Update inventory for treatment control BMPs	Updates made to inventory and maintenance verified at all but one location	The Environmental Division maintains an inventory of treatment control BMPs and ensures annual maintenance compliance through notification through annual letters, inspections, and contact with property owners.
LEVEL 1b OUTCOMES (IMPLIMENTATION OF MANAGEMENT PROGRAM ACTIVITIES)		
a) Jurisdictional Requirements for Project Approval		

Development Planning FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Require development projects to implement applicable project requirements, BMPs, and track information	Plan check for storm water is required for all development projects (discretionary, CIP, and priority projects)	All development and redevelopment projects are required to implement measures to reduce pollutants and runoff to the MEP. The City's project review process further requires that any new construction or modification with a valuation more than $50,000 be subject to public improvements. Projects that meet the $50,000 criterion are routed from the Community Development Department to the Public Works Department for a review in regard to storm water quality public improvements. SUSMP projects are also required to implement additional storm water management controls and BMPs. SUSMP projects are reviewed by Community Development, Public Works, and contract Engineer BDS for compliance with all storm water regulations. All project applications are tracked through the permit approval process and recorded in HTE, excel databases, and Master File system.
b) Confirmation of SUSMP and HMP BMPs		
Verify that all applicable SUSMP and HMP BMPs are applied to priority projects and that the BMPs are inspects prior to occupancy	All SUSMP eligible projects were held to full SUSMP requirements and verified through inspections during construction and prior to occupancy. No projects required HMP interim criterion.	Four SUSMP high priority project (MF 1003, 1072, 1062, and 1034) received a final plan check and was approved for a building permit during the reporting period. Storm water BMPs for priority projects receives review from Public Works, Community Development, and City contract Engineer for SUSMP compliance. BMPs are then verified during construction through field inspections. The final sign off on the project is not complete until the City receives a signed maintenance agreement for continuous maintenance of the BMPs from the property owner.
c) Example of a Priority Development Project and SUSMP BMPs		
List one example of a priority development project that was conditioned to meet SUSMP requirements	New Church Development (MF 1003)	Construction of a new church at 853 Emory St commenced this reporting period. The SUSMP component of the project received multiple reviews and comments from Community Development, Public Works, and contracted engineering firm BDS prior to the issuance of construction permits. The project is required to implement LIDs and source control BMPs and provide a post construction BMP maintenance agreement. The project site treats storm water runoff through a system of bio swales and retention areas. Weekly inspections will ensure that the site is built according to approved plans.
d) Priority Development Projects implementing BMPs with low removal efficiency rankings		

Development Planning FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Listing and feasibility analysis of SUSMP projects using BMPs with low removal efficiency rankings	No projects implemented BMPs with low removal efficiency rankings	Development projects are required to implement BMPs that target priority pollutants. The selection of BMPs is verified during the plan check process. The City only allows less efficient BMPs after a feasibility analysis proves there is no better alternative.
e) HMP and SUSMP Collaboration		
Description of HMP and SUSMP development and collaboration	Collaborated through the Land Development Workgroup	The City participates in the Copermittees' Land Development Workgroup on technical discussions related to the regional implementation of the SUSMP and HMP. Collaboration was made on the implementation of the HMP monitoring requirements.
f) Municipal Staff Training		
Ensure that municipal staff are knowledgeable on storm water BMPs, SUSMP, and HMP requirements	Staff educated through meetings, workshops, and training	Community Development and Public Works Departments meet weekly to review critical issues including storm water project development requirements. In addition the Planning Division, Building Division, Code Compliance Division, Redevelopment Division, and Environmental Division all received training outside the City on multiple storm water issues. Training topics include SUSMP, HMP, TMDLs, General Construction Permit, and code enforcement. Daily interaction with City staff ensures that storm water pollution prevention remains a high priory throughout the City.
g) Developer Education		
Provide education for developers	Counters hours held and meetings conducted during project review and throughout project	The Community Development Department held counter hours, face-to-face meetings, project review meetings, and performed inspections throughout the reporting period. Educational material is also available online, at City Hall, Public Works, and provided during building application process.
h) Special Investigations		
Implementation of special investigations	No special jurisdictional investigations performed	Special investigations are not routinely conducted as part of the implementation strategy for jurisdictional development planning. Special investigations are generally performed under the context of the Regional Program in order to achieve maximum benefit.
LEVEL 2 OUTCOMES (KNOWLEDGE AND AWARENESS OF PROGRAM IMPLEMENTATION BY STAFF AND DEVELOPERS)		

Development Planning FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Increase staff and developer knowledge regarding applicable program content	Provided opportunities for education	See Education Component Section 8.0.
LEVEL 3 OUTCOMES (BEHAVIORS AND BMP IMPLEMENTATION BY STAFF AND DEVELOPERS)		
a) Procedural and Administrative Behaviors		
Review projects and prescribe necessary conditions and BMPs for approval	142 discretionary projects, 2 CIPs, and 4 SUSMP project reviewed for conditions of approval	The City reviews all proposed projects and ensures that all necessary conditions and BMPs are met for CIP, discretionary projects, and priority projects. The City inspects and verifies that all BMPs and project conditions are implemented during construction. Successful completion of development projects will improve storm water quality through the implementation of site BMPs, which also contributes to the incremental change in community behavior towards reducing storm water pollution.
b) BMP Implementation, Operation and Maintenance		
Inspect projects for BMP compliance and verify BMP implementation	142 discretionary projects, 2 CIPs, and 4 SUSMP Project reviewed and received project conditions All active projects inspected for BMPs	The Building Division, Code Enforcement, Environmental Division, and Public Works Inspector conduct inspections at active development projects for compliance of minimum BMPs. The Public Works Inspector conducts inspections at all CIP projects daily. The Building Inspector conducts inspections of all Discretionary permit projects and ensures the implementation of BMPs for SUSMP projects. Code Enforcement and Environmental Division also respond to reports of storm water violations from development projects. Construction inspections of Discretionary Projects are covered in the next Section of this Annual Report.
Verify operation and maintenance of treatment control BMPs	100% of all high priority BMPs verified and19 out of 22 BMPs verified.	The City annually verifies operation and maintenance of treatment control BMPs to ensure compliance with program. Verification is made through written contact with property owner or manager and often followed up with an inspection. At a minimum all high priority treatment control BMPs are inspected for operation and maintenance annually but the City usually tries to verify operation at every site. The three BMPs not confirmed during this reporting period were from a non-responsive property owner at one site.
LEVEL 4 OUTCOMES (SOURCE LOAD REDUCTIONS FROM NEW DEVELOPMENT AND REDEVELOPMENT PROJECTS)		
a) Treatment Control BMPs		

Development Planning FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Maintenance of treatment control BMPs	120 pounds of material removed from treatment control BMPs	The City verifies maintenance of treatment control BMPs and when possible tracks the amount of material collected during maintenance activities.
b) Low Impact Development (LID) and Site Design BMPs		
Implement LIDs, site design BMPs, and treatment control BMPs	High priority projects are required to implement BMPs	During the project review the City requires LIDs, treatment control BMPs, and site design BMPs for high priority projects. No high priority projects completed construction during the reporting period and therefore no additional BMPs were added to the treatment control BMP inventory.

Table 2.3 Treatment Control BMP Inventory and Maintenance Tracking

3.0 CONSTRUCTION COMPONENT

3.1 Introduction

The City endeavors to reduce pollutants and runoff from construction sites to the MEP. This component is primarily applicable to the Community Development Department, the Capital Improvements Projects Division, the Environmental Division, and requirements that apply to the Building and Planning Division activities related to construction and construction permits, and compliance actions proposed by the City. This section of the Annual Report discusses program management, implementation, and changes made during FY 2011-12 to the JURMP Construction Component.

3.2 Outcome Level 1a: Administration of Management Program Activities

The City's implementation and assessment strategy for the Construction component is described in the *2008 JURMP Section 5.0*. The City maintains an ongoing database of active construction projects and tracks inspections though the City's database software HTE. During the reporting period the only notable change in the administration of active construction projects was the implementation of the new Construction General Permit, which required education of staff and new procedures for the management of capital improvement projects.

3.3 Outcome Level 1b: Implementation of Management Program Activities

The City requires all construction projects to implement site control BMPs that reduce pollutants and runoff to the MEP. The designated minimum BMPs for construction projects are listed in the *2008 JURMP Section 5.0* and are required as project conditions prior to the approval and issuance of local construction and grading permits. All construction projects are formally inspected throughout the duration of the project to ensure adequate implementation and maintenance of BMPs. During the rainy season all priority projects were inspected at least biweekly, medium priority sites were inspected at least monthly, and low priority projects were inspected as needed. During the dry season, all construction sites were inspected as needed.

The following tables and figures presented in this section provide additional information on the implementation and assessment of the Construction program element:

- Table 3.1 provides an overview of the Construction element as it was implemented during FY 2011-12.
- Table 3.2 presents and describes targeted FY 2011-12 outcomes and results
- Table 3.3 FY 2011-12 active construction inventory and inspection frequency

3.4 Outcome Level 2: Knowledge and Awareness of Program Implementation by Staff and Contractors

Education is provided to contractors through face-to-face interaction with City staff in meetings, through inspections, and through several local ordinances, storm water forms, and brochures that outline the requirements for addressing urban runoff, BMP implementation, and water quality. Additional training was provided to staff during this reporting period on the implementation of the new Construction General Permit. The education effort for City staff is discussed in the *2008 JURMP Section 10.0.*

3.5 Outcome Level 3: Behaviors and Best Management Practice (BMP) Implementation by Staff and Contractors

The City facilitates changes in behavior and implementation of BMPs at construction sites by working with developers and private residents to ensure that all projects meet the requirements of the Regional Permit. Prior to the issuance of construction and grading permits the City requires applicants to submit design plans that reduce pollutants and runoff to the MEP, develop a Project Storm Water Management Plan, and obtain coverage if necessary under the General Construction Permit. The City also inspects projects and enforces storm water ordinances at all construction sites. Project applicants are made aware of the storm water requirements multiple times in the development planning process and then follows up with inspection and enforcement of storm water BMPs during the construction phase. The *2008 JURMP Section 5.0* provides more information on the procedural and administrative mechanisms in the City that promote behavioral changes. The *2008 JURMP Appendix D* defines minimum BMP requirements applicable to construction in the City.

3.6 Outcome Level 4: Source Load Reductions

The primary goal of BMP implementation is to reduce the loading of pollutants and runoff to storm water discharges. During the reporting period the City successfully implemented all program requirements for implementing and inspecting BMPs to control runoff sources related to construction activities. Source load reductions were achieved at construction sites by implementing erosion and sediment control, requiring minimum BMPs, and enforcing general site management requirements. The City required 71 active construction projects, 2 SUSMP project, and 9 Capital Improvement Projects to reduce pollutants and runoff to the MEP. Compliance with required minimum BMPs were then verified through 746 site inspections. Source load reductions may not be directly measured but can be implied by the proper implementation and maintenance of storm water BMPs on construction sites.

Table 3.1 – Overview of Construction Inventory by Priority Classification

Category	Number	Description
A. Type of Active Construction		
Discretionary Projects	71	Most projects in the City are low priority discretionary projects. The City only had two active SUSMP projects that included the new Sea Coast Inn along the beach front and new church building over an acre. Capital improvement projects that were active during the year are also reported in this section.
Capital Improvement Projects (CIP)	13	
SUSMP Development Projects	2	
B. Priority Classification		
High Priority Projects	1	High priority projects are projects that are over 1 acre in size and tributary to 303(d).
Medium Priority Projects	9	Medium priority projects include CIP projects during the wet season and discretionary projects over one acre in size.
Low Priority Projects	61	Most development projects in the City are categorized as low priority.
C. Totals		
Construction Projects	71	The City had two active SUSMP projects in construction during the reporting period. All other active construction projects were discretionary in nature or capital improvements.
Priority Development (SUSMP) Projects	2	

JURMP Sections	Description of FY 2011-12 Changes
5.0 and Appendix D	No substantive changes were made to the Construction component of the JURMP during the reporting period. Internal management and administrative changes were made in order to adapt to the new regulations in the General Construction Permit.

Table 3.2 - Construction Component Targeted Outcomes and Results

Construction FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
LEVEL 1a OUTCOMES (ADMINISTRATION MANAGEMENT PROGRAM ACTIVITIES)		
a) Modifications to JURMP		
Update applicable JURMP sections per new Permit requirements	No updates made during FY 2011-12	No updates made to the JURMP this reporting period. Internal procedural updates were made to the management of capital improvement projects with the implementation of the new General Construction Permit.
b) Updates to Program Documentation (Policies, Plans, Procedures, and Forms)		
Update program documentation for consistency with program updates	No updates made during FY 2011-12	No programmatic changes during the reporting period.
c) Year-End Program Review		
Complete annual year-end program review	Review program for effectiveness and efficiency	The City continues to improve the implementation of the JURMP by conducting an annual review of each component and incorporating any modifications into the next reporting period. The use of the Environmental Division's new field computer allowed for improvements in efficiency while performing inspections and ICID response.
d) Inventory of Construction Projects and Inspections		
Update inventory for construction projects and track inspections	Updates made to the inventory throughout the reporting period and inspections tracked	An inventory of construction projects and inspections is maintained on the City's database software HTE. Constructions site inspection records are also maintained on HTE. The Environmental Division also maintains an inventory of construction projects that require conditions from Public Works. An inventory of Capital Improvement Projects (CIP) is also maintained by the Environmental Division.
LEVEL 1b OUTCOMES (IMPLIMENTATION OF MANAGEMENT PROGRAM ACTIVITIES)		
a) Jurisdictional Requirements for Project Approval		

Construction FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Require construction projects to implement construction site BMPs	Completion of Storm Water Management Plans or verify SWPPPs as required conditions for all projects	All development and redevelopment projects are required to implement measures to reduce pollutants and runoff to the MEP. Development projects that received storm water review as part of the plan check process were presented in the previous section. Designated minimum BMPs for construction projects are listed in the *2008 JURMP Section 5.0*. Construction BMPs are verified through the Project Review process and during site inspections while construction is underway.
b) Confirmation of Urban Runoff Approval Process		
Require construction projects to have adequate project review for storm water and pollution control	All construction projects received the necessary project review before being issued City permits	Information on the City's project review and approval process is provided in the previous section of this annual report, in the *2008 JURMP Section 4.0,* and information on construction activities is provided in the *2008 JURMP Section 5.0*. Information on construction projects and inspections is tracked in the City's HTE database and by excel spread sheets. The summary of active construction projects and inspections during the reporting period in provided in Table 3.3.
c) Confirmation of Designated BMPs		
Verify that designated BMPs were implemented, or required to be implemented	Construction projects undergo project review before being issued City permits. Construction projects are inspected for BMP compliance.	Designated minimum BMPs are required as project conditions during the urban runoff approval process. Projects then receive inspections during the construction phase to verify the proper implementation of BMPs. Projects are inspected for adequate storm water construction BMPs and project design, and source control BMPs.
d) Confirmation of Maximum Disturbed Area		
Verify that maximum disturbed area for grading was applied to applicable construction sites	Apply conditions for maximum disturbed area during project review and verify through inspections	Project applicants are made aware of storm water requirements during the grading and construction permit application process. The grading permit specifies conditions to control the erosion of sediment off the property. Most projects in the City are under an acre in size and consist of redevelopment of existing structures.
e) Municipal Staff Training		

Construction FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Ensure that municipal staff are knowledgeable on storm water BMPs related to construction activities, SUSMP, and HMP	Staff educated through meetings, workshops, and trainings	Community Development and Public Works Departments meet weekly to review critical issues including storm water project development requirements. Monthly meetings are also held to discuss code enforcement related issues. Planning Division, Building Division, Code Compliance Division, Redevelopment Division, and Environmental Division all received regional training outside the City on multiple storm water issues. Daily interaction with City staff ensures that storm water pollution prevention remains a high priory.
f) Construction Contractor Education		
Provide education for contractors	Counter hours held, face-to-face meetings, education materials, contract documents, and inspections	The Community Development Department held counter hours, face-to-face meetings, project review meetings, and performed inspections throughout the reporting period. Public Works Department oversaw storm water compliance for the Capital Improvement Projects and provided education to contractors during meetings and inspections. Brochures and City website also provide additional information on proper BMP implementation.
g) Confirmation of Construction Inspections		
Inspect construction activities	The Building Inspector, Public Works Inspector, and Environmental Division conducted inspections for BMP compliance	All construction projects get formally inspected throughout the duration of the project. During the rainy season, all high priority sites are inspected at least biweekly, medium priority sites are inspected at least monthly, and low priority sites are inspected as needed. During the dry season, all construction sites are inspected as needed. The Public Works Department inspects all active CIP projects sites daily. The Community Development Department Building Inspector inspects discretionary projects that are not CIPs. The Environmental Division follows up on complaints and violations at construction sites.
h) Special Investigations		
Implementation of special investigations	No special jurisdictional investigations performed	Special investigations are not routinely conducted as part of the implementation strategy for the JURMP. Special investigations are generally performed under the context of the Regional Program in order to achieve maximum benefit.
LEVEL 2 OUTCOMES (KNOWLEDGE AND AWARENESS OF PROGRAM IMPLEMENTATION BY STAFF AND DEVELOPERS)		

Construction FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Maintain high level of staff knowledge regarding storm water program	Conducted annual municipal training, held weekly department meetings, and attended outside training events.	See Education Component Section 8.0.
Increase contractor knowledge regarding storm water program	Community Development and Public Works Departments provide education information to contractors	See Education Component Section 8.0.
LEVEL 3 OUTCOMES (BEHAVIORS AND BMP IMPLEMENTATION BY STAFF AND CONTRACTORS)		
a) Procedural and Administrative Behaviors		
Confirm active construction projects required conditions to protect water quality	All constructions projects (71) were reviewed for conditions of approval.	The City reviews and conditions all proposed projects to ensure all necessary conditions and BMPs are met before any construction permits are issued. Projects over $50,000 also get routed through Public Works for additional storm water BMP review. After a City permit is issued the project is in active construction phase and receives the necessary frequency of inspections for BMP compliance. Inspection frequency is based on high, medium, or low priority ranking. Storm water compliance is a component of every site inspection for both Community Development and Public Works.
b) BMP Implementation		
Inspect projects and verify BMPs	The Building Division conducted 170 BMP site inspections. The Public Works Inspector provided daily oversight at all CIP construction sites and performed 576 BMP inspections.	The City inspects and verifies BMPs at all projects to ensure compliance with storm water program. The Building Inspector, Public Works Inspector, Code Enforcement Officer, and Environmental Division share the responsibility of inspecting development projects and verifying BMP compliance.

Construction FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Verify construction sites with advance treatment	No construction sites required advance treatment	No construction sites during the reporting period required the implementation of advanced treatment for sediment control. The City requires all construction sites to implement BMPs to contain sediment on the property during all stages of development. Advance treatment is required for high threat to water quality projects.
c) Inspections for Wet and Dry Weather		
Identify active construction and inspection frequencies for wet and dry season	The City conducted 746 BMP site inspections and exceeded the required minimum inspection frequency	During the rainy season, all high priority sites are inspected at least biweekly, medium priority sites are inspected at least monthly, and low priority sites are inspected as needed. During the dry season, all construction sites are inspected as needed. Most development projects are redevelopment and are less than one acre in size. The City generally inspects construction sites more frequently than the minimum requirement. See Table 3.3 for inspection frequency per project.
d) Inspection Results		
Provide general inspection results	Conducted the necessary minimum BMP inspections at construction sites	Most contractors are aware of the storm water BMP requirements and properly implement BMPs. Problems arise during the wet season when heavy rain or wind results in the blowout of poorly implemented BMPs. The highest numbers of storm water violations are reported by observant City staffs who observe inadequate BMPs or illegal discharges.
e) Violations and Enforcement Actions		
Number of violations and enforcement actions to achieve compliance.	The City responded to 7 construction related storm water violations	Typical violations include improper washing of equipment, power washing, stock piles of sediment, and trash. Each enforcement case is different but generally involves a verbal or written warning, a notice of violation for a repeat offender or blatant illegal discharger, and a follow up investigation. The City issued 3 verbal warnings, 1 stop works, and 3 NOV. One example of enforcement was the redesign of the final site stabilization plan for the 9th and Palm demolition project after the existing BMPs failed during a storm event.
LEVEL 4 OUTCOMES (SOURCE LOAD REDUCTIONS FROM NEW DEVELOPMENT AND REDEVELOPMENT PROJECTS)		
a) Erosion and Sediment Control		

Construction FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Require erosion and sediment control BMPs	71 projects required installation of erosion and sediment control BMPs as required in their Storm Water Management Plan	The City requires installation of erosion and sediment control BMPs for all construction sites with a grading or building permit. Load reductions from construction sites can be implied through the proper implementation of BMPs.
b) Designated Minimum BMPs		
Require minimum BMPs for construction sites	71 projects required to implement BMPs. All permitted construction sites are required to implement minimum BMPs as required by IBMC	The City requires all construction sites to reduce discharges of pollutants to the MEP, and to prevent discharges from causing or contributing to a violation of water quality standards. Source load reductions from construction sites can be implied through the proper implementation of BMPs.
c) Addition Controls for CWA 303(d) Waters		
Additional BMPs for projects discharging directly to 303(d) waters	No projects required to implement additional controls for CWA Section 303(d) waters	The City requires additional controls to be implemented for Clean Water Act (CWA) Section 303(d) waters. Load reductions are not tracked but can be implied.

Table 3.3 FY 2011-12 Active Construction Inventory and Inspection Frequency

Project	Address	Total Insp.	Dry Weather Insp.	Wet Weather Insp.	Weeks Active During Wet Season	Priority	General Results	Enforcement Action Type	Resolved

4.0 MUNICIPAL COMPONENT

4.1 Introduction

The City endeavors to reduce or eliminate pollutants and runoff from municipal discharges to the MEP. This component is primarily applicable to the Department of Public Works and its efforts to prevent municipal discharges from causing or contributing to a violation of water quality standards. This section of the Annual Report discusses program management, implementation, and changes made during FY 2011-12 to the JURMP Municipal Component.

4.2 Outcome Level 1a: Administration of Management Program Activities

The City's implementation and assessment strategy for the municipal component is described in the 2008 JURMP Section 6.0. During the reporting period the City continued implementation of its municipal training program which provides education opportunities for storm water to all staff throughout the year. The City also continued to implement and maintain BMPs for municipal facilities and activities during the reporting period.

4.3 Outcome Level 1b: Implementation of Management Program Activities

The City makes storm water pollution prevention and response a high priority for all Public Works employees. Each Public Works vehicle contains a binder of municipal storm water BMPs and contains a map of the entire MS4 system. The Environmental Division conducts annual training for all Public Works employees and daily interactions with staff ensures that storm water pollution prevention remains a high priory throughout the City. The Public Works Department provides the eyes and ears on the street and therefore the first line of defense for pollution prevention, response, and cleanup. The *2008 JURMP Section 6.0* provides a complete description of the management programs for the municipal component.

Routine maintenance, cleaning, and implementation of BMPs for municipal facilities and activities keep accumulated debris and other potential pollutants from entering the MS4. At a minimum the City conducts annual formal inspections of high priority municipal facilities and actives. The City also maintains a number of storm drain inlet filters that are cleaned and maintained quarterly by Downstream Services, Inc. Cleaning records are maintained on file and logged in a database on the Environmental Division server. The City continues to implement its street sweeping program, MS4 cleaning program, and participates in the Regional Copermittee's program planning activities with the Industrial, Commercial, and Municipal Workgroup.

The following tables and figures presented in this section provide additional information on the implementation and assessment of the Municipal program element:

- Table 4.1 Provides an overview of the Municipal inventory by facility type and priority classification
- Table 4.2 presents and describes targeted FY 2011-12 outcomes and results
- Figure 4.1 Street sweeping removal totals

- Table 4.3 Municipal storm drain filter inventory and maintenance records
- Table 4.4 Municipal facility and activity inventory and inspection records

4.4 Outcome Level 2: Knowledge and Awareness of Program Implementation by Staff

The City conducts annual training for all municipal employees. Training for the Municipal Component is specifically targeted at the Public Works Department because City Streets, Maintenance Workers, and Sewer crews are typically the first line of defense for storm water pollution. The training program focuses on the use of Best Management Practices in daily operations, and is designed to create an overall sensitivity to pollution prevention concerns.

4.5 Outcome Level 3: Behaviors and Best Management Practice (BMP) Implementation by Staff

The *JURMP Appendix E* defines minimum BMP requirements applicable to streets, roads, highways, municipal areas, municipal activities, and parking facilities in the City. Major targeted outcomes for the JURMP municipal component included streets and parking lot sweeping, MS4 cleaning, sewer system preventative maintenance, municipal storm drain BMP maintenance, integrated pest management at parks, and implementation of BMPs at municipal facilities. All BMPs are inspected and enforced for compliance.

4.6 Outcome Level 4: Source Load Reductions

The City continues to make impressive source load reductions from municipal facilities and activities. The City maintained approximately 125 miles of curbed streets and uncurbed roads located throughout the City. Approximately 143.69 tons of debris was collected through street sweeping operations. The City also collected 170 loads of large bulky items illegally dumped in City alleys through its franchise waste hauler EDCO.

The Sewer Division maintains the City's storm drain lines and catch basins. During this reporting period the Sewer Division inspected 31% of the catch basins and open grates and cleaned any inlets with large obstructions or had exceeded 33% of design capacity. The MS4 includes five miles of underground piping, 92 catch basins, 143 open grates, and 7 open drainage facilities. Storm drain cleaning occurs between the months of May through September. This report contains the amount of storm drains inspected and cleaned between May 2012 and the writing of the report (September 1st). Starting with the FY 13 report, the entire cleaning period will be reported including this years reported numbers.

Lastly, over 30 acres of park facilities, athletic fields, beach accesses, landscapes at various facilities, and five community parks located throughout the City were maintained in a manner that best prevents storm water pollution. The City has a dedicated Tidelands crew that picks up trash and debris and conducts landscaping duties 7 days a week on the beach and one block inland of the beach. In addition, the City contrast with Donovan Prison for a weekly crew to pick up trash and conducts landscape duties at City parks and unmaintained areas. The City tracks source loads whenever possible.

Table 4.1 – Overview of Municipal Inventory by Facility Type and Priority Classification

Category	Miles	Number	Description
A. Type of Facility			
Paved Roads	127.9	---	
Municipal Parking Facilities	---	4	
Underground storm drain piping	5	---	
Catch basins	---	92	
Open Grates	---	143	
Open Drainage Facilities	---	7	
Storm Drain Diverters	---	2	
Vortex Storm Drain CDS	---	1	
Municipal Storm Drain Filters	---	13	
B. Priority Classification			
Streets, Roads, and Highways	(127.9	Miles)	The City also contains 13.3 miles of paves alleys and 2.5 miles of unimproved alleys that are not on the municipal inventory. The alleys are not owned by the City and are maintained by the property owners. The City conducts monthly street sweeping on the paved alleys and provides pick up of large bulky items illegally dumped in the alleys.
High (Commercial areas)	19.2	---	
Medium (Beachfront residential areas)	9.6	---	
Low (Other residential areas and paved alleys)	99.1	---	
Municipal Parking Facilities			
High (Commercial)	---	4	

Category	Miles	Number	Description
Medium (N/A)	---	---	
Low (N/A)	---	---	
Sanitary Sewer System			
Pump stations	---	12	
Underground piping	39.5	---	

JURMP Sections	Description of FY 2011-12 Changes
6.0 and Appendix E	BMP requirements of the JURMP applicable to streets, roads, highways, and municipal parking facilities were modified in accordance with the requirements of the updated Permit in March 2008. No significant updates made during the reporting period.

Table 4.2 - Municipal Component Targeted Outcomes and Results

Municipal FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
LEVEL 1a OUTCOMES (ADMINISTRATION MANAGEMENT PROGRAM ACTIVITIES)		
a) Modifications to JURMP		
Update applicable JURMP sections per Permit requirements	No updates necessary	The City continued to implement its Municipal Component of the JURMP and did not make any significant updates during the reporting period.
b) Updates to Program Documentation (Policies, Plans, Procedures, and Forms)		
Update program documentation for consistency with program updates	No significant updates	No significant updates during the reporting period.
c) Year-End Program Review		
Complete annual year-end program review	End of year program review on MS4 annual maintenance	The end of the year program review focused on looking to the future and the implementation of adaptive management strategies as proposed in the 2012 draft MS4. No programmatic changes to the Municipal Component are proposed to the current JURMP program until the new permit is released.
d) Updates to Training Program		
Update training materials for municipal staff	No significant updates	The City makes annual updates to the municipal training content and materials so that each education activity provides appropriate information for the target audience.
e) Updates to Municipal Inventor or Prioritization		
Update municipal inventory	No significant updates.	The City continues to maintain the municipal facilities and activities inventory that was developed in collaboration with the Commercial, Industrial, and Municipal Workgroup.
LEVEL 1b OUTCOMES (IMPLIMENTATION OF MANAGEMENT PROGRAM ACTIVITIES)		
a) Jurisdictional Requirements for Municipal Facilities and Activities		

Municipal FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Require municipal areas and activities to implement minimum BMPs	Implemented BMPs and verified through inspections and reinforced through annual training	Specific minimum BMP requirements for municipal facilities and activities, including pollution prevention methods, are described in the *2008 JURMP Appendix E*. Municipal BMPs are reviewed with staff regularly and updated as necessary. In addition, each City vehicle contains a binder of Best Management Practices for Municipal Facilities and Activities that get reviewed each year during annual training.
b) Confirmation of Designated Minimum BMPs		
Verify the implementation of minimum BMPs for municipal areas and activities	Implemented BMPs and verified through inspections and reinforced through annual training	Specific minimum BMP requirements for municipal facilities and activities, including pollution prevention methods, are described in the *2008 JURMP Appendix E*. Municipal BMPs are reviewed regularly and updated as necessary.
c) Confirmation of Municipal Inspections		
Verify that municipal inspections achieve BMP compliance	Municipal areas and act ivies get formally inspected each reporting cycle	Municipal inspections are used as means to verify the implementation of BMPs at municipal facilities and activities. Inspections also serve to educate staff, reinforce storm water concepts, and improve communication across City Divisions. Table 4.4 provides the annual Municipal Facility and Activity Inventory and Inspection Records results.
d) Municipal Staff Training		
Provide training opportunities for municipal staff	Conducted annual municipal training, weekly department meetings, outside training events, and provided education materials.	Community Development and Public Works Departments meet weekly to review critical issues including storm water project development requirements. Monthly meetings are also held to discuss code enforcement related issues. Municipal inspections also serve as one-on-one training for Division supervisors. Annual training is provided to Public Works staff and was conducted on 10/26/11. Regional workshops Construction General Permit. Daily interaction with City staff and abundant education material on storm water ensures that storm water pollution prevention remains a high priory throughout the City.
e) Confirmation of Pesticide, Herbicide, and Fertilizer Management		

Municipal FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Verify designated BMPs for pesticides, herbicides, and fertilizer	IPM and BMPs implemented	The City limits the application of pesticides and herbicides applied to park and landscaping facilities in accordance with Integrated Pest Management Program policy.
f) Confirmation of Maintain for Municipal BMPs		
Verify maintenance of municipal storm water BMPs	Maintained operation and maintenance of existing storm water BMPs	The City maintains a number of storm water BMPs along the storm water conveyance system including two urban low flow and first flush storm drain diverters, 13 storm drain filters, 1 CDS unit, and multiple vegetated ditches, and infiltration areas.
g) Special Investigations		
Implementation of special investigations	No special jurisdictional investigations performed	Special investigations are not routinely conducted as part of the implementation strategy for the JURMP. Special investigations are generally performed under the context of the Regional Program in order to achieve maximum benefit.
LEVEL 2 OUTCOMES (KNOWLEDGE AND AWARENESS OF PROGRAM IMPLEMENTATION BY STAFF)		
Maintain high level of staff knowledge regarding storm water program	Conducted annual municipal training, weekly department meetings, outside training events, and provided education materials.	See Education Component Section 8.0.
LEVEL 3 OUTCOMES (BEHAVIORS AND BMP IMPLEMENTATION BY STAFF)		
a) BMP Implementation for Streets, Roads, Highway, and Parking Facilities		
Sweep all High trash areas at least twice per month	28.7 curb-miles swept at least twice per month and 4 municipal parking facilities swept weekly	Commercial areas (19.2 miles of curbed roads and 4 parking lots) are swept weekly. Beachfront residential areas (9.5 miles of curbed roads) are swept bi-weekly (high trash and debris). All other areas (99.1 curb miles) are considered moderate priority and are swept on a monthly basis.
Sweep all Moderate trash areas at least monthly	99.1 curb-miles swept at least monthly	

Municipal FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Sweep improved streets, roads, and highways	127.9 curb-miles swept (2,392 total miles) swept)	The City has a dedicated Tidelands Maintenance Division, funded by the Port of San Diego, that keep the beach and one block inland from the beach free of trash, sand, and other debris. The City also maintains a contract with Donavan Correctional Facility to provide supervised labor for various needs including landscaping and trash pickup. The Streets and Parks Divisions play a crucial role in keeping the City free of trash. EDCO also conducts alley sweeps for large bulky items upon request from the City (170 loads for FY 2011-12). Finally, the City provides a Home Front Cleanup event for residents to dispose of accumulated waste.
Collect trash and debris from non-sweeping activities	Collected trash and debris from parks, alleys, and tideland area	
b) BMP Implementation for Municipal Separate Storm Sewer System (MS4)		
Clean accumulations of trash and debris greater than 33% of design capacity	City is on track to inspect and clean 92 catch basins and 143 open grates inspected by the end of the dry season September 30th.	Storm drain cleaning generally occurs between the months of May and September and is still ongoing at the time of writing this report. It is important to note that the City inspects 100% of its catch basins and cleans them if necessary every year.
Inspect and clean MS4 line	31% of the MS4 inspected and 9124.85 feet of storm drain cleaned	The City cleans and inspects 100% of the catch basins and endeavors to clean 100% of the 5 miles of storm drain lines annually. The Sever Division uses the vactor truck to jet and clean accumulated debris out of the MS4. Cleaning for the 2012 season will be finished in September and still ongoing while writing this report.
Prioritization of MS4 system maintenance	Part of annual assessment of program	Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year The Environmental Division reviews past MS4 cleaning records to identify areas of high trash and debris accumulation. Sections of the MS4 that are identified as low trash and debris accumulation areas may be cleaned and inspected less than annually.
Prevent and eliminate infiltration from the sanitary sewer to the MS4	Implementation of the 2008 Sewer System Maintenance Plan	The City developed a Sewer System Management Plan (SSMP) in 2008 and has a proactive operation and maintenance program to prevent sewer system overflows. The Environmental Division helps in this endeavor by coordinating the response to any SSO, performing biennial SSMP audits, and implementing the FOG control program.
Conduct routine maintenance on sanitary sewer system	36 miles of sanitary sewer system maintained	Most sanitary sewer pipelines are cleaned at least annually, and known problem areas are cleaned more frequently. Twelve alarmed sewage pump stations are monitored daily.

Municipal FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Respond to all sewer spills and log in appropriate data bases	7 sewer spills reported with 6 being from private laterals	In the event of a sewer spill, City staff follows procedures laid out in its Sanitary Sewer Overflow Response Plan. The City experienced 7 sewer spills during FY 2011-12 and 6 of those were from private laterals.
c) BMP Implementation for Municipal Facilities and Activities		
Implement BMPs and maintain municipal treatment control BMPs	Maintained 13 storm drain or catch basin filters, 2 storm drain diverters, 1 CDS unit, vegetated swales, and infiltration areas	The City enforces compliance of minimum BMPs at all municipal facilities and maintenance activities. In addition, the City maintains 13 storm drain filters that are maintained quarterly by contract. The City also operates 2 storm drain diverters, one CDS unit, and a number of vegetated swales and infiltration areas.
d) Municipal Facilities and Activities Inspection Results		
Provide general inspection results for municipal areas and activities	Inspected 100% of municipal facilities and provided training on BMPs for municipal activities	General inspection results include the following: quarterly maintenance of municipal storm drain filters, proper implementation of minimum BMPs by staff, internal review and training on BMPs for municipal areas and activities.
e) Violations and Enforcement Actions		
Number of violations and enforcement actions to achieve compliance.	No enforcement actions necessary to achieve compliance	Minor violations were noted during municipal inspects and corrected without enforcement actions. For example old BMPs for material storage were replaced at the Public Works Yard. Municipal storm water violations are extremely rare as a result of continued education.
LEVEL 4 OUTCOMES (SOURCE LOAD REDUCTIONS FROM MUNICIAPL FACILITIES AND ACTIVITIES)		
a) Street Sweeping		
Track debris collected from street sweeping activities	Trash: 14.369 tons Debris: 114.952 tons Organics: 14.369 tons	The City collected a total of 143.69 tons of material from street sweeping activities. The City sweeps 19.2 miles of commercial area and 4 municipal parking lots weekly (high priority), 9.6 miles of beach front biweekly (medium priority), and 99.1 miles of residential area monthly (low priority).
b) Cleanup Activities		

Municipal FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Track EDCO alley sweeps and Home Front Clean Up totals	EDCO Alley Sweeps: 170 large bulky items Home Front Clean Up: 148.95 tons	EDCO conducts alley sweeps for large bulky items upon request from the City. The City made 170 requests this year which was down from 293 from the previous year. In addition, the City provides a Home Front Cleanup event for residents to dispose of accumulated waste. The City also conducts a number of other cleanup activities to collect trash and debris from municipal areas using the Street, Tidelands, and Donavan Prison crews; however, this waste is not tracked at this time.
c) MS4 Cleaning		
Track debris collected through MS4 cleaning	Annual cleaning records are tracked on a form and entered into excel	There are approximately 93 catch basins, 143 open grates, and approximately 5 miles of storm drain pipe that is maintained and cleaned annually. The Sewer Division inspected and cleaned 31% of the catch basins, open grates, and open channels. MS4 cleaning starts in May and continues through September. Totals for the entire 2012 cleaning will be given in next year's report.
d) **Municipal Storm Drain Filters**		
Track debris collected from 13 municipal storm drain filters	Trash: 43 lbs. Sediment: 168.5 lbs. Organic: 125 lbs.	Downstream Services maintains 13 municipal storm drain filters quarterly. During the reporting period 346 pounds of debris was captured through municipal storm drain filters.
e) Storm Water Diverters		
Monitor storm water diversion from Palm Ave Diverter	Palm Ave Diverter: 1,042,416 gallons diverted into the sanitary sewer	The City operates two storm drain diverters (Palm Ave and Date Ave). Only the diverted flow from Palm Ave is monitored and tracked. The jockey pump for Palm Ave burned out this reporting period and was rebuilt in April.

Figure 4.1-Street Sweeping Totals

	FY 08-09	FY 09-10	FY 10-11	FY 11-12
Organic Debris	20.60	17.70	17.50	14.369
Trash	20.60	17.70	17.50	14.369
Sediment	165.10	141.63	139.95	114.952

Figure 4.1- The street sweeping totals above are presented by fiscal year. Street sweeping is contracted through Clean Streets and EDCO. The City maintains approximately 127.9 miles of curbed streets and uncurbed roads located throughout the City. Sweeping activities collected 143.69 tons of materials during the reporting period.

Table 4.3 Municipal Storm Drain Filter Inventory and Maintenance Records

ID	Filter Type	Address	Location	Watershed	Date of Installation	Date of Service	Service Conducted				Weight of Debris	Materials Collected (lbs.)				Volume Used

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 Introduction

The City endeavors to prevent or eliminate the discharge of pollutants and runoff from industrial and commercial sources. This component is primarily applicable to the Environmental Program Division of the Department of Public Works and its efforts to oversee compliance with urban runoff regulations at businesses within the City and reduce the discharge of pollutants to the MS4 to the maximum extent practicable (MEP). The City is tasked with educating businesses about urban runoff management and overseeing their compliance with applicable Municipal Storm Water Permit requirements.

5.2 Outcome Level 1a: Administration of Management Program Activities

The City's implementation and assessment strategy for the Industrial and Commercial Component is described in the *2008 JURMP Section 7.0*. During the reporting period the City made routine updates to the Commercial and Industrial business inventory which conforms to the Copermittee's standard inventory template. The inventory is maintained on the Environmental Division server and identifies all industrial and commercial facilities that could contribute pollutant loads to the MS4. The City currently does not have any industrial facilities on that inventory. Records are also maintained on each specific business for inspections, corrective actions, and illegal discharges. During the reporting period the City continued to incorporate fats, oils, and grease (FOG) management into the commercial business inspection program for restaurants.

5.3 Outcome Level 1b: Implementation of Management Program Activities

The Environmental Division provides notification and verification of minimum BMPs for commercial businesses, in addition to performing inspections at all high priority commercial businesses in the City. The City also inspects non-high priority business and mobile businesses during the year as necessary. Inspections are conducted and documented as outlined in the *2008 JURMP Section 7.0*.

In addition to City staff reporting illegal discharges, the Environmental Division also responds to calls to the storm water hotline and from online complaints. However, the vast majority of storm water violation reports are made from well-trained City staff. The low number of commercial businesses and centralized commercial zoning allows City staff to be the predominant eyes on the street for identifying storm water violations.

The following tables and figures presented in this section provide additional information on the implementation and assessment of the Commercial Industrial program element:

- Table 5.1 Provides an overview of the Industrial and Commercial inventory by facility type and priority classification
- Table 5.2 presents and describes targeted FY 2011-12 outcomes and results
- Table 5.3 Commercial Business Inspections FY 2011-12
- Table 5.4 and Figure 5.1 Interactive Effectiveness Assessment of Commercial Businesses

- Appendix 1 Complete Commercial Business Inventory FY 2011-12

5.4 Outcome Level 2: Knowledge and Awareness of Program Implementation by Businesses

Commercial businesses receive education on storm water BMPs through a number of different methods including direct mail, face-to-face interaction with City staff during inspections, through dissemination of education material, and through follow up inspections to ensure compliance. The City also provides education to businesses during ICID investigations.

The Environmental Division also incorporates an interactive effectiveness assessment of commercial businesses during the annual storm water inspection at randomly selected businesses to gauge level of knowledge and awareness. The goal of the assessment is to get beyond BMP verification and assess the level of BMP effectiveness at commercial businesses in the City. General results showed a moderate level of knowledge among the businesses. The results are outlined in Table 5.4 and Figure 5.1.

5.5 Outcome Level 3: Behaviors and Best Management Practice (BMP) Implementation by Businesses

The City facilitates changes in behavior and implementation of BMPs at commercial businesses by providing continuous education efforts through face-to-face interactions, routine inspections, dissemination of brochures, mailing of post inspection letters, and responding to illegal storm water discharges. City staff conducts all commercial inspections and have a good working relationship with business owners. The *2008 JURMP Appendix F* defines minimum BMP requirements applicable to industrial and commercial projects in the City. The *2008 JURMP Section 7.0* provides more information on the procedural and administrative mechanisms in the City that promote behavioral changes for commercial, industrial, and mobile businesses.

5.6 Outcome Level 4: Source Load Reductions

The two step approach of education on storm water pollution and enforcement of BMPs have unquestionably resulted in the source load reductions from commercial businesses. Although the City does not currently track source load reductions from commercial sites, the increased level of knowledge on storm water BMPs and cooperation among the local business community have successfully prevented the illegal discharge of pollutants from commercial businesses. Source load reductions can be implied from commercial businesses through the proper implementation of BMPs.

Table 5.1 – Overview of Industrial and Commercial Component by Facility Type and Priority Classification

Category	Number	Description
A. Type of Facility		
Industrial	0	Industrial zoning is limited to a small area in the City. Currently, no industrial businesses that require an industrial general permit reside in the community. The term "commercial" is therefore used for the activities within the City. As such, there is no need in this jurisdiction to identify non-filers under the General Industrial Permit.
Commercial	342	
B. Priority Classification Totals		
High	71	Imperial Beach Municipal Code 8.30.090 defines commercial businesses as either high or non-high (low) priority. High priority businesses include all food service and auto service related businesses.
Low	271	
Mobile	51	Mobile business database is tracked and maintained in house.
C. Inspection Totals		
Commercial Business Inspections	111	The Environmental Division conducts all commercial inspections. All high priority businesses receive inspections annually for storm water compliance. Commercial businesses that have a significant storm water violation receive a follow up investigation.
Follow Up Inspections	40	
Mobile	0	Mobile businesses do not currently receive annual inspections. The Environmental Division inspects mobile businesses while responding to illegal discharge or public service requests.
D. Enforcement Actions		
Notice of Violations (NOVs)	14	Businesses with multiple BMP violations generally receive a NOV and 2 follow up investigations.
Minor Violations (Follow Up)	1	Minor violations generally receive a follow up investigation and written warning.

JURMP Sections	Description of FY 2011-12 Changes
7.0 and Appendix F	BMP requirements of the JURMP applicable to industrial and commercial facilities were modified with the requirements of the updated Permit in March 2008. No significant changes were made during the reporting period.

Table 5.2 - Industrial and Commercial Component Targeted Outcomes and Results

Industrial and Commercial FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
LEVEL 1a OUTCOMES (ADMINISTRATION MANAGEMENT PROGRAM ACTIVITIES)		
a) Modifications to JURMP		
Update applicable JURMP sections per Permit requirements	No updates were made during reporting period	The City continued to implement its Commercial Component of the JURMP and did not make any significant updates during the reporting period.
b) Updates to Program Documentation (Policies, Plans, Procedures, and Forms)		
Update program documentation for consistency with program updates	No updates were made during reporting period	No significant updates made to this program component.
c) Year-End Program Review		
Complete annual year-end program review	Review program for effectiveness and efficiency	The use of the new field computer from last reporting period resulted in improved efficiencies and quicker response for inspections and enforcements. It also allowed for in the field printing of case specific BMP information.
d) Updates to Training Program		
Update training materials for businesses	No updates to education materials and staff	The City makes updates to commercial inspection training content as necessary. Education activities include brochures, handouts, informative letters, and inspections.
e) Updates to Commercial Inventor or Prioritization		
Update commercial inventory and prioritization	Annual updates made to the commercial inventory	Regular updates were made to the commercial and industrial business inventory, which follows the regional copermittee standard template. Currently all food or automotive related businesses get categorized as high priority and receive annual inspections. The regional online mobile business database was also maintained online.
LEVEL 1b OUTCOMES (IMPLIMENTATION OF MANAGEMENT PROGRAM ACTIVITIES)		
a) Jurisdictional Requirements for Commercial Businesses		

Industrial and Commercial FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Require commercial and industrial businesses to implement BMPs and verify through inspections	Notified businesses through mail, conducted inspections, responded to ICIDs, and provided education materials	The City requires all commercial and industrial sites/sources to implement designated minimum BMPs and other measures to prevent the discharge of pollutants to the MEP. The City's Urban Runoff Management and Discharge Control Ordinance (Chapters: 8.30.070, 8.30.090, and 8.30.100) mandate the implementation of designated BMPs and control measures. The commercial inspection program and ICID program are the mechanisms used to educate businesses on BMPs. All high priority businesses receive annual inspections for storm water.
b) Confirmation of Designated Minimum BMPs		
Verify the implementation of minimum BMPs for commercial businesses	Conducted commercial inspections and follow up inspections to verify BMPs	The City verifies the implementation of minimum BMPs at commercial businesses through the implementation of the commercial inspection program. The environmental division conducts annual inspections of all high priority businesses, which include all food and automotive facilities in the City.
c) Confirmation of Commercial Inspections		
Verify that commercial inspections achieve BMP compliance	Inspected all high priority commercial businesses	The Environmental Division conducts inspections at all high priority businesses, as needed inspections at lower priority businesses, and follow up inspections after ICIDs. The City achieved higher inspection frequency than the minimum established in the Permit.
d) Justification for Commercial Inspection Prioritization		
Provide rationale for the businesses that were inspected	IBMC 8.30.090 defines commercial businesses as either high or non-high (low) priority	High priority businesses include at a minimum all food service and auto service related businesses in the City. Businesses that have a treatment control BMPs also receive inspections as well as businesses that cause an ICID.
e) Efforts Made to Notify Businesses of BMPs		
Describe efforts made to notify businesses of BMPs	Notification made through education material, inspections, follow up inspection, and follow up letters	High priority businesses receive storm water inspections and follow up inspections in the case of a violation. A post inspection letter is also mailed to the business outlining the results of the visit. Education material is provided at the time of inspection and in some cases mailed with the post inspection letter. New businesses also receive BMP information through the business license application process.
f) Third Party Inspections		

Industrial and Commercial FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Describe third party inspection results	None	The City conducts all commercial inspections through the Environmental Division
g) General Industrial Permit Non-Filers		
Describe steps taken to identify industrial non-filers	None	The City did not have any industrial businesses during the reporting period.
h) Mobile Businesses		
Describe efforts made to address mobile businesses	Inspected mobile businesses as necessary	The City contacted each mobile business during the previous reporting period through mail with a letter and brochure that outlines the minimum BMP requirements. The Environmental Division informally inspects mobile businesses while responding to illegal discharge reports and public service requests.
i) Special Investigations		
Not targeted	Interactive assessment	The Environmental Division incorporates an interactive effectiveness assessment of commercial businesses and rates businesses on a scale of 1 out of 5. The results of the assessment are presented in Table 5.4 and Figure 5.1.
LEVEL 2 OUTCOMES (KNOWLEDGE AND AWARENESS OF PROGRAM IMPLEMENTATION BY COMMERCIAL BUSINESSES)		
Assess storm water program implementation knowledge from commercial businesses	Conducted interactive assessment of commercial businesses during annual inspections	The goal of the assessment is to get beyond BMP verification and assess the level of BMP knowledge among a random selection of commercial businesses in the City. Assessment results provided in Table 5.4 and figure 5.1
LEVEL 3 OUTCOMES (BEHAVIORS AND BMP IMPLEMENTATION BY COMMERCIAL BUSINESSES)		
a) Commercial Business BMP Implementation		
Inspect businesses for compliance	71 sites inspected and 40 follow up inspections	The City inspections 100% of high priority commercial businesses, non-high priority businesses, and mobile businesses as needed. Inspections consist of observing business operations, reviewing minimum BMPs, and enforcing pollution prevention practices.

Industrial and Commercial FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Notify mobile and fixed commercial businesses of BMP requirements	71 fixed commercial and 0 Mobile Businesses contacted through mail	The City notifies business owners and operators, both fixed and mobile, of BMP requirements through a combination of methods including site inspections, follow-up inspection reports, direct mailings, inclusion of BMP information with business license and special event vendor packets, online resources such as the Project Clean Water website, and City's website. During the FY 09-10 reporting period all mobile businesses were notified of BMPs through the mail.
b) Violations and Enforcement Actions		
Number of violations and enforcement actions to achieve compliance.	Follow up inspections required at 31 businesses. City also issued 14 NOVs	The City enforces compliance at all businesses, including mobile sources, using an escalating series of enforcement actions. Verbal or written warnings are used when violation in question is minor. Notices of Violations (NOVs) may be issued for any observed violation. And escalating administrative penalties, fines, and civil penalties may be enforced for non-compliance
LEVEL 4 OUTCOMES (SOURCE LOAD REDUCTIONS FROM MUNICIAPL FACILITIES AND ACTIVITIES)		
a) BMP Implementation		
Load reductions from proper BMP implementation	Most businesses implemented correct BMPs	Source load reductions are not easily tracked from commercial businesses but can be implied through proper implementation of BMPs.

6.0 RESIDENTIAL COMPONENT

6.1 Introduction

The City endeavors to prevent or eliminate the discharge of pollutants and runoff from residential sources. This component is primarily applicable to the Environmental Program Division of the Department of Public Works and the City's Code Enforcement Division. Efforts are made to educate the public and oversee compliance with local urban runoff regulations to reduce the release of pollutants to the MEP.

6.2 Outcome Level 1a: Administration of Management Program Activities

The City's implementation and assessment strategy for the Residential Component is described in the *2008 JURMP Section 8.0*. During the reporting period no updates were made to the high priority residential area inventory. All other program planning and administration elements remain unchanged from the *2008 JURMP Section 8.0*.

6.3 Outcome Level 1b: Implementation of Management Program Activities

The City enforces its storm water ordinances for all residential areas and activities to maintain compliance with the Municipal Storm Water Permit. Public outreach and education as outlined in the *2008 JURMP Section 10.0* encourages residents to comply with the minimum set of BMPs listed in Imperial Beach Municipal Code 8.30.080. The City encourages the use of pollution prevention methods for all residents and provides convenient and cheap house hold hazardous waste disposal. The City also participated as Co-Chair in the Education and Residential Sources Workgroup and Chair of the Underserved Target Audience sub-workgroup.

The following tables and figures presented in this section provide additional information on the implementation and assessment of the Municipal program element:

- Table 6.1 Provides an overview of the residential component as it was implemented
- Table 6.2 presents and describes targeted FY 2011-12 outcomes and results
- Figure 6.1 Show the referral source for ICIDs investigations

6.4 Outcome Level 2: Knowledge and Awareness of Program Implementation by Residents

Knowledge and awareness of the storm water program by residents is best assessed through the City's response to illegal connections and illicit discharge (ICID) investigations. Figure 6.1 below shows that twenty-three percent of the City's ICID cases come from the public. This is statistically the same as the previous year. This shows that the City is effective in making different stakeholders aware of the importance of reporting storm water violations and more importantly aware of how their own actions effect water quality. Continued commitment to preventing storm water pollution is also seen from City staff. Fifty-seven percent of all cases came from non-environmental City staff. City staff is encouraged to

report violations directly to the Environmental Division. This is an eleven percent increase from the previous year, showing storm water awareness by City staff is increasing.

Figure 6.1 Referral Source for ICID Investigations

6.5 Outcome Level 3: Behaviors and Best Management Practice (BMP) Implementation by Residents

The City facilitates changes in behavior and implementation of BMPs for high threat to water quality activities and residential areas by providing education through face-to-face interactions, disseminating education materials through various media, and responding to illegal discharges. The *2008 JURMP Appendix G* defines minimum BMP requirements applicable to residential areas and activities in the City.

6.6 Outcome Level 4: Source Load Reductions

The City continues to quantify load reductions whenever feasible for disposal of household hazardous waste, used oil, and special clean up events. Pest waste collected by the Ocean Blue foundation is also estimated. The City does not normally track individual source load reductions to receiving waters from residential areas or activities but load reductions can be implied by proper implementation of BMPs.

Table 6.1 – Overview of Residential Component

Category	Pounds	Number	Description
A. Residential Threat to Water Quality Prioritization			
High	---	6	All residential areas in the City are considered high priority.
Medium	---	---	
Low	---	---	
B. House Hold Hazardous, Electronic, and Universal Waste Disposal			
Flammable and Poison	5728	---	Imperial Beach residents have a variety of options for the collection and disposal of house hold hazardous waste. Most residents utilize the South Bay HHW Collection center at the City of Chula Vista. Residents can also drop off used oil at the Auto Zone located at 1344 Palm Ave. and at Express Tire 950 Palm Avenue. The City coordinates used oil disposal that is part of CalRecycle Used Oil Block Grant with the City of Chula Vista. The amount of waste dropped off by Imperial Beach residents is provided in the table to the left. EDCO offers drop off of E-Waste. The City offers curbside pickup of HHW, used oil, and a number of regional collection events for electronic and universal waste. The disposal totals for these additional activities are not provided in this report.
Acid, Base, Oxidizer, and PCBs	321	---	
Reclaimable (Antifreeze, Car batteries, Latex Paint, Used Oil and filters)	6081	---	
Asbestos	3		
E-Waste, Aerosols, Other Universal Waste	10082		
Other HHW	1697		
Total Waste Disposed	23912		

JURMP Sections	Description of FY 2011-12 Changes
8.0 and Appendix G	BMP requirements of the JURMP applicable to residential areas and activities were modified in accordance with the requirements of the updated Permit in March 2008.

Table 6.2 - Residential Component Targeted Outcomes and Results

Residential FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
LEVEL 1a OUTCOMES (ADMINISTRATION MANAGEMENT PROGRAM ACTIVITIES)		
a) Modifications to JURMP		
Update applicable JURMP sections per Permit requirements	No updates made during reporting period	Applicable updates were included in *JURMP Section 6.0*. No significant updates are expected to be necessary during this permit cycle.
b) Updates to Program Documentation (Policies, Plans, Procedures, and Forms)		
Update program documentation for consistency with program updates	No updates made	No updates made this reporting period.
c) Year-End Program Review		
Complete annual year-end program review	Review program for effectiveness and efficiency	The City continues to improve the implementation of the JURMP by conducting an annual review of each component and incorporating any modifications into the next reporting period.
LEVEL 1b OUTCOMES (IMPLIMENTATION OF MANAGEMENT PROGRAM ACTIVITIES)		
a) Jurisdictional Requirements for Residential Areas		
Identify high threat to water quality areas	Update not needed	All residential areas in the City are considered high threat to water quality areas. The *2008 JURMP Section 8.0* provides a list of high threat to water quality activities.
b) Confirmation of Designated Minimum BMPs		
Require residents to implement BMPs	The City provides education and responds to ICIDs in residential areas	The City requires all residential areas to implement designated minimum BMPs and other measures to prevent the discharge of pollutants to the MEP. The City enforces its *Urban Runoff Management and Discharge Control Ordinance IBMC 8.30* and provides education and outreach to local residents.
c) Facilitate Proper Disposal of Household Hazardous Waste and Used Oil		

Residential FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Facilitate proper management and disposal of used oil and HHW	Provided a variety of disposal options for used oil, toxic materials, and other hazardous waste	The City provides a variety of options for the proper management and disposal of used oil and HHW. Residents are generally directed to drop off hazardous materials at the South Bay HHW center at 1800 Maxwell Rd. The City also provides home pickups of HHW for disabled residents. EDCO also provides pickup of used oil. The City also hosts regional collection events for HHW, used oil, electronic waste, and universal waste.
d) Enforcement of Residential Areas and Activities		
Enforce minimum BMPs in residential areas	Responded to storm water violations reported by staff and public	The Environmental Division responds to storm water violations that are reported by City staff or general public in residential areas and provides enforcement through the use of verbal warnings with distribution of BMP literature, Notices of Violation, Notices of Abatement, and additional penalties or fines and civil and/or criminal court actions
e) Evaluate Methods of Oversight for Residential Areas and Activities		
Evaluate methods of oversight and enforcement for residential areas and activities	Operate storm water hotline and utilizes monthly sewer and street inspections to identify violations	Operated a Storm Water Hotline (619-424-4095) during the reporting period. The City received 23 reports on the Storm Water Hotline (619-424-4095), 7 in-person reports, and 2 online reports for storm water violations in residential areas. The Environmental Division responded to another 105 residential violations reported by City staff.
f) Regional Residential Education Program		
Participate in Regional Residential Education Program	Participated in the Education and Residential Sources Workgroup and chair position of the Underserved Target Audience	During this reporting period the County took the lead on the Education and Residential Sources Workgroup. Significant progress continues to be made in the areas of media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment through a county-wide telephone survey.
g) Special Investigations		
Implementation of special investigations	No special jurisdictional investigations performed	Special investigations for the Residential component are generally performed through the Regional Copermittee group to maximize the benefit.
LEVEL 2 OUTCOMES (KNOWLEDGE AND AWARENESS OF PROGRAM IMPLEMENTATION BY RESIDENETS		

Residential FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Establish a baseline for knowledge of BMPs by residents	No additional assessments were targeted at residents outside of education activities	Knowledge and awareness of storm water issues by residents is assessed through the education program. The City uses brochures, special events, presentations, and ICID investigations as tools to educate local residents on storm water. Assessment results provided in Section 8.0 for residential and general public outreach.
LEVEL 3 OUTCOMES (BEHAVIORS AND BMP IMPLEMENTATION BY RESIDENTS)		
a) BMP Implementation		
Facilitate pet waste program with the Ocean Blue Foundation	10 pet waste bag dispensers are maintained by the Ocean Blue Foundation	The pet waste bag dispenser program has been maintained and operated by the Ocean Blue Foundation NGO for the last 10 years but starting next reporting period the Public Works Department will be taking over responsibility for the program.
Cleanup activities in residential areas	Implemented cleanup activities as part of the Municipal Component	Under the Municipal Component of the JURMP the City conducts street sweeping, alley sweeps, and cleanup activities in residential neighborhoods. Under the Education Component the City participates in community cleanup events.
b) Violations and Enforcement Actions		
Number of violations and enforcement actions to achieve compliance	Responded to a total of 137 ICID cases	The City operates a Storm Water Hotline (619-424-4095). The City received 23 reports on the Storm Water Hotline, 7 in-person reports, and 2 online report for storm water violations in residential areas. The Environmental Division responded to another 105 residential violations reported by City staff. In total the Environmental Division responded to 137 ICID cases.
LEVEL 4 OUTCOMES (SOURCE LOAD REDUCTIONS FROM RESIDENTIAL AREAS AND ACTIVITIES)		
a) BMP Implementation		
Household hazardous waste (HHW) collection	16.697 pounds of HHW collected **Year Pounds** 2008 6,000 2009 10,367 2010 10,377 2011 16,697 2012 23,912	The City's HHW disposal program is available to all residents, and the City partners with other jurisdictions in the South Bay to offer convenient, low-cost HHW disposal options.

Residential FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Used oil collection	6,081 pounds of Reclaimable (Antifreeze, Car batteries, Latex Paint, Used Oil and filters) collected **Year Pounds** 2008 2,110 2009 2,173 2010 3,763 2011 4,329 2012 6,081	The City is required to facilitate the proper management and disposal of used oil, toxic materials, and other HHW through educational and public information activities, and establishment of collection sites operated by the City or a private entity.
Universal and electronic waste collection	10,082 pounds of electronic and universal waste collected **Year Pounds** 2009 2,433 2010 3,025 2011 4,371 2012 10,082	The City facilitates the proper management and disposal of universal and electronic wastes trough both EDCO and the South Bay Regional HHW Program.
Pet waste collection	10 pet waste bag dispensers; 72,800 bags replaced, and an estimate of 18,200 lbs. of pet waste collected	The pet waste bag dispenser program is maintained and operated by the Ocean Blue Foundation, a local not for profit group. The City works with the Ocean Blue Foundation to ensure that the pet waste bag dispensers are maintained and the program has adequate funding. If the average pet waste weighs 4 ounces then an estimate of 18,200 lbs. of waste was collected. The City Council supports the foundation through an annual community grant.

Residential FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Special event recycling and waste management	Home Front Cleanup event had 714 participants and collected 148.95 tons of materials **Year No. Tons** 2009 732 154.3 2010 822 175.6 2011 753 178.8 2012 714 148.9	The City holds an annual Home Front Cleanup event. The Home Front Clean Up had 714 participants and disposed a total of 148.95 tons of materials. That includes93.58 tons of diverted materials (green waste, metal, concrete, and e-waste) that was recycled.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

7.1 Introduction

The City endeavors to prevent municipal discharges from the Municipal Separate Storm Sewer System (MS4) from causing or contributing to a violation of water quality standards. This component is primarily applicable to the Environmental Program Division of the Department of Public Works and its efforts to reduce municipal discharges of pollutants to the MS4 to the maximum extent practicable (MEP).

All components of the JURMP are represented in this report with the exception of this component. The San Diego Regional Water Quality Control Board adopted Addendum No. 2 to Order No. R9-2007-0001 (Municipal Permit), extending the annual reporting deadline associated with this component from September 30th to December 15th. This change was necessary because the program involves water quality monitoring during the dry season, defined as May 1st through September 30th, which does not allow for proper time in which to report and convey information on the dry season as a whole.

The City's implementation and assessment strategy for the illicit discharge detection and elimination component is described in the *JURMP Section 9.0*.

8.0 EDUCATION COMPONENT

8.1 Introduction

The City endeavors to implement a diverse education program in the community to reduce the impacts of urbanization on water quality. Education activities are targeted at the following groups: 1) municipal departments and personnel, 2) construction site owners and developers, 3) commercial and industrial business owners and operators, 4) residents, general public, and school children, and 5) underserved community. This component is applicable to all City departments, in particular the Environmental Program Division of the Department of Public Works, which spearheads the City's education efforts and is responsible for the annual training for municipal employees on the components and goals of the JURMP. Note that each section of this JURMP Annual Report already includes a description of education activities for each element. The City recognizes the long term importance education plays in facilitating the necessary behavioral changes to successfully reduce and eliminate pollutants from urban runoff.

8.2 Outcome Level 1a: Administration of Management Program Activities

The City's implementation and assessment strategy for the Education Component is described in the *2008 JURMP Section 10.0*. During the reporting period the City made no significant updates to the education program. The City continues to focus education efforts at the five targeted community groups. The City tailors each individual education activity to best suit the message and content for the target community; however, the overall message is consistent with the *2008 JURMP Section 10.0*. Minor changes to the program include changes to materials such as handouts, surveys, and educational guidance documents, which are continuously updated throughout the year. The City also continues to seek for ways to expand and improve the effectiveness of the education program.

8.3 Outcome Level 1b: Implementation of Management Program Activities

The Environmental Division oversees the implementation and assessment of the Education Component for the five targeted communities. The following tables and figures presented in this section provide additional information on the implementation and assessment of the Education program element:

- Table 8.1 Provides an overview of the Education program
- Table 8.2 presents and describes targeted FY 2011-12 outcomes and results
- Table 8.3 provides the education activity inventory by target community for FY 2011-12

8.4 Outcome Level 2: Knowledge and Awareness of Program Implementation by Target Community

The City implements an education program for each target community using all media as appropriate to (1) measurably increase the knowledge of the target communities regarding MS4s, impacts of urban runoff on receiving waters, and potential BMP solutions for the target audience; and (2) to measurably change the behavior of target communities and thereby reduce pollutant releases to MS4s and the

environment. During the reporting period the Environmental Division implemented a variety of techniques to capture changes in knowledge and awareness among the targeted communities. These techniques include the use of surveys, pre and post test, interactive assessments and evaluations during inspections, and regional assessment programs through the Education and Residential Sources (ERS) Workgroup.

8.5 Outcome Level 3: Behaviors and Best Management Practice (BMP) Implementation by Target Community

The City facilitates changes in behavior and implementation of BMPs by providing continuous education for each target audience using a variety of educational tools and media. The continual saturation of education for each target audience is gradually leading to a greater awareness about storm water pollution and the implementation of pollution prevention BMPs. Gauging the level of effectiveness of the education program from one year to the next is a challenging task because of the gradual nature of behavior change, but the City strives to measure this level of effectiveness and behavior change for each target audience whenever possible. Table 8.3 provides a description of how outcome level 3 is assessed for each targeted community.

8.6 Outcome Level 4: Source Load Reductions

Education is a key component of getting to source load reductions through the implementation of BMPs. Source load reductions are not easily tracked from education activities but can be implied through the proper implementation of BMPs.

Table 8.1 – Overview of Education

Category	Number	Description
A. Educational Efforts		
Municipal Departments and Personnel Events	7	Employees are trained annually on the use of BMPs in their daily operations. Face-to-face meetings are held on a regular basis with employees to discuss the JURMP and its application in their operations.
Construction Site Owners, Contractors and Developer Training Events	4	Construction Site Owners, Contractors and Developers are trained through face-to-face meetings with the Community Development Department and the Publics Works Department during the permitting process, in inspections, and in investigations of illegal discharges.
Public Participation	7	
Commercial Site Owners and Operators Training Events	3	Commercial Site Owners and Operators are trained through scheduled inspections by the Public Works Department Environmental Division, and through investigations of illegal discharges.
Residential Community and General Public Outreach Events	12	All residents receive educational information in the City's newsletter, a newsletter sent out by the City's waste franchisee, website updates, materials provided at City Hall and the Public Works Department, through community presentations, etc. The City also participated with other Co-Permittees in regional outreach events that target the underserved community.
Underserved Community	3	
School Children Outreach Events	2	

JURMP Sections	Description of FY 2011-12 Changes
10.0 and Appendix I	BMP requirements of the JURMP applicable to educational areas and activities were modified in accordance with the requirements of the updated Permit in March 2008.

Table 8.2 - Education Component Targeted Outcomes and Results

Education FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
LEVEL 1a OUTCOMES (ADMINISTRATION MANAGEMENT PROGRAM ACTIVITIES)		
a) Modifications to JURMP		
Update applicable JURMP sections per Permit requirements	No major updates during the reporting period	So significant programmatic changers were made to the Education Component during the reporting year. The City is no longer the co-chair of the Education and Residential Sources workgroup because the County is taking the lead to better facilitate consultant contracts for the workgroup.
b) Updates to Program Documentation (Policies, Plans, Procedures, and Forms)		
Update program documentation for consistency with program updates	No updates made during the reporting period	The City implements surveys when feasible at education events to establish a baseline level of knowledge. Minor program updates were made throughout the year to program content to more effectively present education materials.
c) Updates to Training Program		
Update training materials for consistency with *2008 JURMP Section 10.0*	New content added as necessary to training program	The City makes annual updates to training content and materials so that each education activity provides appropriate information for the target audience. For example a new topic for this year included the requirements in the new Construction General permit. The Environmental Division coordinates training program for all targeted audiences.
d) Year-End Program Review		
Complete annual year-end program review	Review program for effectiveness and efficiency	The City continues to improve the implementation of the JURMP by conducting an annual review of each component and incorporating any modifications into the next reporting period.
LEVEL 1b OUTCOMES (IMPLIMENTATION OF MANAGEMENT PROGRAM ACTIVITIES)		
a) Jurisdictional Requirements for Education Component		
Provide education to construction site owners, contractors, and developers	Educated and reinforced minimum BMP requirements for projects	Construction Site Owners, Contractors and Developers are trained through face-to-face meetings with the Community Development and the Publics Works Departments during the permitting process and pre construction meetings. Community Development holds counter hours for project applicant. Education is reinforced through inspections and in investigations of illegal discharges. The City also provides construction BMP info through brochures and on the City's website.

Education FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Provide education for municipal staff	Provided annual training and additional education opportunities to municipal staff	The Environmental Division provided 7 municipal training activities including the annual storm water training for Public Works on 10/26/11. Each division also received refresher training by the Env Specialist during the year. All new employees receive one-on-one training for storm water at the beginning of employment. City staffs are encouraged to attend training activities for storm water program outside the City for example HMP, SUSMP, and GCP. Face-to-face meetings are held on a regular basis with employees to discuss the JURMP and its application in their operations. Annual municipal inspections involve face time with each Division supervisor. Every City vehicle also contains a binder of Municipal Facility and Activity BMPs and MS4 map that get review during annual training.
Provide education to industrial and commercial owners and operators	Provided education to commercial businesses and owners	Commercial businesses receive education on storm water BMPs through a number of different methods inspections, face-to-face interaction with City staff during commercial inspections, through dissemination of education material, and through a follow up inspection letter that summarizes the results of the commercial inspection. The City also provides education to businesses during ICID investigations and educational materials to street vendors for special events. New businesses receive storm water BMP indoctrination when applying for a business permit.
Provide education to underserved community	Provided education to underserved community	Education materials are provided in both English and Spanish. The environmental division incorporates the underserved community in most education activities, which is particularly important to IB due to the large Spanish speaking community. The City also chairs the Underserved Target Audience Sub-Workgroup of the ERS workgroup.
Provide education to residential community, general public, and school children	Provided education to residential community, general public, and school children	The Environmental Division provided 14 education activities targeted to residential community, general public, and school children. Some of the activities included presentation to schools, after school activities at IB Sports Park, media education, Recycling All-Star award, and ILACSD school presentations. The Tijuana Estuary, State Park, FWS, YMCA Camp Surf, Surfrider, and Wildcoast also conduct environmental education and community outreach within Imperial Beach that is not currently tracked by the City but represents a significant effort to promote clean water in the region.

Education FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Provide opportunity for public participation	Provided opportunities for public education	Public participation is encouraged in the development and implementation of the JURMP. The annual JURMP Report is presented at City Council during an open public hearing process. The Environmental Division also facilitates and participates in public cleanup activities that serve as mechanism for public participation in watershed activities and provides proclamations from the Mayor to encourage such efforts.
b) Special Investigations		
Not targeted	Mayor Proclamation for April as Environmental Awareness Month and Oct as TJ River Action Month and Recycle All Star Award	Imperial Beach proclaimed the month of April as "Environmental Awareness Month". Environmental Division scheduled a number of education activities for the month with the afterschool youth at IB Sports Park and selected a weekly recipient for the Recycling All-Star award for the month. These activities were in addition to the normal Earth Day celebrations in the region. The month of October was also proclaimed as Tijuana River Action Month. The City and EDCO also encourage recycling through the Recycle All Star program that awards $100 to a select resident each month that demonstrates good recycling practices (which also includes clean curb and gutters in front of home).
LEVEL 2 OUTCOMES (KNOWLEDGE AND AWARENESS OF PROGRAM IMPLEMENTATION)		
a) Construction Site Owners and Developers		
Assess knowledge and awareness for construction site owners and operators	Assessed knowledge whenever possible	Most construction activity in the City is from small discretionary projects and CIPs. Knowledge and awareness is achieved through proper submittal of storm water documents and proper implementation of BMPs. All projects are required to submit the necessary storm water documents and implement BMPs. Deficient projects receive proper education from staff. General outcomes reveal a high level of knowledge from larger contractors and a lesser understanding of BMPs from smaller general contractors.
b) Municipal Departments and Personnel		
Assess knowledge and awareness for municipal staff	Assessed knowledge though surveys and regular meetings. Public Works survey average score of 9.58/10 correct answers.	Surveys are administered during annual storm water training events. The surveys are generally challenging in nature because personnel staff are expected to have a high level of understanding of storm water program. Surveys are administered at the begging of the training session and used as a tool to highlight specific topics during the training session.

Education FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
c) Industrial and Commercial Site Owners and Operators		
Assess knowledge and awareness for commercial businesses	Assessed through interactive assessment process. Assessment results provided in Table 5.4 and figure 5.1 in the Commercial Section.	The Environmental Division incorporates an interactive effectiveness assessment of commercial businesses and rates businesses on a scale of 1 out of 5. The results of the assessment are presented in Table 5.4 and Figure 5.1 in Section 5 for Industrial and Commercial Component.
d) Underserved Community		
Assess knowledge and awareness for underserved community	Assessed though Regional Copermittee group	The Education and Residential Sources Workgroup provides targeted assessment of the underserved community through event surveys and a countywide phone survey. The ERS workgroup have completed two countywide phone surveys that provide a pre and post assessment during the past 5 year permit cycle.
e) Residential Community, General Public, and School Children		
Assess knowledge and awareness for residential community, general public, and school children	Assessed through surveys during presentations and at events	The City worked with ILACSD to conduct targeted education and assessment for high school children. Results of pre and post test indicate a change in knowledge of high school students of 35% points between pre and post test. After the presentation students also indicated a higher likelihood of taking action to keep their watershed clean.
LEVEL 3 OUTCOMES (BEHAVIORS AND BMP IMPLEMENTATION FROM EDUCATION ACTIVITIES)		
a) Construction Site Owners and Developers		
Number of construction projects that were not in compliance with BMPs	7 of 71 construction projects were out of compliance with BMPs. 90% of active construction projects in compliance with site BMPs	Most construction projects (90%) implemented the necessary BMPs as prescribed in conditions to contain potential contaminates on site. Non-compliant projects received additional education and a follow up investigation to ensure the proper BMPs were implemented and maintained.
b) Municipal Departments and Personnel		

Education FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
Number of ICIDs identified and reported by municipal staff	Municipal Staff identified 105 out of 137 ICID during the reporting period. Total ICID: 137 Public Works: 97 City Hall Staff: 8	One component of the annual municipal training is the proper identification of ICIDs. During FY 2011-12 City Staff identified 77% of the reported ICIDs with non-storm water staff identifying 57% of the incidents, which again reinforces the high results from municipal staff training. General pubic reporting through online complaint form or hotline calls made up only 23% of the overall cases.
c) Industrial and Commercial Site Owners and Operators		
Number of commercial businesses not in compliance with minimum BMPs	31 out of 71 commercial businesses were out of minimum BMP compliance. 56% of high priority businesses in complete compliance with minimum BMPs (up from 48% last year)	The City inspects 100% of high priority commercial businesses annually for proper implementation of BMPs. During the reporting period the city inspected 71 commercial businesses with the result of 14 businesses receiving an NOV for non-compliance with minimum BMPs and 31 additional businesses having minor violations that required a follow up inspection. In total 31/71 businesses required some type of enforcement action and reinsertion for minimum BMPs. A total of 111 inspections were performed.
d) Underserved Community		
Not targeted	Regional ERS Workgroup conducted the second countywide phone survey reported in RURMP.	The underserved community is not specifically targeted but rather included in all existing education programs. The city does work with Wildcoast to target Spanish speaking and underserved residents as well as underserved youth through after school programs at the IB Sports Park. Behaviors and BMP implementation are more effectively addressed through the Regional Copermittee group where 2 Countywide phone surveys have been conducted.
e) Residential Community, General Public, and School Children		
Number of education activities that target behavior change	14 education activities during the reporting period	Assessing changes in behavior and BMP implementation across the whole community is best addressed through regional programs. Imperial Beach focuses on targeting education through a variety of media and interactive programs that target the most people possible. Anecdotal observations from City staff reveal a continuous improvement in BMP implementation across all targeted audiences as the persistent storm water education message gradually changes public behavior.

Education FY 2011-12 Results		
Targeted Outcome	Implementation Result	Explanation
LEVEL 4 OUTCOMES (SOURCE LOAD REDUCTIONS FROM EDUCATION ACTIVITIES)		
a) BMP Implementation		
Source load reduction	Provided education to targeted audiences. Total number of education activities:38	Source load reductions are not easily tracked from education activities but can be implied through proper implementation of BMPs. Source load reductions from cleanup activities are tracked and reported separately.

Table 8.3 Education Activity Inventory by Targeted Community

Education Activity	Date	Activity or Event Description	Topics	Participants	Effectiveness Assessment
Municipal Departments and Personnel					
Public Works Annual JURMP Training	10/26/2011	Annual Storm Water JURMP training for Public Works	Annual training on PW facility and activities BMPs, LIDs, and Tijuana River update	26	Survey and post assessment (Avg.: 9.58/10)
FYI to City Staff and Council	Weekly	Provided multiple updates on various storm water topics and current events through a weekly email newsletter sent to City staff and Council	Storm Water Program	City Staff and Council	
Code Enforcement Meeting	Monthly	Monthly meeting with Code Enforcement, Fire Inspector, Building Inspector, Community Development, and Environmental Division	Code enforcement issues many of which pertain to storm water	Env, Code, Fire, and Building Divisions	
Community Development Meeting	Weekly	Weekly staff meeting with managers from community development related to interdepartmental issues including storm water	new buildings, BMPs, storm water program	6	
Emergency Reponses Plan Training	8/10/2011	Review City's emergency response plan	Emergency shut off for fuel, equipment operations, spill response	23	
Complete Streets Workshop	6/22/2012	All day workshop on complete streets	Green streets, complete streets, and regional planning	2	
Construction General Permit	multiple	QSP and QSD General Construction Permit training (JS Storm water, URS, and RBF)	QSP/QSD certification	4	Passed test exam QSP
Construction Site Owners and Developers					
Copy of storm water/grading/erosion control requirements attached to Imperial Beach issued permits and construction BMP brochure.	On going	Community Development Department disseminates BMP and storm water information with permits	BMP, pollution prevention, City storm water requirements	---	
Community Development counter hours	On going	Counter hour for education relating to construction and development in the City	BMPs, pollution prevention, City storm water regulations	---	
Streets 3B Pre Construction Meeting	12/14/2011	Review project and BMP requirements with contractors and subs	BMPs and project schedule	14	
Streets 4/5 Pre Construction Meeting	1/5/2012	Review project and BMP requirements with contractors and subs	BMPs and project schedule	14	
Commercial Owners and Operators					
Commercial Inspection	On going	Commercial business inspections	Pollution prevention, BMPs, storm water regulations		

Education Activity	Date	Activity or Event Description	Topics	Participants	Effectiveness Assessment
Follow up inspection report and letter	On going	Each commercial inspection is followed up with summary report and BMP brochures by mail	Commercial BMPs, recycling and pollution prevention		
Sand Castle vender packed and inspections	7/21-24/2011	Education to Vendors and inspections during the event	Storm water pollution prevention, ICIDs	35	
Residents and General Public					
EDCO Shredding Event	7/9/2011	EDCO collected paper to shred at Mar Vista HS	Proper waste management	54	1.06 tons of paper recycled
Water Quality Workshop (When is it safe to swim?)	10/12/2011	Community workshop on beach water quality	County DEH, SCCOOS, Regional Board, Lifeguards, Coastkeeper presentations	40	
Day Without a Bag	12/15/2011	Surfrider handout reusable bags at Wally's IGA	Trash	250	
Day Without a Bag	12/15/2011	City staff handout bags at City Hall and Library	Trash	50	
City Council presentations on Tijuana River	7/6/2011 8/17/2011 2/15/2012 4/4/2012 4/18/2012 6/6/2012	Multiple updates at City Council Meetings on topics related to the environmental issues in the Tijuana River.	Over view of regulatory agencies in US and Mexico; wastewater treatment in Mexico; SCCOOS; TJ River Bacteria Study; IBWC	Public City Council Meeting	
FY 2010-11 JURMP AR Public Hearing	9/7/2011	Public hearing at City Council meeting	Overview of the FY 2010-11 JURMP AR components	Public City Council Meeting	
City Semi-Annual E-news letter	Summer / Winter	Included articles on storm water, Recycling, HHW, and street sweeping	Pollution prevention; storm water BMPs; Recycling HHW; Special Events; Street sweeping	Citywide	
EDCO Environmental Times Mailer	Quarterly	Published a variety of environmental articles in the Summer , Fall, Winter, and Spring EDCO news letters sent to all residents	Pollution prevention, special events, HHW, recycling, and storm water regulations	Citywide	
Citywide Garage Sale	4/28/2012	Annual citywide garage sale to promote reuse of items	Recycle and reuse	90	90 participants received training material from Env Division
Home Front Cleanup	5/5/2012	Citywide annual home front cleanup event	trash, recycling, HHW	714	Trash: 35.8 tons; Green waste: 20.7 tons; metal: 16.4 tons; con-demo: 72.2 tons; e-waste 7.4 tons
Christmas Tree Recycling	12/27/11 - 1/17/12	City provides 3 locations for xmas tree recycling with info	trash, recycling, and BMPS	Citywide	

Education Activity	Date	Activity or Event Description	Topics	Participants	Effectiveness Assessment
Eagle and Times and UT newspaper	Multiple	Articles from City PR on variety of topics advising the community on storm water related issues	Go green in IB for Environmental Awareness Month; Tijuana River Action Month	Citywide newspaper	
Underserved Community					
Underserved Target Audience Sub workgroup	On going	Co-chair of Education Residential Sources Workgroup, Chair of Underserved Target Audience sub-workgroup	Representation of the under community in all aspects of the regional education program	Region wide	
Spanish Calendars	2012	Developed 2011 storm water Spanish calendars and distributed 2000 through Wildcoast as part of regional Education program	Multiple storm water themes	2000	
Storm Drain Stenciling	4/21/2012 4/28/2012	Wildcoast storm drain stenciling in Imperial Beach for Env Awareness Month	Pollution prevention	20	
School Children					
ILACSD Mar Vista High School Presentations	3/23/2012	Mar Vista HS 9th, 10th, and 11th grade presentations	Storm water, watersheds, Tijuana River estuary, San Diego Bay	95	Pre and Post Tests (35% improvement)
IB Sports Park for April as environmental awareness month	4/25/2012 4/26/2012	After school activities with education staff from the Tijuana Estuary at IB Sports Park	watershed, storm water, environmental	30	
Public Participation					
Mayor Proclamation Tijuana River Action Month	10/5/2011	Public presentation at City council meeting and designation of Sep-October as TJ River Action Month	Volunteer appreciation and recognition of agency efforts in TJ River	Public City Council Meeting	
Mayor Proclamation Environmental Awareness Month	3/21/2012	Public presentation at City Council meeting and designation of April as Environmental Awareness Month in IB	Multiple environmental education activities for the month of April	Public City Council Meeting	
Coastal Cleanup Day	9/17/2011	Multiple location in TJ watershed on both sides of the border	Trash cleanup event with Wildcoast, Surfrider, and ILACSD	200+	
Fiesta del Rio	9/11/2011	All day event at Pier Plaza hosted by the TJ Estuary education staff.	Multiple topics that include storm water education	1000+	
Tijuana River Cleanup	10/15/2011	Cleanup at Dairy Mart Road	Cleanup coordinated by Wildcoast and Surfrider	45	
Creek to Bay Cleanup	4/28/2012	Annual Coastkeeper Creek to Bay cleanup	Cleanup of multiple location in the region including IB	Region wide	
Sand Castle Event	7/21-24/2011	Annual Sandcastle event with church group providing volunteers for trash and recycling service and enforcement of BMPs for street vendors	Trash, Recycling, and storm water BMPS	Large Event	

9.0 Public Participation

9.1 Introduction

The City is required to incorporate a mechanism for Public Participation in the updating, development, and implementation of the JURMP. Public involvement in the JURMP leads to a greater understanding of public perception and attitudes towards the problem of storm water pollution and helps the City implement a more effective storm water program. The Environmental Division regularly interacts with residents, commercial businesses, municipal staff, and developers while conducting inspections, education activities, BMP enforcement, and other JURMP implementation components. The City also makes additional efforts to include public participation in the implementation and development of the JURMP by providing opportunities throughout the year to provide comments and feedback.

9.2 Public Participation Efforts

The City holds a public hearing and solicits public comments prior to the adoption and submittal of the JURMP and its Annual Reports. The public was notified on this Annual Report in the Imperial Beach *Eagle & Times* newspaper and through public hearing notices that were posted at City Hall and the Imperial Beach Public Library. A draft of this JURMP Annual Report was made available for public viewing at the Imperial Beach City Hall, posted on the City's website, and presented at a public hearing to City Council on September 19, 2012.

Other public participation mechanisms the City uses include the operation of a storm water hotline and online reporting tool to report violations, coordination of cleanup activities such as the pet waste bag program and trash clean ups with local organizations, involvement with local environmental groups to spread awareness of urban runoff pollution, the City's storm water education program, participation with civic organizations, Mayor proclamations for Tijuana River Action Month and Environmental Awareness Month, and City special events.

10.0 Fiscal Analysis Component

10.1 Introduction

The Environmental Program Division of the Department of Public Works is responsible for the fiscal analysis of the storm water program. Implementation costs for the JURMP are approximately $773.075. Revenue source used by the City to fund the requirements of the Municipal Permit is the City general fund. The City also administered two grant projects in the approximate amount of $577,247 for the Tijuana River Bacteria Source Identification Study and the Los Laureles Trash Tracking Study

10.2 General Budget Information

The costs of implementing the JURMP are spread across the whole City. Each Department and associated Division has an established role in implementing the components of the JURMP. However, the primary responsibility of implementing the storm water program is split between the Department of Public Works and Community Development Department.

10.3 Fiscal Analysis Methods

The Standardized Fiscal Analysis Methods and Format (Fiscal Analysis Methods) were collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. This section of the JURMP report follows the standardized Regional Fiscal Analysis Methods adopted by all Copermittees.

10.4 Fiscal Analysis Results

10.4.1 Expenditures

The expenditures for FY 2011-12 are provided in the tables below. The standardized fiscal analysis method does not exactly correspond to the line item budget maintained by the City. The values presented in Table 10.1 are therefore an extrapolation of the expenditures made that correspond best to the itemized categories. Table 10.2 also provides the expenditures related to City grant funded projects which included the Prop 50 Clean Beaches Initiative grant for the Tijuana River Bacteria Source Identification Study and the Cleanup and Abatement funding for the Los Laureles Trash Tacking Study.

The implementation of all JURMP Components involves every City Department and Division and the actual implementation costs for the program may exceed the amount posted below. The costs being reported only cover the expenditures tracked by the City of Imperial Beach Environmental Division budget.

Table 10.1 Expenditures on JURMP for FY 2011-12

Administration	$142,906
Development Planning	$80,295
Construction	$11,150
Municipal	$287,020
Industrial Commercial	$6,920
Residential	$16,695
IDDE	$34,440
Education	$16,447
Public Participation	$9,420
Special Investigations	$0
Non-Emergency Firefighting	$99,656
Regional Costs	$68,124
Total	**$773,075**

Table 10.2 Grant Funded City Projects FY 2011-12

Tijuana River Bacteria Study	$ 562,247
Los Laureles Trash Tacking	$15,000

10.4.2 Funding Source

Revenue source used by the City to fund the requirements of the Municipal Stormwater Permit is exclusively from the City's general fund.

11.0 Program Effectiveness Assessment

11.1 Introduction

The Environmental Program Division is responsible for the effectiveness assessment of JURMP activities and implementation of BMPs for each major component of the storm water program. Effectiveness assessments are incorporated into the storm water program whenever feasible to help inform the adaptive management process.

The structure of this Annual Report evaluates the level of effectiveness for each JURMP component in the context of program planning, management, and implementation. The City uses the structural hierarchy of levels that were established in the *2003 Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs*. Each section of this Annual Report incorporates program effectiveness on Outcome Level 1through Outcome Level 4. In general, Outcome Levels 1, 2, and 3 are best addressed on a Jurisdictional scale. Outcome Level 4 measurements of load reductions are provided whenever possible, but for the most part, assessment of changes to water quality (Levels 4, 5, and 6) are best addressed at the watershed or regional scale.

11.2 Outcome Level 1a: Administration of Management Program Activities

The administration of management program activities addresses modifications to the *2008 JURMP*, updates to program documentation or procedures, end of the year program review, and updates to inventories for next fiscal year.

The City's implementation and assessment strategy for the program effectiveness is described in the *JURMP Section 13.0*.

11.3 Outcome Level 1b: Implementation of Management Program Activities

The implementation of management program activities addresses BMP confirmation requirements, proper documentation, training, inspections, public awareness and response, and special investigations for each component of the *2008 JURMP*. The tables in each section of the Annual Report present and describe targeted outcomes and results based on program implementation for the reporting period.

11.4 Outcome Level 2: Knowledge and Awareness of Program Implementation

Knowledge and awareness are targeted and assessed as necessary within each element of this Annual Report independently.

11.5 Outcome Level 3: Behaviors and Best Management Practice (BMP)

Behaviors and BMP implementation are assessed within the tables located in each section of this Annual Report.

11.6 Outcome Level 4 – Source Load Reductions

Source load reductions are targeted and assessed as necessary within each element of this Annual Report independently.

12.0 Special Investigations

12.1 Introduction

This section describes special investigations that were conducted above and beyond Permit requirements, but with the ultimate goal of better understanding and controlling urban runoff and storm water pollution. Special investigations relevant to each JURMP component are assessed in the tables of each section of this Annual Report. The discussion presented in this section provides additional details on the special investigation for the Tijuana River Bacterial Source Identification Study and Los Laureles Trash Tracking Study.

12.2 Tijuana River Bacteria Source Identification Study

In April 2008, the City of Imperial Beach (City) was awarded a Clean Beach Initiative (CBI) grant by the State Water Resources Control Board (SWRCB) (Grant Program Agreement No. 07-584-550-0) to assess the potential sources of indicator bacteria on the United States (U.S.) side of the Tijuana River Watershed that may be impacting the Tijuana River Estuary and adjacent beaches. The resultant project was named the *Tijuana River Bacterial Source Identification Study*. The contract timeline for the work identified for the study was as follows:

- The SWRCB Contract for the City of Imperial Beach was awarded in February 28, 2008.
- The Contract was closed by the SWRCB due to the State-wide funding crisis on December 17, 2008.
- The Project was reopened on May 6, 2010.
- The Project end date is October 1, 2012.

The overall goal of the study was to identify sources of indicator bacteria in the Tijuana River Watershed within the U.S. side of the U.S./Mexico border that have the potential to impact the Tijuana River Estuary and adjacent beaches. Within this larger framework, the study had several specific objectives:

1. Identify anthropogenic sources of bacteria,
2. Identify non-anthropogenic sources of bacteria,
3. Assess annual bacteria loads into the Tijuana River,
4. Identify point and non-point sources (NPSs) of bacterial pollutants, and
5. Develop best management practices (BMPs) to reduce bacterial loads originating in from the U.S. side of the border.

To address these objectives, the project had several elements:

- Multiple Sanitary and Dry Weather Surveys,
- Wet Weather Assessments of multiple storm events,
- A Series of Special Studies (Groundwater, Goat Canyon Sediment, and Seacoast Dr. sewer line)
- BMP Concept Designs and Prioritization for urban areas in the US.

There were numerous findings from this multi-year, multi-faceted study. The final report will be submitted to the State Water Board in October and available on the City's website. The major conclusions drawn from the results of the monitoring and special studies are summarized below.

- The pollution sources and their impact on the Tijuana River Estuary vary dramatically by season. During dry weather, the estuary is relatively un-impacted from the watershed, and the estuary is a healthy, vibrant and vital ecosystem. During storm events, flows from Mexico transform the estuary into a severely impacted, polluted and hazardous water body with extremely elevated bacterial concentrations and elevated potential health risk to the environment and the public.
- Extensive dry weather and sanitary surveys revealed several locations in the watershed where indicator bacterial concentrations were high, or there was evidence of human fecal contamination, but the contamination was determined to be ephemeral and not related to a consistent source (such as leaking infrastructure).
- Dry weather surveys also revealed that there is very little hydrologic connection between watershed surface waters and the estuary (with the exception of some small drainages).
- Semi-natural BMPs such as soft-bottom sediments and ponds at the base of the major sub-drainages prevent the large majority of dry weather flows from entering the estuary.
- During wet weather, approximately 99% of the indicator bacterial loads entering the Tijuana River Estuary and Pacific Ocean originate from un-diverted flows from the Tijuana River main stream and tributary channels from Mexico.
- Proactive steps to reline the sewage system along Seacoast Drive by the City of Imperial Beach appear to have eliminated a suspected source of human fecal contamination from entering the northern arm of the estuary.
- Groundwater associated with the main stream of the Tijuana River at the U.S. Mexico Border may have elevated bacterial and nutrient levels compared to relatively clean sites closest to the estuary, suggesting the groundwater may not be a likely source of bacterial contamination to the estuary. However, the presence of enterovirus at sites closest to the estuary suggest that further studies may be needed to better understand surface groundwater interactions and the potential risk to estuary surface waters from groundwater resources.
- Sediments within the Goat Canyon Sediment Basins appear to act as a reservoir for indicator bacteria that has the potential to impact receiving waters for several days if the sediment were used for beach replenishment. Further studies are needed to clarify potential impacts indicated by this initial, small-scale study.
- Based on the findings of these studies, BMPs were designed and prioritized on their ability to reduce bacterial loads and will serve as a tool for managers to reduce potential impacts to the Tijuana River Estuary.

12.3 Los Laureles Trash Tracking Study

In June 2011 the City was awarded $15,000 in funds from the State Water Board Cleanup and Abatement Account for the Los Laurels Trash Tracking Study. The purpose of the study was to scientifically document the trans-border flow of trash into the Tijuana River Valley from illegal stockpiles originating in Mexico. The results of this study provide an important step towards developing bi-national policy to address cross border sources of trash that ends up in the Tijuana River Valley. The project was a joint effort by UCSD, City of Imperial Beach, and Tijuana River National Estuarine Research Reserve.

The goals and objectives of this project are as follows:

1. To Produce a Scientific Record of unmanaged Open Dump Sites in Los Laureles Canyon
   a. Objective – Geo-locate and map all significant open dump sites using GPS and ArcGIS software
   b. Objective – Record spatial attributes, land-use, and soil conditions of dump sites (in an effort to qualify conditions that stimulate waste flows)
   c. Objective – Create database of sites attributes and geography including descriptive attributes of waste found at dump sites

2. Track the Flow of Trash from Los Laureles Canyon to TRNERR during Coastal Storms
   a. Objective – Deploy 2,000 Trash-Tracker Probes housing RFID tags at significant dump sites in canyon (approx. 100 sites)
   b. Objective – Map the course of trash-flows using ArcGIS software
   c. Objective – Geo-locate Trash-Tracker Probes on the U.S. side of the border (post-storms) using RFID technology and map resting places

3. Share Scientific Record with Stakeholders: Community Members/Policy Makers/Government Officials
   a. Objective – Provide database of baseline data
   b. Objective – Provide map of canyon dump site locations
   c. Objective – Provide map of trash-flow (initial site, progress, resting place)
   d. Objective – Provide stakeholders with final analysis of case study

Work started on the project in the fall of 2011 prior to the first winter storms with the placement of trash probes in Mexico at identified illegal dumpsites. The trash probes that made it across the border were then collected in the spring of 2012 on the US side of the border from the Goat Canyon sediment basin. The results of the study demonstrated the hypothesized link between illegal trash dumpsites in Mexico and the trash that makes it across the border into the Tijuana Estuary every winter. The results of the study were presented to officials in Mexico and United States and lead to increased efforts in 2012 by Mexican authorities to clean up trash from illegal dumpsites and create constructive dialogue between both countries to better manage the trans-border flow of trash.

13.0 Non-Emergency Fire Fighting

13.1 Introduction

The City requires pollution prevention measures and BMPs to reduce or eliminate non-emergency firefighting flows. The Environmental Division assists the Fire Department in implementing control measures to prevent or control pollutants from both emergency and non-emergency firefighting activities. The 2008 JURMP Section 2.2 identifies the BMPs that are implemented as part of firefighting activities.

Non-emergency firefighting activities, such as training activities that simulate emergency responses, are performed in a manner that eliminates discharges to the storm water system whenever practicable, and minimizes discharges to the storm water conveyance system when elimination of discharges is practicably unavoidable. The following best management practices are implemented as part of these activities:

- Water flows are directed to landscaped areas whenever possible
- When flowing water to an area where landscaping does not prevent runoff, the area selected shall be surveyed by the Officer in charge prior to training activities to ensure that debris will not enter into the storm water system as a result of the drill
- Areas that have debris, which could potentially enter the storm water system as a result of the drill activities, will not be used for training until debris has been removed. Referrals to the Department responsible for the debris removal will be made as needed
- Live fire training activities will be pre-planned to allow integration of barriers to off-site runoff, which could contribute to storm water discharges
- Discharges from maintenance of equipment and restoration of hoses, vehicles, tools, ladders and other emergency response equipment are directed to the sewage, and dry methods are used whenever practical
- Staff is trained on good housekeeping practices to be used during standard facility maintenance procedures
- The firefighting personnel and inspectors receive annual pollution prevention training from Environmental Specialist
- Vehicle washing or equipment cleaning is conducted over a wash bay that drains to the sewer
- The fire inspector participates in monthly code enforcement meetings

14.0 JURMP Revisions

14.1 Introduction

The Environmental Program Division of the Department of Public Works is responsible to maximize program effectiveness by identifying and describing any JURMP modifications that are made during the reporting period, or that are proposed or planned for the next reporting period. Under the reporting format of this Annual Report, any modification or proposed changes made to the *2008 JURMP* are identified in the Program Planning and Administration subsection within each preceding Section of this report.

14.2 JURMP Updates

During the reporting period the City did not make any significant changes to the JURMP storm water program. No significant updates are anticipated until the Regional Board adopts a new region wide MS4 permit. The release of the next draft permit is anticipated for the fall of 2012. The City is currently working with Regional Board staff and the San Diego County Copermittees, Riverside, and Orange County on the next update to the MS4 permit. It is anticipated that the next permit will allow for a more adaptive and watershed approach based permit. Until the next permit is released, the City will continue to implement the current JURMP program.

15.0 Conclusions and Recommendations

15.1 Introduction

The City continues to made progress in further developing and refining its urban runoff and management program. The City believes that the management programs and activities implemented by municipal staff demonstrate a high level of compliance with the regulatory mandates of the Municipal Storm Water Permit, and underscore the City's commitment to reducing and eliminating pollutants related to urban runoff. The City's urban runoff management program outlined in this Annual Report successfully meets these regulatory requirements and in some cases exceeds the minimum Permit requirements.

The JURMP and all the Annual Reports are a living document that evolve over time and build upon the success and sometimes failure of management program activities. The City endeavors to implement the most effective storm water program possible, building upon the existing program, and given the resources that are available to the City. Looking forward to FY 2012-13 and beyond, the City is committed to continuing with many of the programs and management activities implemented in this report. The City is also looking ahead to the next reissued storm water permit for 2013 that will include adaptive management and a watershed approach to program implementation as guiding principles. The City is committed to working with the Copermittees, Regional Board, and local stakeholders on the next permit to implement a sustainable storm water management program that balances environmental, economic, and social needs.

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Sacramento and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On March 29, 2024, I served the:

- **Current Mailing List dated March 28, 2024**
- **Notice of Waiver of Procedural Requirements, Extension Request Approval, and Postponement of Hearing issued March 29, 2024**
- **Claimants' Comments on the Draft Proposed Decision and Parameters and Guidelines (Volumes 1-14) filed February 20, 2024**

  San Diego Regional Water Quality Control Board Order No. R9-2007-0001, Permit CAS0108758, Parts D.3.a.(3)(b)(iii), D.5.a.(1), D.5.a.(2), D.5.b.(1)(a), D.5.b.(1)(b)(iii-vi), D.5.b.(1)(c), D.5.b.(1)(d), D.5.b.(2), D.5.b.(3), E.2.f., E.2.g., F.1., F.2., F.3., I.1., I.2., I.5., J.3.a.(3)(c)(iv)-(viii), (x)-(xv), the first sentence of L.1. as it applies to the newly mandated activities, and L.1.a.(3)-(6), 07-TC-09-R County of San Diego, Cites of Carlsbad, Del Mar, Imperial Beach, Lemon Grove, Poway, San Marcos, Santee, Solana Beach, Chula Vista, Coronado, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, La Mesa, Lemon Grove, National City, Oceanside, San Diego, and Vista, Claimants

by making it available on the Commission's website and providing notice of how to locate it to the email addresses provided on the attached mailing list.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that this declaration was executed on March 29, 2024 at Sacramento, California.

TO ALL PARTIES, INTERESTED PARTIES, AND INTERESTED PERSONS:

Each commission mailing list is continuously updated as requests are received to include or remove any party or person on the mailing list. A current mailing list is provided with commission correspondence, and a copy of the current mailing list is available upon request at any time. Except as provided otherwise by commission rule, when a party or interested party files any written material with the commission concerning a claim, it shall simultaneously serve a copy of the written material on the parties and interested parties to the claim identified on the mailing list provided by the commission. (Cal. Code Regs., tit. 2, § 1181.3.)

EXECUTIVE SUMMARY

In February 2001, the San Diego Regional Water Quality Control Board (RWQCB) issued Order No. 2001-01, a National Pollutant Discharge Elimination System (NPDES) Permit regulating discharges to storm drain systems within 18 municipalities in San Diego County, the County of San Diego, and the San Diego Unified Port District (collectively referred to a "Copermittees"). After the San Diego County Regional Airport Authority was created as a separate entity from the Port District in 2003, it was added as the twenty-first Copermittee. Order No. 2001-01, generally referred to as the Municipal Permit, required each Copermittee, including the City of La Mesa (City), to develop a comprehensive storm water management program known as a Jurisdictional Urban Runoff Management Program (JURMP). The City's JURMP includes storm water management strategies and protocols related to planning, construction, and existing developments. Major components include the implementation of Best Management Practices (BMP), water quality monitoring, and educational outreach efforts.

Each fiscal year, the City prepares an annual report on the implementation of its JURMP, as required by Municipal Permit Section I.1. The following JURMP Annual Report presents the activities implemented during the 2006/2007 fiscal year (July 1, 2006 through June 30, 2007). A brief summary of each of the 14 sections of the Annual Report is presented below.

Introduction
The introduction presents an overview of the City's storm water pollution prevention program and includes a bulleted summary of key accomplishments for the 2006/2007 reporting period. Also included in this section are responses to the RWQCB comments on the 2005/2006 JURMP Annual Report.

Municipal
The City continues to invest significant resources in further development and implementation of the municipal component of its storm water management program. The City has continued to install the Calsense Computerized Irrigation Control, which helps reduce water use, at various municipal facilities throughout the City and has continued to provide pet waste bags in all City parks. The City continues to implement an aggressive street sweeping schedule and Municipal Separate Storm Sewer System (MS4) maintenance schedule removing approximately 692 tons of material from street sweeping and 225.75 cubic yards of material from MS4 maintenance during 2006/2007. Catch basin filter inserts installed by the City prevented four cubic yards of pollutants from entering the MS4 and the City removed 77.5 cubic yards of material through non-mechanical open channel maintenance. The City continued to use the $14.5 million dollar low interest loan from the State Water Resources Control Board to install, rehabilitate, or replace 3,741 linear feet of sewer line and continued maintenance of the sanitary system to prevent sanitary sewer overflows. The City's Environmental Specialist conducted inspections at all high priority municipal facilities during 2006/2007.

The City held 20 training sessions for City staff, and the City's Environmental Specialist attended a number of different training sessions, meetings, and outreach events. The City continued to provide new Public Works Operation Center employees with the City's Municipal Program Storm Water Best Management Practices Notebook. A variety of other educational information, fliers, and brochures were made available on the City's Storm Water Bulletin Board, which is displayed in City Hall. A notable achievement during the 2006/2007 reporting period was the adoption of an ordinance prohibiting smoking in public parks, which is anticipated to significantly reduce cigarette debris. The ordinance will go into effect in 2007/2008.

Industrial/Commercial

During 2006/2007 the City inspected all high priority industrial facilities and provided corrective actions to each facility based on inspection findings. Based on inspection findings and complaints received to the City's storm water hotline, the City issued Notices of Violation (NOV) to 4 industrial facilities. The City responded to 23 complaints received by the City's storm water hotline regarding commercial facilities. The City issued 10 NOVs to commercial facilities as a result of complaint investigations. The City ensured that all complaints were investigated immediately and resolved. The City continued to provide educational outreach material to industrial and commercial businesses. In response to the findings of the City's Dry Weather Field Screening and Analytical Monitoring Program, the City sent exceedance notification letters and educational material to hundreds of commercial facilities. The letters described the pollutants found and BMPs to prevent discharge of such pollutants.

Residential

Residential areas comprise much of the land-use in the City of La Mesa. For this reason, the City has implemented a variety of programs aimed at encouraging residents to implement pollution prevention practices, BMPs, to dispose of wastes properly, and to be involved in the City's storm water program. The City continued to include storm water-related articles in the quarterly newsletter, the *La Mesa Focus*. Each issue of the *La Mesa* Focus newsletter is sent to over 27,500 residential addresses in the City. The newsletter is also mailed to 2,500 business addresses, and additional copies are available at City Hall, the library, the Adult Enrichment Center, and on the City's website. The City held six household hazardous waste (HHW) events to facilitate the proper disposal of HHW in the City. The City provided door-to-door pickup for seniors and disabled residents. The City sent letters in response to the 2006 Dry Weather Field Screening and Analytical Monitoring Program to hundreds of residents in the City notifying them of pollutant exceedances in their neighborhoods. The letters described the exceedances and BMPs to prevent discharge of pollutants. Educational flyers and fact sheets were mailed with the letters. Throughout 2006/2007 the City continued to encourage residents to report storm water violations to the City's storm water hotline. The City issued one verbal warning, three written warnings, and seven NOVs to residents in the City.

Development Planning/Construction

During 2006/2007 the City continued to utilize a checklist to help determine which storm water requirements are applicable to each development project and which projects are priority projects. The City continued to require the development and implementation of

Water Quality Technical Reports (WQTR) as defined in the City's Standard Urban Storm Water Mitigation Plan (SUSMP) Ordinance for Priority Projects. WQTRs provide post construction BMP plans to mitigate storm water pollution in perpetuity. Project proponents and City inspectors continued to meet with the Development Advisory Board to discuss projects. Eleven development projects were designated as Priority Projects requiring WQTRs. The City continued to inspect high priority construction sites weekly during the wet season and at least twice for medium and low priority sites during this reporting period. All construction sites subject to the General Construction Permit were required to develop and implement site-specific Storm Water Pollution Prevention Plans. The City continued to provide educational material to developers, construction site owners and operators, and City inspectors. The City developed a brochure for the construction community with information regarding the SANCO Resource Recovery Facility in Lemon Grove.

Illicit Discharge Detection and Elimination

The Dry Weather Monitoring Program and the Storm Water Hotline continue to be the primary sources through which illicit connections and illegal discharges (IC/ID) are detected. During this reporting period, 89 complaints were received through the City's storm water hotline and website. The City conducted its Dry Weather Field Screening and Analytical Monitoring Program during the summer of 2006 and the summer of 2007. Visual observations and field screening were conducted at 18 Dry Weather Monitoring Program sites, and water samples from over 25 percent of the sites underwent laboratory analysis for additional parameters. Based on the results of the monitoring, eight follow-up visits were made. The City responded immediately to eliminate the source(s) of pollution identified by these investigations. All IC/IDs detected in 2006/2007 were eliminated during the reporting period.

Education/Public Participation

During 2006/2007 the City continued to provide the general public with educational outreach material and opportunities to participate in the implementation of the storm water program. The City conducted numerous training sessions for municipal personnel and the City's Environmental Specialist attended a number of training sessions. The City generated 375,569 impressions. The City collaborated with local environmental groups to host the Creek to Bay Clean Up and the California Coastal Clean Up Day, both at two locations in the City. The City also hosted a Park Appreciation Day where 400 volunteers removed five tons of trash and debris. The Adopt-a-Park, Adopt-a-Block, and Canine Corners programs continued during this reporting period. These programs involve residents in keeping their community free of trash and debris, including pet waste. The City also provided residents with a number of opportunities for large item and HHW disposal.

Assessment of JURMP Effectiveness

The regionally developed approach to program effectiveness assessment includes program planning, BMP selection, and evaluation of six tiered levels of targeted outcomes. Proceeding from Level 1 to Level 6, targeted outcomes become less focused on activities conducted and more focused on changes in water quality. The higher levels typically require considerably more data and are generally harder to make definitive conclusions about. The City used this regionally developed approach to assess its program,

incorporating some City-specific components such as analysis of water usage for park irrigation, inspection data, and historical water quality monitoring data. The City has also continued to employ a numeric scoring system to assess BMP implementation and the level of storm water knowledge during industrial and commercial inspections.

Fiscal Analysis
The fiscal analysis of the City's storm water program is presented in Section 12 of this JURMP Annual Report. The expenditures for the 2006/2007 fiscal year were $575,477 and the proposed budget for the 2007/2008 fiscal year is $742,615.

Special Investigations
The City continued collaborations with the RWQCB on inspection and enforcement of the industrial business Rainbow Steel. As a result of the joint efforts of the City and the RWQCB, the business has begun to come into compliance with storm water regulations. To better understand the quality of water flowing out of the City at its major discharge points, the City also conducted additional water quality monitoring studies during wet and dry weather conditions. The wet weather study involved sampling at six sites, and the dry weather study collected data from seven sites. Collection of this information should help the City more effectively target its program implementation.

Conclusions and Recommendations
General conclusions and recommendations are presented in Section 14. During 2006/2007, the City continued to improve the planning and implementation of its program and began to prepare for the new requirements of the recently reissued Municipal Permit, Order No. R9-2007-0001. Since 2002 when the JURMP was initially adopted, the City has made a number of notable achievements. Some of these include raising the level of awareness of residents and businesses, regularly putting on cleanup programs, establishing new water quality monitoring programs, eliminating IC/IDs, and requiring higher levels of BMP implementation for construction projects, new development, and existing development. During 2007/2008, the City will continue to refine and adjust existing programs and will develop new programs to meet the requirements of Order No. R9-2007-0001.

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

1 INTRODUCTION

In early 2001, the San Diego Regional Water Quality Control Board (RWQCB) issued Order No. 2001-01 (Municipal Permit), a National Pollutant Discharge Elimination System (NPDES) permit that regulates urban runoff discharges from Municipal Separate Storm Sewer Systems (MS4) in the San Diego area. The Municipal Permit regulates urban runoff discharges of 21 jurisdictions within the County of San Diego, including the City of La Mesa, which are collectively referred to as "Copermittees."

The Municipal Permit required each Copermittee to prepare a Jurisdictional Urban Runoff Management Program (JURMP), which the City developed and finalized in early 2002. The JURMP includes program implementation and management strategies, Best Management Practice (BMP) requirements, education outreach methods and strategies, strategies to verify compliance with applicable regulations, and enforcement protocols. The JURMP includes components for development projects and the maintenance of various types of existing development, including both public and private facilities. Overall, the programs set forth in the JURMP document are intended to reduce the discharge of pollutants from the MS4 to the Maximum Extent Practicable (MEP).

As required by the Municipal Permit Section I.1, each year the City develops an Annual Report to present information on the implementation of its JURMP during the past fiscal year. The City received RWQCB comments on its 2005/2006 JURMP Annual Report in a letter dated September 21, 2007. Those comments and the City's response are presented in Attachment 1.1 of this Annual Report.

This Annual Report describes the City's implementation of its Storm Water Program during the 2006/2007 reporting period. The reporting period is from July 1, 2006 through June 30, 2007. A summary of the major accomplishments during 2006/2007 is provided below, and more detailed discussions of the City's activities are provided in the following sections of this Annual Report.

SUMMARY OF ACCOMPLISHMENTS IN 2006/2007 REPORTING PERIOD

During 2006/2007 the City both initiated new programs and continued to implement and refine existing programs. The following bullets briefly summarize notable achievements and activities from the 2006/2007 reporting period. Additional detail can be found in the following sections of this Annual Report.

- Completed annual storm water compliance inspections of all high priority municipal facilities.
- Continued maintenance of 22 filter inserts along University Avenue. Four cubic yards of sediment, trash, and debris were recovered from the filters during 2006/2007.

- Continued the use of Hydrotex lubricant for oil changes for municipal vehicles. In some cases, this helps reduce oil change frequency to every 9,000 miles instead of every 5,000 miles, which reduced the quantity of waste oil generated.
- Provided 20 training sessions for municipal personnel. The City's Environmental Specialist attended additional training sessions and meetings.
- Continued to maintain and update the NPDES Storm Water Bulletin Board at City Hall. The bulletin board is located in a high traffic area near the front desk of the Engineering Division.
- Continued distribution of a Municipal Program Storm Water BMP Notebook for newly-hired City employees.
- Continued to install Calsense Computerized Irrigation Control (Calsense) at City facilities, which helps reduce water use and over-irrigation. Calsense is now in operation at 21 locations in the City.
- Swept 8,280 curb miles of streets, removing 692 tons of sediment and debris.
- The City maintained 100 percent of the MS4 cleanout locations and removed 225.75 cubic yards of debris. An additional 77.5 cubic yards of debris was removed from open channels in the City through non-mechanical means.
- Continued to use a $14.5 million grant from the State Water Resources Control Board (SWRCB) to fund sanitary sewer improvements. The sewer improvements constitute the largest infrastructure project in City history and are expected to be completed in 2008. These upgrades are a preventative maintenance measure that will help ensure sewer overflows remain an infrequent occurrence in the City.
- Continued to maintain sewer laterals known to be prone to grease blockages monthly.
- Replaced approximately 150 linear feet of storm drain piping from corrugated metal pipe (CMP) with high density polyethylene (HDPE) pipe or round concrete pipe (RCP).
- Inspected all high priority industrial facilities.
- Began developing forms to more accurately track verbal warnings and written warnings.
- Issued 14 NOVs to industrial and commercial businesses. These enforcement actions were mainly related to discharges of wash water investigated during responses to complaints. In each case, the City resolved the issue in a timely manner.
- Continued distribution of educational fact sheets on La Mesa's two watersheds, San Diego Bay and San Diego River.
- Completed the installation of one storm water kiosk at La Mesita Park. The City plans to install one more kiosk during 2007/2008.
- Maintained the 26 pet waste bag dispensers at City parks. A total of 9,000 pet waste bags were used during 2006/2007.

- Published storm water articles in four *La Mesa Focus* newsletters. Topics included BMPs, public participation events, and waste disposal information. Approximately 30,000 copies of each issue were distributed to industrial and commercial businesses and residents in the City.
- Continued to collaborate with Target and Dixieline Lumber in the City to distribute Integrated Pest Management (IPM) cards at garden center check out stands.
- Mailed over 1,212 letters to City residents and businesses in response to recommendations associated with the 2006 Dry Weather Monitoring Program findings. The letters provided information on BMPs for residents and businesses.
- Collected over 83,000 pounds of household hazardous waste (HHW) at six disposal events and through door-to-door collections for the disabled and senior citizens.
- Continued distribution of construction educational materials, including guides for construction activity and for construction and demolition.
- Developed a brochure on construction waste recycling at the SANCO Resource Recovery Facility.
- Continued with the Development Advisory Board (DAB) meetings for development projects. Eight Priority Projects submitted Water Quality Technical Reports (WQTR) for review during this reporting period.
- Continued to use a SUSMP requirements checklist while reviewing WQTR for Priority Projects.
- Inspected all high priority construction sites during the wet season (October through April) each week and medium and low priority twice during the wet season. City building inspectors now check BMP implementation during building inspections.
- Completed the 2006 Dry Weather Monitoring Program and follow-up investigations. The City implemented the recommendations listed in the 2006 Dry Weather Monitoring Program final report. The City also initiated its 2007 Dry Weather Monitoring Program during the reporting period.
- Continued to receive complaints via the storm water hotline and the City website. A total of 89 public complaints were recorded, investigated, and resolved during this reporting period.
- Worked with I Love a Clean San Diego (ILACSD) and San Diego Coastkeeper to host Creek to Bay Cleanup and Coastal Clean Up Day. A total of 53 volunteers removed 427 pounds of debris during these events.
- Hosted Park Appreciation Day, which was a cleanup of City parks involving 400 volunteers and removing over five tons of debris.
- Made 375,569 impressions through outreach efforts.

- Continued the Adopt-a-Park Program and the Adopt-a-Block Program. The City also continued its Canine Corners Program, through which residents clean up pet waste at Harry Griffen Park on a daily basis.
- Passed an ordinance prohibiting smoking at all City parks. This ordinance is anticipated to reduce the amount of cigarette debris deposited at City parks and eventually carried to the MS4.
- Participated in Project Clean Water regional outreach group and San Diego River and San Diego Bay Watershed Urban Runoff Management Program (WURMP) groups.

JURMP ANNUAL REPORT ORGANIZATION

This annual report is divided into the following 14 Sections.

Section 1	Introduction
Section 2	Municipal
Section 3	Industrial
Section 4	Commercial
Section 5	Residential
Section 6	Development Planning
Section 7	Construction
Section 8	Illicit Discharge Detection and Elimination
Section 9	Education
Section 10	Public Participation
Section 11	JURMP Effectiveness Assessment
Section 12	Fiscal Analysis
Section 13	Special Investigations
Section 14	Conclusions and Recommendations

The municipal, industrial, commercial, residential, and construction components were addressed and organized by presenting priority sources, BMP Requirements, BMP Implementation, Pollution Prevention, Inspections, and Compliance and Enforcement. Utilizing the aforementioned format facilitated in addressing the same elements presented in the Municipal Permit. The remaining sections focused on general program activities.

2 MUNICIPAL

The City of La Mesa owns and operates a variety of municipal facilities including parks and recreational facilities, public works facilities, public roads, administrative facilities, and the City's extensive MS4. The City sets a good example for City residents and businesses by implementing BMPs at all municipal facilities to reduce the discharge of pollutants to the MEP. While all City divisions are involved in storm water responsibilities related to each specific division, the City's Engineering and Operations Divisions manage and oversee the bulk of the City's storm water program, including the management of the municipal component.

