation of the expenditures (such as capital, operation and maintenance, education, enforcement, and administrative expenditures) necessary to accomplish the activities described in the JURMP and required under investigation orders and Total Maximum Daily Loads (TMDLs) mandates.

10.2 Fiscal Analysis Methods

The Municipal Permit requires the Copermittees to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The Standardized Fiscal Analysis Method and Format (Fiscal Analysis Method) was collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis Method document was submitted to the San Diego Regional Water Quality Control Board by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009. The Municipal Permit further requires the Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31,

2010. The fiscal analysis incorporated in this section is based on the standardized method. This is the first year that the standardized method is being used.

10.2.1 Program Funding

As previously mentioned, the City secures funding for the implementation of the storm water program through the Water Utilities, Public Works Departments, and Engineering Divisions in the City. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge. The surcharge is based on the customer's water consumption, so the surcharge is also designed as an incentive for individuals to conserve water. This amount is equal to $0.07 per unit of water used.

The City Engineering Division as part of the Development Services Department secures funding from development-related programs. The Engineering Division receives funding through fees assessed on developers for grading plan checks and inspections. Funding for Public Works departments is obtained through general fund allocations to the department.

The Standardized Fiscal Analysis Method includes a Standardized Fiscal Analysis Reporting Form, which consists of three tables separating jurisdictional, watershed, and regional expenditures. Jurisdictional expenditures are divided into components that mirror those included in the Municipal Permit as follows:

Administration
Development Planning
Construction
Municipal
Industrial and Commercial
Residential
Illegal Discharge Detection and Elimination (IDDE)
Education
Public Participation
Special Investigations
Non-Emergency Firefighting

Further, each of the above categories may be broken down into sub-categories. Potential Sub-categories may include:

Land Use Planning
Environmental Review
Development Project Approval and verification
Public Construction Projects
Private Construction Projects
Public Reporting of Illicit Connection or Illegal Discharges (ICIDs)
Jurisdictional Urban Runoff Monitoring Programs
Other

Expenditure items to be considered for each category or sub-category may include:

Administration
Permitting and Licensing
Project Planning and Engineering
Maintenance Inspections
Compliance Inspection and Enforcement
BMP Implementation
Educational Outreach
Waste Collection and Recycling
Jurisdictional Urban Runoff and Receiving Water Monitoring
Other Expenditures

For reporting purposes, only the table incorporating major jurisdictional components will be used. Sub-categories and expenditure items are intended to provide standardization of expenditures and need not be shown in the final report.

10.2.2 Urban Runoff Management Programs

The City's storm water budget is used to support the following departments/divisions:

- Water Utilities Department - Administration of the City's Clean Water Program
- Water Utilities Department – Clean Water Program Compliance Inspectors
- Development Service Department, Engineering Division – Storm water plan review, SUSMP and HMP
- Development Service Department, Engineering Division - Capital Improvement Projects
- Public Works Department - Storm Drain Maintenance
- Public Works Department - Solid Waste
- Public Works Department - Street and Median Maintenance
- Neighborhood Services Department – Code Enforcement Division

Personnel from various City departments and divisions are involved in the implementation of the City's storm water program. Refer to Section 2 and the City's certification letter in Appendix A, pages 2 and 3, of the City's 2008 JURMP for further detail regarding the responsibilities of various departments. Other program expenditures include watershed and regional storm water activities.

10.2.3 Expenditure and Budget Reporting

Following are the expenditures for fiscal year 2010-11 as well as a proposed budget for the next fiscal year. The fiscal year expenditures are presented in tabular format with separate rows for different expenditure categories and the associated budget. The budget for the next fiscal year is presented in the same table. See Table 10-2.

The JURMP budgeting for the Water Clean Water Program which includes various departments is described in the following sections and summarized in Table 10-2 at the end of this section. Currently there is eight staff people dedicated to the City's Clean Water Program.

- One full-time Clean Water Program Coordinator

- Two full-time Environmental Specialists (focusing on water quality monitoring, education outreach, and program administration)
- Two full-time CWP inspectors
- One full-time Engineering Assistant (focusing on SUSMP and HMP)
- Two full-time Code Enforcement Officers

10.2.3.1 Water Utilities Department

The surcharge rate described above under Program Funding is listed as a separate line item on Oceanside customers' utility bills. This allows for the clear delineation of the revenue being secured for the Clean Water Program in the Water Utilities section of the utility bill. The costs to administer the Clean Water Program during Fiscal Year 2010-11 totaled $1,131,730. It is anticipated that the Water Utilities Department will expend $1,313,274 during Fiscal year 2011-12.

10.2.3.2 Public Works

The City calculated the curb miles swept for the reporting period and they totaled 28,954 miles. The overall cost of the City's street sweeping program during FY 2010-11 was estimated to cost $1,450,977. This includes $677,505 for equipment costs and $773,472 for staff costs. With a total of 28,954 curb miles swept in the City at a cost of $1,450,977, this averages out to $50.11 per curb mile.

The cost for inspection and maintenance of the MS4 was $223,952 during this reporting period and. Budgeted costs for FY 2011-12 for MS4 maintenance are $370,000. During fiscal year 2010-11 the Public Works Department spent approximately $1,739,929. It is anticipated that the Public Works Department will expend $1,885,000 during Fiscal year 2011-12.

10.2.3.3 Engineering

Municipal Permit Order 2007-001 requires an increased focus and effort in development-related review and inspection, development of a Hydromodification Plan and revisions to the Standard Urban Storm Water Mitigation Plan. The approximate costs to implement this program during Fiscal year 2010-11 totaled $95,849. It is anticipated that Engineering Department will expend $100,000 during Fiscal year 2011-12.

10.2.3.4 Overall Clean Water Program Costs

During Fiscal Year 2010-11 approximately $2,967,508 was expended amongst the departments for the implementation of the Clean Water Program. It is anticipated that the total program costs for Fiscal Year 2011-12 will total $3,298,274.

Table 10-2. JURMP Budgeting for Water Utilities, Public Works and Engineering Departments/Divisions.

Department	Item	Fiscal Year 2009-2010	Fiscal Year 2010-2011	Projected Fiscal Year 2011-2012
Water Utilities	Personnel (including Code Enforcement)	$686,260	$752,433	$675,958
	Misc. office supplies, postage, uniforms	$4,700	$303	$3,000
	Print Materials	$34,500	$18,270	$34,000
	Monitoring Programs including lab materials, supplies and services	$89,000	$21,183	$46,500
	Other Misc – Cleanups and booths	$2,000	$20,000	$20,500
	Consultant Fees – Investigation Order, TMDL	$250,800	$156,689	$255,660
	Independent Contractors	0	0	0
	Permits	$25,000	$27,178	$36,000
	Dues, Travel, Advertising	$8,950	$2,099	$3,500
	Equipment – UV	$5,000	$1,673	$16,000
	Regional Copermittee Cost-share; Monitoring, RURMP, WURMP	$147,248	$131,902	$146,000
	Vehicle Maintenance			$76,156
Water Utilities	**Total**	**$1,253,458**	**$1,131,730**	**$1,313,274**
Public Works	Street Sweeping (Equipment)	$478,000	$677,505	$675,000
	Street Sweeping (staffing and /or contract costs)	$503,000	$773,472	$775,000
	Conveyance System Cleaning (Contracted Work and City Staff	$369,597	$223,952	$370,000
	Personnel for CWP Monitoring	$65,000	$65,000	$65,000
Public Works	**Total**	**$1,415,597**	**$1,739,929**	**1,885,000**
Engineering Division	Personnel	$130,000	$95,849	$100,000
	Hydromodification Plan	$0	$0	0
Engineering Division	**Total**	**$130,000**	**$95,849**	**$100,000**
	Grand Total	**$2,799,055**	**$2,967,508**	**$3,298,274**

THIS PAGE INTENTIONALLY LEFT BLANK

11.0 EFFECTIVENESS ASSESSMENT COMPONENT

11.1 Introduction

Effectiveness assessment is an important component of the JURMP because it can assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The San Diego County Copermittees developed two guidance documents to assist in the assessment of the JURMP components as well as the jurisdictions overall JURMP program. These two documents are titled *A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs* and the *Baseline Long-term Effectiveness Assessment* (BLTEA). The City participated in regional efforts to develop these documents in anticipation of the requirement to assess their JURMP programs.

The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level. In future reporting years, the issue of standardized assessment metrics and procedures will be addressed by the Copermittees. The City anticipates participation in the further development of these work products.

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes.

Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique. The effectiveness assessment approach developed by the Copermittees during the 2005-06 permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge/Awareness

- Level 3: Behavioral Change/BMP Implementation
- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality
- Level 6: Changes in Receiving Water Quality

The establishment of measurable outcomes is necessary for both incremental program component improvements and as a basis for future establishment of relationships between implementation and water quality improvement outcomes.

11.2 Effectiveness Assessment Results

The Municipal Permit Order 2007-0001 requires the City to assess the effectiveness of each significant activity specific to each program component, for each program component as a whole, and for the storm water program as a whole. Levels 1, 2, 3, 4, 5, and 6 outcomes are discussed in the text below. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome level assessments

Level 1 – Compliance with Activity-Based Permit Requirements: Documenting Activities

Compliance with Activity-based permit requirements is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City based on various components of the Municipal Permit. Level 1 outcomes take the form of a simple yes or no answer basically answering "Was the control measure completed?" or it may provide feedback that may be quantified, counted, or tracked over time to demonstrate effort or progress.

Level 2 – Changes in Knowledge/Awareness: Raising Awareness

An important goal of stormwater programs is to increase the level of knowledge and awareness among target audiences such as residents, businesses, and municipal employees. Level 2 outcomes provide program managers feedback on how effective the various control measures have been in raising awareness and changing attitudes of the target audience.

Level 3 – Behavioral Change/BMP Implementation: Changing Behavior

A key focus of the stormwater management program is to affect changes in behavior. By building increases in knowledge and awareness (Level 2), Level 3 outcomes provide program managers with feedback on how effective the program elements and control measures have been in motivating target audiences to change their behaviors and implement appropriate BMPs.

Level 4 – Load Reductions: Reducing Loads from Sources

Many control measures are intended to reduce the loading of pollutants from targeted sources. Load reductions should, in turn, result in improvements to discharge and

receiving water quality. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning.

Level 5 – Changes in Discharge Quality: Improving Runoff Quality

A primary focus of stormwater management programs is to reduce pollutants in stormwater to the maximum extent practicable, and to ensure that these discharges do not cause or contribute to violations of water quality standards in receiving waters. At this level baseline measurements of runoff quality are measured to allow comparison. Multi-year data sets are needed in order to have any confidence in the measured change.

Level 6 – Changes in Receiving Water Quality: Protecting Receiving Water Quality

The ultimate objective of stormwater management programs is the protection of water bodies. At level 6, program mangers will focus on outcomes such as compliance with water quality standards, protection of biological integrity, and beneficial use attainment.

Summary

Program elements and control measures will typically have outcomes at more than one of the levels described above and not all outcome levels will necessarily be applicable to all activities. The information submitted with this report will address levels 1, 2, 3 and 4. Section 7 of this report, IDDE, will be submitted prior to December 15 and will address level 5.

11.2.2 Overall Component Assessments

11.2.2.1 Development Planning

The application of the Hydromodification Management Plan (HMP) to all Priority Development Projects (PDPs) and the continued implementation of the unified Low Impact Development (LID) design approach have appeared to increase the level of misunderstanding experienced by the development community, as compared to the previous reporting period. The seeming inability to accept the upgraded mitigation requirements can be attributed to a number of factors.

Perhaps the foremost reason for the marked decline in the ability to demonstrate an understanding of current storm water mitigation principles is the prevailing economic climate. Developers and consultants have not been involved in projects and therefore have not had the funding or incentive to keep abreast with current MS4 and Construction General Permit (CGP) regulations. Because the development community has experience a prolonged period of reduce or no activity, projects that were “mothballed” five-years ago are being reconsidered, only to find entire project concept is infeasible due to current regulations.

Another factor to consider is the cost associated with the implementation of the unified LID design approach, inclusion of HMP facilities, compliance with the CGP, and establishment of an O&M Plan. The cost of design to support these concepts, facilities, and compliance documents is significant. Unified LID design requires accounting of all surface types and Drainage Management Areas (DMAs). The complexities associated with HMP requires a specialized knowledge and a level of expertise that greatly adds to

capital expenditures of designing a development project; often eclipsing the combined cost of a mitigation plan and hydrology study. Meanwhile, compliance with the CGP requires the development and implementation of as SWPPP which by itself can add the expense of one-half full-time employee to a construction project. And finally, the O&M component adds yet another design and implementation expense to the final stage of a project.

Yet another consideration weighed by the development community, which creates a degree of frustration, is the land area obligations associated with LID and HMP. The development community is experiencing land appropriations to satisfy unified LID design and HMP requirements ranging from a minimum of 4% to as much as 20% of the developable project area. The material cost alone for HMP facilities begins in the tens of thousands of dollars and more typically ranges in the hundreds of thousands of dollars.

When considering all these factors, the development and consultant communities, are on the whole, unable to accept additional regulation and are somewhat frustrated with what is perceived to be storm water mitigation approaches that are "ever-changing", "too restrictive", and "too costly". In short, many developers are simply foregoing development because projects "no longer pencil-out".

The City SUSMP

The SUSMP has been updated and expanded to include revised HMP requirements, consistent with the Municipal Permit, and clarifications to the unified LID design approach. The SUSMP includes specific definitions and design parameters for the integration of porous concrete, bioretention facilities, flow-through planters, dry wells, infiltration basins, cisterns, and surface ponds. There are also provisions for implementation of higher-rate biofilters or higher-rate vault based filtration units on redevelopment or retrofit projects.

Project remain obligated to incorporate source control design features to mitigate pollutants from on-site land use or sources, such as trash enclosures, outdoor storage areas and vehicle washing. The SUSMP contains BMPs designed to address the pollutant sources and provides corresponding list of mitigation practices.

The most significant revision to the SUSMP was the inclusion of HMP as applied to all Priority Development Projects (PDPs). Direct reference is made to the San Diego County HMP and decision matrices are provided to determine applicability, susceptibility, and etc. In addition, the SUSMP includes BMP sizing tables that enable applicants and design professionals to quickly assess HMP facility requirements. Other methods of addressing HMP requirements, such as the online BMP Sizing Tool, HSPF, HEC-HMS, and SWMM are available to the development community.

By following the SUSMP unified LID design approach and addressing the HMP requirements, applicants are able to develop an integrated design which complies with the complex and overlapping NPDES permit. The updated SUSMP is available at the City of

Oceanside – Development Services counter or may be downloaded from the City Development Services Department – Engineering Division webpage.

Interdepartmental Coordination
The City's SUSMP and development review process involves multiple Departments and Divisions throughout the City. The City has taken necessary steps to maintain compliance with SUSMP requirements through the coordination of these multiple departments and divisions.

Dedicated Storm Water Management Program
The City established the Clean Water Program (CWP) in 2001 under the Water Utilities Department. During this reporting period the CWP program in conjunction with the Engineering Division provided the necessary oversight for all management components of the SUSMP.

Table 11-1. Development Planning – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measures of Success	
Development Planning D.1.e	Development Projects	# Projects requiring SWMP	# Projects completing SWMP	Actual/Target	Percent (%) Completion
	Priority Projects (Required PDP-SWMP)	26	11	11/26	42
	Standard Projects (Require SDP-SWMP)	3	1	1/3	33
	SUSMP Inspections	# Sites targeted for Inspection	# Sites Inspected	Actual/Target	%
	High Priority Sites (Annual)	18	16	16/18	89
	All Sites (Target: 20% of 139)	27	40	40/27	148

The 42% and 33% SWMP completion rates indicate that many of the projects remain in the process of developing an SWMP. The actual number of SWMP reviews per project may vary significantly. Some projects obtain plan approval in the second review cycle, while others may require as many as ten review cycles to produce a SWMP that is consistent with the Municipal Permit and SUSMP. The average project requires three to four reviews to obtain approve of the SWMP.

As the City develops more projects which are subject to the requirements of the Municipal Permit, the inherent challenges associated with data management will emerge such as tracking of post-construction Treatment Control BMPs, maintenances

agreements, and associated documents become more numerous. To counter the possibility, the City Development Services Department, which includes Code Enforcement, Building, and Engineering Divisions, chose CRW Systems, Inc. program called TRAKiT® as a data tracking system which was rolled out in the 2009-10 reporting year. See section 3.2.1 of this annual report for more detailed information about the TRAKiT® database.

11.2.2.2 Construction

The construction component of the City's JURMP continues to be effectively implemented through inspection and enforcement, education and training and BMP maintenance (Table 11-2). As construction activities continue, the City will maintain the level of performance established from past years, and continue to meet the regulatory standards mandated in the Municipal permit.

Table 11-2. Construction – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measures of Success	
Development Planning D.2.d	Construction Projects	# sites targeted for Inspection	# sites inspected	Actual/Target	Percent (%) Completion
	High Priority Sites	18	18	18/18	100
	Medium Priority	17	17	17/17	100
	Low Priority Sites	12	12	12/12	100

11.2.2.3 Municipal

The municipal component of the City's JURMP continues to provide a well-rounded approach and will continue to implement a comprehensive education program along with inspections of municipal facilities, MS4 maintenance, sanitary sewer slip-lining and street sweeping.

Table 11-3 provides the Level 1 Compliance with Activity-Based Requirements and Level 4 - Load Reductions Reducing Loads from Sources.

Table 11-3. Municipal – Level 1: Compliance with Activity-Based Requirements; Level 4 - Load Reductions: Reducing Loads from Sources.

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.a	Municipal Facilities	# of sites to be inspected	# of sites actually inspected	Actual/Target	Percent (%) Completion
	(High, Medium and Low priority facilities)	176	176	176/176	100
	MS4	# of catch Basins to be cleaned	# of catch Basins actually cleaned	Actual/Target	Percent (%) Completion
	Catch basins cleaned	3,250	3,297	3,297/3,250	101
	Sanitary Sewer	# of feet to be slip-lined	# of feet actually slip-lined	Actual/Target	Percent (%) Completion
	Feet of sewer slip-lined	300	302	302/300	100
	Street Sweeping	# of miles of streets to be swept	# of miles of streets actually swept	Actual/Target	Percent (%) Completion
	Curb miles of street swept	28,954	28,954	28,954/28,954	100

In addition the City implemented a training program that provided pre- and post-quizzes to assess the effectiveness of the training course specific to some departments or divisions. During the 2010-11 reporting year, 318 City and contractor staff was trained on the City's storm water program requirements. Pre- and post- tests were given to some groups to assess the level of knowledge before and after each training session. 105 City employees took both the pre- and post-test. The other 213 trainees either completed a pre or post-test or their group only received a customized power point presentation.

Depending on the nature of the employee's department, the employees were given a 15 or 20 question test. The 15-question test targeted City staff that worked in various departments including fleet maintenance, parks and recreation and street maintenance. The 20-question test targeted staff that work at and maintain industrial facilities. The average City pre-test score was 78% percent of the questions correct. The average City post-test score was 96% percent of the questions correct. Figure 11-1 presents the pre- and post-test scores by City department.

Figure 11-1. Municipal – Level 2: Changes in Knowledge/Awareness: Raising Awareness.

11.2.2.4 Industrial and Commercial

The City implements a comprehensive inspection program for industrial and commercial facilities including all restaurants and nursery and greenhouse operations. Table 11-4 provides an assessment for the inspections.

Table 11-4. Industrial and Commercial Component - Level 1: Compliance with Activity-Based Requirements.

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.b	**Industrial Facilities**	# of sites to be inspected	# of sites actually inspected	Actual/Target	Percent (%) Completion
	High Priority Facilities	10	10	10/10	100%
	Medium and Low Priority Facilities	As Needed	14	14/27	N/A
	Commercial Facilities	# of sites to be inspected	# of sites actually inspected	Actual/Target	Percent (%) Completion
	High Priority Facilities	556	556	556/556	100%
	Medium and Low priority facilities	As needed	105	105/1335	N/A
	Commercial and Industrial Facilities	# of sites to be inspected	# of sites actually inspected	Actual/Target	Percent (%) Completion
	All Inventoried Facilities (25% of 1,942 Facilities)	486	685	685/486	35% (Exceeded 25% Requirement)

A new asset management software tool was implemented during the 2009-10 reporting period for the industrial and commercial NPDES inspections. Several discrepancies were found throughout the year, such as duplicate records, inadvertently changed priority levels, and missing, new, or out of business facilities. As these were found, the inventory list in the software was updated. However, as with any new technological tool, updating and using a changing list was a challenge in the first year.

During the current reporting period a comprehensive review of 3,000 records was completed and inventory in the database was updated when necessary revisions were found.

11.2.2.5 Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. The City is also conducting additional monitoring studies to help identify and mitigate residential sources of pollution more effectively. Although fewer households participated in dropping off household hazardous waste during this reporting period, more quantity of household hazardous waste was collected for proper disposal (Table 11-5).

Table 11-5. Residential Component - Behavioral Change/BMP Implementation Changing Behavior.

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measures of Success	
Residential D.3.e	Household Hazardous Material	Quantity of waste targeted	Quantity of waste collected	Actual/Target	Percent (%) Completion
		130 tons	146.5 tons	146.5/130	112
	Households Participating in Program	# of households targeted	# of households participating	Actual/Target	Percent (%) Completion
		3,500	2,289	2,289/3,500	65

11.2.2.6 IDDE

An assessment of this component will be provided in Section 7 when the City submits the entire FY 2010-11 Illicit Discharge Detection and Elimination Component, including the 2010 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2011.

11.2.2.7 Education and Public Participation

The City implements a comprehensive education outreach program for both municipal staff and the public as well as a comprehensive public participation program (Table 11-6). See 11.2.2.3 above for an assessment of the Municipal training program. The City prides itself on educating children within its jurisdiction through the use of a watershed model and the Project SWELL curriculum incorporated into the 5th grade science curriculum.

Table 11-6. Education and Public Participation Component - Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity/Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.g	Student Presentations	# of presentations targeted	# of presentations completed	Actual/Target	Percent (%) Completion
		10	21	21/10	210
	CWP Newsletters	# of newsletters targeted for completion	# of newsletters completed	Actual/Target	Percent (%) Completion
		2	2	2/2	100
	Oceanside Update Tapings	# of tapings planned	# of tapings completed	Actual/Target	Percent (%) Completion
		6	9	9/6	150
	CWP Website	# of targeted hits	# of actual hits	Actual/Target	Percent (%) Completion
		45,000	60,319	60,319/45,000	134

11.3 Program Review and Modification

No changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

THIS PAGE INTENTIONALLY LEFT BLANK

12.0 SPECIAL INVESTIGATIONS

12.1 Lower San Luis Rey Bacteria Source Identification Project

12.1.1 Overview

Project Background

The Pacific Ocean shoreline at the outlet of the San Luis Rey (SLR) River mouth, located in the City of Oceanside, is a stretch of coastline with a large sandy beach and an easily accessible surf break, making it one of the city's most popular places for recreation. As a result of historical fecal indicator bacteria (FIB) exceedances at the beach, one-half mile of shoreline is listed as an impaired water body under section 303(d) of the Clean Water Act for exceedances of indicator bacterial standards and is included in the recently adopted Total Maximum Daily Load (TMDL) for Fecal Indicator Bacteria, Project I for Beaches and Creeks in the San Diego Region (Bacteria I TMDL).

To address the elevated levels of FIB and in anticipation of the TMDL, the City applied for and was awarded the State Water Resources Control Board (SWRCB) Proposition 50 Clean Beaches Initiative Grant Program to implement the Lower SLR River Bacterial Source Identification Project. The overall goals of the Project were to identify hotspots of FIB within the Lower SLR River, identify potential sources, and prioritize those sources and/or locations for future management measures to reduce bacteria concentrations.

Grant Award

The City received $554,375 from the SWRCB and, with the assistance of other stakeholders, was budgeted to match $141,750 to implement the source identification project in the lower river and river mouth. The City awarded MACTEC Engineering and Consulting, Inc. (MACTEC) and their team of leading scientists the contract for the organization and completion of the study.

Project Overview

The Lower SLR River Bacterial Source Identification Project was designed as the initial phase of a source investigation to provide a broad characterization of bacterial concentrations throughout the SLR River and river mouth. The Project was designed to attain the following goals:

- Assess what sources and activities have contributed most to the bacterial impairment of the SLR River mouth and from where those sources and activities may have originated.
- Analyze potential bacterial source elimination or reduction practices targeted at the identified sources and activities.
- Contribute to future achievement of bacterial TMDL objectives by identifying potential management measures (MMs) and follow-up studies to target sources and activities more effectively.

The Project goals were accomplished by integrating data from the following independent monitoring programs:

- The Microbial Source Tracking (MST) Program was implemented by the Prop 50 Grant Project team. The MST Program included monitoring 11 sites within the lower 7.5 miles of the SLR River during wet and dry conditions, a tiered analytical approach for microbial source tracking, and a visual observation program to identify upstream activities in the watershed that may be potential sources of bacteria.
- The Joint Monitoring (JM) Program was completed by the City of Oceanside and the County of San Diego, Department of Public Works as in-kind services to the Grant. Monthly dry weather monitoring was conducted at 18 locations within the lower 19.2 miles of the SLR Watershed.
- The Department of Environmental Health (DEH) AB411 Program was conducted by the County of San Diego, Department of Environmental Health. Weekly dry weather monitoring of the Pacific Shoreline was conducted 75 feet south of the SLR River outlet.

During the MST Program, the main component of the grant, water samples were collected during dry and wet weather for FIB and microbial source tracking analysis in the SLR River mouth, the main stem of the river, and tributary locations. Visual observations were conducted in conjunction with sampling activities, when possible, within 14 zones of residential, commercial, and/or park areas. The MST dry season monitoring was implemented in 2008 and 2010 between the months of May to August. There were a total of four dry season sampling events; two events per year. Due to the Stop Work Order from the State, there was no activity on the Project during 2009. Wet season monitoring was conducted in 2010 and 2011 during the months of December to February. Wet season monitoring events consisted of a dry weather baseline event, two wet weather (storm) events, and two (dry weather) base flow events.

All FIB results from the MST Program were compared to selection criteria based on the Basin Plan Rec-1 WQOs in order to identify samples for further microbial source analyses. This multi-tiered approach utilizes a tool box of traditional fecal indicator bacterial analyses and quantitative molecular assays that are optimal for microbial source tracking in urban environments. These include:

- Three quantitative polymerase chain reaction (QPCR) fecal *Bacteroides* spp. assays were conducted to confirm the presence of human fecal bacteria, taking into consideration a spectrum of specificity and sensitivity.
- Enterovirus assays quantified the enteric viral concentrations present in water samples and were used as a tool to characterize the threat to human health.
- A gull specific marker, *Catellicoccus marimammalium*, was used to provide important information about the impact of seagulls in the SLR River.
- A bacterial community analysis was used to characterize the bacterial communities in the water column and sediment in the river mouth during dry weather.

The City of Oceanside and the County of San Diego conducted the Joint Monitoring Program over the entire project duration. Water samples were collected monthly at main stem, tributary, river mouth, and AB411 locations during dry weather for the JM Program.

12.1.2 Activities completed during previous reporting periods

Establishment of a TAC

A Technical Advisory Committee (TAC) was established for the Project to be involved in all aspects of the project, including project approach and oversight of the monitoring and reporting. There were six members representing the following agencies: the Regional Water Quality Control Board, County of San Diego, City of Vista, and San Diego Coastkeeper. In addition to there were three representatives from the City of Oceanside. Two TAC meetings were held in FY 2008-09. One TAC meeting was held in FY 2009-10.

Monitoring Plan and Quality Assurance Project Plan Approval

The SWRCB approved the original Quality Assurance Project Plan (QAPP) and Monitoring Plan (MP) on June 19, 2008. Revisions throughout the duration of the Project were made to adjust for laboratory changes, genetic analyses updates, and to update the monitoring schedule.

First Dry Season Monitoring Events 2008

The first dry season monitoring event took place on June 18 and 19, 2008. The project team collected bacteria samples and flow measurements at six monitoring locations in the Lower San Luis Rey River. The bacteria samples were analyzed for fecal indicator bacteria and the remaining sample volume was filtered and frozen for molecular analysis. The river mouth was not sampled, as planned, due to construction of the Pacific Street Bridge.

The second dry season event took place on July 23 and 24, 2008. The project team collected bacteria samples and flow measurements at five of six monitoring locations in the Lower San Luis Rey River. As part of the Visual Observation Program, observations were conducted July 23 and 24, 2008 within the Lower San Luis Rey River and upstream in the drainage basin to identify possible sources of bacteria. The river mouth was again not sampled, due to construction of the Pacific Street Bridge.

Suspension of Funds from State Water Resource Control Board, Dept. of Finance

On December 19, 2008, the SWRCB issued a Budget Letter that suspended all projects including the Lower San Luis Rey Source Identification Project. All work was stopped. The work completed after this notice was primarily to assess the status of various elements of the project, including laboratory work and the effect of the stop work notice on genetic analysis. Unfortunately, during the year-long stop work order, samples for two of the three types of genetic analyses had expired and were therefore no longer available for use to the program. During this period, samples were analyzed only for *Enterovirus A* by Dr. Jed Furman's laboratory at the University of Southern California.

The monthly joint monitoring program conducted by the City of Oceanside and the County of San Diego continued as modified for the grant project until June of 2009. In June 2009, the City and County agreed to continue the monitoring program, but the City brought the monitoring in-house to the San Luis Rey Wastewater Treatment Plan Laboratory. The same field procedures were followed, but the reporting limits changed to above SWAMP recommendations.

Reinstatement of Funds from State Water Resource Control Board

On December 17, 2009, the State Water Resources Control Board gave the City of Oceanside notice that the Lower San Luis Rey Source Identification Project grant had been selected to restart. With an original grant end date of March 31, 2010, the City of Oceanside, on January 4, 2010, submitted a Request for Time Extension in order to complete the remaining two-thirds of the field and laboratory work required.

The monthly joint monitoring conducted by the City of Oceanside and the County of San Diego supplementing the grant field work restarted immediately. On April 14, 2010, the City of Oceanside received the executed amendment to the Grant Agreement and work began then to restart the project.

Dry Season Monitoring Events 2010

The third dry season monitoring event in the Lower San Luis Rey River/River Mouth was implemented on May 18, 19, and 20, 2010. On May 18, 2010, The City of Oceanside and the County of San Diego conducted the joint monitoring at 17 locations in Lower San Luis Rey River and the grant project team collected composite water samples and sediment samples at five locations in the River Mouth. In addition, the City of Oceanside collected additional samples at each Watershed monitoring location for potential further genetic analysis on upstream sites within the City boundary. On May 19 and 20, 2010, the grant project team collected composite water samples and sediment samples at five locations in the River Mouth and composite water samples at two river locations (Bonsall Bridge and Benet Bridge). The Visual Observations Program was implemented on the first day of sampling, May 18, 2010. Two teams of two walked a total of four locations adjacent to the river mouth. Activities completed during current reporting period

12.1.3 Activities completed during the current reporting period

Dry Season Monitoring Events 2010 (Continued)

The fourth dry season monitoring event in the San Luis Rey River Mouth was implemented on August 3 and 4, 2010. On August 3 and 4, 2010, the grant project team collected composite water samples and paired sediment samples at four locations in the River Mouth. A total of eight water samples and eight sediment samples were collected for the August Event. The river mouth had closed naturally, a common occurrence during this time of year, and the sampling point furthest west, Point Zero, was still included as one of the four sampling locations. During this event, bird populations were observed bathing and wading at this site.

Wet Season Monitoring Events 2010-11

The baseline monitoring event in the San Luis Rey River Mouth was implemented on December 9, 2010 and December 15, 2010. On December 9, 2010, the grant project team collected composite water samples at seven locations in the river and river mouth. On December 15, 2010, one composite water sample was collected at the Critical Point. A total of eight water samples were collected for the Baseline Event. The river mouth was open to tidal influence at the time of sampling. During this event, bird populations were observed bathing and wading around an island that formed near the River Mouth Site 1. The Visual Observations Program was implemented on December 9th. Two teams of two walked a total of five zones adjacent to the river mouth and the river adjacent to Douglas Bridge.

The first storm event sampling began on January 3, 2011. Samples were collected at nine monitoring locations on January 3, 2011 and January 4, 2011. Samples on January 3, 2011 were collected on the rising limb of the hydrograph (based on flow data from the USGS Station at Benet Bridge (Critical Point)). Samples on January 4, 2011 were collected on the falling limb of the hydrograph after the peak flow had occurred (based on flow data from the USGS Station at Benet Bridge (Critical Point)).

Following the first storm event, a baseflow event was conducted and samples were collected at nine monitoring locations on January 20, 2011 subsequent to an advisory posting of the river mouth by County Department of Environmental Health.

The second storm event began on February 17, 2011. Samples on February 17, 2011 were collected on the rising limb of the hydrograph (based on flow data from the USGS Station at Benet Bridge (Critical Point)). Samples on February 18, 2011 were collected between the peak and falling limb of the hydrograph (based on flow data from the USGS Station at Benet Bridge (Critical Point)). On February 14, 2011, two teams conducted visual observations in Zones 5, 6, 8, 9, 11, and 12. Based on the weather forecast, the team conducted visual observations of sources of bacteria in the watershed that had the potential to be introduced into runoff during the coming storm event.

A second baseflow event was conducted on February 24, 2011 after the second storm event. Samples were collected at nine monitoring locations on February 24, 2011, which was 72 hours after rainfall ended. Also on February 24, 2011, two teams conducted visual observations in Zones 1, 5, 6, 11, 12, and in the downstream portion of the Sleeping Indian watershed.

Project Report

During FY 2010-11 all monitoring activities had been completed for the Grant Project. The Draft Final Report is due to the SWRCB on August 1, 2011. The Final Report is due September 1, 2011. Final results will be reported in the FY 2011-12 JURMP Annual Report.

12.2 Loma Alta Creek Ultraviolet Light Treatment Facility

12.2.1 Overview

Loma Alta Creek Lagoon and Buccaneer Beach, located in the City of Oceanside, have historically been impacted by high levels of bacteria. This is a family beach adjacent to a park with a large parking area, showers and an eating establishment that sees large crowds during the dry months. The City has determined that a key source of bacteria and nutrients in Loma Alta Creek is urban runoff that discharges into the creek. The source of water for Loma Alta Creek is from storm drain flows and hillside seepage from the Loma Alta watershed, which drains approximately 6,400 acres, and flows through densely developed residential, commercial, and industrial land uses.

In 2005, the City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the SWRCB to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. One hundred percent of the dry weather creek flows (averaging

300 to 700 gallons per minute) will be intercepted in the lagoon and diverted to the UV treatment facility, located on the northern bank of the creek. The treatment facility consists of piping flows from an exiting diversion structure by gravity from the lagoon through a 2 micron fine screen to a wet well where the flow is pumped into two large sand filters followed by two UV disinfection units housed in a reinforced concrete building. The treated water is discharged through a pipe extended along the existing section of rip-rap that runs along the north side of the Loma Alta creek outlet at Buccaneer Beach. During wet weather months (November through April), the lagoon would be opened to allow free flow to the ocean and the UV system would be bypassed. See Figure 12-1 for a photo of the facility.

Figure 12-1. Oceanside Loma Alta Creek UV Facility

12.2.2 Activities completed during previous reporting periods

The California Coastal Commission approved Permit No. 6-06-152 for construction of the outfall pipe associated with the UV treatment facility on June 14, 2007. Loma Alta Creek UV Treatment Facility project entered into the construction phase on August 13, 2007 when the official Notice to Proceed was issued to Orion Construction Corporation.

Each year the Loma Alta Creek Ultraviolet Light Treatment Facility is scheduled to start treatment in May and continue through September.

During the summer of 2009, repairs and upgrades were required to restart the facility and operation began in June. The plant typically ran three to four days a week with average flows of 300 gallons per minute. No water was discharged onto the beach when the UV Facility was offline. Flows were lower than expected due to drought conditions and conservation efforts of Oceanside residents. See Figure 12-2 for a photo of treated water being released from the UV Outfall pipe.

Figure 12-2. Oceanside Loma Alta Creek UV Outfall pipe releasing treated water

Water samples were taken weekly from Buccaneer Beach directly in front of the discharge pipe and seventy-five feet north and south of the discharge pipe. The samples were tested for total and fecal coliform and Enterococcus. All samples taken during summer 2009 met California Department of Health Services AB411 Objectives and there were no postings due to bacterial levels exceeding standards set by the County Department of Environmental Health. The UV Facility ran through September 2009.

During the 2009-10 reporting year, Loma Alta Creek flows continued to be lower than expected during drought conditions warranting sporadic running of the UV facility. The facility began running in June 2010 for the summer dry season and discontinued running in October 2010. It ran for a total of 27 days during this time period. Approximately 16 million gallons of water was treated through the facility during the summer of 2010.

12.2.3 Activities completed during current reporting period

During the 2010-11 reporting year, the Oceanside Loma Alta Creek UV Treatment Plant operated between June and August 2011 for a total of 57 days. Higher flows in the Creek allowed continuous treatment through mid-July. Approximately 25 million gallons of water was treated through the facility.

12.3 San Diego RWQCB Loma Alta Slough Bacteria and Nutrient TMDL Development

Development of the Loma Alta Slough Bacteria and Nutrient TMDL began in the fall of 2009 lead by the San Diego Regional Water Quality Control Board (SDRWQCB). Modeling for the Bacteria and Nutrient TMDL, completed by an SDRWQCB contractor, is expected to be complete by November 2011. During the development process, several data gaps had been identified and, where possible, additional monitoring was completed to fill the gaps for modeling purposes.

12.3.1 Activities completed during current reporting period

12.3.1.1 Data Sonde Deployment in the Slough

Data collected pursuant to Investigative Order R9-2006-076 in Loma Alta Slough only required one data sonde deployed at depth in the Slough. During the TMDL model development, a data gap was indentified for water quality monitoring data closer to the surface of the Slough. To capture this data, the City deployed data sondes at two depths at one location to measure temperature, specific conductivity, dissolved oxygen, turbidity, and pH. Data was collected from September 17 through October 14, 2010. This data was then submitted to the SDRWQCB contractor, the Southern California Coastal Water Research Project (SCCWRP) and their subconsultants for use with TMDL modeling.

THIS PAGE INTENTIONALLY LEFT BLANK

13.0 NON-EMERGENCY FIRE FIGHTING

Emergency fire fighting flows (flows necessary for the protection of life or property) are allowed by the Municipal Permit and do not require implementation of BMPs. Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described below.

Order 2007-0001 Compliance Summary

J.3.a(3)(1)iv Non-Emergency Fire Fighting	See Entire Section 13 of this Annual Report

13.1 Best Management Practices

The City developed and implemented a program to reduce pollutants from non-emergency fire fighting flows, in accordance with Section B.3 of Permit Order 2007-0001. BMPs were implemented when the following activities were conducted:

Regular Maintenance of Fire and Emergency Vehicles and Equipment
Training Exercises
Facilities Maintenance
Post-Emergency Rehabilitation of Response Equipment

These activities were conducted in a way to either minimize or eliminate the discharge of pollutants to the MS4. Detailed descriptions of BMPs are given for each activity below:

Regular Maintenance of Fire and Emergency Vehicles and Equipment

Vehicles and equipment were cleaned where runoff was directed to either the sanitary sewer system or to a drain with an oil/water separator system.

Vehicles and equipment were cleaned where runoff would pond and evaporate and/or where runoff would filter through landscaped areas.

Sewer drains in a vehicle cleaning area were outfitted with a hydro screen fabric barrier to collect debris.

Spill kits were available to promptly cleanup and contain leaking or spilled vehicle fluids.

Use of soaps, cleaners, and detergents were minimized, and general cleaning solutions were disposed of into the sanitary sewer system.

Training Exercises

Water used in training exercises was directed to landscaped areas whenever possible, and runoff from the training exercises was not allowed to discharge to the MS4.

Live fire training activities were pre-planned to allow integration of barriers to off-site runoff that could contribute to non-storm water discharges.

Facilities Maintenance

Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways were swept to remove debris. Debris was placed in the trash.

Landscaped areas were maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.

Irrigation systems were monitored and maintained as required to reduce irrigation water from going off-site.

Spills were cleaned up using spill kits provided at the work site, and disposal of spilled material was in accordance with applicable regulations.
Spills that required a cleanup beyond the ability of the on-site employees were reported to the City's Public Works Department for assistance with appropriate resources.
Maintenance and repair of structures were conducted using methods that do not contribute pollutants to the MS4.

Post-Emergency Rehabilitation of Response Equipment
Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency were restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. The use of water that could contribute to storm water discharges was used unless another practical and immediately available method was identified, and was performed in a manner that minimized discharges to the MEP.

13.2 Educational Methods

During live fire fighting training exercises all fire fighters were educated about the requirement to not allow water flows to enter the MS4. Fire fighters in attendance for training sessions about how to use high pressure fire fighting hoses were educated on how to direct the water to percolation basins that are permanently in place at the training grounds. Water that is directed to these basins was allowed to infiltrate into the soil and/or evaporate.

Prior to building structures at the training grounds being set on fire, perimeter controls were put in place to ensure that water from the non-emergency training session did not reach the MS4. Fire fighters in attendance were educated on the proper type and installation protocol of perimeter controls. These perimeter controls were also used for training sessions related to vehicle fires.

14.0 JURMP REVISIONS

There were no changes made to the City of Oceanside's 2008 JURMP during this reporting period. Updates were made to the 2008 JURMP during the 2008-09 reporting period. Details of these changes can be found in Section 14 of the 2008-09 JURMP Annual Report.

THIS PAGE INTENTIONALLY LEFT BLANK

15.0 CONCLUSIONS AND RECOMMENDATIONS

15.1 Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a., of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2010-2011 annual reporting period (July 1, 2010 – June 30, 2011).

15.2 Conclusions

This annual report presents the activities the City conducted from July 1, 2010 through June 30, 2011 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff within the City's jurisdiction on receiving water bodies. Improving water quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

As detailed in the Program Effectiveness Assessment Component, the City met all of the development planning targets and met the municipal targets. Long-term effectiveness assessment is an ongoing and iterative process and the City will continue to use this process to further improve its storm water program.

15.3 Recommendations

15.3.1 Database Tracking System for various departments and divisions

During the previous reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water and Sewer Divisions, and the Clean Water Program, continued using the Lucity (previously GBA Masters Series) software. The Development Services Department, which includes Code Enforcement and Building and Engineering Divisions, selected TRAKiT, permitting software by CRW Systems, Inc and began roll-out in this reporting year.

During this reporting period the Clean Water Program reviewed the effectiveness of the new tracking tools and implemented improvements in the use of the system to better track Stormwater related data. Additional improvement may be implemented during the next reporting period.

15.3.2 Assessment of Education Program

The Pick Up Your Pet Waste Campaign was initiated in FY 2008-09 to address the accumulation of dog waste along the San Luis Rey Recreation Trail (Trail) which travels adjacent to the San Luis Rey River on both the north and south sides. A final report for the project is provided as Attachment 9-C.

Based on recommendations in the final report the City installed four pet waste bag dispensers (Mutt Mitt brand) and four additional trash cans along the Trail where most people access specific sections of the trail, during this reporting period. Modified signage was also installed at the dispenser stations to emphasize pet owner responsibility. See Section 9.1.5 more project details.

15.3.3 Underserved Target Audience Outreach – Spanish Speaking

During this reporting period Spanish materials were disseminated to target the Spanish speaking population about BMPs they can implement to prevent water pollution.

Arnold Schwarzenegger
Governor

To Interested Parties:

2010-2011 ANNUAL REPORT ANNUAL REPORT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Storm Water Multi-Application Reporting and Tracking System (SMARTS) allows an individual discharger to file and submit their Annual Report electronically to the Regional Water Board. Currently SMARTS is not a mandatory reporting method, but we encourage all dischargers to register and use SMARTS.

To register to use SMARTS please visit: https://smarts.waterboards.ca.gov and download the SMARTS LRP registration form and instructions. Please fill out the form and mail it back to: SMARTS Registration, P.O. Box 1977, Sacramento, CA 95812. Once a complete registration form is received, a login name and password will be emailed to you.

For SMARTS registration questions or information please contact the SMARTS help center at 1-866-563-3107 or by email at smarts@waterboards.ca.gov.

To receive email updates on Storm Water Industrial permitting issues, please sign up at http://www.waterboards.ca.gov/resources/email_subscriptions/swrcb_subscribe.shtml The Storm Water program currently maintains five email lists:

- Storm Water Database Issues
- Storm Water Construction Permitting Issues
- Storm Water Industrial Permitting Issues
- Storm Water Municipal Permitting Issues
- Sustainable Development

For all other permitting questions please contact the Storm Water Section at 1-866-563-3107 or by email at stormwater@waterboards.ca.gov.

Sincerely,

Storm Water Section

State of California
STATE WATER RESOURCES CONTROL BOARD

2010-2011
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2010 through June 30, 2011

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 9 371005695

Facility Business Name: City of Oceanside Maxson Landfill

Contact Person: Bryan Forward

Physical Address: 1680.5 Maxson St and Brooks St

e-mail: bforward@ci.oceanside.ca.us

City: Oceanside, Ca 92054

CA Zip: 92054 Phone: 760 435 5194

Standard Industrial Classification (SIC) Code(s): 4953

B. Facility Operator Information:

Operator Name: Oceanside Public Works Department

Contact Person: Bryan Forward

Mailing Address: 300 N. Coast Hwy

e-mail:

City: Oceanside, Ca 92054

State: Ca Zip: 92054 Phone:

C. Facility Billing Information:

Operator Name: Oceanside Public Works Department

Contact Person: Bryan Forward

Mailing Address: 300 N. Coast Hwy

e-mail:

State: Ca Zip: 92054 Phone:

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. ☐ Submitted **No Exposure Certification** (NEC) Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

iv. ☐ Received Regional Board Certification Certification Date: ____/____/____

v. ☐ Received Local Agency Certification Certification Date: ____/____/____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? ____0____ If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

☐ **YES** ☒ **NO** **attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? ____1____

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____/ /_____

6. Were all samples collected during the first hour of discharge? ☐ YES ☒ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☒ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☒ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

       _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

       _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

       _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

E-2. Sampling and Analysis

First storm event of the season that produced a discharge occurred during non working hours.

E-6. Sampling and Analysis

No samples were collected during the reporting period of 10-11. All storm water discharges occurred before or after working hours and or were not preceded by 3 working days.

E-7. Sampling and Analysis

No samples were collected during the reporting period of 10-11. All storm water discharges occurred before or after working hours and or were not preceded by 3 working days.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☒ **YES**	☐ **NO**	☐ **N/A**	October-December	☒ **YES**	☐ **NO**	☐ **N/A**
January-March	☒ **YES**	☐ **NO**	☐ **N/A**	April-June	☒ **YES**	☐ **NO**	☐ **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ **YES**	☐ **NO**	October-December	☒ **YES**	☐ **NO**
January-March	☒ **YES**	☐ **NO**	April-June	☒ **YES**	☐ **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☒ **YES** ☐ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☒ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2010-2011

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1.	Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2.	If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☐ YES	☒ NO	☐ NA
3.	If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☐ NA
4.	Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Title: Maintenance Supervisor

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

See Storm Water Contacts at

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

Arnold Schwarzenegger
Governor

To Interested Parties:

2010-2011 ANNUAL REPORT ANNUAL REPORT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Storm Water Multi-Application Reporting and Tracking System (SMARTS) allows an individual discharger to file and submit their Annual Report electronically to the Regional Water Board. Currently SMARTS is not a mandatory reporting method, but we encourage all dischargers to register and use SMARTS.

