Section 10 "Fiscal Analysis" of this report follows the guidelines provided in the Standardized Fiscal Analysis Method and Format dated January 29, 2009, which was developed by all Copermittees pursuant to the requirements of Section G.3 of the Municipal Permit.

Submittal of Section 7 "Illicit Discharge Detection and Elimination Component" has been deferred to December 15, 2010 as permitted by Addendum No. 2 to Order No. R9-2007-0001. The Regional Board issued Addendum No. 2 in recognition of the fact that field screening and analytical monitoring work could continue to the end of September of each year, and time was required to complete, finalize, and submit the required reports.

As can be construed from the contents of this report, during the reporting period of July 1, 2009 to June 30, 2010, the City of Chula Vista met, and in some cases exceeded, implementation requirements of the Municipal Permit and the City's JURMP.

DEVELOPMENT PLANNING

A notable activity during the current reporting period was the update of the City of Chula Vista Development Storm Water Manual in March 2010. The Manual includes the City's local SUSMP. The updated Manual incorporates the requirements established under the regional Model SUSMP, including Low Impact Development and Interim Hydromodification Control requirements. The next update of the Manual is planned to take place before January 2011, and will include the final Hydromodification Management requirements.

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP. The 2009-2010 Fiscal Year marked one of the lowest number of private development applications. Although there were a few major development projects under review by the City, only a handful of small projects received construction permits.

The City mailed out post-construction treatment control Best Management Practices (BMPs) maintenance verification letters and forms to all responsible parties and followed up to ensure that they were duly certified and returned. Inspections of post-construction treatment control BMPs were conducted on 100% of privately maintained facilities. In total, 174 projects were inspected, which exceeds Permit requirements.

Further emphasis was placed on the practice of Low Impact Development site design BMPs. Developers and consulting engineers were encouraged and required to incorporate such BMPs in

their site design as much as site conditions permitted. Three development projects were under review during the reporting period that proposed to disturb more than 50 acres and qualified for the Interim Hydromodification Criteria, however, they did not receive grading permits and are still in the design process.

CONSTRUCTION

The Construction Component of the City's JURMP primarily included inspections of construction sites for BMP implementation. The City successfully conducted all inspections on private and public construction sites and resorted to enforcement action where necessary to bring violating sites into compliance with the requirements of the City's storm water management and grading ordinances. A total of five Notices of Violation and two Civil Penalties were issued. During the reporting period, the majority of graded construction sites remained inactive. Responsible persons for such sites were contacted and they were required to repair and maintain their erosion and sediment control BMPs. A total of 303 construction inspections were conducted during the reporting period, which meets and exceeds Permit requirements.

MUNICIPAL

The Municipal Component of the City's JURMP primarily includes implementation of BMPs on all City owned facilities and activities. During the reporting period, the City ensured BMP implementation through staff training and inspections. Sixty-one high priority municipal facilities were inspected during the reporting period. The City also conducted street sweeping (18,000 curb miles), storm sewer system maintenance (removed 427 tons of waste), and sanitary sewer system maintenance (cleaned and maintained 586 miles) as source control preventive measures. Wastewater capture was implemented during graffiti removal, Integrated Pest Management practices were implemented during landscaping and parks maintenance, and waste management activities were conducted after each special community event. In Fiscal Year 2009-2010, the City achieved all its inspections, training, and BMP implementation goals under its JURMP Municipal Component.

INDUSTRIAL AND COMMERCIAL

The Industrial and Commercial Component of the City's JURMP constitutes a major section of its storm water management program. An experienced full time Storm Water Compliance Inspector is dedicated to conducting industrial and commercial inspections and providing one-on-one training to business owners and managers throughout the City. The City's industrial and commercial inventory includes 1,426 businesses, of which 249 have been categorized as high priority and the remaining are classified as low priority. All high priority industrial and commercial businesses were inspected during the current reporting period. Thirty low priority businesses were also inspected to bring the total inspections to 25% of the total inventory as required by the Municipal Permit.

Mobile businesses applying for business licenses were directed to the Storm Water Management Section for training and signing of a certification statement to the effect that they are familiar with the City's storm water regulations and would implement BMPs appropriate to their line of

business at all times. During the reporting period, 164 mobile businesses went through this process.

RESIDENTIAL

The City has developed the residential component of the JURMP based upon a multi-faceted approach, including pollution prevention; hotline response and enforcement; and outreach and education. The City collects and analyzes information about various aspects of observed and reported violations from multiple sources to identify high-priority residential areas and activities. Such areas and activities are then targeted for public education and outreach. The current reporting period marks a significant jump in the number of hotline calls, which can be indicative of the public awareness of storm water regulations and the relative ease of reporting.

During the reporting period, various programs under the City's residential component continued, including 1) Household hazardous waste collection center, 2) State-certified used-oil collection center, 3) Household collection of used oil, 4) Christmas tree recycling program, 5) Residential complaint response and enforcement, 6) Residential door hangers, and 7) City's environmental website.

PUBLIC EDUCATION AND OUTREACH

The City of Chula Vista has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses and activities. As such, the City places great importance on its education and outreach programs. During the reporting period, City staff organized or participated in 17 training and educational events.

The CLEAN group continued its activities toward its mission: "Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation." CLEAN group activities included media articles, school education efforts, community events, and Chula Vista Nature Center presentations and field trips. In total, City staff organized or participated in 12 educational events and provided public education on storm water regulations and BMP implementation during everyday residential activities.

City staff provided public education to industrial, commercial, and construction communities by one-on-one contact and on-site training. Business owners and managers, and construction site personnel were trained based on their specific site conditions and pollutant generating activities.
The City's storm water management program is based on the concept of continuous improvement through iterative goal setting, implementation, and assessment cycles. This process requires identifying measurable goals the beginning of the process, followed by implementation of tasks, and then assessment and comparison of results with identified goals. This illustrates the importance of assessment in any storm water management program.

PROGRAM EFFECTIVENESS ASSESSMENT

During the reporting period, the City of Chula Vista continued using the methodology developed in the regional document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs." Assessment tools such as assessment of activity based results, surveys, and dry weather monitoring results were used to arrive at acceptable conclusions. Higher levels of assessment such as changes in discharge quality and receiving water quality were deemed to be beyond the scope of jurisdictional programs and, therefore, delegated to regional research and analysis such as the Regional Monitoring Program, Long-Term Effectiveness Assessment, and the Report of Waste Discharge.

Assessment results indicate that during the Fiscal Year 2009-2010, the City of Chula Vista met all its measurable goals for program element implementation. Dry Weather monitoring indicates that the majority of pollutants of concern show decreasing trends, while some still pose a challenge. In particular, nitrate and bacterial indicators appear to pose persistent problems, which the program should focus on in future years.

FISCAL ANALYSIS

A successful storm water program would require adequate funding. During the current reporting period, the City of Chula Vista made such funds available through various sources including the general fund, storm drain fee, sewer fee, special assessment district fees, etc. The total jurisdictional storm water program costs amounted to about $2.5 million. There were other City programs designed to serve multiple objectives, including storm water pollution prevention, such as wastewater collection system maintenance, household hazardous waste management, etc. The total cost for such programs amounted to about $4.7 million.

Additionally, the City contributed its share to watershed and regional activities. The total for such programs amounted to about $277,000 during the reporting period.

As the City of Chula Vista continues its efforts toward environmental protection in general and water quality improvements in particular, its storm water management program becomes more refined and a part of a more holistic sustainability program.

FY 2009-2010 Hotline Call Response Summary

Incident Date	Structure Category	Site Category	Address			Type of Violation
07/01/2009	STORM CHANNEL	Commercial	3121	MAIN	ST	Construction Debris & Waste
	Comments/ Action Taken:	7/1/09---Received a report of illegal dumping of trash, junk and debris by Hyundai Livart Furniture at 3121 Main St. into the adjacent channel. Inspection noted several large pieces of cardboard and other packing materials dumped into the storm channel. Admin Citation Issued. Cleanup conducted. No further action required.				
07/02/2009	STREET	Commercial	1478	MELROSE	AV	Unknown Discharge
	Comments/ Action Taken:	Received a complaint from Sunny Fresh Cleaners regarding landscape maintenance crews blowing grass clippings into the street. All American Landscape was responsible party. Issued verbal warning regarding the blowing of debris into the street. No further action necessary at this time.				
07/06/2009	STREET	Residential	142	SAN MARCOS	PL	Possible Dumping into Catch Basin
	Comments/ Action Taken:	Received a report of illegal connection at 142 San Marcos Pl. Inspection noted a sewer discharge hose leading from under garage door and into open top sewer clean out in the front drive way. Spoke with resident who stated that she would remove the hose, replace the sewer clean out cap and discontinue washing clothes at home. A re-inspection verified that corrections were made.				
07/06/2009	CATCH BASIN	Residential	160	LAS FLORES	DR	Complaint Response Enforcement
	Comments/ Action Taken:	Received a call reporting mud running into the street from 160 Las Flores and into the storm drain inlet. Inspection did not find any evidence of mud flowing from said property. No further action is necessary at this time.				
07/07/2009	STREET	Residential	501	C	ST	Unknown Discharge
	Comments/ Action Taken:	Received report of water flowing into gutter with oil, slurry and rocks at 501 C Street. Inspection found small water puddle in the gutter in front of said address resulting from irrigation overflows. No further action is necessary at this time.				
07/07/2009	STREET	Commercial	5	FOURTH	AV	Unknown Discharge
	Comments/ Action Taken:	Received report of non-storm water flowing from jack in the box at 5 Fourth Ave. Inspection noted that a sprinkler was leaking water into the gutter. Irrigation system was repaired. No further action is necessary at this time.				

Incident Date	Structure Category	Site Category	Address			Type of Violation
07/08/2009	CATCH BASIN	Residential	740	F	ST	Other
	Comments/ Action Taken:	Received notification of open trash container and running water at the subject location. Inspection did not observe running water from the facility at the time of the response. Open trash container was not overfilled and is not a storm water violation. No further action required.				
07/08/2009	CATCH BASIN	Residential	120	PRESS	LN	Other
	Comments/ Action Taken:	Received notification of an open trash container at subject location. Inspection did not observe trash bin to be overflowing or an accumulation of trash at the bins location. No further action required.				
07/08/2009	CATCH BASIN	Residential	793	ENERGY	WY	Other
	Comments/ Action Taken:	Received notification of uncovered equipment and open trash container at the subject location. Inspection observed facility in good, clean condition and using proper BMPs in accordance with their Industrial Permit. Did not observe overflowing or spilled trash. No further action required.				
07/08/2009	STREET	Commercial	1855	MAXWELL	RD	Construction Debris & Waste
	Comments/ Action Taken:	Received notification of dirt tracking at subject location. Barnhardt, Inc. conducted the cleanup of the tracking using staff and a street sweeper. No further action required.				
07/08/2009	CATCH BASIN	Residential	15	J	ST	Pool Filter Discharge
	Comments/ Action Taken:	Observed discharge into the storm drain system but did not reach the catch basin. Homeowner was not aware that this is an illegal discharge. Issued verbal warning to the residence. Education material was issued. City staff conducted the cleanup utilizing a vactor crew. No further action required.				
07/09/2009	CATCH BASIN	Industrial	1888	NIRVANA	AV	Other
	Comments/ Action Taken:	Received notification of a possible storm water issue at Brenntag Pacific of uncovered pipe, equipment, large drums and possible hazardous materials. Responded to the the facility and observed the facility to be in good, clean condition. Facility is a chemical distribution facility. No storm water violations were observed. No further action is required.				
07/09/2009	CATCH BASIN	Residential	1867	CAMINO MOJAVE		Leaking Vehicle

Incident Date	Structure Category	Site Category	Address	Type of Violation
07/09/2009	CATCH BASIN	Residential	1867 CAMINO MOJAVE	Leaking Vehicle
	Comments/ Action Taken:	Received notification of an oil stain at the subject location. Inspection observed trail of oil stain or other petroleum product along a small section of Camino Mojave. Stain was already adsorbed into asphalt and did not pose a threat to water quality. Source unknown. No further action required.		
07/09/2009	CATCH BASIN	Residential	503 PROCTOR VALLEY RD	Other
	Comments/ Action Taken:	Received notification of uncovered stockpiles at the Senior Living Construction site. Inspection observed inactive large stockpiles that were properly protected with visqueen and gravel bags. Small uncovered stockpiles do not pose a threat to water quality. No further actions required.		
07/09/2009	CATCH BASIN	Municipal	1178 J ST	Other
	Comments/ Action Taken:	Received notification of water running from sprinkler system into storm drain and poor soil containment from slope located at upper parking lot of the subject location. Inspection did not observe landscape water in the curbline. Observed the slope to have old and damaged fiber roll at the toe and a buildup of leaves and sediment in the brow ditch. Parks Department replaced fiber rolls and conducted cleanup of brow ditch. No further actions required.		
07/09/2009	CATCH BASIN	Municipal	4548 SWEETWATER RD	Other
	Comments/ Action Taken:	Received notification of sprinkler water runoff at Rohr Park. Responded to subject location and did not observe irrigation runoff. No further action is required.		
07/09/2009	CATCH BASIN	Municipal	519 CARVALOS DR	Other
	Comments/ Action Taken:	Received notification of a large oil slick at the City's H Street Land Application Site. Observed hydraulic oil staining located behind K-Rail in the dirt. Inform Public Works supervisor. Public Works crew conducted the proper cleanup and disposal of the spill. No further action required.		
07/09/2009	CATCH BASIN	Municipal	707 F ST	Other
	Comments/ Action Taken:	Received notification of trash and poor soil containment at the City's Old Corp Yard. City staff responded and observed facility to be in good,clean condition with minor remnant blown trash. All stockpiles were properly contained. City staff conduct regularly schedule cleaning of the facility. No further action required.		
07/09/2009	CATCH BASIN	Residential	339 CORTE GOLETA	Other

Incident Date	Structure Category	Site Category	Address			Type of Violation
07/09/2009	CATCH BASIN	Residential	339	CORTE GOLETA		Other
	Comments/ Action Taken:	Received notification of residential sprinkler water in the gutter and storm drain. City staff responded to subject location and did not observe discharge due to system was not energized at the time of the response. City staff provided educational door hanger at the residence. No further action required.				
07/09/2009	CATCH BASIN	Industrial	811	ENERGY	WY	Other
	Comments/ Action Taken:	Received notification of oil stains and uncovered equipment at the subject location. Incident Date	Structure Category	Site Category	Address			Type of Violation
03/05/2010	STREET	Residential	1925	MAGDALENA	AV	Dirt/Sediments
	Comments/ Action Taken:	Responded to report of mud in the street at the corner of Peabody and Wolf Canyon. Inspection found that mud/sediment had eroded from a a slope belonging to Sweetwater Union High School District at Olympian High School. The mud cleaned and temporary BMPs implemented. No further action required.				
03/08/2010	STORM DRAIN PIPES	Commercial	3461	MAIN	ST	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of potential non-storm water discharges into the SWCS at 3461 Main Street. Inspection found automotive fluid drums, engines in the trash enclosure without cover and containment. Vehicle repairs being conducted in the parking lot of Heartland Meats. Business to conduct cleanup and cease vehicle repairs. Admin citation issued. No further action required.				
03/09/2010	CATCH BASIN	Commercial	676	MOSS	ST	Dirt/Sediments
	Comments/ Action Taken:	Responded to report of illegal discharge into the SWCS at 676-B Moss Street. Inspection noted abrasive being tracked from the subject address and into the tracking into the street curb and gutter. Cleanup conducted. An administrative citation was issued. No further action required.				
03/10/2010	CATCH BASIN	Commercial	986	BROADWAY		Dirt/Sediments
	Comments/ Action Taken:	Received notification of sediment discharge from subject property. City crews conducted cleanup with cost recovery. Issued admin citation. No further action required.				
03/12/2010	STORM DRAIN PIPES	Residential	449	MILAGROSA	CI	Sewage Spill
	Comments/ Action Taken:	Responded to report of an illegal discharge from 449 Milagrosa Circle into the storm drain. Illegal connection of the property sewer lateral to the SWCS was found. City crews conducted all repairs. Investigation completed. No further action required.				
03/16/2010	CATCH BASIN	Commercial	440	FOURTH	AV	Unknown Discharge
	Comments/ Action Taken:	Responded to report of unknown discharge from 440 Fourth Ave. Inspection found that the contractor was de-watering construction site using BMPs. Instructed to add additional BMPs. No further action required.				
03/17/2010	STREET	Residential	614	VIA MAGGIORE		Sewage Spill

Incident Date	Structure Category	Site Category	Address			Type of Violation
03/17/2010	STREET	Residential	614	VIA MAGGIORE		Sewage Spill
	Comments/ Action Taken:	Responded to report of a sewer discharge into the SWCS. Inspection found sewage had flowed from an uncapped sewer clean out and into the planter area and partly onto the sidewalk. City staff conducted cleanup and repairs with full cost recovery. Admin citation issued. No further action required.				
03/19/2010	STREET	Commercial	29	BROADWAY		Washing Vehicle in Street
	Comments/ Action Taken:	Responded to report of illegal discharge by Enterprise car rentals. Inspection found no evidence of a violation. Business washing cars in proper carwash bay. No further action required.				
03/22/2010	CATCH BASIN	Residential	931	BUENA VISTA	WY	Carpet Cleaning
	Comments/ Action Taken:	Rcvd notification from Dispatch of Sunset Carpet Cleaning discharging wash water into the storm drain system. City staff responded and did not observe evidence of possible discharge. No further action required.				
03/22/2010	CATCH BASIN	Commercial	555	CLAIRE	AV	Unknown Discharge
	Comments/ Action Taken:	Rcvd notification of a unknown discharge at Hilltop High School. Observed a cloudy water coming form curb outlet. Observed maintenance worker conducting cleanup of diluted floor wax from a mop bucket that spilled into a small catch basin on site. Site staff ensured that the cleanup was conducted using mops and bucket. No further action required.				
03/24/2010	STREET	Commercial	285	BROADWAY		Sewage Spill
	Comments/ Action Taken:	Received notification of sewage spill at subject location. Arrived on scene and observed approx. 5-8 gallons of sewage being contained by city staff. Property's clean out cap was missing. City crews contained spill until repairs made. Full cost recovery. No further action required.				
03/25/2010	STREET	Residential	749	NEPTUNE	CT	Unknown Discharge
	Comments/ Action Taken:	Received notification from Dispatch of a unknown spill from Allied Waste at subject location. Arrived on-scene and observed discharge of liquid from Allied Waste Green Waste vehicle. Did not enter storm drain. Spill absorbed in asphalt. No further action required.				
03/29/2010	STREET	Residential	1087	MELROSE	AV	Slulry/Concrete Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
03/29/2010	STREET	Residential	1087	MELROSE	AV	Slulry/Concrete Discharge
	Comments/ Action Taken:	Rcvd notification of a concrete slurry spill at subject address. Arrived on-scene and observed Bulldog Concrete Pumping conducting operations at the address. Bulldog had all BMPs in place and did not observe spill. No further action required.				
03/30/2010	STREET	Residential	122	QUINTARD	ST	Pool Filter Discharge
	Comments/ Action Taken:	Rcvd. Report of pool discharge into adjacent property and subject location. Determined to be a waterline leak. City staff provided info to resident to repair. No further action required.				
04/02/2010	STREET	Residential	739	SAN JUAN	PL	Paint Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge at 735 San Juan Place. Inspection noted traces of dry paint from a previous discharge from the subject property, into the gutter and nearing the storm drain inlet. Administrative citation was issued. Cleanup conducted. No further action required.				
04/06/2010	STREET	Residential	1450	THIRD	AV	Washing Vehicle in Street
	Comments/ Action Taken:	Responded to report of water flowing from a curb drain and into the SWCS. Observed water discharging, Determined to be a water leak on property. Repairs conducted. No further action required.				
04/06/2010	STREET	Commercial	943	OTAY LAKES	RD	Possible Dumping into Catch Basin
	Comments/ Action Taken:	Responded to report of a sewage spill from Domino's Pizza at subject address. Inspection found that sewage had been overflowing from grease trap at the west side of the building and discharging into the street, curb, and gutter at Otay Lakes Rd. Dominos contractor conducted cleanup. Admin citation issued. No further action required.				
04/07/2010	STREET	Municipal	503	PROCTOR VALLEY	RD	Unknown Discharge
	Comments/ Action Taken:	Received report of stagnant water in detention basin. Observed that orifice was clogged. City staff conducted maintenance of basin. No further action required.				
04/07/2010	STREET	Commercial	943	OTAY LAKES	RD	Sewage Spill

Incident Date	Structure Category	Site Category	Address	Type of Violation
04/07/2010	STREET	Commercial	943 OTAY LAKES RD	Sewage Spill
	Comments/ Action Taken:	Responded to report of a sewer discharge from JNC Pinoy Food Mart at 943-D Otay Lakes Rd. Inspection found two sewer clean out caps removed from clean outs, and sewage flowing into the adjacent grease trap. Sewage did not reach the SWCS. Repairs made. Admin Citation issued. No further action required.		
04/08/2010	STREET	Residential	755 MISSION AV	Leaking Vehicle
	Comments/ Action Taken:	Responded to e-mail report of a leaky vehicle and oil pan stored on the street. Observed oil stain. Homeowner cleaned and repaired vehicle. No further action required.		
04/14/2010	STREET	Residential	809 FLOYD AV	Leaking Vehicle
	Comments/ Action Taken:	Responded to report of resident at 805 Floyd allowing oil and grease to spill in the street in front of home. Inspection noted oils stains that had been thoroughly cleaned. No further action required.		
04/14/2010	STREET	Residential	614 VIA MAGGIORE	Sewage Spill
	Comments/ Action Taken:	Report of sewer spill at subject address. Home had previous spill in the past. Observed community carwash without using BMPs. Corrections made. Issued verbal warning. No further action required.		
04/19/2010	STREET	Residential	199 BROADWAY	Washing Vehicle in Street
	Comments/ Action Taken:	Responded to report of an illegal discharge into the SWCS at Gas Depot 199 Broadway. Observed community carwash without using BMPs. Corrections made. Issued verbal warning. No further action required.		
04/20/2010	STREET	Residential	245 ORANGE AV	Paint Discharge
	Comments/ Action Taken:	Responded to report of resident discharging contaminants into the SWCS as a result of automotive body work at subject address. Inspection found no evidence of an illegal discharge nor any Body work being conducted.		
04/22/2010	STREET	Residential	2155 CORTE VISTA	Dirt/Sediments

Incident Date	Structure Category	Site Category	Address			Type of Violation
04/22/2010	STREET	Residential	2155	CORTE VISTA		Dirt/Sediments
	Comments/ Action Taken:	Responded to report of an illegal discharge from 2155 Corte Vista. Inspection found dirt/sediment was eroding from the slope at the south east section of the intersection of Eastlake Parkway and Trinidad Cove. Implemented BMPs. Compliance met. No further action required.				
04/22/2010	STREET	Residential	2015	BIRCH	RD	Leaking Vehicle
	Comments/ Action Taken:	Responded to report of SUV leaking oil into the SWCS at 1610 Phoenix Ct. Inspection noted that the vehicle was parked on private property. Oil cleaned up. No further action required.				
04/22/2010	STREET	Residential	115	GLOVER	AV	Dirt/Sediments
	Comments/ Action Taken:	Responded to report of an illegal discharge at subject address. Inspection noted dirt/ sediment on the street, stock piles in the public right-of-way not covered and contained, and that the construction project did not have any BMPs in place. Implemented BMPs. Issued Admin Citation. No further action required.				
04/29/2010	STREET	Residential	2574	VIEW TRAIL	CT	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge at subject address. Inspection found irrigation water was being discharged from the curb drain. No further action is necessary at this time.				
04/30/2010	CATCH BASIN	Residential	569	E	ST	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge at subject address. Discharge was determined to be a water line leak at property. Repairs made. No further action required.				
05/05/2010	STREET	Residential	416	L	ST	Other
	Comments/ Action Taken:	Responded to discharge of gray water from subject property. Observed illegal discharge. Code enforcement took care of enforcement. No further action required.				
05/10/2010	STREET	Residential	103	JAMUL	AV	Leaking Vehicle

Incident Date	Structure Category	Site Category	Address			Type of Violation
05/10/2010	STREET	Residential	103	JAMUL	AV	Leaking Vehicle
	Comments/ Action Taken:	Responded to report of an illegal discharge of radiator fluid into the SWCS from subject address. Inspection noted that homeowner was allowing the discharge of radiator fluid into the SWCS as a result of automotive work. Cleanup conducted. Issued admin citation. No further action required.				
05/12/2010	STREET	Residential	4368	ACACIA	AV	Dirt/Sediments
	Comments/ Action Taken:	Responded to report of illegally dumped tires at subject address. Inspection noted four tires placed approximately 10 feet from storm drain channel. No evidence linking the tires to the property owner could be found. City staff removed the tires. No further action required.				
05/13/2010	STREET	Residential	764	LAKE HILL	PL	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge at subject address. Inspection notes that a broken irrigation line had saturated the dirt lot and water was flowing into the street, curb and gutter. BMPs were in place and prevented any dirt/ sediment from entering the SWCS. Leak repaired. No further action required.				
05/13/2010	STORM CHANNEL	Residential	1193	CARLOS CANYON	DR	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of gasoline dumped into the storm channel near the intersection of Otay Lakes Rd. And Avenida Del Rey. nspection found no gasoline containers, nor buckets of gasoline, only political signs that had been dumped into the storm drain. City staff removed all political signs and trash and debris from this section of the storm drain system. No further action is necessary at this time.				
05/14/2010	STREET	Commercial	1321	THIRD	AV	Accident/Spill
	Comments/ Action Taken:	Rcvd notification from Dispatch of a soy bean oil container leaking at subject location. City staff arrived on-scene and observed cooking oil leaching out from a dumpster. Contacted Hunong Chinese Buffet staff to conduct the cleanup using mop and bucket and to call Allied Waste to change out dumpster. Rcvd call from owner who contacted Allied which they will replace dumpster week of 05/16/10. Owner to monitor dumpster and conduct any cleanup as necessary. Owner to ensure that Offal is used. No further action is required.				
05/18/2010	STREET	Residential	496	FLOWER	ST	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge at 496 Flower Street. Inspection found that trash cans had been turned over and a leachate was discharging from the cans. Property owner conducted cleanup. No further action required.				
05/18/2010	STREET	Commercial	670	OXFORD	ST	Unknown Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
05/18/2010	STREET	Commercial	670	OXFORD	ST	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from a lunch truck at Harborside Park. Inspection noted ice water leaking from the truck's ice box. Containment placed inside truck to prevent leak. A verbal warning was issued. No further action is necessary at this time.				
05/19/2010	STREET	Commercial	283	PALOMAR	ST	Power Washing
	Comments/ Action Taken:	Inspection found no evidence to support enforcement. No further action required. Responded to report of power washing without the use of BMPs.				
05/21/2010	STREET	Commercial	2400	MAIN	ST	Dirt/Sediments
	Comments/ Action Taken:	Responded to report of an illegal discharge into the SWCS at subject address. Inspection found evidence of a discharge related to fire sprinkler system water. Some BMPs have been implemented, however they were not sufficient. Implemented additional BMPs. Issued Admin Citation. No further action required.				
05/25/2010	STREET	Residential	2338	PEACOCK VALLEY	RD	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of oil spilled in the street in front of subject address. Inspection noted only small piles of oil absorbent left from a clean-up. Small piles of oil absorbent need to be removed. City staff conducted cleanup. No further action required.				
05/26/2010	STREET	Commercial	2397	PORCH SWING	ST	Slulry/Concrete Discharge
	Comments/ Action Taken:	Responded to report of vehicle discharging concrete from the back of a concrete trailer on Olympic Parkway. Found small marks of what may be concrete. Source cannot be located. No further action is necessary at this time.				
05/27/2010	CATCH BASIN	Residential	1401	HILLTOP	DR	Dirt/Sediments
	Comments/ Action Taken:	Responded to report of an illegal discharge in the vicinity of East Rienstra and Hilltop Drive. Inspection found an irrigation system leak at the Arco gas station at 1401 Hilltop Drive. Leak repaired. No further action required.				
05/27/2010	CATCH BASIN	Residential	1579	APACHE	DR	Possible Dumping into Catch Basin

Incident Date	Structure Category	Site Category	Address			Type of Violation
05/27/2010	CATCH BASIN	Residential	1579	APACHE	DR	Possible Dumping into Catch Basin
	Comments/ Action Taken:	Responded to report of an illegal pet waste discharge at subject address. Inspection found no evidence of a pet waste discharge. No further action required.				
05/27/2010	CATCH BASIN	Commercial	2052	ENTERTAINMENT	CI	Unknown Discharge
	Comments/ Action Taken:	Responded to a report of illegally dumped water and trash into the adjacent field at the subject address. Inspection found no evidence of an illegal discharge, but did find evidence of a need for BMP implementation. BMPs implemented. Issued Admin Citation. No further action required.				
05/28/2010	STREET	Residential	1453	MELROSE	AV	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of an abandoned open top used oil container. Inspection found an abandoned used oil container in the trash enclosure at 1450 Melrose Ave #16. Oil removed. No further action required.				
05/28/2010	STREET	Residential	79	SUZANNE	LN	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from 79 Suzanne Lane. Inspection found minimal traces of a discharge. Spoke to tenant regarding discharge. Tenant stated that they were watering the plants in the backyard and that they would try and limit watering. No further action is necessary at this time.				
06/02/2010	STREET	Residential	1419	MELROSE	AV	Unknown Discharge
	Comments/ Action Taken:	White residue flowing from curb drain outlet at Spruce street from 1419 Melrose Ave. Homeowner stated that had spackle spill. Cleanup conducted. No further action required.				
06/03/2010	STREET	Commercial	1328	J	ST	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of an oil spill in the street in the vicinity of the subject address. Inspection noted that Allied waste staff was already on scene finishing up the clean up. No further action required.				
06/03/2010	STORM WATER	Residential	214	RICHMOND PARK	CT	Other

Incident Date	Structure Category	Site Category	Address			Type of Violation
06/03/2010	STORM WATER	Residential	214	RICHMOND PARK	CT	Other
	Comments/ Action Taken:	Follow up visit to to investigate the report of an unknown discharge. No evidence of a violation was found. No further action is necessary at this time.				
06/10/2010	STORM CHANNEL	Residential	916	L	ST	Complaint Response Enforcement
	Comments/ Action Taken:	City staff responded to the report of a foul odor from the channel. I Inspection noted trash junk, debris, and human waste along the banks of the channel. Admin citation issued. Cleanup conducted. No further action required.				
06/11/2010	STORM DRAIN PIPES	Commercial	2260	OTAY LAKES	RD	Other
	Comments/ Action Taken:	Responded to complaint of trash, junk, debris and grease/ oil scattered outside the common trash enclosure at the subject address. Inspection verified the existence of above mentioned conditions. Cleanup conducted. No further action required.				
06/11/2010	CATCH BASIN	Commercial	1550	SOLANO	DR	Complaint Response Enforcement
	Comments/ Action Taken:	Responded to report of landscape staff blowing trash into the storm drain system. Inspection found that landscape staff were applying fertilizer with back pack mounted blowers on a trash pick up day for the same neighborhood. Spoke to the landscaping staff and explained the importance of applying fertilizer accurately and being careful not to further blow existing trash generated by other sources. No further action is necessary at this time.				
06/14/2010	STREET	Residential	443	WOODLAWN	AV	Sewage Spill
	Comments/ Action Taken:	Responded to e-mailed report of a possible illegal sewer discharge at subject address. Inspection found no evidence of a violation. Prior discharge cleanup was conducted by city staff. No further action is necessary at this time.				
06/14/2010	STREET	Residential	130	FORTUNA	ST	Unknown Discharge
	Comments/ Action Taken:	Responded to a Code Enforcement's report of a potential sewer discharge from subject address. Inspection found evidence of an irrigation discharge. No evidence of a sewer discharge was present. No further action is necessary at this time.				
06/15/2010	STREET	Commercial	700	NAPLES	CT	Sewage Spill

Incident Date	Structure Category	Site Category	Address			Type of Violation
06/15/2010	STREET	Commercial	700	NAPLES	CT	Sewage Spill
	Comments/ Action Taken:	Responded to report of a broken sewer line within the Chula Vista Veterans Home. An inspection was conducted to ensure there was no potential threat to the City's SWCS. The inspection found no evidence of any discharge. No further action is necessary at this time.				
06/15/2010	STREET	Commercial	413	TELEGRAPH CANYON	RD	Unknown Discharge
	Comments/ Action Taken:	Responded to report of restaurant staff discharging Lysol and water into the parking lot after mopping. Inspection found some traces of a discharge. Spoke to Restaurant owner she was unaware of the requirement to use BMPs. Issued Admin citation. Staff informed of requirements. No further action required.				
06/17/2010	STREET	Residential	2532	TABLE ROCK	WY	Washing Vehicle in Street
	Comments/ Action Taken:	Responded to report of an illegal discharge at the subject address. Inspection found auto detailer Xrtreme Enterprises Inc. allowing a discharge and not implementing BMPs. Administrative citation was issued. No further action is necessary at this time.				
06/21/2010	STREET	Residential	795	FOURTH	AV	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of an unknown discharge from a five gallon container. Inspection at 786 Fourth Avenue found an unmarked five gallon container slowly leaking fluid into the gutter. Liquid was unknown. Spread dirt at the spill to prevent further flow. Remained on scene until Fire Department took command. No further action is necessary at this time.				
06/21/2010	STREET	Residential	735	ASH	AV	Pool Filter Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from a pool at subject address. Inspection found that green pool water was being discharged from a pool contaminated with algae. Algae cleaned. Issued admin citation. No further action required.				
06/23/2010	STREET	Residential	2972	WINDING FENCE	WY	Unknown Discharge
	Comments/ Action Taken:	Received notification of a slurry spill at subject address. City staff responded to subject address and observed Green Leaf pumping concrete for pool. Green leaf was using proper BMPs. No further action required.				
06/24/2010	STREET	Residential	445	HILLTOP	DR	Pool Filter Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
06/24/2010	STREET	Residential	445	HILLTOP	DR	Pool Filter Discharge
	Comments/ Action Taken:	Responded to report of pool discharge with strong smell of chlorine. At the time of my visit the flow of water had been stopped. Spoke to homeowner on the proper procedure of discharging pool. No further action required.				
06/24/2010	STREET	Commercial	1016	GUATAY	AV	Slulry/Concrete Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from subject address. Inspection found a small trace of gray slurry from 1016 Guatay to 1038 Guatay. Flow did not reach the storm drain inlet. Cleanup conducted. No further action required.				
06/28/2010	STREET	Residential	143	J	ST	Complaint Response Enforcement
	Comments/ Action Taken:	Received notification of a resident washing trash from driveway to street. City staff arrived on-scene and did not observed evidence of discharge. Street was dry and did not observe trash. Left door hanger at resident. No further action required at this time.

City of Chula Vista
Storm Water Quality Public Awareness Survey Analysis

BACKGROUND

During the period April through September 2009, the City of Chula Vista Storm Water Management Section administered an 11-question, multiple-choice survey designed to assess public awareness of pollution prevention measures related to storm water. A copy of the survey is at the end of this document. The focus of the survey was residential behaviors related to gardening, pet care, automobile maintenance, pool maintenance, and reporting of illegal discharges. A baseline survey was administered in 2005. In this latest survey, some questions were improved to increase respondent understanding; some answers were expanded to gain more insight into behavioral change. Data was collected at a variety of locations throughout the City during public outreach events. Survey respondents were encouraged to take any of the various educational storm water brochures offered at the booth when they were finished with the survey.

DATA ANALYSIS APPROACH

Based on the City's population of about 220,000, a 95% confidence level, and 4 confidence intervals, it was determined that at least 599 people had to be surveyed to obtain results that were statistically significant. A total of 662 surveys were collected, thus increasing the level of survey accuracy. This report presents a summary of the survey data and a general comparison with the results of the 2005 baseline survey. Analysis results provide the City with a better understanding of JURMP public outreach and education program implementation and effectiveness, as well as potential areas where the City's storm water program can be improved or enhanced. The City plans to conduct its next survey in FY 2012-2013.