The City initially emphasizes preventing pollutants from entering receiving waters through the implementation of pollution prevention measures and source control BMPs, although structural BMPs may be implemented where necessary. The City requires that minimum BMPs be implemented at each fixed municipal facility and during mobile municipal activities. BMPs must be implemented during routine activities that take place at municipal facilities and during emergency situations when practicable. The City inspects all high priority municipal facilities on an annual basis to ensure BMPs are implemented correctly and functioning properly. Public Works employees maintain and implement a Storm Water Management Plan (SWMP) at the Public Works Operation Center. In addition to the BMPs implemented at municipal areas and during municipal activities, the City maintains a rigorous street sweeping program and MS4 and sewer maintenance programs to further reduce or eliminate pollutants from entering the storm water conveyance system.

PRIORITY SOURCES

The City continues to maintain a prioritized, watershed-based inventory of municipal facilities. These facilities have been prioritized based on threat to water quality into one of three categories: high, medium, or low. The City updates the inventory and prioritizations annually. Included on the City's inventory, Table 2-1 at the end of this section, are 22 public parks and recreational facilities, four administrative facilities, three fire stations, one police station, three community service buildings, seven City Public Works Facilities, and four parking facilities. Additionally, City roads, streets, and highways and the City's MS4 are included on the inventory. City roads, streets, and highways do not include Interstate 8 and State Route 125, both of which are under California Department of Transportation (Caltrans) jurisdiction.

As previously mentioned, each facility is assigned a prioritization based on its threat to water quality. The inventory includes 10 high priority facilities that include the Public Works Operations Center, public parking lots, the MS4, and roads, streets, and highways. The inventory lists nine medium priority facilities, including the fire stations, the community pool, the pump house, police station, some of the City parks, and the community service buildings. Low priority sites include smaller parks and administration or recreational buildings.

POLLUTION PREVENTION

The City continues to implement pollution prevention measures, such as good housekeeping measures, at all municipal facilities and during municipal activities. Pollution prevention measures are practiced to minimize generating pollutants from a variety of sources. Pollution prevention measures are presented to municipal personnel during regular training sessions, refresher sessions, in print material, on the City's bulletin board, and are discussed during routine municipal activities, when applicable. Pollution prevention concepts are also presented during storm water compliance inspections of municipal facilities and during departmental meetings. City staff are encouraged to perform regular sweeping of pervious outdoor areas, schedule landscaping activities based on weather conditions and forecasts, reduce the use of toxic materials by selecting less toxic ones. The City did not change any pollution prevention measures during 2006/2007. Municipal personnel are encouraged to pass on any information provided to them about pollution prevention measures to other employees, and to business owners and residents of the City.

BMP REQUIREMENTS

BMPs for municipal facilities and activities were developed as part of the City's JURMP. Table 2.4 in the City's JURMP presents a summary of the minimum BMPs for municipal facilities and activities. The table shows which classes of BMPs, such as Employee Training or Material Storage Practices, are applicable to each facility or activity type, such as Landscape and Recreational Facilities or Roads and Street Maintenance. Appendix C of the City's JURMP describes, in detail, information regarding non-storm water discharges, BMPs for spill prevention, control and cleanup, vehicle and equipment repair, cleaning, and fueling, waste handling and disposal, good housekeeping practices, landscape maintenance, and drainage system maintenance. During this reporting period, there were no changes or modifications to the City's municipal BMP requirements.

BMP IMPLEMENTATION

As previously mentioned, the City's JURMP includes an established set of minimum BMPs for municipal areas and municipal activities. City personnel are required to implement BMPs for specific areas and activities at all times. Additionally, City personnel are expected to substitute other, equally effective BMPs if for some reason the designated minimum BMPs cannot be implemented. The City continues to provide training and refresher sessions to municipal personnel to ensure that BMP implementation and operation are understood as well as the importance of BMP implementation.

In addition to the activity-specific BMP requirements for municipal facilities and activities in the JURMP, the Public Works Operation Center also implements a site-specific SWMP. The purpose and the design of the SWMP is similar to the Storm Water Pollution Prevention Plans (SWPPP) developed for industrial sites, but the Public Works Operation Center is not subject to the Industrial Permit. The City developed the SWMP to provide site-specific BMP implementation guidelines. The plan was developed by the City's storm water consultant, D-MAX Engineering, Inc. (D-MAX), based on field visits and review of site plans. In addition to pollution prevention measures and source control BMPs, which are emphasized in the plan, the drainage inserts have been installed to provide additional pollutant removal.

Education is a key component of a successful municipal NPDES program. The City conducts a number of training sessions, tailgate meetings, and refresher sessions for municipal employees. Additionally, print material is made available and a bulletin board in the Engineering Department building is dedicated to storm water-related topics, brochures, and photos. The City's municipal education program is discussed in more detail later in this section and in Section 9 of this document.

As required by the Municipal Permit, the City inspects high priority municipal facilities annually. Municipal facility inspections are designed to assess whether changes in BMP implementation are necessary and to ensure that BMPs are being implemented properly. Inspections of municipal facilities and the associated findings are discussed in more detail later in this section.

MUNICIPAL ACTIVITIES

Municipal areas and activities have the potential to discharge pollutants when BMPs are not implemented properly. City personnel are provided with training and materials that stress the importance of BMP implementation and that describe how to properly implement BMPs for specific areas and activities. Descriptions of municipal areas and activities and their associated BMPs are listed below.

Public Works Operation Center

Though listed separately on the City's inventory, the City's Public Works Yard, Public Works Fleet, Public Works Storage and Maintenance Yard, and the Public Works Storage Yard are located at the same location, and are collectively referred to as the Public Works Operation Center. In 2003, a SWMP was developed for the Public Works Operation Center to outline BMPs for specific activities and areas of the site. During the annual inspections of the facilities that make up the Public Works Operation Center, the City's Environmental Specialist makes sure that BMPs detailed in the SWMP are being implemented. Listed below are some of the site specific BMPs that are detailed in the SWMP.

- Patch and oil trucks should be stored under canopies.
- Material stockpiles should be kept in covered and bermed areas.
- Material inventories should be limited to prevent long term storage.
- Stored containers should be properly labeled.
- Vehicles should be washed in the designated covered, contained wash pit. The wash pit drains first to a clarifier and then to the sanitary sewer system.
- The seven catch basin filters installed at the Public Works Operation Center should be maintained regularly including regular clean outs of material captured during storm events.

To ensure that the SWMP is being implemented properly, meetings and training sessions are conducted for personnel at the Public Works Operation Center. Additionally, all new Public Works Operation Center employees are provided a City of La Mesa Municipal

Program Storm Water Best Management Practices Notebook (Attachment 2.1), which includes BMP fact sheets relevant to municipal activities and facilities. The Public Works Operation Center supervisors regularly hold meetings at which storm water pollution prevention and BMP implementation topics are discussed. Supervisors conduct routine inspections of the Public Works Operation Center including monthly inspections of the catch basin filters, and inspections before and after rain events.

The City has installed storm drain filter inserts at seven catch basins at the Public Works Operation Center. The inserts are designed to catch sediment and other large debris and hydrocarbons before entering the MS4. In addition to the storm drain filters installed throughout the site, the City continues to sweep the area once or twice a week as deemed necessary.

Erosion and Sediment Control

The City implements a number of different erosion and sediment control BMPs to stabilize soil and prevent the transport of sediment to receiving waters. In many municipal areas, simply preserving vegetative ground cover or mulching bare ground is effective in controlling erosion. Where necessary, the City implements BMPs such as geotextiles, silt fencing, and fiber rolls to prevent sediment transport. City personnel routinely inspect permanent erosion control BMPs installed at municipal facilities to ensure that they are placed or installed properly and are functioning properly. Good housekeeping measures, such as regular sweeping, at municipal facilities help mitigate sediment discharges. Additionally, the City has installed filter inserts at the Public Works Operations Center and in several drains along University Avenue. City personnel routinely inspect and maintain the inserts to ensure that they are functioning properly. Irrigation controls have been installed at many municipal facilities to prevent transport of pollutants, such as sediment resulting from over-irrigation.

Roadway and Bridge Maintenance

The City sweeps all public streets. The City employs a contractor for sweeping activities monitored by the City's Street Maintenance Supervisor.

The street sweeping schedule is as follows:

- Downtown areas weekly
- Residential areas weekly or monthly
- Parking lots and parking areas at municipal parks weekly
- Center islands twice per month
- Public Works Operation Center once or twice weekly

In addition to the aggressive street sweeping schedule already implemented by the City, all City streets can receive additional sweeping on request or after spills or automobile accidents.

To facilitate the street sweeping program and ensure the entire street area can be reached, the City maintains 19 permanent posted signs to inform the public that parking is prohibited during certain hours on designated street sweeping days. The City issues tickets

to vehicles that remain parked on streets during the posted times. If additional sweeping is requested, the City posts temporary no parking signs.

During 2006/2007, 8,280 curb miles were swept removing approximately 692 tons of trash and debris. As similar to previous years, the Street Maintenance Supervisor estimated that approximately 80 percent of the debris collected was sediment, and 20 percent was composed of trash and organic debris.

Material Management
Since materials management activities have the potential to introduce pollutants and possibly affect the pH of receiving waters, steps must be taken during the storage and handling of paving-related materials to reduce the discharge of pollutants to the MEP. The City implements the following materials management pollution prevention measures and BMPs.

- Patch and oil trucks are typically stored under canopies.
- Stored materials such as sand, soil, gravel, cold mix, and decomposed granite are stored in a permanent material separator.
- Concrete handling procedures include storing material in bermed, covered areas and away from drainage areas.
- Material inventories are limited to prevent long-term storage.
- All stored containers are labeled properly.
- Paving materials are stored away from drainage areas if possible.
- Concrete and asphalt materials recovered during routine repairs are recycled.
- Paving does not take place during rain events and is minimized during the wet season.
- Paving equipment is cleaned off site or in designated cleaning areas.
- Concrete trucks are cleaned off site or at designated areas on site. When necessary, drains are blocked off with appropriate BMPs to prevent discharge of concrete wash water from entering storm drain inlets.

Although all concrete work is done with contracted staff, the City requires that the work be completed in a manner that complies with the required BMPs in Appendix C of the City's JURMP. City inspectors also monitor BMP implementation by the contractors to verify compliance.

Municipal Vehicle Maintenance
The municipal vehicle maintenance facility is located at the City's Public Works Operation Center. Since the vehicle maintenance facility is part of the Public Works Operation Center, BMPs for all maintenance activities are included in the Public Works Operation Center SWMP.

Vehicle maintenance and cleaning activities can potentially introduce pollutants such as oil, grease, metals, and detergents into the City's MS4 if BMPs are not effectively implemented. Spill response kits are available throughout the facility. Absorbent material is commonly used to treat oil stains. Oil changes are conducted every 5,000 miles under typical fleet maintenance procedures. The City continues to use formulated Hydrotex lubricants to minimize the frequency of oil changes, and depending on the type of vehicle and its use, oil changes may be conducted every 9,000 miles rather than every 5,000 miles depending on the vehicle type. Less frequent oil changes helps minimize the quantity of used oil generated.

The City implements preventative maintenance measures to reduce the risk of an operational problem with any of the vehicles that may discharge pollutants to the MS4. Vehicle operators check their vehicles every Monday for leaks and vehicle maintenance checks occur every 5,000 miles or annually, whichever comes first.

The City implements BMPs to prevent the discharge of wash water, and associated pollutants such as oil and grease, metals, sediment, and surfactants, from vehicle washing activities. Vehicles are washed using a wash rack to capture all wastewater. The wastewater is directed to a clarifier and then discharged to the sanitary sewer system.

This reporting period, the City maintained 200 municipal vehicles, which include the following vehicle types:

- Dump Trucks
- Fire Trucks
- Pavers
- Street Sweepers
- Police Cars
- Rider Mowers
- Tree Service Trucks
- Trailers
- Heavy Duty Trucks, Medium Duty Trucks, and Light Duty Trucks

Landscaping Maintenance

The City maintains 22 public parks and recreational areas, including a community pool, and a large sports field complex. Personnel from the Parks Division of the City's Public Works department are responsible for maintenance activities at these facilities, including landscaping. Parks maintenance staff mow, mulch, and apply landscaping chemicals as necessary. Additionally Parks Maintenance staff re-stock the pet waste bag dispensers and ensure they work properly. The City continues to support the Adopt-a-Park Program for volunteers to participate in keeping City parks clean. The City also supports the Canine Corners Program, which involves park patrons volunteering to keep the designated dog area at Harry Griffen Park free of pet waste. Parks maintenance staff also work with St. Madeline's Sophie Center to employ developmentally disabled individuals for park

maintenance activities. Both the Adopt-a-Park and the partnership with St. Madeline's Sophie Center are discussed in Section 9 of this Annual Report. The City passed an ordinance that prohibits smoking in public parks, which should decrease the amount of cigarette debris throughout City parks.

City personnel involved with landscaping activities are trained in proper handling, application, and disposal techniques for chemical materials, and practicing IPM techniques during maintenance activities. Additionally, the Parks Department implements BMPs to minimize trash, organic debris, and other pollutants from entering the City's MS4. During this reporting period, the City implemented the following landscaping-related BMPs and activities to prevent storm water pollution:

- Landscaped irrigation areas throughout the City are monitored by licensed City personnel to ensure the systems are operating properly. The irrigation systems are adjusted regularly to minimize over-irrigation and runoff. Nearly all of the City parks have been brought online with the computerized irrigation system Calsense, which is described in detail later in this section.
- Drip irrigation is used when possible.
- The City continues to maintain native vegetation as the landscaping in portions of Briercrest Park to minimize the need for pesticides, fertilizers, and irrigation.
- City personnel maintain the appropriate certification necessary for fertilizer, herbicide, pesticide, and irrigation application. To maintain certification, personnel must attend refresher training courses during the year.
- The City uses only herbicides that are very quickly absorbed into the plant material and are inert once in contact with the soil.
- Landscaping chemicals are not applied prior to storm events or when there is a likelihood of potential transport to the MS4. Applications are only made using low pressure and low volume to minimize overspray and to prevent any pollutants from accidentally being spilled.
- Pesticides and herbicides continued to be used for weed and rodent control only as needed. The program is strictly monitored by the California State Department of Pesticide Regulation (DPR) through several sections of the California Code of Regulations. Approximately 26.1 pounds of rodent control substances were used during this reporting period, which is less than the 71 pounds used in 2005/2006. A total of 117.6 gallons of herbicides were used during this reporting period.
- A Licensed Pest Control Advisor and Qualified Applicator Certificate holder continued to conduct inspections to monitor the storage, handling, and disposal of pesticides during each application. No other pesticides besides the herbicides mentioned above were used during this reporting period.
- The City continues to mulch bare ground areas as a method to reduce the need for pesticides, excessive irrigation, and to reduce erosion potential.
- Weed control is also performed by manual techniques such as weed whips and hoeing for weed control, where practicable.

- The City continues to use pressure and soapy water sprays for insect control in place of pesticides, when practicable.
- Fertilizers continue to only be applied to turf areas during the growing seasons: spring, summer, and fall. Application is conducted as per label instructions dealing with amounts per acre and the needs of the area involved. City staff ensures that any spills of fertilizer are swept up immediately. This reporting period, the City used 10.3 tons of fertilizer, which is less than the 11.3 tons of fertilizer used during 2005/2006.
- Green waste is mulched and reused when possible.

Calsense Computerized Central Irrigation Control
The City continues to utilize Calsense, an advanced automated irrigation system to prevent over irrigation from several municipal facilities. The use of this program reduces the use of faulty manual irrigation methods and allows the City to monitor irrigation activities from a central computer. The use of Calsense has streamlined irrigation activities for the City and has reduced the potential for over-irrigation or an undetected leak in the system and any pollutants that may be carried in such discharges.

The Calsense system monitors irrigation by including the use of master valves and flow sensing to prevent over-irrigation and also decrease water usage. By decreasing water usage and the amount of labor that needs to be invested in irrigation, Calsense benefits the City by reducing costs. A break in the system is recognized as a high flow, and the system is shut off until it is repaired. The use of this technology allows the City to prevent major leaks by detecting smaller leaks that may otherwise go undetected earlier than with a manual system. The automatic shutoff by Calsense saves thousands of gallons of water and prevents the runoff from carrying pollutants from the parks, streets, and municipal facilities into the storm drain system. The irrigation system can be controlled by a central computer, which calculates the best time for irrigation based on moisture readings, weather, and real time flow rates at every valve. Additionally, the system allows staff to manage the system more efficiently and with less chance of over-irrigation. The irrigation schedules can be designed for a long period of time or easily modified for weekly or daily needs if necessary. The system allows for the most efficient usage of water while minimizing the chance of over-irrigation and consequent introduction of pollutants to the City's MS4.

The City continues to work to convert the irrigation systems of City facilities, particularly parks, to the Calsense system. This reporting year, four new Calsense systems were installed throughout the City. A total of 21 locations have now been equipped with Calsense; Attachment 2.2 provides a list of those facilities and indicates the sites that have been newly equipped with Calsense in 2006/2007.

Trash and Debris
The City continues to remove trash and debris from municipal areas as part of the regular maintenance schedule. City personnel at municipal facilities are reminded to implement BMPs during normal facility activities, including trash disposal. City personnel implement practices such as keeping the dumpster lids closed to prevent trash from entering the City's MS4. In addition to the City's efforts, volunteers as part of the Adopt-a-Park and Adopt-a-

Block programs contribute to keeping City parks and neighborhoods free of trash and debris. The City also hosted Park Appreciation Day, where 400 volunteers removed 5 tons of trash.

As a means to prevent pet waste from entering the MS4 from municipal facilities such as parks, the City continues to maintain pet waste bag dispensers. There are 26 pet waste bag dispensers throughout the City's 14 parks that make the bags easily accessible to park patrons to clean up after their pets. During the reporting period, 9,000 bags were used. The City will continue to maintain and stock the pet waste bag dispensers as needed. As previously mentioned, a number of volunteers assist in keeping the designated dog area at Harry Griffen Park free of pet waste, as part of the Canine Corners Program.

In addition to other methods of outreach to the patrons of public facilities, the City completed the installation of one educational storm water kiosk in La Mesita Park. This kiosk, installed as part of an individual's Eagle Scout project is intended to present general storm water information. The City plans to install one more kiosk in another City park. More information about the kiosks is included in Section 9 of this Annual Report.

MS4

The City continued to implement an aggressive MS4 inspection and maintenance schedule for the 400 curb inlets and catch basins and more than 50 miles of pipes and channels. The following bullets summarize the City's efforts.

- All MS4 drainage facilities were inspected and maintained twice during the reporting period, once before the rainy season and again in the spring.
- The City maintained, inspected and cleaned 100 percent of the cleanout locations in the City's MS4, including 22 filter inserts installed in the University Drainage Basin.
- A total of 225.75 cubic yards of trash and debris, dirt and rocks, sediment, and vegetation were removed from the City's clean-out locations.
- A total of 77.5 cubic yards of similar material was removed from the City's improved channels.
- A total of 4 cubic yards of trash and debris and sediment were removed from the 22 filter inserts within the University Drainage Basin. The composition of the material removed from the filter inserts was approximately 80 percent sediment and 20 percent trash. Information from the manufacturer also suggests that these inserts may be successful in removing oil and grease from storm water runoff.

As with previous years, the City continued to maintain two vactor trucks, one dedicated to MS4 cleaning maintenance and one dedicated to sanitary sewer cleaning and maintenance. All waste removed during MS4 maintenance activities is handled and disposed of appropriately. The City continues to keep records of MS4 maintenance activities.

The City maintains seven open improved channels, and the debris from the channels is removed by hand, not by mechanical equipment. The City continued to utilize probation crews to maintain portions of improved channels by removing trash and debris. Approximately eight to 13 individuals participated in each event for a total of eight days during the 2006/2007 reporting period. As previously mentioned, the City cleans the

channels twice a year, and this year collected approximately 77.5 cubic yards of trash and debris. The City also continues to participate in the regional Channel Maintenance Workgroup, which is working with the RWQCB, the California Department of Fish and Game, United States Fish and Wildlife Service, and the Army Corps of Engineers to develop a process to obtain permits for maintenance of sediment and vegetation in channels.

In addition to regular MS4 cleaning activities, City personnel responded to a number of MS4 maintenance requests that were called in to the City's Public Works Service Request hotline. The City investigated these reports, and maintenance was performed where necessary. Descriptions of the calls to the Public Works Service Request hotline and the City's response to each are included in Table 8.4 of this Annual Report. Nine catch basins were repaired during 2006/2007 and approximately 150 linear feet of CMP was replaced with HDPE or RCP.

Wastewater Operations
The City continues to maintain a Sewer Overflow Prevention Plan and a Sewer Overflow Response Plan. No spills were reported during the 2006/2007 reporting period.

The City continues to maintain 33 posted signs at various canyon locations providing emergency contact information to report illegal discharges. These signs aid the City in responding to illegal discharges and Sanitary Sewer Overflows (SSO) quickly and efficiently to reduce or eliminate illegal discharges into receiving waters.

The City inspects and maintains the sanitary sewer system as part of regular wastewater maintenance activities. This includes monthly maintenance in areas of the City known to be "hot spots" for grease blockages. The City is currently working to develop a Fats, Oils, and Grease (FOG) program that will target grease-producing facilities, such as restaurants. The program is intended to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs.

Sanitary Sewer System Condition and Assessment
The City continues to inspect and clean the sanitary sewer system to prevent SSOs by clearing blockages and repairing leaks in a timely manner. The physical condition of the sewer system continues to be monitored by a private contractor. During 2006/2007, the contractor was able to use a video camera system to assess 39,000 linear feet of sewer line for potential blockages as well as other potential problems. The City continues to use a $14.5 million low-interest loan from the SWRCB to rehabilitate and upgrade the City's sanitary sewer system in older and hillside sections of the City. The City installed, rehabilitated, or replaced approximately 3,741 linear feet of public sewer lines. The project is scheduled to be completed in 2008. Overall, this project represents the largest infrastructure project ever undertaken by the City.

San Diego County Municipal Storm Water Copermittee Meetings
San Diego County Municipal Storm Water Copermittee meetings are designed to provide a forum for Copermittees to meet and discuss recent activities and progress in implementing storm water programs. These meetings also provide a time for Copermittees to discuss the direction of regional programs. The City's Environmental Specialist continues to attend

such meetings and gather information to maximize the success of the City's NPDES Storm Water Program.

San Diego Bay and San Diego River WURMP Group Meetings
In addition to participation in San Diego County Municipal Storm Water Copermittee meetings, the City continues to participate in the WURMP group meetings for both the San Diego River and San Diego Bay. The WURMP meetings are designed to coordinate watershed-related activities in the cities within each Watershed.

INSPECTIONS

The 2005/2006 inspections of facilities at the Public Works Operation Center were completed in June 2006. The recommended corrective actions noted during these inspections were relatively minor and did not require follow-up inspections. However, the City's Environmental Specialist coordinated a meeting during this reporting period to go over the inspection findings in July 2006 with the superintendent and department supervisors. Good housekeeping measures and effective BMP implementation were emphasized during this meeting.

Throughout the 2006-2007 reporting period, the City's Environmental Specialist conducted several un-announced walk-through of the Public Works Operation Center to ensure good housekeeping measures and BMPs were being implemented. Verbal recommendations were provided to the superintendent.

In June 2007, the City's Environmental Specialist conducted and completed the annual inspections of eight high priority municipal facilities as required by the Municipal Permit. A meeting with the superintendent and department supervisors was scheduled and conducted in July 2007 to go over the recommended corrective actions. Follow-up inspections were not required; however, the City's Environmental Specialist continues to conduct unannounced walk-throughs at the facility to check for effective BMP implementation.

The City's Environmental Specialist did not observe any violations at any municipal facilities during this reporting period, although most facilities did require minor corrective actions. The following lists the common problems/recommended corrective actions noted during inspections.

- Minor oil stains were observed in parking areas.
- Some equipment required coverage or drip pans underneath.
- Some liquid storage did was lacking secondary containment.
- Minor sediment and/or organic debris accumulations were observed in parking areas, and increased sweeping frequency was recommended.
- Some trash cans/and or dumpsters were observed open.

The City's Environmental Specialist provided copies of the completed inspection forms to the City's Public Works supervisors and plans to meet with the supervisors during early 2007/2008 to discuss the 2006/2007 corrective actions.

In addition to the eight high priority municipal facilities inspected in June 2007, the City continued to inspect and clean its MS4 and roads, streets, and highways throughout the reporting period. The MS4 and roads, streets, and highways are the other two listings on the high priority municipal inventory.

COMPLIANCE & ENFORCEMENT

The City's enforcement mechanism is included in Section 2.8 of the City's JURMP. The City's Environmental Specialist continues to conduct inspections at municipal facilities and provides corrective actions to ensure that facilities are in compliance with the City's BMP requirements and City Ordinances. Furthermore, inspections of the Public Works Operation Center verify that the BMPs in the SWMP are being implemented. As previously mentioned, municipal facilities are notified of their BMP deficiencies and provided verbal and written documentation of necessary corrective actions. The City's Environmental Specialist actively follows up with facilities to ensure that they have effectively implemented corrective actions. There were no SSOs or circumstances observed to be a threat to human or environmental health during the reporting period; therefore the City did not submit any reports to the RWQCB.

The City continued to distribute an NOV procedural handout (Attachment 2.3), which is used to guide enforcement personnel in issuing an NOV for a storm water-related violation. The City began developing verbal and written warning forms (Attachments 2.4 and 2.5, respectively) to provide better tracking of when verbal and/or written warnings are issued. The City plans to begin using these forms in 2007/2008.

As previously mentioned, the City's Environmental Specialist noted minor corrective actions for the four facilities that make up the Public Works Operation Center and for the four publicly owned parking facilities. Many corrective actions were addressed at the time of the inspection. In all locations, the corrective actions were generally related to good housekeeping measures, such as keeping the sites free of sediment and organic debris, and keeping dumpster lids closed. The City's Environmental Specialist met with the Public Works Operation Center Superintendent and other supervisors in July 2007, early in the 2007/2008 reporting period, to discuss corrective actions related to the 2006/2007 inspections.

TRAINING, EDUCATION, AND OUTREACH

Education is key in implementing a successful NPDES program. The City provides numerous training and refresher sessions, tailgate meetings, and educational material to municipal personnel. Proper implementation of BMPs during municipal activities helps prevent pollutant discharges to the MS4 and sets a good example for residents since many of these activities occur in areas visible to the public. The City continues to display a Storm Water Bulletin Board at City Hall and also continues to distribute educational fact sheets and brochures, including the Municipal Program Storm Water BMP Notebook (Attachment 2.1) as described below. The following is a list of training, education, and outreach activities

conducted for municipal personnel during this reporting period. This list also includes meetings and training sessions attended by the City's Environmental Specialist. Sign in sheets from all training sessions, including municipal training sessions, are included as Attachment 2.6.

- The City's Environmental Specialist attended a number of Municipal Permit re-issuance meetings and was active in the Industrial and Commercial Component review subcommittee.
- The City's Environmental Specialist attended a number of Copermittee Workgroup meetings including those for education and outreach, channel maintenance, regional monitoring, dry weather monitoring, and the development hydromodification plan (HMP).
- In December 2006, the City's Environmental Specialist conducted joint high and medium priority construction inspections with a RWQCB staff member.
- The City's Environmental Specialist attended a TMDL workshop held by PBS&J Consulting on 7/17/2006.
- The City's Environmental Specialist attended a training session on how to deal with an upset public on 7/27/2006.
- The City's Environmental Specialist attended a County-hosted porous paving presentation on 8/17/2006.
- The City's Environmental Specialist and an Administrative Analyst in the City's Environmental Services Division attended a two-day workshop entitled "Fostering Sustainable Development" on 2/7/2007 and 2/8/2007.
- The City's Environmental Specialist attended a Pueblo San Diego Watershed and Organic Toxicants Workshop and Sustainability Initiative as part of the Regional Ecology Network and Environmental Workbench for Sustainable Development (RENEW) Project.
- The City's Environmental Specialist attended a RWQCB meeting regarding new SSO reporting requirements.
- The City's Environmental Specialist attended a Watershed Education Planning meeting hosted by Lois Humphrey of TRG & Associates.
- The City's Environmental Specialist attended a University of California, San Diego (UCSD) workshop on TMDLs on 4/28/2007.
- The City's Environmental Specialist attended Chollas Creek TMDL stakeholder meetings.
- The City's Environmental Specialist attended Copermittee Management Meetings throughout the reporting period.
- The City's Environmental Specialist attended a seminar entitled "Community Based Social Marketing."

- The City's Environmental Specialist attended the City's Community Services Department Annual Meeting to better understand the existing community activities and programs and to investigate how storm water concerns could be addressed by those programs. The City's Environmental Specialist also informed all attending parties about general storm water regulations and how to report storm water violations.
- The City conducted a BMP training session on spill containment for street maintenance employees on 7/10/2006, five employees attended.
- The City conducted a BMP training session for street maintenance employees on 7/31/2006, four employees attended.
- The City conducted a BMP training session for park maintenance employees on 8/1/2006, 17 employees attended.
- The City conducted a BMP training session for park maintenance employees on 8/8/2006, 16 employees attended.
- The City conducted a training session on the CWA for street maintenance employees on 8/14/2006, four employees attended.
- The City conducted a training session on the CWA for street maintenance employees on 8/21/2006, six employees attended.
- The City conducted a training session on storm water management for street maintenance employees on 9/5/2006, five employees attended.
- The City conducted a BMP training session for park maintenance employees on 10/31/2006, 16 employees attended.
- The City conducted a BMP training session for park maintenance employees on 11/7/2006, 13 employees attended.
- The City conducted a BMP training session for park maintenance employees on 11/28/2006, 16 employees attended.
- The City conducted a BMP training session on outdoor storage for wastewater employees on 12/6/2006, six employees attended.
- The City conducted a BMP training session on material handling for fleet maintenance employees 12/12/2006, five employees attended.
- The City conducted a BMP training session on spill prevention for wastewater employees on 12/13/2006, eight employees attended.
- The City conducted a BMP training session on spill prevention and cleanup for building maintenance employees on 1/16/2007, two employees attended.
- The City conducted annual pesticide training for park maintenance employees on 1/16/2007, 15 employees attended.
- The City conducted a BMP training session on good housekeeping measures for park maintenance employees on 1/30/2007, 14 employees attended.

- The City conducted a BMP training session on vehicle and equipment cleaning for fleet maintenance employees 2/27/2007, six employees attended.
- The City conducted a BMP training session on outdoor loading/unloading for traffic safety employees on 3/6/2007, six employees attended.
- The City conducted a BMP training session for park maintenance employees on landscape maintenance on 3/27/2007, 17 employees attended.
- Three members of the City's parks maintenance staff attended an IPM training session at the Port of San Diego in May 2007.
- As previously mentioned, the City has continued to distribute a BMP notebook entitled the "City of La Mesa Municipal Program Storm Water Best Management Practices Notebook" (Attachment 2.1) to new Public Works Operation Center staff. This notebook contains BMP fact sheets relating to municipal activities and is designed to be kept by staff members as a reference guide when needed.
- The City's Storm Water Bulletin Board continued to provide information for both residents and businesses. Information on BMPs, watershed concepts, HHW and electronic disposal events, and other upcoming community events are presented on the bulletin board. It also offers various brochures and information available to take home including the "Litter Bugs" brochure, an informational storm water door hanger, IPM cards, preventing urban runoff brochures, and a construction BMP brochure. A photo of the bulletin board and all aforementioned media available at the bulletin board is included as Attachment 2.7.
- The City distributed Pool and Spa Fact Sheets to 260 City employees (Attachment 2.8). The fact sheet describes the conditions for which discharging pool and spa water is allowed as well as other pool maintenance information.
- The City continued to make the Construction SWPPP Information (Attachment 2.9) trifold available to project proponents. The brochure is also available at the City's Storm Water Bulletin Board in City Hall.

IMPLEMENTATION PLANS FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates to the municipal program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

LG = Lemon Grove

3 INDUSTRIAL

Throughout the 2006/2007 reporting period, the City continued to mitigate urban runoff pollution by implementing the industrial program that is described in the City's JURMP. This program includes site identification and prioritization, education, the implementation of activity and site-specific pollution prevention measures and BMPs, routine and follow-up compliance inspections, and as-needed enforcement actions. The City also requires that all high priority industrial sites conduct monitoring during qualifying rain events in accordance with the Municipal Permit and Industrial Permit. Industrial inspections were conducted at a total of seven facilities during the reporting period. Wedo Wedo was added to the high priority industrial inventory during 2006/2007.

Figure 3.1, below, depicts the high, medium, and low priority industrial facilities in the City of La Mesa. Purple areas delineate the industrial areas, and commercial areas are shown in red as a reference. The seven high priority industrial facilities that received annual inspections by the City's Environmental Specialist are shown as orange dots. Medium priority industrial facilities are shown as green dots, and low priority facilities as yellow dots. Most of the industrial facilities are fairly small, and some are in areas zoned for commercial land use.

Figure 3.1
La Mesa Industrial Facilities

PRIORITY SOURCES

During this reporting period, the City's watershed-based, prioritized inventory consisted of seven high industrial facilities, 25 medium industrial facilities, and 39 low industrial facilities. As previously mentioned, Wedo Wedo was added to the City's high priority industrial inventory during 2006/2007. The City's inventory was developed and prioritized based on SIC codes, proximity to sensitive water bodies, whether they had filed an NOI to obtain coverage under the Industrial Permit, and the findings of the most recent storm water compliance inspections. Facilities with mandatory SIC codes, facilities within 200 feet of a sensitive water body, and other facilities deemed to be a high threat to water quality comprise the high priority industrial inventory. Most facilities included in the City's medium priority industrial inventory are conditionally subject to the Industrial Permit based on their SIC codes. These businesses may qualify for a Notice of Non-Applicability/No Exposure Certification (NONA/NEC) if they do not have any outdoor exposure, exempting them from the requirements of the Industrial Permit. The remaining industrial businesses in La Mesa are mostly contractors or wholesalers and have been classified as low priority industrial.

As noted in previous years' Annual Reports, the State of California's database of businesses subject to the Industrial Permit lists two *Dixieline Lumber* facilities in the City of La Mesa. Although *Dixieline Rancho San Diego* is listed with a La Mesa address, the facility is located in unincorporated area outside the City's jurisdiction. For this reason the City's high priority industrial inventory does not include this facility.

The inventory of high, medium, and low priority facilities are presented in tables 3.1, 3.2, and 3.3, respectively, at the end of this section.

POLLUTION PREVENTION

The City continues to require the implementation of pollution prevention measures at all industrial facilities. Pollution prevention methods are BMPs that eliminate or reduce the generation of pollutants at their sources. Examples include using smaller quantities of toxic material by substituting with less toxic material, changing production processes to reduce waste, decreasing waste water flow, and recycling waste as part of the production process. The City ensures that businesses are made aware of how to implement pollution prevention measures through targeted educational materials and face-to-face during storm water compliance inspections. The City also reserves the authority to require the development and implementation of a SWPPP for any industrial facility within its jurisdiction that is determined to be discharging significant pollutants into receiving water bodies regardless of whether the facility is subject to the Industrial Permit.

BMP REQUIREMENTS AND IMPLEMENTATION

The City has established minimum BMPs that are required to be implemented at all industrial facilities. Industrial facilities are required to use an effective combination of general BMPs that are applicable to virtually all facilities, such as good housekeeping, and activity-specific BMPs. Section 3 of the City of La Mesa's JURMP summarizes the required BMPs for industrial facilities, and further detail is presented in Appendix C of the JURMP. The general BMPs, including structural and non-structural BMPs, required of all facilities

are included in Appendix C.2 of the City's JURMP. The additional, activity-specific BMPs are presented in Appendix C.3 of the City's JURMP. The City's program promotes non-structural BMPs as a preventative and cost-effective step to preventing storm water pollution. When non-structural BMPs alone are insufficient to adequately protect water quality, structural BMPs are required.

The City continues to conduct annual storm water inspections to ensure facilities do not have any IC/IDs to the MS4 and that BMPs are being implemented properly. Inspectors are trained to look for any evidence of IC/IDs, which includes, but is not limited to staining along drainage pathways and direct visual observations of improper activities conducted at the time of inspection. Prompt action is taken to eliminate observed and identified IC/IDs. During the inspections, the City inspector stresses the importance of proper BMP implementation, particularly good housekeeping measures. Many of the common problems seen during compliance inspections are dumpster lids being open and sediment build up in outdoor areas. The City emphasizes good housekeeping measures and educating employees to reduce the frequency of these common problems. During inspections, it has been noted that the majority of the City's industrial facilities conduct their intensive industrial activities, such as cutting countertops or maintaining buses, indoors. The outdoor industrial activities are usually limited to material storage, loading and unloading, and/or similar activities. This practice is effective in preventing many of the largest sources of pollutants from contacting storm water. At facilities where intensive industrial activities are conducted outdoors, more extensive structural or treatment control BMPs may be recommended to reduce the pollutant load to the MEP.

All inspection findings are entered into the City's industrial/commercial database. Figure 3.2, on the following page, presents an example page from the database. This particular page illustrates the page in the database in which facility information is entered. During 2006/2007, some changes were made to the standard industrial/commercial inspection form and the industrial/commercial database was updated to reflect those changes. Notably the form was changed to collect the title of the responsible person and the name of the facility personnel present during the inspection, since many times the responsible party is not the same as the facility personnel present during the inspection. Additionally, fields were added to collect information regarding the property management company, if applicable. This information may be useful if an issue is observed in a business complex where many areas of the facility may be either the responsibility of the property management company or are communal areas.

Figure 3.2
Example Page from the City's Industrial/Commercial Database

The City continued to use the BMP assessment during the 2006/2007 reporting period. BMP scores were assigned during inspections based on a scale of 1 (low) to 5 (high). Since only a small number of businesses were inspected, the data does not allow for overall statistical analyses to be performed. Scores for five inspections during 2006/2007 can be compared to the scores recorded during inspections conducted at the same facilities in 2005/2006. No BMP assessment score was assigned during the 2005/2006 inspection of Rainbow Steel because the RWQCB conducted the inspection, but the 2006/2007 score can be compared to the 2004/2005 score. Since Wedo Wedo is a new facility and the 2006/2007 inspection was its first inspection, there are no previous scores with which to compare it. Overall, scores either increased or remained the same. As more data is collected in future years, more sophisticated program assessments may be possible. To standardize evaluations, inspectors use the following rubric:

- Level 5: All required general and activity specific BMPs have been implemented effectively.
- Level 4: BMPs have been implemented effectively but the dumpster lid was observed open and/or oil stains were noted in the general parking lot not associated with this business's activities.
- Level 3: BMPs have been implemented with the exception of two corrective actions noted aside from dumpster lids being open or oil stains in the general parking lot.
- Level 2: Minimal BMP implementation is noted. Three or more corrective actions, with the exception of dumpster lids being open or oil stains in the general parking lot. No illegal discharge or illicit connection was noted.

- Level 1: Violation of the City's Storm Water Ordinances (illegal discharge, illicit connection, complete failure to implement BMPs, and/or significant littering).

TRAINING, EDUCATION AND OUTREACH

The City continues to use its inspection program as a means to provide one-on-one interaction and education with the facility owner/operators. During storm water compliance inspections, the inspector informs the facility owner or operator about the City's storm water program and encourages them to educate employees regarding good housekeeping measures. Because the inspector is on site, BMPs and pollution prevention tailored to each industrial facility may be recommended, and any corrective actions are discussed with the facility's owner or operator at the end of the inspection. The business is also provided with a copy of the inspection form including the results of the inspection. The following educational materials are also distributed during inspections, as applicable.

- "Preventing Urban Runoff Pollution," an educational guide for both commercial and industrial businesses (Attachment 3.1)
- "San Diego Bay Watershed Fact Sheet" or "San Diego River Watershed Fact Sheet" (Attachment 3.2 and Attachment 3.3, respectively), distributed as applicable.

During this reporting period, the City continued to use the verbal knowledge assessment quiz at the beginning of the inspection as a means of evaluating the storm water knowledge of the facility manager/owner. The number of questions answered correctly is assigned a rating score of 1 (no questions answered correctly) to 5 (all questions answered correctly). This assessment also provides a standardized outline of topics that will be discussed during the inspection. These scores are intended to help the City to conduct a more quantitative assessment of business' knowledge. Similar to the BMP implementation scores, knowledge assessment scores were compared for the five high priority industrial facilities inspected by the City in both 2005/2006 and 2006/2007. The scores generally either increased or stayed the same. More sophisticated program assessments may be possible as more data is collected in future years. In addition, areas with low scores may be targeted to receive education in order to improve their understanding of storm water issues for future reporting periods. Each facility representative was asked the following series of questions:

- What is storm water?
- What is the difference between storm drain system and the sanitary sewer system?
- Where does storm water flow?
- Is storm water treated prior to discharge?
- What are examples of pollutants?
- Is sediment a pollutant?
- Do you know what good house keeping or best management practices are?
- Do you know what NPDES is or means?

The questions are aimed to engage the facility owner or operator and the inspector in a conversation about storm water, and allow any misconceptions or concepts to be explained. The knowledge can then be passed on to other employees at the facility.

Articles regarding storm water issues are another way in which the City educates businesses. The *La Mesa Focus* newsletter is mailed to several thousand businesses in the City, including industrial businesses. In this reporting period, the City published many storm water-related articles in the *La Mesa Focus* newsletters, which can be found as attachments 3.4, 3.5, 3.6, and 3.7, respectively. The City's storm water hotline telephone number is also advertised in the newsletter. The *La Mesa Focus* articles are discussed in detail later sections of this Annual Report.

INSPECTIONS

As previously mentioned, the City uses inspections as a means to determine if facilities are in compliance with the City's BMP requirements and the Industrial Permit. The City conducts routine, follow-up, and/or complaint investigation inspections at industrial facilities. During each site visit, inspectors complete a storm water compliance inspection form (Attachment 3.8) or follow-up inspection form (Attachment 3.9), if necessary. The forms are used to document the inspection and to assess BMP implementation, compliance with the City's Storm Water Ordinance, compliance with the Industrial Permit, and list of recommended corrective actions if necessary. In addition, monitoring data and SWPPPs are evaluated at sites that have filed NOIs. Upon inspection, businesses are verbally informed of any corrective actions. They are provided a copy of their inspection form and are encouraged to ask questions to clarify items on the form that may not be clear. The inspection form data are then entered into the City's commercial and industrial inspection database. Further details about the City's inspection method can be found in Section 3.6 of the JURMP.

The City conducted seven full industrial inspections during this reporting period. All high priority industrial facilities were inspected during the 2006/2007 reporting period. Table 3.4, at the end of this section, lists the results of all industrial inspections conducted during the reporting period, including any recommended corrective actions. All industrial facilities on the City's inventory have been inspected at least once during the life of the Municipal Permit.

COMPLIANCE AND ENFORCEMENT

As previously mentioned, each inspected facility was notified of required corrective actions via a copy of the completed inspection forms, and verbally during the inspection. Below is a summary of some of the inspection findings during the 2006/2007 reporting period.

Interamerica Stone Design, Inc. was found to be in violation of the Industrial Permit in 2005/2006 and again during 2006/2007. During previous inspections this business had been instructed to obtain coverage under the Permit and to develop and maintain a SWPPP and monitoring program. Due to its failure to comply with Permit requirements, Interamerica Stone Design, Inc. was issued an NOV after the inspection conducted in June 2007. Unfortunately the owner passed away in July 2007, and the City is working with the new owner to fill out an NOI to bring this business into compliance.

The City inspected a new business, Wedo Wedo, which is a stone cutting facility. The business was found to be in violation of the Industrial Permit, and it was instructed to file an NOI and to develop and implement a SWPPP and storm water monitoring program.

In accordance with the requirements of the Municipal Permit and the Industrial Permit, the City requires all high priority industrial sites to collect and analyze storm water samples. Storm water monitoring was conducted at five of the seven high priority industrial facilities in the 2006/2007 reporting period. Two businesses were not in compliance with the storm water monitoring requirements: Interamerica Stone Design, Inc. and Wedo Wedo. The City issued an NOV to both of these businesses and informed Don Perrin at the RWQCB on their compliance status.

Additionally, two industrial businesses were issued NOVs based on complaints received by the City's storm water hotline. These complaints and the manner in which they were resolved are included in Table 8.4 of Section 8 of this document.

The City regularly corresponds with RWQCB staff on industrial compliance issues, including the situations observed at Interamerica Stone Design Inc. and Wedo Wedo. The City's Environmental Specialist has sent several emails to Don Perrin at the RWQCB to give periodic compliance status reports for these businesses, such as the progress Wedo Wedo has made toward obtaining Industrial Permit coverage and preparing a SWPPP. Aside from these reports, no other reports related to industrial facilities were made to the RWQCB. No industrial facilities were found to present a significant threat to human or environmental health in 2006/2007.

This reporting period, the City began developing developed forms to document verbal warnings and written warnings, which it hopes will enable the City to better track problem facilities. These forms are included as Attachment 2.4 and Attachment 2.5. Follow-up inspections will be conducted at businesses deemed to need them based on the results of the 2006/2007 inspections, such as Dixieline Lumber. The City's follow-up inspection form will be used for these inspections, and results will be presented in the 2007/2008 Annual Report.

IMPLEMENTATION PLANS AND JURMP UPDATE FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City had been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates to the industrial program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

Table 3.4
Industrial Inspections

#	Facility	Inspection	Current Priority	Current SIC	Recommended Corrective Actions
1	California Countertop, Inc., 7811 Alvarado Rd	6/28/2007	High Industrial	3089	• Consider covering scrap metal during rainy season or store material in warehouse. Ensure dumpster lid is closed. • Maintain employee training log in SWPPP.
2	Dixieline Lumber & Home Centers, 8372 Center Dr	6/27/2007	High Industrial	2439	• Consider covering storm drain inlet during dry season to prevent wood shaving from entering. • Clean out storm drain inlets/ remove sediment and wood debris. • Keep trash area free of debris and lids closed. • Place liquid containers stored outside within secondary containment. • Berm off area where vehicles are washed and discharge wastewater into sewer system or take vehicle to car wash facility. • Change/decrease irrigation water from potted plants from entering storm drain. • Train staff on SWPPP/ Storm Water Pollution Prevention. • Reassess BMPs to address. • Update SWPPP to address changes in personnel and BMP implementation.
3	EDCO Station, 8182 Commercial St	6/27/2007	High Industrial	4953	• Reassess BMPs to address high TSS and other analytes. • Minimize over irrigation.
4	Interamerica Stone Design, Inc., 8227 Commercial St.	6/27/2007	High Industrial	1741/ 3281	• File for an NOI and prepare a SWPPP/Monitoring Program. • Place solvents in secondary containment. • Note: this facility was instructed to file for an NOI and develop a SWPPP and monitoring program during previous inspections. The business was issued an NOV on the date of inspection for failure to comply with the Industrial Permit.

Table 3.4
Industrial Inspections (Continued)

#	Facility	Inspection	Current Priority	Current SIC	Recommended Corrective Actions
5	Schaefer Ambulance, Inc., 7285 University Ave	6/27/2007	High Industrial	4119	• Ensure good housekeeping measures are implemented including regular sweeping of parking lot, treatment of oil stains, dumpster lids closed. • Address low pH at South site and TSS at North site.
6	Rainbow Steel, Inc., 8332 Case St.	6/28/2007	High Industrial	3499	• Provide secondary containment and coverage for liquids stored outside and secondary containment for 55 gallon drums stored inside warehouse. • Vacuum fine dust particles at the southeast area. • Place sand bags on the exterior of warehouse where water leaks past building to prevent water from flowing into parking lot. • Reassess BMPs to address metals, nitrate, and conductivity. • Provide training list in SWPPP.
7	Wedo Wedo, 8169 Center St.	6/29/2007	High Industrial	3281	• Store oil/liquids in closed container, labeled, and under overhead cover. • Prevent tracking of white dust/ sweep regularly. • Keep waste/debris in dumpster with lid closed. Increase waste pickup as needed. • File NOI, develop SWPPP and monitoring program ASAP.

4 COMMERCIAL

Many different categories of commercial businesses, such as auto repair shops and restaurants, have the potential to discharge pollutants to storm water runoff. While these sites are typically smaller than industrial facilities, commercial businesses still have the potential to be significant sources of pollutants if BMPs are not implemented properly. Activities that pose a potential threat to water quality include vehicle repair activities, power washing, improper grease handling and disposal, and improper trash management. To reduce or eliminate potential pollutant discharge from commercial businesses, the City investigates complaints regarding commercial businesses and implements an education program targeting commercial businesses. The City's educational information reaches commercial facilities through media such as the *La Mesa Focus* newsletter, fact sheets, and brochures and through one-on-one interaction during complaint investigations.

Figure 4.1 presents the commercial zones located within the City and mostly concentrated along main roads. The yellow dots represent high priority commercial businesses, all of which have been inspected during the life of the current Municipal Permit. Because the yellow dots are based on GIS data, the dots for businesses in the Grossmont Center Mall, located north of Interstate 8 and west of Grossmont Center Drive, are on the streets around the mall rather than on the buildings in the mall. The commercial area north of Interstate 8 and close to SR-125 is Grossmont Hospital, which is not a high priority commercial business and thus does not have a corresponding yellow dot.

Figure 4.1
La Mesa Commercial Facilities

Base Data Sources: USGS, SanGIS, SANDAG

PRIORITY COMMERCIAL SOURCES

The City is required to maintain an updated JURMP inventory of high priority commercial businesses. The City's 2006/2007 high priority commercial inventory, which is presented in Table 4.1 at the end of this section, contains 266 businesses. Please note that the City's JURMP update will include a more up to date inventory that accounts for some changes after the end of 2006/2007.

POLLUTION PREVENTION

The City continues to require the implementation of pollution prevention measures, such as good housekeeping practices, at all commercial businesses and during commercial activities. Pollution prevention methods are BMPs that eliminate or reduce the generation of pollutants at their sources. The City provides information regarding pollution prevention measures through targeted educational materials and one-on-one during storm water compliance inspections and complaint investigations.

Because many food establishments typically deal with a large amount of waste oil and grease, food establishments are regarded as a high threat to water quality. The City continued to emphasize the importance of proper waste oil and grease disposal since a grease blockage in the sewer line can cause or contribute to SSOs. As with industrial facilities, business owners and/or managers are encouraged to share storm water knowledge with employees through educational materials, training sessions, and good housekeeping instruction.

BMP REQUIREMENTS AND IMPLEMENTATION

Section 4.3 of the JURMP outlines both general and activity-specific BMPs for commercial areas and activities. The City has made an effort to simplify the way in which business managers select and implement these BMPs to match their business's needs via inspections, educational materials, and outreach events. All commercial businesses are required to implement general and activity-specific BMPs, where applicable, which are described in Appendix C.2 of the City's JURMP. The City emphasizes the use of non-structural BMPs, such as good housekeeping techniques to prevent the need for more costly structural BMPs. The City may require structural BMPs when non-structural BMPs alone are not effective.

TRAINING, EDUCATION AND OUTREACH

Since some types of commercial businesses, particularly restaurants, are more likely to have a high turnover rate of employees, the City works with businesses to facilitate the distribution of storm water educational material to new employees by providing businesses educational outreach material and encouragement to pass along storm water-related information and material to employees. Education of employees is important because many lack sufficient knowledge regarding BMPs, which can result in otherwise preventable discharges of pollutants.

When an inspector visits a commercial site, the inspector immediately begins to engage the business manager/owner in a conversation about storm water. The inspector explains the storm water program goals and objectives, and then discusses BMP requirements and good housekeeping methods. The inspector ensures that the business manager/owner

understands the activity-specific BMPs necessary for the business. The inspector also provides the business manager/owner with any corrective actions both verbally and written via the inspection form or follow-up form. Educational materials such as the "Preventing Urban Runoff Pollution" brochure (Attachment 3.1), and the San Diego Bay and San Diego River Watershed fact sheets (Attachments 3.2 and 3.3, respectively) are provided to the business owner at the time of inspection. These fact sheets help business owners and managers become more aware of which constituents are considered a higher priority in the watershed in which their businesses are located.

Similar to previous years, the City continued to publish storm water related articles in the *La Mesa Focus* newsletter, which is distributed to several thousand addresses in the City, including many commercial businesses. The newsletters can be found as attachments 3.4, 3.5, 3.6, and 3.7, respectively. Summaries of the newsletters are described in later sections of this document.

The City continued to work with Target and Dixieline Lumber in La Mesa to make English and Spanish IPM cards (Attachment 4.1) available to the public at each business's garden center. The cooperation of each business with the City's Environmental Specialist to distribute educational material is valuable to the City's storm water program. The City plans to continue the partnerships with the Target and Dixieline Lumber to distribute educational materials to patrons of each business.

In response to exceedances noted during the 2006 Dry Weather Monitoring Program, the City sent 16 letters to businesses on Parkway Drive (east of Jackson Drive) regarding waste disposal and littering (Attachment 4.2). Educational materials sent with the letter included a San Diego River Watershed Fact Sheet (Attachment 3.3) and a Preventing Urban Runoff Pollution brochure (Attachment 3.1). Seven letters were sent to businesses located in the vicinity of Jackson Drive and Grossmont Boulevard regarding over watering and pet waste disposal (Attachment 4.3). Other BMPs were also mentioned in the letter as general pollution prevention measures. Educational materials sent with the letter were Preventing Urban Runoff Pollution brochure (Attachment 3.1), an Over Irrigation Fact Sheet (Attachment 4.4), and a San Diego River Watershed Fact Sheet (Attachment 3.3).

A total of 148 letters were sent to residents and commercial businesses in the Grossmont Shopping Center in the area surrounding Normal Avenue and Olive Avenue (Attachment 4.5). Dry Weather Monitoring Program results indicated high levels of bacteria in the storm drain system, which were likely to be caused by littering and over irrigation in the area. The letter included the following educational materials: San Diego River Watershed Fact Sheet (Attachment 3.3), Over Irrigation Fact Sheet (Attachment 4.4), and a Preventing Urban Runoff Pollution brochure (Attachment 3.1).

Action level exceedances were noted in the runoff from the area surrounding the Grossmont Shopping Center during the 2006 Dry Weather Monitoring Program. A letter was sent to the facility manager at the shopping center with direction to inform the landscape maintenance company that the irrigation should be limited to avoid over-irrigation and overspray from fertilizer and pesticides should be minimized (Attachment 4.6). The City also sent a San Diego River Watershed Fact Sheet (Attachment 3.3), an Over Irrigation Fact

Sheet (Attachment 4.4), and a Preventing Urban Runoff Pollution brochure (Attachment 3.1) with the letter. The Grossmont Center manager informed the City's Environmental Specialist that an irrigation system had been upgraded and installed to comply with the City's request to reduce the amount of irrigation runoff, and that the janitorial company had assured the manager that they were aware of and in full compliance with local regulations.

INSPECTIONS

As previously mentioned, all high priority commercial businesses on the City's inventory have been inspected once during the life of the current Municipal Permit. The City completed all routine inspections of high priority commercial businesses during previous reporting periods and continues to remain vigilant by conducting follow-up inspections and responding to complaints regarding commercial businesses as needed.

The City received a total of 23 commercial business related complaints. All complaints were investigated in a timely manner. Of these, there were five instances where businesses were washing vehicles without collecting washwater. The City responded to these incidents promptly and required that active discharges be ceased immediately. Overall, the City issued two verbal warnings, one written warning, and 10 NOVs to commercial businesses. Educational materials were also provided to businesses, where appropriate. All complaints made to the City's storm water hotline, including all commercial complaints, and their resolutions are discussed in Section 8 of this document.

The City continued to take a proactive approach in confronting mobile business activities. The City requires mobile businesses to sign two affidavits (Attachment 4.7) and meet with the City's Environmental Specialist prior to being granted a business license. The affidavits are signed to acknowledge that proper disposal is necessary for any water generated by mobile business activities such as mobile car detailing and power washing. Additionally, the business owner agrees to implement required BMPs as presented in Appendix C of the City's JURMP and failure to do so will result in enforcement action and possible legal action.

During this reporting period, three mobile car detailing businesses applied for a business license and signed affidavits. The business owner is also provided with the San Diego Bay and San Diego River watershed fact sheets. If a mobile business from another city is found to be discharging water into the storm drain system in the City of La Mesa, violations for not having a City business license and an NOV for illegal storm water discharge are issued. In addition, the City's Environmental Specialist has made it a practice to contact the business' city of origin (if not La Mesa) to inform the other city's storm water department of the violation. The City has taken a very proactive role in cooperating with other cities in the region to prevent storm water pollution. During 2006/2007 one potential mobile detailing business called the City's storm water hotline to inquire about mobile detailing requirements.

COMPLIANCE & ENFORCEMENT

During an inspection or complaint investigation the commercial business manager/owner is notified of necessary corrective actions based on storm water inspection findings. In many cases, BMP deficiencies are corrected and it is not necessary for the City to take further

action. In the case that a business does not cooperate with necessary corrective actions after being notified to do so, the City sends corrective action letters, notices to comply (NTC), and NOVs, as applicable, and may pursue further legal action, including potential fines. Any sites found to pose significant threats to human health or the environment are reported to the RWQCB immediately. The City's JURMP includes more detail about the City's enforcement approach for commercial businesses.

During this reporting period the City received a complaint about one mobile business, Southcoast Building Service, which was observed power washing without implementing adequate BMPs. The City's Environmental Specialist issued an NOV and described the BMPs that needed to be implemented, and the business stopped the illegal activity immediately.

As previously mentioned, the City issued two verbal warnings, one written warning, and 10 NOVs to non-compliant commercial businesses during 2006/2007. The City received complaints that Henry's Marketplace, a grocery store in the City, was pumping water from the loading dock area into the street. The complaints were received from a City resident who lives close to the business and is very vigilant about storm water issues. The City sent two NTCs to the business and talked with Henry's representatives about the importance of implementing proper BMPs. Since then no complaints have been received and no discharges have been observed. No commercial sites were found to pose a significant threat to human or environmental health during the reporting period, so no reports about commercial sites were made to the RWQCB during 2006/2007.

IMPLEMENTATION PLANS AND JURMP UPDATE FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates to the commercial program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

5 RESIDENTIAL

As shown in Figure 5.1, below, residential areas comprise over half of the land use in the City of La Mesa. Since residential areas comprise such a large area of the City, activities that take place in residential areas have the potential to impact the quality of receiving waters. Residential activities such as vehicle washing, over irrigation, home maintenance, and HHW disposal can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Pollutants of concern include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has implemented a range of programs to address these residential activities with the aim to reduce pollutant loads associated with such activities.

Figure 5.1 depicts the residential land use in the City. Yellow areas are single-family homes, orange areas are multi-family housing such as duplexes or apartment buildings, brown areas are mobile home parks, and purple areas are other residential areas such as nursing homes.

Figure 5.1
Residential Land Use in the City of La Mesa

The following subsections provide details about activities performed during this reporting period with respect to priority residential sources, BMP requirements and implementation, pollution prevention, inspections, compliance and enforcement, and training, education, and outreach activities.

PRIORITY RESIDENTIAL SOURCES

During the 2006/2007 reporting period, the City continued to identify high priority residential sources. As in previous reporting periods, the City of La Mesa elected to classify the following activities as high priorities.

- Automobile repair maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of pet waste

In addition to the above activity-based prioritization, the City has noted several residential areas that, relatively speaking, pose higher threats to water quality. High priority residential areas are designated by considering visual observations, institutional knowledge, and Dry Weather Monitoring Program data. The following residential areas were designated as being high threat to water quality:

- Lake Murray Basin
- Lower University Channel and surrounding areas
- Baltimore Drive and surrounding areas
- Severin Drive and surrounding areas

In response to exceedances noted during the 2006 Dry Weather Monitoring Program, letters were sent to residents detailing the kinds of pollutants found in their neighborhoods as well as ways to prevent such pollutants from being discharged. Letters were tailored to target the action level exceedances noted in specific areas. The letters reminded residents that hosing down the sidewalk/driveway area, washing cars on the street, over-irrigating, over-fertilizing, and improperly disposing of pet waste will contribute to storm water pollution. Residents were encouraged to implement BMPs for these activities and to encourage friends and family to do the same. The letters also noted that residents were welcome to call the City's Environmental Specialist if they had additional questions. More detailed information about the priority residential sources, exceedances noted, and the letters sent to residents in response to such exceedances is presented below.

Lake Murray Basin

Runoff from a small portion of northern La Mesa drains into Lake Murray, which eventually drains to the San Diego River. The lake is commonly used for recreational activities such as boating and fishing, and is home to a variety of flora and fauna. Although no evidence was found to suggest that residential activities impacted the water quality in the Lake Murray

Basin area, the City continues to regard the area as a high threat to water quality as a proactive measure.

Lower University Channel and Surrounding Areas
During the 2006 Dry Weather Monitoring Program, a decrease in the amount of bacteria in samples from the open channel between Harbinson Avenue and Massachusetts Avenue was noted. An action level exceedance was still noted though, and the upstream investigation found that the area around the intersection of Olive Avenue and Normal Avenue was the most likely source. There were several instances of over-irrigation noted in that area, including one that was causing a steady stream of turbid surface flow and litter to enter a curb inlet in the southeast corner of Olive Avenue and Normal Avenue. A total of 148 letters were sent to residents and commercial businesses in the Grossmont Shopping Center in the area surrounding Normal Avenue and Olive Avenue (Attachment 4.5). Educational materials sent with the letter included a San Diego River Watershed Fact Sheet (Attachment 3.3), an Over Irrigation Fact Sheet (Attachment 4.4), and a Preventing Urban Runoff Pollution brochure (Attachment 3.1).

Baltimore Drive and Surrounding Areas
This area consists of largely residential areas surrounding Dallas Street, Nagel Street, Sarita Street, and Blain Place. Runoff from this area of the City eventually drains to Alvarado Channel. Similar to the previous reporting period, the Dry Weather Monitoring Program findings indicated high concentrations of bacteria in non-storm water discharges. During the 2006 Dry Weather Monitoring Program, the highest total coliform count was found in a small surface flow entering a grated curb inlet at the corner of Nagel Street and Sarita Street.

A total of 413 letters and educational materials were sent to residents living in the areas surrounding Nagel Street, Sarita Street, and Marengo Avenue near Morrow Way (Attachment 5.1). The letter described the urban runoff sampling done in these areas as part of the City's Dry Weather Monitoring Program and indicated that high levels of bacteria were recorded. The letter also explained possible causes of high bacteria levels, such as organic debris from landscaping/garden waste, bacteria from pet waste, and over irrigation. BMPs were recommended to residents, and educational material was provided. The educational material enclosed with the letter included a Preventing Urban Runoff Pollution brochure (Attachment 3.1), an Over Irrigation Fact Sheet (Attachment 4.4), and a San Diego River Watershed Fact Sheet (Attachment 3.3).

A letter and educational materials were sent to the property owner at the intersection of Alvarado Channel and the SR-125 underpass to encourage the owner to carry out periodic cleaning of the channel to reduce algal growth and bacteria. The letter can be found as Attachment 5.2.

Severin Drive and Surrounding Areas
Severin Drive and the surrounding streets, which include Amaya Drive and Water Street, contain large high-density and suburban residential areas that drain to the Alvarado Channel. During the 2006 Dry Weather Monitoring Program, high levels of bacteria were found, mostly attributed to excess vegetation in the channel and over-irrigation in the area, causing stagnant water and promoting algal growth. It was therefore concluded that the

primary sources of bacteria in this area were surface flow along Amaya Drive caused by over-irrigation and the stagnation of water in channel resulting from excess vegetation.

A total of 596 letters were sent to residents living in the vicinity of Amaya Drive, north of Water Street. The letter described the high levels of bacteria found in the area, which was linked to over-irrigation, improper green waste disposal, and the potential presence of animal waste occurring in the area (Attachment 5.3). A San Diego River Watershed Fact Sheet (Attachment 3.3), an Over Irrigation Fact Sheet (Attachment 4.4), and a Preventing Urban Runoff Pollution brochure (Attachment 3.1) accompanied the letter.

POLLUTION PREVENTION

The City continues to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. Pollution prevention methods are BMPs that eliminate or reduce the generation of pollutants at the source. The City provides information regarding pollution prevention methods through targeted educational materials and one-on-one interaction during complaint investigations.

BMP REQUIREMENTS AND IMPLEMENTATION

The City recognizes that preventative measures such as the implementation of BMPs are an integral part of the City's storm water pollution prevention program. The City requires the implementation of residential BMPs as described in Section 5.2 and in Appendix C of the City's JURMP. The City encourages the public to implement pollution prevention measures and BMPs through a variety of educational outreach activities and materials. Details of storm water related articles published in the *La Mesa Focus* newsletter are provided later in this section. The City has an extensive educational and public outreach program, details of which are given in Section 9 and Section 10 of this Annual Report, respectively.

The City continues to encourage residents to report observed illegal discharges and report other potential violations to the City's Storm Water Hotline. The number for this hotline is published on the City's website, in storm water brochures distributed to the public, and in storm water articles in the *La Mesa Focus* newsletter, with the intent to reach as many residents as possible. Complaints received from residents are the primary mechanism for notification of non-compliance with the City's Storm Water Ordinance in residential areas. Every effort is made to identify the responsible parties and to educate them regarding the NPDES Storm Water Program and City ordinances. The City addressed and documented 89 complaints during this reporting period. Section 8 provides a summary of the public complaints received, all of which were investigated and resolved. About one quarter of the complaints were regarding residential activities. The complaints were received from individuals or City staff that witnessed activities that posed a threat to storm water quality. Each complaint received was verified and resolved.

TRAINING, EDUCATION AND OUTREACH

The City continued to conduct training, education, and outreach activities for residents during this reporting period as described below.

***La Mesa Focus* Newsletter Articles**

As mentioned previously, the City publishes storm water related articles in the quarterly *La Mesa Focus* newsletter. Approximately 30,000 copies of each newsletter were distributed during the 2006/2007 reporting period: 27,500 to residential addresses and 2,500 to business addresses. Copies are also available at many City businesses and electronic copies can be found on the City's website. The articles have been summarized below and copies can be found as attachments 3.4, 3.5, 3.6, and 3.7.

The August 2006 newsletter contained the following storm water-related articles:

- **"DON'T TRASH LA MESA!"** encouraged residents to report instances of illegal dumping to the Public Works department, and informed residents on refuse collection centers located throughout the City.
- **"SUMMER STORM WATER REMINDERS"** provided information about summer-specific BMPs (e.g., discharging pool water, over irrigation, vehicle wastes and washing, garden care and soil erosion prevention).
- **"BECOMING A "GREEN BUSINESS" IS GOOD BUSINESS"** reported the benefits of the restaurant targeted workshop held in April 2006 and encouraged businesses to learn more about the Green Business Program.
- **"APRIL CREEK TO BAY CLEANUP A SUCCESS IN LA MESA"** described the outcome of the April cleanup at the Alvarado Channel, and advertised the California Coastal Cleanup Day held in September 2006.
- **"RESPONSIBLE PET OWNERSHIP"** encouraged pet owners to clean up their pet waste, be aware of the requirements of City's Municipal Code, and other useful tips for residents and pet owners.
- **"LA MESA APPRECIATION DAY GET INVOLVED"** advertised the La Mesa Appreciation Day held in November 2006, which aims to clean up the City's parks.
- **"CALSENSE MAKES SENSE IN CITY PARKS"** gave details on water conservation through a computerized irrigation system that has been installed in City parks.
- **"LA MESA'S PARKS ARE NOW TOBACCO FREE"** informed residents that the City's parks have been designated as tobacco free environments as a result of public response, which will hopefully reduce potentially harmful cigarette butt debris in these areas.

The November 2006 newsletter contained the following storm water-related articles:

- "**RECYCLE YOUR CHRISTMAS TREE AT EDCO STATION**" advertised the City's program to reduce the amount of unwanted Christmas trees being dumped in the City.
- **"STORM WATER POLLUTION – TAKE THE QUIZ"** was an article which aimed to raise awareness about water quality issues, and encouraged residents to implement BMPs to reduce storm water related pollution.

- **"REPORT ABANDONED SHOPPING CARTS"** encourages the public to report discarded shopping carts that sometimes end up in nearby waterways, contributing to pollution in those neighborhoods.
- **"JOIN THE LA MESA ARTS ALLIANCE"** encourages residents to get involved with the "Beautify La Mesa" campaign to keep their neighborhoods clean and help foster a sense of community and pride.

The February 2007 newsletter contained the following storm water-related articles:

- **"ANNOUNCING SPRING CLEAN-UP 2007!"** encouraged residents to lawfully dispose of unwanted bulky items and other non-HHW items at two upcoming disposal events in April 2007.
- **"WATER QUALITY MONITORING CONTINUES IN LA MESA"** was an article that made residents aware of the City's water quality monitoring programs, and encouraged residents to use BMPs to reduce storm water pollution.
- **"DO THE RIGHT THING!"** advertised quarterly HHW events held in the City to encourage residents to dispose of HHW correctly, in an effort to curb illegal dumping.

The May 2007 newsletter contained the following storm water-related articles:

- **"NEW STORM WATER PERMIT ADOPTED"** explained to residents the adoption of the new Municipal Permit, and summarized the more stringent measures required of the Permit, and suggested BMPs that residents and businesses should implement.
- **"EAST COUNTY REGIONAL HOUSEHOLD HAZARDOUS WASTE COLLECTION EVENT"** encouraged residents to dispose of HHW at an event held on Saturday, May 19, 2007.
- **"WASTE NOT, WANT NOT, EDCO OPENS NEW "C&D" FACILITY"** encouraged residents to recycle unwanted products, which may help reduce trash in landfills and surrounding areas, and hopefully reduce trash in water bodies downstream.
- **"LA MESA RECYCLES. DO YOU?"** informed residents about the different types of products that can be recycled and collected from EDCO along with regular trash collections.
- **"DO THE RIGHT THING!"** encouraged residents to dispose of HHW properly through a free program organized by the City, at any of the four HHW events held throughout the year.

Community Services Programs and Activities Schedule Articles
The City's Community Services division publishes a programs and activities schedule that is similar to the format of the *La Mesa Focus* newsletter. The schedule includes information regarding City hosted community events such as parades, organized recreational events, and classes. The spring 2007 Programs and Activities Schedule (Attachment 5.4) included

information regarding La Mesa Appreciation Day and parks in the City becoming smoke-free.

HHW Events
Six HHW collection events were held by the City throughout the reporting period at the EDCO Station on Commercial Street. These events occurred on 7/22/2006, 9/16/2006, 11/18/2006, 1/13/2007, 3/24/2007, and 5/12/2007. Door-to-door pickup was also offered to residents age 65 and older and to disabled residents. A total of 83,050 pounds of HHW were collected through these programs; a breakdown of the collected HHW is included in Attachment 5.5.

Other Educational Outreach Materials and Activities

- Continued to work with Target and Dixieline Lumber in La Mesa to make IPM cards available at the checkout stands in each business's garden center (Attachment 4.1). The IPM cards were developed as part of a regional effort to reduce pollution from pesticide use and increase use of IPM techniques.
- Distributed several hundred letters to residential areas in response to Dry Weather Monitoring results and recommendations. These letters addressed the pollutants found in the areas to which the letters were mailed. Various BMPs that can be implemented to reduce discharges of the pollutants were discussed in the letters. These letters were accompanied by educational material.
- Provided educational outreach materials, including BMP information, on the City's website. Storm water related articles in past issues of the *La Mesa Focus* can also be accessed through the newsletter archives on the City's website. The City has been including articles with storm water pollution prevention information in the *La Mesa Focus* for several years now.
- Provided door-to-door collection of HHW from residents who are 65 and older or disabled.
- Partnered with ILACSD and San Diego Coastkeeper to host cleanup sites for California Coastal Cleanup Day and ILACSD to host cleanup sites for the Creek to Bay Cleanup. Watershed fact sheets and Preventing Urban Runoff Pollution brochures were distributed to participants.
- Hosted Park Appreciation Day, a cleanup event for all City Parks. A total of 400 volunteers removed over five tons of debris.
- Continued implementation of the Adopt-a-Park and Adopt-a-Block programs, which help foster a sense of community responsibility. Residents involved in these programs are encouraged to pick up trash and debris on a regular basis from the City's parks and open spaces and residential areas.
- Adopted an ordinance that bans smoking in City parks. The ordinance was adopted in August 2006 and will go into effect in 2007/2008.
- Continued the development of storm water educational kiosks for two City parks. The first kiosk was installed during this reporting period. The City will continue to

partner with local Eagle Scouts to build the other kiosk, which should be completed in 2007/2008.

- The City continued to provide storm water information on the City's Storm Water Bulletin Board, located at City Hall, to visitors and municipal personnel. A photo of the bulletin board is included as Attachment 2.7.

COMPLIANCE & ENFORCEMENT

The City continues to implement compliance and enforcement measures, as described in the City's JURMP. These measures include identifying potential sources of pollutants in residential areas through information gained through the City's Dry Weather Monitoring Program, complaints received by the City's storm water hotline, and observations from the City's municipal personnel. If there is a potential impact to water quality, the City provides a verbal warning, written warning, NTCs, and NOVs, as applicable. The City received 22 residential-related complaints during this reporting period, which can be found in Table 8.4 in Section 8 of this Annual Report. Complaints were submitted through the storm water hotline and internally through the Public Works Department.

During this reporting period, one verbal warning, three written warnings, and seven NOVs were issued to residents and/or landlords. Many of the complaints verified involved residents who were unaware of residential BMPs. These issues were resolved with a verbal warning and distribution of educational material. The City issued NOVs to more serious violations such as vehicle maintenance without BMPs or washing debris into the street. City personnel also cleaned areas in the public right of way as necessary to resolve complaints. All residential complaints were resolved as described in Section 8 of this Annual Report, and no further action, such as fines or reports to the RWQCB aside from this Annual Report were deemed necessary.

IMPLEMENTATION PLANS AND JURMP UPDATE FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates made to the residential program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

6 DEVELOPMENT PLANNING

One of the requirements of the Municipal Permit is to minimize pollutant discharges from new development and redevelopment projects in order to improve overall storm water quality. Development projects have the potential to contribute pollutants to the City's MS4 from demolition, construction, and post-development activities. Pre-construction planning has been shown to reduce the potential of pollutant discharge after construction. Pre-construction planning activities can include identifying potential pollutants from the site, minimizing the potential for the development to negatively impact downstream channels and/or habitats, and establishing appropriate post-construction BMPs.

After the issuance of the Municipal Permit, the City revised its General Plan, made changes to the City's development approval process, and established educational programs for project proponents. The City routinely evaluates and modifies its development-related processes in order to minimize storm water pollution to the MEP. This section of the Annual Report presents the efforts and activities undertaken by the City to ensure implementation of post-construction BMPs for development projects, while Section 7 of this Annual Report describes measures taken to mitigate potential water quality impacts associated with the construction phase of development.

ASSESSMENT OF GENERAL PLAN

The Municipal Permit (Section F.1.a) requires all Copermittees to include water quality and watershed protection principles in their general plans. The City conducted a thorough review of its General Plan, and in 2002 the City council approved amendments to the General Plan that included water quality and water body protection principles. The revisions to the General Plan presented in the JURMP 2001/2002 Annual Report continue to be applied by the City. No amendments to the General Plan have been made during this reporting period.

DEVELOPMENT PROJECT APPROVAL PROCESS

The City continues to implement the development project approval process outlined in the City's Local SUSMP. The Local SUSMP has been incorporated into the City of La Mesa Storm Water BMP Manual Part II (Development Manual). The approval process requires all development projects to comply with the guidelines and requirements set forth in the City's Development Manual. The City's Water Quality Technical Report (WQTR) review and approval process has been designed to aid project proponents in preparing a document that meets the City's requirements before permits can be issued. The City continues to use Appendix A of the City's Development Manual (Attachment 6.1) to determine the specific storm water requirements applicable to each development project. Appendix A is a checklist that is used to determine both construction and post-construction BMP requirements. Key steps in the City's review process include the following:

- If a development project requires a grading permit, the applicant must complete Appendix A of the City's local SUSMP to determine what storm water related documents must be prepared. Grading project over one acre must prepare a SWPPP,

and projects subject to the City's post-construction BMP requirement must submit a WQTR.

- Grading permits are only issued once the submitted SWPPP and WQTR, as applicable, have been reviewed and approved.
- For development projects that do not require grading, the applicant must complete a Site Plan Checklist. Item A of the checklist requires the applicant to complete Appendix A of the City's Local SUSMP.

Projects designated as Priority Projects must prepare and submit a WQTR as detailed in the City's Local SUSMP. Development projects that are not Priority Projects but still involve soil disturbance or will potentially expose materials to storm water must also implement post-construction BMPs according to the requirements in Development Manual. These projects are subject to some, but not all, of the requirements that are applicable to Priority Projects. For example, non Priority Projects are not required to implement treatment control BMPs. All WQTRs submitted by project applicants are reviewed thoroughly by the City's storm water consultant, D-MAX. For more information regarding these reviews, refer to the Technical Review of Post-Construction BMP Plans subsection found below.

Furthermore, the DAB is responsible for granting approval to development projects. The DAB reviews project plans, evaluates the feasibility of the project, and ensures that all requirements have been met. An additional meeting between the DAB and the project proponent may take place to resolve concerns raised by the initial DAB review before approval is given.

Twelve projects submitted WQTRs for review during this reporting period, 11 of which were Priority Projects. Summaries of these projects can be found in the Redevelopment/Development Project Descriptions subsection and in Table 6.1 at the end of this section. WQTRs were only approved for three of the 12 development projects that submitted them during this reporting period.

REVISIONS TO ENVIRONMENTAL REVIEW PROCESS

The City has not made revisions to its environmental review process during this reporting period. The City's environmental review process consists of the Environmental Assessment and Initial Study Application and the Environmental Initial Study Checklist. The initial study application is completed by the project applicant and identifies various potential environmental impacts of the proposed project, including any threats to water quality. The initial study checklist is used by City Staff to determine which California Environmental Quality Act (CEQA) requirements apply to proposed projects. If the City determines a project has the potential to significantly impact the environment, the project applicant must prepare and submit an Environmental Impact Report (EIR). Projects that do not need to prepare EIRs may still need to prepare mitigated negative declarations. Once the appropriate CEQA requirements have been satisfied, the project is allowed to continue through the development project approval process.

NEW DEVELOPMENT AND REDEVELOPMENT EDUCATION

Effective education, outreach, and training are an integral part of the development planning component of the City's Storm Water Program. The development community is educated on the potential impacts of their activities on storm water quality and onto the applicable City, state, and federal requirements. The City works diligently to educate project proponents on these topics by providing detailed review comments on submitted WQTRs and holding DAB meetings with project proponents.

During this reporting period, the City distributed Appendix C of the JURMP, various storm water brochures, and San Diego Bay and River Watershed fact sheets (Attachment 3.2 and 3.3, respectively) to the development community. Additionally, the Development Manual was made available on the City's website and at City Hall.

TECHNICAL REVIEW OF POST-CONSTRUCTION BMP PLANS

The City of La Mesa retains D-MAX to conduct thorough technical reviews of all WQTRs submitted to the City. D-MAX uses the City's SUSMP Review Checklist (Attachment 6.2) when reviewing each of the WQTRs. After completion of the checklist, D-MAX prepares a letter summarizing key features of the project, discussing deficiencies in the document, and providing a list of comments to be addressed by the project proponent where necessary. If a WQTR is not found to meet the City's Local SUSMP requirements, a revised document addressing the deficiencies noted in the review letter must be prepared and resubmitted by the project proponent to the City for an additional review. This process continues until the WQTR meets the City's requirements and appropriate permits may be issued. The City also requires that each project proponent submit a covenant that describes what steps will be taken to maintain permanent BMPs, specifically treatment control BMPs, at the site. The covenants are then recorded with the County; the requirements in the covenant transfer whenever the site changes owners.

During the 2006/2007 reporting period, only the Civic Center Improvements project met the minimum requirements of the City upon the initial report submission. Table 6.1, at the end of this section, lists all development projects that submitted WQTRs for review during the 2006/2007 reporting period.

Common problems noted during technical reviews of WQTRs are listed below.

- Calculations of pre- and post-development peak runoff rates are not present or not properly calculated.
- Conditions of concern are either not discussed or not sufficiently addressed.
- Site drainage patterns from impervious areas are not sufficiently described or shown on the site map.
- Site design and source control BMP descriptions are generic or otherwise not site specific.
- Site design BMPs are not implemented to the MEP and there is no explanation of why more effective site design BMPs are not proposed.

- Individual Priority Project BMPs for applicable Priority Project categories are not proposed.
- Calculation of SUSMP flow or volume for treatment control BMP sizing is either not present or is not properly calculated.
- Details on the proposed treatment control BMPs, such as model numbers of proprietary BMPs and dimensions of natural BMPs, are not given. The City currently refers project proponents to CASQA and/or Caltrans fact sheets for guidance in properly designing treatment control BMPs.
- It is unclear whether runoff from the entire project footprint will be directed to a treatment control BMP, or the report states that some areas will not receive treatment at all. Also, the locations of these BMPs are not always clearly indicated.
- Discussion of operation and maintenance of structural BMPs and the party responsible for maintenance is missing or insufficient.

Although a number of common problems are noted above, WQTRs reviewed during this reporting period have demonstrated that project proponents are gaining a stronger understanding of the City's storm water requirements. In general, project proponents are proposing more effective treatment control BMPs than they have in the past. "Natural" treatment controls like grass swales are being proposed more frequently in projects' WQTRs.

Despite these improvements, multiple reviews are often necessary before WQTRs are approved and permits are issued. This is largely because the City's review process, including the review process for treatment control BMPs, has also become more stringent during the past several years.

DEVELOPMENT/REDEVELOPMENT PROJECT DESCRIPTIONS

Development projects that submitted WQTRs during this reporting period are described below. Some of these WQTRs were initial submissions, while others were second or third versions of a document that was previously reviewed and did not meet the City's minimum requirements. The City maintains an electronic spreadsheet that tracks WQTR reviews and their current approval status. Table 6.1 shows the number of reviews performed for each WQTR document during this reporting period and notes whether or not the project was approved.

Christ Lutheran Church

This project involves demolishing existing apartment buildings to create a private school with an artificial turf playground. The existing parking lot is being left as is, so construction will only take place on 0.67 acres.

Civic Center Improvements

The construction of an interim library and post office in addition to a new police station are proposed at the existing Civic Center site. The project will be built on 35,000 square feet of existing parking lot.

Grossmont Hospital
This project includes the construction of an office building and a multi-story parking lot on an estimated 2.2 acres of the existing site of Grossmont Hospital.

Grossmont Terrace
This project involves the demolition of existing apartment buildings and the construction of a new, 58-unit condominium complex on a 3.47 acre site.

John A. Davis Family YMCA Expansion
The existing John A. Davis Family YMCA will be expanded to include additional building area, parking, and a play area. The expansion will create 8,700 square feet of additional impervious area.

La Mesa Live/Work Village
This project involves the construction of 15 attached town homes on an undeveloped 0.52 acre site.

La Mesa Townhomes, Sites 1, 2, and 3
The La Mesa Townhomes projects involve development at three noncontiguous sites from 7353 to 7604 El Cajon Boulevard. Sites 1, 2, and 3 each have separate SUSMP reports and propose to construct 49, 19, and 10 townhomes, respectively. The project proponent proposes to remove existing buildings and a used car dealership from these parcels prior to construction.

Palm Avenue
This project involves the construction of 12 single-family condominiums on a 0.74 acre site.

Palm Terrace
This project involves construction of a commercial building with 26 condominiums on a 0.63 acre site.

Park Grossmont
This redevelopment project will involve demolition of existing residential units, surface parking, and driveways to construct new attached residential units.

INSPECTIONS AND ENFORCEMENT

Verification inspections of post-construction BMPs are conducted by the City's inspector. Structural BMPs such as treatment control BMPs are checked to ensure they have been constructed and implemented as depicted on City-approved design plans. The project proponent signs off on a covenant affirming responsibility in the operation and maintenance of post-construction BMPs. No enforcement related to the installation of structural post-construction BMPs was necessary during this reporting period.

IMPLEMENTATION PLANS FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit,

Order No. 2007-0001. Updates made to the development planning program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

Table 6.1
Projects Submitting WQTRs to the City for Review

#	Project Name	Location	Description	Type	# of Reviews	Approved* (Yes/No)
1	Christ Lutheran Church	W. side of La Mesa Boulevard, N. of University Ave	Commercial	Non-Priority	2	Yes
2	Civic Center Improvements	8132 Allison Avenue	CIP Project	Priority	1	Yes
3	Grossmont Hospital	Health Care Dr. and Center Dr.	Hospital Addition	Priority	3	Yes
4	Grossmont Terrace	Buckman St.	Attached Residential	Priority	3	No
5	John A. Davis Family YMCA Expansion	East of 125, S. of Dallas St and La Mesita Park	Commercial	Priority	2	No
6	La Mesa Live/Work Village	La Mesa Blvd. and El Paso St.	Attached Residential	Priority	1	No
7	La Mesa Townhomes Site 1	7353 El Cajon Blvd.	Attached Residential	Priority	2	No
8	La Mesa Townhomes Site 2	7561 El Cajon Blvd	Attached Residential	Priority	2	No
9	La Mesa Townhomes Site 3	7604 El Cajon Blvd	Attached Residential	Priority	2	No
10	Palm Avenue	Palm Avenue and Pasadena	Attached Residential	Priority	3	No
11	Palm Terrace	Palm Ave. between Echo Rd. and Pasadena Ave.	Attached Residential Commercial	Priority	2	No
12	Park Grossmont	North and South sides of Campina Drive	Attached Residential	Priority	1	No

* By the end of the 2006/2007 reporting period

7 CONSTRUCTION

Construction and grading activities have the potential to negatively impact storm water quality as a result of erosion and sediment transport. Furthermore, sediment may also carry other pollutants such as metals and nutrients into the storm drain system and ultimately to receiving waters. Effective sediment control and soil stabilization are key in preventing sediment and other pollutants associated with construction sites from entering the storm drain system. The City requires implementation of BMPs to reduce the potential for sediment discharge from construction sites. Appropriate pollution prevention measures and/or other BMPs related to material management and equipment cleaning can also help prevent materials like concrete, fuel, paint, and detergents from being transported from construction sites into the storm drain system.

Construction projects within the City undergo strict approval and monitoring throughout the life of the project. The City prioritizes each construction site's threat to water quality based on the size and proposed activities using the approach presented in the City's JURMP. The checklist in Appendix A of the City's Local SUSMP, which projects complete prior to construction, includes a section used to determine construction site prioritization. As mandated by the Municipal Permit, during the wet season (October 1 through April 30) all high priority sites are inspected at least weekly, while medium and low are inspected twice throughout the season. This section presents the construction-related activities performed by the City during this reporting period.

PRIORITY SOURCES

The City reviews all construction project plans before grading permits are issued. Construction project activities typically involve demolishing, grading, excavating, paving, clearing, and building. The City maintains a watershed-based inventory of all construction projects within its jurisdiction. Each construction project in the City's inventory is prioritized as high, medium, or low using the prioritization criteria outlined in Section 7.5 of the JURMP. These criteria include size, site slope, erosion potential, and the proximity and sensitivity of receiving water bodies. Other factors, such as potential for non-storm water discharges may also be used for prioritization on a project by project basis. The inventories of the City's private construction projects and Capital Improvement Projects (CIP) during the reporting period are found in Tables 7.1 and 7.2, respectively, at the end of this section.

POLLUTION PREVENTION

The City requires construction projects to implement pollution prevention measures to help avoid illegal discharges and potentially costly cleanups. Furthermore, projects of at least one acre are subject to the pollution prevention requirements specified in the General Construction Permit. Well-planned project scheduling, such as coordinating grading activities with the dry season, can reduce the threat of pollutant discharge from construction sites. Proper management of material and waste is also an effective pollution prevention measure. The City provides a Construction and Demolition Recycling Guide (Attachment 7.1) at the Building Department counter to assist project proponents in implementing pollution prevention practices.

The City also requires a certain percentage of construction waste to be recycled to help mitigate the environmental hazards associated with construction waste. This requirement went into effect during the 2005/2006 reporting period as an ordinance and was discussed in detail in the 2005/2006 Annual Report. The requirement continued to be implemented during this reporting period.

Specific pollution prevention requirements for construction activities are detailed in Section 7.1 of the JURMP. The City uses the application process and pre-construction meetings to educate project proponents about pollution prevention before permits are issued and construction commences.

BMP REQUIREMENTS AND IMPLEMENTATION

Section 7.6 of the City's JURMP details the minimum required BMPs for construction sites regardless of their assigned priorities. The City requires all construction sites to prevent discharges to the MEP through effective project planning, erosion prevention, sediment containment, materials and equipment management, and non-storm water discharge and drainage control. In some cases, additional BMPs beyond those specifically required by the City's JURMP must be implemented to meet the City's MEP standard. To ensure these requirements are met, the City performs inspections of construction sites to evaluate if project proponents are correctly implementing required BMPs. The major categories of BMP requirements outlined in Section 7.6 of the City's JURMP are as follows:

- Project planning
- Erosion prevention
- Sediment containment
- Materials and equipment management
- Non-storm water discharge and drainage control

Fact sheets on the aforementioned BMPs and fact sheets related to pollution prevention and good house keeping are included in Appendix C of the JURMP. The City also uses Appendix C of the JURMP as an educational material, sometimes giving copies of the Appendix to construction project proponents.

All construction projects of at least one acre are subject to the General Construction Permit and are required to prepare a SWPPP. The SWPPP includes a list of the BMPs that will be implemented at the construction site. Construction projects less than one acre that include grading are required to submit erosion control plans. No changes were made to the City's construction BMP requirements during this reporting period.

INSPECTIONS

Construction site inspections involve City inspectors verifying proper BMP implementation and maintenance as presented in the project's erosion control plans, SWPPPs, or other applicable BMP documents. The City conducted construction site inspections per the frequency required by the Municipal Permit. High priority construction sites were visited

and inspected by the City weekly during the wet season. Medium and low priority sites were inspected twice during the wet season unless the project was completed before the second inspection could be performed. During this reporting period there were 36 private construction projects and six CIPs. The updated inventories for private construction projects and CIP projects are found in Tables 7.1 and 7.2, respectively.

In December 2006, Dat Quach, a RWQCB staff member, conducted joint inspections of high priority construction sites with the City's Environmental Specialist. Participating in these joint inspections helps both the City inspectors and regulated construction site managers better understand the RWQCB's implementation process. Maintaining a cooperative relationship with the RWQCB is an important part of an effective inspection and compliance program.

The City's building inspector has become involved in the BMP inspection process as a means to ensure that smaller construction building projects, such as tenant improvements and room editions, are properly implementing required BMPs. The building inspector places a stamp on the building permit with boxes indicating whether or not all BMPs are properly implemented. If any potential BMP problems are noted, the inspector works with the site manager or owner to resolve them. If any major problems are observed, the City's Environmental Specialist is notified to conduct further enforcement as necessary to obtain compliance. The building inspector did not need to refer any construction building sites to the City's Environmental Specialist for further enforcement.

During this reporting period three construction sites were assigned a "high" priority and inspected weekly for a total of 90 inspections. Two of these high priority sites were initially medium priority sites that were changed to high priority at the City's discretion. The condo construction project at 7378 Orien Avenue was changed to high priority during the 2004/2005 reporting period and has remained high priority throughout the 2005/2006 and 2006/2007 reporting years. The site had received multiple written warnings and an NOV for an observed illegal discharge during the 2005/2006 reporting year. During the 2006/2007 reporting year the construction site demonstrated an improved level of compliance with City BMP requirements. On one occasion an illegal discharge was noted and an NOV was issued, but corrective actions were implemented the same day the NOV was issued. No major BMP violations were observed at the site for the remainder of the reporting period nor at the remaining two high priority construction sites.

There were a total of 102 inspections of medium and low priority public and private construction sites during the 2006/2007 reporting year. Of these 102 inspections, 85 were routine inspections and 17 were follow-up inspections. Out of the 17 follow-up inspections, 11 required no additional corrective actions.

COMPLIANCE, AND ENFORCEMENT

Section 7.8 of the JURMP outlines the mechanism for construction site compliance and enforcement. Enforcement actions include verbal warnings, written warnings, stop work orders, denial and revocation of permits, and civil and/or criminal court action. The City will report a site to the RWQCB if the site operator refuses to comply with the City's enforcement process; however, this action was not necessary during the 2006/2007

reporting period. These enforcement methods maximize compliance and the proper implementation of storm water BMPs.

City storm water inspectors and other City employees follow the protocol outlined in the City's JURMP and the Notice of Violation Procedural Sheet (Attachment 2.3) when conducting inspections and implementing enforcement measures. The City's JURMP outlines wet and dry season inspection frequencies, proper inspection procedures, and how to report a threat to human or environmental health to the RWQCB. The Notice of Violation Procedural Sheet informs inspectors when it is appropriate to issue an NOV, recommended corrective actions, other available enforcement procedures, and necessary follow-up actions. Inspectors will recommend corrective actions and educate project proponents about effective BMP implementation as necessary, and revisit sites that require significant corrective actions.

During the reporting period, the City issued 16 NOVs to construction sites. Of the 16 NOVs, 14 were issued to private construction sites, while two were issued to CIP projects. The majority of the NOVs were issued for failure to implement required BMPs. The most common BMP deficiencies were improper perimeter protection, uncovered stockpiles, and insufficient stabilization of construction entrances. Additionally, in response to reports received by the City's storm water hotline, the City issued four verbal warnings, one written warning, and one NOV to construction sites. The City issued two stop work notices during this reporting period. The orders were issued to two separate sites, both of which were found engaging in construction activity without appropriate City permits. Once the appropriate permits were obtained and perimeter protection was installed per the sites' erosion control plans, construction was allowed to continue. The City's enforcement actions were effective in bringing about better BMP implementation and compliance with applicable regulations, so no further enforcement actions were necessary. For example, see the discussion earlier in this section of inspections and associated enforcement actions successfully applied at the site at 7378 Orien Avenue.

In this reporting period, no construction sites were deemed to present a threat to human or environmental health, and thus no reports were made to the RWQCB.

TRAINING, EDUCATION AND OUTREACH

The following training, education, and outreach activities were conducted by the City during this reporting period:

- Continued to educate project proponents during the project approval process
- Continued to distribute applicable sections of Appendix C of the JURMP document
- Continued to distribute the SWPPP preparation trifold (Attachment 2.9)
- The City's Environmental Specialist worked with inspectors and visited construction sites
- Continued to educate site managers on effective BMP implementation during the NPDES storm water compliance inspections

- Continued to distribute a Guide for Construction Activity (Attachment 7.2), available at the City's front desk
- Continued to distribute a general brochure entitled, "Construction and Demolition Guide" (Attachment 7.1), which is available to the public at www.cityoflamesa.com.
- Distributed a brochure with information about the SANCO Resource Recover Facility (Attachment 7.3), where can construction waste, including wood, metals, rock dirt, concrete, asphalt, drywall, and cardboard, can be disposed of properly.

IMPLEMENTATION PLANS FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates made to the construction program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

8 ILLICIT DISCHARGE DETECTION AND ELIMINATION

The City of La Mesa actively works to identify, eliminate and prevent IC/IDs. Illicit connections and illicit discharges can result in unauthorized discharges of pollutants to the City's MS4. Illicit discharges may be associated with activities such as vehicle washing or dewatering without appropriate BMPs. Illicit connections may include sewer pipes that have purposefully or mistakenly been configured to discharge into the MS4 as well as other prohibited connections to the MS4. Unless promptly detected, contained, and captured, IC/IDs may flow untreated into receiving waters. The City works with residents and businesses to make them aware of BMPs to prevent IC/IDs and to encourage reporting of IC/IDs. Three different mechanisms by which this can be accomplished are described in Section 8 of the City's JURMP and listed below:

- Inspecting Local Businesses, Construction Sites, and Municipal Facilities
- Conducting the Dry Weather Monitoring Program
- Operating a Public Complaint Hotline

These three mechanisms enable the City to provide a comprehensive system to better the quality of storm water and urban runoff throughout the City. A more detailed description of the inspection program and its results can be found in sections 2, 3, 4 and 7 of this Annual Report. This section includes a detailed discussion of both the Dry Weather Monitoring Program and the Public Complaint Hotline.

DRY WEATHER MONITORING PROGRAM

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit, to detect and eliminate IC/IDs to the storm drain system. As mentioned earlier, the City uses the Dry Weather Monitoring Program as one of its key methods to detect IC/IDs. Letters and educational materials are sent to neighboring residents and businesses where pollutants have been found. The letters summarize dry weather exceedances found in the subject area and describe BMPs to prevent such discharges that contribute to these exceedances. There are three components to the Dry Weather Monitoring Program:

- Field observations (site description and qualitative observations)
- Field screening monitoring (testing of sample while at site and flow estimation)
- Analytical monitoring (performing further tests of sample later at a laboratory)

The report for the 2006 Dry Weather Field Screening and Analytical Monitoring Program, which was completed during 2006/2007, is included as Attachment 8.1 of this report. The 2007 program was completed after the end of 2006/2007, but the results are briefly summarized later in this section, and the report is included as Attachment 8.2.

Numeric action levels are used as the primary approach for interpreting constituent concentrations measured in the field and the laboratory, and whether there is potentially an IC/ID. The action levels were adopted in 2003 and were based on statistical analysis of previous Dry Weather Monitoring Program data. The California Toxics Rule (CTR) Criteria Maximum Concentration (CMC) is used as the action level for dissolved trace metals. Best professional judgment is used when determining whether or not certain field parameters such as temperature or turbidity warrant upstream investigations.

The City visited a total of 18 primary monitoring stations to collect Dry Weather Monitoring Program data. Table 8.1 includes these stations and their locations within La Mesa. In the instance that a primary monitoring site may be dry or not possible for sampling, the City designated nine alternate monitoring stations specified in the JURMP that can be used as alternate sites. The City of La Mesa's Dry Weather Monitoring Program sites are located within the following drainage basins.

- Alvarado Channel Basin
- Lemon Grove Basin
- Spring Valley Basin
- University Channel Basin

2006 DRY WEATHER MONITORING PROGRAM

The City's storm water consultant, D-MAX, began the 2006 Dry Weather Monitoring Program in late June 2006 and completed the program early in 2006/2007 reporting period. Of the 18 visited sites, 17 sites had measurable flow and one site was observed to have ponded water. All site visits included qualitative observations, flow measurement, and field water quality analyses of specific conductance, temperature, pH, turbidity, detergents (measured as Methylene Blue Active Substance, or MBAS), nitrate nitrogen, ammonia nitrogen and orthophosphate phosphorus. Laboratory analysis was conducted using water samples from five sites, representing over 25 percent of total number of sites. Laboratory analysis was conducted for total hardness, surfactants, oil and grease, diazinon, chlorpyrifos, dissolved metals (cadmium, copper, lead, and zinc), total coliform bacteria, fecal coliform bacteria, and *Enterococcus* bacteria.

Field screening of physical parameters found that all measurements of pH fell between 6.9 and 8.9, temperature from 22.9 to 29 °C, conductivity from 0.9 to 5.56 mS/cm, and turbidity from 1.02 to 47.13 NTU. Field screening of chemical parameters detected an ammonia nitrogen concentration at or above the action level of 1.0 mg/L NH_3-N at three sites; however, the concentrations at all three sites fell below 1.0 mg/L during the time of the follow-up visit. The nitrate nitrogen concentration ranged from 1.25 to 7.5 mg/l. There were no sites with nitrate concentrations at or above the action level of 10.0 mg/L NO_3-N. Detergent concentration ranged from 0.25 to 1.5 mg/L MBAS. Only Site 64 had a detergent concentration of 1.5 mg/L, which is above the action level of 1.0 mg/L. This concentration fell below the action level during follow-up visit. Orthophosphate phosphorus concentration ranged from 0.07 to 1.14 mg/L. No Orthophosphate phosphorous

concentrations exceeded the action level of 2.0 mg/L PO_4-P at all visited sites. Data for field screening results is presented in Table 8.2.

The result from laboratory analysis indicated that four of the five sites had at least one bacterial indicator measured above its action level. Site 4A, 14A and 57 had a total coliform count of 130,000, 80,000, and 240,000 Most Probable Number of colony-forming units per 100 milliliter (MPN/100mL) , respectively. Site 12A had a total coliform count of 50,000 and a fecal coliform count of 30,000 MPN/100mL. *Enterococcus* bacteria were not detected at the sampling sites. Dissolved copper and zinc were detected at Sites 4A and 39, but not at concentrations exceeding the California Toxic Rule (CTR) Criteria Maximum Concentration. Dissolved cadmium and lead were not detected at any sampling sites. Surfactants, oil and grease, diazinon and chlorpyrifos were not detected at any of the sampled sites for laboratory analysis. Data for the laboratory results is presented in Table 8.3.

2006 FOLLOW-UP INVESTIGATIONS

The 2006 Dry Weather Monitoring Program for the City of La Mesa began in late June 2006, during the end of the 2005/2006 reporting period. The follow-up (upstream) investigations were conducted at the beginning of the 2006/2007 reporting period, and they are described in this report as follows.

The purpose of the upstream investigations is to find the sources of the pollutants that exceeded action levels during initial field screening and laboratory testing. The 2006 Dry Weather Monitoring Program revealed elevated levels of pollutants at four sites. Ammonia nitrogen concentrations above the action level (1.0 mg/L) were measured at Sites 35, 40, and 61. A detergent concentration of 1.5 mg/L was detected at Site 64. The concentrations of all these constituents fell below the action level of 1.0 mg/L by the time of the follow-up visit. In depth upstream investigations were not warranted or triggered. Upstream investigations were conducted at sites 4A, 12A, 14A, and 57 to locate potential sources of the elevated bacteria levels indicated by laboratory analyses.

Site 4A is located in the Alvarado Channel, at the southwest corner of Fletcher Parkway and Baltimore Drive intersection. As in previous years, sources of bacteria to Site 4A include contaminated surface flows coming from many lateral flows into the channel rather than one main point source. These areas included Jackson Drive, Nagel Street, Sarita Street, Parkway Drive, and the residential neighborhood near the Marengo Avenue/Morrow Way intersection. Decomposing trash and organic material, and stagnant water in the channel from Site 57 also contributed to the high bacteria levels. As described in Section 5, letters and educational materials were sent to residents living in the neighborhoods of Nagel Street, Sarita Street, and Marengo Avenue near Morrow Way. This information described the monitoring results of the Dry Weather Program and BMPs that should be implemented by residents.

Site 12A is a manhole on the south side of Jackson Drive, just west of Murray Drive. Results from the upstream investigation found that the likely cause of elevated total coliform and fecal coliform levels at Site 12A was from bacteria transported to the storm drain system via irrigation water near the Jackson Drive and Grossmont Boulevard intersection. Dog waste in the lawns around the shopping center at 5232 Jackson Drive was identified as a problem

by businesses at that address, and over-irrigation was visually observed there by the field crew. The dog waste is likely the source of the fecal coliforms, while total coliforms may come from soil and organic material in landscaping and on streets. Letters were sent to businesses on Parkway Drive (east of Jackson Drive), targeting waste disposal and littering, and educational materials were sent with each letter.

Site 14A is an outlet into an open channel running parallel to and north of Boulevard Drive. The sampling point is between Harbinson Avenue and Massachusetts Avenue. Although several upstream sources of bacteria were identified, the neighborhood around Normal Avenue and Olive Avenue was found to be the one with the highest bacteria levels. Several instances of surface flow caused by excess irrigation water were observed transporting litter and decomposing organic material to the storm drain system. It is also possible that pollutants originating from Helix High School area may be contributing to elevated bacteria levels in this area, although this could not be ascertained by the field crew. Letters and accompanying educational materials were sent to residents living in the area around Normal Avenue and Olive Avenue.

As in 2005, the source of ammonia at Site 35 was deemed to be fertilization and over-irrigation of flowerbeds inside Grossmont Center Mall. Site 35 is a manhole inside the Grossmont Center Mall, in front of the mall information stand near Bath and Body Works. Irrigation water appears to be transporting fertilizer to drains within the Mall. The ammonia and phosphate levels in 2006 were much lower than those recorded in 2005. As described in Section 4, a letter was sent to the facility manager at the shopping center urging them to provide an adequate plan to ensure that over irrigation and poor fertilizer application techniques would be remedied, along with educational materials.

Site 57 is an earthen channel running along Amaya Drive, east of Severin Drive and across from Howell Drive. The elevated level of total coliforms at Site 57 is mainly influenced by surface flow on Amaya Drive as it approaches Water Street. While the exact origin of this surface flow could not be located, it appears to come from over-irrigation of lawn areas. A consistent flow along the street, algae and decomposing organic matter were observed in curb gutters. Soil and organic matter in conjunction with over-irrigation appear to be the sources of the total coliform bacteria. Letters were sent to residents living along Amaya Drive, north of Water Street. The letter described the high levels of bacteria found in the area, possible causes, and BMP recommendations; additional educational materials were also included with the letter.

2007 DRY WEATHER MONITORING PROGRAM

The City's storm water consultant, D-MAX, conducted the 2007 Dry Weather Monitoring Program in June 2007. During the Dry Weather Program, nineteen sites were visited, and one of the sites was observed to be dry (Site 61). An alternate site (Site 60) was chosen. Only one site required a follow up investigation due to a field testing exceedances, compared to four in 2006. Follow-up investigations of the sites were conducted shortly afterwards, during the 2007/2008 reporting period. Because follow-up investigations and recommendations for the 2007 Dry Weather Monitoring Program were not completed by the end of 2007/2008, a more detailed discussion of the 2007 Dry Weather Monitoring Program

will be covered in the 2006/2007 JURMP Annual Report. A brief summary of the 2007 Dry Weather Monitoring Program is presented below.

The only field exceedance measured was a pH value of 10.0 at one site. All measurements of ammonia, phosphorus, and nitrate were below their respective action levels. Only one bacteria exceedance was recorded. *Enterococcus* bacteria were detected above the action level at Site 39, and a follow up investigation was conducted. Dissolved copper was detected at one site, but it was below the action level. Similar to 2006, no chlorpyrifos, diazinon, oil and grease, or surfactants were detected by laboratory analyses at any sites. The 2007 Dry Weather Field Screening and Analytical Monitoring program report is provided as Attachment 8.2.

COMPLAINT REPORTING OF IC/IDS, INVESTIGATION AND ENFORCEMENT

The City recognizes that both public and municipal involvement is critical to the prevention and elimination of IC/IDs to the storm water conveyance system. The storm water public complaint hotline provides an effective means for individuals in the community to report suspected IC/IDs. The number for this hotline is published on the City's website, in storm water brochures available in public locations, and in storm water articles in the *La Mesa Focus* newsletter. Residents can also report complaints online via the City's website. All complaints received through the hotline and the website are logged onto a spreadsheet for documentation and tracking purposes. Each of the complaints logged are then investigated by City personnel to determine if there is an IC/ID requiring action to be taken. All attempts are made to find the responsible parties for any IC/ID that is confirmed. The responsible parties are educated and/or cited as necessary and required to cease all and any illegal discharges. The Public Works department is also frequently contacted regarding storm water related complaints, often related to infrastructure concerns. All complaints reported to the Public Works department are tracked and investigated in a similar manner to those reported through the hotline. The City considers tracking and resolving these complaints an integral part of JURMP implementation.

A summary of the reported complaints that were investigated by the City between July 1, 2006 and June 30, 2007 is shown in Table 8.4. A total of 89 complaints were documented during the 2006/2007 reporting period, a decrease from 133 documented the previous reporting period. This may indicate that residents and business owners are taking note of the City's educational program and that more residents are aware of their impact on their environment and are implementing by BMPs. Table 8.4 includes both the complaints made via the storm water hotline or website and the relevant complaints made to the City Public Works Department. The table also includes a description of how each complaint was resolved during the reporting period.

RESPONSE TO SPILLS

The City maintains a Sewer Overflow Prevention Plan and a Sewer Overflow Response Plan as required by the Municipal Permit. The City regularly conducts preventative maintenance on its sanitary sewer system. Sewer surveys and ongoing video inspections are employed to monitor the condition of public sewer lines and determine where maintenance is needed. Preventative maintenance is not conducted on private laterals, as they are private property,

but the City will assist in containment and cleanup of sewer spills from private laterals if the sewage is a threat to the MS4.

The general public is encouraged to report any SSOs to the City's storm water hotline. As mentioned above, information for the hotline can be found online and at various municipal locations. During this reporting period, no spills occurred, an improvement from two spills last year.

IMPLEMENTATION PLANS FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates made to the IDDE program will be presented in the updated JURMP. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No.2001-01) and the associated JURMP document developed in 2002.

Table 8.1
2006 Dry Weather Monitoring Locations

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Unit	Latitude	Longitude
4A	Alvarado channel, intersection of Fletcher Parkway and Baltimore Drive	Concrete Channel	Commercial	Commercial	907	32.77364	-117.02771

Notes

Red Bold Type = Values that exceed action levels

nd = not detected

CTR = California Toxics Rule (based on hardness)

*= Total hardness is not considered a pollutant (see Section 3.4 for details) and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependant on the total hardness value of the water sample. Total hardness measurements are thus required to calculate action levels for dissolved metals.

Table 8.4
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
1	7/10/06	City Personnel	Helix Charter High School	7323 University Ave, off Lowell Street	Storm drain inlet not protected	Verify Complaint	7/10/06 MT issues written warning requesting BMP implementation. 7/21/06 BMP implementation verified/completed.
2	7/10/06	Telephone Call to Public Works	Loren Drive	9315 Loren Drive	Storm drain located to the side of 9315 Loren needs to be cleared - it is starting to smell.	Verify Complaint	Work Order 18124: Private brow ditch, no further action.
3	7/11/06	Storm Water Hotline	Gerardo Herrera, Pacific Bill/Southcoast Building Service / La Mesa Village Plaza 7250 Engineering Road Suite D, SD 92111	La Mesa Village Plaza	Pressure washing side walk without BMPs	Verify Complaint	7/11/06 MT issues NOV and requires BMPs implemented before continuing with pressure washing activities. Pressure washing ceased/No further action.
4	7/11/06	Telephone Call to Public Works	La Mesa Blvd	La Mesa Blvd	Storm drain out in front of San Fillipos is plugged up. Owner sweeping last night into street and plugged up storm drain.	Verify Complaint	Work Order 18131: Cleared trash and debris from drain.
5	7/13/06	City Personnel	Helix Charter High School/Parking Lot	Helix High School off of Lowell Street	Trenching with no BMPs	Verify Complaint	7/13/06 MT contacts Facility Manager and request BMPs implemented. 7/17/06 MT notes some BMP implementation at site. No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
6	7/13/06	City Personnel	Simac Construction	Grossmont Center	Wastewater discharge in parking lot	Verbal Warning	7/13/06 HH gives verbal warning to berm off area in parking lot and recover wastewater for proper disposal. No further action.
7	7/18/06	Storm Water Hotline	EDCO/Blackton Drive	Blackton Drive	Oil leak on asphalt	Verify Complaint	7/18/06 MT verifies complaint and contacts EDCO. MT issues NOV. Cleanup commences by steam cleaning asphalt. No further action.
8	7/18/06	Storm Water Hotline	Juan Villa/ Colony Drive	7440 Colony Drive	Working on Vehicle in Street/Oil discharge	Verify Complaint	7/18/06 MT verifies complaint and issues NOV and 24 hours to cleanup. 7/19/06 MT verifies clean up. No further action.
9	7/19/06	Storm Water Hotline	Resident, Shirley Court	9217 Shirley Court	Cement discharge to street	Verify Complaint	7/19/06 MT verifies complaint and issues NOV with request for cleanup. Cleanup observed no further action.
10	7/19/06	Storm Water Hotline	5800 Bertro, La Mesa	5800 Bertro, La Mesa	Complaint of oil along curb	Verify Complaint	7/19/06 MT verifies complaint. No oil noted. Some leaf debris and water along curb. No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
11	7/19/06	Telephone Call to Public Works	Orien Avenue	7856 Orien Avenue	Drainage ditch Behind 7856 Orien (accessed from alley – last house)	Verify Complaint	Work Order 18208: Private ditch, no further action.
12	7/20/06	Telephone Call to Public Works	Golondrina Drive	9161 Golondrina Drive	Gravel bags left in front of storm drain across from 9161 Golondrina have broken open and made a mess. Work in area has been completed and bags should probably be picked up. [Message left with Laslo to contact Contractor]	Verify Complaint	Word Order 18679: Bags were picked up.
13	7/24/06	Storm Water Hotline	Gregg Torwick, 6051 Amarillo Ave	6051 Amarillo Ave	Wastewater from washing machine discharged onto driveway	Send Notice to Comply	7/24/06 MT sends letter to comply with education outreach information. No further action.
14	7/24/06	Telephone Call to Public Works	Judson Way	4604 Judson Way	Storm drain clogged with debris causing property to become flooded at 4604½ Judson Way (Homeowner is Kathy (619-462-4684)	Verify Complaint	Work Order 18210: Private open ditch was made.
15	7/31/06	Storm Water Hotline	Henry's Market Place	Spring Street/Finely	Pumping water from loading dock	Verify Complaint	7/31/06 MT visited site and will be drafting letter requesting BMP Plan.
16	7/31/06	City Personnel	Guava Street Construction	Guava Street	Tracking sediment	Verify Complaint	7/31/06 MT visits site after DL gives verbal warning. Site had been cleaned.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
17	7/31/06	City Personnel	Lowell Construction Project	Lowell Street	Tracking sediment/minimal BMPs	Verify Complaint	7/31/06 MT contacts designated site inspector to implement BMPs/ give verbal warning to implement BMPs. Inspector verified deficiencies as part of construction site inspections. No further action.
18	8/21/06	City Personnel	The Auto Center, Claudio Arzillo	8203 University Avenue	Discharge of degreaser/cream colored water into storm drain	Verify Complaint	8/21/06 MT verifies complaint, has manager stop discharge immediately. MT contacts public works to flush storm drain inlet and capture wastewater. Estimate less than 25 gallons discharged. MT issues NOV and provides education outreach material. No further action.
19	8/22/06	City Personnel	Mario Arellano, Resident	3839 Murray Hill Rd	Discharge wastewater to curb with stucco waste	Issue NOV	8/22/06 MT issues NOV requesting cleanup of waste along curb. Education outreach material provided. Site cleaned no further action.
20	8/22/06	Storm Water Hotline	8870 Bowling Drive	8870 Bowling Drive	Sediment discharge	Verify Complaint	8/22/06 DG verifies complaint and provide educational/outreach material. Site cleaned up/no further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
21	8/23/06	City Personnel	Kenneth Steele, 8870 Echo Drive	8870 Echo Drive	Sediment on street	Verify Complaint	8/23/06 MT verified complaint, request cleanup and provided educational material. Site cleaned up, no further action.
22	8/24/06	City Personnel	City Hall, Public Works/Landscape Maintenance 8130 Allison Ave	8130 Allison Ave	Over-irrigation	Verbal Warning	8/24/06 MT gives Public Works verbal warning and request irrigation time reduced. No further action.
23	8/25/06	Anonymous	Firestone, 5577 Lake Murray Blvd	5577 Lake Murray Blvd	Car washing no BMPs	Verify Complaint	8/30/06 MT receives written complaint and meets with firestone manager same day and discusses BMPs/provides education outreach material and request no car washing activities at facility.
24	8/29/06	City Personnel	Henry's Farmers Market 4630 Palm Avenue	4630 Palm Avenue	Pumping water from loading dock	Written Notice to Comply	8/29/06 MT prepares written notice to comply and to prepare storm water management plan. 10/30/06 MT sends out a second notice to comply by 11/9/06. 11/9/06 MT receives a legal letter responding to request for storm water management plan. Statement that they will continue using best practices guidelines provided by the city.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
25	9/15/06	City Personnel	Pezanoski Residence 6201 Falmouth Drive	6201 Falmouth Drive	Over-irrigation	Verify Complaint	9/15/06 MT sends out written notice and education outreach material.
26	9/18/06	City Personnel	Firestone (8784 Grossmont & Jackson)	8784 Grossmont & Jackson	Church Fundraiser Car Wash	Verify Complaint	9/18/06 AE visits Firestone Site, gives verbal warning to manager to have Church Fundraiser stopped. No further action.
27	9/28/06	City Personnel	Blue Dolphin Auto Detailing 4213 Kansas St #1, SD 92104	Grossmont Summit Drive Cul-de-sac	Car washing no BMPs	Issued NOV	9/28/06 SM issues NOV for mobile auto detailing business not using BMPs. Prevent runoff/capture wastewater immediately. No further action.
28	10/5/06	Telephone Call to Public Works	Palm Avenue	4401 Palm Avenue	Storm drain behind tot lot at Collier Park needs to be cleaned out	Verify Complaint	Work Order 18671: Cleaned ditch.
29	10/11/06	City Personnel	Pizza Hut 8011 University Ave	8011 University Avenue	Washing equipment outside	Verify Complaint	10/11/06 MT notes Pizza Hut employee washing equipment in parking lot. MT issues NOV and provides education outreach material. No further action. Issued NOV.
30	10/11/06	Anonymous	Murray Hill & Waite	Murray Hill & Waite	Oil dumping	Verify Complaint	10/11/06 MT verifies complaint. No oil dumping. Environmental team collecting groundwater samples as part of monitoring program. No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
31	10/16/06	Telephone Call to Public Works	Lemon Avenue	8535 Lemon Avenue	Storm drain out in front of 8535 Lemon Ave. is clogged (resident left message at City Hall)	Verify Complaint	Work Order 18644: Cleaned open ditch.
32	10/19/06	City Personnel	Resident, 6820 Rosefield	6820 Rosefield	Illicit Connection of washing machine wastewater into yard	Verify Complaint	10/19/06 AE gives verbal warning to remove washing machine hose and reconnect to sink/sewer. AE verified hose removed. No further action
33	10/26/06	Resident	Henry's Farmers Market 4630 Palm Avenue	4630 Palm Avenue	Pumping Water from Loading Dock	Written Notice to Comply	10/30/06 MT sends out a second notice to comply by 11/9/06. 11/9/06 MT receives a legal letter responding to request for storm water management plan. Statement that they will continue using best practices guidelines provided by the city.
34	10/26/06	City Mayor	Resident, 7545 Orien	7545 Orien	Washing machine wastewater discharged into yard	Verify Complaint	10/26/06 MT does not note discharge but observes hose connected to washing machine and into yard. MT gives verbal warning and request hose removed. Education outreach material provided. Drove by to verify hose still removed after a week. No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
35	10/30/06	City Personnel	Pacific Homes International, 7879 El Cajon Blvd	7879 El Cajon Blvd	Over-irrigation	Verify Complaint	10/30/06 MT sends written warning to minimize over-irrigation. 11/2/06 City contacted that irrigation is being fixed. No further action.
36	10/30/06	City Personnel	Action RV 8090 University Avenue	8090 University Avenue	Washing vehicles/runoff onto street	Written Warning	10/30/06 MT sends written warning requesting BMPs implemented per education outreach material provided. No further action.
37	11/6/06	Telephone Call to Public Works	Fortune Lane	9415 Fortune Lane	Concrete drainage ditch is clogged with debris between 9415 and 9435 Fortune Lane	Verify Complaint	Work Order 18908: Cleaned pipe opening at private location
38	11/9/06	City Personnel	Thrift Residence, 4150 Hurley Drive	4150 Hurley Drive	Pumping water out onto street	Verify Complaint	11/9/06 MT verifies complaint and issues NOV/request water not pumped into street. Thrift contacts MT to further discuss and removes hose. No further action.
39	11/28/06	Telephone Call to Public Works	Pasadena	8308 Pasadena	Debris is blocking sewer drain (no water involved)	Verify Complaint	Work Order 18898: Cleaned inlet.
40	11/30/06	City Personnel	Nacho's Taco Shop 7389 University Avenue	7389 University Avenue	Washing around exterior of restaurant	Verified Complaint	11/30/06 MT issues NOV and provides educational outreach material (trifold). No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
41	12/11/06	City Personnel	La Mesa Seventh Day Adventist Church	4207 Spring Garden Drive	Over-irrigation	Written Warning	12/11/06 MT sends written warning to monitor/stop over-irrigation. Urban Runoff Trifold and SD Bay Watershed Fact Sheet provided.
42	12/15/06	City Personnel	Ronald Crites 9110 Fletcher Parkway	9110 Fletcher Parkway	Soil Stockpile in right of way	Verify Complaint	DL visited site on 12/15/06 and issued NOV for no BMP implementation. Site re-inspected on 12/19/06 with BMPs implemented and no further action.
43	12/19/06	Anonymous	4750/70th Street	4750/70th Street	Slurry water discharge	Verified Complaint	12/19/06 MT verifies complaint. Storm drain inlet protected/slurry water discharge not observed. No further action.
44	12/21/06	City Personnel	Shell Service Station 4925 Spring Street	4925 Spring Street	Over-irrigation/water flowing onto street	Verify Complaint	12/21/06 MT gives verbal warning to minimize over-irrigation to reduce potential runoff. No further action.
45	12/27/06	Telephone Call to Public Works	Memorial Dr	4975 Memorial Dr	The drain outside the Community Center by the dumpster backed up during the rain but is ok now. Joan is worried that the drain is plugged and will back up again with the next rain.	Verify Complaint	Work Order 19265: Rodded drain pipe to clear pipe.

Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
46	1/8/07	Resident	Henry's Market/ Fresno	Fresno	Pesticides sprayed on parking lot	Verify Complaint	1/8/07 MT verifies complaint and provides IPM information to Henry's.
47	1/11/07	Resident	8410 Dallas	8410 Dallas	Cement slurry on curb	Verify Complaint	1/11/07 MT verified complaint. Some cement residue observed but no point source. No discharge into storm drain. Cleanup requested.
48	1/12/07	City Personnel	Marilyn Gunner, 7820 Carter Place	7820 Carter Pl	Soil stockpile in right of way	Verify Complaint	1/12/07 DL verifies complaint/request containment of soil stockpile. Site cleaned up and no further action.
49	1/17/07	Telephone Call to Public Works	Harris	Harris	Curb outlet needs to be cleared of dirt and grass.	Verify Complaint	Work Order 19280: Cleared the portion of the outlet that is on City property and notified Caltrans to clean its portion.
50	1/23/07	Telephone Call to Public Works	Spring Street	Spring Street	Walk-in when Kurt at desk. Comment that drain is not correct at Shell Station on Spring St. Public Works staff called Malik. He said that he inspected it on 12/21/06, but he requested that Public Works staff make sure it is proper drain.	Verify Complaint	Work Order 19284: Per Malik, drain conveys runoff from property from landscaping.

Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
51	2/6/07	Storm Water Hotline	6100 Bradmore Drive	6100 Bradmore Drive	Sewer cover	Verify Complaint	2/6/07 MT verifies sewer cover. No issues noted, no further action.
52	2/19/07	Telephone Call to Public Works	Nebo	Nebo	Rain water is slow do drain, water up to the curb	Verify Complaint	Work Order 19242: Cleared inlet.
53	2/21/07	Telephone Call to Public Works	Park Plaza Dr.	9001 Park Plaza Dr.	Jr. Seau Park, the Fletcher Pkwy side of the soccer field, next to the fence, Sharon confirmed drain needs clearing****this SR came in earlier this morning***	Verify Complaint	Work Order 19507: Cleared all drains along the field.
54	2/21/07	Telephone Call to Public Works	Jefferson	8750 Jefferson	Storm drain on Easement plugged/expecting more rain tomorrow. Her alternate phone: 619/444-1123	Verify Complaint	Work Order 19508: Cleared inlet of vegetation.
55	2/23/07	City Personnel	Mike Logsden, 9565 Lemon Ave	9565 Lemon Ave	Construction project no permit/BMPs	Verify Complaint	2/23/07 DL issues NOV due to no BMP implementation/permit. Site re-inspected on 2/27/07 and BMPs implemented, not further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
56	3/4/07	City Personnel	Kirk Paving Inc. Rick Cota, Date Avenue	Date Avenue	Post construction cleanup	Written Warning	3/6/07 MT drafts letter as written warning to Rick Cota to implement BMPs. MT spoke with Rick to further discuss to ensure understanding of BMPs to implement. No further action.
57	3/8/07	City Personnel	Apartment Complex 4500 Block off Nebo Drive	4584 Nebo Drive	Nuisance water	Verify Complaint	3/8/07 MT verifies complaint and notes that nuisance water is raising groundwater. This is same location investigated on 8/29/05. No further action.
58	3/8/07	Resident	Cul-de-sac 6100 Block Sarita	6130 Sarita	Nuisance water	Verify Complaint	3/8/07 MT verified complaint. Rising groundwater noted. No further action.
59	3/14/07	Storm Water Hotline	Harloff Foreign Auto/ Lowell & University Avenue	Lowell and University Avenue	Gray water runoff	Verify Complaint	3/14/07 MT verifies complaint. No gray water noted. MT to monitor and provide education outreach material.
60	3/27/07	Resident	3700 Harris Street	3700 Harris Street	Pothole in street	Verify Complaint	3/27/07 MT verified complaint. Reports pothole to public works. Pothole permanently filled. No further action.
61	3/30/07	City Personnel	Shell Service Station 4925 Spring Street	4925 Spring Street	Car wash overflow	Talk to Owner	3/30/07 AE & MT talk to owner to block soapy water from leaving site. Owner blocked of drain. No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
62	4/5/07	City Personnel	Dennis Sotelo, Kar-Teks 2034 Hidden Crest Drive, Collier Park	Palm Avenue	Mobile car wash discharge	Verify Complaint	4/5/07 MT verifies complaint and issues NOV to Dennis with Kar-Teks. MT provides educational material trifold brochure and has wastewater vacuumed. No further action.
63	4/12/07	City Personnel	Jordan/Larry, Nulite Inc. P.O. Box 1017 Poway, CA 92074 (858) 486-6700	7450 University Avenue Parking Lot	Discharge from maintenance activities	Verify Complaint	4/12/07 MT verifies complaint. Parking lot noted as wet with sediment. No discharge noted to storm drain. MT gives verbal warning and provides educational outreach material. MT request dry sweeping for waste.
64	4/12/07	City Personnel	Randy Baillergeon/Sherrie, Greater San Diego Air Conditioning Company, Inc. 8141 Center Street	8141 Center Street	Hosing down exterior	Verify Complaint	4/12/07 MT issues NOV and request only dry sweeping and to cleanup sediment along curb. No further action.
65	4/13/07	City Personnel	Dan Morrin, 8560 Tia Maria	8560 Tia Maria	Tracking soil	Verify Complaint	4/13/07 MT verifies complaint, issues NOV and request immediate cleanup. MT verified cleanup on 4/16/06. No further action.
66	4/16/07	City Personnel	7195 Colony Drive	7195 Colony Drive	Construction/No BMPs	Issue NOV	4/16/07 DL issues NOV. DL re-inspects on 4/19/07, BMPs implemented. No further action.

Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
67	4/17/07	Storm Water Hotline	Sarita Cul-de-sac	Sarita Cul-de-sac	Algae along curb	Verified Complaint	MT visited site in past and is aware that there is rising groundwater and some algal growth. No further action
68	4/24/07	City Personnel	Souplantation, 9158 Fletcher Parkway	9158 Fletcher Parkway	Washing sidewalk	Issue NOV	4/25/07 MT issues NOV for illegal discharge. Educational material distributed. No further action.
69	5/1/07	Telephone Call to Public Works	Thorn Drive	5016 Thorn Drive	Request a drain at driveway entrance where puddle forms	Verify Complaint	Work Order 19519: This is a drainage issue only, not a storm water issue.
70	5/2/07	Telephone Call to Public Works	Primrose Drive	6200 Primrose Drive	Storm drain box is filled with dirt	Verify Complaint	Work Order 19492: Cleared inlet of dirt.
71	5/5/07	Anonymous	Auto Zone 7791 El Cajon Blvd	7791 El Cajon Blvd	Washing vehicles without BMPs	Verify Complaint	5/25/07 MT verifies complaint, issues NOV and requests all wastewater to be captured and disposed in sewer system. Education outreach material provided.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
72	5/9/07	Storm Water Hotline	Cul-de-sac on Sarita	Sarita	High Bacteria in Water	Verify Complaint	EJ has been to site prior to complaint. MT has been to site prior to complaint. Surfacing groundwater in conjunction with irrigation is accumulating along curb. No documentation of high levels of bacteria. Surfacing groundwater is not prohibited from drainage into the storm water conveyance system as long as pollutants are not being transported. No further action.
73	5/11/07	County of San Diego	5 Star Liquor 7495 University Ave	5 Star Liquor 7495 University Ave	Dumping mop water into storm drain	Meet with manager/store owner	5/15/07 HH meets with store manager to educate him that mop wastewater should be disposed of in sink or toilet and not storm drain. No further action.
74	5/15/07	City Personnel	Harbinson/University Ave	Harbinson/University Ave	Accident/oil dripping	Verify Complaint	5/15/07 HH verifies complaint, goes out to site. DL blocked anti-freeze from flowing into the storm drain. Pollutants were cleaned up/no further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
75	5/17/07	Storm Water Hotline	5065 Guava Ave	5065 Guava Ave	Dripping oil/hydraulic fluid	Verify Complaint	5/17/07 HH verifies complaint and requests cleanup of oil stains/placement of kitty litter/cleanup. Kitty litter applied.
76	5/17/07	Telephone Call to Public Works	Lemon Avenue	8360 Lemon Avenue	Street was resurfaced and the storm drain was covered caller states	Verify Complaint	Work Order 19564: Street Department helped by re-grading in front of house. This was a private issue.
77	5/23/07	Telephone Call to Public Works	Wakarusa Street	9001 Wakarusa Street	The storm drain at Briercrest Park is clogged	Verify Complaint	Work Order 19629: Cleared debris from storm drain.
78	5/23/07	Telephone Call to Public Works	Golendrina	9260 Golendrina	At 9260 Golondrina Dr drain is blocked due to tree growth	Verify Complaint	Work Order 19628: Cleared private drain.
79	5/24/07	Telephone Call to Public Works	King Street	3611 King Street	Caller says that water is leaking from 3610 King street to her complex at 3611-15 and the water does not drain	Verify Complaint	Work Order 19627: This is a private drainage issue and does not involve the public storm drain system.
80	5/24/07	Telephone Call to Public Works	Binney Place	8155 Binney Place	Caller states drain is plugged	Verify Complaint	Work Order 19626: Cleared drain.
81	5/29/07	Telephone Call to Public Works	Purdue Avenue	7351 Purdue Avenue	Caller states that since streets been resurface water just sits at curb at 7351 Purdue Ave and across the street as well	Verify Complaint	Work Order 19625: This is a drainage issue only, not a storm water issue.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
82	5/31/07	Telephone Call to Public Works	Campina Drive	4900 Campina Drive	Caller say at 4900 and Campina Dr. the drain is clogged	Verify Complaint	Work Order 19658: Cleared drain of vegetation
83	6/5/07	City Personnel	Shell Station 4925 Spring Street	4925 Spring Street	Discharge onto side walk	Verify Complaint	6/5/07 MT verifies complaint and speaks with facility manager to cleanup sediment on sidewalk and minimize over-irrigation. Sediment on sidewalk cleaned 6/5/07. No further action.
84	6/6/07	City Personnel	Lee Ladley, YMCA 8881 Dallas Street	8881 Dallas Street	Pool water discharge/filter cleaning	Issue NOV	6/6/07 MT issues NOV and sends Pool & Spa BMP Fact Sheet. No further action.
85	6/6/07	City Personnel	Wedo Wedo, Jorge Urquidi, 8169 Center Drive	8169 Center Drive	White residue on sidewalk	Verify Complaint	6/6/07 MT verifies complaint, issues NOV, requests cleanup, and provides education outreach material (trifold). Cleanup observed at the end of day. No further action.

Table 8.4 (Continued)
Summary of Documented Public Complaints

No.	Date Received	Complaint Origin	Responsible Party/Location	Location: Address	Issue/Problem	Action Needed	Response to Caller, Date, Time
86	6/8/07	City Personnel	Douglas Engelhorn 7889 Highwood Avenue	7889 Highwood Avenue	Discharge of pool water into street	Verify Complaint	6/7/07 MT verifies complaint. Resident states water was tested ok for discharge. MT contacts pool company to verify. Pool water discharge stopped. Pool company to verify water condition to ensure pH and chlorine is acceptable before discharging. (Allpro Tom 479-5692.) Resident connects line to sewage for discharge. No further action.
87	6/27/07	Telephone Call to Public Works	Palm Avenue	Palm Avenue	Caller says at corner of Palm & Lemon the manhole is filled with cigarettes.	Verify Complaint	Work Order 20043: Vacuumed out cigarettes.
88	6/27/07	Telephone Call to Public Works	Wetherly Street	7910 Wetherly Street	Caller says there is a storm drain in front of residents that is missing it's cover	Verify Complaint	Work Order 20042: Replaced cover for storm drain.
89	4/19/07	Storm Water Hotline	Sarita Cul-de-sac	Sarita Cul-de-sac	Algae along curb	Verified Complaint	MT visited site in past and is aware that there is rising groundwater and some algal growth. No Further Action

9 EDUCATION

The City continues to implement a comprehensive storm water education program that targets residents, businesses, construction site owners and operators, and municipal staff. The focus of the City's education program is to encourage storm water awareness and the implementation of pollution prevention measures and BMPs. The City may reduce or eliminate storm water pollution by increasing public awareness and encouraging a change in both the attitude and the behavior of the general public and the regulated community.

MUNICIPAL

The City provides extensive training and educational outreach to its municipal personnel. Since many municipal personnel are out in the field on a daily basis, it is important that they are knowledgeable about storm water pollution prevention and implementing appropriate BMPs. Municipal personnel are encouraged to report any IC/IDs observed while working in the field to the appropriate staff at the City and to educate other municipal personnel and the general public about storm water pollution prevention. Listed below are training sessions that were provided for different municipal departments during 2006/2007:

- The City conducted a BMP training session on spill containment for street maintenance employees on 7/10/2006, five employees attended.
- The City conducted a BMP training session for street maintenance employees on 7/31/2006, four employees attended.
- The City conducted a BMP training session for park maintenance employees on 8/1/2006, 17 employees attended.
- The City conducted a BMP training session for park maintenance employees on 8/8/2006, 16 employees attended.
- The City conducted a training session on the CWA for street maintenance employees on 8/14/2006, four employees attended.
- The City conducted a training session on the CWA for street maintenance employees on 8/21/2006, six employees attended.
- The City conducted a training session on storm water management for street maintenance employees on 9/5/2006, five employees attended.
- The City conducted a BMP training session for park maintenance employees on 10/31/2006, 16 employees attended.
- The City conducted a BMP training session for park maintenance employees on 11/7/2006, 13 employees attended.
- The City conducted a BMP training session for park maintenance employees on 11/28/2006, 16 employees attended.
- The City conducted a BMP training session on outdoor storage for wastewater employees on 12/6/2006, six employees attended.

- The City conducted a BMP training session on material handling for fleet maintenance employees 12/12/2006, five employees attended.
- The City conducted a BMP training session on spill prevention for wastewater employees on 12/13/2006, eight employees attended.
- The City conducted a BMP training session on spill prevention and cleanup for building maintenance employees on 1/16/2007, two employees attended.
- The City conducted annual pesticide training for park maintenance employees on 1/16/2007, 15 employees attended.
- The City conducted a BMP training session on good housekeeping BMPs for park maintenance employees on 1/30/2007, 14 employees attended.
- The City conducted a BMP training session on vehicle and equipment cleaning for fleet maintenance employees 2/27/2007, six employees attended.
- The City conducted a BMP training session on outdoor loading/unloading for traffic safety employees on 3/6/2007, six employees attended.
- The City conducted a BMP training session for park maintenance employees on landscape maintenance on 3/27/2007, 17 employees attended.
- Three members of the City's parks maintenance staff attended an IPM training session at the Port of San Diego in May 2007.

The City continues to maintain the Storm Water Bulletin Board at City Hall with updated information on topics such as BMPs for residents and businesses, watershed concepts, HHW disposal events, and upcoming community events, along with other resources. The bulletin board is visible to City personnel, project proponents, and other visitors to City Hall. A photo of the bulletin board as well as some materials that are available through the bulletin board display is included as Attachment 2.7. The Construction SWPPP Information trifold (Attachment 2.9) was also made available at the bulletin board.

The City continues to provide new Public Works Operation Center employees a copy of the "City of La Mesa Municipal Program Storm Water Best Management Practices Notebook" (Attachment 2.1). A new City storm water inspector received an NOV Procedural Handout (Attachment 2.3). The City began developing a verbal warning form and a written warning form to document enforcement actions (Attachment 2.4) and plans to educate the City storm water inspectors with the new procedures during 2007/2008. Additionally, the City distributed 260 Pool and Spa Fact Sheets (Attachment2.8) to municipal employees. The fact sheet describes BMPs for pool and spa maintenance and draining activities. Furthermore, the City's Environmental Specialist provided training for City construction inspectors and attended training events.

INDUSTRIAL/COMMERCIAL

The City of La Mesa continues to provide education and outreach to industrial and commercial businesses to promote awareness on the City's storm water pollution prevention requirements. The City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provide site-specific one-on-one

education outreach to business owners and operators. The City regards violations seriously and takes enforcement actions as necessary to bring non-compliant businesses into compliance. Educational materials relating to specific activities were given to businesses during routine inspections and were distributed during complaint investigations. These included a general guide for commercial and industrial businesses entitled "Preventing Urban Runoff Pollution" (Attachment 3.1), which explains the difference between the sanitary sewer and storm drain systems, listed BMPs, and provided the City's storm water hotline number. A residential version of the "Preventing Urban Runoff Pollution" brochure is also included in Attachment 3.1. Fact sheets relating to the San Diego Bay and San Diego River watersheds (Attachments 3.2 and 3.3, respectively) were also distributed and included information about the receiving water bodies in the City and how upstream activities of industrial and commercial businesses can produce negative effects downstream.

The City's quarterly newsletter, *La Mesa Focus,* was mailed to approximately 2,500 businesses in the City. The newsletter was also made available on the City's website and various locations City-wide. During this reporting period, the newsletter featured several articles with storm water related topics, which were aimed at both residents and businesses throughout the City. Examples of storm water focused articles include "SUMMER STORM WATER REMINDERS", "WATER QUALITY MONITORING CONTINUES IN LA MESA", "EAST COUNTY REGIONAL HOUSEHOLD HAZARDOUS WASTE COLLECTION EVENT", and "STORM WATER POLLUTION – TAKE THE QUIZ". Detailed summaries of the articles are in Section 5 of this report. The articles can be found as attachments 3.4, 3.5, 3.6, and 3.7. Additionally, letters were also sent to businesses in certain areas of the City based on the results of 2006 Dry Weather Monitoring Program; more information about these letters can be found in Section 8 of this Annual Report.

Mobile Businesses

Mobile businesses, particularly mobile car detailers or power washers, are considered a high threat to water quality due to the nature of the mobile businesses' activities and the likelihood of prohibited non-storm water discharges. Because mobile businesses are not confined to one location and many do not have City businesses licenses, they can be difficult to identify. Once identified, the City requires individuals seeking a business license to sign an affidavit stating that they both understand the BMP requirements of the City and will implement such BMPs to prevent the discharge of wastewater. To sign the affidavit, the applicant must meet with the City's Environmental Specialist who provides one-on-one education regarding the importance of implementing BMPs as described in the City's JURMP and storm water ordinance. The City requires all mobile businesses to sign an affidavit to commit to proper wastewater disposal and BMP implementation before a business license is granted. This reporting period, representatives for three mobile car detailing businesses signed affidavits.

RESIDENTIAL

As previously mentioned, more than half of the City comprises of residential areas. The City has continued to provide educational material to residents of the City through the *La Mesa Focus* newsletters and follow-up letters based on Dry Weather Monitoring Program results sent to residential areas, which can be found as attachments 4.5, 5.1, 5.2, and 5.3. The City also included articles regarding the annual La Mesa Appreciation Day and notification

that an ordinance had been passed to make the parks tobacco free in the Spring 2007 Community Programs and Activities Schedule (Attachment 5.4).

Additionally, the City continued to partner with Target and Dixieline Lumber in La Mesa to provide IPM cards at the checkouts at each business's garden center (Attachment 4.1). The IPM cards were developed as part of a regional effort to combat pesticide pollution and encourage the use of IPM techniques. The packet of bound cards includes topics such as "Ants," "Gardening with Good Bugs," "Safe Use and Disposal of Pesticides," "Spiders," "Termites," "Lawn Insects," "Snails and Slugs," and "Head Lice." The IPM cards were also available to be downloaded from the City's website.

The Pool and Spa fact sheet was made available to the public during this reporting period (Attachment 2.8) at the front desk at City Hall and through the Storm Water Bulletin Board. This handout outlines the requirements for discharge of pool and spa water to the storm drain system and provides BMPs for pool and spa maintenance activities. Other educational information at City offices included the informational Storm Water Bulletin Board at City Hall (Attachment 2.7). The Storm Water Bulletin Board includes BMP information, watershed concepts, HHW disposal events, and upcoming community events. The Bulletin Board also includes tip cards about IPM techniques and a trifold brochure that explains common residential BMPs.

In addition to the educational materials that were provided at various locations, the City continued the development of storm water educational kiosks for two City parks. The first kiosk was installed at La Mesita Park (see Figures 9.1 and 9.2) during the reporting period. The City will continue to partner with local Eagle Scouts to construct the remaining kiosk, which should be completed in 2007/2008. Information about additional outreach programs that involved residents, such as cleanup events, can be found in Section 10 of this report. Such programs also educate residents about storm water pollution prevention.

Figure 9.1 – Installation of kiosk at La Mesita Park

Figure 9.2 – Kiosk at La Mesita Park

DEVELOPMENT AND CONSTRUCTION

Construction site owners and developers alter the landscape and natural flow of storm water runoff and generally create increased amounts of impervious surface. During such activities, construction site owners, developers, and contractors have the potential to discharge a number of different types of pollutants to receiving waters, notably sediment.

The City continued to provide educational information regarding BMPs during construction site inspections, and followed up to determine if BMP deficiencies were resolved.

Since many developers and construction personnel visit the City's Engineering Department to apply for necessary permits, the City provides construction site BMP information on the Storm Water Bulletin Board (Attachment 2.7). Construction site owners and operators are encouraged to ask questions and attend available training sessions to learn more about proper BMP implementation.

Educational materials were made available to project proponents at City Hall and included the County of San Diego Construction & Demolition Recycling Guide and EDCO's SANCO Resource Recovery facility in Lemon Grove. This brochure was new for 2006/2007 and can be found as Attachment 7.3. The City continued to require development applicants to complete the Storm Water Requirements Applicability Checklist, which is Appendix A of the City's Local SUSMP (Attachment 6.1). Printed materials about SWPPP preparation and construction BMP implementation are also made available (attachments 2.9, 7.1, and 7.2). Furthermore, the City provided project proponents applicable sections of the City's JURMP to inform them of the City's minimum BMP requirements.

In addition to printed materials, contractors, property owners, and other parties involved in planning a new development must complete an educational session with the DAB as part of the approval process for the project. The DAB is made up of representatives from the Planning, Engineering, Building, and Fire departments. The project proponents are informed of all the necessary storm water requirements and referred to the City's website for more information regarding the City's requirements and relevant BMPs.

PUBLIC OUTREACH MATERIAL

As described above, the City provided a variety of outreach material designed for different communities in the City. The City recognized that the *La Mesa Focus* newsletters are one of the most widely circulated documents in the City and included more storm water information this reporting period than previous years.

WEBSITE

The City website, www.cityoflamesa.com, is another way in which City residents can become familiar with the design and intended use of the storm drain system, HHW, alternatives to hazardous household products, find information regarding volunteer opportunities, applicable City contact information, including the City's Storm Water Hotline Number, City Ordinances and Codes, BMPs for construction, commercial, and residential activities, and IPM cards. The City also provides electronic copies of current and archived copies of past newsletters on the website.

LEADERSHIP ACTIVITIES & PARTNERSHIPS

The City of La Mesa strives to be an active participant in storm water pollution prevention within the region. City staff attended various regional meetings and forums to maintain involvement in regional activities. The City believes that involvement in regional storm

water activities will help to eliminate storm water pollution on a larger scale. The City's Environmental Specialist also attended a number of training sessions, which are described below:

- The City's Environmental Specialist attended a number of Municipal Permit re-issuance meetings and was active in the industrial and commercial component review subcommittee.
- The City's Environmental Specialist attended a number of Copermittee Workgroup meetings including those for education and outreach, channel maintenance, regional monitoring, dry weather monitoring, and the development of the hydromodification plan (HMP).
- In December 2006, the City's Environmental Specialist was accompanied by a RWQCB staff member during high priority construction inspections.
- The City's Environmental Specialist attended a TMDL workshop held by PBS&J Consulting on 7/17/2006.
- The City's Environmental Specialist attended a training session on how to deal with an upset public on 7/27/2006.
- The City's Environmental Specialist attended a County-hosted porous paving presentation on 8/17/2006.
- The City's Environmental Specialist and an Administrative Analyst in the City's Environmental Services Division attended a two-day workshop entitled "Fostering Sustainable Development" on 2/7/2007 and 2/8/2007. The workshop included a discussion of a community based social marketing strategy to promote sustainable behavior.
- The City's Environmental Specialist attended a Pueblo San Diego Watershed and Organic Toxicants Workshop and Sustainability Initiative as part of the Regional Ecology Network and Environmental Workbench for Sustainable Development (RENEW) Project.
- The City's Environmental Specialist attended a RWQCB meeting regarding new SSO reporting requirements.
- The City's Environmental Specialist attended a Watershed Education Planning meeting hosted by Lois Humphrey of TRG & Associates.
- The City's Environmental Specialist attended a University of California, San Diego (UCSD) workshop on TMDLs on 4/28/2007.
- The City's Environmental Specialist attended Chollas Creek TMDL stakeholder meetings.
- The City's Environmental Specialist attended Copermittee Management Meetings throughout the reporting period.
- The City's Environmental Specialist attended a seminar entitled "Community Based Social Marketing."

- The City's Environmental Specialist attended the City's Community Services Department Annual Meeting to better understand the existing community activities and programs and to investigate how storm water concerns could be addressed by those programs. The City's Environmental Specialist also informed all attending parties about general storm water regulations and how to report storm water violations.

During this reporting period, the City continued to work with other Copermittees to form the San Diego HHW Partnership, which works to utilize HHW Grant funding to increase public outreach and education throughout the region with a coordinated, more effective approach.

MEASURING CHANGES IN KNOWLEDGE AND BEHAVIOR

The City continues to gauge the effectiveness of the NPDES program by determining whether an increase in public knowledge is correlated with their behavior to storm water pollution. During this reporting period there were 89 public complaints related to the storm drain system (Table 8.4) compared to 74 complaints in 2004/2005 and 133 complaints in 2005/2006. A large number of complaints is an indication that both the public and City personnel are taking an active role with respect to storm water pollution prevention. Additionally, providing individuals with the mechanism to be directly involved in the implementation of the storm water program fosters a sense of shared responsibility for protecting water quality.

IMPRESSIONS MADE

The City continued to provide residents and businesses storm water-related education through inspections, distribution and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials given out. Reasonable, conservative estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections, which usually involve more personnel and have been assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training. Printed educational material distributed in mass numbers are assumed to generate three impressions each, and materials distributed in person during inspections likely generated five impressions since multiple people will likely view them. Table 9.1 details the number of impressions made by the City.

Table 9.1
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Municipal Inspection	10	Inspections	50
Industrial Inspection	7	Inspections	21
Commercial Investigations	21	Inspections	63

IMPLEMENTATION PLANS AND JURMP UPDATE FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates to the City's education program will be detailed in the JURMP update. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No.2001-01) and the associated JURMP document developed in 2002.

10 PUBLIC PARTICIPATION

In addition to providing education to encourage residents to implement pollution prevention measures and BMPs, the City encourages business owners and operators and the general public to get involved in public participation programs. Public participation includes, but is not limited to, cleanup events, special community projects such as construction of educational kiosks, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Providing the community with opportunities to participate in the implementation of the City's storm water program helps foster a sense of shared responsibility in keeping the environment clean. City personnel both facilitate and participate in many of the public participation events, which also provides a platform for municipal personnel to share storm water-related information with the general public.

The City of La Mesa continues to partner with outside agencies to provide public participation events and outreach to the general public. During 2006/2007, the City partnered with other jurisdictions, the Solana Center, San Diego Coastkeeper, and ILACSD to host a variety of events, discussed in the following subsections.

COMMUNITY ACTIVITIES

Cleanup Events

Similar to previous reporting periods, the City hosted a number of cleanup events in the City. Not only do cleanup events provide a direct benefit to water quality, the events provide a platform for which the City can provide educational material to the volunteers.

The City hosted "Park Appreciation Day," a cleanup event for 14 City parks, on 11/14/2006 (Figure 10.1). A total of 400 people volunteered for the event, which is an increase from the 75 volunteers for the same event the previous year. Collectively, over five tons of trash and debris were recovered during the public event.

Figure 10.1 - Park Appreciation Day

The City partnered with ILACSD to involve the public in the large scale Creek to Bay Cleanup and the California Coastal Cleanup Day. Coastal Cleanup Day, which San Diego Coastkeeper also helped coordinate, was held at two sites in the City on 9/16/2006, one at Alvarado Channel and one at University Channel (Figures 10.2 and 10.3, respectively). Three volunteers collected 141 pounds of trash from University Channel. Thirty-three volunteers, many of which were girl scouts, removed 69 pounds of trash from Alvarado Channel. San Diego Bay Watershed Fact Sheets (Attachment 3.2) were distributed at the University Channel location and San Diego River Watershed Fact Sheets (Attachment 3.3) were distributed at the Alvarado Channel location. Preventing Urban Runoff Pollution trifolds (Attachment 3.1) were also distributed to participants at both sites.

Figure 10.2 - California Coastal Cleanup Day at Alvarado Channel

Figure 10.3 - California Coastal Cleanup Day at University Channel

The Creek to Bay Cleanup was held on 4/28/2007 the same locations in the City as the Coastal Cleanup Day, one in Alvarado Channel and one in University Channel. Fourteen volunteers removed 84 pounds of trash and 33 pounds of recycling at the site located in the Alvarado Channel (Figure 10.4) and three volunteers collected 100 pounds of trash at the site located in the University Channel. EDCO donated dumpsters for the event. San Diego Bay Watershed Fact Sheets (Attachment 3.2) were distributed at the University Channel location and San Diego River Watershed Fact Sheets (Attachment 3.3) were distributed at the Alvarado Channel location. Preventing Urban Runoff Pollution trifolds (Attachment 3.1) were also distributed to participants at both sites.

Figure 10.4 - Creek to Bay Cleanup at Alvarado Channel

On 4/15/2007, six volunteers representing a number of different organizations in the City including churches, the La Mesa Rotary Club, and Cub Scout Troops participated in La Mesa Community Park Clean Up Day. The volunteers removed trash and debris from Aztec Park, Harry Griffen Park, La Mesita Park, MacArthur Park, and Porter Park.

Community Hazardous Waste Collection and Used Oil Recycling Program
The City's Community Hazardous Waste Collection and Used Oil Recycling Program continues to encourage City residents and business owners to dispose of HHW properly. During 2006/2007, the City hosted six HHW collection events at EDCO's disposal transfer station facility, located near the geographic center of the City. Events were advertised in the City's *La Mesa Focus* newsletters (attachment 3.4, 3.5, 3.6, and 3.7), which are circulated to thousands of residents and businesses in the City. A door-to-door pickup service is also provided for the senior and disabled community. Overall, approximately 666 people participated in the events, and 83,050 pounds of HHW were collected. Universal waste and flammable and poisonous wastes were the two largest characteristic-based groups of HHW collected (37 percent and 34 percent, respectively). Latex paint and Flammable solid/liquid were the two largest waste volumes of specific materials collected (19 percent and 16 percent, respectively). A detailed list of HHW collection totals is included in Attachment 5.5.

Other Waste Disposal
The City hosted the La Mesa Spring Clean Up event on two consecutive Saturdays in April, 4/14/2007 and 4/21/2007. The events provided residents with the opportunity to dispose of unwanted household materials (not including HHW) and green waste. An estimated 1,501 participants disposed of 622.73 tons of waste, which consisted of large household items, furniture, and green waste. Each participant was presented with IPM information cards (Attachment 4.1) to encourage them to use pollution prevention techniques for lawn care activities, particularly pesticide application.

Adopt-a-Park and Adopt-a-Block Programs
The City's Adopt-a-Park Program has continued to involve local businesses, schools, service organizations, families, and other individuals in keeping City parks free of trash. Volunteers in this program are encouraged remove trash on regular basis from the City's parks and open spaces. During the reporting period, 32 volunteers spent over 2,500 hours removing trash from a number of different City parks.

Similar to the Adopt-a-Park program, the City's Adopt-a-Block program encourages residents in the City to work to keep neighborhoods clean and free of trash and debris. Typically, volunteers pick up trash during normal daily activities such as walking their dog through the neighborhood. Individuals may either use a trash bag provided by the City to collect trash and debris, or individuals may choose to collect trash the night prior to trash collection day so that litter and debris can be deposited to any available trash can along the street. During this reporting period, six individuals reported 391 hours of volunteer time as part of the Adopt-a-Block program in the following areas:

- Village area around the Village condos

- Mt Nebo/Windsor Hill area around Valle Drive
- Baltimore Drive and toward Lake Murray
- Porter Hill Terrace & vicinity
- 4400 block of Spring Street

A luncheon was held for participants in the Adopt-a-Park and Adopt-a-Block programs as a gesture of thanks from the City. The Adopt-a-Park and Adopt-a-Block volunteers gave 2,978.5 hours of combined service.

Canine Corners
Similar to the Adopt-a-Park program, volunteers pick up pet waste in areas of Harry Griffen Park. Volunteers also encourage patrons of the park to pick up after their pets. This practice prevents pet waste, and associated bacteria and viruses, from being discharged to the City's MS4.

Public Reporting
Complaints are received through the City's Storm Water Hotline and online website reporting system. The number for the hotline is advertised in articles published in the *La Mesa Focus* newsletter and on various educational materials given out at public outreach events. The City investigates each complaint and keeps track of reports in a complaint log. Section 8 of the Annual Report presents the complaint log.

Saint Madeline's Sophie Center
The City maintains a contract with Saint Madeline's Sophie Center, which employs developmentally disabled individuals to aid in picking up trash and debris at various parks throughout the City. The scope of services includes trash and debris cleanup, emptying trash receptacles and replacement of plastic liners, sweeping/cleaning picnic area tables, as well as some janitorial responsibilities at the park restrooms. Crews consist of three individuals and one job coach working 3.5 hours a day, five days a week at select parks. Parks included in this program are Aztec Park, Collier Park, Highwood Park, Jackson Park, La Mesita Park, Northmont Park, Rolando Park, Sunset Park, Sunshine Park, and Vista La Mesa Park. A similar program is conducted at the Jr. Seau Sports Complex. Crews consist of three people and one job coach working three hours per day, five days a week at the Jr. Seau Sports Complex only.

OUTREACH EVENTS
The City contracted ILACSD to provide education outreach at the Intergenerational Games at La Mesa Middle School on 10/13/2006. ILACSD gave brief demonstrations of the Enviroscape watershed model (Figure 10.5) to adults and youth, and emphasized storm water pollution prevention concepts. The booth attracted 56 visitors, of which 36 were adults, and 20 of which were children. A total of 19 Preventing Urban Runoff Pollution brochures (Attachment 3.1), 17 San Diego Bay Watershed Fact Sheets (Attachment 3.2), and 17 San Diego River Watershed Fact Sheets (Attachment 3.3) were provided to visitors to the booth.

The City's Environmental Specialist also hosted a booth at Kids Care Fest on 9/30/2006 and gave demonstrations of the Enviroscape watershed model. A total of 91 IPM cards (Attachment 4.1), 80 Preventing Urban Runoff brochures (Attachment 3.1), 80 San Diego Bay Watershed Fact Sheets (Attachment 3.2), and 80 San Diego River Watershed Fact Sheets (Attachment 3.3) were distributed during the event.

Figure 10.5 – Enviroscape Watershed Model

Oktoberfest, one of the largest festivals in the City, was held 10/6/2006 through 10/8/2006. The City hosted a storm water educational booth that provided a range of educational materials for visitors. The City distributed a total of 111 IPM cards (Attachment 4.1), five Preventing Urban Runoff brochures (Attachment 3.1), six San Diego Bay Watershed Fact Sheets (Attachment 3.2), and six San Diego River Watershed Fact Sheets (Attachment 3.3).

Storm Water Information Kiosks

As mentioned in the previous section, the City continued to work with local Eagle Scouts to construct a storm water kiosk. One more kiosk is targeted for installation in 2007/2008. The intent of the kiosks is to post storm water pollution prevention information to educate the public.

Commercial Participation

The City's Environmental Specialist has continued to work with two commercial businesses in La Mesa, Target and Dixieline Lumber, to make IPM cards (Attachment 4.1) in each business's garden center. The IPM cards were developed as part of a regional effort to combat pesticide pollution and increase use of IPM techniques. The educational materials are provided in the garden centers because individuals in that portion of those stores are likely to purchase fertilizers, pesticides, and/or herbicides. Providing educational materials that these customers may take home and review before using the products they have purchased may mitigate impacts that improper use of pesticides and fertilizers can have on receiving waters.

STORM WATER COPERMITTEE MEETINGS

The Storm Water Copermittee meetings provide a forum for representatives from the various jurisdictions within the San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm

water programs. The City of La Mesa continued to attend these meetings during this reporting period and will continue to do so during the 2007/2008 reporting period.

IMPLEMENTATION PLANS AND JURMP UPDATE FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. Updates to the public participation component of the City's storm water program will be described in the JURMP update. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No. 2001-01) and the associated JURMP document developed in 2002.

11 ASSESSMENT OF JURMP EFFECTIVENESS

The City's storm water program consists of three major components, listed below:

- Program Planning: Includes source characterization, BMP selection, targeted outcomes, and measures of indicators.
- Program Implementation: Includes implementation of selected measures.
- Effectiveness Assessment: Includes water quality assessment, program assessment, and integrated assessment. Effectiveness is evaluated using a tiered process with six increasingly complex levels.

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. Assessment of the planning and implementation steps provides important information that in turn can be used to improve future planning and implementation efforts. Data is collected from a number of different sources for the assessment, including new water quality monitoring programs recently initiated by the City. The following subsections present the City's approach and activities in assessing the effectiveness of the JURMP.

PROGRAM PLANNING

When designing and modifying proposed storm water program activities, the City obtains and reviews information from inspections, water quality monitoring, complaint records, and institutional knowledge. Inventories of potential pollutant sources have been compiled based on this data; the most recent versions for the 2006/2007 reporting period have been presented earlier in this annual report. The City has also related known priority sources across various types of dischargers to key constituents, as shown in Table 11.1. Program planning involves ensuring that the City's actions will meet the minimum activity based Municipal Permit requirements and that City resources are used to reduce pollutant discharges as effectively as possible. Because La Mesa has a high percentage of residential land use, activities that target residents such as cleanup events and partnerships with local environmental groups are key components of the City's Program.

BMP SELECTION

To reduce discharges of pollutants from identified sources, the City requires implementation of BMPs. More detail about BMPs required for all identified sources of pollution is provided in the City's JURMP. Key BMPs for selected priority sources are also shown in Table 11.2 later in this section. Data from inspection and monitoring programs as well as overall land use information was used in preparing this table.

The City informs target audiences of the BMP requirements through general distribution of educational materials, focused distribution of specifically targeted materials, reviews of submitted plans, and direct interaction with City staff. Direct interaction may take place during inspections, when discussing comments on submitted plans, and/or when encountering City staff in the field. Providing material to the public broadly through

mailings, the City's website, and information stations in public places allows for a broader reach. Installation of kiosks that display educational material at parks also helps reach the public with storm water pollution prevention messages. Targeted programs help provide more tailored information to key audiences, and direct interaction has often proven to be a helpful means of increasing awareness levels.

TARGETED OUTCOMES

At the beginning of each reporting year, the City sets targets for its program. The actual numbers recorded during the year are then compared to the targets at the end of the year to assess progress. Typically, items mandated by the Permit, such as conducting the Dry Weather Monitoring Program or investigating storm water complaints, are relatively easy to measure. Conversely, goals such as significant improvements in receiving water quality are more difficult to assess.

The effectiveness assessment approach jointly developed by the Copermittees recognizes this distinction by defining six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1:	Compliance with Activity-Based Permit Requirements
Level 2:	Changes in Knowledge/Awareness
Level 3:	Behavioral Change/BMP Implementation
Level 4:	Load Reductions
Level 5:	Changes in Discharge Quality
Level 6:	Changes in Receiving Water Quality

Level 1: Compliance with Activity-Based Permit Requirements

The Municipal Permit describes the requirements that Copermittees must meet. Examples of these types of requirements include, but are not limited to, inspecting construction sites on certain minimum frequencies, conducting the Dry Weather Monitoring Program, and reporting spills to the RWQCB within given time frames.

A summary of the City's efforts toward meeting activity-based Permit requirements in 2006/2007 is presented in Table 11.3. One hundred percent of cleanout locations in the MS4 were maintained, City streets were swept, and landscaping was maintained using IPM techniques. All high priority municipal and industrial facilities were inspected at least once during this reporting period, and high priority construction sites were inspected at least weekly during the wet season. Medium and low priority construction sites were generally inspected twice, although in certain instances, low priority construction sites were inspected only once because the project was completed in a short period of time. The Dry Weather Monitoring Program, including follow-up investigations for recorded exceedances, was completed. The City then took action to address sources of pollutants identified during the monitoring. The City maintained two hotlines to receive reports of storm water related incidents: one line by Public Works maintenance staff, and one line by the City's Environmental Specialist. The complaints received were investigated and resolved as described earlier in this document.

All of the inventoried industrial and high priority commercial sites have been inspected during the life of the Municipal Permit. Tables 11.4 and 11.5 present watershed-based summaries of the numbers of businesses in various categories of industrial and commercial businesses, respectively. The numbers of facilities inspected and the total number of inspections are also included in the tables. The total numbers of inspections are often greater than the numbers of facilities because facilities have been inspected multiple times.

Level 2: Changes in Knowledge/Awareness

To increase storm water-related awareness and knowledge, the City provides a variety of educational outreach materials including, but not limited to training sessions, workshops, cleanup events, and the distribution of print media such as brochures, handouts, and newsletters.

The City continues to maintain a storm water hotline and online reporting system by which residents may report potential storm water violations. Over the years, a general increasing trend has been observed, although the number of complaints recorded in 2006/2007 was somewhat lower than the 2005/2006 number. The overall upward trend indicates that City staff and residents are more aware of storm water requirements and how to report observed potential problems. Data from the City's Dry Weather Monitoring Program also indicates decreases in the levels of ammonia and detergents, which are typically good indicators of IC/IDs. Information regarding the City's storm water hotline is available on the City's website and is printed on a variety of print media distributed by the City, including in the quarterly *La Mesa Focus* newsletter, which reaches approximately 120,000 residences and businesses each year. Figure 11.1 shows the trend in storm water complaints over the past few years.

Figure 11.1
Storm Water Complaints Logged

There were 20 training sessions held for City staff in 2006/2007, and the Municipal Storm Water BMP Notebook continued to be distributed to new Public Works Operation Center

employees. Parks and Recreation Landscape Maintenance Staff continue to receive regular training and refresher sessions regarding chemical management and irrigation and maintain up-to-date certifications, as applicable. Additionally, the City's Environmental Specialist attended a number of training sessions, workshops, and informational meetings.

Throughout the life of the Municipal Permit, the City has conducted storm water compliance inspections at industrial and commercial businesses to determine if businesses in the City are meeting the BMP requirements set forth in the JURMP and to provide a one-on-one discussion of storm water-related topics. Inspectors educate business owners on the difference between the storm drain system and the sanitary sewer system, potential pollutants, pollution prevention measures, BMP implementation, and applicable permit and ordinance requirements. As described previously in this Annual Report, the City has implemented a knowledge assessment for its industrial and commercial inspections. The system rates the storm water knowledge of the responsible person at the facility on a scale of one (1) to five (5), with five representing the highest level of knowledge. This approach was used at five facilities that were inspected in both 2005/2006 and 2006/2007. As described in Section 3, the knowledge score at most of the facilities was typically the same or higher in 2006/2007.

Interaction with the City staff and the DAB enables project proponents to learn more about the development planning and construction requirements that apply to their projects. Review comments on submitted WQTRs are also provided to project proponents. After receiving review comments parties preparing the WQTRs became more aware of the City's SUSMP requirements, which was then reflected in subsequent submittals.

During 2006/2007, the City mailed over 1,212 letters to businesses and residents in response to recommendations from the Dry Weather Monitoring Program. These letters alerted residents of pollution found in their neighborhoods/areas and informed them of BMPs that could be implemented to prevent such pollutants from being discharged. The City sent a letter to Grossmont Center Mall, a shopping center in the City, regarding over-irrigation from the site. In response, the real estate manager for Grossmont Center sent a letter to the City's Environmental Specialist notifying him that the shopping center installed and upgraded the irrigation system to reduce or eliminate over irrigation.

The City continued to implement the Adopt-a-Park and Adopt-a-Block programs, for which residents of the City volunteer to pick up trash from their neighborhoods and local parks. Similarly, volunteers for the Canine Corners Program remove pet waste from a designated area in Harry Griffen Park. Furthermore, La Mesa residents participated in a number of cleanups, including the Creek to Bay Cleanup, California Coastal Cleanup Day, and Park Appreciation Day. The City also held several collection events for proper disposal of HHW.

Level 3: Behavioral Change/BMP Implementation

The City continues to provide education to the regulated community, municipal personnel, and the general public to not only increase knowledge regarding storm water issues, but to foster a behavioral change in regards to storm water-related activities. Such change is an important goal of the storm water program in the City.

The City's construction inspection program has resulted in proper BMP implementation at regularly inspected construction sites. Property owners and developers are compelled to be proactive in implementing proper BMPs at their sites because of the City's supervision and strict enforcement program. During the 2006/2007 reporting period, the City inspected high priority construction sites on a weekly basis. This oversight likely led to more consistent and improved BMP implementation, which indicates a positive change in the behavior of developers and property owners directly responsible for the quality of storm water discharging from their sites.

As discussed earlier in this Annual Report, the City continued to assign a BMP assessment score during industrial and commercial inspections. The BMP implementation at inspected businesses is rated on a scale of one (1) to five (5), with five being the highest level. BMP implementation was scored at seven facilities in 2006/2007. BMP scores were also recorded at five of those same sites in 2005/2006. For the most part, scores increased or stayed the same, with one site experiencing a decreased score. The City continued to require mobile detailing and power washing businesses to sign storm water BMP implementation affidavits when applying for business licenses. This program is likely to result in improved BMP implementation among these types of businesses.

The City continues to maintain 26 pet waste collection bag-dispensing birdhouses throughout all of the City parks. During 2006/2007, approximately 9,000 bags were used, which is more than the 4,500 bags used during 2005/2006. The dispensers not only provide a reminder for patrons of the park to clean up after their pets, the conveniently located dispensers make it easy to do so. Based on the increase in bag usage, it is likely that the continued implementation of the pet waste collection bag dispensing birdhouses has increased the number of residents that clean up after their pets at City parks.

Level 4: Load Reduction

The City can qualitatively conclude that load reductions occur in many instances, although accurate estimation of numeric loads is often not possible. Numeric load data can be obtained through data from programs such as street sweeping and cleanup events.

The City reviews the SWPPP or erosion control plan that each grading project submits prior to the start of construction. This process furthers the implementation of more effective BMPs. The City's regular inspections then help ensure that the proposed BMPs are effectively implemented when construction is underway, ultimately reducing the potential load of sediment and other pollutants such as concrete waste and petroleum products.

The City's efforts to reduce irrigation runoff also likely result in smaller pollutant loads being transported to the MS4. Broken sprinkler heads or line breaks can cause erosion and transport sediment and other pollutants. The City's Calsense systems minimize these effects, resulting in a decrease in pollutant discharges. Further, Calsense minimizes over-irrigation, which although typically not a source of pollutants itself, can transport pollutants to the MS4. Figure 11.2 demonstrates a historical pattern of decreasing water consumption for irrigation. Implementation of Calsense is believed to be the main driver of the reduction in water used.

The City continues to implement street sweeping and storm drain inlet cleaning programs to reduce pollutants loads the MS4. During 2006/2007, 692 tons of debris was collected from street sweeping, while 225.75 cubic yards was collected from the MS4. A larger amount of debris was collected from the MS4 in this reporting period compared to the previous reporting period. Less debris was collected from street sweeping activities this reporting period compared to the last. The City's street sweeping schedule has not changed and the distance swept during 2006/2007 was the same as in 2005/2006, so the decrease may suggest that there was less debris on the City's streets this reporting period as compared to last. To provide additional pollutant removal, the City continued to maintain the 22 catch basin filter inserts installed in the University Channel basin, which prevented four cubic yards of debris from entering the City's MS4. Similar to previous reporting periods, the estimated composition of the material removed from the filter inserts was 80 percent sediment and 20 percent trash. An additional 77.5 cubic yards of debris was removed from channel maintenance activities.

As previously mentioned, approximately 9,000 pet waste bags were used at City parks, an increase from the 4,500 used during the last reporting period. Proper pet waste disposal results in a reduction of the amount of pet waste and associated pollutants that may be discharged to the City's storm drain system. The City's Canine Corners program also contributes to a decrease in the amount of pet waste discharged to the City's MS4. Removal of trash and debris through the City's Adopt-a-Park and Adopt-a-Block program also contributed to load reductions. The City-hosted Park Appreciation Day resulted in the collection of 5 tons of trash and debris. Other clean-up events in the City, including California Coastal Cleanup Day and Creek to Bay Cleanup, removed a combined 427 pounds of trash, debris, and recycling. During 2006/2007, over 83,000 pounds of HHW were collected and 622.73 tons of trash and debris were collected during a large item and green waste disposal event. These events reduced the load of various hazardous materials, trash and debris, and green waste that may have otherwise been discharged to the City's MS4.

Level 5: Changes in Discharge Quality

Changes in storm water discharge quality are based on direct measurement of water quality. The main local, historical monitoring records are provided by the City's Dry Weather Monitoring Program, which has been in place since 1993. Figure 11.3 provides a graph with historical data. The City has recently began additional water quality studies conducted in both dry and wet weather, as described in Section 13 of this annual report. However, these programs have not been in place long enough to collect sufficient data to make meaningful statements about changes in discharge quality.

In reviewing Dry Weather Monitoring Program data, it is notable that most pollutants show relatively low exceedance rates. Ammonia and detergents have been measured since 1993, and both pollutants are considered good indicators of IC/IDs. General downward trends in the measured values and numbers of exceedances for these pollutants have been observed, as shown in figures 11.4 and 11.5. Figure 11.6 presents the trends in measured levels of fecal coliform and *Enterococcus* bacteria, which are typically considered indicators of pathogens. Fecal coliform readings have shown general downward trends, and action level

exceedances for these parameters have been relatively infrequent. For example, in 2006 only one fecal coliform exceedance was noted, and there were no *Enterococcus* exceedances.

Some downward trends in pollutant levels have been noted based on Dry Weather Monitoring Program data, which is a positive sign. The elimination of IC/IDs discovered during the reporting year also likely led to improvement in the quality of the discharge. As more data is collected by the City's additional monitoring programs, it is anticipated that more robust evaluations of changes in discharge quality will be possible.

Level 6: Changes in Receiving Water Quality

The City's jurisdiction only includes a portion of one relatively minor receiving water body, Alvarado Canyon. Major downstream receiving water bodies such as the San Diego River and Chollas Creek do not pass through the City, so local City monitoring data does not provide information that can help assess changes in their water quality. The City does work collaboratively with other Copermittees to help design and fund regional monitoring efforts which are targeted at assessing changes in receiving water quality. The results of those monitoring programs can be found in regional monitoring program report and in WURMP Annual Reports. Data from the City's recently initiated additional studies should also help the City assess changes in the quality of the water in Alvarado Canyon over time, although at this point the amount of data available is not sufficient to determine if changes in water quality have occurred.

IMPLEMENTATION PLANS AND JURMP UPDATE FOR 2007/2008

At the time of the writing of this JURMP Annual Report, the City has been working to update the City's JURMP document to meet the requirements of the new Municipal Permit, Order No. 2007-0001. As of this writing, the City is participating in a regional workgroup that is developing a revised approach for jurisdictional storm water program effectiveness assessment. The City plans to use this revised approach once it is finalized. All programs during the 2006/2007 reporting period were conducted under the requirements of the previous permit (Order No.2001-01) and the associated JURMP document developed in 2002.

Table 11.1
Source Characterization, 2006/2007

Constituent of Concern	Geographical Area	Land-Use	Potential High Priority Source	Estimated Number and Percent of Total Sources	Priority
Sediment	In the vicinity of University Channel/ In the area surrounding Nagel St. and Sarita St.	Residential	Planters, Street	5%	Low
	Grossmont Shopping Center	Commercial	Landscape, Parking Lots, Streets	35%	Low
	Jurisdictional	Open Space	Slopes	60%	High
Fertilizer (Nitrate, Phosphate)	Vicinity of University Channel	Residential	Planter, Landscape	40%	High
	Grossmont Shopping Center	Commercial	Landscape, Parking Lots, Streets	40%	Medium
	Jackson Drive	Commercial	Landscape, Parking Lots, Streets	20%	Medium
Bacteria	South of I-8 Jackson Dr.	Residential	Individual homes	20%	Low
	Along Alvarado Cr. up to Amaya Dr./ Grossmont Hospital / Grossmont Shopping Center / Jackson Drive and Vicinity	Commercial	Streets, Curbs	20%	Medium
			Landscape	50%	High
	Northeast of Fletcher PKWY and Amaya Dr. intersection	Open Space	Parks, Open Channels	10%	Low
Oil and Grease	Jurisdictional	Residential	Driveways, Streets, Parking lots	10%	Low
	Along Alvarado Cr. up to Amaya Dr./ Grossmont Hospital / Grossmont Shopping Center / Chollas Cr. surrounding	Commercial	Restaurants,	20%	Medium
			Parking lots	20%	Medium
			Streets, Curbs	30%	Low
	Jackson Drive and vicinity of Commercial St.	Industrial	Automobiles, Repair Shops	20%	High
Metals (Copper,	Boulevard Drive	Residential/ Commercial	Streets, Curbs, Parking lots	20%	Low

Table 11.1 (Continued)
Source Characterization, 2006/2007

Constituent of Concern	Geographical Area	Land-Use	Potential High Priority Source	Estimated Number and Percent of Total Sources	Priority
	Shopping Centers, Surrounding Area of Alvarado Channel	Commercial	Parking Lots	20%	Low
	Jurisdictional	Various	Automobiles	40%	Medium
	In the vicinity of Commercial St.	Industrial	Repair Shops, Machine Shops	20%	High
Organics (Surfactants)	North of I-8, West of Baltimore Dr./ Massachusetts Ave	Residential	Washing Cars, Households and Driveway	40%	Medium
	In the vicinity of Grossmont Shopping Center / In the area surrounding Grossmont Hospital / Along Alvarado Cr.	Commercial	Car Washing	40%	Medium
	Harbinson Avenue Vicinity	Residential	Car Washing	20%	Low
Pesticides	Jurisdictional	Residential	Individual homes	80%	Medium
	Along Alvarado Cr., Boulevard Drive	Commercial	Planter, Landscape	20%	Medium
Gross pollutants (Trash, Debris)	In the area surrounding Harbinson Ave./ In the vicinity of Nagel Sarita St.	Residential	Individual homes, Streets	30%	Low
	Along Alvarado Cr./ University Channel surrounding and along lower stretches of University Ave	Commercial	Streets, Parking Lots, Illegal Dumping	70%	High
Ammonia	North of I-8, West of Baltimore Dr	Residential	Decomposed Materials / Cleaner	20%	Low
	In the vicinity of Grossmont Shopping Center / In the area surrounding Grossmont Hospital / Along Alvarado Cr.	Commercial	Decomposed Materials / Cleaner	80%	High

12 FISCAL ANALYSIS

The City's Sanitation Fund provides funding for the Storm Water Program. There have not been any changes to this funding mechanism during this reporting period. The total expenditures in 2006/2007 were $575,477. Note that the City's payment for the 2006/2007 regional wet weather monitoring costs was not paid until after the end of the 2006/2007 reporting period, resulting in a low expenditure for the Permit Fees & Wet Weather Monitoring line item, which is typically around $60,000. The pattern of one year's wet weather monitoring fees being paid in the following reporting period is expected to continue. The proposed budget for the 2007/2008 Fiscal Year is $742,615. The itemized costs within six different categories are presented in Table 12.1, below.

Table 12.1
Itemized Expenditures and Budget
for Fiscal Years 2006/2007 and 2007/2008

Storm Water Program Fiscal Analysis	Expenditures FY 2006/2007	Budget FY 2007/2008
Engineering Division	$ 143,849	$ 150,795
Program Mgmt.	$ 71,500	$ 74,930
Land Use	$ 9,810	$ 10,370
Construction	$ 13,568	$ 14,585
Existing Development	$ 24,920	$ 25,830
Education	$ 8,071	$ 8,590
IC/ID	$ 15,000	$ 15,480
Admin	$ 980	$ 1,010
Public Works Operations	$ 114,301	$ 119,990

13 SPECIAL INVESTIGATIONS

RAINBOW STEEL

Rainbow Steel is a steel fabrication business located at 8332 Case Street in the City of La Mesa. This facility has a history of non compliance with local and state storm water regulations and had been unresponsive to enforcement actions imposed by the City during previous reporting periods, dating back to their first inspection in May 2003. Details on the City's inspection and enforcement history with Rainbow Steel were discussed in detail in Section 13 of the 2005/2006 Annual Report.

In August 2005, the City requested the assistance of the RWQCB in regards to enforcing storm water requirements at Rainbow Steel. The RWQCB conducted its own inspection of Rainbow Steel, and sampling was performed at the site during two separate rain events during the 2005/2006 reporting period. In April 2006 the RWQCB issued Cleanup and Abatement Order No. R9-2006-0026, which required the facility to develop and implement BMPs, a SWPPP, and a monitoring program.

During the 2006-2007 reporting period, the City conducted a routine inspection of Rainbow Steel as part of the City's industrial and commercial inspection program. The site now maintains a SWPPP and has begun a monitoring program. The inspector issued written corrective actions to the site but did not note any violations. This was the first inspection since the site's initial inspection in 2003 that the site has not received a violation for improper BMP implementation or for non-compliance with the General Industrial Permit. The City will continue to inspect Rainbow Steel as part of its industrial and commercial inspection program in future reporting years to verify that the site remains in compliance with applicable storm water regulations.

ADDITIONAL WATER-QUALITY MONITORING

During 2005/2006, the City initiated an additional study of selected locations in the City during dry weather conditions. In 2006/2007, the City developed and began implementing a wet weather water quality monitoring program and also again completed an additional study during dry weather conditions. Sites chosen for the City's additional monitoring programs are presented in Figure 13.1. Note that the site names on the figure represent the site names used during 2006/2007. The City has since adopted a new site naming system, which is described in the program's monitoring plan (Attachment 13.2). Most sites are within the Alvarado and University drainage basins, which are the two main drainage basins within the City. Seven sites are shown in Figure 13.1. All seven were monitored as part of the dry weather additional study, and all of them except Site Spring Valley Downstream, West were monitored during the wet weather study.

The wet weather monitoring program was designed to help the City to assess the types and quantities of specific pollutants discharged in the City's main drainage basins when it rains, with a focus on pollutants associated with downstream 303(d) listings. This data, along with information gathered during dry weather conditions, will provide a more complete characterization of the water being discharged from the City year round. The information

gained should help guide the City when making future planning decisions regarding storm water program implementation.

Dry weather additional study samples were collected on June 26 and 27, 2007, and wet weather samples were collected on April 20, 2007. Results of analyses from the samples collected under dry weather and wet weather conditions are presented in Attachment 13.1 and Attachment 13.2, respectively. The sampling plan for the wet weather monitoring program is also included in Attachment 13.2. The data from these sampling events were also provided to the Regional Monitoring Workgroup for use in preparing the annual regional monitoring report. As of this writing the City is conducting further analysis of its data and working to finalize a report summarizing the collected information.

FUTURE PLANS FOR SPECIAL INVESTIGATIONS

The City plans to continue to collect and analyze wet weather data in 2007/2008. The analyte list for the program will most likely be expanded to include synthetic pyrethroids, which have been identified as a causative agent of toxicity observed in samples from Chollas Creek. Beyond these water quality monitoring efforts, as it has in the past, the City will also conduct additional special investigations if found to be necessary.

Figure 13.1
Additional Monitoring Site Locations

.

14 CONCLUSIONS AND RECOMMENDATIONS

The City has implemented its storm water program in accordance with Municipal Permit requirements since 2002. RWQCB Order No. 2007-0001, a revised municipal storm water permit, was issued on January 24, 2007. During the 2006/2007 reporting period the City began adjusting its program in anticipation of the new requirements of this permit and continued to refine programs already required under the existing Municipal Permit. Some of the major accomplishments during the present permit cycle include the following:

- Implemented Calsense, a sophisticated irrigation control system, for a number of parks and medians. This system has helped reduce irrigation runoff and associated transport of pollutants.
- Developed and implemented a BMP plan for the Public Works Operation Center.
- Developed and implemented a process to require post-construction BMPs from Priority Projects.
- Inspected 100 percent of its inventoried industrial and commercial businesses. The City has also worked collaboratively with the RWQCB on issues of Industrial Permit compliance.
- Regularly inspected construction sites, often more frequently than required by the Municipal Permit.
- Developed standardized, easily accessible filing systems for records associated with the various components of the storm water program.
- Identified IC/IDs through receipt of calls to the Storm Water Hotline and through the Dry Weather Monitoring Program. The City then worked to eliminate the identified IC/IDs in a timely manner. Figure 11.1 presents the total number of calls received during each of the last several reporting periods.
- Implemented a comprehensive storm water pollution prevention education outreach program. The program has included components such as working with environmental groups to put on clean up events, collaborating with Eagle Scouts to construct educational kiosks, development of new fact sheets, regularly including educational articles in the City's newsletter, and providing special HHW pick-up services for disabled residents and senior citizens.
- Developed and implemented an additional water quality monitoring program to assess wet and dry weather discharges from the City's main drainage basins. Data from these programs will be used to help the City address current and upcoming TMDL requirements.

During 2007/2008, the City will transition into implementing the requirements of the new permit. Additionally, the City will continue to work with other jurisdictions in the Chollas Creek watershed and the RWQCB to address TMDL requirements. The City will continue to refine implementation of existing programs and create new programs as needed to improve its ability to reduce or eliminate pollutant discharges and meet regulatory requirements. The City also plans to collaborate with other Copermittees to develop new programs, further refine existing programs, and develop methods for which program effectiveness may more accurately be assessed.

Ms. Sandra L. Kerl
City Manager
City of La Mesa
8130 Allison Avenue
La Mesa, CA 91941

Dear Ms. Kerl:

SUBJECT: REVIEW OF JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM 2005-2006 ANNUAL REPORT FOR THE CITY OF LA MESA, ORDER NO. 2001-01, NPDES NO. CAS0108758.

The Regional Water Quality Control Board San Diego Region (Regional Board) has completed its review of the "City of La Mesa (City) Urban Runoff Management Plan Fiscal Year 2005-2006 Annual Report". This year the Regional Board focused on the following sections: Municipal, Industrial, Commercial, Land Use, Construction, Illicit Discharges Detection and Elimination, Education and Outreach, and Special Projects. Our comments are generally requests for additional information needed to fully assess program implementation and compliance during the reporting period. Some comments may also request information in order to help ensure program compliance for future reporting periods. Revisions and any responses to comments should be addressed in the Fiscal Year 2006-2007 Annual Report, which is due in January of 2008.

The following comments reveal significant instances of incomplete and/or unclear reporting in the Annual Report of required actions and activities by your agency. If such required actions and activities actually did not occur during the reporting period, these serious deficiencies in your storm water program would be a basis for determining noncompliance with Order No. 2001-01 and would be subject to enforcement action by the Regional Board. All comments are numbered to provide you the ability to track responses.

COMMENTS ON THE CITY OF LA MESA 2005-2006 ANNUAL REPORT

Annual Report Section 3 (Industrial):

1. On January 9, 2006 the City performed an Industrial inspection of Interamerica Stone Design, Inc. and found that this business was in violation of the Statewide

General industrial Stormwater permit and City ordinances. A follow-up inspection on June 28, 2006 found that the business was still out of compliance, and a Notice of Violation (NOV) was issued for failure to comply with the Industrial Permit. In the case of known non-filers, coordination with the Regional Board to bring these businesses into compliance with the Statewide Industrial Stormwater Permit can expedite the process. It is recommended that in the future you coordinate with the Regional Board when non-filers are discovered. Other municipalities frequently provide copies of inspection reports NOV's issued to non-filers to the Regional Board, which can enable Regional Board staff to assist in bringing these industries into compliance.

2. In our previous year's comment letter (January 2, 2007) it was noted that the Annual Report did not include a summary of any necessary follow-up actions that were conducted as a result of the inspections of industrial facilities as required by Permit section F.3.b.5. The Regional Board requested that in subsequent Annual Report submittals follow-up actions be reported.

   During this reporting period a majority of the industrial inspections performed by the City took place on June 28, 2006, a few days before the end of the reporting period. The Regional Board is unable to determine if appropriate and timely follow-up has occurred to address the recommended corrective actions identified by your inspectors. In your response to this letter please provide updates on any follow-up actions, to date, the City has taken to address the deficiencies noted during the industrial inspections, and provide this information in all future reports.

Annual Report Section 4 (Commercial):

3. The Annual Report does not include a summary of any necessary follow-up activities that were conducted as a result of inspections of commercial sites resulting from public complaints.

   A review of Table 8.4 in the Annual Report shows that during the reporting period four NOV's were issued to four mobile auto detailers (entry No. 12, 30, 73 and 82 in table), and six NOV's were issued to other various commercial enterprises (entry No. 31, 32, 107, 118, 121 and 122 in table). It is unclear whether timely follow-up action was taken by the City to address the violations. Follow-up activities are required by Permit section F.3.c.4; therefore such actions must be reported on per Permit section I.1.a. In your response to this letter please provide information on all follow-up activities that the City took to ensure that the recipients of these NOV's had corrected the violations.

The heading portion of this letter includes a Regional Board code number noted after "In reply refer to:" In order to assist us in the processing of your correspondence, please include this code number in the heading or subject line portion of all correspondence and reports to the Regional Board pertaining to this matter.

If you have any questions regarding this letter, please contact Christina Arias at (858) 627-3931 or email: Carias@waterboards.ca.gov.

Respectfully,

Brian D. Kelley

La Mesa, CA 91941

RWQCB COMMENTS REGARDING 2005/2006 JURMP ANNUAL REPORT

RWQCB comments on the City's 2005/2006 JURMP Annual Report were received in a letter dated September 21, 2007. The comments are listed below in italics and numbered in the same order they appear in the RWQCB comment letter; the City's response follows each RWQCB comment. A copy of the RWQCB comment letter is provided in Attachment 1.1.

1. *On January 9, 2006 the City performed an Industrial inspection of Interamerica Stone Design, Inc. and found that this business was in violation of the Statewide General Industrial Stormwater permit and City ordinances. A follow-up inspection on June 28, 2006 found that the business was still out of compliance, and a Notice of Violation (NOV) was issued for failure to comply with the Industrial Permit. In the case of known non-filers, coordination with the Regional Board to bring these businesses into compliance with the Statewide Industrial Stormwater Permit can expedite the process. It is recommended that in the future you coordinate with the Regional Board when non-filers are discovered. Other municipalities provide copies of inspection reports NOV's issued to non-filers to the Regional Board, which can enable Regional Board staff to assist tin bringing these industries into compliance.*

   Response

   The City of La Mesa appreciates the willingness of RWQCB staff to assist the City in bringing industrial businesses into compliance. The City has worked with the RWQCB in the past on such issues; see, for example, the discussion about Rainbow Steel in Section 13 of the 2005/2006 JURMP Annual Report. With respect to the specific case of Interamerica Stone Design Inc., the City and RWQCB staff corresponded in more detail via email in the fall of 2007. RWQCB staff notified the City that the information that the City provided in those discussions was sufficient to answer this comment. Please see Attachment 1.1 of this JURMP Annual Report for copies of the emails.

2. *In our previous year's comment letter (January 2, 2007) it was noted that the Annual Report did not include a summary of any necessary follow-up actions that were conducted as a result of the inspections of industrial facilities as required by Permit section F.3.b.5. The regional Board requested that in subsequent Annual Reports submittals follow-up actions be reported.*

   During this reporting period a majority of the Industrial inspections preformed by the City took place on June 28, 2006, a few days before the end of the reporting period. The Regional Board is unable to determine if appropriate and timely follow-up has occurred to address the recommended corrective actions identified by your inspectors. In your response to this letter please provide updates on any follow-up actions, to date, the City has taken to address the deficiencies noted during the industrial inspections, and provide this information in all future reports.

   Response

   The follow-up process for non-compliance observed at Interamerica Stone Design Inc. is discussed in the response to comment 1 above. The follow-up

process for non-compliance found at Rainbow Steel was discussed in Section 13 of the 2005/2006 JURMP Annual Report. The other industrial sites inspected during 2005/2006 were not found to be in violation of City ordinances. The implementation status of the corrective actions recommended for those sites is verified during the next routine inspection; routine inspections are conducted annually for all high priority industrial sites.

3. *The Annual Report does not include a summary of any necessary follow-up activities that were conducted as a result of inspections of commercial sites resulting from public complaints.*

   A review of Table 8.4 in the Annual Report shows that during the reporting period four NOV's were issued to four mobile auto detailers (entry No. 12, 30, 73, and 82 in table), and six NOV's were issued to other various commercial enterprises (entry No. 31, 32, 107, 118, 121 and 122 in table). It is unclear whether timely follow-up action was taken by the City to address the violations. Follow-up activities are required by Permit section F.3.c.4; therefore such actions must be reported on per Permit section I.1.a. In your response to this letter please provide information on all follow-up activities that the City took to ensure that the recipients of these NOV's had corrected the violations.

   <u>Response</u>
   The City's enforcement process includes a number of different tools, which are typically used in an escalating fashion as described in the City's JURMP. All of the NOVs issued to commercial businesses were related to illegal discharges. In each case, the City required the business to stop the discharge if it was still active at the time of the visit and to clean up discharged water if feasible. City staff ensured that the issues were resolved at the time of the site visits, and no additional follow-up actions were needed. In most cases the City has found that the issuance of an NOV is effective in impressing the significance of the violation on the responsible party and in bringing about compliance. In cases where persistent noncompliance is noted, increasingly strict enforcement measures are taken until compliance is achieved, such as in the example of Rainbow Steel. No further non-compliance was observed at the commercial businesses to which NOVs were initially issued in 2005/2006, so no further enforcement actions were taken.

Subject: RE: Inspection memo

hi Malik,

Thank you for the information. As far as I am concerned, your email below has sufficiently responded to the comment #1 on our letter to the City Manager dated September 21, 2007. Therefore you need not address it in the 06-07 Annual Report. Thanks for taking the time to get me up to speed on the item.

Have a nice weekend,
Christina

Hi Christina,

Good talking to you today and thank you for the memo!

I re-read the comment again and looked into what we presented in the annual report. You are right, it is vague. We did specify that the facility was non-compliance due to non-filing of NOI in our annual report to the RWQCB. I did request that the owner contact the RWQCB to see if they would be exempt for no exposure certification /possibly not have to conduct monitoring. I did a second inspection of the facility in June 06 to follow-up to the January Inspection and to see what the RWQCB decided/and if the facility filed an NOI and prepared a SWPPP. I was told during the inspection that he had contacted the RWQCB and that they would not exempt him. Again, I issued an NOV for failure to comply with the permit and conduct the required water monitoring. I followed up again in August/September 06 and was told that he was working on it. Then I found out he was diagnosed with cancer in the winter 06/was not in the shop. Then he was better in the Spring 07/I still could not get in touch with him and when I did he still had not filed. I contacted Don Perrin to help me in May 07 because I could not get the facility owner to file the NOI. In June I saw his facility was open and stopped by. We read through the Boards Letter/I conducted an inspection/issued an NOV again for no NOI/monitoring. I helped him fill out the NOI form providing him information such as the SIC Code and Receiving Water Body. In the end of July/August 07, I stopped by to follow-up only to find out that he had a massive heart attack and passed on. I forwarded this information onto Don. I also asked the potential new owner to come to the City to meet with me and discuss permit requirements. I provided them with a copy of the industrial permit/filled out the NOI form with them and suggested they contact environmental

consultant to prepare the SWPPP. They had mentioned that they still are not operating and waiting for a City license.

Interamerica stone was definitely an interesting experience/very unique.

Hope this helps. If you feel the comment still stands for lack of information, I do understand; however, I would like to emphasize that we do work closely with the RWQCB and look to you all for assistance in getting facilities into compliance. Thank you for your consideration.

-Malik

CITY OF LA MESA

MUNICIPAL PROGRAM

STORM WATER

BEST MANAGEMENT PRACTICES

NOTEBOOK

City of La Mesa Municipal Best Management Practices Notebook

This notebook presents best management practices (BMPs) for numerous municipal activities. The BMP fact sheets have been selected from the California Stormwater BMP Handbook, January 2003. The following table is an index of the BMPs that are presented in this notebook.

BMP Number	***BMP Description***
SC-10	Non-Stormwater Discharges
SC-11	Spill Prevention, Control and Cleanup
SC-20	Vehicle and Equipment Fueling
SC-21	Vehicle and Equipment Cleaning
SC-22	Vehicle and Equipment Repair
SC-30	Outdoor Loading/Unloading
SC-31	Outdoor Container Storage
SC-32	Outdoor Equipment Maintenance
SC-33	Outdoor Storage of Raw Materials
SC-34	Waste Handling and Disposal
SC-41	Building and Grounds Maintenance
SC-43	Parking/Storage Area Maintenance
SC-60	Housekeeping Practices
SC-61	Safer Alternative Products
SC-70	Road and Street Maintenance
SC-71	Plaza and Sidewalk Cleaning
SC-72	Fountains and Pool Maintenance
SC-73	Landscape Maintenance
SC-74	Drainage System Maintenance
SC-75	Waste Handling and Disposal
SC-76	Water and Sewer Utility Maintenance

The BMP fact sheets can be found at www.cabmphandbooks.com.

Notice of Violation Procedural Sheet

When Do You Use It?

The Notice of Violation or NOV should be used any time you see the following:

1. **Illegal Discharge to a Storm Drain System** (storm drains are only for storm water)
2. **Illicit Connection to a Storm Drain System** (Pipe connected to storm drain that does not convey storm water ie sewage)
3. **BMP Implementation**: Improper BMP implementation in which pollutants have either left the site or the potential for pollutants to leave the site is highly likely in the event of a rain storm.
4. **Other:** Any other activities that may inadvertently result in the contamination of storm water and receiving water bodies.

Recommended Corrective Actions?

List what needs to be done to remedy the situation.

- Illegal discharge: immediately stop the discharge/ clean up
- Illicit connection: immediately disconnect
- Improper BMPs: fix existing or select new BMPs

Distribution?

White Copy: Provide to Storm Water Technician

Yellow Copy: Provide to Violator

Pink Copy: Inspector keeps and files

Procedures

Once you have filled out the form and provided a copy to the violator. Please be informed that the violator will receive a formal second written notice. The following presents the City's Enforcement Measures as presented in Chapter 7 of the City's JURMP.

Verbal Warning/Notice of Violation Form
Written Notice
Enforcement of Contracts
Stop Work Orders
Denial or Revocation of Permits
Civil and Criminal Court Actions

Follow-Up

The Storm Water Technician is responsible for following up to ensure corrective actions have been implemented, unless there is a full time inspector assigned to the project.

CITY OF LA MESA
DEPARTMENT OF PUBLIC WORKS
Storm Water Management Program

NOTICE OF VIOLATION

Site Name: _____ **Phone** _____

Address: _____ **La Mesa, CA** _____

Owner/Manager: _____ **Date:** _____

The Public Works Department is responsible for regulating all discharges into the City's storm water conveyance system pursuant to Chapter 7.18 of the Municipal Code. The purpose of this Storm Water Management And Discharge Control Ordinance is to:

A) Prohibit non-storm water discharges.
B) Eliminate pollutants in storm water to the maximum extent practical.
C) Protect watercourses from pollution in order to comply with water quality control laws, including the federal Clean Water Act.

It is the responsibility of the property owner at the address above to implement Best Management Practices (BMPs) in order to comply with the City's Storm Water Ordinance. A recent inspection of your home/business found one, or more, of the following deficiencies:

____ Illegal discharge(s) of pollutants into the storm water conveyance system.

____ Illegal connection(s) to the storm water conveyance system.

____ Failure to implement Best Management Practices (BMPs) as recommended by City inspector/contractor.

____ Other: _____

Recommended Corrective Actions: _____

_____

_____

_____ **Implement By:** _____

Previous Notification Date(s): _____ **Re-inspectionDate:** _____

Thank you for your prompt attention to this matter and helping to keep the City's waterways free of pollution. If you have questions regarding this correction notice, or if we can be provide assistance, please call (619) 667-1134.

STORM WATER BULLETIN BOARD

10/10/2007 13:20

City of La Mesa
Storm Water Pollution Prevention
Pools & Spas

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

Discharging of pool or spa water is not prohibited; however, the following measures are required.

1. Water shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Pool water must be dechlorinated
3. Water pH acceptable range from 7 to 8
4. No algae present in water
5. Water shall not contain chemicals to counteract the chlorine
6. Water does not contain hydrogen peroxide based products
7. Controlled discharge eliminating potential for erosion

Chlorine

Test pool or spa water for chlorine prior to discharge. Chlorine naturally dissipates overtime and if pool or spa water is left 3 to 5 days, it will become dechlorinated. Pool water needs to be drained before it turns green. Draining pool water gradually over landscaped areas will help prevent erosion problems.

Pool Filters

Pool filters should be cleaned over landscaped areas or anything that will absorb the discharge. Material may be collected over a filter cloth and disposed of in the trash. Filter backwash must be discharged into the sewer system with a pH of 5 to 12.5.

Pool Construction

Material must be contained and disposed of appropriately. Waste generated from plaster, gunite, cement, sediment, and other construction materials is prohibited from entering the storm drain system.

Do the Right Thing, Stay in Compliance and Protect Our Environment. For more information, contact the City's Storm Water Hotline (619) 667-1134.

SEDIMENT CONTROL	**A.8**
Description/Illustration of BMPs to prevent increase of sediment load in discharge	A.8
Construction phase / BMP sequencing schedule including supplemental pre-rain action plan for sediment control measures	A.8
NON-STORM WATER	**A.9**
Description of non-storm water discharges to receiving waters	A.9
Locations of discharges	A.9
Description of BMPs	A.9
Name and phone number of qualified person responsible for non-storm water management	A.9
POST-CONSTRUCTION	**A.10**
Description and location of BMPs	A.10
Operation/Maintenance of BMPs after project completion (including funding)	A.10
MAINTENANCE, INSPECTIONS, AND REPAIR	**A.11**
Name and phone number of qualified person responsible for inspections	A.11
Inspection checklist: date, weather, inadequate BMPs, visual observations of BMPs, corrective action, inspector's name, title, signature	A.11.a-f

CONSTRUCTION SWPPP INFORMATION

State General Construction Permit

Your construction project may be subject to the State of California General Construction Permit. Construction activities subject to this permit include clearing, grading, disturbances to the ground such as stockpiling, or excavation that results in soil disturbances of a at least one acre of total land area. Construction activity that result in soil disturbances of less than one acre is subject to this permit if the construction activity is part of a larger common plan of development that encompasses one or more acres of soil disturbance or if there is significant water quality impairment as a result.

Planning Document Review

If your project is subject to the General Construction Permit, a Notice of Intent (NOI) and filing fee, and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and Monitoring Program are required prior to commencement with project activities. The SWPPP is required to be submitted to the City of La Mesa for review. Prior to submitting a SWPPP to the City for Review, ensure that the following items are addressed

Common Problems

- ☑ Provide a copy of the NOI Application, letter sent to you by the State Water Resources Control Board with Waste Discharge Identification Number (WDID).
- ☑ Ensure the owner and or contractor sign the certification forms.
- ☑ Ensure personnel assigned to various tasks i.e. inspections are presented in the SWPPP and their role is clearly defined.

- ☑ Ensure vicinity map shows the general topography.
- ☑ Provide selected Best Management Practices (BMPs) specifically for the project.
- ☑ Place BMPs on the map.
- ☑ Provide site-specific information for materials list.
- ☑ Ensure text correspond with appendices and is consistent.
- ☑ Provide information on Post-Construction BMPs and funding source.
- ☑ Review the General Construction Permit to ensure all components have been addressed.

Ensure the following items are incorporated into your SWPPP & Monitoring Program:

	Permit Section
Vicinity Map (graphic)	***A.5.a.1***
Major roadways, geographic features or landmarks	A.5.a.1

EROSION CONTROL	**A.6**
SWPPP shall include: (graphic)	***A.6.a-c***
Areas of vegetation on site	A.6.a.1
Areas of soil disturbance that will be stabilized during rainy season	A.6.a.2
Areas of soil disturbance which will be exposed during any part of the rainy season	A.6.a.3
Construction phase / BMP sequencing schedule including supplemental pre-rain action plan for erosion control measures	A.6.a.4
BMPs for erosion control	A.6.b
BMPs to control wind erosion	A.6.c

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following **B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or checked by the City inspector.

Maintenance & Good Housekeeping

- ❑ Regularly, dry sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- ❑ If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- ❑ Water used for cleaning exterior surfaces must be contained and disposed of into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the storm drain or leave the property.
- ❑ Regularly inspect and maintain storm drain inlets.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over watering and causing runoff.
- ❑ Minimize pesticide, herbicide and fertilizer use, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid material.
- ❑ Have a spill response kit available to clean up potential spills such as kitty litter or other absorbents.
- ❑ Keep material storage areas free from rainwater accumulation.
- ❑ Keep lids closed on all outdoor storage containers and ensure containers are labeled.

Waste Management

- ❑ Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- ❑ Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Schedule regular waste pick-up.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using kitty litter or other absorbents. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Protect storm drains or curb inlets and then collect all wash water by vacuum. Recycle or dispose of wash water via the sanitary sewer system.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

Loading Areas & Operations

- ❑ Load and unload in designated areas.
- ❑ Regularly dry sweep loading and unloading areas.
- ❑ If possible, cover loading areas.
- ❑ Divert storm water away from all loading and unloading areas.
- ❑ Check shipments and trucks for leaks and spills.
- ❑ Cleanup spills/leaks immediately and dispose of properly.
- ❑ If you must use water for cleaning, use a mop and bucket and dispose of wash water into the sanitary sewer.
- ❑ Major cleaning of exterior surfaces must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water should not be allowed to enter the street gutter or storm drains.

What's the difference?

Sanitary Sewer vs. Storm Drain System

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

Preventing Urban Runoff Pollution

A Guide for Commercial and Industrial Businesses

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

Beginning in 2002, your business is **required** to prevent urban runoff pollution by implementing **B**est **M**anagement **P**ractices (**BMPs**).

The City will be conducting inspections to ensure that BMPs are being used and water quality is protected.

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following Best Management Practices (BMPs) are required to be used in residential areas to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or checked by the City inspector.

Maintenance & Good Housekeeping

- ❑ Regularly, dry sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- ❑ If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- ❑ Water used for cleaning exterior surfaces must be contained and disposed of into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the storm drain or leave the property.
- ❑ Regularly inspect and maintain storm drain inlets.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over watering and causing runoff.
- ❑ Minimize pesticide, herbicide and fertilizer use, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid material.
- ❑ Have a spill response kit available to clean up potential spills such as kitty litter or other absorbents.
- ❑ Keep material storage areas free from rainwater accumulation.
- ❑ Keep lids closed on all outdoor storage containers and ensure containers are labeled.

Waste Management

- ❑ Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- ❑ Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Schedule regular waste pick-up.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using kitty litter or other absorbents. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Protect storm drains or curb inlets and then collect all wash water by vacuum. Recycle or dispose of wash water via the sanitary sewer system.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

Loading Areas & Operations

Preventing Urban Runoff Pollution

A Guide for Residents

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

The City of La Mesa's Storm Water Ordinance Requires the implementation of **Best Management Practices** (BMPs) to prevent urban runoff pollution.

The City monitors activities within the City's jurisdiction and may take enforcement measures to ensure the prevention of urban runoff pollution.

San Diego Bay Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego Bay and the San Diego River. Your business or facility is located within the San Diego Bay Watershed.

San Diego Bay Watershed

The San Diego Bay Watershed is comprised of 415 square miles. It extends from the Laguna Mountains to San Diego Bay. The watershed falls within the cities of La Mesa, Chula Vista, Coronado, Imperial Beach, Lemon Grove, National City, San Diego, and unincorporated areas of the County. Approximately 4 square miles in the southern portion of the City of La Mesa is part of this watershed. The major discharge sources to San Diego Bay include Sweetwater River, Otay River, Chollas Creek, Paleta Creek, Paradise Creek, and Switzer Creek.

Three drainage basins in the City of La Mesa are part of the San Diego Bay Watershed. Runoff from the Spring Valley Basin flows to the Sweetwater River. Runoff from the University Channel and Lemon Grove Basin contribute to Chollas Creek. The aforementioned creek and river flow into San Diego Bay.

Pollutants of concern associated with the watershed include diazinon, copper and zinc, fecal coliform, turbidity, and total suspended solids. The sources of these pollutants are a result of residential, agriculture or commercial pesticide application, automobiles and industrial waste, sewer spills, encampments, wildlife, erosion, suspended sediment, and fertilizers. Pollutants of concern for Chollas Creek in particular include metals such as copper, lead, zinc, cadmium, and coliform bacteria.

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Moreover, store materials properly to ensure it is not exposed to storm water and do not over-irrigate your landscape. If you observe storm water pollution or illegal dumping into a storm drain, you should call the City's Storm Water Pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

San Diego River Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego River and the San Diego Bay. Your business or facility is located within the San Diego River Watershed.

San Diego River Watershed

The San Diego River Watershed is comprised of 443 square miles. It extends from the mountains near Julian to the Pacific Ocean. Portions of the watershed fall within the cities of El Cajon, Poway, San Diego, Santee, several unincorporated areas, and the City of La Mesa. Primary tributaries to the San Diego River include Boulder Creek, Conejos Creek, Los Coches Creek, San Vicente Creek, and Forester Creek. Alvarado Creek in La Mesa is also tributary to the San Diego River. Alvarado Creek flows into the San Diego River and ultimately into the Pacific Ocean between South Mission Beach and Ocean Beach near Dog Beach.

Pollutants of concern listed in the 2002 Clean Water Act Section 303(d) List Of Water Quality for the lower San Diego River Watershed include fecal coliform (sewage/urban runoff), low dissolved oxygen (decay of organic matter), total dissolved solids (industrial waste/chemical spills), and phosphorus (phosphate based detergents). Between 1996 and 1999, coliform bacteria more than doubled due to urban runoff and sewage.

Other pollutants of concern not listed above include pesticides such as Diazinon and Chlorpyrifos (commercial, agricultural, and residential application), Total Suspended Solids/Turbidity (suspended sediment/solids, construction, sewage, eutrophication), Copper and Zinc (industrial waste or automobiles), and pH/Phosphate (industrial waste, automobiles, sewage, fertilizers, eutrophication, hardening/concrete of creeks).

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Store materials properly to ensure it is not exposed to storm water. Do not over-irrigate your landscape. If you observe illegal dumping into a storm drain, you should call the City's storm water pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

La Mesa FOCUS

A Newsletter for the Citizens of La Mesa • August 2006

JOIN US AT THE NEW FIRE STATION 11

OPEN HOUSE!

The La Mesa Fire Department invites all residents to an Open House at the new Fire Station 11. The event will be held on Saturday, August 5, from 9 a.m. to 3 p.m. The new station is located at 8034 Allison Avenue on the site of the old Station 11.

Guests are welcome to stop by and join in the celebration. There will be plenty of activities for all, including tours of the new station and administrative offices, food, a photographic display of the construction, public education giveaways for the kids, and a special appearance by the Santee Fire Clowns from noon to 2 p.m.

Bring the family and come celebrate the completion of the project that voters so generously approved with Proposition D.

GIVE US YOUR OPINION ON LA MESA'S DOWNTOWN!

Log on to www.cityoflamesa.com and take the Downtown Village Survey.

NEW LIBRARY/POST OFFICE
BUILDING PLANNED FOR THE CIVIC CENTER

Residents will continue to see exciting changes in the La Mesa Civic Center. With completion of the new fire station 11, the City is now focusing on a new building that will house a 7,000 square foot retail-only post office and the La Mesa branch library in about 10,500 square feet.

The building, which will be located in the current City Hall parking lot, is needed to facilitate construction of a new police station that will be built on the site of the current library. The old Tweed & Gambrell warehouse located behind the current post office is being demolished to make way for replacement City Hall parking.

The fire and police stations are being funded by Proposition D, a bond measure approved by La Mesa voters in March 2004. Proposition D funds will not be used to pay for the new 17,500 square foot building.

The architecture of the library/post office facility will complement the new fire station and will fit into the overall design of the Civic Center Master Plan (see architect's rendering below). Construction, which is anticipated to begin in the fall of 2006, will be done in conjunction with planned street improvements that include street trees, new sidewalks and diagonal street parking.

LA MESA RECEIVES THE
HELEN PUTNAM AWARD FOR EXCELLENCE
The PARKS Project is a Big Winner!

The City of La Mesa is a 2006 award recipient of the California League of Cities Helen Putnam Award for Excellence. La Mesa's award is in the League Partners Award for Excellence in City-Business Relationships category. The League only honors programs that are successful and have a proven track record. All winning programs must have been in existence for one year or more. This is the first time La Mesa has been named as a finalist.

The City will be acknowledged as one of three cities across the state that is a finalist for this award category at the League's annual conference in San Diego in September. The grand prizewinner in each category will also be named at the conference. The Excellence in City-Business Relationships award category honors municipalities who engage and develop respectful relationships with the private, non-profit and labor sectors in addressing community problems. The award further honors cities that foster a unique synergy and pride in their city or in a neighborhood and use partnerships to plan their community programs.

La Mesa was awarded this honor for The PARKS Project. The idea behind The PARKS Project was to fulfill an urgent need for sports fields and updated parks in a built-out city with no open land and no funding for park infrastructure. The PARKS Project is a collaborative of public and private agencies working together to enhance recreational facilities in La Mesa. Two facilities were created for the community. One is the grass youth sports fields at Parkway Middle School, also called the Junior Seau Sports Complex. The other is a new passive, accessible park at Briercrest Park (pictured at left).

The PARKS Project Master Plan was approved by the City Council in 1995. It was a daring, multifaceted project and an ambitious, creative plan. During the late 1990s extensive community input occurred to help design the two park projects. Focus groups,

TOUR HISTORIC LA MESA HOMES

On November 4, from 10 a.m. until 3 p.m., the La Mesa Historical Society (LMHS), along with the City's Historic Preservation Commission, will sponsor the first ever Historic Home Tour of La Mesa.

The tour will feature homes that made La Mesa what it was in the first half of the 20th century. Six east-side homes and buildings dating from 1894 will be highlighted. Five of the properties are official La Mesa landmarks, and all are carried in the Inventory of Historic Resources. Each will have displays of La Mesa history and the buildings as they once were, and each will be decorated in a fall motif and have artists working in the yards.

An art show/art mart, co-sponsored by the Foothills Art Association, will display original art by local artists featuring the theme "Historic La Mesa." The artwork will be available for sale.

Free shuttle buses will operate from the tour center at the corner of Palm Ave. and Lemon Ave. in the downtown Village of La Mesa. There is limited parking and vehicle access for most of the homes. Abundant parking is available adjacent to the tour center and in nearby City parking lots.

Mark your calendar now! Call 619-465-1883 for additional information or to reserve your spot on the tour. Full-day tickets on the day of the tour will be $15 for individuals 10 and older. Advance sale tickets and tickets for LMHS members will be $12 ($5 of the ticket price may be applied to a new membership in LMHS at time of purchase). Coupons will be included for discounts at Village merchants, restaurants and coffee shops, together with a prize drawing for a free antiques appraisal session with an accredited appraiser.

Built in 1910, the James Morrison House at 8415 Grant Avenue was designated an historic landmark in 1992.

DOES YOUR HOME QUALIFY FOR A BRONZE MARKER?

Each year, more and more La Mesa residents are buying and restoring historic properties. A sizable pre-1940s housing stock, conveniently located within walking distance of the downtown village, offers a desirable option for many homebuyers.

Much of the thanks for the picturesque tree-lined neighborhoods go to early visionaries such as Robert Allison, A. S. Crowder, Sherman Grable, and C. C. Park, who encouraged development of the area known as La Mesa Springs in the late 1890s and early 1900s. Long before the City's incorporation in 1912, subdivision maps for Grables Addition and Parks Addition had laid out streets and provided investment opportunities that allowed scores of residents to settle in the area. By 1912, there were 700 people living here. By 1930, La Mesa's population had swelled to 2,500.

Of course, not all of La Mesa's historic buildings are located downtown. Ed Fletcher and William B. Gross subdivided Grossmont Park in 1910 with an eye toward establishing an artist's colony on Grossmont. In the 1920s and 1930s, avocado farms were common along the foothills of Mount Helix.

In total, there are over 250 pre-1940 structures representing over a dozen distinct architectural styles in La Mesa. Many of these are largely unmodified structures in excellent condition, resulting in a varied and well-preserved inventory. Of these, 23 have been designated local historic landmarks. Landmarks are easily identifiable by a prominent bronze marker near the front door. Property owners who agree to preserve historic landmarks are eligible for property tax discounts that can be significant.

If you own a qualifying historic house, you might consider designating your property a historic landmark. If you have questions or would like more information about the landmark nomination process, contact Allyson Kinnard in the Community Development Department at 619-667-1196.

LA MESA EMPLOYEES IMPROVE CUSTOMER SERVICE SKILLS

Nearly 100 City employees will be receiving their Superior Service Certificate for completing a series of three customer service training classes offered in conjunction with Cuyamaca College's Professional Development Academy. City Manager Sandra Kerl selected "Service First" as the name of the City's new training program to stress its importance to the organization.

The City contracted with Cuyamaca College to customize the Professional Development Academy's Customer Appreciation, Mastering Communication and Dealing with Difficult People classes to meet the needs of local government. The classes explore key attitudes, techniques and communication skills employees need to provide the very best service to customers.

City Manager Kerl said that the bottom line is to invest in employees and give them the training, the tools and the authority they need to get their job done.

The three-hour classes were held at the City's fire station 12 training room to make it convenient for employees. In addition to the Customer Service series of classes, the City is also considering future on-site, customized classes in the Academy's Team Work series and Personal Best series.

SKATEBOARDERS – DON'T GET BUSTED!

Chapter 10.21 of the La Mesa Municipal Code regulates skateboarding in the City. On June 27, the City Council strengthened the chapter to prohibit the use of ramps on public property and to prescribe penalties for violations of the chapter.

Specifically, new Municipal Code Section 10.21.020 states: "It shall be unlawful for any person to use, construct or place upon any public property a ramp, jump platform, rail, or similar device intended for use by a person upon a skateboard, roller-skates or other similarly wheeled devices." Section 10.21.030 provides that any person who violates a provision of the chapter is guilty of a misdemeanor.

Police officers, for evidentiary purposes, may confiscate skateboards belonging to persons who violate Chapter 10.21.

DON'T TRASH LA MESA!

The City of La Mesa takes illegal dumping seriously. La Mesa Municipal Code Section 7.20.185 expressly prohibits the disposal of refuse into containers owned or rented by any other person, firm or agency. This applies to City as well as private or commercial property.

La Mesa's parks are particularly vulnerable to illegal dumping. If you spot someone dumping bags of trash, construction debris or bulky items into a park or commercial dumpster, jot down the vehicle license number and call the Public Works department at 619-667-1450 with the information. Residents can also submit the information online via the City Hall Action Center on the City's website.

Residents and commercial businesses with locations in La Mesa should contact EDCO Disposal Corporation at 619-287-7555 to sign up for regular trash and recycling collection services. Contractors or individuals who self-haul their own refuse or refuse belonging to others can drop off trash, construction materials or bulky items at EDCO Station, 8184 Commercial Street, at a reasonable cost.

SUMMER STORM WATER REMINDERS

The City of La Mesa's National Pollutant Discharge Elimination System (NPDES) Storm Water Program requires residents and business owners to implement various "good housekeeping" measures and best management practices. You can help protect the environment by considering the following tips:

- Swimming pool water must be tested before being discharged. Chlorine should be less than 1 mg/L with pH between 7 to 8. No algae should be present in the water, and filter debris is prohibited from entering the storm drain system. (A Swimming Pools & Spas Fact Sheet is available at City Hall and on the City's website.)
- Check your irrigation system and do not over-irrigate. Water landscaping during the morning or late afternoon.
- Do not hose down driveways or sidewalks; dry sweep instead.
- Clean up oil spills and other liquids with absorbent material and place in your trash cart for disposal.
- Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff. Consider taking vehicles to a commercial car wash.
- Keep residential trash carts and commercial dumpsters closed.
- Store pesticides and herbicides in a covered and contained area away from pets and children.
- Protect areas with bare soil from eroding during rain by placing fiber rolls or silt fencing, or by hydroseeding or vegetating the areas prior to the rainy season.

GOT QUESTIONS?

Check the City's website at www.cityoflamesa.com or call the La Mesa Storm Water Hotline at 619-667-1134. There is also a Storm Water bulletin board in the City Hall lobby. The bulletin board contains educational and outreach material.

BECOMING A "GREEN BUSINESS" IS GOOD BUSINESS

SAN DIEGO AREA GREEN BUSINESS PROGRAM PARTICIPANT

A Green Business Workshop targeting East County restaurants was held in April at the La Mesa Community Center. Highlights of the two-hour workshop, a collaboration of multiple municipalities and agencies, included a general overview of the Green Business Program; a business perspective; and information on storm water requirements, solid waste management for food facilities, key health permit compliance issues, and rebate and voucher programs for food facilities.

Business owners and managers who attended the workshop were introduced to ways to save money on energy, water and materials. They also learned how to receive free environmental compliance and conservation assistance by becoming a Green Business.

La Mesa residents are encouraged to support businesses that proudly display the Green Business logo in their windows. If you are interested in learning more about the Green Business Program, call 619-667-1340 or e-mail mtamimi@ci.la-mesa.ca.us.

APRIL CREEK TO BAY CLEANUP A SUCCESS IN LA MESA

Next Event Planned for September

Working with I Love A Clean San Diego, the City of La Mesa sponsored and hosted a creek cleanup site on April 29 as part of the Creek to Bay Cleanup Day. Volunteers from La Mesa and nearby communities demonstrated their true concern for protecting the environment by collecting trash and debris at the Alvarado Channel that runs along Fletcher Parkway.

The Alvarado Channel flows into the San Diego River and is part of the San Diego River Watershed. Overall, 35 bags of trash and recyclables were collected. Miscellaneous large items included carpeting and wood siding. The most unique item found was a giant stuffed panda bear!

Prizes were given to the individuals who collected the most trash and found the most unique item. Volunteers were also educated on watershed concepts, pollutants of concern and how the pollutants impact water quality.

The City of La Mesa plans to host a similar event in September for California Coastal Cleanup Day. For more information or to volunteer, contact Malik Tamimi, La Mesa's Environmental Specialist, at 619-667-1340 or mtamimi@ci.la-mesa.ca.us.

La Mesa Gets High Marks on Citizen Satisfaction Survey

Every two years the City of La Mesa conducts a public opinion survey to evaluate residents' use of and satisfaction with City services, as well as priorities for their neighborhoods and the City. Survey results provide a framework for guiding the organization's work efforts and are used by the City Council to help shape City budget priorities.

At the City Council's annual strategic planning workshop, La Mesa elected officials and department heads were presented with the results of the 2006 telephone survey. Conducted by True North Research in conjunction with SANDAG, the focus of the study was to measure the City's performance in meeting the needs of residents, determining the effectiveness of communication, assessing opinions in a variety of service areas, and identifying key issues of concern.

Nearly 90 percent of respondents rated their quality of life in La Mesa as either excellent or good, while more than 93 percent indicated their overall satisfaction with City services. Residents identified five service areas as the best candidates for improvement. Topping the list were maintaining and repairing local streets and providing neighborhood police patrols.

Dr. Timothy McLarney, president of True North Research, told the City Council that, compared with other cities, resident satisfaction in La Mesa is exceptionally high. He urged the City's elected officials to "stay the course" and to focus on the areas identified for improvement.

The complete survey report may be viewed on the City's website, www.cityoflamesa.com. Click on the "News/Events" link.

JOIN THE TEAM FOR THE 2006 INTERGENERATIONAL GAMES

The City of La Mesa is stepping up to the plate this fall to present the 2006 Intergenerational Games. The event will take place on Friday, October 13, from 9 a.m. until 1 p.m. on the La Mesa Middle School athletic fields.

Intergenerational Games brings together elementary school kids and mature, active adults for an energetic half-day event. The focus is on non-competitive fun, physical activity, wellness and healthy lifestyle.

Active adults age 55 or older are encouraged to sign up for this enjoyable and rewarding event. Adults will be paired with students from grades 4 through 6, and teams will be made up of one student and one adult. Each team will take part in a circuit of eight games and two knowledge challenges. Activities will include basketball shoot, street hockey shoot, skeeball, soccer shoot, bocce, horseshoe throw and similar games. There is no charge to participate and the rewards are endless.

The event will kick off with a motivational opening address, and the day concludes with a group picnic-style lunch and awards ceremony. Everyone is a winner in the Intergenerational Games!

For information and registration, call the La Mesa Community Center at 619-667-1300 or the Adult Enrichment Center at 619-464-0505. Intergenerational Games is sponsored by the City of La Mesa, La Mesa Commission on Aging, County of San Diego Aging & Independence Services, La Mesa-Spring Valley School District and many other community partners. For sponsorship opportunities, call Judy Stern at 619-667-1490.

"THANK YOU" FROM PUBLIC WORKS

The Public Works Department would like to thank La Mesa residents who responded to the Parks Maintenance Division's request to trim private growth that encroaches on the City's right-of-ways. Your assistance allows the Parks Division to focus staffing on other parks issues and helps to "Keep La Mesa Beautiful."

FOLLOW THE LA MESA WALKING ART TRAIL

Students studied a live Macaw as part of their art instruction to create a tropical feeling in the final design of their artwork.

Murray Manor Elementary School students showed off their artistic talent as they added their own colorful touches to the first utility box on the La Mesa Walking Art Trail. Several utility boxes on University Avenue have been chosen to be canvases for local artists to transform into works of art. The walking route marked by these urban works of art will be painted in phases and when complete will create a walking route through downtown La Mesa. Phase one of the Walking Art Trail will begin on University Avenue between Memorial Drive and Spring Street. Some 10 utility boxes will be painted in the first phase. Later phases will include utility boxes along Allison Avenue and around the Civic Center.

To kick off the Walking Art Trail and as part of the La Mesa Parks and Recreation Foundation's mission to support youth projects, a group of students from Murray Manor Elementary School painted the first box as part of an art education lesson. The students, under the direction of artist Penny Quirk, jointly created a design and painted the two utility boxes in front of the La Mesa Community Center.

The La Mesa Arts Alliance, a support group of the Foundation, is sponsoring this project. The project is designed to promote a healthy vibrant atmosphere, encourage artistic expression, and inspire a sense of civic pride within the community of La Mesa.

The first artwork in the La Mesa Walking Art Trail is located in the parking lot of the La Mesa Community Center at 4975 Memorial Drive.

HOMELESSNESS IN LA MESA

From time to time, the La Mesa Police Department (LMPD) receives reports about people on City streets, in parks or in other areas of the city who appear to be homeless. The presence of homeless people in our community is not new and is an issue that impacts more than just La Mesa. In July 2004 the Regional Task Force on the Homeless estimated that there were nearly 10,000 homeless people in the San Diego region.

The immediate concern of many residents and visitors is the potential risk posed by the homeless or that the homeless themselves may face. Based on contacts that police officers have had with the homeless, LMPD knows that many have criminal histories, issues with various types of substance abuse, and may commit various crimes to help support their day-to-day existence.

Being homeless presents a whole set of dangers to the homeless themselves, including poor health, lack of any health care, and a greater danger of being victimized by crime. Make-shift shelters set up by the homeless in secluded areas pose certain dangers to both the homeless and the public, primarily due to uncontrolled trash and waste, as well as small fires or stoves used for cooking and warmth.

Due to these concerns, a number of City departments are working together in an effort to address homeless issues in La Mesa. Members of the Police, Fire, and Community Development departments recently identified and closed several homeless encampments in the City. Police Officers make periodic checks of areas where encampments are typically found and respond to citizen reports of new encampments.

The officers' first goal is to address public safety issues, but officers also provide information to the homeless on where they can obtain services. Both government agencies and private service providers in the San Diego region offer a variety of programs to assist the homeless. Services include providing food, short-term lodging, and counseling and education services.

It is important to keep the following in mind when you see or encounter the homeless:

- Do not give food or money to the homeless; instead, encourage them to seek assistance through government or private agency providers.
- Generally, it is not illegal to ask for food or money, or offer to work for food or money, but it is unlawful to do so in an aggressive or harassing manner.
- It is illegal to offer to work for food or money in close proximity to a freeway on-ramp or off-ramp.
- Stopping your car on a street or at an intersection to give money to a homeless person creates a hazard for other vehicles and for the homeless person who steps into the street to accept the money.

More information on the homeless issue in the San Diego region can be found on the Regional Task Force on the Homeless website at www.rtfhsd.org.

Responsible Pet Ownership

SCOOP IT UP!

Any time a pet uses a public area as a "bathroom," the owner or responsible person must clean up the pet waste immediately. Not only is it common courtesy to pick up after your pet, it helps keep our ocean, waterways and beaches clean and free of harmful bacteria.

Pet waste left in yards, lawns, sidewalks and parks gets washed into storm drains when it rains. These wastes are harmful because they contain bacteria, parasites and viruses, which end up in lakes, streams, rivers and the ocean.

Doing your part to keep waterways clean is easy. When walking your dog, carry a plastic bag, pick up the waste and dispose of it in a trash receptacle.

KEEP YOUR PETS SAFE AND HEALTHY

Here are a few tips. . .

Protect pets from the elements. Pets that spend a portion of the day outdoors need a dry warm place to protect them from inclement weather and cold temperatures. As temperatures heat up, animals need a cool place out of the sun. With warmer weather comes the need to have greater amounts of fresh water available at all times.

Doggie workouts. Exercise is an important part of a dog's health. A portion of Harry Griffen Park has been fenced off and designated as a dog run area. There are three separate areas for dogs of all sizes and temperaments. Canine Corners volunteers do a great job of keeping the area stocked with dog toys and bags for dog waste. There is even a bulletin board with all the latest doggie news. Please remember that dogs are not allowed to run off-leash in any other City parks.

Rabies vaccine. Rabies continues to be a concern in some parts of our state and in many other states. It is important that all domestic pets receive their vaccines and that wildlife populations remain in check. All dogs are required by law to have current rabies vaccination proof and a valid dog license.

Know Your Municipal Code

Title 8 of the La Mesa Municipal Code covers City regulations that all pet owners should be aware of. Chapters include animal licensing, impounding, and dangerous or vicious dogs, as well as general topics such as leash requirements, picking up after your pet, and keeping animals other than ordinary household pets.

The La Mesa Municipal Code is available online at www.cityoflamesa.com. Click on "City Services A-Z," then select "M" for Municipal Code.

Not All Critters Are Pets

There are many types of wildlife in La Mesa. All neighborhoods have skunks and opossums. Most neighborhoods have coyotes, and some neighborhoods receive regular visits from raccoons and foxes. As cute as some of these visitors might be, it is important that we don't encourage them to live in our yards or provide a regular source of food.

Keep openings under your home, deck and out buildings secured so that no animals can take up residence. Remove any outdoor pet food supplies at dusk, and keep all trash in plastic bags inside your trash cart. Skunks and opossums will enter a home through pet doors, so secure them at night. Taking these precautions will help keep your family, pets and home safe from furry intruders.

BARKING DOGS

The La Mesa Animal Control Division of the Police Department receives many complaints about barking dogs. La Mesa has an ordinance against barking dogs, which states that any time the barking is "excessive" the animal/owner is in violation.

Dogs are social animals. When they are left alone for many hours a day, a typical response is to bark excessively. Take time to train your dog against excessive barking. Routine activities with your pet such as walks or visits to the dog park are essential, and there are interactive toys available to keep pets busy during the day. You might even consider obedience classes or dog sports. Information on dog sports is available on the American Kennel Club website at www.akc.org.

License Your Dog

All dogs are required to be licensed at four months of age or within 30 days of entering La Mesa (Municipal Code 8.09.010). Licensing ensures that dogs have current rabies vaccinations and provides one of the best ways of returning a lost dog to its family. A current license is also required for canine entrance at many locations throughout the United States, including national parks. While microchips are another good means of pet identification, they do not replace the effectiveness of a license tag. Most people will attempt to return an animal wearing identification, while it takes a trip to a veterinarian or animal shelter to read a microchip. License tags must be worn at all times and it is against the law to remove a license tag from an animal. You will need to provide proof of a current rabies vaccination to obtain the license. And don't forget to keep all registration information current. More information can be found on the City's website or by calling 619-667-1117.

Watch Your City Council in Action!

Tune in to Cox cable channel 24 and watch the La Mesa City Council in action. Televised meetings make City Council deliberations available to residents who are unable to attend meetings, making government more accessible to the community.

La Mesa residents can view La Mesa City Council meetings each month on the second Tuesday at 4 p.m. and on the fourth Tuesday at 6 p.m.

Have you been watching?
We would like to know.
Please call City Hall at 619-667-1191 and give us your feedback.

Keep Kids Safe this Summer!

Children are out playing in the neighborhood, going to the park, riding bikes, walking to the pool, visiting grandparents. Each of us can help keep kids safe this summer. We can begin by paying attention to our driving habits.

- Observe the speed limit (and go slower than the limit when conditions warrant)
- Obey all stop signs and signals
- Be sure to buckle up everyone, every trip

Make sure your own kids and grandkids have safe places to play, and make sure they wear helmets when riding bikes and scooters.

PHASE 2 OF SEWER SYSTEM UPGRADE TO START FALL 2006

The City of La Mesa has secured a $14.5 million low-interest loan from the State Water Resources Control Board. The grant is being used to rehabilitate and upgrade the City's aging sewer system in older and hillside sections of La Mesa.

The project has been divided into four phases. Phase 1 construction is currently underway and is scheduled for completion in spring 2007. Phase 2 construction is scheduled to start in fall 2006. The timetable for Phases 3 and 4 is 2007 and 2008, respectively. The combined phases represent the largest infrastructure project ever undertaken by the City.

During construction, residents may be inconvenienced by restricted traffic flows and construction noise in areas close to the construction zones. The City apologizes in advance for any inconvenience. However, this project will enhance health and safety for La Mesa residents for many years.

Phase 2 construction will take place on the following streets: Lee Ave., Grape St., Normal Ave., Colina Dr., Maiden Ln., Alley between Colina Dr. and Mills St., Palm Ave., Spring St., Chevy Chase Dr., Boulder Dr., Boulder Pl., Hillcrest Ave., Crowder Ln., in easements between Valle Dr. and Beverly Dr., and between Summit Dr. and Valle Dr.

The accompanying diagram shows the locations of the proposed work. Residents in each neighborhood affected by the work will be notified of the start dates 48 hours prior to the start of construction.

SOLICITING IN LA MESA

Know the Regulations

Solicitors are regulated by the City of La Mesa and must abide by specific city ordinances. Individuals and businesses are required to have a solicitor license issued by the City in order to sell merchandise or services door-to-door. Non-profit organizations are not exempt from this requirement. Getting the license requires each solicitor to undergo a background check by the La Mesa Police Department. The license includes a color picture, as well as the solicitor's name, address and phone number.

Solicitors are not allowed to do business on sidewalks, streets or other public property and may only operate between the hours of 9 a.m. and 8 p.m. Solicitors do not need to be carrying their product or providing their service at that time to be considered a solicitor.

For more information, or to complain or inquire about a solicitor, call the City's business licensing division at 619-667-1118 during normal business hours or leave a message after hours. You can also send us your concern online by using the City Hall Action Center at www.cityoflamesa.com. Provide the solicitor's name, business, time and location of the occurrence and the product or service being offered.

If you feel harassed or threatened by a solicitor's activities, call the La Mesa Police Department at 619-667-1400.

ATTENTION ALL TEENS!

The City is seeking La Mesa teens between the ages of 13 and 20 who want to make an impact and help our community by becoming a member of the Youth Advisory Commission.

This commission serves as an advisory body to the La Mesa City Council on matters pertaining to programs, projects and issues that address the concerns of youth in La Mesa. It is the responsibility of the Youth Commission to explore and develop activities and issues that will promote positive youth relations in the City. Commission meetings are held the second Monday of each month at 4:30 p.m. at the Community Center.

Projects organized by the Youth Commission each year include the reading program held at La Mesa Dale Elementary School, the national youth service day project each April, and the annual yard clean-up for La Mesa's older adults. This year's clean-up event will be on November 4. Youth Commissioners also oversee the City's teen website. Check out the website at www.cityoflamesa.com/teen.

Applications for the Youth Commission are available at La Mesa City Hall, 8130 Allison Avenue, by calling the City Clerk's office at 619-667-1120 or by visiting the City's website. Applications must be received in the City Clerk's office no later than 5:30 p.m., Thursday, September 7, 2006.

HELP YOUR NEIGHBORHOOD ON ELECTION DAY

If you are willing and able, why not consider being a poll worker on Election Day, November 7. Those who have already volunteered to serve at the polls are willing and committed but, at this point, are too few in number.

If you've ever given thought to serving your neighborhood and community in this way, now would be a good time. The Registrar of Voters will give you the training, the opportunity to work side by side with your neighbors or friends; and, more than likely, you will meet some new neighbors.

It is a long day–usually 6 a.m. to about 9:30 p.m.–but you will play perhaps the most fundamental and vital role in the democratic process by assisting the voters in your neighborhood to cast their ballots. Poll workers receive a stipend–recently increased to $75 up to $150, depending on the assignment–for being part of a team of fellow poll workers helping to "make democracy happen" in your area.

For details, call the Registrar of Voters office, Monday through Friday, 8 a.m. to 5 p.m. at 858-565-5800.

LA MESA APPRECIATION DAY GET INVOLVED

Is your civic organization, church or business looking for a team-building day or a way to give back to the community? Do you know a teen who is looking for a rewarding community service project? Are you an older adult who needs some help around the yard? Then La Mesa Appreciation Day is for you!

This year's event will take place from 8 a.m. until noon on Saturday, November 4. The location? All of La Mesa's 14 parks and at select older adult homes.

There are several ways that you can be involved. All ages are welcome to participate in La Mesa Appreciation Day.

- Help make La Mesa's parks shine. Recruit your organization to come to a La Mesa neighborhood park at 8 a.m. on November 4. Any size group is welcome. Projects range from light raking, trimming and weeding to planting, painting and litter control. Email commservices@ci.la-mesa.ca.us to sign up a group.
- Help La Mesa's older adults. It will make you feel good! Youth volunteers age 13-18, working in teams, will help seniors by sweeping walkways, porches and patios; raking; weeding; and trimming bushes and shrubs. An adult volunteer will supervise each team. Download a participation sheet at www.cityoflamesa.com.
- Are you an older adult who needs an extra hand? The project is also seeking La Mesa homeowners age 62 or older who need help with yard clean up. Only applications from seniors residing within La Mesa city limits will be accepted. Applications will be considered on the basis of need, such as chronic illness or functional limitations. Senior adult residents wishing to request help, or anyone who would like to refer an elderly neighbor or relative, may contact the La Mesa Adult Enrichment Center at 619-464-0505 to request an application form, or download a form at www.cityoflamesa.com.

La Mesa Appreciation Day is a project of the City of La Mesa, La Mesa Youth Advisory Commission, Commission on Aging and EDCO Disposal Corporation. For more information, call 619-667-1300.

CALSENSE MAKES SENSE IN CITY PARKS

Water conservation continues to be a focus of the City's Public Works Parks Maintenance Division through the use of a computerized irrigation control system. Calsense Centralized Control System was first installed in 2001 at Aztec Park. The system uses flow and valve monitoring to isolate stations that are running over a learned flow rate. The system also monitors for flow at unexpected times and shuts down the system while sending an alert to the central controls. The alerts allow Parks personnel to pinpoint and isolate problems to minimize water usage. The system also assists in managing staff scheduling.

Currently, Calsense controls water usage in a majority of the City's parks. By the end of September, all parks and several City facilities will be on the system. The Parks Maintenance Division is also researching the installation of several weather-related system components to further lessen overall water usage.

The Parks Projects is a Big Winner...*Continued from page 1*

community surveys, leadership interviews and neighborhood meetings drove the ultimate design of the project. Due to the size and estimated cost of the project, the City needed to recruit other public and private partners to join forces to complete the project. In supporting the creation of a separate non-profit foundation to assist with the fundraising, the City took a leap of faith that community partnerships would work. It did and it is still working today. It was truly a long-term focus and accomplished only through the unrelenting efforts of the City's public and private partners and the determination of those involved.

The PARKS Project began as a collaboration of five partners: the City of La Mesa, East County Family YMCA, La Mesa-Spring Valley School District, the Challenge Center and the La Mesa Athletic Council. In 1999, a non-profit foundation, the La Mesa Parks and Recreation Foundation, was created to spearhead the private fundraising efforts to enhance the public dollars. The resources of all the partners were leveraged to build two parks that improve community health through organized and individual sports, fitness, and recreation. The PARKS Project is providing recreational, social and physical activities for everyone for today and tomorrow.