To register to use SMARTS please visit: https://smarts.waterboards.ca.gov and download the SMARTS LRP registration form and instructions. Please fill out the form and mail it back to: SMARTS Registration, P.O. Box 1977, Sacramento, CA 95812. Once a complete registration form is received, a login name and password will be emailed to you.

For SMARTS registration questions or information please contact the SMARTS help center at 1-866-563-3107 or by email at smarts@waterboards.ca.gov.

To receive email updates on Storm Water Industrial permitting issues, please sign up at http://www.waterboards.ca.gov/resources/email_subscriptions/swrcb_subscribe.shtml The Storm Water program currently maintains five email lists:

- Storm Water Database Issues
- Storm Water Construction Permitting Issues
- Storm Water Industrial Permitting Issues
- Storm Water Municipal Permitting Issues
- Sustainable Development

For all other permitting questions please contact the Storm Water Section at 1-866-563-3107 or by email at stormwater@waterboards.ca.gov.

Sincerely,

Storm Water Section

State of California
STATE WATER RESOURCES CONTROL BOARD

2010-2011
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2010 through June 30, 2011

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 9 371005696

Facility Business Name: City of Oceanside Mission Ave.Landfill

Contact Person: Bryan Forward

Physical Address: 2070 Mission Ave

e-mail: bforward@ci.oceanside.ca.us

City: Oceanside, Ca 92054

CA Zip: 92054 Phone: 760 435 5194

Standard Industrial Classification (SIC) Code(s): 4953

B. Facility Operator Information:

Operator Name: Oceanside Public Works Department

Contact Person: Bryan Forward

Mailing Address: 300 N. Coast Hwy

e-mail:

City: Oceanside, Ca 92054

State: Ca Zip: 92054 Phone: 760 435 5194

C. Facility Billing Information:

2010-2011
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

iv. ☐ Received Regional Board Certification Certification Date: ____/____/____

v. ☐ Received Local Agency Certification Certification Date: ____/____/____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? ____0____ If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

☐ **YES** ☒ **NO** **attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? ____1____

E-2. Sampling and Analysis

First storm event of the season that produced a discharge occurred during non working hours.

E-6. Sampling and Analysis

No samples were collected during the reporting period of 10-11. All storm water discharges occurred before or after working hours and or were not preceded by 3.working days.

E-7. Sampling and Analysis

No samples were collected during the reporting period of 10-11. All storm water discharges occurred before or after working hours and or were not preceded by 3 working days.

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____/___/_____

6. Were all samples collected during the first hour of discharge? ☐ YES ☒ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☒ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☒ **YES**	☐ **NO**	☐ **N/A**	October-December	☒ **YES**	☐ **NO**	☐ **N/A**
January-March	☒ **YES**	☐ **NO**	☐ **N/A**	April-June	☒ **YES**	☐ **NO**	☐ **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ **YES**	☐ **NO**	October-December	☒ **YES**	☐ **NO**
January-March	☒ **YES**	☐ **NO**	April-June	☒ **YES**	☐ **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☒ **YES** ☐ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☒ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach** an **explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

   The following records should be reviewed:

   - quarterly authorized non-storm water discharge visual observations
   - monthly storm water discharge visual observation
   - records of spills/leaks and associated clean-up/response activities
   - quarterly unauthorized non-storm water discharge visual observations
   - Sampling and Analysis records
   - preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

   The following SWPPP items should be reviewed:

   - pollution prevention team
   - list of significant materials
   - description of potential pollutant sources
   - assessment of potential pollutant sources
   - identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

   The following BMP categories should be reviewed:

   - good housekeeping practices
   - spill response
   - employee training
   - erosion control
   - quality assurance
   - preventative maintenance
   - material handling and storage practices
   - waste handling/storage
   - structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2010-2011

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1.	Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2.	If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☐ YES	☒ NO	☐ NA
3.	If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☐ NA
4.	Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Title: Maintenance Supervisor

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

See Storm Water Contacts at

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

THIS PAGE INTENTIONALLY LEFT BLANK

Preventing pollution is less costly for taxpayers than cleaning up "after the fact." The following tips can help protect the health of our community and environment from pollutants.

- **Maintain your vehicle.** Fix oil leaks. Use an absorbent material, like cat litter, to clean up spills and take it to a household hazardous waste (HHW) facility. Recycle used motor oil. Call 1-800-CLEANUP for a HHW and used oil recycling center near you.
- **Use soaps sparingly.** If washing your car at home, use biodegradable soap sparingly. Try to wash on a grassy area. Use a bucket and a hose with a shut-off nozzle. Divert the dirty water onto landscaping or down a household sink.
- **Try nontoxic products.** If you must use a toxic household product, buy only what you need. Dispose of household hazardous waste properly. Call 1-800 CLEANUP.
- **Reduce use of landscaping chemicals.** If you must use fertilizers, pesticides, herbicides, etc., follow directions carefully, use them sparingly and avoid over-watering.
- **Clean up after your pets.** Flush pet waste down the toilet or seal it in a plastic bag and put it in the trash.
- **Recycle yard waste frequently.** Sweep grass clippings and other yard materials from driveways and streets and put in recycling container. Start a compost pile!
- **Sweep up debris on your sidewalk and driveway.** Prevent erosion and debris from leaving your property.
- **Throw your litter in a trash container.**

La prevención de la contaminación es menos costosa para los contribuyentes que su limpieza "después de lo ocurrido". Si usted sigue los siguientes consejos, puede ayudar a proteger la salud de nuestra comunidad y el medio ambiente.

- **Mantenga sus vehículos en buen estado.** Repare las goteras de aceite. Esparza las piedrecillas para los deshechos de gatos (cat litter) u otros materiales absorbentes sobre los derrames de aceite para limpiarlos, y luego llévelo a los lugares designados para desechar los materiales domésticos peligrosos. Recicle el aceite de motor. Llame a 1-800-CLEANUP para saber cuál es el centro de desecho de materiales domésticos peligrosos y de reciclaje de aceite de motor más cerca de su domicilio.
- **Use poca jabón.** Cuando lave su auto en casa, use poco jabón biodegradable. Use un reductor de agua. Tire el agua sucia por el drenaje sanitario interior.
- **Compre productos no tóxicos.** Si usa productos domésticos que son tóxicos, compre solo lo que necesite. Disponga de los desechos peligrosos de manera correcta. Llame a 1-800-CLEANUP.
- **Reduzca el uso de productos químicos de jardinería.** Si usted debe usar fertilizantes, pesticidas, etc., siga las instrucciones cuidadosamente y evite el regar demasiado.
- **Limpie los desechos de sus mascotas.** Tire los desechos de sus mascotas en el inodoro o póngalos en una bolsa plástica cerrada herméticamente y tírela en la basura.
- **Recicle los desechos de su jardín frecuentemente.** Barra los restos de césped y otros materiales de jardín sobre la entrada de su casa, garaje y banqueta, luego póngalos en el recipiente de reciclables. Comience un cúmulo de abono!
- **Barra la basura de su banqueta y entrada de garaje.**
- **Tire sus desechos en el basurero.**

Help!

Pollutants were found in your neighborhood storm drain.

¡Ayude!

Contaminantes fueron encontrados en las alcantarillas de su vecindario.

Information for this brochure has been provided by the North County Storm Water Program, which includes the cities of Carlsbad, Del Mar, Encinitas, Escondido, Oceanside, San Marcos, Solana Beach, Vista and the County of San Diego.

La información para este folleto ha sido proveída por el Programa de Alcantarillas del Condado Norte (North County Storm Water Program), el cual incluye la ciudades de Carlsbad, Del Mar, Encinitas, Escondido, Oceanside, San Marcos, Solana Beach, Vista y el Condado de San Diego.

Did you know that storm drains are not connected to the sanitary sewer system or to treatment plants?

Anything that FLOWS into a storm drain, except rainwater, pollutes our creeks, rivers, lakes, lagoons and ocean.

Usted sabe que la alcantarilla de la calle no esta conectada con el sistema de drenaje sanitario de su casa o la planta de tratamiento de aguas negras.

Cualquier cosa que CORRE a la alcantarilla, con la excepción del agua de lluvia, contamina nuestros arroyos, ríos, lagos, lagunas y el mar.

Our field staff found the following pollutant(s spilled or dumped into a storm drain nea your home:

Empleados de la ciudad encontraron los siguiente contaminantes derramados o tirados en la alcantarillas de su vecindario:

- ❑ Motor Oil (Aceite de motor)
- ❑ Grease (Grasa)
- ❑ Antifreeze/Transmission Fluids (Anticongelante/Fluido de transmisión)
- ❑ Detergents (Detergentes)
- ❑ Solvents/Degreaser (Solventes/Desengrasantes)
- ❑ Paint/Paint Products (Pintura/Productos de la pintura)
- ❑ Pesticides/Fertilizers (Pesticidas/Fertilizantes)
- ❑ Home Improvement Waste (Desechos de Renovación de la casa)
- ❑ Animal Waste (Desechos de animales)
- ❑ Yard Waste (Desechos del jardín)
- ❑ Dirt and Gravel (Lodo y grava)
- ❑ Trash (Basura)
- ❑ Other (Otro_____)

Dumping pollutants into a storm drain not only hurts our environment, but is also illegal. However, YOU can help prevent storm water pollution. Check out the prevention tips on the back…

Si tira los contaminantes en la alcantarilla no solo daña nuestro medio ambiente y también es ilegal. Sin embargo, USTED puede ayudar a prevenir la contaminación en las alcantarillas. Por favor, lea los consejos del dorso…

CITY OF OCEANSIDE – CLEAN WATER PROGRAM

Our field staff has found pet waste in the right of ways areas in your neighborhood. Your help is needed to prevent this pollution from reaching our local water ways through the storm drain system.

Pet waste is a serious water quality and public health issue. Stormwater runoff washes bacteria, parasites, viruses, and nutrients from pet waste directly into our waterways. These pathogens can cause disease in humans, recreational swimming advisories, algal blooms, low dissolved oxygen levels, and impaired aquatic habitat. The City of Oceanside pet waste ordinance encourages citizens to be responsible for cleaning up their animal's waste in order to keep our waterways clean and safeguard public health.

The City's pet waste ordinance requires pet owners to:

Fully and immediately clean up after pets on any public property. (Public property consists of streets, sidewalks, right of ways, parks, plazas, stream banks, public accesses, pathways, storm drains, creeks, officially accepted easements, etc.)

Carry a clean-up device (i.e. bag, scooper) at all times.

Bag and dispose of pet waste in a closed trash receptacle or refuse container.

City of Oceanside - Code Section 4.16.2. - Animal Waste Removal

(a) It shall be unlawful for any person owning, keeping or having in his or her care, custody or control any dog knowingly fail, refuse or neglect to clean up any feces of such dog immediately and dispose of it in a sanitary manner whenever such dog has defecated upon public or private property within the Oceanside city limits without the consent of the public or private owner or person in lawful possession or charge of the property

Fines for non-compliance with the City of Oceanside's pet waste ordinance are $100 per occurrence.

Please contact our Clean Water Inspectors Wil Perdomo at 760 435-5072 or Gene Clark at 760 435-5093 if you have any questions.

CITY OF OCEANSIDE clean water program

Volume 8, Issue 2 - Fall 2010

California Coastal Cleanup Day & Buena Vista Creek Cleanup September 25, 2010 9 a.m. - 12 p.m.

Celebrate the 26th Anniversary of California Coastal Cleanup Day by participating in the tenth annual Buena Vista Creek Cleanup and Oceanside Beach Cleanup. The City of Oceanside, together with I Love a Clean San Diego, Coastkeeper, and 1-800-GOT-JUNK will be hosting a cleanup along the banks of Buena Vista Creek, as well as a beach cleanup, on September 25th, from 9 a.m. to 12 p.m. Volunteers will receive cleanup supplies, refreshments, community service hours, and a free give-away item. Call the Clean Water Program Event Information Line for more details at 760-435-5536.

Cleanup sites

- Behind Dick's Sporting Goods at Plaza Drive and College Boulevard (3514 College Boulevard)
- North of Fire Station #4 located at Thunder Drive and Lake Boulevard.
- Behind Kohl's store at College Boulevard and Marron Road
- South side of Oceanside Pier
- Buccaneer Beach at Pacific and Morse Streets (1500 South Pacific Street)

To register for this event click on www.cleanupday.org.

For more information about Oceanside cleanup events and how you can prevent water pollution, visit this Web site: www.OceansideCleanWaterProgram.org.

- Bacteria Source Tracking Project Update

Pick Up Your Pet Waste Campaign along the San Luis Rey Recreation Trail

In spring 2009, the Oceanside Clean Water Program launched a Pick Up Your Pet Waste Campaign to encourage dog owners to clean up after their pets. The Campaign focused on the San Luis Rey River Trail including trails on the north and south sides between Douglas Drive and College Boulevard. These trails are used for a variety of recreational purposes including walking, running, biking, and dog walking. Although most dog owners who use the trails clean up after their pets, some pet waste still accumulates along the trails.

Barriers to Picking up Dog Waste

The project started with a public survey to identify the reasons why people do or do not pick up after their pets on the trails and in other public areas. Among dog owners, the most common reasons cited for why someone might leave dog waste behind were:

- Forgot to bring a bag
- Nowhere to throw it away
- No one else around to see them

Ninety-three percent of survey respondents agreed that more pet waste bag dispensers are needed in the community.

Project Implementation

As result of the survey the City of Oceanside installed pet waste bag dispensers and additional trash cans, where needed, at four locations along the trail. New signs were installed to emphasize proper behavior (picking up after the dog) and pet owner responsibility.

Keep the following tips in mind when you plan to walk your dog.

- Take a bag with you, grab one from a dispenser, or use a personal pet waste bag dispenser
- Pick up and dispose of waste in a trash can, not along the side of the trail or sidewalk

Following these simple steps will keep our community clean, our trails free of unwanted debris, and prevent water pollution.

Urban Runoff Hotline - Help protect our local waterways

Please report anything other than rain water entering the storm drain.

760-435-5800 "Only Rain in the Storm Drain!"

Bacteria Source Tracking Project Along the San Luis Rey River

The Oceanside Clean Water Program was awarded $554,000 from California State Water Resources Control Board (State) to conduct a study to determine the sources of elevated bacteria levels that cause beach advisories at the mouth of the San Luis Rey River. There are three components to the project:

Phase 1- Dry season monitoring (during summer months)
Phase 2 – Wet season monitoring (during winter/rainy months)
Phase 3 – Visual Observations (during summer and winter months)

The goals of the project are to identify where bacteria levels are elevated and to identify potential sources for those bacteria "hot spots" in the river and river mouth. Some of the potential sources may include birds that congregate in the mouth of the river, pet waste left on the ground, and the homeless population in the river bed.

Results from bacteria lab analysis and various genetic testing methods will be compiled and analyzed after all sampling is complete to provide an overall assessment of the lower San Luis Rey River. With potential locations and sources of bacteria identified, the City will build on the study's results by identifying management actions to reduce bacteria loads.

The first two monitoring events occurred in the summer of 2008. Water samples and river flow measurements were collected at several monitoring locations in the lower part of the San Luis Rey River. The water samples were sent to scientific laboratories for bacterial analysis and frozen for genetic analysis.

In December of 2008, the project was stopped due to state budget shortfall. Fortunately, in December of 2009 the state gave the go-ahead for the project study to restart.

The third and fourth sampling events were conducted in May and August of 2010. Additional sampling events are planned for the wet season between October 2010 and March 2011 both during a rain event and between rain events. These upcoming rainy months are critical to sample since the beach advisories are most often posted during the wet season.

Keep your eye out for future project updates in the March 2011 edition of the Clean Water Program Newsletter. In addition, the final report for the overall project will be posted at www.OceansideCleanWaterProgram.org.

2010-2011 River, Creek, & Beach Cleanup Events

Please join the Clean Water Program staff and citizen volunteers to assist in removing trash and debris from our local rivers, creeks, and beaches.

Event Times: 9:00 a.m. - 12:00 p.m.
Event Details: 760-435-5536

- November 6, 2010: San Luis Rey River Cleanup
- April 23, 2011: Loma Alta Creek Cleanup
- July 5, 2011: Morning After Mess - City Beaches (8 - 11 a.m.)
- September 17, 2011: Buena Vista Creek Cleanup and California Coastal Cleanup Day
- November 5, 2011: San Luis Rey River Cleanup

CITY OF OCEANSIDE clean water program

Volume 9, Issue 1 - Spring 2011

Loma Alta Creek Cleanup
April 30, 2011
9 a.m. - 12 p.m.

Celebrate Earth Day by participating in the 12th Annual Creek to Bay Cleanup event on April 30, 2011. The City of Oceanside, together with event sponsors I Love a Clean San Diego and 1-800-GOT-JUNK?, will be hosting a cleanup along the banks of Loma Alta Creek and at two sites on the beach.

Cleanup sites

- Buccaneer Park at 1500 Pacific Street (cross street is Morse Street)
- Behind Smart & Final on Oceanside Boulevard and I-5 (1701 Oceanside Boulevard)
- Mesa Drive between El Camino Real and Rancho Del Oro Drive
- Behind commercial buildings at 1629 Ord Way (Off Oceanside Boulevard between College Boulevard and Temple Heights Drive)
- South side of the Oceanside Pier

Join other volutneers to remove trash and debris from the creek and beach to improve Oceanside water quality. Volunteers will receive cleanup supplies, refreshments, community service hours, and a free T-shirt or other giveaway item. For more infomraiton call 760-436-5536 or 760-435-5807.

To register for this event click on www.creektobay.org.

Bacteria Source Tracking Project

Along the San Luis Rey River

The Oceanside Clean Water Program was awarded a grant from the State Water Resources Control Board to conduct a multi-year investigation into the cause of high bacteria levels near the mouth of the San Luis Rey River that cause beach advisories and closures. The study is underway and final results are expected by Fall 2011.

In addition to using genetic testing to identify bacteria sources, visual observations within the San Luis Rey Watershed were conducted during dry weather conditions and before a rainstorm to identify sources. These observations, conducted by staff and volunteers, were designed to note potential bacteria sources from the environment (soils and decaying vegetation), animal wastes (including pet waste), and human sources (sewage and trash including improperly disposed diapers). Observations also took note of how the bacteria from these sources get to the river, such as by rain or urban runoff.

Results from Neighborhood Observations

The most common sources of bacteria found in residential and commercial areas were:

- Green waste including grass clippings and yard waste improperly disposed in curbs and gutters
- Pet waste
- Litter

While pet waste may seem like the most obvious source, yard waste and litter provide a place for bacteria to grow. The bacteria growing on this debris can then be transported to water bodies in various ways.

Urban Runoff Hotline - Help protect our local waterways

Please report anything other than rain water entering the storm drain.

760-435-5800 "Only Rain in the Storm Drain!"

How many Oceanside water bodies can you name?

One of the first questions that Clean Water Program staff ask when giving children or adult presentations is "Name the nearest river, creek or water body." Many times people cannot answer this question. It is important for the community to be aware of these water bodies in order to learn how to protect them from polluted runoff. You can find out the water body names and more detailed information about them by going to www.OceansideCleanWaterProgram.org and clicking on Waterbodies. While on the website you can also learn what you can do to help prevent pollution from reaching these water bodies.

Schedule a Presentation

Do you know of a school classroom, youth group, or civic organization looking for a speaker? The Oceanside Clean Water Program offers presentations to groups of all ages. To get more information and to schedule a presentation contact Cynthia Mallett at 760-435-5807 or by email at cmallett@ci.oceanside.ca.us.

2011 River, Creek, & Beach Cleanup Events

Please join Clean Water Program staff and citizen volunteers to assist in removing trash and debris from our local rivers, creeks, and beaches.

Event Times: 9:00 a.m. - 12:00 p.m.
Event Details: 760-435-5536
www.OceansideCleanWaterProgram.org/events

- April 30, 2011: Loma Alta Creek Cleanup
- July 5, 2011: Morning After Mess - City Beaches (8 - 11 a.m.)
- September 17, 2011: Buena Vista Creek Cleanup and California Coastal Cleanup Day
- November 5, 2011: San Luis Rey River Cleanup

Bacteria Source Tracking Project Along the San Luis Rey River

continued from front page

The most common means by which bacteria is transported to storm drains and then to local water bodies are:

- Over-irrigation or broken irrigation system (a line, connection, or sprinkler head)
- Rain
- Washing of paved surfaces

When water runs through yard waste, pet waste, or litter, it picks up bacteria and transports it to the water bodies through the storm drain system.

Why Should I Care about Bacteria in our Waterways?

Bacteria can make humans, our pets, and wildlife sick. The advisories and beach closures are to protect beach visitors from the potential of getting sick.

It should be noted that bacteria are present all around us. Like bacteria in our bodies, there are some bacteria that don't harm us and there are other kinds that can make us sick. Scientists are working on distinguishing between these types and what sources can be harmful to human health. In the meantime, all potential sources of bacteria are identified for the purposes of the study.

What Can I Do to Reduce Bacteria Pollution from reaching our Rivers, Creeks and the Ocean?

1) Eliminate the sources of bacteria:
   - Ensure that you or your landscaper are picking up yard waste and either putting it in green waste bins or composting it in your own yard.
   - Pick up after your pet and dispose of the waste in a trash can.
   - Don't litter. If you see trash, pick it up. It's the right thing to do for your community.
2) Use water wisely:
   - Ensure that you or your landscaper are watering landscaped areas no more than 10 minutes per day, three times per week.
   - If you have an irrigation system, periodically check for leaks or broken sprinkler heads.
   - Do not hose paved surfaces. Instead, sweep debris and then dispose of the waste in a trash can or green waste bin.
   - When rain is predicted, ensure yard waste, pet waste, and trash are properly disposed before the rain carries it away into our curbs, storm drains, rivers and creeks, and ultimately the ocean.

Further updates will be provided in future newsletters. Thank you for doing your part to keep bacteria out of our waterways!

San Luis Rey River Cleanup Event

Saturday, November 6, 2010
9:00 AM to 12:00 PM

Five sites to choose from

- Highway 76 & Benet Road
- Highway 76 & Foussat Road at bike path
- Douglas Drive at the bike path on south side of SLR River north of Pala Road
- Mance Buchanon Park on College Boulevard just north of Adams Avenue
- Oceanside Harbor - Parking Lot #10

All volunteers receive refreshments, cleanup supplies, community service hours and a free give-away item.

For more information and site details, call 760-435-5536 or log onto www.OceansideCleanWaterProgram.org.

EVENTO DE LIMPIEZA EN EL RIO SAN LUIS REY

El sábado 6 de noviembre de 2010
De 9 a 12 del mediodía

Cinco lugares para escoger:

- Highway 76 y Benet Road
- Highway 76 y Fousat Road, en el camino de los ciclistas
- Douglas Drive, en el camino de los ciclistas, al lado sur del Rio San Luis Rey, al norte de Pala Rd.
- Parque Mance Buchanon, en College Blvd., justo al norte de Adams Ave.
- En el Harbor de Oceanside – Lote de estacionamiento # 10

Todos los voluntarios recibirán refrescos, artículos para limpieza, horas de servicio comunitario y un articulo gratis.

Para más información y más detalles del lugar, llámenos at 760-435-5536 o entre a nuestra página de Internet www.OceansideCleanWaterProgram.org.

Background

Pet waste left on grass, sidewalks, and along trails is not only a leading cause of bacterial contamination in waterways, but it also an issue that concerns Oceanside residents. In the spring of 2009, the City of Oceanside Clean Water Program launched a Pick up Your Pet Waste Campaign to encourage dog owners to clean up after their pets. The project focused on the San Luis Rey River Trail (Trail) which is used for a variety of recreational purposes including walking, running, and biking. Many people also bring their dogs with them to the Trail. Although most dog owners who use the trail clean up after their pets, some pet waste still accumulates along the trail.

Community-Based Social Marketing. The present project utilized a Community-Based Social Marketing (CBSM) approach. CBSM begins with careful selection of a specific target behavior and then uses a four-step process to foster sustainable behavior change (McKenzie-Mohr, 1999; Schultz & Tabanico, 2007; Tabanico & Schultz, 2007). These four steps are: (1) identifying the barriers to a targeted behavior, (2) using behavior change tools to overcome the barriers, (3) piloting the selected tools using empirical research methodology and a control group, and (4) evaluating the project once it has been widely implemented.

Barrier Survey. To inform the development of the campaign, a brief survey was mailed to a random sample of 300 Oceanside residents living in neighborhoods near the Trail. The goal of the survey was to identify the reasons why people do or do not pick up after their pets on the Trail and other public areas. Sixty-five percent (65%) of residents who received a survey completed it and returned it to the City. Of those residents who completed the survey, 70% had visited the Trail in the past and 48% reported that they had a dog in their household. The complete survey results are attached as Appendix A.

> **Motivations for picking up dog waste.** Both dog owners and those without dogs agreed that it is important to pick up dog waste, rating the importance of the issue as 9.6 out of 10. The top rated reasons for picking up dog waste and throwing it in the trash were: "because it is the right thing to do" and "because it pollutes parks, rivers, and beaches."
>
> **Barriers to picking up dog waste.** The vast majority of Oceanside dog owners who walk their dogs reported that they "always" pick up after their pet, but a small percentage (17%) stated that they, at least sometimes, leave their dog's waste behind without picking it up. Among dog owners, the most common reasons cited for why someone might leave dog waste behind while walking the Trail were: forget to bring a bag, nowhere to throw it away, and no one else is around to see them (anonymity).

CBSM Intervention

The results of the CBSM barrier survey provided clear recommendations for the Pick up Your Pet Waste Campaign at the Trail which include the installation of additional trash cans and pet waste bag dispensers along the Trail as well as modifying signage to emphasize pet owner responsibility. The CBSM intervention consisted of both structural and motivational components which are described in detail below.

Structural Intervention. Results of the barrier survey indicated that trash cans and bag dispensers were needed on the Trail. Not having a bag and lack of trash cans were frequency cited as important barriers. In addition, 93% of survey respondents agreed at least somewhat that more pet waste dispensers were needed in the community. To address this structural barrier, the CBSM intervention consisted of strategically placed pet waste bag dispensers and trash cans.

Figure 1: Pet Waste Bags and Trash Cans

Motivational Signage. Signage was developed that was simple, easy to read, and included focused messaging based on the motivations identified in the survey. Consistent with the CBSM approach, the signs focused on a single activity and omitted reference to other behaviors (e.g., leash laws). The signs also emphasized demonstrating the right thing to do.

Existing trail signage focused on motivating residents to pick up pet waste because it is the law or because it "transmits disease." Based on the results of the barrier survey, we developed new trail signage that focused on a shared community perception that picking up pet waste is a social responsibility. The sign also included mention of pollution prevention as survey data showed that this motivation also resonated well with the target audience.

Figure 2: "Do Your Doody" Motivational Signage

Pilot Experiment

A field experiment was conducted to evaluate the effectiveness of the CBSM intervention. Using an experimental methodology, pre- and post-test data were collected from the trail segments where dispensers and signs were installed (CBSM pilot) as well as from matched trail segments that did not receive the CBSM intervention (Control).

Study Areas

The north (unpaved) and south (paved) sides of the San Luis Rey Bike Trail were each divided into CBSM pilot and Control segments. On each side of the trail, CBSM pilot and Control segments were selected such that they were similar across a variety of dimensions including traffic, usage types, geography, and proximity to access points.

> **North Trail:** The North side of the trail is characterized by an unpaved path that runs adjacent to the backside of residential property as well as a section of public property. The unpaved trail is generally not as heavily used as the south side.
>
> **South Trail:** The South side of the trail is characterized by a paved bike path that runs adjacent to Buchanan Park. The trail is heavily used by bike and pedestrian traffic.

For both of the CBSM pilot segments (north and south), pet waste bag dispensers were installed at the primary trail access points at College and at Douglas. Red arrows indicate installation points for the intervention. See Figure 3 below.

Figure 3: Map of Trail Study Areas

Evaluation Procedure

An experimental methodology was used to evaluate the effectiveness of the CBSM intervention that was implemented in pilot areas. Data were collected from pilot and control segments before and after implementation of the CBSM intervention. The study procedure was as follows:

1. **Clean up all existing waste in pilot and control areas.** Prior to implementing the intervention, existing pet waste was collected, weighed and counted on all sections of the trail (pilot and control).

2. **Gather baseline data.** Prior to implementing the intervention, the quantity and weight of existing pet waste was recorded separately for each of four trail segments: Pilot North, Control North, Pilot South, and Control South.

3. **Install new signage.** Existing "Poop Pollutes" signage along the pilot segments of the trail was replaced with the new CBSM "Do Your Doody" signage. Signage on the control segments of the trail was left unchanged.

4. **Install structural intervention (bag dispensers and trash bins).** Pet waste bag dispensers and trash cans were placed at the entrances to the pilot segments of the trail. For the north side pilot segment, trash bins and dispensers were placed at two major access points along the trail: one at Douglas and one adjacent to the parking lot on North River Rd and College. For the south side pilot segment, trash bins and dispensers were installed at Douglas and at the entrance to the trail near College.

5. **Process evaluation.** A variety of information about the implementation of the intervention was recorded including number and location of dispensers, frequency of refill, maintenance issues, and vandalism issues.

6. **Outcome evaluation.** Approximately one month following implementation of the structural intervention and motivational signage, the quantity and weight of existing pet waste was recorded separately for each of four trail segments: Pilot North, Control North, Pilot South, and Control South. Number and type of bags were also recorded in pilot and control areas (north side only).

Results

Number of Piles

Dog waste piles were counted and collected before and after implementation of the intervention in both pilot and control areas. Aggregated across the two pilot areas (paved and unpaved trail sections), there was a 23% decrease in the number of piles that were collected in the CBSM pilot areas where as the control segments of the trail showed no change.

Table 1: Change in Accumulated Pet Waste across Pilot and Control Sites

	CBSM Pilot (College to Douglas)	Control (Douglas to Whalen)
COMBINED		
PRE	167	106
POST	128	101
% Change	23% decrease	<1% decrease

Although overall pet waste collected decreased from baseline to follow-up in the CBSM segments, the intervention appears to have been most effective on the south (paved) side of the trail.

South Side: On the south (paved) side of the bike trail, there was a 23% decrease in the number of piles of dog waste following implementation of the CBSM intervention. During the same time frame, the number of dog waste piles collected along the control section of paved trail increased by 107%.

North Side: Although the overall number of dog waste piles decreased from pre- to post-test, the observed pattern was the same in both the CBSM and control areas. This suggests that the CBSM intervention had no substantial effect on the north side of the trail.

Table 2: Change in Accumulated Pet Waste on North and South Segments

	CBSM Pilot (College to Douglas)	Control (Douglas to Whalen)
SOUTH SIDE (Paved)		
PRE	31	14
POST	24	29
% Change	**23% decrease**	**107% increase**
NORTH SIDE (Unpaved)		
PRE	136	92

POST	104	72
% Change	**24% decrease**	**22% decrease**

Total Bags Collected

Observations of the number of bags in the trash cans on the north side (at Douglas and at College) suggest that the pet waste bag dispensers were frequency used by trail visitors. Data on the number of bags collected on the South Side was not recorded as the cans were emptied by City maintenance workers prior to the follow-up study period.

On the North Side of the trail, the total number of bags in bins was recorded separately for each of the installation sites at each end of the trail (at Douglas and at College). Of all of the bags observed in the bins, the Mutt Mitts from the CBSM dispensers accounted for between 42% and 70% of all bags in the bins.

Table 3: Bag Usage by Trail Segment

	CBSM Intervention	
SOUTH SIDE (Paved)	Bags Used (# in bins)	% CBSM Mutt Mitts
At Douglass	not available	not available
At College	not available	not available
NORTH SIDE (Unpaved)	Bags Used (# in bins)	% CBSM Mutt Mitts
At Douglass	12	42%
At College	23	70%

Conclusions and Recommendations

Overall, the CBSM intervention resulted in a 23% decrease in the amount of pet waste left along the trail. In addition, there was evidence that the bags provided at the trail were frequently used by trail visitors. Importantly, the results of the CBSM pilot experiment indicated that the CBSM intervention was only effective on the south side of the trail which is a paved bike trail characterized by a constant flow of pedestrians and bike riders. The amount of pet waste left on the south side of the trail significantly decreased as a result of the intervention. On the north side of the trail, which is unpaved and experiences much lower rates of usage, the CBSM intervention had no effect.

Observations of the number of bags in the trash cans on the north side (at Douglas and at College) suggest that the dispensers are being used by trail visitors. However, improper pet waste management continues to be a problem on this side of the trail. While the intervention addressed a key structural barrier identified in the baseline survey (availability of bags), the lack of observed effects on the north of the trail suggests that there may still be motivational barriers that the current intervention did not adequately address. We hypothesize that the lack of effect may be due to heightened anonymity on the north side of the trail. That is, the behavior of dog owners along the north side is more hidden from public view than it is on the south side.

Based on the results of the pilot, We recommend that further outreach efforts be conducted that address the anonymity issue directly. For example:

> **Obtain commitments from residents adjacent to the north trail.** Residents with homes whose backyards are adjacent to the trail could be visited by a Clean Water Program representative, local nonprofit, or girl/boy scout. Residents can be provided with a "Do your Doody" sign to place at the back perimeter of their fence. A few of the homes along the trail already display Neighborhood Watch signs, so we are confident that residents would be willing to participate.
>
> **Concentrate outreach near fire station.** Further observation indicated that a large portion of the pet waste was accumulated along the trail just behind Oceanside Fire Station #5 on North River Rd. We recommend concentrated outreach in this area by either moving the existing sign and dispenser closer to the fire station perimeter fence or by placing additional signage in problem areas. Another consideration is to establish a partnership with the the fire station to "adopt a dispenser."

Utilize Scout troops to emphasize social responsibility on the north side. We recommend sending Girl and/or Boy Scout troops out to the trail and to the surrounding community to inform trail users about the newly available dispensers and trash cans. Ideally, this outreach should be coupled with additional installation sites that are managed and maintained by the troops as part of an "adopt-a-dispenser" program.

Install additional dispensers. We recommend installing additional bag dispensers and trash cans in areas where residents or trail users have requested them as well as more frequent intervals along the north side of the trail.

Provide a trail guide for dog walkers. We recommend modifying existing trail maps to prominently show placement of dispensers and bins. These maps could be displayed at trail heads, posted on the City of Oceanside website, or handed out at local events.

Next Steps

The recommended next steps for the CBSM Pick up Your Pet Waste Campaign are as follows:

1. **Clean up both pilot and control areas.** Engage pet waste clean-up contractor to clean up and count accumulated pet waste along all four trail segments.

2. **Install additional dispensers and signage as requested in control areas.** Because baseline and follow-up data have already been collected, the intervention can now be implemented more broadly to include control areas. Following the clean-up, additional pet waste bag dispensers and signs may be installed as requested along the control segments of the trail and anywhere else deemed appropriate.

3. **Replace all existing signage.** Replace existing "Poop Pollutes" trail signage with the new "Do Your Doody" sign.

4. **Intensify outreach on the north side of the trail.** Following the above recommendations, enhance outreach on the north side of the trail by obtaining commitments from local residents to post signage, addressing problem areas by the fire station, and installing additional signage and/or dispensers.

5. **Gather outcome data from pilot and control areas.** Approximately one-month following implementation of additional outreach on the north side of the trail, engage the pet waste clean-up contractor to clean up and count accumulated pet waste along all four trail segments.

Response Rate Details

300 Surveys Mailed, 285 Valid Addresses
183 Responded = **64% Response Rate**
180 Surveys were Completed = **63% Completion Rate**

Overall Sample Characteristics

Dog Ownership: 45% report having a dog in their household (N=81)
Age: Mean Age = 53.77
Gender: 49% Female, 46% Male, 5% Did not report gender
Interest in Results: 52 residents (29%) requested a copy of the survey results
Trail Visitors: 70% have visited the San Luis Rey River Bike Trail (N = 123)

Characteristics of Dog Owners (N=81)

Mean Age = 51.51; Range = 24-84 years
84% walk their dogs (N=69)
17% of dog walkers said that there are times when they leave their dog's waste behind: "When you walk your dog, how often do you leave your dog's waste behind without picking it up?"

- Never = 82.6%; Rarely = 13.0%; Sometimes = 4.3%

74% of dog owners have visited the San Luis Rey River Trail

How often do you see dog waste in your community
that is left behind and not cleaned up?

Dog Waste in the community is a relevant Issue. Seventy percent (70%) of residents report that they see dog waste left behind in their community at least sometimes.

Never	Rarely	Sometimes	Often	Always
4%	26%	36%	21%	13%

"I would like to see more pet waste bag dispensers in my community. "
0 = Strongly Disagree; 10 = Strongly Agree

Residents are overall positive about the idea of pet waste bag dispensers.

53% responded "strongly agree"; 67% responded 8 or higher on the 10-point scale
Only 7% of respondents strongly disagreed with this suggestion.

- Mean = 7.84 (Dog Owners = 8.36 , Non Owners = 7.43)

How important is it that dog owners always pick up their dog's waste?
0 = Not at all Important; 10 = Extremely Important

Both dog owners and non owners agree that it is important to pick up dog waste.

- Mean = 9.61 out of 10 (Dog Owners = 9.42 , Non Owners = 9.76)

Motivations for Picking up Dog Waste

Among dog owners, the top rated reasons for picking up dog waste and throwing it in the trash were: **"it is the right thing to do"** and **"because it pollutes parks, rivers, and beaches".**

Other important reasons mentioned for picking up dog waste were: because it is the personal responsibility of pet owners, because it smells and attracts bugs, because it is rude and inconsiderate to others, and to keep the community clean.

It is important for pet owners to pick up dog waste and throw it in the trash…	Dog Owners	Non Owners	Total
…because it is the right thing to do.	9.23	9.66	9.47
…because it pollutes parks, rivers, and beaches.	9.05	9.58	9.34
…because it is unsafe for children.	8.81	9.85	9.38
…because it washes into creeks, rivers, and the ocean.	8.90	9.15	9.03
...because it makes the community look bad.	8.75	9.21	8.99
…because someone might step in it.	8.56	9.30	8.97
…because pet waste transmits disease.	8.61	8.99	8.82
…because it is the law.	8.35	9.13	8.77

Barriers to Picking up Pet Waste

Among dog owners, the top rated barriers for why someone might not pick up after their dog were: **"no one else is around to see them," "forget to bring a bag," and "nowhere to throw it away."** Of the 12 people who reported that they left dog waste behind at least sometimes, the highest rated barriers were: other people don't pick up after their pets (*M* = 7.25), nowhere to throw it away (7.25), no one is around to see them (6.83), and they think it is gross (6.75).

Other barriers mentioned by residents included: laziness (42%), lack of enforcement, loose stool, no trash cans or bags, thinking someone else should do it, among others.

In my community, someone might not pick up after their dog because…	Dog Owners	Non Owners	Total
…no one else is around to see them.	6.69	5.61	6.08
…they forget to bring a bag with them.	6.58	5.44	5.94
…there is nowhere to throw it away.	6.32	4.44	5.28
…they think it is gross.	6.17	5.28	5.68
…they don't think it is important.	6.07	5.39	5.69
…other people don't pick up after their pets.	5.88	4.34	5.02
…someone will come later to clean it up.	3.88	3.92	3.90

San Luis Rey River Trail Results

710% of residents have visited the trail (N=123). Of those who have visited the trail, 83% have seen dog waste on the trail. A total of 158 reasons were listed for why there is dog waste on the trail. The primary reasons provided for why there is dog waste on the trail are listed below. Among dog owners who have visited the trail, No Bags and Trash Cans that are too far apart.

	Overall Sample		**Target Population**	
Reason	**N**	**%**	**N**	**%**
People are Lazy/Don't Care/Rude	63	40%	19	29%
No Bags	30	19%	19	29%
No Trash Cans/Trash too Far Away	29	19%	17	26%
Other	11	7%	4	6%
No One Around	10	6%	3	5%
Interrupts Exercise	5	3%	1	2%
Not Paved/Feel it is the Country	4	3%	1	2%
Lack of Enforcement	3	2%	0	0%
Already Coyote Poop	3	2%	2	3%
TOTAL	158	100%	66	100%

Target Population Results

The target population for this Pick Up Your Pet Waste CBSM project is dog owners who walk their dogs on the San Luis Rey River Trail. Because the response rate was so high, the sample included a sufficient number of responses to look at the target population as a group. The results below reflect the responses of those who met the following criteria:

Dog Owners
who Walk their Dogs
and who have visited the San Luis Rey River Trail

A total of 51 participants met these criteria (28%)

18% have left dog waste behind rarely or sometimes

Most important reasons for picking up dog waste were:

- "right thing to do" (9.20),
- "pollutes parks, rivers, and beaches" (8.76),
- "unsafe for children" (8.62), and
- "washes into creeks, rivers, and ocean" (8.60).

Highest rated barriers to picking up dog waste were:

- "forget a bag" (7.02)
- "nowhere to throw it away" (6.68)

- "no one around to see" (6.59)

Appendix B: Additional Load Reduction Data

Total Weight of Waste Collected

The total weight of pet waste collected was recorded before and after implementation of the intervention in both pilot and control areas.

	CBSM Pilot (College to Douglas)	Control (Douglas to Whalen)
SOUTH SIDE (Paved)		
PRE	3.25	1.13
POST	2.25	2.75
% Change	**31% decrease**	**143% increase**
NORTH SIDE (Unpaved)		
PRE	10.88	10.38
POST	10.50	7.75
% Change	**3% decrease**	**25% decrease**

Average Weight per Pile of Waste Collected

The average weight per pile of waste was calculated for each of the four trail segments in the study.

	CBSM Pilot (College to Douglas)	Control (Douglas to Whalen)
SOUTH SIDE (Paved)		
PRE	1.67	1.28
POST	1.50	1.50
Difference	**0.17**	**0.22**
NORTH SIDE (Unpaved)		
PRE	1.28	1.80
POST	1.62	1.72
Difference	**0.34**	**0.08**

About The Cover

Every year the City's Water Utilities Department hosts a Water Awareness Poster Contest as part of Water Awareness Month. This year's top winners are from Laural, North Terrace and Foussat Elementary schools. Congratulations to Saul Figueroa, Michelle Johnson and Alondra Milena Mendoza for becoming "Water-wise"! See Article on Page 20.

Major Changes for Commercial Recycling in Oceanside

Green Oceanside is about teaching families in our local community how to be better stewards of the planet by recycling, composting, saving water, conserving energy, and preventing water pollution.

To better meet the needs of our community and our environment, all Oceanside Commercial Customers are now offered single-stream recycling services beginning immediately.

In the past, businesses and commercial customers, including multifamily apartment complexes, were required to source separate the recycling by material type. This meant that separate containers were required to recycle paper/cardboard, and bottles/ cans. Single-stream recycling provides convenience and ease. Effective immediately all commercial customer's recycling material can be placed together into one recycling container.

Oceanside businesses have an outstanding track record for participating in the City's recycling program. By recycling, businesses are helping the City of Oceanside achieve their zero-waste goals. Oceanside businesses that recycle also help the City comply with State of California Mandate AB 939, which requires all California cities to divert a minimum of 50 percent from landfills.

Over the next few months, Waste Management will be changing out the current signage to reflect the new service offerings. Below you will find a list of recycling materials accepted in your container immediately. Customers do not have to wait for the new signage to begin this service at their place of business.

Remember, Waste Management provides different types and sizes of recycling containers to meet your needs. Recycling service is also offered at a rate that is lower than trash service. For inquiries regarding Waste Management's different service offerings, please contact Waste Management's customer service line at (760) 439-2824 or 1(866) WM RECYCLE (967-3292) from 8:00 am to 5:00 pm, Monday through Friday. Or if you are interested in a more in-depth waste and recycling analysis, please feel free to call the City of Oceanside's Recycling Hotline at (760) 435-5015 to schedule a waste audit.

Thank you for being a part of the Green Oceanside Business community.

Let Us Help You Green Your Business

Let the City of Oceanside's Green Oceanside team help you green your business by recommending ways to reduce waste, recycle, and purchase in a sustainable manner. Every business in Oceanside can be a part of the Green Oceanside solution, to a cleaner, healthier planet and community.

Please call Colleen Foster at (760) 435-5021, to schedule an appointment to discuss ways to make your establishment an eco-friendly place of business. You may also find out how we can help your business save money by reducing your trash needs and increasing your recycling services. The opportunities to go green are endless. We look forward to celebrating the Green Oceanside community with your business.

Also, please let us know if you would be interested in some free recycling containers for your business to help you get started on the path towards Zero Waste in Oceanside.

Michelle Johnson

Saul Figueroa

Alondra Milena Mendoza

Oceanside Water Awareness Poster Contest Winners

Congratulations to the winners of the Oceanside Water Awareness Poster Contest 2011: Michelle Johnson from North Terrace Elementary, Saul Figueroa from Laurel Elementary, and Alondra Milena Mendoza from Foussat Elementary.

This poster contest is part of California Water Awareness Month, an annual celebration sponsored each May by the North County Water Agencies. The contest challenges fourth grade students to learn about the importance of water in Southern California, including water conservation and pollution prevention. This year's theme was "Water is Life."

The top three students were recognized at the May 25, 2011, City Council meeting for their outstanding artwork that encourages everyone to protect and use water wisely. The posters will be included in the 2012 North County Water Agencies Water Awareness calendar that will be distributed in late 2011.

Easy and Convenient Ways to Save Water

Now that we have moved back to normal water supply conditions, it's still important to continue our water efficient habits. Here are some easy and convenient ways to use water efficiently.

- For saving water around your home, look for great ideas and classes from these websites: **www.bewaterwise.com** and **www.SaveWaterOceanside.com**
- SDG&E offers free home energy-savings kits which save water too. The kits include a kitchen faucet aerator, two bathroom faucet aerators and a low-flow showerhead. Visit **www.sdge.com/energykit** or call 1 (800) 644-6133 to order your complimentary kit.
- Transform your landscape into a beautiful low-water-use garden by planting low-water-use plants, checking your irrigation system and fixing any leaks, watering before 10:00 am and after 6:00 pm, and adding mulch.
- Get a free Smart Landscape Evaluation which is a free service designed to assist you with identifying indoor and outdoor water-savings opportunities. Participants can expect to have a professional technician review their indoor fixtures and evaluate the performance of their irrigation system. At the end, the participants will receive a list of recommendations and a proposed watering schedule. Call (866) 883-1332 to schedule your free landscape evaluation.

To learn more about water-saving resources, water-use efficiency tips, rebates, water news, and other water-saving programs, please visit **www.SaveWaterOceanside.com** or contact the Oceanside Water Utilities Department at (760) 435-5800.