ZIP CODE

Respondents were asked to write in their residence zip code on the survey. This provides information on whether or not the individual is a Chula Vista resident and provides info on the region of Chula Vista in which he/she lives. Overall, more than half of the respondents live in zip codes 91910 and 91911, the two westernmost zip codes in Chula Vista. About 70% of respondents live in zip codes 91910 through 91915, which are in the City of Chula Vista. Table 1 and Figure 1 below summarize the results.

Table A: Zip Codes of Survey Respondents

Zip Codes	Count	FY 09-10
91902	21	3.17%
91910	228	34.44%
91911	143	21.60%
91913	52	7.85%
91914	9	1.36%
91915	36	5.44%
91950	29	4.38%
Other Zip Codes	139	21.00%
No Answer	5	0.76%
Total	662	

Figure A

QUESTION 1 : A WATERSHED IS DEFINED AS:

This question was designed to determine what percent of the Chula Vista respondents knew the correct definition of a watershed. The question was improved from the baselines survey's "Yes or No" answer that did not accurately monitor the respondent's knowledge of watersheds. By measuring the understanding of watersheds, the City can better focus its education efforts.

Overall, about 37% of respondents knew the correct definition of a watershed. This was the most favored answer, but was closely followed by respondents that "Do Not Know," at 35%. About 60% of the respondents either did not know what a watershed was or answered incorrectly. Over half of the surveyed population did not know what a watershed is, as shown in the Table 1 and Figure 1 below.

Table 1: Response to Question 1

Answer	Chula Vista	Total
The measure of velocity from urban runoff discharge	10.81%	11.48%
Methods implemented to prevent evaporation of bodies of water	15.06%	15.26%
The land area that drains into particular lake, river, or oceans	37.45%	36.86%
Do not know	34.94%	34.89%
No answer	1.74%	1.51%

Figure 1

QUESTION 2: WHAT IS THE DIFFERENCE BETWEEN STORM DRAIN SYSTEM AND SANITARY SEWER SYSTEM?

This is a very basic and fundamental concept in storm water pollution prevention. This question was modified from the baseline survey that asked respondents to choose an answer for: "Water that flows down the street goes to..."

Over half (57%) of the respondents answered correctly, saying that "Water that flows in Sanitary Sewer System is treated and water that flows in Storm Drain System goes directly to creek, bay, or ocean." Others (30%) responded that water in the storm water drain system gets treated before it is released, and about 12% did not know the difference between the two. This implies that most respondents are aware that runoff could potentially pollute nearby waterbodies. Due to the fact that this is such a fundamental concept in storm water pollution prevention, it is evident that more effort is needed to educate the public on this concept. Data from Question 2 is summarized in Table 2 and Figure 2 below.

Table 2: Response to Question 2

Answer	Chula Vista	Total
Water that flows in Storm Drain System is treated and water that flows in Sewer System is not	16.02%	16.47%
Water that flows in Sanitary Sewer System is treated and water that flows in Storm Drain System is not	57.34%	57.25%
Water that flows in both systems is treated before releasing to bay or ocean	13.90%	13.90%
Do not know	11.97%	11.63%
No answer	0.77%	0.76%

Figure 2

QUESTION 3: IN WHAT WAYS HAVE YOU RECEIVED EDUCATIONAL MATERIALS (BROCHURES, PAMPHLETS, POSTERS) WITH REGARDS TO STORM WATER POLLUTION PREVENTION? (PLEASE MARK ALL THAT APPLY)

It is important for the City to find effective ways to disseminate educational information to residents. Many respondents chose more than one answer, so the sum of the percents is greater than 100%. While most respondents (38%) said they obtained material from public events, many respondents also received information through websites (26%) and the mail (25%). About 10% of respondents found material on their front door at home. It is important to note that no respondents answered: "I have not received any educational materials regarding Storm Water Pollution Prevention." This indicates that the City is able to effectively reach the public through its storm water education program, especially through public events and the website. Data from Question 3 is summarized in Table 3 and Figure 3 below.

Table 3: Response to Question 3

Answer	Chula Vista	Total
Attended public events	58.49%	60.12%
Found it at my door	16.02%	15.26%
Visited Chula Vista websites	40.15%	40.03%
Received through mail	38.61%	36.86%
Others	0.58%	0.91%
No Answer	0.77%	0.91%
I have not received any educational materials	0.00%	0.00%

Figure 3

QUESTION 4: WHICH OF THE FOLLOWING PRACTICES MOST APPLY TO YOU REGARDING AUTO REPAIR MAINTENANCE/ACTIVITIES?

There are many pollutants involved in automobile maintenance and it is important to know where most residents prefer to service their vehicles. The majority of respondents (72%) take their automobiles to a commercial repair shop, while others (24%) perform maintenance at home. The results suggest that in terms of education, it is better to focus efforts on commercial automobile shops. However, it is still important to remind residents about proper auto fluid disposal and to encourage the use of the City' Household Hazardous Waste program. Data from Question 4 is summarized in Table 4 and Figure 4 below.

Table 4: Response to Question 4

Answer	Chula Vista	Total
Take it to commercial repair shop	71.59%	71.66%
Do it myself in the garage	14.77%	13.35%
Do it myself in the backyard	5.30%	6.23%
I don't own a car	7.95%	8.16%
No answer	0.38%	0.59%

Figure 4

QUESTION 5: HOW MANY TIMES IN THE PAST YEAR HAVE YOU REPORTED AN ILLEGAL DUMPING IN STORM DRAIN SYSTEM?

This question is followed by a series of related questions regarding illegal dumping. Compared to the baseline survey question, "Do you know where to report illegal dumping into storm drains?" this series of questions in the 2009 survey help to provide a more in-depth look at how respondents report illegal dumping.

Though most respondents (84%) have never reported an illegal dumping, some have taken the initiative to do so at least once or twice (11%). Of those that have reported illegal dumping, most respondents called the City of Chula Vista Hotline (60.8%), and a few visited the Chula Vista Storm Water Management website (14.5 %) or visited Chula Vista City Hall (7.25%). Among the illegal dumping incidents that were reported, most were pollutants that had been dumped into the streets (43%) or leaking oil from cars (32%). Table 5 and Figure 5 below summarize the results for Question 5.

Table 5: Response to Question 5

Answer	Chula Vista	Total
1 to 2 times	11.39%	10.88%
3 to 4 times	2.32%	2.27%
5 or more	1.35%	1.96%
I have not reported any illegal dumping	83.78%	83.69%
No Answer	1.16%	1.21%

Figure 5

QUESTION 6: HOW DID YOU REPORT THE ILLEGAL DUMPING?

This is a follow up of question number 5. This is an important question because it indicates whether or not respondents know where to report illegal dumping into storm drain. Over half of the respondents who reported illegal dumping called the City's hotline and few visited the City's website or reported it at City Hall. It is important to note that the City's website was the least utilized access tool in reporting illegal dumping. This indicates that majority of respondents still prefer the personal contact approach way of communicating with the City, or they may not know about the City's website. In addition, it may be beneficial to promote the website as a means for reporting illegal dumping. Table 6 and Figure 6 below summarize the data for Question 6.

Table 6: Response to Question 6

Question 6 - Follow up answer from Question 5	Chula Vista	Total
Called City of Chula Vista hotline number (619-397-6000)	60.87%	53.33%
Visited CV Storm Water Management website (www.chulavista.gov/clean) to find contact information	14.49%	16.67%
Called the County of San Diego or other city's hotline number	17.39%	23.33%
Visited Chula Vista City Hall to report the violation	7.25%	6.67%

Figure 6

QUESTION 7: WHAT ILLEGAL DUMPING DID YOU REPORT?

This is a follow up to question number 6. Most reported cases were regarding pollutants that were directly dumped into the streets and gutter (43.84%), followed by leaking oil from cars (32.88%). The data collected provide valuable information in identifying the prevalent pollutants of concern. This data gives insight as to the level of education the of citizens of Chula Vista regarding pollution prevention and preventing illegal discharges. Table 7 and Figure 7 below summarize the results for Question 7.

Table 7: Response to Question 7

Answer	Chula Vista	Total
Illegal dumping into streets/gutter (paints, oil, grease)	43.84%	41.49%
Construction waste dumping (slurry, concrete, etc)	19.18%	20.21%
Leaking oil from cars	32.88%	35.11%
Others	4.11%	3.19%

Figure 7

QUESTION 8: IN THE PAST YEAR, WHERE HAVE YOU REGULARLY WASHED YOUR CAR?

More than half of the respondents (51.96%) said that they take their car to a fixed car wash. Another 24% said that they wash their cars on the driveway and 12% wash their cars on the lawn. In comparing the baseline survey with the current survey, a few differences are evident. Car washing on the driveway increased from 3.7% in 2005 to 24.21% in 2009, while washing at a fixed carwash facility decreased from 75.9% in 2005 to 51.96% in 2009. A possible explanation for the decreased use of car washing facilities and increased washing on the driveway could be due to the downturn in the economy. Residents may prefer to wash their cars at home in order to save money. Based on this data, the City will continue to provide education to residents about BMPs for vehicle washing. Table 8 and Figure 8 below summarize results for Question 8.

Table 8: Response to Question 8

Answer	FY 05-06 Survey Chula Vista	FY 09-10 Survey Chula Vista	FY 09-10 Survey Total
On the driveway	3.7%	24.21%	23.90%
On the lawn	11.7%	12.29%	11.73%
At a fixed carwash station	75.9%	51.96%	52.05%
I called a mobile detail service	N/A	2.61%	2.64%
I don't have a car	N/A	5.77%	5.87%
No Answer	2.5%	3.17%	3.81%

Figure 8

QUESTION 9: HOW DO YOU DISPOSE OF YOUR PET'S WASTE?

This question determines if individuals are familiar with methods of properly disposing pet waste, which can be a source of bacteria. Two extra choices were added to this survey in order to get more accurate data, one of them being that the respondent does not own a pet. The correct response to this question was to either flush the waste down the toilet or to pick it up with a plastic bag and place it in the trash. Some respondents picked more than one answer, so the total number of percentages sums up to more than 100%. There was no significant change in the trends from the 2005 baseline survey to the current survey. Most respondents answered that they use a plastic bag and place it in the trash (59%), which also received the most response in the baseline survey. The results show that the majority of respondents knew the best way to dispose of pet waste. It can be assumed that residents were knowledgeable about pet waste disposal methods regardless of pet ownership. Table 9 and Figure 9 below summarize results for Question 9.

Table 9: Response to Question 9

Answer	FY 05-06 Survey Chula Vista	FY 09-10 Survey Chula Vista	FY 09-10 Survey Total
Rinse off yard/sidewalk into gutter	1.0%	1.16%	1.66%
Flush down the toilet	8.0%	5.02%	5.29%
Bury in the yard/garden	N/A	5.41%	5.74%
Use plastic bag and place in trash	77.1%	59.65%	60.27%
I left it where it was	1.5%	0.58%	0.91%
Don't know	10.7%	0.97%	1.21%
I don't have a pet	N/A	25.68%	23.87%
No Answer	3.0%	3.09%	3.02%

Figure 9

QUESTION 10: WHAT METHOD HAVE YOU USED TO DRAIN YOUR POOL, SPA, OR JACUZZI?

This question was designed to measure awareness of the correct method to drain water from pools, spas, or Jacuzzis. Most respondents did not own a pool, spa, or Jacuzzi (76.8%). Pool owners responded that they discharge to lawn/landscaping, collect filter material and dispose to trash (5.5%) or hire a pool maintenance company (4.6%). About 4% of respondents did not know how to drain their pool. Although dechlorinating and discharging to the storm drain system was also a correct answer, only about 2% of respondents chose this answer.

This differs from the 2005 baseline survey where 39% of respondents did not know the correct method to drain a pool. This may have improved because this year's survey allowed residents to choose "Don't own a pool, spa, or Jacuzzi," which was the most prevalent answer. In the baseline survey, those who did not own pools, spas, or Jacuzzis would not know how to properly drain a pool, therefore forcing them to choose "I do not know." It could possibly explain the high numbers in the baseline survey (39%) and the lower numbers in the current one (3.4%).

The data suggests that majority of respondents who own a pool, spas, or Jacuzzi have significant educational level of awareness on the best ways of draining pools, spas, or Jacuzzis. Table 10 and Figure 10 summarize the results for Question 10.

Table 10: Response to Question 10

Answer	FY 05-06 Survey Chula Vista	FY 09-10 Survey Chula Vista	FY 09-10 Survey Total
Discharge to lawn/landscaping, collect filter material and dispose to trash	14.2%	5.41%	5.59%
I hire a pool maintenance company	N/A	4.63%	4.53%
Discharge to sanitary sewer	20.9%	2.90%	3.17%
De-chlorinate and discharge to street gutter	20.4%	1.74%	1.81%
Others –specify	N/A	0.00%	0.15%
Don't know	39.3%	3.47%	4.23%
I don't have a Pool, spa, or Jacuzzi	N/A	76.83%	75.38%
No answer	4.0%	5.02%	5.14%

Figure 10

QUESTION 11: WHICH OF THE FOLLOWING PRACTICES HAVE YOU USED IN MAINTAINING YOUR LANDSCAPE OR GARDEN? (PLEASE MARK ALL THAT APPLY)

This question has no wrong answers. With the exception of "Do not Know," all answers are correct. Many respondents chose more than one answer, so the sum of the percents is greater than 100%.

There was a significant decrease in those that responded with "Do not know" in comparing the 2005 baseline survey to the current one. This may be explained by the wider array of answer options in this survey, especially with the option to choose "I don't have landscaping or a garden." In 2005, those that do not own landscaping or a garden would automatically choose "Do not know," falsifying the results which show that a significant number of respondents do not know how to properly care for their landscape or garden. It can be assumed that the high tally of "Do not know" respondents took advantage of the opportunity to answer, "I don't have landscaping or a garden" instead, decreasing the "Do not know" response significantly from 27% to 3.2% in 2009.

The 2009 survey numbers show that respondents use all practices in maintaining their garden. However, most hire landscape contractors (20%), collect and recycle yard waste (27%), and use a hose to water to avoid over-watering (20%). Notably, only 3.28% of the total respondents picked the "Don't Know" answer, which is the lowest percentage of all the answers. This indicates that citizens of Chula Vista have a high level of awareness on proper landscape maintenance. Table 11 and Figure 11 summarize the data for Question 11, the final question in the survey.

Table 11: Response to Question 11

Answer	FY 05-06 Survey Chula Vista	FY 09-10 Survey Chula Vista	FY 09-10 Survey Total
Use less toxic pesticides	61.4%	N/A	N/A
I hire a landscape contractor	N/A	20.46%	19.94%
Collect lawn clippings and yard waste for recycling	40%	27.03%	26.28%
Use fertilizers sparingly according to label procedures	33.1%	13.13%	13.60%
Use hose to water landscape to avoid over irrigation	40.5%	20.46%	20.54%
Use drip irrigation and soakers hoses	N/A	10.23%	10.12%
Use regular sprinkler system	N/A	20.66%	19.94%
Don't know	27.1%	3.28%	4.08%

Public Works Department
Storm Water Management Section

STORM WATER QUALITY PUBLIC AWARENESS SURVEY
Home Zip Code: _____ Date: _____

This survey is to evaluate citizen awareness of storm drain pollution prevention and watershed protection issues. Results will be used to improve the City's Urban Runoff Management Program. Please mark the answer that best fits your response.

1) A watershed is defined as:
   a. The measure of velocity from urban runoff discharge before reaching the bay.
   b. Methods implemented to prevent evaporation of bodies of water (lakes, rivers, creeks)
   c. The land area that drains into particular lake, river, or ocean.
   d. Do not know

2) What is the difference between Storm Water Drain System and Sanitary Sewer System?
   a. Water that flows in Storm Drain System is treated and water that flows in Sewer System is not.
   b. Water that flows in Sanitary Sewer System is treated and water that flows in Storm Drain system goes directly to creek, bay or ocean.
   c. Water that flows in both systems is treated before releasing to bay or ocean.
   d. Do not know.

3) In what ways have you received educational materials (brochures, pamphlets, posters) with regards to storm water pollution prevention? (Please mark all that apply)
   a. Attended public events
   b. Found it at my door
   c. Visited Chula Vista websites
   d. Received through mail
   e. I have not received any educational materials regarding Storm Water Pollution Prevention

4) Which of the following practices most apply to you regarding auto repair maintenance/activities?
   a. Take it to commercial repair shop
   b. Do it myself in the garage
   c. Do it myself in the backyard
   d. I don't own a car

5) How many times in the past year have you reported an illegal dumping into storm drain system?
   a. 1 to 2 times
   b. 3 to 4 times
   c. 5 or more
   d. I have not reported any illegal dumping into the storm drain system (Please proceed to Question 8)

6) How did you report the illegal dumping?
   a. Called City of Chula Vista Hotline number (619-397-6000)
   b. Visited Chula Vista Storm Water Management Website (www.chulavista.gov/clean) to find contact information.
   c. Called the County of San Diego or other city's Hotline number
   d. Visited Chula Vista City Hall to report the violation

7) What illegal dumping did you report?
   a. Illegal dumping into streets/gutter (paints, oil, grease)
   b. Construction waste dumping (slurry, concrete, etc)
   c. Leaking oil from cars
   d. Other - please specify: _____

8) In the past year, where have you regularly washed your car?
   a. On the driveway
   b. On the lawn
   c. At a fixed carwash station
   d. I called a mobile detail service
   e. I don't have a car

9) How do you dispose of your pet's (dog, cat, turtle, etc) waste?
   a. Rinse off yard/sidewalk into gutter
   b. Flush down the toilet
   c. Bury in the yard/garden
   d. Use plastic bag and place in trash
   e. I left it where it was
   f. Don't know
   g. I don't have a pet

10) What method have you used to drain your pool, spa, or Jacuzzi?
   a. Discharge to lawn/landscaping, collect filter material and dispose to trash
   b. I hire pool maintenance company
   c. Discharge to sanitary sewer
   d. De-chlorinate and discharge to street gutter
   e. Other – Please specify _____
   f. Don't know
   g. I don't have a Pool, Spa, or Jacuzzi

11) Which of the following practices have you used in maintaining your landscape or garden? (Please mark all that apply)
   a. I hire a landscape contractor
   b. Collect lawn clippings and yard waste for recycling
   c. Use fertilizers sparingly and according to the procedures indicated on the label
   d. Use hose to water landscape to avoid over irrigation
   e. Use drip irrigation and soaker hoses
   f. Use regular sprinkler system
   g. Don't know
   h. I don't have landscaping or a garden.

Thank you for participating in this survey. If you have any questions, please contact Khosro Aminpour, Civil Engineer, at (619) 397-6111.

EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. This is the third annual report submitted under the current permit and covers the implementation period of July 1, 2009 to June 30, 2010. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the stipulations of Section J.3.a of the Municipal Permit.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports, which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has, therefore, been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2009 to June 30, 2010, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (this section will be submitted under a separate cover on or before December 15, 2010, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Section 7.0 of this report includes a summary of the City's 2010 Dry Weather Field Screening and Analytical Monitoring Program report, follow-up investigations, as well as a summary of the Illicit Discharges and Connections program for FY 2009-2010. As mandated by Addendum No. 2 to Order No. R9-2007-0001, the County of San Diego, as Principal Copermittee, will submit this section as a part of the unified JURMP Annual Report to the Regional Board by December 15, 2010. During the current reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. As required under Section III.A.2 of the Receiving Waters and Urban Runoff Monitoring and Reporting Program, the Principal Copermittee will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2009-2010 monitoring season on January 31, 2011.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2009 to June 30, 2010. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

7.1 INTRODUCTION

Illicit connections and illicit discharges (IC/ID) to the MS4 can potentially impact water quality if they are not eliminated. Examples of illicit discharges include wash-water, sediment, spilled chemicals, sewage releases, and pollutants from various sources. An illicit connection is a connection that conveys an illicit discharge to the MS4 via a pipe, drain, channel, etc. The City utilizes the following mechanisms to actively seek and eliminate illicit discharges and connections to the MS4:

1. Public complaint response and investigation
2. Inspection of local businesses and municipal facilities
3. Dry weather field screening and analytical monitoring
4. Municipal MS4 and sewer inspection and maintenance activities
5. Providing educational outreach to the community and business owners

This section provides a summary of:

- Reported illegal discharges and investigation by City staff
- Spill reporting and response
- Dry Weather Field Screening and Analytical Monitoring activities conducted within the 2010 Dry Weather Monitoring Season (May 1 – September 30)
- Follow-up investigations conducted to determine the potential source(s) of pollutants that exceeded their respective action levels.

Effectiveness assessment of the Illicit Discharge Detection and Elimination Component is included in Section 11.0 of this annual report.

Inspection of municipal facilities and industrial/commercial businesses are addressed in Sections 2.0 and 5.0 of this report. Municipal MS4 and sewer maintenance activities are described below and in Section 2.0 of this report. Educational outreach is described in Section 8.0.

7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

The City operates a hotline (619) 397-6000 for residents, employees, and the general public to report any illicit discharges to storm water conveyance systems. The hotline is publicized through several venues such as the City's website, City bus signs, and various storm water educational materials and brochures. The hotline is answered by Public Works dispatch staff, who routes the concern(s) to the appropriate section(s) within the City's Public Works

Department. All calls are entered into a database, and Storm Water Management Section staff takes immediate action to respond, investigate, provide education, and initiate enforcement actions as necessary. Staff also ensures that City crews or the responsible party contains and cleans any spills. Public Works crews are equipped with vactor trucks to contain and clean large spills. When hazardous materials are involved, all appropriate City departments or other agencies such as the Fire Department or the County of San Diego are notified as necessary.

During the reporting year, there were 257 calls to the hotline, compared to 144 calls in FY 2008-2009. Figure 7-1 compares the number of complaints from FY 1997-1998 through FY 2009-2010. As part of its education component, the City advertises the hotline on its website and trains City employees to report any illegal discharges. Attachment L summarizes all calls to the hotline and describes the outcomes of each. Attachment K is a summary of all illegal discharges to the MS4 or other violations of the City's Storm Water Ordinance that resulted in enforcement actions for FY 2009-2010.

Figure 7-1 City of Chula Vista Storm Water Hotline Call Summary 1998-2010

7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

Section 9.0 of the City's JURMP document outlines the procedures for preventing discharges of sewage to the MS4 and the mechanism whereby notification of sewage spills from private laterals, septic systems, and others spills are received. City staff is trained to report all spills to the dispatch hotline and crews are prepared to respond, contain, and cleanup spills where necessary. In addition, Section 9.0 of the City's JURMP details the City's Sanitary Sewer Overflow Response Plan (SSORP) as required by RWQCB Order No. 96-04 and a Capacity,

Management, Operations, and Maintenance (CMOM) program. The City has also developed a Fats, Oil, and Grease (FOG) Monitoring Program to reduce the amount of FOG introduced into the sanitary sewer system by businesses.

Table 7-1 provides a summary of illegal discharges and spills and the number of each. All discharges and spills were immediately responded to, contained, cleaned, and eliminated.

Table 7-1 Types of Spills/Discharges and Number of Each During FY 2009-2010

TYPE OF SPILL/DISCHARGE	NUMBER
Construction BMPs Violation	2
Chemical Discharge	3
Driveway-Trash Washing	2
Grease/Food/Drink Discharge	8
Leaking Containers/Tanks	1
Others/Unknown Discharge	2
Painting-Sanding Residue	2
Pool/SPA Residue	2
Power or Carpet Wash Water	6
Resident Cleaning Residue	6
Sediment Discharge	8
Sewage Spill/Discharge	14
Slurry/Concrete Discharge	7
Trash/Debris Discharge	4
Vehicle Oil Discharge	4
Vehicle Washing/Dismantling	5
TOTAL	76

City inspectors are constantly on the lookout for illegal connections during their routine response to reported violations or industrial/commercial inspections. When a floor drain within a structure is suspected of being connected to the storm water conveyance system or discharging to the street gutter, such connection is verified by dye testing. If the indoor drain is connected to storm drains, it is considered illegal and ordered to be disconnected immediately. In addition, the City's maintenance crews have been trained to look for illicit discharges and connections during their daily activities in the field. This process has resulted in the identification of several illicit discharges and connections each year.

7.4 URBAN RUNOFF MONITORING

The 2010 Dry Weather Field Screening and Analytical Monitoring Program Report has been submitted as Attachment N, along with an updated Dry Weather Field Screening and Analytical Stations Map. During the reporting period, the MS4 map and the dry weather monitoring maps were reviewed for inaccuracies, and no amendments were necessary. Sixty monitoring stations were visited during the 2010 Dry Weather Monitoring Program, and field screening was conducted at the 57 sites where ponded or flowing water was observed. Sites CEN-03, SCR-04,

and SWB-03 were dry, so three alternate locations; SWR-03-E, SCR-07, and SUN-08 were chosen to replace these sites. Forty sites had measurable flow and 17 sites were ponded. Fifteen sites received laboratory analysis in addition to normal field screening. Table 7-2 provides a summary of exceedances for both field and laboratory analysis.

Under the previous Municipal Permit, the main round of monitoring was followed by a follow-up monitoring round within one or two months of each other. Under the current Municipal Permit, the main and follow-up monitoring rounds are combined.

Table 7-2 Summary of Action Level Exceedances for the 2010 Dry Weather Monitoring and Field Screening Analysis

FIELD SCREENING ANALYSIS (57 Samples)			
Analyte	**Number of Exceedances**	**% of Sites with Exceedances**	**Site(s) Exceeding Action Level**
pH	0	0	None
Conductivity	0	0	None
Turbidity	1	2	SVS-01
Surfactants (MBAS)	1	2	CEN-08
Ammonia-N	3	5	JUD-02, SCR-01, SWR-04
Nitrate-N	17	30	LAK-01, OVR-07, RCC-03, RCC-04, SCR-02, SCR-03, SCR-05, SCR-06, SCR-07, SUN-02, SUN-07, TCC-02, TCC-03, TCC-05, TCC-06, WOL-02, WOL-03
Orthophosphate-P	0	0	None
Glycol	3	5	BAY-01, JUD-03, TCS

MBAS = Methylene Blue Active Substances

LABORATORY ANALYSIS (15 Samples)			
Analyte	**Number of Exceedances**	**% of Sites with Exceedances**	**Site(s) Exceeding Action Level**
Oil and Grease	0	0	None
Cadmium (Dissolved)	0	0	None
Copper (Dissolved)	0	0	None
Lead (Dissolved)	0	0	None
Zinc (Dissolved)	0	0	None
Diazinon	0	0	None
Chlorpyrifos	0	0	None
Total Coliforms	3	20	POG-02, SCR-01, SVS-01
Fecal Coliforms	5	33	CEN-01, JUD-01, PRD-02, SCR-01, SWR-03-E
Enterococcus	5	33	CEN-01, JUD-01, JUD-02, SCR-01, SWR-03-E

Note: Table data is based on routine visits only. Confirmation, follow-up, and dry site visits are not included.

During the 2010 Dry Weather Monitoring Program, one exceedance of turbidity was reported. However, prior to 2010, no exceedances have been measured for temperature, turbidity, cadmium, copper, lead, or chlorpyrifos.

The historical data for the results of field analysis presented in Figure 7-2 indicates a decreasing trend in conductivity and ammonia-N exceedances. Orthophosphate-P exceedances have been infrequent, and there is no apparent trend for glycol, surfactants, or pH results. Nitrate-N exceedances generally appear to be increasing each year since 2004.

Figure 7-2 Percent of Sites with Field Constituents Exceedances by Year

* The action level for conductivity was numeric in the past but was later changed to best professional judgment.

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 17 sites, compared to 11 exceedances in the previous year. The possible sources of nitrate-nitrogen exceedances include fertilizer runoff from over-watering and possible groundwater seepage into the storm drain system. Bacteria were elevated at 13 out of 15 sites. The three glycol action level exceedances were tested within normal range at the confirmation visits. Ammonia tested above the action level at three ponded sites. Upon the confirmation visits, two still had an elevated ammonia level, which was due to decaying organic material in ponded water. Surfactants tested above the action level at one ponded site. Upon confirmation visit, the exceedance persisted. Orthophosphate-P was not above action level at any of the tested sites.

Historical data for laboratory analyses presented in Figure 7-3 indicate regular bacteria exceedance rates, although the percent of total and fecal coliform exceedances appear to have decreased somewhat over the years. During this dry weather season, updated action levels for total coliform, fecal coliform, and Enterococcus were implemented. Zinc and diazinon have not

been detected over their action levels since 2003. Prior to 2003 the rates of exceedances were approximately 10% per year. Oil and grease has not been measured above the action level since 2005. From 2002 to 2007, both field screening and laboratory analysis were performed for surfactants. Starting in 2008, routine laboratory analysis of surfactant levels was discontinued.

Figure 7-3 Percent of Sites with Laboratory Exceedances by Year

The City continued to implement the trash monitoring program, as required by the Municipal Permit. Of the 60 sites inspected, 72% were found to be Optimal, 18% Suboptimal, 8% Marginal, 2% Submarginal, and 0% Poor. At the only Submarginal site, trash included Styrofoam cups, beer bottles, aluminum cans, food packaging, plastic bags, shopping carts, and cardboard, suggesting transient activity in the immediate area. As a part of trash assessment, sites were evaluated for potential threat to human or aquatic health. The only Submarginal site described above was found to have potential threat to aquatic health and was immediately cleaned by City crews. The 6 Marginal and Submarginal sites were noted to City crews as sites needing more routine maintenance and trash pick-up.

In addition, the City continued implementation of the Dry Targeted portion of the MS4 Outfall Monitoring Program during this dry season, in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan, and as required by the Municipal Permit. Ten dry weather monitoring sites were laboratory analyzed for constituents as detailed in Table 7-3 below. These results were reported in regional spreadsheet database as a part of the Regional Monitoring Program. The MS4 Outfall monitoring Program is primarily a regional effort and results will be analyzed within the Regional Monitoring Program. A list of outfalls monitored under the MS4 Outfall Monitoring Program together with the constituents analyzed at each outfall is presented in Table 7-3 below.

Table 7-3 MS4 Outfall Monitoring Locations and Constituents Analyzed

OUTFALL NAME	CONSTITUENTS ANALYZED
BAY-01	Bacteria and Dissolved metals
CEN-01	Bacteria, Dissolved metals, and TDS
JUD-01	Bacteria and Dissolved metals
PRD-02	Bacteria and Dissolved metals
RCC-02	Bacteria, Dissolved metals, and TDS
SCR-01	Bacteria and Dissolved metals
SUN-06	Bacteria, Dissolved metals, and TDS
SVS-01	Bacteria, Dissolved metals, and TDS
TCC-03	Bacteria, Dissolved metals, and TDS
TCC-04	Bacteria, Dissolved metals, and TDS

7.5 FOLLOW-UP AND ENFORCEMENT

Twenty nine sites had constituents above their respective action levels. Table 7-4 shows the sites with elevated constituent level and their probable sources based on upstream investigations.

Table 7-4 Summary of Upstream Investigations

SITE	UPSTREAM INVESTIGATION TARGET CONSTITUENT(S)		RESULTS/ PROBABLE SOURCE
	Field	Laboratory	
BAY-01	Glycol	-	Coolant from leaking cars in parking lot
CEN-01	-	Fecal Coliform, *Enterococcus*	Transient flow
CEN-08	Surfactants	-	Car wash area in Cabrillo Mobile Lodge residential community
JUD-01	-	Fecal Coliform, *Enterococcus*	Transient flow
JUD-02	Ammonia-N	*Enterococcus*	Ammonia-N: trash and decomposing organic material upstream; *Enterococcus*: transient flow
JUD-03	Glycol	-	Transient flow
LAK-01	Nitrate-N	-	Over-irrigation and groundwater seepage
OVR-07	Nitrate-N	-	Groundwater or interflow seepage
POG-02	-	Total Coliform	Decomposing leaves and grass clippings in gutters in combination with consistent irrigation runoff from residential areas
PRD-02	-	Fecal Coliform	Insufficient trash control BMPs upstream which can attract wildlife from the adjacent open area
RCC-03	Nitrate-N	-	Groundwater or interflow seepage
RCC-04	Nitrate-N	-	Groundwater or interflow seepage
SCR-01	Ammonia-N	Total Coliform,	Decomposing organic material in a shaded

SITE	UPSTREAM INVESTIGATION TARGET CONSTITUENT(S)		RESULTS/ PROBABLE SOURCE
	Field	Laboratory	
		Fecal Coliform, *Enterococcus*	and ponded area at the site and in a manhole upstream; excess irrigation from residential areas upstream transports bacteria to site; stagnant water upstream may promote bacterial growth; ammonia-N levels likely concentrated by evaporation of ponded water
SCR-02	Nitrate-N	-	Over-irrigation and groundwater seepage
SCR-05	Nitrate-N	-	Over-irrigation and groundwater seepage
SCR-06	Nitrate-N	-	Over-irrigation and groundwater seepage
SCR-07	Nitrate-N	-	Over-irrigation and groundwater seepage
SUN-02	Nitrate-N	-	Over-irrigation and groundwater seepage
SUN-07	Nitrate-N	-	Over-irrigation and groundwater seepage
SVS-01	Turbidity	Total Coliform	Turbidity exceedance due to construction activity; total Coliform exceedance related to transient flow
SWR-03-E	-	Fecal Coliform, *Enterococcus*	Wildlife activity, animal feces, and decomposing leaves present in upstream areas
SWR-04	Ammonia-N	-	Ammonia-N levels likely concentrated by evaporation of ponded water with decomposing leaves, transient activity and trash upstream
TCC-02	Nitrate-N	-	Groundwater or interflow seepage
TCC-03	Nitrate-N	-	Groundwater or interflow seepage
TCC-05	Nitrate-N	-	Groundwater or interflow seepage
TCC-06	Nitrate-N	-	Groundwater or interflow seepage
TCS	Glycol	-	Coolant from leaking cars in parking lot
WOL-02	Nitrate-N	-	Over-irrigation and groundwater seepage
WOL-03	Nitrate-N	-	Over-irrigation and groundwater seepage

Based on the results of the 2010 Dry Weather Field Screening and Analytical Monitoring Program as well as the Follow-Up Investigation Program, the City was provided with recommendations for dry weather monitoring sites and surrounding areas in need of cleaning and neighborhoods where storm water pollution prevention education is needed. The City is in the process of completing these recommended cleaning and education activities and is working to minimize illicit discharges. During the reporting period, there were no instances that required additional investigations or follow-up activities above and beyond those conducted during the 2010 Dry Weather Monitoring Program. More information about the recommendations from City's Dry Weather Monitoring and Field Screening Program and Follow-up Investigations can be found in Attachment N.

Attachment K

FY 2009-2010 Enforcement Action Taken

(Residential, Industrial, Commercial, and Related Businesses)

Note: During this reporting period, 7/01/2009 to 6/30/2010, investigation of the following cases have resulted in the issuance of Notice Code of Violation, Orders to Cease and Desist, Notice to Clean and Abate, and Admin Citation.

Date of Incident	Business Name	Violation Category	Site Category	Address			Action Taken	Fine Amount
			Commercial					
17-Jul-09	Budget Tires	Leaking Containers/Tanks	Commercial	275	ORANGE	AV	Issued Admin Citation-Warning	
17-Jul-09	China China Restaurant	Grease/Food/Drink Disch.	Commercial	386	H	ST	Issued Admin Citation-Warning

FY 2009-2010 Hotline Call Response Summary

Incident Date	Structure Category	Site Category	Address			Type of Violation
07/01/2009	STORM CHANNEL	Commercial	3121	MAIN	ST	Construction Debris & Waste
	Comments/ Action Taken:	7/1/09---Received a report of illegal dumping of trash, junk and debris by Hyundai Livart Furniture at 3121 Main St. into the adjacent channel. Inspection noted several large pieces of cardboard and other packing materials dumped into the storm channel. Admin Citation Issued. Cleanup conducted. No further action required.				
07/02/2009	STREET	Commercial	1478	MELROSE	AV	Unknown Discharge
	Comments/ Action Taken:	Received a complaint from Sunny Fresh Cleaners regarding landscape maintenance crews blowing grass clippings into the street. All American Landscape was responsible party. Issued verbal warning regarding the blowing of debris into the street. No further action necessary at this time.				
07/06/2009	STREET	Residential	142	SAN MARCOS	PL	Possible Dumping into Catch Basin
	Comments/ Action Taken:	Received a report of illegal connection at 142 San Marcos Pl. Inspection noted a sewer discharge hose leading from under garage door and into open top sewer clean out in the front drive way. Spoke with resident who stated that she would remove the hose, replace the sewer clean out cap and discontinue washing clothes at home. A re-inspection verified that corrections were made.				
07/06/2009	CATCH BASIN	Residential	160	LAS FLORES	DR	Complaint Response Enforcement
	Comments/ Action Taken:	Received a call reporting mud running into the street from 160 Las Flores and into the storm drain inlet. Inspection did not find any evidence of mud flowing from said property. No further action is necessary at this time.				
07/07/2009	STREET	Residential	501	C	ST	Unknown Discharge
	Comments/ Action Taken:	Received report of water flowing into gutter with oil, slurry and rocks at 501 C Street. Inspection found small water puddle in the gutter in front of said address resulting from irrigation overflows. No further action is necessary at this time.				
07/07/2009	STREET	Commercial	5	FOURTH	AV	Unknown Discharge
	Comments/ Action Taken:	Received report of non-storm water flowing from jack in the box at 5 Fourth Ave. Inspection noted that a sprinkler was leaking water into the gutter. Irrigation system was repaired. No further action is necessary at this time.				