The Results Of The PARKS Project Have Been Outstanding

- Over $6.9 million dollars was raised toward the completion of The PARKS Project. $1.2 million in private dollars was raised to support the overall effort. Of the total raised, the City of La Mesa has contributed only $500,000, with the remaining dollars coming from outside sources. The community partnerships have opened the door to alternative funding, eliminating total dependence on the City's tax base.
- Private business can bring revenue, attractive development and community clout in support of efforts that benefit their business and the City. A partnership with a developer who will build on City property adjacent to the park will support the daily maintenance costs at Briercrest Park on a long-term basis.
- The joint vision of the community partners solved a pressing community need that was too large for one entity to accomplish on its own.
- Volunteer involvement creates a respectful working relationship and a better understanding between public entities such as the City, the School District and private non-profit entities such as the YMCA or the local garden club. Their ownership creates a positive synergy and pride in the work they do for their community parks.
- The creation of a separate private non-profit foundation provides a long-term strategy for the protection of community recreational services regardless of the ebb and flow of the City's tax base. Their support of major capital improvement projects for the City leverages public funds with private dollars.
- The Foundation Board of Directors creates opportunities to develop volunteer leadership that will ultimately enrich the entire community.

The Helen Putnam Award was created in 1982 to honor cities that deliver the highest quality and level of service in an effective and efficient way. Since it's inception 24 years ago only seven of San Diego County's 18 cities have been award winners.

LA MESA'S PARKS ARE NOW TOBACCO FREE

Thanks to everyone who responded to the questionnaire regarding smoke-free parks that appeared in the April 2006 issue of La Mesa FOCUS. As a result of the total responses received through the public input process, the La Mesa City Council adopted Section 9.08.074 of the La Mesa Municipal Code designating all La Mesa City parks as smoke free and tobacco free environments. The new ordinance will go into effect August 10. Watch for new educational signs to be posted in your favorite La Mesa park.

CITY COUNCIL ACTIONS

March 7, 2006
Adopted a resolution approving a Real Property Agreement and Joint Escrow Instructions between the City of La Mesa and the County of San Diego for the transfer of the library property from the County to the City of La Mesa.

Adopted a resolution authorizing the acceptance of the FY 2004 State Homeland Security (SHS) grant of $38,858.96 for terrorism preparedness.

March 14, 2006
Adopted a resolution authorizing execution of a Second Amendment to the Community Recreation Agreement between the City of La Mesa and the Grossmont Union High School District.

Adopted an ordinance amending Chapter 10.23 to the La Mesa Municipal Code to regulate proximity of sex offenders to children's facilities.

Appointed members to the Youth Advisory Commission.

March 28, 2006
Ratified the Design Review Board's approval of DRB 05 21, a redesign of a previously approved multi-story parking structure located within the Grossmont Medical Campus.

Adopted a resolution amending Section 12.44.130 of the La Mesa Municipal Code to install a disabled persons parking space at 7311 Waite Drive.

Approved the designation of the Sara A. & Milo W. McNeil House located on 3rd Street as an historic landmark.

April 11, 2006
Adopted a resolution authorizing the execution of the Fourth Amendment to a contract for management and implementation of a Home Investment Partnerships Program Project allowing the La Mesa Loan Committee for Real Estate Rehabilitation to approve Housing Rehabilitation loans for health and safety repairs of up to $100,000.

Ratified the Design Review Board's approval of Design Review DRB-05-30 and the Planning Commission's approval of a Tentative Tract Map and Site Development Plan for a proposed two-lot subdivision of property located at 8442-8490 Parkway Drive and 8430-8478 and 8437-8487 Buckland Street to demolish 60 existing apartment units and construct 58 new condominium units on the property.

Adopted a resolution approving a Joint Exercise of Powers Agreement between the City of La Mesa and the La Mesa Redevelopment Agency creating the La Mesa Public Financing Authority for the issuance of Certificates of Participation to finance the construction of the interim library and post office building.

April 25, 2006
Appointed a member to the Youth Advisory Commission.

Adopted the Fee Schedule for Fiscal Year 2006-2007.

Upheld the Planning Commission's approval and denied an appeal of a proposed Site Plan Review to consider a modification to parking provisions to charge for parking at the Grossmont Medical Arts Building, DAB-05-13.

Approved the appeals of the Planning Commission's denial of eight Special Permits, SP 05-09 through SP-05-16 (Lucas & Mercier), to construct 5.5-foot fencing within front setback areas in the Serramar Development.

May 9, 2006
Adopted a resolution amending Section 12.24.020 of the La Mesa Municipal Code designating the alley between Spring Street and Palm Avenue as one-way in a southerly direction from Lemon Avenue to Finley Avenue.

Approved the application for an outdoor assemblage permit for the La Mesa Village Merchants' Association Classic Car Show.

Adopted a resolution authorizing the execution and delivery of Certificates of Participation (COPS) to finance the acquisition, construction, furnishing and equipping of a building to initially house a library and a United States Post Office.

May 23, 2006
Adopted the final amendment to the Blasting Regulations.

Adopted copy fees for Fiscal Year 2006-2007.

Adopted a resolution approving the La Mesa Terrace Mobile Home Relocation Impact Report as sufficient and requiring the provisions of the report to be implemented as a condition of approval of the closure of the Park.

Adopted a resolution authorizing the acceptance of the California Office of Traffic Safety mini-grant for the enforcement of the seatbelt campaign "Click It or Ticket."

June 13, 2006
Ratified the Design Review Board's approval of DRB 06-02, for a proposed wireless communications facility at 7484 University Avenue.

Adopted a resolution approving the allocation of FY 2005-2006 State of California 9-1-1 Emergency Communications Office Funds for the purchase of equipment to be used in the Police Department's Communications Center.

Adopted a resolution accepting an offer from Caltrans to design and construct a 100 meter long soundwall on the north side of highway 94 from the east end of their safety sound wall project easterly.

June 27, 2006
Adopted a resolution amending Section 12.64.010 of the La Mesa Municipal Code to reflect approved speed limits on six City streets.

Adopted resolutions pertaining to the General Municipal election to be held in the City on Tuesday, November 7, 2006, for the election of certain officers of the City.

Adopted an ordinance amending regulations pertaining to skateboard activity.

LA MESA COUNCIL PLANS TOWN HALL MEETINGS

The La Mesa City Council invites residents to participate in an open forum to share their ideas about La Mesa. How would you like to see City resources expended? These Town Hall meetings will be your opportunity to tell the Mayor and City Council what you like about La Mesa and how you envision the City in the future.

Connecting with the citizens of La Mesa continues to be one of the City Council's core values. Your attendance and participation at a Town Hall meeting is very important. The community input received during the two Town Hall meetings will establish the foundation on which the City Council will develop the next two-year budget for the years 2007-2009. The better your elected officials understand what residents think about La Mesa, the better able they will be to match budget dollars and City programs with citizens' concerns and their vision for La Mesa's future.

Two Town Hall meetings are scheduled. Choose the one that is most convenient for you. See the meeting schedule below. If you have any questions about the meetings, you may call the City Manager's Office at 619-667-1105.

Town Hall Meeting #1		*Town Hall Meeting #2*	
Date:	Monday, December 4, 2006	Date:	Tuesday, January 30, 2007
Time:	6 pm – 8 pm	Time:	6 pm – 8 pm
Location:	Parkway Middle School 9009 Park Plaza Dr.	Location:	La Mesa Middle School 4200 Parks Ave.

LA MESA TO FORM CITIZEN AD HOC COMMITTEES ON SIDEWALKS

Do you currently not have sidewalks on your street but would like to have them? Do you prefer the rural look of your neighborhood without sidewalks? Are you concerned about safety when you are walking or jogging? Are you tired of pushing strollers in the street? Should La Mesa have sidewalks in some areas of the City and not in other areas?

On August 29, 2006, the City Council directed staff to set up citizen ad hoc committees to discuss where sidewalks should or should not be constructed. The committees will help answer questions such as:

- How do sidewalks affect your quality of life?
- What should the criteria be for determining where sidewalks should or should not be constructed?
- Which streets need/don't need sidewalks and other improvements?
- Should sidewalks be installed in hillside areas?
- How walkable is your community?
- How important is a walkable community to health and safety?

Please consider applying for a position on an Ad Hoc Citizen Committee on Sidewalks. We need representation from all parts of the City of La Mesa, and we are looking for people with opinions both "for" and "against" sidewalks. Meetings will be held at convenient times.

WE NEED YOU! Contact Dirk Epperson, Assistant Engineer, at 619-667-1152 or depperson@ci.la-mesa.ca.us for more information on becoming a member of one of these committees. You may also apply online at www.cityoflamesa.com. Click on City News & Events.

KIDZ WATCH – A FREE SAFETY ACADEMY FOR CHILDREN AGES 6 TO 11

Does your child know what to do in case of an emergency? Does your child know how to stay safe?

Police officers, dispatchers, firefighters, lifeguards and park rangers, in partnership with many community-based organizations, will help teach your children to become safer, stronger individuals at the Kidz Watch Safety Academy. Geared for children ages 6 to 11, the program is offered free of charge.

Safety classes include: Stranger Danger, Neighborhood Watch, Nature Awareness, Fire Safety, Water Safety, Bike Safety and 9-1-1 & Kids. Classes are held weekly, and some classes may be held in the evening or on weekends. Parents are required to attend with their children.

Applications are available at the La Mesa Police Department. For more information, contact Marla Kingkade, Crime Prevention Specialist, at 619-667-1441.

LIVING WITH COYOTES

Coyote sightings are not uncommon in La Mesa. The range of the coyote covers the entire state. Being adaptable animals, you can find them anywhere from the middle of the desert to downtown city streets.

Coyotes play an important role in the ecosystem, helping to keep rodent populations under control. They are by nature fearful of humans; but, when coyotes are given access to human food and garbage, their behavior changes. They lose their sense of caution and fear, and this creates numerous problems including possible threats to human and coyote safety.

Statistically speaking, the risk of coyote harm to humans is almost non-existent. Most, if not all, of the few coyote bites that occur nationally each year are directly related to coyotes being fed by humans and include both intentional bites and accidental bites.

Here are important facts that everyone should know about coyotes:

- Coyotes are brownish gray in color. They have pointed ears, slender muzzles and bushy tails.
- Coyotes are active mainly at night but can be moving around at any time of day. It is not unusual to see a coyote in broad daylight.
- They will eat ANYTHING. Snakes, doughnuts, rodents, fruits and veggies, birds, pet cats and dogs, grass, pet food, carrion, grasshoppers and garbage are all on their menu.

You can help lessen conflict between coyotes and humans by taking a few simple precautions:

- Never feed or attempt to tame a coyote. Not only is feeding wildlife illegal in the City of La Mesa; attracting coyotes can lead to deadly conflicts with neighborhood pets. Coyotes can also carry diseases such as rabies and distemper.
- Do not leave small children or pets outside unattended.
- Trim ground level shrubbery to reduce hiding places.
- Put garbage in tightly closed containers.
- Remove sources of water, especially during drier times of the year.
- Bring in pets at night and do not leave pet food outside.
- Pick up fallen fruit from under your fruit trees.
- Ask your neighbors to follow these tips.

Coyotes can only be legally trapped if they meet certain criteria to be considered a public hazard. They must have chased or bitten someone or taken a domesticated pet within ten feet of a human being. If a coyote meets these standards, contact La Mesa Animal Control at 619-667-1436 or the Department of Agriculture Wildlife Management Unit at 858-694-2518. The Wildlife Management Unit has responded to coyote complaints in La Mesa in the past and follows State of California requirements for humane trapping procedures.

PEDESTRIAN TRAFFIC SIGNAL SAFETY – *A Primary City Concern*

Traffic safety is a primary concern of City elected officials and staff. This concern includes the safety and convenience of both vehicular and pedestrian traffic. We attempt to fairly balance the needs of all road users to meet these goals.

At intersections where pushbuttons are provided, pedestrians must push the button and wait for the WHITE WALKING PERSON light to appear. The traffic signal is programmed to respond to pedestrian demand and allow enough walk time for pedestrians to safely get across an intersection. DO NOT begin crossing the street if the RED HAND is ON or FLASHING. It is against the law to do so. If the RED HAND is FLASHING there is not enough walk time available to permit safe crossing.

Some of the City's newer signals are equipped with COUNTDOWN timers. These are designed to give the pedestrian more information, but they operate by the same rules as standard pedestrian signals.

When no pedestrian pushbuttons are available, the pedestrian sequence is pre-programmed and will occur at the beginning of a green light for each direction. Wait for the WHITE WALKING PERSON light to appear to begin crossing.

At some older traffic signals, where no pedestrian signals are installed, you are still required to push the pedestrian button and wait for a new green light to cross. This will hold the green light to allow enough time for a pedestrian to cross the intersection.

STORM WATER POLLUTION – TAKE THE QUIZ

1. What percent of water quality problems in the United States is a result of storm water pollution?

2. How many gallons of drinking water can be contaminated by just one gallon of illegally dumped motor oil?

Take a moment to look at the answers to the above questions at the end of this article. Do the answers surprise you? Is there something each of us can do to prevent storm water pollution? Yes, there is! Please consider the following prevention measures:

- Dry sweep exterior paved areas instead of using water.
- If water must be used for cleaning, use a mop and bucket.
- Avoid over-irrigation, and adjust timers accordingly.
- Minimize the use of pesticides, herbicides and fertilizers. If they must be used, ensure that instructions are followed.
- Perform vehicle maintenance indoors and use drip pans.
- Wash vehicles at a commercial car wash or over an area that prevents wastewater from entering the storm drain system.

Unlike the sewer system, where wastewater is treated, the storm drain system is designed to carry rainwater from City streets and driveways to prevent flooding. This water is not treated. It flows directly to creeks and rivers and, ultimately, the Pacific Ocean.

If you observe an illegal discharge, contact La Mesa's Storm Water Hotline at 619-667-1134. You may also file a complaint online. Additional educational materials are available on the City's website at www.cityoflamesa.com and on the Storm Water Bulletin Board at City Hill.

Do your part to help protect the environment and our quality of life in La Mesa and the greater San Diego area. Please pass this information along to friends and neighbors.

The City of La Mesa hosted two cleanup sites as part of the annual statewide California Coastal Cleanup Day on September 16. There were over 40 participants involved, including local Brownies and Girl Scouts. More than 200 pounds of trash and debris was collected during the event.

(Answers to questions: 1. 50 percent; 2. One million gallons)

Complaints About Low Flying Aircraft? Here's What To Do . . .

The local Federal Aviation Administration (FAA) Office handles complaints about low flying aircraft in the San Diego Region through the FAA's Flight Standards District Office (FSDO). If you have a complaint, this is what you need to do:

1. *Send a signed statement (no e-mail) describing the incident.*
2. *Gather as many witnesses as possible and have them provide signed statements.*
3. *Provide as much detail as possible (date, time, type of aircraft, N-number, direction of travel, estimated height, and how determined).*
4. *Send statements to:*
   San Diego FSDO
   Attn: Operations Unit Supervisor
   8525 Gibbs Drive, Suite 120
   San Diego, CA 92123
5. *You may be required to appear at a federal hearing to testify to what you observed.*

Before you submit your complaint, here are a few things to keep in mind. Aircraft in the process of taking off or landing are not subject to minimum altitude rules. Helicopters have no minimum altitude flight rules, but they may not endanger persons and property on the ground. Public use helicopters (police, fire) have wide latitude in the conduct of their operations.

"SLOW DOWN" SIGNS ARE AVAILABLE

Signs proclaiming "It's Our Neighborhood…Slow Down…Thanks!" are available to residents who wish to place them in their front yards. The signs, which are part of the City's Traffic Calming Program, are designed to serve as a reminder to speeding drivers to slow down.

Signs (one per residence, please) may be picked up during normal business hours at the following locations:
City Hall–8130 Allison Ave.
Community Center–4975 Memorial Dr.
Adult Enrichment Center–
8450 La Mesa Blvd
Police Department Storefront–
6119 Lake
Murray Blvd

FREE

Personal Finance Workshop for Kids and Their Parents

Young adults, grades 7-12, and their parents are invited to a FREE personal finance workshop. Give your kids a solid understanding of personal finance, earning, saving and spending income by attending this family workshop. You will learn the principals of personal economics using real life problems. In addition, participants will take home personal finance workbooks for ongoing education.

The workshop will be held Thursday, January 18, 2007, from 6-7 p.m. at the La Mesa Community Center, 4975 Memorial Drive. Although there is no charge for the workshop, registration is required. Call 619-667-1300 or email commservices@ci.la-mesa.ca.us.

The Personal Finance Workshop is sponsored by the La Mesa Park and Recreation Foundation and the EconEd Foundation in partnership with the City of La Mesa.

KNOW LA MESA'S SKATEBOARDING LAWS

Recently, the La Mesa City Council made modifications and additions to the La Mesa Municipal Code regulations that deal with skateboarding within City limits. These changes were made in response to complaints received by business owners.

Below is a summary of the skateboarding laws in La Mesa:

- It is unlawful for any person to skateboard upon the sidewalk in any business district within the City of La Mesa or upon any City roadway.
- No person shall ride on any sidewalk in such a manner as to interfere with pedestrians.
- It shall also be unlawful for any person to skateboard within any public property except within areas designated for such activities.
- It is unlawful for any person to skateboard within any privately owned property without written permission from the property owner.
- It is unlawful for any person to use, construct, or place upon any public property a ramp, jump platform, rail or similar device intended for use by a skateboard.
- Any person who violates a provision in the skateboarding ordinance is guilty of a misdemeanor.
- The City Attorney may request the performance of community service, as deemed appropriate by the court, as a result of committing a skateboarding offense.
- Any person who violates a provision in the skateboarding ordinance is subject to having their skateboard seized by law enforcement officers for evidentiary purposes.

The City encourages the use of the skateboarding facility at La Mesita Park, located at 8855 Dallas Street, La Mesa. The skate park is operated by the YMCA. The skateboarding ordinance (LMMC 10.21.010) can be viewed on the City website at www.cityoflamesa.com.

SENIOR HOUSING EXPO RETURNS

The City of La Mesa will host the third annual Senior Housing Expo on Wednesday, January 31, 2007. The FREE event will take place at the La Mesa Community Center, 4975 Memorial Drive, from 10:00 a.m. to 1:30 p.m. It is open to area seniors as well as to adult children of aging parents.

The event will feature more than 50 exhibitors, interesting speakers, and valuable resources on housing alternatives such as assisted living, 55+ residential communities, low-income senior and disabled rental housing, reverse mortgages, granny flat construction, home modifications, shared housing, and housing-related legal concerns. Other topics will include safety preparedness, energy savings, housing benefits for veterans and more. Jeff Isaac, the "Lawyer in Blue Jeans," will be the featured keynote presenter.

Shuttle service will be available from the parking areas. For other event information, call the La Mesa Adult Enrichment Center at 619-464-0505.

Event sponsors include Union Bank of California and MDC Development Corporation. The Housing Expo is hosted by the City of La Mesa, the La Mesa Park and Recreation Foundation and the La Mesa Commission on Aging, in partnership with Aging and Independence Services, AARP and other community organizations.

Event sponsorship and exhibitor opportunities are still available. Interested businesses and organizations may direct inquiries to Judy Stern, Human Services Manager, at 619-667-1490.

Report Abandoned Shopping Carts

The City of La Mesa contracts with a private company to collect abandoned shopping carts in La Mesa. If you see abandoned carts in your neighborhood, call the California Shopping Cart Retrieval Corporation at 800-252-4613. They will retrieve the cart within 48 hours. It is a crime to remove shopping carts from local businesses and violators will be prosecuted.

JOIN THE LA MESA ARTS ALLIANCE

The La Mesa Arts Alliance believes that a diverse community of artists and arts organizations is essential to the cultural, educational, social and economic vitality of our community.

Have you seen the colorfully painted utility boxes in the downtown area? This is just one of the public art projects that the Arts Alliance supports. If you have seen the boxes, enjoyed them, and would like to see more, the Arts Alliance needs your help.

Please join them in their goal to continue beautifying La Mesa. For information on how you can get involved, contact Kristen Blankenship at 619-248-6254 or Yvonne Garrett at 619-667-1300.

CITY COUNCIL ACTIONS

July 11, 2006
Ratified the Design Review Board's approval of DRB 06 06, for a proposed wireless communications facility at 9550 Murray Drive.

Approved a Caltrans District 11 Landscape Maintenance Provisions Agreement for work and maintenance of a portion of the Caltrans SR 125 right-of-way adjacent to the City owned Briercrest Park site that is being developed for the senior residential care/assisted living facility.

Adopted an Ordinance adding Section 9.08.074 of the La Mesa Municipal Code entitled Smoking Prohibited In Parks.

Approved the final Community Plan design concept for the University Avenue Revitalization Project and the Negative Declaration.

July 25, 2006
Ratified the Design Review Board's Approval of DRB 06-05 for a proposed wireless communications facility at 8851 Center Drive.

Adopted a Resolution amending Section 12.44.130 of the La Mesa Municipal Code for the installation of a disabled persons parking space at 7000 Hybeth Drive.

August 8, 2006
Ratified the Design Review Board's approval of DRB 06-09 for a proposed remodel to a single-family residence at 4567 Acacia Avenue.

Ratified the Design Review Board's approval of DRB 06-12 for a proposed addition of a second unit and garage to an existing single-family residence at 8345 Pasadena Avenue.

August 22, 2006
Adopted a Resolution approving a Lease Agreement with American Medical Response (AMR) for use of Fire Station 11.

Adopted an Ordinance amending Chapter 2.32 of the La Mesa Municipal Code to reestablish the Community Services Commission pursuant to the authority of the City Council.

Approved the annual report on the Neighborhood Traffic Management Program.

Denied the appeal and upheld the Planning Commission's approval of TTM 05-02/DAB 05-07, and SP 05-18, La Mesa Meadows (Reynolds Communities), for the proposed construction of 31 single-family residences on a 37-lot subdivision of an approximately 11-acre site located on the west side of State Route 125, on the north and south sides of Highfield Avenue.

September 12, 2006
Ratified the Design Review Board's approval of DRB-06-01, for a proposed wireless communications facility at 7840 El Cajon Boulevard.

Ratified the Design Review Board's approval of DRB-06-03, for a proposed wireless communications facility at 5575 Lake Park Way.

Ratified the Design Review Board's approval of DRB-06-08, for a proposed wireless communications facility at 8691 Echo Drive.

Adopted a Resolution in support of Proposition 83, "The Sexual Predator Punishment and Control Act: Jessica's Law," on the November 2006 Ballot

Denied a 178-unit condominium development proposed by William Lyon Homes, Inc. (Portola) located at 7380 Parkway Drive and 5315 Maryland Avenue.

September 26, 2006
Adopted Resolutions pertaining to the final approval of a proposed development of 527 apartments and supporting commercial space by Fairfield Grossmont Trolley LLC on a site located on the south side of Fletcher Parkway at the Grossmont Center Drive Bridge.

La Mesa Community Redevelopment Agency adopted a Resolution approving the First Amendment to an Affordable Housing Agreement with Fairfield Grossmont Trolley LLC.

Adopted an Ordinance amending Chapter 10.38 of the La Mesa Municipal Code to update regulations pertaining to the consumption of alcohol by minors.

WALK LA MESA...

JUST FOR THE FUN OF IT!

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Find out where by picking up a brochure at City Hall, the Community Center or the Adult Enrichment Center. The brochure is also available online at www.cityoflamesa.com/Departments/Community Services.

DO YOU LOVE A PARADE?

If your answer is YES, the La Mesa Flag Day Parade Committee needs you! Volunteers are now being recruited to assist with organization of the 2007 parade, which will be held on Saturday, June 2. Volunteer meetings are held once a month from January to June. To volunteer call Yvonne Garrett at 619-667-1300 or email commservices@ci.la-mesa.ca.us.

"SUNDAYS AT SIX" SUMMER CONCERTS TO LAUNCH 6TH YEAR OF FREE SUMMER MUSIC

For six Sunday evenings in June and July, the sound of music fills the air at the Harry Griffen Park Amphitheatre. These free summer concerts are brought to you by a dedicated group of community volunteers who secure the services of quality musical entertainment for your enjoyment.

The 2007 concert committee is looking for a few good volunteers to assist with the organization of the concert series. The committee is also seeking community sponsors to support the cost of printing schedules, rental of sound equipment for the bands, and refreshments for the musicians who donate their time.

To volunteer or to provide financial support for the concert series please contact La Mesa Community Services at 619-667-1300 or commservices@ci.la-mesa.ca.us.

WHAT IS HAPPENING AT THE GROSSMONT TRANSIT STATION?

Architect's rendering of the view from the top of the elevator bridge structure overlooking the apartment community.

The Grossmont Transit Station, located on the south side of Fletcher Parkway at Grossmont Center Drive, is the site of much activity of late. The long awaited groundbreaking for this smart growth project took place on December 14, 2006. The transit-oriented development project is the result of a partnership of the City of La Mesa, MTS, SANDAG, and Fairfield Residential. La Mesa has a history of building smart growth projects throughout the community. The Grossmont Transit Station project will be the latest planned award-winning development along the green and orange lines of the trolley.

Architect's rendering of the apartment project with commercial space oriented toward the trolley platform.

The development consists of two levels of structured parking on both sides of the Grossmont Center Drive bridge topped by three to four levels of apartments. The lower level of the parking structure will replace the transit station parking spaces and the second level of parking will serve the apartments. There will be a small amount, approximately 3,000 square feet, of commercial use at ground level oriented to the transit station platform.

Fairfield Residential is building 527 apartment units, consisting of 279 one-bedroom units and 248 two-bedroom units. Of the 527 units, 15 percent (80 units) will be made available to very low- and moderate-income households. These units will be funded by the La Mesa Community Redevelopment Agency in the amount of $2.7 million of housing set-aside money. The project will be developed in two phases, starting with the west side of the Grossmont Center Drive bridge. The first phase, to be named Pravada, will have 230 apartments. The second phase construction of 297 apartments will start on the east side of the bridge in late 2007; this development will be named Alterra.

The transit platform will also be improved to include many pedestrian amenities. This station currently has only a steep staircase to provide access from the trolley platform to the employment/entertainment centers at the top of the hill. Starting construction in 2007, two elevators and a bridge structure will greatly improve access to the top of the hill. These trolley platform improvements will be funded by a grant that the City of La Mesa received from SANDAG in 2006.

The public improvements, complemented by the planned private improvements, will transform this transit station into a well-used, pedestrian-friendly regional transit center exemplifying smart growth principles. Anyone interested in the apartment community can call Fairfield Residential at 858-824-6464.

CITY UPDATES BLOCK PARTY PERMIT POLICY

The La Mesa Municipal Code (Section 10.50.020) specifies that Block Party/Temporary Street Closure permits are required any time a special event takes place that has an impact on public lands or thoroughfares; that occurs on a city street, sidewalk, alley or other street right-of-way; and that is likely to obstruct, delay or interfere with the normal flow of pedestrian or vehicular traffic.

The City requires this permit in order to inform the public, other agencies and City forces, while minimizing impacts to the neighboring community, traffic, and citizen safety during the temporary closure.

In our continuing effort to provide the best service possible to the community, the City has revised the process for obtaining temporary street closures for block parties. The policy changes will provide better direction concerning the application process and reduce the number of times an applicant needs to visit City Hall.

A few of the more important changes that will help streamline the process are: making the forms and instructions available on the City's website; having City staff be responsible for obtaining authorized signatures from the police and fire departments; allowing the use of vehicles as barricades; and not charging additional fees in conjunction with obtaining a permit for sound amplification for private use.

The City would like to thank community members for taking the time to provide valuable feedback and offer us the opportunity to address your concerns.

ANNOUNCING SPRING CLEAN-UP 2007!

The City of La Mesa and EDCO Disposal Corporation will be holding Spring Clean-Up 2007 on two Saturdays in April. This is your opportunity to dispose of reusable items, unwanted furniture, large appliances, landscape material, waste debris from improvement projects, and just plain junk – ***all for FREE!***

The event will be held between 7 a.m. and 2 p.m. at EDCO Station, 8184 Commercial Street.

If you live SOUTH of Interstate 8, your clean-up day is APRIL 14.
If you live NORTH of Interstate 8, your clean-up day is APRIL 21.

This annual event is for residents who live within the incorporated city limits ONLY. You MUST bring a California driver's license showing your La Mesa address. DO NOT bring items from a household outside La Mesa city limits.

There are some restrictions on the items that can be accepted. This is NOT a household hazardous waste (HHW) collection event. We will NOT accept televisions; computer monitors; home electronics; tires; or items labeled poison, flammable, corrosive or explosive. To dispose of HHW for free, call 619-287-5696 ext. 4270.

We also will NOT accept waste from businesses, contractors or professional landscapers.

A limited amount of free mulch will be available on a self-loading, first-come, first-served basis.

WATER QUALITY MONITORING CONTINUES IN LA MESA

For the past 13 years the City of La Mesa has been collecting water samples from the environment to assess the City's water quality. When the process began, the samples collected were tested for elevated concentrations of pollutants such as ammonia, chlorine, copper, detergents and phenol. The water sampling process has evolved to include testing for concentrations of metals, nutrients, pesticides, oil and grease, and bacteria. Each year, water samples are collected from 18 locations in La Mesa. The samples are tested in the field and are also sent to a state-certified laboratory for analysis.

Recent results show some increase in concentrations of ammonia, detergents and bacteria. However, metals, pesticides, oil and grease, nitrates, and phosphates have remained at lower concentrations. What does this mean?

Everything that we do may have a potential impact on water quality, the environment and our overall quality of life. Sources of ammonia include sewage, household cleaners and fertilizers; detergent sources include compounds used for cleaning such as soap; while bacteria includes sewage, pet waste and decaying material.

Implementing good housekeeping measures is a great way to bring down concentrations of ammonia, detergents and bacteria. Such measures will also help maintain lower concentrations of other pollutants. Here are a few ways that you can help decrease or maintain low pollutant concentrations:

1. Pick up after your pet and place waste in trash cans.
2. Dry sweep exterior paved areas instead of using water.
3. If water must be used for outdoor cleaning, use a mop and bucket; then dispose of wash water in the sanitary sewer.
4. Avoid over-irrigation and adjust timers accordingly. (The added benefits are a lower water bill and a more efficient use of water.)
5. Minimize use of pesticides, herbicides, and fertilizers. If they must be used, ensure that instructions are followed and that over-spray is minimized. (Proper application could actually save you money.)
6. Keep trash receptacle lids closed and schedule regular pick-ups.
7. Perform vehicle maintenance indoors and use drip pans.
8. Wash vehicles at a commercial car wash or over an area that prevents wastewater from entering the storm drain system. Minimize the amount of soap used.

Storm drains are different than the sewer system. Water entering the storm drain system does not get treated. It flows directly to creeks and rivers and, ultimately, the Pacific Ocean. Please do your part to help protect the environment and our quality of life in La Mesa and neighboring communities. If you have questions or concerns or would like storm water educational materials, call La Mesa's Storm Water Hotline at 619-667-1134 or access the City's website at www.cityoflamesa.com.

CITY OF LA MESA

Independent Citizens' Bond Oversight Committee

2006 Annual Report to the Community — January 2007

A Letter from the Chair –

The Independent Citizens' Bond Oversight Committee (ICBOC) is pleased to provide this 2006 Annual Report. The ICBOC hopes you find the information both useful and a validation of the process overwhelmingly approved by La Mesa voters on March 2, 2004.

The ICBOC is responsible for ensuring that the bond proceeds are expended in compliance with Proposition D and are not used for administrative salaries or other City operating expenses including the preparation and submittal of this Annual Report. The ICBOC has determined that this criteria has been successfully met on all proceeds expended to date.

After being in existence for one year, the ICBOC issued its Initial Report, which was presented to the community in September 2005. The first Annual Report for Calendar Year 2005 was presented in January 2006. This report represents the second Annual Report following ICBOC review of the City's annual audited financial statements for Fiscal Year 2005-2006. The audit reports can be viewed on the City's website at www.cityoflamesa.com/Departments/AdministrativeServices/Audits.htm. Subsequent reports will be issued on an annual basis following the committee's review of each fiscal year's audited financial statements.

The ICBOC continues to meet quarterly in an open, publicly noticed environment and addresses items from a formal agenda with Minutes transcribed. Your attendance is welcome as we collectively ensure that the City of La Mesa invests your tax dollars in

Your Tax Dollars At Work – Proposition D Project Updates

New Fire Station Is Open for Business

La Mesa Fire personnel moved into their new $7.4 million headquarters on August 16, approximately two and one-half years following the passage of Proposition D. The project was completed on time and on budget with change orders held to a minimum due to extensive up-front work and good project management. The station opening was delayed several weeks by some vandalism and a problem with the driveway design which caused the driveway to have to be re-poured at the cost of approximately $36,000.

The new Fire Station 11 is more than 6,000 square feet larger than its 14,000 square foot predecessor. More important, the new building replaces a cramped and outdated one, which could not have withstood a major earthquake or other disaster, with a seismically safe facility.

The new station boasts a state-of-the-art emergency operations center equipped with the latest technology, a commercial grade kitchen, a fitness room, and private bedroom and bathroom facilities that can house both male and female firefighters. This is a major upgrade from the old station where emergency vehicles were kept outside, firefighters' exercise equipment shared floor space in the apparatus bay with fire engines, personnel slept in one common room, and only a few computers could access the city's network at any one time due to old and insufficient wiring.

In the new station, a computer system will alert only the necessary fire personnel instead of one alarm waking everyone. Other technologically advanced features will cause the TV volume to be decreased when dispatch calls come into the station and will automatically shut off the gas stove when crews leave. Similarly, motion sensors in all common rooms will turn off lights when the room is no longer in use. These safety features are time savers as well. In fact, the greatest benefit for residents is the expected improvement in response times. Valuable seconds were sometimes lost at the old station because emergency vehicles were parked outside and had to be kept locked.

ICBOC PRESENTS 2006 ANNUAL REPORT TO THE COMMUNITY

In March 2004, the citizens of La Mesa overwhelmingly approved Proposition D, the City of La Mesa Fire, Police and Emergency Services Measure. Along with authorizing the sale of general obligation bonds to construct or rehabilitate the City's public safety facilities, the measure also created the Independent Citizens' Bond Oversight Committee (ICBOC).

The ICBOC is tasked with ensuring that bond proceeds are expended in compliance with Proposition D and are not used for administrative salaries or other City operating expenses. The ICBOC is also responsible for an annual report to the community, outlining the progress made and any challenges encountered.

The ICBOC presented their 2006 Annual Report to the Community at the January 9, 2007 City Council meeting. The report contains a project update and a financial report, which concludes that the City spent bond money as required on allowable voter-approved projects.

Copies of the report are available on the City's website or at La Mesa City Hall, Community Center and Adult Enrichment Center. Also available on the website are ICBOC meeting agendas, minutes and expenditure summaries.

Members of the community are welcome to attend the quarterly ICBOC meetings. For meeting dates, times and locations, check the City website at www.cityoflamesa.com, call 619-667-1162, or send an email to ICBOC@ci.la-mesa.ca.us.

FIRE STATION 13 REMODEL UNDERWAY

The City is working with Jeff Katz Architecture to develop plans on a remodel project to upgrade the livability of Fire Station 13 as well as bring the station up to current earthquake standards. Construction will begin in early 2007 and will be completed within 6 to 8 months. Some of the proposed highlights include:

- **individual bunk rooms**
- **new roof**
- **improved landscaping and visual sightlines**
- **dedicated physical fitness room**
- **new HVAC system**

The original station was built in 1961 to house an engine company and three firefighters. Today the station houses a front line pumper and a reserve engine as well as three firefighters. Fire department personnel are eagerly awaiting the completion of the remodel and are looking forward to serving the community from a new and improved Fire Station 13. The department is grateful to the La Mesa voters who passed Proposition D, which provided funding for a new Station 11 and remodel of Station 13.

PREPARING FOR THE PANDEMIC FLU

This is the first in a series of articles intended to prepare you, your family and the community for the potential arrival of a pandemic flu outbreak. The article covers the differences between the seasonal flu we see each year and a pandemic flu. It also provides links to additional information and offers tips on how to protect yourself.

WHAT CAN YOU DO TO PROTECT YOURSELF?

Preparing for a pandemic flu can reduce your chances of getting sick and help limit the spread of disease. Stay healthy by eating a balanced diet, exercising daily, getting enough rest and drinking fluids. And . . . get your seasonal flu shot.

Stay informed by keeping up to date on a possible pandemic by listening to radio and television, reading news stories and checking out the web. These common-sense steps can help stop the spread of influenza germs:

- Wash hands frequently using soap and water.
- Cover coughs and sneezes with tissues. Cough or sneeze into your sleeve. Put used tissues in the trash and then wash your hands.
- If you get sick, stay home and away from others as much as possible.
- Avoid close contact with people who are sick.

A FREQUENTLY ASKED QUESTION—

Will the seasonal flu shot protect me against pandemic influenza?

- No, it won't protect you against pandemic influenza. But flu shots can help you to avoid seasonal flu.
- Get a flu shot to help protect you from seasonal flu.
- Get a pneumonia shot to prevent secondary infection if you are over the age of 65 or have a chronic illness such as diabetes or asthma. For specific guidelines, talk to you your health care provider.
- Make sure that your family's immunizations are up to date.

FOR MORE INFORMATION GO TO:

- www.cdc.gov: General information about pandemic flu and other health-related information.
- www.redcross.org: All the information you will need to make your own emergency preparation plan.
- www.pandemicflu.gov: Provides updates on national and international pandemic flu.
- www.sdbirdflu.com: General information and preparedness steps from the County of San Diego.

OR CALL:

- The Centers for Disease Control and Prevention (CDC) hotline, 1-800-232-6348.

Some Differences Between Seasonal Flu and Pandemic Flu

(Information Provided by the U.S. Department of Health and Human Services)

SEASONAL FLU

Caused by influenza viruses that are similar to those already circulating among people.

Symptoms include fever, headache, tiredness, dry cough, sore throat, runny nose and muscle pain. Deaths can be caused by complications such as pneumonia. Healthy adults are usually not at risk for serious complications; the very young, the elderly, and those with certain underlying health conditions are at increased risk for serious complications.

Every year in the United States, on average:

- 5% to 20% of the population gets the flu
- More than 200,000 people are hospitalized from flu complications
- About 36,000 people die from flu

PANDEMIC FLU

Caused by a new influenza virus that people have not been exposed to before. Likely to be more severe, affect more people and cause more deaths than seasonal influenza because people will not have immunity to the new virus. Symptoms similar to the common flu but may be more severe and complications more serious.

Healthy adults may be at increased risk for serious complications.

The effects of a severe pandemic could be much more damaging than those of a regular flu season. It could lead to high levels of illness, death, social disruption, and economic loss. Everyday life could be disrupted because so many people in so many places become seriously ill at the same time. Impacts could range from school and business closings to the interruption of basic services such as public transportation and food delivery.

The next article in the series will provide information on preventing the spread of disease at home, caring for sick family members and preparedness measures.

PLAN – PREPARE - STAY INFORMED

CITIZENS SHARE THEIR IDEAS AND CONCERNS AT TOWN HALL MEETINGS

The La Mesa City Council invited residents to two Town Hall meetings to share their ideas and concerns about La Mesa. The first open forum was held on December 4, 2006, at Parkway Middle School; the second (as this issue of the FOCUS goes to press) is scheduled for January 30, 2007, at La Mesa Middle School.

The community input received during the two Town Hall meetings will be compiled and reported to the City Council during their annual strategic planning workshop in March. Moreover, the citizen input will establish the foundation on which the City Council will develop the next two-year budget for the years 2007-2009.

Watch for a complete Town Hall Meeting report in the May 2007 issue of La Mesa FOCUS. The report will also be available on the City's website.

CITY COUNCIL ACTIONS

October 10, 2006
Ratified the Design Review Board's approval of DRB 05-37 for a proposed wireless communications facility at 6952 University Avenue.

Adopted a resolution authorizing the acceptance of the Urban Area Security Initiative Grant (UASI)of $51,000 for terrorism preparedness.

Appointed six members to the Youth Advisory Commission.

October 24, 2006
Ratified the Design Review Board's approval of DRB 06-15 for proposed alterations to a commercial building at 8555 Fletcher Parkway.

Adopted a resolution authorizing a Memorandum of Understanding with the San Diego County Sheriff's Department for membership in the Regional "Anti-Human Trafficking Task Force."

Adopted a resolution authorizing the acceptance and expenditure of the 2005 Law Enforcement Terrorism Prevention Program grant funds.

Adopted an ordinance adjusting Mayor and City Council compensation.

Designated the Harry and Vada Robertson house located at 4582 Palm Avenue as a historic landmark and entered into a Historic Landmark Property Preservation Agreement with the property owners.

November 14, 2006
Adopted a resolution authorizing the acceptance of Commercial Landscape Incentive Program grants from the San Diego Water Authority and the Helix Water District for irrigation system upgrades.

Adopted a resolution adding Subsection 12.28.030 (74.15) to the La Mesa Municipal Code, establishing King Street as a stop street at Lois Street.

Adopted a resolution authorizing the continuing use of Supplemental Law Enforcement's Citizens Option for public safety (COPS) funds for the San Diego County 800 mhz Regional Communications System (RCS).

Adopted a resolution authorizing a grant application to SANDAG for the New Freedom Federal Transportation Funding program.

November 28, 2006
Approved the first amendment to a ground lease with Briercrest Development, L.P., for the development of property at Briercrest Park for a senior care facility.

Adopted a resolution approving grant of easement to San Diego Gas & Electric Company over a portion of lots 81, 82, 83 and 84 of Murray Hill, map 1342 (Harry Griffen Park access road).

Adopted an ordinance amending Chapter 22.03 of the La Mesa Municipal Code regulating the conversion of existing residential development (condominium conversion).

December 12, 2006
Adopted a resolution reciting the fact of the General Municipal election held on November 7, 2006, declaring the results and such other matters as provided by law.

Ratified the Design Review Board's approval of DRB-06-19 for proposed exterior alterations to a commercial building at 8341 La Mesa Boulevard.

Ratified the Design Review Board's approval of DRB-06-20 for an approximately 10,700 square foot addition and a remodel to the existing John A. Davis Family YMCA building located at La Mesita Park, 8881 Dallas Street.

Adopted a resolution authorizing execution of a lease agreement with the Foothills Art Association for use of the building known as Porter Hall at 9410 Memorial Drive.

Adopted a resolution authorizing the renewal of the Police Department Storefront lease for a three-year term.

Adopted a resolution approving the Expense and Use of Public Resources Policy in compliance with Assembly Bill 1234.

DO THE RIGHT THING!

Do you want to do the right thing and dispose of household hazardous waste properly? If you reside within the City limits of La Mesa, you are eligible to participate in the City's free Household Hazardous Waste Drop-off Program. Events during 2007, available by appointment ONLY, will be held on:
March 24, May 19, July 21, September 15 and November 17.
Call EDCO Disposal Corporation at 619-287-5696, extension 4270, to schedule an appointment or to request additional information.
Not sure what "household hazardous waste" or "HHW" is? Log on to www.cityoflamesa.com, click on "City Services A-Z," then click on "H." This will direct you to the Environmental Services Division web pages and information about HHW, electronic waste (e-waste), and more.

THE RESULTS ARE IN!

TOWN HALL MEETINGS RATED A SUCCESS

The results of two recent "town hall meetings" conducted by the La Mesa City Council have been compiled. In an open invitation to residents that appeared on the front page of the November 2006 *La Mesa FOCUS* as well as on the City website home page, the City Council asked residents to participate in one of two open forums to share their ideas and concerns about La Mesa. The initial meeting on December 4, 2006, was held at Parkway Middle School; the second meeting was held at La Mesa Middle School on January 30, 2007. Nearly 100 people attended the two open forums.

In addition to the opportunity to provide verbal comments, participants were asked to complete a brief written survey. Asked what they like most about the City and their neighborhood, La Mesa's "small town atmosphere" was cited most often at both forums (26.5%). What one thing could be improved? Again, participants at both meetings agreed: The City's infrastructure is of greatest concern, with sidewalk and street repair mentioned most often (39.3%).

When asked what one, big change participants would like to see happen in La Mesa over the next five to ten years, infrastructure improvements (such as sidewalks and walkability, additional traffic-calming measures, undergrounding of utilities) and redevelopment (for example, revitalizing the downtown village, improving old commercial and residential areas, encouraging infill and mixed-use projects), were most often cited at both forums. At Parkway Middle School, residents rated infrastructure concerns (44.7%) higher than redevelopment (21.3%); while the reverse was true at La Mesa Middle School, with redevelopment (37.3%) outranking infrastructure needs (23.7%). (See the accompanying graph.)

At their annual strategic planning workshop on March 20, the City Council discussed the town hall meeting results. Overall, the Council felt the town hall meeting format was highly successful. In fact, the Council decided to hold two such meetings each year in the future in various locations to cover all areas of the City. Also, to encourage as many people as possible to attend, future town hall meetings will be scheduled at different times during the day.

The community input received at the recent town hall meetings establishes the foundation on which the Council will develop the next two-year budget for the fiscal years 2007-2009.

Watch for your invitation to future town hall meetings in the *La Mesa FOCUS* and on the City's website, because connecting with La Mesa residents continues to be very important to the Council.

(See complete town hall meeting results at www.cityoflamesa.com.)

Survey Question 7: **Over the next 5 to 10 years, what one big change would you like to see happen in the City of La Mesa/your neighborhood?**

"A SALUTE TO OLD GLORY!"

La Mesa Celebrates Its Annual Flag Day Parade

Saturday, June 2, at 10 a.m., La Mesa's downtown will dress up in red, white and blue for the City's annual Flag Day Parade, "A Salute to Old Glory!" The traditional parade, which marches through the downtown Village, will feature some 75 entries, including six marching bands led by the U.S. Marine Corps Band. Spectators young and old will enjoy floats, military vehicles, equestrian units and youth groups. Active and retired war heroes will participate, and a parade highlight will be a 20-foot-wide flag carried by community volunteers. Don't forget to stop by the KSON Radio listener booth located at Palm Avenue and La Mesa Boulevard to pick up a free flag while supplies last.

There will be two free patriotic pre-parade concerts, with the La Mesa Middle School band performing at La Mesa Boulevard and Palm Avenue, and the Granger Middle School jazz band performing at La Mesa Boulevard and Nebo Drive. Each band will play from 9 a.m. to 10 a.m. Spectators are encouraged to dress in patriotic attire and cheer on parade participants.

The City of La Mesa thanks the La Mesa Flag Day sponsors including: La Mesa Rotary, Wal-Mart, KSON 97.3 and 92.1 Country Radio, La Mesa Community Welfare Association, La Mesa Women's Club and the La Mesa Spring Valley Education Foundation.

For more information, log onto www.cityoflamesa.com or call the parade hotline at 619-464-3761.

This year the parade will honor La Mesa military recently returned from the war. To participate call 619-667-1300.

VOLUNTEER YOUR TIME AND TALENT

Public involvement is crucial to the City's decision-making process; and you can help make the best, most informed decisions possible for the benefit of the entire community. Volunteer your time and talent by becoming a member of one of the City's boards, commissions or committees. You will provide input and make recommendations to the City Council and staff, help your City, and meet and work with people with similar interests and knowledge.

The following is a brief summary of the roles and responsibilities of the City's advisory bodies for which vacancies will exist in June. (Youth Advisory Commission terms expire in September.) With a few exceptions, most advisory groups meet only once a month for a couple of hours.

- **COMMISSION ON AGING** advises the City Council on programs, projects and issues that address the concerns and needs of older adults in the community. The commission plans and coordinates community education and information forums on senior topics and issues; provides support to projects and activities for the elderly; and advises on the development of senior programs and initiatives. Members must be at least 55 years of age at the time of appointment.
- **DESIGN REVIEW BOARD** reviews and approves development plans for compliance with the Urban Design Program and makes recommendations on development proposals and other design-related issues as directed by the City Council.
- **HISTORIC PRESERVATION COMMISSION** advises the City Council on historic preservation, including review of development plans and the La Mesa Historic Resources Inventory; nominates structures to the register of designated landmarks; encourages private efforts to protect historic resources; and provides advice and guidance to property owners of historic resources.
- **HUMAN RELATIONS ADVISORY COMMISSION** advises the City Council on matters that promote goodwill in the community. The Commission explores issues and develops activities that respect diversity and promote positive human relations.
- **LA MESA COMMUNITY PARKING COMMISSION** advises the City Council regarding parking issues within the Parking District. The Commission ensures cost-effective public parking that meets the needs of the City's businesses, residents and patrons by involving the community in parking management decisions.
- **LOAN COMMITTEE FOR REAL ESTATE REHABILITATION** approves or disapproves all loan and grant applications for the rehabilitation of qualifying homes in the City of La Mesa. It reviews and makes disposition of all cases involving deferred payment loans and lead-based paint grants.
- **PLANNING COMMISSION** advises the City Council on land use matters, including review of development plans for consistency with the General Plan, Zoning Ordinance, Subdivision Ordinance and Sign Ordinance; reviews Special Permits, Conditional Use Permits and Variances; reviews appeals from staff and Development Advisory Board determinations; and addresses other duties as required by state law.
- **YOUTH ADVISORY COMMISSION** advises the City Council on matters that address the concerns of youth in the community. The Commission explores and develops activities and issues that promote positive youth relations in La Mesa. Members must be at least 13 years and not more than 20 years of age at the time of appointment.

Please give serious consideration to serving on a board, commission or committee. Applications and specific information regarding qualifications, requirements for serving and meeting days and times are available by accessing the City's website at www.cityoflamesa.com or visiting the City Clerk's office at City Hall, 8130 Allison Avenue, or calling 619-667-1120. Applications must be submitted to the City Clerk's office no later than Tuesday, June 5, to be included in the June interview and selection process.

DON'T BE A VICTIM OF AUTO THEFT!

The La Mesa Police Department is committed to working with the community to combat crime. Based on current crime statistics, these are the top five vehicles stolen in San Diego County during 2006:

#1 – Honda Accord #2 – Honda Civic #3 – Acura Integra
#4 – Saturn SL #5 – Ford Explorer and Toyota Camry

Take the following preventative measures to help protect your vehicle:

- Park your car in a garage if possible.
- Use security devices such as a club or alarm. Thieves don't like to draw attention to themselves.
- Take car keys with you. A large number of stolen vehicles had keys left in them.
- Lock your car. Often, stolen vehicles are left unlocked.
- Completely close vehicle windows when parking. Don't make it easier for a thief to enter your vehicle.
- Park in well-lit areas.
- Report suspicious activity. Most law enforcement arrests start with a call from a concerned citizen.

For additional information, contact the La Mesa Police Department Crime Prevention Unit at 619-667-1445 or 619-667-1441.

"SUNDAYS AT SIX"

CELEBRATES SIXTH SEASON

A Free Summer Concert Series at Harry Griffen Park

The popular "Sundays at Six" summer concert series launches its sixth season June 10 at 6 p.m. in the Amphitheatre at Harry Griffen Park, 9550 Milden Street, La Mesa.

The one-hour concerts are free, and spectators are welcome to bring picnics (no glass, please). Spend a wonderful evening in the company of friends and family at "Sundays at Six."

The season kicks off with the popular Fleet Jazz Band from Navy Southwest. Following is a listing of the 2007 season concerts:

June 10 .....Navy Jazz Band Southwest
June 17 .....San Diego Concert Band
June 24 .....Marsha Foreman Band (Swing/Standards)
July 8.....Ron Jermain Big Band
July 15..... Breez'n Variety Band
July 22.....Mark Jackson Country Band

"Sundays at Six" is sponsored by Wells Fargo Bank and Central Park Luxury Condominiums in collaboration with the City of La Mesa and the La Mesa Arts Alliance. For additional information, call 619-667-1300.

NEW STORM WATER PERMIT ADOPTED

New environmental requirements in La Mesa are on the horizon, and they will affect industrial facilities, commercial businesses, construction sites and residential areas. They also require everyone to be aware of storm water pollution prevention.

On January 24, the San Diego Regional Water Quality Control Board (RWQCB) adopted Order No. R9-2007-0001, the renewal of the San Diego County Municipal Storm Water Permit. The order increases requirements to further protect water quality within the 22 cities and various agencies in San Diego County, including, but not limited to, the following:

1. Capture and treatment of runoff at new development and redevelopment project sites.
2. Storm water pollution prevention inspections on an annual basis at industrial and commercial facilities.
3. Additional water quality monitoring and enforcement requirements.
4. Adoption of a Hydromodification Management Plan (control of post-project runoff to ensure only pre-project runoff is discharged).
5. A Regional Urban Runoff Management Program for a unified regional approach to storm water pollution prevention.
6. Enforcement of a storm water ordinance for all residential areas.
7. A Program Effectiveness Assessment to directly address water quality concerns.

SOME HELPFUL HINTS:

- Dry sweep your property instead of hosing.
- Store materials under cover.
- Provide secondary containment for liquids.
- Do not over-irrigate.
- Place trash in trash cans and keep covered.

Should you have questions, feel free to contact La Mesa's Environmental Specialist, Malik Tamimi, at 619-667-1134, or stop by City Hall and pick up a storm water pollution prevention form from the City's storm water bulletin board.

Remember – only rain down the storm drain!

CHILDREN AND FIREPLAY

A DANGEROUS COMBINATION

Juvenile firesetting has been identified as the fastest growing fire threat in the United States. Annual statistics show that more than 300 people die each year and approximately $1 billion in property is destroyed in fires set by children. More than 30 percent of the victims in these fires are the children themselves.

What exactly is juvenile firesetting? It is the unsupervised use of fire by those under age 18. Children play with fire for many reasons such as curiosity, boredom, lack of supervision or lack of fire safety awareness. Many adults think nothing of a child lighting a candle, stove, fireplace or campfire if they are there to watch them. Statistics show that children will use matches or lighters for play when adults are not present. This is when children and fire can become a dangerous combination, an issue that surely warrants our attention.

What can parents, community members and the fire service do to prevent fireplay? Most importantly, talk to your children about fire safety. Discuss how dangerous matches and lighters can be and keep them out of sight and out of reach of children, stored in a secure place in your home. Do not ask children to retrieve matches or lighters, or allow them to light candles, incense, fireplaces, BBQs, stoves, etc. When children are much older, only allow them to light fires for a specific use and with an adult's permission and guidance. Remember that matches, lighters and fire are used as a tool, not a toy.

Educating children early about fire safety can help avoid bodily injury, property damage or worse. Contact the Fire Department at 619-667-1355 or the San Diego Burn Institute at 858-541-2277 about La Mesa juvenile firesetter intervention programs. These programs help educate children and parents about the dangers of fireplay and the consequences associated with fireplay behavior.

For your family's safety, keep your smoke detectors in good working condition and change the batteries twice a year.

EAST COUNTY REGIONAL HOUSEHOLD HAZARDOUS WASTE COLLECTION EVENT

Who: ..... East County Residents

Where: ..... Bethel Christian Assembly Church
1929 Arnold Way (parking lot)
Alpine CA 91901

When: ..... Saturday, May 19, 2007

Time: ..... 9 a.m. to 2 p.m.

NO APPOINTMENT NECESSARY!

Household Hazardous Waste includes: batteries, fluorescent lights, electronics, paints, cleaners, pool & garden products and propane. You may bring up to 15 gallons or 125 pounds of waste per vehicle.

We Can NOT Accept:
business waste, ammunition, explosive or radioactive material, large appliances or medical waste.
Visit www.cityoflamesa.com
or call 619-667-1338 for more information.

This collection event is a community service funded by a grant from the California Integrated Waste Management Board.

LA MESA YOUTH CHOOSE HEALTH AND WELLNESS

"Show ur Skillz!" is how La Mesa's Youth Advisory Commission recognized National Youth Service Day on April 20. Teens from the La Mesa Teen Center, operated by the Boys & Girls Club of East County, and La Mesa Middle School's after-school program gathered with youth commissioners to learn the benefits of health, exercise and nutrition while participating in relay races and other activities. Pictured are participants from the Teen Center.

National Youth Service Day is the largest service event in the world that mobilizes youth to identify and address the needs of their communities through service. This is the La Mesa Youth Commission's third year participating in this rewarding service event. The first year the commissioners cooked dinner for the families staying at the Ronald McDonald House at Children's Hospital. Besides the yummy dinner, each family received a care bag to make their stay more comfortable. The second year the commissioners read stories to children at La Mesa Dale Elementary School and gave each child a book to start his or her own library at home.

The Youth Advisory Commission is a City Council-appointed committee made up of area youth from La Mesa schools. The commissioners provide input to the Council on youth-related issues, oversee the Teen Scene website and provide community service.

5TH ANNUAL

Soap Box Derby Race — June 9, 9 a.m. - 6 p.m.
Junior High Dr. by La Mesa Middle School

ALL-AMERICAN SOAP BOX DERBY

Winners will be sent to the National All-American Soap Box Derby in Akron, Ohio, in July. Youngsters ages 8 to 17 wishing to enter the race should contact Dennis Wilkes at 619-469-7353.

LA MESA KIWANIS CLUB

ADA ACCESS FOR BUSINESSES –
Information Available on City Website

The City of La Mesa hosted an Americans With Disability Act (ADA) Informational Seminar on December 12, 2006, at the La Mesa Community Center. The seminar featured a panel of experts, who discussed the following topics:

- The difference between Federal and State laws as they relate to ADA
- The role of local government in encouraging ADA compliance
- Access improvements that should be made to business locations

A presentation by David Warren Peters from Lawyers Against Lawsuit Abuse is available on the City's website. Click on "ADA Access Compliance" under the Business section on the website home page at www.cityoflamesa.com.

The presentation is not intended to provide legal advice regarding the subject matter. The information is used with permission of the presenter for the benefit of any business person who may be interested in the subject matter but did not attend the presentation.

YOUR PROPERTY TAXES – THE COMPLEXITIES

Historically, property taxes were the largest single source of revenue for cities in California. Cities had the authority under state law to establish property tax rates in accordance with their needs. Each year, city councils across the state examined the service demands of their community, reviewed revenue projections, and increased (or decreased) the property tax rate to generate the required funding level within the limits of what they believed the community was willing to pay. These tax levies were then spread to the assessment rolls based on the current market value (known as assessed value) of each property in the taxing jurisdiction. Up to this point, property taxes were relatively easy to explain and understand. This changed dramatically with the passage of Proposition 13 in 1978.

Impact of Proposition 13

Proposition 13 established a uniform 1% property tax rate throughout the state resulting in local government property tax revenues being reduced by about 60%. As part of Proposition 13, the assessed value of each property was limited to the value of the property at the time that it changed hands, plus a 2% growth factor each subsequent year. Because the assessed value of property is now only "trued up" to the full market value when it changes owners, there is disparate treatment of similar properties. For example, two identical homes built in the same year in the same development may have very different property tax bills depending on how many times each property has been sold.

Proposition 13 also established the requirement for two-thirds voter approval for tax increases and it transferred the authority to allocate property tax revenues from local government to the state. This last provision led to legislation in 1979 (AB 8) which allowed cities to receive the same share of property tax revenues they had received prior to the passage of Proposition 13. As a result of AB 8, cities that had been consistently increasing their property tax rates ended up in much better shape than cities that had been more conservative with their rate increases. AB 8 also benefited cities as it shifted a portion of the tax previously collected by schools to local government, with the state taking on more of the responsibility of funding schools.

ERAF Shifts and Proposition 172

In fiscal years 1992-1993 and 1993-1994, the state created the Education Revenue Augmentation Fund (ERAF) in response to budget deficits. The ERAF shifts (now known as ERAF I and ERAF II) reallocated property tax revenues from local government to schools. Cities on average saw a 24% reduction in their property tax shares.

In La Mesa, the Proposition 172 sales tax generated more than $6.1 million in 2005-2006, yet the City received only $257,000.

In response to these shifts, in 1993 voters approved Proposition 172 which extended an existing one-half cent sales tax that was expiring. The purpose was to lessen the impact of the ERAF shifts on local government, with the one-half cent sales tax monies restricted for public safety purposes. In accordance with the language in the proposition, the vast majority of the monies are distributed to counties, with cities, on average, only regaining about 17% of the monies lost in the ERAF shifts. In San Diego County, the County of San Diego retains over 94% of all Proposition 172 taxes collected, with cities sharing the remaining 5.6% according to a formula set in state law. In La Mesa, the Proposition 172 sales tax generated more than $6.1 million in 2005-2006, yet the City received only $257,000. After 13 years in existence, the tax has generated an estimated $63.6 million in La Mesa; while our city has received only $2.2 million – less than 4% of what was collected. The rest has been retained by the County of San Diego.

Additional State Takeaways Lead to Constitutional Amendment

In fiscal year 2003-2004, the state once again faced a significant budget deficit and came calling on local government to help bail them out. Governor Schwarzenegger negotiated an additional two-year ERAF shift with local government (known as ERAF III) in exchange for his support for Proposition 1A which passed in 2004. This two-year shift cost the City of La Mesa about $1.4 million from its General Fund and about $0.4 million from its Redevelopment Agency over fiscal years 2004-2005 and 2005-2006.

Proposition 1A provided constitutional protection for local government property taxes and other locally controlled revenue sources, and limited the state to "borrowing" rather than "taking" from local government in the future. In addition, Proposition 1A also permanently reduced the vehicle license fee (VLF) from 2% of the depreciated value of the vehicle to two-thirds of 1% of the value. In exchange for this reduction in city revenues, the state replaced the loss to cities with an equal amount of property taxes, thereby increasing the percentage cities receive from the overall property tax pie. This is a permanent shift. The state also took one-quarter of the 1% city sales tax and provided a like amount of property taxes from the monies previously allocated to schools in exchange. The state then made up for the shift from schools with other monies. This shift, known as the "triple flip," will continue through the term of deficit reduction bonds that the state issued to help them through their budget crisis.

How Property Taxes are Distributed

The amount and percentage of property taxes a city receives varies throughout the state. The reasons for the variances include whether the city was growing or was largely built out prior to Proposition 13, whether services are provided by the city or by a county or special district (e.g., library or fire services), whether redevelopment is used extensively, and whether the city's property tax rate in the 1970s was higher or lower than other cities. For example, within San Diego County, the amount of property taxes received per resident varied from a low of $41 per resident in National City to a high of $506 per resident in Del Mar (based on 2003-2004 property taxes – before the Proposition 1A changes). La Mesa received $70 per resident. The statewide average was $166.12 per resident. In terms of percent of property taxes paid, the amount also varies by city. Across the state, the average city receives about 11.6% of the property tax pie. In fiscal year 2006-2007, the average city in San Diego County received 12.4% of the base property tax (in La Mesa, we received close to 11%), an additional 5.3% as a result of the VLF swap, and an additional 3.3% as a result of the triple flip. Other shares went to schools with 43.3%, the County with 22.1%, redevelopment agencies with 10.0%, and special districts with 3.6%.

OF THIS IMPORTANT REVENUE SOURCE

Special Levies

In November 2004, La Mesa voters overwhelmingly approved Proposition D, the City of La Mesa Fire, Police and Emergency Services Measure. Proposition D authorized the City to issue $25 million of General Obligation Bonds to construct and rehabilitate our public safety facilities. The first project constructed, the new Fire Station 11 and Administration in the Civic Center, opened in August 2006. The next project will be the rehabilitation of Fire Station 13 on Grossmont Boulevard. The final project will be a new Police Station built in the Civic Center. Proposition D, and other locally passed property tax measures, increase property taxes beyond the 1% of valuation cap imposed by Proposition 13. On your property tax bill, you will see separate lines for each of these special levies along with their tax rates.

Putting It Into Perspective

As this article describes, the distribution of property taxes is much more complicated than most people realize. The amount of taxes levied is based on state law and special elections. Your individual tax share is based on the assessed value of your property (as determined by the County of San Diego Assessor/Recorder/County Clerk's Office) and the tax rates approved by voters. Your taxes are paid to and distributed by the County of San Diego Treasurer-Tax Collector, with the City of La Mesa receiving a relatively small share of the overall property tax pie. These monies are unrestricted revenues to the City and are used to cover a portion of the cost of providing basic services that are enjoyed by all La Mesa residents, businesses and visitors.

To provide some perspective, the amount of money that the City received in regular property taxes in fiscal year 2005-2006 was $4.9 million. In the same fiscal year, the City spent $7.2 million on providing fire protection and emergency medical services and $11.0 million providing police protection. Clearly, the amount of property taxes received is not sufficient to cover the cost of providing fire and police protection services. For fiscal year 2006-2007, even when the property tax in lieu of VLF component is included, property taxes are expected to provide only 24% of General Fund sources, while the cost of providing fire and police protection services is expected to be 50% of General Fund expenditures.

As you pay your property taxes, we hope that you will do so with an enhanced understanding of how your property tax bill is computed, where the dollars go, and how they are used.

Clearly, the amount of property taxes received is not sufficient to cover the cost of providing fire and police protection services.

PREPARING FOR THE PANDEMIC FLU

– Second in a Series of Articles –

The first installment of Preparing for the Pandemic Flu, which appeared in the February 2007 issue of *La Mesa FOCUS*, discussed the differences between the seasonal flu and a pandemic flu, steps to protect yourself, and sources for obtaining additional information. In this issue, you will be presented with guidelines for caring for individuals and preventing the spread of the disease.

In the event of a pandemic flu, the impact to our community could be severe; and services you depend on may become limited or unavailable, including medical care. With the potential for hospitals and physicians to be operating at a level beyond their capacity, it may be necessary for you to care for family members and neighbors who become ill.

Because of monitoring efforts, the community will have been alerted to the presence of a pandemic flu strain within the population; and you should be alert to the signs and symptoms of the disease. The expected influenza will likely present with fever, nausea, diarrhea and difficulty breathing. Look to the media and announcements from the County Health Department for more specifics about the disease, how to treat it and how to obtain assistance.

If you are directed to care for an individual, prevent the spread of the disease by following these basic guidelines:

- Isolate ill persons within the home.
- Persons who are ill should not leave the house unless they are being taken to a medical appointment. Sick individuals will have to stay home for two weeks after their symptoms begin, even if they are feeling better. Do not have visitors while sick persons are in the home.
- Designate a separate room for a sick individual so he or she is separated from other household members. The room should have a door that can be closed.
- Ill persons should wear protective masks when anyone is in the same room or car. People in the room or car with a sick individual should also wear protective masks. Disposable gloves should be used when cleaning or disinfecting any room or area where sick persons have been.
- Wash hands with soap or use alcohol-based hand rubs.
- Everyone in the household – and it is important to remind children – should wash their hands with soap between contacts with others, before preparing food and before eating.
- Wash hands after touching tissues or surfaces soiled with saliva or nose drainage.
- Keep the household environment clean.
- On a daily basis, clean surfaces and commonly shared items like microwave ovens, refrigerator handles, phones, remote controls, doorknobs and handles, toilet seats and handles, faucets, light switches and toys. Use a labeled household disinfectant or chlorine bleach mixture.
- Chlorine bleach can be used as a disinfectant by mixing ¼ cup chlorine bleach with 1 gallon of cool water.
- Cover noses and mouths when sneezing or coughing.
- Remind children and others to cover their noses and mouths with a tissue when sneezing or coughing, or to sneeze or cough into their sleeves. Put used tissues in a wastebasket, and then wash hands with soap or use an alcohol-based rub.
- Even when a person is wearing a mask, he or she should cough or sneeze into a sleeve.
- Watch all household members for symptoms of respiratory illness.
- Contact your healthcare provider if a fever or other symptoms such as chills, cough, sore throat, headache or muscle aches develop.
- Make sure supplies are on hand.
- Keep masks, gloves, soap, tissues, paper towels and cleaning supplies on hand.
- Make sure all sinks and bathrooms are stocked with soap and paper towels.
- Make sure that tissues are available in all bedrooms, kitchen, and other common areas like living, dining, family and computer rooms.

Utilize the following web links to obtain additional information about protecting you and your family from the effects of influenza and steps you can take to prepare for its potential arrival.

- http://www.cdc.gov/germstopper/home_work_school.htm

- http://www.sdbirdflu.org
- http://www.sccphd.org

For information over the phone, contact:

- The Centers for Disease Control and Prevention (CDC) hotline – 1-800-232-6348
- The San Diego County Department of Public Health – 1-888-551-4636

The next article in the series will provide suggestions from various health organizations on preparing your family for a pandemic flu.

PLAN – PREPARE - STAY INFORMED

FIGURING OUT 9-1-1 Internet Phone Service

Consumers interested in buying Internet-based telephone services should be aware that not all such services provide access to the 9-1-1 network.

When a person calls 9-1-1 from a wired telephone, dispatchers automatically know the caller's location and can direct emergency personnel to that location even when the caller is unable to articulate that information.

When considering an Internet-based telephone service, ask whether or not the offer includes enhanced 9-1-1. If so, ask whether the 9-1-1 calls are routed to the appropriate law enforcement or fire agency. If the answer is yes, ask if the agency you are routed to will be able to locate you. If so, the service is just like traditional 9-1-1.

The provider may say traditional 9-1-1 service is voluntary, which means you may be required to go online and enter your name and address so you can be located in an emergency. It is very important to enter that information accurately and keep it up to date, especially if you travel with your Internet phone service.

If you are considering a telephone service which does not include traditional 9-1-1 service, ask yourself how members of your household, including children, visitors and babysitters, will call for help in an emergency. Don't forget that they will have to know your address and be able to communicate it to emergency personnel.

For more information, contact Christine McMillen, Police Services Manager, at 619-667-1408.

La Mesa Beautiful's 27th Annual

PLANT SALE

Saturday, May 5, 2007
9 a.m. – 4 p.m.

Sunday, May 6, 2007
9 a.m. – 2 p.m.

Saint Andrews Episcopal Church
4816 Glen St., La Mesa
Corner of Lemon Ave. & Glen St.
(Lemon Ave. Courtyard)

Trees – Shrubs – Bedding Plants
Cacti – Succulents
Donations of potted plants or fruits and vegetables from your garden will be gratefully accepted.

2007 LA MESA GARDEN AWARDS NOMINATION FORM

How Does Your Garden Grow?

La Mesa Beautiful is conducting its annual contest involving property owners within the city limits of La Mesa who have done a great job landscaping their property. Nominate any property. Include blocks or even neighborhoods which have helped make La Mesa the "Jewel of the Hills."

Winners will be recognized at the 27th Annual Garden Awards Luncheon held in October at the La Mesa Community Center. A team of judges will evaluate all nominations. Their decision is final. Nominations may be filed throughout the year. Winners will be notified prior to the award luncheon. For consideration this year, nominations should be submitted before July 1st.

La Mesa Beautiful Is A Non-profit Corporation. Its Sole Purpose Is To Encourage The Development Of A More Attractive Community.

WASTE NOT, WANT NOT

EDCO Opens New "C&D" Facility

The City of La Mesa is constantly looking for ways to increase diversion of waste from landfills, especially by reusing and recycling waste materials generated by La Mesa's residences and businesses.

EDCO Disposal Corporation has helped La Mesa and other East County cities take a big step forward with the opening of the SANCO Resource Recovery Facility in Lemon Grove, which processes construction and demolition (C&D) debris for recycling and reuse. The facility has the capability of diverting 700,000 to 1,000,000 cubic yards of debris from landfills per year – approximately the same amount of household trash produced by 250,000 people.

La Mesa's C&D ordinance, approved in 2005, required that 50 percent of debris from most construction and remodeling projects be diverted. With the opening of the SANCO C&D facility, that diversion rate now is set at 75 percent. Construction crews, contractors and property owners can bring wood, dirt, asphalt, gypsum board and carpet to the facility in mixed loads. Loads do not need to be separated by material type, but they must be free of trash. Workers then sort the materials for recycling.

The SANCO C&D facility is located at 6750 Federal Blvd. in Lemon Grove and is open to the public six days per week, Monday-Friday from 6:30 a.m. to 5:30 p.m. and Saturdays from 7:00 a.m. to 3:00 p.m. There are no long lines and appointments are not necessary. Customers can just show up with mixed loads and EDCO will do the rest!

LA MESA RECYCLES. DO YOU?

Here is a friendly reminder of the types of items you can recycle in your blue EDCO recycling cart:

Glass Bottles & Jars — Recycle all food and beverage containers—clear and colored glass. Please rinse. No need to remove labels.

Cardboard — Flatten or cut boxes to a maximum size of 3 ft. x 3 ft.

Newspapers — Recycle your newspaper and everything that is delivered with it, including inserts, coupons, etc.

Cans — Recycle aluminum cans and steel cans, including clean and dry paint cans and empty aerosol cans. Also recycle aluminum foil.

Plastic Containers — Recycle plastic bottles, jugs, jars marked 1 or 2 and all beverage containers labeled "CA Redemption Value" or "CA Cash Refund."

These include:

- Food & Beverage Containers — Milk, soda, water, salad dressing, cooking oil, etc.
- Jars & Canisters — Peanut butter jars, mayonnaise jars, aspirin bottles and 35 mm film canisters.
- Cleaning Products & Detergents — Bleach, detergent, soap, shampoo, drain cleaners, etc. (Containers must be empty.)
- Automotive & Yard Care Products — EMPTY motor oil, antifreeze, plant food and herbicide containers.

Mixed Paper — Recycle virtually all clean and dry paper including: writing paper (all colors), computer paper, copier paper, "no carbon required" (NCR) forms, window envelopes, catalogs, brochures, magazines, junk mail, phone books, sticky notes and shredded paper.

EDCO accepts them all. PLUS, if those items have staples or small metal fasteners, they're OK, too! But, please, no large metal items like clasps on notebooks or three-ring binders.

You can also recycle cereal boxes and other clean food packaging, including: cake boxes, flour bags, frozen dinner boxes, paper egg cartons, and soda/beer 12-pack carrying boxes. Also recycle paper grocery bags, gift boxes, shoe boxes, paper gift wrap, calendars, and core tubes from paper towels, etc.

Before you know it, recycling becomes second nature!

City of La Mesa

MONTHLY MEETING SCHEDULE

CITY COUNCIL
Second Tuesday - 4:00 PM
Fourth Tuesday - 6:00 PM

PLANNING COMMISSION
First and Third Wednesday - 7:00 PM

DEVELOPMENT ADVISORY BOARD
Every other Monday - 10:00 AM

DESIGN REVIEW BOARD
Every other Monday - 12:30 PM

HISTORIC PRESERVATION COMMISSION
First Tuesday - 5:00 PM

LOAN COMMITTEE FOR REAL ESTATE REHABILITATION
Third Wednesday - 8:30 AM (as needed)

REDEVELOPMENT AGENCY
Fourth Tuesday - 6:00 PM

HUMAN RELATIONS ADVISORY COMMISSION
Third Monday - 5:30 PM

PARKING COMMISSION
First Thursday - 8:00 AM

TRAFFIC COMMISSION
First Wednesday - 9:00 AM
The above meetings are held at City Hall
8130 Allison Avenue - La Mesa

COMMUNITY SERVICES COMMISSION
Second Wednesday - 6:00 PM

YOUTH ADVISORY COMMISSION
Second Monday - 4:30 PM
The above meetings are held at the
Community Center Conference Room
4975 Memorial Drive - La Mesa

COMMISSION ON AGING
Fourth Tuesday - 1:30 PM (except July, August, November, December)
The above meeting is held at the
Adult Enrichment Center
8450 La Mesa Boulevard - La Mesa

CITY COUNCIL ACTIONS

January 9, 2007
Adopted a resolution authorizing a contract for management and implementation of a Home Investment Partnerships Program with the County of San Diego to fund the La Mesa Down Payment and Closing Cost Assistance (DCCA) Loan Program; a contract for management and implementation of a Home Investment Partnerships Project with the County of San Diego to reimburse the City for administrative costs it incurs for work on the La Mesa DCCA Loan Program; and an amendment to the American Dream Down Payment Initiative (ADDI) Agreement with the County of San Diego.

Adopted a resolution authorizing the acceptance of a County of San Diego Community Projects Award of $75,000 from Supervisor Dianne Jacob for Emergency Operations Center Equipment.

January 23, 2007
Ratified the Design Review Board's approval of DRB 06-22 for the proposed exterior alterations to a commercial building at 8890 La Mesa Boulevard.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a local Seat Belt Compliance Traffic Safety Project.

Established Underground Utility District No. 25 in the City of La Mesa on Spring Street from the City of La Mesa/County of San Diego boundary to Palm Avenue.

Approved Tentative Parcel Map TPM-06-09 (Health Care Group) for a proposed one-lot subdivision of property for 76 residential condominium units at 9000 Murray Drive.

February 13, 2007
Ratified the Planning Commission's approval of Tentative Tract Map TTM-05 09 and Site Development Plan DAB-05-23, for 19 residential condominium units with 1 commercial suite at 7561 El Cajon Boulevard.

Adopted a resolution authorizing the City of La Mesa to commit $87,500 of Transportation Development Act reserves to fund one half the cost of installation of security cameras at the Amaya Trolley Station.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a Selective Traffic Enforcement program.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct an Anti-DUI Safe Ride program.

February 27, 2007
Adopted a resolution authorizing the submission of a claim for Article 3 Transportation Development Act (TDA) funding for construction of pedestrian improvements at the intersection of Spring Street and High Street adjacent to the Spring Street trolley station.

Adopted a resolution authorizing the submission of a claim for Article 3 Transportation Development Act (TDA) funding for construction of pedestrian improvements at the intersection of El Cajon Boulevard and La Mesa Boulevard.

Adopted a resolution amending Section 12.44.130 of the La Mesa Municipal Code installing a disabled persons parking space on the Pasadena Avenue frontage of 8099 Fairview Avenue.

March 13, 2007
Adopted a resolution authorizing an agreement for the "California Multi-Jurisdictional Methamphetamine Enforcement Team (Cal-MMET)" with the County of San Diego and the San Diego County Sheriff's Department.

Adopted a resolution authorizing the acceptance and expenditure of the 2006 Law Enforcement Terrorism Prevention Program grant funds.

March 27, 2007
Adopted a resolution authorizing the acceptance of the FY06 Urban Area Security Initiative (UASI) grant of $20,000 for terrorism preparedness training.

Adopted a resolution authorizing the acceptance of the FY06 State Homeland Security Grant Program (SHSGP) grant of $34,000 for terrorism preparedness.

Approved the designation of the property located at 8393-95 La Mesa Boulevard as a historical landmark and a Historic Landmark Property Preservation Agreement.

DO THE RIGHT THING!

Do you want to do the right thing and dispose of household hazardous waste (HHW) properly? HHW consists of products labeled "hazardous," "toxic" or "corrosive" that cannot be placed in landfills due to their contents. Examples of HHW are:

General: ***Batteries, Fluorescent Lights, Latex & Oil Based Paints, Solvents, Cleaners, Pesticides & Garden Products, Pool Products, Propane, Small Quantities of Asbestos***
Electronic: ***TVs, Computer Monitors/Hardware, Telephones, VCRs, Radios***
Automotive: ***Used Oil & Filters, Batteries, Antifreeze***

If you reside within the city limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program. Upcoming events, available by appointment only, will be held on May 12, July 21, September 15 and November 17.

Call EDCO at 619-287-5696, extension 4270, to schedule an appointment or to request additional information.

For more information on HHW, log on to www.cityoflamesa.com and click on the Trash, Recycling & Hazardous Waste link under City Services. This link will also provide information on electronic waste, energy conservation and recycling.

STORM WATER QUALITY INSPECTION FOR INDUSTRIAL/COMMERCIAL FACILITIES

Inspected by D-MAX Engineering, Inc.

Inspector Name _____ Date____/____/_____Time_____AM / PM

Type of Inspection: ☐ Routine Result: ☐ Full Insp. ☐ Could not Contact ☐ Low Commercial ☐ Moved, Vacant
☐ Follow-up ☐ Complaint ☐ Moved, Replaced by_____ ☐ Refused ☐ Duplicate

A. CONTACT INFORMATION

Original	Changes
Business Name_____	Business Name_____
_____	_____
Street Address_____	Street Address_____
_____	_____
Responsible Person(s)_____	Responsible Person(s)_____
Business Telephone # (____) _____ -_____ext._____	Business Telephone # (____) _____ -_____ext._____
Business Fax # (_____) _____ - _____	Business Fax # (_____) _____ - _____

Home Based? ☐ Yes ☐ No

B. FACILITY/SITE INFORMATION

Principal activity:_____

Assigned JURMP Classification: ☐ High Ind ☐ Medium Ind ☐ Low Ind ☐ High Comm ☐ Unassigned

Is this facility currently listed in the City's JURMP Inventories? ☐ Yes ☐ No

Assigned SIC Code(s)_____ _____ ☐ Unassigned

Does SIC Code best represent principal activity: ☐ Yes ☐ No

Recommended change of SIC Code(s)?_____ _____

New JURMP Classification?_____

Does facility have a current business certificate? ☐ Yes ☐ No #_____ Exp._____

Is facility subject to CA Statewide General Industrial Permit? ☐ Yes ☐ No

If yes, has facility filed a Notice of Intent (NOI) to comply? ☐ Yes ☐ No WDID#_____

If no, does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Does facility maintain SWPPP or BMP Plan? ☐ Yes ☐ No

Has facility conducted previous storm water monitoring programs? ☐ Yes ☐ No

High Priority Commercial Category (circle): (a) (e) (j) (q) Other_____ ☐ N/A

Existing Status: ☐ High Ind ☐ Med Ind ☐ Low Ind ☐ High Com ☐ Moved/Out of Business ☐ Dup ☐ Low Com
☐ Not in City Jurisdiction

Existing SIC code(s) _____ _____

C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____ HA:_____ Basin:_____

Approximate distance to water bodies: ☐ < 200 ft. ☐ 200 – 1000 ft. ☐ > 1000 ft. Watershed:_____

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points along perimeter: _____

_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Approximate area covered by industrial or commercial activities:_____square feet

Approximate % impervious surface of this area_____%

Exposed areas of intensive outdoor activity: _____

D. BMP ASSESSMENT

D.1 General

BMPs	N/A	Yes	No	Comments
Is the site free of litter and debris?				
Are discharge locations free of sediment and debris?				
Are parking lots, sidewalks and streets free of sediment and debris?				
Is pressure washing of outdoor areas conducted at this facility, directly or indirectly as part of the operations?				
Is pressure washing waste water captured and disposed appropriately?				
Pressure Washing Company: _____ Telephone: __(____)_____				
Are roof downspouts directly away from areas of potential pollutants?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Are stockpiles of soil or landscape waste equipped to prevent runoff transport?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Are outdoor storage containers properly labeled?				
Is there an accessible spill response kit?				
Are storage tanks equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are vehicle-fueling areas covered and are storm drain inlets protected from spills and leaks?				
Is vehicle washing preformed in a contained area where runoff does not enter the MS4?				
Are biodegradable soaps used for cleaning activities?				
D.5 Food Establishments				
Does facility have a grease trap or grease interceptor?				
When was the last time the grease trap was maintained? _____				
Where is the grease trap located? ☐ Under the sink ☐ Outside ☐ Other _____				
How many grease fryers are at the facility? _____				

About how often is fryer oil replaced? ☐ Weekly ☐ Monthly ☐ Every 6 months ☐ Annually

BMPs	N/A	Yes	No	Comments
How is used oil disposed of? ☐ Outside rendering service ☐ Sanitary sewer/sink ☐ Other:_____				
Do oil-recycling/grease bins have overhead coverage?				
Do oil-recycling/grease bins have secondary containment?				
Are deep fryer oil-recycling drums stored properly?				
At what time is cleaning performed? _____				
What is the cleaning method? _____				
Does the restaurant hose off the site (parking lot, back lot, etc.)? If so, how often?				
How are kitchen floor mats cleaned? ☐ Hose off outside ☐ Clean inside (mop sink) ☐ Cleaning Service ☐ Other:_____				
Where is used cleaning water discharged? _____				
Are storm drain inlets free of grease and other food debris?				
D.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
D.7 Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs from Appendix C of the JURMP being implemented?				
Were any educational materials distributed?				

D.8 BMP Summary

E. SWPPP REVIEW

Does facility maintain a SWPPP: ☐ **Yes** ☐ **No** ☐ **Not Applicable**

_____

_____

F. CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No

If **BMP-related** corrective action is required, describe below. If other corrective action, check the appropriate box in section G.

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax

G. VIOLATIONS

- ☐ No violations have been noted at this time
- ☐ No violations have been noted, but recommend taking corrective action described in Section F.
- ☐ Violation of the City's storm water ordinance:
  - ☐ Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
    Description_____
  - ☐ Illegal connection(s) to the storm drain system
    Location_____
  - ☐ Littering
  - ☐ Failure to properly implement required BMPs
- ☐ Failure to comply with the requirements of applicable State or Regional Permit(s):
  - ☐ Non-compliance with the State Industrial Storm Water General Permit.
    Subjectivity, based on SIC Code: ☐ Mandatory ☐ Conditional
    - ☐ In the future, under a new Industrial Permit which has not yet been adopted, this facility may be able to qualify for a No Exposure Certification (NEC) and exemption from Permit coverage.
  - ☐ Non-compliance with the Municipal Storm Water Permit (NPDES NO. CAS0108758).
- ☐ Other Violation_____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

- ☐ Implement the recommended corrective actions listed in Section F.
- ☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (http://www.waterboards.ca.gov/stormwtr/industrial.html).
  - ☐ For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.
- ☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.
- ☐ Develop and implement a storm water monitoring program--see section B of the Industrial Permit for guidelines.
- ☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional actions required:_____

_____

_____

_____

H. RECOMMENDED CITY ACTIONS*

- ☐ None
- ☐ Follow-up to ensure the observed violation is corrected (see Section G)
- ☐ Follow-up to ensure recommended corrective actions in Section F have been implemented.
- ☐ Update the following: ☐ JURMP priority ☐ SIC code ☐ Facility Contact Information
- ☐ Add this business to the City's JURMP inventories.
- ☐ Based on the observed business activities, this facility may be reclassified as "low priority commercial" and may be removed from the City's JURMP inventories.
- ☐ This business is no longer at its listed address. If further investigation does not determine that it is still operating at another address within City jurisdiction, it should be removed from the JURMP inventories.
- ☐ No current business license was available. Review City business license records to determine if this business has a current license on file.

Other:_____

_____

_____

_____

Does this business require a follow-up inspection? ☐ **Yes** ☐ **No**

ASSESSMENT

Level of knowledge regarding stormwater issues: ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

Level of cleanliness, BMP implementation, orderliness of site: ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff

Ants

Ants are one of the most prevalent pests in California. Although ants are annoying when they come indoors, they can be beneficial by feeding on fleas, termites, and other pests in the garden. While spraying chemicals inside the house may seem effective, it won't prevent more ants from entering your home, which is essential for control because most ants nest outside. Focus management efforts on excluding ants from buildings or valuable plants.

Make your house less attractive to ants:

- Caulk cracks and crevices that provide entry inside.
- Store attractive food in closed containers.
- Clean up grease and spills.
- Look for and remove indoor nesting sites, such as inside potted plants.
- Ant-proof kitchen garbage pails with sticky barriers such as petroleum jelly under the lip and pet dishes by placing them in a moat of water.
- Remove sweet food sources next to your house such as aphid-infested bushes and ripened fruit on trees.

When ants invade your house, take these steps:

- Sponge invaders with soapy water as soon as they enter.
- Plug up ant entryways with caulk or petroleum jelly.
- Remove infested potted plants.
- Clean up food sources.
- Rely on baits to control the ant colony.
- Indoor sprays are not usually necessary.

How and why baits work best:

When using bait, place it along ant trails and at nest openings. Worker ants will be attracted to bait and take it back to the nest where the entire colony, including queens, may be killed. The bait must be slow-acting so workers won't be killed before they get back to the nest. It may take several weeks for results to be evident. Just killing workers foraging in your home or garden does little to control the colony, because as few as one percent of a colony's foraging worker ants are able to provide sufficient food to support nestbound queens and larvae. Baits in bait stations or ant stakes are easiest to use and safest for the environment.

(actual size)

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Aphids

Almost every plant has one or more aphid species that occasionally feeds on it, but low to moderate numbers of aphids are usually not damaging in gardens or on landscape trees. Although aphids can curl leaves and produce sticky honeydew, they rarely kill plants and can often be washed off with water. When aphid numbers get high, natural enemies frequently feed on them, eliminating the need for pesticides. Insecticidal soaps and oils are less toxic pesticides that can be used when treatment is necessary.

Aphids are common in your garden because:

- Aphids like lush new growth. Don't over fertilize. Use organic fertilizers or slow-release products.
- Aphids build up on flowering plums, roses, tulip trees, crape myrtles, apples, and many vegetables. Expect aphids when you grow these plants.
- Ants protect aphids from their natural enemies. Keep ants off plants to get more benefit from these beneficial insects.

To reduce aphids:

- Prune out infested leaves and stems.
- Knock aphid populations off plants by shaking or spraying with a strong stream of water.
- Protect seedlings with covers or aluminum soil mulches.
- Wait for hot weather; most aphids are heat-intolerant and will be gone by mid-June.

Protect aphids' natural enemies:

- Lady beetles, both adults and larvae
- Lacewings
- Syrphid fly larvae
- Soldier beetles
- Parasitic mini-wasps that turn aphids into crusty mummies (look for exit holes or insect drawings)

Natural enemies of aphids such as lady beetles and lacewings will come into your garden naturally when aphids are abundant. Protect these good bugs by avoiding the use of insecticides that may be toxic to a broad variety of insects.

If insecticides seem necessary, use the safest products:

- Nonchemical pest control methods should be used first to manage aphid populations. However, if you feel insecticides are necessary, choose less toxic products.
- Insecticidal oils and soaps are the safest products. When properly used, these materials solve most pest problems.
- Oils and soaps work by smothering aphids, so application must be thorough. Don't apply to drought-stressed plants or when it is very hot. A few plants are sensitive to these products.
- Insecticidal soaps, soap-pyrethrum mixtures, or neem oils are often applied on vegetables or small bushes like roses.
- Narrow range oils, like parafinic, supreme or superior oils, are appropriate for larger trees.
- Oils and soaps don't kill aphids hidden within curled leaves. Prune these out. Systemic insecticides can kill hidden aphids, but they are much more toxic and not registered for use on garden vegetables or fruit trees.

It's the water that connects us!

Cockroaches

Cockroaches thrive in warm environments that provide food, water, and shelter. Roaches hide in cracks, crawl spaces, and other dark places during the day and come out at night to feed. Pesticide sprays alone will not control roaches and are not usually required. Baits provide better control. You must integrate several strategies to make your home a less roach-friendly environment. Thoroughness is essential for effective control.

Identify your cockroach species first:

- Effective management options vary according to species.
- Cockroach traps provide an easy way to catch roaches for identification.
- Control practices for outdoor invaders (American, oriental roaches) and indoor residents (brownbanded and German roaches) differ.
- For help with identification go to www.ipm.ucdavis.edu.

Remove food and water sources:

- Even tiny crumbs or liquids in cracks provide good food sources.
- Store food in sealed containers.
- Keep trash in containers with tight lids.
- Eliminate plumbing leaks.
- Vacuum cracks and crevices and clean floors and counters daily.

Remove roach hiding places:

- Seal cracks and other openings to prevent invaders from the outside.
- Seal cracks in false bottoms of cupboards and other indoor hiding places.
- Seal or clean up other areas where you find roaches or their egg cases hiding.
- Remove old newspapers, boxes, and other clutter in kitchens and bathrooms.
- The oriental cockroach hides outdoors under ivy and other shelter. Check to see if you have this roach and remove outdoor hiding places or bait.

Use traps to identify and track cockroach populations:

- Cockroach traps are available in hardware stores.
- Place traps on the floor around edges of walls, in cupboards and other places where you think roaches are foraging. Place bait stations at locations where you trap roaches.
- Check traps daily.
- Sticky traps with pheromones may provide some control of German cockroaches.

Using chemicals to control cockroaches:

- Avoid use of foggers, bombs, or aerosol sprays — they just disperse populations.
- Boric acid powder blown into cracks, crevices, hollow walls, under refrigerators, or other undisturbed hiding places is very effective (allow 7 days or more for an effect to be seen).
- Bait stations containing boric acid, abamectin, fipronil, or hydramethylnon placed near hiding places can be effective if other food sources are removed (allow 7 days or more for an effect to be seen). Replace stations as needed as long as roaches are being caught.
- Insecticide sprays alone do not give long-term control. They are not necessary if other methods such as baits and boric acid powder are combined along with cleanup and removal of hiding places.
- Contact a professional pest control operator for very serious infestations, but be sure they use an integrated program as described above.

Earwigs

HEALTHY GARDEN HEALTHY HOME

While their prominent tail-end pincers may look ferocious, earwigs are not harmful to people. Earwigs may seriously damage seedling vegetables and chew holes in annual flowers, soft fruit, and corn silks, but earwigs also play a beneficial role by feeding on aphids and other insects. Nocturnal in habit, earwigs feed at night and hide during the day in dark, cool, moist places in the yard or within flowers or vegetables. To manage earwigs, reduce hiding places and moisture, and employ a vigilant trapping program.

Should you be concerned about earwigs in your garden?

- Yes, if you are growing vegetables, herbaceous flowering plants, sweet corn, or plants with soft fruits like strawberries and apricots.
- No, if your garden is primarily lawn, trees, and woody ornamentals or native plants.

Reduce outdoor hiding places:

- Eliminate dense undergrowth of vines, ground cover and weeds around vegetable and flower gardens.
- Prune away fruit tree suckers.
- Remove leaves, boards, boxes, trash, and other debris from planting areas.
- Move flower pots and other garden objects and structures that can harbor earwigs.
- Check plastic or organic mulches and remove them to limit earwig numbers.

Trap earwigs until they are gone!

- Trap earwigs with rolled newspaper, bamboo tubes, or short pieces of hose. Place these traps on the soil near plants just before dark, and shake accumulated earwigs out into a pail of soapy water in the morning. A low-sided can filled with oil and a drop of bacon grease or fish oil also makes a good trap. Daily trapping will reduce earwig populations to tolerable levels.

Other ways to reduce earwig problems:

- Drip irrigate where possible to reduce surface moisture.
- Keep earwigs out of stone fruit trees with a band of sticky substance like Tanglefoot, around the trunk, and harvest fruit as soon as it ripens.
- Insecticides should rarely be needed.

Inside the home:

Earwigs may seek refuge indoors when conditions outside are too dry, hot, or cold. Large accumulations of earwigs can be annoying but present no health hazards. When earwigs invade your home follow these steps:

- Sweep or vacuum up invading earwigs.
- Seal up cracks or other entry points.
- Remove debris from gutters and around entryways.
- Keep water and moisture away from structures.
- Replace white outdoor lights with yellow ones, which are less attractive to earwigs.
- Indoor application of pesticides is not recommended.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Fleas

Fleas are particularly annoying to people and pets, especially during spring and early summer when their numbers tend to increase dramatically. The common flea in California is the cat flea. Despite its name, it attacks both dogs and cats and will also bite humans. To keep fleas out of your home, control fleas on your pet and regularly clean pet sleeping areas.

On the pet:

Recently, a number of very effective and safe new products for flea control on the pet have become available. Remember to supplement pet treatments with regular cleaning of your home and periodic combing with a pet flea comb to detect new infestations.

- Spot-on formulations are applied to the animal's coat, providing flea control for 1 to 3 months. Available from veterinarians or over-the-counter.
- Systemic flea control products, available from vets, are given as a pill or food additive. While they do not kill adult fleas, they prevent reproduction.
- Flea collars containing insect growth regulators (IGRs) give protection for up to 6 months on dogs and up to a year on cats. Be sure to choose collars containing methoprene or pyriproxyfen.
- Flea shampoos and soaps, powders and dusts, spray-on liquids, and dips are less effective and more hazardous to pets, people, and the environment than the three types of products above.

In the yard:

Outdoor treatment is rarely needed, but if your pet regularly sleeps outside and flea numbers are high, these areas can be treated with a spray containing pyriproxyfen. If possible, open sleeping areas to sunlight by removing low hanging vegetation. Immature fleas are unlikely to survive in areas with exposure to sunlight.

Inside the home:

Whether or not you are aware of fleas in your home, regularly vacuum and launder areas where your pet rests to avoid flea buildup. If you have a major flea problem, treat your pet with one of the options on the front of this card and follow the steps below.

- Locate heavily infested areas (usually areas where the pet rests) and concentrate treatment there.
- Wash throw rugs and pet bedding.
- Vacuum upholstered furniture, cleaning under cushions and in crevices.
- Vacuum carpets, especially beneath furniture.
- Use a hand sprayer or aerosol to treat all carpets and unwashable upholstered furniture with an insecticide that contains an IGR (methoprene or pyriproxyfen). This treatment kills larvae but not pupae, so fleas may continue to emerge for up to 2 weeks.
- Over the next 2 weeks vacuum regularly to remove adult fleas that emerge from pupae. Do not reapply pesticides.
- Seal vacuum bags and discard them so fleas don't escape.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Gardening with Good Bugs

HEALTHY GARDEN HEALTHY HOME

Most gardens contain far more types of good bugs,or beneficial insects, than pest insects. Beneficial insects and other organisms that kill pest insects are called natural enemies. In any pest management or plant care program, it is important to encourage these natural enemies by avoiding pesticides that kill them. You can also encourage beneficial insects by choosing plants that provide them with pollen, nectar, and shelter and keeping ants out of pest-infested plants. Learn to identify good bugs, both in their adult forms and immature (larval) stages.

Common good bugs found in California gardens include:

- Lady beetles: Both adults and larvae consume aphids.
- Lacewings: Lacewing larvae feed on many insect pests; adults are often seen around lights.
- Syrphid flies: Syrphid fly larvae consume aphids; adults hover around flowers.
- Parasitic mini-wasps: Many species of tiny wasps lay their eggs in pests like aphids or caterpillars; their hatching larvae consume the pest and kill it.
- Spiders: All spiders feed on insects or other arthropods and are beneficial in the garden.

(See reverse for drawings of good bugs mentioned above.)

What is Integrated Pest Management?

Integrated pest management (IPM) uses environmentally sound, yet effective, ways to keep pests from annoying you or damaging plants. IPM programs usually combine several pest control methods for long- term prevention and management of pest problems without harming you, your family, or the environment — IPM also reduces pollution in California waterways. Successful IPM begins with correct identification of the pest. Only then can selection of the appropriate IPM methods and materials be made.

Preferred IPM methods include:

- Planting pest-resistant or well-adapted plant varieties like native plants.
- Discouraging pests by modifying the way you design, irrigate, fertilize, and manage your garden.
- Altering the garden or home environment to deprive pests of the food, water, shelter or other requirements they need to thrive.
- Keeping pests out of the home and garden using barriers, screens, and caulking.
- Squashing, trapping, washing off or pruning out pests.
- Relying on good bugs in your garden to eat pests, thereby eliminating the need for insecticides that may end up in our waterways.

Turning to pesticides:

- Only use pesticides when non-chemical controls are ineffective and pests are reaching intolerable levels.
- Use pesticides in combination with the methods described above.
- Choose pesticides carefully so that the least toxic, most effective material is used to protect human health and the environment.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Head Lice

HEALTHY GARDEN HEALTHY HOME

Head lice can infest anybody, but children are prone to infestations because they play closely and share items that come in contact with the head like hats, headphones, and combs. Head lice are not known to transmit any infectious diseases; they are more of a nuisance than a health risk. Children with head lice, however, are generally not allowed to attend school as long as nits are found in their hair.

Head lice facts:

- Head lice cannot hop, fly, or jump; they crawl. Lice spread only through direct contact with an infested object or person.
- Head lice spend their entire life in head hair and can only survive off a human head for about 1 or 2 days.
- A newly hatched louse must ingest blood within minutes of birth to survive.
- Head lice cannot live on family pets.
- Nits (eggs) that are more than 1 1/4 inch from the scalp probably are dead or have already hatched.

What to look for:

- Intense scratching on the back of the head or neck.
- Tiny white eggs (nits) glued to hair near the scalp.
- Small, rapidly crawling flat insects.

Four steps necessary to manage an infestation of head lice:

1 Use a head louse shampoo if you observe active lice or viable eggs.

- Avoid shampoo products containing lindane, which are available by prescription only. Pyrethrin and permethrin are safer, more effective, and less polluting to wastewater than lindane. Not all eggs will be killed.
- To avoid insecticides entirely, use soap shampoos that contain coconut or olive oils. Most soap shampoos kill all stages of the louse except the egg. Because they are not as effective as products containing pesticides, you must be sure to comb and repeat these shampoos four times at 3-day intervals. Successive shampooing kills newly hatched lice.

2 Remove nits from the head by combing with a specially designed nit comb.

- This step is the key to successful control. Repeat daily as long as you find live lice or nits within 1¦4 inch of the scalp. Use a metal comb specially designed for removing head lice and their eggs. Combs sold with head lice shampoos are not generally effective. Infested hair can also be cut out with small safety scissors.

3 Remove lice and nits from the household.

- Wash clothing and bedding of the infested person in hot water (at least 140°F) and dry in a hot dryer or have them dry cleaned. Place other items (earphones, bike helmets) in plastic and put in a freezer that is 5°F or lower for at least 10 hours. Clean any object that might have come in contact with the infested person's head (stuffed animals, car seats). Vacuum carpets and upholstery. Pesticide sprays are not recommended.

4 Check heads and remove nits daily until infestation is gone. Follow with weekly head checks to detect reinfestation.

Lawn Insects

HEALTHY GARDEN HEALTHY HOME

Contrary to popular belief, insects are not a common cause of residential lawn damage in California. Poor lawn care, especially improper watering and planting inappropriate grass species, are more likely causes of unhealthy or dying lawns. Disease-causing agents, excess orinappropriate use of chemicals such as fertilizer and herbicides, or dog urine also produce lawn damage resembling that of insects. Many insects in the lawn are beneficial. Never apply an insecticide unless a damaging level of a known insect pest is confirmed. Insecticides are only effective if applied at the right time and in the right manner. Some insecticides may kill good bugs too.

How do you know if insects are causing damage?

- Brown spots in lawns can be caused by over- or under-irrigation, plant disease, improper use of chemicals, or dog urine as well as insects.
- Confirm presence of insects before applying an insecticide. For grubs, dig around roots, for other insects perform a drench test. (See reverse.)

Keep your lawn healthy by:

- Planting grass species that do well in your area
- Irrigating deeply and infrequently
- Doing routine maintenance on sprinkler heads
- Applying only 3 to 6 pounds of actual nitrogen per 1000 square feet per year when fertilizing
- Aerating your lawn annually; remove thatch if it exceeds 1/2 inch
- Cutting only one-third to one-half of grass height at each mowing and keeping lawnmower blades sharp

See the UC Guide to Healthy Lawns at www.ipm.ucdavis.edu

If a damaging level of insects is confirmed, do the following:

- Choose an insecticide based on the pest you're targeting.
- Find out which insecticide ingredients target specific lawn insects:
  - *Bacillus thuringiensis* (Bt) kills only caterpillars, including cutworms, lawn moths, and skippers.
  - Insect-attacking nematodes control caterpillars or grubs.
  - Azadirachtin controls cutworms, armyworms, and larvae of lawn moths.
  - Imidacloprid is effective against young lawn grubs.
  - Pyrethroids (e.g., cyfluthrin, bifenthrin) are broadly toxic insecticides that kill chinch bugs, lawn moths, and cutworms, but also kill beneficial insects and should be avoided.
- Get help from UC Cooperative Extension.

HOW TO PERFORM A DRENCH TEST

- Mix 3–4 tablespoons of dishwashing liquid to 2 gallons of water.
- Evenly apply the 2 gallons to 1 square yard of your lawn.
- Monitor the area for 10 minutes and count the number of armyworms, cutworms, or lawn moth larvae that rise to the surface.
- Treat the area only if insect numbers exceed 5 armyworms or cutworms or 15 lawn moths per square yard.

Safe Use & Disposal of Pesticides

HEALTHY GARDEN HEALTHY HOME

Pesticides are designed to be toxic to the pests they target — insects, weeds, and other unwanted home and garden invaders. Always read pesticide product labels carefully and follow all directions on proper use, storage, and disposal of empty pesticide containers. Product labels are your main source of information on how to use a product safely and legally. They include guidelines needed to protect you, your family, and pets. The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For the site nearest you in San Diego County call 1-877-713-2784 .

If you must use pesticides, follow these tips to reduce pesticide effects on your local waterways:

- Identify your pest problem and choose the least toxic pesticide that targets your pest and achieves the results you want. If you need help identifying the least toxic pest control method, contact your University of California Cooperative Extension office.
- Determine the right amount of pesticide to purchase. Purchasing exactly the amount you need for the application eliminates the need for storing unused pesticides.
- Use spot treatments whenever possible.

Outdoors

- Avoid overwatering after applying pesticides. Never let pesticide runoff flow into storm drains.
- Do not apply pesticides outdoors when rain is forecast or when it is windy.
- Avoid applying pesticides on paved areas.

Indoors

- Avoid applying pesticides in or near floor drains or sinks.
- Avoid applying pesticides on areas that will be washed or mopped with water, or where food is prepared or stored.

When using and storing pesticides take these precautions:

- Always wear a long-sleeved shirt, pants, and eye protection, and other equipment suggested on the label.
- Store products tightly capped in a locked cabinet out of reach from children and pets.
- Always keep pesticides in their original container.
- Know where to call for help in an emergency!

Pesticide disposal:

- If you cannot use up your pesticides, fertilizers, and weed killers, give them to a friend who may need them.
- Sewage treatment plants are not designed to treat for certain toxic pesticides like diazinon and chlorpyrifos — dumping pesticides into the stormdrain or down the sink is never an option.
- The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For household pesticide disposal information for San Diego County, call 877-713-2784.

Finding active ingredients on a pesticide label:

Pesticide labels are required by law to show the active ingredient and its percentage. Minimize or avoid the use of products that contain diazinon and chlorpyrifos – these materials are polluting our waterways. Always read the label before you buy!

Active Ingredient
Chlorpyrifos 4.38%
Inactive Ingredients 95.62%
KEEP OUT OF REACH OF CHILDREN
CAUTION See back panel booklet for additional precautionary statements.
NET CONTENTS 32 FL OZ (1 QT) 946mL

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Snails & Slugs

Snails and slugs rank among our most despised garden pests. These slimy mollusks emerge from hiding at night and chew holes in leaves and flowers of many succulent garden plants and fruit. Slugs and snails are similar in structure and biology, except slugs lack the snails' external spiral shell. Management requires a vigilant and integrated approach that includes eliminating moisture and hiding spots, trapping, barriers, and handpicking. Baits can be helpful, but by themselves, don't provide adequate control in gardens that contain plenty of shelter, food, and moisture.

How do you know snails and slugs are causing damage?

- You may not observe these pests at first because they feed at night and hide during the day. Go out at night or early morning to view them in action.
- Other pests can cause holes in leaves, flowers, and fruit. Look for the shiny, slimy trails slugs and snails leave behind.

What must be done to reduce snails and slugs?

- Remove daytime hiding places — ivy, weedy areas, debris, or boards.
- Regularly remove snails from shelters you cannot eliminate such as low ledges on fences, undersides of decks, meter boxes.
- Place traps in your garden and dispose of trapped snails and slugs daily.
- Reduce moist surfaces by switching to drip irrigation or sprinkling in the morning rather than later in the day.
- Consider snail-proof plants such as impatiens, geraniums, begonias, lantana, nasturtiums, and many plants with stiff leaves and highly scented foliage like sage, rosemary,and lavender.

How can I manage snails and slugs without using pesticides?

- Make sure the garden is mollusk-free before planting. Then erect a copper barrier around it. Use a 4- to 6-inch-wide band of copper, buried an inch below the soil and bent over at the top or attach it around the edge of a raised bed.
- Place your garden in the sunniest spot possible. Remove garden objects or adjacent plants or ground cover that may serve as shady shelter. Reduce moist surfaces as much as possible.
- Build a trap using a 12"x15" board raised off the ground by 1-inch runners. As the mollusks collect under the board, scrape them off and destroy them daily.

What about baits?

- Baits will not be very effective unless you also remove shelter, food, and moisture.
- Metaldehyde baits are especially poisonous to dogs and birds. Metaldehyde also loses its effectiveness rapidly in sunlight and after rain or irrigation.
- Iron phosphate baits are safe for use around dogs, children, and wildlife.
- Irrigate before applying bait and apply in evening on warm days when mollusks are active.
- Scatter bait around sprinklers and in moist and protected areas where snails and slugs travel.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Spiders

Spiders are mostly beneficial because they feed on pest insects. However, many people think that all spiders are dangerous and aggressive. In California, the main spider capable of causing serious injury is the black widow, which generally remains outdoors and out of sight. Spiders seen out in the open during the day are unlikely to bite people. Focus pest management efforts on removing webs and hiding places. Pesticides are not generally recommended.

What to know about spiders:

- In California, the main spider capable of causing serious injury is the black widow:
  - The poisonous black widow spider is commonly found outdoors, in sheltered, dry, undisturbed areas such as wood piles.
  - Female black widows have shiny black bodies with a red hourglass marking on the underside.
  - Only large female black widows can injure people.

    Anyone bitten by a black widow spider should remain calm and seek medical advice, or call California's Poison Control Center at 1-800-8-POISON (1-800-876-4766).
- The brown recluse spider does not live in California.
- The jaws of most spiders are too small to bite humans.
- Some other spiders bite when trapped in clothing, but the reaction is usually no more severe than itching or a bee sting. See www.ipm.ucdavis.edu for more information about these spiders.

To prevent spiders from entering your house, take these steps:

- Seal home foundation cracks and other access holes.
- Inspect window and door screens for good seals that keep out spiders and the insects they prey on.
- Keep areas around home foundations free of clutter.

Manage spiders using these tips:

- Indoors, regular housecleaning provides adequate spider control.
- Vacuum up the spider and its web.
- Prevent clutter buildup that can provide hiding places.
- Remove spider webs from the exterior of the house with a broom or high pressure hose.
- Indoors, squash spiders or capture them in a jar and release them outdoors.

When removing spiders, don't overlook the fact that spiders eat a large number and variety of nuisance and pest insects. Spiders also have natural enemies — wasps, other spiders, birds, reptiles, and others — that sometimes keep them from becoming too numerous.

Termites

Because of the serious damage they can cause to wooden structures, termites are among the pests most feared by homeowners. However, swarms of flying termites do not always mean your building is infested. A careful inspection of the structure is required to confirm an infestation. People also frequently mistake swarms of flying ants for termites. If you suspect that your house is infested, call a professional. Do-it-yourself sprays cannot be relied on to reduce a damaging infestation. Common termites in California are the subterranean termites that build nests in soil, dampwood termites that nest in moist wood and soil, and drywood termites that nest above ground in dry wood. Management of each termite species is different.

Distinguish flying ants from termites:

- Check the antennae, wings and waist to confirm that pest insects are termites. (Please refer to ant vs. termite drawing on back.)

Design your building to keep termites out:

- Keep a 12-inch barrier of smooth concrete, sand, or other material between the soil surface and substructure wood beneath a building.
- Choose termite-resistant wood for fences or other structures that must contact soil.
- Remove wood piles, untreated fence posts, and buried scrap wood near structures.
- Provide adequate ventilation to substructures and keep them dry.
- Immediately repair foundation cracks.

If termites are invading your home:

- Destroy shelter tubes that subterranean termites build between soil and wood structures.
- If dampwood termite nests are accessible, remove infested wood and eliminate excess moisture.
- Drywood termites can be controlled with heat, freezing, electricity, microwaves, fumigation, or spot treatments of chemicals.
- For any infestation, contact a professional for help. Pesticides licensed only for use by a pest control operator are usually necessary to control subterranean and dampwood infestations.

Using pesticides for termite control:

- Pesticides may be injected into the soil by professional applicators through drilling or rodding. Special procedures must be followed to prevent contamination of ground or surface water.
- For soil injections, ask your applicator to use a product other than chlorpyrifos. Newer types of products such as fipronil and chloronicotinyls are safer for your health and the environment.
- Baits can be effective in some cases, but may take several months to control the problem and must be followed up with constant monitoring.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Giant Whitefly

HEALTHY GARDEN HEALTHY HOME

Giant whiteflies can cover a beautiful plant with white fuzzy wax and sticky honeydew, turning it into an unsightly mess. First discovered in San Diego County in October 1992, this whitefly has spread northward into other areas of California. Since its introduction into San Diego, giant whitefly has spread rapidly northward along the coast. Although affected plants may be weakened, they rarely die. To manage giant whitefly, wash plants off with water and encourage natural enemies.

What plants are affected?

- Many ornamentals including hibiscus, giant bird of paradise, begonia, Xylosma.
- Fruit trees including citrus, avocado, mulberry and banana.

Look for these damage symptoms on affected plants:

- Long, white, waxy filaments produced by the whitefly give the leaf surface a bearded appearance. These hairlike strands may be mistaken for a fungal infection.
- Large amounts of sticky honeydew excreted by the whitefly as it feeds on plant sap.
- Black sooty mold growing on the honeydew.

How to recognize the whitefly:

- Adults are small (3/16") and white with light brown markings on wings and usually found in groups on undersides of leaves.
- Nymphs are yellowish, small, oval, have no legs and don't move.

To reduce problems, use an integrated program that includes:

- Removing infested leaves.
- Washing giant whiteflies off leaves with a strong stream of water.
- Planting species less susceptible to giant whitefly.
- Avoiding insecticides that injure natural enemies, such as lacewings, lady beetles, syrphid flies, and parasitic wasps.

What about insecticides?

- **Don't use insecticides if beneficial insects, including parasites and predators, are present in the area.**
- **To confirm the presence of parasitic wasps, use a magnifying glass to look for parasite exit holes on giant whitefly nymphs or darkened nymphs as indicated in drawings below.**
- **If you do choose to use an insecticide, select least toxic products such as insecticidal soaps or oils. Remember to follow label directions and spray the undersides of the leaves where whitefly colonies are found.**

(adult) (actual size) I

Examine whitefly colonies for grayish-black or yellow nymphs with exit holes (a), or darkened nymphs (b), or healthy nymphs (c).

Use NON-CHEMICAL methods & LEAST TOXIC pesticides. WHY? Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes, and oceans.

Learn more about San Diego regional water quality at www.ThinkBlueSD.org & www.ProjectCleanWater.org.
For more pest information, visit the University of California IPM Web site at **www.ipm.ucdavis.edu**. or contact the UCCE Master Gardeners at (858) 694-2860, Mon-Fri, 9 am to 3 pm.

Subject: Storm Water Pollution Prevention

Dear Business Owner,

As part of a state mandate, the City of La Mesa is required to develop and implement a Storm Water Pollution Prevention Program. Ensuring compliance with the state mandate includes collecting urban runoff samples at various locations through out the jurisdiction during the summer months. Urban runoff samples are tested for pollutants such as (1) Oil & Grease, (2) Metals, (3) Ammonia/Nitrate, (4) Phosphorus, (5) Surfactant, (6) Pesticides, and (7) Bacteria. Field observations to document trash and debris are also recorded.

The City of La Mesa selected a runoff sampling location within your neighborhood. Results from the sampling and monitoring efforts conducted during the summer of 2006 indicated significant amount of trash and debris in the vicinity of your business. Trash and debris maybe sources of harmful bacteria when flushed into the storm drain system.

Please ensure that your business maintains good house keeping measures. This includes:

1. Routinely sweeping the premise and disposing of sediment and trash into the dumpster. No not hose down the property.
2. Keeping dumpster lids closed at all times.
3. Train employees on pollution prevention/good house keeping measures.
4. Cover and contain material stored outside (as applicable to your business)
5. Prevent over-irrigation which may transport debris into the storm drain.

We all want to preserve our quality of life, please take the appropriate action to help prevent harmful pollutants from entering our environment. If you have been taking action already to keep your business tidy, the City would like to thank you for your help in protecting our natural resources.

Should you have any questions, please feel free to contact me at (619) 667-1134.

Sincerely,

Malik Tamimi

Subject: Storm Water Pollution Prevention

Dear Business Owner,

As part of a state mandate, the City of La Mesa is required to develop and implement a Storm Water Pollution Prevention Program. Ensuring compliance with the state mandate includes collecting urban runoff samples at various locations through out the jurisdiction during the summer months. Urban runoff samples are tested for pollutants such as (1) Oil & Grease, (2) Metals, (3) Ammonia/Nitrate, (4) Phosphorus, (5) Surfactant, (6) Pesticides, and (7) Bacteria.

The City of La Mesa selected a runoff sampling location within your neighborhood. Results from the sampling and monitoring efforts conducted during the summer of 2006 indicate high levels of bacteria in the water. Sources of bacteria include organic debris flushed in the storm drain such as green waste/leaf debris as well as animal waste.

Animal waste is a source of harmful bacteria that is conveyed through the storm water conveyance system into our creeks and eventually to our beaches. If you do own a pet or maintain a pet facility, please ensure that you collect and dispose of pet waste in your trash receptacle. Similarly with green waste and litter, please collect or have landscaping companies collect and dispose of green waste/litter and debris in a trash receptacle and not down the storm drain inlet. Ensure that over-irrigation is eliminated. The only water that should be entering the storm water conveyance system should be rainwater.

Additionally, hosing down your business premise, washing vehicles in the street/or parking lot, over-fertilizing and over-spray of pesticides/herbicides all result in storm water pollution. The above activities enable harmful pollutants to enter our storm water conveyance system to our creeks and eventually the ocean and our beaches.

We all want to preserve our quality of life, please take the appropriate action to help prevent these harmful pollutants from entering our environment. If you have been taking action already, the City would like to thank you for your help in protecting our natural resources.

Should you have any questions, please feel free to contact me at (619) 667-1134.

Sincerely,

Malik Tamimi

City of La Mesa
Storm Water Pollution Prevention
Over-Irrigation

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

With La Mesa's clay soils, it doesn't take much to moisten the ground before water starts running off your property to the curb, down the street and into the storm drain. Runoff from over-irrigation may transport pollutants such as sediment, pesticides, fertilizers, pet waste, bacteria, and automobile fluids. These pollutants enter our local creeks and streams and discharge into the ocean.

Over-irrigation is not prohibited; however, the following measures are recommended.

1. Over-irrigation runoff shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Irrigate to meet site-specific conditions to prevent over-watering.
3. Ensure that your irrigation system has control devices, sensors or shut-off switches to address malfunctions.
4. Place or group plants with similar water needs within the same area.
5. Don't irrigate non-planted areas.
6. Inspect your irrigation system regularly for potential problems
7. Consider drip irrigation to save water and prevent over-irrigation and runoff.
8. Adjust irrigation rates according to seasons, weather conditions and the soil's ability to absorb water. Instead of watering for 15-minutes straight, break up the session into 5-minute intervals, allowing water to soak in before the next application.
9. Irrigate in the early morning; it's the most efficient time to water plants with minimal evaporation.
10. Refrain from irrigation during hot, windy periods of the day. Do not let water run out into the street.

Do the right thing, stay in compliance and protect our environment. For more information contact the City's Storm Water Hotline (619) 667-1134.

City of La Mesa

DEPARTMENT OF PUBLIC WORKS

Subject: Storm Water Pollution Prevention

Dear Resident,

As part of a state mandate, the City of La Mesa is required to develop and implement a Storm Water Pollution Prevention Program. Ensuring compliance with the state mandate includes collecting urban runoff samples at various locations through out the jurisdiction during the summer months. Urban runoff samples are tested for pollutants such as (1) Oil & Grease, (2) Metals, (3) Ammonia/Nitrate, (4) Phosphorus, (5) Surfactant, (6) Pesticides, and (7) Bacteria.