Greening Your Special Event

The City of Oceanside is requesting that all special events at city parks, beaches, harbor and/or other city facilities, comply with state and local mandates for the proper disposal of solid waste and recycling. To ensure the greatest diversion rate possible, we would like to assist you with meeting this requirement by providing you with several options and/or recycling containers for your event. When you apply for your event permit at the City Recreation Department, they will provide a required form with all the details. Additionally, Waste Management of North County can provide bigger recycling containers for the large venues. You may also call our Recycling Hotline for more information on how to recycle at your next event at (760) 435-5015.

For those of you who are planning a small party or picnic with family and friends, please remember to do your best to keep your event green and litter-free. There are many simple ways to do this, which can be fun and entertaining for all of those attending. The following are a couple of tips on how to green your event, large or small:

* Send E-vites rather than actual invitations. Reduce your use of paper.
* Check that your event location has a recycling bin prior to the event. If there is no bin close by, designate a personal container for recycling, or for larger events, please call the Recycling Hotline at (760) 435-5015 for some free special event recycling containers.
* Avoid serving bottled water – use pitchers and reusable cups. Encourage your guests to bring their own utensils, or have a project where everyone decorates their own utensils.
* Purchase food that does not have a lot of packaging, or is in packaging that can be recycled. All plastics with the recycling symbol #1-7 can be recycled in Oceanside, as well as bottles, cans, paper, and cardboard.
* Do not use Styrofoam materials and/or plastic bags. Avoid using plastic utensils. These materials do not biodegrade, but rather end up in our landfills for hundreds of years.
* Strive to have as little leftover food as possible. Order wisely, and encourage guests to take home leftovers. Food waste is always unnecessary.
* Provide food and condiments in bulk. Avoid excess packaging.
* Leave no trace: Invite guests to help with a quick clean-up of the area, to ensure the area is cleaner than when you arrived and ready for the next set of guests.
* **HAVE FUN AND BE GREEN!**

Free Irrigation Workshop

Managing Your Irrigation System
Thursday, July 21, 4:00 to 6:00 pm
Space is limited! Call (760) 435-5828

Take a free hands-on irrigation workshop at MiraCosta College to learn about:

- Irrigation systems and basics
- How to adjust your irrigation system
- How to troubleshoot and do simple repairs
- Irrigation scheduling
- Common sprinkler problems and much more.

This workshop is sponsored by the Oceanside Water Utilities Department. Space is limited and a special parking permit is required to park on campus. Please call (760) 435-5828 to reserve a seat or for more information.

How Many Oceanside Water Bodies Can You Name?

This is the first in a series of information articles about Oceanside water bodies that will appear in the Oceanside Magazine. The Oceanside Clean Water Program would like you to be informed about the different water bodies that are in Oceanside. By being aware of the water body closest to your home, school or business, you can be better prepared to help protect them from polluted runoff.

San Luis Rey River

The San Luis Rey (SLR) River originates in the Palomar and Hot Springs Mountains in eastern San Diego County and extends over 55 miles across northern San Diego County before discharging to the Pacific Ocean in the City of Oceanside. The SLR River parallels Highway 76 in Oceanside and drains a watershed of approximately 360,000 acres or 562 square miles. Within the City of Oceanside, the SLR River is fed by one of its tributaries, Pilgrim Creek.

There are numerous land-use types within the watershed with the majority of land remaining undeveloped. Higher population concentrations are in the western area of the watershed. Residential and agriculture serve as the dominant land uses in the watershed.

These land uses have introduced many pollutants into the river and have degraded the water quality. The river shows high levels of chloride and total dissolved solids and the mouth of the river has had historical bacterial exceedances.

About 8 percent of the City of Oceanside's drinking water supply comes from the SLR Valley Groundwater Basin. Water from the basin is pumped from wells and treated at a reverse osmosis plant before being distributed to Oceanside residents.

You can find more information about other Oceanside waterbodies by logging onto **www.OceansideCleanWaterProgram.org** and clicking on Waterbodies. While on the website you can also learn what you can do to help prevent pollution from reaching these water bodies.

San Luis Rey River discharges into the Pacific Ocean.

2011 Oceanside River, Creek, and Beach Cleanup Events

Mark your calendar to join the Clean Water Program staff and citizen volunteers at these events to help remove trash and debris from our local rivers, creeks, and beaches.

July 5, 2011
Tuesday - Morning After Mess - City Beaches
Time: 8:00 - 11:00 am

September 17, 2011
Saturday - Buena Vista Creek Cleanup and California Coastal Cleanup Day
Time: 9:00 am – 12:00 pm

November 5, 2011
Saturday - San Luis Rey River Cleanup
Time: 9:00 am – 12:00 pm

More information can be found by calling the Oceanside Events Hotline at (760) 435-5536 or at **www.OceansideCleanWaterProgram.org/events.asp**

Eco Friendly Tips

These days, a growing number of people are making greener choices for their families and are working to create more sustainable homes. Here are some environmentally conscious tips to honor Mother Earth every day.

By putting into practice even a few of these easy tips, people are sure to reduce their carbon footprint, see a positive difference in family health and even a few less trips to take out the trash:

- **Eat Green:** Re-evaluate your grocery list and avoid highly processed foods, diet foods, instant and ready-made foods, juice-flavored drinks, white breads and sugary cereals and snacks.
- **Go organic:** Focus on fresh, organic in-season fruits and vegetables, whole grains high in fiber as well as beans, nuts and seeds.
- **Paper or plastic?:** How about canvas? Use recyclable canvas shopping bags when buying groceries instead of paper or plastic. Keep some in your car as well as at home so they are always on hand when you need them.
- **Dish out your meals with health in mind:** Use stainless steel or cast iron pots and pans when possible, as non-stick pans and finishes may be toxic. Serve your meals on ceramic dishes, use glass cups and avoid wasteful plastic-ware and paper plates.
- **Think twice about food storage:** Plastic containers can leach toxic chemicals into foods. Avoid reheating stored food in plastic containers and when possible, use glass jars.
- **Cut back on paper towels:** Though convenient, disposable paper towels are the cause of a lot of waste in the household. Stick with reusable sponges and micro-fiber cloths instead.
- **Drink from the tap:** Purchase a water filter to place directly on your faucet and reduce bottled water consumption by using a refillable canteen.
- **Green cleaning:** Cast out those chemical cleaning products and go back to the basics. Try wiping down surfaces with white vinegar, use baking soda in bathrooms, or purchase green-friendly products.
- **Plan a daily nature date with your kids:** Carve out some time each day to disconnect from the rest of the world and get outside with your kids. The time spent outdoors is not only healthy for the mind and body, it will help your children become more mindful about their environment.
- **Educate your children on being green:** The best way to continue the green movement is to educate the next generation. Teach your children simple ways they can help recycle, reduce and reuse.

Get CFLs out of the closet and into your sockets!

Do you still have compact fluorescent light (CFL) bulbs sitting in storage instead of in a socket? Do you still have older style (incandescent) bulbs in use?

If you answered yes to either question, don't wait any longer to put those CFLs to work! Switching out older bulbs in favor of CFLs is one of the easiest ways to save energy and money in your home.

CFLs save you money!

For starters, SDG&E helps make bulbs more affordable by providing promotional pricing at participating stores. Look for ENERGY STAR®-qualifying products with the SDG&E promotional sticker at your favorite retailer.

SDG&E also hosts lighting exchanges where customers can turn in older bulbs or lamps for newer, more energy-efficient equivalents. For upcoming exchanges in your area, visit **www.sdge.com/lighting.**

Even when purchasing bulbs at full price, the investment is well worth it. While CFLs may be a bit pricier at the register, they soon pay for themselves in energy savings. Replacing a standard 60-watt incandescent bulb with a CFL equivalent can save a single household $30 in energy costs over its lifetime. Plus, when used properly, they burn brightly for up to 10,000 hours as opposed to just 800-1,500 hours for an older incandescent.

What are you waiting for?

Make it a goal to switch to CFL lighting—the sooner the better. And if you've got a CFL sitting unused in a closet, now is the perfect time to put it to work!

Green Oceanside

Be sure to clip out and save these pages for reference.

3rd Annual Green Week & Oceanside Green Fair

The City of Oceanside invites you to participate in its 3rd Annual Green Week and Oceanside Green Fair. From March 7-12, the City will be honoring Green Week 2011 at various community events. Green Week 2011 is coordinated by the Green Oceanside campaign, which is a collaboration between several City Departments, local environmental organizations and businesses dedicated to educating the public about environmental conservation. Green Oceanside is about teaching families in our local community how to be better stewards of the planet by recycling, composting, conserving water, conserving energy, and preventing water pollution.

All Green Week events from March 7-12 will be **FREE** to the whole family. Events will include a Citywide environmental youth art contest, a film festival, "Green" storytime at the library, a beach cleanup, an electronic waste collection event, and a Green Fair. The following is information about the week's activities and how you can be a part of Green Oceanside's Green Week 2011.

On Tuesday, March 8, the City will be hosting its 2nd Annual "Green Oceanside Environmental Film Festival" at the El Corazon Senior Center from 6:00 to 8:00 pm. Last year's Film Festival featured the film "Tapped", which shed light on the water bottle industry and its impact to the environment. There was an excellent turnout last year, and audience members really enjoyed the opportunity to share dialogue with City officials and local nonprofit agencies after the show. The feature film this year has not been determined, but will definitely highlight some key environmental issue that affects us locally and internationally. For updated information, please stay tuned to our City's Web site as we near Green Week 2011.

The Citywide 3rd Annual Environmental Youth Art Contest invites Oceanside Unified School District students (K-6) to identify what "Green Oceanside" means to them. Students are asked to submit a poster entry that incorporates the following concepts: Reduce, Reuse, Recycle, Water Conservation, Pollution Prevention and/or Clean Earth. In order to highlight our young environmentalists, last year's winning artwork was actually incorporated in City outreach materials as well as in the design of several thousand reusable bags that are currently being distributed Citywide at several City events including Harbor Days 2010, and Day Without a Bag 2010, all in an effort to support the reduction of plastic bags, and the promotion of Green Week 2011. The City expects to incorporate the students' winning artwork in some kind of outreach promotional material every year after each Green Week event. Look for these items the next time you see a Green Oceanside booth at one of our great City events. Our children's artwork is an inspiration to us all to be environmental conservationists.

The Oceanside Library will also be having an environmental-themed storytime throughout Green Week 2011. For information and times, please ask at the Children's desk in your local branch, or call (760) 435-5600. Educating our children at an early age is the key to environmental preservation for generations to come.

Citizens view composting efforts.

Green Week 2011 will have its grand finale on March 12 at a Beach Cleanup and our 3rd Annual Green Fair. San Diego Coastkeeper will be sponsoring this beach cleanup which will be held from 9:00 am to 12:00 pm. The registration site for this beach cleanup event will be on the south side of the Pier. Interested groups can log onto www.oceansidecleanwaterprogram.org or www.sdcoastkeeper.org for more information. Help us keep our beaches beautiful and clean.

After the Beach Cleanup we invite the whole family to join us at the 3rd Annual Green Fair, from 11:00 am to 4:00 pm at the Oceanside Amphitheater located at the south side of the Pier. The Fair will have environmental related booths that will be distributing information and free green goodies to all who attend. There will be live entertainment for the whole family, children's activities and crafts, as well as plenty of free information and goodies all intended to help you be more environmentally sustainable at home and at work. Top Finalists and Grand Prize winners of the Environmental Youth Art Contest will be announced at the Award Ceremony in the afternoon at the Amphitheater, with some of the submitted artwork from the contest on display. Please join us in celebrating our creative youth as they shed light on environmental conservation and preservation.

Another highlight of the Green Fair will be the opportunity to drop off your electronic waste to recycle for **Free**. The drop off event will be held between 11:00 am to 4:00 pm at Parking lot 24, at the corner of Mission Avenue and Myers Street in downtown Oceanside.

For more information about Green Week 2011 events and the Green Fair call (760) 435-5015 or log onto the City of Oceanside Web site at www.ci.oceanside.ca.us and look under "Whats New" for a link to Green Week 2011, as the event nears. Thank you for being a part of Green Oceanside.

The 'Cash for Cans' Program in Oceanside

The City of Oceanside's Solid Waste and Recycling Division has a program called "Cash for Cans", and the objective of the program is to increase recycling and reduce litter in Oceanside. This program not only increases the recycling of plastic and aluminum beverage containers with CRV (California Redemption Value) fees, but it's also a fund-raising opportunity for many nonprofit organizations that "adopt" and service the recycling containers, and then turn in their recyclables for cash to use toward their cause(s).

This is how the program works: we purchase recycling containers with grant funds we receive from the California Beverage Container Grant, and then place the containers at local schools, parks, harbor, strand and beach areas, as well as other locations used by the public. Then we solicit nonprofit groups such as sports teams, schools or classrooms, youth groups, among other community non-profit organizations, who then "adopt" one or more containers, pledging to service the containers by collecting the bottles and cans on a regular basis, and delivering them to a recycling center for cash, which can then be used to benefit their cause(s). All CRV containers can be redeemed for cash at a local certified recycling center such as Waste Management's Recycling Center, located at 2880 Industry St. in Oceanside.

The next time you go to a park, school, recreation center, or other public areas in Oceanside, and happen to see a recycling container (such as the blue one shown here), please use it to recycle your empty beverage containers, and be proud that you are helping a nonprofit organization in Oceanside and contributing towards a beautiful and litter-free ***Green Oceanside.***

Is your non-profit organization interested in participating?

Please call the City's Recycling Hotline at: 435-5015

The **Cash for Cans Program** is open to schools, sports leagues, recreation programs, community groups or associations, and other nonprofit organizations in Oceanside (and/or OUSD). The only requirements for the program are:

- Sign an agreement with the City to adopt one or more containers.
- Service the containers on a regular basis.
- Take your recyclables to a certified recycling center in Oceanside.
- Maintain records with amounts of materials recycled and funds received.
- Report your findings bi-annually to the City.

Have a GREEN Holiday Season

Please remember to use items that are reusable and/or recyclable during the holidays!

Keep in mind that most people produce more waste during the holidays due to gift-wrap materials, excess packaging on toys and electronics, gift boxes, etc. We also tend to buy more packaged foods because we are home for the holidays, our children are on break from school, and/or we have more guests. Here are some tips on reusing and recycling during the holidays:

- Use less gift wrap and/or packaging for gifts. Remember to recycle all the gift-wrapping paper, gift bags, shirt boxes, and cardboard packaging afterwards!
- Reduce your use of single-use plastics such as plastic water and soda bottles. Instead buy larger sizes and use your glassware at home in order to reduce waste (bonus: you will save money too!)
- Reduce your use of disposable plates, cups, silverware and plastic bags. Instead save money, and our planet, by using your dishes and silverware that are reusable. Take your reusable bags to the grocery store instead of accepting their plastic bags, which create more waste and are harmful to the planet. *In fact, reusable bags make great gifts!* (See our "Day Without A Bag" article in this issue to find out when and where to get a free reusable bag.)

Christmas Tree Recycling

Waste Management will collect Christmas trees at the curb during the first two weeks following Christmas on <u>your regular collection day</u>, between Dec. 27 – Jan. 14.
These are the guidelines for tree-recycling at the curb:

- Trees taller than six feet must be cut in half.
- Please remove all decorations including tinsel, lights, ornaments and tree stands, and then place your tree at the curb.
- Flocked trees cannot be recycled, so they will be collected as trash instead of being recycled as green waste.
- Better yet, do not use tinsel or flock your trees at all… it can be your gift to the environment.

Finally, we hope you have a safe and pleasant Holiday Season

If you have any recycling questions or requests, please call our Recycling Hotline at: (760) 435-5015.

December 16th: Day Without A Bag

We will be handing out reusable bags at City facilities, local retail establishments, and at this year's **Bagless** Sunset Market on Thursday, December 16th. Last year we had a successful event, handing out over 4,000 reusable bags throughout the City. The purpose of "Day Without A Bag" is to encourage our residents to give back to the environment by using reusable totes instead of disposable plastic or paper bags. Plastic bags in particular are considered a significant component of litter in the environment due to their durability and light weight, and make up the greatest amount of litter debris in our streets, waterways, and beaches. In fact, it takes approximately 1,000 years for a plastic bag to fully biodegrade. Please refer to our City Web site as we get closer to December 16th, for specifics on which stores may be handing out incentives to use reusable bags, or free reusable bags.

Please stop by our booth at the Sunset Market for your free reusable bag on December 16th and show your support by using fewer plastic bags!

Reusable bags are popular.

A Message from the *Green Team:*

Thank you for your recycling efforts at home, work, and outside in public areas of our community! We want to remind all City residents that any time you need recycling containers for your home, simply call our Recycling Hotline to request them. We want to make sure you have all the recycling containers you need. Waste Management offers a green crate for all mixed paper, and a separate yellow crate for glass, plastic and bi-metal/aluminum cans. They also offer several types and sizes of recycling containers for multifamily complexes and businesses. Please call the Recycling Hotline for more information and/or to request your recycling containers, at: (760) 435-5015.

Water Conservation is Still Necessary in San Diego County

San Diego County still faces significant water supply challenges created by regulatory restrictions on water deliveries from the Bay-Delta and the lingering effects of the several years of drought. The first year of regionwide water shortage allocations and Level 2 water use restrictions began July 1, 2009. Over the next 12 months, urban water use fell by 12.8 percent. San Diego County Water Authority officials attribute the reduction in regional water use to several factors – improved water conservation by residents and businesses, suppressed demand due to the ongoing recession, and an average rainfall year following several years of below-average rainfall.

Although snowfall in the Sierra Nevada in Northern California was well above average during the winter months of 2009-2010, pumping restrictions in the Bay-Delta significantly reduced any water supply benefits from it. Imported water supplies are still recovering from three years of historic dry conditions. Even though the 2010 winter's above-average rain and snow prevented water shortage conditions from worsening, the region remains only one dry year away from potentially severe shortages. Many state reservoirs have still not returned to pre-drought levels. The Colorado River basin will take many years to recover from drought conditions in eight out of the last ten years.

Locally, rainfall provided marginal help to local reservoirs, but not enough to mitigate the San Diego region's dependence on imported supplies. Rainfall can help lower demand by reducing irrigation needs, but it only provides about five percent of the San Diego region's water supply.

The possibility of another below-average year due to the impacts of La Niña conditions forecast for the 2010-2011 winter will reduce water available from the State Water Project. Regardless of precipitation levels, regulatory restrictions on State Water Project pumping are in place and will reduce deliveries of available water to this region for the foreseeable future, making meeting the region's water needs much more challenging.

What You Can Do to Help:

1. In winter, irrigate only if needed to maintain some moisture in soil.
2. Check soil moisture using your finger or shovel and wait until the soil is dry 1 or 2 inches deep to water.
3. Use the landscape calculator at www.bewaterwise.com for advice on how much and how often to water.
4. Water only after 8:00 pm and before 6:00 am to reduce water loss due to evaporation and wind.
5. Fix leaking sprinklers, valves and pipes. A broken spray sprinkler wastes 10 gallons per minute or 100 gallons in a typical 10 minute watering cycle.
6. Place a 2- to 3-inch layer of mulch on bare spots. This will reduce water evaporation, improve the soil and control weeds.
7. Replace lawn areas with California-friendly groundcovers, trees and shrubs whenever possible.
8. Go to the City of Oceanside's Web site at ci.oceanside.ca.us; click on "Water Conservation Tips and Rebates" for information and incentives to help you save water. Or call the Water Utilities Department at 435-5800 for conservation assistance.

Loma Alta Creek Cleanup
April 23, 2011
9:00 am – 12:00 pm

Celebrate Earth Day by participating in the 12th Annual Creek to Bay Cleanup event on April 23, 2011. The City of Oceanside, together with event sponsors I Love a Clean San Diego, San Diego Coastkeeper, Harrah's Rincon Casino and 1-800-GOT-JUNK, will be hosting a cleanup along the banks of Loma Alta Creek and at two sites along the Pacific Ocean.

Join us to help remove unwanted materials from the creek and beach and help to improve Oceanside creek and beach water quality. Volunteers will receive cleanup supplies, refreshments, community service hours, and a free T-shirt or other giveaway item. For more information call (760) 435-5536 or (760) 435-5807.

Choose from five registration sites:

* Buccaneer Park at 1500 Pacific Street (cross street is Morse Street)
* Behind Smart & Final on Oceanside Boulevard and I-5 (1701 Oceanside Boulevard)
* Mesa Drive between El Camino Real and Rancho Del Oro Drive
* Behind commercial buildings at 1629 Ord Way (Off Oceanside Boulevard between College Boulevard and Temple Heights Drive)
* South side of the Oceanside Pier

Receive future event notices by email
Send your email address to cleanwaterprogramevents@ci.oceanside.ca.us, or log onto the events tab at www.OceansideCleanWaterProgram.org to register to receive event notices by email.

2011 Oceanside River, Creek and Beach Cleanup Events

Mark your calendar to join the Clean Water Program staff and citizen volunteers at these future events to help remove trash and debris from our local rivers, creeks, and beaches.

April 23, 2011
Saturday – Loma Alta Creek Cleanup
Time: 9:00 am – 12:00 pm

July 5, 2011
Tuesday – Morning After Mess - City Beaches
Time: 8:00 - 11:00 am

September 17, 2011
Saturday – Buena Vista Creek Cleanup and California Coastal Cleanup Day
Time: 9:00 am - 12:00 pm

November 5, 2011
Saturday – San Luis Rey River Cleanup
Time: 9:00 am - 12:00 pm

More information can be found by calling the Oceanside Events Hotline at (760) 435-5536 or at www.OceansideCleanWaterProgram.org/events.asp .

Bacteria Source Tracking Project Along the San Luis Rey River

The Oceanside Clean Water Program was awarded a grant valued at $554,000 from the California State Water Resources Control Board. The grant is to be used to conduct a study to determine the sources of high bacteria levels that cause beach advisories at the mouth of the San Luis Rey River. Ultimately, the findings may help the beaches stay cleaner and improve the quality of life for Oceanside. The project consists of three components, two of which involve bacteria monitoring and one that involves visual observations.

The goal of the project is to identify where bacteria levels are elevated and to pinpoint sources. Some of these sources may include birds that congregate in the mouth of the river, pet waste left on the ground, and the homeless population in the river bed. Results from lab analysis and genetic testing will be compiled and analyzed to provide an overall assessment of the lower San Luis Rey River. With potential locations and sources of bacteria identified, the City will build on the study's results by identifying actions to help reduce bacteria loads.

The City started collecting samples and river flow measurements at several monitoring locations in the summer of 2008. In December of 2008, the project was temporarily stopped due to state budget shortfalls and then restarted in December of 2009 after the state gave the go-ahead.

Additional sampling was conducted in May and August of 2010; more is planned for the wet season between October 2010 and March 2011. These rainy months are critical to sample since these are the times when ocean water is most impacted by high bacteria levels.

Keep your eye out for project updates in future editions of the Clean Water Program Newsletter. In addition, the final report for the overall project will be posted at www.OceansideCleanWaterProgram.org.

One Year Anniversary of Cogen Facility Benefits Ratepayers and Environment

The one year anniversary of the San Luis Rey Cogen Facility provides proof that Cogen facilities in San Diego County reap many benefits for ratepayers, the environment and city entities.

The Cogen plant is a biogas generation system. It uses the methane gas by-product from the San Luis Rey Wastewater Facility's operations and converts the gas into energy and heat. That heat and energy are used to power the wastewater facility. Prior to the Cogen facility's operation, the methane gas was burned into the atmosphere.

The City is proud to host the first biogas generation system built without ratepayer funds. The Cogen plant is saving Oceanside hundreds of thousands of dollars every year without spending one dime of ratepayer money, and the environmental benefits are impressive.

The Cogen facility's operations reduce 5,600 tons of carbon dioxide emissions annually. This annual reduction of greenhouse gas is equal to removing more than 900 cars from the road each year.

The power produced at the Cogen facility is more than what a similar-size solar power project would generate on a 24-hour basis. The City of Oceanside saves an estimated $250,000 in annual electric and natural gas expenses that would have been otherwise used to operate the wastewater facility.

The entire project was funded with a grant from CHP Clean Energy, LLC, a private entity. CHP funded the project through its subsidiary, Calpwr Oceanside, LLC, which assumes all operating risk. CHP selected Calpwr to build and maintain the Cogen facility.

As private companies, Calpwr and CHP are able to obtain state and utility grants, tax incentives and renewable energy credits that are unavailable to municipalities. Building a Cogen facility is more cost-effective than other competing technologies. Coupled with the grant and tax incentives this facility demonstrates that a renewable energy project can be profitable for a private company and benefit a municipality simultaneously.

City of Oceanside Celebrates Successful Operation of Privately Funded Green Energy Project

Joe Silva, Tom Moore and the rest of the team from Calpwr have the practical experience that helped make this project a success from the start. CHP is looking to provide similar grants to 20 more municipalities, and we encourage interested parties to contact us for more information.

The CHP Clean Energy and Calpwr partnership will maintain and operate the Cogen facility for 10 years with the option of an additional decade. The Center for Sustainable Energy provided financial incentives that helped make the project economically viable.

About The Cover

Oceanside is pleased to announce a new disc golf course at Goat Hill! Disc golf will be offered side-by-side traditional golf beginning March 1. By bringing disc golf to Goat Hill, the City is looking to turn an underutilized asset into something new and exciting as well as to generate additional revenue. Please check out this new offering, get some exercise and enjoy one of Oceanside's beautiful amenities!

City of Oceanside

GREEN WEEK 2011

March 7-13

Please Join Us for A Week Full of FREE Events that Promote a Green Oceanside Community!

Environmental Film Festival Featuring "Bag It"

Tuesday, March 8, 6-9pm

Sunshine Brooks Theater, 217 N. Coast Hwy, Oceanside 92054

The film "Bag It" examines our society's use and abuse of plastic. There is no admission fee and light refreshments will be served.

Compost Workshop

Tuesday, March 8, 2-4pm (Questions: 760-435-5807)

El Corazon Senior Center, 3302 Senior Center Dr., Oceanside 92054

Learn to compost kitchen scraps and garden materials at this free event.

Green Fair

Saturday, March 12, 11am- 4pm

Oceanside Pier Amphitheater

Enjoy children's activities, environmental booths, food, live music, an awards ceremony, and free goodies at this free public event.

Beach Cleanup, Hosted by Coastkeeper

Saturday, March 12, 9-11am (To Volunteer: 760-435-5807)

South side of Oceanside Pier

Free E-Waste Drop Off

Saturday, March 12, 11am-4pm

Bring your electronics free of charge for recycling at parking lot 24, corner of Mission Ave. and Myers St. More details on back.

Free Used Oil Filter Exchange Event

Sunday, March 13, 1-3pm (Information: 760-435-5021)

Kragen O'Reilly Auto Parts Store, 3661 W. Mission Ave., Oceanside 92058

Green Educational Library Programs

Monday-Friday, March 7-11

For information and times, contact children's desk 760-435-5600

Green Oceanside Youth Art Contest OUSD K-6th

Student entries will be on display at the Green Fair March 12

Don't Miss!

Environmental Film Festival

Featuring "Bag It"

March 8, 6-9pm

Green Fair

March 12, 11am-4pm

Green Week Questions

Phone:
760-435-5021

Household Appliances

*No household hazardous waste materials will be accepted

GREEN WEEK 2011

Event Locations

Please note downtown locations for Green Week events on the map above, including Environmental Film Festival, Green Fair and E-Waste Drop Off. Free parking at Oceanside City Hall and Lot 23 located at Cleveland St. and Pier View Way.

Upcoming Green Changes in Oceanside's Solid Waste and Recycling Services

In order to be better stewards of our planet, the City of Oceanside and Waste Management understand the importance of improving solid waste and recycling services in our local community that meet and exceed the requirements set forth by the State of California. California State Mandate AB 939, requires all California cities to divert a minimum of 50% from deposit in landfills. Today, the City of Oceanside can boast a 59% diversion rate, with an ultimate goal of 75% diversion by the year 2020.

Over the next two years, residents will see changes or enhancements to their current solid waste and recycling services that will help our City become a zero-waste leader in San Diego County. Highlights of significant service changes and implementation schedules are briefly explained below.

Free Electronic Waste Pick –Up:

Early Summer 2011

- Oceanside residents will be able to have electronic waste items such as televisions, computers, and other e-waste items collected curbside as a free on-call service starting early summer of 2011. Prior to then, Oceanside residents are allowed to drop off these electronic materials at the Oceanside Recycling Center for no charge. Previously, there was a $0.50 per pound charge for non-Cathode Ray Tubes.

Automated Solid Waste and Recycling Service:

Phased in from mid-2011 to 2012

- Residential customers' curbside solid waste and recycling services will be transitioned from manual service to a more convenient automated recycling service that will allow the comingling of all recyclables (paper, cardboard, plastic, metals, etc.) to be placed in one cart. As the yellow and green crates residents currently use for recycling get phased out, each single-family resident will be provided a 96-gallon solid waste cart, recycling cart, and a green waste cart. Shortly after the initial implementation phase of this enhanced recycling service, low-volume generators of trash will also be provided an incentive opportunity to use a 35-gallon cart at a lower rate, to encourage recycling and the reduction of our waste stream. Commercial and multifamily accounts will also be transitioned to automated service starting as early as April of 2011. Residential automated service will begin to be phased in late 2011 to 2012.

- The automated recycling service will be provided via a new fleet of compressed-natural-gas vehicles, furthering Oceanside's commitment to reducing our greenhouse gas emissions.

Bulky Item Collection

Effective January 1, 2011

- New guidelines include 5 items per pick-up, up to three pick-ups per year, at no charge. Please remember the donation and the recycling or reuse of used household items are great ways to divert these materials from the landfills, supporting our City's diversion rate and our community's environmental standards.

Curbside Cell Phone and Household Battery Recycling:

Phased in early 2012

- Once the automated residential recycling carts are delivered, residents will be able to conveniently and properly dispose of cell phones and household batteries at the curb, by placing these items in a clear, sealed plastic bag and placing that bag on top of their recycling collection cart prior to their regularly scheduled weekly service.

As each implementation date nears, we will inform our customers of service changes as they approach, to ensure a smooth and successful transition for our residents. For more information on current services, future changes, and Green Oceanside programs, please refer to our Solid Waste and Recycling Web page under the What is New section of the City Web site at **www.ci.oceanside.ca.us**, or call the Recycling Hotline at (760) 435-5015, or visit the Waste Management Web site at **http://northcounty.wm.com** .

CITY OF OCEANSIDE RECYCLING SERVICES

Need recycling containers?

The City of Oceanside offers various recycling services whether you are a resident or business owner. Please review the following information and determine which recycling service works best for you. Recycling helps preserve our natural resources, and it's easy! If you need recycling containers or more information about multi-family or commercial recycling, mail the bottom portion with your utility bill or send to: City of Oceanside, Attn: Jessica Moen, 4927 Oceanside Blvd., Oceanside, CA 92056.

WHAT CAN BE RECYCLED?

ALUMINUM, BI METAL & TIN CANS
- Aluminum beverage cans
- Tin Cans (i.e. canned vegetables & soups)

GLASS
- Beverage bottles (ALL colors)
- Food jars (i.e. sauces & pickles)

NO DISHES, DRINKING GLASSES, LIGHT BULBS, WINDOWS OR MIRRORS.

PLASTIC (NO plastic bags!)
- Plastic beverage containers with recycling symbols numbered 1—7
- Empty Bottles from household cleaners with recycling symbols numbered 1—7 (i.e. shampoo, laundry detergent, window cleaners, etc.)

Any CRV Material (California Redemption Value)

PAPER AND CARDBOARD
- Newspaper, mixed paper (all colors), cardboard
- Catalogs, magazines, telephone books, shoe boxes, cereal boxes (remove liners)
- Any color computer/fax paper, junk mail, paper bags and flattened cardboard

GREEN WASTE

Yard waste such as grass clippings, leaves, weeds and other prunings. Prunings and branches must be tied into 4-foot sections into bundles not to exceed 18 inches in diameter.
DO NOT use wire for bundles. Please use string. Place green waste cart on the curb by 6 a.m. on your regular trash day. **DO NOT USE PLASTIC BAGS. Green waste in plastic bags will not be collected.**

For more information please call the Recycling Hotline at (760) 435-5015, or visit www.ci.oceanside.ca.us.

SINGLE FAMILY / CURBSIDE PICK-UP

- Curbside Recycling Crates:
  - Glass, Plastics 1—7, Cans & Bi-metals (NO PLASTIC BAGS)
  - Mixed paper (all colors), junk mail, catalogs, magazines, flattened cardboard & newspapers (REMOVE PLASTIC BAGS)
- Green Waste carts (NO PLASTIC BAGS FOR GREEN WASTE)
- Curbside solid waste cans, sealed trash bags or wheeled cart
- Large item pick-up (by appointment): Call WM at 760-439-2824

NO PLASTIC BAGS IN RECYCLING CONTAINERS PLEASE
(Plastic Bags may be recycled at local grocery or discount retail stores)

Sharps, E-Waste, Light Bulbs, Batteries & Household Hazardous Waste (HHW) can be taken to the WM Recycling Center at 2880 Industry St. (HHW requires an appt.; call 760-439-2824.)

MULTI-FAMILY (Condos, Apartments, etc.)

- Wheeled Recycling Carts (96 gallon):
  - Glass, Plastics 1—7, Cans & Bi-metals (NO PLASTIC BAGS)
  - Mixed paper (all colors), junk mail, catalogs, magazines, flattened cardboard & newspapers (REMOVE PLASTIC BAGS)
  - Green Waste (NO PLASTIC BAGS)
- 3 Yard Bins
  - Solid Waste (large green bins)
  - Flattened cardboard (large white bins)
  - Green Waste (NO PLASTIC BAGS)

NO PLASTIC BAGS IN RECYCLING CONTAINERS PLEASE
(Plastic Bags may be recycled at local grocery or discount retail stores)

Sharps, E-Waste, Light Bulbs, Batteries & Household Hazardous Waste (HHW) can be taken to the WM Recycling Center at 2880 Industry St. (HHW requires an appt.; call 760-439-2824.)

COMMERCIAL / INDUSTRIAL / SMALL BUSINESS

- Wheeled Recycling Carts (96 gallon):
  - Glass, Plastics 1—7, Cans & Bi-metals (NO PLASTIC BAGS)
  - Mixed Paper (all colors), junk mail, catalogs, magazines, flattened cardboard & newspapers (REMOVE PLASTIC BAGS)
  - Green Waste (NO PLASTIC BAGS)
- 3 & 4 Yard Bins:
  - Trash collection
  - Recyclables: same as mentioned above (for larger quantities)

NO PLASTIC BAGS IN RECYCLING CONTAINERS PLEASE

Please fill out the bottom portion, detach, and mail to: City of Oceanside, Attn: Jessica Moen, 4927 Oceanside Blvd., Oceanside, CA 92056

REDUCE. REUSE. RECYCLE. Funded by the California Department of Conservation.

Let it Rot!

Do you separate your bottles, cans and paper for recycling on trash day? Are you committed to practicing Reduce, Reuse Recycle? If so, it's time to take the next step to reduce your waste by COMPOSTING. In addition to recycling, you can reduce the amount of waste you place in your trash can by up to 25% by composting food scraps and landscape trimmings.

Composting is nature's way to recycle. You can create a dark, rich, organic soil by combining a balance of carbon materials, such as dead leaves, wood chips and sawdust, with nitrogen materials, like fruit and vegetable scraps and grass clippings. Then, with the addition of a little air and water, you can create an excellent natural soil amendment for your plants, garden, and landscape.

Composting Benefits

Composting has many benefits for the environment and for the consumer. Composting reduces the amount of waste going into landfills. It also helps build good soil structure which reduces the need for chemical fertilizers and it helps prevent soil erosion. It is an excellent amendment for soils laden with clay or sand, which are common in soil types around San Diego County. It provides valuable organic matter to these soil types which can help support healthy plant growth and suppress plant diseases transmitted through the soil. Compost also holds more moisture for longer periods of time than native soils, which reduces water use.

Composting Methods

There are several methods of composting, some of which use a compost bin, while some methods use a heap of material. If you plan to use food scraps in your compost pile, it is recommended that a bin be used. If you are just composting landscape material a compost bin isn't necessary. Following are three common methods for composting.

Vermicomposting.

Active Composting

Active composting takes a little more effort on your part. Materials are turned in the compost bin or heap on a regular basis (at least weekly) using a turning fork. A turning fork is similar to a pitchfork but with thicker tines. By maintaining proper moisture levels and turning the pile regularly, you can create excellent compost in as little time as one month.

Passive Composting

This type of composting takes less effort on your part, just as the term implies – passive. Turning the pile is done less frequently thus slowing down the composting process. For busy families, this is a recommend method. You grab your food scraps and landscape trimmings, bury them in the compost bin, and let it rot. Occasional turning is necessary to keep odors under control.

Vermicomposting

Composting with worms is a great way to create organic soil from your food scraps. Adding brown landscape material is discouraged since the combination with food scraps can create too much heat thus killing the worms. A manufactured worm bin is usually used with this type of composting.

For more information on composting contact the Solana Center for Environmental Innovation at 436-7986 or visit their Web site at **www.solanacenter.org.** They have compost bins for sale and regularly hold hands-on composting workshops to assist you in implementing this environmentally friendly task into your daily routine. You can also send questions to **greenoceanside@ci.oceanside.ca.us**.

Loma Alta Creek Cleanup
April 30, 2011
9:00 am – 12:00 pm

Mark your calendar to join the Clean Water Program staff and citizen volunteers for the Loma Alta Creek Cleanup event. As a coastal community, Oceanside relies on clean water for its residents, healthy beaches, public safety and a desirable environment for wildlife. When it rains, many of the pollutants that lurk on our streets, sidewalks, parking lots and gutters wash down the storm drains, and into the nearest body of water. Volunteers are needed to remove litter and trash from these waterways to improve their health and aesthetics for all users.

Bring Your Own Bucket

Volunteers are encouraged to bring their own bucket to the event. Trash collected in buckets can be emptied into fewer trash bags reducing the amount of bags used during the cleanup.

All volunteers will receive cleanup supplies, refreshments and one free-give-away item. More information can be found by calling the Oceanside Events Hotline at 435-5536 or at **www.OceansideCleanWaterProgram.org/events.asp** .

Registration sites:

* Behind Smart & Final on Oceanside Boulevard and I-5 (1701 Oceanside Boulevard)
* Mesa Drive between El Camino Real and Rancho Del Oro Drive
* Behind commercial buildings at 1629 Ord Way (Off Oceanside Boulevard between College Boulevard and Temple Heights Drive)
* Buccaneer Park at 1500 Pacific Street (cross street is Morse Street)
* South side of the Oceanside Pier

2011 Future Cleanup Events

Mark your calendar to join the Clean Water Program staff and citizen volunteers at these future events to help remove trash and debris from our local rivers, creeks, and beaches.

July 5, 2011
Tuesday – Morning After Mess - City Beaches
Time: 8:00 - 11:00 am

September 17, 2011
Saturday – Buena Vista Creek Cleanup and California Coastal Cleanup Day
Time: 9:00 am - 12:00 pm

November 5, 2011
Saturday – San Luis Rey River Cleanup
Time: 9:00 am - 12:00 pm

More information can be found by calling the Oceanside Events Hotline at (760) 435-5536 or at **www.OceansideCleanWaterProgram.org/events.asp** .

Parking Enforcement Has Gone Eco-Friendly

Back in January of 2009, the Parking Enforcement Division of the Public Works Department evaluated a solar-powered electric car. The successful evaluation opened the door to testing other makes and models of electric vehicles. The division announced the best solution for parking enforcement in the downtown area.

Public Works has purchased two GEM electric vehicles to be used to monitor 2-hour and 4-hour time zones in the downtown area as well as parking lots and metered areas. The GEM has a top speed of 25 mph and a range of 30 miles on a charge making it a perfect choice for the downtown area. For about $1, one can drive 50 miles in a GEM (the equivalent of 150 miles per gallon) making it a perfect solution for short-distance transportation. With gas price fluctuations and environmental concerns becoming more prevalent, the GEM car just made sense.

Through the efforts of the Public Works Department, the City adopted a Green Fleet Policy committing to a 100% clean-and-green fleet by using fuels and vehicles that are the most fuel-efficient, low-emission vehicles available while still meeting the business needs of the City. The policy also mandates a decrease in Green House Gas emissions by 10% by fiscal year 2012-13. The City sees many benefits associated with the use of these GEM electric vehicles, the most important being the fact that they are 100% electric and emit zero emissions.

Parking Enforcement rolled out the GEM vehicles in February.

About The Cover

Every year the City's Water Utilities Department hosts a Water Awareness Poster Contest as part of Water Awareness Month. This year's top winners are from Laural, North Terrace and Foussat Elementary schools. Congratulations to Saul Figueroa, Michelle Johnson and Alondra Milena Mendoza for becoming "Water-wise"! See Article on Page 20.

Major Changes for Commercial Recycling in Oceanside

Green Oceanside is about teaching families in our local community how to be better stewards of the planet by recycling, composting, saving water, conserving energy, and preventing water pollution.

To better meet the needs of our community and our environment, all Oceanside Commercial Customers are now offered single-stream recycling services beginning immediately.

In the past, businesses and commercial customers, including multifamily apartment complexes, were required to source separate the recycling by material type. This meant that separate containers were required to recycle paper/cardboard, and bottles/ cans. Single-stream recycling provides convenience and ease. Effective immediately all commercial customer's recycling material can be placed together into one recycling container.

Oceanside businesses have an outstanding track record for participating in the City's recycling program. By recycling, businesses are helping the City of Oceanside achieve their zero-waste goals. Oceanside businesses that recycle also help the City comply with State of California Mandate AB 939, which requires all California cities to divert a minimum of 50 percent from landfills.

Over the next few months, Waste Management will be changing out the current signage to reflect the new service offerings. Below you will find a list of recycling materials accepted in your container immediately. Customers do not have to wait for the new signage to begin this service at their place of business.

Remember, Waste Management provides different types and sizes of recycling containers to meet your needs. Recycling service is also offered at a rate that is lower than trash service. For inquiries regarding Waste Management's different service offerings, please contact Waste Management's customer service line at (760) 439-2824 or 1(866) WM RECYCLE (967-3292) from 8:00 am to 5:00 pm, Monday through Friday. Or if you are interested in a more in-depth waste and recycling analysis, please feel free to call the City of Oceanside's Recycling Hotline at (760) 435-5015 to schedule a waste audit.

Thank you for being a part of the Green Oceanside Business community.

Let Us Help You Green Your Business

Let the City of Oceanside's Green Oceanside team help you green your business by recommending ways to reduce waste, recycle, and purchase in a sustainable manner. Every business in Oceanside can be a part of the Green Oceanside solution, to a cleaner, healthier planet and community.

Please call Colleen Foster at (760) 435-5021, to schedule an appointment to discuss ways to make your establishment an eco-friendly place of business. You may also find out how we can help your business save money by reducing your trash needs and increasing your recycling services. The opportunities to go green are endless. We look forward to celebrating the Green Oceanside community with your business.

Also, please let us know if you would be interested in some free recycling containers for your business to help you get started on the path towards Zero Waste in Oceanside.

Michelle Johnson

Saul Figueroa

Alondra Milena Mendoza

Oceanside Water Awareness Poster Contest Winners

Congratulations to the winners of the Oceanside Water Awareness Poster Contest 2011: Michelle Johnson from North Terrace Elementary, Saul Figueroa from Laurel Elementary, and Alondra Milena Mendoza from Foussat Elementary.

This poster contest is part of California Water Awareness Month, an annual celebration sponsored each May by the North County Water Agencies. The contest challenges fourth grade students to learn about the importance of water in Southern California, including water conservation and pollution prevention. This year's theme was "Water is Life."

The top three students were recognized at the May 25, 2011, City Council meeting for their outstanding artwork that encourages everyone to protect and use water wisely. The posters will be included in the 2012 North County Water Agencies Water Awareness calendar that will be distributed in late 2011.

Easy and Convenient Ways to Save Water

Now that we have moved back to normal water supply conditions, it's still important to continue our water efficient habits. Here are some easy and convenient ways to use water efficiently.

- For saving water around your home, look for great ideas and classes from these websites: **www.bewaterwise.com** and **www.SaveWaterOceanside.com**
- SDG&E offers free home energy-savings kits which save water too. The kits include a kitchen faucet aerator, two bathroom faucet aerators and a low-flow showerhead. Visit **www.sdge.com/energykit** or call 1 (800) 644-6133 to order your complimentary kit.
- Transform your landscape into a beautiful low-water-use garden by planting low-water-use plants, checking your irrigation system and fixing any leaks, watering before 10:00 am and after 6:00 pm, and adding mulch.
- Get a free Smart Landscape Evaluation which is a free service designed to assist you with identifying indoor and outdoor water-savings opportunities. Participants can expect to have a professional technician review their indoor fixtures and evaluate the performance of their irrigation system. At the end, the participants will receive a list of recommendations and a proposed watering schedule. Call (866) 883-1332 to schedule your free landscape evaluation.

To learn more about water-saving resources, water-use efficiency tips, rebates, water news, and other water-saving programs, please visit **www.SaveWaterOceanside.com** or contact the Oceanside Water Utilities Department at (760) 435-5800.

Greening Your Special Event

The City of Oceanside is requesting that all special events at city parks, beaches, harbor and/or other city facilities, comply with state and local mandates for the proper disposal of solid waste and recycling. To ensure the greatest diversion rate possible, we would like to assist you with meeting this requirement by providing you with several options and/or recycling containers for your event. When you apply for your event permit at the City Recreation Department, they will provide a required form with all the details. Additionally, Waste Management of North County can provide bigger recycling containers for the large venues. You may also call our Recycling Hotline for more information on how to recycle at your next event at (760) 435-5015.

For those of you who are planning a small party or picnic with family and friends, please remember to do your best to keep your event green and litter-free. There are many simple ways to do this, which can be fun and entertaining for all of those attending. The following are a couple of tips on how to green your event, large or small:

* Send E-vites rather than actual invitations. Reduce your use of paper.
* Check that your event location has a recycling bin prior to the event. If there is no bin close by, designate a personal container for recycling, or for larger events, please call the Recycling Hotline at (760) 435-5015 for some free special event recycling containers.
* Avoid serving bottled water – use pitchers and reusable cups. Encourage your guests to bring their own utensils, or have a project where everyone decorates their own utensils.
* Purchase food that does not have a lot of packaging, or is in packaging that can be recycled. All plastics with the recycling symbol #1-7 can be recycled in Oceanside, as well as bottles, cans, paper, and cardboard.
* Do not use Styrofoam materials and/or plastic bags. Avoid using plastic utensils. These materials do not biodegrade, but rather end up in our landfills for hundreds of years.
* Strive to have as little leftover food as possible. Order wisely, and encourage guests to take home leftovers. Food waste is always unnecessary.
* Provide food and condiments in bulk. Avoid excess packaging.
* Leave no trace: Invite guests to help with a quick clean-up of the area, to ensure the area is cleaner than when you arrived and ready for the next set of guests.
* **HAVE FUN AND BE GREEN!**

Free Irrigation Workshop

Managing Your Irrigation System

Thursday, July 21, 4:00 to 6:00 pm

Space is limited! Call (760) 435-5828

Take a free hands-on irrigation workshop at MiraCosta College to learn about:

- Irrigation systems and basics
- How to adjust your irrigation system
- How to troubleshoot and do simple repairs
- Irrigation scheduling
- Common sprinkler problems and much more.