Incident Date	Structure Category	Site Category	Address			Type of Violation
07/08/2009	CATCH BASIN	Residential	740	F	ST	Other
	Comments/ Action Taken:	Received notification of open trash container and running water at the subject location. Inspection did not observe running water from the facility at the time of the response. Open trash container was not overfilled and is not a storm water violation. No further action required.				
07/08/2009	CATCH BASIN	Residential	120	PRESS	LN	Other
	Comments/ Action Taken:	Received notification of an open trash container at subject location. Inspection did not observe trash bin to be overflowing or an accumulation of trash at the bins location. No further action required.				
07/08/2009	CATCH BASIN	Residential	793	ENERGY	WY	Other
	Comments/ Action Taken:	Received notification of uncovered equipment and open trash container at the subject location. Inspection observed facility in good, clean condition and using proper BMPs in accordance with their Industrial Permit. Did not observe overflowing or spilled trash. No further action required.				
07/08/2009	STREET	Commercial	1855	MAXWELL	RD	Construction Debris & Waste
	Comments/ Action Taken:	Received notification of dirt tracking at subject location. Barnhardt, Inc. conducted the cleanup of the tracking using staff and a street sweeper. No further action required.				
07/08/2009	CATCH BASIN	Residential	15	J	ST	Pool Filter Discharge
	Comments/ Action Taken:	Observed discharge into the storm drain system but did not reach the catch basin. Homeowner was not aware that this is an illegal discharge. Issued verbal warning to the residence. Education material was issued. City staff conducted the cleanup utilizing a vactor crew. No further action required.				
07/09/2009	CATCH BASIN	Industrial	1888	NIRVANA	AV	Other
	Comments/ Action Taken:	Received notification of a possible storm water issue at Brenntag Pacific of uncovered pipe, equipment, large drums and possible hazardous materials. Responded to the the facility and observed the facility to be in good, clean condition. Facility is a chemical distribution facility. No storm water violations were observed. No further action is required.				
07/09/2009	CATCH BASIN	Residential	1867	CAMINO MOJAVE		Leaking Vehicle

Incident Date	Structure Category	Site Category	Address	Type of Violation
07/09/2009	CATCH BASIN	Residential	1867 CAMINO MOJAVE	Leaking Vehicle
	Comments/ Action Taken:	Received notification of an oil stain at the subject location. Inspection observed trail of oil stain or other petroleum product along a small section of Camino Mojave. Stain was already adsorbed into asphalt and did not pose a threat to water quality. Source unknown. No further action required.		
07/09/2009	CATCH BASIN	Residential	503 PROCTOR VALLEY RD	Other
	Comments/ Action Taken:	Received notification of uncovered stockpiles at the Senior Living Construction site. Inspection observed inactive large stockpiles that were properly protected with visqueen and gravel bags. Small uncovered stockpiles do not pose a threat to water quality. No further actions required.		
07/09/2009	CATCH BASIN	Municipal	1178 J ST	Other
	Comments/ Action Taken:	Received notification of water running from sprinkler system into storm drain and poor soil containment from slope located at upper parking lot of the subject location. Inspection did not observe landscape water in the curbline. Observed the slope to have old and damaged fiber roll at the toe and a buildup of leaves and sediment in the brow ditch. Parks Department replaced fiber rolls and conducted cleanup of brow ditch. No further actions required.		
07/09/2009	CATCH BASIN	Municipal	4548 SWEETWATER RD	Other
	Comments/ Action Taken:	Received notification of sprinkler water runoff at Rohr Park. Responded to subject location and did not observe irrigation runoff. No further action is required.		
07/09/2009	CATCH BASIN	Municipal	519 CARVALOS DR	Other
	Comments/ Action Taken:	Received notification of a large oil slick at the City's H Street Land Application Site. Observed hydraulic oil staining located behind K-Rail in the dirt. Inform Public Works supervisor. Public Works crew conducted the proper cleanup and disposal of the spill. No further action required.

	Comments/ Action Taken:	Responded to a report of illegally dumped water and trash into the adjacent field at the subject address. Inspection found no evidence of an illegal discharge, but did find evidence of a need for BMP implementation. BMPs implemented. Issued Admin Citation. No further action required.				
05/28/2010	STREET	Residential	1453	MELROSE	AV	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of an abandoned open top used oil container. Inspection found an abandoned used oil container in the trash enclosure at 1450 Melrose Ave #16. Oil removed. No further action required.				
05/28/2010	STREET	Residential	79	SUZANNE	LN	Unknown Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from 79 Suzanne Lane. Inspection found minimal traces of a discharge. Spoke to tenant regarding discharge. Tenant stated that they were watering the plants in the backyard and that they would try and limit watering. No further action is necessary at this time.				
06/02/2010	STREET	Residential	1419	MELROSE	AV	Unknown Discharge
	Comments/ Action Taken:	White residue flowing from curb drain outlet at Spruce street from 1419 Melrose Ave. Homeowner stated that had spackle spill. Cleanup conducted. No further action required.				
06/03/2010	STREET	Commercial	1328	J	ST	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of an oil spill in the street in the vicinity of the subject address. Inspection noted that Allied waste staff was already on scene finishing up the clean up. No further action required.				
06/03/2010	STORM WATER	Residential	214	RICHMOND PARK	CT	Other

Incident Date	Structure Category	Site Category	Address			Type of Violation
06/03/2010	STORM WATER	Residential	214	RICHMOND PARK	CT	Other
	Comments/ Action Taken:	Follow up visit to to investigate the report of an unknown discharge. No evidence of a violation was found. No further action is necessary at this time.				
06/10/2010	STORM CHANNEL	Residential	916	L	ST	Complaint Response Enforcement
	Comments/ Action Taken:	City staff responded to the report of a foul odor from the channel. I Inspection noted trash junk, debris, and human waste along the banks of the channel. Admin citation issued. Cleanup conducted. No further action required.				
06/11/2010	STORM DRAIN PIPES	Commercial	2260	OTAY LAKES	RD	Other
	Comments/ Action Taken:	Responded to complaint of trash, junk, debris and grease/ oil scattered outside the common trash enclosure at the subject address. Inspection verified the existence of above mentioned conditions. Cleanup conducted. No further action required.				
06/11/2010	CATCH BASIN	Commercial	1550	SOLANO	DR	Complaint Response Enforcement
	Comments/ Action Taken:	Responded to report of landscape staff blowing trash into the storm drain system. Inspection found that landscape staff were applying fertilizer with back pack mounted blowers on a trash pick up day for the same neighborhood. Spoke to the landscaping staff and explained the importance of applying fertilizer accurately and being careful not to further blow existing trash generated by other sources. No further action is necessary at this time.				
06/14/2010	STREET	Residential	443	WOODLAWN	AV	Sewage Spill
	Comments/ Action Taken:	Responded to e-mailed report of a possible illegal sewer discharge at subject address. Inspection found no evidence of a violation. Prior discharge cleanup was conducted by city staff. No further action is necessary at this time.				
06/14/2010	STREET	Residential	130	FORTUNA	ST	Unknown Discharge
	Comments/ Action Taken:	Responded to a Code Enforcement's report of a potential sewer discharge from subject address. Inspection found evidence of an irrigation discharge. No evidence of a sewer discharge was present. No further action is necessary at this time.				
06/15/2010	STREET	Commercial	700	NAPLES	CT	Sewage Spill

Incident Date	Structure Category	Site Category	Address			Type of Violation
06/15/2010	STREET	Commercial	700	NAPLES	CT	Sewage Spill
	Comments/ Action Taken:	Responded to report of a broken sewer line within the Chula Vista Veterans Home. An inspection was conducted to ensure there was no potential threat to the City's SWCS. The inspection found no evidence of any discharge. No further action is necessary at this time.				
06/15/2010	STREET	Commercial	413	TELEGRAPH CANYON	RD	Unknown Discharge
	Comments/ Action Taken:	Responded to report of restaurant staff discharging Lysol and water into the parking lot after mopping. Inspection found some traces of a discharge. Spoke to Restaurant owner she was unaware of the requirement to use BMPs. Issued Admin citation. Staff informed of requirements. No further action required.				
06/17/2010	STREET	Residential	2532	TABLE ROCK	WY	Washing Vehicle in Street
	Comments/ Action Taken:	Responded to report of an illegal discharge at the subject address. Inspection found auto detailer Xrtreme Enterprises Inc. allowing a discharge and not implementing BMPs. Administrative citation was issued. No further action is necessary at this time.				
06/21/2010	STREET	Residential	795	FOURTH	AV	Fuel/Oil/Gas Spill
	Comments/ Action Taken:	Responded to report of an unknown discharge from a five gallon container. Inspection at 786 Fourth Avenue found an unmarked five gallon container slowly leaking fluid into the gutter. Liquid was unknown. Spread dirt at the spill to prevent further flow. Remained on scene until Fire Department took command. No further action is necessary at this time.				
06/21/2010	STREET	Residential	735	ASH	AV	Pool Filter Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from a pool at subject address. Inspection found that green pool water was being discharged from a pool contaminated with algae. Algae cleaned. Issued admin citation. No further action required.				
06/23/2010	STREET	Residential	2972	WINDING FENCE	WY	Unknown Discharge
	Comments/ Action Taken:	Received notification of a slurry spill at subject address. City staff responded to subject address and observed Green Leaf pumping concrete for pool. Green leaf was using proper BMPs. No further action required.				
06/24/2010	STREET	Residential	445	HILLTOP	DR	Pool Filter Discharge

Incident Date	Structure Category	Site Category	Address			Type of Violation
06/24/2010	STREET	Residential	445	HILLTOP	DR	Pool Filter Discharge
	Comments/ Action Taken:	Responded to report of pool discharge with strong smell of chlorine. At the time of my visit the flow of water had been stopped. Spoke to homeowner on the proper procedure of discharging pool. No further action required.				
06/24/2010	STREET	Commercial	1016	GUATAY	AV	Slulry/Concrete Discharge
	Comments/ Action Taken:	Responded to report of an illegal discharge from subject address. Inspection found a small trace of gray slurry from 1016 Guatay to 1038 Guatay. Flow did not reach the storm drain inlet. Cleanup conducted. No further action required.				
06/28/2010	STREET	Residential	143	J	ST	Complaint Response Enforcement
	Comments/ Action Taken:	Received notification of a resident washing trash from driveway to street. City staff arrived on-scene and did not observed evidence of discharge. Street was dry and did not observe trash. Left door hanger at resident. No further action required at this time.

Re: 2010 Dry Weather Field Screening and Analytical Monitoring Program
City of Chula Vista, California

Dear Mr. Aminpour:

Enclosed please find the final report of the City of Chula Vista 2010 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of Chula Vista during the 2010 dry weather season. The contents include field screening results, trash assessment data, analytical laboratory test results, and analyses of the collected data. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the monitoring program and our recommendations for additional actions. Also, the results and a summary of the 2010 Municipal Separate Storm Sewer System Outfall Monitoring Program are included as a section of this report.

Review comments from the draft report submitted to the City have been included in the final report. It has been our pleasure working with the City of Chula Vista on this project. If you have any questions, please call me at (858) 586-6600.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.

1 INTRODUCTION

1.1 Program Overview

The purpose of the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) is to identify and eliminate illicit connections and illegal discharges (IC/IDs) to the storm water conveyance system, minimizing negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following components:

- Field screening observations
- Field analytical testing
- Laboratory analytical testing
- Trash assessments

The data collected from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up investigations are conducted as necessary to detect and eliminate the source(s) of these pollutants. Similarly, the goal of the Municipal Separate Storm Sewer System (MS4) Outfall Monitoring Program is to identify pollutant discharges from MS4 outfalls, and to assess these discharges contributing to the receiving water quality. The results from the 2010 Dry Weather Monitoring Program and MS4 Monitoring Program conducted by D-MAX Engineering, Inc. (D-MAX) are presented herein.

1.2 Regulatory Requirements

In accordance with the San Diego Regional Water Quality Control Board Order No. R9-2007-0001 (Municipal Permit), Copermittees are required to annually perform dry weather field screening of discharges into its storm drain conveyance system. During the dry weather season, May 1 through September 30, selected locations along the storm drain conveyance system are evaluated. This procedure includes recording field observations, estimating observed flow rates, and conducting field testing. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station is selected. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

Concurrently with the Dry Weather Monitoring Program, the City conducted the targeted dry weather component of the 2010 MS4 Outfall Monitoring Program. The work was performed in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan (MS4 Workplan) developed in June 2009 and with the requirements of Receiving Waters and Urban Runoff Monitoring and Reporting Program dictated in the Municipal Permit. This report presents the results of the City's 2010 Dry Weather Monitoring Program and MS4 Monitoring Program.

1.3 Hydrologic Setting

The City of Chula Vista (City) is located in the southern portion of the County of San Diego and is bordered by the cities of National City, San Diego, and unincorporated areas of the County of San Diego. The City covers an area of approximately 52 square miles and has a population of approximately 223,738. The majority of the land use in the City is residential.

Other land uses include commercial, industrial, municipal facilities, streets, highways, and open spaces.

The City lies within the Sweetwater River Hydrologic Unit (HU) and the Otay River HU. These two Hydrologic Units, along with the Pueblo San Diego HU, form the San Diego Bay Watershed and ultimately drain into the San Diego Bay. The City is located in the Lower Sweetwater Hydrologic Area (HA 909.1) and the Otay Valley Hydrologic Area (HA 910.2). A complete map of the City's Hydrologic Subareas is included as Figure A.

The City is naturally divided by topography into multiple smaller basins from which runoff flows into the City's major receiving water bodies, including San Diego Bay, Sweetwater River, Otay River, and the Lower Otay Reservoir. A complete drainage map for the City is included as Figure B. Drainage basins and the abbreviations used to identify field sampling stations are listed in Table 1-1.

TABLE 1-1
OUTFALL DESIGNATIONS AND DRAINAGE BASINS

Site Abbreviation	Basin
BAY	Bay Boulevard Outfalls
BLC	Long Canyon Basin
CEN	Central Basin
JUD	Judson Basin
LAK	Upper Otay Reservoir
MGC	Chula Vista Municipal Golf Course
OLR	Otay Lakes Basin
OVR	Otay Valley Road Outfalls
POG	Poggi Canyon Basin
PRD	Palm Road Basin
RCC	Rice Canyon Basin
SCR	Salt Creek Basin
SUN	Sunnyside Basin
SVS	Sunny Vista Basin
SWB	Southwest Basin
SWR	Sweetwater River
TCC	Telegraph Canyon Basin
TCS	Telegraph Canyon Basin, South Branch
WIL	Upstream of the Willow Street Bridge
WOL	Wolf Canyon Basin

Based primarily on wet weather data from mass loading stations (MLS), ambient bay and lagoon monitoring, bioassessments, the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), and/or Total Maximum Daily Load (TMDL) programs for the San Diego Bay Watershed, the high priority constituents of concern (COC) for the San Diego Bay Watershed were identified in the 2009 Watershed Urban Runoff Management Plan (WURMP). COCs for the Sweetwater River Hydrologic Unit (HU 909) are bacteria and pesticides, and for the Otay River Hydrologic Unit (HU 910) they are bacteria and gross pollutants. Receiving water bodies that are located within the jurisdiction of the City of Chula Vista and are 303(d) listed include: Poggi Canyon Creek for DDT, and the

Lower Otay Reservoir for color, iron, manganese, nitrogen ammonia (total ammonia), and high pH. Both Poggi Canyon Creek and Lower Otay Reservoir are in the Otay River HU. The San Diego Bay Shoreline at Chula Vista Marina is 303(d) listed for copper, and the shoreline along Bayside Park for bacteria; both of which are within the jurisdiction of the Port of San Diego.

1.4 Previous Work

The City has conducted dry weather monitoring programs since 1994. The results of the previous programs (1994 through 2009) are summarized in Table 1-2.

TABLE 1-2
SUMMARY OF HISTORICAL DRY WEATHER MONITORING

Year	Number of Field Screening Sites [1]	Number of Flowing Sites	Number of Ponded Sites	Number of Dry Sites	Number of Lab Analysis Sites [2]
1994-R1	14	Data not available [3]		40	0
1994-R2	17			42	0
1995-R1	23			36	0
1995-R2	27			33	0
1996-R1	18			40	0
1996-R2	22			38	0
1997-R1	33			22	0
1997-R2	31			23	0
1998-R1	39			15	0
1998-R2	32			12	0
1999-R1	39			13	0
1999-R2	40			16	0
2000-R1	40	26	14	0	0
2000-R2	45	28	17	0	0
2001-R1	43	28	15	0	0
2001-R2	43	32	11	0	0
2002-R1	42	26	16	16	15
2002-R2	45	30	15	12	13
2003	50	34	16	4	15
2004	50	34	16	2	15
2005	50	38	12	3	15
2006	57	37	20	4	15
2007	57	41	16	0	15
2008	57	42	15	1	15
2009	57	36	21	2	15

Notes: The City conducted two separate rounds of dry weather monitoring in years 1994-2002.
R1 = Round one; R2 = Round two
[1] Number of Field Screening Sites = Number of Flowing Sites + Number of Ponded Sites. Field screening cannot be conducted at dry sites. Dry sites are replaced by either an alternate flowing or ponded site.
[2] Laboratory testing commenced in 2002 as required by San Diego Regional Water Quality Control Board Order 2001-001.
[3] Available information does not distinguish between flowing and ponded sites during this period.

1.5 Report Outline

Section 1, Introduction, includes a program overview, regulatory background, a discussion of the City's hydrologic setting, and constituents of concern, a summary of historical field screening data, and the report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Trash Assessment discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 7, Data Analysis, provides an analysis of field and laboratory data collected in 2009, as well as a comparison of past results.

Section 8, Upstream Investigations, details the results of follow-up investigations undertaken to isolate the sources of water contamination detected during routine field and laboratory screenings.

Section 9, Nitrate-Nitrogen Upstream Investigations, details the results of follow-up investigation conducted to identify the sources of elevated nitrate-nitrogen concentrations detected during routine field screenings.

Section 10, MS4 Outfall Monitoring Program, includes an overview of the new program, descriptions of sampling locations, sampling and analysis test methods, and a discussion of the results.

Section 11, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Figure A is a watershed map of the area, broken into hydrologic subareas.

Figure B is a drainage map for the City.

Figure C is a map showing the 2010 Dry Weather sample locations.

Appendix A contains historical dry weather monitoring data.

Appendix B contains photographs of each of the investigated sites.

Appendix C contains laboratory analytical reports.

Appendix D contains field data sheets.

2 SAMPLING LOCATIONS

The City's 2010 Dry Weather Monitoring Program included 57 primary sampling sites, all of which are located in San Diego Hydrologic Units 909 and 910. This year, sites CEN-03, SCR-04, and SWB-03 were dry. Instead, alternate site SWR-03-E was sampled, as well as two new alternate sites, SCR-07 and SUN-08.

Table 2-1 provides the site, location, conveyance configuration, primary and secondary land uses, hydrological subunit, and GPS coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix B. A map of the watersheds in and around the City, broken down into HSAs, is included as Figure A, and a map of the drainage basins within the City is included as Figure B. A City map with dry weather sampling locations is included as Figure C.

TABLE 2-1

Denotes a dry weather location sampled for both field screening and laboratory analysis.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of flow measurements, qualitative field observations, and quantitative field analyses of selected water quality parameters. Weather conditions, time since last rainfall, and the type of storm water conveyance are recorded as well. Specific observations and results of the field water quality analyses are documented on field datasheets, which also serve as a record of the field visit. Datasheets are completed for every site visit regardless of whether or not samples were collected. Check boxes on the datasheets indicate if the visit is for routine field screening, confirmation of an exceedance, or an IC/ID follow-up visit. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation. Datasheets from the 2010 Dry Weather Monitoring Program are included as Appendix D.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations are made during each site visit. These observations include a general site assessment and description of water odor, clarity, the presence of floatable materials, visible deposits or stains, and organisms. Evidence of past or present illicit connections and illegal discharges (IC/ID) to the storm drain system can also be discovered through careful field observations. Each field screening location is photographed to document site conditions. Photographs of each site visited are included in Appendix B.

Flow Measurement

Flow measurements can help estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal discharge. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth, and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)
- Orthophosphate-Phosphorus (Orthophosphate-P)
- Surfactants, measured as methylene blue active substances (MBAS)
- Glycol

The methods used to perform the above field analyses, along with the reporting limit, range, and accuracy of each method, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Method Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter*	0.01 mS/cm	0 – 20 mS/cm	± 2% of FS[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter*	0.1℃	0.0℃ – 60.0℃	± 0.5℃
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter*	0.01	0.00 – 14.00	± 0.01 pH
Turbidity	Hanna Instruments HI 93703 Portable Turbidity Meter*	0.00 NTU	0.00 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate*	0.20 mg/L**	0.20 mg/L – 3.00 mg/L**	Varies with measured concentration[2,3]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[4]*	1.13 mg/L**	1.13 mg/L – 113 mg/L**	± 30%of PDL[2]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[4]*	0.098 mg/L**	0.098 mg/L – 2.608 mg/L**	Varies with measured concentration[2,3]
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.00 mg/L – 3.00 mg/L***	± 0.13 & ± 0.5 mg/L[5]
Glycol	CHEMetrics V-2000 Multi-Analyte LED Photometer – Glycol Vacu-vials® (K-4403) Purpald/periodate*	0.60 mg/L**	0.60 mg/L – 10.00 mg/L	Varies with measured concentration[4,5]

Notes:

EC = electrical conductivity
mS/cm = millisiemens per centimeter
℃ = degrees Celsius
NTU = nephelometric turbidity unit
mg/L = milligrams per liter
LED = light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] The Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-N, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The PDL for nitrate is 5.0 mg/L; however, the PDL for nitrate-N is lower due to the conversion.

[4] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The practical detection limit for orthophosphate is 0.3 mg/L; however, the practical detection limit for orthophosphate-P is lower due to the conversion.

[5] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

*Test method information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

3.2 Laboratory Analytical Methods

In accordance with the Municipal Permit, laboratory samples were collected at 15 sites, representing over 25 percent of the sites where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc, (EMA) a laboratory certified by the California Department of Health Services, for analysis of the following dry weather monitoring constituents:

- Total hardness
- Oil and grease
- Diazinon
- Chlorpyrifos
- Dissolved Cadmium
- Dissolved Copper
- Dissolved Lead
- Dissolved Zinc
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

In addition to the constituents listed above, the following constituents were analyzed in the laboratory as part of the MS4 Outfall Monitoring Program and as part of an upstream investigation:

- Total dissolved solids (TDS)
- Total Nitrogen
    - Total Kjeldahl Nitrogen
    - Nitrite as Nitrogen
    - Nitrate/Nitrite as Nitrogen
    - Nitrate as Nitrogen
- Specific Conductance
- Surfactants, measured as MBAS

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

3.3 Quality Assurance and Quality Control

The Quality Assurance and Quality Control Plan (QA/QC) utilized for this project includes the United States Environmental Protection Agency (EPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters, turbidity meter, and conductivity meter are tested daily before field screening begins. The pH meters are calibrated as needed with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter and conductivity meter are calibrated as needed using standard solutions.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Reporting Limit	Method Detection Limit	Maximum Holding Time [1]
Oil and Grease	EPA 1664	5 mg/L	5 mg/L	28 days
Total Hardness	EPA 200.7	10 mg/L	10 mg/L	14 days
Dissolved Cadmium	EPA 200.8	1 µg/L	0.2 µg/L	24 hours
Dissolved Copper	EPA 200.8	10 µg/L	1 µg/L	24 hours
Dissolved Lead	EPA 200.8	5 µg/L	1 µg/L	24 hours
Dissolved Zinc	EPA 200.8	20 µg/L	0.3 µg/L	24 hours
Diazinon	EPA 8141A	0.05 µg/L	0.04 µg/L	7 days
Chlorpyrifos	EPA 8141A	0.05 µg/L	0.04 µg/L	7 days
Total Coliforms[2]	SM 9221 B, E	20 – 1,600,000 MPN/100 mL	20 MPN/100 mL	6 hours
Fecal Coliforms[2]	SM 9221 B, E	20 – 160,000 MPN/100 mL	20 MPN/100 mL	6 hours
Enterococci[2]	SM 9230 A, B	20 – 160,000 MPN/100 mL	20 MPN/100 mL	6 hours
Total Coliforms	SM 9223 (IDEXX Colilert)[3]	10 – 2,419,600 MPN/100 mL	10 MPN/100 mL	6 hours
Escherichia coli (E. coli)[4]	SM 9223 (IDEXX Colilert)[3]	10 – 2,419,600 MPN/100 mL	10 MPN/100 mL	6 hours
Enterococci	IDEXX Enterolert[4]	10 – 241,960 MPN/100 mL	10 MPN/100 mL	6 hours
Total Dissolved Solids	SM2540C	20 mg/L	1 mg/L	7 days
Total Nitrogen[5]	Calculation	0.5 mg/L	0.5 mg/L	48 hours
Total Kjeldahl Nitrogen	SM4500 N C	0.5 mg/L	0.3 mg/L	28 days
Nitrite as Nitrogen	SM4500 NO2 B	0.05 mg/L	0.007 mg/L	48 hours
Nitrate/Nitrite as Nitrogen	SM4500 NO3 E	12.5 mg/L	2.25 mg/L	48 hours
Nitrate as Nitrogen	SM4500 NO3 E	12.5 mg/L	2.25 mg/L	48 hours
Specific Conductance	SM2510B	1 umhos/cm	1 umhos/cm	28 days
MBAS	SM5540C	0.5 mg/L	0.1 mg/L	48 hours

Notes:
µg/L = micrograms per liter
MPN/100 mL = most probable number (of colony-forming units) per 100 milliliters
[1] Maximum Holding Time values listed apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.
[2] For D-MAX's Dry Weather Monitoring Program, EMA performs standard dilutions for total coliforms to quantify from 20-1,600,000 most probable number per 100 milliliters (MPN/100 mL). For fecal coliforms and Enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.
[4] Number of fecal coliforms is derived from number of *E. coli* through the following formula:
Fecal Coliforms = *E. coli* / 0.85. The converted fecal coliform count, not the number of *E. coli*, is reported in this report's data tables.
[5] Total Nitrogen is the sum of nitrate, nitrite, ammonia and organic nitrogen.

Field sample collection containers are rinsed first with distilled water and then with the sample water prior to sample collection. Upon completion of sampling and testing at each site, sample collection containers, test vials, and ion-sensitive electrodes are rinsed twice with distilled water and dried.

Field test kit accuracy is assessed prior to commencing sampling. Each lot, or batch, of Chemetrics ampoules is analyzed against standard solutions of known concentrations for ammonia-nitrogen, nitrate, orthophosphate, and surfactant ampoules. The results of these tests are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Lot Number	Date	Field Test Kit Results (mg/L)
Ammonia-N	0.85	0.68 - 1.02	73707/2	5/17/2010	0.811
			74559/8	5/27/2010	0.821
			75425/13	6/30/2010	0.811
Nitrate**	44.3	31.0 - 57.6	75362/2	5/17/2010	42.77
			73960/4	5/17/2010	41.02
			75655/6	6/30/2010	38.56
			75655/8	6/30/2010	36.49
Orthophosphate**	6.13	4.29 - 7.97	75263/4	5/17/2010	6.023
			73677/4	5/17/2010	5.265
			75756/4	6/30/2010	5.015
Surfactants	1.0	0.75 - 1.25	75440/75293/12	5/17/2010	1.0
			74268/74253/2	5/17/2010	1.0
			75638/75460/12	6/30/2010	1.0
			75638/75631/2	6/30/2010	1.0
Glycol	1	0.70 - 1.30	75398/4	6/8/2010	0.943
			75786/12	6/24/2010	0.994

Notes:
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.
** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by multiplying the results by 0.226 for nitrate and 0.326 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed and samples are delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included with laboratory reports in Appendix C.

3. 4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a confirmation visit is conducted within two business days. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is initiated within two business days of receiving the laboratory results. A discussion of follow-up investigations is included in Section 8.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. The three approaches are described below and presented with associated constituents in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results. Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels based on county-wide sampling data. These action levels have been used by all San Diego County Copermittees since the 2003 dry weather season. For implementation in 2010, D-MAX performed statistical analysis on county-wide data to update action levels for bacterial indicators.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is a short term concentration limit in which aquatic life can be sustained. The CMC is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in EPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/Notes
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Turbidity (NTU)	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Orthophosphate-P (mg/L)	2.0	EPA Multi-sector General Permit
Surfactants (MBAS) (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Glycol (mg/L)	1.0	No regional action level has been established; action level is based on City experience.
Laboratory Analytes	**Action Levels**	**Source/Notes**
Oil and Grease (mg/L)	15	EPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)		
Dissolved Lead (µg/L)		
Dissolved Zinc (µg/L)		
Total Coliforms (MPN/100 mL)	130,000	Bacteria action levels were updated for implementation in 2010 by the Dry Weather Monitoring Sub-workgroup. Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	13,000	
Enterococci (MPN/100 mL)	7,000	
Total Dissolved Solids (mg/L)	Best Professional Judgment	No regional action level has been established; evaluated based on best professional judgment.

Notes:
[1] The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information, including within-site and between-site sample variability.
[2] Basin Plan = Water Quality Control Plan for the San Diego Basin
WQO = Water Quality Objective
ppb = parts per billion

4 FIELD SCREENING RESULTS

The 2010 Dry Weather Monitoring Program fieldwork began June 9, 2010, and was completed by July 14, 2010. Sixty monitoring stations were visited, and field screening was conducted at the 57 sites where ponded or flowing water was observed. Forty sites had measurable flow, 17 sites were ponded, and three sites were dry. Forty-one confirmation visits were conducted, and 17 upstream investigation locations were visited. A total of 118 site visits were performed.

4.1 Qualitative Observations

Qualitative observations are summarized below and presented in Table 4-1. These observations are based on routine and confirmation site visits only. Upstream investigation data is not included.

Light Conditions
The majority of the program was conducted under sunny light conditions. Several days were partly cloudy or overcast.

Odor
The majority of samples had no discernable odor, five samples had a musty odor, and a few samples had sewage-like odors. Water at one site had a chemical smell.

Color
Water samples were predominantly colorless, and 16 samples were yellow.

Clarity
Almost all water samples were clear with negligible suspended particles. Only a few samples were observed having slightly cloudy water.

Floatable Materials
The majority of the sites did not have any notable materials floating in the water. Trash and algae were most commonly noted, and bubbles, foam, and sheens were also observed at some sites.

Vegetation
Depending upon the type of conveyance and access to sunlight and soil, vegetative growth varied naturally from no growth to normal, with a few sites having excessive vegetation.

Biology
Insects and algae were the most common organisms observed at the sites. Many sites had snails, and at a few sites fish and crawfish were noted. Other organisms seen at the sites include tadpoles, larvae, worms, and birds. The presence of biological organisms typically indicates healthy water conditions. The presence of algae implies a persistent water flow at the site. However, excessive algae may be a result of nutrient enrichment and may diminish the dissolved oxygen available to other organisms.

Deposits
Sediment, gravel, and/or fine particulates were observed at almost all sites. There were no sites having stains or oily deposits.

ns = not sampled (dry site)

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Definitions of constituents measured are as follows.

Flow rates are the measurements of the volume of fluid passing through a given surface per unit time. Flow rate measurements are particularly important when calculating the load or particular amount of a pollutant discharged.

The **pH** is an expression of the acidity or alkalinity of a water sample. The pH of an aquatic system will affect a multitude of chemical reactions, including the availability of nutrients and the solubility of chemical substances, especially heavy metals.

Water temperature is needed to assess the significance of other parameters such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. Water temperature was measured in the field immediately upon sample collection at each site.

Conductivity values indicate the total concentration of ions in an aquatic system and the ability of water to conduct electricity. This parameter can be used to assess the mineral content of water or to help determine the presence of dissolved pollutants. Salinity also increases conductivity. Therefore, sites that receive water from the San Diego Bay during high tide often have conductivity greater than the maximum detection limit of 20 mS/cm.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures.

Ammonia-nitrogen is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment, however, in higher quantities it can become toxic to fish and other organisms.

Nitrate-nitrogen is a common indicator of nutrient pollution from agricultural or household fertilizer use. Nitrate pollution can cause excessive algal growth, which can later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. During field analysis, nitrate is measured in mg/L NO_3 and converted into mg/L nitrate-nitrogen using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-phosphorus, known as reactive phosphorus, is also a common indicator of nutrient pollution from agricultural or household fertilizer use and irrigation runoff. Similar to nitrate, phosphate pollution can cause eutrophication, which stimulates algal growth and eventually lowers aquatic dissolved oxygen to levels that are dangerous for aquatic life. Because it is commonly a limiting nutrient required for plant growth, relatively low levels of phosphate can cause significant algal growth. During the field analysis, orthophosphate was measured in mg/L PO_4 and converted into mg/L orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 6 of Table 3-1.

Surfactants in water samples often indicate illegal discharges from industrial, commercial, or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish and other aquatic organisms.

Glycol is most commonly associated with radiator coolant discharges. Glycol is not naturally found in water, and its presence in the storm drain system is indicative of IC/IDs.

A statistical summary of the field analytical results is presented in Table 4-2. The data used in statistical calculations in this table are from routine visits only; data for confirmation visits and upstream investigations have not been incorporated. Table 4-3 presents the results of routine field analyses conducted at the routine sampling sites. Graphs of each analyzed parameter are included at the end of this section.

TABLE 4-2
INITIAL FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceedances	Graph Number
Flow Rate (gpm)	136	0 (Ponded)	14.2	0.8	44.6	0	4-1

Notes:
The data used in statistical calculations in this table are from routine visits only; data for confirmation visits and upstream investigations have not been incorporated.
nd = not detected; considered to be half of detection limit in statistical calculations.
J = Value reported is below the reporting limit; measurements have an increased percent error

Notes: na = not analyzed; nd = not detected; ns = not sampled (dry site)
J = Value reported is below the reporting limit; measurements have an increased percent error.
Red values exceed action level.
* Value not considered an exceedance due to inference in field test method.
Denotes a confirmation visit.
Denotes a location sampled for laboratory analysis.

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather monitoring site. This trash assessment program is designed to provide information on the spatial extent and relative abundance of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a two-page Trash Assessment Form to document the amount and extent of trash at each evaluated site. The first page defines the level of trash as falling within one of five categories ranging from optimal to poor. It also lists any potential threat the wastes may pose to human or aquatic health. The second page, which includes information about the types, prevalence, potential routes, and sources of trash, is also completed at sites where a submarginal or poor trash level is assigned.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form includes five categories to describe the amount and extent of trash. The definitions are primarily qualitative, although the number of trash pieces is also included in each category as a rough guideline. The five categories are listed below.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10 - 50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (~51 - 100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100 - 400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.

- *Threat to Aquatic Health* – Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. **Large amount is defined as 50 pieces or more.*

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Form.

If a site is labeled as submarginal or poor, it is assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on their prevalence and the potential threat to water quality they pose. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are identified.

5.3 Trash Assessment Results

The majority of sites evaluated in the City were rated optimal or suboptimal. Of the remaining sites, five fell under the marginal category, and one fell under the submarginal category. No sites were rated as poor. Graph 5-1 and Table 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and their corresponding trash assessment.

GRAPH 5-1
TRASH ASSESSMENT SUMMARY

5.3.1 Submarginal Sites

The site that was rated as submarginal is discussed below. A breakdown of the types, prevalence ranking, potential routes, and potential sources of trash to these sites is presented in Table 5-1.