The City of La Mesa selected a runoff sampling location within your neighborhood. Results from the sampling and monitoring efforts conducted during the summer of 2006 indicate high levels of bacteria in the water as well as a lot of trash and debris. Sources of bacteria include organic debris flushed in the storm drain such as green waste/leaf debris as well as animal waste. Over-irrigation is consistently high and transports bacteria from lawns and landscaped areas to the nearby storm drains ultimately making its way to Alvarado Channel/San Diego River. Please ensure the following:

1. Collect and dispose of pet waste in your trash receptacle.
2. Collect or have landscaping companies collect and dispose of green waste/litter and debris in a trash receptacle and not down the storm drain inlet.
3. Prevent over-irrigation, over-fertilizing and over-spray of pesticides/herbicides, and hosing down your driveway.

Ensuring that the above actions are taken will help prevent harmful pollutants from entering our storm water conveyance system to our creeks and eventually the ocean and our beaches. The only water that should be entering the storm water conveyance system (storm drain) should be rainwater.

We all want to preserve our quality of life, please take the appropriate action to help prevent these harmful pollutants from entering our environment. Please talk to family members, neighbors and friends. If you have been taking action already, the City would like to thank you for your help in protecting our natural resources.

Facility Management
Grossmont Shopping Center
5500 Grossmont Center Drive Ste. 213
La Mesa, CA 91941

Subject: Storm Water Pollution Prevention Landscape Maintenance Grossmont Shopping Center, La Mesa

Dear Facility Manager,

As part of a state mandate, the City of La Mesa is required to develop and implement a Storm Water Pollution Prevention Program. Ensuring compliance with the state mandate includes collecting urban runoff samples at various locations through out the jurisdiction during the summer months. Urban runoff samples are tested for pollutants such as (1) Oil & Grease, (2) Metals, (3) Ammonia/Nitrate, (4) Phosphorus, (5) Surfactant, (6) Pesticides, and (7) Bacteria.

The City of La Mesa selected a runoff sampling location within the vicinity of the Grossmont Shopping Center. Results from the sampling and monitoring efforts conducted during the summer of 2005 and 2006 indicated high levels of ammonia in the urban runoff. Improper plant food application and irrigation practices in flowerbeds from Grossmont Shopping Center may have transported the pollutants into the storm water conveyance system. The only water that should be entering the storm water conveyance system is rainwater.

Please inform the landscape maintenance company that the irrigation system should be limited to avoid over-irrigation. Ensure over-spray from fertilizing and pesticide application should be minimized. If fertilizer pellets are spilled on the sidewalk or pavement, it should be swept up and collected for proper application/disposal. Sediment (soil or potting mix) is also considered a pollutant and should be swept up.

As you are aware, we all want to preserve our quality of life and want to take the appropriate action to help prevent these harmful pollutants from entering our environment. Failure to comply with our storm water pollution prevention requirements may result in a Notice of Violation. This is the second year that we have had elevated concentrations of ammonia from the shopping center. Please provide a plan that will address the aforementioned issue. You may contact me at (619) 667-1340.

Sincerely,

Malik Tamimi

La Mesa COMMUNITY SERVICES

Spring 2007

GRAND OPENING FINAL PHASE

Junior Seau Sports Complex

A grand opening celebration was held to mark completion of the final phase of the Junior Seau Sports Complex. The complex is located on the grounds of Parkway Middle School at 9009 Park Plaza Drive in La Mesa. This phase includes three lighted baseball/softball fields, accompanying bleacher seating, additional parking, an entry plaza, and an access roadway from adjacent La Mesita Park. This phase completes the $6 million project that also includes a lighted football field, multi-purpose soccer field, and restroom/concession building completed in earlier phases.

City Manager Sandra Kerl addresses audience at the Grand Opening Celebration held September 18.

La Mesa Appreciation Day

Saturday, November 4
8:00AM to Noon

Get Involved!

Help make La Mesa parks shine. Recruit family and friends to join you and spruce up your neighborhood park. This is a great community service project for youth groups, scouts, church groups, and service clubs. Projects range from light raking, trimming, and weeding, to planting, painting, and litter control.

For more information call La Mesa Community Services at 619-667-1300.

Reap Benefits from Daily Activities

A moderate amount of physical activity is roughly equivalent to physical activity that uses approximately 150 Calories (kcal) of energy per day, or 1,000 Calories per week. This chart shows a variety of activities that you can incorporate into your daily physical activity schedule for a healthier lifestyle.
Chart is extracted from Promoting Physical Activity – A Guide for Community Action, U. S. Department of Health and Human Services, Human Kinetics 1999.

Less Vigorous More Time	Washing and waxing a car for 45-60 minutes
	Washing windows or floors for 45-60 minutes
	Playing volleyball for 45 minutes
	Playing touch football for 30-45 minutes
	Gardening for 30-45 minutes
	Wheeling self in wheelchair for 30-40 minutes
	Walking 1 ¾ miles in 35 minutes (20 min/mile)
	Basketball (shooting baskets) for 30 minutes
	Bicycling 5 miles in 30 minutes
	Dancing fast (social) for 30 minutes
	Pushing a stroller 1 ½ miles in 30 minutes
	Raking leaves for 30 minutes
	Walking 2 miles in 30 minutes (15 min/mile)
	Water aerobics for 30 minutes
	Swimming laps for 20 minutes
	Wheelchair basketball for 20 minutes
	Basketball (playing a game) for 15-20 minutes
	Bicycling 4 miles in 15 minutes
	Jumping rope for 15 minutes
	Running 1 ½ miles in 15 minutes (10 min/mile)
Less Time More Vigorous	Shoveling snow for 15 minutes
	Stairwalking for 15 minutes

SMOKE-FREE PARKS IN LA MESA

Section 9.08.074 of the La Mesa Municipal Code designates all City of La Mesa park facilities smoke-free environments. The new code took effect on August 10, 2006 and was announced at an unveiling of the new informational sign at the MacArthur Park playground. Look for these reminder signs in all City parks.

City officials and representatives from Communities Against Substance Abuse of East County unveiled the new signs designating La Mesa parks smoke-free.

Signs bearing this logo have been installed in all City parks.

Live a Healthy Life... Recreate!

La Mesa is a member of the Greater San Diego Recreation and Parks Coalition for Health and Wellness.

GRAND OPENING

LA MESA TEEN CENTER

The La Mesa Teen Center held grand opening festivities on October 18 and officially opened its doors to area teens on October 23, 2006. The center is located in Highwood Park, adjacent to La Mesa Middle School and serves City of La Mesa and surrounding area teens. The City has contracted with the Boys and Girls Club of East County to operate the facility. Activities in the 3,000 square foot facility will include after school programs, seasonal camp programs, and athletic activites. Amenities include computers, video games, a music recording room, kitchen facility, and study room. The Boys and Girls Club is also working with the La Mesa-Spring Valley School District to refurbish outdoor recreational facilities at the school site for use by Teen Center participants after school.

A portion of the La Mesa Teen Center modular structure being installed earlier this year.

SPRING 2007 ENRICHMENT SCHEDULE

PRE-ENROLLMENT REQUIRED - USE FORM ON PAGE 8.

Enroll online or by mail
November 6, 2006 through January 27, 2007.

Activities listed for February 5 through June 9, 2007.
See listings for individual class dates and times.

Youth Classes ~ Art

NEW. ANIMAL ART. Lions, tigers, and bears…OH MY! Create a marvelous menagerie of colorful creatures using a potpourri of mixed media. Try collage, mosaics, pen and ink, and more. Learn to paint without a brush. If you love animals, make this your pet project. A supply fee of $10 is payable to the instructor, Artist Alena Batson, at the first class.
➤ Location: MacArthur Room Contractor: Alena Batson FEE: $83 RES/$88 NON-RES

Wed	**5:00 - 6:00PM**	**6-12 yrs**	**Wed**	**5:00 - 6:00PM**	**6-12 yrs**
Feb 7 – Apr 4		#2000	Apr 11 – Jun 6		#2001

ART ENRICHMENT. ART ENRICHMENT. A variety of classes consisting of: portraits, florals, landscapes, designing note cards, paper-making, and crafts using various media such as pencil, pastels, watercolors, and collage. A $15 supplies fee is payable to the instructor, Artist Penny Quirk, at the first class.
➤ Location: Recreation Center Kitchen Contractor: Penny Quirk FEE: $90 RES/$95 NON-RES

Thu	**4:00 - 5:00PM**	**7-12 yrs**
Apr 12 – Jun 7		#2100

CARTOONING. Get the inside story on the art of cartooning. Practice drawing people and animals from head to toe (or paw). Experiment with humor and action. Sharpen your storytelling skills while creating original comic strips starring your own characters. Instructor Alena Batson has been an art educator for over 20 years. A $10 supply fee is payable to the instructor, Artist Alena Batson, at the first class.
➤ Location: MacArthur Room Contractor: Alena Batson FEE: $83 RES/$88 NON-RES

Wed	**6:00 – 7:00PM**	**6-12 yrs**	**Wed**	**6:00 – 7:00PM**	**6-12 yrs**
Feb 7 – Apr 4		#2200	Apr 11 – Jun 6		#2201

Activity fees are subject to change at any time per City Council direction.

AMERICANS WITH DISABILITIES ACT
The City of La Mesa encourages the participation of disabled individuals in the services, activities, and programs provided by the City. Individuals with disabilities who require reasonable accommodation in order to participate in our programs should contact the Classes and Events Supervisor at (619) 667-1333.

Youth Classes ~ Dance

BALLET. Tiny Tots: Basic ballet and tap is introduced with emphasis on coordination, musicality and rhythm. Basic moves are introduced and imagination is encouraged through activities such as skipping, marching, music interpretation, and tumbling. Students need to wear a leotard, tights, and ballet shoes to class – no specific color.
Ballet A: Basic technique is introduced. The emphasis is on coordination, musicality, and rhythm. Students are taught basic ballet positions as an introduction. Imagination is encouraged through activities such as skipping, marching, music interpretation, and tumbling. Students need to wear red tights, red leotard, and black ballet shoes.
Ballet B: The emphasis is basically the same as Ballet A but more terminology, positions, and movements are incorporated as the body and mind develop. Students need to wear red tights, red leotard and black ballet shoes.
Ballet C: The emphasis is the same as Ballet B but with more depth. Students need to wear pink tights, light blue leotard and pink ballet shoes.
Ballet D: Emphasis is similar to Ballet C with more depth and is preparation for Ballet I. Students need to wear pink tights, light blue leotard, and pink ballet shoes.
BALLET 1 & 2: Covers basic fundamentals and ballet technique including stretching, exercises at barre, center, & across the floor. Ballet I students need to wear pink tights, white leotard and pink ballet shoes. Instructor will have correct uniforms available for purchase.
Required dance clothing specified above can be purchased either through California Ballet or any dancewear shop.
NOTE: The All School Concert is June 1 – 2, 2007 at North Park Theater. All students are invited to participate. The registration fee is $50. Use of a costume, to be provided by California Ballet, is included. Tickets to the concert are $10 each pre-sale or $12 at the door. Participants must sign up for both sessions to participate in the All School Concert.
➤ Location: Performing Arts Room Contractor: California Ballet FEE: $65 RES/$70 NON-RES

ITS GREAT TO BE A KID IN LA MESA

Kids Care Fest 2006 was held at Briercrest Park and the Dr. William C. Herrick Community Health Care Library on Saturday, September 30. More than 1100 children and their families participated in a day of hands-on art, science, theater, sports, safety, and health screenings. Joining the City of La Mesa as event co-sponsors were the Grossmont Healthcare District, La Mesa Park & Recreation Foundation, and La Mesa Arts Alliance.

The first 500 kids who attended received a free lunch sponsored by Ralph's Grocery Company. *Other event sponsors included: The San Diego Union-Tribune, Sharp Grossmont Hospital, EDCO Disposal, Golden Acorn Casino, North Island Credit Union, Cox Communications, La Mesa Athletic Council, Troy Glaus and Major League Baseball, La Mesa Rotary Club, and Friends of East County Arts. This annual event is offered free to the community.*

Youth Classes ~ Dance

TDC COMPANY — The Dance Company offers the opportunity to be a part of their national award winning competition company. Company members are selected and placed based on age, ability level, and level of competition desired. Whether you're a beginner or a pro, we have a place for you in our company. A strong emphasis is placed on personal achievement and team values, not on the size of the trophy. This is a year-long commitment with the season lasting from September to July. Please email thedanceco@cox.net for more information and to set up a tryout day and time.

THE DANCE COMPANY offers classes to boys and girls, ages 1½ and up, in tap, jazz, hip-hop, and many other dance disciplines. An emphasis is placed on self-confidence, self-discipline, poise, and coordination through music and movement. Many children will have performance opportunities. Please email thedanceco@cox.net if you have any questions regarding TDC classes or placement in appropriate levels. Visit www.tdcdance.net for more information about The Dance Company. **All classes will perform at the San Diego County Fair. Participants must enroll in both sessions to participate at Fair. Costume cost is approximately $40. Instructor will provide additional information in class.**

NEW. MOMMY DANCE WITH ME (ages 1½ - 2½). Introduce your child to dance and movement along side their best teacher… Mommy. Boys and girls will learn basic tap sounds and skills as well as basic ballet and across the room movement. Simple combinations to familiar children's songs will be taught for practice outside of the class.

➤ Location: West Terrace Contractor: The Dance Company FEE: $70 RES/$75 NON-RES

MINI DANCE (ages 4 – 7). Children will learn tap, ballet, and jazz dance. Like PS Dance, children will learn dance and musicality in a fun and exciting manner. Stronger focus will be placed on proper body position and technical skill. Stretching and flexibility will be introduced as well as performance skills. Black or pink dance attire must be worn. Both black tap shoes and black jazz shoes are required. Mini Dance II requires instructor approval to enroll.

MINI AND JUNIOR COMPANY (ages 4 – 7 yrs.) Children who have demonstrated advanced skill in tap and/or jazz will be invited to participate in these classes. Children will perform in all company recitals and performances as well as have the opportunity to compete locally if desired. Please email thedanceco@cox.net for tryout information.

TAP (ages 6 & up). Children will learn basic steps, rhythms, and combinations as well as musicality and agility following the outline set in the Al Gilbert tap syllabus. Tap shoes and proper dance attire are required. It is strongly recommended that tap classes be taken concurrently with jazz classes. Some Level II and all Level III and IV classes are competitive. *Instructor approval required to enroll in any Tap II, III, or IV level classes. Instructor reserves the right to reclassify children at instructor's discretion.

Youth Classes ~ Dance

JAZZ (ages 6 & up). Children will learn basic steps, isolations, turns, leaps, and across-the-floor progressions of jazz dance. As level increases, flexibility and strength are emphasized in conjunction with more difficult turns and sequences. Jazz shoes and proper dance attire are required. **It is strongly recommended that tap classes be taken concurrently with jazz classes. Some Level II and all Level III and IV classes are competitive and students must have instructor approval to enroll. Instructor reserves the right to reclassify children at instructor's discretion.

ROLANDO PARK GETS A NEW PLAYGROUND

In October, the City proudly opened a new playground in Rolando Park. The playground site was relocated to a lower portion of the park to provide greater accessibility and visibility for park users. Utilizing a grant from the California Integrated Waste Management Board, resilient rubber surfacing manufactured from California waste tires was installed underneath the equipment. This "green project" provides an enhanced recreational facility for the neighborhood and helps divert waste tires from the landfill, making it environmentally friendly as well. Our thanks go to residents of the surrounding neighborhood who provided input for the project.

Planning a child's party?

Save wear and tear on your house - use ours.

Nan Couts Cottage

Perfect for parties of up to 100 people

Features: tile floor, fenced patio access, kitchen, and fireplace.

Front lawn has room for games,relays and party jumps.

Park playground adjacent to the facility.

Call 619-667-1307 for details and availability.

After School Reading Program

LA MESA DALE ELEMENTARY

WHO DO WE NEED?	Teen volunteers like you!

SIGN, SING, & PLAY! American Sign Language class for babies. This is the same class you have seen featured again and again on Fox 6 News, KPBS Full Focus, KUSI News and 10 News in the Morning and it was also rated "Best Parenting Class" in The Lila Guide! More than just a play class, Sign, Sing, and Play was developed by Monta Briant, best selling author of Baby Sign Language Basics and Sign, Sing, and Play, to help parents bond with their babies and open a window into babies' minds and personalities. Parents and children learn effective two-way communication using a fun and simple combination of play, music, and American Sing Language signs. Our weekly themed class engages the whole child by including signs in activities that stimulate social, cognitive, language, and motor development. Fun group activities and one-on-one interactions between parents and children make it easy to remember the new signs, concepts, and strategies introduced each week. You'll have fun playing with your baby and making new friends in this relaxed, semi-structured class. Our small intimate classes ensure plenty of one-on-one attention from your certified Sign2Me instructor and we offer separate classes for babies and toddlers. Most babies will begin using their first sign by the end of the 9-week series and will go on to learn many more! Come Sign, sing, and Play with us! Fee includes handouts and book (Spanish or English).

Lifeguard Training course will be held
January 20 through February 10, 2007
(T, TH 5:00-8:00 PM, Saturdays: January 20 1:00 PM - 5:00 PM, January 27 8:00 AM - 5:00 PM, February 3 8:00 AM - 5:00 PM, February 10 8:00 AM - 12 noon)

Attendance is required at all class sessions
FEES: $105 La Mesa Residents / $110 Non-Residents

Observed Holidays & Pool Closures

THE POOL WILL BE CLOSED FOR ANNUAL MAINTENANCE:
Thursday, November 23 - Sunday, January 7

The pool will re-open on January 8

THE POOL CLOSES AT 1:30 PM ON:
Friday, November 10 – Veteran's Day (observed)

FREE PASS — CLIP & SAVE

SENIOR HOUSING EXPO

Wed, Jan 31 — 10 AM – 1:30 PM

La Mesa Community Center, 4975 Memorial Dr., La Mesa

Call 464-0505 for info!

More than 50 exhibitors and guest speakers on housing alternatives, reverse mortgages, assisted living, home safety, home modifications, granny flats, subsidized housing and more!

Sponsored by: Union Bank of California & MDC Development Corporation.

FREE PASS — CLIP & SAVE

SEEKING MATURE VOLUNTEERS

Do you like fun, laughter, kids, sharing, learning, and celebrations?

We are looking for mature volunteers (55 and older) who enjoying working with elementary age school children and can commit to 2 or more hours per week during the school year.

Project KAST (Kids and Seniors Together) is an after-school program pairing caring older adults with elementary students who are at risk for educational failure. Adult volunteers act as mentors, encouraging students to do their best and helping them with homework completion. Volunteers will share their life experience with students in a safe, nurturing environment that encourages a love of lifelong learning and boosts self-esteem. Seasonal holiday activities and end of year picnic are just a couple of the special events volunteers and students celebrate together.

The program meets at La Mesa Dale Elementary School in 10-week sessions during the school year, Monday through Friday, for 2 hours each afternoon. Volunteers are asked to commit to the 2 hours at least one day per week and are welcome to sign up for as often as you like!

For more information call Michele Greenberg-McClung at 619-667-1333.

ENROLLMENT INFORMATION

MARK YOUR CALENDAR!

Enroll Online: See our new improved online system. Now it's easier and convenient to enroll online and receive immediate confirmation of your class enrollment! Please let us know how you like our new look.

Classes are available online beginning November 6. Go to www.cityoflamesa.com, click first on Recreation Classes, then on Spring 2007 Class Information & Enrollment. Scroll down and click on the online enrollment icon. Remeber to print your class confirmation when you enroll online.

November 6 — January 27: **Enroll online, fax, or mail completed enrollment forms along with payment** (checks, money orders, VISA or MasterCard) to: Attn: Enrollment Processing
La Mesa Community Center
4975 Memorial Drive, La Mesa CA 91941
(Fax to 619-464-3761, or use convenient drop-box in the Community Center lobby)

ROSTERS

January 31: Class rosters available at the Community Center. You must be enrolled and on the roster to attend class.

PROGRAMS

February 5: Spring enrichment programs begin. Check individual listings for specific dates and times. Late enrollments can only be accepted during the first two weeks of classes on a space available basis.

CLOSED HOLIDAYS

Regular activities will not be held on dates listed below. Check with individual class instructors to see if special class sessions will be scheduled.

November 10 Veteran's Day (obs)
December 18 – Jan 1 Winter Break
May 28 – Memorial Day
November 20 – 25 Thanksgiving Week
January 15 – Martin Luther King Day
June 2 – Flag Day Parade

WRITE IT DOWN!

Make a note of your enrollment information. Online enrollment allows you to check availability and offers an email confirmation check box. Confirmation is not available for mail-in or drop box enrollments; your cancelled check or credit card bill is your receipt. We will make every attempt to enroll you in your first choice selection; however, activities fill quickly. If class selections are no longer available, you will be notified by mail.

CHOOSE classes carefully. There is a $10 fee for requested changes. Change requests must be received in the office at least three (3) working days prior to class start date. Changes are subject to availability. Instructors reserve the right to reclassify the level of any participant at any time and participants pay only the difference in class fee. NO REFUNDS.

RESIDENTS NOTE: Participants residing within the incorporated city limits of La Mesa pay the first listed class fee marked RES. All others, including those with addresses in the unincorporated area of La Mesa, pay the second listed class fee marked NON-RES.

DON'T DELAY. Classes not meeting minimum enrollment will be cancelled. Late enrollments can only be accepted during the first two weeks of classes on a space available basis. If you miss the enrollment period, check for class availability online (see online enrollment instructions above).

Late enrollments for all other classes and camps are processed at the Community Center office, Monday through Thursday, 8:30 AM to 4:30 PM the first two weeks of classes. Most City offices are closed on alternate Fridays (call 619-667-1300 for specific dates).

QUESTIONS?

Call the Community Center office at 619-667-1300 for information or referral to the appropriate staff contact.

City of La Mesa
Storm Water Pollution Prevention
Pools & Spas

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

Discharging of pool or spa water is not prohibited; however, the following measures are required.

1. Water shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Pool water must be dechlorinated
3. Water pH acceptable range from 7 to 8
4. No algae present in water
5. Water shall not contain chemicals to counteract the chlorine
6. Water does not contain hydrogen peroxide based products
7. Controlled discharge eliminating potential for erosion

Chlorine

Test pool or spa water for chlorine prior to discharge. Chlorine naturally dissipates overtime and if pool or spa water is left 3 to 5 days, it will become dechlorinated. Pool water needs to be drained before it turns green. Draining pool water gradually over landscaped areas will help prevent erosion problems.

Pool Filters

Pool filters should be cleaned over landscaped areas or anything that will absorb the discharge. Material may be collected over a filter cloth and disposed of in the trash. Filter backwash must be discharged into the sewer system with a pH of 5 to 12.5.

Pool Construction

Material must be contained and disposed of appropriately. Waste generated from plaster, gunite, cement, sediment, and other construction materials is prohibited from entering the storm drain system.

Do the Right Thing, Stay in Compliance and Protect Our Environment. For more information, contact the City's Storm Water Hotline (619) 667-1134.

H. WASTE VOLUMES COLLECTED

		Weight (in pounds)	DI	FI	L	N	RC	RU	S	
			Management Method(s) Include percentage if more than one method was used							
1. Flammable & Poison	Flammable solid/liquid	13,200.00	5%	95%						16%

STORM WATER PROJECT DATA SHEET

Public Works Department / Engineering Division
8130 Allison Avenue, P.O. Box 937, La Mesa, CA 91944-0937
Telephone: (619) 667-1166 • Fax: (619) 667-1380

PROJECT DATA:

Owner's Name & Phone No: _____

Address: _____ **Permit No:** _____

Project: _____ **Date Applied:** _____

PROJECT SITE DATA:

1. Area of the lot/parcel = _____ sf
2. Existing impervious area (roof/building foot print) = _____ sf
3. Existing impervious area (driveway, parking, walkway, hardscape etc.) = _____ sf
4. Impervious area after development (roof/building foot print) = _____ sf
5. Impervious area after development (driveway, parking, walkway, hardscape etc.) = _____ sf
6. Total area to be disturbed = _____ sf
7. Storm water runoff based on Hydrology Study

   Existing runoff = _____ cfs, Post construction runoff = _____ cfs
8. Identify if the runoff from the site discharged to the public street or storm drain or open channel, detention or retention basin: _____
9. Water Shed (Check One): San Diego River _____ San Diego Bay _____

---

a. Total disturbed area includes impervious area, construction material storage, staging area, graded slopes, new slopes and landscape areas.

b. The information shall be shown on the site/grading plans.

c. Complete APPENDIX A

Notes:

- Items I through 9 shall be shown on the site development plan/grading plan.
- The applicant may be required to submit SWPPP and SUSMP depending on the "Priority" as stated in **Appendix A**.
- A Hydrology report may be required.

CITY OF LA MESA
JEWEL of the HILLS

APPENDIX A - STORM WATER REQUIREMENTS

Public Works Department / Engineering Division
8130 Allison Avenue, P.O. Box 937, La Mesa, CA 91944-0937
Telephone: (619) 667-1166 • Fax: (619) 667-1380

Complete Sections 1 and 2 of the checklist to determine which permanent best management practices (BMPs) and which construction BMPs are required for your project for storm water. *This form must be completed and submitted with your permit application.*

SECTION 1. PERMANENT STORM WATER BMP REQUIREMENTS:

PART A: DETERMINE PRIORITY PROJECT PERMANENT STORM WATER BMP REQUIREMENTS.

DOES THE PROJECT MEET THE DEFINITION OF ONE OR MORE OF THE PRIORITY PROJECT CATEGORIES AS DEFINED IN THE *STORM WATER STANDARDS?* (APPENDIX I)*	**YES**	**NO**
1. Detached residential development of 10 or more units?	☐	☐
2. Attached residential development of 10 or more units?	☐	☐
3. Commercial development greater than 100,000 square feet?	☐	☐
4. Automotive repair shop?	☐	☐
5. Restaurant?	☐	☐
6. Steep hillside development greater than 5,000 square feet? (Other criteria) (Definition- 25% and steeper)	☐	☐
7. Project discharging to receiving waters within "*Environmentally Sensitive Areas*?"	☐	☐
8. "Parking lot" greater than or equal to 5,000 square feet or with at least 15 parking spaces, and potentially exposed to urban runoff?	☐	☐
9. "Streets, roads, highways, and freeways" that would create a new paved surface that is 5,000 square feet or greater?	☐	☐
10. "Significant redevelopment" over 5,000 square feet? (Explain)	☐	☐
**** Refer to the definitions section in the Storm Water Standards for expanded definitions of the priority project categories.***		
Limited Exclusion: Trenching and resurfacing work associated with utility projects are not considered priority projects. Parking lots, buildings and other structures associated with utility projects are priority projects if one or more of the criteria in Part A is met. If all answers to Part A are "No", continue to Part B. (sidewalk, bikeway)		

PART B: DETERMINE STANDARD PERMANENT STORM WATER REQUIREMENTS.

DOES THE PROJECT PROPOSE:	**YES**	**NO**
1. New impervious areas such as rooftops, roads, parking lots, driveways, paths and sidewalks?	☐	☐
2. New pervious landscape areas and irrigation systems?	☐	☐
3. Permanent structures within 100 feet of any natural water body?	☐	☐
4. Trash storage areas?	☐	☐
5. Liquid or solid material loading and unloading areas?	☐	☐
6. Vehicle or equipment fueling, washing, or maintenance areas?	☐	☐

7. Require a General NPDES Permit for storm water discharges associated with industrial activities* (Except construction)?	☐	☐
8. Commercial/ industrial waste handling or storage, excluding typical office or household waste?	☐	☐
9. Any grading or ground disturbance during construction?	☐	☐
10. Any new storm drains, or alteration to existing storm drains?	☐	☐
**To find out if your project is required to obtain an individual General NPDES Permit for Storm Water Discharges Associated with Industrial Activities, visit the State Water Resources Control Board web site at, www.swrcb.ca.gov/stormwtr/industrial.html.*		

If any of the answers provided in Section 1, Part A are "Yes," the project is subject to the "Priority Project Permanent Storm Water BMP Requirements". A standard urban storm water mitigation plan (SUSMP) shall be submitted; the requirements of the City of La Mesa Storm Water Best Management Practices Manual-Part 2 shall be satisfied. In particular, Section III must be completed.

If all answers provided in Section 1, Part A are "No," and any answers to Part B are "Yes," the project is only subject to the Standard Permanent Storm Water BMP Requirements. Section III is to be complete through III.2.B.17.

If every question in Part A and B is answered "No," the project is exempt from permanent storm water requirements.

SECTION 2. CONSTRUCTION STORM WATER BMP REQUIREMENTS:

PART C: DETERMINE CONSTRUCTION PHASE STORM WATER REQUIREMENTS.

WOULD THE PROJECT MEET ANY OF THESE CRITERIA DURING CONSTRUCTION?	YES	NO
1. Is the project subject to California's statewide General NPDES Permit for Storm Water Discharges Associated With Construction Activities?	☐	☐
2. Does the project propose grading or soil disturbance?	☐	☐
3. Would storm water or urban runoff have the potential to contact any portion of the construction area, including washing and staging areas?	☐	☐
4. Would the project use any construction materials that could negatively affect water quality if discharged from the site (such as paints, solvents, concrete and stucco)?	☐	☐

If the answer to question 1 of Part C is answered "Yes," your project is subject to Construction Storm Water BMP Performance Standards, and a Storm Water Pollution Prevention Plan (SWPPP) must be prepared.

If the answer to question 1 is "No," but the answer to any of the remaining questions is "Yes," your project is subject to Construction Storm Water BMP Performance Standards and a local Water Pollution Control Program (WPCP) must be prepared.

If every question in Part C is answered "No," your project is exempt from any construction storm water BMP requirements. If any of the answers to the questions in Part C are "Yes," complete the construction site prioritization in Part D, below.

PART D: DETERMINE CONSTRUCTION SITE PRIORITY

In accordance with the Municipal Permit, each construction site with construction storm water BMP requirements must be designated with a priority: high, medium or low. This prioritization must be completed with this form, noted on the plans and included in the SWPPP or WPCP.

Indicate the project's priority in one of the check boxes using the criteria below, existing and surrounding conditions of the project, the type of activities necessary to complete the construction and any other extenuating circumstances that may pose a threat to water quality. The City Engineer may adjust the priority of the projects both before and during construction.

[Note: The construction priority DOES NOT change construction BMP requirements that apply to projects; all construction BMP requirements must be identified on a case-by-case basis. The construction priority DOES affect the frequency of inspections that will be conducted by the City.]

☐ A) High Priority

1. Projects where the site is 50 acres or more and grading will occur during the wet season.
2. Projects that are 5 acres or more and tributary to an impaired water body for sediment by the most current Clean Water Act Section 303(d) list (e.g., Chollas Creek).
3. Projects that are 5 acres or more within or directly adjacent to or discharging directly to water within a water quality sensitive area.
4. Projects, active or inactive, adjacent or tributary to sensitive water bodies.

☐ B) Medium Priority

1. Capital improvement projects where grading occurs. However, a Storm Water Pollution Prevention Plan (SWPPP) is not required under the State General Construction Permit (i.e., water and sewer replacement projects, intersection and street re-alignments, widening, comfort stations, etc.)
2. Permit projects in the public right-of-way where grading occurs. However, SWPPPs are not required, such as installation of sidewalk, substantial retaining walls, curb and gutter for an entire street frontage, etc.
3. Permit projects on private property where grading permits are required. However, Notice Of Intents (NOIs) and SWPPPs are not required.

☐ C) Low Priority

1. Capital projects where minimal to no grading occurs, such as signal light and loop installations, street light installations, etc.
2. Permit projects in the public right-of-way where minimal to no grading occurs, such as pedestrian ramps, small sidewalks, driveway additions, small retaining walls, etc.
3. Permit projects on private property where grading permits are not required, such as small retaining walls, single-family homes, small tenant improvements, etc.

Completed By: _____

Name, Address & Phone

CITY OF LA MESA
SUSMP REVIEW CHECKLIST
D-MAX Engineering, Inc.

A. PROJECT INFORMATION

Project Name _____ Type: ☐ Private ☐ Public

Street Address _____ ZIP

Project Size (ft^2) _____ paved surfaces (ft^2) _____ roofs (ft^2) _____ pervious (ft^2) _____

SUSMP Preparer _____ SUSMP Report Date _____

Project Description _____

_____

_____

B. SUSMP CATEGORY

Is this a Priority Project? ☐ Yes ☐ No

If yes, check all SUSMP categories that apply to the project:

- ☐ Residential Development: 100+ units Type: ☐ Attached ☐ Detached
- ☐ Residential Development: 10-99 units Type: ☐ Attached ☐ Detached
- ☐ Commercial Development > 100,000 ft^2
- ☐ Automotive Repair Shop
- ☐ Restaurant
- ☐ Hillside Development > 5,000 ft^2
- ☐ Parking Lot > 5,000 ft^2 or with > 15 parking spaces and potentially exposed to urban runoff
- ☐ Streets, Highways, or Freeways
- ☐ Discharges to ESA and creates $\geq$ 2,500 ft^2 of impervious surfaces or increases impervious area to 10% or more of its naturally occurring condition and
  - ☐ Is located within 200 feet of an ESA **OR**
  - ☐ Discharges urban runoff to ESA without mixing with flows from adjacent land
- ☐ Redevelopment that creates or adds $\geq$ 5,000 ft^2 of impervious surfaces on an already developed site

C. HYDROLOGIC SETTING

Receiving water body: _____ Hydrologic Area: _____

Approximate distance to water bodies: ☐ < 200 ft. ☐ 200 – 1000 ft. ☐ > 1000 ft.

Sensitivity of receiving waters: ☐ Non-sensitive ☐ ESA ☐ 303(d)/ESA (all 303(d) are by definition also ESAs)

If 303(d) list impairments _____

D. POLLUTANTS OF CONCERN (as listed in the report)

Pollutant	A*	Listed Correctly?		Comments
		Yes	No	
Sediments				
Nutrients				
Heavy Metals				
Organic Compounds				
Trash & Debris				
Oxygen Demanding Substances				
Oil & Grease				
Bacteria & Viruses				
Pesticides				
Others (list):				

Pollutant	A*	Listed Correctly? Yes	Listed Correctly? No	Comments

*A = Anticipated Pollutant

E. Conditions of Concern

Was a drainage study report prepared? ☐ Yes ☐ No

Was the report prepared by a registered Civil Engineer? ☐ Yes ☐ No

If yes list the engineer's name _____

Does the study state that field reconnaissance was conducted? ☐ Yes ☐ No

Relevant findings _____

Drainage study includes (check all that apply):

☐ Calculation 1: based on (indicate one: ☐ 2 ☐ 10 ☐ 50 ☐ 100)-year, (indicate one: ☐ 6 ☐ 24)-hour storm

- ☐ Peak flow rate — existing (cfs): _____ proposed (cfs): _____
- ☐ Flow velocity
- ☐ Runoff volume
- ☐ Time of concentration
- ☐ Retention volume

☐ Calculation 2: based on (indicate one: ☐ 2 ☐ 10 ☐ 50 ☐ 100)-year, (indicate one: ☐ 6 ☐ 24)-hour storm

- ☐ Peak flow rate — existing (cfs): _____ proposed (cfs): _____
- ☐ Flow velocity
- ☐ Runoff volume
- ☐ Time of concentration
- ☐ Retention volume

Were conditions of concern adequately identified? ☐ Yes ☐ No

If so, has the project implemented sufficient site design, source control, and/or treatment control BMPs to maintain pre-project hydrologic conditions affecting downstream conditions of concern? ☐ Yes ☐ No

BMPs	N/A	Yes	No	Comments
"Yes" means incorporated and adequate; "No" means not incorporated or not adequate				
F Site Design BMPs (All Projects)				
F.1 Maintain Pre-Development Runoff Conditions				
Minimize project's impervious footprint				
Conserve natural areas				
Construct low traffic areas (walkways, trails, patios, parking lots, alleys, etc.) using permeable surfaces				
Construct streets, sidewalks, and parking lot aisles to minimum widths				
Maximize canopy interception by preserving existing trees and shrubs				
Minimize use of impervious surfaces, such as decorative concrete, in landscape design				
Preserve natural drainage systems				
Other (list in comments box)				
F.2 Minimize Directly Connected Impervious Areas				
Drain rooftops into landscaping				
Drain sidewalks, walkways, trails, and patios into landscaping				

BMPs	N/A	Yes	No	Comments
"Yes" means incorporated and adequate; "No" means not incorporated or not adequate				
Other (list in comments box)				
F.3 Protect Slopes and Channels				
G. Source Control BMPs				
Provide storm drain stenciling				
Design outdoor material storage areas to reduce pollution introduction				
Design trash storage areas to reduce pollution introduction				
Use efficient irrigation systems and landscape design				
H. Individual Project Category BMPs				
H.1 Private Roads				
At least one of the following (check all that apply): ☐ Rural swale system ☐ Dual drainage system ☐ Urban curb/swale system ☐ Other equivalent method: _____				
H.2 Residential Driveways & Guest Parking				
At least one of the following (check all that apply): ☐ Driveways: shared access, flared, with wheelstrips, or drain to landscaping ☐ Temporary or guest parking: pervious paving or drain to landscaping ☐ Other equivalent method: _____				
H.3 Dock Areas				
All of the following (check all that apply): ☐ Covered or designed to prevent run-on and runoff ☐ No direct connections from depressed loading dock areas to the storm drain system ☐ Other equivalent method: _____				
H.4 Maintenance Bays				
All of the following (check all that apply): ☐ Indoors or designed to prevent run-on and runoff ☐ Drainage system designed to capture all wash water, leaks, and spills; bay is not directly connected to the storm drain system ☐ Other equivalent method: _____				
H.5 Vehicle Wash Areas				
All of the following (check all that apply): ☐ Self-contained, or covered with roof or overhang ☐ Equipped with clarifier or other pretreatment device ☐ Properly connected to sanitary sewer ☐ Other equivalent method: _____				
H.6 Outdoor Processing Areas				

BMPs	N/A	Yes	No	Comments
"Yes" means incorporated and adequate; "No" means not incorporated or not adequate				
All of the following (check all that apply): ☐ Covered or enclosed, sloped toward dead-end sump, or discharge to sanitary sewer with permit ☐ Graded or bermed to prevent run-on from surrounding areas ☐ No storm drains to be installed in equipment repair areas ☐ Other equivalent method: _____				
H.7 Equipment Wash Areas				
All of the following (check all that apply): ☐ Self-contained, or covered with roof or overhang ☐ Equipped with clarifier, grease trap, or other pretreatment device, as appropriate ☐ Properly connected to sanitary sewer ☐ Other equivalent method: _____				
H.8 Parking Areas				
Incorporate as applicable and feasible (check all that apply): ☐ Incorporate landscaping into drainage design ☐ Overflow parking constructed with pervious paving ☐ Other equivalent method: _____				
H.9 Roadways				
☐ Appropriate treatment control BMP selected				
H.10 Fueling Areas				
All of the following (check all that apply): ☐ Overhead coverage greater than or equal to size of area within grade break, with downspouts routed to not drain into fueling area. ☐ Drains to project's treatment control BMPs prior to entering MS4 ☐ Paved with Portland Cement or equivalent; not paved with asphalt ☐ Have an appropriate slope to prevent ponding; grade break to prevent run-on ☐ Other equivalent method: _____				
H.11 Hillside Landscaping				
☐ Disturbed areas landscaped with deep-rooted, drought tolerant plant species for erosion control				

H. TREATMENT CONTROL BMPS

The following treatment control BMPs have been selected for this project (check all that apply):

☐ Biofilter

☐ Detention Basin

☐ Infiltration

Indicate Type: ☐ Basin ☐ Trench or Swale ☐ Porous Paving

Groundwater table height: _____ feet

Have appropriate groundwater protection measures been proposed? ☐ Yes ☐ No

☐ Wet Pond

☐ Wetland

☐ Drainage Insert manufacturer & model number: _____

☐ Filtration System

☐ Hydrodynamic Separator System manufacturer & model number : _____

Do proposed BMPs effectively address primary pollutants of concern (high or med. removal efficiency)? ☐ Yes ☐ No

Have the BMPs with the highest removal efficiencies for the anticipated pollutants been selected? ☐ Yes ☐ No

If not, does the report justify the use of the proposed BMPs? ☐ Yes ☐ No

Treatment Control BMP Design

Design based on ☐ Flow ☐ Volume

Are the calculations based on the appropriate size and frequency storm event? ☐ Yes ☐ No

Is all runoff from the site directed to at least one treatment control BMP? ☐ Yes ☐ No

Are the selected BMPs capable of treating the calculated SUSMP flow or volume? ☐ Yes ☐ No

Are the selected treatment control BMPs designed properly? ☐ Yes ☐ No

If design is flawed, list flaws here: _____

I. MAINTENANCE REQUIREMENTS

Is an operation and maintenance (O&M) plan attached? ☐ Yes ☐ No

List the party identified as responsible for implementing the O&M plan _____

Does the plan require adequate inspection and maintenance of all structural BMPs? ☐ Yes ☐ No

Is an access easement or agreement included? ☐ Yes ☐ No

J. SITE MAP

Are all proposed structural BMPs (site design, source control, and/or treatment) identified on the map? ☐ Yes ☐ No

Does the map adequately show the proposed property drainage? ☐ Yes ☐ No

K. SUMMARY

Does the submitted SUSMP report meet the City's requirements? ☐ Yes ☐ No

Major concerns regarding this submittal are summarized (check one) ☐ Below ☐ On attached sheet

This guide is a public service to help reduce pollution and the amount of materials landfilled. Listing in this directory is not a recommendation or endorsement by the **County of San Diego**.

To add your business in future editions of this directory, please call:

1-877-R-1-EARTH

Special thanks to I Love A Clean San Diego, the Alameda County Waste Management Authority and the Sonoma County Waste Management Agency for their assistance in developing this guide. Brochure design by Paul Ruiz and illustrations by Sheryl Chapman.

This guide is printed on 100% post-consumer recycled content paper with soy-based inks

The County of San Diego Recycles

It's In Our Nature!

In 1990 San Diego County residents and businesses recycled just 20% of their waste. Thanks to your efforts, the 2002 recycling rate was over 50%. But we can still do more.

WHY RECYCLE?

As the County of San Diego continues to grow, the recycling of construction and demolition materials is vital to preserving our existing landfill space. Construction and demolition debris (not including metals or yardwaste) comprises 35% of materials disposed in San Diego landfills. In 2002, residents and businesses in the unincorporated San Diego County landfilled 575,000 tons of material. 189,000 tons of that was construction and demolition material. Most of those materials landfilled, including dirt, rock, concrete and carpet could have been recycled.

By choosing durable, rather than disposable, products and using energy efficient appliances for remodels and new home construction, the amount of waste generated can be greatly reduced. Remodeling or retrofitting existing buildings can greatly reduce the amount of waste generated from new construction. If you have to demolish a structure, consider SALVAGE and DECONSTRUCTION.

The **County of San Diego's Solid Waste Ordinance**, and several jurisdictions' within the county, prohibits placing the following industrial materials in the trash:

ASPHALT, CONCRETE, DIRT, ROCK, SAND AND BRUSH.

WHAT CONSTRUCTION AND DEMOLITION WASTE IS SENT TO THE LANDFILL?

Source: 1999 Miramar Landfill Waste Characterization Study

For more information, call **1-877-R-1-EARTH** (toll free).

STOP WASTE BEFORE IT STARTS

REDUCE WASTE... USE LESS!

- Be precise! Measure twice, cut once.
- Use standard size materials.
- Choose durable rather than disposable.
- Use energy efficient practices and products for construction, operation and maintenance of building.

REUSE MATERIALS

- Consider remodeling or retrofitting existing buildings for new use.
- Instead of DEMOLITION, consider SALVAGE and DECONSTRUCTION.
- Asphalt and concrete can be crushed and reused on-site.
- Use salvaged products or products made from recycled materials.

RECYCLING SAVES MONEY!

- Haulers generally charge less for recycling metal, concrete and clean wood than for normal trash collection. You can also use a scrap metal dealer or concrete facility for recycling collection.
- By diverting wastes from trash bins into recycling bins, you can reduce your trash bin size and the number of weekly collections.
- Extra time spent separating materials usually costs less than landfill fees.

HAVE A WASTE MANAGEMENT PLAN

Before you start, identify what materials are used in your project. Work with your contractor, hauler or recycler to determine what materials should be separated for recycling. Use the chart on the next page to help you get started.

According to the National Association of Home Builders (NAHB) Research Center, the following natural resources are required to build a 1,700 square feet home in this country:

- *9,700 board feet of lumber*
- *4,850 square feet of sheathing*
- *2,528 square feet of siding*
- *2,000 square feet of shingles*
- *55 cubic yards of concrete*
- *2,500 square feet of insulation*
- *6,484 square feet of drywall*
- *300 pounds of nails*
- *750 feet of copper wire*
- *170 feet of copper pipe*
- *55 gallons of paint*

Source: www.nahbrc.org

CLEAN LOADS SAVE YOU $$! CHECK WITH YOUR HAULER AND RECYCLER TO BE SURE WHAT A "CLEAN LOAD" IS.

DECONSTRUCTION *is the careful removal of materials from structures to recover valuable building resources. Deconstructed materials can be sold to salvage companies, which eliminates landfill disposal fees.*

SALVAGE *is using and saving reusable items, including doors, hardware, appliances and fixtures (preferably before construction begins, to avoid damaging anything). These items are often rare like old-growth lumber or antique fixtures.*

Call 1-877-R-1-EARTH (1-877-713-2784) for more information.

WASTE MANAGEMENT PLAN

TIPS FOR A SUCCESSFUL PLAN:

- Appoint a recycling supervisor.
- Educate all workers on the project to keep lunch bags, caulking tubes and other trash out of the recycling bins.
- Require subcontractors to participate in your recycling program.
- Allow time for deconstruction and salvage.
- Sort materials by type.
- Place recycling bins in a location that will prevent misuse or contamination by the public. Even a small amount of trash can make the entire load unacceptable for recycling.

MATERIAL TYPE	QUANTITY (tons or containers)	SALVAGE OR REUSE	RECYCLE	DISPOSE
Asphalt & Concrete				
Brick/Masonry/Tile				
Cabinets, Doors, Fixtures, Windows				
Carpet				
Carpet Padding				
Cardboard				
Ceiling Tile (acoustic)				
Dirt (clean)				
Drywall (new, unpainted sheets or scrap)				
Drywall (used)				
Landscape Debris (brush, trees, stumps, etc.)				
Plastic Buckets				
Rock				
Roofing Materials				
Scrap Metal/Appliances				
Stucco				
Unpainted Wood & Pallets				
Remaining Trash				
Recycled Mixed Debris				
Other				
Hazardous Materials: Call 1-800-714-1195				

Call 1-877-R-1-EARTH (1-877-713-2784) for more information.

HAZARDOUS WASTES KEEP OUR WATER CLEAN

PUT TOXIC WASTE IN ITS PLACE!

SOME HAZARDOUS MATERIALS YOU MAY HAVE:

- ACIDS & CAUSTICS
- AEROSOL CANS
- ANTIFREEZE
- ASBESTOS
- CONTAMINATED SOILS
- FLUORESCENT LIGHTING TUBES & BALLASTS
- FUEL/GASOLINE KEROSENE
- GLUES
- HERBICIDES
- MOTOR OIL & FILTERS
- MERCURY
- NICKEL-CADMIUM (NI-CAD) BATTERIES
- PAINT (LEAD, OIL, LATEX)
- PAINTED WOOD
- PAINT THINNERS
- PCBs
- PESTICIDES
- POISONS
- POOL CHEMICALS
- PROPANE TANKS
- RAILROAD TIES
- RECHARGEABLE BATTERIES
- SOLVENTS
- THINNERS
- TREATED WOOD

Toxic wastes cannot be disposed of in the trash. There is AFFORDABLE, SAFE, LEGAL and CONVENIENT disposal of hazardous waste for homeowners and qualifying small businesses throughout San Diego County. If you are a homeowner, call **1-877-R-1-EARTH**.

If you are a small business that generates 27 gallons or 220 lbs. of hazardous waste each month, or 2.2 lbs. of acutely hazardous waste each month, you may qualify as a Conditionally Exempt Small Quantity Generator (CESQG), and be able to use certain Household Hazardous Waste Facilities. Call 1-800-714-1195 for information and to determine whether your business qualifies.

For large businesses and general information about hazardous waste call the County of San Diego Hazardous Materials Division at 1-800-253-9933.

Sponsored by the **County of San Diego Department of Environmental Health**.

The County of San Diego Watershed Protection Ordinance prohibits the discharge, either directly or indirectly, of anything but rainwater to the storm drains or water bodies. Best Management Practices (BMPs) help prevent illegal discharges of debris to nearby storm drains, creeks, rivers and the ocean.

BMPS FOR CONSTRUCTION AND DEMOLITION

- Whenever possible, schedule demolition, excavation and grading activities for dry weather.
- Designate staging areas for materials, soil stockpiles and wastes away from storm drains.
- Store materials and wastes covered with a tarp or plastic sheeting to shield them from wind or rain.
- Use dry clean up methods, such as sweeping and vacuuming whenever possible.
- Never bury waste. Contact your hauler for proper disposal of wastes and recyclable materials.

For more information or to report stormwater pollution, call the Regional Stormwater Hotline at 1-888-846-0800 or www.projectcleanwater.org.

BUILD SMARTER... BUILD GREEN

Each of us has a stake in preventing pollution and preserving resources for future generations. Buildings have a tremendous impact on the environment, both during construction and through their operation.

"Green" building is a strategy of land-use, building design and construction activities that reduce environmental impacts. Benefits of building green include reduced energy consumption and protection of ecosystems and occupant health. Green building reduces dependence on natural resources such as trees, oil and minerals. It creates less pollution and greenhouse gasses by reducing manufacturing and transportation related emissions. For more information: http://www.usgbc.org/chapters/sandiego/meet_the_chapter.asp

Call 1-877-R-1-EARTH (1-877-713-2784) for more information.

Estar incluido en este directorio no es una recomendación o aprobación del **Condado de San Diego**, el que está proporcionando la información como un servicio público para ayudar a reducir la contaminación y la cantidad de materiales que se transportan al relleno sanitario.

Este guía se ha impreso en papel reciclado con un contenido del 100% de pos-consumidor y con tintas con base de soya.

El Condado de San Diego Recicla
¡es nuestra naturaleza!

En 1990 los residentes y comercios en el Condado de San Diego reciclaron sólo el 20% de sus desechos. Gracias a sus esfuerzos, la tasa de reciclaje en el año 2002 fue de más del 50%. Pero todavía podemos hacer más.

Este guía proporciona información sobre el reciclaje y la prevención de los desechos para todos los constructores, desde el constructor aficionado y los que se ocupan en modelar de nuevo, hasta los constructores de grandes proyectos comerciales. Este es su manual para ahorrar dinero y recursos en el sitio de la obra.

¿POR QUÉ RECICLAR?

Conforme el Condado de San Diego continua creciendo, el reciclaje de materiales de construcción y demolición es vital para la preservación de nuestro espacio existente del relleno sanitario. Los escombros de construcción y demolición (sin incluir los metales y desechos de jardines) consta del 35% de materiales tirados en los rellenos sanitarios de San Diego. En el año 2002, los residentes y negocios en el área no incorporada del Condado de San de San Diego, dispusieron de 575.000 toneladas de material en los rellenos sanitarios. De esa cantidad, 189.000 toneladas fue material de construcción y demolición. La mayor cantidad de esos materiales, incluyendo tierra, piedra, concreto y alfombras se pudo haber reciclado.

La cantidad del desecho generado puede ser grandemente reducida si se escogen productos durables, en lugar de los desechables, y si se usan aparatos electrodomésticos con eficiencia de energía para la nueva modelación o para la construcción de viviendas nuevas. La remodelación o retro-acondicionamiento de los edificios en existencia puede reducir grandemente la cantidad de desechos generados en la nueva construcción. Si tiene usted que echar abajo una estructura, considere el SALVAMENTO y la DESCONSTRUCCIÓN.

El Reglamento de Residuos Sólidos del Condado (**County Solid Waste Ordinance**), y varias jurisdicciones dentro del condado prohibe colocar los materiales industriales enumerados a continuación:

ASFALTO, CONCRETO, TIERRA, PIEDRA, ARENA
BROZA (DESPOJO DE PLANTAS)

¿QUÉ DESECHO DE CONSTRUCCIÓN Y DEMOLICIÓN ES ENVIADO AL RELLENO SANITARIO?

Fuente: Estudio de caracterización del relleno sanitario de desechos de Miramar de 1999

1. 27% Piedra/Tierra
2. 20% Madera
3. 12% Concreto
4. 9% Alfombra y alcochonado para alfombras
5. 7% Yeso
6. 7% Asfalto
7. 12% Otra construcción

Para mayor información, llame al **1-877-R-1-EARTH** (libre de costo.)

DETENGA EL DESECHO ANTES DE QUE EMPIECE

REDUCIR LOS RESIDUOS...¡UTILICE MENOS!

- ¡Ser preciso! Medir dos veces, cortar una sola vez.
- Utilice materiales de tamaño normal.
- Utilizar durables en lugar de desechables.
- Usar prácticas eficientes de energía y productos para construcción, operación y mantenimiento de un edificio.

REUTILICE LOS MATERIALES

- Considerar la remodelación o el refuerzo de edificios existentes para un uso nuevo.
- En lugar de DEMOLICIÓN, considerar la RECOBRACIÓN y DESCONSTRUCCIÓN.
- El asfalto y el concreto puede triturarse y utilizarse de nuevo en otra construcción.
- Utilizar los productos recobrados o productos hechos de materiales reciclados.

¡EL RECICLAJE AHORRA $$!

- Los acarreadores generalmente cobran menos por el reciclaje del metal, el concreto, y la madera limpia que por la recolección normal de la basura. Usted puede también contratar a un comerciante en chatarra o a una empresa de recolección de reciclables.
- Desviando los desechos de los botes de la basura a los botes de los reciclables, usted puede reducir el tamaño de su bote de basura al igual que las veces de la recolección semanal.
- El tiempo extra que se ocupa en separar los materiales cuesta menos que lo que se pague en el relleno sanitario.

PLAN ADMINISTRATIVO DE RESIDUOS

Antes de empezar, identifique qué materiales serán parte de su proyecto. Póngase de acuerdo con su acarreador, su contratista o reciclador para determinar los materiales que deberán separarse para su reciclaje. Use el gráfico en la siguiente página para obtener la ayuda necesaria para empezar.

De acuerdo con la National Association of Home Builders (NAHB) Research Center "Centro de investigación de la asociación nacional de constructores de viviendas (ANCV)", se necesitan los siguientes recursos naturales para construir una casa de 1.700 pies cuadrados en este país:

- 9.700 pies lineales de madera
- 4.850 pies cuadrados de revestimiento
- 2.528 pies cuadrados de material para la fachada
- 2.000 pies cuadrados de tablilla para el techo
- 55 yardas cúbicas de concreto
- 2.500 pies cuadrados de aislamiento
- 6.484 pies cuadrados de hojas de yeso para paredes
- 300 libras de clavos
- 750 pies de alambre de cobre
- 170 pies de tubería de cobre
- 55 galones de pintura

Fuente: www.nahbrc.org

¡CARGAMENTOS LIMPIOS LE AHORRAN $$!

INFÓRMESE CON SU ACARREADOR Y/O RECICLADOR PARA ESTAR SEGURO DE QUÉ ES UN "CARGAMENTO LIMPIO"

*La **DESCONSTRUCCIÓN** es la remoción cuidadosa de materiales de las estructuras para el recobro de fuentes valiosas de construcción. Los materiales desconstruidos pueden venderse a las compañías de salvamento de material, eliminando así las cuotas del relleno sanitario.*

*El **SALVAMENTO** es la utilización y la recuperación de artículos que se pueden volver a usar, incluyendo puertas, ferretería, artefactos y accesorios (preferiblemente antes de que se inicie la construcción, para evitar los daños a cualesquiera de esos objetos). Estos objetos a menudo son raros, como madera o accesorios de antigüedad.*

Llame al 1-877-R-1-EARTH (1-877-713-2784) para obtener mayor información.

PLAN PARA LA ADMINISTRACIÓN DEL DESECHO

PUNTOS PARA UN PLAN EFICIENTE:

- Designe un supervisor de reciclaje.
- Eduque a todos los trabajadores en el proyecto que no tiren en los contenedores del reciclaje las bolsas de papel de su almuerzo, los tubos de calafateo y otra basura.
- Requiérale a sus subcontratistas que participen en su pro grama de reciclaje.
- Dé tiempo para la desconstrucción y para la recobración.
- Separe los materiales por tipo o categoría.
- Coloque los contenedores de reciclaje en un sitio en el que se pueda evitar el uso inapropiado o la contaminación del público. Tan sólo una mínima cantidad de basura hará que toda la carga sea inaceptable para reciclarse.

TIPO DE MATERIAL	CANTIDAD (tons or containers)	RECOBRAR O RE-USAR	RECICLAR	DESECHAR
Asfalto y concreto				
Ladrillo/albañilería/mosaico				
Gabinetes, puertas, accesorios, ventanas				
Alfombra				
Almohadín de alfombra/espuma solamente				
Cartón				
Teja acústica para cielo				
Tierra (limpia)				
Tabla de yeso (usada)				
Tabla de yeso (nueva, sin pintar o en pedazos)				
Despojos de jardín (plantas, árboles, troncos, etc.)				
Cubetas de plástico				
Piedra				
Estiroespuma/remanentes de plástico				
Materiales para techos				
Residuos de metal/Accesorios				
Yeso				
Madera sin pintar y plataformas				
Basura restante/Basura				
Escombro mixto reciclable

Materiales Peligrosos: Llame al (800) 714-1195				

Llame al 1-877-R-1-EARTH (1-877-713-2784) para obtener mayor información.

RESIDUOS PELIGROSOS

¡COLOQUE LOS RESIDUOS TOXICOS EN SU LUGAR!

ALGUNOS MATERIALES PELIGROSOS QUE USTED PUEDE TENER:

- ÁCIDOS Y CÁUSTICOS
- LATAS DE AEROSOL
- ANTICONGELANTE
- ASBESTO
- TIERRA CONTAMINADA
- TUBOS FLUORESCENTE Y BALASTO
- COMBUSTIBLE/ GASOLINA/PETRÓLEO
- PEGAMENTOS
- HERBICIDAS PELIGROSOS
- ACEITE DE MOTOR Y FILTROS DE ACEITE
- MERCURIO
- PILAS (BATERÍAS) DE CADMIUM
- PINTURA PLOMADA, DE ACEITE, LÁTEX
- LATAS VACÍAS DE PINTURA
- MADERA PINTADA
- ADELGAZADORES DE PINTURA (AGUARRÁZ, ETC.)
- PCBs
- PESTICIDAS
- VENENOS
- PRODUCTOS QUÍMICOS PARA PISCINAS
- TANQUES DE PROPANO
- DURMIENTES
- PILAS (BATERÍAS) RECARGABLES
- SOLVENTES
- MADERA TRATADA CON ADELGAZADORES

Desechos tóxicos no se deben tirar en la basura regular. Existen medios por todo el Condado de San Diego para la disposición de los desechos peligrosos para los dueños de casas y para los pequeños negocios que califiquen, que son ASEQUIBLES, SEGUROS, LEGALES, y CÓMODOS. Si es usted un dueño de casa, llame al **1-877-R-1-EARTH**.

Si usted es un pequeño negocio que genera 27 galones o 220 libras de desechos peligrosos por mes, o 2.2 libras de desechos extremadamente peligros por mes, usted puede calificar como un Conditionally Exempt Small Quantity Generator (CESQG) "Generador de pequeña cantidad exento condicionalmente (GPCEC)", y así poder hacer uso de ciertas instalaciones de desechos domésticos peligrosos. Llame al **1-800-714-1195** para mayor información y para determinar si su empresa califica.

Para empresas mayores y para información general con respecto a residuos peligrosos, llame por favor a la División de Materiales Peligrosos del **Condado de San Diego al 1-800-253-9933**.

Auspiciado por el **Departamento de Salubridad Ambiental del Condado de San Diego**.

MANTENGA NUESTRA AGUA LIMPIA

El Reglamento de Protección de Cuencas de San Diego (The County of San Diego Watershed Protection Ordinance) prohibe el descargue, directo o indirecto, de cualquier cosa excepto el agua de lluvia por el sistema de desagües (alcantarillados) públicos o urbanos. El (MMP) Manejo de Mejores Prácticas (Best Management Practices –BMPs) ayuda a prevenir descargas ilegales de escombros en los desagües cercanos, arroyos, ríos y el océano.

BMPS (MMPS) PARA LA CONSTRUCCIÓN Y DEMOLICIÓN:

- Siempre que sea posible, programe las actividades de demolición, excavación, y explanación durante el tiempo de secas.
- Designe zonas de embarque para materiales, pilas de tierra, y residuos lejos de los desagües públicos.
- Guarde materiales y residuos cubiertos con una lona impermeable o de plástico, para protegerlos del viento y de la lluvia.
- Siempre que sea posible, use métodos secos de limpieza, ya sea mediante una escoba o una aspiradora eléctrica.
- Nunca entierre los residuos. Contacte a su acarreador para la disposición apropiada de residuos y los materiales reciclables.

Para mayor información o para reportar sobre la contaminación urbana de agua de desagüe, llame a Regional Stormwater Hotline al (888) 846-0800 o www.projectcleanwater.org.

CONSTRUYA INTELIGENTEMENTE... CONSTRUYA VERDE

Cada uno de nosotros tenemos intereses en la prevención de la contaminación y la preservación de los recursos para las generaciones futuras. Las construcciones tienen un tremendo impacto en el ambiente—tanto durante su construcción como durante su operación.

Construyendo "Verde" es una estrategia del uso de la tierra, diseño del edificio, y la construcción de actividades que reducen los impactos ambientales. Los beneficios de edificar verde incluye: la reducción del consumo de la energía, la protección de los ecosistemas y la salud de los ocupantes. La construcción verde reduce la dependencia en los recursos naturales como los árboles, el aceite, y los minerales. Crea menos contaminación y gases de efecto invernadero al reducir la manufactura y transportación de emisiones relacionadas. Para mayor información acceda a: http://www.usgbc.org/chapters/sandiego/meet_the_chapter.asp

Llame al 1-877-R-1-EARTH (1-877-713-2784) para obtener mayor información.

6) **Sediment Tracking** – Construct a stabilized construction entrance and conduct frequent street sweeping to keep sediment off of roadways.

7) **Materials Management** – Protect stockpiles of soil and paving materials from wind and water erosion. Have a spill prevention and control plan for hazardous materials such as fuel, paints and solvents.

8) **Waste Management** – properly store and dispose of solid, hazardous, concrete, and sanitary wastes. Cleanup spills immediately.

9) **Non-Storm Water Discharges**

- **Paving/grinding** – Protect inlets from slurry seal operations and vacuum saw cut slurry and grinding residue.
- **De-watering** – Use accumulated water for dust suppression or consult with City staff and the Regional Water Quality Control Board when dewatering operation is proposed.
- **Potable Water/Irrigation** – Shut off water source to broken lines, sprinklers or valves as soon as possible and direct water away from pollutant sources.

For further assistance, detailed BMP information from the above list can be downloaded from the City's Storm Water Pollution Prevention website.

Storm Water Pollution

Construction activities can have a significant impact on water quality due to soil disturbances and the types of materials and equipment used. As storm water flows over a construction site, it can pick up pollutants such as sediment, oil, fuels, paints, adhesives, trash, debris and fertilizers. Polluted storm water runoff can harm or kill fish and other wildlife, and can destroy aquatic habitat.

Best Management Practices (BMPs)

In order to reduce, or eliminate, erosion and pollutant discharges into La Mesa's storm drain system, owners and operators of all construction sites are required to implement Best Management Practices (BMPs). BMPs are techniques or physical controls utilized to prevent pollution.

Permit/Regulatory Requirements

The following permits and ordinances must be considered before construction or grading activity commences:

- **State Construction General Permit** – Projects which disturb one acre or more of soil must obtain coverage by submitting a Notice of Intent to the State Water Resources Control Board and preparing a Storm Water Pollution Prevention Plan (SWPPP).
- **Storm Water Management Ordinance -** Review Chapter 7.18 of the La Mesa Municipal Code (LMC) for local storm water requirements and penalties for noncompliance.
- **Grading Ordinance** – Chapter 14.05 of the LMC requires additional erosion control requirements during grading activities. Consult with the Engineering Division to determine if a grading permit is needed.
- **Building Permits** – Contact the Building Division to determine what building permits may be needed. Storm water BMP notes must be shown on site plans.
- **Encroachment Permits** – A permit is needed when working in the public right-of-way. Please contact the Engineering Division for specific requirements.

Inspection Program

City staff monitors constructions sites for proper erosion and sediment controls all year long, with more frequent inspections occurring during the wet season (October 1 through April 30). Inspectors will evaluate BMP implementation, effectiveness and maintenance.

Sites Covered Under State Construction General Permit (Over 1 Acre):

- These sites are also subject to inspections by the Regional Water Quality Control Board (RWQCB).
- Self-inspections are required before forecasted rain events, during each 24-hour rain event, and following a rain event.

Minimum BMPs

Construction projects within the City will be required to implement at least one of the BMPs from each category below when applicable to the site. Please refer to the following list while planning your project to ensure compliance with City and State requirements and to prevent storm water pollution. Brief examples of BMPs have been mentioned within each category, but do not represent a complete list.

1) **Planning and Scheduling** – Minimize land disturbance during the wet season.

2) **Slope Stabilization** – Preserve existing vegetation and stabilize slopes with hydraulic mulch or erosion control blankets.

3) **Site Drainage** – Install outlet protection devices to reduce velocity and erosion potential of storm water flows.

4) **Sediment Perimeter Protection** – Install silt fencing, straw rolls or a gravel bag barrier to prevent sediment discharges.

5) **Sediment Capture** Protect all storm drain inlets with gravel bags. For sites over an acre, inlet controls should be used in conjunction with a sediment basin/trap.

No Waiting in Long Lines!

How to Dispose of CDI

- 1. Off the 94 heading East, take the Federal Blvd. off-ramp and continue straight on Federal Blvd. enter the last gate of the facility. If you're heading West on the 94, take College Avenue. Go left under the bridge and right onto Federal Blvd. EDCO/SANCO is on the FWY side of Federal Blvd between San Miguel Avenue and Central Avenue, Lemon Grove.
- 2. Pull into the EDCO/SANCO driveway closest to Bob Baker Toyota.
- 3. Drive straight onto the scale.
- 4. We are currently in the process of placing a scale-house at the scale for your convenience. Until that time, please get out of your vehicle and see the scale attendant at the cashier window. You will get a full weight ticket at that time.
- 5. Drive into the building and follow the directions of the spotter who is there to assist you.
- 6. After dumping, drive out of the building and get back on the scale.
- 7. The cashier will present your ticket for payment.

Things to Remember:

- 1. Always drive safely. Directional signs and verbal instructions are provided for your safety.
- 2. Absolutely No Hazardous Waste is allowed to be disposed of at SANCO.
- 3. Current Rates are posted at the facility or you can call (619) 287-7555 to inquire.

Construction, Demolition and Inert (CDI) Recycling facility is now open!

Monday through Friday 6:30 a.m. to 5:30 p.m.

Saturday from 7:00 a.m. to 3:00 p.m.

EDCO

What can I bring?

- Wood, metals, rock, dirt, concrete, asphalt, drywall, and cardboard. No hazardous waste or garbage please.

Do I have to sort the different materials?

- Absolutely not! Just bring your mixed load of CDI material only, and we'll do all the work!

Do I have to make an appointment?

- NO. Please see the operating hours of the facility on this information card.

Can I get credit?

- If you use our solid waste transfer stations in San Diego, La Mesa, Escondido, Ramona, Fallbrook or our CDI facility in San Marcos, you can get credit with SANCO. Please call in advance to ensure we have you set up and eliminate time wasted dealing with it at SANCO.

SANCO SERVICES

For information on disposal of solid wastes, garbage or green wastes, please see our website at www.edcodisposal.com, and click on public disposal or visit one of these EDCO public disposal sites:

Re: 2006 Dry Weather Field Screening and Analytical Monitoring Program City of La Mesa, California

Dear Mr. Hashemian:

Enclosed please find the final report for the City of La Mesa 2006 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of La Mesa during the 2006 dry weather season. The contents include field screening data and analytical laboratory test results, analysis of the collected data, and photographs of the sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions. Review comments on the draft report previously submitted to the City have been incorporated into this final report.

It has been our pleasure working with the City of La Mesa on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Regulatory Requirements

The current Municipal Storm Water Permit (Municipal Permit), San Diego Regional Water Quality Control Board (RWQCB) Order No. 2001-01, requires that the 18 cities within San Diego County, the County of San Diego, the Port of San Diego and the San Diego County Region Airport Authority (Copermittees) conduct annual dry weather monitoring of discharges into the storm drain system within their jurisdictions. As one of these Copermittees, the City of La Mesa is subject to this order. The main parts of the permit that discuss the dry weather monitoring program are sections F.5.b, F.5.c, and F.5.d, as well as Attachment E. The primary goal of this program is the detection and identification of illicit connections and illegal discharges (IC/ID). The Municipal Permit requires flow estimates, field observations, and field analyses. Copermittees also must conduct laboratory analyses for 25 percent of the sites with flowing or ponded water. For each sampling location that exhibits no flow, an alternate sampling station must be selected and sampled. If the results of the field or laboratory analysis exceed established action levels, follow-up investigations are required.

1.2 Hydrologic Setting

The City of La Mesa, located just east of the City of San Diego, has an area of approximately nine square miles. Land use in La Mesa is mainly residential with about 55,000 residents; other land uses in La Mesa include roads and streets, commercial, mixed use, schools, and industrial.

About 52% of La Mesa is in the San Diego River Watershed, Hydrologic Unit (HU) 907 and the remaining 48% is located in the San Diego Bay Watershed. The San Diego Bay Watershed is comprised of three hydrologic units: Pueblo San Diego (HU 908), Sweetwater (HU 909), and Otay (HU 910). Each hydrologic unit is essentially a separate watershed, but since these three watersheds all drain to San Diego Bay, they have been combined into one watershed management area, referred to as the San Diego Bay Watershed, for regulatory purposes. The City of La Mesa includes areas within two of those hydrologic units, the Pueblo San Diego Watershed and the Sweetwater Watershed. Runoff generated in the City is conveyed through five drainage basins. The boundaries of these drainage basins are illustrated in Figure 1. Table 1-1 lists the drainage basins along with the approximate percentage of drainage area in La Mesa, the corresponding hydrologic unit of the basin, and the receiving water body to which each basin drains:

TABLE 1-1
CITY OF LA MESA DRAINAGE BASINS

Drainage Basin	Percentage of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

Runoff collected in the Lake Murray Basin eventually enters the Alvarado Drainage Basin, which drains to the San Diego River. In addition to runoff from La Mesa, the San Diego River carries water from other large portions of San Diego County and eventually terminates at the Pacific Ocean, south of Mission Bay. Runoff from the Spring Valley Basin eventually enters the Sweetwater River, which terminates in San Diego Bay. Runoff collected in the University and Lemon Grove basins drains to Chollas Creek, which also flows into San Diego Bay.

In both the San Diego Bay and the San Diego River watersheds, the City of La Mesa makes up about one percent of the overall land area of the watershed respectively. Based primarily on wet weather monitoring data from mass loading stations (MLS) located on Chollas Creek, bioassessments, the 2004-2005 San Diego Bay Watershed Urban Runoff Management Program (WURMP) Annual Report, and the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), diazinon, copper, zinc, bacterial indicators, trash, and turbidity have been established as targeted pollutants in the Pueblo San Diego Watershed. Total Maximum Daily Load (TMDL) regulations for diazinon and for dissolved metals have been adopted. Monitoring in recent years, however, indicates that the recent ban on diazinon use has essentially eliminated diazinon as a pollutant of concern. The Sweetwater Watershed, which is significantly less urbanized than the Pueblo San Diego watershed, does not have any 303(d) Listings. Turbidity and bacteria were identified as constituents of concern in the WURMP Annual Report.

In the San Diego River Watershed, constituent data have been collected annually. The 2004-2005 San Diego River WURMP Annual Report lists bacterial indicators, pH, total dissolved solids (TDS), phosphorus, and dissolved oxygen as high priority Constituents of Concern (COC). These listings appear to be mainly based on 303(d) Listings in the watershed, principally Forester Creek and the lower San Diego River. There are no 303(d) Listed water bodies within the borders of the City of La Mesa. The WURMP Annual Report also notes that diazinon, eutrophication, benthic degradation, turbidity, and copper are non-high priority COCs. The 2004-2005 WURMP Annual Report states that chlorpyrifos was less apparent as a COC during that reporting period, while fecal coliforms, total coliforms/enterococci, TDS and turbidity were more apparent.

1.3 Program Overview

The current Municipal Permit adopted by the San Diego RWQCB requires all Copermittees, including the City of La Mesa, to conduct field screening and analytical monitoring at different sampling locations throughout the City during the dry weather season (May 1st through September 30th). The purpose of the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) is to detect and eliminate IC/IDs to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components:

- Field screening observations
- Field screening analytical monitoring
- Laboratory analytical monitoring

Information collected from the Dry Weather Monitoring Program is also used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary to detect and eliminate the sources of these pollutants. This report presents the results of the City of La Mesa 2006 Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc. (D-MAX).

1.4 Previous Work

The City of La Mesa has conducted an annual Dry Weather Monitoring Program since 1993. A summary of the screening results obtained for each year (1993 through 2005) is discussed below and presented in Table 1-2. Before 2002, laboratory analyses were not required. Laboratory testing was added to the program in 2002 as required by the current Municipal Permit. The same laboratory and field tests used in 2006 were also used from 2002 through 2005. Graphical representations of the data for both the San Diego River and San Diego Bay watersheds have also been prepared and are included as Attachments 1 and 2, respectively. The graphs display the results of both field and laboratory analyses for the 2002 through 2006 Dry Weather Monitoring Programs. Where applicable, averages for each constituent have been calculated, and error bars displaying average plus and minus one standard deviation have also been included on the graphs. Trend lines have been prepared for constituents where multiple values above the method reporting limit were recorded. The equations and R^2 values for the lines have been indicated on the graphs. Note that an R^2 value of 0.0 indicates a very poor fit and 1.0 indicates a perfect fit. Since the trend lines have been based on only five years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

In 1993, all 15 of the visited sites showed concentrations of Ammonia at or above 1.0 milligrams per liter (mg/L) NH_3-N. Of these sites, 13 showed concentrations of copper at or above 1.0 mg/L, and six had concentrations of detergents greater than 1.0 mg/L. Concentrations of chlorine and phenols greater than 1.0 mg/L were recorded at three and five sites, respectively.

In 1994, 11 of the 16 visited sites had ponded or flowing water. Ammonia was detected at 10 of these sites, with seven showing concentrations above 1.0 mg/L. Concentrations of detergents ranging between 0.3 mg/L and 0.8 mg/L were detected at all 11 sites. Copper was detected at nine sites with concentrations ranging between 0.0 mg/L and 3.0 mg/L, and concentrations of phenols ranged between 0.04 mg/L and 4.9 mg/L at eight of the sites. Chlorine was detected at all 11 sites but no concentrations were above 1.0 mg/L.

In 1995, ammonia was detected at all 11 sites with ponded or flowing water, but only one site showed a concentration above 1.0 mg/L. Detergents were also detected at all 11, but only two concentrations were at or above 1.0 mg/L. Chlorine was detected at 10 sites but in very low concentrations (0.1 to 0.4 mg/L), and phenols were not detected at any sites.

In 1996, the Dry Weather Monitoring Program consisted of seven previously screened sites along with eight new sites. Six sites showed concentrations of ammonia above 0.5 mg/L, with only two of those being at or above 1.0 mg/L. Five of these sites were located along Jackson Drive and Grossmont Shopping Center. Detergent concentrations of 0.5 mg/L and greater were observed at seven sites, with one site showing a detergent concentration of >3.0 mg/L. In general, the concentrations of phenols, copper and chlorine were very low or below the reporting limits.

In 1997, the Dry Weather Monitoring Program consisted of six previously screened sites and six new sites. Detergents and ammonia were detected throughout the City. All ammonia concentrations were between 0.0 mg/L and 1.0 mg/L except one, which exceeded 10 mg/L, and only one site showed a concentration of detergents above 1.0 mg/L. Chlorine in low concentrations (< 0.5 mg/L) was also detected at the majority of the sites visited. Copper was detected at a concentration of 0.1 mg/L at three sites, and only one site showed a detectable phenols concentration of 0.3 mg/L. During visual observations, a strong odor was observed at most of the sites located within the Grossmont Shopping Center. This odor, along with the presence of high levels of ammonia and low levels of copper, prompted an investigation within

the Grossmont Center. The investigation found the primary source of the ammonia to be fertilizers used on the lawns and flowerbeds. Copper concentrations could be attributed to the chemicals used to control algae, and by the pennies thrown into the fountains, where they remain until periodic cleaning of the pools.

In 1998, the City conducted one round of dry weather field screening at 14 sites. Ammonia was detected at all 11 sites with ponded or flowing water, and concentrations ranged from below the field test detection limit to 9.5 mg/L. Detergent concentrations ranging from 0.25 to 0.75 mg/L were also detected at 11 sites . Copper was detected at only one site inside Grossmont Shopping Center. Chlorine concentrations at a low range of 0.1 to 0.2 mg/L were detected at five sites. Phenols were not detected at any of the sites visited.

In 1999, the City conducted two rounds of field screening at 14 sites. In round one, the ammonia levels ranged from 0.2 to 7.0 mg/L. Detergent concentrations were in the 0.25 to 0.75 mg/L range for this round, and were detected at all visited sites with ponded or flowing water. Phenols and copper were detected at five and nine sites, respectively, at concentrations of 0.1-0.2 mg/L. Chlorine concentrations were detected at a maximum of 0.3 mg/L, and a minimum of non-detect.

In round two of the 1999 sampling, ammonia concentrations generally ranged from 0.2 to 4.0 mg/L NH_3-N, although one site was found to have a concentration of 30 mg/L. An upstream investigation revealed that a sewer overflow was the cause of this elevated value, and later sampling showed that the concentration had dropped to 1.0 mg/L. This site also had the highest recorded detergent concentration, >3.0 mg/L, which later fell to 0.25 mg/L. Detergent concentrations between 0.25 and 2.0 mg/L were detected at all other tested sites. Phenols, copper and chlorine all had minimum values of non-detect. The maximum value measured for phenols was 0.1 mg/L. The maximum copper concentration value was 0.6 mg/L, and the maximum chlorine concentration was 0.5 mg/L.

In 2000, the City performed two rounds of the field screening program at 15 sites. In round one, ammonia concentrations ranged between 0.2 and 2.0 mg/L NH_3-N, detergent concentrations ranged from 0.25 to 2.5 mg/L, and chlorine ranged from non-detect to 0.4 mg/L. Copper and phenol levels were only detected at two sites each; the copper concentration peaked at 0.7 mg/L and the phenol concentration peaked at 0.2 mg/L.

During round two, ammonia concentrations ranged from 0.1 to 5.0 mg/L NH_3-N, detergent concentrations ranged from 0.25 to 0.75 mg/L, and chlorine ranged from non-detect to 0.6 mg/L. As found in round one, copper and phenols concentrations were typically undetectable but several sites showed traces of these constituents. The copper concentration reached a maximum of 0.4 mg/L and the phenol concentration reached a maximum of 0.1 mg/L.

In 2001, two rounds of field screening were performed throughout the City, at 15 and 16 sites, respectively. Detergent concentrations ranged from 0.25 to 0.75 mg/L. Ammonia concentrations ranged from 0.1 to 8.0 mg/L NH_3-N. Only one site showed a detectable concentration of Copper (0.2 mg/L), and a Chlorine concentration of 0.1 mg/L was also only detected at one site. Phenols were detected only during the second visit to Site No. 35, where field analysis resulted in a concentration of 0.1 mg/L.

During round two, detergent concentrations ranged from 0.25 to 1.5 mg/L. Ammonia was detected between 0.1 and 5.0 mg/L NH_3-N. Chlorine concentrations ranged from non-detect to 0.4 mg/L. Copper was not detected during this round of sampling. Phenols were only detected during the second visit to Site No. 13C, at a concentration of 1.0 mg/L.

In 2002, the City conducted one round of field screening at a total of 19 sites. As one of the stations was observed dry, an alternate site (Site No. 14) was selected for monitoring with this site having measurable flow. Ammonia concentrations of 1.0 mg/L NH_3-N or higher were found at five of the sites, with the highest concentration reaching 8.0 mg NH_3-N/L at Site No. 4A. The ammonia concentration at Site No. 4A dropped to 0.4 upon a follow-up visit. Nitrate concentrations at all the sites were found below 5.0 mg/L NO_3-N, with two sites having concentrations below the detection limit. Orthophosphate-P concentrations generally were measured below 1.0 mg/L PO_4-P, but Site No. 40 had a phosphate concentration reaching 7.83 mg/L PO_4-P. Upon a return visit to Site No. 40, the phosphate concentration had dropped to 0.82 mg/L PO_4-P. Detergent concentrations exceeded 1.0 mg/L at three of the sites. The maximum detergent concentration was recorded greater than 24 mg/L at Site No. 40, but dropped to 0.75 mg/L on a return visit. Laboratory analysis for detergents detected contamination at one site (Site No. 4A) with a concentration of 4.8 mg/L. Oil and grease was detected at three of the sites, with the maximum concentration reaching 8.0 mg/L. Laboratory results for dissolved metals and pesticides found all concentrations below the method detection limit.

In 2003, the City conducted one round of field screening at a total of 18 sites. Alternate Site 14 was substituted for primary Site 61, which was dry. 16 sites had measurable flowing water; the flow rate ranged from 1.0 gallons per minute (gpm) to 118.5 gpm. Two of the sites had ponded water. An ammonia concentration of 1.0 mg/L NH_3-N or higher was found at three sites. There were no sites with nitrate concentrations at or above the action level of 10 mg/L NO_3-N. A reactive phosphorous concentration exceeding the action level of 2.0 mg/L PO_4-P was found at one site, while the rest of the sites had detectable phosphorus concentrations at low levels. A detergent concentration of 1.0 mg/L was measured at one of the sites. Laboratory analyses were conducted at five sites and indicated bacterial contamination at three sites. The organophosphate pesticide diazinon was detected at one of the sites but was below the action level of 0.5 micrograms per liter (µg/L). Chlorpyrifos was not detected at any of the sites. Surfactants were detected at one site, but the concentration was below the action level of 1.0 mg/L. None of the laboratory samples had detectable amounts of dissolved metals or oil and grease.

In 2004, the City conducted one round of field screening at the 18 primary monitoring stations, all of which had ponded or flowing water. Ammonia was detected above the action level at two sites, which were found to have the common upstream source of an illicit sewage connection. No sites were found to have orthophosphate-P or detergent concentrations above the respective action levels. Laboratory analyses were again conducted for five sites, and as in 2003, three sites were found to have bacterial indicators in excess of established action levels. No other constituents assessed by laboratory analysis were found to be in excess of established action levels.

In 2005, the City again conducted one round of field screening at all 18 primary monitoring stations since none of the sites were dry. Detergents were detected above the action level at one site, but had fallen below the action level by the time of a follow-up visit the next day. Ammonia action level exceedances were detected at two sites. For one site, the ammonia level dropped below the action level by the following day. For the other site, located in Grossmont Center mall, the ammonia concentration had dropped significantly by the time of a follow-up visit but remained above the action level. Three of the five sites receiving laboratory analysis had bacterial indicators exceeding action levels; no other constituents tested for in the lab were above set action levels.

1.5 Report Outline

Section 1, Introduction, includes regulatory background, the City of La Mesa hydrologic setting, objectives of the Dry Weather Monitoring Program, previous monitoring results, and a report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and the criteria used to select sampling locations.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 6, Data Analysis, provides an analysis and description of each site with evidence of physical, chemical or biological pollution.

Section 7, Upstream Investigations, includes follow-up investigations of sites with recurring evidence of physical, chemical or biological pollution.

Section 8, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Photographs of the investigated sites

Appendix B Laboratory analytical reports

Appendix C Copies of the original field data sheets

Attachment 1 Historical Data Graphs: San Diego River Watershed

Attachment 2 Historical Data Graphs: San Diego Bay Watershed

2 SAMPLING LOCATIONS

The City of La Mesa created a Jurisdictional Urban Runoff Management Program (JURMP) in 2002. Table 8-1 in Section 8 of the JURMP identifies 18 primary monitoring stations where data will be collected during the Dry Weather Monitoring Program. Table 8-2 lists nine alternate stations to be monitored if any of the primary stations do not have flowing or ponded water. Sampling sites are located in HU 907, HU 908, and HU 909.

During the 2006 Dry Weather Monitoring Program, all 18 primary sampling locations were visited and had flowing or ponded water. No sites were observed to be dry. Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrologic unit, and Global Positioning System (GPS) coordinates of the sampling locations that were visited. Figure 1 displays the sampling locations on a map of the City that also shows storm drain lines, roads, and drainage basin boundaries. Photographs of all the sampling locations are included as Appendix A. Laboratory analytical reports are included in Appendix B, and Appendix C contains the field data sheets for each site visit. A map of the watersheds in and around the City of La Mesa broken down into Hydrologic Subareas (HSA), is included as Figure 2.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consisted of qualitative field observations, flow measurement, and field analyses of selected water quality parameters. Information relating to weather conditions, the amount of time since last rainfall, and the type of storm water conveyance was recorded. Specific observations and results of the field water quality analyses were recorded on the field data sheets, which are included as Appendix C. The data sheets also serve as a record of the field visit and were completed for every site visit regardless of whether or not samples were collected.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations were made during each site visit whether or not ponded or flowing water was observed. These observations are intended to provide a general assessment of the site and include variables like odor, water clarity, the presence of floatables, visible deposits, stains and biological status. Evidence of present or past illicit connections and illegal discharges to the storm drain system may be ascertained by careful field observations. Each field screening location was photographed to provide additional information and documentation of site conditions. Photos are included in Appendix A.

Flow Measurement

Flow measurements can be used to estimate pollutant mass loading, prioritize storm drains for future investigation, and to identify significant changes in discharge that may be indicative of an illegal release upstream. Various field methods can be used to estimate the discharge rate. These include measuring the velocity, depth and width of the flowing water, or recording the amount of time required to fill a bottle of known volume with sample water.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as Methylene Blue Active Substances (MBAS)*
- Nitrate-N
- Ammonia-N
- Orthophosphate-P (Reactive Phosphorus)

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results. Due to the importance of surfactants, the City conducted analyses for this parameter in both the field and laboratory. Surfactants concentrations were measured using the MBAS method.

The methods that were used to perform the above field analyses along with the detection limit, range, and accuracy, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Detection Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter**	0.01 mS/cm	0 – 20.000 mS/cm	± 2% of functional sensitivity[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter**	0.1ºC	0.0ºC – 60.0ºC	± 0.5ºC
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter**	0.01	0.00 – 14.00	± 0.01 pH
Turbidity	Hanna Instruments HI 93703-11 Portable Turbidity Meter**	0.01 NTU	0.01 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading[2]
Surfactants	CHEMetrics CHEMets Kit (K-9400), methylene blue active substances method	0.13 mg/L	0.0 mg/L – 3.0 mg/L*	± 0.13 & ± 0.5 mg/L[3]
Nitrate-N	CHEMetrics CHEMets Kit (K-6902D), cadmium reduction method	1.25 mg/L	0.0 mg/L - 125 mg/L*	± 1.25 & ± 6.25 mg/L[4]
Ammonia-N	CHEMetrics CHEMets Kit (K-1510), Nesslerization	0.05 mg/L	0.0 mg/L – 10.0 mg/L*	± 0.05 & ± 0.5 mg/L[5]
Orthophosphate-P	CHEMetrics CHEMets Kit (K-8510), molybdenum blue/stannous chloride method[6]	0.016 mg/L	0.016 mg/L – 3.26 mg/L*	± 0.016 & ± 0.16 mg/L[7]

Notes:

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.5 NTU or 5% of reading (whichever is greater).

[3] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L, and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[4] ± 1.25 for the range of 0.0 to 25.0 mg/L, ± 6.25 for the range of 25.0 to 125.0 mg/L.

[5] ± 0.05 for the range of 0.0 to 1.0 mg/L, ± 0.5 for the range of 1.0 to 10.0 mg/L.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of reactive phosphorus, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.05mg/L; however, the detection limit for reactive phosphorus is lowered due to the conversion.

[7] ± 0.05 for the range of 0.0 to 1.0 mg/L, ± 0.5 for the range of 1.0 to 10.0 mg/L for orthophosphate (multiplied by 0.326 correction factor—see note 6).

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

**Detection limit, range, and accuracy information taken from Hanna Instruments manuals, available online at www.hannainst.com

3.2 Laboratory Analytical Methods

In accordance with Order 2001-01 requirements, water samples were collected at five sites (greater than 25 percent of the sites) where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc., a California Department of Health Services certified laboratory, for analysis of the following constituents:

- Total hardness
- Surfactants, measured as MBAS
- Oil and grease
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Total Coliform bacteria
- Fecal Coliform bacteria
- Enterococcus bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Detection Limit	Maximum Holding Time**
Surfactants, measured as MBAS	SM 5540 C	0.5 mg/L	48 hours
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Cadmium	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Copper	USEPA 6010, 6020 200.8	0.005 mg/L	6 months
Lead	USEPA 6010, 6020 200.8	0.005 mg/L	6 months
Zinc	USEPA 6010, 6020, 200.8	0.020 mg/L	6 months
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms	SM 9221	20* – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms	SM 9221	20* – 160,000 MPN/100 mL	6 hours
Enterococci	SM 9230	20* – 160,000 MPN/100 mL	6 hours

Notes:

*For D-Max's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 MPN/100 mL. For fecal coliforms and enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20 and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

**Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the QA/QC procedures listed in Section 3.3.2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project included the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters were calibrated periodically with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass

electrode tube was kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter was calibrated and periodically checked for accuracy using standard solutions. The conductivity meter was checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers were first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water.

The accuracy of field analytical techniques was assessed at the beginning of the sampling program by analyzing solutions of known concentrations for ammonia, detergents, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration	Field Test Kit Results
6/23/06	Ammonia	1.0 mg/L	1.0 mg/L
6/23/06	Detergents	2.0 mg/L	2.0 mg/L
6/23/06	Nitrate	1.0 mg/L	1.0 mg/L
6/23/06	Orthophosphate	3.0 mg/L	3.0 mg/L

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis were collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles were obtained from the laboratory and thus did not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples were kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures were followed, and samples were delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included in Appendix B.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation was necessary, numeric action levels and best professional judgment (described below) were used to interpret the field screening results. If visual and/or analytical evidence of gross contamination was present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation was initiated. For sites that exceeded numeric action levels but were not perceived as an immediate threat to water quality, a re-sampling was conducted within 24 hours. A comprehensive source investigation was conducted thereafter if elevated concentrations persisted. The results of these investigations are included in Section 7 of this report. Recommendations based on these investigations are included in Section 8.

If elevated levels of pollutants were detected after laboratory analyses, a comprehensive follow-up investigation including re-sampling was conducted. The following three methods were employed to determine whether immediate or comprehensive follow-up investigations were necessary: (1) Numeric action levels; (2) California Toxics Rule (CTR); and (3) best professional judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels were used as the primary approach for interpreting pH, orthophosphate, nitrate, ammonia, surfactants, oil and grease, diazinon, chlorpyrifos, total

coliforms, fecal coliforms, and enterococcus analytical results (Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels, which are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, reactive phosphorus, nitrate, ammonia, or detergents were observed above the numeric action level, a follow-up investigation was conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or enterococcus laboratory analytical results exceeded numeric action levels, then source investigations were conducted.

California Toxics Rule

The CTR 1-hour criteria was used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases.

Best Professional Judgment

Best professional judgment was utilized as the primary approach for interpreting turbidity, conductivity, and water temperature. Best professional judgment was also the secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew due to their familiarity with the City of La Mesa Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan, and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Turbidity (NTU)[2]	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity), and unusual odors.
Temperature (^{o}C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Surfactants (mg/L MBAS)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)	California Toxics Rule	
Dissolved Lead (µg/L)	California Toxics Rule	
Dissolved Zinc (µg/L)	California Toxics Rule	
Total Coliforms (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	20,000	
Enterococci (MPN/100 mL)	10,000	

Notes

[1]The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

[2]Basin Plan = Water Quality Control Plan for the San Diego Basin

4 FIELD SCREENING RESULTS

The Dry Weather Monitoring Program commenced on June 23, 2006, and was completed on June 28, 2006. 18 monitoring stations were visited, all of which had ponded or flowing water. Field screening was thus conducted at all 18 sites. A total of 22 site visits were performed, including four follow-up visits to sites where one or more constituents were found to exceed accepted action levels. Completed field data sheets for each site visit are included in Appendix C.

4.1 Qualitative Observations

Qualitative observations are a routine and important part of the Dry Weather Monitoring Program. Weather conditions were recorded at each site, and any evidence of dry weather flows was documented. Visual observations of the sample water and the vicinity of the sampling location such as odor, color, clarity, floatable materials, vegetation and biological organisms were also recorded. Observations are summarized below and presented in Table 4-1.

Atmospheric Conditions
Samples were collected during sunny, partly cloudy, and overcast conditions.

Odor
Most of the visited sites had no observable odor, with the exception of a slightly musty odor at Site 61.

Color
Water samples collected from most of the sites were colorless, with the exception of five sites that had water with a yellowish hue.

Clarity
The majority of water samples collected from visited sites were clear with negligible suspended particles observed. Only the sample taken from Site 12 was slightly cloudy.

Floatable Materials
During routine field screening visits, eight of the sites that had flowing or ponded water were observed to have trash in or around the sampling location. The trash observed included materials such as paper, plastics, Styrofoam, aluminum cans, and glass bottles.

Vegetation
Vegetative growth ranged from no growth to naturally vegetated riparian areas. No growth was observed at 12 sites, which include concrete channels with no soil, and manholes or catch basins which receive limited sunlight. Site 64 had limited vegetation consisting of just a few plants due to growth constraints caused by concrete. Five of the 18 sites had normal vegetation; that is, vegetation not considered significantly limited by man-made structures, such as a manhole which blocks sunlight and access to soil, or so excessive that it significantly impaired flow at the site.

Biology
Many of the sites exposed to sunlight had algal growth, which indicates that water flow is consistent at the site. Insects were observed at eight sites and larvae at Site 61.

Deposits
Sediment deposition was observed at all at the sampling location sites except sites 12A and 39.

TABLE 4-1
SUMMARY OF FIELD OBSERVATIONS

Site No.	Date	Time	Light Conditions	Odor	Color	Clarity	Floatables	Deposits	Vegetation	Biology
4A	6/26/06	10:50	Partly Cloudy	None	None	Clear	Trash	Fine Particulates	None	Insects, Algae

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Chemical analyses were conducted using CHEMetrics field test kits; pH, specific conductance, and temperature were measured using a Hanna Instruments Portable pH/EC/TDS/Temperature Meter (HI 991301), and turbidity was measured using a Hanna Instruments Turbidity Meter (HI 93203-11). Flow was estimated either visually, or, when possible, by measuring the velocity, depth, and width of the flowing water. A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 presents the results of all field analyses conducted at the sampled sites. Graphs of each parameter analyzed and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median
Flow Rate (gpm)	156	<1.0	15.1	5
Temperature (º Celsius)	29.7	22.9	25.1	24.5
pH	8.9	6.9	7.8	7.8
Conductivity (mS/cm)	5.56	0.90	2.00	2.18
Turbidity (NTU)	47.13	1.02	9.30	7.01
Ammonia (mg/L NH_3-N)	2.5	0.1	0.6	0.4
Detergents (mg/L MBAS)	1.5	0.25	0.4	0.25
Nitrate (mg/L NO_3-N)	7.5	1.25	3.7	3.75
Orthophosphate-P (mg/L PO_4-P)	1.14	0.07	0.2	0.2

The **flow rates** at sites with measurable flow ranged from less than 1.0 gpm to 156 gpm, with an average of 15.1 gpm and a median of 5 gpm, as shown in Table 4-2. The highest flow rate of 156 gpm was measured at Site 4A.

Water temperature is an important physical parameter because it is needed to assess the significance of other parameters such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. Water temperature was measured in the field immediately upon sample collection at each site with ponded or flowing water. During routine visits, temperature readings ranged from 22.9 to 29.7 degrees Celsius (°C), with an average of 25.1°C and a median of 24.5°C. The maximum temperature of 29.7°C was recorded at Site 52. The minimum temperature recorded during routine visits was Site 55, a lower temperature of 22.2°C was measured at Site 61 during a follow-up investigation. Graph 4-1 presents the results of temperature readings at all sites.

The **pH** is a measure of whether a water body is acidic or basic. This is a critical factor in determining water quality, as the pH of an aquatic system will drive a multitude of chemical reactions, including the availability of nutrients or the solubility of chemical substances. The pH values ranged from 6.9 to 8.9, with an average of 7.8 and median of 7.8. The highest pH reading of 8.9 was observed at Site 64, while the lowest pH of 6.9 was recorded at sites 12 and 35. Graph 4-2 presents the results of pH readings at all sites.

Specific Conductance (Conductivity) values indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water or potentially help indicate the presence of dissolved pollutants. Conductivity readings ranged from 0.90 to 5.56 millisiemens per centimeter

(mS/cm) during routine field screening, with an average of 2.0 mS/cm and a median of 2.18 mS/cm. The highest conductivity measured during the program, 5.56 mS/cm, was observed at Site 50, while the lowest reading during a routine visit was recorded at Site 64. Follow-up visits at sites 35, 61, and 64 found conductivity values below 0.90. Graph 4-3 illustrates the results of conductivity measurements at all sites.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures. Turbidity measurements ranged from 1.02 to 47.13 Nephelometric Turbidity Unit (NTU), with an average of 9.3 NTU and a median of 7.01 NTU. The highest turbidity reading of 47.13 NTU was recorded at Site 12, which has historically had the highest turbidity of all sampled sites, and the lowest measurement of 1.02 NTU was documented at Site 14A. Graph 4-4 presents the results of turbidity measurements at all sites.

Ammonia is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms. Ammonia concentrations measured in the water samples ranged from 0.1 to 2.5 mg/L NH_3-N, with an average of 0.6 mg/L and a median of 0.4 mg/L. The highest ammonia concentration of 2.5 mg/L was observed at Site 61, while the lowest ammonia concentration of 0.1 mg/L was found at sites 13C and 14A. Graph 4-5 shows the results of the ammonia analyses at all sampling locations.

Nitrate is a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which will later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. Nitrate concentrations measured in the water samples ranged from 1.25 to 7.5 mg/L NO_3-N, with an average of 3.7 mg/L and a median of 3.75 mg/L. The highest nitrate concentration of 7.5 mg/L was observed at Site 50. Nitrate was measured at the lowest detectable concentration, 1.25 mg/L, at one site. Graph 4-6 presents the results of nitrate analyses at all sampling locations.

Orthophosphate-P (Reactive Phosphorus) is also a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate, phosphate pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of phosphate can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate was measured in mg/L PO_4 and converted into mg/L reactive phosphorus (orthophosphate-P) using a conversion factor of 0.326 (See Note 6 to Table 3-1). Reactive phosphorus was found at concentrations ranging from 0.07 to 1.14 mg/L PO_4-P, with an average of 0.2 mg/L and a median of 0.2 mg/L. The highest concentration of 1.14 mg/L was found at Site 61. The lowest orthophosphate-P concentration of 0.07 mg/L was observed at four sites. Graph 4-7 illustrates the results of orthophosphate-P at all sampling locations.

Detergent concentrations in water samples often indicate illegal discharge from either industrial, commercial or residential sources. Pollution resulting from detergents alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms. During field analysis, detergent concentrations ranged from 0.25 mg/L to 1.5 mg/L, with an average of 0.4 mg/L and a median of 0.25 mg/L. The highest concentration of

1.5 mg/L was found at Site 64. The lowest concentration of 0.25 mg/L was found at 10 sites. Graph 4-8 reflects the results of the detergents analyses at all sampling locations.

TABLE 4-3
SUMMARY OF FIELD ANALYTICAL RESULTS

Site No.	Date	Time	Flow gpm	Temp. °C	pH	Turbidity NTU	Conductivity mS/cm	Detergents mg/L MBAS	Ammonia mg/L NH_3-N	Nitrate mg/L NO_3-N	Orthophosphate-P PO_4-P mg/L

5 LABORATORY ANALYTICAL RESULTS

5.1 Summary

Laboratory analyses were conducted at five sites, representing over 25 percent of all sites with ponded or flowing water. A summary of the laboratory analytical results is presented in Table 5-1. Table 5-2 presents all of the results from the laboratory analyses. The laboratory reports are included in Appendix B.

TABLE 5-1
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Minimum	Maximum
Surfactants (mg/L MBAS)	nd	nd
Oil and grease (mg/L)	nd	nd
Total hardness (mg/L $CaCO_3$)	434	686
Cadmium (dissolved, mg/L)	nd	nd
Copper (dissolved, mg/L)	nd	0.008
Lead (dissolved, mg/L)	nd	nd
Zinc (dissolved, mg/L)	nd	0.028
Diazinon (µg/L)	nd	nd
Chlorpyrifos (µg/L)	nd	nd
Total Coliforms (MPN/100 mL)	23,000	240,000
Fecal Coliforms (MPN/100 mL)	20	30,000
Enterococcus bacteria (MPN/100 mL)	40	5,000

nd = not detected

Surfactants (MBAS) are analyzed to detect detergent pollution from residential, commercial or industrial washing activities. Surfactants were not detected at any sites during the 2006 Dry Weather Monitoring Program.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources including parking lots, washing activities, illegal discharges and automobile repair facilities. Oil and grease were not detected at or above the reporting limit at any of the sampled sites.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with results expressed in mg/L of $CaCO_3$. Although it is not itself considered a pollutant, total hardness is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals, as well as other minerals and ions. Total hardness values varied from 434 to 686 mg/L $CaCO_3$. The highest total hardness value of 686 mg/L $CaCO_3$ was found at Site 12A, while the lowest value of 434 mg/L was observed at Site 39.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure. Diazinon and Chlorpyrifos were not detected at any of the sampled sites during the 2006 Dry Weather Monitoring Program.

.

Metal concentrations in the environment can originate from a variety of sources including automobile operation, automobile repair facilities, car washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms, including fish and waterfowl. The laboratory samples collected during the 2006 Dry Weather Monitoring Program were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Cadmium and lead were not detected at any site. Dissolved zinc was detected at sites 4A and 39 with concentrations of 0.028 mg/L. According to the CTR (1-hour) for Dissolved Metals in Fresh Waters,[1] which defines metal toxicity as a function of water hardness, the action level for dissolved zinc in water samples with hardness values of 434 and 524 mg/L $CaCO_3$ are 0.407 and 0.477 mg/L, respectively. Dissolved copper was detected at the same sites (sites 4A and 39) with concentrations of 0.008 and 0.005 mg/L respectively. The action level for dissolved copper with the aforementioned hardness values are 0.054 and 0.064 mg/L. Therefore, since measured zinc and copper concentrations were significantly below the action levels corresponding to the measured hardness values, source investigations were not deemed necessary.

Coliform bacteria are relatively harmless to humans and are present in all mammalian digestive tracts. They are also present in soil and decomposing organic matter, so measurements of total coliforms are not typically considered to be very accurate indicators of fecal contamination. Water samples are analyzed for total coliform bacteria because it is a historically accepted public health practice and because the Municipal Permit requires it. During the 2006 Dry Weather Monitoring Program, total coliform counts ranged from 23,000 to 240,000 MPN/100 mL. The highest level, 240,000 MPN/100 mL was found at Site 57. sites 4A, 12A and 14A also had total coliform counts at or above the action level of 50,000 MPN/100 mL. Upstream investigations were conducted at all four sites; the results are detailed in Section 7.

Fecal coliforms, a subset of coliform bacteria, and **enterococci** are found primarily in the gastro-intestinal tracts of humans and animals, so they are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material was human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain. Fecal coliform counts ranged from 20 MPN/100 mL at Site 57 to 30,000 MPN/100 mL at Site 12A, which was the only site with a fecal coliform count above the action level of 20,000 MPN/100 mL. Enterococcus counts ranged from 40 to 5,000 MPN/100 mL, which is below the action level of 10,000 MPN/100mL.

Notes

Red Bold Type = Values that exceed action levels

nd = Not detected

CTR = California Toxics Rule (based on hardness)

*= Total hardness is not considered a pollutant (see Section 3.4 for details) and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependant on the total hardness value of the water sample. Total hardness measurements are thus required to calculate action levels for dissolved metals.

6 DATA ANALYSIS

When contaminant levels were detected above established action levels during field screening, upstream investigations were conducted to identify the source(s) of the contaminants. Since the laboratory requires several days to analyze samples, sites with contamination detected by laboratory analyses were investigated during a later round of visits. A rain event in mid summer also delayed the beginning of the upstream investigation. Based on the visual observations and the field and laboratory analytical testing that was conducted, the following sites demonstrated physical and chemical evidence of possible illegal discharges and/or illicit connections:

Site 4A

Site 4A (Photo 12), located in the Alvarado Channel, is at the intersection of Fletcher Parkway and Baltimore Drive. Alvarado Channel runs east to west across the City of La Mesa, and most commercial and residential areas located on and around Fletcher Parkway flow to this major drainage structure. During the initial visit, the 156 gpm flow was noted to be fairly clean, and no constituents tested were above their respective action levels.

Laboratory analysis of water from Site 4A detected total coliforms at a concentration of 130,000 MPN/100 mL, which is well above the action level of 50,000 MPN/100 mL. Details of an upstream investigation conducted in this area are presented in Section 7.

Site 12A

Site 12A is a manhole on the south side of Jackson Drive, just west of Murray Drive (Photo 24). During the initial site investigation, the water was clear, with no deposits or floatables. Laboratory analysis of the water sample detected a total coliform count at the action level of 50,000 MPN/100 mL, and a fecal coliform count of 30,000 MPN/100 mL, which is above the action level of 20,000 MPN/100 mL for that bacterial indicator. An upstream investigation was later conducted for this site to identify sources of fecal and total (see Section 7).

Site 14A

Site 14A is an outlet into an open channel running parallel to Boulevard Drive (Photo14). The sample point lies between Harbinson Avenue and Massachusetts Avenue. The clear flow at the site passes over a semi-natural channel bottom, and there is a significant amount of vegetation present. Laboratory analysis found the total coliform count to be 80,000 MPN/100 mL. An upstream investigation was conducted for this site to identify potential sources of total coliforms. The investigation is detailed in Section 7.

Site 35

Site 35 is a manhole inside the Grossmont Center Mall, in front of the mall information stand near Bath and Body Works (Photo 26). Approximately one gpm of water was flowing into the junction box beneath the manhole, which contained about an inch of standing water. The field crew found a slightly elevated ammonia concentration of 1.5 mg/L at this site during the routine investigation. Similar to what was found the previous year, the field crew hypothesized that the source of ammonia could be fertilizer transported by irrigation water. Again, the field crew alerted the mall's Chief Engineer, who was present for a follow-up investigation the next

day. By the time of the follow-up investigation, the ammonia concentration had dropped significantly below the action level. Details regarding the follow-up investigation are discussed in Section 7.

Site 40

Site 40 is a manhole in the northeast corner of Grossmont Center Drive and Murray Drive, south of the Trader Joe's parking lot (Photo 6). During a routine investigation, the field crew observed a slightly yellow flow of 3 gpm and measured an ammonia concentration matching the action level of 1.0 mg/L. An upstream investigation commenced immediately, since in previous years, high ammonia concentrations had been measured at this site due to a sewer leakage. This investigation is discussed in Section 7, and did not yield any definitive sources of ammonia. During a follow-up investigation the next day, the ammonia concentration had gone down slightly and was below the action level, leading the field crew to deem the previously high ammonia concentration a result of a transient flow.

Site 57

Site 57 is an earthen channel running along Amaya Drive, east of Severin Drive and across from Howell Drive (Photo 23). Water in the channel flows west toward the Alvarado Channel. Water sampled during an initial visit to this site had a total coliform density of 240,000 MPN/100 mL, so the field crew later returned to conduct an upstream investigation, detailed in Section 7.

Site 61

Site 61 is a catch basin located on Commercial Street in front of the La Mesa Public Works Department (Photo 9). During a routine investigation of this site, the field crew measured an ammonia concentration above the action level of 1.0 mg/L. The field crew also observed that the ponded water contained a substantial amount of organic matter and a large population of what appeared to be mosquito larvae. An upstream investigation was conducted immediately following the routine visit to this site, but no specific upstream sources of ammonia were noted. A follow-up investigation was also conducted the following day, and by that time the ammonia level had dropped to 0.8 mg/L, which is slightly below the action level for ammonia. The field crew hypothesized that the decomposing organic matter building up in the ponded water at Site 61 is the primary source of ammonia.

Site 64

Site 64 is a concrete channel on the north side of Seton Hall Street, between Swarthmore Street and Wheaton Street (Photo 1). The field crew noted an elevated level of detergents, 1.5 mg/L, during a routine visit, and an upstream investigation was conducted to try to locate the source of the detergents. The channel in which Site 64 is located runs between various residential and commercial areas. While some evidence of foam was found upstream, this was in ponded water that did not reach the sample point, and the exact source could not be located. When the field crew returned for a follow-up visit the next day, the detergent concentration was below the action level. Therefore, the field crew hypothesized that the previous detergents level had been the result of a transient flow likely caused by uncontained outdoor washing.

7 UPSTREAM INVESTIGATIONS

7.1 Purpose

The purpose of the upstream investigations is to find the sources of the pollutants that exceeded action levels during initial field screening and laboratory testing.

The 2006 Dry Weather Monitoring Program revealed elevated levels of pollutants at four sites, as described in Section 6. When field analyses detected a pollutant surpassing the action level, the sites received a follow-up visit within 24 hours of the initial visit. Upstream investigations are typically conducted when field screening parameters are measured above their respective action levels during both visits. In 2006, field screening did not reveal any sites to have a constituent in excess of its established action level on consecutive visits. Because the initial ammonia exceedance at Site 35 seemed to have the same source as had been observed in 2005, a brief follow-up investigation was performed there.

Samples were collected for laboratory analysis at five sites during the initial round of field screening. Complete results of these analyses showed bacteria in excess of their established action levels at sites 4A, 12A, 14A, and 57. Upstream investigations were undertaken at each of these sites to identify the source(s) of the high bacteria counts.

7.2 Investigation Procedure

Upstream investigations were conducted in two rounds. The first upstream investigations were for the sites at which field tests indicated elevated constituent levels. These investigations were conducted immediately after confirming the elevated concentrations via additional field testing. The second round of upstream investigations were carried out for the sites at which laboratory testing had found elevated constituent levels. These investigations were conducted after receiving the test results from the laboratory.

During the investigations, the D-MAX field crew measured flow rates, performed visual observations, and conducted field testing. Visual observations, such as water color, clarity, odor, floatable materials, vegetation and biology, and physical parameters, such as temperature, pH and conductivity, were recorded on field data sheets at each official sampling site. Observations and data for locations upstream of the official sites were recorded in the field crew's log notebooks. Field data sheets are included in Appendix C.

In order to determine the potential sources of bacteria to sites with high bacteria, the D-MAX field crew used 3M Petrifilm *E. coli*/Coliform Count plates as a rapid method to trace sources of both total coliform bacteria and *E. coli* bacteria in the storm water conveyance system. Because laboratory microbiological analyses take a significant amount of time, relying primarily on laboratory analyses can significantly delay an upstream investigation for bacteria. Also, due to the cost of these tests, often only a few locations can be examined, giving a less comprehensive picture. Using the Petrifilm plates allowed the field crew to quickly sample numerous branches or locations upstream of the sites.

Samples were taken in the field and preserved with Butterfield's phosphate buffer to keep the pH close to 7. Sample containers were kept on ice in a cooler and then plated within 6 hours of collection to ensure proper holding times were observed. The plates were then incubated at 35°C ± 1°C. After 24 hours of incubation, total coliform bacterial concentrations were enumerated, and after an additional 24 hours (48 hours incubation total) *E. coli* levels could be

read from the same plates, helping investigators identify potential bacterial sources over a large area in a timely manner.

This method is an improvement over the technique used in the past because it now also tests for *E. coli* bacteria. *E. coli* bacteria, a subset of fecal coliform bacteria, are better indicators of fecal contamination than total coliforms alone. Additionally, since total coliforms and *E. coli* are enumerated on the same plate, a rough ratio of *E. coli* (more likely to be from fecal sources) to total coliforms can be ascertained. While not unequivocally conclusive, this information allows for a better determination as to whether observed high bacteria levels likely come from fecal or non-fecal sources. Note that although *E. coli* are a major subset of fecal coliform bacteria, they are not enumerated for upstream analyses as an equivalent replacement for laboratory fecal coliform testing.

It should be noted that although laboratory analyses are done for total coliforms, fecal coliforms, and enterococcus bacteria, field bacteria analyses using Petrifilm plates are used to test only for total coliform bacteria and *E. coli*. As noted in Section 4, total coliform bacteria are generally harmless to humans but are a commonly-used indicator of harmful, pathogenic organisms, especially those found in fecal matter. Because the total coliform group of bacteria includes many species of bacteria of non-fecal origin, it is not as precise an indicator of fecal contamination as fecal coliforms or enterococci. A high total coliform count does not necessarily indicate fecal contamination of water, as total coliforms can also be found in soil, grain, and water, especially stagnant water. Therefore, a water sample with a high level of total coliform bacteria does not necessarily have a correspondingly high level of pathogens.

Fecal coliforms and enterococci are found mainly (but not solely) in the digestive tracts of humans and warm-blooded animals. With a few notable exceptions, fecal coliforms and enterococci are not hazardous to humans, but their presence is usually a good indication of the presence of animal or human waste. Fecal contamination from animal sources may be less hazardous to humans than fecal contamination from human sources; however, standard tests for fecal coliforms and enterococcus bacteria cannot reliably distinguish between human and animal sources.

Field bacteria tests using Petrifilm plates use Colony Forming Units per milliliter (CFU/ml) as the measurement unit, rather than the Most Probable Number (of colony forming units) per 100 milliliters (MPN/100 mL) unit used in laboratory analyses. These units are generally comparable, although the laboratory volume, and thus value, is one hundred times greater. D-MAX has created a stringent field protocol to control sample development as consistently as possible. Sterile dilution vials containing pre-measured amounts of sterile buffer solution for dilution are used for sample collection, the diluted samples are kept on ice in a cooler while in the field, and chilled samples are collected from the field crew twice daily to be plated within the proper holding time. Plated samples are then developed in an incubator for a total of 48 hours. While this method is not conducted at a certified laboratory, it is still useful for determining which locations have relatively higher or relatively lower bacteria levels. The action level for total coliform bacteria is 50,000 MPN/100 mL, which roughly corresponds to 500 CFU/mL. However, only about 150 or fewer colony forming units can be accurately enumerated using a Petrifilm plate. This would correspond to 15,000 MPN/100 mL. Therefore, all samples were first diluted 1:10 with sterile buffer solution before Petrifilm analysis, thus adjusting the detection limits for Petrifilm plates from the standard value of 1-150 CFU/mL to 10-1,500 CFU/mL. This adjusted range corresponds to approximately 10,000 to 150,000 MPN/100 mL, a much more useful range when dealing with total coliform bacteria levels around the action level of 50,000 MPN/mL.

Field investigators began the source identification investigations by testing the water at the site itself.; they then gradually worked upstream until potential pollutant sources could be identified. If follow-up field testing at a site resulted in constituent concentrations below specified action levels, it was concluded that the pollution found during the initial field screening and laboratory analysis was due to a transient flow.

7.3 Investigated Sites

Site 4A

Site 4A is located in the Alvarado Channel near the intersection of Fletcher Parkway and Baltimore Drive. The Alvarado Channel is a major drainage structure in the City of La Mesa, transporting runoff generated from commercial and residential areas around Fletcher Parkway from east to west across the City. Laboratory analysis detected a total coliform reading of 130,000 MPN/100 mL in the first sample taken at this site, which is lower than in 2005 (240,000 MPN/100 mL). Fecal coliforms and enterococci, which were above their action levels in 2005, were below their respective action levels during this year's monitoring program. The field crew conducted a follow-up investigation of the channel and several of the lateral branches that join it along Fletcher Parkway to better understand the origins of bacterial contamination in this area. The locations and results of follow-up sampling events are summarized in the Table 7-1 and Figure 7-1.

Photo 7-1 Surface flow entering a grated curb inlet on Nagel Street at Sarita Street

Since Site 4A received follow-up investigations for total coliforms in both 2004 and 2005, the field crew was able to narrow down the upstream sites to those that have previously shown high levels of total coliforms. The elevated bacteria levels in most of the upstream samples were consistent with those found in previous samples taken in those areas.

Interestingly, Site 4A had a relatively low bacteria count at the time of the follow-up investigation. Historically, bacteria levels in the channel tend to fluctuate due to the large volume of water and variety of upstream areas. However, several of the upstream areas were found to have relatively high levels of bacteria. The highest total coliform count was found in a small surface flow entering a grated curb inlet at the corner of Nagel Street and Sarita Street, in the northeastern part of the City (Photo 7-1). This area had consistently high bacteria levels in 2004 and 2005 as well. The surface flow was sampled because it appeared to be a fairly established flow; there was significant algae and sediment deposition along its path, which was traced for several blocks up Nagel Street to a point where it began to dry up. Slightly farther up the street, the field crew observed an over-irrigated front yard where water had washed mud into the gutter and street. It is likely that bacteria present in the soil are being transported to the street, where the shallow flow and significant amount of algae provide an excellent platform for bacterial growth. This is consistent with the bacteria data from the site which showed a relatively high level of total coliforms but no detectable *E. coli*.

The field crew also opened a manhole on the corner of Nagel Street and Sarita Street to sample flow from Sarita Street. This flow had elevated bacteria counts as well. As in 2005, the origin of the flow coming from Sarita Street could not be located. This neighborhood should be targeted in order to address consistently high bacteria levels. See Section 8 for recommendations.

Photo 7-2 Sediment deposition, litter, and organic debris in a manhole on the corner of Jackson Drive and Parkway Drive

Also consistently high are total coliform levels in the underground pipe draining the residential neighborhood around Marengo Avenue (Site 4A-4), and in surface flow on Parkway Drive as it flows toward Jackson Drive (Site 4A-5). While no specific sources of coliforms or instances of over-watering were noted in the area around Marengo Avenue, this is another neighborhood where consistently high bacteria levels should be addressed.

Surface flow on Parkway Drive has been noted for several years and seems to be seeping from beneath Grossmont Center North commercial plaza. The 1 gpm flow had transported a significant amount of mud, litter, and decomposing organic debris into the manhole on the corner of Jackson Drive and Parkway Drive (Photo 7-2).