This workshop is sponsored by the Oceanside Water Utilities Department. Space is limited and a special parking permit is required to park on campus. Please call (760) 435-5828 to reserve a seat or for more information.

How Many Oceanside Water Bodies Can You Name?

This is the first in a series of information articles about Oceanside water bodies that will appear in the Oceanside Magazine. The Oceanside Clean Water Program would like you to be informed about the different water bodies that are in Oceanside. By being aware of the water body closest to your home, school or business, you can be better prepared to help protect them from polluted runoff.

San Luis Rey River

The San Luis Rey (SLR) River originates in the Palomar and Hot Springs Mountains in eastern San Diego County and extends over 55 miles across northern San Diego County before discharging to the Pacific Ocean in the City of Oceanside. The SLR River parallels Highway 76 in Oceanside and drains a watershed of approximately 360,000 acres or 562 square miles. Within the City of Oceanside, the SLR River is fed by one of its tributaries, Pilgrim Creek.

There are numerous land-use types within the watershed with the majority of land remaining undeveloped. Higher population concentrations are in the western area of the watershed. Residential and agriculture serve as the dominant land uses in the watershed.

These land uses have introduced many pollutants into the river and have degraded the water quality. The river shows high levels of chloride and total dissolved solids and the mouth of the river has had historical bacterial exceedances.

About 8 percent of the City of Oceanside's drinking water supply comes from the SLR Valley Groundwater Basin. Water from the basin is pumped from wells and treated at a reverse osmosis plant before being distributed to Oceanside residents.

You can find more information about other Oceanside waterbodies by logging onto **www.OceansideCleanWaterProgram.org** and clicking on Waterbodies. While on the website you can also learn what you can do to help prevent pollution from reaching these water bodies.

San Luis Rey River discharges into the Pacific Ocean.

2011 Oceanside River, Creek, and Beach Cleanup Events

Mark your calendar to join the Clean Water Program staff and citizen volunteers at these events to help remove trash and debris from our local rivers, creeks, and beaches.

July 5, 2011
Tuesday - Morning After Mess - City Beaches
Time: 8:00 - 11:00 am

September 17, 2011
Saturday - Buena Vista Creek Cleanup and California Coastal Cleanup Day
Time: 9:00 am – 12:00 pm

November 5, 2011
Saturday - San Luis Rey River Cleanup
Time: 9:00 am – 12:00 pm

More information can be found by calling the Oceanside Events Hotline at (760) 435-5536 or at **www.OceansideCleanWaterProgram.org/events.asp**

Eco Friendly Tips

These days, a growing number of people are making greener choices for their families and are working to create more sustainable homes. Here are some environmentally conscious tips to honor Mother Earth every day.

By putting into practice even a few of these easy tips, people are sure to reduce their carbon footprint, see a positive difference in family health and even a few less trips to take out the trash:

- **Eat Green:** Re-evaluate your grocery list and avoid highly processed foods, diet foods, instant and ready-made foods, juice-flavored drinks, white breads and sugary cereals and snacks.
- **Go organic:** Focus on fresh, organic in-season fruits and vegetables, whole grains high in fiber as well as beans, nuts and seeds.
- **Paper or plastic?:** How about canvas? Use recyclable canvas shopping bags when buying groceries instead of paper or plastic. Keep some in your car as well as at home so they are always on hand when you need them.
- **Dish out your meals with health in mind:** Use stainless steel or cast iron pots and pans when possible, as non-stick pans and finishes may be toxic. Serve your meals on ceramic dishes, use glass cups and avoid wasteful plastic-ware and paper plates.
- **Think twice about food storage:** Plastic containers can leach toxic chemicals into foods. Avoid reheating stored food in plastic containers and when possible, use glass jars.
- **Cut back on paper towels:** Though convenient, disposable paper towels are the cause of a lot of waste in the household. Stick with reusable sponges and micro-fiber cloths instead.
- **Drink from the tap:** Purchase a water filter to place directly on your faucet and reduce bottled water consumption by using a refillable canteen.
- **Green cleaning:** Cast out those chemical cleaning products and go back to the basics. Try wiping down surfaces with white vinegar, use baking soda in bathrooms, or purchase green-friendly products.
- **Plan a daily nature date with your kids:** Carve out some time each day to disconnect from the rest of the world and get outside with your kids. The time spent outdoors is not only healthy for the mind and body, it will help your children become more mindful about their environment.
- **Educate your children on being green:** The best way to continue the green movement is to educate the next generation. Teach your children simple ways they can help recycle, reduce and reuse.

Get CFLs out of the closet and into your sockets!

Do you still have compact fluorescent light (CFL) bulbs sitting in storage instead of in a socket? Do you still have older style (incandescent) bulbs in use?

If you answered yes to either question, don't wait any longer to put those CFLs to work! Switching out older bulbs in favor of CFLs is one of the easiest ways to save energy and money in your home.

CFLs save you money!

For starters, SDG&E helps make bulbs more affordable by providing promotional pricing at participating stores. Look for ENERGY STAR®-qualifying products with the SDG&E promotional sticker at your favorite retailer.

SDG&E also hosts lighting exchanges where customers can turn in older bulbs or lamps for newer, more energy-efficient equivalents. For upcoming exchanges in your area, visit **www.sdge.com/lighting.**

Even when purchasing bulbs at full price, the investment is well worth it. While CFLs may be a bit pricier at the register, they soon pay for themselves in energy savings. Replacing a standard 60-watt incandescent bulb with a CFL equivalent can save a single household $30 in energy costs over its lifetime. Plus, when used properly, they burn brightly for up to 10,000 hours as opposed to just 800-1,500 hours for an older incandescent.

What are you waiting for?

Make it a goal to switch to CFL lighting—the sooner the better. And if you've got a CFL sitting unused in a closet, now is the perfect time to put it to work!

ES EXECUTIVE SUMMARY

Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2011-2012 annual reporting period (July 1, 2011 – June 30, 2012).

Report Organization

Section J of Municipal Permit 2007-0001 defines the requirements for the Jurisdictional Urban Runoff Management Program (JURMP) Annual Report and states that each JURMP Annual Report shall, at a minimum, contain a comprehensive description of all activities conducted by the Copermittee for each required component. Table ES-1 presents these components and the section in which they are discussed.

Table ES-1. Municipal Permit 2007-0001 Reference Table.

Municipal Permit 2007-0001 Components	Annual Report Section
Development Planning Component	Section 2.0
Land-Use Planning	Section 2.2
Environmental Review Process	Section 2.3
Development Project Approval and Verification Process	Section 2.4
Construction Component	Section 3.0
Municipal Component	Section 4.0
Industrial and Commercial Component	Section 5.0
Residential Component	Section 6.0
Illicit Discharge Detection and Elimination Component	Section 7.0
Education Component	Section 8.0
Public Participation	Sections 9.0
Fiscal Analysis Component	Section 10.0
Effectiveness Assessment Component	Section 11.0
Special Investigations	Section 12.0
Non-Emergency Fire Fighting	Section 13.0
JURMP Revisions	Section 14.0
Conclusions and Recommendations	Section 15.0

Pursuant with the Municipal Permit this document contains all of the required information.

Program Highlights

Below is a summary of each section which describes the Clean Water Program activities appearing in this Annual Report. Please refer to the individual section for more detailed information.

Section 2.0 Development Planning Component

The development planning component focuses on the collective effort to mitigate impacts which may result from new development and redevelopment projects. The process of verifying compliance with the Municipal Permit is accomplished through the consistent application of storm water principles and regulations during all phases of development.

The City Clean Water Program continued to contribute to the formulation of storm water Development Planning policy as an active member of the Copermittee Land Development workgroup.

During this reporting period, the City revised the following storm water documents:

- Oceanside SUSMP
- Storm Water Quality Assessment (SWQA) form
- Standard Development Plan-Storm Water Mitigation Plan (SDP-SWMP) Template
- Priority Development Project-Storm Water Mitigation Plan (PDP-SWMP) Template
- Treatment Control BMP Threat to Water Quality (TTWQ) – Determination Flow Chart

City Staff involved in planning, review, inspection, and enforcement of development projects received training during this reporting period. Training topics focused on SWMP document review, SUMSP and HMP requirements, LID implementation, inspection and maintenance.

Section 3.0 Construction Component

The City of Oceanside Clean Water Program continued to update its construction site inventory and implement inspection frequencies at construction sites that meet permit requirements. During the reporting period, engineering inspectors inspected 34 construction sites to ensure proper installation and maintenance of BMPs.

Section 4.0 Municipal Component

The City of Oceanside Clean Water Program inspected 176 municipal facilities and areas to ensure these facilities are in compliance with the City Code. A total of 2,140 tons of waste was removed as a result of street sweeping and a total of 745 tons of waste was removed from the storm drain system (MS4) as part of the annual cleaning. Eighty five (85) feet of City sewer pipes were slip lined during this reporting period.

Section 5.0 Industrial and Commercial Component

The City annually updates its watershed-based industrial and commercial inventories which contain the name, address, and description of all industrial sites within its jurisdiction, regardless of site ownership. The inventory now includes 1,516 Industrial and Commercial businesses that have a potential to contribute pollutants to the MS4 system. Twenty-seven (27) industrial businesses and 528 commercial businesses were inspected during this reporting period, to ensure these facilities are in compliance with City Code.

Section 6.0 Residential Component

The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the maximum extent practical (MEP). The City of Oceanside Clean Water Program received a total of 162 storm water related calls through the Urban Runoff Hotline. Of the 162 Urban Runoff Hotline calls 137 were received by residents concerning potential urban runoff violations. There were also 25 referrals from City staff. Code Enforcement responded to 114 urban runoff cases related to residential areas and activities, during the reporting period.

Extensive educational efforts were made to help Oceanside residents understand watersheds, water quality and urban runoff impacts through presentations on a KOCT, the local television channel, a *Green Oceanside* newsletter mailed to over 42,000 households, and information available on the Clean Water Program Website. 3,098 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 338 tons of hazardous materials (including universal waste) during the reporting period.

Section 7.0 Illicit Discharges Detection and Elimination Component

This section is intended to document the activities conducted by the City of Oceanside during the 2011-2012 reporting period to manage illicit discharges. In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2011-12 Illicit Discharge Detection and Elimination Component, including the 2011 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2012.

Section 8.0 Education Component

The City of Oceanside Clean Water Program continued to use a variety of avenues to educate various internal and external groups about the Clean Water Program and the requirements of Municipal Permit Order 2007-0001. These outreach activities included municipal staff training, a *Green Oceanside* newsletter, staffing community booths, conducting watershed education presentations, continued implementation of a 5th grade curriculum titled Project SWELL, and targeting under-served audiences with educational materials.

Section 9.0 Public Participation Component

The Clean Water Program continued to sponsor beach and creek cleanup events and supported private groups who wanted to coordinate their own cleanup events. During this reporting period a total of 1,481 volunteers participated in City sponsored cleanup events in addition to private group volunteers. More than four tons of trash, and debris, were removed from the local waterways. In addition the City continues to replenish pet waste bags in four dispensers along the San Luis Rey Recreation Trail as part of its Pick up your Pet Waste Campaign and installed two new pet waste signs along the Loma Alta Creek walking trail.

Section 10.0 Fiscal Component

The City of Oceanside Clean Water Program continued to acquire funding from various sources to implement programs to meet Municipal Permit Order 2007-0001. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge that is delineated on the utility bills for each household and is based on the customer's water consumption.

Approximate expenditures for the 2011-12 fiscal year is provided in Section 10 as well as the budget for the 2012-13 reporting period.

Section 11.0 Effectiveness Component

The City implemented an effectiveness assessment program to assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level.

Section 12.0 Special Investigations

In previous reporting periods the City of Oceanside received grant funding for two projects to implement water quality related projects: the San Luis Rey Bacteria Source Tracking Study and the Loma Alta Creek Ultraviolet Treatment Facility. Also development of the San Diego RWQCB Loma Alta Slough Bacteria and Nutrient TMDL continued during this reporting period.

Lower San Luis Rey Bacteria Source Tracking

As part of the Proposition 50 Clean Beaches Initiative, the City of Oceanside was awarded $554,375 to track the sources of bacteria in the Lower San Luis Rey River. This goal of this study was to identify the sources and quantify the loading of bacterial contamination in the lower San Luis Rey River using a tiered approach. The project was effective in characterizing bacterial concentrations throughout the Lower SLR River and river mouth during both wet and dry seasons. The Final Report was completed and accepted by the SWRCB during this reporting period.

The Loma Alta Creek Ultraviolet Treatment Facility

The City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the State Water Resources Control Board to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. The anticipated project goal is to eliminate beach closures during the dry season at Buccaneer Beach in Oceanside, California. This will be achieved by diverting the flow from the Loma Alta Lagoon through a UV treatment facility prior to discharging the flow onto the shoreline.

During the 2011-12 reporting year, the Oceanside Loma Alta Creek UV Treatment Plant operated between May and September 2012. Between May and August, the plant operated a total of 80 days The September 2012 data was not available for reporting. Approximately 31 million gallons of water was treated through the facility.

San Diego RWQCB Loma Alta Slough Bacteria and Nutrient TMDL Development

Development of the Loma Alta Slough Bacteria and Nutrient TMDL began in the fall of 2009 lead by the San Diego Regional Water Quality Control Board (SDRWQCB). Additional monitoring data to support TMDL modeling was submitted to SCCWRP and their subconsultants during this reporting period.

Section 13.0 Non-Emergency Fire Fighting

Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described in Section 13.

Section 14.0 JURMP Revisions

During this reporting period no revisions were made to the 2008 JURMP.

Section 15.0 Conclusions and Recommendations

This section presents the conclusions from the 2011-2012 reporting period and provides recommendations for future activities and management actions for JURMP program components.

The City will continue to assess the effectiveness of two relatively new data tracking systems that assist with tracking hotline calls, inventories, inspection information and monitoring information, and will modify and/or customize when needed.

The City of Oceanside continues to implement the 5th Grade Project SWELL curriculum and will conduct assessment of this curriculum in FY 2012-13 in conjunction with Coastkeeper and the City of San Diego. In addition the City will begin implementation of the 6th Grade Project SWELL curriculum during the next reporting period.

THIS PAGE INTENTIONALLY LEFT BLANK

1.0 INTRODUCTION

This annual report document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) (referred to in this document as the Municipal Permit) draining the Watersheds of the County of San Diego, which include agencies with land use authority including the incorporated Cities of San Diego County, the County of San Diego, the San Diego Unified Port District, and the San Diego County Regional Airport Authority (collectively called Copermittees). Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2011-2012 annual reporting period (July 1, 2011 – June 30, 2012).

This Municipal Permit is based on the Federal Clean Water Act (CWA), the Porter–Cologne Water Quality Control Act, applicable state and federal regulations, all applicable provision of statewide Water Quality Control Plans and Polices adopted by the State Water Resources Control Board (SWRCB), the Water Quality Control Plan for the San Diego Basin adopted by the Regional Water Quality Control Board (RWCQB), the California Toxics Rule, and the California Toxics Rule Implementation Plan. This Annual Report addresses the renewed NPDES Permit No. CAS0108758, which was first issued on July 16, 1990 (Order No. 90-42), renewed on February 21, 2001 (Order No. 2001-01), and renewed again on January 24, 2007

In the interests of communicating consistent messages to the community regarding the most efficient and effective means of reducing storm water and urban runoff pollution, and as directed under Part J.5 of the Municipal Permit, this document was developed following the standardized format developed and agreed upon by the Copermittees. For the most part, compliance with the Municipal Permit was undertaken by the Copermittees through the development and implementation of the JURMP; therefore this Annual Report is organized in a similar format as the 2008 JURMP.

1.1 Background

Urban development typically involves conversion of natural space to developed areas that include impervious surfaces such as streets, buildings, and parking lots. With the increase in human population and impervious surfaces associated with developed areas there tends to be higher runoff volume and velocity due to the impervious area's incapacity to absorb and hold rainwater. Also, human use of developed areas is associated with a number of pollutants that can be conveyed to the municipal separate storm sewer system (MS4) by a rain event or non-storm water discharges. This is called non-point source pollution. Non-point source pollution, such as urban runoff discharges to the MS4, is a large source of pollutants to receiving water bodies in the San Diego region and throughout the United States. Pollutants commonly associated with urban runoff include sediments, pesticides, fertilizers, herbicides, trash, oil and grease, and heavy metals. Such pollutants are generated by everyday activities such as construction, landscaping and vehicle use and maintenance.

Pollutants that reach receiving water bodies, such as streams, lakes, bays, lagoons, and the ocean, have the potential to significantly impact human and environmental health as well as wildlife that utilize these water bodies and surrounding habitat for survival. Notably, environmentally sensitive areas (ESA) are especially threatened by urban development because such areas tend to have lower capacities to withstand pollutants entering the area.

1.2 Purpose and Objectives

The purpose of this annual report is to present the activities the City conducted during the Fiscal reporting period of July 1, 2011 through June 30, 2012 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. Improving the quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

Table 1-1 presents the organization of the City's JURMP Annual Report and a summary of the corresponding permit requirement in Order No. 2007-0001. Some Report sections and permit requirements overlap and will be found in multiple locations throughout the document.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 Introduction

Development and re-development projects are typically associated with land disturbance activities and increases in impervious area. When development projects substitute pervious areas with impervious roofs, pavement, and flatwork; the ability of the site to absorb and infiltrate precipitation is markedly reduced. This in turn affects the hydrologic characteristics of a site by increasing the rate of runoff, flow duration, runoff volume, and discharge velocity. In natural channels or channels which are not "significantly hardened", the effect is to cause physical alteration to the channel; causing negative impacts to the biological integrity of the receiving water. To counter these impacts, the City has developed and implemented a storm water development planning program which is designed to mitigate the negative effects associated with development and redevelopment projects.

The Development Planning section of the JURMP Annual Report documents the activities performed by the City of Oceanside during the reporting period beginning July 1, 2011 and ending on June 30, 2012. During this reporting period, the City has continued to implement a comprehensive Development Planning Component consistent with Section D.1 of the San Diego RWQCB Order No. R9-2007-0001 (Municipal Permit). Table 2-1 contains a tabulation of the applicable Municipal Permit subsections and corresponding sections of the Annual Report.

Table 2-1. Order 2007-0001 Compliance Summary.

2.2 Land Use Planning

2.2.1 Background

The SUSMP Development Planning component focuses on the City Development Services – Engineering, Planning, and Building Division efforts to comply with Municipal Permit requirements that mitigate impacts which may result from new development and redevelopment projects. The process of verifying compliance with the Municipal Permit is accomplished through the consistent screening of all permit applications and subsequent implementation of SUSMP requirements are each phase of project development.

2.2.1.1 Notable Activities

The City Clean Water Program continued to contribute to the formulation of storm water Development Planning policy as an active member of the Copermittee Land Development workgroup.

During this reporting period, the City revised the following storm water documents:

- Oceanside SUSMP
- Storm Water Quality Assessment (SWQA) form
- Standard Development Plan-Storm Water Mitigation Plan (SDP-SWMP) Template
- Priority Development Project-Storm Water Mitigation Plan (PDP-SWMP) Template
- Treatment Control BMP Threat to Water Quality (TTWQ) – Determination Flow Chart

The Storm Water Quality Assessment (SWQA) form is a tool that ensures all projects applying for Planning, Engineering, or Building permits receive uniform screening to determine applicability of Municipal Permit and SUSMP requirements. During this reporting period, the SWQA was revised to clarify project categories and include completion guidance.

The Standard Development and Priority Development Project templates were developed during the previous reporting period and were provided as guidance documents, for form and content, to the Consultant/Development Community. During this reporting period, the templates were revised to incorporate suggestions from the Consultant/Development community and to provide clarification. Clarification took on the form of a completely revised approach to the template completion guidance. The instruction was previously embedded in the document and has since been rewritten and relocated to the end of the document. The SWMP templates will continue to be a work in progress and will receive periodic updates as necessary to remain consistent with Municipal Permit and SUSMP requirements.

"A significant notable activity during this reporting period was the delegation of responsibility for Storm Water Development Review oversight to the City Development Engineer (CDE) by the City Engineer. The CDE began program changes by implementing Engineering Division Staff training to facilitate storm water document review. Engineering Division Staff received training that was comprehensive in nature and which thoroughly covered foundational principles, information sources, regulatory precedent, SUSMP concepts, LID and HMP requirements, and SWMP template completion. Review Staff continues to regularly attend SW review training to expand subject knowledge, maintain program consistency, and as part of a continuing education component. In addition, the CDE directed changes to the storm water (SW) review approach that were modeled after procedures being implemented by the County of San Diego. The

foremost goal was to improve customer service. To meet that goal, the Engineering Division Staff were encouraged to improve plan review turn-around time by focusing on general aspects of the project and holding the Engineer-of-Work (EOW) "highly accountable" by requiring the completion of the "Declaration of Responsible Charge". Plan reviewers were encouraged to focus responsibility on the EOW for providing correct BMPs and calculations. The CDE is responsible for the distribution (assignment) of SW plans to Staff for the purpose of review. The individual Staff member assigned to review the SW plan for a project is also the individual who is responsible to deem the SW plan complete or accepted."

The City continued to implement data tracking systems in the Development Services Department and the City Water Department. The City Development Services Department encompasses the Planning, Engineering and Building Divisions. Projects which submit permit applications to Development Services are entered into a tracking database (TRAKiT by CRW Systems®) which enables monitoring of projects from initial submittal through the entitlement, preliminary grading, precise grading, engineering construction, building construction, and final occupancy phases of a project. Permit applications are routed to each discipline; Planning, Engineering (Entitlement, Final, Geotechnical, Landscape, Storm Water, and Traffic), Building, Fire, and Water for review and comment. This procedure enables a coordinated review process between Divisions and Departments prior to project entitlement or granting of a permit; whichever is applicable.

An online version of TRAKiT, called eTRAKiT is available to the public. Users may access public records and review and permit status via the web. For more information, visit www.ci.oceanside.ca.gov and click on the "eTRAKiT-Online Permitting" Quick Link.

2.2.2 Source Characterization

An integral component of the City urban runoff program is source control characterization. Unmitigated activities associated with various land use types are known to be sources of pollutants that have the potential to negatively impact the environment and receiving waters. Land use source characterization is addressed through the implementation of unified Low Impact Development practices that include Treatment Control BMPs and HMP flow attenuation measures that enable Priority Development Projects to reduce impacts to the receiving waters, while demonstrating compliance with the Maximum Extent Practicable (MEP) standard.

The updated Storm Water Quality Assessment (SWQA) form continues to identify the eleven (11) separate "Priority Project Categories" (PDP) as cited in the Municipal Permit Section D.1.d.(1)(b) and SUSMP Table 1-1. Each PDP is identified as a potential or anticipated source of storm water pollutants and is based upon specific land use, proximity to environmentally sensitive areas, topography, and disturbed area.

2.2.3 Best Management Practice Requirements

There are established minimum design requirements for all development projects, which are discussed in Section 4.4.3 of the 2008 JURMP. In addition, the Land Use Planning Element of the General Plan contains policies to protect water quality that are discussed in Section 4.2.3 of the 2008 JURMP.

The SUSMP continued require the implementation of the unified Low Impact Development (LID) design approach and the integration of HMP flow attenuation into the design of applicable development and redevelopment projects.

The PDP-SWMP template enables the implementation of the unified LID approach by providing a series of tables to simplify the identification of discrete Drainage Management Areas (DMAs) composed of quantified surface types that self-treat, self-retain, drain to a self-retaining area, or drain an Integrated Management Practice or IMP. By following the design procedure outlined in the SUSMP and the SWMP Template completion guidance, the Design Professional may develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements.

Proposed Treatment Control BMPs and IMPs are required to meet the medium removal efficiency standard for the identified Primary Pollutants of Concern for each development project. The implementation of Treatment Control BMPs with low removal efficiency is not consistent with the Municipal Permit and therefore is not permissible. The implementation of a unified LID approach coupled with HMP provides the development community with a broad spectrum of design alternatives that will enable projects to achieve the Maximum Extent Practicable as cited in the Municipal Permit.

2.2.4 Program Implementation

Program implementation is enabled by the General Plan, which was adopted by the City Council and is recognized as a legally binding document. All applicable projects, including municipal projects are required to be consistent with the plan. In addition to the General Plan, the City addresses storm water pollution issues through the application of its Municipal Code. Chapter 40 of the Municipal Code is the Urban Runoff Management and Discharge Control Ordinance and is commonly referred to as the Storm Water Ordinance. The Ordinance contains multiple references to the current NPDES, Municipal Permit, and SUSMP as the governing storm water regulations. All new development and redevelopment projects are subject to updated SUSMP and the lawful prior approval provisions of the Municipal Permit.

All project applications are subject to a formal SUSMP Determination. Formal determinations are based upon a review of the Planning Division project application submittal. The minimum amount of information necessary to perform a SUSMP Determination includes a completed Storm Water Quality Assessment (SWQA) form, site plan, and project description and justification. The objective of the SUSMP Determination is to provide a consistent and thorough method for the initial review of development and redevelopment projects, with the overall purpose of categorizing projects and determining applicable SUSMP requirements. Development and redevelopment projects are categorized as; projects not subject to SUSMP Treatment requirements (Exempt Projects), Standard Development Projects (SDPs), or Priority Development Projects (PDPs). The SUSMP Determination also demonstrates to the RWQCB that each project receives a consistent review and enables the City to document project categorization and satisfy Municipal Permit requirements for reporting findings in the JURMP Annual Report.

Details on the completed and planned SUSMP updates may be found in Section 4.4.4.4 of the 2008 JURMP. In addition, information pertaining to the legal authority to implement a storm water program is located in Section 2 of the 2008 JURMP.

2.3 Environmental Review Process

The City has evaluated its established environmental review process for all development projects to determine compliance with the Municipal Permit. The City guides developers through the filing necessary documents and identifies which reports are required to be submitted and approved before development may begin. The current environmental review process places emphasis on the evaluation of water quality impacts and related issues that may result from the project development.

The Planning Division and Engineering Division of the Development Services Department are responsible for reviewing development projects for conformance with storm water requirements. The City will continue to assess all development and redevelopment projects for compliance with the California Environmental Quality Act (CEQA) by reviewing the Environmental Initial Study completed by each project applicant. A copy of this checklist is included in Appendix D of the 2008 JURMP. The checklist contains questions to evaluate potential negative impacts on receiving water bodies. Projects which are determined to have "potentially significant impacts" to the surrounding environment and receiving waters are required to prepare Environmental Impact Reports (EIRs) for City review. Development projects that are not required to prepare EIRs proceed to the next phase of the approval process.

During the development of the 2008 JURMP, the City evaluated its current established environmental review process for all new development and redevelopment projects to determine compliance with the Municipal Permit. The City determined that the current environmental review process adequately addresses the requirements of the Municipal Permit. While the specific requirements evaluated during the environmental review process are expected to be updated periodically, the basic review structure did not require revision during this reporting period. Details of the current environmental review process are provided in Section 4.3 of the 2008 JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

The City has an established administrative and discretionary approval processes that provides multiple reviews by the Planning and Engineering Divisions. The Planning Division is responsible for determining acceptable land uses, development constraints, and identifying environmental issues. The Engineering Division is composed of various disciplines (i.e., Engineering Improvements, Grading and Drainage, Hydrology, Geotechnical, Storm Water, Traffic, and Landscape), which perform a coordinated review of all project applications. The Fire Department also performs multiple reviews and notifies the appropriate division in the event of a discrepancy or nonconformance with development regulations. In addition, the Building Division coordinates with Storm Water Development Review to ensure that new development, remodeling projects, additions, or demolitions are reviewed for compliance with storm water regulations. The coordinated involvement of all Divisions and disciplines provides an elevated degree of assurance that all projects are subjected to thorough scrutiny as part of a typical review process. Particulars surrounding the project approval and process verification are discussed in the following sections.

2.4.2 Best Management Practice Requirements

The Municipal Permit dictates minimum BMP requirements for all new development and redevelopment projects. The requirements are addressed in the Oceanside Standard Urban Standard Management Plan (SUSMP) and Chapter 40 of the Oceanside City Code (i.e. the Storm Water Ordinance) included in the City Storm Water Ordinance and SUSMP and shall include, but not be limited to, the implementation of the following BMPs and LID practices by the project proponent:

- Source Control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed outdoor material storage areas, properly designed trash enclosure areas, the implementation of Integrated Pest Management Principles (IPM) and the inclusion of efficient irrigation system, and drought tolerant/native species landscape design consistent with the City Water Efficient Landscaping Ordinance 10-OR0412-1.

- The inclusion of Unified Low Impact Development (LID) practices that conserve natural topographic features, provide development setbacks from natural water bodies and conveyances, minimize site imperviousness, maximize infiltration, and retain and slow runoff, while addressing pollutant mitigation requirements;

- Implementation of development buffer zones from natural water bodies requires the project proponent to implement other types of buffers such as trees or access restrictions where conventional setbacks are not feasible;

- Measures to mitigate discharges of pollutants that result during grading or construction activities as specified in the Section D.2 of the Municipal Permit; and

- Submittal and approval of a mechanism under which ongoing long-term maintenance of all structural post-construction BMPs will be conducted.

Addressing storm water BMP requirements is required during the planning/permit application phase of a project. Projects are obligated to demonstrate compliance with Municipal Permit requirements prior to scheduling a public hearing. In addition, implementation of BMPs is a City standard condition of approval. The City will not support the entitlement of a project or issue development permits until the appropriate SUSMP documents are reviewed and deemed complete by City Engineering Division Staff. Any subsequent changes that affect the accepted BMPs are required to be reviewed and deemed complete by City Engineering Division Staff.

2.4.3 Program Implementation

2.4.3.1 Application of SUSMP Requirements

All new development and redevelopment projects may be subject to the requirements of the Municipal Permit and SUSMP. Requirements include minimum standards for the implementation of Low Impact Development (LID) practices and the integration of flow control criteria designed to mitigate runoff peaks and durations from development sites. The updated

SUSMP incorporates a unified LID procedure which combines site planning and design measures coupled with engineered, small-scale Integrated Management Practices (IMPs).

The SUSMP contains specific design information for dispersal of runoff to landscaped areas, the integration of pervious pavements, bioretention facilities, flow-through planters, dry wells, infiltration basins, and cisterns into the project design. Where feasible, and where permissible, the water in cisterns may be directed to non-potable uses to augment irrigation practices. Bioretention facilities and planter boxes may be designed with an impermeable barrier so that runoff does not saturate native soils. Instead, runoff is filtered through an engineered soil mix and captured in a subdrain and conveyed to a storm drain system. This configuration may be needed where native soils have low infiltration rates, where groundwater is high, contaminated, or where increasing soil moisture may present a hazard to foundations or slope stability. In limited and special circumstances, such as retrofit of existing drainage systems, some pedestrian-oriented developments, and roadway widening projects; where it can also be demonstrated it is not be feasible to construct any of these facilities, higher-rate surface biofilters or higher-rate vault based filtration units may be used to address treatment requirements. Applicants are also required to incorporate design features to control pollutants from specified on-site sources, such as refuse areas, outdoor storage areas, and vehicle washing and repair facilities. The SUSMP contains a number of Source Control BMPs designed to address the types of sources to be controlled and a corresponding list of required source control measures.

In addition to disconnecting impervious surfaces and mitigation pollutant sources, applications for approval of Priority Development Projects (PDPs) are required to demonstrate compliance with the Hydromodification Management Plan (HMP) consistent with the Municipal Permit. Applicants are directed to the HMP Applicability Determination matrix (HMP Figure 6-1) to determine if a proposed project is obligated to implement hydromodification controls. The HMP Decision Matrix applies to all PDPs. As a rule of thumb, application of flow controls to redevelopment projects would only be required if the redevelopment project increases impervious area or peak flow rates as compared to pre-project conditions. Please note that all Priority Development Projects, regardless of HMP applicability, remain subject to Municipal Permit unified LID and water quality treatment requirements.

By following the design procedure, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit, LID, storm water treatment, and peak runoff and duration control requirements.

2.4.3.2 SUSMP Document Review

During this reporting period the responsibility for overseeing SUSMP document review was delegated to the City Development Engineer (CDE) by the City Engineer. The CDE began program changes by implementing Engineering Division Staff training to facilitate storm water document review. Moreover, the CDE directed changes to the storm water (SW) review approach that were modeled after procedures being implemented by the County of San Diego. The foremost goal was to improve customer service. To meet that goal, the Engineering Division Staff were encouraged to improve plan review turn-around time by focusing on general aspects of the project and holding the Engineer-of-Work (EOW) “highly accountable” by requiring the completion of the “Declaration of Responsible Charge”. Plan reviewers were

encouraged to focus responsibility on the EOW for providing correct BMPs and calculations. The CDE is responsible for the distribution (assignment) of SW plans to Staff for the purpose of review. The individual Staff member assigned to review the SW plan for a project is also the individual who is responsible for deeming the SW plan complete or accepted.

As part of the administrative and discretionary permit application process, each development or redevelopment project is required to complete a permit application form, a Storm Water Quality Assessment form, and provide a project description and justification with supporting site development and architectural plans. The complete project application is distributed by the CDE to a member of the Engineering Division Review staff with the underlying task of providing a formal SUSMP Determination. The determination clearly identifies the project type and subsequent SUSMP requirements.

The majority of new development and redevelopment projects are subject to the provisions of the SUSMP. Projects are identified as Priority Development or Standard Development projects based upon land use categories and applicability of permanent storm water BMPs. A very limited number of projects are not required to submit a SUSMP document and are noted as SUSMP exemptions. Projects which are granted a SUSMP exemption typically involve incidental construction with negligible or no ground disturbance activities. Examples include the addition of an antenna to an existing cellular tower or interior tenant improvements to an existing building.

A SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of infeasibility to a Priority Development Project and does not anticipate granting waivers in the future; however, if waivers are necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed.

Projects which have been formally identified as Priority Developments or Standard Developments are required to submit a project specific Storm Water Mitigation Plan (SWMP). Entitlement project storm water plans and supporting documents are submitted to the Planning Division for distribution to Engineering and Storm Water Development Review staff. The storm water review of Priority and Standard Development Projects is an iterative process that entails examination of the SWMP for consistency with SUSMP and Municipal Permit requirements. SWMP reviews also comprise an evaluation the supporting documents that include (at a minimum); the Site Development Plan, Project Description and Justification, Hydrology Study, HMP Study, Geotechnical Report, Biological Study, Slope Analysis, and etc. Projects which are consistent with the Municipal Permit and SUSMP are deemed complete by the individual Staff member assigned to review the project SW plans by the City Development Engineer. A digital image and hard copy of the original plan are retained for City records.

2.4.3.3 Priority Projects

Priority Projects are required to obtain an approved SWMP as part of the project entitlement process. The items required in a SWMP are described in Section 1 of the SUSMP. In summary, Priority Projects must determine the Primary Pollutants of Concern based upon source characterization and impacts to the 303(d) impaired receiving waters. This category of development is required to provide Source Control BMPs while implementing LID practices. The project must incorporate Integrated Management Practices/Structural Treatment Control

BMPs into the site development. The selected IMPs/Treatment Control BMPs are required have a medium to high removal efficiency for the identified Primary Pollutants of Concern. The Treatment Control BMPs with low pollutant removal efficiencies are not permissible in the City of Oceanside.

Priority Projects are also required to obtain an approved Operation and Maintenance Plan (O&M Plan) and enter into a Storm Water Facilities Maintenance Agreement (SWFMA) to ensure the long-term maintenance and operation of the Treatment Control BMPs. The City will not consider Priority Project structural Treatment Control BMPs to be effective without the assurance of a long-term maintenance component, and therefore will not accept storm water BMPs as meeting the MEP standard, unless a mechanism is in place that will ensure ongoing long-term maintenance of all structural BMPs. This mechanism shall be proposed by the project proponent as part of the SWMP and will be refined though the City review process until satisfactory verification of maintenance is provided to the City Development Engineer. Such verification may include, but is not limited to, covenants, legal agreements, maintenance agreements, and/or conditional use permits. A non-refundable security may be required. The security provides the City with funding to perform maintenance activities in the event of default by the owner.

2.4.3.4 Priority Project Example

The selected sample project for this report cycle involves the relocation of an existing facility to a new and upgraded location. The El Corazon Green Waste/Compost Facility is a private, commercial-enterprise located in the Loma Alta Hydrologic Area on approximately 15-acres of City-owned property. The compost facility is part El Corazon Specific Plan, which includes other elements such as sports fields, hiking trails, and an existing Senior Center. The relocation effort will re-establish the compost facility approximately one-half mile southwest of the existing location.

The El Corazon Specific Plan site was a former silica mine that ceased operation in 1990. After the sand mining operation closed, the title transferred to a private developer and subsequently to the City of Oceanside, along with funding to reclaim the former mine site. In 1994 the City leased 15 acres of the El Corazon property to Agri Services Inc. to permit and operate a green waste facility. At that time, it was estimated that the facility was processing approximately 40,000 tons of yard trimming per year. By 2000 improvements to the composing methods at the facility increased compost production to approximately 80,000 tons per year. The City has used the mulch generated from the facility as soil amendments and erosion control for the El Corazon property to help meet the provisions of the mine reclamation plan and also for City parks and other public projects. Additionally, Agri Service Inc. operates a compost and mulch giveaway, as well as education programs for the residents of Oceanside. Under this program, users of the facility have the option of bringing in their green waste to the facility or having it picked up from the curb outside their residence. Once the green waste has been composted, residents have the option of receiving the mulch for free for use in gardening and landscaping activities.

The relocated El Corazon Green Waste Facility will continue to accept yard trimmings, source separated food waste, liquid waste and untreated construction wood generated from both residential and commercial projects. Source separated food waste and liquid waste (such as gray water from domestic wastewater sources composed of wash water from kitchen, bathroom, and laundry sinks, tubs, and washers, or food juices) will help meet increasing water diversion

mandates, provide a service for local restaurants, grocery stores and food processing plants and provide a source of reclaimed water for the composting process to reduce the facilities dependence on the City potable water supply.

The facility is anticipated to process an average of 260 tons per day, however, due to seasonal fluctuations up to 400 tons per day may be received. The material will be brought to the facility by the City contract waste hauler, individual homeowners, contract haulers, and landscape contractors. Green waste material brought to the facility is weighed and delivered to a tipping floor where it is inspected by trained employees for the presence of contaminants, such as metal, plastic, and chemically treated wood. The identified contaminants will be removed prior to grinding and composting. Removed materials will be stored in dedicated disposal containers for collection by a local waste hauling company. It is anticipated that approximately 10-40 cubic yards of contaminants will be removed from the facility on a weekly basis. Chemically treated wood is not accepted at this facility; however, any incidental treated wood will be stored separately for disposal at nearest landfill that accepts this material; the San Diego County operated Otay Landfill.

Green materials, such as grass and leaves, will be mixed with high carbon materials, such as branches and limbs, to stimulate microbial activity which aides in the reduction of malodorous compounds. Fresh green waste will be ground within one week to avoid odor generation and the build up of flammable material. The grinder operated by Agri Services Inc. is capable of processing up to 60 tons of material per hour. The ground material will be placed over aeration channels in heaps containing up to 650 yards of material. The upgraded facility will support up to 12 heaps of material. Liquid waste (such as gray water or food juices) will be added to the compost to increase the moisture content of the shredded material to between 45 and 55 percent. Food waste and liquid wastes will be processed daily to reduce the likelihood of odor. If the liquid waste is not available, potable water will be used in its place. An aeration system will be employed to enable decomposition of material while reducing odor. The process is controlled by pumps designed to draw air through the mulch piles and thereby increasing the level of oxygen in the material while promoting aerobic decomposition which aids in the reduction of malodorous compounds. If the desired reduction in odor is not affected by these measures, there is a contingency for installing perforated covers over the compost heaps to minimize odors.

A typical mulch-cycle requires approximately eight weeks. After the initial sorting, grinding and adjusting of moisture content; the material is allowed to compost for two weeks. After two weeks, the material will be remixed, recovered and aerated for an additional two weeks. During this process, the temperature of the material will be monitored to ensure pathogen reduction requirements are satisfied. The material is then remixed and moved to a second staging area for curing where it is further remixed and aerated without covers for an additional two to four weeks. After curing, the material is processed through a series of screens. The screened compost is suitable for use as a soil amendment. Oversized material may be used for water conservation, erosion and weed control, and/or pathogen reduction. All composted material will be sampled and tested for pathogens and heavy metals as required by CCR Title 14, Sections 17868.1 to 17868.3.

The manipulation of the compost materials on this site is accomplished by several pieces of large equipment including four Caterpillar™ (Cat) Model 966G front end loaders, one Doppstadt™ trammel screener, and one Vermeer™ Model TG9000 tub grinder. All of this equipment is

portable and operates on diesel fuel. Because of the nature of the composting operation, all of the equipment is regularly inspected oil, fuel or coolant leaks and maintained to avoid system failures. Small repairs, fueling, and cleaning will be preformed in the pole shed maintenance area. The equipment will be positioned under the shed which is equipped with an impervious concrete floor. The shed floor is equipped with a dead-end floor drain to capture any spills or rinse water. The dead end sump has a capacity of approximately 270 gallons and is intended to be maintained (pumped) at the same interval as the on-site portable sanitary facilities. The shed canopy is equipped with a 10 foot overhang beyond the edges of the impervious floor to preclude rainfall. The floor slab is also constructed 6 inches above the adjacent ground surface to preclude run-on from other areas. Large 55 gallon drums of oil, waste oil and waste filters are kept on EPA approved secondary containment in a portable enclosed freight storage container.

The fuel tank system and dispensing equipment is presently covered under a separate permit for the current location from the County of San Diego (Unified Program Facility Permit or UPF permit). A copy of the current county permit is included in the appendix of the SWMP. A new permit will be obtained for the new location at the time of the move. The fuel tank is an above ground unit that is equipped with double wall containment to prevent the leakage of fuel from the tank and dispensing equipment. The fuel tank is located under the pole barn roof structure on the impervious concrete pad. The fuel dispensing pump is located on the tank and is more than 10 feet within the edge of the canopy.

The proposed site development is a zero-discharge low impact design project. Grading is minimized to road sections, creation of a process water pond, remedial soil preparation and excavations necessary to place stationary equipment, a truck scale, and support sheds.

The majority of the site will remain existing natural soil. Drive aisles are delineated by the placement of Class 2 road-base which is intended to reduce tracking while providing a pervious drive surface. The area where the composting operations are to occur is designed to capture all of the runoff (leachate) from the composting process, direct that leachate to an aeration chamber where it is stored and prepared to be pumped back onto the composting piles. The composting area is bound to the north and south by PCC pads to facilitate equipment operation involving material handling. All of the rainfall that enters the composting area is automatically made part of the process water and is used in the composting process. The aeration chamber is equipped with a high water overflow feature that acts similar to a sewer grease separator. In the event that the aeration chamber capacity is exceeded due to a large rainfall event, the leachate will remain in the chamber and the excess flows will bypass the leachate and be directed to the process water storage pond for later use. The pumps used to move the aerated leachate back to the compost piles are portable gasoline powered units that can be positioned anywhere they are needed on site. The pumps used are typically of the size that is comparable to a push lawnmower or walk behind rototiller (about 5 horse power). The fuel capacity of these units is typically around one gallon or less. The pumps are not exposed to rainfall because they are stored in the enclosed cargo container (primarily to prevent theft, damage and weathering) and there is no reason to pump water when rain is falling on the compost area already. The pumps are constantly monitored while they are in use. The pumped water is manually sprinkled on the compost piles to prevent ponding of the water and wasting of the pumping effort. As part of the above ground fuel tank permit and storage of new and used oil products and filters, the site is stocked with adequate spill containment and cleanup supplies. In the unlikely event that there is leakage of fluid from one of these relatively small pumps, the pump will be immediately shut down and the

spill properly cleaned up and disposed of using the on-site materials and supplies. The operation of the pumps is typically covered under the UPF permit. Under typical non-storm conditions most of the water in the composting process is located in the composting materials. Any excess water is stored in the process water pond. Normally there is little or no water in the process water pond because potable water is expensive and subject to evaporation losses without the benefit of producing composted material. The entire composting area and process water pond will be lined with an impervious membrane to eliminate the loss of process water into the subsoil. The process water collection pond is sized to hold a minimal amount of process water plus up to a 100 year runoff volume from the composting area. Any water in excess of the process water collection pond capacity will be discharged over a high water weir structure and allowed to flow down to the existing offsite detention pond.

Since there is no flow that leaves the site, no receiving waters or MS4 are impacted. If the flows were to leave the site they would be collected in the storm drain system of Oceanside Boulevard which discharges to Loma Alta Creek.

2.4.3.5 Standard Development Projects

Development and redevelopment projects that are not identified as Priority Development Projects or are not determined to be exempt from SUSMP Treatment requirements, and receive a formal SUSMP Determination identifying the project as a "Standard Development Project" (SDP) are required to implement Source Control BMPs consistent with Section 2.7 of the SUSMP. Projects are also required to include LID features designed to conserve natural topographic features, provide development setbacks from natural water bodies and conveyances, minimize site imperviousness, maximize infiltration, and retain and slow runoff.

Standard Development Projects are required to implement a Standard Development Project SWMP. Clean Water Program staff may also require additional controls for Standard Development Projects, appropriate to the project, which may include treatment BMPs and LID IMPs such as infiltration or bioretention. If treatment facilities are included, provisions are to be made to ensure their long-term maintenance.

2.4.3.6 Adequacy of Proposed Plans

Staff is tasked with review of submitted SUSMP documents and other relevant plans for compliance with the Municipal Permit and SUSMP requirements. The City Engineer may elect to accept proposed alternatives to the BMP requirements contained in the SUSMP if they are determined to be applicable and equally effective. Additional analysis or information may be required to enable staff to determine the adequacy of proposed BMPs and may be requested following the conclusion of a staff review cycle. A project SWMP will be deemed complete when the project complies with the requirements of the City SUSMP and Municipal Permit.

2.4.3.7 Inspection

The City has compiled a Treatment Control BMP inventory with information for all approved and/or constructed Priority Development Projects. The inventory is included in this report as Attachment 2-A. All installed Treatment Control BMPs are regularly inspected by City Code Enforcement Inspectors to ensure intended function and proper maintenance. The Municipal Permit dictates that high priority sites shall be inspected annually and medium priority sites are to be inspected every two years. Low priority sites are inspected on an "as needed" basis. In addition, the Municipal Permit requires a minimum of 20% of the total number of projects with

approved Treatment Controls and a maximum of twice the average number of projects with Treatment Control BMPs approved per year will be inspected annually. The Municipal Permit dictates 50% of all medium priority sites with drainage inserts will be inspected annually. City Code Enforcement inspection staff performed a total of 52 treatment control BMP inspections during this reporting period.