Site SWR-04 is located at an outlet northwest of the intersection of C Street and 5th Avenue. Large quantities of beverage containers were found at the site, including Styrofoam cups, beer bottles, and aluminum cans. There were also significant amounts of food packaging and plastic bags. Much of the trash appeared to have come from transient activity. There were multiple shopping carts and cardboard near the banks of the water, also suggesting human activity in the immediate area. The site was assessed as a potential threat to human health, due to human feces and urine in the immediate area, and mosquito larvae directly observed in ponded water. The presence of larvae in the water was most likely due to trash.

TABLE 5-1
BREAKDOWN OF SUBMARGINAL SITES

Site	Types of Trash	Ranking	Potential Route 1	Potential Route 2	Potential Source 1	Potential Source 2
SWR-04	Food Packaging	1	Dumping	Littering	Transient	--
	Shopping Carts	2	Dumping	Littering	Transient	--
	Fabric/Clothing	3	Dumping	Littering	Transient	--

6 LABORATORY ANALYTICAL RESULTS

Laboratory analyses were conducted at 15 sites, representing over 25 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Although it is not itself considered a pollutant, total hardness is measured in order to calculate CTR (California Toxics Rule) limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Diazinon and **chlorpyrifos** are organophosphate pesticides that are highly toxic to insects, birds, and mammals, freshwater fish, and invertebrates. In 2005, the Environmental Protection Agency banned the sale of diazinon in the United States and tightened restrictions on chlorpyrifos use.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the development and survival of aquatic organisms.

The California Toxics Rule for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness. As hardness increases, so does the Criterion Maximum Concentration (CMC), a concentration limit in which aquatic life can be sustained. CMC values differ for various metals. Dry weather monitoring laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

Notes: Only those sites where a particular dissolved metal was detected are listed. Lead was not detected in any of the samples. For equations and constants used in California Toxics Rule calculations, see http://www.epa.gov/ost/standards/ctr/toxic.pdf.
CMC = Criterion Maximum Concentration, short term concentration limit in which aquatic life can be sustained.
J = Value reported is below the reporting limit; measurements have an increased percent error.

Coliform bacteria are relatively harmless to humans and are typically present at high levels in mammalian digestive tracts, as well as naturally found in most surface waters and soils. Testing water samples for total coliform bacteria is a standard practice in public health. Total coliform is tested as a surrogate for more harmful pathogens that are generally present in much smaller quantities and are therefore difficult to test for directly.

Fecal coliform, a subset of coliform bacteria, and ***Enterococcus*** are found primarily in the gastrointestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material is human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

A summary of the laboratory analytical results is presented in Table 6-2. Table 6-3 presents the laboratory results from all samples. Laboratory reports are included as Appendix C.

TABLE 6-2
LABORATORY ANALYSIS STATISTICAL SUMMARY*

Parameter (units)	Maximum	Minimum	Number of Exceedances
Oil and Grease (mg/L)	nd	nd	0

Notes:
Red values are at or exceed action level.
J = Value reported is below the reporting limit; measurements have an increased percent error.
nd = not detected; na = not analyzed.
CTR = California Toxics Rule; CTR action levels for metals are calculated based upon on the total hardness value of the water sample.
* Number of fecal coliforms is derived from *E. coli* count. Number of fecal coliforms = (Number of *E. coli*) / 0.85.
** Reporting limit is 10 MPN/100 mL for IDEXX tests used during confirmation and upstream testing.
*** Total hardness is not considered a pollutant (see section 3.4), and thus has no established action level for the purposes of dry weather monitoring.
Denotes a confirmation visit.

7 DATA ANALYSIS

This section provides an overall evaluation of the results of the 2010 Dry Weather Monitoring Program, as well as a discussion of historical trends for various constituent exceedances.

7.1 2010 Results

Table 7-1 presents the sites at which one or more parameter tested above the respective action level. Below is a summary of notable constituent exceedances reported during the 2010 Dry Weather Monitoring Program.

- Nitrate-N was the constituent with the greatest number of exceedances, testing above the action level at 17 sites.
- Bacteria levels were elevated at eight sites. Note that dry weather action levels for bacterial indicators were revised in 2010. Constituents have been compared to action levels in effect at the time of sampling to identify exceedances.
- All three sites with ammonia-N exceedances were small amounts of ponded water.

7.2 Previous Results

Historical results regarding exceedances are presented in Table 7-2, Graph 7-1, and Graph 7-2. Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of exceedances by year for field constituents, and Graph 7-2 presents the percentage exceedances by year for laboratory analyses.

During the 2010 Dry Weather Monitoring Program, one exceedance of turbidity was reported. However, prior to 2010, no exceedances have been measured for temperature, turbidity, cadmium, copper, lead, or chlorpyrifos. Therefore, these constituents are not included in the following table and graphs.

The historical data for the results of field analyses presented in Graph 7-1 indicates a decreasing trend in conductivity and ammonia-N exceedances. Orthophosphate-P exceedances have been infrequent, and there is no apparent trend for glycol, surfactants, or pH results. Nitrate-N exceedances generally appear to be increasing each year since 2004.

Historical data for laboratory analyses presented in Graph 7-2 indicate regular bacteria exceedance rates, although the percent of total and fecal coliform exceedances appears to have decreased somewhat over the years. Zinc and diazinon have not been detected over their action levels since 2003. Prior to 2003 the rates of exceedances were approximately 10 percent per year. Oil and grease has not been measured above the action level since 2005. From 2002-2007 both field screening and laboratory analysis were performed for surfactants. Starting in 2008, routine laboratory analysis of surfactant levels was discontinued.

Notes: Results based on complete routine visits only. Confirmation visits, follow-up visits and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

** From 2002-2007 both field screening and laboratory analysis were performed for surfactants. Starting in 2008, surfactants were only measured in the field.

na = not analyzed

GRAPH 7-1
PERCENT OF SITES WITH FIELD CONSTITUENTS EXCEEDANCES BY YEAR

* The action level for conductivity was numeric in the past but was later changed to best professional judgment. See footnote in Table 7-2.

GRAPH 7-2
PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR

8 UPSTREAM INVESTIGATIONS

The purpose of follow-up investigations is to identify source(s) of pollutants that have caused action level exceedances during routine field screening and laboratory analysis.
Photographs of all primary sampling sites are provided in Appendix B.

8.1 Investigation Procedure

In the event that a constituent measurement is above the associated action level during the routine visit, a confirmation visit is typically conducted within two business days of receiving the result. The purpose of the confirmation visit is to verify whether the initial exceedance is persistent. The visit includes returning to the routine site to retest the water for the parameters initially in exceedance.

In circumstances where an exceedance has been sufficiently investigated through previous studies and a confirmation visit was not likely to provide new information, a confirmation visit was not conducted. Efforts were instead focused upon acquiring new information whenever possible.

If the constituent measures below specified action levels during the confirmation visit, the initial exceedance may have been due to a transient flow. If, however, the constituent concentration is found to exceed the specified action level during the confirmation visit, an upstream investigation is performed. In this case, the field crew progresses upstream to isolate and identify potential pollutant sources.

Follow-up investigations entail making visual observations of areas upstream of the routine site and collecting samples for field or lab analysis. Flow rates of each branch contributing to the site are measured, potential sources of the COC are identified, and sample data is used to assist in source identification. At each location sampled, visual observations are recorded on field data sheets and include water color, clarity, odor, floatable materials, vegetation, and biology present. Field data sheets are included in Appendix D.

The laboratory test for investigating upstream bacteria sources differs from routine bacteria testing by using the IDEXX Colilert and IDEXX Enterolert tests. Information about these methods is provided in Table 3-2. Results for the Colilert and Enterolert tests are typically available within 24 hours, as opposed to the five business days needed for routine testing. The quicker turnaround time allows for additional upstream investigations as needed.

8.2 Investigated Sites

During the 2010 Dry Weather Monitoring Program, some sites required follow-up investigations for constituent exceedances. This section includes a description of the investigated sites, analytical results, photographs of selected upstream locations, and the results of upstream investigations. Table 10-2 in Section 10 of this report provides a summary of the investigation results.

Site BAY-01 is located at an outlet across from 1075 Bay Boulevard, on the west side of the street. The water was ponded during the initial visit, and the glycol measurement was 1.55 mg/L. At the confirmation visit, the glycol level had decreased to 0.89 mg/L. It was concluded that transient exceedance was likely due to irrigation runoff that had come into contact with coolant leaks in an upstream parking lot (Photo 8-1).

Photo 8-1: Irrigation runoff in parking lot near Site BAY-01

Site CEN-01 is located at a concrete channel south of H Street, east of I-5 and the trolley tracks. The site was partially shaded and had yellow-colored water. A fecal coliform bacteria count of 17,000 MPN/100 mL and an *Enterococcus* bacteria count of 24,000 MPN/100 mL were noted at the site. Bacteria levels decreased below action levels at the confirmation visit, and areas upstream of the site did not appear to be contributing significant sources of bacteria. An increase in flow from the routine visit to the confirmation visit may have transported bacteria away from the site. Thus, it was concluded that the initial exceedance was likely the result of a transient flow.

Site CEN-08 is located at a catch basin 100 feet west of Marina Parkway, north of G Street. The initial field screening and confirmation visit samples collected had a surfactants measurement of 1.00 mg/L. Ponded water at upstream location CEN-08-1, at the Cabrillo Mobile Lodge, had a surfactants level of 3.00 mg/L (Photo 8-2). CEN-08-1 is a designated car washing area and drains directly to a concrete channel leading to the MS4. It was concluded that washing activities at this location contribute surfactants to the MS4 flowing to Site CEN-08. Table 8-1 presents the flow and surfactants concentrations measured during this investigation and Figure 8-1 provides an MS4 map of the immediate area.

Photo 8-2: Ponded water at car washing area of upstream location CEN-08-1

TABLE 8-1
SITE CEN-08 SURFACTANTS UPSTREAM INVESTIGATION RESULTS

Site	Location	Flow (gpm)	Surfactants (mg/L)
CEN-08 *(Routine Visit)*	100 feet west of Marina Parkway, north of G Street	Ponded	**1.00**
CEN-08 *(Confirmation)*	*(Same as above)*	Ponded	**1.00**
CEN-08-1	Cabrillo Mobile Lodge at 731 G Street	Ponded	**3.00**

Note: **Red** values were at or above the measured constituent's action level.

FIGURE 8-1
SITE CEN-08 SURFACTANTS UPSTREAM INVESTIGATION

Site JUD-01 is located at a concrete channel south of the intersection of Fresno Avenue and Main Street where trash was observed floating in the water. A fecal coliform bacteria level of 13,000 MPN/100 mL and an *Enterococcus* bacteria level of 8,000 MPN/100 mL were noted at the site. Because bacteria levels decreased below action levels at the confirmation visit, and since areas upstream of the site did not appear to be contributing significant sources of bacteria, it was concluded that the initial exceedance was the result of a transient flow.

Site JUD-02 is located at an outlet southwest of the Reed Court and Main Street intersection. At the routine visit, the site was partially shaded, ponded, and had yellow-colored sample water. An *Enterococcus* bacteria exceedance was noted at the site. The *Enterococcus* count was below the action level at the confirmation visit, and it was concluded that the initial exceedance was the result of a transient flow.

In addition, ammonia-N levels were above the action level at the initial field screening and at the confirmation visit. It was concluded that the exceedance was likely related to trash and decomposing leaves at the site based on the following:

- Trash and decomposing leaves were observed at the site in the ponded water. As organic material decomposes, ammonia-N is created as a byproduct.

- Due to the stagnant water at the site, ammonia-N levels were likely to rise without being washed downstream. Evaporation of the ponded water throughout the day could also cause ammonia-N to become more concentrated.
- At upstream location, JUD-02-1, the flows from two lines were sampled. Both lines had ammonia-N levels below the action level. Therefore, it is likely that conditions at the site itself, not at upstream locations, are the source of elevated ammonia-N.

Table 8-2 presents the results of the *Enterococcus* and ammonia-N investigations.

TABLE 8-2
SITE JUD-02 ENTEROCOCCI & AMMONIA-NITROGEN UPSTREAM INVESTIGATION RESULTS

Site	Location	Flow (gpm)	*Enterococcus* (MPN/100 mL)	Ammonia-N (mg/L)
JUD-02 *(Routine Visit)*	Southwest of the Reed Court and Main Street intersection.	Ponded	**11,000**	**2.531**
JUD-02 *(Confirmation)*	*(Same as above)*	Ponded	683	**2.819**
JUD-02-1	South side of Main Street in front of 3939 Main Street (north line).	Ponded	na	0.793

Notes: **Red** values exceed action level.
na = not analyzed

FIGURE 8-2
SITE JUD-02 ENTEROCOCCI & AMMONIA-NITROGEN UPSTREAM INVESTIGATION

Site JUD-03 is located at a manhole southwest of the Main Street and Mace Street intersection. At the routine field visit, the water had a musty smell and was brown in color. The glycol measurement was 1.623 mg/L, above the action level of 1.0 mg/L. At the confirmation visit, the glycol level decreased below the action level, and the water continued to have a musty odor. Due to the location of this manhole, sediment from the street entered the MS4 when the manhole was opened. This resulted in relatively high values of turbidity at both visits. However, the field crew did not consider the high turbidity measurements to be exceedances since the sediment had entered the storm drain during sampling. Because glycol levels decreased below the action level at the confirmation visit, it was concluded that the initial exceedance was a result of transient flow.

Site POG-02 is located at a manhole at the intersection of Eastlake Parkway and Trinidad Cove, near the entrance to the housing tract "Antigua". Total coliforms at the site measured 173,000 MPN/100 mL, above the action level. The exceedance was likely the result of decomposing leaves and other material in curb gutters, transported by irrigation runoff from residential areas upstream due to the following:

- Trash and decomposing leaves and grass were observed in the manhole at the site. The presence of trash is likely to encourage the growth of bacteria.
- The source of flow observed was irrigation runoff, primarily in the upstream commercial areas to the north, where decomposing organic material was not observed in the streets or gutters.
- Decomposing leaves, grass clippings, and algae were observed along curb gutters in several upstream locations in the residential areas to the east (Photo 8-3).

Photo 8-3: Upstream from POG-02-1 where leaf litter and debris were observed in gutters with flowing irrigation runoff.

- Decomposing organic material and a damp environment are conducive to bacterial regrowth in the MS4.
- The presence of algae in curb gutters indicates a consistent flow in the area.

Table 8-3 presents total coliform counts measured during this investigation.

TABLE 8-3
SITE POG-02 TOTAL COLIFORMS UPSTREAM INVESTIGATION RESULTS

Site	Location	Flow (gpm)	Total Coliform (MPN/100 mL)
POG-02 *(Routine Visit)*	Intersection of Eastlake Parkway and Trinidad Cove, near the entrance to the housing tract "Antigua"	5	**173,000**
POG-02 *(Confirmation)*	*(Same as above)*	4	**242,000**
POG-02-1	Manhole on eastside of Eastlake Parkway 300 feet north of POG-02 (east line)	< 1	**548,000**
POG-02-2	Manhole on eastside of Eastlake Parkway 300 feet north of POG-02 (north line)	2	72,700

Note: **Red** values exceed action level.

FIGURE 8-3
SITE POG-02 TOTAL COLIFORMS UPSTREAM INVESTIGATION

Site PRD-02 is located at an outlet west of Aries Court and 200 feet south of Rienstra Street, in the SDG&E easement. The sample was yellow-colored with a slight sewage odor, and the site had a low flow rate of 1 gpm. At the routine visit, there was a fecal coliform count of 22,000 MPN/100 mL, which decreased to 855 MPN/100 mL at the confirmation visit. However, at the confirmation visit, total coliforms were above the action level with a count of 173,000 MPN/100 mL. A second confirmation visit was conducted and total coliforms measured below the action level at 64,900 MPN/100 mL. These exceedances are most likely attributable to the abundance of trash in the water, and in the immediate and upstream areas of the site. Decomposing trash can induce bacterial growth, particularly total coliform bacteria. Additionally, trash containing food may attract wild animals, which may then deposit feces in the vicinity.

Site SCR-01 is located at an outlet north of Otay Lakes Road and 300 feet west Otay Ranch Road, east of Hunte Parkway. At the routine sample visit, the ammonia-N measurement was 1.026 mg/L. At the confirmation visit, the ammonia-N concentration had decreased to 0.973 mg/L. Although ammonia-N levels decreased below the action level, the concentration remained relatively high.

During the upstream investigation, a manhole was opened at the corner of La Costa Avenue and Torrey Pines Road within a residential area. The manhole also contained decomposing leaves and grass clippings.

Therefore, it was concluded that the ammonia-N exceedance was likely the result of stagnant, shaded, and ponded water with decomposing leaves and trash in the water at the site based on the following:

- Trash and decomposing leaves were observed at the site in the ponded water. As organic material decomposes, ammonia-N is created as a byproduct.
- At upstream location, SCR-01-1, decomposing leaves and grass clippings were observed.
- Due to the stagnant water at the site, ammonia-N levels were likely to rise without being washed downstream. Evaporation of the ponded water throughout the day could also cause ammonia-N to become more concentrated.

In addition, at the routine visit, bacteria counts were above their respective action levels. However, only total coliform and *Enterococcus* bacteria were confirmed exceedances. At upstream location SCR-01-1, the *Enterococcus* bacteria exceedance was most likely the result of decomposing leaves and grass clippings in the manhole, and in the gutters of residential areas upstream. Irrigation runoff from upstream residential areas is most likely the source of flow observed at the site. Runoff has the potential to transport bacteria to the site as the flow comes into contact with decomposing leaves and other material. It was concluded that the confirmed bacteria exceedances were related to decomposing leaves and grass clippings in shaded and ponded areas upstream and at the site, which is conducive to bacterial growth. Table 8-4 presents the bacteria counts measured during this investigation, and Figure 8-4 displays the locations of sampling sites.

TABLE 8-4
SITE SCR-01 BACTERIA UPSTREAM INVESTIGATION RESULTS

FIGURE 8-4
SITE SCR-01 BACTERIA UPSTREAM INVESTIGATION

Site SVS-01 is located at an outlet located behind the Ramada Inn, north of the intersection of Bonita Road and Bonita Glen. The initial sample was collected from a partially shaded and ponded area. At the initial site visit, the turbidity was very high and construction activity was observed. The sample water was gray and slightly cloudy. At the confirmation visit, the turbidity had significantly decreased. It was concluded that erosion of the steep slope with loose sediment and other materials adjacent to the site was the result of high turbidity measurements. In addition, at the routine site visit, the total coliform bacteria count was above the action level. The bacteria count had decreased below the action level at the confirmation visit, thus indicating that the initial exceedance was the result of a transient flow. Table 8-5 presents the bacteria counts and turbidity measurements recorded during the investigation.

TABLE 8-5
SITE SVS-01 TOTAL COLIFORMS & TURBIDITY UPSTREAM INVESTIGATION RESULTS

Site	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Turbidity (NTU)
SVS-01 *(Routine Visit)*	Behind the Ramada Inn at the intersection of Bonita Road and Bonita Glen, north of Bonita Road	Ponded	**170,000**	**48.05**
SVS-01 *(Confirmation)*	*(Same as above)*	< 1	37,800	3.35

Note: **Red** values were at or above the measured constituent's action level.

Site SWR-03-E is located at an outlet south of 3rd Avenue and North Glover Avenue in back of CVS Pharmacy. A fecal coliform and an *Enterococcus* bacteria exceedance was noted at the routine site visit. At the confirmation visit, total coliform, fecal coliform, and *Enterococcus* bacteria were above their respective action levels. These levels decreased below their action levels at the second confirmation visit.

During the upstream investigation, an *Enterococcus* exceedance was noted. The initial exceedances were likely due to wildlife activity and decomposing leaf litter transported by irrigation runoff from upstream residential areas based on the following:

- Upstream irrigation runoff came into contact with decomposing leaf litter in the manhole.
- Decomposing leaf litter in a ponded area is conducive to bacterial growth, and is most likely the cause of the total coliform bacteria exceedance.
- The open space at the site promotes wildlife activity which is likely related to increased levels of fecal coliforms and *Enterococcous* bacteria.
- A manhole upstream from the site on 3rd Avenue had a flow of less than 1 gpm with an abundance of small animal feces and decomposing leaf litter.
- Two shopping carts, trash, blankets, and clothing were observed next to the manhole on 3rd Avenue and evidence of current transient activity was noted.
- Discharged water from a construction site at the Fredrika Manor Community with a flow of less than one gpm flowed towards a catch basin on D Street near 3rd Avenue which likely transported bacteria to a second manhole at location SWR-03-E-1.

Table 8-6 presents the bacteria counts measured during this investigation, and Figure 8-5 displays the locations of sampling sites.

TABLE 8-6
SITE SWR-03-E BACTERIA UPSTREAM INVESTIGATION RESULTS

FIGURE 8-5
SITE SWR-03-E BACTERIA UPSTREAM INVESTIGATION

Site SWR-04 is an outlet located northwest of the intersection of 5th Avenue and C Street, south of the Wal-Mart parking lot. The initial field screening and confirmation visit samples were taken from ponded water with ammonia-N levels above the action level. The water had a chemical smell, contained mosquito larvae, and was yellow in color. An upstream investigation was conducted at Eucalyptus Park at a concrete channel, and did not contribute to the ammonia-N exceedance. It was concluded that the exceedance was likely due to the abundance of trash, human waste, and transient activity in the immediate vicinity of the site. Table 8-7 presents the ammonia-N measurements recorded during this investigation, and Figure 8-6 displays the locations of sampling sites.

FIGURE 8-6
SITE SWR-04 AMMONIA-NITROGEN UPSTREAM INVESTIGATION

Site TCS is located at a catch basin at the intersection of Moss Street and the trolley tracks inside the property located west of the San Diego Pallet facility. At the routine site visit, a glycol measurement of 1.431 mg/L was reported. The water was ponded, yellow in color, and contained larvae. However, at the confirmation visit, the site was dry. Although, no surface flow was observed at the routine visit, the exceedance was likely the result of irrigation runoff coming into contact with fluids from leaking cars in the parking lot at the site.

9 NITRATE-NITROGEN UPSTREAM INVESTIGATIONS

9.1 Introduction

During the 2010 Dry Weather Monitoring Program, many sites required follow-up investigations for nitrate-N exceedances. Upstream investigations conducted in the past indicated that potential sources of nitrate-N were not specific to the site, but rather common to all sites within their respective drainage basin. Therefore, in 2010, the City took a comprehensive approach to investigating and identifying potential nitrate-N sources on a basin-wide basis. This section includes a description of the investigated sites, analytical results, photographs of selected upstream locations, and the results of upstream investigations.

9.2 Investigated Basins

9.2.1 Otay River Basin

Four sites were sampled within the Otay River Basin during the 2010 Dry Weather Monitoring Program. Of these sites, only OVR-07 had confirmed elevated nitrate-N concentrations. An upstream investigation was conducted to locate and identify the source(s) of nitrate-N and flow. The results of the upstream investigation are presented in Table 9-1. Routine and upstream sampling locations within the Otay River Basin are displayed in Figure 9-1.

Site OVR-07 has had relatively high conductivity measurements and nitrate-N concentrations each year of the Dry Weather Monitoring Program since 2002, with the exception of 2008. In addition, nitrate-N has been reported by State Water Resources Control Board (SWRCB) as a potential contaminant of concern at the land disposal site on Otay Valley Road, north of Energy Way and Site OVR-07[1].

Photo 9-1: Upstream location, OVR-07-1, at entrance of FJ Willert Construction Company on Nirvana Avenue.

In a previous study conducted by D-MAX in April 2010, laboratory analyses of a sample collected at OVR-07 indicated a nitrate-N concentration of 19.80 mg/L and a conductivity value of 11.14 mS/cm.

In 2010, at the upstream location, OVR-07-1, the nitrate-N concentration and conductivity measurement were also relatively high, and were greater than at the site (Photo 9-1). During the upstream investigation a manhole in the South Bay Auto Wrecking property was dry, and further upstream, a manhole along the fence of the landfill was also dry. In addition, no surface flow was observed during the investigation. Therefore, it was concluded that water enters the MS4 conveyance south of the landfill upstream from location OVR-07-1.

[1]Information obtained via http://geotracker.swrcb.ca.gov/.

Due to the current and historical measurements of nitrate-N and high conductivity at the sampling locations within the Otay River Basin, it was concluded that infiltration of water from interflow and groundwater into the MS4 conveyance upstream of location OVR-07-1 and Site OVR-07 is most likely the cause of the consistent elevated nitrate-N levels.

TABLE 9-1
OTAY RIVER BASIN NITRATE-NITROGEN UPSTREAM INVESTIGATION RESULTS

Site	Date	Location	Flow (gpm)	Conductivity (mS/cm)	Nitrate-N (mg/L)

FIGURE 9-1
OTAY RIVER BASIN ROUTINE AND UPSTREAM SAMPLING LOCATIONS

9.2.2 Rice Canyon Basin

Four sites were sampled within the Rice Canyon Basin during the 2010 Dry Weather Monitoring Program. Of these sites, RCC-03 and RCC-04 had observed elevated nitrate-N concentrations and conductivity measurements. An upstream investigation was conducted to locate and identify the source(s) of the nitrate-N and flow. The results of the upstream investigation are presented in Table 9-2, and upstream sampling locations are displayed in Figure 9-2.

Sites within the Rice Canyon Basin have had relatively high conductivity and nitrate-N concentrations each year of the Dry Weather Monitoring Program since 2002. Additionally, upstream from the sampling locations, there are seven wells monitored by SWRCB. The topography in the vicinity of the monitoring wells is generally flat and slopes southwest towards the canyon where Site RCC-04 is located approximately 7 miles west of the wells. The reported depth to groundwater ranges from approximately 8.95 to 14.55 feet below ground surface (bgs) and the groundwater flow direction is toward the southwest at a gradient of 0.02 ft/ft.

The nitrate-N concentration and conductivity measurement were relatively high at the upstream location, RCC-04-1, but were less than the measurements at Site RCC-04 (Photo 9-2). This is consistent with the direction of groundwater flow and topography of the basin. Additionally, no surface flow was observed during the upstream investigation.

In addition, during a past study conducted by D-MAX in April 2010, laboratory analysis of samples collected at location RCC-04-1 indicated nitrate-N concentrations of 18.10 mg/L. Another sample was collected downstream of Site RCC-04 at a 6” pipe next to the outfall at Site RCC-03. Laboratory results indicated nitrate-N levels of 13.50 mg/L. The addition of flow between Site RCC-03 and Site RCC-04 is the likely cause of decreasing nitrate-N levels. Based on the results of the 2010 Dry Weather Monitoring Program, it was concluded that the infiltration of groundwater and lateral flow into the MS4 conveyance upstream from Site RCC-04 and downstream of RCC-04-1 is the most probable source of elevated nitrate-N concentrations and high conductivity values within the Rice Canyon Basin.

Photo 9-2: Upstream location, RCC-04-1, at Otay Lakes Road east of East H Street in front of Southwestern College.

FIGURE 9-2
RICE CANYON BASIN ROUTINE AND UPSTREAM SAMPLING LOCATIONS

9.2.3 Salt Creek Basin

Seven sites were sampled within the Salt Creek Basin during the 2010 Dry Weather Monitoring Program. Of these sites, SCR-02, SCR-05, SCR-06, and SCR-07 had observed elevated nitrate-N concentrations and conductivity values. Therefore, upstream investigations were conducted to locate and identify the source(s) of the nitrate-N and flow. The routine and upstream sampling locations are displayed in Figure 9-3.

Throughout the history of the program, there was only one nitrate-N exceedance prior to 2007. Since 2007, sites SCR-02, SCR-03, and SCR-05 have had persistent elevated nitrate-N concentrations. In addition, these sites have had relatively high conductivity measurements, with the exception of Site SCR-05 in 2008. The historical data does not include information for Site SCR-06 until 2009, and Site SCR-07, which was added to the list of sampling locations during the 2010 Dry Weather Monitoring Program.

During the upstream investigation of Site SCR-02, water was observed seeping from a vegetated bank located on the east side of Salt Creek and west of Montevalle Community Park at upstream location, SCR-02-2 (Photo 9-3). The spring had a low flow and elevated nitrate-N levels, and location SCR-02-1 had similar results (Table 9-3). Surface flow was not observed during the upstream investigation of the site. Although seepage was observed in only one location upstream from Site SCR-02, it is probable that there are other locations where seepage occurs along the banks of Salt Creek, but are unable to locate due to heavy vegetation.

Photo 9-3: Seepage at upstream location, SCR-02-2, along the bank of Salt Creek.

Samples were taken from the two pipes, SCR-05-1 and SCR-05-2, contributing flow to Site SCR-05 (Photo 9-4). All samples had elevated nitrate-N levels and relatively high conductivity measurements. The results of the routine and upstream field screenings for Sites SCR-05 and SCR-07 are presented in Table 9-4. Further laboratory analysis of SCR-05-1 reported a level of total nitrogen of 195 mg/L with a conductivity measurement of 10.2 mS/cm (Table 9-5).

Site SCR-07, downstream of Site SCR-05, had a nitrate-N concentration of 77.63 mg/L at the routine visit, which is less than at Site SCR-05. This decrease in nitrate-N concentration is most likely the result of water passing through the detention basin before reaching the outlet at Site SCR-07.

Lastly, an upstream investigation was conducted for Site SCR-06. The results of this upstream location are presented in Table 9-6. Three samples were collected within the Salt Creek Golf Course and nitrate-N levels were below the action level. Flow observed within the golf course was

Photo 9-4: Upstream locations, SCR-05-1 (left) and SCR-05-2 (right) contributing to Site SCR-05.

relatively low. Therefore, it could not be concluded that landscaping practices at the Salt Creek Golf Course contributes to the nitrate-N exceedances within the Salt Creek Basin.

Based on the observations of the upstream area of Site SCR-02, it was concluded that the seepage of interflow along Salt Creek is a major source of nitrate-N. Water most likely percolates from irrigation at Montevalle Community Park, Eastlake Middle School, and upstream residential areas and contributes to interflow which is probably the main source of flow at the upstream sample locations. It is probable that the fertilization of the community park and the middle school contributes to elevated nitrate-N concentrations observed in the Salt Creek Basin. In conclusion, the elevated nitrate-N levels and conductivity measurements recorded for the routine and upstream sample locations within the Salt Creek Basin are most likely due to the infiltration of water from interflow and groundwater into the MS4.

TABLE 9-3
SITE SCR-02 NITRATE-NITROGEN UPSTREAM INVESTIGATION FIELD RESULTS

9.2.4 Sunnyside Basin

Six sites were sampled within the Sunnyside Basin during the 2010 Dry Weather Monitoring Program. Of these sites, SUN-02 and SUN-07 had confirmed elevated nitrate-N concentrations and relatively high conductivity measurements. An upstream investigation was conducted to locate and identify the source(s) of the nitrate-N and flow. The results of the upstream investigations are presented in Table 9-7. Routine and upstream sample locations are displayed in Figure 9-4.Site SUN-02 has been a routine sampling site since 1999 and has had elevated nitrate-N concentrations and relatively high conductivity measurements in 2008 and 2009. Site SUN-07 has been a routine sampling site since 2006 and had nitrate-N exceedances in 2007 and 2008.

Photo 9-5: Upstream location SUN-02-2.

Both sites are located at the base of steep, landscaped slopes where irrigation occurs. This area is currently under construction and there are many new housing developments surrounding the sites. At Site SUN-07, water was observed seeping through a crack in the pipe. Although there is flow coming from both sides of the crack in the pipe, the majority of flow at the site comes from the side adjacent to the steep slope.

Samples taken at upstream locations, SUN-02-1 and SUN-02-2, did not have nitrate-N concentrations above the action level and surface flow was not observed (Photo 9-5). Because of the steepness of the slopes surrounding the sites, water from irrigation most likely contributes to interflow observed seeping into the pipe at the sites.

Based on the current and previous results of the Dry Weather Monitoring Program for sites within the Sunnyside Basin, it was concluded that infiltration of irrigation into the MS4, at and upstream from the sites, is most likely the cause of the elevated nitrate-N levels.

FIGURE 9-4
SUNNYSIDE BASIN ROUTINE AND UPSTREAM SAMPLING LOCATIONS

9.2.5 Telegraph Canyon Basin

Nine sites were sampled within the Telegraph Canyon Basin during the 2010 Dry Weather Monitoring Program. Of these sites, TCC-03, TCC-05, TCC-06 had confirmed elevated nitrate-N concentrations and relatively high conductivity values, and an upstream investigation was conducted to locate and identify the source(s) of the nitrate-N and flow. Routine and upstream sampling locations within the Telegraph Canyon Basin are displayed in Figure 9-5, and the results of the upstream investigations are presented herein and summarized in Table 9-8.

Sites within the Telegraph Canyon Basin have had relatively high conductivity and nitrate-N concentrations since 2002, but nitrate-N levels have decreased over the years. During the 2010 program, a sample was collected from a crack in the joint of the concrete pipe at Site TCC-03. Additionally, samples were taken from the east and south line contributing to the flow at the site. All samples had elevated nitrate-N concentrations.

During the upstream investigation, flow contributing to the south line at the upstream location, TCC-03-4, had the greatest concentration of nitrate-N and relatively high conductivity, but had the lowest flow of the sample locations. At this location, water was observed seeping out of the slope behind Vons in the shopping center (Photo 9-6). At the base of the slope, a small concrete channel was dry, and there was no evidence of irrigation runoff. Upstream locations contributing flow to the east line were sampled at three manholes along Otay Lakes Road and Eastlake Parkway. All three samples collected had greater nitrate-N concentrations than at the site, and had similar measurements of conductivity.

Site TCC-03 is located downstream of the Eastlake Greens Golf Course and housing development. It is possible that irrigation water from these areas percolates the soil and contributes to interflow. Therefore, water likely infiltrates the MS4 conveyance and other locations in the area, such as the steep, vegetated slope at TCC-03-2.

Photo 9-6: Seepage along steep slope at upstream location TCC-03-2 contributing to the east flow at Site TCC-03.

Sites TCC-05 and TCC-06, located downstream of Site TCC-03, also had elevated nitrate-N levels. As flow travels from Site TCC-03, the eastern most sample location within the Telegraph Canyon Basin, it gradually dilutes the concentration of nitrate-N. The results of the field tests for nitrate-N at Sites TCC-05 and TCC-06 are presented in Table 9-8 and the direction of flow from Site TCC-03 to Site TCC-02 is displayed in Figure 9-5.

Based on these results, it was concluded that the relatively high concentrations of nitrate-N at the sampling locations within the Telegraph Canyon Basin, is most likely the result of irrigation water infiltrating the MS4 conveyance from interflow upstream of Site TCC-03.

9.2.6 Upper Otay Reservoir Basin

One site was sampled within the Upper Otay Reservoir Basin during the 2010 Dry Weather Monitoring Program. Site LAK-01 had confirmed elevated nitrate-N concentrations, and an upstream investigation was conducted to locate and identify the source of the nitrate-N and flow. Table 9-9 presents the results of the upstream investigation and Figure 9-6 displays the routine and upstream sampling locations within the Upper Otay Reservoir Basin.

Site LAK-01 has been a routine sampling site since 2006 and has had relatively high conductivity measurements and nitrate-N concentrations since 2007. Areas surrounding LAK-01 have undergone substantial residential development in recent years. During the upstream investigation in 2010, irrigation runoff was observed flowing to a catch basin at the corner of Agua Vista Drive and Morning Creek Drive. Downstream of the residential area are landscaped slopes with evidence of irrigation runoff. Nonetheless, the upstream location, LAK-01-1, had nitrate-N levels below the action level.

Based on these observations, water most likely percolates the soil and travels down slope, which contributes to interflow. Seepage of interflow likely occurs under the detention basin upstream from the site, and infiltrates the pipe at Site LAK-01. Nitrate-N concentrations are most likely greater at the site than at upstream locations because of the accumulation of surface flow and interflow.

In conclusion, the infiltration of irrigation from interflow into the MS4 conveyance upstream from Site LAK-01 is most likely the cause of elevated nitrate-N concentrations within the Upper Otay Reservoir Basin.

TABLE 9-9

Note: **Red** values exceed action level.