The field crew also sampled the Alvarado Channel itself toward the eastern edge of the City, where it crosses under SR-125 (Site 4A-8). The water in the channel is slow moving and brackish at this point due to back-up caused by excessive vegetation and sediment deposits (Photo 7-3). Site 57, which also had a high total coliform count (see below for the upstream investigation for that site), drains to this part of the Alvarado Channel, likely contributing to high bacteria levels. *E. coli* was present in the sample taken at Site 4A-8 at a density of 10 CFU/mL, but no specific sources of *E. coli* were noted in the area.

Photo 7-3 The Alvarado Channel where it passes under SR-125

Some bacteria also appear to be entering the Alvarado Channel from the southwestern area of the City. Two outfalls in a junction box in the Costco parking lot drain some of this commercial and industrial area, and elevated total coliform readings were found for samples taken from both outfalls (sites 4A-2 and 4A-3). Relatively low *E. coli* readings were also present in both samples. The field crew was unable to locate the origin(s) of bacterial contamination, but the southwest area of the City includes an industrial area where further investigation may be useful in determining possible bacteria sources.

In general, an elevated total coliform count in the Alvarado Channel is not surprising as it drains such a significant portion of the City. However, the presence of consistently high levels of bacteria in several upstream areas should be addressed. See Section 8 for recommendations.

Sampling Locations for Site 4A Upstream Investigation

Base Data Sources: USGS, SanGIS, SANDAG

4A-9	Site 58, manhole at the corner of the Amaya Drive/Amaya Court intersection	2	40	<10

Site 12A

Site 12A is a manhole on the south side of Jackson Drive, west of Murray Drive. Runoff generated within the area southwest of the I-8 and Highway SR-125 intersection flows through Site 12A before eventually flowing into the Alvarado Channel. While this site had an elevated total coliform reading in 2005, this year both total coliform and fecal coliform levels were 50,000 MPN/100mL and 30,000 MPN/100mL, above their respective action levels. The field crew therefore carried out an upstream investigation, the locations and results of which are summarized in Figure 7-2 and Table 7-2. The field crew began by sampling the two major lines that join before flowing through Site 12A. The bacteria analysis results, presented in Table 7-2, show that the highest bacteria counts were coming from the area up along Jackson Drive and Grossmont Boulevard, and that bacteria levels generally decreased as the distance from the site increased. These results are similar to those from 2005. The field crew returned to the site to look for possible sources in that area. They noted that during both days of investigation there was flow entering a curb inlet in the parking lot of a shopping center at the corner of Jackson Drive and Grossmont Boulevard (Photo 7-4). The flow lines for this runoff are clearly visible in the parking lot and they contain significant sediment deposits and algae. The water appears to be a result of irrigation water which has saturated the soil in the shopping center lawn and is allowed to drain into the parking lot. A sample of this surface flow had a total coliform count of 130 CFU/mL, but it did not contain a detectable amount of *E. coli*. A catch basin in the lawn upstream of this area appeared to be draining irrigation water directly into the storm water system. However, water in the catch basin was ponded at the time of this investigation and was too shallow to be sampled. Dog feces were noted on the lawn in close proximity to the catch basin. There is an animal hospital located in the shopping center, and a sign posted on one of the lawns asks dog owners to pick up after their pets. This sign was

Photo 7-4 Surface flow originating from irrigation water in a shopping center parking lot of Jackson Drive and Grossmont Boulevard

posted by ReMax, which is located next door to the animal hospital, and a ReMax employee mentioned that dog feces on the various lawn areas have been a problem in the past.

Since most of the bacteria seems to originate from the shopping center area and no other sources of fecal coliforms were noted, the field crew hypothesized that fecal contamination at Site 12A had likely originated from the shopping center, where fecal matter on the lawn appears to be transported to the storm drain system via over-irrigation. The lawn appeared to be recently mowed and cleaned at the time of the upstream investigation, which is perhaps the reason why no *E. coli* was found in samples taken at that time. Total coliform bacteria also seemed to origine mainly from this area, since samples taken southeast of the Jackson Drive and Grossmont Boulevard intersection did not have particularly elevated bacteria counts. Most likely, coliforms present in the lawn soils are being transported to the storm drain system via the irrigation water draining into the parking lot. Recommendations regarding Site 12A can be found in Section 8.

Sampling Locations for Site 12A Upstream Investigation

Base Data Sources: USGS, SanGIS, SANDAG

Figure 7-2 Map of Sampling Locations for Site 12A Upstream Investigation

TABLE 7-2
SAMPLING LOCATIONS FOR SITE 12A UPSTREAM INVESTIGATION

ID	Location	Flow (gpm)	Total Coliforms (CFU/mL)	*E. coli* (CFU/mL)
12A	Jackson Drive, 100 feet west of Murray Drive, south side of street	10	220	<10

12A-1	Manhole in parking lot at northwest corner of Jackson Drive/Grossmont Boulevard intersection	1	220	<10
12A-2	Manhole, south side of Jackson, north of I-8	1	140	<10
12A-3	Manhole, Wilson Street and La Mesa Boulevard intersection	15	90	<10
12A-4	Grated concrete box, north end of Barona Way	15	10	<10
12A-5	Surface flow draining from lawn area near Site 12A-1	<1	130	<10

Site 14A

Site 14A is an outlet into an open channel running parallel to and north of Boulevard Drive. The sampling point is between Harbinson Avenue and Massachusetts Avenue. Laboratory analysis found the total coliform count in the channel to be 80,000 MPN/100 mL, lower than in 2005. Only low concentrations of fecal coliforms and enterococci were present.

Photo 7-5 Turbid surface flow and litter entering a grated curb inlet on Normal Avenue

The field crew conducted an upstream investigation for Site 14A, taking samples along the main channel and on lateral branches. The locations and bacterial counts of these sampling points are summarized below in Table 7-3 and Figure 7-3. The Petrifilm count was quite low at Site 14A itself during the follow-up visit, but many upstream sampling sites had fairly high levels of both total coliforms and *E. coli* bacteria. One branch of the upstream system, that come from the La Mesa Boulevard area around the City Hall buildings, had a somewhat high level of total coliform bacteria (Site 14A-6). However, the area near the intersection of Olive Avenue and Normal Avenue had the highest bacteria counts, which is consistent with the data from the 2005 upstream investigation at this site. There were several instances of over-irrigation noted in that area, including one that was causing a steady stream of turbid (74 NTU) surface flow and litter to enter a curb inlet in the southeast corner of Olive Avenue and Normal Avenue (Photo 7-5). The field crew took a sample of this flow, and the total coliforms were too numerous to count (TNTC), while the *E. coli* count was 800 CFU/mL. The field crew traced this flow along Normal Avenue to an apartment complex where Accurate Carpet Care was draining a hose from its van while an employee was shampooing the carpet of one of the apartments (Photo 7-6). The water was running down the driveway and out to the street, transporting a

Photo 7-6 Accurate Carpet Care draining water onto Normal Avenue

significant amount of mud from the lawn area of the complex. The field crew informed the employee that such a discharge is illegal, and he stopped soon after, although he claimed that Accurate Carpet Care has been draining water to the street for as long as he could remember, and that it is a common business practice.

Although this transient flow was probably not contributing to elevated bacteria levels during the original site visit, all of the upstream sites sampled near to the Olive Avenue and Normal Avenue intersection had fairly high bacteria counts. Also, Site 14A-2, the point just before all of the runoff from that neighborhood joins with the branch coming from La Mesa Boulevard, had a total coliform level TNTC and an *E. Coli* density of 570 CFU/mL, indicating that the entire area has significant bacteria contamination. Several instances of irrigation water entering the storm drain system were observed by the field crew, including one on Olive Avenue entering the curb inlet at Site 14A-3 and 14A-4 (Photo 7-7). This flow contained decomposing algae, and both 14A-3 and 14A-4 had fairly high total coliform bacteria counts. Also, sites 14A-1 and 14A-2 may have been affected by their close proximity to Helix High School; while the field crew was unable to enter the school in order to inspect it, there are often potential sources of bacteria located on school grounds, such as food wastes, litter, and organic debris.

Photo 7-7 Surface flow on Olive Avenue

The field crew therefore concluded, as in 2005, that the most significant upstream source of bacteria to Site 14A was the neighborhood around Olive Avenue and Normal Avenue. Recommendations regarding this site can be found in Section 8.

Site 35

Site 35 is a manhole in an outdoor walkway inside Grossmont Center Mall. The field crew detected an ammonia concentration of 1.5 mg/L during the regular site visit and hypothesized that, like last year, the pollutants originated from fertilizer used on new plants in planters on the mall walkway, transported to the storm drains by irrigation water.

The mall's Chief Engineer, Dan Rourke, accompanied the field crew for the follow-up visit. The flow into the junction box had slowed to less than 1 gpm. The ammonia concentration in the junction box had decreased to 0.2 mg/L, and another sample taken from the east pipe just before it joins the junction box had an ammonia concentration of 0.3 mg/L. There was no evidence of any contamination farther east, and a second manhole at the west upstream end of the walkway was observed to be dry, therefore suggesting that the source of the ammonia was coming from within the shopping center. In 2005 the field crew identified granular plant food used on planter boxes as the source of elevated ammonia levels; according to Mr. Rourke, this fertilizer is no longer used at the shopping center, although a liquid fertilizer is used. While it appears that there has been some improvement in the mall's watering and fertilizing practices, it is still possible that some fertilizer is being transported to the storm drains during watering. Recommendations regarding Site 35 are discussed in Section 8.

Site 57

Photo 7-8 Surface flow on Amaya Drive upstream of Site 57-3

Site 57 is an earthen channel that runs parallel to Amaya Drive at the point where it is sampled. The channel originates at an outlet on Water Street, east of the Amaya Drive and Water Street intersection. The residential areas along and between Amaya Drive and Janfred Way drain to this channel, which flows west and eventually joins with the Alvarado Channel. Laboratory analysis initially detected a total coliform count of 240,000 MPN/100 mL at this site, which has not had bacterial action level exceedances during dry weather monitoring programs in recent years. The field crew carried out a follow-up investigation, sampling the two upstream lines along Amaya Drive and Janfred Way to try to locate possible sources of coliform bacteria. The sampling locations and results are presented in Table 7-4 and Figure 7-4.

Bacterial analysis results showed the highest bacteria count originating from a manhole at the east corner of the Amaya Drive and Water Street intersection (Site 57-3). The flow was less than 1 gpm at this site, but contained a total coliform count of 680 CFU/mL. The only flow noted to be entering the storm drain system upstream of this point was surface flow coming down Amaya Drive (Photo 7-8). This flow contained decomposing organic material, and was traced down to around Gregory Street, where it started to dry out. Most likely, this is irrigation water from one or more of the residences on Amaya Drive, and coliforms associated with soil and decomposing organic material are being transported from lawns and gutter areas into the storm drain system.

Photo 7-9 Litter and algae in the slow-moving water at Site 57-1

Site 57-1, located 200 yards east of Site 57 in the same channel, had a moderate total coliform bacteria count. This is where the two upstream branches join, and the conditions in the channel at this point are fairly conducive to bacterial growth. The flow is quite slow, backed up by excessive vegetation and sedimentation, and the warm water contains a significant amount of algae and litter (Photo 7-9). It seems likely that this site provides an excellent platform for growth of bacteria.

The field crew therefore concluded that the primary sources of bacteria to Site 57 are surface flow along Amaya Drive caused by over-irrigation and the

conditions in the channel itself upstream of Site 57. Recommendations regarding Site 57 can be found in Section 8.

Sampling Locations for Site 57 Upstream Investigation

Base Data Sources: USGS, SanGIS, SANDAG

Figure 7-4 Map of Sampling Locations for Site 57 Upstream Investigation

TABLE 7-4
SAMPLING LOCATIONS FOR SITE 57 UPSTREAM INVESTIGATION

ID	Location	Flow (gpm)	Total Coliforms (CFU/mL)	*E. coli* (CFU/mL)
57	Amaya Drive, east of Severin, across from Howell	2	370	20
57-1	Upper end of the channel, on Water Street just past Amaya Drive	2	180	50
57-2	Wolff Court and Janfred intersection, grated curb inlet at northwest corner	<1	80	<10
57-3	Manhole at east corner of Amaya Drive/Water Street intersection	<1	680	10

8 SUMMARY AND RECOMMENDATIONS

8.1 Summary

8.1.1 Summary of Field Screening and Laboratory Analysis Data

Of the 18 visited sites, 17 had measurable flow and one was ponded. The flow rate ranged from a trickle of less than 1 gallon per minute to 156 gpm with the highest flow rate recorded in the Alvarado Channel.

All measurements of pH fell between 6.5 and 9.0. In the best professional judgment of the field crew, no conductivity readings were indicative of a threat to water quality.

An ammonia concentration of 1.0 mg/L NH_3-N or higher was found at three sites, although the concentrations at all three sites fell below 1.0 mg/L by the time of the follow-up visit. Two of these sites had had elevated ammonia concentrations in previous years.

As in previous years, there were no sites with nitrate concentrations at or above the action level of 10.0 mg/L NO_3-N. The highest nitrate concentration, measured at Site 50, was 7.50 mg/L NO_3-N. Furthermore, no reactive phosphorous concentrations exceeded the action level of 2.0 mg/L PO_4-P.

Site 64 had a temporary detergent concentration of 1.5 mg/L, which is above the action level of 1.0 mg/L. This concentration fell below the action level within 24 hours.

Laboratory analyses were conducted at five sites. Results indicated that bacteria levels in water from sites 4A, 14A, and 57 exceeded the established action level for total coliforms, and the action levels for both total coliforms and fecal coliforms were exceeded at Site 12A.

Concentrations of dissolved copper and dissolved zinc were detected at sites 4A and 39, but they were below the CTR action level. No other dissolved metals were detected at any of the sites. Chlorpyrifos, diazinon, oil and grease, and surfactants were also not detected at any of the sites.

Notable trash was recorded at eight of the visited sites, up from four sites in 2005. Sediment was noted at most of the sites, but no other sheens, floatables, or deposits were noted.

Vegetative growth ranged from no growth to normal growth. Many of the sites located in sunny areas had natural vegetation, while sites located in dark structures, such as manholes, generally had no vegetation.

A variety of biological organisms were observed at the visited sites, including algae, insects, and insect larvae.

8.1.2 Summary of Upstream Investigation Data

Whenever field tests showed one or more parameters above their respective action levels at the initial field screening visit, follow-up visits were performed the following business day. During 2006, four sites required follow-up visits. However, none of the parameters tested at the revisited sites exceeded their respective action levels during the follow-up visits. The field crew initiated an upstream investigation for ammonia at Site 35 for reasons explained earlier in this report.

Upstream investigations were conducted at sites 4A, 12A, 14A, and 57 to locate potential sources of the elevated bacteria levels indicated by laboratory analyses. To facilitate a prompt, comprehensive survey of potential sources of bacterial contamination, Petrifilm plates were used to conduct field microbacterial analyses. Note that total coliforms levels alone are considered a poor indicator of fecal material and an even poorer indicator of pathogens. Based on the results of the upstream investigations and follow-up actions conducted at five sites for the City of La Mesa 2006 Dry Weather Monitoring Program, the following conclusions have been developed:

- Sources of bacteria to Site 4A include contaminated surface flow coming from Nagel Street and an underground flow of unknown origin coming from Sarita Street at the intersection of Nagel and Sarita; decomposing trash and organic material from Parkway Drive being transported to the storm drain system via constant surface flow along Parkway; the residential neighborhood near the Marengo Avenue/Morro Way intersection; the eastern end of the Alvarado Channel, mainly due to stagnation of water in the channel around Site 57; and, possibly, sources in the industrial and commercial areas at the southwest corner of the City.

- Bacteria transported to the storm drain system via irrigation water near the Jackson Drive and Grossmont Boulevard intersection is the likely cause of elevated total coliform and fecal coliform levels at Site 12A. Dog waste in the lawns around the shopping center at 5232 Jackson Drive has been identified as a problem by businesses at that address, and over-watering was visually observed there by the field crew. The dog waste is likely the source of the fecal coliforms, while total coliforms may come from soil and organic material in landscaping and on streets.

- Site 14A had several upstream sources of bacteria; however, the neighborhood around Normal Avenue and Olive Avenue was identified as the one with the highest bacteria levels. Several instances of surface flow caused by excess irrigation water were observed, transporting litter and decomposing organic material to the storm drain system. It is also possible that pollutants originating from Helix High School may be contributing to elevated bacteria levels in this area, although this could not be ascertained by the field crew.

- As in 2005, the source of ammonia at Site 35 was deemed to be fertilization and over-irrigation of flower beds inside Grossmont Center mall. Irrigation water appears to be transporting fertilizer to drains within the mall. The ammonia and phosphate levels in 2006 were much lower than those recorded in 2005, probably because the type of fertilizer has been changed.

- The elevated level of total coliforms at Site 57 is mainly influenced by surface flow on Amaya Drive as it approaches Water Street. While the exact origin of this surface flow could not be located, it appears to come from over-watering of lawn areas. A consistent flow along the street, algae and decomposing organic matter were observed in curb gutters. Soil and organic matter on concrete with irrigation water, appear to be the sources of the total coliform bacteria.

8.2 Recommendations

Based on the results of the 2006 Dry Weather Monitoring Program for the City of La Mesa, these follow-up actions are recommended for consideration:

Inspection and Maintenance

- Consider increasing the frequency of street sweeping for Marengo Avenue, Jackson Drive, and Parkway Drive. Also consider implementing a more frequent street sweeping schedule in the area around Olive Avenue and Normal Avenue.

- Notify the owner of the property where Alvarado Channel passes under the SR-125 underpass (upstream investigation location 4A-8; see Table 7-1 and Figure 7-1) that excess vegetation in this area is causing a backup of water and algal growth, likely facilitating bacterial growth. Encourage the property owner to carry out a periodic cleaning of the channel in this area.

- Periodically inspect sites 4A, 12, 13B, 13C, 50, 52, 59, 61, the channel upstream of Site 57, and Sarita Street upstream of Site 4A to ensure that trash and debris are not accumulating in those locations.

Education

- Provide educational material for residents in the area of Nagel Street and Sarita Street and in the neighborhood on Marengo Avenue near Morro Way (both upstream of Site 4A) regarding littering and over-watering; bacteria levels in these areas are consistently high and are in some cases resulting from surface flow from excess irrigation water.

- Continue to target businesses along Parkway Drive east of Jackson Drive, upstream of Site 4A, regarding waste disposal and littering. Also consider inspections of businesses in the area.

- Provide educational material for businesses upstream of Site 12A in the area of Jackson Drive and Grossmont Boulevard regarding over-watering and proper pet waste disposal. Specifically target the shopping center at 5232 Jackson, where waste from animals, likely those being treated at the animal hospital located there, was observed on shopping center lawns.

- Provide educational material to residents in the area around Normal Avenue and Olive Avenue, upstream of Site 14A, regarding littering and over-irrigating; surface flow caused by over-watering is fairly common in this area and appears to be transporting bacteria to the storm drain system.

- Continue to work with Grossmont Shopping Center management to keep ammonia levels at Site 35 below the action level. Specifically, inform the employees responsible for maintenance of landscaped areas about irrigation practices and fertilizer use.

- Provide educational material regarding over-irrigation to residents along Amaya Drive northeast of Water Street. This area appears to be the most significant source of bacteria to Site 57, and surface flows on Amaya Drive seem to be fairly consistent.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
QM-04	Visual evaluation of the sample indicates the RPD is above the control limit due to a non-homogeneous sample matrix.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

P.O. Box 937
La Mesa, CA 91944-0937

Re: 2007 Dry Weather Field Screening and Analytical Monitoring Program City of La Mesa, California

Dear Mr. Hashemian:

Enclosed please find the final report for the City of La Mesa 2007 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of La Mesa during the 2007 dry weather season. The contents include field screening data and analytical laboratory test results, analysis of the collected data, and photographs of the sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions. Your reviewed comments have been incorporated in this final report.

It has been a pleasure working with the City of La Mesa on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Regulatory Requirements

San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (the recently adopted Municipal Permit) requires that the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) in 2007 be conducted in accordance with RWQCB Order 2001-01 (the previous Municipal Permit) requirement. Under Order No. 2001-01, each of the Copermittees, including the City of La Mesa, must annually conduct dry weather field screening of discharges into its storm drain system. This procedure consists of recording field observations, estimating observed flow rates, and conducting field testing at selected locations along the storm drain conveyance system during the dry weather season (May 1st through September 30th). The Permit also requires Copermittees to conduct laboratory analysis for at least 25 percent of the visited sites that have flowing or ponded water. At each sampling location that exhibits no flowing or ponded water, an alternate sampling station must be selected and sampled. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required. The results from the current year's Dry Weather Field Screening and Analytical Monitoring Program, including both field screening and analytical monitoring, are presented herein.

1.2 Hydrologic Setting

The City of La Mesa encompasses an area of nine square miles just east of the City of San Diego. The primary land use in La Mesa is residential with 55,000 residents. Other land uses in La Mesa include roads and streets, commercial, mixed use, schools, and industrial. An estimated 52 percent of La Mesa falls within the San Diego River Watershed, Hydrologic Unit (HU) 907, while the remaining 48 percent is located in the San Diego Bay Watershed. In both the San Diego Bay and the San Diego River watersheds, the City of La Mesa makes up about one percent of the overall land area of the watershed respectively. Runoff generated in the City is conveyed through five drainage basins. The boundaries of these drainage basins are illustrated in Figure 1. Table 1-1 lists the drainage basins along with the approximate percentage of drainage area in La Mesa, the corresponding hydrologic unit of the basin, and the receiving water body to which each basin drains.

TABLE 1-1
CITY OF LA MESA DRAINAGE BASINS

Drainage Basin	Percentage of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

The San Diego Bay Watershed is comprised of three hydrologic units: Pueblo San Diego (HU 908), Sweetwater (HU 909), and Otay (HU 910). Each hydrologic unit is essentially a separate watershed, but these three watersheds all drain to San Diego Bay. For regulatory purposes, they have been combined into one watershed management area, referred to as the San Diego Bay Watershed. The City of La Mesa includes areas within two of those hydrologic units, the

Pueblo San Diego Watershed and the Sweetwater Watershed. Runoff from the Spring Valley Basin eventually enters the Sweetwater River, which terminates in San Diego Bay. Runoff collected in the University and Lemon Grove basins drains to Chollas Creek, which also flows into San Diego Bay.

The San Diego River Watershed is the second largest hydrologic unit in San Diego County. It also has the highest population (~475,000) of the County's watersheds. In addition to runoff from La Mesa, the San Diego River carries water from other large portions of the cities of San Diego, El Cajon, Poway, and Santee and several unincorporated jurisdictions. The mouth of the river eventually discharges into the Pacific Ocean, south of Mission Bay. Runoff collected in the Lake Murray Basin eventually enters the Alvarado Drainage Basin, which drains to the San Diego River.

1.3 Constituents of Concern

Based primarily on wet weather monitoring data from mass loading stations (MLS) located on Chollas Creek, bioassessments, the 2005-2006 San Diego Bay Watershed Urban Runoff Management Program (WURMP) Annual Report, and the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), the constituents that have been established as targeted pollutants in the Pueblo San Diego Watershed are diazinon, copper, zinc, bacterial indicators, trash, and turbidity. Total Maximum Daily Load (TMDL) regulations have continued for diazinon and for dissolved metals. Monitoring in recent years, however, indicates that the recent ban on diazinon use has essentially eliminated diazinon as a pollutant of concern. The Sweetwater Watershed, which is significantly less urbanized than the Pueblo San Diego watershed, does not have any 303(d) Listings. Turbidity and bacteria were identified as constituents of concern in the WURMP Annual Report for the Sweetwater watershed.

In the San Diego River Watershed, constituent data have been collected annually. The 2005-2006 San Diego River WURMP Annual Report lists bacterial indicators, copper and zinc as high priority Constituents of Concern (COC). The WURMP Annual Report also notes that diazinon, turbidity, and trash are non-high priority COCs.

1.4 Program Overview

The Municipal Permit adopted by the San Diego RWQCB requires all Copermittees, including the City of La Mesa, to conduct field screening and analytical monitoring at different sampling locations throughout the City during the dry weather season (May 1st through September 30th). The purpose of the Dry Weather Monitoring Program is to detect and eliminate illicit connections and illicit discharges (IC/ID) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components:

- Field screening observations
- Field screening analytical monitoring
- Laboratory analytical monitoring

Information collected from the Dry Weather Monitoring Program is also used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary to detect and eliminate the sources of these pollutants. This report presents the results of the City of La Mesa 2007 Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc. (D-MAX).

1.5 Previous Work

The City of La Mesa has conducted an annual Dry Weather Monitoring Program since 1993. A summary of the screening results obtained for each year (1993 through 2006) is discussed below and presented in Table 1-2. Before 2002, laboratory analyses were not required. Laboratory testing was added to the program in 2002 as required by the current Municipal Permit. The same laboratory and field tests used in 2007 were also used from 2002 through 2006. Graphical representations of the data for both the San Diego River and San Diego Bay watersheds have also been prepared and are included as Attachments 1 and 2, respectively. The graphs display the results of both field and laboratory analyses for the 2002 through 2007 Dry Weather Monitoring Programs. Where applicable, averages for each constituent have been calculated, and error bars displaying average plus and minus one standard deviation have also been included on the graphs. Trend lines have been prepared for constituents where multiple values above the method reporting limit were recorded. The equations and R^2 values for the lines have been indicated on the graphs. Note that an R^2 value of 0.0 indicates a very poor fit and 1.0 indicates a perfect fit. Since the trend lines have been based on only five years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

In 1993, all 15 of the visited sites showed concentrations of ammonia at or above 1.0 milligrams per liter (mg/L) NH_3-N. Of these sites, 13 showed concentrations of copper at or above 1.0 mg/L, and six had concentrations of surfactants greater than 1.0 mg/L. Concentrations of chlorine and phenols greater than 1.0 mg/L were recorded at three and five sites, respectively.

In 1994, 11 of the 16 visited sites had ponded or flowing water. Ammonia was detected at 10 of these sites, with seven showing concentrations above 1.0 mg/L. Concentrations of surfactants ranging between 0.3 mg/L and 0.8 mg/L were detected at all 11 sites. Copper was detected at nine sites with concentrations ranging from the detection limit to 3.0 mg/L, and concentrations of phenols ranged between 0.04 mg/L and 4.9 mg/L at eight of the sites. Chlorine was detected at all 11 sites, but no concentrations were above 1.0 mg/L.

In 1995, ammonia was detected at all 11 sites with ponded or flowing water, but only one site showed a concentration above 1.0 mg/L. Surfactants were also detected at all 11 sites, but only two concentrations were at or above 1.0 mg/L. Chlorine was detected at 10 sites but in very low concentrations (0.1 to 0.4 mg/L), and phenols were not detected at any sites.

In 1996, the Dry Weather Monitoring Program consisted of seven previously-screened sites along with eight new sites. Six sites showed concentrations of ammonia above 0.5 mg/L, with only two of those being at or above 1.0 mg/L. Five of these sites were located along Jackson Drive and Grossmont Shopping Center. Surfactant concentrations of 0.5 mg/L and greater were observed at seven sites, with one site showing a surfactant concentration of >3.0 mg/L. In general, the concentrations of phenols, copper, and chlorine were very low or below the reporting limits.

In 1997, the Dry Weather Monitoring Program consisted of six previously-screened sites and six new sites. Surfactants and ammonia were detected throughout the City. All ammonia concentrations were between 0.0 mg/L and 1.0 mg/L except one, which exceeded 10 mg/L, and only one site showed a concentration of surfactants above 1.0 mg/L. Chlorine in low concentrations (< 0.5 mg/L) was also detected at the majority of the sites visited. Copper was detected at a concentration of 0.1 mg/L at three sites, and only one site showed a detectable phenol concentration of 0.3 mg/L. During visual observations, a strong odor was observed at most of the sites located within the Grossmont Shopping Center. This odor, along with the presence of high levels of ammonia and low levels of copper, prompted an investigation within

the Grossmont Center. The investigation found the primary source of the ammonia to be fertilizers used on the lawns and flowerbeds. Copper concentrations could be attributed to the chemicals used to control algae and to the pennies thrown into the fountains, where they remain until periodic cleaning of the pools.

In 1998, the City conducted one round of dry weather field screening at 14 sites. Ammonia was detected at all 11 sites with ponded or flowing water, and concentrations ranged from below the field test detection limit to 9.5 mg/L. Surfactant concentrations ranging from 0.25 to 0.75 mg/L were also detected at 11 sites. Copper was detected at only one site inside Grossmont Shopping Center. Chlorine concentrations at a low range of 0.1 to 0.2 mg/L were detected at five sites. Phenols were not detected at any of the sites visited.

In 1999, the City conducted two rounds of field screening at 14 sites. In round one, the ammonia levels ranged from 0.2 to 7.0 mg/L. Surfactant concentrations were in the 0.25 to 0.75 mg/L range for this round and were detected at all visited sites with ponded or flowing water. Phenols and copper were detected at five and nine sites, respectively, at concentrations of 0.1-0.2 mg/L. Chlorine concentrations were detected at a maximum of 0.3 mg/L and a minimum that was below the detection limit.

In round two of the 1999 sampling, ammonia concentrations generally ranged from 0.2 to 4.0 mg/L, although one site was found to have a concentration of 30 mg/L. An upstream investigation revealed that a sewer overflow was the cause of this elevated value, and later sampling showed that the concentration had dropped to 1.0 mg/L. This site also had the highest recorded surfactant concentration, >3.0 mg/L, which later fell to 0.25 mg/L. Surfactant concentrations between 0.25 and 2.0 mg/L were detected at all other tested sites. Phenols, copper, and chlorine all had minimum values below the detection limit. The maximum value measured for phenols was 0.1 mg/L. The maximum copper concentration value was 0.6 mg/L, and the maximum chlorine concentration was 0.5 mg/L.

In 2000, the City performed two rounds of the field screening program at 15 sites. In round one, ammonia concentrations ranged between 0.2 and 2.0 mg/L, surfactant concentrations ranged from 0.25 to 2.5 mg/L, and chlorine ranged from a value below the detection limit to 0.4 mg/L. Copper and phenol levels were only detected at two sites each; the copper concentration peaked at 0.7 mg/L, and the phenol concentration peaked at 0.2 mg/L.

During round two, ammonia concentrations ranged from 0.1 to 5.0 mg/L, surfactant concentrations ranged from 0.25 to 0.75 mg/L, and chlorine ranged from a value below the detection limit to 0.6 mg/L. As found in round one, copper and phenols concentrations were typically undetectable, but several sites showed traces of these constituents. The copper concentration reached a maximum of 0.4 mg/L, and the phenol concentration reached a maximum of 0.1 mg/L.

In 2001, two rounds of field screening were performed throughout the City, at 15 and 16 sites, respectively. Surfactant concentrations ranged from 0.25 to 0.75 mg/L. Ammonia concentrations ranged from 0.1 to 8.0 mg/L. Only one site showed a detectable concentration of copper (0.2 mg/L), and a chlorine concentration of 0.1 mg/L was also only detected at one site. Phenols were detected only during the second visit to Site 35, where field analysis resulted in a concentration of 0.1 mg/L.

During round two, surfactant concentrations ranged from 0.25 to 1.5 mg/L. Ammonia was detected between 0.1 and 5.0 mg/L. Chlorine concentrations ranged from a value below the detection limit to 0.4 mg/L. Copper was not detected during this round of sampling. Phenols were only detected during the second visit to Site 13C, at a concentration of 1.0 mg/L.

In 2002, the City conducted one round of field screening at a total of 19 sites. As one of the stations was observed dry, an alternate site (Site 14) was selected for monitoring with this site having measurable flow. Ammonia concentrations of 1.0 mg/L or higher were found at five of the sites, with the highest concentration reaching 8.0 mg/L at Site 4A. The ammonia concentration at Site 4A dropped to 0.4 upon a follow-up visit. Nitrate concentrations at all the sites were found below 5.0 mg/L NO_3-N, with two sites having concentrations below the detection limit. Orthophosphate-P concentrations generally were measured below 1.0 mg/L PO_4-P, but Site 40 had an orthophosphate-P concentration reaching 7.83 mg/L. Upon a return visit to Site 40, the orthophosphate-P concentration had dropped to 0.82 mg/L. Surfactant concentrations exceeded 1.0 mg/L at three of the sites. The maximum surfactant concentration was recorded greater than 24 mg/L at Site 40, but dropped to 0.75 mg/L on a return visit. Laboratory analysis for surfactants detected contamination at one site (Site 4A) with a concentration of 4.8 mg/L. Oil and grease were detected at three of the sites, with the maximum concentration reaching 8.0 mg/L. Laboratory results for dissolved metals and pesticides found all concentrations below the method detection limit.

In 2003, the City conducted one round of field screening at a total of 18 sites. Alternate Site 14 was substituted for primary Site 61, which was dry. 16 sites had measurable flowing water; the flow rate ranged from 1.0 gallons per minute (gpm) to 118.5 gpm. Two of the sites had ponded water. An ammonia concentration of 1.0 mg/L or higher was found at three sites. There were no sites with nitrate concentrations at or above the action level of 10 mg/L. An orthophosphate-P concentration exceeding the action level of 2.0 mg/L was found at one site, while the rest of the sites had detectable orthophosphate-P concentrations at low levels. A surfactant concentration of 1.0 mg/L was measured at one of the sites. Laboratory analyses were conducted at five sites and indicated bacterial contamination at three sites. The organophosphate pesticide diazinon was detected at one of the sites but was below the action level of 0.5 micrograms per liter (µg/L). Chlorpyrifos was not detected at any of the sites. Surfactants were detected at one site, but the concentration was below the action level of 1.0 mg/L. None of the laboratory samples had detectable amounts of dissolved metals, oil, or grease.

In 2004, the City conducted one round of field screening at the 18 primary monitoring stations, all of which had ponded or flowing water. Ammonia was detected above the action level at two sites, which were found to have the common upstream source of an illicit sewage connection. No sites were found to have orthophosphate-P or surfactant concentrations above the respective action levels. Laboratory analyses were again conducted for five sites and, as in 2003, three sites were found to have bacterial indicators in excess of established action levels. No other constituents assessed by laboratory analysis were found to be in excess of established action levels.

In 2005, the City again conducted one round of field screening at all 18 primary monitoring stations. All of the visited sites had either flowing or ponded water. Surfactants were detected above the action level at one site during the first visit, but had fallen below the action level by the time of a follow-up visit the next day. Ammonia action level exceedances were detected at two sites. For one site, the ammonia level dropped below the action level by the following day. For the other site, located in Grossmont Shopping Center, the ammonia concentration had dropped significantly by the time of a follow-up visit but remained above the action level. Three of the five sites receiving laboratory analysis had bacterial indicators exceeding action levels; no other constituents tested for in the lab were above set action levels.

In 2006, the City conducted one round of field screening at all 18 primary monitoring stations. All of the visited sites had either flowing or ponded water. Surfactants were detected above the action level at one site during the first visit, but had fallen below the action level by the time

of a follow-up visit the next day. Ammonia action level exceedances were detected at three, although the concentrations at all three sites fell below the action level by the time of the follow-up visits. Two of these sites had had elevated ammonia concentrations in previous years. As in previous years, there were no sites with nitrate concentrations at or above the action level. Furthermore, there were no sites that exceeded the action level for orthophosphate-P concentrations. Four of the five sites receiving laboratory analysis had bacterial indicators exceeding action levels. No other constituents tested in the lab were above set action levels.

1.6 Report Outline

Section 1, Introduction, includes regulatory background, the City of La Mesa hydrologic setting, previous monitoring results, and a report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and the criteria used to select sampling locations.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 6, Data Analysis, provides an analysis and description of each site with evidence of physical, chemical or biological pollution.

Section 7, Upstream Investigations, includes follow-up investigations of sites with recurring evidence of physical, chemical or biological pollution.

Section 8, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Photographs of the investigated sites

Appendix B Laboratory analytical reports

Appendix C Copies of the original field data sheets

2 SAMPLING LOCATIONS

The City of La Mesa prepared a Jurisdictional Urban Runoff Management Program (JURMP) in 2002. Table 8-1 in Section 8 of the JURMP identifies 18 primary monitoring stations where data will be collected during the Dry Weather Monitoring Program. Table 8-2 of the JURMP lists nine alternate stations to be monitored if any of the primary stations do not have flowing or ponded water. Sampling sites are located in hydrologic unit (HU) 907, HU 908, and HU 909.

During the 2007 Dry Weather Monitoring Program, all 18 primary sampling locations were visited, and 17 of them had flowing or ponded water. Site 61 at Center Drive, Commercial Street, west of Industrial Lane, in front of City Public Work was dry, and thus Site 60 at Jackson Drive, north of Fletcher Parkway, across from Mesa Ridge Apartments was selected as an alternate location for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrologic unit, and Global Positioning System (GPS) coordinates of the sampling locations that were visited. Figure 1 displays the sampling locations on a map of the City that also shows storm drain lines, roads, and drainage basin boundaries. Photographs of all the sampling locations are included as Appendix A. Laboratory analytical reports are included in Appendix B, and Appendix C contains the field data sheets for each site visit. A map of the watersheds in and around the City of La Mesa is included as Figure 2.

TABLE 2-1
2007 DRY WEATHER MONITORING STATIONS

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Unit	Latitude	Longitude

Note
* Alternate Site 60 was substituted for dry primary monitoring Site 61.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consisted of qualitative field observations, flow measurement, and field analyses of selected water quality parameters. Information relating to weather conditions, the amount of time since last rainfall, and the type of storm water conveyance was recorded. Specific observations and results of the field water quality analyses were recorded on the field data sheets, which are included as Appendix C. The data sheets also serve as a record of the field visit and were completed for every site visit regardless of whether or not samples were collected.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations were made during each site visit whether or not ponded or flowing water was observed. These observations are intended to provide a general assessment of the site and include variables like odor, water clarity, the presence of floatables, visible deposits, stains and biological status. Evidence of present or past illicit connections and illegal discharges to the storm drain system may be ascertained by careful field observations. Each field screening location was photographed to provide additional information and documentation of site conditions. Photos are included in Appendix A.

Flow Measurement

Flow measurements can be used to estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal release upstream. Various field methods can be used to estimate the discharge rate. These include measuring the velocity, depth, and width of the flowing water, or recording the amount of time required to fill a bottle of known volume with sample water.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as methylene blue active substances (MBAS)*
- Nitrate-N
- Ammonia-N
- Orthophosphate Phosphorus (Orthophosphorus- P)

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results. Due to the importance of surfactants, the City conducted analyses for this parameter in both the field and laboratory.

The methods that were used to perform the above field analyses along with the detection limit, range, and accuracy, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]

Turbidity	Hanna Instruments HI 93703-11 Portable Turbidity Meter***	0.01 NTU	0.01 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.0 mg/L – 3.0 mg/L*	± 0.13 & ± 0.5 mg/L[2]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[3]***	2.26 mg/L**	2.26 mg/L –13.6 mg/L**	± 30%
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate***	0.10 mg/L**	0.10 mg/L – 3.00 mg/L**	Varies with measured concetration[4,5]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[6]***	0.25 mg/L**	0.25 mg/L – 2.61 mg/L**	Varies with measured concetration[4,5]

Notes:

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The detection limit for nitrate is 10.0 mg/L; however, the detection limit for nitrate-nitrogen is lowered due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.75 mg/L; however, the detection limit for orthophosphate phosphorus is lowered due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Reporting limit, range, and accuracy information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

3.2 Laboratory Analytical Methods

In accordance with Order 2001-01 requirements, water samples were collected at five sites (greater than 25 percent of the sites) where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc., a California Department of Health Services certified laboratory, for analysis of the following constituents:

- Total hardness
- Surfactants, measured as MBAS
- Oil and grease
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus*

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Detection Limit	Maximum Holding Time**
Surfactants, measured as MBAS	SM 5540 C	0.5 mg/L	48 hours
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Cadmium	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Copper	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Lead	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Zinc	USEPA 6010, 6020, 200.8	0.020 mg/L	6 months
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms	SM 9221	20* – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms	SM 9221	20* – 160,000 MPN/100 mL	6 hours
Enterococci	SM 9230	20* – 160,000 MPN/100 mL	6 hours

Notes:

*For D-Max's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 most probable number per 100 milliliters (MPN/100mL). For fecal coliforms and enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

**Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the QA/QC procedures listed in Section 3.3.2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project included the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters were calibrated periodically with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube was kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter was calibrated and periodically checked for accuracy using standard solutions. The conductivity meter was checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers were first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water.

The accuracy of field analytical techniques was assessed at the beginning of the sampling program by analyzing solutions of known concentrations for ammonia, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration	Field Test Kit Results
6/12/07	Ammonia Nitrogen	1.0 mg/L	1.0 mg/L
6/12/07	Surfactants	1.0 mg/L	1.0 mg/L
6/12/07	Nitrate Nitrogen	10.0 mg/L	10.0 mg/L
6/12/07	Orthophosphate	3.0 mg/L	3.0 mg/L

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis were collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles were obtained from the laboratory and thus did not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples were kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures were followed, and samples were delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included in Appendix B.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation was necessary, numeric action levels and best professional judgment (described below) were used to interpret the field screening results. If visual and/or analytical evidence of gross contamination was present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation was initiated. For sites that exceeded numeric action levels but were not perceived as an immediate threat to water quality, a re-sampling was conducted within 24 hours. A comprehensive source investigation was conducted thereafter if elevated concentrations persisted.

The results of these investigations are included in Section 7 of this report. Recommendations based on these investigations are included in Section 8.

If elevated levels of pollutants were detected after laboratory analyses, a comprehensive follow-up investigation including re-sampling was conducted. The following three methods were employed to determine whether immediate or comprehensive follow-up investigations were necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels were used as the primary approach for interpreting pH, orthophosphate, nitrate, ammonia, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels, which are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, orthophosphate-P, nitrate, ammonia, or surfactants were observed above the numeric action level, a follow-up investigation was conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations were conducted.

California Toxics Rule

The CTR criterion maximum concentration (CMC) was used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases.

Best Professional Judgment

Best professional judgment was utilized as the primary approach for interpreting turbidity, conductivity, and water temperature. Best professional judgment was also the secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew due to their familiarity with the City of La Mesa Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Turbidity (NTU)[2]	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Surfactants (mg/L MBAS)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)	California Toxics Rule	
Dissolved Lead (µg/L)	California Toxics Rule	
Dissolved Zinc (µg/L)	California Toxics Rule	
Total Coliforms (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	20,000	
Enterococci (MPN/100 mL)	10,000	

Notes

[1]The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

[2]Basin Plan = Water Quality Control Plan for the San Diego Basin

WQO = Water Quality Objective

TDS = Total Dissolved Solids

ppb = parts per billion

4 FIELD SCREENING RESULTS

The Dry Weather Monitoring Program commenced on June 12, 2007 and was completed on June 14, 2007. A total of 19 monitoring stations were visited; however, field screening was only conducted at the 18 sites where ponded or flowing water was observed. Since primary sampling Site 61 was observed to be dry, alternate Site 60 was selected as a replacement. In addition, one follow-up visit was performed at a site where one constituent was found to exceed accepted action levels. Completed field data sheets for each site visit are included in Appendix C.

4.1 Qualitative Observations

Qualitative observations are a routine and important part of the Dry Weather Monitoring Program. Weather conditions were recorded at each site, and any evidence of dry weather flows was documented. Visual observations of the sample water, such as odor, color, clarity, floatable materials, vegetation, organisms, and the condition of the sampling location, were also recorded. Observations are summarized below and presented in Table 4-1.

Atmospheric Conditions
Sunny weather was the dominant light condition during field screening.

Odor
None of the visited sites had noticeable odors during field screening.

Color
Water samples collected from most of the sites were colorless, with the exception of five sites that had water with a yellowish hue.

Clarity
The majority of water samples collected from visited sites were clear with negligible suspended particles observed.

Floatable Materials
During routine field screening visits, 10 of the sites that had flowing or ponded water were observed to have small amounts of trash in or around the sampling location. The trash observed included materials such as paper, plastics, Styrofoam, aluminum cans, glass bottles, and shopping carts.

Vegetation
Vegetative growth ranged from no growth to naturally vegetated riparian areas. No growth was observed at 14 sites, which included concrete channels with no soil and manholes or catch basins that received limited sunlight. Five of the 19 visited sites had normal vegetation; that is, vegetation not considered significantly limited by man-made structures (e.g., a manhole which blocks sunlight and access to soil) nor so overgrown that it significantly impaired flow at the site.

Biology
Many of the sites exposed to sunlight had algal growth, which indicates that water flow is consistent at the site. Insects were observed at six sites.

Deposits
Sediment deposition was observed at all the sampling location sites except Site 12A.

TABLE 4-1
SUMMARY OF FIELD OBSERVATIONS

Site No.	Date	Time	Light Conditions	Odor	Color	Clarity	Floatables	Deposits	Vegetation	Biology
4A	6/13/07	9:20	Sunny	None	None	Clear	Trash	Coarse & Fine Particulates	None	Insects, Algae

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Chemical analyses were conducted using a CHEMetrics field test kits for surfactants and CHEMetrics V-2000 Multi-Analyte LED Photometer and Vacu-vials® for nitrate, ammonia, and ortho-phosphate; pH, specific conductance, and temperature were measured using a Hanna Instruments Portable pH/EC/TDS/Temperature Meter (HI 991301). Turbidity was measured using a Hanna Instruments Turbidity Meter (HI 93203-11). Flow was estimated either visually or, when possible, by measuring the velocity, depth, and width of the flowing water. A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 presents the results of all field analyses conducted at the sampled sites. Graphs of each parameter analyzed and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median
Flow Rate (gpm)	162	<1.0	14.5	4.0
Temperature (° Celsius)	26.4	20.0	23.0	22.8
pH	10.0	7.2	8.2	8.0
Conductivity (mS/cm)	5.3	1.08	2.0	2.19
Turbidity (NTU)	14.63	1.27	5.4	3.74
Ammonia (mg/L NH_3-N)	0.5	0.1	0.2	0.2
Surfactants (mg/L MBAS)	0.75	0.25	0.5	0.5
Nitrate (mg/L NO_3-N)	5.85	0.1	2.1	1.76
Orthophosphate-P (mg/L PO_4-P)	0.52	0.03	0.2	0.23

The **flow rates** at sites with measurable flow ranged from less than 1.0 gpm to 162 gpm, with an average of 14.5 gpm and a median of 4.0 gpm, as shown in Table 4-2. The highest flow rate of 162 gpm was measured at Site 4A.

Water temperature is an important physical parameter and can help interpret the significance of other parameters, such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. Water temperature was measured in the field immediately upon sample collection at each site with ponded or flowing water. During routine visits, temperature readings ranged from 20.0 to 26.4 degrees Celsius (°C), with an average of 23.0°C and a median of 22.8°C. The minimum temperature of 20.0°C was recorded at Site 64 during the second visit to the site. The maximum temperature of 26.4°C was recorded at Site 59. Graph 4-1 presents the results of temperature readings at all sites.

The **pH** is a measure of whether a water body is acidic or basic. This is a critical factor in determining water quality, as the pH of an aquatic system will drive a multitude of chemical reactions, including the availability of nutrients or the solubility of chemical substances. The pH values ranged from 7.2 to 10.0, with an average of 8.2 and median of 8.0. The lowest pH reading of 7.2 was observed at Site 12, while the highest pH of 10.0 was recorded at Site 64. Graph 4-2 presents the results of pH readings at all sites.

Specific Conductance (Conductivity) values indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water or potentially help indicate the presence of dissolved pollutants. Conductivity readings ranged from 1.08 to 5.30 millisiemens per centimeter (mS/cm) during routine field screening, with an average of 2.0 mS/cm and a median of 2.19 mS/cm. The lowest reading of 1.08 mS/cm was recorded at Site 64 during follow-up investigation, while the highest conductivity of 5.30 mS/cm measured during routine field screening at Site 50. Graph 4-3 illustrates the results of conductivity measurements at all sites.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures. Turbidity measurements ranged from 1.27 to 14.63 Nephelometric Turbidity Unit (NTU), with an average of 5.4 NTU and a median of 3.74 NTU. The lowest measurement of 1.27 NTU was documented at Site 14A. The highest turbidity reading of 14.63 NTU was recorded at Site 58. Graph 4-4 presents the results of turbidity measurements at all sites.

Ammonia is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms. Ammonia concentrations measured in the water samples ranged from 0.1 to 0.5 mg/L NH_3-N, with an average of 0.2 mg/L and a median of 0.2 mg/L. The lowest ammonia concentration of 0.1 mg/L was found at sites 55 and 64, while the highest ammonia concentration of 0.5 mg/L was observed at Site 12. Graph 4-5 shows the results of the ammonia analyses at all sampling locations.

Nitrate is a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which will later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. During the field analysis, nitrate was measured in mg/L NO_3 and converted into mg/L nitrate-N using a conversion factor of 0.226. This process is explained above in footnote 4 of Table 3-1. Nitrate concentrations measured in the water samples ranged from 0.1 to 5.85 mg/L NO_3-N, with an average of 2.1 mg/L and a median of 1.76 mg/L. Nitrate was measured at the lowest detectable concentration, 0.10 mg/L, at sites 57 and 64. The highest nitrate concentration of 5.85 mg/L was observed at Site 50. Graph 4-6 presents the results of nitrate analyses at all sampling locations.

Orthophosphate Phosphorus (orthophosphate-P) is also a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate, orthophosphate-P pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate was measured in mg/L PO_4 and

converted into mg/L orthophosphate-P using a conversion factor of 0.326 (See Note 6 to Table 3-1). Orthophosphate-P was found at concentrations ranging from 0.03 to 0.52 mg/L PO_4-P, with an average of 0.2 mg/L and a median of 0.23 mg/L. The lowest orthophosphate-P concentration of 0.03 mg/L was observed at sites 35 and 58. The highest concentration of 0.52 mg/L was found at Site 13B. Graph 4-7 illustrates the results of orthophosphate-P at all sampling locations.

Surfactant concentrations in water samples often indicate illegal discharge from industrial, commercial or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms. During field analysis, surfactant concentrations ranged from 0.25 mg/L to 0.75 mg/L, with an average of 0.5 mg/L and a median of 0.5 mg/L. The lowest concentration of 0.25 mg/L was found at four sites. The highest concentration of 0.75 mg/L was found at Site 13B. Graph 4-8 reflects the results of the surfactants analyses at all sampling locations.

5 LABORATORY ANALYTICAL RESULTS

5.1 Summary

Laboratory analyses were conducted at five sites, representing over 25 percent of all sites with ponded or flowing water. A summary of the laboratory analytical results is presented in Table 5-1. Table 5-2 presents all of the results from the laboratory analyses. The laboratory reports are included in Appendix B.

TABLE 5-1
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum
Surfactants (mg/L MBAS)	nd	nd
Oil and grease (mg/L)	nd	nd
Total hardness (mg/L $CaCO_3$)	688	564
Cadmium (dissolved, mg/L)	nd	nd
Copper (dissolved, mg/L)	0.005	nd
Lead (dissolved, mg/L)	nd	nd
Zinc (dissolved, mg/L)	nd	nd
Diazinon (µg/L)	nd	nd
Chlorpyrifos (µg/L)	nd	nd
Total Coliforms (MPN/100 mL)	17,000	2,200
Fecal Coliforms (MPN/100 mL)	8,000	nd
Enterococcus (MPN/100 mL)	14,000	170

nd = not detected

Surfactants (MBAS) are analyzed to detect detergent pollution from residential, commercial or industrial washing activities. Surfactants were not detected at any sites during the 2007 Dry Weather Monitoring Program.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources including parking lots, washing activities, illegal discharges, and automobile repair facilities. Oil and grease were not detected at or above the reporting limit at any of the sampled sites.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with results expressed in mg/L of $CaCO_3$. Although it is not itself considered a pollutant, total hardness is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals, as well as other minerals and ions. Total hardness values varied from 564 to 688 mg/L $CaCO_3$. The lowest value of 564 mg/L was observed at Site 39, while the highest total hardness value of 688 mg/L $CaCO_3$ was found at Site 12A.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure. Diazinon and Chlorpyrifos were not detected at any of the sampled sites during the 2007 Dry Weather Monitoring Program.

.

Metal concentrations in the environment can originate from a variety of sources including automobile operation, automobile repair facilities, car washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms, including fish and waterfowl. The laboratory samples collected during the 2007 Dry Weather Monitoring Program were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Cadmium, lead, and zinc were not detected at any site. Dissolved copper was detected at Site 4A with a concentration of 0.005 mg/L. According to the CTR (1-hour) for Dissolved Metals in Fresh Waters,[1] which defines metal toxicity as a function of water hardness, the action level for dissolved copper in water samples with hardness values of 631 mg/L $CaCO_3$ is 0.076 mg/L. Therefore, since measured copper concentration was significantly below the action levels corresponding to the measured hardness values, source investigations were not deemed necessary.

Coliform bacteria are relatively harmless to humans and are present in all mammalian digestive tracts. They are also present in soil and decomposing organic matter, so measurements of total coliforms are not typically considered to be very accurate indicators of fecal contamination. Water samples are analyzed for total coliform bacteria because it is a historically accepted public health practice and because the Municipal Permit requires it. During the 2007 Dry Weather Monitoring Program, total coliform counts ranged from 2,200 to 17,000 MPN/100 mL. The highest level, 17,000 MPN/100 mL was found at Site 4A, which is below the action level of 50,000 MPN/100 mL.

Fecal coliforms, a subset of coliform bacteria, and **enterococci** are found primarily in the gastro-intestinal tracts of humans and animals, so they are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material was human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain. Fecal coliform counts were below the action level of 20,000 MPN/100 mL and ranged from a value below the detection limit to 8,000 MPN/100 mL. *Enterococcus* counts ranged from 170 to 14,000 MPN/100 mL. Site 39, was the only site with an *Enterococcus* count above the action level of 10,000 MPN/100 mL.

[1] For equations and constants used in CTR calculations, see http://www.USEPA.gov/ost/standards/ctr/toxic.pdf

Notes

Red Bold Type = Values that exceed action levels
nd = Not detected
nt = Not tested
CTR = California Toxics Rule (based on hardness)
*= Total hardness is not considered a pollutant (see Section 3.4 for details) and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependant on the total hardness value of the water sample. Total hardness measurements are thus required to calculate action levels for dissolved metals.

6 DATA ANALYSIS

When contaminant levels were detected above established action levels during field screening, upstream investigations were conducted to identify the source(s) of the contaminants. Since the laboratory requires several days to analyze samples, sites with contamination detected by laboratory analyses were investigated during a later round of visits. Based on the visual observations and the field and laboratory analytical testing that was conducted, the following sites demonstrated physical and chemical evidence of possible illegal discharges and/or illicit connections:

Site 39

Site 39 is located in a manhole junction box about 25 feet deep located in the Grossmont Shopping Center parking lot between Staples and Mattress Discounters. Approximately halfway down the walls of the manhole, lateral pipes carrying drainage from the immediate commercial area discharge into the manhole. The main pipe at the bottom of the manhole carries flow westward and eventually discharges to the Alvarado Channel. No constituents were above their respective action levels during field screening. Laboratory analysis of the water sample detected an *Enterococcus* count above the established action level of 10,000 MPN/100 mL. An upstream investigation was later conducted at this site to identify potential source(s) of this bacterial indicator (see Section 7).

Site 64

Site 64 is a concrete channel on the north side of Seton Hall Street, between Swarthmore Street and Wheaton Street (see Appendix A). The concrete channel had algal growth throughout its length. A pH level of 10.0 and a water temperature of 26.0° C were observed during the initial visit. The field crew returned the next morning to observe a pH level of 9.3, still above the action level of 9.0. An investigation upstream in the concrete channel found lower pH readings when samples were taken from water located in shaded areas where temperatures were decreased. Approximately 500 yards upstream from the sampling site, a pH reading was taken from an outlet that was the main source of the flow observed. The pH reading was 7.9 with a temperature of 17.0. The field crew believes that the high pH at the sampling site resulted primarily from algal photosynthesis and increased temperature, which removes carbon dioxide from the water. Because carbon dioxide forms carbonic acid when dissolved in water, removal of carbon dioxide from water makes the water more basic and results in higher pH readings. Typically the pH increases during daylight hours as sunlight stimulates algal photosynthesis and carbon dioxide is removed from water. During the night when algae is not photosynthesizing, the carbon dioxide level in the water increases due to biological respiration and physical diffusion of carbon dioxide from air into water, and the pH decreases. Because the solubility of gas in water is inversely proportional to the water temperature, carbon dioxide is less soluble in warmer water. Sunlight heats the shallow, unshaded water in the concrete channel, resulting in lower solubility for carbon dioxide later in the day when the water is warmer. The effects of temperature and algal photosynthesis lead to lower pH values in the morning and higher values in the afternoon. Since the majority of the concrete channel was not shaded, even in the earlier hours of the day, the pH reading continued to be elevated from increased summer temperatures.

7 UPSTREAM INVESTIGATIONS

7.1 Purpose

The purpose of the upstream investigations is to find the sources of the pollutants that exceeded action levels during initial field screening and laboratory testing.

Dry Weather Monitoring in 2007 revealed elevated levels of pollutants at only one site, as described in Section 6. In addition, Site 64 was investigated for pH levels above the action level and received a follow-up visit within 24 hours of the initial visit.

Five sites of the 18 were sampled for laboratory analysis during the initial round of field screening. Only one site had one analyte observed above established action levels. Site 39 showed *Enterococcus* above action levels. Upstream investigations were undertaken at this site to identify potential source(s) of the high bacteria count.

7.2 Investigation Procedures

7.2.1 General Procedures

Upstream investigations were conducted in two rounds. The first upstream investigations were for the sites at which field tests indicated elevated constituent levels. These investigations were conducted immediately after confirming the elevated concentrations via additional field testing. The second round of upstream investigations was carried out for the sites at which laboratory testing had found elevated constituent levels. These investigations were conducted after receiving the test results from the laboratory.

During the investigations, the D-MAX field crew measured flow rates, performed visual observations, and conducted field testing. Visual observations, such as water color, clarity, odor, floatable materials, vegetation and biology, and physical parameters, such as temperature, pH and conductivity, were recorded on field data sheets at each official sampling site. Field data sheets are included in Appendix C.

Field investigators began the source identification investigations by testing the water at the site itself; they then gradually worked upstream until potential pollutant sources could be identified. If follow-up field testing at a site resulted in constituent concentrations below specified action levels, it was concluded that the pollution found during the initial field screening and laboratory analysis was due to a transient flow.

7.2.2 Bacterial Investigation Procedures

In order to determine potential sources for sites with high bacteria, the D-MAX field crew used 3M Petrifilm *Escherichia coli* / Coliform Count plates as a rapid method to trace sources of both total coliform bacteria and *E. coli* bacteria in the storm water conveyance system. Because laboratory microbiological analyses take a significant amount of time, relying primarily on laboratory analyses can significantly delay an upstream investigation for bacteria. Also, due to the cost of these tests, often only a few locations can be examined, giving a less comprehensive picture. The Petrifilm plates allowed the field crew to quickly sample numerous branches or locations upstream of the sites.

Samples were taken in the field and preserved with Butterfield's phosphate buffer to keep the pH close to 7. Sample containers were kept on ice in a cooler and then plated within 6 hours of collection to ensure proper holding times were observed. The plates were then incubated at

35℃ ± 1℃. After 24 hours of incubation, total coliform bacterial concentrations were enumerated and, after an additional 24 hours (48 hours incubation total), *E. coli* levels could be read from the same plates, helping investigators identify potential bacterial sources over a large area in a timely manner.

This method is an improvement over the technique used in the past because it tests for *E. coli* bacteria. *E. coli* bacteria are a subset of fecal coliform bacteria and are better indicators of fecal contamination than total coliforms. Additionally, since total coliforms and *E. coli* are enumerated on the same plate, a rough ratio of *E. coli* (more likely to be from fecal sources) to total coliforms can be ascertained. While not unequivocally conclusive, this information allows for a better determination as to whether observed high bacteria levels likely come from fecal or non-fecal sources. Note that although *E. coli* are a major subset of fecal coliform bacteria, they are not enumerated for upstream analyses as an equivalent replacement for laboratory fecal coliform testing.

It should be noted that although laboratory analyses are done for total coliforms, fecal coliforms, and *enterococcus*, field bacteria analyses using Petrifilm plates are used to test only for total coliform bacteria and *E. coli*. As noted in Section 4, total coliform bacteria are generally harmless to humans but are a commonly-used indicator of harmful, pathogenic organisms, especially those found in fecal matter. Because the total coliform group of bacteria includes many species of bacteria of non-fecal origin, it is not as precise an indicator of fecal contamination as fecal coliforms or enterococci. A high total coliform count does not necessarily indicate fecal contamination of water, as total coliforms can also be found in soil, grain, and water, especially stagnant water. Therefore, a water sample with a high level of total coliform bacteria does not necessarily have a correspondingly high level of pathogens.

Fecal coliforms and enterococci are found mainly (but not solely) in the digestive tracts of humans and warm-blooded animals. With a few notable exceptions, fecal coliforms and enterococci are not hazardous to humans, but their presence is usually a good indication of the presence of animal or human waste. Fecal contamination from animal sources may be less hazardous to humans than fecal contamination from human sources; however, standard tests for fecal coliform and *Enterococcus* cannot reliably distinguish between human and animal sources.

Field bacteria tests using Petrifilm plates use Colony Forming Units per milliliter (CFU/mL) as the measurement unit, rather than the Most Probable Number (of colony forming units) per 100 milliliters (MPN/100 mL) unit used in laboratory analyses. These units are generally comparable, although the laboratory volume, and thus value, is one hundred times greater. D-MAX has created a stringent field protocol to control sample development as consistently as possible. Sterile dilution vials containing pre-measured amounts of sterile buffer solution for dilution are used for sample collection, the diluted samples are kept on ice in a cooler while in the field, and chilled samples are collected from the field crew twice daily to be plated within the proper holding time. Plated samples are then developed in an incubator for a total of 48 hours. While this method is not conducted at a certified laboratory, it is still useful for determining which locations have relatively higher or relatively lower bacteria levels. The action level for total coliform bacteria is 50,000 MPN/100 mL, which roughly corresponds to 500 CFU/mL. However, only about 150 or fewer colony forming units can be accurately enumerated using a Petrifilm plate. This would correspond to 15,000 MPN/100 mL. Therefore, all samples were first diluted 1:10 with sterile buffer solution before Petrifilm analysis, thus adjusting the detection limits for Petrifilm plates from the standard value of 1-150 CFU/mL to 10-1,500 CFU/mL. This adjusted range corresponds to approximately 10,000

to 150,000 MPN/100 mL, a much more useful range when dealing with total coliform bacteria levels around the action level of 50,000 MPN/mL.

7.3 Investigated Sites

7.3.1 Site 39

Site 39 is a manhole junction box about 25 feet deep located in the Grossmont Shopping Center. Laboratory analysis of the water sample at Site 39 detected an *Enterococcus* count of 14,000 MPN/100 mL, above the established action level of 10,000 MPN/100 mL. After receiving the results from the laboratory, the field crew conducted a follow-up investigation of the area and several of the lateral branches that join the main pipe at Site 39 to attempt to locate the source(s) of the exceedance in this area.

The total coliform bacterial count from the follow-up investigations at Site 39 was 10 CFU/mL. To the northeast of Site 39, upstream locations 39-1 and 39-2 were visited next. Both of those sites are located near the Murray Drive and Grossmont Center Drive intersection; see Figure 7-1 and Table 7-1 for more specific information. The total coliform level at 39-1 was higher than Site 39, with a count of 300 CFU/mL. The water sample from the loading dock at Sharp Grossmont Hospital (location 39-2) indicated very high levels of total coliform bacteria, as the bacteria growth on the plate was too numerous to count (TNTC). No *E. coli* was detected at either of those two upstream locations or at Site 39. No flow was observed further upstream from upstream locations 39-1 and 39-2.

A sample was taken from a manhole along the exit ramp of Interstate-8 just northwest of the Ford dealership, Site 39-3, where the storm drain map indicated a line from the south that drains toward Site 39 is located. The flow was observed traveling northwest at about 1 gpm. The total coliform bacteria count for this site was 90 CFU/mL, but *E. coli* was still fairly low.

To investigate whether the bacteria levels at the site extended to areas farther downstream, a sample was taken downstream from Site 39 at a manhole located in front of Sports Authority. A sample was taken from the eastern line at this location, which comes from Site 39. The sample was taken from this line that would consist of only water from Site 39 unless there is an additional, unknown connection. The total coliform count was 20 CFU/mL, which is similar to Site 39.

An additional sample was taken from Site 39 for laboratory analysis on June 27, 2007 to confirm the bacterial concentrations. Results were 13,000 MPN/100 mL for both total and fecal coliforms, both of which are below their respective action levels. *Enterococcus* bacterial counts were 800 MPN/100 mL, which is significantly lower than the initial reading of 14,000 MPN/100 mL and well below the action level. Nonetheless, because the analyses indicated that essentially all the total coliforms were fecal coliforms and an illicit sewer connection had been detected upstream of this site in the past at Sharp Grossmont Hospital, an additional sample was taken at upstream location 39-2. That location also had a high total coliform count during the upstream investigation. That additional sample was submitted for laboratory analysis for total coliforms, fecal coliforms, and enterococci, and ammonia, which is an indicator of sewage releases. The laboratory reported total coliform and *Enterococcus* counts of 40 MPN/100 mL and 300 MPN/100 mL, respectively. Fecal coliforms were not detected. Ammonia was measured at a concentration of 0.47 mg/L, these results do not suggest a sewage leak or other illegal discharge. The overall results of the investigation suggest that bacteria levels are not consistently high at Site 39, and relatively higher levels may be the result of transient flows. The locations and results of follow-up sampling events are summarized in the Table 7-1 and Figure 7-1.

8 SUMMARY AND RECOMMENDATIONS

8.1 Summary

8.1.1 Summary of Field Screening and Laboratory Analysis Data

During the course of dry weather monitoring, 19 sites were visited, of which 18 had measurable flow and one was dry. The 2007 field screening was resulted in only one follow-up investigation, compared to four in 2006 and three in 2005. Flow rates at the observed sites ranged from a trickle of less than 1 gallon per minute to 162 gpm. As in the past, the highest flow rate was recorded in the Alvarado Channel.

All but one site had measurements of pH that fell between 6.5 and 9.0. Site 64 had a pH of 10.0 during the initial visit and a reading of 9.3 on the following day. Elevated pH levels were likely a result of algal photosynthetic activity (see Section 6). Conductivity readings were not considered an indication of threat to water quality based on the field crew's best professional judgment.

All measurements of ammonia were below concentrations of 0.50 mg/L, below the action level of 1.0 mg/L.

As in the past five years, nitrate concentrations among all sites were below the action level of 10.0 mg/L. The highest nitrate concentration, measured at Site 50, was 5.85 mg/L. The action level for reactive phosphorous concentrations, 2.0 mg/L, was not exceeded at any of the sites.

The highest concentration of surfactants among all sites was 0.75 mg/L, below the action level of 1.0 mg/L, which was detected at Site 13B.

As per the Permit, laboratory analyses were conducted at five sites. Results detected bacteria levels in water sampled from Site 39 that exceeded the established action level for *Enterococcus*, which is 10,000 MPN/100 mL.

Dissolved copper was detected at Site 4A, but it was below the CTR action level. No other dissolved metals were detected at any of the sites. As it was for 2006, no chlorpyrifos, diazinon, oil and grease, and surfactants were detected at any sites.

Trash was observed at 10 of the visited sites, up from eight sites in 2006 and up from four sites in 2005. Sediment was present at all but one of the sites visited, but no other floatables were observed.

Vegetation was present at many of the sites where sunlight was accessible to the site. Those sites located in darker areas, normally had no vegetation.

8.1.2 Summary of Upstream Investigation Data

Follow-up visits were performed on the following business day whenever field tests showed one or more parameters above their respective action levels at the initial field screening visit. During the Dry Weather Monitoring Program in 2007, only one site required a follow-up visit for a pH reading that exceeded action levels. Only one site required upstream investigations after laboratory results were concluded.

Site 39 required upstream investigations to locate potential sources of the elevated bacteria levels indicated by laboratory analyses. To facilitate a prompt, comprehensive survey of potential sources of bacterial contamination, Petrifilm plates were used to conduct field

microbacterial analyses. Note that total coliforms levels alone are considered a poor indicator of fecal material and an even poorer indicator of pathogens. Based on the results of the upstream investigations and follow-up actions conducted at Site 39,the elevated bacterial count observed was transient.

8.2 Recommendations

Based on the results of the 2007 Dry Weather Monitoring Program for the City of La Mesa, the following follow-up actions are recommended for consideration:

Inspection and Maintenance

- Consider checking sites where trash was noted during the 2007 Dry Weather Monitoring Program for trash and debris accumulation as deemed necessary. A notable amount of trash was observed in the following three locations: Site 52, the channel upstream of Site 57, and the conveyance along Sarita Street (upstream of Site 4A).

- Retrieve the shopping cart from the channel at Site 4A and contact California Shopping Cart Retrieval Corporation (1-800-667-4613) to pick up the cart.

July 30, 2007
Project No. 200703W-7

Mr. Hamed Hashemian, P.E.
Engineering Project Manager
City of La Mesa
8130 Allison Avenue
P.O. Box 937
La Mesa, CA 91944-0937

Re: Non-Storm Water Quality in the City of La Mesa

Dear Mr. Hashemian,

Per your request, D-MAX Engineering Inc. (D-MAX) has conducted a sampling and analysis study at seven locations in the three major drainage basins of the City of La Mesa. The purpose of the study was to evaluate the water quality of the discharged flow. Water flowing out of these basins joins the three main receiving water bodies downstream of the City. The sampling was conducted on June 26 and 27, 2007. The sampling locations were jointly selected by the City of La Mesa and D-MAX. Sampling locations are listed in the attached Table 1.

Six of the locations (Alvarado 1, Alvarado 2, University. 1, University 2, University 3, and University 4) are those locations that previously have been sampled for wet weather program on April 20, 2007. Three of the locations (Alvarado 1, University 1, and Spring Valley Downstream West) had been sampled for non-storm water discharge leaving the City in 2005.

The water samples from six of the above mentioned sampling locations have been tested for similar constituents tested for the wet weather program. Sampling site Spring Valley Downstream West, which was not included in the wet weather sampling, was analyzed for the same suite of constituents measured in the City's annual Dry Weather Field Screening and Analytical Monitoring Program.

The field analyses results are presented in the attached Table 2. Laboratory results are tabulated in attached Table 3. Field data sheets and laboratory results are attached.

Please call me at (858) 586-6600 x22 with any questions.

Sincerely,

D- MAX Engineering, Inc.

Arsalan Dadkhah Ph.D., P.E.
Project Manager

EXECUTIVE SUMMARY

The City of La Mesa (City) has been actively developing and implementing storm water pollution prevention measures since 1990. The City's Jurisdictional Urban Runoff Management Program (JURMP) was updated and submitted to the San Diego Regional Water Quality Control Board (RWQCB) in March 2008. The JURMP update was required by the recently re-issued storm water permit, RWQCB Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit was jointly issued to 18 municipalities in San Diego County, including the City; the County of San Diego; the San Diego County Regional Airport Authority; and the San Diego Unified Port District (collectively referred to as "Copermittees").

The City's JURMP includes Best Management Practices (BMP) standards for businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

This JURMP Annual Report presents the City's activities to implement its JURMP during the 2007/2008 fiscal year, which began on July 1, 2007 and ended on June 30, 2008. Two different storm water permits were in effect during this reporting period: the previous permit issued to the Copermittees, Order No. 2001-01, and the current Municipal Permit. The City was required to implement its newly updated JURMP to comply with the Municipal Permit no later than March 24, 2008, but the City began implementing some aspects of the new program prior to this deadline. Each section of this JURMP Annual Report discusses how the City's efforts during 2007/2008 met the requirements of the applicable permit and when the requirements of the new Municipal Permit were implemented. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

During 2007/2008, the City continued to oversee development activities occurring in the City to mitigate potential threats to water quality due to such activities. The City developed a treatment control BMP operation and maintenance verification program, which included the development of a treatment control BMP database, an inspection program, and an annual maintenance verification program. Eleven sites in the City with approved treatment control BMPs were inspected. The City also updated BMP requirements for all development projects to include the addition of Low Impact Development (LID) principles, and relevant documents and forms were updated in accordance with the new development planning requirements.

Construction Component

During 2007/2008, a total of 91 construction inspections were completed at 38 sites; these inspections were done at a frequency meeting the requirements of the new Municipal Permit. Enforcement actions were taken where necessary and were effective in bringing about compliance. The City's plan check and inspection program required projects to comply with the City's minimum BMP requirements.

Municipal Component
The City inspected all high threat to water quality (TTWQ) municipal fixed facilities and continued its rigorous street sweeping and MS4 maintenance programs. A total of 692 tons of trash and debris was removed from street sweeping activities, and 175.5 cubic yards of debris was removed from standard MS4 maintenance. An additional nine cubic yards of debris was removed from the cleaning of 23 filter inserts installed along University Avenue. The City also replaced or rehabilitated 12,136 linear feet of sewer line and continued to maintain its sanitary sewer system to decrease the potential for a sanitary sewer overflow (SSO). City personnel were regularly trained regarding storm water pollution prevention concepts and practices.

Industrial and Commercial Component
During 2007/2008 the City met the Municipal Permit requirement to inspect at least 20 percent of the City's industrial and commercial inventory. The City inspected all high threat to water quality (TTWQ) sites on the City's industrial and commercial inventory as well as additional medium TTWQ sites. The City's watershed-based industrial and commercial inventory was updated based on information gained since the development of the inventory in March 2008. During the inspections conducted during 2007/2008, the City notified industrial and commercial businesses of the City's new BMP requirements through a variety of outreach materials provided to facility personnel during the inspections. Inspectors also assessed each facility's compliance with the General Industrial Permit (Industrial Permit); the City notified the RWQCB when potential non-filers were discovered. The City also initiated special additional data collection programs focused on pollutant discharge potential assessment and watershed-specific issues.

Residential Component
Residential areas comprise more than half of the City's land use, and the City worked to educate residents in the City through a variety of means. The City provided its quarterly *La Mesa Focus* newsletter to City residents via email and the City's website. Each newsletter published during 2007/2008 contained storm water articles relating to residential activities. One example is the article "One Phone Call Can Help Stop Storm Water Pollution" in the August 2007 issue, which was distributed to 30,000 residential and business addresses in the City. During 2007/2008 the City hosted a variety of waste disposal events and encouraged residents to participate in these events. The City also responded to complaints made to the City Storm Water Hotline regarding residential areas. The complaint investigations were used as opportunities to enforce BMP requirements and to educate residents.

Illicit Discharge Detection and Elimination Component
On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for 2008 Dry Weather Monitoring Program, which took place after July 1, 2008, is finalized. The section must be submitted to the RWQCB no later than December 15, 2008.

While the full section will not be submitted until after September 30, 2008, the City did still implement its IDDE program component during 2007/2008. During this period, the City responded to and resolved 137 complaints made to its Storm Water Hotline and the Public Works maintenance hotline. The City completed its 2007 Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program), during which only two relatively minor action level exceedances were noted. The recommendations in the final report for the Dry Weather Monitoring Program were addressed during this reporting period. The City continued maintenance of the sanitary sewer system to prevent SSOs, and there were no SSOs during 2007/2008.

Education Component

As a means to raise storm water awareness in various communities, the City continued to conduct various education and outreach activities throughout 2007/2008. The City's efforts results in an estimated 200,324 impressions. City staff held or attended 34 training sessions, and the City continued to circulate the quarterly *La Mesa Focus* newsletter to businesses and residents. Each newsletter sent during 20007/2008 included storm water-related articles aimed at both residents and businesses in the City. Additionally, the City continued to maintain a storm water bulletin board at City Hall, which is strategically located to maximize exposure to both City personnel and project proponents that visit the Engineering Division. To better serve the City's diverse population, a variety of educational materials were distributed in Spanish and English.

Public Participation Component

Public participation activities in 2007/2008 included cleanup events, which have a direct effect on water quality, and outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. A total of 1,648 people attended such events. The City participated in Coastal Cleanup Day and the Creek to Bay Cleanup, with two sites in the City for each event. During these events 475 pounds of trash and debris were collected. Other cleanup activities completed during 2007/2008 included Park Appreciation Day and the Adopt-a-Park and Adopt-a-Block programs. The City partnered with local Eagle Scouts to install a storm water information kiosk at Vista La Mesa Park. A variety of waste disposal events, including household hazardous waste (HHW) disposal events, were also held in the City.

Fiscal Analysis Component

The City continued to fund its storm water program though the City's Sanitation Fund. Itemized expenditures for 2007/2008 were $745,867, and $792,645 has been budgeted for 2008/2009.

Effectiveness Assessment Component

The City began evaluating the effectiveness of its storm water program based on the revised approach presented in the City's March 2008 JURMP update. The City has seen lower amounts of pollutants in its Dry Weather Monitoring Program in recent years. The City has also implemented additional treatment control BMPs for University Avenue and its Public Works Operation Center, and it conducts additional street sweeping to aid in meeting watershed requirements. The City has identified parties

responsible for treatment control BMP maintenance as an audience in need of additional education and outreach through its new treatment control BMP operation and maintenance verification and inspection programs.

Special Investigations

The City continued implementation of an additional water quality monitoring program, which includes sampling at two sites in the San Diego River Watershed and four sites in the San Diego Bay Watershed during both wet and dry weather conditions. Based in part on the results of this monitoring program, some additional inspections of industrial and commercial businesses were conducted. The City also completed additional data gathering during industrial and commercial inspections to assess knowledge of watershed-specific storm water concepts and to assess the potential for inspected sites to be significant sources of watershed pollutants of concern.

Conclusions and Recommendations

The City began implementing its newly updated March 2008 JURMP toward the end of 2007/2008. The City will continue to implement the new and updated programs in its JURMP during 2008/2009; it is anticipated that some program refinements will be made as implementation progresses. The City will also collaborate with the other Copermittees to improve the efficiency of its program and to develop updated methods of assessing program effectiveness.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents a summary of the activities of the City of La Mesa (City) during the 2007/2008 fiscal year. Preparation and submittal of the JURMP Annual Report is required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act (also known as the Clean Water Act, or CWA) established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). The RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region in 1990, followed by a revised permit in 2001. The current Municipal Permit in turn replaced the 2001 permit, RWQCB Order No. 2001-01, in 2007.

Like all the other regulated municipalities in the San Diego region, collectively referred to as Copermittees, the City developed and submitted a JURMP to the RWQCB in 2002. As required by the Municipal Permit, the City submitted an updated JURMP in March 2008. The JURMP includes management measures for a variety of different sectors and activity types such as municipal, industrial, commercial, construction, and significant development and re-development.

Annual reports on the implementation of the JURMP are required to be submitted to the RWQCB September 30 of each year. This JURMP Annual Report presents information from the 2007/2008 fiscal year, which extended from July 1, 2007 to June 30, 2008.

1.1.2 CITY SETTING

The City of La Mesa includes an area of approximately nine square miles and has a population of over 56,000 residents. The primary land use in La Mesa is residential. Grossmont Center and businesses along major roads in the City make up the bulk of the commercial development, and a small light industrial area is located close to the geographic center of the City, just north of Interstate 8.

Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. The City of La Mesa makes up about one percent of the overall land area in both the San Diego Bay and the San Diego River watersheds. Runoff generated in La Mesa is conveyed through five drainage basins. Figure 1-1 on the following page shows the drainage basins and the land uses in the City. Table 1-1 lists the drainage basins along with the approximate

percentage of drainage area in La Mesa, the corresponding hydrologic unit (HU) of the basin, and the receiving water body to which each basin drains.

Table 1-1
City of La Mesa Drainage Basins

Drainage Basin	Percent of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

Please note that while runoff from the City drains to these water bodies, the actual water bodies are not themselves located within the City.

Figure 1-1
City of La Mesa Land Use and Drainage Basins

0 0.45 0.9 Miles

1.2 Purpose and Objectives

The City's JURMP presents a strategy to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP includes a variety of programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the City's implementation of its JURMP during the 2007/2008 reporting period.

1.3 Report Organization

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1	**Introduction**
Section 2	**Development Planning Component**
Section 3	**Construction Component**
Section 4	**Municipal Component**
Section 5	**Industrial and Commercial Component**
Section 6	**Residential Component**
Section 7	**Illicit Discharge Detection and Elimination Component**
Section 8	**Education Component**
Section 9	**Public Participation Component**
Section 10	**Fiscal Analysis Component**
Section 11	**Effectiveness Assessment Component**
Section 12	**Special Investigations**
Section 13	**Non-Emergency Fire Fighting**
Section 14	**JURMP Revisions**
Section 15	**Conclusions and Recommendations**
Section 16	**References**

Each section includes all the sections required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a clearer explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Subsection 1.1, Background, has been divided into subsections 1.1.1, Regulatory Background, and 1.1.2, City Setting, for the sake of clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and managing increase in runoff from development project that have the potential to negatively affect downstream water bodies. During the 2007/2008 fiscal year, the City accomplished these goals through implementation of its JURMP document. During the reporting period, a new Municipal Permit went into effect, and the development planning component of the City's JURMP was updated accordingly.

The City began implementing new Municipal Permit requirements for development planning on March 24, 2008. The overall structure of the City's processes for incorporating post-construction BMPs into the development planning process remained similar throughout the reporting period. The most significant changes to the City's program apply to the implementation of the City's development project approval and verification process. For example, the City's Standard Urban Storm Water Mitigation Plan (SUSMP) requirements were updated to include Low Impact Development (LID) and hydromodification concepts, and the City began a treatment control BMP inspection and a BMP maintenance verification program.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- Updated the City's SUSMP and the City of La Mesa Storm Water Best Management Practices Manual Part II (BMP Manual Part II), including addition of new Priority Development Project (Priority Project) categories required by the Municipal Permit.
- Updated the City's development requirements checklist (Appendix A of BMP Manual Part II) to reflect changes made to the City's updated JURMP and distributed updated checklist starting late March 2008.
- Updated minimum BMP requirements for all development projects, including addition of LID principles.
- Collaborated with the Copermittee hydromodification management workgroup to discuss key Hydromodification Management Plan (HMP) development issues.
- Developed a treatment control BMP operation and maintenance verification program, which included the development of a treatment control BMP database, an inspection program, and an annual maintenance verification program.

- Conducted maintenance inspections of treatment control BMPs at 11 completed development projects throughout the City.
- Conducted trainings for City staff and developed educational materials for the development community regarding new Municipal Permit requirements related to development projects.

2.2 Land Use Planning

2.2.1 Background

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Public Services and Facilities Element. The comprehensive principles established in 2002 provide an ample framework for implementing the requirements of both the old permit and the new Municipal Permit, and no changes to these policies were necessary during the reporting period.

2.2.2 Source Characterization

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection related land use policies during the reporting period mainly through the City's Municipal Code. During this time, the City's Storm Water Ordinance was updated to meet new Municipal Permit requirements. The City's BMP Manual Part II was also updated as part of the City's Storm Water Ordinance update. Descriptions of the changes made, as well as complete copies of the amended documents, can be found in the City's updated JURMP. Implementation of these new development requirements began on March 24, 2008. Prior to that date, the City implemented the Storm Water Ordinance and BMP Manual Part II as detailed in the 2006/2007 JURMP Annual Report.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report document.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's updated JURMP. While changes to specific requirements of the City's environmental review process were made during the reporting period as part of the JURMP update, the overall structure of the review process, such as the City's departments involved and the document submissions required, remains the same as in previous reporting years. No further modifications to the City's environmental review process have been made since the submittal of the updated JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2007/2008 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below. As previously discussed, the development project approval and verification process implemented prior to March was identical to the process described in the 2006/2007 JURMP Annual Report. The approval and verification process implemented after March 24, 2008 followed the process described in the City's updated JURMP.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's BMP Manual Part II. Please note that the City's BMP Manual Part II contains the City's SUSMP regulations. Prior to March 2008, the BMP Manual Part II included in the City's 2006/2007 JURMP Annual Report document was used by the City and development community, while the updated BMP Manual Part II, revised as part of the JURMP update, was implemented starting in late March 2008. Details on changes to the City's BMP Manual Part II, such as the addition of retail gas outlets (RGO) and industrial development as Priority Project categories, can be found in Section 4 of the updated JURMP.

2.4.3 Best Management Practice Requirements

No changes were made to the development BMP requirements presented in the 2006/2007 JURMP Annual Report prior to March 2008. The City's new BMP requirements, implemented after March 2008, are similar to the requirements prior to that date, with a few exceptions. In some cases, the new BMPs were already being required by the City, but the update provided an opportunity for the language in the JURMP to be strengthened for clarity. For example, the LID BMP requirements added to the City's BMP Manual Part II are similar to site design concepts that were already

required in the original BMP Manual Part II developed in 2002 as part of the City's SUSMP requirements. The City's BMP Manual Part II was only changed to stress the importance of a few of these design principles, such as draining runoff from impervious surfaces to adjacent landscaping. Similarly, the City had already begun requiring project proponents to include justification whenever a treatment control BMP that did not have a high or medium removal efficiency for key pollutants associated with the project. The new BMP Manual Part II provided more explicit language in support of this requirement. All changes to BMP requirements made during the reporting period are detailed in the City's updated JURMP.

2.4.4 Program Implementation

During the 2007/2008 fiscal year, the City required implementation of its BMP requirements for all development projects through education, a comprehensive development project approval process, and a new treatment control BMP inspection and maintenance verification program.

2.4.4.1 Outreach and Staff Training

The City continually trains staff involved in the planning and review of development projects within the City and works closely with the development community to communicate its development requirements throughout the entire approval process. During the reporting period, staff and industry training was focused on changes being made to the City's JURMP in response to new Municipal Permit requirements. Details on trainings conducted and educational materials developed and distributed related to the new development during the reporting period can be found in Section 8 of this JURMP Annual Report document. Distribution of maintenance verification letters to parties responsible for maintenance of treatment control BMPs at completed projects, which began in July 2008, is also expected to increase the level of knowledge of regulated parties.

2.4.4.2 Urban Runoff Approval Process for Development Projects

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Forms completed by project applicants are kept with the project's file at the City for future reference. As discussed in the City's JURMP, the City required all projects applying for construction and building permits to complete an "Appendix 'A' –Storm Water Requirements and Project Data Sheet" that guides project applicants to submit proper documents to the City for review. Prior to March 2008, the City distributed the Appendix A form included in the City's 2006/2007 JURMP Annual Report. Starting in March 2008, the City began distributing an updated version of the Appendix A form that included changes necessary to comply with the new Municipal Permit requirements. Features of the

updated Appendix A form are discussed in the City's updated JURMP. A copy of the updated form is included as Attachment 2.1 to this JURMP Annual Report document.

The updated Appendix A form distributed starting March 2008 now prompts certain non-priority development projects to complete a Standard Post-Construction BMP Plan (SPCBMPP, Attachment 2.2). This form includes a list of all standard permanent storm water BMPs required by the City's SUSMP and requires project proponents to indentify which BMPs will be implemented at the development. Note that the standard permanent storm water BMPs do not include treatment control BMPs. If any BMP is not selected, the project proponent must provide an explanation why the BMP is not applicable or feasible for the project. The City developed the Standard Post-Construction BMP Plan Preparation Instructions (Attachment 2.3) sheet to guide project proponents on how to correctly complete the Standard Post-Construction BMP Plan. During the period from March 24, 2008 through June 30, 2008, no development projects required submittal of a SPCBMPP.

All development projects determined to be Priority Projects after completing the Appendix A form were required to implement the City's SUSMP requirements and prepare a Water Quality Technical Report (WQTR). Note that after March 2008, the City began referring to WQTRs as Post Construction Water Quality Technical Reports (PCWQTR). The City developed a Post Construction WQTR Report Guidelines sheet to detail all the information required to be included in a project's PCWQTR (Attachment 2.4). In the past, the majority of deficiencies found in document reviews were missing information or sections not having enough detail about proposed BMPs. The guideline sheet provides a more detailed resource for project proponents to use when writing the PCWQTR, and the City hopes that the guidelines will reduce the number of document reviews required for development project before they are approved. Since the document change occurred late in March 2008, only one development project submitted a PCWQTR for review during the reporting period. Prior to March 24, 2008 but still during the reporting period, some additional WQTRs were submitted for review. Table 2-1 lists the development projects subject to the City's SUSMP requirements during the 2007-2008 reporting period, the number of document reviews for each project, and their current approval statuses as of the end of the 2007/2008 reporting period.

Table 2-1
Development Projects Subject to SUSMP Requirements During 2007/2008

#	Project Name	Location	Project Type	Number of Reviews	Approved? (Yes/No)
1	Heidi St. Residence	5475 Heidi Street	Non-Priority	2	Yes
2	Davis Family YMCA Expansion	8881 Dallas	Priority	1	Yes
3	KFC /Taco Bell	Jackson Drive	Priority	3	No
4	Montbello South	7699 El Cajon Blvd	Priority	1	No

The Davis Family YMCA Expansion project, which involved construction of a small additional building and parking area, was reviewed during the 2006/2007 reporting period. The project was not approved during this period due to a few clarifications that needed to be made in the project's WQTR. These clarifications were made and the project was approved early in the 2007/2008 reporting period. Since construction on this Priority Project began before the new Municipal Permit requirements were implemented within the City, the project was approved under the requirements of the City's SUSMP detailed in the 2006/2007 JURMP Annual Report.

Heidi St. Residence was also approved during the reporting period but prior to the adoption of the updated BMP Manual Part II. While this project was not a Priority Project, the project was still reviewed for compliance with the City's standard permanent BMP requirements, which apply to all development projects. No treatment control BMPs were approved as part of this development project.

In preparation of the new BMP requirements going into effect during the middle of the reporting period, all development projects that submitted documents to the City for review were educated on upcoming changes to the City's SUSMP requirements. KFC/Taco Bell is one project the City worked with during the reporting period to meet new Municipal Permit requirements. The first WQTR for KFC/Taco Bell was submitted to the City for review in October of 2007. At this time, the project did not meet the City's established minimum BMP requirements due to the vague descriptions of proposed site design and source control BMPs and lack of treatment control BMP sizing calculations. The project proponents were informed that if the project did not obtain lawful approval prior to March 24, 2008, the project would be subject to the City's new LID requirements. When the second report for the project was submitted in late March 2008, the project was reviewed against the City's updated BMP Manual Part II. The project was once again found to not meet the City's new minimum BMP requirements for various reasons, but the project now proposed to incorporate permeable pavement and grass swales into the project design. The City will continue to work closely with the project to ensure all applicable BMPs are designed effectively and meet the City's minimum requirements before approval is given.

The Civic Center Improvements project was approved during the 2006/2007 reporting period and began construction early in the 2007/2008 fiscal year. During construction minor changes were made to the proposed BMPs for the project. The City reviewed the proposed changes before they were implemented and determined the changes met the City's SUSMP requirements.

The majority of the development projects that submitted documents to the City for review during the 2006/2007 reporting period did not submit revised documents during this 2007/2008 reporting period. Due to the slow housing market in the San Diego region, many planned development projects were abandoned or were placed on hold during the reporting period. If any of these projects are resumed in the future, they will be subject to the City's updated SUSMP requirements and the document review process detailed in the updated JURMP.

No Priority Projects were allowed to implement treatment control BMPs with low removal efficiency rankings during the reporting period. The City makes every effort to encourage development projects to select treatment controls with high and medium pollutant removal efficiencies and does not expect to approve many projects with low removal efficiency BMPs. However, if projects proposing a low removal efficiency treatment control BMP with a defensible infeasibility analysis are approved, details of those projects and their feasibility analyses will be reported as required in future JURMP annual reports.

During the reporting period, no projects received a SUSMP waiver for implementation of treatment control BMPs. The City has never issued a SUSMP waiver in the past either, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

Hydromodification Management Plan
During the reporting period the Copermittee hydromodification management workgroup met regularly to discuss key HMP development issues and provide updates on the status of consultant work products. The City of La Mesa regularly participated in the hydromodification management workgroup during 2007/2008. Note that in the summer of 2008 the workgroup name was officially changed to the Land Development Workgroup.

The City's current Development Manual contains detailed Interim Hydromodification Criteria (IHC) which the City will continue to implement until the HMP is finalized. None of the development projects undergoing the City's review process during the reporting period were subject to the IHC since all of these projects are less than 50 acres. Final HMP requirements have not yet been established by the Land Development Workgroup. Once the HMP is developed and approved by the RWQCB, the City will incorporate the HMP into its BMP Manual Part II.

BMP Installation Verification
No Priority Projects under construction during the 2007/2008 fiscal year were completed prior to the end of the reporting period. Once construction of Priority Projects is completed in the future, verification that the BMPs proposed have been installed in accordance with approved documents will be performed prior to occupancy of the site. Once BMP installation is verified, the project will be assigned a threat to water quality (TTWQ) priority using the prioritization flow chart presented in the City's JURMP, and the project will be added to the City's treatment control BMP inventory.

2.4.4.3 Treatment Control BMP Inspection and Maintenance Verification Program

The City's treatment control BMP inspection program did not go into effect until March 24, 2008, significantly after the start of the 2007/2008 wet season, which began on October 1, 2007. Therefore, the City did not have the opportunity to inspect the high TTWQ development projects included on its inventory prior to the start of the wet season

during the reporting period. The City did, however, contract D-MAX Engineering, Inc. (D-MAX) to conduct inspections of all projects with treatment control BMPs, regardless of their TTWQ, during the 2007/2008 fiscal year after March 24, 2008.

D-MAX utilized information included in the City's treatment control BMP database to determine what BMPs should be present at the individual project sites. Each BMP was visually inspected, and the City of La Mesa Treatment Control BMP Inspection form in the City's JURMP was completed by the inspector for each site visited. Table 2-2 lists the development projects inspected, the number of BMPs installed at each site, the number of BMPs inspected, the number of BMPs found in need of maintenance, and brief descriptions of inspection findings. Public Priority Projects are indicated with the marker "(CIP)", which is short for capital improvement project. The BMP types installed at these sites and the sites' TTWQ priorities are included in the City's treatment control BMP inventory, which is included in Appendix A.1 of this JURMP Annual Report.

Table 2-2
Summary of Treatment Control BMP Inspection Results

#	Project Name	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes
1	Aragon	2	2	0	No BMP maintenance deficiencies observed.
2	Bougainvillea Walk	3	3	2	Drainage inserts on site contained sediment and debris.
3	Briercrest Park (CIP)	1	1	0	No BMP maintenance deficiencies observed.
4	Car Dealership (McClelland Auto Sales)	1	1	1	No vegetation observed in proposed vegetated buffer strip. Some of the pipes conveying runoff to buffer strip from parking lot were clogged with sediment.
5	Eastridge	3	3	0	No BMP maintenance deficiencies observed
6	La Mesa Teen Center (CIP)	2	2	2	Leaf debris observed in swale and drainage insert contained trash and debris.
7	Lowell Street Condominiums	4	4	1	Drainage insert installed in 15" catch basin on site contained sediment and debris
8	Parkview	16	16	14	14 porous pavement driveways appeared clogged with sediment and organic debris.
9	Talmadge East Apartments	4	4	4	All drainage inserts on site contained sediment and debris.
10	Fire Station (CIP)	1	1	0	No BMP maintenance deficiencies observed.
11	Kaiser	1	1	0	No BMP maintenance deficiencies observed

Follow-up actions were recommended for all development projects with BMPs observed in need of maintenance. A copy of the completed inspection form, which details the actions required to correct the violation(s) observed, if any, was sent to the property owner or manager of each site visited. A Notice of Violation (NOV) was issued to the party responsible for the "Car Dealership" site in response to the poor condition of its

vegetated buffer strip. The City has had further correspondence with the responsible party in early 2008/2009, after the issuance of the NOV, and is working to ensure the buffer strip is properly maintained. Since inspections were conducted at the end of the reporting period, not all follow-up actions were able to be conducted during the 2007/2008 fiscal year. The City will continue to follow up with these sites during 2008/2009. No sites were observed to present a significant threat to human health or the environment during inspections, so none were reported to the RWQCB.

In addition to City-conducted maintenance inspections, the Municipal Permit requires annual verification of operation and maintenance of treatment control BMPs installed within the City's jurisdiction. Annual verification must be provided by the party responsible for treatment control BMP maintenance and must be returned to the City prior to the start of the wet season (October 1st). Since this portion of the City's program did not go into effect until March 2008, towards the end of the wet season, the City was not able to require annual maintenance verification of treatment control BMP maintenance prior to the 2007/2008 wet season, which began October 1, 2007. The City did, however, begin the process of obtaining annual BMP maintenance verifications for the 2008/2009 fiscal year.

A BMP maintenance verification form, frequently asked questions (FAQ) sheet, and introductory letter were developed during the 2007/2008 reporting period. Using the property owner names and addresses recorded in the City's BMP database, BMP maintenance verification forms were mailed to all the projects included in the City's BMP database in early 2008/2009. The template letter, BMP maintenance verification form, and FAQ sheet are included as Attachment 2.5 to this JURMP Annual Report. As maintenance verification forms are returned to the City, results will be documented in the City's BMP database. The City will follow up with projects that do not return the annual maintenance verifications as described in the City's JURMP.

2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's development planning component have been made since that time.

3.0 CONSTRUCTION

3.1 INTRODUCTION

The City began implementation of new Municipal Permit requirements related to construction activities on October 1, 2007. New inspection frequencies and minimum BMP requirements were implemented through the remainder of the fiscal year. As a result, the overall implementation of the City's construction program remained largely the same throughout the reporting period. The City made some modifications to improve its program in late March 2008 as part of its JURMP update. These changes included additions of requirements limiting maximum disturbed area and calling for the use of advanced treatment methods in certain instances. Some modifications to standard forms used in the construction program were also made.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- Distributed appropriate checklists to all projects applying for grading and building permits.
- Conducted plan checks of erosion control plans to ensure construction projects comply with the City's minimum BMP requirements.
- Conducted training for applicable City staff regarding the construction requirements in the City's updated JURMP.
- Conducted 88 construction inspections at 38 sites per the frequency in the updated JURMP. During the wet season, high TTWQ sites were inspected bi-weekly, medium TTWQ sites monthly, and at least once for low TTWQ sites with grading activity.
- Issued 18 verbal warnings, nine written warnings, five follow-up inspections, eight NOVs, and one stop work order to construction sites in response to violations of the City's minimum BMP requirements.
- As part of the updated JURMP, required construction sites less than one acre to complete a Construction Storm Water Management Plan (CSWMP), similar to a Storm Water Pollution Prevention Plan, that details the planned BMPs for the project.

3.2 SOURCE CHARACTERIZATION

An inventory of active construction projects during the reporting period is presented in

Appendix A.2 of this JURMP Annual Report document. The City's inventory was maintained throughout the reporting period by the City's Engineering Division. New construction projects were added to the inventory at the start of construction, and projects were removed from the inventory after construction was completed. Since construction projects were continually being added and removed throughout the fiscal year, inventory updates were usually performed more frequently than the minimum once per month.

3.3 Updates to Ordinances and Approval Processes

The City updated its Grading and Storm Water Management and Discharge Control ordinances during the reporting period as part of the City's JURMP update. Details on these revisions can be found in Section 5 of the City's updated JURMP. The construction requirements in the City's BMP Manual Part II were also updated to be consistent with the ordinance changes. Details on any changes to the City's approval process during the reporting period are discussed in Section 3.5 of this document.

3.4 Best Management Practice Requirements

The City's updated construction and grading project requirements are detailed in the City's updated BMP Manual Part II, which can be found as Appendix C in the City's updated JURMP document. The City's new BMP requirements were implemented starting in March 2008. The construction component of the updated BMP Manual Part II is not significantly different than the construction element of the previous BMP Manual Part II that was in effect prior to March 2008. The main differences are that the updated BMP Manual Part II includes a provision that allows the City to require advanced treatment at sites that pose an exceptional threat to water quality, a provision that limits the maximum disturbed area to 17 acres unless special approval is obtained, and language that clarifies the City's requirements for stockpile management.

3.5 Program Implementation

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 Education and Staff Training

Education and staff training implemented during the 2007/2008 fiscal year focused on communicating changes made to the City's construction requirements to both City staff and the construction community. Please see Section 8 of this JURMP Annual Report document for details on trainings performed and educational materials distributed related to construction and grading activities.

3.5.2 Construction and Grading Approval Process

During the reporting period, City personnel verified that all construction projects planned to implement the City's minimum BMP requirements prior to issuing any building or grading permits. The City's grading approval process is described thoroughly in Section 5 of the City's updated JURMP. The primary changes made during 2007/2008 were related to forms and required report submittals. As discussed in Section 2 of this document, prior to March 2008, the City distributed and required completion of the Appendix A form included in the 2006/2007 JURMP Annual Report for all projects applying for construction or grading permits. A section of the Appendix A form helps the City and project proponents identify whether coverage under State of California General Construction Permit (General Construction Permit) is needed. After March 2008, the City started distributing an updated version of the Appendix A form and began requiring construction projects that are not subject to the General Construction Permit to complete a Construction Storm Water Management Plan (CSWMP), which details the BMPs planned for construction sites not required to develop a Storm Water Pollution Prevention Plan (SWPPP). Prior to the development of the CSWMP requirement, construction sites less than an acre applying for permits were still subject to a review process via the submittal of erosion control plans and were required to implement the City's minimum construction BMP requirements. A copy of the City's CSWMP form is included as Attachment 3.1 to this JURMP Annual Report document. Approved forms and documents completed by project proponents are kept with the each project's file at the City for reference.

During the reporting period, the City began enforcing a 17 acre maximum disturbed area for grading activities. None of the City's active construction sites were larger than 17 acres, and the maximum disturbed area limitation did not apply. However, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also began implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's updated JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Appendix A.2 of this JURMP Annual Report contains a list of construction projects that were active during the reporting period, along with their assigned TTWQ priorities, the number of weeks the site was active within the rainy season, the numbers of inspections conducted during the wet and dry seasons, the number of follow-up inspections, and the total number of inspections for each site. In total, 91 construction inspections were

performed for 38 construction sites.

Construction inspections conducted during the reporting period were performed as described in the City's updated JURMP. Key components of the inspections include checks for coverage under the General Construction Permit during the initial inspection and assessments of compliance with the City's BMP and discharge requirements during all inspections. Responsible parties at the sites are educated as needed during inspections. Copies of the inspection forms are kept on file at the City. The City conducted inspections at high TTWQ construction sites bi-weekly during the wet season and monthly for medium TTWQ sites. While the Municipal Permit only requires construction inspections at low TTWQ on an "as needed" basis year round, the City conducted at least one round of inspections at low TTWQ construction projects with grading activities during the wet season.

When violations were noted during routine or follow-up inspections, these violations were noted on the project's inspection form, and the sites were given a list of corrective actions necessary to fix the observed violation. When necessary, a verbal or written warning was issued for the violation, and the City inspector followed up with the site until compliance was achieved. In most cases, violations were corrected while the inspector was still at the site, and follow-up visits were not necessary. Details on the enforcement actions taken for construction sites during the implementation period are described below.

3.5.4 Enforcement Measures

Table 3-1 includes the number of violations and enforcement actions taken during the reporting period in response to violations of the City's minimum construction BMP requirements. Enforcement actions are administered in an escalating manner as described in the City's updated JURMP.

Table 3-1
Total Number of Violations and Enforcement Actions Taken

Verbal Warnings	Written Warnings	Follow-Up Inspections	NOVs	Stop Work Orders
18	9	5	9	0

Copies of the forms utilized to administer the above enforcement actions can be found in Appendix D of the City's updated JURMP.

None of the violations observed at construction sites during the reporting period were found to endanger human health or the environment. The City was able to bring about compliance at all sites for which enforcement actions were taken, and it was not necessary to report any of these sites to the RWQCB.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's construction component have been made since that time.

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout 2007/2008, the City of La Mesa continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As required by the Municipal Permit, the City updated its JURMP document in March 2008. Any changes made to the City's Municipal Component were implemented by the formal adoption date required by the Municipal Permit, March 24, 2008.

As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal areas in the City. Municipal activities conducted by the City or City contractors include but are not limited to power washing, graffiti abatement, building maintenance, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. The City continued to respond to complaints made to the City's storm water hotline. All complaints made to the hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are included in Table 4-3. Though some changes have been made to the program since the first JURMP was written in 2002, the overall goal of the program has remained the same—implementing preventative BMPs at the source to reduce the need for costly treatment farther downstream.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- The City inspected all high TTWQ fixed municipal facilities.
- The City hosted 34 training events/meetings for municipal personnel and agencies working closely with the City; over 200 City personnel participated in these training sessions.
- The City continued to keep the informational storm water bulletin board in City Hall.
- The City removed a total of 692 tons from street sweeping activities.
- The City removed a total of 175.5 cubic yards from standard MS4 cleaning activities, not including drainage insert maintenance.

- The City removed nine cubic yards from filter inserts in University drainage basin; the City installed one more of these inserts in 2007/2008 for a total of 23.
- City personnel continued to restock the pet waste bag dispensers in City parks, using 180,000 pet waste bags during 2007/2008.
- A total of 30,810 linear feet of sewer line were televised during 2007/2008, which led to the discovery of some areas of the sanitary sewer in need of repair. The City replaced 1,150 linear feet of storm drain pipe during 2007/2008 and replaced or rehabilitated 12,136 linear feet of sewer line. This prevented these areas from becoming future seepage points.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities, because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar. For the purposes of organization, municipal fixed facilities are divided into the following categories: Parks and Recreational Facilities, Public Works Facilities, Fire Stations, and Other Fixed Facilities, which includes fixed facilities that could not be placed into another category.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included on the City's municipal inventory, which was revised during the JURMP update in early 2008. The JURMP includes detailed descriptions of each of the categories mentioned in the previous subsection and a discussion of activities beyond what is suggested by the facility's category or facility name. There were no changes to the City's municipal inventory nor were there any updates to the discussions of any fixed facilities on the City's inventory. The City's inventory is included as Appendix A.3.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs at all fixed municipal facilities. As mentioned in the City's JURMP, the City uses the California Stormwater Quality Association (CASQA) Municipal BMP Handbook to establish appropriate BMPs for fixed municipal facilities. Table 6-2 in the City's JURMP describes the CASQA fact sheets that are used for specific facility types.

The City continues to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as described in the City's JURMP. The City also continues to use Calsense Computerized Irrigation Control (Calsense) at a

number of fixed municipal facilities to reduce water use and decrease the chance of transporting pollutants to the City's MS4 by over-irrigation. BMP implementation for parks and recreational facilities, as described in the City's JURMP, has not changed.

City public works employees, fire station employees, and employees at other fixed facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for public works facilities, fire stations, and other fixed facilities.

4.2.4 PROGRAM IMPLEMENTATION

As mentioned above, the City's BMP requirements have not changed since the development of the revised JURMP. Some notable examples of implementation of those BMPs are provided below.

Calsense Computerized Central Irrigation Control
The City continues to use Calsense, an advanced automated irrigation system designed to prevent over irrigation at several fixed municipal facilities. Since Calsense is automated, it has a lower chance of malfunction than manual irrigation systems and allows the City to monitor irrigation activity from a central computer.

The Calsense system monitors irrigation by including the use of master valves and flow sensing to prevent over-irrigation and also decrease the amount of water that is used. A break in the system is recognized as a high flow, and the system is shut off until it is repaired. The use of this technology allows the City to prevent major leaks by detecting smaller leaks that might otherwise go undetected earlier than with a manual system. The automatic shutoff by Calsense saves thousands of gallons of water and prevents the runoff generated by a leak from carrying pollutants from parks and other fixed municipal facilities to the storm drain system. The irrigation system can be controlled by a central computer, which calculates the best time for irrigation based on moisture readings, weather, and real time flow rates at every valve. Additionally, the system allows staff to manage the system more efficiently and with less chance of over-irrigation. The irrigation schedules can be designed for a long period of time or easily modified for weekly or daily needs if necessary. The system allows for the most efficient usage of water while minimizing the chance of over-irrigation and consequent introduction of pollutants to the City's storm drain system. A total of 21 fixed facilities have been equipped with Calsense technology.

Parks and Recreational Facilities
During 2007/2008, City parks personnel installed eight new pet waste bag dispensers in City parks. The City now has a total of 34 pet waste bag dispensers in 14 parks. City personnel restock the dispensers as necessary; 180,000 pet waste bags were used during the reporting period. This is significantly more than during previous reporting periods. As mentioned in the City's JURMP, a number of volunteers continue to assist in keeping

the designated dog area at Harry Griffin Park free of pet waste as part of the Canine Corners Program. The City also continues to host the Adopt-A-Park program, which engages residents of the City in volunteering to pick up trash throughout local parks. The City further continued its partnership with the St. Madeline's Sophie Center, which employs developmentally disabled individuals in park maintenance activities. Kiosks in two City parks are another means of public outreach. The kiosks, one in La Mesita Park, the other in Vista La Mesa Park, present storm water information. The City plans to install one more kiosk in Jackson Park in 2008/2009. The Adopt-A-Park program, the partnership with St. Madeline's Sophie Center, and the storm water kiosks are also discussed in Section 9 of this Annual Report.

Public Works Facilities, Fire Stations, Other Fixed Facilities

As previously mentioned, City personnel continued to implement appropriate BMPs for municipal fixed facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance (i.e. landscaping, building maintenance, etc.) as necessary. Parking facilities associated with fixed municipal facilities are conducted as part of the regular sweeping activities and were swept weekly during 2007/2008. The large paved area at the City's Public Works Operation Center was swept at least once weekly during 2007/2008, and twice weekly if needed. Public Works employees continued to implement the storm water management plan (SWMP) at the Public Works Operations Center. Public Works employees also continued to maintain the seven filter inserts on the property; these inserts are cleaned twice annually.

Municipal Inspections

All high TTWQ fixed municipal facilities received an routine annual inspection in 2007/2008. Table 4-4 at the end of this section lists all 21 high TTWQ municipal fixed facilities requiring inspection in 2007/2008, the date the inspection was performed, and the recommended corrective actions from the inspection. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2007/2008. The City's municipal inspection form is included as Attachment 4.1.

Four fixed facilities were observed to have BMP deficiencies requiring follow-up action: the Community Pool, Harry Griffin Park, Northmont Park, Rolando Park, and the Public Works Storage Yard. The BMP deficiencies were not severe but were serious enough to warrant a follow-up inspection. During the initial inspection, facility personnel were notified of the deficiencies. Since most of the inspections were close to the end of the reporting period, the follow-up actions will be completed in the 2008/2009 reporting period. In future years the City plans to conduct inspections earlier in the reporting period.

During 2007/2008, the City's Stormwater Program Manager observed a broken irrigation valve at Porter Hall. The City's Stormwater Program Manager notified the responsible Public Works personnel with a verbal warning, and the valve was repaired immediately.

4.3 Roads, Streets, Highways, and Parking Facilities

4.3.1 Background

Roads, streets, highways, and parking facilities are often one of the first components of the City's MS4 to collect and convey runoff. These areas can collect a variety of pollutants due to routine vehicle use and use of the surrounding areas. The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris that may accumulate and then be discharged with runoff.

4.3.2 Source Characterization

The City maintains roads, streets, and highways in the City; the City also maintains four stand-alone parking facilities. Roads, streets, highways, are included as one entity on the City's municipal inventory and each individual stand-alone parking facility is also included on the city's municipal inventory, which is included in Appendix A.3.

4.3.3 Best Management Practices

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping. Other BMPs are chosen as needed based on the CASQA Municipal Handbook. The City's sweeping frequency is outlined in the JURMP and described in the following subsection. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2007/2008.

4.3.4 Program Implementation

During 2007/2008, the City swept a total of 8,285 curb miles, removing approximately 692 tons of debris. Similar to previous reporting periods, the debris removed by sweeping activities was approximately 80 percent sediment and 20 percent leaves, debris, and trash. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities, and the associated sweeping frequency. The City met the sweeping frequency requirements of the high, medium, and low priority streets as described in both the JURMP and in the table below. Parking lots associated with City parks were swept every two weeks; parking lots associated with all other fixed facilities in the City were swept every week during 2007/2008.

As a means to address priority pollutants in the San Diego Bay and the San Diego River Watersheds, the City conducted additional sweepings of some City streets. Designated residential areas that are low priority were swept monthly during 2007/2008 and selected high priority streets were swept weekly.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route	Sweeping Frequency
Low	Designated residential areas	140 miles	As needed, at least annually
Medium	Center islands	9 miles	At least once per month
High	Downtown areas, designated residential areas, designated commercial areas, stand-alone parking facilities	10.6 miles	At least every two weeks
Fixed Facilities	Parking lots associated with municipal fixed facilities	N/A*	Weekly
Fixed Facilities - Parks	Parking lots associated with parks	N/A*	Every two weeks
Fixed Facilities – PW Operations Center	Public Works Operation Center	N/A*	At least weekly, twice weekly if needed
Total Amount of Debris Collected from Street Sweeping Activities: 692 tons			

* Mileage data is not available for the swept area of stand-alone parking facilities, parking facilities associated with municipal facilities, and the PW Operations Center. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections

As previously mentioned, there are four stand-alone parking facilities in the City, each high TTWQ. Routine, annual inspections were completed at each of the four parking facilities and results of the inspections are included in Table 4-4, at the end of this section.

4.4 MS4

4.4.1 Background

The City's extensive storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during a rain event. The City's MS4 consists of approximately 56 miles of pipes of varying materials, natural channels, concrete channels, and culverts and over 400 curb inlets and catch basins.

4.4.2 SOURCE CHARACTERIZATION

The City's MS4 as one complete entity is included on the City's high TTWQ municipal inventory.

4.4.3 BEST MANAGEMENT PRACTICES

The City maintains a strict MS4 maintenance and cleaning schedule. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. As described in the City's JURMP, BMPs for MS4 maintenance activities are chosen based on the CASQA Municipal Handbook and have not changed during 2007/2008.

The City has installed and maintains 23 filter inserts in catch basins in the University drainage basin, which are designed to prevent debris from entering the MS4. These filter inserts are maintained as part of the routine MS4 maintenance schedule.

4.4.4 PROGRAM IMPLEMENTATION

The City implemented a rigorous MS4 inspection and cleaning schedule during 2007/2008. The City inspected and cleaned all MS4 cleanout locations twice in 2007/2008, as described in Table 4-2, below.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter	Amount of Debris Removed from Cleaning Activities
Catch Basins/Self Cleaning MS4 Facilities	100%	N/A	58.5 cubic yards
Open Channels	100%	100%	117 cubic yards
Drainage Inserts	100%	N/A	9 cubic yards
Total Debris Removed From MS4 Maintenance Activities: 184.5 cubic yards			

* No structures were observed at least 33% of capacity during the reporting period. However, the City cleans out any structures, including self-cleaning structures, in which trash and debris is observed at the time of inspection.

The City's cleanout locations are access points to various sections in the City's MS4, so no additional pipe beyond the cleanout location is typically cleaned. The City may flush the MS4 line and then reclaim the water in the event of a spill. During 2007/2008, there was no need to flush any MS4 line, so there is no data to report for additional MS4 cleanout activities. The City continued to maintain the filter inserts installed in the University drainage basin and installed an additional insert in 2007/2008. A total of 23 catch basins or inlets in the University drainage basin are equipped with filter inserts.

During 2007/2008, the City continued to inspect the open channels in the City and remove trash and debris as necessary. If litter or debris is observed during the routine inspections, it is removed immediately. The total length of the channel segments inspected and cleaned by City staff is approximately 4,930 feet.

As described in Table 4-2, 184.5 cubic yards of debris was removed during MS4 maintenance activities. The weight of the material removed was not recorded. The volumes were converted to estimated weights using the percent composition estimates from City maintenance staff and conversion factors of 2,300 pounds per cubic yard of rocks and soil and 400 pounds per cubic yard of trash, leaves, and similar material. The total weight of material removed was estimated at 120 tons.

4.5 Sanitary Sewer System

4.5.1 Background

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or sanitary sewer overflow (SSO) and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 Source Characterization

The City maintains a system of public sanitary sewer pipes to convey wastewater from the City to be treated. The sanitary sewer system, as one complete entity, is included on the City's high TTWQ municipal inventory.

4.5.3 Best Management Practices

The City implements BMPs from the CASQA Municipal Handbook, as described in the City's JURMP, during sanitary sewer maintenance. There have been no changes to these BMPs during 2007/2008. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities. The City clears blockages and repairs leaks as needed.

4.5.4 Program Implementation

The City continued to maintain 33 posted signs at various canyon locations providing emergency contact information to report possible SSOs. These signs help the City in responding to illegal discharges and SSOs that may otherwise go unnoticed for a longer period of time.

As part of the City's regular maintenance schedule, the City maintains areas known to be "hot spots" for grease buildup on a monthly basis. The City has also worked to develop a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. The City conducted initial FOG evaluations at a number of eating establishments during 2007/2008 and plans to fully implement the program in 2008/2009.

In addition to the monthly maintenance at known grease "hot spots," the City seeks to eliminate seepage from the sanitary sewer system to the MS4 by routine preventative maintenance of both systems. Routine maintenance of both systems allows the City to find areas that are likely to become problems in the future and make the necessary repairs/replacements before any larger issues arise. The City also continued to conduct flow metering in its sanitary sewer system to monitor for evidence of potential problems. The City cleans out or repairs any identified problem areas as necessary. The City continued to use the $14.5 million dollar low-interest loan it has obtained from the State Water Resources Control Board (SWRCB) to rehabilitate sections of the City's sanitary sewer system. The program is anticipated to be completed in the 2008/2009 reporting period. During 2007/2008, the City replaced 1,150 linear feet of storm drain pipe and replaced or rehabilitated 12,136 linear feet of sewer line. A total of 30,810 linear feet of sewer line was televised during 2007/2008, which led to the discovery of some areas of the sanitary sewer in need of repair. This prevented these areas from becoming future seepage points.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. There were no SSOs during 2007/2008.

4.6 Mobile Municipal Activities, Including Power Washing

4.6.1 Background

The City conducts a variety of different mobile municipal activities, typically involving infrastructure maintenance, landscape maintenance, graffiti removal, and power washing. Power washing is not considered a part of any normal maintenance activities, but it is used when other methods of cleaning or graffiti removal are not effective.

4.6.2 Source Characterization

Both power washing and graffiti removal are listed on the City's high TTWQ municipal inventory. Infrastructure maintenance and landscape maintenance are listed on the City's medium TTWQ municipal inventory.

4.6.3 Best Management Practices

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. For example, City personnel performing power washing are trained to collect all waste water and City personnel conducting graffiti removal are trained to store and handle any chemicals properly. New City employees are also provided with a copy of the municipal BMP handbook. The handbook includes the municipal BMPs from the City of La Mesa Storm Water Best Management Practices Manual – Part I (BMP Manual Part I). A more detailed discussion of BMPs for specific mobile activities is included in the City's JURMP, which also includes BMP Manual Part I as an attachment.

4.6.4 Program Implementation

Power washing and graffiti removal, both high TTWQ activities, are conducted on an as needed basis and are therefore not on a set schedule. These activities were not available for inspection after the formal adoption of the JURMP in March 2008, so an inspection could not be conducted during the 2007/2008 reporting period. In the event that these activities are conducted during the 2008/2009 reporting period they will be inspected.