It is the responsibility of the City Engineering Inspection staff to ensure that all BMPs proposed for a project have been built or installed according to the construction plans; before approving subsequent stages of construction. The City Engineer requires that all Priority Development Projects attached a duplicate of the approved SWMP BMP Exhibit to the construction plan set. The inspectors utilize the project plans to identify any missing or incorrectly constructed/installed Treatment Control BMPs. Engineering Inspection staff has the authority to stop a project from proceeding if BMPs are not constructed consistent with the approved SWMP. The SWMP is the governing document. Moreover, inspectors have the authority to withhold the Certificate of Occupancy (CO) and to deny approval for sites with observed problems. Inspectors also have the authority to withhold the release of bonds until plan requirements are adequately addressed. City Staff routinely inspects all development projects subject to SUSMP requirements to ensure that all LID, Source Control, and Treatment Control BMPs proposed for the project have been constructed in compliance with all approved plans and City permits and ordinances. This established method of ongoing inspection during site development and the ability to stop-work, withhold release of bonds, and/or occupancy, ensures developer compliance with the approved SWMP.

Inspections include examination of all Treatment Control BMPs at the site to verify that each Treatment Control BMP is in working order, being maintained properly, and is in compliance with all applicable City ordinances and permits. Inspection findings will be documented by the inspector using the City of Oceanside Treatment Control BMP Inspection form in Appendix D of the 2011 JURMP. Deficiencies in Treatment Control operation and maintenance are noted during the inspection, the responsible party is notified and appropriate enforcement actions take place as described in Section 4.4.4.9 of the 2008 JURMP, in order to achieve compliance.

The City requires annual verification of proper maintenance of all treatment control BMPs by the responsible party for maintenance prior to the start of the rainy season. The City Code Enforcement section is responsible for ensuring the proper long term maintenance and operation of post construction BMPs. The City requires all Priority Projects to include Operation and Maintenance checklists and a self-inspection log for the site's Treatment Control BMPs as found in the approved project SWMP. The City requires these forms to be completed by the site's responsible party and be submitted to the City Code Enforcement staff on an annual basis. See Attachment 2-A for sites that were inspected and/or have BMP maintenance verification on file for this reporting period

A detailed description of the different enforcement measures used by the City of Oceanside to enforce its storm water regulations can be found in Section 2 of the 2008 JURMP.

Enforcement of post-construction BMP maintenance after occupancy is the responsibility of City Code Enforcement officers. Code Enforcement uses a variety of methods to ensure long term maintenance objectives are met. Enforcement actions include verbal and written warnings and monetary penalties. Enforcement measures will escalate with continued violations as necessary.

All enforcement actions are documented in the development project's database file. If a development site receives frequent citations or is not responsive to previously issued enforcement actions, more severe actions, such as court actions, will be used as necessary. Details surrounding the City Treatment Control BMP inspection program may be found in Section 4.4.4.7 of the 2008 JURMP.

2.4.3.8 2011-2012 SUSMP Document Submittal and Review Summary

This Section identifies the SUSMP document reviews that were performed during the 2011-2012 reporting period.

There were 33 Priority Development Project SWMP submittals which prompted 79 reviews with a total of 8 projects receiving approval. During the same period there were 9 Priority Projects that submitted Amendments to a previously approved SWMP that prompted 16 reviews and yielded 5 approvals. In addition, there were 10 Standard Development Projects that submitted an SWMP which prompted 26 reviews. Six (6) Standard Development Project SWMP were approved during the 2011-2012 reporting period.

During the reporting period there were 9 Priority Development Projects that submitted O&M plans as part of the final engineering process. There were a total of 15 reviews performed with a total of 4 O&M Plans receiving approval. The SWMFA is typically submitted with O&M Plan. Some projects elect to "trail" the SWFMA submittal. During this reporting period 7 project SWFMAs were submitted, prompting 13 reviews, resulting in 2 approved agreements.

All projects were subjected to a SUSMP Determination. The determination process places the majority of developments into Priority Development Project or Standard Development Project categories. During this reporting period, a number of projects were found to be exempt from SUSMP requirements. Projects which are granted a SUSMP exemption typically involve minor construction with minimal, or no ground disturbance. Examples of projects that are eligible to receive an exemption include interior tenant improvements to an existing structure, or the addition of an antenna to an existing cellular tower. During this reporting period there were 59 reviews linked to the evaluation of 48 project submittals as part of the SUSMP Determination process. At total of 48 projects were not categorized as a Priority or Standard Development Project and therefore were not required to submit an SWMP.

As previously stated, a SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of treatment control BMP infeasibility to a Priority Development Project and does not anticipate granting such waivers in the future. However, if a waiver is deemed necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed. There were no SUSMP waivers of infeasibility granted during this reporting period. See Table 2-2 for more detail on project submittals and review results.

2.4.3.9 Outreach and Staff Training

City Staff involved in planning, review, inspection, and enforcement of development projects received training during this reporting period (see Table 2-3). Training topics during this reporting period focused on SWMP document review, SUMSP and HMP requirements, LID implementation, inspection and maintenance.

Table 2-3. Staff Training During the 2011-2012 Reporting Period

2.5 Development Planning Component Effectiveness Assessment

See Section 11.0 for an assessment of the Development Planning component of the City JURMP.

2.6 Program Review and Modification

The Development Planning components of this Report, the City JURMP, and the SUSMP will be revised as necessary to conform to the future requirements of the Municipal Permit. Major revisions to the Development Planning component will be cited in Section 14 of the City JURMP.

THIS PAGE INTENTIONALLY LEFT BLANK

3.0 CONSTRUCTION COMPONENT

3.1 Introduction

Land disturbance activities associated with grading and construction when left unmitigated, are known to cause negative impacts to the receiving waters. The JURMP provides guidance designed to address potential impacts associated with construction and grading activities. The Construction Component of the Annual Report briefly describes the measures implemented by the Engineering Division – Engineering Inspection that are intended to meet the requirements of the Municipal Permit while reducing impacts to the receiving water to the Maximum Extent Practicable (MEP). A summary of applicable sections of the Municipal Permit and the corresponding Annual Report sections are presented in Table 3-1.

Table 3-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(d).iv Updated construction site inventory	See Section 3.2.1 of this Annual Report
J.3.a.(3)(d).i Ordinance update and approval process modifications	See Section 3.3 of this Annual Report
J.3.a.(3)(d).vi BMP Implementation	See Sections 3.4 and 3.5 of this Annual Report
J.3.a.(3)(d).ix Confirmation that sites went through urban runoff approval process	See Section 2.4.3 of this Annual Report
J.3.a.(3)(d).x and xi Inspection of construction sites	See Section 3.5.2 of this Annual Report
J.3.a.(3)(d).xiii and xiv Enforcement of construction sites	See Section 3.5.3 of this Annual Report
J.3.a.(3)(d).xii Inspection frequency and totals during dry and wet seasons	See Section 3.5.2.3 of this Annual Report
J.3.a.(3)(d).vii Requirements for application of erosion and sediment control BMPs	See Section 3.5 of this Annual Report
J.3.a.(3)(d).viii Construction sites requiring Advanced Treatment	See Section 3.5 of this Annual Report

Portions of the JURMP Construction Component are based upon the following municipal documents:

- Chapter 40 of the City Code or Ordinances
- City of Oceanside Grading Regulations Manual
- City of Oceanside *Construction Urban Runoff Requirements Manual* (Construction Manual).
- City of Oceanside Erosion Control Plan

The documents are available on the City website at http://www.ci.oceanside.ca.us/

The Construction Manual was developed by the City to provide construction projects with guidance in order to comply with the City Code and its ordinances. The Construction Manual is subject to change to maintain consistency with the current Municipal Permit and ensure effective program implementation. Updated versions of the manual will be made available whenever modifications have been incorporated and approved by the City. During this reporting period no changes were made to the Construction Manual. The Construction Manual is located in Appendix C of the 2008 JURMP.

3.1.1 Notable Activities

During this reporting period the Development Services Department, which includes Building and Engineering Divisions, and the Neighborhood Services Department, which includes the Code Enforcement Division, continued to implement TRAKiT® software for permitting and enforcement tracking. In addition, the City continued to provide public access to select through the online version of TRAKiT™, called eTRAKiT™. Public users are able to access records and view the status of projects, permits and cases via the Internet. For more information, visit www.ci.oceanside.ca.gov and click on the "eTRAKiT-Online Permitting" Quick Link. The Clean Water Program will be reviewing the effectiveness of the new tracking tools and will continue to implement improvements. See Section 3.2.1 for additional information regarding TRAKiT® software.

3.2 Source Characterization

3.2.1 Site Inventory

The City has compiled a watershed-based inventory of all active construction sites within its jurisdiction that may have a potential impact on receiving waters. Projects that appear in the inventory are subject to grading permit and erosion control plan requirements. Engineering Division Inspection staff and Building Division Inspection staff are tasked with performing regularly scheduled site inspections to ensure development is executed as planned and erosion controls are implemented consistent with each stage of development. Small projects that are not associated with ground disturbance and do not require a grading permit, such as cel-tower retrofit or tenant improvement, are not included in the inventory, however still receive inspection.

The inventory process begins when information is collected from construction projects at the time of grading or building permit application. When the permit is approved, this information is then entered into a database developed by the City. If a permit was previously issued for a project, then the database is updated to reflect the most current information. In an effort to improve productivity, the Development Services Department coordinated with Code Enforcement, Fire Prevention, Information Technologies, and Water Utilities Department to institute an efficient permitting system and streamline processing. Permit processing and tracking has been improved since the October 2009 implementation of TRAKiT® permitting software by CRW Systems, Inc. The data management capabilities of TRAKiT assist specifically trained and dedicated Development Services Technicians (DSTs) as the "front-line" staff with regard to daily organization, input, and revision of permit data for every active project. The software contains enhanced reporting tools to provide management staff with pertinent statistics and data to evaluate workflows and resource allocation.

The inventory includes details on each construction site, including project name, location, and threat to water quality (TTWQ) as determined by the process described in Section 5.2.1.1 of the 2008 JURMP. Construction sites that were active during this reporting period may be found in Attachment 3-A.

3.2.2 Construction Site Prioritization

All construction projects are required to hold an onsite pre-construction meeting. The meeting is scheduled after obtaining grading permit and prior to commencement of any grading activities. The purpose of the "pre-con" meeting is to acquire and disseminate project specific information, identify key participants, and determine the project Threat-To-Water-Quality (TTWQ) by completing an Urban Runoff Threat Assessment. Required attendees include, but are not limited to, the owner, general contractor, project superintendant, grading contractor, geotechnical consultant, other pertinent subcontractors (environmental, archeological, and etc), and the City inspector assigned to the project.

The completed Urban Runoff Threat Assessment enables the determination of the project TTWQ. Projects are categorized as a low, medium, or high TTWQ, which determines the minimum construction inspection frequency. The project attributes that are used to assess a construction project include:

- Item 1 – Project Size
- Item 2 – Planned Grading/Soil Disturbance Period
- Item 3 – Proximity to Water Quality Environmentally Sensitive Area (WQESA)
- Item 4 – Presence of Significant Erodible Slopes
- Item 5 – Potential to Produce Non-Storm Water Pollutants or Discharges
- Item 6 – Amount of Proposed Impervious Area

All project proponents are directed to reference a prioritization matrix (Table 3-2) to determine the TTWQ priority of the project. To use the matrix, first locate the project size and then identify each item that applies to the project, within the row. Each item in the row corresponds to a level of prioritization, i.e. high, medium, or low. By determining the average prioritization within the applicable row based upon project size, a project will be assigned a high, medium, or low TTWQ and construction inspection frequency. The use of this matrix was developed consistent with the requirements of the Municipal Permit.

Table 3-2. Construction Project TTWQ Prioritization Matrix.

Item 1 - Project Size	Item 2	Item 3	Item 4	Item 5	Item 6	Default Priority
Greater than 50 acres	High	High	High	High	High	Medium
5□50 acres	□	High	High	High	High	Medium
1□5 acres	□	High	Medium	Medium	Medium	Medium
Less than 1 acre	□	Medium	Medium	Medium	Medium	Low

3.3 Updates to Ordinances and Approval Processes

During this reporting period, the City continued to actively participate in the Copermittee Workgroups and Sub-workgroups. The City also released an updated SUSMP in June 2011. Subsequent to the updated SUSMP, the City released a draft Storm Water Mitigation Plan (SWMP) template. The purpose of the template is to provide the design professional with a standardized presentation format while facilitating plan review. The Standard Development and Priority Development Project templates were developed during the previous reporting period and were provided as guidance documents, for form and content, to the Consultant/Development Community. During this reporting period, the templates were revised to incorporate suggestions from the Consultant/Development community and to provide clarification. Clarification took on the form of a completely revised approach to the template completion guidance. The instruction was previously embedded in the document and has since been rewritten and relocated to the end of the document. The SWMP templates will continue to be a work in progress and will receive periodic updates as necessary to remain consistent with Municipal Permit and SUSMP requirements.

In addition to the updated SUSMP, the City continued to require all development and redevelopment projects that cause land disturbance, including projects subject to the Statewide Construction General Permit (CGP), to complete and implement a City Erosion Control Plan. Erosion control plans are reviewed by Engineering Division staff and approved by the City Engineer. The Erosion Control Plan may appear to be a redundant document, as it typically overlaps the CGP SWPPP. However, the erosion control plan differs from the SWPPP because it requires a bond prior to approval. The erosion control bond creates a maintenance funding mechanism that assures funds will be available to repair or construct BMPs in the event of default by the Responsible Party. Plans are required to be updated on annual basis, prior to the rainy season, to assure that plans are consistent with site conditions and to update the erosion control bond.

3.4 Best Management Practice Requirements

The City has a set of construction phase Best Management Practices (BMPs) that are required to be implemented at all construction sites regardless of TTWQ priority including implementing and maintaining general site management BMPs and erosion and sediment control BMPs to reduce, retain, and manage pollutant discharges to the MEP. Table 5-2 of the 2008 JURMP outlines the minimum construction BMPs required by the City. The table also provides references to the corresponding BMP fact sheets obtained from the Caltrans Storm Water Quality BMP Handbook and California Stormwater Quality Association (CASQA) Construction BMP Handbook.

A Construction BMP brochure titled “A Pollution Prevention Guide for the Construction Industry” is provided to the developer during pre-development meetings. This brochure provides a sample drawing that illustrates the minimum BMPs that must be used at all construction sites to protect storm drains and minimize pollution. This brochure was provided as Attachment 3-B in the 2008 JURMP Annual Report. This brochure is also available at both the Engineering and Building Department counters of the City. Approximately 100 brochures were distributed to the public by building division staff during this reporting period.

3.5 Program Implementation

All construction sites are required to select, install, and maintain BMPs that meet or exceed the minimum BMP requirements described in the City Construction Manual and in Section 5.4.1 of the 2008 JURMP. There is no minimum threshold of disturbed area that relieves a project of the responsibility to implement erosion and sediment control BMPs. Moreover, all sites requiring a grading permit are obligated to implement an Erosion Control Plan as part of the Grading Plan review and permit process. Construction activities that result in a land disturbance equal to or greater than one acre are subject to the requirements of the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP). Projects that are subject to the CGP are required to file a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB), obtain a Waste Discharge Identification Number (WDID#), and develop and implement a site specific Storm Water Pollution Plan (SWPPP) prior to the commencement of any grading activities. SWPPPs are required to include a list of BMPs that will be implemented during each phase of construction to reduce pollution discharges to the MEP. In addition, selected projects governed by the CGP may be required to employ advanced treatment as part of their SWPPP. Each project is required to perform a site assessment that includes the determination of a Sediment Risk Factor and a Receiving Water Risk Factor to ascertain a Combined Risk Level. Projects with Risk Levels associated with Numeric Effluent Limits (NELs) may find it necessary to implement an Advanced Treatment System (ATS) to achieve effluent standards. Projects faced with physical constraints that "inhibit the ability to construct a correctly sized sediment basin" may also elect to implement an ATS to comply with the MEP standard.

3.5.1 Education and Staff Training

Site owner/developer education and training

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents. Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of permits, construction site owners and developers meet during a pre-construction meeting with City staff and developer staff and/or contractors, subcontractors and superintendents. During these meetings City staff from various departments review what is expected of the project proponent in order to develop the project. At least one Clean Water Program staff person attends these meetings. Topics covered during these meetings specific to storm water pollution prevention include:

- Grading - Reference to the City of Oceanside Grading Regulations manual and the BMP Construction manual (both available on the City's website).
- Site Plan review for storm water inlets and associated BMPs
- Review of site-specific BMPs more applicable to the site and associated with the potential pollutants that could be generated from the proposed business operations
- Inspection Requirements and Frequency – Unannounced and upon call-outs from the public

- Expectations of BMPs during dry and wet seasons
- Construction BMP Brochure is provided

Prior to wet season, all currently permitted construction sites were contacted to remind site owners and developers to assess, repair and update their sites BMPs to reduce erosion potential and prevent storm water pollution. Site owners and developers are also advised to update their erosion control plans and SWPPPs that are applicable to the site.

Municipal Staff Training

City staff directly involved with development and construction sites are provided training on a departmental basis. For further details on topics covered during the City's construction educational program, please refer to Sections 10.2.2 and 10.3.1 of the City's 2008 JURMP. During this reporting period staff from the building division attended training that related to construction and development topics. See Table 3-3 training details.

Table 3-3. Municipal staff land development-related trainings.

3.5.2 Inspection of Construction Sites

Permit Order 2007-0001 requires that the City develop and implement an inspection program to ensure that each construction site complies with City ordinances and permits, and Section F.2.g. of the Municipal Permit. This section describes the City inspection of construction sites during the 2011-12 reporting period.

Each project was assigned an Engineering Inspector who was tasked with conducting site inspections throughout the life of the project. All inspectors have been educated in the requirements of the Permit Order 2007-0001 and City erosion control requirements through City personnel training and/or construction-specific certificate training seminars.

3.5.2.1 Initial Site Inspections

Upon commencement of work at a construction site, a City inspector will visit the site and perform the following:

- Where applicable, confirm coverage under the General Construction Permit
- Review City required Erosion Control Plans to confirm site implementation and consistency with the project SWPPP
- Check for field implementation of the BMP as indicated on supporting plans
- Review BMP maintenance procedures/schedule

All construction sites in the City construction site inventory receive initial site inspections as part of the pre-construction meeting, regardless of TTWQ priority. If any required documents or BMPs are found to be missing or deficient, the City may issue a citation, notice of correction, or stop work notice until the deficiencies are corrected.

3.5.2.2 Routine and Follow-Up Inspections

The initial site inspection is followed by additional, regularly scheduled inspections. The minimum frequency of the routine inspections is dependent upon the site TTWQ. The criteria used to determine the site TTWQ was developed to correspond to the routine inspection frequencies required by the Municipal Permit, as discussed in Section 5.2.1.1. Table 3-4 presents the different TTWQ categories and their corresponding minimum inspection frequencies for the wet season (October 1 through April 30) and dry season (May 1 through September 30). Note these are minimum storm water inspection frequencies. The Engineering inspector is present onsite many times during a normal work week and when present, performs visual inspections of all the construction components of the project.

Table 3-4. Construction Site Inspection Frequency.

Construction Site TTWQ	Wet Season Inspection Frequency	Dry Season Inspection Frequency
High	Bi-weekly (Every two weeks)	As needed
Medium	Monthly	
Low	As Needed	

3.5.2.3 Construction Site Inspection Frequencies

Attachment 3-A provides the number of inspections conducted during both rainy and dry seasons for active construction sites during the reporting period. This table provides the number of inspections performed by the Engineering and Building department staff.

There were 34 active construction sites and two sites that were not active during this reporting period. All are included in Attachment 3-A. For the inactive sites one is abandoned and the other has been under a stop work notice since FY 08-09. The construction sites were assessed to be a

high, medium, and low TTWQ. Table 3-5 below categorizes the priority construction sites into one of the three ratings. This table also includes the minimum number of inspections required by the Municipal Permit for both rainy and dry seasons based on the TTWQ. The inactive sites are not included in this table (one High TTWQ and one Low TTWQ).

Table 3-5. Prioritized Construction Site Inventory Summary and Required Inspection Frequency.

Prioritized Construction Sites		Minimum Required Inspection Frequency		
Threat Priority		**Wet Season**	**Minimum number of required inspections**	**Dry Season - As Needed**
High	15	Bi-weekly over 30 weeks	225	As Needed
Medium	10	Monthly over 7 months	70	As Needed
Low	9		63	As Needed
Total	**34**		**358**	As Needed

The City conducted 433 wet season and 88 dry season storm water related inspections of prioritized construction sites. During the reporting period the City conducted inspections of construction sites in accordance with the requirements of the Permit. While the Building Division always looks for any potential storm water violations during site visits, all construction sites assigned to them for inspection during this reporting year were tenant improvements. No violations were observed. See table 3-6 for a summary of the construction site inspections completed during wet and dry seasons.

Table 3-6. Inspection Frequency Verification Table.

Wet Season Inspections		Dry Season Inspections		Total Number of Prioritized Construction Site Inspections
Engineering Division	Building Division	Engineering Division	Building Division	
433	0	88	0	
433		88		521

3.5.3 Enforcement Measures for Construction Sites

The City will be responsible for enforcement of applicable local ordinances and permits at all construction sites in its jurisdiction. When violations are observed and documented during a site inspection, the City will implement appropriate enforcement measures based on the severity of the violation. Enforcement can range from written warnings to more severe enforcement such as stop work notices. Stronger enforcement measures will be used as necessary if proper corrective actions are not implemented during the allotted time frame or if the severity of the violation warrants stricter enforcement.

The typical progressive enforcement steps that the City will implement include the following:

- Written warnings
- Enforcement of contracts (Municipal projects)

- Stop work notices
- Administrative citations
- Denial or revocation of permits
- Civil and/or criminal court actions

Enforcement actions by Code Enforcement Officers for construction sites begin with a referral from another department, a site visit, or by a complaint lodged via phone. Depending on the severity of the violation, follow up activities may include phone calls, site visits, written correction notices with specified compliance timeframes, or administrative warnings. If these actions do not produce the required improvements, administrative citations (starting at $100 with a $1,000 maximum fine) and/or stop-work notices are given.

3.5.4 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of non-compliant sites in the City that are determined to pose a threat to human or environmental health. Verbal notification is required within 24 hours of the discovery of non-compliance and a written report should be submitted to the RWQCB within 5 days of the incident. The criteria established for determining when a site is not compliant and poses a threat to human or environmental health is described in Section 5.5.5 of the 2008 JURMP. No sites were issued stop work notices during this reporting period.

Two sites issued stop work notices during FY 2008-09 were lifted: Hi Hope Ranch and Darwin Glen. The other site's stop work notice has not been lifted and has been abandoned: Darwin Knolls. Table 3-7 provides a list of these sites.

Table 3-7. Construction Sites issued Stop Work Notices in FY 2008-09

Project Name	WDID	Watershed	Address Location	Stop Work Notice Status
Hi Hope Ranch	937C322214	San Luis Rey	Melrose Drive and Highway 76	Lifted during FY 2011-12
Darwin Glen	937C325609	San Luis Rey	Darwin and Sagewood Dr.	Lifted during FY 2011-12
Darwin Knolls	937C325610	San Luis Rey	Darwin and Ocean Ridge Ct.	Not lifted since FY 2008-09

There were no construction sites requiring code enforcement action during this reporting period.

3.6 Construction Activities Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the Construction Component of the City's JURMP.

3.7 Program Review and Modification

The Clean Water Program will continue to review and modify the construction component as needed. The Development Services Department, which includes Building and Engineering, and the Neighborhood Services Department, which includes Code Enforcement, continued to utilize the TRAKiT permitting software by CRW Systems, Inc.

THIS PAGE INTENTIONALLY LEFT BLANK

4.0 MUNICIPAL COMPONENT

4.1 Introduction

This section documents the activities conducted by the City of Oceanside at its municipally owned, leased and/or managed facilities during the 2011-2012 reporting period to meet the requirements of Section D.3 of Municipal Permit Order 2007-0001 (Table 4-1). The City of Oceanside owns and/or maintains a variety of municipal facilities including operation centers/facilities, public parks, administration buildings, fire stations, a fire training facility, industrial facilities, potable reservoirs, sewage pump stations, wastewater treatment facilities, public roads, streets and parking facilities and other miscellaneous facilities. Additionally, the City conducts activities that have a high threat to water quality such as power washing, street and sidewalk repair, painting, graffiti removal, parking meter maintenance, MS4 maintenance, and regular upkeep of the sanitary sewer system to prevent overflows and leaking.

Table 4-1. Order 2007-0001 Compliance Summary.

D.3.a Municipal (Existing Development)	Section 4 of this Annual Report
J.3.a.(3)(c).i Updates to Municipal Inventory	See Section 4.1.1 of this Annual Report
J.3.a.(3)(c).ii BMP Implementation	See Section 4.2.3, 4.3.3, 4.4.3,4.5.3, 4.6.3, and 4.8.3 of this Annual Report
J.3.a.(3)(c).iii Inspection and maintenance of municipal treatment controls	See Sections 4.4.3 of this annual report
J.3.a.(3)(c).iv Number of catch basins and inlets, inspections, and cleaning	See Section 4.4.3 of this annual report
J.3.a.(3)(c).v Distance of MS4 inspected and cleaned	See Section 4.4.2 of this annual report
J.3.a.(3)(c).vi Distance of open channels inspected and cleaned	See Section 4.4.2 of this annual report
J.3.a.(3)(c).vi Amount of waste removed from MS4 and open channels	See Section 4.4.3 of this annual report
J.3.a.(3)(c).viii MS4 inspected less than annually	See Section 4.4.1 of this annual report
J.3.a.(3)(c).ix Implementation of BMPs for pesticides, herbicides, and fertilizers	See Section 4.3.3 of this Annual Report
J.3.a.(3)(c).x, xi, xii, xiii Curb miles	See Section 4.2.2 and 4.2.4, of this Annual Report
J.3.a.(3)(c).xiv Municipal parking lots	See Section 4.2.2, 4.2.4., and 4.2.5.1 of this Annual Report
J.3.a.(3)(c).xv Tonnage of debris removed from streets and parking lots	See Section 4.2.5.2 of this Annual Report
J.3.a.(3)(c).xvi	See Section 4.5 of this Annual Report

Prevention of infiltration from sanitary sewer	
J.3.a.(3)(c).xvii Sites inspected and frequency	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xviii Inspection results	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xix Inspections steps determined full compliance	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xx Violations and enforcement actions	See Attachment 4-A of this Annual Report
J.3.a.(3)(c).xxi Notable activities	See Section 4.1 and 4.5 of this Annual Report

To comply with the Municipal Permit, the City of Oceanside has developed a comprehensive program designed to reduce the amount of pollutants that are transported in urban runoff from municipal areas and municipal activities. Some of the significant activities include street sweeping, inspections of municipal facilities, and educational efforts geared toward municipal personnel.

The City continues to use its Municipal Urban Runoff Procedures Manual (Municipal Manual) as a useful reference document for training staff and developing and implementing educational programs. The Municipal Manual contains BMP requirements and related guidance for City facilities and employees and was circulated to relevant City staff directly involved with the Municipal NPDES Permit. This manual was first prepared as part of the JURMP in 2002 and updated and provided with the 2008 JURMP. See Appendix C.3 of the 2008 JURMP for this manual. No changes were made to this manual during this reporting period.

4.1.1 Notable Activities

The Clean Water Program continued to utilize the Lucity (previously GBA Master Series Software) during this reporting period to track NPDES facility inspections, incoming hotline storm water complaint calls, and use with the jurisdictional monitoring program. This software program was updated to accept data for NPDES tracking purposes during the 2011-12 reporting period.

4.1.2 Source Identification

As required in Section D.3.a(1) of Permit Order 2007-0001, the City of Oceanside has developed a prioritized, watershed-based inventory of municipal properties and activities. The City of Oceanside maintains a number of municipal facilities, including parks, administrative buildings, fire stations, and public works yards. The inventory of municipal facilities, including areas and activities, is updated annually. The municipal inventory list (Attachment 4-A) is an update to the inventory submitted with the 2008 JURMP and the FY 2010-2011 annual report. The attached inventory was updated to include changes from the FY 2011-2012 inspections and will be used for the FY 2012-2013 inspections. Table 4-2 provides a summary of the facility categories within the City's inventory.

Table 4-2. Summary of Municipal Facilities by Category.

Facility Category	Number of Facilities
Park and Recreation Facilities	48
Public Works Operations Facilities	1
Municipal Landfills	2
Marina and related facilities	3
Municipal Airport	1
Potable Water Treatment Facilities	14
Wastewater Treatment Facilities and Lift Stations	36
Police and Fire Facilities	12
Other Fixed and Leased Facilities	25
Roads, Streets, Highways and Parking Facilities	34
Total Facilities	**176**

4.2 Roads, Streets, Highways, and Parking Facilities

4.2.1 Background

Roads, streets, highways, and parking facilities are an integral part of any functional City. These facilities can collect a variety of pollutants due to routine vehicle use and have a tendency to collect litter and debris from neighboring areas and activities. Regular maintenance is necessary to control the level of pollutants, such as sediment, metals, litter, and debris on roads, streets, highways, and parking facilities. Other City activities include building new roads, resurfacing existing roads, and similar construction-related activities. All construction-related activities conducted by the City will continue to be conducted under the requirements of the construction component, which is described in detail in Section 3 of this document.

4.2.2 Source Characterization

The City of Oceanside maintains approximately 575 miles of public roads and streets throughout the City and sweeps 32,500 curb miles. A parking facility is defined as a stand-alone parking facility, which is a parking facility that is not associated and/or adjacent to other inventoried municipal facilities. Parking facilities that are associated and/or adjacent to municipal facilities will continue to be included in regular maintenance activities of the associated municipal facility. Roads, streets, highways, and parking facilities are included in the City's municipal inventory, which is included as Attachment 4-A of this annual report. There are 34 parking facilities within the City.

4.2.3 Best Management Practice Requirements

Similar to municipal fixed facilities, the City will continue to utilize the City-developed Municipal BMP Manual to choose applicable BMPs to implement for public roads, streets, parking facilities and operational facilities within the City.

Street sweeping and cleaning continues to be the main BMP that is implemented for roads, streets, and parking facilities. The frequency of cleaning takes into account the following: variations in climate conditions, surrounding land use, design of existing structures, traffic volume, frequency and quantity of accidental spills and leaks, and areas with historical trash

and/or debris problems. Treatment control BMPs will be used for road sections subject to SUSMP.

The City will continue to implement an aggressive street sweeping program to reduce the amount of pollutants discharged from roads, streets, and parking facilities in the City with a particular focus on facilities that drain to environmentally sensitive areas (ESAs). If in the future negative impacts to ESAs associated with runoff from roads, streets, highways, or parking facilities are noted, the City will take the measures necessary to mitigate the negative impacts.

4.2.4 Program Implementation

As an effort to reduce the pollutant load entering local receiving water bodies, the City continued to implement a sweeping schedule for roads, streets, highways, and parking facilities to meet the requirements of the Municipal Permit. There have been no significant changes to the existing programs during the reporting period.

Roads, streets, and highways that have been observed as generating relatively high volumes of trash, sediment, and debris are included as high priority and will continue to be swept at least twice per month; medium priority streets are streets in the City that generate moderate volumes of trash, sediment, and debris and will continue to be swept at least monthly. Low priority streets have been observed as generating relatively low volumes of trash, sediment, and debris and will continue to be swept as needed, but not less than once per year. In the event of a National Holiday, sweeping is conducted in a timely manner, usually by the next working day. Due to the City's proximity to the Pacific Ocean and as a means to target watershed constituents of concern, the City typically sweeps all streets within the City above baseline jurisdictional activity standards. Additional program details can be found in Section 6.3 of the 2008 JURMP.

All public streets in the City of Oceanside are swept at least monthly. There is a total of 574.78 miles of public streets that are swept per the frequency outlined below. There were 32,500 curb miles swept during this reporting period. Some streets are swept more frequently than others.

- Every Monday, Wednesday, and Friday, the downtown commercial areas and other high use areas are swept using regenerative air vacuum street sweepers. These areas include the medians on Mission Avenue, Canyon Drive, and the Civic Center Drive Bridge, Wisconsin Avenue to Pacific Street to Ditmar Street, the Strand, and all downtown parking lots.
- The majority of all other public streets, not included in the areas listed above, are swept every other week. In some low use residential areas, the streets may be swept monthly.
- As necessary, sweepers or other clean up crews will respond to public or municipal staff reports to collect debris and/or sweep.
- Inspection of streets and curbs for cleaning is continuous. City employees and residents are encouraged to call the City of Oceanside's Customer Care number to report any maintenance needs regarding roads, streets, highways and parking facilities.

4.2.5 Inspection and Maintenance Results

4.2.5.1 Inspections

Inspections and maintenance activities were conducted throughout the reporting period as described in the previous section. Following is a review of the results from inspection and maintenance.

There are 34 parking lots in the Roads, Streets, Highway and Parking Facilities categories in addition to 575 miles of public and private roads. During this reporting period all 34 of these facilities were inspected by CWP staff. Some corrections were noted but were addressed by appropriate staff in a timely manner. Due to the fact that many of these parking facilities are swept at least once per week, debris and sediment are removed on a more frequent basis.

4.2.5.2 Maintenance

Street sweeping activities resulted in the collection of over 2,140 tons of waste from public streets and parking lots during the reporting period. These results are comparable with tonnage amounts from previous reporting years. See Table 4-3 for a summary of debris collected during this reporting period and in previous reporting periods.

Table 4-3. Summary of amount of street sweeping debris collected.

Reporting year	Tons
2003-2004	2,604
2004-2005	2,538
2005-2006	2,283
2006-2007	2,480
2007-2008	2,358
2008-2009	2,062
2009-2010	2,093
2010 -2011	2,342
2011-2012	2,140

4.2.6 Roads, Streets, Highways, and Parking Facilities Element Effectiveness Assessment

See Section 11.0 for an assessment of the Municipal component of the City's JURMP.

4.3 Parks and Recreational Facilities

4.3.1 Background

The City of Oceanside is committed to providing the highest quality of service to its residents by providing the opportunity for them to enjoy a variety of recreational activities at both outdoor parks and indoor recreational facilities. Operating and maintaining 48 community attractions from public pools, beaches, parks and community centers, the City of Oceanside works hard every day to maintain the high level of service. The inspection and maintenance of these

facilities in regards to storm water is important because of the number of facilities throughout the city and the public exposure that these facilities receive.

4.3.2 Source Characterization

The City regularly inspects, cleans and maintains 48 Parks and Recreational Facilities. Because of high public use these facilities have the potential to generate a variety of pollutants including trash and debris, organic material and sediment. See Attachment 4-A of this annual report that includes an inventory for Parks and Recreational Facilities.

4.3.3 Program Implementation

The City has selected BMPs to implement at Parks and Recreational Facilities to reduce the contribution of pollutants associated with the application, storage, and disposal of pesticides, herbicides and fertilizers. These BMPs are detailed in the Municipal Manual. All 48 facilities were inspected during this reporting period. Some corrections were noted but were addressed by appropriate staff in a timely manner.

Pesticides, herbicides and fertilizers are seldom used by City staff, as it contracts out the majority of work involving these substances. To facilitate compliance with this Section of the Municipal Permit, the City has reviewed its landscaping contract and has integrated BMP requirements into the conditions of the contract.

4.4 Municipal Separate Storm Sewer System

4.4.1 Background

As required by Section D.3.a.(3) of the Municipal Permit, the City has implemented a schedule of maintenance activities for the City's entire Municipal Separate Storm Sewer System (MS4), including any structural controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures. The City has determined, through historical knowledge and records, the locations within the MS4 that require regular waste removal and those areas that are less likely to require any waste removal. The City has developed a comprehensive Flood Control Annual Maintenance Program which includes a list of the high priority areas, divided into zones, which are to be inspected annually using an inspection checklist. Approximately 110 sites are inspected and maintained annually. At minimum all sites are inspected and cleaned annually.

4.4.2 Source Characterization

The Public Works, Street Division, performs ongoing inspection and cleaning of storm drains and flood control facilities, as well as annual maintenance of all major facilities such as creeks, desilting basins, detention basins and rock and concrete lined channels. There are approximately 104 concrete and earthen channels that are inspected and maintained throughout the city. Over 49,000 linear feet of storm drains, catch basins, and concrete and earthen channels are maintained on at least an annual basis. In addition, the Street Division performs annual maintenance/cleaning in September, October, and November for all major MS4 facilities. The results of this work are recorded on an Annual Maintenance List that is available at the City Operations Center.

4.4.3 Best Management Practices

In order to inspect and clean storm drains as described above, during the May through September period, the City utilizes a contractor to inspect and clean the majority of the storm drain inlets. The contractor work spans two fiscal years but their reporting data is a compilation of all their work during their summer cleaning period.

During the summer months of 2011 the contractor cleaned 3,562 structures (catch basins, manholes, inlets, outlets, etc.) removing 32.34 tons of waste and debris. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt. During the inspections if a storm drain was not labeled with a marker, one was installed. During 2011 373 were labeled with a placard stating: "No Dumping – Drains to Creek" in both English and Spanish. See the photo below for a copy of the storm drain placard installed. See Table 4-4 for a summary of the amount of waste removed from catch basins, inlets, the MS4 and open channels by category during this reporting period.

Table 4-4. Waste removed from catch basins, inlets, the MS4 and open channels by category during FY 2011-12.

Structure	Number Inspected	Contractor or City Crew	Drain Markers Installed	Cleaned	Amount of Material Removed
Catch Basin/Inlet	3,562	Contractor	373	3,562	33.59 tons
Catch Basin/Inlet	173	City Staff		173	
Total Catch Basin/Inlet	3,735			3,433	
Open Channels	104	City Staff	N/A	49,455 ft.	712 tons
Drain Pipe	2,000 ft.	City Staff	N/A	2,000 ft.	

Trash Trap at the Oceanside Municipal Golf Course

Staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. In March 2009 City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the

driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. During this reporting period approximately 200 pounds of trash and organic debris were removed from this device. Photos of the trash trap were provided in Section 6.3.1 of the FY 2008-09 JURMP Annual Report.

4.5 Sanitary Sewer

4.5.1 Background

The City of Oceanside Sewer Division maintains the sanitary sewer system within the jurisdictional boundaries which includes sewer lines, lift stations, sewage treatment plants. This sanitary sewer system uses pipes to remove human waste from homes and businesses and transport that waste to one of two waste water treatment plants in the City. The two treatment plants are operated by city crews.

4.5.2 Source Characterization

The City regularly inspects, cleans and maintains 480 miles of sanitary sewer pipe, 34 sewer lift stations and two sewage treatment plants. Attachment 4-A includes an updated inventory of wastewater facilities.

4.5.3 Best Management Practices

Since the City owns and operates the sewage system, these facilities are regularly inspected and maintained for proper operation and maintenance, and to ensure that BMPs are in place for the protection of receiving waters that may be impacted from the system. The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations.

In order to ensure that the sanitary sewer lines do not leak, the city inspects its sewer system and slip lines or replaces pipes throughout the City that are defective. During this reporting period 85 feet of 16 inch City sewer line was slip lined. Since the 2005-06 reporting period the City has slip-lined a total of 21,153 feet of sewer. The City also inspected and cleaned 320.5 miles (1,691,918 feet) of sanitary sewer.

4.6 City Operations Center

4.6.1 Background

The City Operations Center (COC) is a municipally owned and operated facility that houses several departments or divisions for the City including Public Works, fleet maintenance, road maintenance, parks and recreation maintenance and others. Because of the diverse activities of these departments and divisions, the City developed a Storm Water Pollution Prevention Plan (SWPPP) for the COC in the fall of 2002.

The COC includes the following areas: employee parking lot, COC main building (offices, storage and fleet maintenance), traffic control lot, back lot, city vehicle parking lot, large vehicle equipment lot, fueling area, waste disposal area, wash facilities, general use yard and west corner lot. The SWPPP has the following objectives:

- Identify and evaluate sources of pollutants from the facility that may affect the quality of urban runoff discharge and to identify and
- Implement site-specific best management practices to reduce or prevent pollutants in urban runoff discharges.

The SWPPP outlines BMPs to be implemented at each of the respective areas. A comprehensive training program was also developed and has been implemented in concert with the COC SWPPP.

4.6.2 Source Characterization

Due to the nature of the various activities from the departments and divisions it was determined that there are various activities that generate pollutants and have the potential to reach storm water conveyance systems. Some of these activities include vehicle washing, disposal of street sweeping debris, temporary storage of wrecked vehicles, and storage of various materials, including paints, solvents, metal piping and infrastructure materials. In addition steep hillside landscaped areas can be a potential pollutant source if BMPs are not managed properly.

4.6.3 Best Management Practices

Since the implementation of the SWPPP at the COC some permanent BMPs have been installed and continue to be used for protection of receiving waters. Following is a brief description of the BMPs in place at the COC and any new BMPs installed during this reporting period.

4.6.3.1 Wash Facility

The main wash facility is used for washing large vehicles and equipment, and collection of street sweeper and vactor truck contents. The main wash facility is a completely contained area, surrounded on all sides by berms and curbs. The entire area drains to the eastern corner of the pad where it enters a grated inlet that leads to a clarifier and then the sewer. An overflow is available if the drain to the sewer is clogged or the volume of water exceeds its capacity, however, this is not anticipated to happen frequently because the drain is maintained daily.

4.6.3.2 Pollution Prevention and Recycling

COC BMPs in place

There was no new pollution prevention BMPs installed at this facility during this reporting period and all existing BMPs were maintained during this reporting period.

4.6.4 Program Implementation

4.6.4.1 Facility Inspection

A thorough walk through inspection of the COC Facility was conducted by Clean Water Program inspectors during this reporting period. There were no potential storm water violations identified during the inspection of this facility.

4.7 Other Facilities

4.7.1 Background

The City of Oceanside owns and operates two closed landfills (Maxson Street Landfill, WDID 9375005695 and Mission Avenue Landfill, WDID 9375005696). The City also operates and maintains eight fire fighting facilities including one at the COC in addition to one fire fighting training facility.

4.7.2 Source Characterization

The two closed landfills maintained by the City have the potential to generate pollutants that can negatively impact receiving waters. If potential storm water discharges are identified, appropriate BMPs are implemented to prevent pollutants from entering MS4.

Also fire fighting stations have the potential to generate pollutants such as trash and debris, organic materials and fluids and wash water from fire fighting vehicles. The two closed landfills and the fire fighting facilities are included in the City's municipal inventory, which is included as Attachment 4-A of this annual report.

4.7.3 Program Implementation

Closed Landfills

Both closed landfills are inspected quarterly per permit requirements and an annual report is prepared each for submittal to the Regional Water Quality Control Board. See Attachment 4-B for copies of the 2011-12 Annual Report for Storm Water Discharges Associated with Industrial Activities for these two landfills.

Fire Stations

All fire stations were inspected during this reporting period. During the station inspections no violations or potential violations were noted.

4.8 Special Events

The City of Oceanside hosts a variety of Special Events in the City. These events include major sporting events and community fairs and festivals. A Special Events Permit is required for any organized activity involving the use of, or having impact upon, public property, public facilities, parks, beaches, sidewalks street areas or the temporary use of private property in a manner that varies from its current land use. The permit process includes a BMP implementation plan. The City has a Special Events Committee comprised of various City Department representatives who review permit applications to insure events are held safely and do not adversely impact the community.

4.8.1 Source Characterization

The City issues Special Event permits for both internal city sponsored events and event organizations that coordinate events that may include vendors or various event related elements.

- Turkey Trot 5k Run
- Ironman Triathlon

- Freedom Day Parade

Typically, special events have a high density use of people per square foot raising the potential for pollutant types at special events, such as:

- Setup and teardown of equipment booths
- Booth operation generating trash
- Food and drink preparation and consumption – illicit discharges and organic material
- Hydraulic rides – oil and grease
- Temporary portable restroom – chemicals and bacteria
- Hydration stations – water cups and other trash material

4.8.2 Best Management Practices

All special events are required to implement designated BMPs and comply with all applicable regulations outlined in the Oceanside Municipal Code. During pre-event application meetings for large events, event organizers are provided with an event permit packet that includes storm water related information including a copy of the Storm Water Compliance Guidelines for Special Events brochure and the Special Events Inspection Form. Copies of the brochure and inspection form are attached. It is explicitly stated that the company coordinating the event is required to leave the site as clean as the pre-event condition and shall not allow any materials or liquid to enter the storm drain system.

4.8.3 Program Implementation

4.8.3.1 Event Inspections

A special event storm water inspection form was developed for use before and after large special events. Storm water compliance inspection reports will be completed by City staff or event contractors prior to the start of the event to ensure that appropriate BMPs are in place. A post-event inspection will ensure that the site is properly cleaned. City staff or event contractors will also complete post-inspection reports.

4.8.3.2 Street Sweeping

Most special events occur in the downtown area which is swept five days a week, with sweeping vehicles generally onsite within 12 hours from the end of the event.

For special events that cause an added impact to the community street sweeping is conducted immediately after the end of the event. On an annual basis, the City holds one parade in the downtown area after which street sweeping is immediately conducted.

4.8.3.3 Harbor and Beaches Maintenance

Large events held in the Harbor and Beaches area can have the potential to generate large quantities of trash. In addition to the above information, the Harbor and Beaches Maintenance Division conducts the following activities after large events and holidays held in the Harbor and Beaches area:

- A litter abatement contractor provides staff to walk beach and hand pick up litter.
- City staff uses trucks and/or utility carts to follow and pick up items that are too large for the litter abatement contractor such as logs, furniture, etc.

- City staff further screens the beach using Cherrington beach sweeping machines.
- A pressure-washing contractor or City staff washes the hardscapes with all wash water being recovered and disposed of properly.

Cigarette Butt Service
The Harbor and Beaches Maintenance Division has contracted with a cigarette butt service company to install and service cigarette butt receptacles in the harbor, pier and beach areas. The receptacle selected is the Butts Only Box and is designed to prevent rain and irrigation water from contacting the butts until collection. This prevents leaching of toxic compounds into sensitive habitats.

The company has several models to choose from, two of which have been installed in the City of Oceanside. The trail model is used along high foot traffic areas adjacent to the beach and harbor sidewalks. There are a total of 18 of these installed in the coastal areas of Oceanside: 11 in the harbor, 2 on the pier, 4 on The Strand (the road that parallels a large section of beach) and one at Buccaneer Beach receptacle.

Butts Only Boxes also has a sister company, Cigarette Butt Services, that services the boxes. The City of Oceanside subscribes to this service and the company provides a monthly statement that includes the number of butts removed and the weight of the debris.

During this reporting period a total of 150,832 cigarette butts were collected from the 18 trail models. The weight of this debris totaled 56.56 pounds.

The City plans to continue servicing boxes currently in place. The City will also seek additional funding to cover costs for purchasing, installation and servicing of additional receptacles within the jurisdiction.