FIGURE 9-6
UPPER OTAY RESERVOIR BASIN ROUTINE AND UPSTREAM SAMPLING LOCATIONS

9.2.7 Wolf Canyon Basin

Two sites were sampled within the Wolf Canyon Basin during the 2010 Dry Weather Monitoring Program. Both sites, WOL-02 and WOL-03 had confirmed elevated nitrate-N concentrations and relatively high conductivity measurements. An upstream investigation was conducted to locate and identify the source of the nitrate-N and flow. The results of the upstream investigation are presented in Table 9-10 and the routine and upstream sampling locations within the Wolf Canyon Basin are displayed in Figure 9-7.

Sites within the Wolf Canyon Basin have been sampled since 2006. Site WOL-02 has had consistent nitrate-N concentrations above the action level and relatively high conductivity measurements. On the other hand, Site WOL-03 has not had nitrate-N exceedances until 2010.

Site WOL-02 and WOL-03 are located at the bottom of steep, vegetated slope with new housing developments located adjacent to and upstream from their locations. During the 2010 program, water was observed leaking from a crack in the concrete pipe at both sites. At Site WOL-02, water was observed seeping from the soil next to the site.

During the upstream investigations, locations upstream from Site WOL-02 were sampled, and measurements of nitrate-N and conductivity were relatively high (Photo 9-7). At these locations, flow most likely comes from irrigation runoff in residential areas upstream, although no surface

flow was observed at the time of the investigation. Due to the steepness of the vegetated slopes surrounding the sites, water from irrigation most likely percolates and contributes to interflow and thus to the flow at the sites. Additionally, two manholes on Santa Luna Street upstream from Site WOL-03 were dry. Because Site WOL-02 is upstream from Site WOL-03, additional upstream locations were not necessary.

Photo 9-7: Upstream location WOL-02-2 north of La Media Road and south of the detention basin.

Based on the results of the 2010 Dry Weather Monitoring Program, and past measurements of nitrate-N and conductivity at Site WOL-02, it was concluded that infiltration of irrigation from interflow into the MS4 conveyance upstream from this site is most likely the cause of nitrate-N exceedances. On the other hand, because of the recent increase in the nitrate-N concentration at Site WOL-03, it was concluded that the likely source of flow and elevated nitrate-N levels include the infiltration of irrigation from interflow into the concrete pipe and surface flow from landscaping practices at new housing developments upstream from the site.

10 MS4 OUTFALL MONITORING PROGRAM

10.1 Introduction

The targeted dry weather component of the 2010 MS4 Outfall Monitoring Program was performed concurrently with sampling for the 2010 Dry Weather Monitoring Program. The purpose of this program is to identify pollutant discharges from MS4 outfalls and to assess whether these discharges contribute to receiving water quality.

The work was performed in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan (MS4 Workplan) developed in June 2008 and with the requirements of the Receiving Waters and Urban Runoff Monitoring and Reporting Program required in the Municipal Permit. The results of the City of Chula Vista's 2010 MS4 Outfall Monitoring are summarized below.

10.2 Sampling Locations

The MS4 Workplan identifies sites BAY-01, CEN-01, JUD-01, PRD-02, RCC-02, SCR-01, SUN-06, SVS-01, TCC-03, and TCC-04 in the City of Chula Vista as MS4 outfall monitoring sites. Table 10-1 lists MS4 outfall sampling locations and descriptions. Photographs of sampling locations are included as Appendix B, and locations are displayed in Figure 10-1.

10.3 Analytical Methods

All 10 sampling sites were also part of the 2010 Dry Weather Monitoring Program, thus samples for the MS4 Program and Dry Weather Program were taken concurrently. The MS4 Workplan does not require testing of any field screening parameters at the City's MS4 outfall monitoring sites. Seven of the sites were designated as analytical monitoring sites for the Dry Weather Monitoring Program, and laboratory test results for most constituents were used for the MS4 Monitoring Program as well. Samples were collected and submitted to EnviroMatrix Analytical, Inc. for laboratory analysis of the following constituents:

- Total Coliform
- Fecal Coliform
- *Enterococcus*
- Total Hardness
- Dissolved Cadmium
- Dissolved Copper
- Dissolved Lead
- Dissolved Zinc

An additional sample was collected at six of these sites and analyzed for total dissolved solids (TDS), which is not a Dry Weather Monitoring Program analyte. These sites were CEN-01, RCC-02, SVS-01, SUN-06, TCC-03, and TCC-04.

The test methods used are described in Section 3 of this report and are compatible with those set forth in the MS4 Workplan.

10.4 Analytical Results

Laboratory results from the 2010 MS4 Monitoring Program are presented in Table 10-2. Laboratory reports are included as Appendix C. A spreadsheet of the results in the regionally standardized format required for countywide data sharing has been provided to the City.

There are no established water quality standards for MS4 results. Within the MS4 outfall monitoring dataset, the following observations were noted:

- Dissolved copper and zinc concentrations at Sites BAY-01 and CEN-01 were relatively higher than at other sites.
- Measurements of TDS were generally the same among the sites.
- Total coliform counts were the highest at Sites PRD-02 and SVS-01.
- Fecal coliform counts were the highest at Sites PRD-02 and SCR-01.
- Enterococci counts were the highest at Sites CEN-01 and SCR-01.

10.5 Previous Results

Since 2009 was the first year of the MS4 Outfall Monitoring Program, there is not substantial historical data to which the results can be compared. However, the following comparisons can be made of this year's MS4 monitoring results to last year's results:

- Measurements of total hardness and TDS were similar to last year's results.
- In 2010, there were more sites with detected measurements of dissolved cadmium.
- Site BAY-01 had lower levels of dissolved copper in 2010 than in 2009, and CEN-01 has greater levels of dissolved copper.
- Overall, there are greater levels of dissolved zinc than in 2009.
- Total coliform and *Enterococcous* bacteria have generally increased in 2010 from last year.

11 SUMMARY AND RECOMMENDATIONS

11.1 Field Screening and Laboratory Analyses Summary

Fifty-seven primary monitoring sites were visited during the 2010 Dry Weather Monitoring Program. Thirty-six sites had measurable flow and 21 sites were ponded. A total of 15 sites were sampled for laboratory analyses. A summary of action level exceedances is presented in Table 11-1.

TABLE 11-1

Note: Data is based on routine visits only. Confirmation, follow-up, and dry site visits not included.

11.2 Upstream Investigation Summary

Twenty-nine sites had parameters testing at or above dry weather action levels. Table 11-2 presents conclusions of follow-up investigation, excluding nitrate-N exceedances.

TABLE 11-2
SUMMARY OF UPSTREAM INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results/Probable Source(s)
	Field	Laboratory	
BAY-01	Glycol	----	Coolant from leaking cars in parking lot
CEN-01	----	Fecal Coliforms, *Enterococcus*	Transient flow
CEN-08	Surfactants	----	Car wash area in Cabrillo Mobile Lodge residential community
JUD-01	----	Fecal Coliforms, *Enterococcus*	Transient flow
JUD-02	Ammonia-N	*Enterococcus*	Ammonia-N: trash and decomposing organic material upstream; *Enterococcus:* transient flow
JUD-03	Glycol	----	Transient flow
POG-02	----	Total Coliforms	Decomposing leaves and grass clippings in gutters in combination with consistent irrigation runoff from residential areas
PRD-02	----	Fecal Coliforms	Insufficient trash control BMPs upstream which can attract wildlife from the adjacent open area
SCR-01	Ammonia-N	Total Coliforms, Fecal Coliforms, *Enterococcus*	Decomposing organic material in a shaded and ponded area at the site and in a manhole upstream; excess irrigation from residential areas upstream transports bacteria to site; stagnant water upstream may promote bacterial growth; ammonia-N levels likely concentrated by evaporation of ponded water
SVS-01	Turbidity	Total Coliforms	Turbidity exceedance due to construction activity; total coliforms exceedance related to transient flow
SWR-03-E	----	Fecal Coliforms, *Enterococcus*	Wildlife activity, animal feces, and decomposing leaves present in upstream areas
SWR-04	Ammonia-N	----	Ammonia-N levels likely concentrated by evaporation of ponded water with decomposing leaves, transient activity and trash upstream
TCS	Glycol	----	Coolant from leaking cars in parking lot

11.2.1 Nitrate-N Exceedance Investigations

The 2010 nitrate-N exceedance investigation findings can be grouped into the two primary categories. With the exception of one transient exceedance observed at Site SCR-03, each site with a nitrate-N exceedance is listed under the associated category as follows:

- Groundwater or interflow seeping into stormwater conveyances for the following sites:
  - OVR-07
  - RCC-03
  - RCC-04
  - TCC-02
  - TCC-03
  - TCC-05
  - TCC-06
- Combination of landscaping practices and groundwater/interflow seepage into MS4 conveyance for the following sites:
  - LAK-01
  - SCR-02
  - SCR-05
  - SCR-06
  - SCR-07
  - SUN-02
  - SUN-07
  - WOL-02
  - WOL-03

11.3 Trash Assessments

Trash assessments were performed at all routine sampling sites, including three dry sites. Forty-three sites received optimal ratings, 11 suboptimal, five marginal, and one submarginal. No sites received a poor trash rating. The marginal and submarginal sites are:

- Marginal
  - POG-01
  - RCC-03
  - SCR-04
  - SCR-05
  - SWR-03-E
- Submarginal
  - SWR-04

11.4 Recommendations

Based on the results of the City of Chula Vista's 2010 Dry Weather Monitoring Program, the following actions are recommended.

11.4.1 Inspection and Maintenance

Establish and maintain a regular schedule for the removal of trash at the following sites. Ensure that trash at these sites is regularly assessed, and implement preventative measures where possible to decrease the introduction of debris to the storm water conveyance system.

- POG-01
- RCC-03
- SCR-04
- SCR-05
- SWR-03-E
- SWR-04

Site POG-02

- Clean out manhole upstream from the site at location POG-02-1 on Eastlake Parkway to prevent the growth of bacteria.

Site SCR-01

- Clean out MS4 conveyance at the corner of La Costa Avenue and Torrey Pines Road upstream from the site to prevent bacterial growth.

Site SVS-01

- Contact the construction company working on the I-805 freeway construction at the Bonita Road exit to improve BMPs placed near the site in order to prevent excess sediment from entering the storm drain system.

Site SWR-03-E

- Consider identifying areas in the vicinity of the site where barriers can be placed to prevent wildlife from entering the storm drain system.

Site SWR-04

- Consider improving barriers to MS4 conveyance at the site under the bridge to deter transient activity and littering.

11.3.2 Education

Site BAY-01

- Provide educational material regarding proper management of automobile oil leaks (or general spills and leak management) to the office building at 1075 Bay Boulevard. Consider providing similar information to the surrounding office buildings on the east side of Bay Boulevard located across the street from the site.

Site CEN-08

- Provide educational material regarding vehicle washing BMPs to the property management at the Cabrillo Mobile Lodge on 731 G Street located upstream from the site.

Site JUD-02

- Provide educational material regarding minimizing over-irrigation to the property managers of Otay Park, the elementary school at 1636 Albany Avenue, and commercial businesses along Reed Court and Britton Avenue that contribute runoff to the site.

Site LAK-01

- Provide educational material regarding minimizing over-irrigation to the residents, home owners associations, and property managers of residential areas along Morning Creek Road, Coastal Hills Drive, and Winding Fence Way within the Rolling Hills Ranch community which contribute runoff to the site.

Site POG-02

- Provide educational material regarding landscape fertilization and minimizing over-irrigation to the property managers of Eastlake High School and Olympic View Elementary School on 1220 South Greensview Drive, and the home owners associations and residents of Boca Raton Drive, Turtle Cay Way, Waterwood Court, and Tall Pines Drive contributing runoff to the site.

Site PRD-02

- Provide educational materials regarding trash BMPs to the residents, home owners associations, and property managers at the condominium complex on the 1400 block of Melrose Avenue to prevent bacteria and trash from entering the storm drain system.

Site SCR-01

- Provide educational materials regarding minimizing over-irrigation to residents, the home owners association, and property managers of the

residences along Torrey Pines Road and La Costa Avenue within the Eastlake Greens community to prevent bacteria from entering the storm drain system.

- Consider providing education material to the parties listed above regarding proper pet waste disposal, since dog walking was observed in areas upstream of the site and exceedances of fecal coliform and *Enterococcous* bacteria were reported at the site and at upstream location SCR-01-1.

Site SCR-02

- In order to minimize nitrate sources and flow to the site, consider providing educational material regarding landscape fertilization and minimizing over-irrigation to the property managers of Eastlake Middle School, Montevalle Community Park, and major home owners associations located within Rolling Hills Ranch and Eastlake Woods West communities.

Site SUN-02

- Provide educational material regarding minimizing over-irrigation to the residents, home owners associations, and property managers of areas along Mountain Ridge Road, Rolling Ridge Road, Windy Way, and Ocean View Lane to prevent runoff from potentially entering the storm drain system.

Site SWR-03-E

- Provide educational materials regarding proper pet waste disposal and minimizing over-irrigation to residents of areas surrounding the site, areas upstream from the site, and at the Gentry Glen community on 3rd Avenue.

Site TCS

- Provide educational material regarding proper management of automobile oil leaks (or general spills and leak management) to the facility at 694 Moss Street and to Harbor Freight at 680 East L Street.

Site WOL-02

- Provide educational material regarding landscape fertilization and minimizing over-irrigation to the residents, home owners associations, and property managers of the Montecito Ridge and Otay Ranch communities upstream of the site, particularly residences along Irwin Street, May Street, Jones Street, Pember Street, and Barbour Street south of Birch Road and north of Fleishbein Street.

Site WOL-03

- Provide educational material regarding landscape fertilization and minimizing over-irrigation to the property managers of Olympian High School at 1925 Magdalena Avenue and Wolf Canyon Elementary School on Peabody Way.

11.3.3 Further Investigation

Site SCR-05

- Consider further investigating the source of flow to the small pipe contributing flow and elevated nitrate levels to Site SCR-05.

Dry Weather Reports

28 June 2010

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 10F0326

Project Name: Chula Vista Dry Weather
Project Desc./#: 201009W-3

Enclosed are the results of analyses for samples received by the laboratory on 06/09/10 16:30. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

Client Name: D-Max Engineering
Project Name: Chula Vista Dry Weather

EMA Log #: 10F0326

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
SVS-01	10F0326-01	Stormwater	06/09/10 15:15	06/09/10 16:30

4831

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Client Name: D-Max Engineering
Project Name: Chula Vista Dry Weather

EMA Log #: 10F0326

Metals (Dissolved) by EPA 200 Series Methods

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

4840

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
QR-06	The RPD value was exceeded due to the sample concentration being less than 10 times the reporting limit. The QC batch was accepted based on the LCS or QCS results.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

2010 Trash Assessment Form

SITE ID: Bay-01 DATE: 6/9/10

OBSERVER: SB/MD TIME: 10:30

LOCATION: West side of Bay Blvd across from 1075 complex

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15' x 10'

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: BLC-02 DATE: 6/16/10

OBSERVER: MD/IT TIME: 10:10

LOCATION: Long Canyon channel S of Benita Rd & W of southern end of Acacia Ave.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 25X10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: CEN-07 DATE: 6/17/10

OBSERVER: MD/IT TIME: 10:25

LOCATION: W of 5th Ave., between Center St. & Park Way

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☑ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: CEN-10 DATE: 6-23-10

OBSERVER: MD, BM TIME: 9:45

LOCATION: Northwest of intersection of Hilltop Dr. & Whitney St.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 4 x 4

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: JUD-02 DATE: 6/14/10

OBSERVER: MD/SB TIME: 9:50

LOCATION: Southwest of Reed Court and Main Street intersection

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Submarginal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 4' x 3'

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☑ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: LAK-01 DATE: 6/21/10

OBSERVER: MD/IT TIME: 10:35

LOCATION: NE of the intersection of Proctor Valley Rd & Agua Vista Dr. in the canyon

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 20x20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: OVR-07 DATE: 6-23-10

OBSERVER: MD, BM TIME: 10:45

LOCATION: East of property at 1879 Nirvana Ave.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 6 x 6

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: POG-01 DATE: 6/17/10

OBSERVER: MO/TT TIME: 15:20

LOCATION: S of Main St., 100 ft W of Melrose Ave.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Marginal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 30 x 20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☑ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: POG-03 DATE: 6/21/10

OBSERVER: MD/IT TIME: 15:40

LOCATION: Olympic Pkwy, across from Heritage Rd.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 30 x 20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☐ MS4 ☑ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: PRD-02 DATE: 6/10/10

OBSERVER: MD/SB TIME: 12:15

LOCATION: West of Aries Court and 200 Feet South of Rieustra Street in SDG&E easement

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 4' x 20'

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: RCC-04 DATE: 6/24/10

OBSERVER: MD/BM TIME: 15:50

LOCATION: E. ~~side~~ of H St. and Otay Lakes Rd. intersection; W of shopping center, in canyon

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 7 x 15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: SCR-02 DATE: 6/18/10

OBSERVER: MD/IT TIME: 14:40

LOCATION: Salt Creek, as it passes under Otay Lakes Rd, E of Hunte Pkwy (N side of street)

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 40x20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☒ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☑ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Revised 4/20/2004. 4/15/2005. 4/19/2006, 3/13/2008

2010 Trash Assessment Form

SITE ID: Sun-03 DATE: 6/14/10

OBSERVER: MD/SB TIME: 15:40

LOCATION: Chula Vista Municipal Golf Course, Southwest of Bonita and Central Ave intersec

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 4' x 10'

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☑ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: Sun-07 DATE: 6/21/10

OBSERVER: MD/IT TIME: 9:30

LOCATION: E of the end of Jeapl Way, inlet to detention basin at base of slope, W of SR-125

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: SVS-01 DATE: 6/9/10

OBSERVER: MD/SB TIME: 15:15

LOCATION: Rear of Ramada Inn at intersection of Bonita rd and Bonita Glen, North of Bonita

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 12' x 60'

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: SWB-03 DATE: 6/22/10

OBSERVER: MD/IT TIME: 13:30

LOCATION: Landscaped area along W side of 2446 Main St.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5x5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: SWR-04 DATE: 6/28/10

OBSERVER: MD / BM TIME: 9:40

LOCATION: NW of 5th Ave. and C St.; south of Wal-Mart parking lot

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Submarginal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 x 30

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☑ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☑ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

SITE ID: SWR-04

*** Complete the following section for Submarginal, and Poor Evaluations ONLY ***

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)

2010 Trash Assessment Form

SITE ID: TCC-01-01 DATE: 6/25/10

OBSERVER: MD/BM TIME: 10:10

LOCATION: Telegraph canyon channel SW of Bay Blvd. & L St. inside Duke Energy Plant; easternmost outlet

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 15 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: TCC-02 DATE: 6/28/10

OBSERVER: MD/BM TIME: 10:50

LOCATION: Telegraph canyon channel, W of Hilltop Dr. in Hilltop Park

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 20 X 2

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☑ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: TCC - 06 DATE: 6/28/10

OBSERVER: MD/BM TIME: 13:40

LOCATION: Telegraph Canyon Rd. & ~~Hentag~~ Paseo del Rey intersection, NW corner

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Sub optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 20 x 20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Revised 4/20/2004. 4/15/2005. 4/19/2006, 3/13/2008

2010 Trash Assessment Form

SITE ID: WOL-02 DATE: 6/17/10

OBSERVER: MD/CT TIME: 11:25

LOCATION: W of La Media Rd, across from detention basin in canyon, S of intersection of La Media Rd & Birch Rd

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 x 20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Attention: Mr. David Gibson, Executive Officer

SUBJECT: JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM (JURMP) ANNUAL REPORT NO. 31

Please find enclosed City of Chula Vista's JURMP Annual Report No. 31 for Fiscal Year 2010-2011.

The JURMP Annual Report has been prepared in accordance with the requirements of the San Diego Regional Water Quality Control Board Order No. R9-2007-0001 (NPDES Permit No. CAS0108758) and is a documentation of the City's implementation of and compliance with the requirements of said Permit during the reporting period July 1, 2010 to June 30, 2011.

If you have any questions regarding the submitted report, or need further information, please contact Khosro Aminpour, Senior Civil Engineer, at (619) 397-6111. Please direct any and all correspondence to:

City of Chula Vista, Department of Public Works

ACKNOWLEDGEMENTS

This Report has been prepared by or under the supervision of:

Matt Little, Assistant Director of Public Works
Silvester Evetovich, Principal Civil Engineer
Khosro Aminpour, Senior Civil Engineer
Don Bergeson, Environmental Health Specialist
Marisa Soriano, Environmental Health Specialist

Staff from the following City of Chula Vista departments, divisions, or sections has contributed to the implementation of the JURMP in 2010-2011:

Public Works Storm Water Management
Public Works Inspection Services
Public Works Wastewater Management
Public Works Environmental Services
Office of Communications
Chula Vista Nature Center
Geographic Information Systems
Development Services – Land Development
Engineering Design
Planning Landscape Architecture
Environmental Planning
City Attorney's Office

The following organizations have contributed to the implementation of the JURMP in 2010-2011:

- D-MAX Engineering, Inc.
- I Love a Clean San Diego, Inc.
- Otay Valley Regional Park (OVRP)
- The CLEAN Stakeholder Group

The City of Chula Vista wishes to thank:

- Volunteers who dedicated their time to improve water quality in Chula Vista
- Environmentally conscious citizens who reported illegal discharges
- Citizens, business owners, contractors, and developers who cooperated with City staff in implementing Best Management Practices

• Executive Summary

EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. This is the fourth annual report submitted under the current permit and covers the implementation period of July 1, 2010 to June 30, 2011. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the stipulations of Section J.3.a of the Municipal Permit.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports, which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has, therefore, been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2010 to June 30, 2011, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (this section will be submitted under a separate cover on or before December 15, 2011, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Prior to the 2007-2008 report, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, the 2011 Dry Weather Field Screening report, and an analysis of its findings will be submitted to the Regional Board before December 15, 2011, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

During this reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2010-2011 rainy season on January 31, 2012.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2010 to June 30, 2011. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

• Introduction

1.0 INTRODUCTION

1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (Regional Board), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority, and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 31 is an account of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2010 to June 30, 2011.

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Implemented inspection programs of construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable Best Management Practices (BMPs) that can be implemented to reduce the discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

- Participated in watershed and regional meetings and activities.

1.2 PURPOSE AND OBJECTIVES

Report No. 31 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of the Municipal Permit during the reporting period July 1, 2010 to June 30, 2011. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction Program
- Municipal Program
- Industrial and Commercial Program
- Residential Program

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0 of this report, together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2011.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management fiscal resources as required by Section G of the Municipal Permit. The Copermittees developed a Standardized Fiscal Analysis Method and Format, dated January 29, 2009, which has been used in this report as a basis for the City's fiscal analysis in this section.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this section, the Telegraph Canyon Channel has been placed on the 2008-2010 303(d) list for Selenium. The listing was based on the results of four samples taken from the Telegraph Canyon Channel within the Hilltop Park, as part of the SWAMP program. During the reporting period, the City initiated a Selenium Study to collect additional samples and obtain further data. Four sites were selected along the Telegraph Canyon Channel and samples were collected and tested in May 2011. This study will be continued in the future until adequate data is available to provide statistically significant results.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of this report is dedicated to descriptions of modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the City's JURMP effectiveness.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

• Development Planning

2.0 DEVELOPMENT PLANNING COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.

Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.

Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.

Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.

Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory

.

Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.

Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.

Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.

Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.

Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.

Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.

Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.

Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.

Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.

Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.

2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes actions taken during the defined reporting period by the City to minimize short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development (including construction or installation of a building or structure), creation of impervious surfaces, and capital improvement projects. Through the implementation of the Development Planning Component, the City minimizes and manages increases in runoff from development projects to the MEP to protect receiving waters.

2.2 LAND-USE PLANNING

2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to visions, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.
- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)
- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.
- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.
- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.
- Maximize the protection of potable water supply resources from pollutants.
- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including

urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the Chula Vista Development Storm Water Manual (Manual), updated in January 2011, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2 of the JURMP) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Manual. The Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Manual has been dedicated to the City's SUSMP. Another section of the Manual outlines BMP requirements on construction sites during both dry and rainy seasons.

During the current reporting period, amid continued slump in development activities, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

2.2.4 PROGRAM IMPLEMENTATION

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP as described in Section 2.4.4 of this report.

In January 2011, in compliance with NPDES Municipal Permit requirements, the following document was updated:

- Chula Vista Development Storm Water Manual (including the City's SUSMP)

The main objective of this update was to incorporate Hydromodification Control requirements in the City's local SUSMP. During the update process, each of the City's implementation processes were objectively reviewed and, based on extensive experience gained during several years of Municipal Permit implementation, significant improvements were made throughout all

aspects of the program. Those improvements are reflected in the above referenced updated document. A copy of the updated Development Storm Water Manual is available on the City's website at http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp .

2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Division of the Development Services Department reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits and Land Development Divisions of the Development Services Department, and the Storm Water Management Section of the Public Works Department review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Environmental Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Development Services Department
- Public Works Department, Engineering
- Public Works Department, Operations - Storm Water Management Section

The Development Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Division of the Development Services Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Land Development Division for review and final approval.

Land Development Division staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; low impact development site design, source control, structural treatment control, and hydromodification control BMPs; calculations for sizing of treatment control and hydromodification control BMPs; and a perpetual maintenance plan and funding mechanism. The applicants are required to sign an agreement with the City for the maintenance of post-construction BMPs. When necessary, the Land

Development Division coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

The Land Development Division and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for low impact development site design, source control, treatment control, and hydromodification control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Land Development Division and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the planning and design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Land Development Division and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Land Development Division and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Public Works Department, Engineering Design Section. Public projects undergo the same review process as private developments. Engineering staff has received training on SUSMP requirements, identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments, divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are therefore readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals.

2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP which culminated in December 2007, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP. During the current reporting period, City staff followed all such guidelines and procedures, and it can be asserted that a sound process is now in place. City staff involved with project review and approval is now familiar with their roles and responsibilities regarding water quality aspects of project approvals. They receive adequate training when necessary to stay abreast of the latest developments, including BMPs, Low Impact Development, and Hydromodification.

2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 10 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's minimum BMP requirements for all development projects are outlined below and are included in the Manual (Forms 5501 and 5504A or 5504B of the Manual). All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.

- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.

- BMPs applicable to individual project categories

- Provide buffer zones or other buffers for natural water bodies.

- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.

- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

Priority Development Projects are additionally required to meet the City's SUSMP requirements included in Section 3 of the Manual. Also, projects disturbing one or more acre of land are required to comply with the Construction General Permit requirements of the State Water Resources Control Board.

During the project approval and verification process, all project submittals were reviewed for compliance with the minimum BMP requirements described above.

2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP document was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure that to the maximum extent practicable, development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual," available on the web at:

http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

In January 2011, City Council approved the updates to the City's SUSMP and Manual. The Updated SUSMP and Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the Municipal Permit. The City's Storm Water Management and Discharge Control and Grading Ordinances incorporate the Manual (which includes the City's SUSMP) by reference, therefore, making its contents legally enforceable.

2.4.4.1 NOTABLE ACTIVITIES

In 2010-2011, notable improvements in processes and protocols supporting SUSMP implementation were made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates included:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Hydromodification BMPs.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document and Maintenance Agreement links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.
- Site inspections of all development projects to ensure proper installation of construction and post-construction BMPs.

On July 14, 2010, the Regional Water Quality Control Board approved the Final Hydromodification Management Plan submitted by the Copermittees. Subsequent to this

approval and throughout the current reporting period, City staff continued active participation in regional meetings and activities, which focused on issues concerning the implementation phase of this program component. Subjects addressed during regional meetings involved monitoring activities, improvements in the numeric sizing calculator, and the review of other available hydromodification computer software. Further, City staff participated in several regional workshops, seminars, and other training courses on HMP processes and techniques.

2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project requirements. Private development permit applications are tracked in Permits Plus, which is a project tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development Projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and digitally saved. The City maintained the database necessary to link the above referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Public Works Department, Engineering. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects subject to SUSMP requirements is included in Attachment A. This list includes the names of all Priority Development or Redevelopment Projects from the inception of the SUSMP program on December 9, 2002 to the end of the current reporting period. The list is updated annually to include Priority Development Projects for which development applications have been received and SUSMP eligibility identified during that reporting period. The listed projects may be currently in different phases of review, construction, or occupancy. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Pending, 2) Inactive, 3) Under Construction, or 4) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

The Municipal Permit establishes requirements for post-construction BMPs on Priority Development and Redevelopment Projects. In order to develop regional standards and criteria for compliance with Municipal Permit requirements, the Copermittees have developed Model and local SUSMPs. All project applicants are required to complete forms that are included in the Manual to determine post-construction BMP requirements for their projects. City staff verifies proper completion of such forms and informs applicants of their required study reports and project submittals. Project submittals are then reviewed based upon this initial determination.

As required by the Municipal Permit, the City updated its local SUSMP for the first time in January 2008 to include Low Impact Development and Interim Hydromodification Management requirements, as well as other construction and post-construction criteria and standards. Subsequently, the Copermittees updated their Model SUSMP and submitted it for the Regional Boards approval in July 2008. The Regional Board approved the Model SUSMP on March 25, 2009. In March 2010, the City again updated its local SUSMP to incorporate the provisions of the Model SUSMP. In July 2009 and December 2009, the Copermittees submitted their draft and final Hydromodification Management Plans to the Regional Board. The Regional Board considered and approved the final Hydromodification Management Plan for approval on July 14, 2010. The Copermittees had 180 days after approval of the Regional Board to incorporate the HMP into their local SUSMP and implement the HMP for all applicable Priority Development Projects. The City's current Manual, which came into effect on January 10, 2011, includes requirements for Final Hydromodification Control BMPs.

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Priority Development Projects without approved WQTRs do not move further along in the development review process, providing Land Development and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Project grading or construction plans are required to show all approved structural BMPs. Non-structural BMPs are described in the project's WQTR. Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes verification inspection and approval of installed or constructed structural treatment control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections and confirmation of SUSMP BMP applications of such Priority Development projects to ensure proper installation of post-construction BMPs before final Certificates of Occupancy are issued and bonds are released.

In order to track confirmation of post-construction BMPs, and as an on-going activity, the City's GIS system was continuously updated throughout FY 2010-2011 with post-construction BMP

information; further supporting project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the types of BMPs, and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. Most significantly, in FY 2010-2011, WQTR documents were made available through the GIS Grading Plan layer as they are linked to individual projects (Figure 2-1 – CVMapper GIS Layer). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly or privately maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 – GIS Layer: Grading Plans & WQTR Links). In addition, all privately or publicly maintained treatment control BMPs are being added to the BMP layer to facilitate their tracking and mapping. Also, files containing hard copies of grading plans, WQTRs, maintenance agreements, and other pertinent information are being created and maintained to support and facilitate construction verification and maintenance inspections of post-construction BMPs. (Figure 2-3 – GIS Layer: Post Construction BMPs).

Figure 2-1 CVMapper GIS Layer

Figure 2-2 GIS Layer: Grading Plans and WQTR

Figure 2-3: GIS Layer: Post Construction BMPs

All pending, inactive, under construction, or installed Post-Construction BMPs and Priority Projects are inventoried and tracked by Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/Capital Improvement Plan, Residential, Commercial, etc.)
- Project status (Pending, inactive, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings
- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking, for examples of SUSMP tracking forms.

Figure 2-4 GBA Master Series: SUSMP Verification and Maintenance Tracking Database A

Figure 2-6 GBA Master Series: SUSMP Verification and Maintenance Tracking Database C

2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

The City works with developers, planners, and consulting engineers to establish standards of Source Control, LID Site Design, Treatment Control, and Hydromodification Control BMPs that meet the requirements of the Manual and the Municipal Permit. An example of such cooperation was with the San Diego Association of Governments (SANDAG). The Metropolitan Transit System (MTS) improvements of the South Bay Bus Maintenance Facility is the expansion of the footprint of an existing bus depot located at 3650 Main Street, Chula Vista, and consists of the demolition of two existing buildings and conversion of the site to permanent bus and auto parking space. The improvements consist of the replacement of existing asphalt pavement and base. The site is approximately 10.6 acres in total; of which 10.2 acres is impervious. Site drainage is from north to south which discharges through an existing underground system into the Otay River. The project replaces less than 50% of the existing impervious areas. Pursuant to criteria established in the Chula Vista Development Storm Water Manual, the project qualifies as a Priority Development Project, and subject to the Standard Urban Storm Water Mitigation Plan (SUSMP). Part of the expansion area was previously used as a lunch truck servicing facility and incorporated two clarifiers, intended to treat truck wash water. Those clarifiers have been removed and replaced with High Rate Media Filters throughout the entire expansion area. MTS will be the responsible party to ensure that post-construction BMPs are maintained into perpetuity.

2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all Priority Development Projects that received grading, construction, or building permits from the City proposed medium or high-efficiency treatment control BMPs. No SUSMP projects were permitted to have low-efficiency treatment control BMPs.

2.4.4.7 TREATMENT CONTROL BMP INVENTORY

In Chula Vista there are 194 Priority Development Projects completed or under construction, inventoried from the inception of the SUSMP requirements to the end of the current reporting period. Projects that are still in the review stage are not included in the inventory and are not prioritized until the final WQTR is approved and the project construction commences. Attachment A of this report includes an inventory of all Priority Development Projects that have operational or under construction treatment control BMPs. The information provided in Attachment A includes the project name, subdivision, neighborhood, BMP type, category (residential, commercial, etc.), and inspection priority. The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority Development Project as well as post-construction BMPs inspection records.

2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

Storm Water Management Section staff is responsible for annual inspections of private and public constructed permanent BMPs as required by the Municipal Permit. Additionally,

responsible parties for the maintenance of permanent BMPs are required to conduct routine inspections of their treatment facilities. For public permanent BMPs, the City's Public Works Storm Drain Maintenance staff is responsible for conducting routine inspections and maintenance. This duplicate inspections program ensures that all permanent BMPs are maintained to high operational standards.

During the current reporting period, Storm Water Management staff conducted inspections of all High Priority and over fifty percent of Medium Priority constructed permanent BMPs to verify their proper installation and maintenance, which exceeds Permit requirements. A summary of inspections is listed in Table 2-1 below, which includes both private and public permanent BMPs inspections. Where deficiencies were identified, notices were sent out to responsible parties, followed by further contacts to ensure that corrective actions were taken within the specified time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

Table 2-1 Treatment Control BMP Inspection Summary FY 2010-2011

PROJECT PRIORITY	TOTAL NUMBER OF PROJECTS	NUMBER OF PROJECTS INSPECTED
High	58	51
Medium	60	38
Low	76	4
Total	194	93

Note: Of the 58 high priority projects, seven were under construction

As can be seen from Table 2-1, a total of 93 Priority Development Projects were inspected during the current reporting period, which meets and exceeds Municipal Permit requirements. Attachment F to this report includes more detailed information about each project, such as, inspection dates, project names, neighborhood, types of BMPs installed, categories (commercial, residential, etc.), inspection priority, development, and responsible party. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

Public Works Department Storm Drain Maintenance Section conducts routine inspections and maintenance of publicly owned permanent BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders for conducting inspection and scheduling maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-7 for a sample of Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

Figure 2-7 Sample Publicly Maintained Treatment Control BMP Inspection and Maintenance Report

2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 61 notification and inspection letters were sent out to parties responsible for the maintenance of completed private Priority Development Projects (see City's JURMP document Appendix D).

It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs (32 in total). By conducting random inspections of public Treatment Control BMPs, Storm Water Management Section ensures that the level of maintenance on such facilities is adequate.

During this reporting period, responsible parties were aware of their BMP cleaning and maintenance obligations. City staff encountered some resistance, which was mainly believed to be attributable to the current downturn in economy as well as factors such as the transfer of property ownership, changes in property management companies, and a change in the board membership of Homeowners' Associations. For this reason, the City worked closely with the responsible parties to ensure that the BMPs were inspected and maintained. The City continues to re-evaluate its annual maintenance verification procedures and may modify the program if necessary.

Prior to the beginning of the rainy season, the City requires annual verification of proper inspection and maintenance of all treatment control BMPs by the responsible parties. Each year, the City issues to the responsible party, either electronically, by fax, or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) if necessary, a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans.

This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form and certify that the treatment control BMPs have been properly maintained in accordance with the site's maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form. If signed and certified verification forms are not received by the due date, City staff contacts the responsible parties and follows up until Treatment Control BMPs are maintained and verification forms properly completed and returned to the City. Enforcement action may be initiated if a responsible party does not comply with the verification requirement after follow-up actions and proper service of a notice.