During the 2007/2008, a few minor BMP infractions were observed by City staff but were resolved in a timely manner. During routine activities, the City's Stormwater Program Manager observed over-irrigation from City property near La Mesa Boulevard. The City's Stormwater Program Manager issued a written warning to Public Works personnel responsible for landscaping in that area and provided them with an over-irrigation fact sheet. No other issues with over-irrigation have been observed in this area. A City employee reported to the City's Stormwater Program Manager that City landscaping activities had left some grass clippings on a sidewalk at the Adult Enrichment Center. The appropriate public works employees were notified with a verbal warning, and the grass clippings were cleaned up immediately.

4.7 Special Events

4.7.1 Background

There is one annual special event in La Mesa: Oktoberfest, which is an annual three-day celebration occurring in early October each year. There are no other regular major special events, although smaller events may occur from time to time.

4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the city's high TTWQ municipal inventory.

4.7.3 BEST MANAGEMENT PRACTICES

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable.

4.7.4 PROGRAM IMPLEMENTATION

The City did not host any special events after the formal adoption of the updated JURMP, so there were no special events available for inspection during 2007/2008. The City did host clean-up events after the formal adoption of the updated JURMP, but since the purpose of the clean-up events is to remove trash and debris, the City does not consider it necessary to implement BMPs for clean-up events.

During 2007/2008, the City provided vendors of the Oktoberfest event set to occur in 2008/2009, a handout entitled "Tips for Outdoor Vendors." This fact sheet informed the vendors of the difference between the storm drain system and the sanitary sewer system and the effects of polluted urban runoff. The sheet also included event-specific BMPs, such as using dry cleaning methods, having spill response materials if using cooking grease, and managing trash and other wastes properly. The City distributed 311 of the aforementioned fact sheet.

4.8 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating illicit connections and illegal discharges (IC/ID) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, in storm water articles in the *La Mesa Focus* newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2007/2008 reporting period and the City's response to each are listed in Appendix B. One hundred thirty-seven complaints were

documented this year, an increase from the 89 recorded last year. The increase in documented complaints may indicate that individuals in the City are more aware of the impact of certain activities on the storm drain system as well as the need to report such activities to the Storm Water Hotline and/or the City website.

Enforcement

As previously stated, investigated complaints from the Storm Water Hotline, City website, and Public Works hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material. Table 4-3 summarizes the enforcement actions taken in response to complaints received.

Table 4-3
Enforcement Actions Resulting from Complaints Received by the Storm Water Hotline

	Verbal Warning	Written Notice to Comply	Written Warning	NOV
Commercial	6	1	1	9
Industrial	0	0	1	0
Mobile	0	0	0	6
Municipal	4	0	0	0
Residential	4	2	17	5
Construction	2	0	0	2

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. Preventative maintenance is regularly conducted on the City's sanitary sewer system, and video inspections and sewer surveys are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventative maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. During the 2007/2008 reporting period, only one spill occurred and was reported to the RWQCB within 24 hours. A detailed email regarding the spill was sent to by the City, and the RWQCB deemed it unnecessary to produce a formal report on the event:

- On 6/4/2008, the City received a complaint about a homeowner discharging a 500 gallon tank from his residence at 4950 Pine Street. When the La Mesa Fire Department arrived at the site no active discharge was observed, but red staining was apparent on the curb of the street. The hazmat team advised the

homeowner to place kitty litter along the curb and issued an NOV for the illegal discharge. Educational material and instructions for proper disposal of the kitty litter were provided to the resident.

4.10 Education and Outreach

During 2007/2008, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. During 2007/2008 the City hired three new employees that were provided a copy of the City's municipal BMP handbook. Additionally, the City sent an e-mail to all its employees about the adoption of the new JURMP and the new programs associated with the update. The City also continued to maintain a storm water bulletin board in City Hall, which provided storm water information and brochures. Detailed information regarding the education and outreach conducted for City personnel is described in detail in Section 8 of this Annual Report. Information about the municipal tailgate training sessions, a copy of the municipal BMP handbook, a copy of the Citywide e-mail, and a photo of the storm water bulletin board are included in Attachment 4.2.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 Program Modification and Review

The City's JURMP was recently updated in March 2008. No changes to the City's municipal component have been made since that time.

Table 4-4
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Municipal Category	Inspection Date	Recommended Corrective Actions
1	Allison Avenue Lot (Parking Facility)	Palm & Allison Avenues	High	Roads, Streets, Highways, and Parking Facilities	5/16/2008	• Provide secondary containment for portable toilet and sink since they are stored liquid.
2	Aztec Park	Corner of Aztec Dr and Morocco Dr	High	Parks and Recreation Facilities	6/20/2008	• None
3	Briercrest Park	9000 Block Wakarusa Street	High	Parks and Recreation Facilities	6/4/2008	• None
4	Collier Park and Pump House	4401 Palm Avenue	High	Parks and Recreation Facilities	6/20/2008	• Inspect the upper area of the park and remove litter. • Remove leaves and sediment from the culvert and the open channel. • Provide additional vegetative or physical stabilization to prevent sediment transport into the channel. • Keep dumpster lids closed when not in use.
5	Community Pool	5100 Memorial Drive	High	Parks and Recreation Facilities	5/22/2008	• Use dry methods or collect all water used to cleanup pool chemicals and dispose of appropriately to a sewer drain. Provide some documentation of this change of practice. • Minimize discharge of water to deck chains that are not directed to the sewer. • Stabilize loose soil in the parking lot landscaping to prevent erosion and sediment transport.
6	Harry Griffin Park	9550 Milden Street	High	Parks and Recreation Facilities	6/24/2008	• Clean out leaves and litter from catch basins and parking lots and trash enclosures. • Keep loose soil out of the parking lot from the horseshoe pit and gopher soil mounds. • Keep dumpster lids closed when not in use. • Provide secondary containment for the port-o-potty units as is feasible.

Table 4-4 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Municipal Category	Inspection Date	Recommended Corrective Actions
7	Highwood Park	4200 Parks Avenue	High	Parks and Recreation Facilities	5/16/2008	• Collect organic debris that has accumulated in the parking lot, trench drain, catch basin and on sidewalks. • Pick up litter and keep the site free of litter. • Properly store stockpiles with covered containment to prevent soil transport to the trench drain and catch basin. • Consider replacing pet waste bags in the dispenser(s).
8	Jackson Park	Jackson Drive & Laird Stree	High	Parks and Recreation Facilities	5/21/2008	• Ensure that the sidewalks and parking lot remain free of sediment, and stabilize the planter soil as necessary. • Keep dumpster lids closed when not in use. Consider re-labeling the pet waste bag dispenser.
9	Junior Sean Sports Complex	9001 Park Plaza Drive	High	Parks and Recreation Facilities	6/20/2008	• Clean out litter from the curb inlet. • Remove sediment regularly from catch basins around the perimeter or otherwise prevent sediment transport to the storm drain.
10	La Mesa Blvd (Parking Facility)	La Mesa Blvd & Acacia Avenue	High	Roads, Streets, Highways, and Parking Facilities	5/16/2008	• Clean up organic debris in the parking lot.
11	La Mesita Park and Gardener's Shack	8855 Dallas Street	High	Parks and Recreation Facilities	6/20/2008	• Remove litter regularly in high traffic/use areas of the park. • Collect vegetative debris from the parking lot and clean out catch basins.

Table 4-4 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Municipal Category	Inspection Date	Recommended Corrective Actions
12	Lemon Ave Lot (Parking Facility)	Lemon Avenue & 3rd Street	High	Roads, Streets, Highways, and Parking Facilities	5/16/2008	• Keep the parking lot free of litter and debris. • Keep all dumpster lids closed when not in use. • If the couches do not belong to the thrift shop, remove and dispose of them appropriately.
13	MacArthur Park	University Avenue and Memorial Drive	High	Parks and Recreation Facilities	5/22/2008	• Keep the parking lots free of organic debris. • Keep dumpster lids closed when not in use. • Provide secondary containment for the port-o-potty.
14	Northmont Park	Severin Drive and Amaya Drive	High	Parks and Recreation Facilities	6/20/2008	• Clean out leaves and debris from storm drain inlets. • Regularly check the site for litter and pick it up. • Ensure that storm drains are protected when applying herbicide to prevent these chemicals from entering the storm drain system. • Cover the soil stockpile as long as it must remain on the site.
15	Palm Avenue Lot (Parking Facility)	Palm Avenue and Lemon Ave	High	Roads, Streets, Highways, and Parking Facilities	5/16/2008	• None
16	Porter Hall	4610 Memorial Drive	High	Parks and Recreation Facilities	5/22/2008	• None
17	Porter Park	8425 University Avenue	High	Parks and Recreation Facilities	5/22/2008	• Keep the dumpster lids closed when not in use and regularly place litter in the dumpster.

Table 4-4 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Municipal Category	Inspection Date	Recommended Corrective Actions
18	Public Works (PW) Yard	8152 Commercial Street	High	Public Works Facilities	5/22/2008	• Clean up and treat leaked fluids and stains. • Keep area free of sediment. • Provide drip pans or other effective method to contain leaks from heavy equipment.
19	PW Fleet	8152 Commercial Street, Building 400	High	Public Works Facilities	5/22/2008	• Clean out sediment or debris from the inlet filter basket and nearby area. • Consider providing overhead over for the fueling area.
20	PW Storage and Maintenance	8152 Commercial Street, Building 200	High	Public Works Facilities	5/22/2008	• Clean up sediment under parked equipment and at the NW inlet. • Keep secondary containment free of spilled liquids. • Prevent fluid leaks or catch them with a drip pan or other effective method. • Consider providing overhead cover for the fueling area.
21	PW Storage Yard	8152 Commercial Street	High	Public Works Facilities	5/22/2008	• Clean up sediment in the stockpile area, storage area and near the inlet. • Clean sediment out of the filter basket in the inlet. • Cover the stockpiles when not in use and keep the area free of loose sediment. • Consider providing overhead cover for the fueling area.

Table 4-4 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Municipal Category	Inspection Date	Recommended Corrective Actions
22	Rolando Park	Alamo Way & Vigo Street	High	Parks and Recreation Facilities	6/6/2008	• Replace and improve implementation of construction BMPs intended to prevent sediment transport to the storm drain catch basin and curb inlet at the cul-de-sac. • Clean up sediment and plant debris in the parking lot and on paved walkways. • Remove plant debris from all storm drains. • Vegetate or otherwise stabilize the slope between the east ramp and the upper field and consider extending the retaining wall or wood boards as are used downhill. • Provide cover and containment for stockpiles stored at the park.
23	Sunset Park, Gardener's Shack and Recreational Building	5540 Lake Park Way	High	Parks and Recreation Facilities	5/21/2008	• Provide some form of soil stabilization for the slope west of the park to prevent erosion to the parking lot. • Level the mounds of soil in the planters that would otherwise be able to spill onto the sidewalk. • Keep the parking areas free of oil leaks and stains.
24	Sunshine Park	70th & Tower St	High	Parks and Recreation Facilities	6/10/2008	• Clean out the sediment and debris in the catch basin south of the field
25	Vista La Mesa Park	King Street & Hoffman Avenue	High	Parks and Recreation Facilities	5/16/2008	• Keep the parking area and swale free of sediment and organic debris. • Consider repairing and refilling the pet waste bag dispenser.

Note: Roads, streets, highways, and parking lots; the MS4; and the sanitary sewer system were inspected via the maintenance effort described earlier in this section.

5.0 INDUSTRIAL AND COMMERCIAL

5.1 INTRODUCTION

During 2007/2008, the City continued to implement a storm water program to mitigate urban runoff pollution from the areas and activities of industrial and commercial businesses. As part of the JURMP revision, updates were made to the City's industrial and commercial site/source prioritization process, minimum BMP requirements, and inspection frequencies. The City's updated program was implemented after the formal adoption date of the JURMP in March 2008. Through various aspects of the industrial and commercial program, the City aims to reduce the amount of pollutants discharged from these facilities.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the industrial and commercial component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- The City met the Municipal Permit requirement of inspecting at least 20 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ industrial and commercial facilities.
- The City completed pollutant discharge potential assessment (PDPA) forms and additional watershed-specific questionnaires at inspections to aid watershed management and source identification efforts.
- The City prepared a Chollas Creek Total Maximum Daily Load (TMDL) educational fact sheet and distributed it to businesses in the Chollas Creek Watershed during inspections.
- Based on inspection findings and complaints made to the hotline, the City issued 50 NOVs, two written warnings, one written notice to comply, and six verbal warnings to industrial and commercial businesses.
- One mobile business signed the City's mobile business affidavit acknowledging that it was aware of the City's BMP requirements.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's industrial and commercial inventories, which can be found in appendices A.4 and A.5, include all stationary facilities known to be operating in the City that are

required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and designated minimum BMPs to mitigate the impacts of business activities on water quality.

5.2.2 Source Characterization

As previously mentioned, the City's industrial and commercial inventories are included as appendices A.4 and A.5. The inventories include both stationary and mobile businesses, as required by the Municipal Permit. The inventories were updated in mid 2007/2008 as part of the JURMP update using applicable data from the City's business license registry, the then existing inventory and inspection records, and the State's list of industrial sites covered under the State of California Industrial General Permit (Industrial Permit).

Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Industrial Permit subjectivity
- Consideration of downstream waterbody and whether the business is likely to discharge pollutants for which the waterbody is impaired
- Results from previous inspections and institutional knowledge
- Proximity to the receiving waterbody

The City's updated inventory includes 511 stationary industrial and commercial facilities.

5.2.3 Best Management Practice Requirements

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are described in more detail in the City's BMP Manual Part I, which is an attachment to the City's JURMP.

5.2.4 Program Implementation

Industrial and Commercial Inspections

During 2007/2008, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities; Table 5-1 provides a summary of the industrial and commercial site visits. The purpose of the inspections is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities. The City also checks for Industrial Permit subjectivity and reviews SWPPPs and monitoring results when applicable.

Since requirements of the new Municipal Permit did not go into effect until March 2008, the industrial and commercial component of the City's storm water program was conducted under the Order No. 2001-01 requirements for the first part of the 2007/2008 fiscal year and under the new Municipal Permit requirements for the latter part of the 2007/2008 fiscal year. Though the new Municipal Permit only required 50 percent of the high TTWQ sites to be inspected during the first year of implementation, the City chose to inspect 100 percent of its inventoried high TTWQ industrial and commercial businesses. The City also met the new Municipal Permit requirement that 20 percent of the total number of facilities on the City's inventory be inspected during the first year of program implementation. All facilities in the City with Industrial Permit coverage were also all inspected in 2007/2008, which meets the requirements of the previous municipal permit. During the inspection process, the City also checked Industrial Permit compliance status when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-2 on the following page.

Table 5-1 below provides a summary of the industrial and commercial site visits. As shown in the table, all high TTWQ sites were selected for inspection, and additional medium TTWQ sites were also selected for routine inspection. Additional sites selected for inspections were medium TTWQ and were typically restaurants and auto-related facilities. The City chose to select mainly restaurants and auto-related facilities for the additional industrial and commercial inspections due to those industry categories' potential to discharge bacteria and heavy metals, respectively. Table 5-3 at the end of this section summarizes the results of the 88 full inspections conducted at 87 facilities as part of the routine inspection program; note that one facility was inspected twice during 2007/2008. The remainder of the sites were visited, but during the visit they were found to have moved, be duplicates of other businesses, or not to be conducting activities for which inclusion on the City's inventory is necessary. Several sites were also selected as part of an additional study to help characterize a light industrial area of the City. The inspections conducted as part of the additional study are discussed in detail in Section 12 and are not included in Table 5-3.

Table 5-1
Summary of Industrial and Commercial Site Visits

Facility Category	Initial List	Accounted For*	Percentage of Total Inventory
High TTWQ Industrial	12	12	2%
High TTWQ Commercial	20	20	4%
Additional Sites Selected for Inspection	72	72	14%
Additional Study "Light Industrial" Area	6	6	1%
All Stationary Inventoried Sites	**530****	**--**	**21%**

* "Accounted For" means that the business was inspected, assessed during a site visit and found to not need an inspection, or found to not need an inspection when called to schedule a site visit.

** The number of sites selected for inspection in 2007/2008 was based on the inventory presented in the JURMP, which included 530 businesses. The final inventory presented in this JURMP Annual Report has been updated to account for inspection results during 2007/2008 and includes only 511 stationary businesses.

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a through examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form, which is included in the City's JURMP, and discussed with facility personnel present during the inspection. The City also completed PDPA forms and supplemental watershed questionnaire forms during the inspections as part of an additional data collection effort. These forms are included with the City's inspection form, which is included in Attachment 5.1. More information about the results of this process is presented in Section 12 of this JURMP Annual Report.

The City did not rely on third party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third party inspection program.

General Industrial Permit

Industrial Permit compliance status was evaluated during the industrial and commercial inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). The inspector then determined Industrial Permit subjectivity based on SIC code. Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-2 on the following page. The table includes businesses directed to file a Notice of Intent (NOI) and develop a Storm Water Pollution Prevention Plan (SWPPP) and monitoring program, as well as businesses that

had filed an NOI but had failed to develop a SWPPP and monitoring program. The table also includes facilities that could potentially gain exemption from Industrial Permit requirements by completing notice of non-applicability/no exposure certification (NONA/NEC) paperwork.

Table 5-2
Violations of the Industrial Permit

#	Business Name	Street Address	Permit Subjectivity	Action to Correct Violation				
				File NOI	Develop SWPPP	Develop / Implement Storm Water Monitoring	Complete NONA/ NEC	Other
1	Albert J. Becker, Inc. dba Wood Design West	8333 Case Street Suite C	Conditional				✔	
2	Amazing Stone and Tile	8227 Commercial Street	Mandatory	✔	✔	✔		
3	American Tanks	8111 Commercial St	Conditional	✔	✔	✔		
4	Centex Glazing	8260 Commercial St.	Conditional	✔	✔	✔		
5	Classic Screen Print*	8176 Center St, Ste. C	Conditional				✔	
6	Rainbow Steel Inc.	8332 Case St.	Conditional					Keep a copy of the SWPPP on site at all times. Perform storm water monitoring as required by the Industrial Permit.
7	Wedo Wedo	8169 Center Street	Mandatory					Keep a copy of the SWPPP on site at all times. Perform storm water monitoring during the next wet season.

* Completed NONA/NEC paperwork has been received by the City in 2008/2009

Each business was notified of any Industrial Permit-related non-compliance by the inspector. Each business observed to be in violation of the Industrial Permit was issued an NOV. Details of NOVs issued in response to the findings of the 2007/2008 inspection program are discussed later in this section. During 2007/2008, the City's Stormwater Program Manager maintained correspondence with the RWQCB regarding industrial non-filers and other Industrial Permit-related instances of non-compliance. Don Perrin

of the RWQCB was notified via email of all three non-filers in the above list and of the compliance deficiencies at Rainbow Steel during the reporting period.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Inspectors distributed a variety of educational material covering topics such as watershed concepts, San Diego County Water Authority (SDCWA) water conservation efforts, and the City's new BMP requirements. Copies of the industrial and commercial component of the City's JURMP, which detail the City's BMP requirements, was provided to businesses that received full storm water compliance inspections. A description of the specific educational material provided to industrial and commercial facilities is included below. Educational materials distributed during the 2007/2008 industrial and commercial storm water compliance inspections are included in Attachment 5.1.

- Inspected facilities in the Alvarado drainage basin received the following educational material:
    - Letter from the City – "Re: Storm Water Compliance Inspections" informed business owners of the inspection program and provided notification that D-MAX inspectors were to perform the inspections.
    - Trifold – "Preventing Urban Runoff Pollution" discussed the activities that create storm water pollution and the BMPs required to prevent it.
    - San Diego River Watershed Factsheet outlined watershed concepts, priority pollutants and required BMPs for the San Diego River Watershed.
    - BMP Manual Part I – "3.0 – BMP Requirements for all Dischargers" discussed the types of discharging activities and all relevant BMP requirements.
    - Over-Irrigation Stormwater Pollution Prevention Factsheet outlined the contribution of over-irrigation to storm water pollution as well as guidelines to prevent over-irrigation.
    - SDCWA Water Efficiency Discounts provided information on discounts for water efficient devices for restrooms and HVAC systems.
    - SDCWA Smart Landscape provided information on irrigation evaluations, artificial turf, and smart controllers and provided guidelines on how to purchase and qualify for a new controller.

- Inspected facilities in the University drainage basin received the following educational material:
    - Letter from the City – "Re: Storm Water Compliance Inspections" informing business owners of the inspection program and notification that D-MAX inspectors were to perform the inspections.
    - Trifold – "Preventing Urban Runoff Pollution" discussed the activities that create storm water pollution and the BMPs required to prevent it.

- San Diego Bay Watershed Factsheet outlined watershed concepts, priority pollutants and required BMPs for the San Diego Bay Watershed.
- BMP Manual Part I – "3.0 – BMP Requirements for all Dischargers" discussed the types of discharging activities and all relevant BMP requirements.
- Over-Irrigation Stormwater Pollution Prevention Factsheet outlined the contribution of over-irrigation to storm water pollution as well as guidelines to prevent over-irrigation.
- SDCWA Water Efficiency Discounts provided information on discounts for water efficient devices for restrooms and HVAC systems.
- SDCWA Smart Landscape provided information on irrigation evaluations, artificial turf, and smart controllers and provided guidelines on how to purchase and qualify for a new controller.
- Chollas Creek TMDL Fact Sheet discussed the TMDLs for Chollas Creek as well as BMPs to employ to ensure that no pollutants enter the drainage system.

- All eating establishments received SDCWA "20 Gallon Challenge" informational cards and a table tent describing the SDCWA's 20 gallon challenge campaign. Eating establishments received information brochures entitled "Grease Interceptors and Grease Traps, How to Keep Cooking Grease Out of the Drain" and "What's Cookin'" brochures, as applicable. Both brochures were also available in Spanish.
- Auto shops received the "Green Wrench Guide" as applicable. The brochure discussed storm water concepts, required BMPs, good housekeeping techniques, and City contact information. This brochure was also available in Spanish.

The City continued to partner with Target and Dixieline Lumber in the City to provide English and Spanish Integrated Pest Management (IPM) cards (Attachment 5.2) available to the public at each business's garden center. This continued collaboration between the businesses and the City's Stormwater Program Manager in distributing educational material is valuable to the city's storm water program. During 2007/2008, a total of 120 packets of English IPM cards and 115 packets of Spanish IPM cards were distributed through Target and Dixieline Lumber.

Similar to previous years, the City continued to publish storm water-related articles in the widely distributed *La Mesa Focus* newsletter. The 2007 issues were mailed to residents and businesses in the City, and the 2008 issues were distributed electronically. Summaries of the articles in the newsletter can be found in Section 6; the newsletters are included as Attachment 5.3 to this JURMP Annual Report.

Enforcement

Based on the 2006/2007 inspection, the City conducted a follow-up inspection at Dixieline Lumber in the fall of 2007. Many of the corrective actions had been implemented, but additional corrections were still necessary. The City inspected

Dixieline Lumber again in the spring of 2008, and again some improvement was noted, with only relatively minor corrective actions noted. The City also coordinated with the RWQCB regarding Industrial Permit noncompliance noted in the City in 2006/2007 and 2007/2008. More information about the sites out of compliance and enforcement actions taken is available both in the Industrial Permit compliance discussion earlier in this section and in a bulleted list later in this enforcement subsection.

Several industrial and commercial facilities were also observed to be out of compliance with the City's municipal storm water ordinance and/or the Industrial Permit during inspections conducted in 2007/2008. Most of the inspections were conducted close to the end of the 2007/2008 reporting period, so actions to bring the sites into compliance will continue into the 2008/2009 reporting period. The City did, however, send NOVs to businesses in violation of the City's municipal storm water ordinance and/or the Industrial Permit during 2007/2008. A total of 35 NOVs were mailed in response to the 2007/2008 inspections. A summary of NOVs issued in response to the 2007/2008 inspections is included below:

- Five industrial facilities were in violation of an aspect of the Industrial Permit related to filing an NOI and/or a SWPPP and monitoring program and were mailed an NOV. Three of these facilities were also in violation of the City's storm water ordinance for failing to properly implement BMPs. Permit-related and City ordinance-related violations were included on the same NOV, and the RWQCB was notified of Industrial Permit noncompliance.
- Thirty industrial and commercial facilities, not including the three above that were also issued NOVs for noncompliance with the Industrial Permit, were issued NOVs for failing to properly implement BMPs.

Three industrial and commercial IC/IDs were discovered during routine inspections. All three were due to a lack of proper BMP implementation when performing car washing activities. All three facilities were given NOVs after they were inspected toward the end of 2007/2008, and follow-up inspections will be conducted during the 2008/2009 reporting period. In addition to these three IC/IDs, two inspected facilities were noted as having potential IC/IDs. The City is following up with these facilities to ensure they come into compliance with the City's requirements:

- On 5/28/2008, Chili's Bar and Grill #454, located at 8285 Fletcher Parkway, received a routine inspection. During which the inspector observed a poorly maintained enclosed area behind the restaurant where the waste grease bin and bags of trash waiting to go to the dumpster are stored. Three drains were observed in this general area, each appearing to regularly receive a greasy discharge. During the inspection, the facility personnel present were under the assumption that each of the three drains was connected to the sanitary sewer system. Facility personnel checked the building plans and determined that only one of the drains is connected to the sanitary sewer system. Facility personnel reported that deck brushing and power washing the area and with discharge to

the three drains in that area was a regular occurrence at the facility. Because no discharge was observed at the time of inspection, no violation for illegal discharge was noted. Facility personnel were notified that wash water cannot be allowed to discharge to the drains that are connected to the storm drain system, which would be an illegal discharge.

- On 6/10/2008, Marie Callender's #72, located at 6950 Alvarado Road, received a routine inspection. During which the inspector observed two trench drains in the loading and disposal areas that had evidence of grease discharge (grease buildup in the grates). The general manager, who was present for the inspection, reported that the drains were installed approximately five years ago to collect water from washing activities in the parking lot and are connected to the sanitary sewer system. The general manager provided D-MAX a cost estimate from a contractor hired to route the drains to the sanitary sewer system, but no other documentation that the drains are connected to the sanitary sewer system, such as final building plans, could be provided. The business was issued an NOV directing it not to discharge to the drain, and the issue was also referred to the appropriate City staff to investigate whether the drain was a sewer drain and, if so, if the proper permits had been obtained.

During the course of the 2007/2008 reporting period, the City received a number of complaints through the City's storm water hotline regarding industrial and commercial businesses. Based on the results of the complaint investigations, the City took enforcement actions for stationary commercial and industrial facilities. Details of the industrial and commercial complaint investigations are included in Appendix B and Section 7 of this JURMP Annual Report. The City took the following enforcement actions in response to complaints.

- Issued two written warnings and one notice to comply
- Issued six verbal warnings
- Issued nine NOVs

There were no instances of noncompliance at stationary businesses found to present a significant threat to human health or the environment observed during 2007/2008. Other than the non-filers discussed earlier in this section, no other businesses were reported to the RWQCB.

5.3 MOBILE SOURCES

5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because many mobile businesses may be home based and activities do not occur in one fixed location, inspections of such facilities are impractical.

5.3.2 Source Characterization

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile.

5.3.3 Best Management Practice Requirements

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are required to be implemented for mobile activities, as applicable. BMPs for mobile businesses, including key principles, such as proper collection and disposal of any discharge, are discussed in the City's JURMP. The City has also established a program that requires mobile businesses operating in the City to sign an affidavit that makes them aware of the City's BMP requirements and commits the businesses to implementing them. There have been no updates to the BMP requirements as described in the JURMP.

5.3.4 Program Implementation

Throughout the course of 2007/2008, the City responded to eight calls to the City's storm water hotline regarding mobile businesses. Notable occurrences of non-compliance as well as the City's response are discussed below:

- City personnel reported to the storm water hotline that a mobile pool plastering business discharged plaster into the street in front of a private residence where work was being conducted. The City's Stormwater Program Manager investigated the complaint and issued an NOV to the business owner. Educational material and direction on clean up were provided. The City's Stormwater Program Manager verified the street had been cleaned.
- An anonymous caller reported a property management company power washing building awnings without any BMPs. The City's Stormwater Program Manager investigated and verified the complaint, and issued an NOV to the property management company conducting the power washing. Educational material was also provided.

Several other mobile businesses were reported to the storm water hotline. In each case the City responded to investigate and verify the complaint. Enforcement action was taken and educational material was distributed as applicable. More detail about the complaints made to the City's storm water hotline regarding mobile businesses is included in Appendix B and Section 7 of this Annual Report.

Mobile Affidavits

During 2007/2008, the City required one mobile business to sign an affidavit (Attachment 5.4) to acknowledge that proper disposal is necessary for any waste water generated by mobile business activities such as car detailing and power washing. Additionally, the affidavit states that the business owner agrees to implement BMPs as

required by the City's JURMP and acknowledges that failure to do so will result in enforcement action and possible legal action.

Education and Outreach and Enforcement
As previously mentioned, eight complaints were made to the City's Storm Water Hotline regarding mobile businesses. Of those eight complaints, seven were verified by City personnel. No issues were observed upon investigation of the eighth complaint, so no further action was necessary. A total of six NOVs were issued to mobile businesses. In each instance, City personnel discussed the BMP requirements of mobile businesses with business personnel and provided educational material such as the City's watershed fact sheets and the "Preventing Urban Runoff Pollution" brochures, which can be found in Attachment 5.2. For the seventh verified complaint, Public Works personnel cleaned the area as necessary, and an NOV was not issued.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2007/2008, so none were reported to the RWQCB.

5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's industrial and commercial component have been made since that time.

Table 5-3
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
1	5 Star Market & Liquor	7495 University Avenue	5/9/2008	• Keep dumpster lids closed when not in use.
2	7 Eleven Food Store 17945	7602 University Avenue	5/23/2008	• Keep dumpster lids closed when not in use.
3	A & B Auto Electric	7801 El Cajon Blvd, Ste 2	5/15/2008	• Obtain a lid for the trash can and keep it closed when not in use.
4	A & W Restaurants	5500 Grossmont Center Dr	6/6/2008	• Ensure parking lot area is free of litter.
5	A A A Auto Repair & Transmission	7025 University Ave	5/9/2008	• Provide secondary containment for the used oil filter drum and the spare waste oil drum, if used. • Provide overhead cover for all drums containing waste oil/filters and for other oily equipment stored outside. • Keep outside areas free of oil spills and leaks and pick up absorbent after if has been used.
6	A To Z Auto Repair	7159 University Avenue	5/8/2008	• Keep liquid storage away from shop doors and consider secondary containment to prevent drips and spills. • Clean up small oil leaks in the parking areas as they occur to prevent contact with storm water. • Do not conduct vehicle/equipment washing in a location or manner that would allow runoff to the storm drain system. • Keep dumpster lids closed when not in use.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
7	A-1 Hire, Ltd.	7190 University Ave.	5/8/2008	• Clean up sediment, sand and debris throughout the site and keep paved areas free of sediment and debris. • Clean up the large puddle of oil on the east side of the site and properly dispose of all used absorbent or other materials used to remove oil. • Provide secondary containment for liquid storage containers, particularly used oil, coolant or diesel. • Appropriately label liquid storage containers such as used oil or diesel. • Cover equipment with exposed rust or tar and store elevated off the ground if possible to prevent contact of rainwater or run-on with rusty metal.
8	Aliberto's Mexican Food	7819 El Cajon Blvd.	5/15/2008	• Clean the area around the grease bin outside and keep it free of stains and oil residue. • Do not hose the patio unless all water can be collected to prevent runoff to the storm drain. • Clean and keep the parking area free of litter, leaves and sediment. • Ensure that the grease bin is covered and contained.
9	All Italiana	8356 Allison Ave	6/5/2008	• None
10	Amazing Stone and Tile	8227 Commerical Street	5/6/2008	• Ensure that sediment and dust remain inside the building and are kept away from contact with storm water.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
11	American Tanks	8111 Commercial St	5/5/2008	• Ensure that all wash water is collected and appropriately disposed of to the sanitary sewer system. • Clean up and contain all scrap metal pieces and keep rusty metal under cover. • Keep outdoor areas, particularly the front entrance and street, free of metal shavings. • Close dumpster lids when not in use.
12	Aqua Clean Hand Car Wash & Express Lube	7959 Parkway Dr	6/6/2008	• Obtain absorbent and/or an emergency spill kit for oil. • Ensure that no water other than rain runoff enters the storm drains. • Keep site free of litter.
13	Arby's 5822	5341 Jackson Dr	6/5/2008	• Clean up discarded grease in grease bin area. • Ensure sediment from concrete work and landscaping work are cleaned up and do not reach the storm drain system. • Consider providing overhead cover and/or secondary containment for grease bins.
14	Big O Tires	7589 El Cajon Blvd Suite A	5/27/2008	• Provide overhead cover for outdoor tire storage area to prevent contact with storm water. • Ensure that any drums of fluid or oil filters temporarily moved outside are brought inside each night and before predicted rainfall.
15	Bob Stall Chevrolet	7601 Alvarado Road	6/13/2008	• Ensure that all wash water is captured and does not enter the storm drain system. • Clear debris from drainage channel and ensure that is stays free of litter and debris.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
16	Brigantine Restaurant	9350 Fuerte Drive	6/11/2008	• Clear drains of vegetation, debris and sediment, and ensure that they stay clean. • Provide secondary containment for bulk cleaning solvents that are stored outside.
17	Budget R V Repair & Mobile Service	7860 El Cajon Blvd	5/12/2008	• Contain and collect all wash water or take vehicles to a professional wash facility. Minimize the use of soap and bleach and dispose of water to the sanitary sewer system if conducted on site. • Keep the lot and RV parking area free of sediment, leaves, litter, and loose aggregate using dry methods. • Obtain trash removal service appropriate to the needs of the business to prevent accumulation. • Move rusty metal (including racks) under the canopy or provide cover for the rusty materials. • Obtain a spill kit appropriate to the automotive and other fluids present on site. • Determine whether the drain under the canopy leads to the sanitary sewer system or to the storm drain system and educate employees appropriately.
18	C & D Auto Care	7163 University Avenue	5/8/2008	• Regularly clean inside the waste automotive fluid secondary containment to keep it free of spills. • Keep the dumpster lids closed when not in use.
19	California Countertop, Inc	7811 Alvarado Rd	5/6/2008	• Clean up the corian dust and vegetative debris, and keep the site free of litter/debris. • Keep loose gravel and planter soil from exiting the site using housekeeping, and consider physical stabilization.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
20	Carl Burger Dodge World	8355 Hercules Street	5/8/2008	• Move the engine cores to an area not exposed to storm water and ensure all auto parts with oil residue are kept in covered and contained areas. • Provide appropriate labels for all waste containers and move those containing waste entirely under the overhead container. • Close the dumpster lids when not in use and at the end of the work day. • Clean out the concrete swale in the service area parking lot and prevent runoff from contamination with oil or tire residue. Consider replacing absorbent material before drain. • Do not conduct washing activities (even with plain water) in a manner or in a location where runoff will enter the storm drain system or exit the property.
21	Carl Burgers Jeep Eagle World	8333 Hercules St.	5/8/2008	• Clean up sediment that may be transported from planters onsite and keep paved areas free of sediment. • Provide a form of containment for the material/waste storage area that would prevent run on water from the car wash area and roof downspouts. • Ensure that water from the wash area does not runoff to the storm drain system or exit the property. • Close the dumpster lids when not in use and at the end of the day.
22	Carl's Jr. #284	8110 Parkway Dr	6/9/2008	• Clean liquid from trash area and ensure area stays free of spills; liquids should not be disposed of in dumpster. • Clear litter from parking lot and landscaping and ensure that site stays free of litter.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
23	Centex Glazing	8260 Commercial St.	5/5/2008	• Keep the site free of sawdust and aluminum shavings. • Consider providing overhead cover and containment for the aluminum cutting area in the north storage yard to prevent storm water from contacting aluminum cutting activities and shavings.
24	Centifontis	8209 La Mesa Blvd	6/11/2008	• None
25	Chefaxel Inc. Bistro	7097 University Avenue	6/6/2008	• Keep dumpster lids closed when not in use.
26	Chili's Bar & Grill #454	8285 Fletcher Pkwy	5/28/2008	• Clean the grease bin and surrounding area and keep it free of grease residue. • Adjust the location off the grease bin as needed to keep it away from roof downspout discharge and storm drains. • Properly dispose of all trash and cardboard immediately when bringing it outside to prevent discharge of trash liquids to the storm drain. • Increase frequency of cardboard recycling pick up if needed to keep the dumpster lid closed when not in active use. • Conduct any necessary washing of outdoor areas in such a manner that no water is discharged to the storm drains. • Keep the storm drains free of grease, food debris, litter, and liquids using good operational behaviors as well as potentially protecting the drains with a mat or other effective method. • Ensure that the grease bin is covered and contained.
27	Chipotle Mexican Grill	8005 Fletcher Parkway	5/28/2008	• Modify the current outdoor cleaning method so that neither clean nor dirty water is discharged to the storm drain system. • Keep the outside of the grease bin and the surrounding area free of grease residue and stains. • Work with property management and neighbors to keep the storm drain inlet and catch basin free of grease stains and debris. • Ensure that the grease bin is covered and contained.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
28	Citlalli Mexican Food	7327 University Avenue	5/20/2008	• Clean up any oil residue on the ground near the outdoor grease bins. • Keep the site free of litter and sediment, including the sidewalk by the planter. • Provide a low wall or other soil stabilization to prevent erosion and sediment transport. • Consider providing secondary containment and/or overhead cover for grease bins.
29	Claim Jumper Restaurant La Mesa	5500 Grossmont Ctr. Drive #406	6/6/2008	• Keep storm drain basins free of sediment. • Ensure parking area is free of litter. • Ensure no grease leaves waste area via runoff.
30	Costco Wholesale #469	8125 Fletcher Pkwy	6/5/2008	• Ensure landscaping in parking lot is free of litter.
31	Dan's Automotive	7501 University Ave.	5/9/2008	• Clean the parking lot using dry methods and keep the area clean of sediment and oil spills. • Provide cover and secondary containment for the drum of used oil filters and clean up and oil in the existing secondary containment trays. • Keep spill kits for the fluids stored onsite available at all times. • Store the engine core and other rusty or greasy parts off of the ground and protected from storm water until they are picked up.
32	Denny's, Inc. #1743	6970 Alvarado Rd	6/6/2008	• Ensure that the grease bin and nearby pavement remain free of grease residue and stains and that grease bin is covered/contained.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
33	Dixieline Lumber & Home Centers	8372 Center Dr	11/13/2007	• Prevent the water used during the irrigation of potted plants from entering the storm water conveyance system. • Ensure all members of the local staff are trained on the Storm Water Pollution Prevention Plan. Documentation and training records should be kept up to date and provided along with the SWPPP. • Update SWPPP to accurately reflect any changes in BMP implementation and ensure all personnel responsible for the implementation of the SWPPP are included in the SWPPP. The SWPPP should include any materials and BMPs that pertain to the regulated component of the business. The SWPPP should include the secondary containment structure and a list of materials typically stored within the containment, as well as all materials stored outdoors. The use of covers to protect storm drains during dry weather conditions should also be documented in the SWPPP. A list of local personnel that are responsible for the implementation of the SWPPP should also be included.
34	Dixieline Lumber & Home Centers	8372 Center Dr	5/12/2008	• Clean out sediment from the trench drain and from the area around the northwest inlet. • Cover the rusty metal wire products on the northwest side of the lot to prevent rust transport. • Ensure that cover is provided for railroad ties and treated lumber products. • Address the high COD monitoring results.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
35	EDCO Transfer Station	8182 Commercial St	5/20/2008	• Paint or remove the metal plate over the storm drain opening to prevent rust transport. • Cover the large rusty metal bucket or move it to be store indoors. • Ensure that over irrigation is not the cause of the water puddled in the parking lot, and consider capturing the condensation water if feasible.
36	El Torito	5024 Baltimore Dr	6/12/2008	• Work with neighbors and property management to clear parking lot and hillside of litter ad ensure that site remains litter free. • Clean exterior of grease bin and ground and ensure that area remains free of grease residue. • Provide coverage and secondary containment for grease bin. • Ensure that wash water from pressure washing is disposed of appropriately either captured or discharged to landscaping (if appropriate).
37	Elite Auto Collision Repair Center	4949 Baltimore Drive	6/12/2008	• Clean litter and cigarette butts from site and ensure that site remains litter free. • Ensure that storage drums are labeled properly.
38	Express Auto Service	7633 El Cajon Blvd. suite 300	5/12/2008	• Provide secondary containment for drums of fluid and used oil filters or else move the drums to the interior of the building where applicable. • Work with the property management to adjust sprinklers and stabilize soil in the landscaping to prevent sediment laden runoff to the storm drain. • Keep the dumpster lids closed when not in use.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
39	Filiberto's Mexican Food	7102 University Ave	5/14/2008	• Keep the parking lot and driveways and drains free of sediment and loose gravel. • Do not pressure wash or use a hose to wash the patio unless all wash water can be collected and properly disposed of to an indoor sewer drain. • Repair the sprinkler system as necessary to ensure that sprinklers are adjusted appropriately to minimize over watering and runoff. • Keep dumpster lids closed when not in use and keep all food litter in the dumpster. • Keep the area around the grease bin and the grease bin itself free of grease residue, but do not allow any wash water to flow to the street or storm drain. • Remove or cover the nonfunctional fryer stored in the trash enclosure to prevent rainwater from contacting grease residue. • Ensure waste grease bin is covered and contained.
40	Five Star Collision Center Inc	7643 University Avenue Suite H	6/11/2008	• Ensure that wash water is not leaving the site. • Provide building plans/verification that trench drains lead to sewer do not discharge to these drains until this has been verified. • Use dry methods to clean trash, debris, and sediment from the site and ensure that site remains litter free.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
41	Golden State Auto of La Mesa, Inc.	7224 University Avenue	5/14/2008	• Provide secondary containment and cover for all liquid storage, including waste oil, car batteries and other automotive fluids. • Label containers appropriately. • Keep a spill kit onsite at all times that is adequate for materials stored onsite. • Provide adequate trash containers and remove trash frequently enough that it does not overflow. • Clean up sediment, wood shavings, litter and oil leaks in the parking and work areas and keep it clean. • Conduct any car washing so that no wash water (even with soap) is discharged to the street; contain and dispose of wash water down the sanitary sewer system (e.g. toilet).
42	Groceryworks.Com Operating Company	8011 University Avenue	5/23/2008	• Work with Vons to keep the dock drain free of litter, sediment, and debris using a rubber mat or other method. • Keep trash dumpster lids closed when not in use.
43	Growers Direct	7055 University Avenue	5/23/2008	• Keep the sidewalk and street free of sediment through regular housekeeping. • Consider acquiring a larger or another recycling container for cardboard, if necessary.
44	Hearth House	5505 Jackson Dr	6/6/2008	• Ensure that wash water is collected or disposed of to sanitary sewer system and does not reach the storm drain system. • Clean the litter from the front landscaping area and ensure that the entire site stays free of litter. • Obtain a designated container for waste oil disposal unless you can provide written verification from your waste disposal company that it is permitted to dispose of waste oil/grease in your dumpster.
45	J Ks Greek Cafe	7749 University Ave	5/21/2008	• Keep the parking area and back area free of sediment and gravel.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
46	Jack In The Box, University	6987 University Ave	5/14/2008	• Clean the outside of the grease bin and the surrounding area and keep it free of grease residue to prevent grease from entering the storm drain. • Prevent any liquids from being placed in or leaking from the dumpster, and clean up these liquids if they do leak. • Ensure that the grease bin is covered and contained.
47	Jack Orr Auto Body, Inc.	7253 University Ave	5/9/2008	• None
48	Kentucky Fried Chicken	5358 Jackson Dr	6/5/2008	• Clean up oil residue from ground in trash/grease bin area. • Keep site free of litter and sediment. • Consider providing secondary containment and/or overhead cover for grease bins.
49	La Fogata Mexican Restaurant	7303 El Cajon Blvd	6/10/2008	• Keep the outside of the grease bin free of oil residue. • Consider full overhead cover and containment for the grease bin. • Keep the dumpster lids closed when not in use.
50	La Mesa Smog Check	7801 El Cajon Blvd, Ste 1	5/12/2008	• None
51	La Mesita Mexican Food	7012 University Avenue	5/23/2008	• Keep the outside of the grease bin/box and the ground free of grease residue. • Consider contacting the property management about a recycling container for the boxes. • Keep dumpster lids closed when not in use. • Consider providing secondary containment for the grease bin.
52	Lotus Pond Restaurant	8260 Parkway Dr	6/13/2008	• Ensure that grease is cleaned from ground surface and that containers have secondary containment.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
53	Marie Callender's #74	6950 Alvarado Rd	6/10/2008	• Eliminate all discharges to the trench drains in the loading/trash area unless documentation can be provided to show that these drains are connected to the sanitary sewer system. Contain wash water. • Similarly, remove all grease and debris from the trench drains without discharging to them. • Remove grease residue from the exterior surfaces of all the grease bin and surrounding area and keep them clean. • Ensure that the grease bin is covered and contained.
54	Marieta's	8949 La Mesa Blvd	6/10/2008	• Clear the trash enclosure of the litter and ensure that it stays free of litter and ensure lids are closed when not in use. • Clean the grease residue from the exterior of grease bin and ground and ensure that area stays free of grease spills/splashes. • Provide secondary containment and overhead coverage for grease bin. • On 6/13 business reported to have stopped refrigerator discharge to parking lot.
55	McDonald's	8045 Fletcher Pkwy	5/28/2008	• Clean the grease bin and ground below, and keep them free of grease residue. • Ensure that the grease bin covered and contained. • If outdoor areas must be cleaned using water, conduct cleaning so that all wash water (with or without cleaning chemicals) is collected and disposed of properly to an inside sewer drain. • Work with the other tenants and the property management to keep the parking lot, sidewalks, and curb inlets free of black grease stains.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
56	MD Auto Group	7840 La Mesa Blvd	6/10/2008	• Implement BMP's to ensure that wash/rinse water is contained onsite, either collected or discharged to landscaping. • Ensure that outdoor repair work is performed in a contained area. • Clean litter up in the trash area and ensure that site remains free of litter. • The facility does not have a spill response kit for automotive fluids; obtain one and keep on site.
57	Mi Casita Taco Shop	8038 La Mesa Blvd	6/10/2008	• Ensure that parking lot and sidewalks are kept free of litter
58	Midas Mufflers	7207 University Ave	5/9/2008	• Keep the parking lot free of sediment and debris. • Keep the trash enclosure clean and all litter properly disposed of. • Cover used tires stored outside until they can be recycled or disposed of.
59	Nacho's Taco Shop	7589 University Ave	5/21/2008	• Keep the site free of trash and sediment. • Clean the grease bin and surrounding area and keep it free of grease residue. • Close the grease bin lid when not in use as well as the dumpster lids. • Ensure the grease bin is covered and contained.
60	Pacific Southwest Structures	8140 Commercial Street	5/5/2008	• Keep dumpster lids closed when not in use.
61	Pacific Tire & Brake	7633 El Cajon Blvd, Suite 100	5/27/2008	• Work with the property management company to keep the parking lot free of sediment and vegetative debris. • Keep the dumpster lids closed when not in use.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
62	Panda Express #226	8011 University Ave	5/21/2008	• Keep the dumpster lids closed when not in use. • Work with the property management company to clean thoroughly the outside surfaces of the grease bin or obtain a new grease bin with attached lid and keep it free of grease spills and residue. Clean greasy absorbent off the ground. • Consider moving the grease bin to be less conspicuous than the trash dumpsters such that customers are not likely to dump trash into it. • Consider providing secondary containment and/or overhead cover for the grease bin to prevent spills on the ground and contact with rainwater.
63	Pick Up Stix La Mesa	8025 Fletcher Pkwy	5/28/2008	• Clean the area around and the outside of the grease bin drums and keep them free of grease. • Ensure all trash is placed appropriately into the dumpster and the lids are closed. • Cover and contain grease bins. • Work with other tenants and property management to keep the storm drain inlet free of grease stains and debris.
64	Pizza Hut	8011 University Ave	5/24/2008	• Work with the property management company to keep the trash area free of loose litter, perhaps through increased pick up frequency of the trash cans used by customers on the sidewalk.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
65	Rainbow Steel Inc.	8332 Case St.	6/5/2008	• Clean and organize storage areas so that litter, debris and sediment may be cleaned out from around and under them. Keep the site free of litter, debris and sediment. • Conduct metal work inside, in contained areas or at minimum as far away from the storm drain channel as is feasible to prevent grindings from entering the channel. • Store rusty metal beams and parts off of the ground, and provide cover to prevent rainwater from contacting them. • Use drop pans if vehicles leak oil and clean up any leaks as soon as possible. • Provide secondary containment for the diesel fuel tank or, if not used, remove or label as such.
66	Rob's Automotive	7589 El Cajon Blvd Unit E	5/24/2008	• Work with property management to unclog the drain pipes and keep the site free of vegetative debris and sediment. • Conduct maintenance activities inside or under cover whenever feasible. • Elevate the transmission stored outside or store it on a pervious (soil) surface until it may be removed.
67	Rosaritos Mexican Food #3	7941 University Ave	5/23/2008	• Clean the grease bin and wall and keep the area free of grease residue. • Keep the dumpster lids closed when not in use. • Consider providing overhead cover and/or containment for the grease bin.
68	Round Table Pizza	8032 La Mesa Blvd	6/10/2008	• Clean up the trash area and keep dumpster lids closed when not in use. Keep enclosure free of spills/stains. • Ensure that parking lot and sidewalks are free of litter.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
69	Sam's Market	7587 University Avenue	5/15/2008	• Clean up the outside areas, and keep them free of sediment, gravel and litter. • Close dumpster lids when not in use. • Regularly check for oil leaks and spills in the parking lot and clean them up.
70	Sanfilippo's Pizza	8141 La Mesa Blvd	6/10/2008	• Clear back storm drain of debris & clear litter from site. • Ensure that site and drains are kept free of litter and debris. • Ensure that discharge from cleaning kitchen floor racks does not reach storm drain.
71	Schaefer Ambulance Service, Inc.	7285 University Ave	5/6/2008	• Address the high total suspended solids results in both water samples using additional housekeeping, and determine if loose sediment originates onsite. • Fix the leak from the vehicle in the parking lot.
72	Shirley's Kitchen, University	7118 University Ave	5/20/2008	• Clean up sediment, black deposits, and litter that have covered the storm drain in the parking lot, and keep it clean. • Keep the site free of litter and sediment. • Clean up grease residue on the grease bin lid and surrounding area. • Ensure the grease bin is covered and contained. • Cover or remove the rusty metal filters stored outside.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
73	Sid's Auto Body, Inc.	7473 El Cajon Blvd.	5/27/2008	• Ensure that the oil water separator/interceptor is appropriately maintained to prevent clogging. • Ensure that trash removal frequency and containers are sufficient to keep all trash inside with lids closed. • Keep the site free of litter. • Clean up the oily residue outside the air compressor condensation outlet pipe, and consider trapping the liquid to prevent future staining. • Keep the areas outside the bay doors for the paint and the grinding shop areas free of sediment, particularly due to any spilled rinse water or dust deposition.
74	Subway (Jaspal Enterprises)	7404 University Avenue	6/6/2008	• If water must be used to clean outdoor surfaces minimize use of detergents and capture all wash water for disposal at an inside drain to prevent runoff to the storm drain. • Work with the property management to keep the parking lot free of sediment and gravel.
75	Summit Transmissions	7633 El Cajon Blvd. #208	5/12/2008	• Keep the dumpster lids closed when not in use. • Work with the property management company to adjust the sprinklers and stabilize loose soil to prevent sediment laden runoff to the storm drain.
76	Sun Valley Golf Course	5080 Memorial Drive	6/28/2008	• Provide cover and containment for stockpiles when they are not actively being used. • Keep a spill kit onsite for small oil leaks or spills from equipment (e.g. kitty litter or other absorbent material). • At the back gate, prevent sand/sediment from being tracked onto the parking lot and/or increasing housekeeping to clean the area.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
77	Tamarind Thai Restaurant	7970 University Avenue	5/15/2008	• Do not wash floor mats or other equipment in a manner that would cause wash water to go to patio or parking lot drains. • Use dry methods to clean the patio or prevent wash water from discharging to drains and collect it for disposal to inside drains. • Dispose of wash water from mopping to inside drains or toilet. • Keep dumpster lids closed when not in use and keep the area free of sediment and litter.
78	Tasty Garden Buffet	7984 La Mesa Blvd	6/9/2008	• Ensure that trash dumpster and grease bin lids are kept closed. • Ensure that site is kept free of litter. • Clean grease residue from outdoor grease bin area and keep ground surface and exterior of bin free of grease. • Ensure grease bin is covered.
79	The Chickenest 95, Inc.	7200 Parkway Dr #111	6/9/2008	• Ensure that site is free of litter. • Clean ground and wall surface around grease bin and ensure area is kept clean and free of oil and grease. • Ensure grease bin is covered & contained.
80	The Greek Gyros II	5500 Grossmont Ctr. Drive	6/6/2008	• Ensure parking lot area is free of litter
81	The Truck and SUV Center	5301 Lake Murray Boulevard	6/12/2008	• Ensure that waste oil storage area has overhead coverage and water tight secondary containment. • Obtain a spill response kit and/or absorbent. • Ensure that any residue/sediment from car washing/rinsing is cleaned up and that there is no discharge of water or cleaning chemicals to the storm drain system. • Contain sediment on hillside clean up litter ands ensure site remains litter free.
82	The Yogurt Mill	8158 La Mesa Blvd	6/11/2008	• None
83	Trattoria Tiramisu	8273 La Mesa Blvd.	6/10/2008	• Ensure that site is free of litter.

Table 5-3 (Continued)
Industrial and Commercial Inspection Results

#	Business Name	Address	Inspection Date	Corrective Actions
84	Vons Companies Inc #2093	8011 University Avenue	5/23/2008	• Protect the dock drain with a rubber mat or other method to prevent debris, litter and sediment from entering the drain. • Keep dumpster lids closed when not in use.
85	Walter H. Barber & Sons, Inc.	8179 Center St.	5/5/2008	• Keep the front paved area free of sediment, gravel and leaves. • Cover railroad tires and oil stored outside and provide secondary containment for liquids (including oil) stored outside. Alternatively, these materials may be moved indoors. • Clean up the oil that had leaked from the truck and use a drip pan until the truck may be repaired.
86	Wedo Wedo	8169 Center Street	5/5/2008	• Clean up soil, sediment, litter and stone debris from the front sidewalk, loading area, and the slab storage area. • Prevent tracking of sediment and keep outdoor areas clean. • Close the dumpster lids when not in use. • Obtain a spill kit or materials sufficient to clean up any anticipated spill risks.
87	Wienerschnitzel #58	6949 University Ave	5/14/2008	• None
88	Wongs Golden Palace, Inc.	7126 University Ave	5/14/2008	• Obtain a grease removal service to take the bottles of used grease instead of putting them in the dumpster unless it can be varied that EDCO allows this form of grease disposal.

6.0 RESIDENTIAL

6.1 INTRODUCTION

Land use in the City of La Mesa is largely residential; over half the land use in the City is residential. Due to the large residential area, activities that take place in residential areas have the potential to impact the quality of receiving waters. Residential activities such as vehicle washing, over-irrigation, home maintenance, and Household Hazardous Waste (HHW) disposal can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Pollutants of concern include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has worked to implement a range of programs to address these residential activities with the goal of reducing pollutant loads associated with such activities.

Figure 6-1 depicts the residential land use in the City. Yellow areas signify single-family homes, orange areas are multi-family homes such as duplexes and apartment buildings, brown areas are mobile home parks, and purple areas are other residential areas such as nursing homes.

Figure 6-1
Residential Land Use in the City

Base Data Sources: USGS, SanGIS, SANDAG

6.1.1 Summary of Notable Accomplishments

Some notable achievements for the residential component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- The City has worked with local Eagle Scouts to construct and install a storm water kiosk in Vista La Mesa Park.
- The City hosted eight HHW events; 1,044 participants dropped off 1,100 loads of HHW. Door-to-door pick up service was available for the disabled and senior communities.
- The Solana Center hosted the La Mesa Oil Filter Exchange at Kragen Auto Parts. A total of 44 people disposed of 55 used oil filters and five gallons of used oil for recycling.
- The City continued to distribute the *La Mesa Focus* newsletter to residents in the City.
- The City hosted the La Mesa Spring Clean Up on two consecutive Saturdays. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste without charge.

6.2 Source Characterization

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities. To reduce pollutant discharges from these high TTWQ areas and activities, the City has designated specific BMPs.

6.2.1 High TTWQ Activities

During the 2007/2008 reporting period, as outlined in the City's JURMP, the City continued to identify the following activities as high priority:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of pet waste

6.2.2 High Threat to Water Quality Areas

In addition to these activity-based priorities, the City has noted several residential areas that pose higher threats to water quality. High priority residential areas are designated

by considering complaint investigations, institutional knowledge, Dry Weather Monitoring data, and criteria as defined in the Municipal Permit. The following residential areas have been designated as being a high threat to water quality.

East of Helix High School
This area drains to University Channel and includes the residential area east of Helix High School in the area around Lowell Street, Normal Avenue, and Olive Avenue. University Channel serves as a part of the storm water conveyance system for the City and is part of the Chollas Creek Watershed. Previous Dry Weather Monitoring Program upstream investigations have traced high total coliform counts to this area and found several instances of irrigation runoff. Storm Water Hotline calls related to this area have been recorded in recent years as well.

Baltimore Drive, North of Interstate 8
The area surrounding Baltimore Drive is largely composed of high-density housing. Runoff from this area drains to Alvarado Channel via two storm drain networks that run through the area. Storm Water Hotline calls related to activities in this area have been recorded in recent years. Some past Dry Weather Monitoring results have indicated that this area could be a source of bacteria, although that has not been found in monitoring programs over the past couple years. The area is still classified as high TTWQ to be conservative, although the City may reevaluate the prioritization in future years if recent dry weather monitoring trends continue. Potential runoff sources include residences located on Parkway Drive, Aztec Drive, and Baltimore Drive.

Nagel Street and Sarita Street
The residential area around the intersection of Nagel Street and Sarita Street drains to Alvarado Channel. Previous Dry Weather Monitoring Program upstream investigations have indicated that this area is a source of bacteria. A relatively high number of Storm Water Hotline calls have been recorded for this area.

6.3 Best Management Practice Requirements

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. The City's BMP Manual Part I includes lists of general residential BMP requirements and BMP requirements for specific residential activities. The manual is included in Appendix C of the JURMP. General residential BMPs include erosion control; non-storm water discharge management, including elimination of IC/IDs; and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Specific BMPs for the high priority activities outlined above are also included in the City's BMP Manual Part I.

6.4 Program Implementation

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted. This ensures that pollutants associated with residential activities and areas are minimized.

The residential program has an education component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities.

6.4.1 Training, Education, and Outreach

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***La Mesa Focus* Newsletter Articles**

The City publishes storm water related articles in the quarterly *La Mesa Focus* newsletter. Four newsletters were printed during the reporting period. Two issues, August and November 2007, were each mailed to approximately 27,500 residential addresses. These issues were also archived on the City's website. The February and May 2008 issues were not mailed, but were made available on the City's website. Approximately 630 copies of both the February and May 2008 newsletters were distributed during the 2007/2008 reporting period to both the industrial and commercial and residential communities in the City. A total of 592 individuals receive e-mail notification when a new newsletter has been added to the City's website, and about 40 hard copies of each issue are made available in City Hall, which yields a total approximate circulation of 630 copies for both the February and May 2008 issues of the newsletter. The articles published in 2007/2008 are summarized below. All newsletters published during the 2007/2008 reporting period are included as Attachment 5.3.

The August 2007 newsletter contained the following storm water-related articles and announcements:

- "LA MESA APPRECIATION DAY: GET INVOLVED!" encouraged residents to participate in the clean up of designated City parks.
- "ONE PHONE CALL CAN HELP STOP STORM WATER POLLUTION" informed residents of the Storm Water Hotline, potential pollutants to be aware of, and what to look for and report based on the facility or area type.
- "LA MESA RECYCLES USED OIL & OIL FILTERS" stressed the importance of recycling oil and provided a telephone number and website to research local drop off locations for used oil and oil filters.

The November 2007 newsletter contained the following storm water-related articles and announcements:

- "ENVIRONMENTAL PROGRAM UPDATE – PRESERVING YOUR QUALITY OF LIFE" provided a two page informational section with four storm water specific articles and announcements including:
    - "DISPOSE OF OLD ELECTRONIC DEVICES, PAINT AND OTHER TOXIC ITEMS…BUT DO IT SAFELY AND RESPONSIBLY" which highlighted examples of HHW as well as drop off dates and locations.

- "RECYCLING CONTAINERS MAKING THEIR WAY INTO PARKS" informed residents of recycling container placement, and encouraged use of the containers.
- "FREE OIL FILTERS!" notified residents of the La Mesa Oil Filter Exchange.
- "BE AWARE OF WHAT YOU WASH DOWN THE STORM DRAIN" informed residents of the causes of storm water pollution and how to prevent it.

The February 2008 newsletter contained the following storm water-related articles and announcements:

- "PROPERLY DISPOSE OF OR RECYCLE YOUR HAZARDOUS ITEMS!" described different types of HHW and notified residents of drop-off dates and locations to recycle HHW items free of charge.
- "ANNOUNCING SPRING CLEAN-UP 2008" informed residents of the upcoming cleanup event and what could be disposed of or recycled at the event.
- "STORM WATER: DID YOU KNOW?" discussed the local watersheds, channels and inlets in the City and promoted the use of pollution prevention measures.
- "CITY OF LA MESA PARK APPRECIATION DAY" provided the date of the event and the types of activities volunteers would be involved in for the event.

The May 2008 newsletter contained the following storm water-related articles and announcements:

- "DON'T FORGET ABOUT HOUSEHOLD HAZARDOUS WASTE!" reminded City residents of the remaining HHW events and what could be disposed of and recycled at them.
- "LA MESA VOLUNTEERS MAKE THEIR PARK JEWELS SHINE" reported the number of volunteers and the type of work they performed at La Mesa Park Appreciation Day.
- "UPDATES TO THE CITY'S STORM WATER PROGRAM" notified readers of the updates made to the JURMP and gave a break down of requirements and prohibited activities by area type.

6.4.1.1 HHW Events

The City hosted seven HHW collection events throughout the 2007/2008 reporting period at the City's EDCO station on Commercial Street. An additional HHW event was held in Rancho San Diego at the Skyline Church; though not located in the City, residents from the City participated in the event. Door-to-door pick-up was also offered for disabled and senior residents. Overall, 1,044 people participated in the events, and 1,100 loads of HHW were collected.

Other Educational Outreach Materials and Activities
When discovering instances of over-irrigation in residential areas, the City provided an over-irrigation door hanger as well as a tri fold entitled "Preventing Urban Runoff Pollution," both of which are included in Attachment 6.1. Other educational outreach materials and activities are highlighted in the Education and Public Participation sections of this report (Sections 8 and 9, respectively). Most notably, the City has continued to provide storm water information and contacts on their website (www.cityoflamesa.com). The City's storm water hotline also provides a medium for City residents to obtain storm water information and file storm water related complaints.

6.4.2 Compliance and Enforcement

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the Storm Water Hotline, and observations made by the City's municipal personnel. If a potential to impact water quality is present the City provides a verbal warning, written warning, NTCs, and NOVs as applicable. The City received 26 residential-related complaints during this reporting period. Complaints were submitted through the Storm Water Hotline and internally through the Public Works Department; see Appendix B of this JURMP Annual Report for details.

Seventeen written warnings, five NOVs, three verbal warnings and two NTCs were issued to residents and/or landlords during this reporting period. Many of the complaints verified involved residents who were unaware of residential BMPs. These issues were resolved with a verbal warning and distribution of educational materials. The City issued NOVs to more serious violations such as vehicle maintenance without BMPs or washing debris into the street. City personnel also cleaned areas in the public right of way as necessary to resolve complaints. One spill was noted and reported to the RWQCB; see Section 7 of this JURMP Annual Report for details. All other residential complaints were resolved and no further actions, such as fines or reports to the RWQCB aside from this JURMP Annual Report, were deemed necessary.

6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's residential component have been made since that time.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008 RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2007/2008 illicit discharge detection and elimination section and attachments to the RWQCB no later than December 15, 2008.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2007/2008, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, residents, and underserved audiences. The City aims to reduce storm water pollution by increasing awareness about storm water and promoting the implementation of pollution prevention measures and BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- The City has hosted 34 training events/meetings for municipal personnel and agencies working closely with the City; over 200 City personnel participated in these training sessions.
- During 2007/2008, the City's quarterly newsletter, the *La Mesa Focus*, featured several articles highlighting storm water topics aimed at businesses and residents of the City.
- Educational materials were made available to project proponents and City personnel at City Hall through the informational storm water bulletin board. A total of 30 construction site management tri folds, 20 English/Spanish door hangers, and 10 construction SWPPP tri folds were distributed to construction site owners and developers from the bulletin board.
- The City worked closely with the local Eagle Scouts to construct and install a storm water kiosk at Vista La Mesa Park.
- Various educational materials were made available in Spanish and English. The City has provided English and Spanish educational materials at events and during inspections this year. The City's storm water hotline also accepts calls in both Spanish and English.
- The City contracted with I Love a Clean San Diego (ILACSD) to provide education outreach at the Intergenerational Games at the La Mesa Middle School on 10/12/2007. ILACSD gave brief demonstrations of the Enviroscape watershed model to adults and youth and presented storm water pollution prevention concepts.

- The City provided financial support and educational materials for a booth hosted by the Solana Center for Environmental Innovations (Solana Center) at Earth Fair on 4/20/2008.

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention.

The informational storm water bulletin board at City Hall is continually updated with information on storm water topics such as BMPs. The bulletin board is visible to City personnel, project proponents, and other City Hall visitors. A photo of the bulletin board is included in Attachment 4.2.

In addition to the materials available at the informational storm water bulletin board, the City also provided three new Public Works employees a copy of the "City of La Mesa Municipal Program Storm Water Best Management Practices Notebook". This notebook is included in Attachment 4.2.

Table 8-1 below includes all training sessions that were provided for various municipal departments during 2007/2008. The table also includes meetings with outside agencies regarding project collaboration (e.g., meetings with Helix Water District on how to work together to eliminate over-irrigation in the City).

Table 8-1
Training Sessions

#	Date	Event	Topic(s)	Participants
1	1/17/2007	Tailgate Training	BMPs - Housekeeping	5 Streets Division Employees
2	5/12/2007	Pre-Development Advisory Board Meeting	Code update workshop discussion, dumpsters at commercial, industrial, multi-family sites	Development Advisory Board Members
3	7/10/2007	Tailgate Training	BMPs - Material Storage	14 Parks Division Employees
4	7/19/2007	Low Impact Development Manual Training/Presentation	Presentation of county's proposed Low Impact Development Manual	Stormwater Program Manager

Table 8-1
Training Sessions

#	Date	Event	Topic(s)	Participants
5	8/15/2007	Meeting for 06/07 Follow-Up Municipal Inspections	Discussion of high priority municipal inspections, form revisions, corrective actions and implementation methods.	4 Public Works Operations Division Employees
6	8/17/2007	Advanced SWPPP Training - presented by Associated General Contractors	SWPPP requirements, NPDES, implementing BMPs, effective SWPPP development, keeping projects in compliance	3 City Employees
7	8/17/2007	Meeting at City Hall – Discussion of Strategies for Irrigation Problems	Discussion of over-irrigation prevention methods within the City	Stormwater Program Manager and Helix Water District
8	8/28/2007	Tailgate Training	BMPs - Over Irrigation/Runoff	13 Parks Division Employees
9	10/2/2007	Email From Community Development	Power washing without water reclamation is not allowed, direction to notify merchant members that hired power washers must reclaim water	Managers at businesses located on La Mesa Blvd and Date Ave (where Oktoberfest is hosted)
10	10/11/2007	Training/Presentation: Storm Water Management for Construction Projects – Presented by Stormwater Program Manager	Regulatory overview, developer responsibilities, construction BMPs, JURMP construction section, San Diego River and San Diego Bay watershed maps	4 Engineering Staff Employees
11	10/16/2007	Tailgate Training	BMPs - Outdoor Storage	18 Parks Division Employees
12	10/29/2007	Tailgate Training	BMPs - Outdoor Storage	6 Streets Division Employees
13	10/30/2007	Tailgate Training	BMPs - Outdoor Storage	18 Parks Division Employees
14	11/9/2007	Meeting with Helix	City's JURMP and Helix's discharge permit requirements, ensure compliance with water quality objectives and address any potential issues related to non-storm water discharges	Stormwater Program Manager and 4 Helix Managers

Table 8-1
Training Sessions

#	Date	Event	Topic(s)	Participants
15	11/9/2007	Tailgate Training	BMPs - Outdoor Storage	8 Wastewater Division Employees
16	11/19/2007	Hydromodification / SUSMP Workshop	Requirements of permit, timeline for implementation, SUSMP updates, interim hydromodification management criteria	5 Community Development and Engineering Staff Employees (including Stormwater Program Manager)
17	11/19/2007	Tailgate Training	BMPs - Spill Containment	4 Streets Division Employees
18	11/21/2007	Tailgate Training	BMPs - General Storage	13 Parks Division Employees
19	12/10/2007	Tailgate Training	Storm Water	5 Streets Division Employees
20	1/7/2008	Tailgate Training	BMPs - Outdoor Storage	6 Streets Division Employees
21	1/16/2008	Tailgate Training	Annual Pesticide Training	16 Parks Division Employees
22	1/29/2008	Tailgate Training	Rain and Drains	18 Parks Division Employees
23	2/26/2008	Tailgate Training	General Housekeeping	15 Parks Division Employees
24	3/5/2008	E-mail From Stormwater Program Manager	Notification of new permit requirements, attached manual, directed to become familiar with requirements of Low Impact Development	Community Development and Engineering Staff
25	3/18/2008	Tailgate Training	BMPs - Runoff	6 Streets Division Employees
26	3/18/2008	Tailgate Training	BMPs - Runoff	16 Parks Division Employees
27	3/25/2008	E-mail From Stormwater Program Manager	Programs adopted and incorporated in Municipal Code: JURMP updates, ordinance updates.	All City Employees
28	4/1/2008	Tailgate Training	BMPs - Runoff	13 Parks Division Employees
29	4/9/2008	Tailgate Training	NPDES	7 Wastewater Division Employees

Table 8-1
Training Sessions

#	Date	Event	Topic(s)	Participants
30	4/14/2008	Pre-Development Advisory Board Meeting – Presented by Stormwater Program Manager and City Staff	Storm water training, code update, specific projects	~10 Participants
31	4/16/2008	Process Improvement Team Meeting – Presented by Stormwater Program Manager	Construction/Post-construction BMP requirements, required forms, Low Impact Development/site design, source control, other new requirements	~ 12 City Building Department, Engineering Staff, Community Development, and City Hall Employees
32	5/9/2008	CASQA Meeting - "Opportunities and Challenges for Stormwater Programs"	Source control, control of copper, pesticide regulation, plastic bag and food container ban, architectural sources of metals	Stormwater Program Manager
33	5/30/2008	CASQA Municipal Stormwater Program Effectiveness Assessment Manual Training	Principals of effectiveness measurement, impact of implementation, effectiveness measurement tools, interpreting results, water quality assessments	Stormwater Program Manager
34	6/4/2008	Integrated Pest Management Seminar	Integrated pest management	2 Park Maintenance Employees

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, residential areas, and underserved audiences. These efforts promote storm water awareness and BMP implementation.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Violations to the City's BMP requirements are corrected through enforcement actions as necessary. Educational materials relating to specific activities were given to businesses during inspections.

These materials are included as Attachment 5.1; the quantities distributed are included in Table 8-2 below.

Many of the educational materials listed in the table below were distributed in packets according to the facility location and principal activity. All facilities received an informational letter from the City, the Preventing Urban Runoff Tri fold, San Diego River Watershed Factsheet or San Diego Bay Factsheet, BMP Manual Part I, Over-Irrigation Stormwater Pollution Prevention Factsheet, SDCWA Water Efficiency Discounts, and SDCWA Smart Landscape. Facilities in the Chollas Creek Subwatershed received an additional handout about the TMDL for Chollas Creek and what that may mean for businesses in the City. Additionally, an English and Spanish packet of the Grease Interceptors and Grease Traps and How to Keep Cooking Grease Out of the Drain (Spanish title: Cómo Mantener la Grasa de Cocinar Fuera del Desagüe) brochures were provided for applicable eating establishments. English and Spanish versions of the "What's Cookin'" and "Green Wrench" guides were distributed to eating establishments and auto shops, respectively, as necessary.

Table 8-2
Industrial and Commercial Business Educational Materials

Type of Educational Material Distributed	Number of Facilities
SDCWA Water Efficiency Discounts	92
SDCWA Smart Landscape	92
Letter from the City – "Re: Storm Water Compliance Inspections"	92
Tri fold - "Preventing Urban Runoff Pollution"	92
BMP Manual Part I – "3.0 – BMP Requirements for all Dischargers"	92
Over-Irrigation Stormwater Pollution Prevention Factsheet	92
San Diego Bay Watershed Factsheet	49
San Diego River Watershed Factsheet	43
Chollas Creek TMDL Fact Sheet	40
Grease Interceptors and Grease Traps	38
SDCWA The 20 Gallon Challenge (Card and Table Tent)	28
How to Keep Cooking Grease Out of the Drain	28
The Green Wrench Guide	15
Cómo Mantener la Grasa de Cocinar Fuera del Desagüe	10
What's Cookin'?	5

Table 8-2

Type of Educational Material Distributed	Number of Facilities
NOI Paperwork	2
NONA/NEC Paperwork	2
Guía Ecológica Para la Industria Automotriz (Green Wrench Guide, Spanish)	1
¿Qué Pasa en la Cocina? (What's Cookin', Spanish)	1
Industrial Permit	1

During the 2007/2008 reporting period, the City's quarterly *La Mesa Focus* newsletter featured several articles highlighting storm water topics that were aimed at businesses and residents of the City. Examples of such articles include "One Phone Call Can Help Stop Storm Water Pollution," "Be Aware of What You Wash Down the Storm Drain," "Storm Water: Did You Know?," and "Updates to the City's Storm Water Program." These articles are included as Attachment 6.1. Letters were also sent to businesses in certain areas of the City.

During 2007/2008, the City distributed a handout with tips for outdoor vendors to commercial vendors that had booths at Oktoberfest. A total of 311 of these brochures were distributed (Attachment 8.1). The handout detailed specific BMPs that could be implemented by the vendors at the event and detailed the difference between the storm drain system and the sanitary sewer system.

8.3.1.1 Mobile Businesses

Mobile businesses, specifically mobile car detailers or power washers, are considered a high threat to water quality due to the nature of the business activities and the likelihood of prohibited non-storm water discharges. Mobile businesses are not confined to a single area and many do not have City business licenses, making them difficult to identify. Once mobile businesses are identified, the City requires individuals seeking a City business license to sign an affidavit stating that they understand the BMP requirements of the City and will implement BMPs to prevent the discharge of wastewater. To sign the affidavit, the applicant must meet with the City's Stormwater Program Manager, who provides one-on-one education regarding the importance of implementing the City's required BMPs. The City requires all mobile businesses to sign an affidavit to commit to proper wastewater disposal and BMP implementation before a license is granted. The City's mobile affidavit is included as Attachment 5.4.

8.3.2 Construction Site Owners and Developers

Due to the nature of activities, construction sites have the potential to discharge many types of pollutants to receiving waters if not managed properly. Many construction site

owners, contractors, and developers visit the City's Engineering Division to apply for necessary permits. The Storm Water Bulletin Board (Attachment 4.2), located across from the front counter where permits are issued, includes material about construction BMPs to provide education for these parties. Several construction related brochures, specifically the construction site management tri fold and a construction SWPPP tri fold (Attachments 8.2 and 8.3) are available for project proponents to take from the bulletin board. A total of 30 construction site management tri folds, 20 English/Spanish door hangers, and 10 construction SWPPP tri folds were distributed to construction site owners and developers.

8.3.3 Residential Areas

Since residential areas make up more than half the City, the City understands the importance of reaching this particular audience through educational outreach programs. The City continued to send the *La Mesa Focus* newsletter (Attachment 5.3) to residents in the City. As previously mentioned, several storm water articles were included in the newsletters distributed in 2007/2008. The City also continued to partner with Target and Dixieline Lumber in La Mesa to provide IPM cards at the checkouts of each business's garden center. These cards are included as Attachment 5.2. Other educational materials distributed to City residents include San Diego Bay and San Diego River Factsheets as well as the Green Wrench Guide and the residential Preventing Urban Runoff Pollution tri fold. Most educational materials were distributed at City events, at specific locations in the City, or during complaint investigations. The San Diego and San Diego Bay Factsheets can be found in Attachment 5.1; the City's residential Preventing Urban Runoff Pollution tri fold is included as Attachment 6.1. The quantity and location of the materials that were distributed are included in Table 8-3.

Table 8-3
Residential Area Educational Materials

Educational Material	Location	Number Distributed
IPM Cards	Oktoberfest	98 English, 2 Spanish
IPM Cards	Target Garden Center	75 English, 75 Spanish
IPM Cards	Dixieline Lumber	45 English, 40 Spanish
IPM Cards	Intergenerational Games	11 English, 8 Spanish
SDR Factsheets	Household Hazardous Waste at Rancho San Diego*	700
Residential Preventing Urban Runoff Pollution	Household Hazardous Waste at Rancho San Diego*	700
SDB Factsheets	Household Hazardous Waste at Rancho San Diego*	700
SDR Factsheets	Strawberry Hill Apt Complex	180
Residential Preventing Urban Runoff Pollution	Strawberry Hill Apt Complex	180
SDR Factsheets	Earth Fair	100
SDB Factsheets	Earth Fair	100

Table 8-3
Residential Area Educational Materials

Educational Material	Location	Number Distributed
Residential Preventing Urban Runoff Pollution	Household Hazardous Waste	72
SDR Factsheets	Solana Center at Kragen in La Mesa (oil filter exchange)	40
Residential Preventing Urban Runoff Pollution	Solana Center at Kragen in La Mesa (oil filter exchange)	40
SDB Factsheets	Solana Center at Kragen in La Mesa (oil filter exchange)	40
SDR Factsheets	Coastal Clean Up Day	30
SDB Factsheets	Coastal Clean Up Day	30
Green Wrench Guide	Solana Center at Kragen in La Mesa (oil filter exchange)	20
SDB Factsheets	Oktoberfest	16
Residential Preventing Urban Runoff Pollution	Intergenerational Games	7

Note
* Rancho San Diego is a location close to the City where residents chose to participate in HHW disposal.

In addition to the educational materials that were provided at various locations, the City continued the development of the storm water kiosks at selected City parks. The first constructed kiosk is located at La Mesita Park and was completed during the 2006/2007 reporting period. The second kiosk is located in Vista La Mesa Park (see Figure 8-1) and was completed during the 2007/2008 reporting period. The City will continue to partner with local Eagle Scouts to complete construction of a third kiosk to be completed during the 2008/2009 reporting period.

Figure 8-1 – Kiosk at Vista La Mesa Park

The City website, www.cityoflamesa.com, is another way in which City residents can become familiar with the design and intended utilization of the storm drain system, HHW, alternatives to hazardous household products, find information regarding volunteer opportunities, applicable City contact information, and IPM cards. As

previously noted, the City also provides electronic copies of current and archived *La Mesa Focus* newsletters on the website.

8.3.4 UNDERSERVED COMMUNITIES

As discussed in the City's JURMP, the City has identified the several residential areas along University Avenue as "underserved" communities. Two residential areas have been identified as Low/Moderate Income Block Groups. A third area has been identified as a Hispanic Household Concentration area. A disproportionately large number of calls to the City's storm water hotline involve these areas. In an effort promote outreach and education in these underserved communities, the City has developed Spanish versions of educational materials distributed to residential areas. Another effort implemented by the City is the utilization of the Spanish language option on the City's storm water hotline. The City plans to continue outreach to these underserved communities through more educational programs to be implemented in future reporting years.

8.3.5 COMPLAINT INVESTIGATIONS

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs. In addition to the City's storm water hotline, Public Works also has a maintenance hotline for complaints regarding issues with the MS4 and sewer lines. These complaints are followed up by Public Works personnel. If a representative for the business, residential area, or construction site is present, the inspector will provide site-specific information regarding storm water issues including applicable educational materials. Included in Table 8-4 are the name and the quantity of each of the educational materials distributed during complaint investigations in 2007/2008.

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2007/2008 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder the effectiveness assessment for this program component.

Impressions Made

The City has continued to provide residents and businesses storm water-related education through inspections, distribution and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session. Printed educational materials distributed are assumed to generate three impressions each. Table 8-5 details the number of impressions made by the City during this reporting year.

Table 8-5
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions

8.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was recently updated in March 2008. No changes to the City's education component have been made since that time.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, cleanup events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Collaboration between the City and the community should help encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2007/2008 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period.

- During 2007/2008, the City hosted a variety of cleanup events throughout the City. Over 110 volunteers removed over 475 pounds of trash and debris during these events.
- The City hosted 8 HHW collection events. Door-to-door pick up service was available for the disabled and senior communities. A total of 1,044 individuals disposed of 1,100 loads of HHW.
- On 11/10/2007 the Solana Center hosted the La Mesa Oil Filter Exchange at Kragen Auto Parts. A total of 44 people participated and received a new oil filter. Five gallons of used oil and 55 used oil filters were collected for recycling.
- On 4/12/2008 and 4/19/2008 the City hosted the La Mesa Spring Clean Up. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste without charge.
- Volunteers for the City's Adopt-A-Block and Adopt-A-Park programs, which involve residents in keeping local streets and parks free of litter, logged over 2,700 hours.
- On 3/29/2008, the city held Park Appreciation Day, a clean up even held throughout the 14 parks in the City.

9.2 Public Participation Activities

Cleanup Events and Programs

During 2007/2008, the City hosted various cleanup events and activities at various locations in the City. Cleanup events provide a direct benefit to water quality and provide an opportunity for the City to distribute educational materials and information to the event's volunteers.

California Coastal Cleanup Day

The City hosted the California Coastal Cleanup Day in the Alvarado and University channels on 9/15/2007. A total of 65 volunteers removed over 200 pounds of trash at the Alvarado site, and 25 volunteers removed 80 pounds of trash at the University site. EDCO donated dumpsters for the event. Public participation in this event has grown from previous years; only five volunteers participated during 2006/2007. The City's Stormwater Program Manager presented an overview of storm water pollution prevention and watershed concept topics to participating volunteers.

Park Appreciation Day

Park Appreciation Day was a cleanup event held throughout the 14 parks in the City on 3/29/2008. Normally this event is held earlier in the fiscal year, however, due to the 2007 fires the event was pushed back several months. A short presentation was given by the site captain regarding watershed concepts, pollutants of concern in local watersheds, the benefits of cleanups, and applicable information available on the City's website.

Creek to Bay Cleanup

The City also hosted the Creek to Bay Cleanup at two locations in the City. Fifteen volunteers, including Mayor Art Madrid, participated in removing 135 pounds of trash from the site at Alvarado Channel (Figure 9-1). Five volunteers removed 25 pounds of trash and five pounds of recycling from the site at University Channel. An additional 30 pounds of trash were collected from University Avenue during the event. The City's Stormwater Program Manager briefly explained watershed concepts, pollutants of concern, and required BMPs to all event volunteers. At the University Channel site, event volunteers were also presented information on the TMDL for Chollas TMDLs. These cleanup events were advertised on the City website and in the Union Tribune. The results of the cleanup were posted on the City website, announced on the City's storm water bulletin board, in the community center and the public library, and in a press release.

Figure 9-1 – Creek to Bay Cleanup at Alvarado Channel

Adopt-a-Park and Adopt-a-Block

The City's Adopt-a-Park Program has continued to involve local businesses, schools, service organizations, families and other individuals in keeping the City's parks free of trash. Volunteers involved in this program are encouraged to remove trash on a regular basis from the City parks and open spaces. Volunteers spent 2,338 hours removing trash from various parks throughout the City.

Similarly, the City's Adopt-a-Block Program promotes cleanliness in the City by encouraging City residents to keep neighborhoods free of trash and debris. Volunteers pick up trash during normal daily activities, such as daily walks in their neighborhood. Individuals utilize City-provided trash bags or may choose to collect trash prior to trash collection day so that litter and debris can be deposited into any available trash can along the street. During this reporting period, participants reported 456 hours of volunteer time as part of this program.

Canine Corners

Canine Corners volunteers pick up pet waste in designated areas of Harry Griffin Park. Volunteers also advocate patrons of the park to pick up after their pets. This prevents pet waste and associated bacteria and viruses from being discharged to the City's MS4.

Saint Madeline's Sophie Center

The City maintains a contract with Saint Madeline's Sophie Center, which employs developmentally disabled individuals to aid in picking up trash and debris at various parks throughout the City. The scope of services includes trash and debris cleanup, emptying trash receptacles and replacement of plastic liners, sweeping/cleaning picnic area tables, as well as some janitorial responsibilities at the park restrooms. Crews consist of three individuals and one job coach. Parks included in this program are Aztec Park, Collier Park, Highwood Park, Jackson Park, La Mesita Park, Northmont Park, Rolando Park, Sunset Park, Sunshine Park, and Vista La Mesa Park. A similar program is conducted at the Jr. Seau Sports Complex, also with a crew consisting of three individuals and one job coach.

Hazardous Waste Collection and Used Oil Recycling Program
The City's Community Hazardous Waste Collection and Used Oil Recycling Program encourages City residents and business owners to properly dispose of HHW. The City hosted eight HHW collection events at EDCO's disposal transfer station facility, which is located near the center of the City. One of these collection events was hosted in Rancho San Diego, about 5 miles southeast of the City, at the Skyline Church. Forty-nine of the participants at this location were from the City. Events were advertised in the City's *La Mesa Focus* newsletter (Attachment 5.3), which was circulated to thousands of residents and businesses in the City. A door-to-door pickup service was also provided for the senior and disabled communities. A total of 1,044 people participated in the events, and 1,100 loads of HHW were collected.

On 11/10/2007 the Solana Center hosted the La Mesa Oil Filter Exchange at Kragen Auto Parts, located in the City. A total of 44 people brought in 55 used oil filters and 5 gallons of oil for recycling. A new filter was distributed to each participant. Educational outreach materials were distributed to all participants. The event was advertised in the *La Mesa Focus* newsletter, the *Penny Saver* and by Kragen Auto Parts employees.

Other Waste Disposal
The City hosted the La Mesa Spring Clean Up event on two consecutive Saturdays in April, 4/12/2008 and 4/19/2008. Residents were allowed residents to bring large items, unwanted household materials (not including HHW), and green waste to the EDCO location in the City for free disposal. Participants were provided with IPM information to encourage the utilization of pollution prevention techniques for lawn care activities, particularly pesticide application.

Public Reporting
As discussed in Section 7, complaints are received through the City's Storm Water Hotline and online website reporting system. The number for the hotline is advertised in articles published in the *La Mesa Focus* newsletter and on various educational materials given out at public outreach events. The residential, industrial and commercial, construction, and municipal communities are encouraged to utilize the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable.

9.3 Outreach Events

The City has continued to provide educational outreach programs for variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include the participation of commercial businesses in distributing educational materials and the City's participation in regional meetings and events.

Intergenerational Games

The City contracted ILACSD to provide education outreach at the Intergenerational Games at the La Mesa Middle School on 10/12/2007. ILACSD gave brief demonstrations of the Enviroscape watershed model to adults and youth and emphasized storm water pollution prevention concepts (Figures 9-2 and 9-3). A total of seven Residential Preventing Urban Runoff Pollution brochures and 19 IPM cards were distributed to booth visitors (Attachments 5.4 and 5.2, respectively).

Figure 9-2 – Enviroscape Watershed Model

Figure 9-3 – Demonstration at Intergenerational Games

Oktoberfest

Oktoberfest is one of the largest festivals in the City and was held from 10/5/2007 through 10/7/2007. The City hosted a storm water educational booth that provided various educational materials for its visitors; 100 IPM cards and 16 San Diego Bay Watershed Factsheets (Attachments 5.2 and 5.1) were distributed during this event. Additionally, vendors at the event were provided a handout entitled "Tips for Outdoor Vendors" (Attachment 8.1).

Storm Water Information Kiosks

As mentioned in the previous section, the City has continued to work with local Eagle Scouts to construct storm water kiosks. One kiosk was installed during 2007/2008. The City plans to install an additional kiosk in 2008/2009 for a total of three kiosks in three different City parks. The kiosks present storm water pollution prevention information to park patrons.

Business Participation

The City's Stormwater Program Manager has continued to work with two businesses in La Mesa, Target and Dixieline Lumber, to distribute IPM cards (Attachment 5.2). The IPM cards were developed as part of a regional effort to combat pesticide pollution and increase the utilization of IPM techniques. Target keeps the educational materials in its garden center due to the likelihood of individuals visiting that portion of the store purchasing pesticides. Dixieline Lumber keeps the cards at the registers for those checking out to take. Providing educational materials that customers may take home and review before using the purchased products may mitigate the negative impacts they have on receiving water bodies.

Chollas Creek TMDL Stakeholder Meetings
The jurisdictions named as dischargers for Chollas Creek TMDLs regularly meet to share information, develop reports, and discuss strategies. The City actively participated in these meetings during the reporting period.

Storm Water Copermittee Meetings and Other City Participation
The meetings of various storm water Copermittee workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City continued to attend these meetings during the reporting period and will continue to do so during the 2008/2009 reporting period. The City has taken on the responsibility of serving as Co-Chair of the Dry Weather Monitoring Subworkgroup.

During 2007/2008, the City provided funding and educational materials for the Solana Center for a regional collection event at Earth Day on 4/20/2008. Over 60,000 people from all over San Diego County attended the event.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City's Sanitation Fund provides funding for the Storm Water Program. There have not been any changes to this funding mechanism during this reporting period. The total expenditures in 2007/2008 were $745,867. The proposed budget for the 2007/2008 Fiscal Year is $792,645. The itemized costs within six different categories are presented in Table 12.1, below. Note that 2007/2008 contractor costs in the table below are based on funds encumbered during the reporting period. The "Miscellaneous As-Needed Services" line item includes various as-needed services from consultants.

Table 10-1
Itemized Expenditures and Budget
For Fiscal Years 2006/2007 and 2007/2008

Storm Water Program Fiscal Analysis	Expenditures FY 07/08	Budget FY 08/09
Engineering Division	$ 185,880	$ 184,900
Program Mgmt.	$ 85,530	$ 89,910
Land Use	$ 25,755	$ 15,850
Construction	$ 16,880	$ 17,650
Existing Development	$ 29,480	$ 30,680
Education	$ 9,275	$ 10,960
IC/ID	$ 17,830	$ 18,720
Admin	$ 1,130	$ 1,130
Public Works Operations	$ 113,620	$ 124,005
SSO/MS4 Cleaning	$ 107,620	$ 116,370
Streets Division	$ 4,450	$ 4,860
Parks Division	$ 1,550	$ 2,775
Equipment and Supplies	$ 36,581	$ 54,760
Storm drain pipe and supplies	$ 7,677	$ 21,770
Vactor	$ 28,904	$ 32,990

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

The City began using the standardized program effectiveness assessment soon after it was developed by the Copermittees during the last permit cycle. The City also participated in regional efforts to develop a standardized assessment approach and associated metrics from summer 2007 through winter 2008. The original goal of that group was to produce assessment work products that all Copermittees could use in their JURMPs. Due to a variety of complications on a regional level, that process could not be completed prior to the submittal of the City's JURMP, so the City prepared its own effectiveness assessment approach and measures.

Since the submittal of the JURMP in March 2008, no additional progress has been made on regionally standardized approaches to program effectiveness assessment. It is likely that the Copermittees' Fiscal, Reporting, and Assessment Workgroup will revisit the issue of standardized assessment metrics and procedures in the near future. The City anticipates participating in the process of developing such regional standards and incorporating work products produced into its own local program effectiveness assessment system.

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

The City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP. The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted

outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 Effectiveness Assessment Results

The new Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome Level Assessments

Level 1
Level 1 outcomes essentially are measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

Levels 2 and 3
See the tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

Level 4
The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs reliable load estimation methods have not yet been developed. Note that the City has installed Calsense in various City parks and medians, as described in Section 4. Calsense has resulted in decreases in water usage for City-maintained landscaping; see

Figure 11-4. This is likely to have reduced the load of pollutants potentially transported by irrigation runoff.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. The City also has established an additional monitoring program that includes six sites. Five of these sites are located in the City's MS4, and one is located in an improved channel that has also been identified as a receiving water body. The City will also begin collecting MS4 monitoring data in 2008/2009, which should also provide information about discharge quality.

Several graphs demonstrating historical Dry Weather Monitoring results are provided at the end of this section as figures 11-5 through 11-8. Ammonia and detergents, the two constituents with the longest historical data record, both show decreasing trends over time. Relatively few action level exceedances have been noted in recent monitoring years; only two measurements from the 2007 Dry Weather Monitoring Program exceeded their respective action levels.

A comparatively short data set is available for the City's additional monitoring program. Based on initial results, it appears that sediment and metals values in runoff from the area upstream of Site 907-ALV-002 may be somewhat higher than those recorded at the other sites. The City has initiated some additional inspections in the light industrial area upstream of this site; more information about that effort is available in Section 12 of this JURMP Annual Report. The City plans to continue its additional monitoring work during wet and dry weather in 2008/2009.

Level 6

No Regional Monitoring Program stations are located within or close to the City of La Mesa. The western portion of Alvarado Channel is the only receiving water body within City limits. The City has placed a special study monitoring site in Alvarado Channel at the point where the channel exits the City. Three wet weather samples and two dry weather samples have been collected at this site, 907-ALV-002, over the past two years. For 2008 it has been made a primary Dry Weather Monitoring Program site in order to collect each year. To date, the amount of data collected is not sufficient to determine any trends for water quality at the site. Several years of data are needed before any trends become apparent. The City plans to continue collecting both dry and wet weather data at this site in 2008/2009. The City will also continue to work with the San Diego River and San Diego Bay WURMP workgroups to improve the quality of water bodies downstream of the City of La Mesa.

11.2.2 OVERALL COMPONENT ASSESSMENTS

Development Planning

The City's review process for development projects is effectively requiring higher removal efficiency BMPs. Based on some interaction with responsible parties after the end of the reporting period and the results of the treatment control inspections, it appears that there is a low level of awareness of the need for regular treatment control BMP maintenance. The City will work with the parties responsible for maintenance of treatment control BMPs to address this issue during 2008/2009.

Construction

The available data indicate that on the whole the City's construction program effectively requires BMP implementation. Any BMP deficiencies noted are typically remedied promptly. The City has received some hotline calls about poor BMP implementation at a few small projects, so the City will continue its efforts to notify small projects and homeowners of the City's BMP requirements.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. In particular, the City sweeps its streets more often than the permit requirements to aid in WURMP efforts. The City has also installed drainage inserts along University Avenue and at the Public Works Operation Center to mitigate discharges of pollutants. The City has implemented a sophisticated system, Calsense, to control irrigation runoff from parks and medians. The City also distributes pet waste bags through dispensers in its parks.

Industrial and Commercial

The City has a comprehensive inspection program that utilizes experienced consultant inspectors. Results are tracked through a database. A comparatively high number of noncompliant sites were identified in 2007/2008. While this indicates the City correctly identified high TTWQ sites when prioritizing its inventory, the City will also need to follow up with these sites in 2008/2009 so that they comply with the City's regulations. The City has recently begun charging businesses for inspections, and it appears that this practice has stimulated more interest in and a higher desire for awareness about the program. Businesses also have an increased incentive to comply with the regulations, as compliant businesses will be inspected less frequently. The City will be holding an educational workshop in early 2008/2009.

Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. The City is also conducting additional monitoring studies to help identify and mitigate residential sources of pollution more effectively.

Illicit Discharge Detection and Elimination
The City's IDDE program has effectively responded to complaints. No IC/IDs were identified during the 2007 Dry Weather Monitoring Program. There were no SSOs during the reporting period, indicating sanitary sewer system maintenance efforts were effective. The City will continue to take action to prevent and eliminate IC/IDs.

Education
The City has expanded its education program over each of the last several years. Data from 2007/2008 indicate that two key target audiences in need of additional education are industrial and commercial businesses and parties responsible for treatment control BMP maintenance.

Public Participation
New clean-up events have been added over the years, and the City will continue looking for new opportunities for public involvement. The number of hotline calls increased in 2007/2008, which may indicate an increased level of awareness of the hotline rather than an increase in the number of storm water issues occurring in the City. Dry Weather Monitoring Program results did not indicate an increase in pollutant levels from 2006/2007 to 2007/2008.

11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A relatively small number of projects submitted reports during 2008/2009. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing. Internal The City's storm water consultant and the City's Stormwater Program Manager worked with engineers in the City to improve their level of understanding of the SUSMP program. City personnel also attended training sessions—see Section 8. The City's consultant reviews WQTRs submitted to the City.	Overall WQTR approval rate during reporting period	17%	N/A, addressed through other significant activities for this component
		Individual firm WQTR approval rate	N/A, insufficient number of projects	
		Number of projects requiring three or more reviews prior to WQTR approval	1	
		Percent of projects proposing BMPs besides filter inserts	100%	
		Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern	100%	
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of projects implementing proposed BMPs	100%	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External N/A, verification letters were not sent out until 2008/2009. Internal N/A, verification letters were prepared by the City's consultant.	Percent of sites properly maintaining BMPs	45%	Additional load reduction could be achieved through improved BMP maintenance.
		Resolution status of enforcement actions	See Section 2	
		Percent of sites submitting proper verification forms	N/A	
		Percent of sites certifying proper maintenance	N/A	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of projects implementing required BMPs by end of reporting period	100%	Proper BMP implementation is likely to have reduced pollutant loading.
		Percent of projects in compliance with BMP requirements during all inspections	50%	
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8.	Percent of inspected facilities/activities in compliance with BMP requirements	81%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	See Section 4	Number of pet waste bags distributed	180,000
		Number of dry weather monitoring exceedances traced to municipal sites	0		
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	692 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	0.08 tons/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume)	175.5 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO discharge to MS4 (gallons)	0
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of sediment and debris removed from treatment BMPs	9 cubic yards
				BMP effectiveness studies	N/A
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External Knowledge assessment scores indicated a slightly low level of understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City contracts with a qualified consultant to perform industrial and commercial inspections.	Percent of inspected sites in compliance with BMP requirements (not including additional study)	63%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	0	Number of IC/IDs eliminated (inspections and complaint investigations)	24
		Consistent with the intentional selection of sites with the highest TTWQ potential, many sites had a low BMP score of 1. Aside from those problem sites, the most common score was three. See Figure 11-2 on the following page for a score distribution.			
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Figure 11-1
Knowledge Assessment Scores, 2007/2008 Inspections

Figure 11-2
BMP Assessment Scores, 2007/2008 Inspections

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in variety of ways in 2007/2008; see sections 6 and 8 for details. Internal The City's Stormwater Program Manager is heavily involved in the implementation of the residential component. Other City staff involved in the program also have a good understanding of the goals of the storm water program.	Number of residential incidents reported to storm water hotline	26	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation..
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Stormwater Program Manager trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Section 7.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Section 7 are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventative inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	There were no SSOs during the reporting period.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2007/2008.
	Estimated number of impressions made	200,324		

Notes
Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details. See Figure 11-3 for a summary of hotline reports in recent years.	Number of attendees at events	1,648	Amount of trash and debris collected at cleanup events	475 lbs.
		Number of calls received to the storm water hotline	137	Amount of HHW collected	1,100 loads, 55 oil filters, and 5 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Dry Weather Results, Fecal Coliform and *Enterococcus* Bacteria 2002-2007

12.0 SPECIAL INVESTIGATIONS

During the reporting period the City conducted two special investigations: wet weather water quality monitoring and additional industrial and commercial inspections. Details of these investigations are presented below.

12.1 ADDITIONAL WATER QUALITY MONITORING

During the reporting period, the City continued the additional wet and dry weather water quality monitoring program it initiated during the 2006/2007 fiscal year. Figure 12-1 presents the locations of the sampling sites during the 2007/2008 reporting period. While the sampling locations have not changed since the previous year, the sampling site names on the figure differ from those presented in the 2006/2007 JURMP Annual Report. The site names in Figure 12-1 have been updated based on the naming system presented in the City's March 2008 JURMP update. All six sites shown on Figure 12-1 were sampled during the 2007/2008 reporting period.

Wet weather monitoring samples were taken on November 30, 2007 and December 7, 2007. Time-weighted composite samples were taken at all six sampling sites on November 30, 2007 and tested for the constituents listed in the monitoring plan—see the 2006/2007 JURMP Annual Report for a copy of the monitoring plan. The two sites at the base of the Alvarado and University drainage basins, 907-ALV-001 and 908-UNI-001, were also sampled on December 7, 2007. Time-weighted composites were taken and analyzed for all the constituents in the monitoring plan. Additional monitoring at all six sites was also conducted concurrently with the Dry Weather Monitoring Program during the summer of 2007.

Recent regional monitoring data from Chollas Creek has shown that pyrethroids are an emerging issue in the Chollas Creek subwatershed. It is believed that they are being used as replacement pesticides for the banned pesticide Diazinon. These recent findings prompted the City to also test the composite sample at site 908-UNI-001 for pyrethroids to collect local data to compare with regional findings. To collect additional pyrethroid data, the City also collected samples from site 908-UNI-001 during a rain event on December 7, 2007. Downstream site 907-ALV-001 was also sampled and tested for pyrethroids on December 7, 2007 to gain additional data in anticipation of upcoming regional pyrethroid testing beyond the Chollas Creek subwatershed.

The results from the wet weather monitoring conducted during the reporting period showed somewhat higher levels of metals and Total Suspended Solids (TSS) in the composite sample from site 907-ALV-002 in comparison to the other monitored sites. In response to these results, the City conducted additional industrial and commercial inspections upstream of the sampling site to identify possible sources of the elevated pollutants. Results from the additional industrial and commercial inspections are presented below in Section 12.2. The City also developed forms designed to collect data that might help identify upstream sources during industrial and commercial inspections.

These supplemental forms were completed during 2007/2008 inspections, and the results are summarized in Section 12.3.

The City has not yet produced an official report analyzing the data from the wet weather sampling conducted during the reporting period, but is planning to prepare a report next fiscal year, which will include results from an additional round of wet weather sampling planned for the 2008/2009 fiscal year. An electronic file of data collected through additional monitoring programs during 2007/2008 is included as Attachment 12.1. During the next round of sampling, the City plans to conduct flow-weighted composite samples at both of the downstream sampling sites, 908-UNI-001 and 907-ALV-001. Samples taken at other sites farther upstream in the basins will be time-weighted composite samples as they have been during previous years.

Figure 12-1
Additional Water Quality Monitoring Site Locations

12.2 Additional Industrial and Commercial Inspections

As mentioned previously in this section and earlier in Section 5, the City conducted additional industrial and commercial inspection in a "light industrial" zone of the City in an effort to characterize the area and search for potential sources of elevated pollutants observed during wet weather sampling. Inspections were conducted as described in the industrial and commercial section of the JURMP and as described in Section 5 of this JURMP Annual Report. A total of five facilities received full storm water compliance inspections; one additional facility was visited, but a full inspection was not conducted because it was a duplicate of another business on the City's routine inspection list. The businesses inspected as part of the additional study, as well as the corrective actions recommended during the inspection are included in Table 12-1 later in this section.

Due to the small number of inspections that were completed as a part of this special study, it is difficult to make larger assumptions about the area as a whole. In general, BMP recommendations were relatively minor. The City conducted additional inspections as part of its special investigation in early 2008/2009. Findings from these additional inspections will be analyzed along with the data collected from the 2007/2008 and any relevant findings will be reported in the 2008/2009 JURMP Annual Report.

Table 12-1
Industrial and Commercial Facilities Visited as Part of an Additional Study

#	Business Name	Address	Corrective Actions
1	Albert J Becker, Inc. dba Wood Design West	8333 Case Street Suite C	• Keep dumpster lids closed when not in use.
2	Broding's Battery Warehouse	7860 El Cajon Blvd Suite A	• Do not wash vehicles on the site unless all water can be collected to prevent runoff to the storm drain system.
3	Cape-Able Canines	8150 Commercial Street	• None
4	Classic Screen Print	8176 Center Street, Suite C	• None
5	Diversified Materials Company, Inc	8250 Commercial Street	• Talk to the property owner and work to fix the storm drain on the property to prevent flooding. Do not pump the dirty water to the street. • Wash hands only in locations that drain to the sanitary sewer system, such as the bathroom sink. • Clean up the aluminum debris and keep the site free of leaves and debris. • Close the dumpster lids when not in use.

12.3 ADDITIONAL DATA COLLECTED DURING INDUSTRIAL AND COMMERCIAL INSPECTIONS

The City requested that D-MAX collect additional information during the 2007-2008 industrial and commercial inspections. Several of the questions were asked to gauge the level of knowledge of the facility contact person, and other questions were based on inspector observations.

The last question on the Supplemental Watershed Assessment Questionnaire and Inspection Form prompts the inspector to assign either significant or not significant to the overall source ranking for watershed pollutants of concern. This box was checked "Significant" when two or more of the watershed pollutants of concern were assigned a pollutant discharge potential (PDP) of three (3) or higher or one watershed pollutant of concern was assigned a PDP of a four (4) or higher. If the site did not meet the aforementioned criteria, the box was checked "Not Significant."

If the site was ranked as a "Significant" source for watershed pollutants of concern, the site was marked as being in violation of the City's Municipal Storm Water Ordinance. Note that a small number of sites were observed to be in violation of the City's Municipal Storm Water Ordinance but were ranked as "Not Significant" sources for watershed pollutants of concern. In these cases, any high PDP scores for the businesses were assigned to pollutant categories that are not considered watershed pollutants of concern and therefore did not meet the criteria of "Significant." More information on enforcement actions for industrial and commercial businesses is present in Section 5 of this JURMP Annual Report.

Information gathered from the questionnaire is discussed below, and split up between the San Diego River and San Diego Bay Watersheds. The City will take these results into account when planning and preparing for its 2008/2009 inspection program.

12.3.1 SAN DIEGO RIVER WATERSHED RESULTS

Most facility personnel (approximately 62%) did not have any knowledge of receiving any information or education about what businesses should be doing to prevent pollution from entering the environment. Other information gathered from the questions asked to facility personnel are presented in the following tables.

Table 12-2
Question: When water (from rain, sprinklers, etc.) leaves your site where does it go?

Answer	Frequency of Answer
A Water Body (Any)	31%
Don't Know/Unsure	10%
Storm Drain System	57%
Storm Drain System, A Water Body (any)	2%

Table 12-3
Question: Runoff leaving your site eventually reaches what water body?

Answer	Frequency of Answer
Don't Know/Unsure	24%
Pacific Ocean	45%
Pacific Ocean, San Diego River	10%
Pacific Ocean, San Diego River, Alvarado Channel	2%
San Diego River	17%
San Diego River, Mission Bay	2%

Table 12-4
Question: What is your impression of the water quality/condition of the downstream water body?

Answer	Frequency of Answer
Don't Know	12%
Fair	19%
Good	24%
Poor	45%

Table 12-5
Question: In General, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff (more than one answer is checked in some instances)?

Answer	Frequency of Answer
Washing Activities	33%
Washing Activities Done by Mobile Businesses	2%
Material Storage	10%
Material Processing	10%
Landscaping	10%
Repair Services	10%
Illegal Dumping	17%
Trash Area	21%
Don't Know	19%
Other	38%

Most facility personnel (approximately 76%) were receptive in their attitude toward compliance with storm water regulations. Other information regarding observations recorded during the inspection is included in the tables below:

Table 12-6
Observation: Was evidence of any non-storm water discharges (including allowable discharges) observed?

Observation	Frequency of Answer
Minimal	31%
No	45%
Significant	24%

Table 12-7
Observation: If irrigation system is present, which sprinkler head types are present (more than one answer is checked in some instances)?

Observation	Frequency of Answer
Spray	55%
Rotor	2%
Microspray	2%
Drip	12%
Bubblers	0%
Water by Hand	7%
Other	0%
N/A	26%

Table 12-8
Sites observed to be a significant source for watershed pollutants of concern in the San Diego River Watershed

#	Business Name	Business Address
1	Aqua Clean Hand Car Wash & Express Lube	7959 Parkway Dr
2	Arby's 5822	5341 Jackson Dr
3	Budget R V Repair & Mobile Service	7860 El Cajon Blvd
4	Centex Glazing	8260 Commercial St.
5	Chili's Bar & Grill #454	8285 Fletcher Pkwy
6	Chipotle Mexican Grill	8005 Fletcher Parkway
7	Diversified Materials Company, Inc	8250 Commercial Street
8	El Torito	5024 Baltimore Dr
9	Hearth House	5505 Jackson Dr
10	Kentucky Fried Chicken	5358 Jackson Dr
11	Marie Callender's #74	6950 Alvarado Rd
12	McDonald's	8045 Fletcher Pkwy
13	Pick Up Stix La Mesa	8025 Fletcher Pkwy
14	Rainbow Steel Inc.	8332 Case St.
15	The Truck and SUV Center	5301 Lake Murray Boulevard
16	Wedo Wedo	8169 Center Street

12.3.2 SAN DIEGO BAY WATERSHED

Similar to the San Diego River Watershed, most facility personnel (approximately 69%) did not have any knowledge of receiving any information or education about what businesses should be doing to prevent pollution from entering the environment. Other information gathered from the questions asked to facility personnel are presented in the following tables. Please note that a language barrier at one business, Aliberto's Mexican Food, prevented some information from being collected.

Table 12-9
Question: When water (from rain, sprinklers, etc.) leaves your site where does it go?

Answer	Frequency of Answer
Storm Drain System	57%
A Water Body (Any)	14%
Don't Know/Unsure	22%
Treatment Plant/Sewer	6%

Table 12-10
Question: Runoff leaving your site eventually reaches what water body?

Answer	Frequency of Answer
Pacific Ocean	49%
Chollas Creek	10%
San Diego Bay	4%
Don't Know/Unsure	36%

Table 12-11
Question: What is your impression of the water quality/condition of the downstream water body?

Answer	Frequency of Answer
Don't Know	47%
Fair	22%
Good	6%
Poor	24%

Table 12-12
Question: In General, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff (more than one answer is checked in some instances)?

Answer	Frequency of Answer
Washing Activities	14%
Washing Activities Done by Mobile Businesses	2%
Material Storage	4%
Material Processing	2%
Landscaping	4%
Repair Services	16%
Illegal Dumping	22%
Trash Area	22%
Don't Know	33%
Other	18%

Most facility personnel (approximately 64%) were receptive in their attitude toward compliance with storm water regulations. Other information regarding observations recorded during the inspection is included in the tables below:

Table 12-13
Observation: Was evidence of any non-storm water discharges (including allowable discharges) observed?

Observation	Frequency of Answer
Minimal	34%
No	46%
Significant	20%

Table 12-14
Observation: If irrigation system is present, which sprinkler head types are present?

Observation	Frequency of Answer
Spray	40%
Rotor	0%
Microspray	0%
Drip	2%
Bubblers	0%
Water by Hand	22%
Other	2%
N/A	34%

13.0 NON-EMERGENCY FIRE FIGHTING

Please reference Section 4.2.3 of this JURMP Annual Report for information about BMPs and procedures associated with non-emergency fire fighting activities.

14.0 JURMP REVISIONS

The City's JURMP was rewritten in the spring of 2008 in response to new Municipal Permit requirements. Section 14 of the updated JURMP document includes a list of the changes made to the JURMP at that time. Any other changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 CONCLUSIONS AND RECOMMENDATIONS

During the 2007/2008 reporting period the City of La Mesa updated its JURMP, which was finalized and submitted to the RWQCB in March 2008. The City has begun implementing the new and revised programs in its updated JURMP. The Copermittees have created several new regional workgroups to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City of La Mesa will work collaboratively with the other Copermittees in this process and continue to refine its program implementation as needed to improve its ability to reduce or eliminate pollutant discharges and meet regulatory requirements. The City has initiated additional monitoring and other special studies to help it better identify and address sources of pollutants, with a view toward meeting TMDL requirements. The City will also continue its efforts related to existing and pending TMDLs for both Chollas Creek and the San Diego River.

Notes and Definition

[1]Alvarado Channel did not begin construction during the reporting period. This project was included on the construction inventory in the City's updated JURMP and was left on the inventory for clarity purposes.

[2]Condos (Aragon) was not active during the wet season but one inspection was performed during the wet season to ensure proper perimeter protection.

[3,4]These projects completed grading prior to the start of the 2007-2008 fiscal year. Construction is currently on hold; however, the City conducted one inspection at each site during the wet season to check for signs of erosion.

[5,6,7,8]These construction projects were completed prior to the start of the 2007-2008 wet season.

Notes

TTWQ – Threat to Water Quality

SIC –Standard Industrial Classification Code

Basin – City of La Mesa drainage basin. HSAs are as follows: Alvarado and Lake Murray (907.12; San Diego River Watershed), University and Lemon Grove (908.22, San Diego Bay Watershed), Spring Valley (909.12, San Diego Bay Watershed)

WDID – Waste Discharge Identification Number

<200 ft -- Less than 200 feet from the nearest receiving water body

Likely Source – Based on category, has pollutant discharge potential of "Likely" (see Table 7-1) for pollutant(s) associated with impairments of downstream receiving water bodies located outside the City but within the same watershed as the business. Pollutants considered for HSA 908.22 were heavy metals, bacteria, pesticides, and trash. Pollutants considered for HSA 907.11 were nutrients, oxygen demanding substances, and bacteria. There are no impaired water bodies or ESAs in the City of La Mesa.

Notes

TTWQ – Threat to Water Quality

SIC –Standard Industrial Classification Code

Basin – City of La Mesa drainage basin. HSAs are as follows: Alvarado and Lake Murray (907.12; San Diego River Watershed), University and Lemon Grove (908.22, San Diego Bay Watershed), Spring Valley (909.12, San Diego Bay Watershed)

<200 ft -- Less than 200 feet from the nearest receiving water body

Likely Source – Based on category, has pollutant discharge potential of "Likely" (see Table 7-1) for pollutant(s) associated with impairments of downstream receiving water bodies located outside the City but within the same watershed as the business. Pollutants considered for HSA 908.22 were heavy metals, bacteria, pesticides, and trash. Pollutants considered for HSA 907.11 were nutrients, oxygen demanding substances, and bacteria. There are no impaired water bodies or ESAs in the City of La Mesa.