4.9 Power Washing

4.9.1 Background

The City conducts a number of activities which are not designated and/or confined to a specific location. Because such activities are not confined to a fixed facility, where BMPs may be permanently implemented, BMPs must actively be implemented during all mobile municipal activities.

4.9.2 Source Characterization

Mobile activities that City employees may use during their day-to-day operations that have a potential to create polluted runoff include:

- Power Washing
- Infrastructure Maintenance
- Street and sidewalk repair
- Street striping
- Waste removal
- Traffic light maintenance
- Parking meter maintenance

- Landscape/Right-of-Way Maintenance

4.9.3 Best Management Practice Requirements

As previously mentioned, the City will continue to implement good housekeeping and general pollution prevention measures during municipal activities including the mobile activities listed above. City personnel will continue to conduct the proper collection protocol to collect all water generated by power washing activities. City personnel continue to use the City's Municipal BMP Manual to choose applicable BMPs to implement for municipal areas and activities. Pesticide, herbicide, and fertilizer management BMPs similar to those discussed in Section 6.2.3.1 of the City's 2008 JURMP will continue to be implemented during landscaping of City right of way such as medians.

4.9.4 Program Implementation

City field crews will continue to receive refresher training to implement BMPs during all mobile activities including how to properly contain, control, and capture any discharge generated by power washing (or any other discharge-generating activities). The City uses fiber rolls, geo logs, silt fencing, check dams, gravel bags, and filter inserts during mobile activities, where applicable. City personnel involved in mobile activities are trained to be aware of Illicit Connections/Illicit Discharges and report them to the appropriate City staff promptly. More information about the City's education program, including municipal training activities, is included in Section 10 of this document.

4.10 Municipal Component Effectiveness Assessment

See Section 11.0 for an assessment of the municipal component of the City's JURMP.

4.11 Program Modification and Review

The Clean Water Program will continue to keep its municipal inventory updated and any changes to the program will be reported in the next annual report.

THIS PAGE INTENTIONALLY LEFT BLANK

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 Introduction

The City of Oceanside continues to implement a comprehensive program that aims to reduce and prevent industrial and commercial pollution discharges to and from the MS4 to the maximum extent practicable (MEP) to protect local receiving water bodies and to comply with the Municipal Permit. This section documents the activities conducted by the City of Oceanside during the 2011-2012 reporting period to meet the reporting requirements of Section J.1.a(3)(f) of Order 2007-0001 Municipal Permit (Table 5-1).

Table 5-1. Order 2007-0001 Reporting Summary.

Permit Section	Annual Report Section Reference
J.3.a.(3)(d).i -Any updates to the industrial and commercial inventory.	See Section 5.2.2 of this Annual Report
J.3.a.(3)(d).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	See Section 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	See Section 5.2.1 and 5.3.3 of this Annual Report
J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	See Section 5.2.2 of this Annual Report
J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	See Section 5.2.2, 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	See Section 5.2.4.1 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.	See Section 5.2.4.1 of this Annual Report
J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.	See Section 5.2.4.3 of this Annual Report
J.3.a.(3)(d).ix - A description of efforts implemented to address mobile businesses.	See Section 5.3 of this Annual Report
J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	See Section 5.2.4.2 and 5.2.4.4 of this Annual Report
J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	See Section 5.2.4.1 and 5.2.4.2 of this Annual Report
J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	See Section 5.1.1 of this Annual Report

The City has compiled a list of industrial and commercial sources and developed BMP requirements, including pollution prevention measures, for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.1.1 Notable Activities

There were no notable activities during this reporting period.

5.2 Stationary Industrial and Commercial Sites Sources Element

5.2.1 Background

Section 7 of the City's 2008 JURMP, titled Industrial and Commercial Component, requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by industrial owners and/or operators pursuant to City Code to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. The City uses a variety of ways to educate and ensure that BMPs are implemented at industrial and commercial facilities, including dissemination of the City's industrial and commercial BMP manuals, site inspections and enforcement.

5.2.2 Source Characterization

The City annually updates its watershed-based industrial/commercial inventory which contains the name, address, and description of all commercial and industrial sites within its jurisdiction that could contribute a significant pollutant load to the MS4, regardless of site ownership.

The commercial inventory list (Attachment 5-A) and the industrial inventory list (Attachment 5-B) are updates to the inventories submitted with the 2008 JURMP and the FY 2010-2011 annual report. The attached inventory was updated to include changes from the FY 2011-2012 inspections and will be used for the FY 2012-2013 inspections. This table does not include mobile businesses that have City of Oceanside business licenses. See section 5.3 of this report for mobile business information. The FY 2011-2012 inventory was provided in the FY 2010-2011 Annual Report and was utilized for inspections during FY 2011-12. In the City there were a total of 1543 Industrial and Commercial businesses that were determined to have a potential storm water pollution threat. See Tables 5-2 and 5-3 below for a summary of the number of industrial and commercial businesses respectfully inventoried in the City according to watershed location.

Table 5-2. Industrial Businesses in the City by Watershed at beginning of FY 2011-12.

Watershed	Number of Industrial Business		
	2009-10 Inventory	2010-11 Inventory	2011-12 Inventory
San Luis Rey	15	14	15
Loma Alta	27	22	12
Buena Vista	0	0	0
Agua Hedionda	0	0	0
Total	**42**	**36**	**27**

Table 5-3. Commercial Businesses in the City by Watershed at beginning of FY 2011-12.

Watershed	Number of Commercial Business		
	2009-10 Inventory	2010-11 Inventory	2011-12 Inventory
San Luis Rey & Harbor	926	885	575
Loma Alta	1056	732	660
Buena Vista	485	267	268
Agua Hedionda	31	7	13
Not Verified	0	0	0
Total	**2498**	**1891**	**1516**

Based on the 2011-12 updated inventory, the City contains approximately 27 industrial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-4 provides a summary of the prioritization for industrial businesses.

Table 5-4. Industrial Businesses in the City by Priority.

Priority	Number of Industrial Business
High	15
Medium	6
Low	6
Total	**27**

Based on the 2011-12 updated inventory, the City contains approximately 1516 commercial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-5 provides a summary of the prioritization for commercial businesses.

During the 2011-2012 reporting year, the City of Oceanside's Clean Water Program performed a thorough review of its Low Priority commercial businesses to determine their applicability for retention in the watershed-based inventory based on the permit criteria. These Low Priority sites were reevaluated to determine if they (a): fit into one of the commercial sites/sources categories as specified in Section D.3.b.(1)(a) of the Municipal Permit; and (b): could potentially contribute a significant pollutant load to the MS4. As a result of this review, Clean Water Program staff identified 901 Low Priority commercial businesses that were not applicable for inclusion in the City's watershed-based inventory and were thus removed.

Table 5-5. Commercial Businesses in the City by Priority.

Priority	Number of Commercial Business
High	472
Medium	110
Low	934
Total	**1516**

5.2.3 Best Management Practice Requirements

BMP Manuals

Two manuals originally developed in 2001, *Industrial Urban Runoff Requirements Manual* and *Commercial Urban Runoff Requirements Manual*, detail the requirements of industrial and commercial businesses for compliance with the City's Urban Runoff Management and Discharge Control Regulations. In order to ensure industrial and commercial owners and operators are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for industrial and commercial areas and activities located within the City are specified in these two manuals.

The manuals were first produced in FY 2001-02 as a result of requirements under Municipal Permit Order No. 2001-01 and were revised in 2004 to include additional state requirements. These manuals were again reviewed and revised during the 2007-08 reporting period to ensure compliance with the new Municipal Permit Order No. R9-2007-0001. Main changes included the addition of categories and a list of specific BMPs for those industrial and commercial activities. Inspections, enforcement, reporting and the definitions have not been changed. See this section of the 2007-08 report for a list of changes to both the industrial and commercial manuals.

The City conducted efforts to ensure industrial and commercial business owners and/or operators have received a copy of the Industrial Manual either through an annual inspection or a response to a complaint or concern reported through the Urban Runoff Hotline. In addition, copies of the Industrial Manual are available on the Clean Water Program website.

5.2.4 Program Implementation

Annual inspections of commercial and industrial businesses are conducted by Clean Water Program inspectors and Code Enforcement officers to ensure that applicable pollution prevention activities are implemented by industrial and commercial business owners and/or operators. In addition, inspections are conducted based on calls received on the Urban Runoff Hotline. All industrial and commercial businesses visited, through the annual inspection program or by complaint calls acknowledged on the Hotline, receive follow-up visits until the industrial business is deemed in-compliance with City Code. All documentation pertaining to site visits are kept on file with the City. City staff conducted a total of 632 site inspections during the FY 2011-2012 reporting year, which included 555 initial site visits and 62 follow-up inspections. Of the initial site visits, 15 were industrial businesses, 528 were commercial businesses (including eating and drinking establishments) and 12 were nursery or greenhouse businesses.

5.2.4.1 Inspections of Industrial Businesses

Inspections of industrial businesses are conducted by designated Clean Water Program Inspectors and Code Enforcement personnel. Inspections are tracked using two tracking software programs, Lucity (previously GBA) and TRAKiT, a permitting software by CRW Systems, Inc. Inspectors utilized a Commercial and Industrial businesses inspection form that incorporates fields customized in the Lucity database to address all inspection components required under the permit. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Completion of site inspections for all industrial businesses during the reporting period.

- Completion of 15 required annual inspections of High Priority industrial businesses during the reporting period.
- Completion of 3 follow-up visits either in response to the initial inspection or response to a complaint.
- Dissemination of the Industrial Manual to help industrial owners and/or operators be aware of the City Code requirements for BMP implementation, and information on applicable BMPs for specific industrial businesses and activities.
- Ensuring proper and continued training of the Code Enforcement officers and Clean Water Program compliance inspectors dedicated to the Clean Water Program.

5.2.4.2 Enforcement of Industrial Businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for enforcement of ordinances at an industrial site. This program was designed in accordance with part D.3.b.(3) of Municipal Permit Order 2007-0001. There was no enforcement action required for Industrial businesses during this reporting period.

5.2.4.3 Inspections of Commercial businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for conducting inspections of commercial businesses. This program was developed and implemented in accordance with part D.3.b.(3) of the Municipal Permit Order 2007-0001. As detailed in the JURMP, inspections of High Priority commercial businesses are inspected annually. At least 25 percent of Medium and Low Priority commercial businesses will be inspected based largely on their perceived potential to contribute pollutants of concern for local receiving water bodies. Some inspections are initiated in response to a public complaint, a municipal staff report, an illicit discharge source investigation, or as a follow up to a previous inspection.

The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Two hundred ninety seven (297) eating and drinking establishments were inspected at least once for the proper implementation and maintenance of storm water BMPs and grease control devices. The inspector forwarded all facilities that were not in-compliance with storm water regulations to Code Enforcement Officers.
- One hundred sixty eight (168) inspections of High Priority commercial businesses were inspected, excluding restaurants and agricultural operations.
- Fifty one (51) inspections of Medium and Low priority commercial businesses were inspected, excluding restaurants and agricultural operations.
- Twelve (12) inspections of nursery and greenhouse operations within the City of Oceanside were conducted for compliance with urban runoff regulations specified in Chapter 40 of the City Code.
- Ensuring proper and continuing training of the Code Enforcement Officers and Clean Water Program inspectors dedicated to the Clean Water Program.

During the FY 2011-2012 reporting period, all High Priority eating and drinking establishments were inspected for compliance with the City's urban runoff regulations and adequate implementation and maintenance of BMPs. There were 292 High Priority eating & drinking establishment inspections conducted by CWP inspectors.

When CWP Inspectors and Code Enforcement Officers conduct inspections at High Priority areas, they target the entire commercial/industrial complex, because these areas often contain a mix of industrial and commercial operations. Rather than just focus on the High Priority businesses located in these areas, CWP Inspectors and Code Enforcement officers inspect all businesses in the complex to ensure owners and/or operators understand their BMP requirements and can work collaboratively with their neighbors to implement BMPs or solve drainage problems.

Code Enforcement officers inspected 12 nursery and greenhouse operations. The inventory of operating nurseries and greenhouses was declining in years prior to FY 2011-12. During this reporting period, the number of nursery and greenhouse operations did not change. These sites, along with the larger agricultural facilities that are annually inspected by the County of San Diego Agriculture, Weights and Measures Department, and are visited several times a year by City staff due to the evolving nature of their business. With constant plowing and crop rotation, CWP staff not only complete annual inspections, but also complete a pre-rain event inspection and visit the agricultural areas frequently during the rainy season as well as during rain events. The City maintains a cooperative relationship with the U.S. Department of Agriculture Natural Resources Conservation District (NRCS) for assisting the agricultural community in Oceanside in design and implementation of BMPs.

5.2.4.4 Enforcement of Commercial Businesses

After the second inspection visit, all but 2 commercial businesses were in compliance. These two commercial businesses were referred to the Code Enforcement Division. Code Enforcement (CE) conducted an inspection following the referral date, upon which the owner/operator was requested to correct the issue. These two establishments were in compliance on the Code Enforcement inspection date and no additional enforcement action was taken. See Table 5-6 below for inspection information on these two businesses.

Table 5-6. Code Enforcement action for Commercial Businesses.

Business Name	Principal Products Services	1st Inspec. Date	Corrective Action Needed	2nd Inspec. Date	Corrective Action Needed	Referred to CE Date	Code Enforcement Inspection Date	Status
Q Restaurant	Restaurant	3/1/12	Proper storage of material & kitchen grease	3/9/12	Proper storage of material & kitchen grease	3/9/12	3/14/12	IC

IC In Compliance

5.2.4.5 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of noncompliant sites in the City that are determined to pose a threat to human or environmental health. Oral notification is required

within 24 hours of the discovery of noncompliance and a written report should be submitted to the RWQCB within five days of the incident. During this reporting period there were no industrial or commercial businesses reported to the RWQCB, as all came into compliance after follow-up inspections.

5.2.5 Stationary Industrial and Commercial Sites Sources Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

5.3 Mobile Sources Element

5.3.1 Background

Due to the lack of a stationary location for proper disposal of potentially hazardous liquids and materials, there is a major area of concern about where mobile businesses discharge water used in their line of work. Due to the nature of their activities, mobile businesses will continue to be regulated differently than other businesses. Mobile businesses can be difficult to identify because they may not have a City business license, they go out of business on a relatively regular basis and, though they may have a home base, they can cross jurisdictional lines to operate their business. For these reasons, regular inspections of mobile businesses are challenging and time consuming.

5.3.2 Source Characterization

Mobile businesses known to operate within the City's jurisdiction are tracked via an online database, the San Diego County Regional Copermittee Database (http://mob.envirospect.org/rbf101.aspx) that contains business contact information and runoff violation records for each business, if applicable. During this reporting period the City of Oceanside made additions to this online inventory in conjunction with the format agreed upon by the San Diego County Regional Copermittees.

The following business types are addressed by the mobile sources element of the City's industrial and commercial program:

- Mobile automobile or other vehicle washing
- Pest control services
- Mobile carpet, drape or furniture cleaning
- Mobile construction trades
  - Painting and coating
  - Cement mixing or cutting
  - Masonry
  - Other contractors
- Landscaping
- Pool and fountain cleaning
- Power washing services

Because not all mobile businesses have obtained business licenses in the City or have a base of operation in the City, the City expects that a continual process of refining and updating the

online inventory will be needed. Sources for such inventory updates will include reported incidents or violations, general observations by City staff, and available business licenses.

5.3.3 Best Management Practice Requirements

The City updated its Commercial Urban Runoff Requirements Manual during the 2007-08 reporting period with information on the required BMPs for both mobile and stationary sources. This updated manual can be referenced in Appendix C of the City's 2008 JURMP. One example of a BMP included in the updated manual is for outdoor mobile vehicle detailing, the BMP explains how to capture and contain the rinse water so that it does not enter the storm drain system. Regardless of where the activity occurs, the City categorically prohibits illegal discharges from mobile businesses.

5.3.4 Program Implementation

5.3.4.1 Education Outreach

Because a specific element of the industrial and commercial program for mobile businesses is being newly developed, it is anticipated that some mobile businesses are not aware of storm water requirements and that education will need to be a significant portion of the program. During the FY 2009-10 reporting period Mobile Business education materials were developed by the Regional Industrial Commercial Workgroup of the San Diego County Copermittees. The City of Oceanside sent these educational materials to the owner/operator of each of the businesses on the 2008 JURMP Mobile Business Inventory.

5.3.4.2 Inter-Jurisdictional Cooperation

The City of Oceanside is participating in the Regional Industrial Commercial Sources workgroup which developed a plan during FY 2009-10 to educate mobile businesses about proper BMPs and protection of water quality. Details of this task can be found in the Regional Urban Runoff Management Program report sent to the RWQCB in January 2012. A complete report on the activities of this workgroup for the current reporting period will be included in the Regional Urban Runoff Management Program report due to the RWQCB in January 2013.

5.3.4.3 Staff Training

Code Enforcement Division Officers and Clean Water Program Compliance Inspectors are responsible for conducting storm water compliance inspections and enforcement of mobile sources. Officers and inspectors are trained annually on inspection and enforcement procedures and BMP implementation as they relate to mobile businesses. City staff is encouraged to report potential illegal discharges from mobile businesses when working in the City to the storm water hotline.

5.3.4.4 Inspections

During this reporting period, inspection of mobile businesses was conducted on an as needed basis. The most common triggers for these inspections were from incident reports received over the Urban Runoff Hotline and direct visual observations by City staff.

5.3.4.5 Enforcement

During this reporting period Code Enforcement officers did respond to complaint calls regarding mobile businesses that were allowing water to run uncontained into streets, parking lots and the City's storm drain system. During the site visit, depending on the nature of the complaint, Code Enforcement officers issued notices to comply and/or educated the operator on the proper BMPs that should be in place during their operation, and provided them with the power washing brochure.

5.4 Industrial and Commercial Component Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

5.5 Program Review and Modification

During the previous reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water, Sewer, and the Clean Water Program, continued implementing the Lucity database software (formerly GBA Master Series). The Development Services Department, which includes Code Enforcement, Building, and Engineering, has been utilizing TRAKiT permitting software (CRW Systems, Inc.) to track storm water inspection and enforcement records.

During this reporting period the Clean Water Program reviewed the effectiveness of the new tracking tools and implemented improvements in the use of the system to better track storm water related data.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 RESIDENTIAL COMPONENT

6.1 Introduction

A total of 39 percent of the City's 26,983 acres is designated as either multi- or single-family residential according to the San Diego Association of Governments (SANDAG). Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters in and around the City. The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the MEP.

This section documents the activities conducted by the City of Oceanside during the 2011-2012 reporting period to meet the requirements of Section D.3.c of the Municipal Permit (Table 6-1). The City continued the implementation of an enforcement program that responds to and monitors potential violation calls received on the Oceanside Urban Runoff Hotline (Hotline).

Table 6-1. Order 2007-0001 Compliance Summary.

D.3.c Residential Program	See Section 6 of this Annual Report
J.3.a.(3)(e).i High threat residential areas	See Section 6.2 of this Annual Report
J.3.a.(3)(e).ii Designated BMPs were implemented	See Section 6.3 of this Annual Report
J.3.a.(3)(e).iii Proper disposal of used oil and HHW	See Section 6.4.2 of this Annual Report
J.3.a.(3)(e).iv Amounts of HHW collected	See Section 6.4.2 of this Annual Report
J.3.a.(3)(e).v Evaluation of methods used for oversight of residential areas	See Section 6.2.1 of this Annual Report
J.3.a.(3)(e).vi Violations and enforcement actions	See Section 6.4.7 of this Annual Report
J.3.a.(3)(e).vii Collaboration on implementation of Regional Residential Education Program	See Section 6.5 of this Annual Report
J.3.a.(3)(e).viii Notable Activities	See Section 6.1.1 and 6.3.1 of this Annual Report

The City also utilizes its revised Urban Runoff Requirements Manual for Residents (Residential Manual) that contains BMP requirements and related guidance information for residents of the City. This manual has been made available to residents through the City's Clean Water Program Website. Changes to the Residential Manual were made during the 2007-08 reporting period.

6.1.1 Notable Activities

- The City continues to gather data on the trash trap located at the Oceanside Municipal Golf Course. See section 6.3.1 below for more details on these prioritized residential areas and the activities implemented to address the specific pollutant.

- The City of Oceanside has created a new *Green Oceanside Newsletter* which replaces the Oceanside Clean Water Program Newsletter. The *Green Oceanside Newsletter* includes storm water related information as well as other environmental-related topics such as solid waste and recycling and water use efficiency. See section 6.4.3 for more information about this newsletter.

6.2 Source Characterization

Residential neighborhoods can be the source of a variety of pollutants depending on the activities conducted in residentially developed areas. Pursuant to Section D.3.c.(1) of the Permit Order 2007-0001, the City identified High Priority Residential Areas and Activities in the JURMP. The following residential activities have been identified by the City to be High Priority Activities:

- Automobile or boat repair and maintenance.
- Automobile washing.
- Automobile parking.
- Home and garden care activities and product use.
- Disposal of household hazardous waste.
- Disposal of pet waste.
- Disposal of green waste.
- Any other residential activity that contributes a significant pollutant load to the MS4.
- Power washing activity (both do-it-yourself and contracting services).

The City has also identified residential areas of High Priority. These areas include the following:

- Any residential area tributary to a CWA section 303(d) impaired water body, where the residence generates pollutants for which the water body is impaired
- Any residential area within or directly adjacent to or discharging directly to a coastal lagoon or other receiving waters within an ESA

6.2.1 Evaluation of methods for oversight of residential areas and activities

The Public Works storm drain maintenance staff has the best opportunity to inform the Clean Water Program staff about drainage areas that have a lot of trash and debris. On a regular basis the CWP staff request from public works maintenance staff areas within the city that are generating pollutants of concern for two reasons:

1. To identify areas within the City where the public can become involved to assist in removing trash and debris from the specific areas where debris has collected, and
2. To target the residential areas for future outreach.

Reports by citizens and City staff are additional sources of identifying, assessing and prioritizing residential areas. See section 6.3.1 below for more specific information on the tasks implemented in these areas to address the pollutant sources.

6.3 Best Management Practice Requirements

The City's JURMP Residential Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by residents pursuant to City Code. In order to ensure residents are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention

methods for residential areas and activities, located within the City, are specified in the Residential Manual. This manual is found in Appendix C of the City's 2008 JURMP.

Education and outreach aimed at residents helps facilitate the implementation of BMPs, including pollution prevention methods. A detailed discussion of the City's education program can be found later in Section 10 of the 2008 JURMP. Details on education outreach to the residential community can be found in Sections 8 and 9 of this annual report.

6.3.1 BMP Implementation

Structural BMP to address debris accumulation along Mesa Drive

In FY 2008-09 Public Works staff identified debris accumulation after storm events in a section of MS4 where Garrison Creek daylights adjacent to Mesa Drive in the Loma Alta Watershed. The debris consists of tennis and sports balls, plastic drink bottles and organic debris. Four storm drain inlets along Mesa Drive were identified as the primary collection point of the debris.

During the 2010-11 reporting period the City of Oceanside Engineering Division allocated funding to install eight Automatic Retractable Screens (ARS) on four storm drain inlets to prevent sports balls, sports drink bottles, organic debris and other material to enter the storm drain prior to street sweeping. The devices allow the street sweeper to retrieve this material before it can enter the storm drain system and eventually into the daylighted creek area. During this reporting period a reduction in debris was noted in the daylighted area of Garrison Creek possibly associated with the installation of the ARS.

Figure 6.1 Automatic Retractable Screens installed at one storm drain inlet prior to rain event and after rain event.

Trash Trap at the Oceanside Municipal Golf Course

During FY 2008-09 staff at the City of Oceanside Municipal Golf Course had noted that trash and debris was collecting in Pilgrim Creek, which runs in the middle of the golf course, after storm events. The source of the trash and debris was identified as a residential area just south of the golf course across Douglas Drive. In March 2009 City staff installed a trash trap downstream of this priority residential area and upstream of the municipal golf course in the open channel that parallels the driving range. The goal of this trap was to capture trash and organic debris coming from the residential neighborhood before it enters the golf course and Pilgrim Creek. During this reporting period approximately 200 pounds of trash and organic debris were

removed from this device. Photos of the trash trap were provided in Section 6.3.1 of the FY 2008-09 JURMP Annual Report.

6.4 Program Implementation

6.4.1 Outreach

The most efficient way to encourage pollution prevention and BMP implementation and to restrict polluting practices is to educate residents on how to carry out their daily activities in ways that have the smallest potentials to discharge pollutants to the MS4. During this reporting period the Clean Water Program provided educational information and training to residents, in the following ways:

- Cleanup events
- Booths at public events
- Public television notices
- Presentations
- Website
- Email notifications
- Residential BMP Manual

The Clean Water Program promotes these events through the use of email distribution lists. Over 300 people receive environmentally-related event notifications via email. Further outreach program details for this reporting period can be found in the Education and Public Participation, Section 8 and Section 9, of this document.

6.4.2 Household Hazardous Waste

The City continued to facilitate the proper management and disposal of used motor oil, toxic materials, and all other HHW to the residential audience. Residents have the opportunity to take used motor oil to approximately 12 private auto parts stores within the jurisdiction. In addition Waste Management, Inc., the City's franchise trash hauler, accepts HHW at its Oceanside facility. Residents may bring up to five gallons per day of used oil, used oil filters, and anti-freeze, Monday through Friday from 8 a.m. to 4 p.m. without an appointment. HHW may be brought on Saturdays by appointment only between 9 a.m. and 1 p.m. Details of the locations mentioned above can be found in Section 8.4.2 of the City's 2008 JURMP.

During the 2011-2012 reporting period, 3,098 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 338 tons of hazardous materials (including universal waste) during the reporting period.

As part of Oceanside Green Week (see Section 9.1.6 for more details) a free electronic waste (E-Waste) drop-off event, open to the public, was held simultaneously during the Green Fair, thus providing a much needed service to the community, as participants enjoyed the benefit and entertainment of the fair itself. In most communities, disposing of all types of E-Waste can prove costly, which oftentimes discourages the proper disposal of these materials. Via a partnership/sponsorship by 1-800-GOT-JUNK?, the City was able to provide this service free of charge to anyone who wished to participate in the Green Fair. At this event there were over 10

tons of universal waste and 4,980 pounds of metal and wire collected for proper recycling and disposal.

Furthermore, as part of the City's collection program, a 750-gallon used oil collection receptacle is provided at the City's harbor. This receptacle is available for residents who live on the boats in the Marina as well as for those boat owners and operators who rent a harbor slip to conveniently recycle the used oil and used oil filters generated from the boats. During the reporting period 1,237 gallons of used oil were collected and recycled. In addition one 55-gallon barrels of used oil filters were collected from Harbor residents.

6.4.3 Green Oceanside Newsletters

During this reporting period the City of Oceanside created the new *Green Oceanside Newsletter*. This newsletter will be a replacement to the *City of Oceanside Clean Water Program* newsletter. Articles in the Green Oceanside Newsletter will address storm water as well as other environmental topics such as water use efficiency and solid waste and recycling. Green Oceanside Newsletters are mailed with the utility bill to over 42,000 homes in the City of Oceanside.

During this reporting period one Green Oceanside Newsletter was distributed to over 42,000 households. An overview of topics in newsletter is listed below. A copy of this newsletter is included in Attachment 6-A of this annual report.

Fall 2011: Green Oceanside Newsletter

- Zero Waste – Overview of Oceanside's Zero waste Plan
- Day Without A Disposable Bag – encouraging use of reusable tote bags instead of single use plastic bags
- San Luis Rey River Cleanup event information
- Free Water Saving Resources

6.4.4 Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. Those households in the City who have access to the KOCT local channel are able to view this show. During this reporting period the Clean Water Program provided seven three-minute presentations. Table 6-2 provides an overview of the topics covered during each taping.

Table 6-2. Summary of 2011-12 Oceanside Update Topics by Month.

Date	Topic Discussed
September 2011	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
October 2011	San Luis Rey River Cleanup Event, Storm Water Hotline
November 2011	Fertilize After It Rains and other fertilizer and pesticide tips to protect water quality
February 2012	Ten simple ways to protect water quality
March 2012	Green Week events and Loma Alta Creek/Beach Cleanup

6.4.5 Website

The Clean Water Program maintains its own Website providing convenient electronic access to program information for residents and the general public. This Website provides the opportunity to learn about storm water pollution, the sources of the pollution, and what can be done to eliminate these pollutants from entering the storm drain system, thereby improving water quality in receiving waters.

During this reporting period the City of Oceanside revised and updated the City website in its entirety. The original Clean Water Program URL, www.oceansidecleanwaterprogram.org now redirects users to the new main Clean Water Program webpage URL: http://www.ci.oceanside.ca.us/gov/water/clean/default.asp.

There were 2,629 hits to the Clean Water Program website. This is a significant reduction in website hits that could be due to several factors. The tracking of hits to the original URL were not trackable due to the URL changes. During the next reporting period tracking of the website hits will be addressed so that the numbers reflect actual hits on the Clean Water Program main webpage. The original URL will continue to be used on outreach materials and promotional items since it is easier for the public to remember.

Specific web pages available on the Clean Water Program Website are as follows:

- Commercial Business
- Development
- Events
- Industrial Business
- Just for Kids
- Water Quality Laws
- Other Websites
- Landslide Prevention
- Clean Water Projects
- Report Violations
- Residential/General
- Just for Educators
- Waterbodies

The residential web page offers the following information:

- An overview of pollutants in receiving waters and how those pollutants get there
- The difference between the storm drain system and the sewer system
- Links to pollutant factsheets in PDF format
- Links to brochures in PDF format
- Links to past Clean Water Program Newsletters in PDF format
- Link to the Residential Urban Runoff Requirements Manual

The Website address is disseminated to the public in a variety of ways:

- Listed in all Green Oceanside Newsletters
- Mentioned during each Oceanside Update Taping
- Listed on promotional items
- Listed on Clean Water Program staff business cards
- Listed in email notifications for upcoming events

6.4.6 Hotline

The public and City employees can report potential storm water violations that could pollute the City's receiving waters through the Oceanside Urban Runoff Hotline. During this reporting period the Urban Runoff Hotline number changed to 760-435-4500. The City of Oceanside made a decision to create a centralized call center for all public calls and inquiries to the City. When calls are received through the call center, customer service representatives assess the type of call, enter information into a database called Public Stuff, and then forward the information entered into the database to the appropriate City department to address. This system is ideal in that all calls made to the call center are tracked in the Public Stuff database. Storm water and urban runoff related calls are forwarded to administrative staff in the Water Utilities Department. Thus all storm water related calls are tracked and easily queried.

Urban Runoff Hotline calls received by the Call Center are entered into a database. The information is then sent to an office specialist in the water utilities department who then determines based on the nature of the call which staff person to forward the call to. For storm water related calls the information is disseminated to the Clean Water Program inspectors, Clean Water Program administrative staff or code enforcement staff.

Promotion of the new hotline phone number began during this reporting period. All outreach materials and promotional items promote the new hotline phone number. If someone references an older education piece or promotional item with the old hotline umber (760-435-5800) the phone call will automatically roll over to the new hotline number without the caller knowing.

The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, on the City's Clean Water Program webpage placement on newsletters, click-message pens, pencils, and other promotional give-away items.

During the reporting period, a total of 162 storm water related calls were received through the Urban Runoff Hotline. Of the 162 Urban Runoff Hotline calls 137 were received by residents concerning potential urban runoff violations. There were also 25 referrals from City staff.

6.4.7 Enforcement

Section 8.4.4 of the JURMP describes the City's program for enforcement of ordinances in residential areas. The major activities and accomplishments undertaken by the City during this reporting period included:

- Code Enforcement responded to, 114 urban runoff related cases, related to residential areas and activities, during the reporting period.
- An accounting of all residential enforcement actions, taken by Code Enforcement Officers, is shown in Table 6-3.

Table 6-3. Accounting of Residential Code Enforcement Actions for the 2011-2012 Reporting Year.

Action Type	Follow-up Phone Call	Follow-up Site Visit	Follow-up Office Visit	Written Notice	Letter Sent	Admin. Warning	Administrative Monetary Citation	Referral to Other Dept	Stop Work Notice
of Actions	162	150	3	0	44	15	0	0	0

6.5 Collaboration to implement Regional Residential Education Program

During this reporting period the County of San Diego took over as chair of the Education and Residential Sources Workgroup. The City of Oceanside was an active participant in the ERS workgroup during this reporting period. The ERS workgroup was established as one of several workgroups under the Memorandum of Understanding amongst the San Diego County Copermittees (Copermittees). The chair of each of these workgroups presides over and provides leadership and direction to the workgroup. This includes serving as the point of contact to external entities, soliciting group input, developing meeting content, facilitating meetings, and coordinating with the Secretary to finalize work products for distribution to the workgroup.

Details of the activities of the ERS Workgroup will be provided in the submittal of the annual report of the Regional Urban Runoff Management Program due to the RWQCB in January 2013.

6.6 Residential Component Effectiveness Assessment

See Section 11.0 for an assessment of the education component of the City's JURMP.

6.7 Program Review and Modification

During the FY 2009-10 reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water, Sewer, and the Clean Water Program, continued utilizing Lucity software (previously called the GBA Masters Series). The Development Services Department, which includes Building and Engineering, and the Neighborhood Services Department, which includes Code Enforcement, continued to utilize the TRAKiT, permitting software by CRW Systems, Inc.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

This section is intended to document the activities conducted by the City of Oceanside during the 2011-2012 reporting period to manage illicit discharges and meet the requirements of Sections D.4 and J.3.a.(3)(f) of the 2007 Municipal Permit.

In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2011-12 Illicit Discharge Detection and Elimination Component, including the 2011 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2012.

THIS PAGE INTENTIONALLY LEFT BLANK

8.0 EDUCATION COMPONENT

8.1 Introduction

Storm water education is an important step in working towards improving receiving water quality both locally and regionally. By increasing public awareness and encouraging a change in both the attitude and the behavior of the general public and the regulated community, the City may reduce or eliminate storm water pollution caused by common daily activities.

This section documents the activities conducted by the City of Oceanside during the 2011-2012 reporting period to meet the requirements of Section D.3.g of the Municipal Permit (Table 8-1). The City continued the implementation of an education outreach program for municipal staff, industrial and commercial businesses, and the general public.

Table 8-8-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(g).i Description of education efforts	See Section 8.0 of this Annual Report
J.3.a.(3)(g).ii Underserved target audiences	See Section 8.3.1 of this Annual Report
J.3.a.(3)(g).iii Education of municipal employees	See Section 8.2 of this Annual Report
J.3.a.(3)(g).iv Education of construction community	See Section 8.4 of this Annual Report
J.3.a.(3)(g).v City education efforts for residents, general public and school children	See Section 8.3 of this Annual Report

The City of Oceanside provides a comprehensive storm water education program to achieve the following objectives:

- Measurably increase the knowledge of target communities regarding MS4s, impacts of urban runoff on receiving waters, and BMP solutions for the target audience.
- Measurably change the behavior of target communities, and thereby reduce pollutant releases to MS4s and the environment.

Educational programs and activities are tailored to meet the needs of the following target audiences:

- Municipal departments and personnel.
- Construction site owners and developers.
- Industrial and commercial owners and operators.
- Residential community, general public, and school children.
- “Underserved” target audiences, where applicable.

Many education outreach efforts are conducted on an ongoing basis, such as direct interaction during inspections, pre-construction meetings, or when fielding calls from the City’s Urban Runoff Hotline. Educational materials are made available throughout the year at special events and at the City’s Water Utilities Department counter. Targeted mailings, focused training

sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

8.2 Staff Training Element

City personnel are the eyes and ears of the City, and can provide valuable information on storm water related discharges and potential violations that may be occurring within the City. The City presents general storm water educational content, which is described in Section 10.3 of the 2008 JURMP, to all City departments. The City primarily educates its municipal personnel through on-line training, on-the-job training sessions, and the Municipal BMP Manual (Appendix C of the 2008 JURMP). Customized training programs are designed for personnel targeting fieldwork-related departments such as storm water compliance inspectors, building/engineering inspectors, public works, planning department staff, and park and recreation personnel. General informational storm water training sessions are provided for municipal personnel in other departments to review storm water regulations in the City, impacts of urban runoff and BMPs to be implemented to reduce or eliminate runoff.

During this reporting period eleven (11) City departments or divisions received training on storm water related issues. A total of 92 City staff attended one or more of the following storm water trainings:

- On-line training program (details below)
- Quarterly staff meeting of the water utilities department
- Land use development trainings (see Table 8-2 below)

Online Training

During this reporting period online employee training was initiated for ease of implementation for both the Clean Water Program Outreach Coordinator and the staff themselves. On-line training offers employees the opportunity to watch the video and take the pre- and post-quiz at a time that is opportune for them.

During this reporting period the City of Oceanside Clean Water Program purchased a new storm water training video through Excal Visual titled "*Rain Check Stormwater Pollution Prevention for MS4s Employee Training*". The Clean Water Program has used this company's training videos in the previous five reporting periods with great success. This new video provides additional information on specific BMPs that are directly related to tasks that City of Oceanside employees conduct during their regular work day. It also offers City Employees a new educational video after seeing the same video for several years.

The new video covers a national menu of BMPs that are often important in training municipal employees. There are three two video modules: Basic BMPs and Specialty BMPs. All employees who watched this video online watched the Basic BMPs module. Topics in this module are bulleted below:

- Spill Prevention and Good Housekeeping
- Spill Control Response
- Vehicle Fueling, equipment maintenance and washing
- Materials Management
- Waste Management

In addition some employees were assigned to watch the Specialty BMPs module depending on the nature of the work they do on a daily basis. Topics in this module are bulleted below:

- BMPs for Building Maintenance Employees
- BMPs for Street, Road & Bridge Employees
- BMPs for Parks and Open Space Employees
- BMPs for Marina, Harbor or Port Employees

The new video program also includes a quiz. Prior to the start of the on-line training session employees were provided with a multiple choice quiz to establish a baseline of knowledge for that individual. The quiz also served as the sign-in sheet for the individual attending each training session. After the completion of the video the same multiple choice quiz was given to each participant. Seventy-eight (78) municipal employees took both a pre- and post-quiz related to the on-line video. For more information on the effectiveness of these training programs based on the pre- and post-quiz scores see Section 11.0 of this report.

Quarterly Staff Meeting of the Water Utilities Department

The Clean Water Program had a unique opportunity to conduct a presentation during a Water Utilities Department quarterly meeting on December 7, 2011. Staff who attended this meeting are from all divisions in the water department. The Clean Water Program staff provided an overview of the program's goals to improve water quality in the rivers creeks and streams, the flow chart of regulatory agencies and their roles in implementing municipal storm water permits, and the basic BMPs that City employees should follow that set an example for others living and working in the City. Sixty eight (68) employees attended this quarterly meeting and saw the presentation.

8.2.1 Other Staff Trainings

Departments or Divisions that received storm water related trainings during this reporting period was as follows:

- Water Utilities – Meter Services
- Water Utilities Sewer Division – Collections
- Water Utilities Sewer Division – Plant Maintenance
- Water Utilities – sewer Plant Operators
- Water Utilities – administrative Staff
- Water Utilities – Water Distribution (potable)
- Water Utilities – Reverse Osmosis and Water Treatment Plant
- Neighborhood Services Department – Engineering Division
- Neighborhood Services Department – Code Enforcement Division

During this reporting period staff from the Engineering Department and one Code Enforcement officer that oversees Treatment Control BMP inspections attended various land use development trainings. See Table 8-2 below for a summary of these trainings.

Table 8-2. Land-use related development trainings.

Department Division	Date	Number in Attendance	Topic
Engineering Review	July 26, 2011	4	Hydrology/SWMP Review
Engineering Review	August 1, 2011	1	HMP Tools
Engineering Review	August 17, 2011	1	HMP SDHM
Engineering Review	August 17, 2011	2	CGP SMARTS

8.3 Educational Outreach Element

Residential areas make up a large portion of the land use in the City, and therefore even small pollutant discharges can be magnified significantly and have the potential to affect the quality of the receiving waters. Activities such as residential car washing and over irrigation are harmful to receiving water bodies by contributing pollutants such as heavy metals, detergents, and nutrients. Providing residents with appropriate educational materials may help to increase overall awareness, and encourage residents to change harmful behaviors and subsequently reduce the potential for pollutants to enter the storm drain system and reach receiving water bodies.

Media

The City of Oceanside has a unique opportunity to reach out to its residents because the City serves as the drinking water purveyor and the wastewater/sewer district. Utility bills are mailed monthly to residents for water services, sewer services, solid waste and recycling services as well as other services. The Clean Water Program takes advantage of this billing service by inserting a newsletter twice per year which has information on storm water related pollution prevention practices, opportunities for public involvement such as cleanup events, and other environmentally-related information.

Green Oceanside Newsletter
During this reporting period the Water Utilities Department created a new newsletter titled *Green Oceanside* that includes articles from various environmental programs and projects that the City manages and coordinates. Articles in the Fall 2011 issue addressed topics regarding storm water, water use efficiency, and solid waste and recycling. The Spring 2012 issue was focused on promoting annual Green Week 2012 events, a week of events that are coordinated by staff from the City's environmental programs. See section 9.1.5 for more information about Green Week 2012.

During this reporting period one *Green Oceanside* Newsletter was distributed to over 42,000 Oceanside households. A copy of this newsletters is included as Attachment 6-A to this annual report. An overview of topics in this two newsletters is as follows:

Fall 2011: Green Oceanside Newsletter
- Zero Waste – Overview of Oceanside's Zero waste Plan
- Day Without A Disposable Bag – encouraging use of reusable tote bags instead of single use plastic bags
- San Luis Rey River Cleanup event information
- Free Water Saving Resources

Also during this reporting period a flier promoting the Oceanside 2012 Green Week events was distributed to over 42,000 households. See Attachment 9-B for a copy of this flier. Below is a bulleted list of information included in the flier.

Spring 2012: Oceanside Green Week Flier – April 23 -29, 2012
- Environmental Film Festival
- Compost Workshops
- Green Oceanside Youth Art Contest
- Loma Alta Creek and Beach Cleanup event information
- E-waste drop-off event information
- Used Oil Filter Exchange event

Website
The City's Clean Water Program website also offers electronic copies of a variety of storm water fact sheets covering topics such as proper pesticide and fertilizer use, trash disposal, pet waste and lawn waste disposal, proper chlorine and other swimming pool chemical disposal, sedimentation, effects of soaps and detergents on receiving waters, and other storm water-related topics.

During this reporting period the City of Oceanside revised and updated the City website in its entirety. The original Clean Water Program URL, www.oceansidecleanwaterprogram.org now redirects users to the new main Clean Water Program webpage URL:
http://www.ci.oceanside.ca.us/gov/water/clean/default.asp.

There were 2,629 hits to the Clean Water Program website. This is a significant reduction in website hits that could be due to several factors. The tracking of hits to the original URL were

not trackable due to the URL changes. During the next reporting period tracking of the website hits will be addressed so that the numbers reflect actual hits on the Clean Water Program main webpage. Table 8-3 below provides a summary of the number of hits to the webpage. The original URL will continue to be used on outreach materials and promotional items since it is easier for the public to remember.

Table 8-3. Summary of Clean Water Program Webpage Hits.

Fiscal year	of Website Hits
2011-12	2,629
2010-11	72,086
2009-10	60,319
2008-09	35,647
2007-08	38,146
2006-07	45,267
2005-06	42,367

Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. During this reporting period the Clean Water Program will provided five three-minute presentations. Table 8-4 provides an overview of the topics covered during each taping.

Table 8-4. Summary of 2011-12 Oceanside Update Topics by Month

Date	Topic Discussed
September 2011	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
October 2011	San Luis Rey River Cleanup Event, Storm water hotline
November 2011	Fertilize After It Rains and other fertilizer and pesticide tips to protect water quality
February 2012	Ten simple ways to protect water quality
March 2012	Green Week events and Loma Alta Creek/Beach Cleanup

Community Events – Booths and Outreach Activities

The Clean Water Program staffed education outreach booths at several community events in Oceanside and north San Diego County. The Clean Water Program staff talked to residents, handed out educational materials, and responded to questions and concerns. Table 8-3 lists community events attended between July 2011 and June 2012 to encourage community participation and to educate participants of the effects of polluted urban runoff and storm water:

Table 8-5. 2011-12 Community Events.

Date	Event	Participants (Estimated)
9/24 and 25/2011	Oceanside Harbor Days	1000
12/17/2011	Day without a Bag	300
4/23 □29/12	Oceanside Green Week	500 at various events
4/28/12	Oceanside Green Fair	500

Primary School Education

Educating the City's youngest residents is important in two ways: ideally the good habits/behaviors learned will be carried into adulthood, and secondly, children may educate their families and friends around them with the information they have learned. Children are impressionable at a young age, and are therefore more likely to act upon the knowledge given to them now and throughout their life.

The City continued its outreach to school age children through the use of the watershed model during presentations. A total of 31 presentations were conducted reaching 734 primary school-age children and 37 adults.

High School Education

During this reporting period the City of Oceanside contracted with Solana Center for Environmental Innovation to provide a presentation to high school students about storm water and pollution prevention in local rivers, creeks, streams and the ocean. Mission Vista High School in Oceanside received this presentation. 250 students and 7 adults were in attendance at two presentations. Topics covered under this presentation included the following:

- What is storm water?
- Why is it a problem?
- The Great Pacific Garbage Patch
- Sources of storm water pollution
- ID sources of storm water pollution at your school and in your neighborhood

During this reporting period a total of 984 students and 42 adults received storm water related presentations in their classroom. Table 8-6 provides a list of groups and classrooms that were educated about storm water pollution prevention via these presentations.

Table 8-6. 2010-11 School Age Children Watershed Presentations.

Date	Group	Children	Adults

Splash Lab

The San Diego County Office of Education Splash Science Mobile Lab (Splash Lab) is a completely self-contained mobile laboratory brought to local schools to provide students with hands-on experience with the following resources:

- Watershed/storm drain model presentations
- GIS computer stations
- Water Conservation Station
- San Diego Estuary Station
- Microscopes - with live specimens!
- Chemistry experiments

- State of the art computers
- Cooperative learning skills

The curriculum is designed for grade levels 4-6 and is aligned with California Science Content Standards.

During this reporting period a total of 493 students from 16 classes at four schools received the Splash Lab with the costs covered by the City Water Utilities Department. See Table 8-7 below for information on the schools and number of students who participated in the programs.

Table 8-7. Schools using Splash Lab during FY 2011-12.

Date	School	Grade	Topic	Number Attended	Number of classes
9/27/2011	Mission Elementary	5	Splash Lab	88	4
10/13/2011	Ivey Ranch Elementary	4	Splash Lab	115	4

11/17/11	Libby Elementary	4-5	Splash Lab	146	4
Totals				**493**	**16**

Project SWELL (SWELL = Stewardship: Water Education for Lifelong Leadership)

The City continued to collaborate with San Diego CoastKeeper and the San Diego Unified School District (SDUSD) to customize and implement Project SWELL (Stewardship: Water Education for Lifelong Leadership), a water-based science curriculum, for different grade levels in the Oceanside Unified School District (OUSD). The City of Oceanside is currently implementing the 5th grade curriculum and will begin implementation of the 6th grade curriculum curing the next reporting period.