2.4.4.10 BMP CONSTRUCTION VERIFICATION

The City's Public Works Inspectors and Storm Water Management staff is responsible for ensuring that permanent BMPs, which are components of the project's drainage systems and grading works, are constructed in accordance with approved specifications and grading plans. Public Works Inspectors and Storm Water Management staff conducts frequent inspections of projects during their grading and construction activities and verify that permanent BMPs are constructed as per approved plans.

In compliance with the Municipal Permit, the City has developed databases for tracking Priority Development Projects that are under construction. Additionally, hard copy files, including information about each project's WQTRs and grading or construction site plans that show locations of permanent BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section staff immediately after their inspections of grading activities are completed and their presence on the project is no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting permanent BMPs while being constructed. They ensure that LID Site Design features are constructed as shown on approved grading, construction, or landscape plans and per approved specifications.

2.4.4.11 SUSMP WAIVERS

Section D.1.d.(11) of the Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Development Project to receive a waiver from the requirement of meeting numeric sizing criteria for Treatment Control BMPs, if infeasibility can be established. During the reporting period, the City did not grant waivers to any Priority Development Projects.

2.4.4.12 SUSMP WAIVER MITIGATION

During the reporting period, all Priority Development Projects were required to comply with the provisions of the City's local SUSMP. Therefore, the City did not grant waivers to any Priority Development Project during this period.

2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN COLLABORATION

Soon after Regional Board's adoption of the Municipal Permit on January 24, 2007, the Copermittees formed a Land Development Workgroup to develop Copermittees' Hydromodification Management Plan (HMP) and Model SUSMP, among other regional development related tasks. The Land Development Workgroup planned regular meetings in which various topics, mainly the development of the HMP and Model SUSMP, were discussed. The Copermittees decided to hire a consultant with expertise in those fields to work on the studies needed for this purpose. The consulting team of Brown and Caldwell was selected as the main consultant, with several sub-consultants providing expert services.

A Technical Advisory Committee (TAC), consisting of high-ranking and renowned experts in the fields of hydrology, hydromodification, and SUSMP issues were formed to oversee the Consultant's work, and to provide expert advice. During the reporting period, the TAC continued to meet on a regular basis, and while Copermittees were not on the TAC, they were encouraged to participate in their meetings. Brown and Caldwell developed submittals for the Final Hydromodification Management Plan, which was subsequently approved by the Regional Board and became effective in January 2011. During the current reporting period, the Hydromodification Management Plan and its requirements were incorporated in the updates of the City's local SUSMP.

City of Chula Vista representatives actively participated in all Land Development Workgroup and TAC meetings and activities. They were closely involved in the issues that were discussed, reviewed work products, and provided comments on all related draft documents.

City staff attended all regional workshops and trainings related to HMP and SUSMP issues. A description of such trainings is included in Section 8.0 of this report.

2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

Section D.1.g.(5) of the Municipal Permit requires the development of an HMP document at the regional level and incorporation of such HMP into individual local SUSMPs. The HMP is to include limitations on increases of runoff discharge rates and durations from all Priority Development Projects in order to prevent increased downstream channel erosion, sediment pollutant generation, or other impacts to beneficial uses and stream habitat.

Development of a draft HMP was a two-year effort by the Copermittees and their consultants. The Copermittees submitted the first draft HMP to the Regional Board in January 2009. In the meantime, the Municipal Permit required the implementation of an Interim Hydromodification Criteria (IHC) for development projects that were 50 acres or more. The IHC requirement was incorporated into updated local SUSMPs, which came into effect in January 2008.

Adoption of IHC requirements in January 2008 coincided with the collapse in the housing market, and almost all major development projects in Chula Vista came to an abrupt halt. The Final Hydromodification Management Plan (HMP) was incorporated into the City's local SUSMP in January 2011 and became effective for all projects, which had not received their grading or building permits. However, development continued to be slow and occasional major projects submitted for review by City staff have had extended project submittal, review, and permitting schedules.

During the reporting period, 3 major projects continued to be under review as follows:

1. Eastern Urban Center
2. Otay Ranch Village 8
3. Otay Ranch Village 9

All or part of these projects may qualify for HMP requirements, but their project submittals are still under review.

2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

The current reporting period spans over two different sets of requirements concerning hydromodification control BMPs. From July 1, 2010 to January 9, 2011, Priority Development Projects were subject to the Interim Hydromodification Criteria, while from January 10, 2011 to June 30, 2011, Priority Development Projects were required to meet Final Hydromodification Plan requirements. According to the Chula Vista Development Storm Water Manual, any project that had not obtained their construction permits before January 10, 2011, was required to meet the new standards. As such, the City of Chula Vista did not grant any waivers from the HMP requirements during the current reporting period.

2.4.4.16 PROJECTS DISTURBING 50 ACRES OR MORE

Until January 9, 2011, projects that disturbed 50 acres or more were required to comply with the Interim Hydromodification Criteria. Those projects that disturbed less than 50 acres were required to address Conditions of Concern, which typically included a comparison of pre- and post-development peak discharge rates for 2- and 10-year storm events, and a Best Professional Judgment evaluation of downstream geomorphologic conditions. Under the current Municipal Permit requirements, Priority Development Projects, irrespective of disturbed area, are required to meet the Final Hydromodification Standards. Non-Priority Development Projects, while being subject to BMP implementation, are exempt from hydromodification considerations.

2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP verification inspections, the City determined that 12 out of 93 inspected projects were partially or totally deficient in the inspection and maintenance of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, nine projects were brought into compliance. Work is being continued on the remaining three projects. Deficiencies were observed in the cleaning and maintenance of some treatment control BMPs, which were satisfactorily addressed by the responsible persons after written notices. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to bring their project to compliance in a timely manner. Such enforcement action may include verbal and written warnings, Notices of Violation, Administrative Citations, and/or Civil or Criminal Penalties. At this time, the City initiated enforcement actions, which included Notice of Violations for three development project with deficient post-construction BMPs.

• Construction

Section 3.0

3.0 CONSTRUCTION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(b).i – Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.

Permit Section J.3.a.(3)(b).ii – Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.

Permit Section J.3.a.(3)(b).iii – A description of modifications made to the construction and grading ordinances and approval processes.

Permit Section J.3.a.(3)(b).iv – Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.

Permit Section J.3.a.(3)(b).v – Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.

Permit Section J.3.a.(3)(b).vi – A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.

Permit Section J.3.a.(3)(b).vii – For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.

Permit Section J.3.a.(3)(b).viii – A description of the general results of the inspections.

Permit Section J.3.a.(3)(b).ix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(b).x – The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(b).xi – A description of the notable activities conducted to manage urban runoff from construction sites.

3.1 INTRODUCTION

Pursuant to the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by Regional Board staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the Maximum Extent Practicable (MEP).

3.2 SOURCE CHARACTERIZATION

The City has compiled and monthly updates a watershed-based inventory of all construction sites within its jurisdiction as required by Municipal Permit Section D.2.b. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including subdivision, project name, neighborhood, project status, work order number, and priority. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report and includes all active and inactive projects.

3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, Storm Water Management staff maintained and monthly updated a construction site inventory. As a result of coordination between the Public Works Construction Inspection staff, Engineering Design staff, Development Services staff, and Storm Water Management staff, mechanisms have been established in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Development Services Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of inspection priority, and status.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Storm water compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and Discharge Control and Grading Ordinances incorporate, by reference, the Development Storm

Water Manual, hence providing legal authority for the enforcement of the Manual's requirements. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and do not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of Best Management Practices (BMPs) during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Development Storm Water Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets are obtained from the CASQA Storm Water BMP Portal and are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements
- Limitation of Grading
- Advanced Treatment
- Example Construction Best Management Practices

3.5 PROGRAM IMPLEMENTATION

The Development Storm Water Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit, it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the Qualified SWPPP Developer or authorized personnel designated by the Legal Responsible Person, electronically submits a Notice of Intent and a SWPPP through the State Water Resources Control Board Storm Water Multiple Application and Report Tracking System (SMARTS). The SWPPP is maintained at the construction site for review by City or Regional Board staff.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet and dry seasons, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive or in distress. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of seven or more consecutive calendar days. The City inspects inactive construction sites and issues formal letters to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such letter is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites. If a site is partially inactive, above requirements apply only to inactive areas of the site.

If a construction project is wholly or partially inactive or expected to remain inactive for some time, the City requires the developer to submit a Construction Site Stabilization Plan.

The Stabilization Plan is required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

3.5.1 MAXIMUM DISTURBED AREAS

The Development Storm Water Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. Detailed requirements for maximum disturbed area limitations are included in the Development Storm Water Manual. During the reporting period, most major development projects remained inactive due to the downturn in the housing industry, and developers in Chula Vista did not undertake new major grading projects. The focus of City inspectors was to ensure that developers of existing graded sites that were planned to become inactive fully stabilized graded areas by implementing adequate BMPs.

3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. These conditions are explained in Section 7.5 of the Development Storm Water Manual. If it is determined that a site poses an Exceptional TTWQ based on criteria outlined in the Manual, the site will be required to implement advanced treatment controls to minimize the discharges from the construction site.

3.5.3 CONSTRUCTION SITE INSPECTIONS

The City's construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one Senior Civil Engineer, two full-time Environmental Health Specialists and eight Public Works Inspectors who manage this effort on private and public construction projects.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. The Municipal Permit does not require prioritization for construction sites. However, the City has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites, therefore, includes a column indicating the prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of the Municipal Permit, as applicable. Please see Table 3-1 for the number of construction site inspections. A complete list of inspected construction sites is included in Attachment G. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

Table 3-1 Construction Site Inspection Summary FY 2010-2011

INSPECTION TYPE	NUMBER
Inspections During Wet Season	205
Inspections During Dry Season	35
Total Inspections	240

City inspectors evaluate BMP implementation on construction sites in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP, monitoring results, training records, etc. for construction sites subject to the General Construction Permit.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP or CSWMP.
- Failure to implement good housekeeping practices at the site.
- Failure to comply with previous orders.

City inspectors who conduct site inspections of both public and private development projects have full inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements of the Municipal Permit, the Development Storm Water Manual, the erosion control plans, and any other development permit conditions imposed by the City prior to the issuance of a grading or construction permit.

Construction site inspections include the following:

- Verification of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Verification of proper maintenance of the BMPs.
- Evaluation of the effectiveness of the BMPs.
- Verification that site personnel has received adequate training.
- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its storm water ordinances and development permit conditions at all private and public construction sites, as necessary. The City's ordinances and development permit conditions provide adequate legal authority for the City to enforce its storm water regulations on construction sites through stop work notices, penalties, fines, and other appropriate enforcement mechanisms. City's inspectors work with developers and contractors to identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City's inspectors initiate enforcement action which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 summarizes enforcement actions taken within the defined reporting period of this report.

Table 3-2 Construction Enforcement Summary FY 2010-2011

ENFORCEMENT ACTION	NUMBER
Written Notices of Violation (Includes Cease and Desist and/or Clean and Abate Orders)	5

As a result of the above enforcement actions, follow-up inspections were conducted within a designated time period until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2010-2011. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

• Municipal

4.0 MUNICIPAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(c).i – Any updates to the municipal inventory and prioritization.

Permit Section J.3.a.(3)(c).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.

Permit Section J.3.a.(3)(c).iii – A description of inspections and maintenance conducted for municipal treatment controls.

Permit Section J.3.a.(3)(c).iv – Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.

Permit Section J.3.a.(3)(c).v – Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.

Permit Section J.3.a.(3)(c).vii – Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.

Permit Section J.3.a.(3)(c).viii – Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.

Permit Section J.3.a.(3)(c).x – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xi – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xii – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.

Permit Section J.3.a.(3)(c).xiii – Identification of the total distance of curb-miles swept.

Permit Section J.3.a.(3)(c).xiv – Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.

Permit Section J.3.a.(3)(c).xv – Amount of material (tons) collected from street and parking lot sweeping.

Permit Section J.3.a.(3)(c).xvi – A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.

Permit Section J.3.a.(3)(c).xvii – Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.

Permit Section J.3.a.(3)(c).xviii – A description of the general results of the inspections.

Permit Section J.3.a.(3)(c).xix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(c).xx – The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(c).xxi – A description of notable activities conducted to manage urban runoff from municipal areas and activities.

4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Open Space
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal and informal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Nature Center
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage,

loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are classified as high, medium, or low TTWQ based on activities, functions, and various site-specific factors. For more information on the facilities that have additional operations and activities, please see the City's JURMP. The inventory in Attachment C includes a column for facilities that are tributary to a 303(d) listed water body and potentially generate similar pollutants. This column is marked as "Tributary" in the inventory. Map 3 also shows municipal facility locations in relation to the 303(d) listed waterbodies in the City. Some areas of the City discharge to San Diego Bay, which is 303(d) listed for PCBs. Since PCBs have been banned since the early 1970s, no municipal facilities within the City discharge PCBs to San Diego Bay.

4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

4.2.4 PROGRAM IMPLEMENTATION

4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities receive training on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City storm water staff inspected all high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected

on an as needed basis. No medium or low priority facilities were determined to need inspection this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in Attachment H. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented. Enforcement on municipal facilities is in the form of disciplinary process against the responsible staff member when compliance is not met in a timely manner. If a violation of the City's Storm Water Ordinance or the Municipal Permit is observed, which is caused by negligence of City personnel, inspectors work with supervisors to ensure that corrective actions are implemented; provide training to the personnel; and immediately inform the appropriate supervisor. The supervisor will then take action against the violating staff member as necessary, including warnings and other disciplinary measures. City storm water staff is in regular contact with Public Works Maintenance staff and provides training on pollution prevention and BMP implementation, therefore, most deficiencies are taken care of upon first notice.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Public Works Maintenance staff inspects all municipal treatment control BMPs to ensure their proper operation. Additionally, Storm Water Management staff conducts random inspections of such facilities to provide a second layer of confidence and to ensure that maintenance standards are met. The City maintains treatment control BMPs at several of its facilities. City crews conduct annual inspections and clean structural treatment control BMPs on an as needed basis, and their condition is evaluated for effectiveness. Any repairs are noted and carried out on a timely manner. Table 4-1 includes a list of municipal facilities with high priority treatment control BMPs within the City that were inspected during the reporting year. Medium and low priority municipal facilities with treatment control BMPs are inspected on an as needed basis.

Table 4-1 Inspected Municipal Facilities with Treatment Control BMPs

FACILITY NAME	NUMBER & TYPE OF TREATMENT CONTROL BMP	DATE INSPECTED
Montevalle Park	10 Filter Inserts	06/01/10
Salt Creek Park	1 CDS Unit	06/01/10
Harvest Park	1 Filter Insert	06/01/10
Sunset View Park	3 Filter Inserts	06/01/10
Mountain Hawk Park	20 Filter Inserts	04/01/11
Horizon Neighborhood Park	1 Filter Insert	06/01/10
Chula Vista Civic Center	5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts	06/15/10

4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

Fertilizer, Pesticides, and Herbicides

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do not spray on windy days.
- All employees who spray herbicides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the State and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent Material Safety Data Sheet (MSDS) files.
- MSDS sheets for chemicals being used must be kept with the applicator while applying pesticides.

Proper Planting Techniques

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation and convert existing turf areas to drought tolerant, sustainable landscaping when possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

Minimize Runoff

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.
- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.
- The City is in the process of reducing large-scale vegetation on curb lines along major roads such as East Palomar, La Media, and Heritage Road. Existing ground cover is reduced by bringing it back from the curb line about 5-10 feet. Mulch is applied in the

vegetated area that was removed and irrigation lines along the curb line are capped off. This cuts down on irrigation overspray, excess water use, and runoff.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

4.3.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) designates roads, streets, highways, and parking facilities as high priority municipal areas for inspection purposes. Therefore, the Municipal Inventory (Attachment C) categorizes these facilities as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by roads, streets, highways, and parking facilities. The City maintains 414 miles of roads, streets, and highways.

The City has one stand-alone covered parking facility in downtown Chula Vista that generates a moderate volume of trash and debris that is swept twice per month and is inspected annually as a part of the City's Municipal Inspection Program. Other City parking facilities are associated with other municipal facilities (such as parks) and generate low volumes of trash and/or debris. These are swept on a monthly basis and are inspected annually.

For the purpose of street sweeping, roads, streets, and highways are further classified into high, medium, and low priority based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. Table 4-2 below provides more information about these classifications, the number of curb miles in each, the type of areas these classes cover, and respective sweeping frequencies.

Table 4-2 Street Sweeping Information Based on Class

CLASS	NUMBER OF CURB MILES	TYPE	SWEEPING FREQUENCY
High	131.61	Industrial and Commercial – 10.5 miles	Twice per week
		Commercial and Business – 121.11 miles	Once per week
Medium	75.47	Center Islands and Medians	Twice per month
Low	702.26	Residential – 656.36 miles	Once per month
		Center Lines – 45.9 miles	Twice per month

4.3.3 BMP REQUIREMENTS

Street sweeping is one of the ongoing city functions that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

The City has identified some streets as high Threat to Water Quality (HTTWQ) areas. The main pollutant in these areas is trash. Trash in these areas is mainly attributable to customers of recycling businesses located in the industrial areas of Energy Way and Nirvana Avenue. Also, trash trucks shedding some of their load while traveling to and from the Otay Landfill on Maxwell Road and Main Street east of I-805 are sources of trash on these two streets. As a proactive measure to minimize trash entering the storm drain system, the City has retrofitted existing curb inlets in these areas with filter inserts. The City's storm drain crews conduct regular inspections and cleaning of these filter inserts and replace parts as necessary.

4.3.4 PROGRAM IMPLEMENTATION

4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept approximately 18,000 curb miles and removed more than 1,000 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular street sweeping is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

Figure 4-1 Street Sweeping Schedule

4.4 MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4)

4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through four primary activities: 1) Inspections, 2) catch basin maintenance, 3) channel maintenance, and 4) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drain facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultant for dry weather field screening annually inspects over 57 outfall locations throughout the City and conducts upstream investigations based on field screening results. They report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to inspect the drainage area, abate the pollution, and conduct cleanup.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary. This multi-layer inspection program ensures that almost all MS4 facilities are inspected and maintained regularly.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all environmental regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris from areas that trash accumulation may cause flooding and damage to life or property.

Currently, three vacuum trucks and three crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drain systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drain systems in emergencies and other similar situations.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system universally used by the Public Works Department for collecting and tracking data about all its activities. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

All storm drain inlets throughout the City have been marked with prohibitive signs to discourage pedestrians and drivers from dumping into storm drainage systems. They are of various types, including thermoplastic signs, stamped concrete, stenciled markings, or plastic decals.

Figure 4-2 Thermoplastic Storm Drain Stencil

4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4s, which include open channels, catch basins and inlets, and outfalls. Storm drain pipes are designed to be self-cleaning and do not typically require scheduled cleaning. As required by the Municipal Permit Section D.3.a.(7), the City's MS4 is included in the municipal facility inventory (Attachment C) as a high priority facility for inspection purposes. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

4.4.4 PROGRAM IMPLEMENTATION

4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2010 to June 30, 2011 is summarized below. A total of 248 inlets were identified as accumulating a high volume of trash. All high trash volume facilities were inspected and or cleaned at least once during the dry season (May 1 – September 30). Table 4-3 details the amounts of waste collected from the City's storm drain system based on various facility and waste categories.

Catch Basins and Inlets

- There are 10,710 catch basins and inlets in the City
  - 12,236 inspections were conducted (some inlets and catch basins were inspected more than once)
  - Out of all the catch basins and inlets inspected, 2,371 were cleaned
- Data collection for catch basins with accumulated waste exceeding the cleaning criteria (33% or more full) started January 1, 2008. A total of 25 exceeded the criteria from July 1, 2010 – June 30, 2011.

MS4

- There are 224 miles of MS4 in the City
- The storm drain maintenance crews televised 1.33 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there was no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 40.7 feet of MS4 pipe was cleaned. It should be noted that the City's storm drain pipes are designed to be self-cleaning under normal operation.

Open Channels

- There are 32.85 miles of open channels in the City
- A total of 104,967 square feet of open channels were inspected and cleaned

Table 4-3 Amount of Waste in Tons Cleaned from the Storm Drain System FY 2010-2011

STRUCTURE	TRASH	LANDSCAPING DEBRIS	SEDIMENT
MS4	5.69	-	-
Catch Basin/Inlet	3.0	4.75	10.86
Open Channel	26.54	70.65	0.35
Total	35.23	75.4	11.21
Grand Total	121.84		

The City will continue to inspect its MS4 as required by the Municipal Permit and record collected inspection data. During this reporting year, the City reviewed its inspection record and determined that there were no facilities that required inspections less than annually.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in the protection of the MS4 system. If not properly maintained, the sewer system can potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, parasites, and chemicals.

The City currently implements a Sewer System Management Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, in April 2009 the City developed a Sewer System Management Plan. The City is currently working on developing a Fats, Oils, and Grease (FOG) Monitoring Ordinance. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

4.5.2 SOURCE CHARACTERIZATION

There are 498 miles of sewer pipes in the City. The Municipal Permit Section D.3.a.(7) requires sanitary sewer collection systems to be identified as high priority facilities for the purpose of inspections. The sanitary sewer system is included in the municipal inventory as such (please see Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system. The City of Chula Vista does not operate a Publicly Owned Treatment Works. Sewage generated in Chula Vista is collected and conveyed to the City of San Diego treatment works at Point Loma.

4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receives training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance and cleanup crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector or an Environmental Health Specialist contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

4.5.4 PROGRAM IMPLEMENTATION

4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 596 miles of sewer main (includes critical maintenance areas, which were cleaned more than once) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is also conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, minimizing potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of

sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with diameters larger than 36 inches. PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as power washing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. The Municipal Permit Section D.3.a.(7) requires that power washing be identified as a high priority municipal activity for inspection purposes. Therefore, Attachment C has categorized power washing as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including power washing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City power washing crews implement BMPs during their activities and receive regular training on storm water pollution prevention.

4.6.4 PROGRAM IMPLEMENTATION – POWER WASHING FOR GRAFFITI REMOVAL

4.6.4.1 MAINTENANCE AND INSPECTION

The City's Graffiti Abatement Program functions under the mission of: *"To deliver in a timely manner, a comprehensive, cost-effective, environmentally sound, and technically reliable graffiti removal, education, and prevention program for the residents of Chula Vista."* The City provides cost-free graffiti removal for the residents of Chula Vista.

The Graffiti Abatement Program utilizes various techniques for effective removal of graffiti Citywide, including power washing and sand blasting. In 2006, in its commitment to this program and to utilize environmentally sound and cost-effective graffiti removal processes, City Council approved the spending of $63,000 for the purchase of highly specialized equipment to capture and treat residual wash water generated from graffiti abatement activities. At the end of 2006, the new equipment was made available to the graffiti crews and has been in use ever since.

As a part of the inspection process, City's Storm Water Management staff annually conducts a ride-along with the graffiti/power washing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures. During this reporting year, City Storm Water Management staff observed the removal of graffiti from a sidewalk area, close to the curb/gutter. The graffiti crew implemented all BMPs and prevented any wash water from entering the storm drain system. In addition, the crew used the least amount of water necessary to complete the job. All BMPs were in place and working properly.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

The City hosts a variety of special local events, which include festivals, fairs, and other events for special causes and occasions. Usually, these events involve the participation of outside organizations, community groups, and the general public. The gathering of event participants and crowds is generally a source of trash and debris if BMPs are not implemented.

4.7.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) requires that special events be designated as high priority for inspection purposes. Therefore, special events are included in the City's municipal inventory as high priority activities (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping immediately following major events taking place on a street, and having personnel dedicated to litter abatement throughout City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works in conjunction with other City departments and event organizers to ensure that adequate BMPs are implemented during special events.

4.7.4 PROGRAM IMPLEMENTATION

Storm Water Management and Environmental Services staff has active presence at the majority of City events. They set up booths, provide public education on environmental issues, and

distribute informational materials. As necessary, they conduct surveys at the same time to evaluate general public's awareness and practice of BMPs. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed protection. City Environmental Services staff notifies hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

• Industrial Commercial

Section 5.0

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(d).i – Any updates to the industrial and commercial inventory.

Permit Section J.3.a.(3)(d).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.

Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.

Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.

Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.

Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.

Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.

Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.

Permit Section J.3.a.(3)(d).ix – A description of efforts implemented to address mobile businesses.

Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.

Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.

5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City of Chula Vista to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity is mutually exclusive, and that each is essential to the overall success of the program. The City has compiled an inventory of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

5.2.1 BACKGROUND

The City's industrial and commercial inventories include 1,517 facilities, of which 429 are mobile businesses. Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, annually, the City conducts updates of its industrial and commercial facility inventories by searching through its business license database and conducting visual observations of new or closed businesses during annual inspections. Additionally, every five years, the City conducts a comprehensive field validation of its industrial and commercial inventories Citywide. The industrial and commercial inventories are also updated on a continuous basis by adding businesses that cause incidents of pollutant discharge or are found to require regular inspections due to the type and amount of pollutants that they generate.

Watershed-based inventories of industrial and commercial sites within the City have been compiled. Information was obtained from the City's business license database (Permits Plus), the State Water Resources Control Board database of industrial sites that have filed NOIs, inspection records, and previous experience.

Inventories of industrial and commercial facilities within the City were compiled during the development of the City's JURMP in 2008, which were later updated for the current reporting period and are included in Attachments D.1 and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Business category
- Priority
- SIC Code
- Mobile or stationary
- Tributary to a 303(d) listed waterbody

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- SIC code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.
- Tributary to a 303(d) listed waterbody

The entire City of Chula Vista jurisdiction is located within the San Diego Bay watershed and, therefore, watershed designations are not included separately for each industrial/commercial facility. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

The inventories in Attachments D.1 and E include a column for facilities that are tributary to a 303(d) listed waterbody and potentially generate similar pollutants. This column is marked as "Tributary" in the inventory. In addition, Maps 3 and 4 show each commercial and industrial facility, respectively, in relation to the 303(d) listed waterbodies in the City. Some areas of the City discharge to San Diego Bay, which is 303(d) listed for PCBs. Since PCBs have been banned since the early 1970s, no facilities within the City discharge PCBs to San Diego Bay. Attachment D.2 has additional information about each commercial and industrial facility, including the potential pollutants generated by the business type as well as the latitude and longitude of each facility. The inclusion of the APNs and latitude/longitude allows the City to track its inventories through the City's GIS program.

5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing discharges of pollutants into MS4s from existing industrial and commercial facilities. Pollution prevention

methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides legal authority for the City to require a SWPPP for any industrial or commercial facility that may potentially discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets because they are less stringent than, and conflict with Municipal Permit requirements or City's ordinances. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards. It has been determined that one-on-one interaction between City inspectors and business owners are more effective in knowledge and behavior change than conducting workshops or distributing informational materials, although latter methods are also effective to a lesser degree and are practiced by the City.

5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. The City inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements, as described in the JURMP, are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities. Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection, the City provides a copy of the inspection report to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

In all cases a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Providing one-on-one training and helping business owners to develop their activity and site specific BMPs
- Distributing informational printed materials
- Conducting industrial and commercial inspections and setting standards for compliance

5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

During this reporting period, 196 industrial facilities and 1,321 commercial facilities, which included 429 mobile businesses were identified and inventoried. These facilities are identified in Attachments D.1 and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, the following number of inspections was conducted to ensure compliance with Permit requirements (see Attachments I and J):

- 208 inspections of high priority commercial facilities (Out of 199 facilities, 9 were re-inspected)
- 38 inspections of high priority industrial facilities

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b.(3).
- Threat to Water Quality – Facilities that posed a higher TTWQ was given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.
- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial and commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed for bringing the facility into compliance. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities and during administrative hearings.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

The Copermittees have standardized industrial/commercial inspections. An Inspection Standards Workgroup was formed with the task of finding a way to standardize industrial-commercial inspections so that the results from each Copermittee's inspections are consistent. The goal of the workgroup was to create minimum regional guidelines while maintaining flexibility for each Copermittee to identify and apply their individual requirements that have been developed to match each Copermittee's respective storm water program.

5.2.4.2 PRIORITIZATION

The Municipal Permit no longer requires industrial and commercial inventories to be categorized into high or low priority for TTWQ, although Section D.3.b.(3) of the Municipal Permit requires inspections of sites determined to pose a high threat to water quality. Based on the City's past experience, prioritization of industrial and commercial facilities into high or low priority provides a powerful tool to identify facilities that require focused attention and more frequent inspections. Therefore, the inventories of industrial and commercial facilities have been prioritized in this report.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge are also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- SIC Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)
- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)

    - Bonita Road (Sweetwater River)
    - Bay Boulevard (San Diego Bay; facilities within the Port jurisdiction are not included)
- Fast food chains
  This is due to frequent rotation of management and employees, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrappers, etc. in the parking lot.
- Private golf courses
- Entertainment facilities
  Cricket Wireless Amphitheater and Knotts Soak City
- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note to update the inventory. If a new business has been determined to be included in the inventory, Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Where applicable, Storm Water Management staff checks for coverage under the General Industrial Permit

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/groupmonitoring.shtml

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies the Storm Water Compliance Inspector or the Environmental Health Specialist during the walk-through to enable City staff to point out areas

where corrections are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, the Storm Water Compliance Inspector or the Environmental Health Specialist completes a Storm Water Quality Inspection Report for Commercial/Industrial Facilities. The responsible party is provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Results of the SWPPP review, BMP plan, and monitoring results, where applicable
- Assessment of BMP implementation
- Recommended corrective actions
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the report

The Storm Water Compliance Inspector or the Environmental Health Specialists does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person. Educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while the Storm Water Compliance Inspector is at the site.

As discussed above, the business is provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high priority or vice versa. Any such changes are reflected in the inventory update submitted in the following JURMP Annual Report.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachments I and J.

5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the use of a third party inspection program. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

5.2.4.5 VIOLATIONS AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate
- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

Storm Water Compliance Inspector or Environmental Health Specialists properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, Storm Water Compliance Inspector conducts follow-up inspections to ensure that required corrective actions are adequately addressed.

Where the Storm Water Compliance Inspector or the Environmental Health Specialist observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the situation. When necessary, City's maintenance crews respond to illegal discharges, attempt to contain and capture pollutants before entering storm water conveyance system inlets, and stay at the scene until the responsible person terminates the illegal discharge. The affected areas and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the business owner or the property owner. In any case in which Storm Water Compliance Inspectors or Environmental Health Specialists determine that a noncompliant site poses a threat to human or environmental health, the City notifies the RWQCB by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illicit discharges or illegal connections from industrial and commercial businesses. This includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section 9.5 of the City's JURMP.

Table 5-1 details the types of violations and the numbers of each during the reporting period. A detailed account of enforcement actions taken during this reporting period is included in Attachment K.

Table 5-1 Industrial/Commercial Enforcement Action Summary FY 2010-2011

VIOLATION TYPE	NUMBER
Administrative Citations-Warning	6
Administrative Citations-Fine	9
Notice of Violation	0
VIOLATION CATEGORY	**NUMBER**
Commercial	13
Industrial	3

NOTE: Total Fines issued - $1,600.

The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

5.2.4.6 IDENTIFICATION OF NON-FILERS

If Storm Water Compliance Inspectors determine that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the Regional Board to determine if the facility is required to obtain coverage. At the same time, the Regional Board is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with Regional Board staff to assist in their site inspections.

During the current reporting period, the City did not identify any non-filer facilities that may be eligible for coverage under the General Industrial Permit.

5.3 MOBILE SOURCES ELEMENT

5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Mobile businesses can be difficult to regulate because many do not have permanent locations in the City or may not have a business license. On a continual basis, new mobile businesses are started, existing mobile businesses go out of business, some mobile businesses do not renew their business license, or some operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses.

5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business

types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile auto detail/ maintenance
- Window washing/pressure washing/ street sweeping
- Pool and spa cleaning
- Carpet cleaning
- Plumbing/ handyman/ repairman
- Landscaping
- Dog grooming
- Boat cleaning/ hull maintenance
- Fire sprinkler maintenance
- Painting and coating
- Masonry
- Concrete cutting
- Mobile construction trades, which include cement work and masonry

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business license applicant within the above categories are required to go through a storm water BMP training, and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 140 mobile businesses from the categories listed above applied for a City business license, were trained on BMPs related to their business, completed the City of Chula Vista Storm Water Questionnaire and Certification Statement, and received their business license. Attachment D.3 is a list of the businesses that went through this process during the reporting period. Table 5-2 details the types and numbers of mobile businesses approved during the reporting year.

Table 5-2 Approved Mobile Business Licenses by Category FY 2010-2011

MOBILE BUSINESS TYPE	NUMBER
Construction Related	10
Carpet Cleaning	6
Boat Cleaning and Maintenance	1
Auto Detailing	1
Pool and Spa Cleaning	6
Handyman/ Repairman	30
Powerwashing/ Window Cleaning	7
Plumbing	15
Landscaping	32
Fire Protection Systems	2
Painting and Coatings	13
Pest Control	1
Mobile Mechanic	14
TOTAL	**140**

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes as well as costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge Control and Spill Prevention, Control, and Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

In addition, as per the Municipal Permit, the Copermittees developed a set of minimum core BMPs for the various types of mobile businesses. The following BMPs specifically address the unique characteristics of mobile businesses.

- Storm water training
- Spill containment and cleanup (Spill Kits)
- Proper handling of all wastes (Solid, liquid and hazardous)
- Protecting storm water conveyance systems
- Providing proper handling and containment of materials
- Providing equipment washout areas

These practices represent only the minimum required BMPs. Mobile businesses are encouraged to contact City staff for any questions or for information on any additional and more stringent activity-specific requirements.

The Copermittees posted information about mobile business minimum BMPs as a resource in the Project Clean Water Toolbox website. Please see Figure 5-1 – Clean Water Toolbox for the home page of the website.

Figure 5-1 Clean Water Toolbox

5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed to the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. Approved applications and completed Storm Water Questionnaires and Certification Statements are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department receives application from mobile business owner
- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance, and appropriate CASQA BMPs relevant to the type of business activities.
- The applicant is instructed to complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval from the Storm Water Management Section before a business license can be issued.
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.
- In addition to the City's Mobile Business Database, the Copermittees have established a Regional Copermittee Mobile Business Database. The web-based database can make queries on locating a mobile business, finding and viewing violations, and watershed-based reporting. Jurisdictions are able to edit a mobile business that is located or does business in their jurisdiction. See Figure 5-2 – Regional Copermittee Mobile Business Database for a sample web page.

Figure 5-2 Regional Copermittee Mobile Business Database

Three types of reports can be generated from this database:

- All mobile businesses home-based within a jurisdiction
- All mobile businesses operating within a jurisdiction
- All violations that have occurred within a jurisdiction

5.3.4.1 EDUCATION AND OUTREACH

During the business license application process, the City provides mobile business owners or operators the necessary information, educational materials, and outreach related to storm water quality issues specific to their type of business. As stated above, businesses are given the educational materials outlining pollution prevention measures and other BMP requirements related to their respective activities prior to the license being issued. A sample of the Storm Water Information Packets for Mobile Businesses is included in Appendix D of the City's updated JURMP. The education program is described in detail in Section 10, of the City's updated JURMP.

5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobile businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene, City inspectors require an immediate stop to any illegal discharge and instruct the responsible person to initiate containment and cleanup of

the affected areas. If the business lacks materials and equipment required for the deployment of adequate BMPs, the responsible person is informed that they will not be able to resume activities until such time that they procure all necessary materials and equipment. Storm Water Compliance Inspectors find out if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being allowed to resume business operations. Enforcement action, including warnings, citations, civil penalties, or other enforcement measures are initiated where justified. During the current reporting period, a total of 17 administrative citations totaling $3,100 in fines were issued to mobile businesses operating in Chula Vista.

5.3.4.2.1 NOTABLE ACTIVITIES

During the reporting period, the City continued its mobile business license application processing combined with public education, which is considered a notable and very effective method of minimizing pollutant discharges from mobile business activities.

• Residential

Section 6.0

6.0 RESIDENTIAL COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.

Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.

Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.

Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.

Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.

Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.

Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.

6.1 INTRODUCTION

The City has developed the residential component of the Jurisdictional Urban Runoff Management Program (JURMP) based upon a multi-faceted approach including pollution prevention; complaint response and enforcement; and outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharges of pollutants into the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP) and to support the long-term improvements of water quality through awareness and behavior modification.

6.2 SOURCE CHARACTERIZATION

The information collected from reported illegal discharges and results of subsequent investigations can be analyzed to provide useful tools in effectively characterizing activities, sources, and areas within the City that contribute more to water quality impacts and that need to be targeted. These criteria may stay constant from year to year, or change each year. However,

knowledge of the pattern that they follow will provide the storm water manager an insight that is necessary to develop or modify an effective program. As in previous reporting years, the City has taken a critical look at the hotline calls related to residential activity received during the reporting period (Figure 6-1). Home improvement related discharges continue to be prevalent in this reporting period. The City has continued to focus residential education on pollution prevention during home improvement activities in order to foster a change in behavior and to increase residential BMP implementation. Further, characterizing the sources of pollutants can provide a resource in tailoring public education and outreach programs to the specific needs of the community and improving their effectiveness, while maintaining economic viability. This type of critical look is an important tool in making management decisions on how to approach residential BMP implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

Figure 6-1 Percentage of Reported Residential Storm Water Violations by Activity FY 2010-2011

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high Threat To Water Quality (TTWQ) residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, every year certain residential areas of the City are designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating

residential BMP implementation is quite challenging, however, the City has developed a number of mechanisms through which information on BMPs are disseminated to the public and ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, door hangers, City's environmental website, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response and Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed above have been discussed in more detail throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented primarily through public education, and where necessary by enforcement action.

6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted, so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses public education and outreach together with enforcement mechanisms, when necessary, to ensure program implementation by residents and compliance with all federal, state, and local laws and regulations.

The City keeps accurate records of all reported residential illegal discharges and non-compliance with BMP requirements. This information can be used in many ways such as identification of pollutants of concern, areas of HTTWQ, increasing/decreasing trends in illegal discharges, and repeat violators. Such analysis is then used to develop new programs or modify existing programs to focus attention on program elements that result in higher effectiveness and quicker results. Map 1 – Violation Location Map was prepared to depict all areas of the City with a visual demonstration of reported illegal discharge distributions. The City then targets higher density areas for more focused public education and surveillance.

6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Information pertaining to the household hazardous waste and the used oil and filter programs are distributed to residents annually during special events, presentations, point of purchase locations, mobile displays throughout the city offices and

community centers, local realtors/associations, and property management offices. Residents are educated about the disposal of such waste through the City's public education program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the Cal Recycle (formerly the California Integrated Waste Management Board). The program has the capacity to receive and process used oil and filters generated by City residents. The amount of used oil collected from certified oil centers increased compared to last reporting year as shown in Table 6-1. The City continues encouraging residents to take a proactive approach to changing their oil by draining it, uninstalling their oil filters and taking filters along prior to visiting their local auto supply store. In this way, residents recycle used oil as they purchase their new oil and avoid an extra trip, one that could have added green house gases into the atmosphere. This method also prevents storm drain pollution, as unattended oil could intentionally or unintentionally spill and enter storm drain systems.

The South Bay Used Oil Recycling Program has been evaluated by CalRecycle as a successful program implemented by the City of Chula Vista, National City, and Imperial Beach in terms of improving environmental quality. Residents of Chula Vista can leave oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. This used oil will be collected and recycled through the South Bay Used Oil Recycling Program. Residents of Chula Vista also have the option of taking their used oil to various used oil collection facilities in the City for recycling or disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. This facility accepts oil, both clean and contaminated as well as residential hazardous waste. Residents are limited to 15 gallons or 125 pounds of used oil or hazardous waste per vehicle. The facility is open every Saturday and Wednesday from the hours of 9 AM to 1 PM. The City also offers "door-to-door" collection of HHW for a small donation. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. Every used oil and HHW application has focused on pollution prevention, watershed protection, source reduction and making it easy for residents to do the right thing when it comes to proper disposal.

Table 6-1 Amount of HHW and Used Oil Collected FY 2010-2011

Household Hazardous Waste	Quantity of waste collected (FY 09-10)	Quantity of waste collected (FY 10-11)
	294,217 pounds	412,706 pounds
Used Oil	Quantity of used oil collected from certified centers (FY 09-10)	Quantity of used oil collected from certified centers (FY 10-11)
	22,399 gallons	28,732 gallons

6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where enforcement actions may be necessary, where appropriate:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel
- City's environmental website at: www.chulavistaca.gov/clean
- Analysis of data collected and managed in the Department of Public Works data management system gbaMS (George Butler Associates Management System)

Further information about the City's hotline reporting system and Dry Weather Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. By using a Geographic Information System program and the data collected from these mechanisms, every year residential areas of the City that have had higher numbers of violations, and outfall locations that exceeded pollutant standard limits are mapped (see Map 1 – Violation Locations Map and Map 2– HTTWQ Residential Area Map). City staff then develops programs to inspect and investigate areas of the City that are considered high TTWQ. City staff investigates violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continues to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's illegal discharge reports database can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1.

The residential areas and activities evaluation method described above indicate that: 1) residents are becoming more environmentally conscious, 2) residents take an active role in environmental

protection by calling the City and reporting illegal discharges, 3) a positive trend in urban runoff discharge quality is emerging. These results are encouraging and provide incentive to City staff to maintain their level of efforts and find innovative methods to accelerate the positive trend.

6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in Chula Vista Municipal Code Chapter 14.20, Storm Water Management and Discharge Control; and Chula Vista Municipal Code Title 1, General Provisions. During this reporting period, Storm Water Management Section staff responded to 174 reported violations, of which 101 were residential. Thirty-one of the reported violations resulted in citations. The amount of fines collected during this reporting period from residential violations was $2,400. Storm Water staff responded to each reported violation, investigated each case, took appropriate actions regarding containment of pollution, educated the violating party on existing laws and regulations, made follow-up visits where necessary, and proceeded with enforcement action if voluntary compliance was not achieved.

Data management of past violations helps City staff to identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate illegal act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of reported violations are included in Attachment K.

6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step towards improving receiving water quality, both locally and regionally. Increasing public awareness and encouraging a change in both attitude and behavior of the general public and the regulated community, can directly lead to a reduction or elimination of storm water pollution caused by common daily residential activities. Due to the importance of public education and outreach in storm water programs, the Municipal Permit requires public education at jurisdictional, watershed, and regional levels. The following are brief accounts of the implementation of jurisdictional and regional education programs during the reporting period. Additionally, during the reporting period, the City collaborated with the Copermittees of the San Diego Bay Watershed to implement the Watershed Urban Runoff Management Program (WURMP) residential education component. Details of such efforts are fully discussed in this year's WURMP Annual Report, which will be submitted to the Regional Board under a different cover.

6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the City's Environmental Services Division and the Conservation Department in the implementation of the Jurisdictional Residential Education Program. Pollution prevention and water quality regulation information is disseminated by actively participating in community events throughout the year. Informational

booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise pubic awareness about the City's storm water regulations and requirements as well as Best Management Practices methods. Residents become aware of the importance of protecting their watersheds and water resources, and recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also distributed throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of reported violations, and other similar factors.

Residential hotline calls, response, and enforcement rely heavily upon citizen participation and awareness. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting period, the City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. The workgroup is broken down into sub-workgroups that focus on one, or more of the various components undertaken by the ERS. These sub-workgroups address media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Development and implementation of comprehensive media program including ads on TV, radio, movie theaters, and bus shelters; 2) Development and implementation of a county-wide telephone survey to assess citizen storm water knowledge; 3) Development and distribution of the regional 2011 Storm Water Calendar in Spanish; and 4) Continued participation in regional community events such as the Envirofair at the San Diego County Fair.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under a separate cover.

6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the negative impacts of improper waste disposal. A consistent message of stewardship through everyday actions and

behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

During the reporting year, the City identified several High Threat to Water Quality (HTTWQ) residential neighborhoods that required focused educational outreach (see Map 2). These areas have been targeted based on storm water inspection observations, reported violations to the City's hotline, and the dry weather monitoring upstream investigation program. The City is currently in the process of finding volunteers to distribute storm water pollution prevention door hangers in addition to brochures targeting specific residential activities and their associated pollutants to these neighborhoods. The activities and pollutants that will be focused on include: 1) vehicle washing and repair (detergents and vehicle fluids), 2) gardening (green waste, fertilizer, and over-irrigation discharge), 3) household activities (pet waste and trash). These areas and their corresponding activities and pollutants have been identified on Map 2. In addition, the City plans to work with Homeowner's Associations to include storm water pollution prevention articles and messages into their community newsletters.

In November 2010, the USEPA approved the 2008-2010 303(d) list for the San Diego Region. Therefore, in addition to the HTTWQ areas shown in Map 2, there are also residential areas of the City that could potentially discharge pollutants of concern to 303(d) listed waterbodies within the City. Table 6-2 shows the pollutant/waterbody combinations within or adjacent to the City. Some areas of the City discharge to San Diego Bay, which is 303(d) listed for PCBs. Since PCBs have been banned since the early 1970s, no residential areas within the City discharge PCBs to San Diego Bay. The pollutant(s) of concern causing toxicity in Poggi Canyon and Sweetwater River are not known, however, previous regional monitoring reports suggest that synthetic pyrethroids are potential cause of toxicity. Synthetic pyrethroids are a component of pesticides, which can come from residential homecare activities. The lower section of Sweetwater River, below the impoundment, is 303(d) listed for a variety of pollutants. Residential activities may potentially affect water quality in this area, mostly through gardening and landscaping activities. It is not clear if selenium is generated through residential activity and accordingly, the City is in the process of further studying selenium and its sources. The City will continue to educate its residents through distribution of educational materials and interaction at community events, with a focus on these pollutants of concern.

Table 6-2 2008-2010 303(d) Listed Waterbodies-Pollutants In or Adjacent to Chula Vista

WATERBODY	POLLUTANT
Poggi Canyon Creek	Toxicity
Telegraph Canyon Creek	Selenium
Sweetwater River, Lower (below Sweetwater Reservoir)	Enterococcus
	Fecal Coliform
	Phosphorus
	TDS
	Total Nitrogen as N
	Toxicity
	Selenium

The City also targets HTTWQ residential areas by having cleanup events that provide residents the opportunity to volunteer to help cleanup their neighborhoods. The annual Beautify Chula Vista event focuses on a different neighborhood each year, frequently in under-privileged areas of the City, and provides graffiti cleanup, tree planting, trash pick-up, and storm drain stenciling. By participating in the event, residents are able to make a connection to their community and environment while learning about storm water pollution prevention.

In addition to targeting HTTWQ areas for public education and outreach, the City has a number of programs in place throughout the City to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

• Illicit Discharge Detection Elimination

Section 7.0

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.

Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.

Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.

Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.

Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.

Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.

Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.

Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.

Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.

Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.

Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.

Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.

Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.

On September 10, 2008, the Regional Board adopted Addendum No. 2 to the Municipal Permit. The addendum recognized that Dry Weather Field Screening and Analytical Monitoring activities may continue until the end of September each year, and the results would not be available to be included in JURMP Annual Reports, which are also due for submittal on September 30 of each year. Therefore, submittal of Section 7.0 of the JURMP Annual Report (Illicit Discharge Detection and Elimination Component) was allowed to be postponed until December 15 of each year. Pursuant to this requirement, the City of Chula Vista will submit the entire FY 2010-2011 Illicit Discharge Detection and Elimination Component; copies of the City's 2011 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2011.

• Education

8.0 EDUCATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.

Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.

Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.

Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.

Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.

8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public, and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay/ East County Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Program targets issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and Best Management Practices (BMPs) to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of Citywide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting year, Storm Water Management staff continued to receive training as well as provided training to municipal staff (including Public Works Engineering and Development Services Departments) about the new General Construction Permit. Training included general permit overview, risk levels, sampling and monitoring, inspections, reporting, and certification requirements. As construction projects begin to implement the General Construction Permit, the Storm Water Management Section staff will continue its efforts to educate itself as well as municipal staff.

Education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) implementation strategies. In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. A continuing focus on internal SUSMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize Low Impact Development (LID) techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of higher efficiency treatment control BMPs. In addition, presentations by the manufacturers and vendors of structural BMPs have been organized and hosted by the City.

As in previous reporting year, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance
- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Transit
- Vehicle Maintenance
- Land Development
- Public Works Inspections

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

05/18/11 – 05/20/11	QSP/QSD Training	Training on the CA General Construction Permit.	AGC CA

8.3 EDUCATIONAL OUTREACH ELEMENT

8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

The CLEAN group, made up of the City's environmental departments and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. *Your Choice*.**"

The culmination of efforts of various involved City divisions has been embodied in the established CLEAN program, which provides an effective and powerful body to guide the significant efforts envisioned for the program. It is also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including pollution notification residential door hangers, stickers, stationery, and various brochures were distributed to the general public within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean has information about the environmentally focused divisions in the City including Storm Water Management, Environmental Services, Conservation, and the Chula Vista Nature Center. The storm water section has information specific to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to evolve, a wide array of media outlets have been explored, and established branding has been incorporated in them. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2010-2011 the City continued to use pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of items such as recyclables, cooking grease, and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging on such items as pet waste bag containers, towels, pens, pencils, and rulers. During this reporting year, the CLEAN group and stakeholders collaborated to produce a comprehensive environmental guide that covers various topics such as storm water pollution prevention, recycling, alternative transportation, green gardening, and conservation. This guide is distributed by all CLEAN stakeholders at community events.

Figure 8-1 CLEAN Homepage

The City has continued to maintain six trail displays (Figure 8-2) throughout the City, near walking trails and parks. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. They demonstrate the connectivity of environmental concerns throughout the City. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park
- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

A poster form of the trail display is also displayed in the City's John Lippit Public Works Center and the Chula Vista Public Library. Chula Vista staff and residents pass this display on a daily basis, reminding them that the City is within the Sweetwater and Otay Watersheds and of the

simple actions they can take to protect their local waterways. Another poster is used for community events to explain watershed concepts and pollution prevention to Chula Vista residents.

Figure 8-2 City of Chula Vista CLEAN Trail Display

Media Articles

As a member of the CLEAN group, Storm Water Section staff contributed articles about pollution prevention to various publications aimed at residents living in the City. These included The Star News and Your Guide to CLEAN, which is included in residential trash bills. Altogether, these publications reach more than 50,000 households. The City will continue to contribute and place pollution prevention advertisements and articles in these publications as well as continue to explore more venues for reaching citizens through print media.

School Education Efforts

Due to the previous success of the Salt Creek Critters, Southbay Water Warriors, and high school education programs, the City decided to continue its education outreach program to school children. With the help of I Love a Clean San Diego, the City provided storm water education presentations to students at Castle Park High School. The presentation focused on pollutant types and their sources, pollution prevention, watershed protection, and volunteer opportunities. A pre- and post-test were administered to the students receiving the presentations. In addition, an interactive activity was done with each class to enforce the concepts taught in the presentations. Overall, both students and teachers felt that the presentations were beneficial and increased knowledge and interest in environmental issues in their community. The City will continue with school programs such as these into the coming fiscal year, as funding permits.

Community Events
The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. During the reporting period the CLEAN group, which includes the Storm Water Management Section and the Department of Conservation and Environmental Services, participated in and set up booths and displays at most major South Bay community events. City staff provided education and outreach materials regarding a variety of interrelated environmental issues. A variety of brochures and pamphlets were distributed to the general public about the effects of storm water pollution on the environment and ways that residents can prevent pollution of their waterways. By participating in these community events, City storm water staff has the opportunity to generate large numbers of impressions each fiscal year. In addition, City staff displayed the EnviroScape model at several community events in order to teach residents about watershed concepts and to reinforce the connection between everyday actions and water quality.

Chula Vista Nature Center
The Chula Vista Nature Center, located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Nature Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Nature Center's mission is to educate the public about the importance of coastal resource conservation and environmental stewardship. Through visits to the Nature Center and its offsite programs thousands of people are exposed to these critical environmental messages each year. To help facilitate educational experiences, the Nature Center offers field trips, guided walks, classes, tours, and special projects. During the reporting year, there were over 430 scheduled tours to the Nature Center, resulting in over 11,280 children and over 2,630 adults learning about San Diego Bay watersheds and watershed protection.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Nature Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Chula Vista Nature Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Nature Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Nature Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- Students learn to recycle, reuse, and reduce waste. They also learn about storm drains and the types of pollutants commonly identified in the storm drain system. The Chula Vista Nature Center and Conservation Department also conduct a "Less Toxic Gardening Workshop," dealing specifically with pesticide use, as well as weekly composting classes.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

Table 8-2 Education Outreach Provided During FY 2010-2011

DATE	EVENT	EVENT DESCRIPTION	SITE NAME/ LOCATION
08/08/10	Lemon Festival	City storm water staff manned a booth and distributed information about pollution prevention	Downtown Chula Vista (Third Avenue)
09/18/10	Children's Festival	City storm water staff had a booth at the festival and provided pollution prevention training to citizens	New Hope Community Church
09/25/10	BonitaFest	City storm water staff provided pollution prevention training to citizens	Bonita Shopping Center
10/16/10	Beautify Chula Vista	City storm water staff provided pollution prevention training to citizens	Memorial Park
12/09/10	Understanding the Whys and Hows of Compliance for Your Future Projects	City staff was on a panel discussion about the requirements of the General Construction Permit. Provided education to contractors.	Shea Homes Corporate Office San Diego
12/16/10	A Day Without a Plastic Bag	City staff distributed 1000 reusable grocery bags to shoppers to promote the reduction of plastic bag trash in the environment.	North Park Produce
04/16/11	Go Green and Clean Family Day	City staff manned a booth and provided CLEAN brochures, IPM Pest Tip cards, and other giveaways to promote pollution prevention.	Otay Ranch Town Center
04/30/11	Day of the Child	Storm water staff manned a booth and provided storm water pollution prevention brochures, IPM tip cards, storm water calendars, and environmental giveaways	Memorial Park

DATE	EVENT	EVENT DESCRIPTION	SITE NAME/ LOCATION
05/08/11	Cinco de Mayo	Storm water staff manned a booth and provided storm water pollution prevention brochures, IPM tip cards, storm water calendars, and environmental giveaways	Downtown Chula Vista (Third Avenue)
06/04/11	Otay Valley Regional Park Day	City staff provided storm water brochures and CLEAN guides to citizens who attended the event.	Otay Valley Regional Park
06/18/11	Pet Fest and Doggy Dash	Storm water staff implemented a pet waste survey, provided pollution prevention education, and environmental giveaways to citizens	Memorial Park
06/18/11	Enviro-Fair	City staff manned the Think Blue Regional booth at the SD County Fair and provided education to	San Diego County Fair
Year-round	Watershed, Recycling, Storm Drain Pollution Education	Organized School Group Visitors to the Chula Vista Nature Center	Chula Vista Nature Center

Regional Outreach

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further development of the Regional Residential Storm Water Education Plan that was submitted to the Regional Board in March 2008. This reporting year, the Copermittees collaborated on improving the regional storm water website, developed and distributed a regional storm water education calendar in Spanish, and had a booth at the EnviroFair at the San Diego County Fair in June 2011.

8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included dissemination of information via the County's Clean Water Project website targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, Storm Water Compliance Inspectors meet with facility owners or managers and explain water quality issues relating to the

particular type of industrial or commercial facility. BMPs relevant to the activities at each facility are explained and, corrective actions are proposed to bring the facility into compliance with the City's ordinances and BMP requirements. Consequences of non-compliance are also brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of Low Impact Development site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- The City Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

8.3.4 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day

- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as notebooks, dustpans, pencils, pens, and pet waste bag holders. This reporting year, the CLEAN Team and Stakeholders continued to distribute the all-inclusive environmental brochure called CLEAN – Your Environmental Guide for Green Living. The brochure covers a wide range of environmental topics such as storm water pollution prevention, water conservation, energy, green living, transportation, recycling, and green gardening.

During the reporting period, the City, with the help of I Love a Clean San Diego, supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteers have participated in a number of activities during this event, including cleaning of trash, graffiti removal, and planting trees. Efforts are usually focused in underserved areas of the City where more attention is needed due to trash and graffiti problems. Over 600 volunteers participated in the Beautify Chula Vista Day in October 2010.

The Graffiti Abatement Program allows citizens to report graffiti in their neighborhoods by phone, web, or email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. During the current reporting period, and as a result of downsizing City services, the Graffiti Abatement Program was reduced to one day per week. However, volunteers help the City in graffiti removal during weekends. During the current reporting period, the City received over 2,000 requests to remove graffiti, some of which were duplicated by phone, e-mail, or website.

• Public Participation

9.0 PUBLIC PARTICIPATION COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.

9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

9.2 PROGRAM IMPLEMENTATION

Beautify Chula Vista Day – October 17, 2010

Beautify Chula Vista Day is an annual event that involves citizen participation and involvement in activities that enhance the environmental setting of the City. Every year, this event attracts several hundred volunteers and provides an opportunity for City staff to have direct interaction with the public to discuss environmental issues and the role that citizens can play in protecting their community's health and living standards. Volunteer citizens are able to participate in activities such as tree planting, graffiti removal, clean-up projects, and storm drain stenciling. During this reporting year's event, over 600 volunteers were able to remove more than 2,700 pounds of trash from City streets in addition to cleaning up graffiti.

Otay Valley Regional Park Cleanup

The Otay Valley Regional Park (OVRP) is being developed as a collaborative effort of the cities of Chula Vista and San Diego and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land. The Otay River Valley Cleanup Project (Cleanup Work Project) currently encompasses the Western Otay Valley Regional Park (Nester Creek east to I-805) and Eastern Otay Valley Regional Park – Proctor Valley (North End Upper Otay Lakes Reservoir).

The Cleanup Work Project encompasses efforts by many organizations including the OVRP Citizens Advisory Committee (CAC) coordinating the Donovan Prison Community Crew,

California Conservation Corp (CCC) coordinated by the City of San Diego WOVRP Rangers, County of San Diego Otay Lakes Park Rangers, Friends of the Park (coordinates Proctor Valley Cleanup), Allied Waste (delivering and picking up of large waste bins), City of San Diego Environmental Services, and City of Chula Vista Public Works.

Park cleanup activities include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, and placing signage identifying the OVRP. During this reporting year, workers continued to discourage transients from setting up camps in the park and picked up trash and green waste from the river valley. More information about the Otay Valley Regional Park can be found on their website http://www.ovrp.org/

I Love a Clean San Diego (ILACSD) 9th Annual Creek To Bay Cleanup

The ninth Annual Creek to Bay Cleanup event occurred on Saturday, April 30, 2011. The City co-sponsored this cleanup event, which was coordinated by ILACSD. The San Diego County Board of Supervisors presented this year's cleanup event through the support of a variety of organizations, including the City of Chula Vista through the San Diego Bay Watershed group. The event was able to bring together 5,350 volunteers who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Volunteers picked up 80 tons of trash and recyclables from over 172 miles of coastline and inland areas. Commonly found items included plastic items and cigarette butts.

Cleanup sites within or adjacent to Chula Vista included the Otay Valley Regional Park, the Sweetwater Regional Park, J Street Marina, and Salt Creek. At these locations, 211 volunteers removed over 3,000 pounds of trash and recyclables from about 8 miles of Chula Vista waterways.

Household Hazardous Waste and Used Oil Recycling

The Household Hazardous Waste (HHW) Facility at the City of Chula Vista Public Works Center started operation in January 2002. It serves the Cities of Chula Vista, Imperial Beach, National City, and the County of San Diego. The facility is open every Wednesday and Saturday from 9am to 1pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under the door-to-door program, HHW is collected by appointment from residents who are unable to take the waste to the permanent facility or because of scheduling conflicts. The facility is under 24-hour camera surveillance to prevent illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill. Public participation in this program is expected to minimize the amount of hazardous materials that may otherwise enter storm drain systems. During the reporting period 2,824 residents participated in the collection program from the City of Chula Vista, National City, the County of San Diego, and Imperial Beach, of which 2,487 were Chula Vista residents.

Public IC/ID Reporting and Graffiti Hotline

The City encourages its citizens to partner with the City in keeping Chula Vista clean. Citizens can do so by reporting any illegal discharges to storm drains, as well as reporting any graffiti in

their neighborhoods. Despite budget cuts during the reporting year, the City continued graffiti removal services on public property by using environmentally friendly power washing equipment and BMPs. Storm Water Management Section staff investigates illegal discharges to storm drain systems and provides education and enforcement. In cases of spills or pollutants entering storm drain systems, Public Works maintenance crews provide cleanup as needed. During the reporting period the City received over 170 calls and reports about illegal discharges to storm drain systems. There were over 3,500 calls, emails, and web requests from citizens to the graffiti program during the reporting year (some duplicated), showing that citizens are participating and taking an active part in keeping the City clean.

CLEAN Business Program

As part of its efforts to involve local businesses in keeping the City clean, the CLEAN Team started the CLEAN Business Program in February 2008. The CLEAN Team is made up of the City's Storm Water Management Section, Environmental Services Division, and the Department of Conservation. The CLEAN Business Program was designed to help small businesses exercise environmentally safe practices and become sustainable. This goal could only be achieved by learning basic environmentally responsible and sound methods related to their specific daily activities. The program verifies and promotes businesses that demonstrate environmentally friendly practices and conserve resources. As part of the verification process, the business must complete a packet of checklists with minimum BMPs and request an inspection by the CLEAN Team to verify that the selected BMPs are adequate and have been correctly implemented. The CLEAN Team verifies that the BMPs are in place and functioning. Once a business becomes a CLEAN Business, they receive recognition on the City's website and receive a decal sticker to put on their front window to show consumers that they are shopping at a CLEAN Business. At the time of writing this report, 93 businesses in the City have been verified as a CLEAN Business. Businesses must receive verification on an annual basis in order to maintain their CLEAN Business status.

• Fiscal Analysis

Section 10.0

10.0 FISCAL ANALYSIS COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.

Permit Section G: Fiscal Analysis

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

10.1 INTRODUCTION

The Municipal Permit requires the Copermittees to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The Standardized Fiscal Analysis Method and Format (Fiscal Analysis Method) was collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis

Method document was submitted to the San Diego Regional Water Quality Control Board by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009. The Municipal Permit further requires the Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. The fiscal analysis incorporated in this section is based on the standardized method. This is the second year that the standardized method is being used.

10.2 GENERAL BUDGET INFORMATION

The Standardized Fiscal Analysis Method includes a Standardized Fiscal Analysis Reporting Form, which consists of three tables separating jurisdictional, watershed, and regional expenditures. Jurisdictional expenditures are divided into components that mirror those included in the Municipal Permit as follows:

- Administration
- Development Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Illegal Discharge Detection and Elimination (IDDE)
- Education
- Public Participation
- Special Investigations
- Non-Emergency Firefighting

Further, each of the above categories may be broken down into sub-categories. Potential Sub-categories may include:

- Land Use Planning
- Environmental Review
- Development Project Approval and verification
- Public Construction Projects
- Private Construction Projects
- Public Reporting of Illicit Connection or Illegal Discharges (ICIDs)
- Jurisdictional Urban Runoff Monitoring Programs
- Other

Expenditure items to be considered for each category or sub-category may include:

- Administration
- Permitting and Licensing
- Project Planning and Engineering
- Maintenance Inspections
- Compliance Inspection and Enforcement

- BMP Implementation
- Educational Outreach
- Waste Collection and Recycling
- Jurisdictional Urban Runoff and Receiving Water Monitoring
- Other Expenditures

For reporting purposes, only the table incorporating major jurisdictional components will be used. Sub-categories and expenditure items are intended to provide standardization of expenditures and need not be shown in the final report.

City of Chula Vista staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Environmental Planning Division of the Development Services Department reviews development projects for compliance with the California Environmental Quality Act, assesses potential environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Land Development Division of the Development Services Department is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Division staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Section of the Public Works Department manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the City's GIS systems, and provides support to

the Storm Water Management Section by mapping the City's storm water conveyance systems and data management.

- The Operations Division of the Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Section, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Section of the Public Works Department is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections provide support to the Storm Water Management Section in the fulfillment of the City's JURMP and are instrumental in the implementation of that program. Although those departments, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

10.3 FISCAL ANALYSIS METHODS

The fiscal analysis method used in this report is based on the standardized fiscal analysis method and format dated January 29, 2009, developed by the Copermittees of the San Diego County NPDES Municipal Permit, Order No. R9-2007-0001.

10.4 FISCAL ANALYSIS RESULTS

10.4.1 EXPENDITURES

10.4.1.1 JURISDICTIONAL

The City's jurisdictional expenditures for FY 2010-2011 related to compliance with the Municipal Permit are listed in Table 10-1 to 10-3.

Table 10-1 NPDES Jurisdictional Expenditures for FY 2010-2011

JURISDICTIONAL COMPONENT		MULTIPLE PROGRAMS	PRIOR PROGRAM
Administration	$169,767		
Development Planning	$79,034		
Construction	$551,724		
Municipal	$1,245,678		
Industrial and Commercial	$128,206		
Residential	$46,876		
IDDE	$371,827		
Education	$38,131		
Public Participation	$1,000		
Special Investigations	$10,199		
Non-Emergency Firefighting	$8,149		
Jurisdictional Total	**$2,650,590**		

Table 10-2 NPDES Jurisdictional Shared Program Expenditures for FY 2010-2011

JURISDICTIONAL COMPONENT SHARED PROGRAMS		MULTIPLE PROGRAMS	PRIOR PROGRAM
Used Oil Recycling	$12,064	x	x
Household hazardous Waste Management	$255,250		
Wastewater Collection Systems Maintenance	$4,398,750	x	x
Flood Management Projects and Flood Control Devices	$174,207	x	x
Jurisdictional Shared Programs Total	**$4,840,271**		

Table 10-3 Jurisdictional Shared Programs For Which Expenditures are Not Readily Available

JURISDICTIONAL COMPONENT SHARED PROGRAMS FOR WHICH COSTS ARE NOT READILY AVAILABLE	MULTIPLE PROGRAMS	PRIOR PROGRAM
Land Use Planning	x	x
Environmental Review	x	x
Development Project Approval and Verification	x	x
Management of Pesticides, Herbicides, and Fertilizers	x	x
Roads, Streets, Highways, and Parking Facilities	x	x
Parks and Recreational Facilities	x	x

10.4.1.2 WATERSHED

The standardized Fiscal Analysis method and format provides a form for total watershed expenditures, which is divided into various watersheds draining each Copermittee's jurisdictional boundaries. The City of Chula Vista is wholly located within the San Diego Bay watershed and, therefore, the sum total of all expenditures associated with watershed activities is shown as one number under Watershed Total.

Table 10-4 NPDES Watershed Expenditures for FY 2010-2011

WATERSHED COMPONENT		MULTIPLE PROGRAMS	PRIOR PROGRAMS
Chula Vista's Share of the Watershed Total	**$32,594**		

During FY 2010-2011, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions and, therefore, no cost sharing occurred at the watershed level. Based on the Municipal Permit requirements for watershed activities, the City allocated $25,000 for watershed activities and $10,000 for watershed education in its FY 2010-2011 budget.

10.4.1.2 REGIONAL

Table 10-5 for total regional expenditures shows the City's share of total regional costs that are determined by using cost share formulae included in the Memorandum of Understanding dated November 16, 2007, and signed by all Copermittees.

The City participates in regional meetings and activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, costs associated with activities of the following workgroups were included in the regional expenditures and budgets:

- Program Planning Subcommittee
- Fiscal, Reporting, and Assessment Workgroup
- Education and Residential Sources Workgroup
- Monitoring Workgroup
- Land Development Workgroup
- Municipal Workgroup
- Industrial and Commercial Sources Workgroup
- Regional WURMP Workgroup

Additionally, City staff time for attending regional workgroup meetings has been included in regional expenditures for Fiscal Year 2010-2011. Finally, annual fees for membership in the

California Storm Water Quality Association is paid as a regional expenditures and the appropriate share of the City of Chula Vista has been included in the following regional expenditure analysis.

Table 10-5 NPDES Regional Expenditures for FY 2010-2011

REGIONAL COMPONENT		MULTIPLE PROGRAMS	PRIOR PROGRAMS
Chula Vista's Share of the Regional Total	**$230,454**		

As shown in Table 10-5, City's share of the above expenditures was $230,454 for FY 2010-2011.

10.4.2 FUNDING SOURCES

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, these vary significantly from year to year, depending on the level of development activities within the City. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

Table 10-6 Funding Sources for FY 2010-2011

No.	FUNDING SOURCE	PROGRAM ELEMENT
1	General Fund	Storm Water Management Program
		Storm Drain Maintenance
2	Storm Drain Fee	Storm Water Management Program
3	Sewer Fee	Wastewater Collection System Maintenance
4	Special Assessment District Fees	Storm Drain Maintenance
		Wastewater Collection System Maintenance
5	Grant Funds	Used Oil Recycling
		Drainage Capital Improvement Projects
6	Solid Waste Fee	Household Hazardous Waste Management Waste Management Recycling
7	Developer Deposits and Fees	Environmental Reviews
8	Loans	Drainage Capital Improvement Projects
9	Transnet	Drainage Capital Improvement Projects

• Program Effectiveness Assessment

Section 11.0

11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

MUNICIPAL PERMIT REQUIREMENTS:

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6*[9] *to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the Copermittees to the Regional Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in other sections of this report.

The 2004-2005 reporting year was highlighted by the Copermittees' regional development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD) for the previous Municipal Permit, Order No. 2001-001. This comprehensive assessment incorporated water quality and source data collected by all Copermittees and provided a critical first look at regional water quality presented per watershed. On June 29, 2011, pursuant to the requirements of Section J.2.c-d of the current Municipal Permit, Order No. R9-2007-0001, the Copermittees of San Diego County submitted their Report of Waste Discharge (ROWD) and Long Term Effectiveness Assessment for the current permit cycle to the Regional Water Quality Control Board. The ROWD, among other topics, discusses the long-term effectiveness assessment methodology and proposes to adopt the methodology developed by the California Stormwater Quality Association (CASQA) in 2007. If approved by the Regional Board, the Copermittees will start using the CASQA Municipal Stormwater Program Effectiveness Assessment Guide during the next permit cycle.

The City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City continued to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

During the reporting period, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the continued implementation of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

In FY 2008-2009 the City of Chula Vista administered a survey instrument designed to measure public awareness of various storm water quality related issues. It is intended that similar surveys be conducted within 3 to 5 year intervals to provide a measurable accounting of the City's public education and awareness programs. In addition, the City continued its source inventory validation process. This effort has been detailed in Sections 2.0 through 6.0 of this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants

of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization
  - BMP Selection
  - Targeted Outcomes
  - Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics are included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation during the reporting period. It is important to recognize that the whole of this document represents an account of program implementation in 2010-2011, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluates the overall effectiveness of the City's Storm Water Management Program.

11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this concept continues to be perpetuated. The City has sought to integrate these key elements in

order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

Source Characterization

Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by the previous Municipal Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially compiled in 2001, and have been updated annually ever since. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS systems, GBA database, and comprehensive business license tracking. In recognizing that source characterization needs to be increasingly matched to identified water quality concerns and program results, the City seeks to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Sections 2.0 through 6.0 of this report, the City has continued to fortify source characterization in 2010-2011. Comprehensive field verification of source inventories is conducted approximately every five years with the renewal of the Municipal Permit, while inventory updates based on existing information in the City's databases and observations during regular inspections are conducted annually. In this reporting period, the City continued its source verification utilizing the City's business license database combined with field observations during inspections and investigations to identify all active industrial and commercial facilities Citywide. The Municipal inventory is updated continuously as new facilities are constructed or acquired. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data is utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

BMP Selection

In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by the previous Municipal Permit's Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. These minimum BMPs were visited during the City's JURMP update in 2008 and changes were made as needed. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs.

Targeted Outcomes

The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes are to be established prior to program implementation to accurately provide measurability and accountability. Included within the regional long-term assessment

framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

Figure 11-1 Hierarchy of Targeted Outcomes

Assessment Measures and Indicators

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes in water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional levels.

11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the water quality of discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success or failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for the Copermittees to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)
- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2005 and 2011. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The graph on the following page, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent-specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. Graphs detailing the action level exceedences for each pollutant are on the following pages.