The Project SWELL curriculum will foster a sense of stewardship for our natural environment and help to empower and educate these future leaders of America to understand and improve the condition of San Diego's coast and waterways. Project SWELL balances environmental and scientific studies as a comprehensive and hands-on K-12 water quality and pollution prevention curricula. More information about this curriculum can be found at http://www.projectswell.org/. This curriculum provides students with knowledge of water resources in San Diego County and Oceanside, watershed functions, water conservation, the effects of polluted urban runoff, and how students can help prevent water pollution.

5th Grade

During this reporting period a Project SWELL Professional Development teacher training was conducted on January 31, 2012 for 5th grade level teachers. There were thirteen teachers in attendance from seven different elementary schools in the school district. A curriculum writer who developed the original 5th grade curriculum in conjunction with the City of San Diego and Coastkeeper conducted the teacher training. During the school year the City of Oceanside Clean Water Program staff collaborated with the science kit center to ensure that the materials specific to the Project SWELL lesson plan were included in the FOSS Science Kits. The City of Oceanside also renewed the licensing agreement with City of San Diego and Coastkeeper which extended the ability to use the curriculum in OUSD schools for five more years.

6th Grade

During this reporting period the City of Oceanside and the City of San Diego worked on finalizing the licensing agreement for the 6th grade lesson plans. During the next reporting period the City will work with the Oceanside Unified School District and Coastkeeper to begin implementation of the 6th grade curriculum. This curriculum focuses on earth science and students are expected to:

- Understand the definition of a watershed.
- Identify watersheds in the North San Diego County region.
- Understand the movement of water through North San Diego County watersheds.
- Understand pollution concerns and pollution prevention measures related to North San Diego County watersheds.

Over-Irrigation

Clean Water Inspectors continue to respond to and document over irrigation issues after receiving complaints from the general public or City staff. Inspectors investigated water sources and contacted property owners in person when possible or provided informational door hangers indicating the need to curtail overwatering or fix broken irrigation systems if applicable, as well as provided information to educate the public to use water efficiently. After responding to complaints, inspector's maintained electronic files of all complaints and revisited locations to make sure over irrigation had stopped. In problematic areas where overwatering was caused by many property owners, the entire area was notified by door hangers and/or letters informing the property owners the need to conserve water and avoid polluting the storm drain systems.

Water meter reader personnel are trained to document and respond to urban runoff and over-irrigation issues as they come across such activities during their normal activities. While in the field these personnel will enter the address location into a hand-held meter of a site that may have an urban runoff violation. These addresses are then compiled and given to the Clean Water Inspectors for follow-up. When possible, the water meter reader personnel will also leave door hangers and report incidents of urban runoff. Depending on the situation a meter shop personnel will visit the site or the Clean Water Inspector will follow-up.

Residential Car Washing

Residents continued to be encouraged to use professional car washes or to implement BMPs at their homes to prevent water produced by residential car washing from entering the storm water conveyance system.

Pick Up Your Pet Waste Campaign

The Pick Up Your Pet Waste Campaign along the San Luis Rey Recreation Trail (Trail) was initiated in FY 2008-09 to address the accumulation of dog waste along the Trail which travels adjacent to the San Luis Rey River on both the north and south sides. For more detailed information about this campaign please refer to Section 9.1.5 of this annual report.

Also during this reporting period the City of Oceanside installed signs along a walking trail that parallels Loma Alta Creek. The City of Oceanside was contacted by a local RV camp park that is located adjacent to this walking trail. The facility manager complained that there was dog waste left along the trail and requested the installation of "Pick Up Your Pet Waste" signs in the

vicinity of the trail. One sign was installed at the east and west end of the trail. See figures 8.1 and 8.2 below for photos of both signs.

Figure 8.1 Pet Waste Sign installed at west end of Loma Alta Creek Trail

Figure 8.2 Pet Waste Sign installed at east end of Loma Alta Creek Trail

8.3.1 Targeting Underserved Communities

Underserved communities are communities the City has determined may require increased educational efforts. The City targeted the following underserved communities and high-risk behaviors.

Mobile Businesses

Due to their nature, mobile businesses are typically not inspected during the routine industrial and commercial inspection program; thus the opportunity to regularly reach this target audience through inspections is not viable due to the mobility of the business. The City continued to use Code Enforcement to respond to complaint calls related to mobile businesses at which time Mobile Business BMP information was given to the operator.

As part of the regional outreach efforts implemented through the Industrial/Commercial Sources Workgroup, the City submitted their inventory in FY 2008-09 to the Industrial/Commercial Workgroup for the development of a regional inventory of Mobile Businesses. This inventory was created in order to send information to the businesses about the minimum BMP requirements specific to Mobile businesses.

During the 2009-10 reporting period the City of Oceanside mailed “Required Minimum BMPs For Mobile Businesses” education materials to 34 Oceanside Mobile Businesses with current

business licenses. See Attachment 8-A of the 2009-10 Annual report for a copy of these materials. Of the 34 mailed only four were returned to the City.

Spanish-speaking population

The City will continue to target the large Spanish-speaking population in the City by offering a number of educational brochures and handouts, including the Green Wrench Guide and Integrated Pest Management tip cards in both English and Spanish. In addition there are posters available in Spanish for restaurants and automotive related businesses and are provided to these business where inspectors feel there is a need or upon request.

Nursery and Greenhouse Operations

Due to the amount of agricultural land use in the City, the City distributed a number of printed educational materials to agricultural/nursery/greenhouse site owners and operators. The City continues to provide educational materials, when needed, to nursery and greenhouse operations during annual inspections and on unannounced visits throughout the year.

Education Materials Distributed

Education outreach materials are provided to residents, the general public, and students which include information about urban runoff, water quality, BMPs, Clean Water Program projects, and the Urban Runoff Hotline number. These materials include brochures and promotional items that are distributed upon request and during community events where the Clean Water Program staffed a booth. No significant changes were made to any of the brochures during this reporting period. Copies of these brochures were submitted with previous annual reports. Table 8-8 lists the educational materials distributed during the 2011-2012 reporting period.

Table 8-8. Educational Brochures and Promotional Items Developed and/or Distributed.

Education Material	Description	Number Distributed
Educational Brochures		
Urban Runoff Guidelines for Residents Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from residential activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	45
Pollution Prevention Tips for Gardening Activities Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from gardening activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	30
Urban Runoff Guidelines for Commercial Businesses Brochure	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from commercial and industrial business activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	75

Education Material	Description	Number Distributed
Urban Runoff BMPs for Construction Projects handout	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from home-improvement activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	100
Urban Runoff Guidelines for Powerwashers	Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from powerwashing activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information.	25
	Total number of educational brochures distributed during this reporting period.	**275**
Promotional Items		
Personal Pet Waste Bag Dispensers	These convenient dispensers are small enough to hook onto the dog leash so they are conveniently available when walking the dog. The image on the dispenser is the same image as on the sign used along the San Luis Rey Recreation Trail. Each dispenser holds ten small bags. Bag refills are available at pet stores.	100
Click Message Pen	Each pen has Oceanside's Urban Runoff Hotline number on the outside barrel number as well as the following messages inside that rotate when the pen is clicked: "Protect our Waterways: sweep sidewalks, all storm drains lead to the ocean, Sweep (don't hose off) driveways and sidewalks, pick up pet waste, www.OceansidCleanWaterProgram.org, Water saving tips:www.SaveWaterOceanside.com, Conserve water – don't overwater landscapes.	550
Pencils	Each pencil has Oceanside's Urban Runoff Hotline phone number and is made from recycled newsprint. These were distributed to students and teachers as well as the general public during outreach events.	1050
Decals	These static cling decals have Oceanside's Urban Runoff Hotline phone number and can be placed on the windshield for quick reference to report potential storm water violations.	50
Gel Pen	These gel pens have Oceanside's Urban Runoff Hotline phone number and were distributed to City employees.	175
T-shirts	T-shirts are offered as a give-away option for beach and creek cleanup volunteers.	900
Tote Bags	These reusable tote bags are made from recycled cotton and have the words "Protect and Conserve Oceanside Water". They were distributed to employees and as a give-away option for beach and creek cleanup volunteers.	450
Water bottles	These reusable steel Bisphenol A (BPA) free water bottles were distributed to beach and creek cleanup volunteers.	1,000
Rally Towels	These 11"x15" rally towels have the slogan "Only Rain in the Strom Drain" and were offered to beach and creek cleanup volunteers.	90

Education Material	Description	Number Distributed
Stickers	These stickers are provided to young children and have storm water related slogans such as Only Rain in the Storm Drain and You Are the Solution to Storm Water Pollution	1000
Ceramic Coffee Mugs	These reusable ceramic coffee mugs were provided to municipal staff as a replacement for disposable coffee cups.	50
	Total number of promotional items distributed during this reporting period.	**5,135**

8.4 Education of Construction Community

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents.

Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of any permits, construction site owners and developers are either given printed educational material or referred to the Clean water Program website for information that includes the municipal permitting process, as well as the state and local storm water permit requirements for construction sites. Prior to the wet season, all currently permitted construction sites are contacted reminding site owners and developers to update their sites' BMPs to reduce erosion and prevent storm water pollution, as well as update erosion control plans and SWPPPs.

The Building Division counter in City Hall references websites that have the following documents for construction site owners and developers to reference:

- Clean Water Program Website to for a link to the General Construction Storm Water Permit
- The City's Construction Manual
- Construction related sections of the Municipal Storm Water Permit Order R9-2007-0001
- Standard Urban Storm Water Mitigation Plan, when applicable

In addition to referring the construction community to the documents mentioned above, a copy of the Urban Runoff BMPs for Construction Projects brochure is stapled to the storm water related development plans for the project. This ensures that the construction community has received BMP information and is required to follow the minimum BMPs listed and shown in the brochure. Additional BMPs may be required by the City based on a review of the Storm Water Pollution Prevention Plan prepared by the project applicant. Storm water information is also disseminated to the construction community through storm water compliance inspections of construction sites. During this reporting period approximately 100 of these pamphlets were distributed form the Building Division counter.

8.5 Outreach Component Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the education component of the City's JURMP.

8.6 Program Review and Modification

During this reporting period the majority of the municipal storm water training was conducted online. See section 8.2 above for more details about this online training program.

THIS PAGE INTENTIONALLY LEFT BLANK

9.0 PUBLIC PARTICIPATION COMPONENT

In order to ensure success with any City-wide program, the public must be involved. Stewardship and participation by the general public will increase the acceptance and willingness to comply with new regulations. The City of Oceanside has actively pursued public involvement in the Clean Water Program through the implementation of various programs and feedback mechanisms. This section documents the activities conducted by the City of Oceanside during the 2011-2012 reporting period to meet the requirements of Section D.6 of the Municipal Permit (Table 9-1).

Table 9-1. Order 2007-0001 Compliance Summary.

J.3.a.(3)(h).i Public Participation Efforts	See Entire Section 9 of this Annual Report

9.1 Local Public Participation Opportunities

The City of Oceanside encourages its residents to become involved in the Clean Water Program in various ways. The public can participate in the Clean Water Program including reporting potential violations through the Urban Runoff Hotline, beach and creek cleanup events, and attendance at community events.

9.1.1 Notable Activities

Green Oceanside Campaign

During this reporting period the Storm Water Hotline number changed. See section 9.1.2 for more information about this change.

In late 2008, a group of city employees from various departments and divisions, including the Clean Water Program, joined forces and organized “The Green Team” which was a driving force behind the creation of the Green Oceanside campaign. This campaign continued during this reporting period. See section 9.1.5 for detailed information about activities implemented for this campaign.

9.1.2 Urban Runoff Hotline

The public and City employees can report potential storm water violations that could pollute the City’s receiving waters through the Oceanside Urban Runoff Hotline. During this reporting period the Urban Runoff Hotline number changed to 760-435-4500. The City of Oceanside made a decision to create a centralized call center for all public calls and inquiries to the City. When calls are received through the call center, customer service representatives assess the type of call, enter information into a database called Public Stuff, and then forward the information entered into the database to the appropriate City department to address. This system is ideal in that all calls made to the call center are tracked in the Public Stuff database. Storm water and urban runoff related calls are forwarded to administrative staff in the Water Utilities Department. Thus all storm water related calls are tracked and easily queried.

Urban Runoff Hotline calls received by the Call Center are entered into a database. The information is then sent to an office specialist in the water utilities department who then determines based on the nature of the call which staff person to forward the call to. The

information from storm water related calls is disseminated to the Clean Water Program inspectors, Clean Water Program administrative staff or code enforcement officer.

Promotion of the new hotline phone number began during this reporting period. All outreach materials and promotional items have the new hotline phone number. If someone references an older education piece or promotional item with the old hotline umber (760-435-5800) the phone call will automatically roll over to the new hotline number without the caller knowing.

The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, on the City's Clean Water Program webpage, placement on newsletters, click-message pens, pencils, and other promotional give-away items.

During the reporting period, a total of 162 storm water related calls were received through the Urban Runoff Hotline. Of the 162 Urban Runoff Hotline calls 137 were received by residents concerning potential urban runoff violations. There were also 25 referrals from City staff.

All storm water related calls to the City either from residents or City staff referrals were entered into the Lucity database system for tracking. These calls were then forwarded to either the Clean Water Program inspectors or Code Enforcement staff, depending on the nature of the call.

Table 9-2 provides a summary of the nature of the calls received via the Hotline or by City staff referral. Of the calls received through the Hotline, nine (9) were referred directly to Code Enforcement for investigation.

Table 9-2. Urban Runoff Hotline calls and City staff referral summary

Department	Problem	City Employee Referral	Public Hotline	Total
Clean Water Program	Follow-up	0	4	4
	Leak Repair	1	0	1
	Other	0	9	9
	Over-irrigation/Broken Irrigation	19	63	82
	Power Washing	1	0	1
	Spills/Dumping	1	8	9
	Street/Driveway Washing	0	3	3
	Unidentified Water Runoff	3	49	52
	Yard waste/Landscape Activity	0	1	1
	Total For CWP	25	137	162
Referred Directly to Code Enforcement	Other	0	2	2
	Power Washing	0	1	1
	Spills/Dumping	2	3	5
	Street/Driveway Washing	1	0	1
	Total for CE	3	6	9

9.1.3 Cleanup Events

City Sponsored events

To increase Oceanside residents' stewardship toward our local waterways, the Clean Water Program hosts annual cleanup events at every major waterway in Oceanside including Buena Vista Creek, Loma Alta Creek, San Luis Rey River and City beaches. Between 70 and 300 volunteers participate in each of these cleanup events. During the 2011-12 reporting period, 1,481 volunteers removed over four tons of trash, debris, shopping carts and other unwanted material from Oceanside waterways during City-sponsored events. See Table 9-3 below for data related to the City-sponsored events.

Table 9-3. 2011-12 Oceanside sponsored Cleanup Events.

Date	Event	Number of Participants	Pounds/Tonnage of Waste Removed
City Sponsored Cleanup Events			
7/5/2011	Morning After Mess	77	225
9/17/2011	Buena Vista Creek Cleanup	40	2,000
9/17/2011	Oceanside Beach Cleanup	627	1,155
11/05/2011	San Luis Rey River Cleanup	82	2,000
11/05/2011	Harbor Beach Cleanup	18	300
4/28/2012	Loma Alta Creek Cleanup	80	1,750
4/28/2012	Oceanside Beach Cleanup - Pier	557	647
	Total City Sponsored Events	**1,481**	**8,077 pounds**

Private group sponsored events

Private groups regularly approach the city to coordinate their own cleanup event. The City of Oceanside including the Clean Water Program, Lifeguard division and the harbor maintenance staff support these groups by providing them guidance on what areas to target for cleanup, provide supplies for their event (bags and gloves), and provide safety instructions for the group.

To assist these groups in coordinating their own beach cleanup event the Clean Water Program created a Beach Cleanup manual. This manual provides the following information:

- How to coordinate a beach cleanup
- Day of cleanup instructions
- City of Oceanside "Beach Cleanup Pledge"
- Safety fact sheet
- Supply checklist
- Cleanup event data summary sheet

A copy of the Beach Cleanup Manual is included as Attachment 9-A in the 2009-10 Annual Report.

During this reporting period nine private groups coordinated ten beach or open space cleanup events in Oceanside. After the completion of their event, private groups are requested to provide the number of volunteers and the number of bags collected or pounds of trash removed from the target area. Every attempt is made to gather this data but some groups do not always keep track of the data or report back to the City. See Table 9-4 for a list of groups that coordinated cleanup events in FY 2011-12.

Table 9-4. 2011-12 Private group sponsored cleanup events.

Private Group Sponsored Events	
10/12/11	Coca Cola
10/22/11	PASS Americorps Program
11/10/11	prAna
11/18/11	Cal State San Marcos Service Our Beaches
12/02/12	Navy Hospital
3/10/12	Coastkeeper
5/12/12	Boy Scout Pack 787
5/12/12	Coastkeeper
6/2/12	San Marcos High School Key Club
6/23/12	Bank of America

Cleanup event email lists

In FY 2011-12 four event notices, one Green Oceanside Newsletter and three fliers were sent via email to approximately 315 email addresses on an event notification email distribution list. See Attachment 6-A for the newsletter and Attachment 9-A for event fliers for Green Week, the Buena Vista Creek clean-up, and the San Luis Rey River clean up. These notices were emailed to interested parties during this reporting period who registered to receive e-notifications.

In addition two newspaper advertisements announcing the April 28, 2012 Loma Alta Creek Cleanup was published in two local newspapers: the North County Times and the Coast News.

9.1.4 Oceanside Update Show

Clean Water Program staff appears regularly on the Oceanside Update show broadcast through Oceanside Television Station KOCT. Each spot allows staff to spend three to five minutes discussing specific storm water pollution programs, pollution prevention tips, and BMPs to reduce impacts. The 30-minute show is broadcast twice daily at 7:00 a.m. and 7:00 p.m. on channels 17 and 18 in Oceanside. Topics are varied with every taping of Oceanside Update, therefore the viewing audience learns about public participation events and water quality BMPs. While KOCT is unable to determine the actual number of residents who watch Oceanside Update regularly or for any length of time, both channels broadcast to approximately 45,000 Oceanside households. Table 9-5 summarizes Oceanside Clean Water Program topics discussed during each of the seven tapings which aired during this reporting period.

Table 9-5. Summary of Oceanside Update Topics by Month.

Date	Topic Discussed
September 2011	Coastal Cleanup Day, Buena Vista Creek and Oceanside Beach Cleanup
October 2011	San Luis Rey River Cleanup Event, Storm Water hotline
November 2011	Fertilize After It Rains and other fertilizer and pesticide tips to protect water quality
February 2012	Ten simple ways to protect water quality
March 2012	Green Week events and Loma Alta Creek/Beach Cleanup

9.1.5 Additional Public Participation Opportunities

Other opportunities for local public participation during this reporting period are discussed in this section.

Pick Up Your Pet Waste Campaign

The Pick Up Your Pet Waste Campaign was initiated in FY 2008-09 to address the accumulation of dog waste along the San Luis Rey Recreation Trail (Trail) which travels adjacent to the San Luis Rey River on both the north and south sides. Detailed information about this project can be found in section 9.1.15 of the 2010-11 Annual Report. The Clean Water Program continues to provide funding to refill the pet waste bag dispensers along this section of the trail.

Green Oceanside Campaign and Green Week

The City of Oceanside continued to implement its Green Oceanside campaign which was initiated in 2008 by a group of City employees from various departments and divisions. The Green Oceanside campaign includes the implementation of one week of environmental events that the public can attend, staffing of outreach events, and working with staff to provide education and resources so they can become better stewards of the planet.

Green Week 2012 included a week of activities at which the public was invited to participate. Following is a summary of the Green Week activities.

Green Week 2012

Green Week 2012 was held April 23 – 29, 2012. A summary of environmental events and activities are noted below.

- Green Oceanside Youth Art Contest– This poster contest was open to all Oceanside Unified School District students in K-5th grade levels. The theme was "What does Green Oceanside mean to you?"
- Environmental Film Festival – On Thursday April 26 the short film "The Story of Stuff" and the movie "*Flow*" were shown to approximately 70 attendees. The Story of Stuff is an animated short film that shows how our consumer goods are produced, consumed and disposed of or recycled. The award winning film "Flow" highlights the world's dwindling fresh water supply with a focus on politics, pollution, and human rights issues.
- Green Fair – The culmination of Green Week ended with the Green Fair on April 28, 2012 at which over 30 environmentally conscious organizations and businesses staffed tables to provide information and resources to the public.

- Electronic Waste Drop-off Event – The public had the opportunity to bring unwanted electronic waste for proper recycling and disposal. This event was held on April 28 and was located near the Green Fair. At this event there were 11.5 tons of universal E-Waste collected for proper recycling and disposal.
- Loma Alta Creek and Beach Cleanup – The Clean Water Program coordinated this creek and beach cleanup event on the morning of the Green Fair. 637 volunteers participated and removed 2,397 pounds of trash including 650 cigarette butts.
- Local Community Support – several local businesses provided sponsorship money that went toward the purchase of prizes for the youth contest winners and supplies for teachers who had a winning student in their classroom.
- Media/Marketing: A flier promoting Green Week 2012 was sent to over 42,000 households prior to the event. See Attachment 9-B for a copy of this flier.

Interpublic Education. The City has developed programs to educate the public and various target communities about the JURMP and the numerous ways the public can contribute to reduce pollution of the City's waterways and receiving waters. However, the City recognizes that no matter how many educational programs it implements, there will always be a need for ongoing outreach to various audiences. Therefore, "spreading the word" is another significant effort that the public will be encouraged to participate in that will substantially contribute to the success of the JURMP. When speaking with the public about urban runoff issues, they are encouraged to speak with neighbors about how everyday activities can potentially pollute local waterways.

City Staff Activities. City staff is the public at work. Staff is encouraged to report potential violations and provide feedback on the implementation of the JURMP. City staff is the eyes and ears of the City, and can provide valuable information on which components and programs are working and provide suggestions or recommendations on improving the programs. The City staff is encouraged to use the Oceanside Urban Runoff Hotline (760) 435-4500 for reporting potential runoff violations. In addition, City staff is encouraged to provide feedback directly to the Clean Water Program Coordinator and staff. Comments are discussed and if changes can be made to better improve the program, then they are planned and implemented.

9.2 Regional Public Participation Opportunities

This section describes those mechanisms available, at the regional level, for the public to participate in to assist in the implementation of regional JURMP related programs and to provide feedback to the Copermittees and contribute to the continuing development of the numerous JURMPs in effect around the County:

9.2.1 Media

Outreach to the public through the media serves as a widespread public education BMP and is an important element of public participation and keeps communication open between government staff and the public. Utility billing inserts are an economical and effective way to share storm water related information with residents of Oceanside. These fliers were directly mailed to over 42,000 Oceanside households.

9.2.2 Regional Events

San Diego County Fair

The San Diego Regional Storm Water Copermittees sponsored the Envirofair at the 2012 San Diego County Fair (Fair) as an education and outreach activity under the Regional Education and Residential Sources workgroup. The Envirofair was held on Jun 23, 2012 and was selected as a regional event due to its unique ability to potentially reach more than one million San Diegans and convey a strong environmental storm water and pollution prevention message. Details of the activities related to this event will be included in the FY 11-12 Regional Urban Runoff Management Program (RURMP) annual reports.

Copermittee Working Bodies

The Copermittees collectively developed ten (10) working body groups to coordinate the implementation of regional programs required by the Municipal Permit. Each Copermittee is required to provide at least one representative to each working body. These working bodies meet at least four times per year unless a different meeting frequency is established through unanimous approval of all Copermittees.

During this reporting period the City of Oceanside participated in each working body. Activities related to each of these ten working bodies during FY 2011-12 will be provided in the Regional Urban Runoff Management Program (RURMP) annual report scheduled to be submitted to the RWQCB in January 2013.

Regional Hotlines and Website

The regional hotlines provide a direct connection for public participation. Historically, the hotlines have worked well and should continue to increase in use as more people are educated of the hotline phone number and the types of issues to report. The City will encourage reporting through its local hotlines, however, the regional hotlines will serve as an alternative to the local hotlines and also provide an opportunity for reporting by visitors to the City, from other areas in the County, who are not familiar with copermittee hotlines.

During FY 2009-10 the ERS Workgroup launched a new regional website: www.thinkbluesdregion.org. This website provides the public with a link to their own jurisdictional storm water website, a phone number to report potential storm water violations. And resource links to get storm water related information. More detailed information on the successes of this website will be provided in the Regional Urban Runoff Management Program (RURMP) annual report scheduled to be submitted to the RWQCB in January 2013.

THIS PAGE INTENTIONALLY LEFT BLANK

10.0 FISCAL ANALYSIS COMPONENT

10.1 Introduction

The City of Oceanside acquires the funds necessary to facilitate the City's storm water program through four departments in the City: Water Utilities Department, Public Works Department, Development Services Department and Neighborhood Services Department. Much of City's storm water program falls under the responsibility of these four departments. Funds obtained for use in implementing the City's storm water program are utilized for a number of different programs, including jurisdictional, watershed, and regional programs. This section documents the activities conducted by the City of Oceanside during the 2011-2012 reporting period to meet the requirements of Section G of the Municipal Permit Order 2007-0001 (Table 10-1).

Table 10-1. Order 2007-0001 Fiscal Analysis Compliance Summary.

G.1: Each Copermittee shall secure the resources necessary to meet all requirements of the Municipal Permit.	See Section 10.1 of this Annual Report
G.2. Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities).	See Section 10.2 of this Annual Report
G.3. Each Copermittee shall conduct an annual fiscal analysis.	See Section 10.2.3 of this Annual Report
J.3.a.(3)(j).i Fiscal analysis of City urban runoff management program	See Entire Section 10 of this Annual Report

Effective programs require adequate funding to implement planned activities. The first step in securing adequate funding for the JURMP is to provide a strategy for effectively conducting a fiscal analysis of the JURMP in its entirety. This year's fiscal analysis included an evaluation of the expenditures (such as capital, operation and maintenance, education, enforcement, and administrative expenditures) necessary to accomplish the activities described in the JURMP and required under investigation orders and Total Maximum Daily Loads (TMDLs) mandates.

10.2 Fiscal Analysis Methods

The Municipal Permit requires the Copermittees to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The Standardized Fiscal Analysis Method and Format (Fiscal Analysis Method) was collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis Method document was submitted to the San Diego Regional Water Quality Control Board by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009. The Municipal Permit further requires the Copermittees to

conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. The fiscal analysis incorporated in this section is based on the standardized method.

10.2.1 Program Funding

The City secures funding for the implementation of the storm water program through the Water Utilities, Public Works Departments, and Engineering Divisions in the City. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge. The surcharge is based on the customer's water consumption, so the surcharge is also designed as an incentive for individuals to conserve water. This amount is equal to $0.07 per unit of water used. Total revenue for fiscal year 2011-12 generated though the surcharge fee was $771,983.

The City Engineering Division as part of the Development Services Department secures funding from development-related programs. The Engineering Division receives funding through fees assessed on developers for grading plan checks and inspections. Funding for Public Works departments is obtained through general fund allocations to the department.

The Standardized Fiscal Analysis Method includes a Standardized Fiscal Analysis Reporting Form, which consists of three tables separating jurisdictional, watershed, and regional expenditures. Jurisdictional expenditures are divided into components that mirror those included in the Municipal Permit as follows:

Administration
Development Planning
Construction
Municipal
Industrial and Commercial
Residential
Illegal Discharge Detection and Elimination (IDDE)
Education
Public Participation
Special Investigations
Non-Emergency Firefighting

Further, each of the above categories may be broken down into sub-categories. Potential Sub-categories may include:

Land Use Planning
Environmental Review
Development Project Approval and verification
Public Construction Projects
Private Construction Projects
Public Reporting of Illicit Connection or Illegal Discharges (ICIDs)
Jurisdictional Urban Runoff Monitoring Programs
Other

Expenditure items to be considered for each category or sub-category may include:

Administration
Permitting and Licensing
Project Planning and Engineering
Maintenance Inspections
Compliance Inspection and Enforcement
BMP Implementation
Educational Outreach
Waste Collection and Recycling
Jurisdictional Urban Runoff and Receiving Water Monitoring
Other Expenditures

For reporting purposes, only the table incorporating major jurisdictional components will be used. Sub-categories and expenditure items are intended to provide standardization of expenditures and need not be shown in the final report.

10.2.2 Urban Runoff Management Programs

The City's storm water budget related to the following departments, divisions, and programs are:

- Water Utilities Department - Administration of the City's Clean Water Program
- Water Utilities Department – Clean Water Program Compliance Inspections
- Development Services Department, Engineering Division – Storm water plan review, SUSMP and HMP
- Development Services Department, Engineering Division - Capital Improvement Projects
- Public Works Department - Storm Drain Maintenance
- Public Works Department - Solid Waste Disposal
- Public Works Department - Street and Median Maintenance
- Neighborhood Services Department – Code Enforcement Division

In addition the following department/division dedicate employees to address storm water related tasks required by the municipal storm water permit:

- Public Works Department – Park Maintenance (Inspections and BMP installation/maintenance)
- Public Works Department – Harbor Maintenance (Inspections and BMP installation/maintenance)

Personnel from various City departments and divisions are involved in the implementation of the City's storm water program. Refer to Section 2 and the City's certification letter in Appendix A, pages 2 and 3, of the City's 2008 JURMP for further detail regarding the responsibilities of various departments. Other program expenditures include watershed and regional storm water activities.

10.2.3 Expenditure and Budget Reporting

This section provides information on the expenditures for fiscal year 2011-12 as well as a proposed budget for fiscal year 2012-13. The fiscal year expenditures are presented in tabular

format with separate rows for different expenditure categories and the proposed budget for the next FY. See Table 10-2.

The JURMP budgeting for the Water Clean Water Program which includes various departments is described in the following sections and summarized in Table 10-2 at the end of this section. During this reporting period there were eight staff people dedicated to the City's Clean Water Program.

- One full-time Environmental officer (note title change from Clean Water Program Coordinator)
- Three full-time Environmental Specialists (focusing on water quality monitoring, education outreach, and program administration)
- One full-time CWP compliance inspectors
- One full-time Engineering Assistant (focusing on SUSMP and HMP)
- One full-time Code Enforcement Officer

10.2.3.1 Water Utilities Department

The surcharge rate described above under Program Funding is listed as a separate line item on Oceanside customers' utility bills. This allows for the clear delineation of the revenue being secured for the Clean Water Program in the Water Utilities section of the utility bill. Total revenue for fiscal year 2011-12 generated though the surcharge fee was $771,983. The costs to administer the Clean Water Program during Fiscal Year 2011-12 totaled $1,131,274. It is anticipated that the Water Utilities Department will expend $1,379,891 during Fiscal Year 2012-13.

10.2.3.2 Public Works

The City calculated the curb miles swept for the reporting period totaling 32,500 miles. The overall cost of the City's street sweeping program during FY 2011-12 was $1,450,977. This included $677,505 for equipment costs and $773,472 for staff costs. With a total of 32,500 curb miles swept in the City at a cost of $1,450,977, this averages out to $44.65 per curb mile. The cost for inspection and maintenance of the MS4 was $330,000 during this reporting period and. Budgeted costs for FY 2012-13 for MS4 maintenance are $370,000.

During fiscal year 2011-12 the Public Works Department spent approximately $1,845,000. It is anticipated that the Public Works Department will expend $1,954,920 during Fiscal year 2012-13.

10.2.3.3 Engineering

Municipal Permit Order 2007-001 requires an increased focus and effort in development-related review and inspection, development of a Hydromodification Plan and revisions to the Standard Urban Storm Water Mitigation Plan. The approximate costs to implement this program during Fiscal Year 2011-12 totaled $100,000. It is anticipated that Engineering Department will expend $110,000 during Fiscal year 2012-13 for storm water plan check review and implementation of the HMP.

10.2.3.4 Overall Clean Water Program Costs

During Fiscal Year 2011-12 approximately $3,268,274 was expended amongst the departments for the implementation of and tasks that support the Clean Water Program. It is anticipated that the total program costs for Fiscal Year 2012-13 will total $3,344,811. See Table 10-2 below for a summary of expenditures and projected budgets.

Table 10-2. JURMP Budgeting for Water Utilities, Public Works and Engineering Departments/Divisions.

Department	Item	Fiscal Year 2010-2011	Fiscal Year 2011-2012	Projected Fiscal Year 2012-2013
Water Utilities	Personnel (including Code Enforcement)	752,433	675,958	680,000
	Misc. office supplies, postage, uniforms	303	3,000	3,000
	Print Materials	18,270	34,000	15,000
	Monitoring Programs including lab materials, supplies and services	21,183	47,206	30,500
	Outreach supplies; Other Misc Cleanups and booths	20,000	20,500	20,500
	Consultant Fees Regional Monitoring, CLRP Development; Database Assistance	156,689	255,660	346,000
	Independent Contractors Teacher Training;	0	350	350
	Permits, Licenses, Fees	27,178	36,635	40,500
	Dues, Travel, Advertising	2,099	3,500	3,000
	Equipment UV	1,673	16,000	16,000
	Regional Copermittee Cost-share; Monitoring, RURMP, WURMP	131,902	146,000	146,000
	Vehicle Maintenance		76,156	79,041
Water Utilities	**Total**	**1,131,730**	**1,313,274**	**1,379,891**
Public Works	Street Sweeping (Equipment)	677,505	675,000	740,201
	Street Sweeping (staffing and /or contract costs)	773,472	775,000	$779,719
	Conveyance System Cleaning (Contracted Work and City Staff	223,952	330,000	370,000
	Personnel for CWP Monitoring	65,000	65,000	65,000
Public Works	**Total**	**1,739,929**	**1,845,000**	**1,954,920**
Engineering Division	Personnel	95,849	100,000	110,000
	Hydromodification Plan	0	0	0
Engineering Division	**Total**	**95,849**	**100,000**	**110,000**
	Grand Total	**2,967,508**	**3,268,274**	**3,344,811**

11.0 EFFECTIVENESS ASSESSMENT COMPONENT

11.1 Introduction

Effectiveness assessment is an important component of the JURMP because it can assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The San Diego County Copermittees developed two guidance documents to assist in the assessment of the JURMP components as well as the jurisdictions overall JURMP program. These two documents are titled *A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs* and the *Baseline Long-term Effectiveness Assessment* (BLTEA). The City participated in regional efforts to develop these documents in anticipation of the requirement to assess their JURMP programs.

The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level. In future reporting years, the issue of standardized assessment metrics and procedures will be addressed by the Copermittees. The City anticipates participation in the further development of these work products.

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes.

Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique. The effectiveness assessment approach developed by the Copermittees during the 2005-06 permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge/Awareness

- Level 3: Behavioral Change/BMP Implementation
- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality
- Level 6: Changes in Receiving Water Quality

The establishment of measurable outcomes is necessary for both incremental program component improvements and as a basis for future establishment of relationships between implementation and water quality improvement outcomes.

11.2 Effectiveness Assessment Results

The Municipal Permit Order 2007-0001 requires the City to assess the effectiveness of each significant activity specific to each program component, for each program component as a whole, and for the storm water program as a whole. Levels 1, 2, 3, 4, 5, and 6 outcomes are discussed in the text below. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome level assessments

Level 1 – Compliance with Activity-Based Permit Requirements: Documenting Activities

Compliance with Activity-based permit requirements is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City based on various components of the Municipal Permit. Level 1 outcomes take the form of a simple yes or no answer basically answering "Was the control measure completed?" or it may provide feedback that may be quantified, counted, or tracked over time to demonstrate effort or progress.

Level 2 – Changes in Knowledge/Awareness: Raising Awareness

An important goal of storm water programs is to increase the level of knowledge and awareness among target audiences such as residents, businesses, and municipal employees. Level 2 outcomes provide program managers feedback on how effective the various control measures have been in raising awareness and changing attitudes of the target audience.

Level 3 – Behavioral Change/BMP Implementation: Changing Behavior

A key focus of the storm water management program is to affect changes in behavior. By building increases in knowledge and awareness (Level 2), Level 3 outcomes provide program managers with feedback on how effective the program elements and control measures have been in motivating target audiences to change their behaviors and implement appropriate BMPs.

Level 4 – Load Reductions: Reducing Loads from Sources

Many control measures are intended to reduce the loading of pollutants from targeted sources. Load reductions should, in turn, result in improvements to discharge and

receiving water quality. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning.

Level 5 – Changes in Discharge Quality: Improving Runoff Quality

A primary focus of storm water management programs is to reduce pollutants in storm water to the maximum extent practicable, and to ensure that these discharges do not cause or contribute to violations of water quality standards in receiving waters. At this level baseline measurements of runoff quality are measured to allow comparison. Multi-year data sets are needed in order to have any confidence in the measured change.

Level 6 – Changes in Receiving Water Quality: Protecting Receiving Water Quality

The ultimate objective of storm water management programs is the protection of water bodies. At level 6, program mangers will focus on outcomes such as compliance with water quality standards, protection of biological integrity, and beneficial use attainment.

Summary

Program elements and control measures will typically have outcomes at more than one of the levels described above and not all outcome levels will necessarily be applicable to all activities. The information submitted with this report will address levels 1, 2, 3 and 4. Section 7 of this report, IDDE, will be submitted prior to December 15 and will address level 5.

11.2.2 Overall Component Assessments

11.2.2.1 Development Planning

Despite Staff efforts and availability of document templates, the majority of City permit applicants and their consultants continued to misunderstand and underestimate the requirements of the MS4 Permit and the SUSMP. Many in the development community have experienced a prolonged period of reduced or no activity, due to economic factors and therefore, have not had the opportunity or funding to maintain familiarity with storm water mitigation requirements. Moreover, many are not prepared for the 4% to 20% land area obligations associated with LID and HMP. Those who are unfamiliar with current regulations tend to characterize storm water mitigation requirements as “every-changing”, “too restrictive”, and “too costly”. In short, many developers are simply foregoing development because projects they “no longer pencil-out”.

The City SUSMP

The SUSMP has been updated and expanded to include revised HMP requirements, consistent with the Municipal Permit, and clarifications to the unified LID design approach. The SUSMP includes specific definitions and design parameters for the integration of porous concrete, bioretention facilities, flow-through planters, dry wells, infiltration basins, cisterns, and surface ponds. There are also provisions for implementation of higher-rate biofilters or higher-rate vault based filtration units on redevelopment or retrofit projects.

Projects remain obligated to incorporate source control design features to mitigate pollutants from on-site land use or sources, such as trash enclosures, outdoor storage

areas and vehicle washing. The SUSMP contains BMPs designed to address the pollutant sources and provides corresponding list of mitigation practices.

The most significant revision to the SUSMP was the revision to the Priority Development Project – Storm Water Mitigation Plan (PDP-SWMP) template. The template was revised to incorporate clearer completion guidance, summarize project attributes, and simplify Drainage Management Area (DMA) surface tabulation. The template has been well received by the development community.

By following the SUSMP unified LID design approach and addressing the HMP requirements, applicants are able to develop an integrated design which complies with the complex and overlapping NPDES permit. The updated SUSMP, Storm Water Quality Assessment (SWQA) form, and SWMP template are available at the City of Oceanside – Development Services counter or may be downloaded from the City Development Services Department – Engineering Division webpage.

Interdepartmental Coordination
The City's SUSMP and development review process involves multiple Departments and Divisions throughout the City. The City has taken necessary steps to maintain compliance with SUSMP requirements through the coordination of these multiple departments and divisions.

Dedicated Storm Water Management Program
The City established the Clean Water Program (CWP) in 2001 under the Water Utilities Department. During this reporting period the CWP program in conjunction with the Engineering Division provided the necessary oversight for all management components of the SUSMP.

Table 11-1 presents the Level 1 Compliance with Activity-Based Requirements. The 24% and 60% SWMP completion rates indicate that many of the priority development projects remain in the process of developing an SWMP. The actual number of SWMP reviews per project may vary significantly. Some projects obtain plan approval in the second review cycle, while others may require as many as ten review cycles to produce a SWMP that is consistent with the Municipal Permit and SUSMP. The average project requires three to four reviews to obtain approve of the SWMP.

As the City develops more projects which are subject to the requirements of the Municipal Permit, the inherent challenges associated with data management will emerge such as tracking of post-construction Treatment Control BMPs, maintenances agreements, and associated documents become more numerous. To counter the possibility, the City Development Services Department, which includes Building, and Engineering Divisions, chose CRW Systems, Inc. program called TRAKiT® as a data tracking system which was rolled out in the 2009-10 reporting year. See section 3.2.1 of this annual report for more detailed information about the TRAKiT® database.

Table 11-1. Development Planning – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Development Planning D.1.e	Development Projects	Projects requiring SWMP	Projects completing SWMP	Actual/Target	Percent (%) Completion
	Priority Projects (Required PDP-SWMP)	33	8	8/33	24
	Standard Projects (Require SDP-SWMP)	10	6	6/10	60
	SUSMP Inspections	Sites targeted for Inspection	Sites Inspected	Actual/Target	%
	High Priority Sites (Annual)	10	10	10/10	100
	All Sites (Target: 20% of 139)	35	52	52/35	148

11.2.2.2 Construction

The construction component of the City's JURMP continues to be effectively implemented through inspection and enforcement, education and training and BMP maintenance (Table 11-2). As construction activities continue, the City will maintain the level of performance established from past years, and continue to meet the regulatory standards mandated in the Municipal permit.

Table 11-2. Construction – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Development Planning D.2.d	Construction Projects	sites targeted for Inspection	sites inspected	Actual/Target	Percent (%) Completion
	High Priority Sites	15	15	15/15	100
	Medium Priority	10	10	10/10	100
	Low Priority Sites	9	9	9/9	100

11.2.2.3 Municipal

The municipal component of the City's JURMP continues to provide a well-rounded approach and will continue to implement a comprehensive education program along with inspections of municipal facilities, MS4 maintenance, sanitary sewer slip-lining and street sweeping.

Table 11-3 provides the Level 1 Compliance with Activity-Based Requirements and Level 4 - Load Reductions Reducing Loads from Sources.

Table 11-3. Municipal – Level 1: Compliance with Activity-Based Requirements; Level 4 - Load Reductions: Reducing Loads from Sources.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.a	Municipal Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent (□) Completion
	(High, Medium and Low priority facilities)	168	168	168/168	100
	MS4	of catch Basins to be cleaned	of catch Basins actually cleaned	Actual/Target	Percent (□) Completion
	Catch basins cleaned	3,250	3,735	3,735/3,250	114
	Sanitary Sewer	of feet to be slip-lined	of feet actually slip-lined	Actual/Target	Percent (□) Completion
	Feet of sewer slip-lined	300	85	85/300	28
	Street Sweeping	of miles of streets to be swept	of miles of streets actually swept	Actual/Target	Percent (□) Completion
	Curb miles of street swept	28,954	32,500	32,500/28,954	112

Employee Training

The City implemented an employee training program that provided pre- and post-quizzes to assess the effectiveness of the training course. During this reporting period online employee training was initiated for ease of implementation for both the Clean Water Program Outreach Coordinator and the staff themselves. On-line training offers employees the opportunity to watch the video and take the pre- and post-quiz at a time that is opportune for them.

During this reporting period the City of Oceanside Clean Water Program purchased a new storm water training video through Excal Visual titled "*Rain Check Stormwater Pollution Prevention for MS4s Employee Training*". More details about this training video can be found in Section 8.2 of this report.

During the 2011-12 reporting year, 92 City employees were trained on the City's storm water program requirements. New pre- and post-tests based on the new Excal Visual video were given to 78 employees to assess the level of knowledge before and after they viewed the video. Depending on the nature of the employee's department, the employees were assigned specific questions from a 40-question quiz. Of the 78 employees who took the quizzes, 31 received a perfect score on the post-quiz. Thus 40% of the employees

who viewed this video for the first time were able to correctly answer the storm water related questions in the post-quiz.

11.2.2.4 Industrial and Commercial

The City implements a comprehensive inspection program for industrial and commercial facilities including all restaurants and nursery and greenhouse operations. Table 11-4 provides an assessment for the inspections.

Table 11-4. Industrial and Commercial Component - Level 1: Compliance with Activity-Based Requirements.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.b	**Industrial Facilities**	of sites to be inspected	of sites actually inspected	Actual/Target	Percent (%) Completion
	High Priority Facilities	15	15	15/15	100%
	Medium and Low Priority Facilities	As Needed	0	N/A	N/A
	Commercial Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent (%) Completion
	High Priority Facilities	472	472	472/472	100%
	Medium and Low priority facilities	As needed	56	56/1044	N/A
	Commercial and Industrial Facilities	of sites to be inspected	of sites actually inspected	Actual/Target	Percent (%) Completion
	All Inventoried Facilities (25% of 1,543 Facilities)	386	570	570/386	147% (Exceeded 25% Requirement)

Lucity, the City of Oceanside's management and inspection tracking software, continued to be utilized during the 2011-12 reporting period for industrial and commercial NPDES inspections. Several discrepancies were found throughout the year, such as duplicate records, inadvertently changed priority levels, and missing, new, or out of business facilities. As these were found, the inventory master list and the database entries were updated. However, as with any data management tool, updating and using a constantly changing list of establishments continues to be a challenge.

During this reporting year, the Clean Water Program performed a comprehensive review of its Low Priority commercial businesses. The purpose was to determine whether these sites were to remain in the watershed-based inventory based on criteria set forth in the municipal permit. The Clean Water Program removed a set of establishments that were determined to pose no risk in contributing pollutants to the MS4. See Section 5.2.2 for more details.

11.2.2.5 Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. The City is also conducting additional monitoring studies to help identify and mitigate residential sources of pollution more effectively. Although fewer households participated in dropping off household hazardous waste during this reporting period, more quantity of household hazardous waste was collected for proper disposal (Table 11-5).

Table 11-5. Residential Component - Behavioral Change/BMP Implementation Changing Behavior.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Residential D.3.e	Household Hazardous Material	Quantity of waste targeted	Quantity of waste collected	Actual/Target	Percent ( ) Completion
		130 tons	338 tons	338/130	260
	Households Participating in Program	of households targeted	of households participating	Actual/Target	Percent ( ) Completion
		3,500	3,098	3,098/3,500	88

11.2.2.6 IDDE

An assessment of this component will be provided in Section 7 when the City submits the entire FY 2010-11 Illicit Discharge Detection and Elimination Component, including the 2010 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2011.

11.2.2.7 Education and Public Participation

The City implements a comprehensive education outreach program for both municipal staff and the public as well as a comprehensive public participation program (Table 11-6). See 11.2.2.3 above for an assessment of the Municipal training program. The City prides itself on educating children within its jurisdiction through the use of a watershed model and the Project SWELL curriculum incorporated into the 5th grade science curriculum.

Table 11-6. Education and Public Participation Component - Compliance with Activity-Based Permit Requirements: Documenting Activities.