11.3.2 PROGRAM ASSESSMENT

In 2010-2011, the City continued to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2010-2011 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment. As mentioned in the preceding paragraphs, Copermittees continued to collaborate in an effort to establish a comprehensive assessment in developing a standardized framework for assessing the effectiveness of Jurisdictional Urban Runoff Management Program.

In previous reporting periods, i.e., in 2005-2006 and 2009-2010, the City conducted two rounds of public awareness surveys. The data collected during these surveys, together with future survey results will provide a better understanding of the effectiveness of the City's storm water education efforts.

The discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City, based on various components of the Municipal Permit (Tables 11-1 – 11-7). In the following sections, these tables and their associated analysis are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation, reflecting various elements of the Municipal Permit, and provide a summary accounting of activities conducted by the City in 2010-2011.

11.3.2.1.1 LAND USE PLANNING

In view of the recent update to the City's local Standard Urban Storm Water Mitigation Plan (SUSMP), and inclusion of Low Impact Development (LID) and Final Hydromodification Management Plan (HMP), the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. During the current reporting period, development activities remain slow and the number of projects submitted to the City for approval and permit issuance was low. As can be seen from Table 11-1, thirteen SUSMP projects were submitted and three SUSMP projects received approval. However, the number of total cumulative projects that have implemented

post-construction BMPs and the number of projects inspected for post-construction BMPs remains high.

During this reporting period, BMP maintenance verification letters were sent to responsible parties reminding them of their responsibility to clean, inspect, and maintain storm water treatment facilities. Responsible parties were required to provide the City with certification of maintenance of the treatment facilities within a set time frame. Additionally, the City has added another GIS layer in our GBA tracking system identifying all public and private treatment category BMPs. These processes provided yet another mechanism to ensure proper maintenance and effectiveness of all treatment facilities and compliance with Municipal permit provisions.

The following tables summarize City of Chula Vista's activities during the reporting period towards ensuring compliance with SUSMP implementation and the review, inspection, and maintenance verification of SUSMP projects.

Table 11-1 FY 2010-2011 Compliance with Activity-Based Requirements – Land Use Planning

PERMIT SECTION	ACTIVITY/ SOURCE TYPE	TARGETED OUTCOME	ACTUAL	MEASURE OF SUCCESS	
D.1 Land Use Planning	Development Projects	# SUSMP Projects Submitted	# SUSMP Projects Approved	Actual/Target	%
		13	3	N/A	N/A
	High Priority Sites (Total Listed = 50)	# Sites Targeted for Inspection	# Sites inspected	Actual/Target	%
		50	50	50/50	100
	Medium Priority Sites (Total Listed = 39)	39	39	39/39	100
	Low Priority Sites (Total Listed = 4)	As Needed	4	N/A	N/A

Please refer to Attachment F for a list of SUSMP projects inspected during the current reporting period.

Based upon the significant achievements and continued refinements experienced in 2010-2011, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

JURMP strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2010-2011

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

Development Storm Water Manual

The Manual, updated in January 2011, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by City staff, developers, and consultants.

During this reporting period City staff actively participated in the Regional Land Development Workgroup meetings and activities and collaborated with other participants to update the Model SUSMP and develop a Hydromodification Management Plan (HMP). The current Model SUSMP is dated March 2011. The Copermittees submitted the Final HMP to the Regional Board, which was approved in July 2010. HMP requirements were later incorporated in the City's Development Storm Water Manual in January 2011. The City of Chula Vista has met all the deadlines for updating its local SUSMP and incorporating the Final HMP into its ordinances.

Inter-Departmental Coordination

The City's SUSMP and development review process includes multiple entities throughout the City. As the City continues to grow, it has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Although the current economic situation has slowed down the City's growth during the past four years, such coordination has continued in 2010-2011 to require refinement and augmentation, as necessary, to maintain compliance and ultimately improve water quality.

Dedicated Storm Water Management Section

The Development Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to City staff and assist project proponents and consultants. Storm Water Compliance Inspectors and Environmental Health Specialists also perform the functions of post-construction BMP construction verification, inspection, and maintenance verification.

Information System Support

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. Additionally, Permits Plus, which is a specialized permits tracking software, is utilized in tracking a variety of discretionary permits, and specifically is used by the Development Services Department to identify and track Priority Development Projects. Further, Permits Plus is utilized in annual inventory updates. Notably, in

2010-2011, the GIS layer was continuously updated to manage and provide easy access and tracking of post-construction BMP Treatment facilities.

Data Management

As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. The City continues to address these challenges through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. The City continues to maintain up-to-date data and effectively track all information related to JURMP activities such as inventories, inspections, violations, notifications, and post-construction BMPs.

New Development and Redevelopment Project Design Elements

With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City continued to work with the development community to improve the storm water design features of proposed projects. The City continuously stressed this focus in 2010-2011 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects. The recently updated Model SUSMP, which was incorporated in the City SUSMP requirements, will provide a new approach in the level of analysis and project design elements for the development community.

11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component continued to demonstrate success by consistent programmatic developments and enhancements. Through identified needs and associated management decisions, the City fortified its jurisdictional construction management component in 2010-2011. As the slowdown in development continued, many construction sites remained inactive or faced sever reductions in construction activities. Within the reporting period, the City worked closely with developers to stabilize inactive construction sites; promote pollution prevention and BMP implementation; and ensure proper maintenance of BMPs to prevent polluted discharges from construction sites. Because of sagging economy, this was a challenge as many developers claimed that they had limited financial resources and were unable to fund their planned maintenance activities. City staff worked with developers to identify cost-effective BMPs and in some instances initiated enforcement action until full compliance was achieved. Mechanisms were identified to promote pollution prevention techniques as described in Section 3 of this report. The City continues to maintain the regulatory standards established by the Municipal Permit for construction activities and the City's construction performance standards included in the Chula Vista Development Storm Water Manual.

Table 11-2 FY 2010-2011 Compliance with Activity-Based Requirements – Construction

PERMIT SECTION	ACTIVITY/ SOURCE TYPE	TARGETED OUTCOME	ACTUAL	MEASURE OF SUCCESS	
D.2.d Construction	High Priority Sites (Total Listed = 3)	# Sites targeted for inspection	# Sites inspected	Actual/ Target	%
		3	3	3/3	100
	Medium Priority Sites (Total Listed = 39)	39	39	39/39	100
	Low Priority Sites (Total Listed = 50)	As Needed	27	NA	NA
	All Sites (Total Listed = 92*)	Total sites identified	# in compliance or on a schedule for compliance	Actual/ Target	%
		92	92	92/92	100
		# of inspections during dry season	# of inspections during wet season	Total # of inspections	N/A
		35	205	240	N/A

*Note: Of the 92 construction sites listed above, 43 sites were inactive during the reporting period and were inspected on an as needed basis. Active sites were inspected according to the Municipal Permit requirements. For a complete list of construction sites inspected during the reporting period, please refer to Attachment G.

The following features distinguish the construction component of the City's JURMP:

Inspection and Enforcement

As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensures compliance with the construction component of the JURMP. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been fully achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

Education and Training

Storm Water Management staff provides education and training to all entities related to construction activities including developers, site superintendents, sub-contractors, and trades persons. During the previous years, this education and training capacity was further defined by storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, Chula Vista Storm Water Management staff continues to offer a strong asset and broad-based expertise in construction storm water management both locally and regionally. The adoption of the new General

Construction Permit necessitates further education and trainings to all entities related to construction activities. During this reporting period, City staff was given the opportunity to speak at a regional seminar for the construction industry including local municipalities. City staff continued their efforts in educating members of the construction industry at the local level during meetings and site inspections.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2010-2011. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

BMP Maintenance

During the reporting period, due to an increase in the number of inactive construction sites, BMP maintenance on construction sites continued to be an area of concern. While inspection staff noted significant efforts in BMP implementation, the maintenance needs associated with implemented BMPs did not match implementation efforts on a consistent basis. The City continues to inspect inactive construction sites and issues formal inspection reports to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such formal reports is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites.

11.3.2.1.3 MUNICIPAL

As exemplified in program descriptions included in other sections of this report, the City prides itself for outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City activities such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. The following table summarizes municipal activities' data.

Table 11-3 FY 2010-2011 Compliance with Activity-Based Requirement – Municipal

PERMIT SECTION	ACTIVITY/ SOURCE TYPE	TARGETED OUTCOME	ACTUAL	MEASURE OF SUCCESS	
D.3.a Municipal	High Priority Sites (Total Listed = 65[1])	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		65	65	65/65	100
	Medium Priority Sites (Total Listed = 5)	As needed	As needed	N/A	N/A
	Low Priority Sites (Total Listed = 16)	As needed	As needed	N/A	N/A
	Catch Basins, Inlets, MS4, Open Channels	Estimated quantity of waste targeted for removal (Tons)	Quantity of waste removed (Tons)	Actual/Target	%
		122	122	122/122	100
	Streets/Parking Lots	Estimated distance of curb/park miles to be cleaned	Total curb/park miles cleaned	Actual/Target	%
		18,000	18,000	18,000/18,000	100
	Catch Basins/ Inlets	# of catch basins and inlets in the City	# of catch basins and inlets inspected	Actual/Target	%
		10,710	10,710[2]	10,710/10,710	100
		# of catch basins and inlets targeted to be cleaned	# of catch basins and inlets cleaned	Actual/Target	%
		2,371	2,371	2,371/2,371	100

[1] Three categories listed in the Municipal Inventory (Attachment C) as follows are inspected on a regular and as needed basis. The frequency of inspection of these categories exceed Municipal Permit requirements:

- MS4
- Roads, Streets, and Highways
- Special Events

[2] 12,236 inspections were conducted on MS4 catch basins and inlets. Comparing this number with the number of catch basins and inlets (10,710) indicates that some catch basins and inlets were inspected more than once during the current reporting period.

With such a well-rounded approach, the City has a significant number of management measures to accurately assess the effectiveness of municipal program component. Further, no BMPs have been identified as ineffective within the reporting period of this report.

The following features distinguish the Municipal component of the City's JURMP:

Municipal Facility Inspections
The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2010-2011, and as part of this comprehensive inspection process, Storm Water Management staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

Environmental Programs
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have continued to capitalize upon in 2010-2011 through the development of a broad-based outreach and educational campaign by the City. The City's CLEAN Business program adopted in 2008 continued to promote partnerships between the City and local businesses that operate in an environmentally responsible manner and protect the environment. The program was well received by local businesses and has increased in membership since its adoption. To date, 93 Chula Vista businesses have enrolled in the program and efforts are being made to increase this number to 100 before the Chula Vista centennial celebrations this year.

Based on exemplary municipal pollution prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for program improvement or modification at this time.

11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2010-2011 reporting year was a continued maintenance year in terms of industrial and commercial activities within the City. Inventory validation and supplemental inspection efforts remain the highlights of this year's activities. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous industrial and commercial facilities operating within the City. With such a significant variety of commercial and industrial activities in Chula Vista, staff has recognized the need to target those areas and business activities that remain high on the source priority list, and to provide a consistent presence and strong enforcement standard. Notably in this reporting period, Storm Water Section staff continued its one-on-one educational training program on storm water pollution prevention and BMP implementation to specific industrial facilities that have a track record of violations and were identified as High Threat To Water Quality.

The City's FY 2010-2011 inventory of industrial/commercial facilities includes 196 industrial facilities and 1,321 commercial facilities, of which 413 are mobile businesses. However, the 2009-2010 industrial/commercial inventory was used as a basis for inspections during the reporting period, which are shown as targeted outcome in Table 11-4. In 2010-2011, Storm Water Management staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Municipal Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not

identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

Table 11-4 FY 2010-2011 Compliance with Activity Based Requirements – Industrial/Commercial

PERMIT SECTION	ACTIVITY/SOURCE TYPE	TARGETED OUTCOME	ACTUAL	MEASURE OF SUCCESS	
D.3.b Industrial	High Priority Sites (Total = 43)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		43	38	38/43	89
	Medium Priority Sites (Total = 5)	As needed	As needed	NA	NA
	Low Priority Sites (Total = 148)	As needed	As needed	NA	NA
D.3.c Stationary Commercial	High Priority Sites (Total Listed = 201)	# Sites targeted for inspection	# Sites inspected	Actual/Target	%
		201	199	199/201	99
	Low Priority Sites (Total Listed = 750[1])	As needed	NA	NA	NA

[1] 333 commercial facilities included in the commercial inventory for FY 2010-2011 were mobile businesses that are regulated differently from other businesses. The Municipal Permit does not require annual inspections of mobile businesses.

The following features distinguish the industrial/commercial component of the City's JURMP:

Integrated and Balanced Approach

With a dedicated Storm Water Compliance Inspection staff, industrial and commercial facilities are effectively regulated. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme. Further, Public Works maintenance and landscape crews, whose working environment is in the field, have been trained and educated in storm water pollution prevention, and they report any observed illegal activities or discharges. As such, they are considered the "eyes and ears" of the Storm Water Management Section.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City of Chula Vista defines the residential component of the City's JURMP. Any small changes in behavior of residents are magnified due to the effect of numbers. As such, the Storm Water Management staff has sought to achieve continued success in the reduction of pollutants from residential areas through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types associated with such activities. The Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality. Table 11-5 shows the quantity of Household Hazardous Waste and used oil collected from residents in the City of Chula Vista for FY 2010-2011. The significant quantities collected in HHW can be attributed to an aggressive effort by the City on residential outreach and educational efforts. Similarly, the quantity of used oil collected showed an increase of 20% over the previous Fiscal Year, which is an indication of the effectiveness of the program.

Table 11-5 FY 2010-2011 Compliance with Activity-Based Requirements – Residential

PERMIT SECTION	ACTIVITY/ SOURCE TYPE	TARGETED ACTUAL FY 09-10	ACHIEVED ACTUAL FY 10-11	MEASURE OF SUCCESS	
				Actual/Target	%
D.3.c Residential	Household Hazardous Material	294,217 lbs	412,706	412,706/ 294,217	140
	Used Oil	23,560 gallons	28,732 gallons	28,732/23,560	122
	Used Oil Filters	-	9,122	N/A	N/A

Residential Program Strengths:

Pollution Prevention

Various pollution prevention programs offered to residents strengthen the City's residential component. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, oil filters, green waste, recyclables, used cooking oil, household hazardous waste, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

Residential Outreach and Education

The City continued to focus significant resources on residential outreach and education efforts in 2010-2011 and constantly endeavored to devise different avenues in reaching the public. While

these activities are more fully described in Section 7.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

Residential Program Improvement Areas and Challenges:
Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts with various City entities such as the Chula Vista Nature Center, the Conservation Department, the Regional Used Oil Recycling Program, and Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Management Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

While the City continuously strives to improve its JURMP implementation program, it has not identified specific management measures by which to improve education and public participation activities. The Clean Business program was the latest measure added in our public participation activities. The City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

Education and Public Participation Program Strengths:

Environmental Program Collaboration
As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous environmental programs within the City. As such, the Storm Water Management Program has been able to reach more diverse audiences and participate in a greater variety of public participation venues. This collaboration of programs that culminated in the creation of the CLEAN program has resulted in clear and consistent messaging to Chula Vista residents and has reinforced City's resources toward more effective and holistic environmental programs.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. Through the collaboration of environmental programs such as conservation, household hazardous waste collection, recycling, and storm water management, citizens receive consistent and interrelated messages, and participate in activities that demonstrate various facets of environmental protection. Such coordinated public education and participation programs have

far reaching and lasting effects that ultimately result in general acceptance of environmental concepts and changes in behavior. It has been recognized that the interrelationship of each of these programs collectively, is integral to the overall success of each of these programs individually. Finally, the City is fortunate to have the Chula Vista Nature Center to showcase the San Diego Bay and to provide tangible access to the resources the community is called to protect.

Internal Staff Training

Through formal or informal training, meetings or individual contact, staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

Chula Vista CLEAN Program

The City continued to take significant steps to further implement an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment and a sense of ownership to the community's environment, water resources and watershed.

Education and Public Participation Program Improvement Areas and Challenges:

Education of the Development Community

The recently updated Model SUSMP, which was incorporated in the City's local SUSMP required extra efforts by City staff, developers, and consultants. The development community, which was used to meeting water quality requirements of their projects by mainly incorporating mechanical treatment BMPs in their drainage systems, was now faced with LID and hydromodification requirements. LID principles are based on site planning for the minimization of impervious areas, utilizing landscaped areas for the benefit of water quality, water conservation, and other natural site design BMPs that mimic the pre-development hydrologic conditions of the site. Integrated Management Practices (IMPs) combine the benefit of natural treatment and flow attenuation methods to both treat runoff and mimic pre-development hydrology by reducing runoff flow peaks and durations.

LID concepts require site planning at the earliest stages of the project conception. A change in perspective and a closer cooperation between architects, planners, and engineers, as well as cross training among these groups are needed. Because of these reasons, and the inevitable fact that normally there is reluctance to change acquired habits and established procedures, City staff faced the challenge of reviewing multiple submittals and meeting with project applicants, on occasions several times, before acceptable site plans were achieved. Through regional and jurisdictional efforts, developers and consultants are becoming familiar with the new requirements and are making the necessary adjustments to incorporate LID principles into their project plans. After the issuance of the current Municipal Permit, the Storm Water Management

staff expanded its inspections and enforcement of post-construction BMPs to ensure BMP implementation and maintenance on development projects, often exceeding minimum requirements of the Permit. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

Table 11-6 Compliance with Activity-Based Requirements – Education and Public Participation

PERMIT SECTION	ACTIVITY/ SOURCE TYPE	TARGETED OUTCOME	ACTUAL	MEASURE OF SUCCESS

11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program, all support this critical programmatic element. To date, the City of Chula Vista has completed two rounds of surveys designed to measure public awareness of various storm water quality related issues. The surveys are intended to measure the level of knowledge and associated behavioral change. During the reporting period, the City provided a wide cross-section of information through the interrelationship of various environmental programs. The City was able to significantly impact the level of knowledge and awareness within the community through its continued efforts in influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Hotline Call Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years, as these indicators become more wholly developed and additional data is collected; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only

indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

Hotline Call Response Tracking

A comprehensive hotline call response summary is presented in Attachment L – Hotline Call Response Summary. It is important to note that trends in hotline calls received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of hotline calls from FY 1998-1999 to FY 2010-2011. The high level of public participation in reporting illegal discharges can be attributed to two elements, 1) the expanded effort by the City in its public education and outreach that gained substantial increase in public awareness of various storm water quality issues, and 2) publicity of the hotline and its ease of access. It may be inferred that overall programmatic influences are strong throughout the community.

Figure 11-2 Chula Vista Storm Water Hotline Call Summary 1998-2011

Business License Application Screening Procedure

The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants,

Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

The City continued to utilize the regional mobile business database website. The website includes a compilation of all approved mobile business applications in the region, which is categorized by jurisdiction. The creation of regional source inventory is a significant improvement in mobile business database management, which can provide essential information in monitoring and tracking mobile business activities in the entire region.

Storm Water Web Site

The City's CLEAN website development and update continued into 2010-2011. This site offers valuable information to Chula Vista residents and businesses and is intended to facilitate public education on environmental issues, including storm water. The website also provides a means for residents to report illegal discharges to storm drain systems. Due to technical constraints, it is not possible at this time to count the number of people accessing the website. It is hoped that this technical difficulty will be overcome in the future in order to provide a method to assess the usefulness of the website. In the meantime, Storm Water Management Section will continue to resort to other means of assessment such as surveys.

Development Review Process

During the current reporting period, the City continued implementing the environmental review process for all development and redevelopment project submittals. The City's JURMP includes a comprehensive flow chart to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. Through the required submission of Water Quality Technical Reports (WQTR) for Priority Development Projects; subsequent review by City staff; and project pre-construction meetings, in 2010-2011 a notable increase in knowledge and awareness within the development community was observed. The level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with SUSMP requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. A detailed description of the review process has been discussed in section 2 of this report. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, including Low Impact Development and hydromodification, and will continue to take this approach in future reporting years.

11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

During this reporting period, the City continued to implement BMP tracking measures into various components as reviewed in this report. It has been recognized that through the implementation of well-developed BMP tracking measures, the City is able to more fully evaluate BMP implementation and associated behavioral change. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation
- Survey

Inspection Activities
As discussed in applicable sections of this report, the City has developed comprehensive commercial, industrial, municipal, and construction inspection programs. It is through these well-developed inspection programs, that the City is able to utilize BMP implementation tracking and assessment mechanisms.

In the reporting year 2010-2011, the Storm Water Management Section continued to use the GBA database management system to track source inventories, inspection activities, and other data relevant to the assessment of storm water management programs. The use of the GBA was expanded and refined to better serve the purposes of the new Municipal Permit. Through this database program, Storm Water Management staff is able to view the historical activities such as inspections and violations of commercial, industrial, municipal, and construction sites. Further, in support of BMP selection and evaluation throughout various community sectors, staff uses the inspection forms that were developed in FY 2005-2006. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities are intended to provide fully developed BMP implementation tracking mechanisms.

Based on data gathered from such activities, the City is able to take a critical look at BMP selection and implementation Citywide, and be able to evaluate behavioral change within business communities and further validate effectiveness trends in years to come.

SUSMP Implementation
Within the development community, implementation of post-construction BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

Survey
To date, the City has conducted two rounds of surveys and intends to conduct similar surveys in the future at intervals of 3 to 5 years. The survey questionnaire includes 11 questions designed to measure public awareness of various storm water quality related issues and their relationship to behavioral change. The survey administered in 2005 served as a general baseline for comparison. Although the survey in general is an assessment of public awareness, a few questions were designed to measure behavioral change. The focus of the survey was residential behaviors related to auto maintenance, landscaping, pet care, and swimming pool maintenance. Overall, results show that residents are aware of pollution prevention methods to protect waterways. Results show that some improvement can be made by educating residents about watersheds, the difference between the storm drain and the sewer system, and on BMPs for vehicle washing. Results suggest that although residents know in general how to prevent

pollution, they still may not know the fundamentals of why they should prevent pollution. The City will take this knowledge and use it to better focus its education program.

11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-7 are focused on municipal functions and programs.

Table 11-7 FY 2010-2011 Load Reduction

ACTIVITY/FUNCTION	LOAD REDUCTION	POLLUTANT TYPE
Used Oil Recycling	28,732 gallons	Motor Oil
Household Hazardous Waste Collection	412,706 pounds	Antifreeze, Oils, Paints, Aerosols, etc
MS4 Maintenance	5.69 tons	Trash, Debris, Leaves, Grass, Rock, Silt
MS4 Catch Basin and Inlets	18.61 tons	Trash, Debris, Leaves, Grass
Channel Maintenance	97.54 tons	Trash, Debris
Street Sweeping	1,000 tons	Trash, Debris, Sediment

11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators and nitrate are the persistent constituents of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses. Nitrate is commonly associated with landscaping activities and groundwater intrusion. Notably, the City continued its special investigation this reporting year to learn more about the sources of nitrate within the City, particularly those areas that show a consistent flow of groundwater into the storm drain system. Based on the findings of the study, it has been determined that groundwater intrusion into surface and underground storm drain conveyance systems is the main source of elevated nitrate levels in MS4 discharges.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program

- A comprehensive storm water conveyance system maintenance
- Street sweeping
- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that a number of pollutants are on a declining trend in this reporting period. Particularly, significant decreases in Total Coliform and Fecal Coliform are encouraging. These results can be interpreted as follows:

The City maintained its expanded public education and outreach in this reporting period. This effort was aimed at increased awareness and changes in public behavior. Based on current and past results from the dry-weather monitoring program, and past violation reports, specific residential areas that were identified as High Threat To Water Quality (HTTWQ) were targeted for disseminating educational materials specific to the type of pollutants and violation activities. Moreover, the implementation of BMPs as described above is considered effective in deceases in fecal coliform and total coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. Further, due to the slowdown in construction activities, creation of urban impervious areas slowed down during the reporting period, which may also contribute to decreased instances of observed pollutant discharges. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout an extended period of time. The recently submitted ROWD and LTEA include more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

• Special Investigations

Section 12.0

12.0 SPECIAL INVESTIGATIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.

12.1 SELENIUM SPECIAL STUDY

In November 2010, the USEPA approved the 2008-2010 303(d) list for the San Diego Region. Table 12-1 shows the pollutant/waterbody combinations within or adjacent to the City. Both Poggi Creek and Telegraph Canyon Creek, listed for toxicity and selenium, respectively, are located entirely within the City of Chula Vista. The lower section of Sweetwater River, below the impoundment (Sweetwater Reservoir), is 303(d) listed for a variety of pollutants. The Cities of San Diego, Chula Vista, National City, Lemon Grove, and La Mesa, as well as the County of San Diego discharge into the Lower Sweetwater River. As a proactive measure, the City, with the help of a consultant, initiated a special study to further investigate selenium concentrations in Telegraph Canyon Creek and augment data collected by the Regional Board as part of the SWAMP monitoring program. The City decided to give priority to selenium due to the fact that exact pollutant(s) causing toxicity within Poggi Canyon Creek and Sweetwater River have yet to be determined through regional monitoring studies. Similar studies for the Sweetwater River will have to be conducted with cooperation from all Copermittees contributing to flows in the Sweetwater River as a collaborative effort.

Table 12-1 2008-2010 303(d) Listed Waterbody-Pollutant Combinations In or Adjacent to Chula Vista

WATERBODY	POLLUTANT
Poggi Canyon Creek	Toxicity
Telegraph Canyon Creek	Selenium
Sweetwater River, Lower (below Sweetwater Reservoir)	Enterococcus
	Fecal Coliform
	Phosphorus
	TDS
	Total Nitrogen as N
	Toxicity
	Selenium

Four sites within Telegraph Canyon Creek were sampled during the reporting period. Preliminary results have been contradictory, with total selenium concentrations being lower than the dissolved fraction concentrations. The City is working with the lab to determine why this result was obtained. The City is also doing more literature reviews about selenium to research potential sources of selenium and to look at selenium studies done in other regions.

The City will continue this long-term special study to characterize selenium within Telegraph Canyon Creek in order to obtain statistically significant data. Potential future directions for selenium studies involve working with other dischargers within Sweetwater River.

• Non-Emergency Firefighting

13.0 NON-EMERGENCY FIRE FIGHTING

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.

13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods are used to reduce the discharge of pollutants to the MEP. BMPs are implemented when conducting the activities described in the following sections:

13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff can be directed to the sanitary sewer system.
- Vehicles and equipment are cleaned where runoff can pond and evaporate and/or where runoff filters through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

13.2.2 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When water flows to an area where landscaping does not prevent runoff, the Officer-in-Charge surveys the area prior to training activities to ensure that drill activities do not wash debris or sediment to storm drain systems.
- Prior to drill activities, debris is removed from downstream areas that could potentially discharge to storm drain systems.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.

13.2.3 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept regularly to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and the disposal of spilled materials is in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site personnel are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

13.2.4 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods cannot be identified. In such cases, BMPs are used to control water usage and effluent flows to prevent discharges to MS4s.

13.2.5 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory (See Attachment C). Such facilities are inspected on an as needed basis. Only one fire station (Fire Station No. 4/Training Tower) has training capabilities. This facility is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter
- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism, which diverts the wash water to the sanitary sewer system and rainwater to storm drain systems.

All personnel who conduct washing activities are properly trained on using the diverter device and ensuring it is used appropriately. Trucks that require cleaning from other stations are brought to the stations equipped with washing capabilities.

As part of the City's enforcement program, during this reporting period Station #2 was issued an Administrative Citation for failing to implement BMPs to prevent the discharge of wash water into the storm drain. Station staff was subsequently provided additional training to prevent any future discharges.

• JURMP Revisions

Section 14.0

14.0 JURMP REVISIONS

MUNICIPAL PERMIT REQUIREMENTS:

Permit Section J.3.a.(3)(m)i – A description of any proposed revisions to the JURMP.

The following paragraph details proposed updates to the City's JURMP.

APPENDICES

Since the City's JURMP document was developed and submitted to the Regional Board in March 2008, the JURMP Appendices have been updated, as needed, and have been included in the JURMP Annual Reports as Attachments. During the current reporting period, the inventories of construction sites; municipal, commercial, and industrial facilities and activities; and Priority Development Projects with treatment control BMPs were updated. These inventories are included in Attachments A to E of this report.

- Conclusions
Recommendations

15.0 CONCLUSIONS

The present report is an accounting of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2010 to June 30, 2011. It has been prepared in compliance with the requirements of the San Diego Regional Water Quality Control Board's Order No. R9-2007-0001, National Pollutant Discharge Elimination System Municipal Permit No. CAS0108758. The report format follows the regional standardized reporting format developed by the Copermittees as required under Section M.6 of the Municipal Permit.

Section 10 "Fiscal Analysis" of this report follows the guidelines provided in the Standardized Fiscal Analysis Method and Format dated January 29, 2009, which was developed by all Copermittees pursuant to the requirements of Section G.3 of the Municipal Permit.

Submittal of Section 7 "Illicit Discharge Detection and Elimination Component" has been deferred to December 15, 2011 as permitted by Addendum No. 2 to Order No. R9-2007-0001. The Regional Board issued Addendum No. 2 in recognition of the fact that field screening and analytical monitoring work could continue to the end of September of each year, and time was required to complete, finalize, and submit the required reports.

As can be construed from the contents of this report, during the reporting period of July 1, 2010 to June 30, 2011, the City of Chula Vista met, and in some cases exceeded, implementation requirements of the Municipal Permit and the City's JURMP.

DEVELOPMENT PLANNING

A notable activity during the current reporting period was the update of the City of Chula Vista Development Storm Water Manual in January 2011. The Manual includes the City's local SUSMP. The updated Manual incorporates the requirements established under the updated regional Model SUSMP and the Final Hydromodification Management Plan. No further SUSMP updates are required under the current Municipal Permit cycle.

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP. The 2010-2011 Fiscal Year marked one of the lowest number of private development applications. Although there were a few major development projects under review by the City, only a handful of small projects received construction permits.

The City mailed out post-construction treatment control Best Management Practices (BMPs) maintenance verification letters and forms to responsible parties and followed up to ensure that they were duly certified and returned. Inspections of post-construction treatment control BMPs were conducted on privately maintained facilities. Of all the projects listed as having treatment control BMPs, 48% were inspected, which exceeds Permit requirements of 20%.

Further emphasis was placed on the practice of Low Impact Development site design BMPs. Developers and consulting engineers were encouraged and required to incorporate such BMPs in their site design as much as site conditions permitted. In January 2011, the hydromodification

control requirements went into effect. However, due to the slump in building construction, very few projects that qualify under this requirement have their project submittals under review by City staff.

CONSTRUCTION

The Construction Component of the City's JURMP primarily included inspections of construction sites for BMP implementation. The City successfully conducted all inspections on private and public construction sites and resorted to enforcement action where necessary to bring violating sites into compliance with the requirements of the City's storm water management and grading ordinances. Notices of Violation were issued when necessary. During the reporting period, the majority of graded construction sites remained inactive. Responsible persons for such sites were contacted and they were required to repair and maintain their erosion and sediment control BMPs. The number of construction inspections conducted during the reporting period meets and exceeds the minimum requirements included in Section D.2.d of the Municipal Permit.

MUNICIPAL

The Municipal Component of the City's JURMP primarily includes implementation of BMPs on all City owned facilities and activities. During the reporting period, the City ensured BMP implementation through staff training and inspections. All high priority municipal facilities and some low priority facilities and activities were inspected during the reporting period. The City also conducted street sweeping, storm sewer system maintenance, and sanitary sewer system maintenance as source control preventive measures. Wastewater capture was implemented during graffiti removal, Integrated Pest Management practices were implemented during landscaping and parks maintenance, and waste management activities were conducted after each special community event. In Fiscal Year 2010-2011, the City achieved all its inspections, training, and BMP implementation goals under its JURMP Municipal Component.

INDUSTRIAL AND COMMERCIAL

The Industrial and Commercial Component of the City's JURMP constitutes a major section of its storm water management program. City staff conducts industrial and commercial inspections and provides one-on-one training to business owners and managers throughout the City. During the current reporting period, at least 25% of all inventoried commercial and industrial facilities were inspected as required by the Municipal Permit.

Mobile businesses applying for business licenses were directed to the Storm Water Management Section for training and signing of a certification statement to the effect that they are familiar with the City's storm water regulations and would implement BMPs appropriate to their line of business at all times. An inventory of such businesses is included in Attachment D3 of this report.

RESIDENTIAL

The City has developed the residential component of the JURMP based upon a multi-faceted approach, including pollution prevention; hotline response and enforcement; and outreach and education. The City collects and analyzes information about various aspects of observed and reported violations from multiple sources to identify high-priority residential areas and activities. Such areas and activities are then targeted for public education and outreach. During the current reporting period the number of hotline calls remained relatively high, which can be indicative of the public awareness of storm water regulations and the relative ease of reporting.

During the reporting period, various programs under the City's residential component continued, including 1) Household hazardous waste collection center, 2) State-certified used-oil collection center, 3) Household collection of used oil, 4) Christmas tree recycling program, 5) Residential complaint response and enforcement, 6) Residential door hangers, and 7) City's environmental website.

PUBLIC EDUCATION AND OUTREACH

The City of Chula Vista has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses and activities. As such, the City places great importance on its education and outreach programs. During the reporting period, City staff organized or participated in several training and educational events.

The CLEAN group continued its activities toward its mission: "Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation." CLEAN group activities included media articles, school education efforts, community events, and Chula Vista Nature Center presentations and field trips.

City staff provided public education to industrial, commercial, and construction communities by one-on-one contact and on-site training. Business owners and managers, and construction site personnel were trained based on their specific site conditions and pollutant generating activities.
The City's storm water management program is based on the concept of continuous improvement through iterative goal setting, implementation, and assessment cycles. This process requires identifying measurable goals at the beginning of the process, followed by implementation of tasks, and then assessment and comparison of results with identified goals. This illustrates the importance of assessment in any storm water management program.

PROGRAM EFFECTIVENESS ASSESSMENT

During the reporting period, the City of Chula Vista continued using the methodology developed in the regional document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs." Assessment tools such as assessment of activity based results, surveys, and dry weather monitoring results were used to arrive at acceptable conclusions. Higher levels of assessment such as changes in discharge quality and receiving water quality were deemed to be beyond the scope of jurisdictional programs and, therefore, delegated to regional research and analysis such as the Regional Monitoring Program, Long-Term Effectiveness Assessment, and the Report of Waste Discharge.

Assessment results indicate that during the Fiscal Year 2010-2011, the City of Chula Vista met all its measurable goals for program element implementation. Dry Weather monitoring indicates that the majority of pollutants of concern show decreasing trends, while some still pose a challenge. In particular, nitrate and bacterial indicators appear to pose persistent problems, which the program should focus on.

FISCAL ANALYSIS

A successful storm water program would require adequate funding. During the current reporting period, the City of Chula Vista made such funds available through various sources including the general fund, storm drain fee, sewer fee, special assessment district fees, etc. There were other City programs designed to serve multiple objectives, including storm water pollution prevention, such as wastewater collection system maintenance, household hazardous waste management, etc. While those programs were originally intended to serve other goals and objectives, they, directly or indirectly, help the City's storm water management program by reducing sources of pollution and preventing pollution from reaching receiving waters. Where cost analysis is available for such programs, they have been included in Section 10 of this report.

Additionally, the City contributed its share to watershed and regional activities, which is identified in the Fiscal Analysis included in Section 10 of this report.

As the City of Chula Vista continues its efforts toward environmental protection in general and water quality improvements in particular, its storm water management program becomes more refined and a part of a more holistic sustainability program.

Attachment D.2 - Additional Information for Industrial and Commercial Inventories

Facility Name	Address Number	Street Name	Street Designation	Potential Pollutants									GIS	
Name used to identify facility in database	Street number of facility, this is the numeric street address	Name of street facility is located on.	**NOTE:** Chula Vista Database has separate column for street designation	Potential pollutants that may be generated by the facility. A facility can be identified as having more than one pollutant. Each Copermittee shall use best professional judgement to determine potential pollutants for each facility. Copermittees may elect to use "likely" or "unlikely" rather than "yes" or "no" for valid entries.									The following fields are optional. The purpose of these fields are to supply a coordinate system for the purposes of GIS mapping.	
				Bacteria	Oxygen Demanding	Metals	Nutrients	Oil & Grease	Organics	Pesticides	Sediment	Trash	Latitude / Longitude (Decimal Degrees) NAD 83