Permit Section	Activity Source Type	Targeted Outcome	Actual	Measures of Success	
Municipal D.3.g	Student Presentations	of presentations targeted	of presentations completed	Actual/Target	Percent ( ) Completion
		10	31	31/10	310
	Green Oceanside Newsletters	of newsletters targeted for completion	of newsletters completed	Actual/Target	Percent ( ) Completion
		2	2	2/2	100
	Oceanside Update Tapings	of tapings planned	of tapings completed	Actual/Target	Percent ( ) Completion
		6	5	5/6	83
	CWP Website	of targeted hits	of actual hits	Actual/Target	Percent ( ) Completion
		45,000	2,629	2,629/45,000	5

See section 8.3 of this report for details on the low number of hits to the Clean Water Program Website.

11.3 Program Review and Modification

No changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

THIS PAGE INTENTIONALLY LEFT BLANK

12.0 SPECIAL INVESTIGATIONS

12.1 Lower San Luis Rey Bacteria Source Identification Project

12.1.1 Overview

Project Background

The Pacific Ocean shoreline at the outlet of the San Luis Rey (SLR) River mouth, located in the City of Oceanside, is a stretch of coastline with a large sandy beach and an easily accessible surf break, making it one of the city's most popular places for recreation. As a result of historical fecal indicator bacteria (FIB) exceedances at the beach, one-half mile of shoreline is listed as an impaired water body under section 303(d) of the Clean Water Act for exceedances of indicator bacterial standards and is included in the recently adopted Total Maximum Daily Load (TMDL) for Fecal Indicator Bacteria, Project I for Beaches and Creeks in the San Diego Region (Bacteria I TMDL).

To address the elevated levels of FIB and in anticipation of the TMDL, the City applied for and was awarded the State Water Resources Control Board (SWRCB) Proposition 50 Clean Beaches Initiative Grant Program to implement the Lower SLR River Bacterial Source Identification Project. The overall goals of the Project were to identify hotspots of FIB within the Lower SLR River, identify potential sources, and prioritize those sources and/or locations for future management measures to reduce bacteria concentrations.

Grant Award

The City received $554,375 from the SWRCB and, with the assistance of other stakeholders, was budgeted to match $141,750 to implement the source identification project in the lower river and river mouth. The City awarded MACTEC Engineering and Consulting, Inc. (MACTEC) and their team of leading scientists the contract for the organization and completion of the study.

Project Overview

The Lower SLR River Bacterial Source Identification Project was designed as the initial phase of a source investigation to provide a broad characterization of bacterial concentrations throughout the SLR River and river mouth. The Project was designed to attain the following goals:

- Assess what sources and activities have contributed most to the bacterial impairment of the SLR River mouth and from where those sources and activities may have originated.
- Analyze potential bacterial source elimination or reduction practices targeted at the identified sources and activities.
- Contribute to future achievement of bacterial TMDL objectives by identifying potential management measures (MMs) and follow-up studies to target sources and activities more effectively.

The Project goals were accomplished by integrating data from the following independent monitoring programs:

- The Microbial Source Tracking (MST) Program was implemented by the Prop 50 Grant Project team. The MST Program included monitoring 11 sites within the lower 7.5 miles of the SLR River during wet and dry conditions, a tiered analytical approach for microbial source tracking, and a visual observation program to identify upstream activities in the watershed that may be potential sources of bacteria.
- The Joint Monitoring (JM) Program was completed by the City of Oceanside and the County of San Diego, Department of Public Works as in-kind services to the Grant. Monthly dry weather monitoring was conducted at 18 locations within the lower 19.2 miles of the SLR Watershed.
- The Department of Environmental Health (DEH) AB411 Program was conducted by the County of San Diego, Department of Environmental Health. Weekly dry weather monitoring of the Pacific Shoreline was conducted 75 feet south of the SLR River outlet.

During the MST Program, the main component of the grant, water samples were collected during dry and wet weather for FIB and microbial source tracking analysis in the SLR River mouth, the main stem of the river, and tributary locations. Visual observations were conducted in conjunction with sampling activities, when possible, within 14 zones of residential, commercial, and/or park areas. The MST dry season monitoring was implemented in 2008 and 2010 between the months of May to August. There were a total of four dry season sampling events; two events per year. Due to the Stop Work Order from the State, there was no activity on the Project during 2009. Wet season monitoring was conducted in 2010 and 2011 during the months of December to February. Wet season monitoring events consisted of a dry weather baseline event, two wet weather (storm) events, and two (dry weather) base flow events.

All FIB results from the MST Program were compared to selection criteria based on the Basin Plan Rec-1 WQOs in order to identify samples for further microbial source analyses. This multi-tiered approach utilizes a tool box of traditional fecal indicator bacterial analyses and quantitative molecular assays that are optimal for microbial source tracking in urban environments. These include:

- Three quantitative polymerase chain reaction (QPCR) fecal *Bacteroides* spp. assays were conducted to confirm the presence of human fecal bacteria, taking into consideration a spectrum of specificity and sensitivity.
- Enterovirus assays quantified the enteric viral concentrations present in water samples and were used as a tool to characterize the threat to human health.
- A gull specific marker, *Catellicoccus marimammalium*, was used to provide important information about the impact of seagulls in the SLR River.
- A bacterial community analysis was used to characterize the bacterial communities in the water column and sediment in the river mouth during dry weather.

The City of Oceanside and the County of San Diego conducted the Joint Monitoring Program over the entire project duration. Water samples were collected monthly at main stem, tributary, river mouth, and AB411 locations during dry weather for the JM Program.

12.1.2 Activities completed during previous reporting periods

Establishment of a TAC

A Technical Advisory Committee (TAC) was established for the Project to be involved in all aspects of the project, including project approach and oversight of the monitoring and reporting. There were six members representing the following agencies: the Regional Water Quality Control Board, County of San Diego, City of Vista, and San Diego Coastkeeper. In addition to there were three representatives from the City of Oceanside. Two TAC meetings were held in FY 2008-09. One TAC meeting was held in FY 2009-10.

Monitoring Plan and Quality Assurance Project Plan Approval

The SWRCB approved the original Quality Assurance Project Plan (QAPP) and Monitoring Plan (MP) on June 19, 2008. Revisions throughout the duration of the Project were made to adjust for laboratory changes, genetic analyses updates, and to update the monitoring schedule.

First Dry Season Monitoring Events 2008

The first dry season monitoring event took place on June 18 and 19, 2008. The project team collected bacteria samples and flow measurements at six monitoring locations in the Lower San Luis Rey River. The bacteria samples were analyzed for fecal indicator bacteria and the remaining sample volume was filtered and frozen for molecular analysis. The river mouth was not sampled, as planned, due to construction of the Pacific Street Bridge.

The second dry season event took place on July 23 and 24, 2008. The project team collected bacteria samples and flow measurements at five of six monitoring locations in the Lower San Luis Rey River. As part of the Visual Observation Program, observations were conducted July 23 and 24, 2008 within the Lower San Luis Rey River and upstream in the drainage basin to identify possible sources of bacteria. The river mouth was again not sampled, due to construction of the Pacific Street Bridge.

Suspension of Funds from State Water Resource Control Board, Dept. of Finance

On December 19, 2008, the SWRCB issued a Budget Letter that suspended all projects including the Lower San Luis Rey Source Identification Project. All work was stopped. The work completed after this notice was primarily to assess the status of various elements of the project, including laboratory work and the effect of the stop work notice on genetic analysis. Unfortunately, during the year-long stop work order, samples for two of the three types of genetic analyses had expired and were therefore no longer available for use to the program. During this period, samples were analyzed only for *Enterovirus A* by Dr. Jed Furman's laboratory at the University of Southern California.

The monthly joint monitoring program conducted by the City of Oceanside and the County of San Diego continued as modified for the grant project until June of 2009. In June 2009, the City and County agreed to continue the monitoring program, but the City brought the monitoring in-house to the San Luis Rey Wastewater Treatment Plan Laboratory. The same field procedures were followed, but the reporting limits changed to above SWAMP recommendations.

Reinstatement of Funds from State Water Resource Control Board

On December 17, 2009, the State Water Resources Control Board gave the City of Oceanside notice that the Lower San Luis Rey Source Identification Project grant had been selected to restart. With an original grant end date of March 31, 2010, the City of Oceanside, on January 4, 2010, submitted a Request for Time Extension in order to complete the remaining two-thirds of the field and laboratory work required.

The monthly joint monitoring conducted by the City of Oceanside and the County of San Diego supplementing the grant field work restarted immediately. On April 14, 2010, the City of Oceanside received the executed amendment to the Grant Agreement and work began then to restart the project.

Dry Season Monitoring Events 2010

The third dry season monitoring event in the Lower San Luis Rey River/River Mouth took place on May 18, 19, and 20, 2010. On May 18, 2010, The City of Oceanside and the County of San Diego conducted the joint monitoring at 17 locations in Lower San Luis Rey River and the grant project team collected composite water samples and sediment samples at five locations in the River Mouth. In addition, the City of Oceanside collected additional samples at each Watershed monitoring location for potential further genetic analysis on upstream sites within the City boundary and the Visual Observations Program was implemented at four locations near the river mouth. On May 19 and 20, 2010, the grant project team collected composite water samples and sediment samples at five locations in the River Mouth and composite water samples at two river locations (Bonsall Bridge and Benet Bridge).

The fourth dry season monitoring event in the San Luis Rey River Mouth was implemented on August 3 and 4, 2010. On August 3 and 4, 2010, the grant project team collected composite water samples and paired sediment samples at four locations in the River Mouth. A total of eight water samples and eight sediment samples were collected for the August Event. The river mouth had closed naturally, a common occurrence during this time of year, and the sampling point furthest west, Point Zero, was still included as one of the four sampling locations. During this event, bird populations were observed bathing and wading at this site.

Wet Season Monitoring Events 2010-11

The baseline monitoring event in the San Luis Rey River Mouth was implemented on December 9, 2010 and December 15, 2010. On December 9, 2010, the grant project team collected composite water samples at seven locations in the river and river mouth. On December 15, 2010, one composite water sample was collected at the Critical Point. A total of eight water samples were collected for the Baseline Event. The river mouth was open to tidal influence at the time of sampling. During this event, bird populations were observed bathing and wading around an island that formed near the River Mouth Site 1. The Visual Observations Program was implemented on December 9th. Two teams of two walked a total of five zones adjacent to the river mouth and the river adjacent to Douglas Bridge.

The first storm event sampling began on January 3, 2011. Samples were collected at nine monitoring locations on January 3, 2011 and January 4, 2011. Samples on January 3, 2011 were collected on the rising limb of the hydrograph (based on flow data from the USGS Station at

Benet Bridge (Critical Point)). Samples on January 4, 2011 were collected on the falling limb of the hydrograph after the peak flow had occurred (based on flow data from the USGS Station at Benet Bridge (Critical Point)).

Following the first storm event, a baseflow event was conducted and samples were collected at nine monitoring locations on January 20, 2011 subsequent to an advisory posting of the river mouth by County Department of Environmental Health.

The second storm event began on February 17, 2011. Samples on February 17, 2011 were collected on the rising limb of the hydrograph (based on flow data from the USGS Station at Benet Bridge (Critical Point)). Samples on February 18, 2011 were collected between the peak and falling limb of the hydrograph (based on flow data from the USGS Station at Benet Bridge (Critical Point)). On February 14, 2011, two teams conducted visual observations in Zones 5, 6, 8, 9, 11, and 12. Based on the weather forecast, the team conducted visual observations of sources of bacteria in the watershed that had the potential to be introduced into runoff during the coming storm event.

A second baseflow event was conducted on February 24, 2011 after the second storm event. Samples were collected at nine monitoring locations on February 24, 2011, which was 72 hours after rainfall ended. Also on February 24, 2011, two teams conducted visual observations in Zones 1, 5, 6, 11, 12, and in the downstream portion of the Sleeping Indian watershed.

Project Report

During FY 2010-11 all monitoring activities were completed for the Grant Project. Effort on the final report began.

12.1.3 Activities completed during the current reporting period

Project Report

The Draft Final Report was submitted to the SWRCB on August 1, 2011. The City received comments from the SWRCB on August 18, 2011. The Final Report with changes was submitted on September 1, 2011. The Grant Manager had additional questions, which were addressed by an Addendum submitted to the SWRCB by the City on September 12, 2011.

Summary of Results and Conclusions

The Prop 50 Grant Project was effective in characterizing bacterial concentrations throughout the Lower SLR River and river mouth during wet and dry seasons. A summary of conclusions is provided below.

<u>River Mouth:</u>

- FIB concentrations were generally below WQOs in the river mouth during the summer months when human exposure and health risks are highest at the Pacific Ocean.
- Although FIB concentrations were below WQOs, multiple MST molecular markers for human-related bacterial sources were present in August when the river mouth was closed to ocean inputs and SLR River flow was significantly reduced. Human sources of contamination have been identified subsequently in this area, including an active sewer

pipe. Other factors could be important to the retention of fecal contamination in this area, including low residence time and hydrologic conditions in the river mouth during low flow.

- The bacterial community analysis showed a lack of relationship between the sediment and water samples in May when the river mouth is open to tidal exchange. Conversely, there was a strong relationship between the sediment and water samples in August when the river mouth is closed. The sediment bacterial community is stable during the dry season and was not analyzed during the wet season. It should be noted that the bacterial community analysis was only conducted on river mouth samples and no analysis was conducted to evaluate the relationship between the SLR River's main stem and tributaries and the river mouth monitoring locations.
- No enteroviruses were recorded during the dry season.
- A strong signal of gull feces was found in the river mouth during the wet and dry seasons.
- FIB concentrations significantly increased in the wet season resulting in a higher frequency of WQO exceedances.
- There was evidence of potential human-related bacterial sources (a minimum of two out of three markers) at River Mouth 1 and River Mouth 3 throughout the wet season, while at Point Zero there was evidence of potential human-related bacterial sources (a minimum of two out of three markers) at a lower frequency.
- One sample collected at River Mouth 1 during Wet Event 1 was positive for enteroviruses.
- Of the 74 samples from the DEH AB411 program, 12 results for *Enterococcus* sp, and 4 results for fecal coliform were above the respective WQOs, whereas no total coliform results exceeded the WQO.

<u>SLR River Main Stem:</u>

- The MST Program study data at the SLR main stem reinforced trends in elevated FIB concentrations seen in the data collected by the Joint Monitoring Program.
- In May of 2010, there were potential (two of three markers) human-related bacterial sources present at Bonsall Bridge, Douglas Bridge, and the Critical Point.
- No enteroviruses were detected in samples at the main stem monitoring locations during dry or wet seasons.
- During the wet season, the Douglas Bridge and Critical Point locations exhibited strong positive signals for all three MST molecular markers of human fecal *Bacteroides* spp.
- FIB concentrations and loadings did not change significantly in the river during base flow conditions.
- A trend toward delivery of bacterial loadings in the first half of the storm event was demonstrated by a simple first flush analysis. This indicates a possible first flush effect and may aid in the future selection and design of appropriate BMPs.

<u>Tributaries:</u>

- The MST Program study data at the SLR tributaries reinforced trends in elevated FIB concentrations seen in the data collected by the Joint Monitoring Program.
- In May of 2010, there were potential human-related bacterial sources present at Sleeping Indian and Pilgrim Creek.

- No enteroviruses were detected in samples at the tributaries during dry or wet seasons.
- During the wet season, Sleeping Indian and Pilgrim Creek exhibited strong positive signals for all three MST molecular markers of human fecal *Bacteroides* spp.
- FIB concentrations and loadings did not change significantly in the tributaries after storms passed during base flow conditions.
- The assessment of flow relative to concentrations of FIB and human-specific markers indicates the importance of bacterial sources stemming from low flow areas or low dilution (i.e., tributaries).
- A trend toward delivery of bacterial loadings in the first half of the storm event was demonstrated by a simple first flush analysis. This indicates a possible first flush effect and may aid in the future selection and design of appropriate BMPs.

Recommendations

The Project was designed as the first phase in source identification to assess the magnitude and extent of elevated FIB and to characterize sources on a broad scale. Based on results from this study, recommendations were developed to provide further information to help select the most feasible and effective management strategies necessary to reduce bacterial concentrations. Recommendations included follow-up source investigations, an assessment of the relationship between the river mouth and ocean, and focused management measures including source controls, decentralized treatment controls and centralized treatment controls. Some general recommendations include:

- To identify possible sources of overflow or leaks along the main stem river and tributaries, a desktop GIS analysis of the City's sewer infrastructure and septic systems may be conducted. Field surveys, such as dye testing or the use of closed circuit television (CCTV), may be considered to identify leaks or illicit connections.
- Focus education and outreach based on activities documented in visual surveys and known land use types.
- Higher resolution data is required for an evaluation of loading and possible implementation of structural treatment control BMPs. This may be accomplished through continuous flow and higher resolution FIB sampling at the outlets during the wet season to characterize conditions over the course of the hydrograph and continuous flow and higher resolution FIB sampling at the outlet over a 24 hour period during dry weather (including base flow conditions and dry season, when flow is present).
- Characterize the flow patterns within the river mouth system to understand the general transport of fecal bacteria sources and their ultimate fate.
- Design a groundwater study to gain a better understanding of groundwater dynamics and their relationship to surface water in the SLR River and river mouth during base flow conditions.
- To contribute to future achievement of the Bacteria TMDL, it will be important to assess the interaction between the river mouth and the Pacific Ocean. To characterize the dispersal of the bacterial and viral material from the SLR River outlet along the shoreline, multiple sampling locations between the river mouth and the AB411 monitoring location may be monitored.
- To allow for accurate loading calculations and an assessment of bacterial loads and flux over the course of the monitoring period at the river mouth, pollutograph monitoring may

be employed at a river mouth location to characterize bacteria on a higher resolution time frame. Acoustic Doppler current profilers (ADCPs) may be utilized to collect continuous flow measurements during sampling events.

- To identify potentially failing septic (onsite) wastewater systems viral tracking, dye testing, inspections and/or other methods may be utilized. Once identified, an inspection and maintenance schedule may be developed and revised to prioritize the septic systems in the SLR watershed, based on threats to groundwater and receiving water quality. Based on available resources and feasibility, a capital improvement plan for conversion of septic systems to sanitary sewers may be developed in appropriate areas.
- To address the human-related bacterial sources present in the river mouth during the dry season, when the river mouth is closed to ocean inputs and the SLR River flow is significantly reduced, the feasibility of hydraulic modifications to the river mouth and/or the SLR River outlet may be evaluated to reduce residence time and increase flushing during the dry season. A feasibility study may be implemented after additional monitoring has been conducted to better understand the hydrology of the river mouth and retention of FIB in the river mouth. Based on available resources, the feasibility study could identify benefits and constraints for current and alternative hydraulic configurations of the river mouth.

Future Actions

The SLR Watershed TMDL Responsible Parties have developed and are finalizing a Comprehensive Load Reduction Plan (CLRP) for the SLR Watershed to address the Bacteria I TMDL. The CLRP will provide a watershed-based approach to assess impairments and sources and implement a phased approach to pollutant reduction strategies. The results of this project will be used immediately by the SLR TMDL Responsible Parties in the development of the CLRP addressing bacteria. Project data will be used to focus the initial phase of CLRP implementation by assisting in the prioritization of source and sub-watershed activities.

With preliminary results indicating human sources of bacteria, the City of Oceanside has taken a proactive approach and already has begun to implement a key recommendation from this project, initiating the desktop GIS analysis of the City's sewage infrastructure. The City's Clean Water Program is working closely with the City's Sewer Division to develop an action plan to investigate the City's sewage infrastructure.

Project Closure

The City submitted the final quarterly report and invoice on October 7, 2011. The SWRCB closed the project on October 25, 2011.

12.2 Loma Alta Creek Ultraviolet Light Treatment Facility

12.2.1 Overview

Loma Alta Creek Lagoon and Buccaneer Beach, located in the City of Oceanside, have historically been impacted by high levels of bacteria. This is a family beach adjacent to a park with a large parking area, showers and an eating establishment that sees large crowds during the dry months. The City has determined that a key source of bacteria and nutrients in Loma Alta Creek is urban runoff that discharges into the creek. The source of water for Loma Alta Creek is

from storm drain flows and hillside seepage from the Loma Alta watershed, which drains approximately 6,400 acres, and flows through densely developed residential, commercial, and industrial land uses.

In 2005, the City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the SWRCB to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. One hundred percent of the dry weather creek flows (averaging 300 to 700 gallons per minute) will be intercepted in the lagoon and diverted to the UV treatment facility, located on the northern bank of the creek. The treatment facility consists of piping flows from an exiting diversion structure by gravity from the lagoon through a 2 micron fine screen to a wet well where the flow is pumped into two large sand filters followed by two UV disinfection units housed in a reinforced concrete building. The treated water is discharged through a pipe extended along the existing section of rip-rap that runs along the north side of the Loma Alta creek outlet at Buccaneer Beach. During wet weather months (November through April), the lagoon would be opened to allow free flow to the ocean and the UV system would be bypassed. See Figure 12-1 for a photo of the facility.

Figure 12-1. Oceanside Loma Alta Creek UV Facility.

12.2.2 Activities completed during previous reporting periods

The California Coastal Commission approved Permit No. 6-06-152 for construction of the outfall pipe associated with the UV treatment facility on June 14, 2007. Loma Alta Creek UV Treatment Facility project entered into the construction phase on August 13, 2007 when the official Notice to Proceed was issued to Orion Construction Corporation.

Each year the Loma Alta Creek Ultraviolet Light Treatment Facility is scheduled to start treatment in May and continue through September.

During the summer of 2009, repairs and upgrades were required to restart the facility and operation began in June. The plant typically ran three to four days a week with average flows of 300 gallons per minute. No water was discharged onto the beach when the UV Facility was offline. Flows were lower than expected due to drought conditions and conservation efforts of Oceanside residents. See Figure 12-2 for a photo of treated water being released from the UV Outfall pipe.

Figure 12-2. Oceanside Loma Alta Creek UV Outfall pipe releasing treated water.

Water samples were taken weekly from Buccaneer Beach directly in front of the discharge pipe and seventy-five feet north and south of the discharge pipe. The samples were tested for total and fecal coliform and Enterococcus. All samples taken during summer 2009 met California Department of Health Services AB411 Objectives and there were no postings due to bacterial levels exceeding standards set by the County Department of Environmental Health. The UV Facility ran through September 2009.

During the 2009-10 reporting year, Loma Alta Creek flows continued to be lower than expected during drought conditions warranting sporadic running of the UV facility. The facility began running in June 2010 for the summer dry season and discontinued running in October 2010. It ran for a total of 27 days during this time period. Approximately 16 million gallons of water was treated through the facility during the summer of 2010.

During the 2010-11 reporting year, the Oceanside Loma Alta Creek UV Treatment Plant operated between June and August 2011 for a total of 57 days. Higher flows in the Creek allowed continuous treatment through mid-July. Approximately 25 million gallons of water was treated through the facility.

12.2.3 Activities completed during current reporting period

During the 2011-12 reporting year, the Oceanside Loma Alta Creek UV Treatment Plant operated between May and September 2012. The September 2012 data was not available for reporting, however between May and August, the plant operated a total of 80 days. Approximately 31 million gallons of water was treated through the facility.

12.3 San Diego RWQCB Loma Alta Slough Bacteria and Nutrient TMDL Development

Development of the Loma Alta Slough Bacteria and Nutrient TMDL began in the fall of 2009 lead by the San Diego Regional Water Quality Control Board (SDRWQCB). Modeling for the Bacteria and Nutrient TMDL, completed by an SDRWQCB contractor, is expected to be complete by the end of 2012. During the development process, several data gaps had been identified and, where possible, additional monitoring was completed to fill the gaps for modeling purposes.

12.3.1 Activities completed during previous reporting period

12.3.1.1 Data Sonde Deployment in the Slough

Data collected pursuant to Investigative Order R9-2006-076 in Loma Alta Slough only required one data sonde deployed at depth in the Slough. During the TMDL model development, a data gap was identified for water quality monitoring data closer to the surface of the Slough. To capture this data, the City deployed data sondes at two depths at one location to measure temperature, specific conductivity, dissolved oxygen, turbidity, and pH. Data was collected from September 17 through October 14, 2010. This data was then submitted to the SDRWQCB contractor, the Southern California Coastal Water Research Project (SCCWRP) and their subconsultants for use with TMDL modeling.

12.3.2 Activities completed during current reporting period

12.3.2.1 Low Flow Monitoring at the Mass Emissions Station

Flow data collected pursuant to Investigative Order R9-2006-076 in Loma Alta Slough at the watershed mass emissions station (MES) was flagged for questionable quality assurance in the final monitoring report. The flow was likely overestimated due to a manufacturing defect to the pressure transducer. This flow data was used in initial TMDL modeling efforts. The greatest impact to this overestimation is during dry weather where estimated watershed loads from the model are much greater than loads calculated through other monitoring. Therefore, during the TMDL model development, a data gap was identified for low flow (late summer) flow data. To capture this data, the City worked with the SDRWQCB contractor, Southern California Coastal Water Research Project (SCCWRP), and a City contractor to construct a weir, install flow equipment, and measure and maintain flow during late summer 2011. Data was collected from September 22 through October 3, 2011. This data was then submitted (SCCWRP) and their subconsultants for use with TMDL modeling.

13.0 NON-EMERGENCY FIRE FIGHTING

Emergency fire fighting flows (flows necessary for the protection of life or property) are allowed by the Municipal Permit and do not require implementation of BMPs. Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described below.

Table 13-1. Order 2007-0001 Compliance Summary.

J.3.a(3)(1)iv Non-Emergency Fire Fighting	See Entire Section 13 of this Annual Report

13.1 Best Management Practices

The City developed and implemented a program to reduce pollutants from non-emergency fire fighting flows, in accordance with Section B.3 of Permit Order 2007-0001. BMPs were implemented when the following activities were conducted:

- Regular Maintenance of Fire and Emergency Vehicles and Equipment
- Training Exercises
- Facilities Maintenance
- Post-Emergency Rehabilitation of Response Equipment

These activities were conducted in a way to either minimize or eliminate the discharge of pollutants to the MS4. Detailed descriptions of BMPs are given for each activity below:

Regular Maintenance of Fire and Emergency Vehicles and Equipment

- Vehicles and equipment were cleaned where runoff was directed to either the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment were cleaned where runoff would pond and evaporate and/or where runoff would filter through landscaped areas.
- Sewer drains in a vehicle cleaning area were outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits were available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents were minimized, and general cleaning solutions were disposed of into the sanitary sewer system.

Training Exercises

- Water used in training exercises was directed to landscaped areas whenever possible, and runoff from the training exercises was not allowed to discharge to the MS4.
- Live fire training activities were pre-planned to allow integration of barriers to off-site runoff that could contribute to non-storm water discharges.

Facilities Maintenance

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways were swept to remove debris. Debris was placed in the trash.
- Landscaped areas were maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems were monitored and maintained as required to reduce irrigation water from going off-site.

- Spills were cleaned up using spill kits provided at the work site, and disposal of spilled material was in accordance with applicable regulations.
- Spills that required a cleanup beyond the ability of the on-site employees were reported to the City's Public Works Department for assistance with appropriate resources.
- Maintenance and repair of structures were conducted using methods that do not contribute pollutants to the MS4.

Post-Emergency Rehabilitation of Response Equipment
Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency were restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. The use of water that could contribute to storm water discharges was used unless another practical and immediately available method was identified, and was performed in a manner that minimized discharges to the MEP.

13.2 Educational Methods

During live fire fighting training exercises all fire fighters were educated about the requirement to not allow water flows to enter the MS4. Fire fighters in attendance for training sessions about how to use high pressure fire fighting hoses were educated on how to direct the water to percolation basins that are permanently in place at the training grounds. Water that is directed to these basins was allowed to infiltrate into the soil and/or evaporate.

Prior to building structures at the training grounds being set on fire, perimeter controls were put in place to ensure that water from the non-emergency training session did not reach the MS4. Fire fighters in attendance were educated on the proper type and installation protocol of perimeter controls. These perimeter controls were also used for training sessions related to vehicle fires.

14.0 JURMP REVISIONS

There were no changes made to the City of Oceanside's 2008 JURMP during this reporting period. Updates were made to the 2008 JURMP during the 2008-09 reporting period. Details of these changes can be found in Section 14 of the 2008-09 JURMP Annual Report.

THIS PAGE INTENTIONALLY LEFT BLANK

15.0 CONCLUSIONS AND RECOMMENDATIONS

15.1 Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a., of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2011-2012 annual reporting period (July 1, 2011 – June 30, 2012).

15.2 Conclusions

This annual report presents the activities the City conducted from July 1, 2011 through June 30, 2012 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff within the City's jurisdiction on receiving water bodies. Improving water quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

As detailed in the Program Effectiveness Assessment Component, the City met all of the development planning targets and met the municipal targets. Long-term effectiveness assessment is an ongoing and iterative process and the City will continue to use this process to further improve its storm water program.

15.3 Recommendations

15.3.1 Database Tracking System for various departments and divisions

During the 2010-11 reporting period several departments within the City moved forward with implementation of various data tracking systems. The Water Utilities Department, which includes Water and Sewer Divisions, and the Clean Water Program, continued using the Lucity (previously GBA Masters Series) software. The Development Services Department, which includes Code Enforcement and Building and Engineering Divisions, continue using TRAKiT, permitting software by CRW Systems. These two systems can accept data and allows for custom queries to provide data for the jurisdictional annual reports. Customization of modules for these two software programs to allow data entry and querying related to the Clean Water Program will be assessed and implemented when needed.

15.3.2 Assessment of Education Program

The Pick Up Your Pet Waste Campaign was initiated in FY 2008-09 to address the accumulation of dog waste along the San Luis Rey Recreation Trail (Trail) which travels adjacent to the San Luis Rey River on both the north and south sides. During FY 2010-11 the City installed four pet waste bag dispensers (Mutt Mitt brand) and four additional trash cans along the Trail where most people access specific sections of the trail.. Modified signage was also installed at the dispenser

stations to emphasize pet owner responsibility. Refill bags continue to be replenished when needed.

Assessment of the Project SWELL 5th and 6th grade curricula is planned for FY 2012-13 in conjunction with Coastkeeper and the City of San Diego. Feedback from teachers and students will be important to evaluate and modify the program, if necessary.

15.3.3 Underserved Target Audience Outreach Spanish Speaking

During this reporting period Spanish materials were disseminated to target the Spanish speaking population about BMPs they can implement to prevent water pollution. This included the Spanish 2012 Regional Storm Water Calendar. Details on this calendar will b submitted with the Regional Urban Runoff Management Program annual report to be submitted to the RWQCB in January 2013.

To Interested Parties:

2011-2012 ANNUAL REPORT ANNUAL REPORT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Storm Water Multi-Application Reporting and Tracking System (SMARTS) allows an individual discharger to file and submit their Annual Report electronically to the Regional Water Board. Currently SMARTS is not a mandatory reporting method, but we encourage all dischargers to register and use SMARTS.

To register to use SMARTS please visit: https://smarts.waterboards.ca.gov and download the SMARTS LRP registration form and instructions. Please fill out the form and mail it back to: SMARTS Registration, P.O. Box 1977, Sacramento, CA 95812. Once a complete registration form is received, a login name and password will be emailed to you.

For SMARTS registration questions or information please contact the SMARTS help center at 1-866-563-3107 or by email at stormwater@waterboards.ca.gov.

To receive email updates on Storm Water Industrial permitting issues, please sign up at
http://www.waterboards.ca.gov/resources/email_subscriptions/swrcb_subscribe.shtml
The Storm Water program currently maintains five email lists:

- Storm Water Database Issues
- Storm Water Construction Permitting Issues
- Storm Water Industrial Permitting Issues
- Storm Water Municipal Permitting Issues
- Sustainable Development

Sincerely,

Storm Water Section

State of California
STATE WATER RESOURCES CONTROL BOARD

2011-2012

ANNUAL REPORT

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2011 through June 30, 2012

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 9 371005695

Facility Business Name: City of Oceanside

Contact Person: Bryan Forward

Physical Address: 1680.5 Maxson St / Brooks St

e-mail: bforward@ci.oceanside.ca.us

City: Oceanside, CA 92054

CA Zip: 92056 Phone: 760 435 5194

Standard Industrial Classification (SIC) Code(s): 4953

B. Facility Operator Information:

Operator Name: Oceanside Public Works

Contact Person: Bryan Forward

Mailing Address: 4927 Oceanside Blvd

e-mail: bforward@ci.oceanside.ca.us

City: Oceanside, CA 92056

State: CA Zip: 92056 Phone: 760 435 5194

C. Facility Billing Information:

Operator Name: Oceanside Public Works

2011-2012

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: ___/___/___

   v. ☐ Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☒ **YES** ☐ **NO** **attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated ___/___/_____

6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☒ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

       _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

       _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

       _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers**. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☒ **YES**	☐ **NO**	☐ **N/A**	October-December	☒ **YES**	☐ **NO**	☐ **N/A**
January-March	☒ **YES**	☐ **NO**	☐ **N/A**	April-June	☒ **YES**	☐ **NO**	☐ **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ **YES**	☐ **NO**	October-December	☒ **YES**	☐ **NO**
January-March	☒ **YES**	☐ **NO**	April-June	☒ **YES**	☐ **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☒ **YES** ☐ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☒ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2C.

The unauthorized non storm water discharge is generated from the Oceanside Public Pool back washing pool filters as well as public parkway irrigation run off.

2011-2012

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1. Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2. If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☒ YES	☐ NO	☐ NA
3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☐ NA
4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed Name: Bryan Forward

Signature: _____ Date: 5/31/12

Title: Ordinance Enforcement Supervisor

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

See Storm Water Contacts at

http://www.waterboards.ca.gov/water_issues/programs/stormwater/contact.shtml

2011-2012 ANNUAL REPORT ANNUAL REPORT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Storm Water Multi-Application Reporting and Tracking System (SMARTS) allows an individual discharger to file and submit their Annual Report electronically to the Regional Water Board. Currently SMARTS is not a mandatory reporting method, but we encourage all dischargers to register and use SMARTS.

To register to use SMARTS please visit: https://smarts.waterboards.ca.gov and download the SMARTS LRP registration form and instructions. Please fill out the form and mail it back to: SMARTS Registration, P.O. Box 1977, Sacramento, CA 95812. Once a complete registration form is received, a login name and password will be emailed to you.

For SMARTS registration questions or information please contact the SMARTS help center at 1-866-563-3107 or by email at stormwater@waterboards.ca.gov.

To receive email updates on Storm Water Industrial permitting issues, please sign up at
http://www.waterboards.ca.gov/resources/email_subscriptions/swrcb_subscribe.shtml
The Storm Water program currently maintains five email lists:

- Storm Water Database Issues
- Storm Water Construction Permitting Issues
- Storm Water Industrial Permitting Issues
- Storm Water Municipal Permitting Issues
- Sustainable Development

Sincerely,

Storm Water Section

State of California
STATE WATER RESOURCES CONTROL BOARD

2011-2012

ANNUAL REPORT

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2011 through June 30, 2012

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 9 371005696

Facility Business Name: City of Oceanside

Contact Person: Bryan Forward

Physical Address: 2070 Mission Ave

e-mail: bforward@ci.oceanside.ca.us

City: Oceanside

CA Zip: 92054 Phone: 760 435 5194

Standard Industrial Classification (SIC) Code(s): 4953

B. Facility Operator Information:

Operator Name: Oceanside Public Works Department

Contact Person: Bryan Forward

Mailing Address: 4927 Oceanside Blvd

e-mail: bforward@ci.oceanside.ca.us

City: Oceanside

State: Ca Zip: 92056 Phone: 760 435 5194

C. Facility Billing Information:

2011-2012

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: ___/___/___

   v. ☐ Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? ___2___

   If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☒ **YES** ☐ **NO** **attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? ___1___

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated ___/___/_____

6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☒ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

       _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

       _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

       _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☒ **YES**	☐ **NO**	☐ **N/A**	October-December	☒ **YES**	☐ **NO**	☐ **N/A**
January-March	☒ **YES**	☐ **NO**	☐ **N/A**	April-June	☒ **YES**	☐ **NO**	☐ **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ **YES**	☐ **NO**	October-December	☒ **YES**	☐ **NO**
January-March	☒ **YES**	☐ **NO**	April-June	☒ **YES**	☐ **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☒ **YES** ☐ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☒ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

   The following records should be reviewed:

   - quarterly authorized non-storm water discharge visual observations
   - monthly storm water discharge visual observation
   - records of spills/leaks and associated clean-up/response activities
   - quarterly unauthorized non-storm water discharge visual observations
   - Sampling and Analysis records
   - preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

   The following SWPPP items should be reviewed:

   - pollution prevention team
   - list of significant materials
   - description of potential pollutant sources
   - assessment of potential pollutant sources
   - identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

   The following BMP categories should be reviewed:

   - good housekeeping practices
   - spill response
   - employee training
   - erosion control
   - quality assurance
   - preventative maintenance
   - material handling and storage practices
   - waste handling/storage
   - structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2C.

The unauthorized non storm water discharge is generated from the Oceanside Unified School District Maintenance yard, as well as public parkway irrigation run off.

2011-2012

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1. Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2. If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☒ YES	☐ NO	☐ NA
3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☑ NA
4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Title: Ordinance Enforcement Supervisor

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

See Storm Water Contacts at

- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in acc with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

Zero Waste

The City of Oceanside is a Zero Waste City that has a goal of diverting 75 percent of its waste stream from the landfill by the year 2020 through waste reduction, recycling and composting programs. The City Council approved a zero waste resolution and with your help the City can meet this diversion goal. The City of Oceanside is currently developing a Zero Waste Strategic Plan that will help our community establish and implement strategies that focus on product stewardship, waste prevention, reuse, recycling and composting. This plan, along with our new solid waste and recycling carts arriving in January, will help Oceanside lead the way in creating a Zero Waste reality by collectively working with local businesses, community groups, and the public to reduce, reuse, and recycle all materials back into nature or the marketplace. Please go to the City's website at www.ci.oceanside.ca.us and click on the Water Utilities Department webpage to find the Solid Waste and Recycling section that provides details on ways you can make zero waste a part of your daily life.

Road to ZERO Waste

Day Without a Disposable Bag: December 15, 2011

Nothing says blight quite like a plastic bag blowing down the street. They make our neighborhoods look bad, can hurt wildlife and cost our cities money to remove from the environment and to transport to the landfill.

The goal of the Day Without a Bag event is to reduce the use of single-use plastic bags throughout California by empowering shoppers to take simple and direct actions to eliminate unsightly debris and save taxpayer dollars. On December 15, 2011, the City of Oceanside will be participating in its fourth Day Without a Bag event.

Use a reusable tote bag instead of plastic.

In 2010, the event went region-wide and included a unique coalition of major retailers, local governments and regional environmental groups. The "Day Without a Bag," campaign urges consumers to forego environmentally harmful single-use plastic or paper

continued on page 2

Is the Bag Monster growing in your kitchen?

1 year, 1 shopper, 500 bags

Green Oceanside *is a community awareness campaign that promotes environmental sustainability with support from Oceanside residents and businesses. The mission is to provide the community with the tools needed to be better stewards of the planet through recycling, reducing our waste, composting, conserving water, preventing water pollution and conserving energy.*

San Luis Rey River Cleanup

November 5, 2011 • 9 AM – 12 PM - Please join the Oceanside Clean Water Program and other volunteers by participating in the San Luis Rey River Cleanup event. This event will be held on Saturday, November 5, 2011 from 9 AM to 12 PM.

Volunteers can register at one of the following sites:

- Highway 76 and Benet Road
- Highway 76 and Foussat Road at the bike path
- Douglas Drive at the bike path (southwest corner)
- Mance Buchanon Park on College Boulevard just north of Adams Avenue
- Oceanside Harbor – Parking Lot #10

All volunteers receive cleanup supplies, refreshments, community service hours and one free give-away item. Volunteers should wear closed-toed shoes, sunscreen and hats.

Please consider registering at the Benet Road, Foussat Road and Douglas Drive sites because these are always in need of more volunteers. They are also encouraged to bring their own bucket, reusable gloves and water bottle to help reduce the amount of materials generated by the event itself.

For more information and site details, call 760-435-5536 or log onto www.OceansideCleanWaterProgram.org.

Day Without a Bag (cont.)

grocery bags in favor of reusable totes. At last year's event, City staff, dozens of local businesses and community groups distributed over 5,000 reusable bags at multiple Oceanside retail establishments and at our downtown Farmer's Market and Sunset Market.

Reusable bags are a long-term practical solution to reduce the amount of plastic bags that are found littering our environment. A single reusable bag has the potential to replace over 1,000 single-use bags in its lifetime, saving a significant amount of resources. Your help and commitment towards foregoing plastic and paper bags not only on December 15, but every day of the year, brings Oceanside one step closer towards its Zero Waste goals, where resources are conserved and our neighborhoods and waterways stay clean and pristine.

Please stay tuned to the City of Oceanside's website at www.ci.oceanside.ca.us to find out where you can get a free reusable bag on December 15, 2011. Also, if you are interested in volunteering at a bag giveaway location or are interested in sponsoring this event, please contact Colleen Foster at 760-435-5021 for more information.

FREE Water Saving Resources

The City offers FREE Residential Surveys and Smart Landscape Evaluations. A Smart Landscape Evaluation is a free service designed to assist residential, multi-family and business customers with identifying inefficiencies and water waste as well as water savings opportunities. Single-family participants can expect to have technicians review indoor fixtures and evaluate the performance of the site's irrigation system. At the end, the participant will receive a list of recommendations and a proposed watering schedule.

For multi-family and business customers, an outdoor audit will be performed and participants will receive a report outlining site specific irrigation and maintenance recommendations as well as plant alternatives designed to reduce water waste and use. To enroll please contact 866-883-1332.

To learn more about water-saving resources, conservation tips, rebates, water news, and other water-saving programs, please visit www.SaveWaterOceanside.com or contact the Oceanside Water Utilities Department at 760-435-5800.

City of Oceanside

GREEN WEEK 2012

April 23 - 29

Please Join Us for A Week Full of FREE Events that Promote a Green Oceanside Community!

Environmental Film Festival Featuring *FLOW* and *THE STORY OF STUFF*

Thursday, April 26, 6 - 9 p.m., Sunshine Brooks Theater, 217 N. Coast Hwy, Oceanside 92054

The Story of Stuff (6:30 p.m.) This animated short-film shows how our consumer goods are produced, consumed and disposed of or recycled. It will teach you something, as well as make you laugh. And, it just may change the way you look at all the stuff in your life forever.

Flow (7:00 p.m.) This award-winning film highlights the world's dwindling fresh water supply with a focus on politics, pollution, and human rights issues. This is a must-see film!

Compost Workshops

Tuesday, April 24, and Saturday, April 28, See Back For Details.

Learn to compost kitchen scraps and garden materials. This is a free event and Oceanside residents will have an opportunity to purchase a subsidized compost bin.

Free Used Oil Filter Exchange Event

Sunday, April 29, 10 a.m. - 2 p.m., O'Reilly Auto Parts, 502 Oceanside Blvd., Oceanside 92054

Log onto www.ci.oceanside.ca.us and search "Green Oceanside" for event details.

Green Fair

Saturday, April 28, 11 a.m. - 4 p.m. at Pier Amphitheater

Enjoy environmental booths, family and children's activities, food, live music, and an awards ceremony. There is no admission and is open to the public.

Loma Alta Creek and Beach Cleanup

Saturday, April 28, 9 a.m. - Noon

Sites along Loma Alta Creek, Buccaneer Beach, and the south side of the Oceanside Pier. Register at www.creektobay.org. Support provided by Waste Management of North County.

Free E-Waste Drop-Off

Saturday, April 28, 11 a.m. - 4 p.m.

Bring your electronics for recycling free of charge at parking lot 24, corner of Mission Ave. and Myers St. (more details on back).

Green Oceanside Youth Art Contest

Oceanside students in K-5th grades are eligible to enter. Download form from City website.

Free E-Waste Drop-Off

Sponsored by: City of Oceanside & 1-800-GOT-JUNK?

Saturday, April 28, 11 a.m. - 4 p.m.

Oceanside Parking Lot 24

Bring these electronics free of charge for recycling!

(No household hazardous waste materials will be accepted.)

- Cell Phones
- Computers
- Miscellaneous Wires
- Computer Monitors (CRT, Plasma, LCD)
- Consumer Electronics
- Copiers/Printers
- CPUs/Computer Towers
- Digital & Video Cameras
- DVD Players
- Fax Machines
- Household Appliances
- Electronic Medical Equipment
- Laptops
- Hard Drives
- Keyboard/Mice
- MP3 Players
- PBXs
- PDAs
- Scanners
- Speakers
- Stereo Equipment
- Televisions
- Telephones
- VCRs

Compost Workshops

Learn to compost kitchen scraps and garden materials at this free event. Oceanside residents will have an opportunity to purchase a subsidized compost bin.

Two dates to choose from:

Tuesday, April 24, 6:30 p.m.

Civic Center Community Rooms
300 N. Coast Hwy, Oceanside

Saturday, April 28, Noon

Pier Amphitheatre
During Green Fair

Space is limited; RSVP by logging onto
www.ci.oceanside.ca.us
and search "Green Oceanside" for details.

GREEN WEEK 2012

Event Locations

Please note downtown locations for Green Week events on the map above including Environmental Film Festival, Green Fair and E-Waste Drop Off. Free parking at Oceanside City Hall and Lot 23 located at Cleveland St. and Pier View Way.

The Green Oceanside campaign is about teaching families how to be better stewards of the planet by recycling, reducing waste, composting, using water efficiently, conserving energy, and preventing water pollution and litter.

Partially funded by a grant from the California Department of Resources Recycling and Recovery (CalRecycle).

Join the Oceanside Clean Water Program for the...

11th Annual

Buena Vista Creek CLEANUP

September 17, 2011
9:00 am to 12:00 pm

Participate in the 27th Annual California Coastal Cleanup Day by choosing from one of the following Oceanside sites:

Buena Vista Creek Sites
(Zone 2: North County—Inland)

1. **Fire Station #4: North side**
   Thunder Dr. and Lake Blvd.
2. **Kohl's: Behind store**
   College Blvd. and Marron Rd.
3. **Dicks Sporting Goods: Behind store**
   College Blvd. and Plaza Dr.

Coastal Beach Sites
(Zone 1: North County—Coastal)

1. **Oceanside Pier: South side**
2. **Buccaneer Beach: Buccaneer Park**
   Pacific St. and Morse St.
3. **Harbor: Boat launch ramp**
   1302 N. Pacific St.

Register at www.CleanUpDay.org

For more information

Oceanside Cleanup Events: 760-435-5536

TO ALL PARTIES, INTERESTED PARTIES, AND INTERESTED PERSONS:

Each commission mailing list is continuously updated as requests are received to include or remove any party or person on the mailing list. A current mailing list is provided with commission correspondence, and a copy of the current mailing list is available upon request at any time. Except as provided otherwise by commission rule, when a party or interested party files any written material with the commission concerning a claim, it shall simultaneously serve a copy of the written material on the parties and interested parties to the claim identified on the mailing list provided by the commission. (Cal. Code Regs., tit. 2, § 1181.3.)