Mobile – Mobile business

94	2/6/2008	Hotline Caller	4761 Jessie Street	Residential	Working on Vehicle/No BMPs	2/6/08 MT verifies complaint and provides education outreach material. No further action.	Verbal Warning, Green Wrench Guide, Urban Runoff Trifold, San Diego Bay Watershed Fact Sheet
95	2/11/2008	Public Works	Dallas/Fletcher Park Way Shell Station	Commercial	Water flowing on street from Shell Station property	2/11/08 MT verifies complaint. Sewer flow noted and Public Works contacted cleanup/address blockage. No discharge noted into storm drain. No further action.	N/A
96	2/13/2008	City Personnel	4473 Maple	Construction	Grading without proper permits	2/13/08 TM issues NOV and informs site that construction will not be allowed to continue until proper City permits are obtained. 2/15/08 MT follows up; construction not allowed to resume until permits obtained. BMPs found partially implemented, additional BMPs recommended.	Written NOV, Construction Trifold, San Diego Bay Watershed Fact Sheet
97	2/15/2008	Public Works	8689 Mariposa Street	Municipal	Her property has an old culvert for water run off, and it is deteriorating, now flooding her yard. She has standing water at the lower part of her property now.	WO#21079	N/A

Appendix B (Continued)
Summary of Documented Public Complaints

#	Date Received	Complaint Origin	Responsible Party/Location of Problem	Responsible Party Type	Issue/Problem	Response to Caller	Enforcement Type/Educational Material Distributed
98	2/15/2008	City Personnel	8090 University Avenue, Action RV	Commercial	Washing RV on property, runoff onto Nebo Street	2/15/08 MT issues NOV and provides education outreach to eliminate discharge.	Written NOV, Urban Runoff Trifold, San Diego River Watershed Fact Sheet
99	2/18/2008	Hotline Caller	4625 Katherine Place	Residential	Unknown substance discharge to gutter	2/18/08 MT verifies source but can't identify discharge location. MT sends correspondence to 4625 Katherine Place to address issue/cleanup.	Written Warning, Construction Trifold, San Diego Bay Watershed Fact Sheet, Verbal Warning
100	2/25/2008	Public Works	68th Street	Municipal	Per La Mesa Listens: The drainage ditches need to be unclogged above the homes on the left side of the street as you come down 68th towards the park. Water is out of hand and has nowhere to go. This is causing instability and damage to properties.	WO#21125	N/A
101	3/3/2008	Hotline Caller	6355 Kinney Lane	Residential	White Paint Residue	3/3/08 MT verifies complaint and asks homeowner to sweep up residue. 3/4/08 MT verifies cleanup.	Verbal Warning
102	3/6/2008	Malik Tamimi	Par Electric University Avenue	Mobile	Water discharge no BMPs	3/6/08 MT issues NOV & has discharge stopped until proper BMPs implemented.	Written NOV
103	3/10/2008	Hotline Caller	3849 Violet Street	Residential	Over-irrigation	3/11/08 MT sends out over-irrigation letter.	Verbal Warning
104	3/10/2008	Hotline Caller	Mohawk Garden Complex 7482 Mohawk	Residential	Over-irrigation	3/11/08 MT does not observe over-irrigation.	N/A

Appendix B (Continued)
Summary of Documented Public Complaints

#	Date Received	Complaint Origin	Responsible Party/Location of Problem	Responsible Party Type	Issue/Problem	Response to Caller	Enforcement Type/Educational Material Distributed
105	3/11/2008	Public Works	8348 Center Drive	Municipal	Caller states that we have cleaned this culvert before. She works at Snipes Dye & Associates.	WO#21338	N/A
106	3/11/2008	Hotline Caller	Chevron Jackson/Center Drive	Commercial	Smelly Water at Car Wash	3/11/08 MT contact Chevron. Wastewater is recycled. Water not discharged to street. No further action	N/A
107	3/12/2008	Hotline Caller	6942 University Avenue	Commercial	Discharge Curve Cut	3/12/08 MT verifies complaint and does not note discharge at time of inspection.	N/A
108	3/17/2008	Public Works	4855 Harbinson Avenue	Municipal	Don Palmer spoke with this person: There is a tree growing up through the storm drain just south of 4855 Harbinson.	WO#21362	N/A
109	3/28/2008	Hotline Caller	9467 Block Tropico Drive	Residential	Concrete Washwater discharge	3/28/08 MT verifies complaint. Source of discharge could not be identified. Public Works notified for cleanup.	N/A
110	3/31/2008	Public Works	6030 Nagel Street	Municipal	Per La Mesa Listens: In the drainage ditch behind 6030 Nagel Street there are overgrown weeds. It is causing pools of standing water and a possible fire hazard.	WO#21458	N/A
111	4/2/2008	Hotline Caller	7761 Highwood Avenue	Residential	Five gallon paint on to street	4/3/08 DK did not observe paint. No further action.	N/A

Appendix B (Continued)
Summary of Documented Public Complaints

#	Date Received	Complaint Origin	Responsible Party/Location of Problem	Responsible Party Type	Issue/Problem	Response to Caller	Enforcement Type/Educational Material Distributed
112	4/3/2008	Public Works	Dugan Avenue	Municipal	There are 4-5 paint cans dumped into the gutter and the storm drain. This is at the corner of Dugan & St. Onge Place. Steve was paged.	WO#21510	N/A
113	4/7/2008	Hotline Caller	MD Auto Group	Commercial	Washing cars/engines in car lot	4/8/08 MT contacts facility and requests that car washing and engine washing be stopped. Owner receptive to request.	Verbal Warning
114	4/8/2008	Dave Liesberg	MD Auto Group	Mobile	Stucco discharge to street.	4/9/08 DL has Public Works cleanup. No further action.	N/A
115	4/8/2008	Hotline Caller	MD Auto Group	Residential	Water running down curb	4/8/08 MT verified complaint, irrigation system dysfunction/turned off. No further action	N/A
116	4/16/2008	Hotline Caller	MD Auto Group	Residential	Over-irrigation	4/17/08 DK verified compliant and placed door hanger.	Over-irrigation Door Hanger
117	4/23/2008	Hotline Caller	MD Auto Group	Commercial	Dumping Dirty Mop Water Along Curb	4/24/08 DK spoke with manager to stop discharge of wastewater.	Verbal Warning, Urban Runoff Trifold
118	4/26/2008	Hotline Caller	MD Auto Group	Other	Water discharging from manhole	4/28/08 RG verifies complaint, discharge not observed.	N/A
119	4/30/2008	Hotline Caller	MD Auto Group	Residential (homeowners association)	Car Washing on property, over-irrigation, no storm drain protection	5/1/08 ER verifies complaint. 5/7/08 MT sends out written warning and BMP education outreach. 6/4 MT contacted and provided preliminary data on BMPs to be implemented. 6/18/08 Association sends letter confirming bmp implementation. No further action.	Written Warning, Over-irrigation Fact Sheet, Urban Runoff Trifold

Appendix B (Continued)
Summary of Documented Public Complaints

#	Date Received	Complaint Origin	Responsible Party/Location of Problem	Responsible Party Type	Issue/Problem	Response to Caller	Enforcement Type/Educational Material Distributed
120	5/1/2008	Public Works	Riviera Drive	Municipal	Per Contact Us Form: There are plastic bags full of trash in the culvert on Riviera, just E of High Street.	WO#21726	N/A
121	5/8/2008	Storm Water Complaince Inspector	Carlsburger Dodge Rocky Bleier 8355 Hercules Street	Commercial	Washing cars/runoff	5/12/08 DK verbal warning and educational material.	Verbal Warning, Urban Runoff Trifold
122	5/12/2008	Hamed Hashemian	Shell Service Station 5261 Baltimore	Commercial	Over-irrigation	5/12/08 DK talks to manager to eliminate over-irrigation.	Verbal Warning
123	5/13/2008	Hotline Caller	Gus' Subs & Pizza #12 5620 Baltimore Drive, La Mesa	Commercial-Restaurant	Washing equipment outside	5/13/08 MT issues NOV. 6/6/08 MT further discusses NOV with owner/BMPs implemented.	Written NOV, Urban Runoff Trifold, What's Cookin', San Diego River Watershed Fact Sheet
124	5/13/2008	Hotline Caller	4342 Elma Lane	Residential	Oil Stains/Cigarette Butt	5/15/08 MT sends written warning for cleanup. No further action.	Written Warning
125	5/13/2008	Hotline Caller	Lemon Avenue/Fuerte	Residential	Storm Water Runoff	5/15/08 DK verifies. MT verifies that groundwater is resurfacing through asphalt. No further action.	N/A
126	5/15/2008	Hotline Caller	Harbinson and University	Commercial/Residential	Red Substance Reported in Channel	5/15/08 DK verifies complaint. Red substance not observed. No further action.	N/A
127	5/29/2008	Hotline Caller	4410 Date Ave	Residential	Paint chips washed into street	5/29/08 MT verifies complaint. Paint chips not observed. No further action	N/A

Appendix B (Continued)
Summary of Documented Public Complaints

#	Date Received	Complaint Origin	Responsible Party/Location of Problem	Responsible Party Type	Issue/Problem	Response to Caller	Enforcement Type/Educational Material Distributed
128	6/4/2008	La Mesa PD	4950 Pine Street	Residential	Washing 500 gallon diesel tank	6/4/08 Fire Department and MT respond to call. County Dept Environmental Health Hazmat Team/and City of San Diego Hazmat contacted. Wastewater discharged into storm drain with volume less than 500 gallons. Kitty litter placed a long curb to absorb diesel residue. Staining in storm drain not observed. MT issues NOV to owner. RWQCB contacted within 24 hours. Five day written report waived by RWQCB. No further action.	Written NOV
129	6/6/2008	Public Works	4459 Summit Drive	Residential	Antifreeze spill onto road	6/4/08 Public Works responded to help control antifreeze from entering storm drain. No antifreeze made it into storm drain. Curb cleaned. No further action.	Written NOV, Urban Runoff Trifold
130	6/9/2008	Public Works	5364 Swarthmore Street	Municipal	There is graffiti in the cement drainage ditch (canyon) behind 5364 Swarthmore Street	WO#21928	N/A
131	6/9/2008	Hotline Caller	6120 Horton Drive	Residential	Over-irrigation	6/9/08 MT verifies complaint, door hanger placed at resident's home. No further action.	Over-irrigation Door Hanger
132	6/11/2008	Eric Johnson	6201 Falmouth Drive	Residential	Over-irrigation	6/11/08 EJ sends written warning. 6/22/08 Resident responds that over-irrigation is being monitored/minimized. No further action.	Written Warning
133	6/11/2008	Hotline Caller	Nick's Auto Group 4949 Baltimore Drive	Commercial	Car Washing	6/14/08 MT verifies complaint and issues written warning/notice to comply. No further action.	Written Warning

#	Date Received	Complaint Origin	Responsible Party/Location of Problem	Responsible Party Type	Issue/Problem	Response to Caller	Enforcement Type/Educational Material Distributed
134	6/12/2008	Public Works	5418 Wellesley	Municipal	Debris from empty rental house pitched in a ditch that will cause a drainage problem. His address is 5432 Wellesley. The rental is the address on SR.	WO#21924	N/A
135	6/18/2008	Hotline Caller	A1 Storage 4981 Spring Street	Commercial	Pressure Washing	6/18/08 MT verifies complaint and sends out written notice to comply. No further action.	Written Notice to Comply
136	6/20/2008	Public Works	5282 Maryland Avenue	Municipal	The sidewalk drain needs to be removed and repaired.	WO#21985	N/A
137	6/23/2008	Hotline Caller	4533 Toni Lane	Residential	Washing Driveway	7/7/08 MT sends written warning. 7/16/08 MT follows up with complainant to see if washing continues. No washing activities, no further action.	Written Warning, Urban Runoff Trifold

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.3
iii. A listing of the development projects to which SUSMP requirements were applied.	Table 2-1
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	Appendix A (inventory)
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-2
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	2.4.4.2
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	2.4.4.2

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	**Location in Report**
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3
xviii. A description of notable activities conducted to manage urban runoff from development projects.	Throughout Section 2

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A (inventory)
viii. A description of the general results of the inspections.	3.5
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5 Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4.3.2
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.4, Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4, Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4, Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	**(N/A for 07-08)**
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-2
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3.4, Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4, Table 4-1 (
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.35.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-3
xviii. A description of the general results of the inspections.	Table 4-3
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4,
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.2 (mobile), Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4 (will be N/A)
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4 (will be N/A)
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4, Table 5-2
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

IDDE

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	**Location in Report**
i. Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.	7.4
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	7.4, Table 7-2, 7-3, and 7-4
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	7.4, Attachment 7.1
iv. A brief description of any other investigations and follow-up activities for illicit discharges and connections.	7.5
v. The number and brief description of illicit discharges and connections identified.	7.5, Appendix B
vi. The number of illicit discharges and connections eliminated.	7.5, Appendix B
vii. Identification and description of all spills to the MS4 and response to the spills.	7.3, Appendix B
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	7.5, Table 7-1, Appendix B

IDDE

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.5, Table 7-1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	7.4
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	7.4
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.4
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.4
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4

Education

Permit Annual Reporting Requirement—Section J.3.a.(3).(g)	**Location in Report**
i. A description of education efforts conducted for each target community.	8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.	8.3
iii. A description of education efforts conducted for municipal departments and personnel.	8.3
iv. A description of education efforts conducted for the new development and construction communities.	8.3
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3

Public Participation

Permit Annual Reporting Requirement—Section J.3.a.(3).(h)	**Location in Report**
i. A description of public participation efforts conducted.	9.2 and 9.3

Effectiveness Assessment

Permit Annual Reporting Requirement—Section J.3.a.(3).(i)	**Location in Report**
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11

Fiscal Analysis

Permit Annual Reporting Requirement—Section J.3.a.(3).(j)	**Location in Report**
i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. (For 2007-2008, the requirements that apply are essentially the same as those found in Order No. 2001-01)	10

Same as old Permit for 2007-2008

Special Investigations

Permit Annual Reporting Requirement—Section J.3.a.(3).(k)	**Location in Report**
i. A description of any special investigations conducted.	12

Non-Emergency Firefighting

Permit Annual Reporting Requirement—Section J.3.a.(3).(l)	**Location in Report**
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	4.2.3, 13

JURMP Revisions

Permit Annual Reporting Requirement—Section J.3.a.(3).(m)	**Location in Report**
i. A description of any proposed revisions to the JURMP.	14 and each program component section

APPENDIX A – STORM WATER REQUIREMENTS AND PROJECT DATA SHEET

CITY OF LA MESA
JEWEL of the HILLS

APPENDIX 'A' – STORM WATER REQUIREMENTS AND PROJECT DATA SHEET

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

PROJECT DATA:

Owner's Name & Phone No: _____

Address: _____ **Permit No:** _____

Project: _____ **Date Applied:** _____

PROJECT SITE DATA:

1. Area of the lot/parcel = _____ sf
2. Existing impervious area (roof/building foot print) = _____ sf
3. Existing impervious area (driveway, parking, walkway, hardscape etc.) = _____ sf
4. Impervious area after development (roof/building foot print) = _____ sf
5. Impervious area after development (driveway, parking, walkway, hardscape etc.) = _____ sf
6. Total area to be disturbed = _____ sf
7. Storm water runoff based on Hydrology Study

   Existing runoff = _____ cfs, Post construction runoff = _____ cfs
8. Identify if the runoff from the site discharged to the public street or storm drain or open channel, detention or retention basin: _____
9. Water Shed (Check One): San Diego River _____ San Diego Bay _____

---

a. Total disturbed area includes impervious area, construction material storage, staging area, graded slopes, new slopes and landscape areas.

b. The information shall be shown on the site/grading plans.

c. Complete Storm Water Requirements Applicability Checklist.

Notes:

- Items 1 through 9 shall be shown on the site development plan/grading plan.
- The applicant may be required to submit SWPPP or CSWMP, and PCWQTR or SPCBMPP depending on the "Priority" as stated below.
- A Hydrology report may be required.

STORM WATER REQUIREMENTS APPLICABILITY CHECKLIST

Complete Sections 1 and 2 of the checklist to determine which permanent best management practices (BMPs) and which construction BMPs are required for your project for storm water. *This form must be completed and submitted with your permit application.*

Section 1. Permanent Storm Water BMP Requirements:

Part A: Determine Priority Project Permanent Storm Water BMP Requirements.

*Does the project meet the definition of one or more of the priority project categories as defined in the Storm Water Standards (Appendix I)?**	Yes	No
1. Residential development of 10 or more attached or detached dwelling units?	☐	☐
2. Commercial development greater than one acre?	☐	☐
3. Industrial development greater than one acre?	☐	☐
4. Automotive repair shop?	☐	☐
5. Restaurant?	☐	☐
6. Hillside development greater than 5,000 square feet? (Definition- 25% and steeper)	☐	☐
7. Project located within or directly adjacent to or discharging directly to receiving waters within "Environmentally Sensitive Areas?"	☐	☐
8. "Parking lot" greater than or equal to 5,000 square feet or with at least 15 parking spaces, and potentially exposed to urban runoff?	☐	☐
9. "Streets, roads, highways, and freeways" that would create a new paved surface that is 5,000 square feet or greater?	☐	☐
10. "Retail Gasoline Outlets" either 5,000 square feet or greater or with a projected "Average Daily Traffic" of 100 or more vehicles per day	☐	☐

** Refer to the definitions section in La Mesa's Storm Water BMP Manual Part II for expanded definitions of the priority project categories.*

Limited Exclusion: Trenching and resurfacing work associated with utility projects, such as resurfacing and reconfiguring surface parking lots and existing roadways, new sidewalk construction, pedestrian ramps, bike lanes on existing roads, and routine replacement of damaged pavement, such as pothole repair, are not considered priority projects. Parking lots, buildings and other structures associated with utility projects are priority projects if one or more of the criteria in Part A is met. If all answers to Part A are "No", continue to Part B.

Part B: Determine Standard Permanent Storm Water Requirements.

Does the project propose:	Yes	No
1. New impervious areas such as rooftops, roads, parking lots, driveways, paths and sidewalks?	☐	☐
2. New pervious landscape areas and irrigation systems?	☐	☐
3. Permanent structures within 100 feet of any natural water body?	☐	☐
4. Trash storage areas?	☐	☐
5. Liquid or solid material loading and unloading areas?	☐	☐

Does the project propose (cont'd.):	Yes	No
6. Vehicle or equipment fueling, washing, or maintenance areas?	☐	☐
7. Vehicle or equipment fueling, washing, or maintenance areas?	☐	☐
8. Require a General NPDES Permit for storm water discharges associated with industrial activities* (Except construction)?	☐	☐
9. Commercial/ industrial waste handling or storage, excluding typical office or household waste?	☐	☐
10. Any grading or ground disturbance during construction?	☐	☐
11. Any new storm drains, or alteration to existing storm drains?	☐	☐
**To find out if your project is required to obtain an individual General NPDES Permit for Storm Water Discharges Associated with Industrial Activities, visit the State Water Resources Control Board web site at, www.swrcb.ca.gov/stormwtr/industrial.html.*		

If any of the answers provided in Section 1, Part A are "Yes," the project is subject to the "Priority Project Permanent Storm Water BMP Requirements". A Post Construction Water Quality Technical Report (PCWQTR) shall be submitted; the requirements of the City's Storm Water BMP Manual Part II be satisfied. In particular, Section III must be completed. If a Priority Project is over 50 acres, the project is also subject to the City's Interim Hydromodification Criteria (IHC) as discussed in Section III.C of the *Storm Water Standard Manual.*

If all answers provided in Section 1, Part A are "No," and any answers to Part B are "Yes," the project is only subject to the Standard Permanent Storm Water BMP Requirements and shall submit a Standard Post-Construction BMP Plan (SPCBMPP). Section III is to be complete through III.2.B.11.

If every question in Part A and B is answered "No," the project is exempt from permanent storm water requirements.

Section 2. Construction Storm Water BMP Requirements:

Part C: Determine Construction Phase Storm Water Requirements.

Would the project meet any of these criteria during construction?	Yes	No
1. Does the project proposed grading or soil disturbance over one acre?	☐	☐
2. Does the project propose any grading or soil disturbance?	☐	☐
3. Would storm water or urban runoff have the potential to contact any portion of the construction area, including washing and staging areas?	☐	☐
4. Would the project use any construction materials that could negatively affect water quality if discharged from the site (such as paints, solvents, concrete and stucco)?	☐	☐

If the answer to question 1 of Part C is answered "Yes," your project is subject to California's statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities and the City's Construction Storm Water BMP Performance Standards. A Storm Water Pollution Prevention Plan (SWPPP) must be prepared and Parts D and E of this form must be completed.

If the answer to question 1 is "No," but the answer to any of the remaining questions is "Yes," your project is subject to Construction Storm Water BMP Performance Standards and a Construction Storm Water Management Plan (CSWMP) must be prepared and Part E of this form must be completed.

If every question in Part C is answered "No," your project is exempt from any construction storm water BMP requirements and you do not need to completed Parts D and E of this form.

Part D: Determine Advance Treatment Subjectivity

Would The Project Meet Any Of These Criteria During Construction?	Yes	No
1. Is the project located within, adjacent to, or a portion of the site within 200 feet of waters listed on the CWA Section 303(d) list of Water Quality Limited Segments as impaired for sedimentation or turbidity?	☐	☐
2. Will the project disturb more than five acres, including all phases of the development?	☐	☐
If the answers to 1 and 2 are both "yes", please answer questions 3 and 4 below. If any of the answers to 1 or 2 are "no", the project is not subject to advanced treatment requirements.		
3. Will the project disturbed slopes steeper than 4:1 (horizontal: vertical) and higher than 10 feet that drain toward the 303(d) listed receiving water?	☐	☐
4. Does the project contain a predominance of soils with USDA-NRCS Erosion factors k_f greater than or equal to 0.4?	☐	☐

If all answers to part D are "yes", the project is subject to the City's advanced treatment requirements for construction. Advanced treatment requirements are detailed in Section IV of the Storm Water BMP Manual Part II. Note that even if the above criteria do not apply, advanced treatment may be required at the discretion of the City Engineer based on the slope of the site and a record of noncompliance.

Part E: Determine Construction Site Priority

In accordance with the Municipal Permit, each construction site with construction storm water BMP requirements must be designated with a priority: high, medium or low. This prioritization must be completed with this form, noted on the plans and included in the SWPPP or CSWMP.

Indicate the project's priority in one of the check boxes using the criteria below, existing and surrounding conditions of the project, the type of activities necessary to complete the construction and any other extenuating circumstances that may pose a threat to water quality. The City Engineer may adjust the priority of the projects both before and during construction.

[Note: The construction priority DOES NOT change construction BMP requirements that apply to projects; all construction BMP requirements must be identified on a case-by-case basis. The construction priority DOES affect the frequency of inspections that will be conducted by the City.]

☐ A) High Priority

1. Projects where the site is 50 acres or more and grading will occur during the wet season.
2. Projects that are 1 acre or more and tributary to an impaired water body for sediment by the most current Clean Water Act Section 303(d) list (e.g., Chollas Creek).
3. Projects that are 1 acre or more within or directly adjacent to or discharging directly to water within a water quality sensitive area.
4. Projects, active or inactive, adjacent or tributary to sensitive water bodies.

☐ B) Medium Priority

1. Capital improvement projects where grading occurs. However, a Storm Water Pollution Prevention Plan (SWPPP) is not required under the State General Construction Permit (i.e., water and sewer replacement projects, intersection and street re-alignments, widening, comfort stations, etc.)

2. Permit projects in the public right-of-way where grading occurs. However, SWPPPs are not required, such as installation of sidewalk, substantial retaining walls, curb and gutter for an entire street frontage, etc.

3. Permit projects on private property where grading permits are required. However, Notice Of Intents (NOIs) and SWPPPs are not required.

☐ C) Low Priority

1. Capital projects where minimal to no grading occurs, such as signal light and loop installations, street light installations, etc.

2. Permit projects in the public right-of-way where minimal to no grading occurs, such as pedestrian ramps, small sidewalks, driveway additions, small retaining walls, etc.

3. Permit projects on private property where grading permits are not required, such as small retaining walls, single-family homes, small tenant improvements, etc.

STANDARD POST-CONSTRUCTION BMP PLAN (SPCBMPP) PREPARATION INSTRUCTIONS

CITY OF LA MESA
JEWEL of the HILLS

STANDARD POST-CONSTRUCTION BMP PLAN (SPCBMPP) PREPARATION INSTRUCTIONS

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

Introduction

Projects that answered "Yes" to any of the items in Section I Part B of the City's Appendix A document are subject to the City's standard post-construction BMP requirements. The goal of these requirements is to reduce the amount of storm water entering the City's storm drain system by retaining storm water onsite and to prevent storm water from contacting and transporting pollutants off the site once construction is completed. The City of La Mesa Storm Water Best Management Practices Manual--Part II (BMP Manual Part II) states that "projects subject to only standard permanent BMP requirements need only to prepare a Standard Post Construction BMP Plan (SPCBMPP), which requires applicants to incorporate the requirements in Section III.2.A, "LID site Design BMPs" and Section III.2.B, "Source Control BMPs". Applicants must incorporate all necessary permanent BMPs into the project plans prior to submittal, regardless of project type. Analysis of the project's anticipated pollutants of concern must also be included with the project submittal."

Standard Post-Construction BMP Plan (SPCBMPP)

To meet the City's requirements, applicants subject to standard post-construction BMP requirements need to complete the attached SPCBMPP form which lists all the requirements in Section III.2.A and B in the BMP Manual Part II. Applicants are required to incorporate all BMPs listed on the SPCBMPP form where applicable and feasible. For minor development project, many of these BMPs will not be applicable to the site. For BMPs not applicable or feasible for the project, a brief explanation should be written in the appropriate space provided on the SPCBMPP form. Any project plans submitted to the City need to be consistent with the information in the SPCBMPP.

Applicants are also responsible for identifying anticipated pollutants on the SPCBMPP form. Use the table below from the City's BMP Manual Part II to identify what anticipated and potential pollutants are expected from your project based on the land use most applicable to the proposed project. Enter this information where indicated on the SPCBMPP form.

Anticipated and Potential Pollutants Generated by Land Use Type

Project Categories	Sediments	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P(1)	P(2)	P	X
Commercial Development > One Acre	P(1)	P(1)		P(2)	X	P(5)	X	P(3)	P(5)
Industrial Development > One Acre	X		X	X	X	X	X		
Automotive Repair Shops			X	X(4)(5)	X		X		

Restaurants					X	X	X	X	
Hillside Development >5,000 ft²	X	X			X	X	X		X
Parking Lots	P(1)	P(1)	X		X	P(1)	X		P(1)
Retail Gasoline Outlets			X	X	X	X	X		
Streets, Highways & Freeways	X	P(1)	X	X(4)	X	P(5)	X		

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

ATTACHMENT 2.3

STANDARD POST-CONSTRUCTION BMP PLAN STANDARD PERMANENT STORM WATER BMPS

CITY OF LA MESA
JEWEL of the HILLS

STANDARD POST-CONSTRUCTION BMP PLAN
Standard Permanent Storm Water BMPs

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

Project Name: _____ Project Address: _____
Person completing form: _____ Telephone number: (_____)_____-_____
Signature: _____ Date: ____/_____/_____
Proposed land use: _____
Anticipated/potential pollutants (list all): _____
_____

In order to address the anticipated pollutants listed above, the following planning, design, and post-construction BMPs are required for all land development and redevelopment projects in the City of La Mesa. All BMPs listed below shall be selected and implemented where applicable and feasible.

Each selected BMP must be shown on the applicable plan(s) for the project.

Required BMPs	Check if Selected	If the BMP is not selected, explain why below (attach additional pages if necessary).
1. BMPs for permanent control of erosion from slopes.		
a. Convey runoff safely from the tops of slopes		
b. Vegetate slopes with native or drought tolerant vegetation		
c. Other (describe):		
2. BMPs to control flows, velocity and erosion. Flow control and downstream erosion protection measures shall prevent any significant increase in downstream erosion as a result of the new development, but shall not prevent flows needed to sustain downstream riparian habitats or wetlands.		
a. Minimize disturbances to Natural Drainages		
b. Stabilize permanent channel crossings		
c. Install energy dissipaters, riprap, at outlets of new storm drains, culverts, conduits, or channels that enter unlined channels		
d. Provide buffer zones for natural water bodies		
e. Other (describe):		
3. Low Impact Development (LID) and site design BMPs.		
a. Conserve natural areas, soils, and vegetation where feasible		
b. Construct walkways, trails, patios. overflow parking lots, alleys, and other low-traffic areas with permeable surfaces		
c. Construct impervious surfaces to minimum widths necessary		
d. Use natural drainage systems		
e. Minimize soil compaction in areas that will remain pervious after development		
f. Drain runoff from impervious roofs into adjacent landscaping		
g. Drain runoff from impervious sidewalks and/or walkways into adjacent landscaping		

h. Drain runoff from impervious parking lots into adjacent landscaping		
i. Drain runoff from other impervious areas into adjacent landscaping		
j. Other (describe):		
Source Control BMPs		
4. Storm drain stenciling and signage		
5. BMPs for outdoor materials storage and exposed work areas, to reduce pollution introduction.		
a. Provide overhead coverage for outdoor storage or work areas		
b. Divert storm water run-on away from outdoor storage or work areas		
6. BMPs for trash storage areas, to reduce pollution introduction. Store trash containers on an impervious surface in a screened or walled area designed to prevent run-on from flowing through the trash area, and provide a roof or awning to prevent direct contact with rain.		
7. BMPs for irrigation systems and landscape design, to minimize the runoff of excess irrigation water into the storm water conveyance system. (Limited exclusion: detached residential developments)		
a. Use rain shutoff devices		
b. **Design** irrigation system to each landscape area's water requirements		
c. Use flow reducers		
d. Other (describe):		
8. Structural BMPs[1] to treat and/or to infiltrate storm water where a development project would otherwise cause or contribute to a violation of water quality standards in receiving waters.		

[1] Off-site structural BMPs may be used for treatment and infiltration necessary to meet water quality standards only if the conveyance of run-off to those facilities prior to treatment will not cause or contribute to an exceedance of water quality standards or deprive wetlands or riparian habitats of needed flows. Offsite facilities shall not substitute for the use of any on-site source control BMPs required by the manual. When an infiltration BMP is used, related BMPs set out in the manual (including but not limited to siting constraints), to protect present uses of ground water and future uses of that ground water as currently designated in the applicable RWQCB Basin Plan. (Discharges to infiltration BMPs may also require an RWQCB permit and additional state requirements may also be applicable to these discharges.)

City Use Only

If structural BMPs are proposed, a maintenance agreement is required. Has a maintenance agreement for this project been submitted? □ Yes □ No □ NA

Approved □ Yes □ No

ATTACHMENT 2.4

POST-CONSTRUCTION WQTR REPORT GUIDELINES

POST CONSTRUCTION WQTR REPORT GUIDELINES

CITY OF LA MESA
JEWEL of the HILLS

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

Purpose

To describe the permanent storm water Best Management Practices (BMPs) that will be incorporated in the project to mitigate the impacts of urban runoff due to the development.

Minimum Requirements

- Prepared by Registered Civil Engineer

General Information - Title Page

- Name of project
- Application and/or Tract Number
- Lot number(s) if site is a portion of a Tract
- Site address(es) and planning area number
- Owner/Developer name
- Owner/Developer address & telephone number
- Consulting/Engineering firm that prepared WQTR
- Consulting/Engineering firm address & phone number
- Date WQTR was prepared/revised

Owner's Certification

- Following the Title Page, a signed certification statement, in which the project owner acknowledges and accepts the provisions of the WQTR.

Table of Contents, including a list of all figures and attachments

Section 1.0, Permit Numbers and Conditions of Approval

- Lists the Discretionary Permit(s).
- The lot & tract/parcel map number describing the subject property.
- Lists, verbatim, the Water Quality Conditions, including condition(s) requiring preparation of WQTR, if applicable.
- Final Resolution of Approval, Conditional Use Permit, etc. is included as an Attachment to the WQTR.

Section 2.0, Project Description

1. **For All Projects:**
   - Narrative of project activities
   - Identifies planning area or community name.
   - Does the project description completely and accurately describe where facilities will be located, what activities will be conducted and where on the site, what kinds of materials and products will be used, how and where materials will be received and stored, and what kinds of wastes will be generated?
   - Describes all paved areas, including the type of parking areas.
   - Describes all landscaped areas.

2. **Requirement Satisfied?**

- Describes ownership of all portions of project and site.
  a) Will any infrastructure transfer to public agencies (City, County, Caltrans, etc.)?
  b) Will a homeowner's or property owner's association be formed?
  c) Will the association be involved in long term maintenance?
- Identifies the potential storm water or urban runoff pollutants reasonably expected to be associated with the project.

Pollutants and Conditions of Concern

- Pollutants based upon land use
- Project located in which Watershed
- Impaired water bodies downstream of the project and impairment
- Impacts to hydrologic regime

3. **For Commercial and Industrial Projects:**

- Provides Standard Industrial Classification (SIC) Code which best describes the facilities operations?
- Describes the type of use (or uses) for each building or tenant space
- Does project include food preparation, cooking, and eating areas (specify location and type of area)
- Describes delivery areas and loading docks (specify location and design and if below grade and types of materials expected to be stored
- Describes outdoor materials storage areas (describe and depict location(s), specify type(s) of materials expected to be stored)
- Describes activities that will be routinely conducted outdoors
- Describes any activities associated with equipment or vehicle maintenance and repair, including washing or cleaning.
- Indicates number of service bays or number of fueling islands/fuel pumps, if applicable.

4. **Residential Projects**

- Range of lot and home sizes
- Describes all community facilities such as, laundry, car wash, swimming pools, jacuzzi, parks, open spaces, tot lots, etc.

Section 3.0, Site Description

- Vicinity Map
- Describes project area and surrounding planning areas in sufficient detail to allow project location to be plotted on a base map.
- Provides site address and site size to nearest tenth acre.
- Identifies the zoning or land use designation.
- Identifies soil types and the quantity and percentage of pervious and impervious surface for pre-project and post project conditions.
- Describes pre-project site drainage and how it ties into drainage of surrounding or adjacent areas and describes how planned project drainage and how it will tie into drainage of surrounding or adjacent areas.
- Identifies the watershed in which the project is located and the:
  a) downstream receiving waters
  b) known water quality impairments as included in the 303(d) List
  c) applicable Total Maximum Daily Loads (TMDLs)
  d) hydrologic conditions of concern, if any.
- Identifies known Environmentally Sensitive Areas (ESAs) and Areas of Special Biological Significance (ASBSs) within the vicinity and their proximity to the project.

Section 4.0, Best Management Practices

- Includes narrative describing how LID design concepts were considered and incorporated into project plans.
  a) Reduce impervious surfaces

b) Conserve natural Areas
c) Minimize directly connected areas
d) Protect slopes and channels

- Lists and describes all Routine Source Control BMPs (Non-structural and Structural).
  a) Inlet stenciling and signage
  b) Materials Storage
  c) Trash storage
  d) Efficient irrigation
  e) Other controls (as applicable)
- Describes the implementation frequency and identifies the entity or party responsible for implementation of each Non-Structural BMP.
- If applicable Routine Source Control BMPs were not included, was a reasonable explanation provided?
- Lists and describes appropriate Treatment Control BMPs and identifies the design basis (SQDF or SQDV) for the Treatment Control BMPs.
  a) Basis for selection (include targeted pollutants, justification, and alternative analysis)
  b) Design criteria (include calculations)
  c) Pollutant removal information (other than vendor specifications)
  d) Literature References
  e) Maintenance Condition(s)
- For Routine Non-Structural BMPs N1 (Education for Property Owners, Tenants, and Occupants) and N12 (Employee Training), does the WQTR describe the concepts that will be addressed by the education and training? Is a list of educational materials that will be used provided? Are copies of the educational materials included in an Attachment to the WQTR?

Section 5.0, Inspection and Maintenance Responsibility for BMPs

- Identifies the entity (or entities) responsible for the long-term inspection and maintenance of all structural source control BMPs and all Treatment Control BMPs, including name, title, company, address, and phone number.
- Describes the minimum frequency for inspection and maintenance to ensure the effectiveness of each structural source control BMP and each Treatment Control BMP.
- If ownership of the Treatment Control BMPs will be transferred to a public agency, does the WQTR include an Attachment indicating the public agency's intent to accept the Treatment Control BMPs as designed?
- Is an appropriate mechanism for the long-term operation and maintenance, including funding, in place?

Section 6.0, Location Map and Plot Plan

- Provide an 11" by 17" plot plan
- All figures, maps, plot plans, etc. should have a legend, including a North arrow and scale?
- Are all facilities labeled for the intended function?
- Are all areas of outdoor activity labeled?
- Are all structural BMPs indicated?
- Is drainage flow information, including general surface flow lines, concrete or other surface ditches or channels, as well as storm drain facilities such as catch basins and underground storm drain pipes depicted?
- Depicts where and how on-site drainage ties into the off-site drainage system.
- Entire property included on one map (use key map if multi-sheets)
- Nearby water bodies and municipal storm drain inlets
- Location of existing and proposed storm water controls
- Location of "impervious" areas- paved areas, buildings, covered areas
- Locations where materials would be directly exposed to storm water
- Location of building and activity areas (e.g. fueling islands, garages, waste container area, wash racks, hazardous material storage areas, etc.)
- Areas of potential soil erosion (including areas downstream of project)

Re: Treatment Control BMP Maintenance Verification, Maintenance Agreement Number Agreement Number

Dear Property Owner or Manager,

The City of La Mesa (City) has been conducting inspections and tracking inventory of all completed new and redevelopment projects with permanent storm water treatment devices, also known as treatment control best management practices (BMPs). **This is a requirement of the San Diego Municipal Storm Water Permit, issued by the Regional Water Quality Control Board (RWQCB) as Order No. R9-2007-0001 in January 2007.**

In addition to the City's inspections and tracking of these treatment control BMPs, the Municipal Permit also requires that the parties responsible for the BMPs conduct their own regular inspections, perform maintenance as needed, and submit documentation of these activities to the City (see attached form). You are receiving this notice because City records indicate you are responsible for the treatment control best management practices (BMPs) located at the project referenced above. The recorded maintenance agreement associated with your site, if applicable, is referenced above.

Please complete and return the attached BMP Inspection & Maintenance Verification Form **no later than August 25, 2008**. Please also correct any information on the form or this letter (responsible party, address, etc.) that is inaccurate, and the City will update its records. In the future, you will need to complete this form annually. The form should be mailed to the following address:

City of La Mesa
Storm Water Pollution Prevention Program
8130 Allison Avenue
La Mesa, CA 92141

You are required to submit a signed copy of the completed form under City of La Mesa Municipal Code section 7.18.140.F. Failure to submit the required information could result in enforcement actions such as the issuance of a "Notice of Violation".

A "Frequently Asked Questions" (FAQ's) Sheet and a completed example BMP Inspection & Maintenance Verification Form have been included to assist you with completion of the form. If you have further inquiries, please contact me at (619) 667-1340 or via email at mtamimi@ci.la-mesa.ca.us.

We appreciate your cooperation with the City's storm water pollution prevention program. Your efforts help make our region's waterways and oceanfront safe and enjoyable for everyone.

Sincerely,

Malik Tamimi
Stormwater Program Manager

Enclosures:
1. Frequently Asked Questions (FAQ's)
2. BMP Operation and Maintenance Verification Form
3. Example BMP Operation and Maintenance Form

FREQUENTLY ASKED QUESTIONS
(FAQ'S) SHEET

Q. What are Permanent Treatment Control Best Management Practices (BMPs)?

A. Permanent Treatment Control BMPs are designed to remove pollutants contained in storm water runoff. The pollutants of concern include sand, silt, and other suspended solids; metals such as copper, lead, and zinc; nutrients (e.g., nitrogen and phosphorus); certain bacteria and viruses; and organics such as petroleum hydrocarbons and pesticides. Methods of pollutant removal include sedimentation settling, filtration, plant uptake, ion exchange, adsorption, and bacterial decomposition. Floatable pollutants such as oil, debris, and scum can be removed with separator structures. Treatment control facilities may need to be used in series as a "Treatment Train" to achieve the desired level of pollutant removal for different pollutants.

Q. How may I find out what type of Permanent Treatment Control Best Management Practices (BMPs) I have and where they are located?

A. An Operation & Maintenance Agreement was required, at time of installation, if you have Treatment Control BMPs on your property. BMP Type, Location and Required Maintenance may be found in this document.

BMP Type & Location may also be found in the "As-Built" Construction Drawings and within the Water Quality Technical Report (WQTR) prepared for the project. The City's Engineering Division may have these files on record. To determine if the City has copies of the applicable documents and to purchase copies, please contact the Development Services Section of the Engineering Division at (619) 667-1166.

Q. How may I find out what type of maintenance my Treatment Control BMPs require?

A. Please refer to your property's recorded Maintenance Agreement and/or Water Quality Technical Report for details on required maintenance for the Treatment Controls BMPs for which you are responsible. For further information on maintenance of treatment control BMPs, refer to the documentation provided from the manufacturer (for commercially sold treatment control BMPs) or the California's Storm Water Quality Association's (CASQA) New Development and Redevelopment Handbook . You can access the handbook on CASQA's website at:
http://www.cabmphandbooks.com/Development.asp (See Section 5)

Q. Where may I acquire a copy of my Maintenance Agreement?

A. Maintenance Agreements may be acquired through the County Recorder's Office at the web-site below or by contacting the County Recorder directly at (619) 236-3771.
http://arcc.co.san-diego.ca.us/services/grantorgrantee/search.aspx

Q. How can I get more information from the City regarding this request?

A. You can contact the City's Stormwater Program Manager at (619) 667-1340.

TC-10 Infiltration Trench				
TC-11 Infiltration Basin				
TC-12 Retention/Irrigation				
TC-20 Wet Ponds				
TC-21 Constructed Wetlands				
TC-22 Extended Detention				
TC-30 Vegetated Swale				
TC-31 Vegetated Buffer Strip				
TC-32 Bio-filtration				
TC-40 Media Filter				
TC-50 Water Quality Inlet				
TC-60 Multiple Systems				
MP-20 Wetland				
MP-40 Media Filter				
MP-50 Wet Vault

CONSTRUCTION STORM WATER MANAGEMENT PLAN

CITY OF LA MESA
JEWEL of the HILLS

CONSTRUCTION STORM WATER MGMT. PLAN

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

Project Name: _____ Project Address: _____
Person completing form: _____ Telephone number: (_____)_____-_____
Signature: _____ Date: ____/____/_____

Construction projects less than one acre but answer "Yes" to questions 2, 3, or 4 in Section 2 Part C of the City's Appendix A document are required to prepare a Construction Storm Water Management Plan (CSWMP). Completion of this form along with submittal of a site map with the features described at the end of this form can adequately meet this requirement.

Planning and Organization

Person responsible for implementing items in this CSWMP:_____

Is this project subject to other construction regulations? ~ Yes ~ No
If yes, please list: _____

Significant Materials

List all significant materials that will be stored and handled at the site in the table below.
Include a brief description of the location where the materials will be stored and expected quantities.

Material	Storage Location	Expected Quantity

Potential Pollutant Sources

Provide a brief narrative description of the site's activities and list the potential pollutants that could be transported from the site by storm water in the following table.

Activity	Potential Pollutants Sources and Pollutants Generated by Activity

Best Management Practices

Every construction site within the City's jurisdiction is required to select, install, and maintain construction BMPs to reduce, retain, and manage pollutant discharges to the maximum extent practicable. The BMPs listed below are required by the City where applicable. The corresponding Caltrans fact sheet for the listed BMPs is indicated in parenthesis. These fact sheets are obtainable from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual (2003) and provide additional details on how to implement the BMP.

Please check all BMPs below that are applicable and feasible for the construction that will be implemented and maintained for the length of construction.

- ☐ Preserve natural hydrologic features where feasible
- ☐ Preserve riparian buffers and corridors where feasible
- ☐ Minimize areas that are cleared and graded to only the portion of the site that is necessary for construction
- ☐ Minimize exposure time of disturbed soil areas
- ☐ Minimize grading during the wet season and correlate grading with seasonal dry weather periods to the extent feasible
- ☐ Temporarily stabilize and reseed disturbed soil areas as rapidly as feasible
- ☐ Preserve existing vegetation where feasible (SS-2)
- ☐ Establish permanent re-vegetation or landscaping as early as feasible

Prevent the contamination of storm water from vehicles and equipment through proper management of the following types of activities:

- ☐ Cleaning (NS-8)
- ☐ Fueling (NS-9)

☐ Maintenance (NS-10)

Prevent the contamination of storm water from construction materials through proper management of the following types of activities:

☐ Material Delivery and Storage (WM-1)
☐ Material Use (WM-2)
☐ Stockpile Management1 (WM-3)
☐ Spill Prevention and Control (WM-4)

Prevent the contamination of storm water by wastes through proper management of the following types of wastes:

☐ Solid Waste (WM-5)
☐ Hazardous Waste (WM-6)
☐ Contaminated Soil (WM-7)
☐ Concrete (WM-8)
☐ Sanitary Waste (WM-9)
☐ Liquid (WM-10)

Prevent the contamination of storm water through proper management of the follow activities:

☐ Water Conservation Practices (NS-1)
☐ Dewatering Operations (NS-2)
☐ Paving and Grinding (NS-3)
☐ Potable Water/Irrigation and Flushing (NS-7)

Prevent erosion and sediment runoff from exposed graded areas through physical stabilization and/or vegetation stabilization[2] by implementing <u>one or more</u> of the following BMPs:

☐ Hydraulic Mulch (SS-3)
☐ Hydroseeding (SS-4)
☐ Soil Binders (SS-5)
☐ Straw Mulch (SS-6)
☐Geotextiles, Plastic Covers, and Erosion Control Blankets/Mats (SS-7)
☐ Wood Mulch (SS-8)
☐ Earth Dikes/Drainage Swales (SS-9)

Reduce the velocity of storm water by using <u>one or more</u> of the following:

☐ Outlet Protection/Velocity Dissipation (SS-10)
☐ Slope Drains (SS-11)

Protect the Perimeter of the site or exposed area from sediment discharge using <u>one or more</u> of the following:

☐ Silt Fence (SC-1)
☐ Gravel Bag Berm (SC-6)
☐ Fiber Rolls (SC-5)

Capture sediments in channeled storm water by using <u>one or more</u> of the following:

☐ De-silting Basin3 (SC-2)
☐ Storm Drain Inlet Protection (SC-10)
☐ Sediment Trap (SC-3)
☐ Gravel Bag Barrier (SC-8)

Prevent sediment from being tracked off-site by using <u>one or more</u> of the following:

☐ Stabilized Construction Entrance (TC-1)
☐ Construction Road Stabilization (TC-2)
☐ Entrance/Exit Tire Wash (TC-3)
☐ Street Sweeping (SC-7)

Notes on above BMPs:

1. Stockpiles should be fully covered when materials are not being added or removed.
2. Vegetation stabilization BMPs must be installed, irrigated, and established (uniform vegetative coverage with 70% coverage established) prior to October 1st. In the event stabilizing vegetation has not been established by October 1st, other forms of physical stabilization must be employed to prevent erosion until the stabilizing vegetation is established.
3. De-silting basins must be designed in accordance with industry standards such as Caltrans.

All construction sites must implement the above BMPs in accordance with the City's dry and wet season requirements, which are detailed below.

A. Dry Season Requirements (May 1 through September 30) include but are not limited to:

- All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)
- Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).
- Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not considered to be "exposed" for purposes of this requirement.
- The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).
- Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.
- A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.
- Properly protected, designated storage areas are required for materials and wastes.
- All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.
- Remnant trash and debris shall be removed and/or properly stored/disposed of daily.
- Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.
- Materials for spill control/containment must be stockpiled onsite.
- Non-storm water discharges must be eliminated or controlled to the MEP.

B. Rainy Season Requirements (October 1 through April 30) include but are not limited to:

- All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)
- Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).
- Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not

considered to be "exposed" for purposes of this requirement.

- The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).
- Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.
- A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.
- Properly protected, designated storage areas are required for materials and wastes.
- All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.
- Remnant trash and debris shall be removed and/or properly stored/disposed of daily.
- Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.
- Materials for spill control/containment must be stockpiled onsite.
- Non-storm water discharges must be eliminated or controlled to the MEP.
- Erosion control BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.
- Perimeter protection and sediment containment BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.
- adequate soil stabilization and erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a selected BMP fails, it must be repaired, improved, or replaced with an acceptable alternate as soon as it is safe to do so.
- All vegetation erosion prevention BMPs must be established prior to the rainy season to be considered as a BMP.
- Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. A disturbed area that is not completed but that is not being actively graded must be fully protected from erosion if left for seven or more calendar days. The ability to deploy standby BMP materials is not sufficient for these areas.

Project Site Map

A site map of the project must be attached to this form and contain the following features:

- An outline of the entire property
- Drainage areas on the property and direction of flow
- Areas of soil erosion
- Nearby water bodies and municipal storm drain inlets
- Location of storm water conveyance systems (ditches, inlets, storm drains, etc.)
- Location of existing storm water controls (oil water separators, sumps, etc.)
- Location of impervious areas (paved areas, buildings, covered areas)
- Locations where toxic or hazardous materials spilled in the past
- Location of building and activity areas (e.g. fueling islands, garages, waste container areas, wash racks, hazardous material storage areas, etc.)
- Locations where BMPs proposed in this document will be installed
- Locations where materials will be temporarily stored onsite

Fax (□□□□□□□□□) _____ - □□□□□□□□□□

B. FACILITY SITE INFORMATION

Principal Activity:_____

SIC Code(s)_____

Does SIC Code best represent principal activity: ☐ Yes ☐ No

What is recommended SIC Code(s)?_____ New JURMP Classification?_____

Is facility subject to CA Statewide General Industrial Permit? ☐ Yes ☐ No

If yes, has facility filed a Notice of Intent (NOI) to comply? ☐ Yes ☐ No WDID _____

If no, does facility have No Exposure Certification (NEC)? ☐ Yes ☐ No

Does facility maintain SWPPP or BMP Plan? ☐ Yes ☐ No

Does facility have a map/sketch of the site with flow lines and storm drains? ☐ Yes ☐ No

Has facility conducted previous storm water monitoring programs? ☐ Yes ☐ No

C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____

Approximate distance to water bodies: ☐ □200 ft. ☐ 200 □1000 ft. ☐ 1000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points along perimeter: _____

_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Approximate area covered by industrial or commercial activities:_____square feet

Approximate □ impervious surface of this area_____□

Exposed areas of intensive outdoor activity: _____

D. SWPPP REVIEW

DOES FACILITY MAINTAIN A SWPPP: ☐ YES ☐ NO ☐ NOT APPLICABLE

Materials List	☐ Yes ☐ No	☐ Yes ☐ No	_____
Significant Spills/Leaks	☐ Yes ☐ No	☐ Yes ☐ No	_____
Pollution Prevention	☐ Yes ☐ No	☐ Yes ☐ No	_____
Industrial Activities	☐ Yes ☐ No	☐ Yes ☐ No	_____
Pollutant Sources/Risks	☐ Yes ☐ No	☐ Yes ☐ No	_____
Compliance Activity Schedule	☐ Yes ☐ No	☐ Yes ☐ No	_____
Employee Training	☐ Yes ☐ No	☐ Yes ☐ No	_____
Accessible to staff	☐ Yes ☐ No	☐ Yes ☐ No	_____
Existing BMPs	☐ Yes ☐ No	☐ Yes ☐ No	_____

E. BMP ASSESSMENT

BMPs	N/A	Yes	No	Comments
E.1 General				
Is the site free of litter and debris?				
Are discharge locations free of sediment and debris?				
Are parking lots, sidewalks and streets free of sediment and debris?				
Are roof downspouts directed away from areas of potential pollutants?				
Is pressure washing / hosing down conducted to clean facility? If yes, is wash water captured?				
Are employees trained in storm water management? If so, provide a list of employees who have participated.				
E.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Is reclaimed water used for irrigation?				
Are stockpiles of soil or landscape waste covered and equipped to prevent runoff transport?				
Are pest management techniques employed?				
Is drought-resistant vegetation incorporated into landscaping?				
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?				
E.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				

BMPs	N/A	Yes	No	Comments
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Are outdoor storage containers properly labeled?				
Is there an accessible spill response kit?				
Is there a spill response plan? If so, please provide to inspector.				
Are storage tanks equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
E.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are equipment and vehicles inspected daily for leaks and repaired as necessary?				
Are vehicle-fueling areas covered and are storm drain inlets protected from spills and leaks?				
Is vehicle washing preformed in a contained area where runoff does not enter the MS4?				
Are biodegradable soaps used for cleaning activities?				
E.5 Construction				
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)				
Are adequate sediment control BMPs employed throughout the site? (sandbags, gravel bags, inlet filters)				
E.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
E.7 Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs from Appendix C of the JURMP being implemented?				
Are the appropriate signs posted for the facility?				
Are there any structural BMPs on or near the site? If so, how often are they maintained? Provide maintenance records.				

CITY OF LA MESA
STORM WATER QUALITY INSPECTION SUMMARY

F. SUMMARY OF BMP COMMENTS:

G. RECOMMENDED CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No If yes, describe below.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Photocopy ☐ Fax

H. VIOLATIONS

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described above.

☐ Violation of storm water ordinance or other applicable regulations were found.

Type of violation: ☐ Illegal discharge(s) of pollutants into the storm drain or receiving waters

Description

☐ Illegal connection(s) to the storm drain system

Location_____

☐ Littering ☐ Improper implementation of required BMPs

Non-Compliance with General Industrial Permit: ☐ Need NEC ☐ Need NOI ☐ Need NEC/NOI

☐ Other_____

I. RECOMMENDED CITY ACTIONS

POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

Site Name:_____

Pollutant	PDP	Sources Needing More BMPs							Recommended BMPs (check if applicable)			
		Trash Area	Material Storage	Prkng Lot	Load/ Unload	Land-scape	Veh/Eqp Maint	Exposed Work Area	Emp. Training	House-keeping	Minor Struct.	Major Struct.
Sediments												
Nutrients												
Aluminum												
Iron												
Heavy Metals												
Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury												
Organic Compounds												
Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT												
Trash & Debris												
Oxygen Demanding												
Oil & Grease												
Bacteria & Viruses												
Pesticides												
Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos												
Acid/Base (pH effects)												
Others (list):												

RW 303(d) Receiving water impairments, as listed in the most recent 303(d) list
WS COC High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
PDP pollutant discharge potential.
Emp. Training employee training activities focused on storm water pollution prevention
Housekeeping standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
Minor Struct. minor structural BMPs that do not require building permits, such as covering with tarps or building berms
Major Struct. major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results exceed the EPA benchmark by an order of magnitude or more

SUPPLEMENTAL WATERSHED ASSESSMENT QUESTIONNAIRE AND INSPECTION

Inspected by D-MAX Engineering, Inc.

Business Name _____ Date:_____/_____/_____

Watershed (circle one): San Diego River Chollas Creek/San Diego Bay

Questions for Facility Contact Person

When water (from rain, sprinklers, etc.) leaves your site where does it go? ☐ Treatment Plant/Sewer ☐ Storm Drain System ☐ A Water Body (any) ☐ Don't Know/Unsure

Runoff leaving your site eventually reaches what water body (more than one can be checked)? ☐ San Diego Bay ☐ Chollas Creek ☐ Pacific Ocean ☐ San Diego River ☐ Mission Bay ☐ Don't Know/Unsure

What is your impression of the water quality/condition of the downstream water body? ☐ Good ☐ Fair ☐ Poor ☐ Don't Know

In general, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff? ☐ Washing Activities ☐ Washing Activities Done by Mobile Businesses ☐ Material Storage ☐ Material Processing ☐ Landscaping ☐ Repair Services ☐ Illegal Dumping ☐ Trash Area ☐ Don't Know/Unsure ☐ Other

Other than today's inspection, have you received any information or education about what your business should do to prevent pollution from entering the environment? ☐ Yes ☐ No

Observations

Was evidence of any non-storm water discharge (including allowable discharges) observed? ☐ Significant ☐ Minimal ☐ No

If irrigation system is present, which sprinkler head types are present (check all that apply)? ☐ Spray ☐ Rotor ☐ Microspray ☐ Drip ☐ Bubblers ☐ Water by hand ☐ Other ☐ NA

Approximate percentage of site's total pervious area that is landscaped: _____ %

Attitude toward compliance with storm water regulations: ☐ Receptive ☐ Neutral ☐ Resistant

Overall Source Ranking (for Watershed Pollutants of Concern)

☐ Significant ☐ Not Significant

MUNICIPAL EDUCATION AND OUTREACH

Malik Tamimi

From: Malik Tamimi
Sent: Tuesday, March 25, 2008 2:43 PM
To: ALL LAMESA USERS
Subject: NPDES Storm Water Program Update

Hi Everyone,
As you may be aware the Regional Water Quality Control Board issued the National Pollutant Discharge Elimination System Permit No. R-9-2007-0001 on January 24, 2007. The Municipal Permit requires the City to develop, adopt, and implement various programs and policies aimed at controlling storm water pollution within the City of La Mesa. These programs are now in effect. A brief description of the program updates are presented below. The programs have been adopted and incorporated in our **Municipal Code**.

1. Jurisdictional Urban Runoff Management Program Update:
   This document has been updated and presents the City's jurisdictional program to meet the requirements of the New Municipal Permit. The JURMP Update consists of 16 Chapters. Several of these chapters may require changes to your ongoing activities/programs.

   - ***Non-Storm Water Discharges:*** this chapter presents a list of exempt and prohibited non-storm water discharges that are reflected in Chapter 7.18 of our Municipal Code. **This will affect everyone**.
   - ***Development Planning Component:*** this chapter pertains to new development or redevelopment with land disturbing activities, structural development including construction or installation of a building or structure, the creation of impervious surfaces, public agency projects, and land subdivision. **This will affect Community Development and Engineering departments.**
   - ***Construction Component:*** this chapter addresses building and construction activities. **This will affect Engineering and Building departments.**
   - ***Municipal Component:*** this chapter addresses all municipal facilities and activities. **This will affect all of Public Works Operation Center, Environmental Services, Engineering, and Fire Department.**
   - ***Industrial and Commercial:*** this chapter addresses industrial/commercial business activities. **This will affect Engineering (Storm Water Code Compliance).**
   - ***Residential:*** this chapter addresses residential activities. **This will affect Engineering (Storm Water Code Compliance), Community Services, and Environmental Services.**
   - ***Illicit Discharge Detection and Elimination:*** this chapter addresses illegal discharges/illicit connections to the storm drain system and water quality monitoring/pollutant source identification and enforcement. **This will affect Engineering (Storm Water Code Compliance) and Public Works Operation Center.**
   - ***Education/Public Participation:*** these two chapters focus on education outreach/public participation to address storm water pollution prevention. **This will affect Engineering, Community Development, Community Services, Public Works Operation Center, Environmental Services, and Fire Department.**
   - ***Fiscal Analysis:*** this chapter will require standardized fiscal analysis methods and reporting. **This will affect Engineering/Environmental Services.**

2. Ordinance Update
   - Chapter 7.18 pertains to storm water and non-storm water discharges. It has been updated to reflect the new municipal permit requirements. Copies have not yet been posted online; however, a copy is available for review at the Engineering Department or with our City Clerk.

- Storm Water Best Management Practices Manual-Part II has been updated to reflect new municipal permit requirements (SUSMP/Hydromodification/LID/Advance Treatment) for new development/redevelopment projects. Copies have been emailed to Engineering and Community Development and has been posted to our City website. **This affects Engineering and Community Development.**

3. Watershed Urban Runoff Management Plan (WURMP) San Diego Bay
   - Two watershed water quality activities that demonstrate watershed priority pollutant load reduction in active implementation are required on an annual basis. **This affects Engineering and Public Works Operation Center.**
   - Two watershed water quality education outreach activities are required on an annual basis. **This affects Engineering.**

4. Watershed Urban Runoff Management Plan (WURMP) San Diego River
   - Two watershed water quality activities that demonstrate watershed priority pollutant load reduction in active implementation are required on an annual basis. **This affects Engineering and Public Works Operation Center.**
   - Two watershed water quality education outreach activities are required on an annual basis. **This affects Engineering.**

Should you have any questions as it pertains to your department, feel free to contact me. A copy of the aforementioned documents will be made available at the Engineering Department.

Thank you

Malik Tamimi

STORM WATER

BEST MANAGEMENT PRACTICES

NOTEBOOK

City of La Mesa Municipal Best Management Practices Notebook

This notebook presents best management practices (BMPs) for numerous municipal activities. The BMP fact sheets have been selected from the California Stormwater BMP Handbook, January 2003. The following table is an index of the BMPs that are presented in this notebook.

BMP Number	***BMP Description***
SC-10	Non-Stormwater Discharges
SC-11	Spill Prevention, Control and Cleanup
SC-20	Vehicle and Equipment Fueling
SC-21	Vehicle and Equipment Cleaning
SC-22	Vehicle and Equipment Repair
SC-30	Outdoor Loading/Unloading
SC-31	Outdoor Container Storage
SC-32	Outdoor Equipment Maintenance
SC-33	Outdoor Storage of Raw Materials
SC-34	Waste Handling and Disposal
SC-41	Building and Grounds Maintenance
SC-43	Parking/Storage Area Maintenance
SC-60	Housekeeping Practices
SC-61	Safer Alternative Products
SC-70	Road and Street Maintenance
SC-71	Plaza and Sidewalk Cleaning
SC-72	Fountains and Pool Maintenance
SC-73	Landscape Maintenance
SC-74	Drainage System Maintenance
SC-75	Waste Handling and Disposal
SC-76	Water and Sewer Utility Maintenance

The BMP fact sheets can be found at www.cabmphandbooks.com.

WEEKLY TAILGATE TRAINING
2007/2008

The table below includes the weekly tailgate training sessions provided by the City during the 2007/2008 reporting period. Training sessions relevant to implementing the City's JURMP are highlighted in green.

DATE	SUBJECT	DIVISION	TRAINER	# ATTENDING

D. BMP ASSESSMENT

D.1 General

BMPs	N/A	Yes	No	Comments
Is the site free of litter and debris?				
Are discharge locations free of sediment and debris?				
Are parking lots, sidewalks and streets free of sediment and debris?				
Is pressure washing of parking lots or sidewalks conducted at the facility? Is wash water captured?				
Are roof downspouts directly away from areas of potential pollutants?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Are stockpiles of soil or landscape waste equipped to prevent runoff transport?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Are outdoor storage containers properly labeled?				
Is there an accessible spill response kit?				
Are outdoor storage containers equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?				
Is vehicle washing performed in a contained area where runoff does not enter the MS4?				
D.5 Food Establishments				
Does facility have a grease trap or grease interceptor?				
When was the last time the grease trap or interceptor was maintained? _____				
Where is the grease trap or interceptor located? ☐ Under the sink ☐ Outside ☐ Other				

BMPs	N/A	Yes	No	Comments
How many grease fryers are at the facility? _____				
About how often is fryer oil replaced? ☐ Weekly ☐ Monthly ☐ Every 6 months ☐ Annually				
How is used oil disposed of? ☐ Outside rendering service ☐ Sanitary sewer/sink ☐ Other:_____				
Do oil-recycling/grease bins have overhead coverage?				
Do oil-recycling/grease bins have secondary containment?				
At what time is cleaning performed? _____				
What is the cleaning method? _____				
Does the restaurant hose off the site (parking lot, back lot, etc.)? If so, how often?				
How are kitchen floor mats cleaned? ☐ Hose off outside ☐ Clean inside (mop sink) ☐ Cleaning Service ☐ Other:_____				
Where is used cleaning water discharged? _____				
Are storm drain inlets free of grease and other food debris?				
D.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
If not, have the appropriate authorities been notified?				
D.7 Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs from Appendix C of the JURMP being implemented?				
Were any educational materials distributed?				SD River SD Bay TMDL F1 F2 F2-SP F3 F3-SP Auto Auto-SP

D.8 BMP Summary

E. SWPPP REVIEW

Does facility maintain a SWPPP: ☐ **Yes** ☐ **No** ☐ **Not Applicable**

SWPPP Component	Provided		Comments
Site Map/Description	☐ Yes	☐ No	
Materials List	☐ Yes	☐ No	
Significant Spills/Leaks	☐ Yes	☐ No	
Pollution Prevention	☐ Yes	☐ No	
Industrial Activities	☐ Yes	☐ No	
Pollutant Sources/Risks	☐ Yes	☐ No	
Compliance Activity Schedule	☐ Yes	☐ No	
Employee Training	☐ Yes	☐ No	
Accessible to staff	☐ Yes	☐ No	
Existing BMPs	☐ Yes	☐ No	

Does this facility have a storm water monitoring program? ☐ Yes ☐ No ☐ N/A

Was appropriate monitoring conducted during the most recent wet season? ☐ Yes ☐ No

If not, does the facility have documentation of no qualifying rain events? ☐ Yes ☐ No

If not, is the facility in a GMP and not scheduled for most recent year ? ☐ Yes ☐ No

Do monitoring results show that existing BMPs are effective in removing pollutants? ☐ Yes ☐ No ☐ None Available

Notes:

F. CORRECTIVE ACTIONS REQUIRED BY THE CITY

Is corrective action needed? ☐ Yes ☐ No

If **BMP-related** corrective action is required, describe below. If other corrective action, check the appropriate box in section G.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax

G. VIOLATIONS

- ☐ No violations have been noted at this time
- ☐ No violations have been noted, but recommend taking corrective action described in Section F.
- ☐ Violation of the City's storm water ordinance (Municipal Code Chapter 7.18):
  - ☐ Illegal discharge(s) of pollutants to the storm drain system or to receiving waters

CITY OF LA MESA

SUPPLEMENTAL WATERSHED ASSESSMENT QUESTIONNAIRE AND INSPECTION

Inspected by D-MAX Engineering, Inc.

Business Name _____ Date:_____/_____/_____

Watershed (circle one): San Diego River Chollas Creek/San Diego Bay

Questions for Facility Contact Person

When water (from rain, sprinklers, etc.) leaves your site where does it go? ☐ Treatment Plant/Sewer ☐ Storm Drain System ☐ A Water Body (any) ☐ Don't Know/Unsure

Runoff leaving your site eventually reaches what water body (more than one can be checked)? ☐ San Diego Bay ☐ Chollas Creek ☐ Pacific Ocean ☐ San Diego River ☐ Mission Bay ☐ Don't Know/Unsure

What is your impression of the water quality/condition of the downstream water body? ☐ Good ☐ Fair ☐ Poor ☐ Don't Know

In general, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff? ☐ Washing Activities ☐ Washing Activities Done by Mobile Businesses ☐ Material Storage ☐ Material Processing ☐ Landscaping ☐ Repair Services ☐ Illegal Dumping ☐ Trash Area ☐ Don't Know/Unsure ☐ Other

Other than today's inspection, have you received any information or education about what your business should do to prevent pollution from entering the environment? ☐ Yes ☐ No

Observations

Was evidence of any non-storm water discharge (including allowable discharges) observed? ☐ Significant ☐ Minimal ☐ No

If irrigation system is present, which sprinkler head types are present (check all that apply)? ☐ Spray ☐ Rotor ☐ Microspray ☐ Drip ☐ Bubblers ☐ Water by hand ☐ Other ☐ NA

Approximate percentage of site's total pervious area that is landscaped: _____ %

Attitude toward compliance with storm water regulations: ☐ Receptive ☐ Neutral ☐ Resistant

Overall Source Ranking (for Watershed Pollutants of Concern)

☐ Significant ☐ Not Significant

POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

Site Name:_____

Pollutant	PDP	Sources Needing More BMPs							Recommended BMPs (check if applicable)			
		Trash Area	Material Storage	Prkng Lot	Load/ Unload	Land-scape	Veh/Eqp Maint	Exposed Work Area	Emp. Training	House-keeping	Minor Struct.	Major Struct.
Sediments												
Nutrients												
Aluminum												
Iron												
Heavy Metals												
Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury												
Organic Compounds												
Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT												
Trash & Debris												
Oxygen Demanding												
Oil & Grease												
Bacteria & Viruses												
Pesticides												
Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos												
Acid/Base (pH effects)												
Others (list):												

☐RW 303(d)☐☐ Receiving water impairments, as listed in the most recent 303(d) list
☐WS COC☐☐ High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
☐PDP☐☐ pollutant discharge potential.
☐Emp. Training☐☐ employee training activities focused on storm water pollution prevention
☐Housekeeping☐☐ standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
☐Minor Struct.☐☐ minor structural BMPs that do not require building permits, such as covering with tarps or building berms
☐Major Struct.☐☐ major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results☐are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results☐are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results☐are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results☐above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results☐exceed the EPA benchmark by an order of magnitude or more

CITY OF LA MESA
SUPPLEMENTAL FOG QUESTIONS
Inspected by D-MAX Engineering, Inc.

Business Name _____ Date:_____/_____/_____

Street Address _____ La Mesa, CA _____

What kind of grease control device does the facility have? ☐ **G**rease trap ☐ Grease interceptor ☐ None

BMPs	N/A	Yes	No	Comments
Does the amount of solids in the grease trap/interceptor appear acceptable?				
Are cleaning logs / maintenance logs maintained on site?				
Are exhaust hood(s) and filter(s) cleaned and maintained?				
Is waste food properly disposed of in trash bins?				
Does restaurant have documented training program for employees for keeping grease out of the storm drain and sewer systems?				

City of La Mesa

DEPARTMENT OF PUBLIC WORKS

May 5, 2008

Re: Storm Water Compliance Inspections

La Mesa Business Owner:

The City of La Mesa (City) will be visiting your business to conduct a storm water compliance inspection. The City is required by the State of California to conduct storm water compliance inspections of industrial and commercial business. The City has contracted with a local environmental and water quality consulting firm, **D-MAX Engineering, Inc.**, to perform the inspections on behalf of the City. D-MAX inspectors are authorized to conduct storm water inspections on behalf of the City.

The inspection program is only one component in a multi-faceted approach to controlling storm water pollution within the City. In addition to business site inspections, the City is also performing frequent construction site inspections, conducting a comprehensive storm drain monitoring program to detect pollutants, developing educational programs for a variety of audiences, imposing urban runoff requirements for new developments, and conducting frequent cleaning of the storm drain system. We sincerely appreciate your concern and cooperation during the implementation of this required program. For additional questions please visit http://www.ci.la-mesa.ca.us/index.asp?NID=234 or call 619.667.1134.

Sincerely,

Malik Tamimi

Malik Tamimi

Environmental Specialist
City of La Mesa

DIRECTOR AND ENGINEERING DIVISION:
8130 ALLISON AVENUE, LA MESA, CALIFORNIA 91941 / PHONE 619.667.1166, FAX 619.667.1380

San Diego Bay Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego Bay and the San Diego River. Your business or facility is located within the San Diego Bay Watershed.

San Diego Bay Watershed

The San Diego Bay Watershed is comprised of 415 square miles. It extends from the Laguna Mountains to San Diego Bay. The watershed falls within the cities of La Mesa, Chula Vista, Coronado, Imperial Beach, Lemon Grove, National City, San Diego, and unincorporated areas of the County. Approximately 4 square miles in the southern portion of the City of La Mesa is part of this watershed. The major discharge sources to San Diego Bay include Sweetwater River, Otay River, Chollas Creek, Paleta Creek, Paradise Creek, and Switzer Creek.

Three drainage basins in the City of La Mesa are part of the San Diego Bay Watershed. Runoff from the Spring Valley Basin flows to the Sweetwater River. Runoff from the University Channel and Lemon Grove Basin contribute to Chollas Creek. The aforementioned creek and river flow into San Diego Bay.

Pollutants of concern associated with the watershed include diazinon, copper and zinc, fecal coliform, turbidity, and total suspended solids. The sources of these pollutants are a result of residential, agriculture or commercial pesticide application, automobiles and industrial waste, sewer spills, encampments, wildlife, erosion, suspended sediment, and fertilizers. Pollutants of concern for Chollas Creek in particular include metals such as copper, lead, zinc, cadmium, and coliform bacteria.

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Moreover, store materials properly to ensure it is not exposed to storm water and do not over-irrigate your landscape. If you observe storm water pollution or illegal dumping into a storm drain, you should call the City's Storm Water Pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

San Diego River Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego River and the San Diego Bay. Your business or facility is located within the San Diego River Watershed.

San Diego River Watershed

The San Diego River Watershed is comprised of 443 square miles. It extends from the mountains near Julian to the Pacific Ocean. Portions of the watershed fall within the cities of El Cajon, Poway, San Diego, Santee, several unincorporated areas, and the City of La Mesa. Primary tributaries to the San Diego River include Boulder Creek, Conejos Creek, Los Coches Creek, San Vicente Creek, and Forester Creek. Alvarado Creek in La Mesa is also tributary to the San Diego River. Alvarado Creek flows into the San Diego River and ultimately into the Pacific Ocean between South Mission Beach and Ocean Beach near Dog Beach.

Pollutants of concern listed in the 2002 Clean Water Act Section 303(d) List Of Water Quality for the lower San Diego River Watershed include fecal coliform (sewage/urban runoff), low dissolved oxygen (decay of organic matter), total dissolved solids (industrial waste/chemical spills), and phosphorus (phosphate based detergents). Between 1996 and 1999, coliform bacteria more than doubled due to urban runoff and sewage.

Other pollutants of concern not listed above include pesticides such as Diazinon and Chlorpyrifos (commercial, agricultural, and residential application), Total Suspended Solids/Turbidity (suspended sediment/solids, construction, sewage, eutrophication), Copper and Zinc (industrial waste or automobiles), and pH/Phosphate (industrial waste, automobiles, sewage, fertilizers, eutrophication, hardening/concrete of creeks).

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Store materials properly to ensure it is not exposed to storm water. Do not over-irrigate your landscape. If you observe illegal dumping into a storm drain, you should call the City's storm water pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

3.0 INDUSTRIAL AND COMMERCIAL

3.1 BMP REQUIREMENTS FOR ALL DISCHARGERS

3.1.1 NON-STORM WATER DISCHARGES

Non-storm water discharges refer to water flows that are not associated with storm events (i.e. the product of precipitation). The following categories of non-storm water discharges are exempt from discharge prohibitions established by the City's ordinance, but BMPs must maintained to keep prevent these discharges from being a source of or transporting pollutants to the City's storm water conveyance system. Such discharges are listed below:

- Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks;
- Diverted stream flows (provided required permits are obtained);
- Flows from riparian habitats and wetlands;
- Foundation drains (not including active groundwater dewatering systems);
- Rising groundwater;
- Uncontaminated groundwater infiltration to MS4s [as defined at 40 CFR 35.2005(20)];
- Uncontaminated pumped groundwater;
- Water from crawl space pumps;
- Water from footing drains (not including active groundwater dewatering systems).
- Air conditioning condensate
- Flows from emergency fire fighting activities
- Springs
- Water line flushing

3.1.2 BMP REQUIREMENTS APPLICABLE TO ALL DISCHARGERS

Good Housekeeping BMPs

Good housekeeping consists of practices implemented to prevent pollutants from being carried in either non-storm water dischargers or with storm water during a storm event and include the practices below. These practices should be implemented by all dischargers, when applicable:

- Report prohibited non-storm water discharges to the City's storm water hotline (619) 667-1134
    - Prohibited non-storm water discharges include industrial and commercial businesses hosing down their sites or washing vehicles or equipment where water reaches the City's storm water conveyance

system, or anyone dumping solid or liquid waste directly into or where it may reach the City's storm water conveyance system.

- Regularly clean and maintain outdoor areas
  - Eliminate the accumulation of pollutants (dirt, surplus materials, spilled or dropped substances, litter, and debris) that collect in areas that can be carried in runoff to the storm water conveyance system.
  - Keep dumpster, trashcan, and recycling bin lids closed to prevent the wind from carrying trash out of the receptacles and to prevent wind, rain, and scavengers from transporting pollutants to the storm water conveyance system.

- Choose dry cleaning methods
  - Eliminate hosing down the site unless all wash water is contained and disposed of to a pervious area, like a lawn, or the sanitary sewer system. Note that some kinds of wash water (i.e. containing significant amounts of pollutants) may not be allowed to be disposed of to a pervious area. Additionally, sewer permits may be necessary for disposing of significant amounts of wash water to the sewer system.
  - Sweeping of paved areas is a dry cleaning method that helps prevent trash, debris, and particulate matter such as dirt from accumulating on paved surfaces and being carried to the storm water conveyance system during a rain event.

- Reduce the use of toxic materials
  - Substitute non-toxic or less-toxic cleaning materials and solvents, use non-caustic and phosphate-free detergents, water-based degreasers, non-chlorinated solvents, when possible.

- Store materials in a manner where they do not contact storm water
  - Move into a building or provide a cover, berm, or similar structure to prevent storm water from contacting materials stored outdoors.

Erosion Control

- Remove or secure any significant accumulations of eroded soils from slopes, or other exposed areas. Such areas may be secured through the use of vegetation, geotextiles, erosion control blankets, etc.

Illegal Connections and Discharges

- Illegal connections to the storm water conveyance system, including, but not limited to sinks and toilets plumbed to the storm water conveyance system, and other systems that convey prohibited discharges to the storm water conveyance system must be eliminated (even if the connection was established pursuant to a valid permit and was legal at the time it was constructed).
- Illegal discharge practices must be eliminated. If a discharge is not include on the list of allowed discharges discussed in section 2.1.1, and is not water resulting from a storm event, it is most likely an illegal discharge.

3.2 BMP Requirements For Industrial And Commercial Sites

Key BMPs generally applicable to industrial and commercial facilities and activities include the following:

- Reducing the exposure of pollutants to storm water and non-storm water discharges. This is often done through
  - Covering the pollutants and/or
  - Keeping pollutants away from typical flow paths of water
- Good housekeeping: generally keeping work and storage areas clean and well organized
- Prompt, proper cleanup of spills
- Preventing illegal discharges, such as vehicle wash water

3.2.1 Pollution Prevention

The City will require incorporation of such strategies into the standard operating procedures of all industrial and commercial facilities, whether a large or small industrial facility, a corporate chain store, a franchise, or an independent or family-run shop. The following pollution prevention methods shall be considered and implemented to the MEP, where applicable:

- Reduce quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees and customers
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process (most preferred), off site or on site (least preferred)
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

3.2.2 General and Activity Specific BMPs

In addition to the pollution prevention BMPs described above, the City has also established a set of minimum BMPs based on the CASQ California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of general BMPs and activity-specific BMPs. General BMPs and activity-specific BMPs are required where applicable and are briefly listed below. The relevant CASQA BMP fact sheet reference is

given in parentheses after each listing; the BMP fact sheets are available online at www.cabmphandbooks.com. In some cases the City does not agree with some of the specific recommended BMP options listed in the CASQA fact sheets. Those exceptions are listed later in this section.

Note that more stringent BMP requirements may need to be applied where necessary to reduce discharges of pollutants to sensitive water bodies and/or comply with total maximum daily load (TMDL) regulations. The City also reserves the right to require the development of Storm Water Pollution Prevention Plans (SWPPP) and/or storm water monitoring if deemed necessary by City inspectors.

- **General BMPs**
  - Non-Storm Water Discharge Control (SC-10)
  - Spill Prevention, Control/Cleanup (SC-11)
  - Waste Handling and Disposal (SC-34)
  - Sediment/Erosion Control (SC-40)
  - Building/Grounds Maintenance (SC-41)
  - Parking Area Maintenance (SC-43)
  - Drainage System Maintenance (SC-44)
  - Employee Training
    - As appropriate to their positions, staff must be trained to avoid prohibited discharges.
    - Staff must be trained in proper implementation of the BMPs applicable to the activities they regularly conduct.
- **Activity-Specific BMPs**
  Appropriate BMPs depend on the type of activities, pollutants and potential source of pollutants. BMPs requirements for the following activities and areas, which are relatively common at industrial and commercial sites, follow the CASQA BMP noted in parentheses after each activity.
  - Vehicle/Equipment Fueling (SC-20)
  - Vehicle/Equipment Cleaning (SC-21)
  - Vehicle/Equipment Repair (SC-22)
  - Outdoor Loading/Unloading (SC-30)
  - Outdoor Liquid Container Storage (SC-31)
  - Outdoor Equipment Operations (SC-32)
  - Outdoor Storage of Raw Materials (SC-33)

In addition to the minimum BMPs listed above, the City may require additional BMPs based on specific site conditions observed during an inspection. The City also may require the implementation of treatment control BMPs, including but not limited to the following:

- Infiltration Trench (TC-10)
- Infiltration Basin (TC-11)
- Retention/Irrigation (TC-12)

- Wet Pond (TC-20)
- Constructed Wetland (TC-21)
- Extended Detention Basin (TC-22)
- Vegetated Swale (TC-30)
- Vegetated Buffer Strip (TC-31)
- Bioretention (TC-32)
- Media Filter (TC-40)
- Water Quality Inlet (TC-50)
- Multiple Systems (TC-60)
- Wetland (MP-20)
- Media Filter (MP-40)
- Wet Vault (MP-50)
- Vortex Separator (MP-51)
- Drain Inlet (MP-52)

3.2.3 CITY EXCEPTIONS TO CASQA FACT SHEETS

The City has noted some exceptions to some BMPs listed on some of the aforementioned CASQA Industrial and Commercial Fact Sheets, which are discussed below.

Please note that although CASQA fact sheets state that listed BMPs are "suggested protocols," the City requires the implementation of such protocols as minimum BMPs, when applicable to the business.

There are no fact sheets specific to disposal of hazardous waste included in the CASQA Industrial and Commercial Handbook. Industrial and commercial businesses must follow appropriate waste disposal BMPs (SC-34) and applicable laws and regulations when disposing of hazardous waste.

CASQA fact sheet SC-11 states that industrial and commercial businesses should develop and regularly update a spill prevention control and countermeasure (SPCC) Plan. A formal SPCC document is not required, but is encouraged. However, other BMPs listed on SC-11 must be implemented when preventing and responding to spills.

SC-22, Vehicle and Equipment and Repair, states, "Incoming vehicles [should be] checked for leaking oil and fluids. Do not allow leaking vehicles or equipment on site." Due to the nature of vehicle equipment and repair facilities, leaking vehicles or equipment may be allowed on site. BMPs must be implemented to prevent vehicle and equipment fluids from contacting, or potentially contacting, storm water.

SC-43, Parking/Storage Area Maintenance, states, "Follow the procedures below when cleaning oily deposits: use a screen or filter fabric over inlet, then wash surfaces." Non-storm water discharges of this nature, even if filtered, are not allowed to enter the storm water conveyance system. Water must be contained, collected, and disposed of properly.

SC-41 - Building and Grounds Maintenance, states (in regards to pressure washing), "If soaps or detergents are not used, and the surrounding area is paved, waste runoff does not have to be collected but must be screened. Pressure washers must use filter fabrics or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff." As previously mentioned, non-storm water discharges of this nature, even if filtered, are not allowed to enter the storm water conveyance system. Water must be contained, collected, and disposed of properly.

Note that the City does not require the use of treatment control BMPs as minimum BMPs for existing industrial and commercial facilities. Treatment control BMPs may be necessary at industrial and commercial facilities to reduce pollutants to the MEP. Treatment control BMPs are required for all high priority development projects as required by the Municipal Permit and the City's SUSMP ordinance. Any business implementing treatment control BMPs should be aware of regulations that regulate the removal of silt, sediment, and/or vegetation from naturally lined ponds and detention basins.

City of La Mesa
Storm Water Pollution Prevention
Over-Irrigation

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

With La Mesa's clay soils, it doesn't take much to moisten the ground before water starts running off your property to the curb, down the street and into the storm drain. Runoff from over-irrigation may transport pollutants such as sediment, pesticides, fertilizers, pet waste, bacteria, and automobile fluids. These pollutants enter our local creeks and streams and discharge into the ocean.

Over-irrigation is not prohibited; however, the following measures are recommended.

1. Over-irrigation runoff shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Irrigate to meet site-specific conditions to prevent over-watering.
3. Ensure that your irrigation system has control devices, sensors or shut-off switches to address malfunctions.
4. Place or group plants with similar water needs within the same area.
5. Don't irrigate non-planted areas.
6. Inspect your irrigation system regularly for potential problems
7. Consider drip irrigation to save water and prevent over-irrigation and runoff.
8. Adjust irrigation rates according to seasons, weather conditions and the soil's ability to absorb water. Instead of watering for 15-minutes straight, break up the session into 5-minute intervals, allowing water to soak in before the next application.
9. Irrigate in the early morning; it's the most efficient time to water plants with minimal evaporation.
10. Refrain from irrigation during hot, windy periods of the day. Do not let water run out into the street.

Do the right thing, stay in compliance and protect our environment. For more information contact the City's Storm Water Hotline (619) 667-1134.

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following **B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or checked by the City inspector.

Maintenance Good Housekeeping

- ❑ Regularly, dry sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- ❑ If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- ❑ Water used for cleaning exterior surfaces must be contained and disposed of into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the storm drain or leave the property.
- ❑ Regularly inspect and maintain storm drain inlets.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over watering and causing runoff.
- ❑ Minimize pesticide, herbicide and fertilizer use, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid material.
- ❑ Have a spill response kit available to clean up potential spills such as kitty litter or other absorbents.
- ❑ Keep material storage areas free from rainwater accumulation.
- ❑ Keep lids closed on all outdoor storage containers and ensure containers are labeled.

Waste Management

- ❑ Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- ❑ Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Schedule regular waste pick-up.

Vehicle Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using kitty litter or other absorbents. Properly dispose of used absorbents.

Vehicle Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Protect storm drains or curb inlets and then collect all wash water by vacuum. Recycle or dispose of wash water via the sanitary sewer system.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

Loading Areas Operations

- ❑ Load and unload in designated areas.
- ❑ Regularly dry sweep loading and unloading areas.
- ❑ If possible, cover loading areas.
- ❑ Divert storm water away from all loading and unloading areas.
- ❑ Check shipments and trucks for leaks and spills.
- ❑ Cleanup spills/leaks immediately and dispose of properly.
- ❑ If you must use water for cleaning, use a mop and bucket and dispose of wash water into the sanitary sewer.
- ❑ Major cleaning of exterior surfaces must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water should not be allowed to enter the street gutter or storm drains.

What's the difference?

Sanitary Sewer vs. Storm Drain System

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers ☐ terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

Preventing Urban Runoff Pollution

A Guide for Commercial and Industrial Businesses

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

Beginning in 2002, your business is **required** to prevent urban runoff pollution by implementing **B**est **M**anagement **P**ractices (**BMPs**).

The City will be conducting inspections to ensure that BMPs are being used and water quality is protected.

CITY OF LA MESA
Jewel of the Hills

NEW
Increased discounts

HVAC
$1,900 per pH CTCC
$ 625 per standard CTCC

Toilets
$ 165 per 1.2 gpf toilet
$ 135 per 1.6 gpf toilet

Urinals
$ 400 per zero-water urinal
$ 200 per .5 gpf urinal

and more
$ 150 per waterbroom

To bring expenses down, start at the top.

We'll give you up to $1,900 for cooling tower conductivity controllers that work 24/7.

©2006 San Diego County Water Authority REV 08/2006

Voucher Incentive Programs
commercial • Residential

Processing Center
P.O. Box 884
El Segundo, CA 90245-0884

We've increased water-efficiency discounts . . .

for your restrooms, your HVAC system and more.

MONEY SAVER
Voucher Incentive Programs
1-800-981-1938

Urinals

$200 per high-efficiency urinal

You'll save 66–100 percent each use. Pre-1989 urinals use 3 or more gallons of water compared to the .5 gallon, or less, used by high-efficiency or zero-water urinals.

Guidelines

$400 per zero-water urinal

- Urinals using .5 gallon or less per flush and waterless models are acceptable.
- New urinals must replace existing urinals using 3.0 gallons per flush or more.
- Urinals installed as part of new construction or restroom additions do not qualify.
- Properties built after 1994 do not qualify.
- Vouchers may be applied to the cost of the urinal and sales tax.

Cooling Tower Conductivity Controllers

New discounts for pH controllers lead to even greater water and energy savings and longer equipment life. A properly functioning conductivity controller facilitates automated monitoring and control. Reductions in scaling, bleed-off water and chemical use add up to significant 24/7 savings.

$625 per CTCC

$1,900 per pH CTCC

Guidelines

- Controllers that automatically monitor and maintain pH levels of recirculated water may qualify for the $1,900 voucher discount.

Toilets

You'll save more than 60 percent every time you flush. Pre-1981 toilets use 5–7 gallons of water per flush, compared to the 1.2–1.6 gallons per flush used by these water-efficient toilets.

Guidelines

$165 per high-efficiency toilet

- Toilets must replace fixtures which are specified by their manufacturers to use at least 3.5 gallons per flush.
- Toilets installed as part of new construction or restroom additions do not qualify.
- Properties built after 1994 do not qualify.
- Vouchers may be applied to the cost of the toilet tank, bowl and sales tax.
- High-efficiency toilets must be selected from the current list of Water Authority approved models.

Call toll free 1-800-986-4538

Discount incentive availability varies by water agency.

Waterbrooms

Save time and money when cleaning tennis courts, pool decks, kitchens, outdoor eating areas, sidewalks, and more. Waterbrooms can save 5–15 gallons per minute and clean in about 75% less time.

Guidelines

$150 per waterbroom

- Waterbroom vouchers are available for commercial properties only.
- Not all water agencies are participating.

Sponsoring Agencies: Carlsbad Municipal Water District, City of Del Mar, City of Escondido, Fallbrook Public Utility District, Helix Water District, City of Oceanside, Olivenhain Municipal Water District, Otay Water District, Padre Dam Municipal Water District, City of Poway, Rainbow Municipal Water District, Ramona Municipal Water District, Rincon del Diablo Municipal Water District, City of San Diego, San Dieguito Water District, Santa Fe Irrigation District, Sweetwater Authority, Vallecitos Water District, Valley Center Municipal Water District and Vista Irrigation District.

REV 08/2006

San Diego County Water Authority

MONEY SAVER Voucher Incentive Programs 1-800-986-4538

Before you buy...

Call the Processing Center to request a voucher. The voucher will be treated like a coupon by participating wholesale and retail suppliers and plumbers/contractors throughout San Diego County. Vouchers must be presented at the time fixtures or equipment are purchased.

1. Call 1-800-986-4538 to make sure you are a qualifying customer of a participating agency and vouchers are still available.
2. Vouchers expire 30 days after issuance. If you need additional time to complete your purchase, call 1-800-986-4538 and see if an extension is available.
3. Redeem your voucher when you purchase qualifying fixture(s) or equipment from participating suppliers or contractors.
4. Customers participating in the program agree to respond to a brief water conservation survey and to allow an on-site installation verification.

Commercial, public, multi-family properties

up to $25-per-station discounts for smart controllers

New construction now qualifies!

Discounts are no longer limited to the replacement of existing controllers! Suppliers and contractors may now offer this point-of-purchase discount to all commercial, multi-family and public customers.

Automatically adjust watering schedules as the weather changes.

Improve landscape health and appearance.

Reduce runoff.

smart LANDSCAPE
A San Diego County Water Authority Program

HERE'S HOW

Before purchasing a new controller(s), request a discount voucher. Call 800-986-4538 (option 2, 5) to determine property eligibility and voucher availability or go to www.sdcwa.org/manage/conservation-overview.phtml to download the voucher application.

- Vouchers must be presented at the time of purchase.
- The voucher will be treated like a coupon by participating suppliers and/or contractors.
- Contractors may request vouchers with property owner's/manager's written authorization.
- Participating customers agree to an on-site installation verification.
- Funding is limited and vouchers are distributed on a first-come, first-served basis.

GUIDELINES

- Qualifying properties must have at least 2,000 square feet of irrigated landscape.
- Controllers must be selected from the current list of eligible models.
- Maximum 48 stations per controller.
- Controllers must be installed by qualified C-27 licensed contractors from the list of contractors provided by manufacturers. (This requirement does not apply to properties with in-house landscape maintenance staff.)

NO REBATES!

- There are no rebates available for previously purchased commercial or new construction controllers.
- Voucher discounts apply only at the time of equipment purchase.

FREE WATER MANAGEMENT REPORTS

When you participate in the Smart Landscape Program, your property may receive water budget information. It's a service that helps property owners and managers control water-related expenses by comparing the amount of water used with the optimal amount needed. Offered in select areas only. Please call your water agency for availability.

CALL TOLL-FREE: 800-986-4538 (option 2, 5)

or go to www.sdcwa.org/manage/conservation-overview.phtml.

Do you have a list of irrigation repairs or upgrades but no budget?

HERE'S HOW

Applications are available: from irrigation equipment suppliers; at www.sdcwa.org/manage/conservation.phtml; or by calling 800-986-4538 (option 2, 5).

4 Easy Steps

- Submit a grant application. We'll contact you about your application within 10 days of receipt.
- Complete installation within 60 days of approval notification.
- Fax, e-mail or mail receipts.
- Schedule an appointment to confirm installation.

GUIDELINES

- Funding is limited and grants are issued on a first-come, first-served basis.
- Grants may not exceed $2,500 per irrigated acre.
- Grant funds are not available for labor, plant materials, delivery or installation.
- Hardware and/or equipment must be installed by a California licensed contractor with a C-27 landscaping classification. (This requirement does not apply to properties with in-house landscape maintenance staff.)
- FREE Water Management Reports! When you participate in the Smart Landscape Program, your property may receive water budget information. (See other side.)

We offer grants up to **$5,000**

for commercial, public or multi-family properties. Public properties may receive up to $10,000.

We can help

Chollas Creek TMDL Fact Sheet

What are the Chollas Creek TMDLs?

In 2003 and 2007, Total Maximum Daily Load (TMDL) allocations for the pesticide diazinon and for heavy metals (copper, lead, and zinc), respectively, were adopted by the Regional Water Quality Control Board (a State Regulatory Agency) for Chollas Creek. The regulations establish strict numeric limits on the amounts of heavy metals and diazinon that can be present in urban runoff. Southwestern La Mesa, roughly bounded by El Cajon Boulevard to the north and Spring Street to the east (see map), eventually drains to Chollas Creek and is subject to these requirements. Businesses within this area are impacted by these new requirements. The City is monitoring water quality near your business to identify and eliminate sources of these pollutants to comply with new State regulations. The following activities/sources contribute to the discharge of heavy metals and diazinon.

Heavy metals are commonly associated with industrial waste, uncontained storage of certain metal products or materials (such as galvanized steel), cutting and grinding activities, atmospheric deposition, metal smelting or plating, and automobile tires and brakes.

Diazinon is a pesticide associated with landscaping activities. It has been banned for use and is no longer available at retail outlets. Diazinon acquired prior to the ban should be disposed of in accordance with state and federal regulations.

What is the City of La Mesa doing about these TMDLs?

The City's many efforts to protect water quality and comply with State regulations include regularly sweeping its streets and cleaning out its storm drain system, inspecting businesses and construction sites, and applying strict water pollution control standards to new development projects.

What do these TMDLs mean for my business?

The City's Municipal Code requires that businesses take measures to ensure that urban runoff (water that leaves your business and enters storm drains) is not contaminated with pollutants. Chapter 7.18 of the Municipal Code requires businesses to implement measures including those listed below. Taking these actions will help meet TMDL requirements.

- Eliminate non-storm water discharges, such as hosing off property and allowing the water to leave the site, dumping liquids into a storm drain, and runoff from excessive irrigation.
- Cover and contain metal products or materials that may contain heavy metals where feasible. Examples of such materials include galvanized metal, brake pads, tires, and metal recycling bins.
- Conduct metal cutting, grinding, welding, automotive or equipment repair, and similar activities in indoor, contained areas where feasible.
- Regularly sweep paved areas of your site to keep them clean and dispose of debris appropriately.
- Do not use any product containing diazinon. Contact County of San Diego Hazmat for instructions on proper disposal (619-338-2231).
- Store all pesticides and fertilizers in covered and contained areas. Consider alternative, non-chemical pest control methods.
- Do not apply pesticides before storms and eliminate overspray of pesticides onto paved surfaces.

If you observe illegal dumping into a storm drain, please report it to the City at 619-667-1134.

We are serving drinking water only upon request.

This saves water by eliminating waste at the table and by reducing water needed for cleaning glasses.

Thank you for your understanding!

How To Keep COOKING GREASE Out of the Drain

You Can Help Prevent Sewer Spills

Cooking Grease

is one of the primary causes of residential pipeline and City sewer main clogs resulting in sewer spills throughout the Metropolitan Wastewater Sewerage area. The spilled sewage eventually reaches San Diego's bays, rivers, and beaches, causing unsafe conditions and temporary closures.

All cooking oils disposed of improperly can cause problems in the sewer system. These include:

- ✓ frying oil
- ✓ salad oil
- ✓ meat drippings
- ✓ bacon fat
- ✓ greasy leftovers

Important Facts

- Cooking grease coats pipelines similar to the way that fatty foods clog human arteries. The grease clings to the inside of the pipelines, eventually causing complete blockage.
- Costly home plumbing bills are often the result of grease-clogged pipelines. Residential pipelines clog easily since they are only 2"- 4" in diameter.

- Many people are unaware that pouring hot water and detergent down the drain only breaks up grease temporarily. Grease should NEVER be poured down the drain. If small amounts of grease accidentally get into your drain, flush immediately with COLD water.

- Flushing grease down the toilet also causes sewer backups.

By following a few simple steps, you can help prevent costly sewer spills in the future.

Step 1

All **cooking oil** should be poured into an old milk carton, frozen juice container, or other non-recyclable package, and disposed of *in the garbage,*

not down the drain.

Step 2

Dishes and pots that are coated with greasy leftovers, should be wiped clean with a disposable towel prior to washing or placement in dishwashers.

Step 3

Instead of placing fat trimmings from meat in the garbage disposal, put them in a trash can. *ALWAYS* put cooking grease containers and greasy towels in a plastic bag before disposing of them in your trash bag. *NEVER* dispose of cooking grease directly into your automated trash container.

Other Causes...

- The continual flow of nutrient-filled water found in pipelines attracts tree roots through pipe joints and manholes. The roots eventually grow, causing separation of the pipeline joints or blockages in the pipe. Always avoid planting trees and shrubs near residential and City sewer pipelines.
- Rocks, debris, power outages, vandalism, rain and construction are also contributing factors to sewer spills.

About MWWD

The Metropolitan Wastewater Department (MWWD) processes approximately 180 million gallons per day generated by 2 million people within 16 cities and districts that comprise the Metropolitan Sewerage System.

Fact sheet information taken from material produced by San Diego MWWD. Information was intended for residents, but much of it is also applicable to businesses.

Cómo mantener la

GRASA de COCINAR

fuera del desagüe

Usted puede ayudar a prevenir derrames en los alcantarillados

La Grasa de la Cocina

Una de la causas principales de las obstrucciones en el sistema municipal de alcantarillado y las tuberías residenciales que ocasionan derrames en los alcantarillados en todo el Sistema de Aguas Residuales del Área Metropolitana. Las aguas negras derramadas llegan eventualmente a las bahías, ríos y playas de San Diego causando condiciones inseguras y cierres temporales.

Todas las grasas que se desechen inadecuadamente pueden causar problemas en el sistema de alcantarillado. Entre estas grasas están las siguientes:

- ✓ el aceite de freír
- ✓ el aderezo para ensaladas
- ✓ la grasa de carnes cocidas
- ✓ la grasa de tocino
- ✓ las sobras de comidas grasosas

Datos Importantes

- La grasa de cocinar cubre las tuberías de una forma similar a la manera como los alimentos grasosos obstruyen las arterias humanas. La grasa se pega a la parte interior de las tuberías, causando eventualmente bloqueos completos.
- Con frecuencia las costosas facturas por trabajos de plomería en el hogar son la consecuencia de tuberías obstruidas por la grasa. Las tuberías residenciales se obstruyen fácilmente puesto que sólo tienen de 2 a 4 pulgadas (5 a 10 cm) de diámetro.

- Muchas personas ignoran que vertiendo agua caliente y detergente al desagüe sólo corta la grasa temporalmente. La grasa NUNCA debe echarse en el desagüe. Si pequeñas cantidades de grasa caen accidentalmente dentro de su desagüe, hágalas bajar inmediatamente con una descarga de agua FRÍA.

- Descargar grasa por la tasa también causa obstrucciones en el alcantarillado.

Siguiendo unos cuantos pasos sencillos,usted puede ayudar a prevenir futuros derrames costosos en el alcantarillado.

Paso 1

Todos los aceites de cocinar deben echarse dentro de un envase viejo de leche, un envase de jugo u otro empaque no reciclable y desecharse *en la basura,*

no por el desagüe.

Paso 2

Los platos y ollas que estén cubiertos con sobras grasosas deben limpiarse con una toalla desechable antes de lavarlos o colocarlos en la máquina lavaplatos.

Paso 3

En lugar de colocar recortes de grasa de la carne en el triturador de basura, colóquelos en el bote de basura. *SIEMPRE* ponga los recipientes de aceites o grasas de la cocina y las servilletas grasosas en una bolsa de plástico antes de desecharlos en su bolsa de basura. *NUNCA* deseche los aceites o grasas de la cocina directamente en su bote de basura.

Otras Causas...

- El flujo continuo de agua llena de elementos nutritivos que se encuentra en las tuberías atrae a las raíces de los arboles a través de las uniones y en los registros de acceso de la tubería. Las raíces eventualmente crecen causando la separacíon de las uniones de la tubería. Los residentes y negocios de San Diego deben evitar plantar árboles y arbustos cerca de las tuberías residenciales y las tuberías del sistema municipal de alcantarillado.
- Las piedras, escombros, interrupciones del suministro eléctrico, actos de vandalismo, lluvias y obras de construcción son otros factores que contribuyen a la obstrucción de las tuberías.

Acerca de MWWD

El Departamento Metropolitano de Aguas Residuales (MWWD-por sus siglas en inglés) procesa aproximadamente 180 millones de galones de aguas residuales, diáriamente que son generados por 2 millones de habitantes detro se las 16 ciudades y distritos que forman el Sistema Metropolitano de Alcantarillado.

Esta hoja de datos de información tomados de material producido por el MWWD de San Diego. La información ha sido destinado para los residentes, pero muchos de ellos también es aplicable a las empresas.

Grease Interceptors and Grease Traps

Grease traps and grease interceptors are the most common types of grease control devices, which reduce discharges of grease to the sanitary sewer system. The grease trap prevents excess grease from getting into the sewer system from existing plumbing lines within facilities. Traps are small and are usually installed inside a facility. Generally, they range in size from 20 gallons per minute (gpm) to 50 gpm.

Many high-volume or new establishments use grease interceptors, which are larger than the traps and are installed underground, outside of a facility. Grease is actually "intercepted" in these concrete tanks before it reaches the City sewer main. Grease interceptors should be accessible by three manhole covers and a sample box.

Interceptors and traps cause the flow of water to slow down, allowing the grease to naturally float to the top of the tank for easy removal.

Grease Trap

What's Cookin'

Eating and Drinking Establishments: Stormwater Best Management Practices

Dear Business Owner:

This training guide is being provided as a tool to assist eating and drinking establishments by outlining stormwater best management practices (BMPs) for owners, managers, and employees. BMPs are actions you can take to prevent or reduce pollutants from leaving your business. By using this training guide, you can proactively help to protect our waterways.

Clean eating and drinking establishments are important to everyone. However, when not properly handled and managed, routine activities that keep businesses clean, or that assist in food production, can contribute to the pollution of our watersheds. Pollution can harm aquatic habitats, human health, and ultimately can result in waterway closures. Being a successful business and an environmentally responsible eating and drinking establishment go hand-in-hand. The Food and Beverage Association, along with the County of San Diego, local city government agencies, and the Port District have developed minimum BMPs for eating and drinking establishments.

Please note that this training guide is not intended to provide requirements for all regulations that pertain to your business. The goal of this guide is to educate businesses on stormwater BMPs.

The Food and Beverage Association of San Diego County and the County of San Diego encourage you to share this information with all of your employees. To help ensure compliance, train all employees on a quarterly basis, review stormwater BMPs, and practice pollution prevention.

Thank you for being environmentally responsible and for keeping the San Diego region a desirable place for people to live and visit! Should you have any questions, please contact your local jurisdiction (see page 13 and 14 of this guide).

FOOD & BEVERAGE ASSOCIATION OF SAN DIEGO

Do you know where water in the street goes?

In Southern California, water running off our streets flows into storm drains. Some people think that this water goes to our local wastewater treatment plant.

They are mistaken!

Anything entering the storm drain flows untreated into our creeks, streams, and rivers and ends up in our lakes and the ocean. Polluted water harms plants and animals and makes us sick. It causes beach closures and makes our fish and shellfish unsafe to eat.

Our ocean and lakes are being polluted!

A storm drain outlet that empties directly into a local stream.

What is causing stormwater pollution?

The sanitary sewer system and the storm drain system are different systems. Storm drain openings are located outside in gutters, alleys, and streets. Materials that are spilled, dumped, or poured onto these surfaces can enter the storm drain system and eventually travel to our creeks, lakes, and the ocean without being treated.

Waste water from sinks and floor drains travel through the sewer system to a waste water plant where it is treated before it flows to the ocean.

To keep our water clean, it is very important that all water used in business activities be directed only to drains that lead to the sanitary sewer.

Waste water from toilets, kitchen sinks, mop sinks, dishwashers, kitchen floor sinks and drains goes to a treatment plant.

What can your business do to keep our water clean?

The County of San Diego, Unified Port District, and each of the 18 cities in the county adopted local stormwater ordinances to protect our water resources. These ordinances require your eating and drinking establishments to:

1. **Prohibit pollutants from entering the storm drain system**
2. **Use Best Management Practices (BMPs)**

As a business owner or operator, you are legally responsible to comply with these stormwater ordinances. Failure to comply with these ordinances could result in citations and fines.

The storm drain system includes parking lots, sidewalks, streets, gutters, and drainage channels.

Best Management Practices and Your Business

Best Management Practices, commonly called BMPs, are actions you can take to prevent or reduce pollutants from leaving your eating and drinking establishment.

A key type of BMP is "pollution prevention". Pollution prevention methods help to limit the amount of pollutants that are produced, thus eliminating the need to manage or remove them. Pollution prevention BMPs can help your business run more efficiently and can save you money.

Inspect Your Business

This is a good way to make sure that your eating and drinking establishment complies with stormwater requirements.

- ✔ Inspect inside and outside areas of your business.
- ✔ Make sure that all pipes inside your business are connected to the sewer system.
- ✔ Locate and mark storm drain openings on a map and post it in a common work area. Show your employees where the openings are located.
- ✔ Review your current practices and look for areas where you can improve.
- ✔ Inspect grease traps or interceptors regularly.
- ✔ Record any changes that you make to help prevent stormwater pollution.
- ✔ Good record keeping is your key to compliance.

Inform Your Employees

Employees are more likely to respond to training when they understand the impact of their daily activities on water quality.

- ✔ Hold staff meetings to discuss the importance of keeping our water clean.
- ✔ Train all employees on stormwater BMPs and pollution prevention.
- ✔ Have your employees read and review this guide and sign and date the training log included on pages 17 and 18.
- ✔ Record other training sessions and include date, instructor, and attendees.
- ✔ Keep training records on site.
- ✔ Provide regular refresher trainings.
- ✔ Post BMPs and pollution prevention tips around your business.
- ✔ Teach employees on the proper use of spill clean-up materials.

Keep good training records and self-inspection checklists (see pages 15 and 16).

Cleaning and Disposal

Cleaning products and food waste can pollute our waterways if they are not handled and disposed of properly.

Spill Prevention and Clean Up

It is always best to prevent spills, but be prepared when they occur.

- ✔ Routinely maintain all equipment and fix all leaks.
- ✔ Keep spill clean-up materials handy such as near dumpsters, grease bins, and unloading areas.
- ✔ Use dry methods for spill clean up such as rags, absorbents, brooms, and vacuums.
- ✔ If a final rinse is needed, collect the rinse water using a mop or a wet vacuum. Pour the rinse water into a mop sink or a floor drain connected to the sewer.
- ✔ Clean up the used absorbent and place in the trash.
- ✔ Report any spill that cannot be cleaned up or contained before entering the storm drain. To report spills and discharges, call the Regional Stormwater Hotline at **(888) 846-0800**.

Pour all wash water to the sewer and not to the storm drain system.

Inside Areas

- ✔ Sweep and mop floors daily.
- ✔ Wash floor mats, kitchen mats, filters, and garbage cans in a mop sink, janitors sink, or near the kitchen floor drain.
- ✔ Never clean equipment outside where water may flow to an unprotected storm drain.
- ✔ If floor mats are too big to clean indoors, contract with a mat-cleaning service or clean them in an area that drains to the sewer.
- ✔ Pour rinse water containing soap, bleach, and disinfectants to a mop sink or sewer.

Outside Eating Areas

- ✔ Sweep or vacuum litter and food waste daily.
- ✔ Cover storm drain openings before wet cleaning, such as pressure washing.
- ✔ Contain and collect all wash water and dispose of it properly. Contact your local sewer agency for discharge requirements.

Wash floor mats in an area that drains to a sewer and not to the storm drain system.

Grease Management

Grease can collect in the sewer lines and create sewer blockages that cause sewage spills into the storm drain system.

- ✔ Install a grease trap or interceptor whenever possible or as required by a municipal sewer agency.
- ✔ Regularly clean grease traps and interceptors.
- ✔ Contract with a grease hauler to regularly service and empty your grease waste.
- ✔ Grease storage area should be regularly cleaned and inspected.
- ✔ Make sure grease bins are always tightly closed.
- ✔ Store grease bins on level ground and secure to prevent bins from tipping over.

Collect bulk grease in containers and contract with a firm for recycling.

Dumpster and Unloading Areas

Liquid and solid waste from leaking trash containers and unloading areas can flow into storm drains.

- ✔ Sweep up food particles, cigarette butts, and litter around dumpsters and unloading areas regularly.
- ✔ Put trash and debris in tied plastic bags before placing into the dumpsters.
- ✔ Dispose of liquid waste into the sanitary sewer.
- ✔ Keep dumpster lids closed and locked to prevent illegal dumping.
- ✔ Do not hose out dumpsters.
- ✔ Call your solid waste hauler when dumpsters are leaking, need cleaning, or repair.

Use dry methods for cleaning up spills and leaks such as rags, absorbents, brooms, and vacuums.

Grounds

Customers are more likely to use a trash can if your property is kept neat and clean.

- ✔ Routinely sweep and clean parking lots and paved areas around your eating and drinking establishment.
- ✔ Provide trash cans with lids in your parking lot to discourage littering.
- ✔ Post "No Dumping or Littering" signs around your property.
- ✔ Sweep up dirt, leaves, and clippings on walkways, street, and gutters.
- ✔ Apply pesticides and fertilizers according to label instructions and do not apply before a rain event. Try using less toxic alternatives.
- ✔ Adjust sprinkler heads properly to avoid over-watering and runoff.
- ✔ Clean the rooftops of your buildings at least once before the rainy season.
- ✔ Cover any materials stored outside and on the roof.

Prevent waste water from entering storm drains by using plastic sheeting or other storm drain type covers.

Recycling and Pollution Prevention

Conserve water. Eating and drinking establishments in San Diego County use millions of gallons of water each day for daily activities.

- ✔ Use proper storage and "first-in, first-out" for food materials.
- ✔ Post water conservation signs around faucets.
- ✔ Purchase recycled products or products with a high-recycled material content.
- ✔ Contact your local solid waste hauler for recycling options and bins.
- ✔ Start a recycling program and make sure recycling bins are easily accessible to employees.

Paper, cardboard, glass, aluminum, tin, and #1 and #2 plastics can easily be recycled.

How to Reach Us

County of San Diego,
Department of Environmental Health,
Food and Housing Division:
For any questions regarding eating and drinking establishments call **(619) 338-2379** or **(800) 253-9933**

Regional Stormwater Hotline

To report spills and discharges to the storm drain system, call **(888) 846-0800**

General Information

For additional information regarding water quality in the San Diego region, please use the resources listed below.

(888) 846-0800 **www.projectcleanwater.org**
(888) THINK-BLue **www.thinkbluesd.com**

Local Stormwater Program Information

Stormwater and BMP requirements may vary by jurisdiction. Please contact your jurisdiction for questions or if you would like additional information. Updated phone numbers are posted on the **www.projectcleanwater.org** website.

Self-inspection Checklist	Done	Date
Employees have reviewed this guide and have been trained on stormwater BMPs.		
Employees have been shown how to properly use spill clean-up materials.		
Spill clean-up materials are readily available around your business in case of a spill.		
Storm drain openings have been located and marked.		
"No littering" signs and pollution prevention tips have been posted.		
Brooms, vacuums, and rags are available and are used instead of wet cleaning methods.		
Storm drain openings are protected and wash water is collected if water is used outside.		
Wash water from filters, garbage cans, kitchen and floor mats drain only to the sewer.		
All wash water and rinse water are drained to the sewer.		
All indoor drains, sinks, dishwashers, and food equipment drain to the sewer.		

Self-inspection Checklist	Done	Date
Grease traps / interceptors are installed as required by sewer agency and serviced regularly.		
Grease bins are kept tightly closed and regularly serviced by a licensed grease hauler.		
Dumpsters and grease bins do not leak and are in good shape.		
Dumpster and other waste containers are kept closed when not in use.		
Dumpster and grease bin areas, parking lots, and drives are cleaned regularly using dry methods.		
Recycling program has been established and recycling bins are accessible.		
Material stockpiled outside and on the roof are properly covered.		
Hired landscapers and contractors are familiar with stormwater regulations.		
Irrigation system is properly adjusted to prevent over-watering and runoff.		
Storm drains are kept free of trash, leaves, and dirt.		

Training Log

The Green Wrench Guide

Stormwater Best Management Practices for the Automotive Industry

Definitions

Best Management Practices (BMPs):	Techniques or controls used to prevent or reduce the discharge of pollutants into stormwater, receiving waters, or the stormwater conveyance system.
Dry Cleaning Methods:	Methods of cleaning surfaces that minimizes the use of water. Examples include sweeping, vacuuming, and using hydrophobic mops and rags.
Illegal Connection:	An unauthorized pipe, facility, or other device connected to the storm drain system or receiving waters. Devices that convey pollutants may be illegal even if they were permitted at the time of installation.
Illegal Discharge:	The unauthorized discharge of pollutants or non-stormwater into the stormwater conveyance system or receiving waters.
Pollutants:	Anything that can cause or contribute to water quality degradation.
Pollution Prevention:	Practices that minimize or eliminate the generation of pollutants at the source.
Receiving Waters:	Any water bodies including the Pacific Ocean, lakes, streams, lagoons, rivers, reservoirs, and intermittent waters such as vernal pools and seasonal dry creeks.
Stormwater Conveyance System (storm drain system):	Any public or private drainage system (non-sewage) including streets, curbs, gutters, inlets, ditches, pipes, channels, culverts, streams, etc.

Background

What is Stormwater Pollution

When water flows over work areas, parking lots, streets, and other surfaces, it picks up pollutants and carries them into the storm drain system. This system is designed to prevent flooding by transporting water away from urban areas. Water and all the contaminants that it collects eventually flow without treatment through the storm drain system to our streams, lakes, and the ocean where we swim and fish. This polluted runoff harms inland freshwater wildlife and habitats, and in some cases causes, beach closures and makes our fish and shellfish unsafe to eat.

The Storm Drain System and the Sewer System are NOT Connected

In San Diego County, wastewater and surface runoff are discharged into two separate underground systems. Wastewater that is disposed to a toilet, sink, or a piped sewer drain flows into the sanitary sewer system where it is filtered and treated. Water runoff that leaves your business via driveways, sidewalks, parking lots, streets, gutters, storm drain inlets, drainage ditches, and concrete channels flows into a separate storm drain system. Anything that enters the storm drain system eventually flows untreated and unfiltered into our creeks, bays, lagoons – and ultimately the ocean. The things you do at work are directly connected to the health and safety of our citizens and the environment.

Your Responsibilities

As required by federal and state laws, the County of San Diego, the Unified Port District, and each of the 18 incorporated cities in the County have adopted local stormwater management ordinances to protect our water resources. *These ordinances prohibit the discharge of pollutants into the storm drain system.* Pollutants typically associated with automotive maintenance and repair activities include antifreeze, fuels, waste oils, solvents, and paints. Other pollutants commonly contributing to stormwater pollution include sediment, fertilizers, pesticides, and litter. As a business owner or operator, you are legally responsible for ensuring that these and any other potential stormwater pollutants are properly managed. To do so, you will need to select and use Best Management Practices that are specific to your business activities.

A storm drain outlet which flows unfiltered directly into a local stream.

Best Management Practices (BMPs)

Best Management Practices, commonly called BMPs, are actions you can take to prevent pollutants from leaving your facility. In general, there are two main types of BMPs:

- **Source control BMPs** keep pollutants from entering runoff. Examples include preventive maintenance and routine sweeping.

- **Treatment control BMPs** remove pollutants from runoff before it reaches the storm drain system. Common examples are storm drain filters and oil / water separators.

Source control BMPs are often preferable because they are usually simpler and more cost-effective. One of the main types of source control BMPs is “pollution prevention”. Pollution prevention methods (process changes, materials substitution, waste reduction) help to limit the amount of pollutants that are generated, thus eliminating the need to manage or remove them. Pollution prevention BMPs can help your business to run more efficiently and can save you money.

Using the BMPs described in this booklet will help you to satisfy regulatory requirements and to preserve and protect San Diego’s waterways. Successfully meeting this challenge will require the active participation of all employees at your business. To assist your employees in understanding these requirements, please have them read and review this Green Wrench Guide. Also have your employees sign and date the training log included on pages 19 and 20 of this guide so that you will have a record of their training activities.

BMPs and Your Business

This guide is designed to help you think about ways to manage potential stormwater pollutants associated with your business activities. It provides information on minimum requirements, and includes suggested pollution prevention tips for the automotive industry. It is organized according to the following activity types:

- **Facility Audits**
- **Employee Training**
- **Spill Management and Reporting**
- **Vehicles and Equipment**
- **Good Housekeeping**
- **Hazardous Waste Recycling and Treatment**

This guide is not intended to address all regulatory requirements pertaining to your business. Local jurisdictions may have additional, more specific stormwater BMP requirements. Pages 17 and 18 of this guide list additional contact information where you can obtain more information on stormwater and other regulatory requirements.

Thank you for helping to keep the San Diego region a great place for people to live and visit!

Facility Audits

Conducting your own facility audit is the best way to make sure that you stay in compliance with stormwater requirements. This can also save you money by identifying process and procedural improvements (waste prevention, etc.) to make your business activities more efficient. Be sure to address the following key areas during your audits:

- **Illegal Connections** - Inspect your business for connections that may convey pollutants to the storm drain system or receiving waters. An illegal connection is an unauthorized pipe, facility, or other device connected to the storm drain system, and may be illegal even if it was permitted at the time of installation.

- **Inlet and Discharge Points** - Identify the location of storm drain inlets on or down-gradient of your business or property. Mark these locations on a facility map and keep it posted in a common work area. Ensure that employees are shown these areas during training sessions.

- **Review of Activities** - Identify and use specific BMPs for activities with the potential to cause spills or releases of pollutants (oil, grease, fuel, etc.). Use the BMPs presented here as a guide for compliance, but don't stop there. Continue to seek out other sources of BMP information through the internet, professional associations, industry publications, etc. – you can never know too much.

- **Documentation** - Document any corrective action taken after your audit. Documentation is your key to demonstrating compliance. Be sure to include revised business practices and procedures in your employee training.

Employee Training

An effective stormwater management training program promotes employee ownership of problems and solutions. Employees are more likely to respond to training when they understand the impact of their daily activities on water quality. By involving your employees, their feedback will help implement needed actions to reduce stormwater pollution.

- Train all employees on stormwater BMPs and pollution prevention. Maintain training records on site; record the date of each training session and include a sign-in list of those who attended. Perform refresher trainings on a regular basis.

- Post signs around your shop reminding employees of BMPs and pollution prevention tips. This will also help to create awareness for your customers.

- Train employees about the proper use, handling, and disposal of all hazardous materials. Make sure all employees have current licensing and certification for their specific job duties.

- Teach employees how to control, contain, and clean up spills. Demonstrate how to properly use spill response kits.

You can stay informed about current regulations by joining trade associations and subscribing to trade journals and magazines. At trade association meetings and workshops, you will have the opportunity to learn about new pollution control practices and to network with others in your industry. Being involved will help you share ideas with others and will keep your training program up to date.

Spill Management and Reporting

It is always best to prevent spills, but be ready when they occur. Keep spill kits readily available, preferably near work areas where spills are most likely to occur. Make sure all employees know where these materials are kept and how to properly use them to contain and immediately clean up spills. Whenever possible, use dry methods such as sweeping, vacuuming, mopping or absorbents (if absorbents are used, they may have to be disposed of as a hazardous waste). Spilled hazardous materials (antifreeze, gasoline, solvents, etc.) need to be managed as hazardous wastes. Make sure your employees are aware of any special requirements that apply to hazardous material disposal.

Use the following guidelines within 24 hours of occurrence for reporting spills:

- Report any spill or discharge that cannot be completely contained or cleaned up prior to entering the storm drain system. To report spills and discharges, call the Regional Stormwater Hotline at **(888) 846-0800**.

- If the spill involves hazardous substances, call the Department of Environmental Health (DEH), Hazardous Materials Division at **(619) 338-2284**.

Always call **911** if the spill presents an immediate threat to public health or the environment.

This section describes core BMPs for vehicle fluid management, engine and parts cleaning, vehicle and equipment washing, and body repair and painting. No matter which of these activities you are doing, it is important to always protect storm drain inlets on or down-gradient of work areas. Cover inlets with plastic or other impermeable material to prevent the entry of spilled fluids or wash water. Tape or weigh down the edges to keep the protective material in place.

Vehicle Fluid Management

Antifreeze, waste oil, and used solvents are hazardous wastes and must be stored, managed, and disposed of in accordance with all local, state, and federal laws.

- Whenever possible, drain vehicle fluids indoors or within covered areas, and only over floors that are constructed of a non-porous material such as concrete. Asphalt and dirt floors are not acceptable because they absorb spilled or leaked fluids.
- Use drip pans, containers, or other methods of drip and spill containment.
- Take extra precautions to prevent spills while draining fluids from vehicles. Transfer waste fluids to a labeled waste storage container as soon as possible.

- Provide drip pans under stored vehicles and those with known leaks. Drain fluids from disabled or stored vehicles as soon as possible to prevent leaks and spills.

- Transfer any fluids from drip pans or collection devices to designated waste storage areas regularly.
- Store vehicle fluids in separate, sealed, and leak-proof containers.

Vehicle & Equipment Washing

- Never discharge wash water or rinse water to a storm drain system or receiving water. Wash vehicles and equipment in designated areas. Use wash racks whenever possible.
- Use a spray nozzle or rinse bucket to conserve water and minimize discharge water.
- Whenever possible, use biodegradable soaps.
- Consider the use of a wash water recycling system to minimize wastewater from car washing.
- Use an oil / water separator or similar treatment system to remove oil, grease, and solids when discharging to the sanitary sewer.
- Use a commercial car wash facility if you are not able to meet the minimum standards described in this guide.
- Contact your local sewer agency for discharge information to the sanitary sewer. Use of oil / water separators and wash water recycling systems may have special discharge requirements.

OIL/WATER SEPARATOR

An oil / water separator is designed specifically to remove petroleum products, and can also remove solids. As the mixture enters the separator, the vehicle fluids float to a collection trough and the water flows into the sewer system. Solids settle to the bottom of the separator. Bottom sludges are often contaminated with heavy metals and other pollutants and must be managed as a hazardous waste.

Engine and Parts Cleaning

- Designate specific areas in your service bays for parts cleaning. Do not wash or rinse parts outdoors.
- Use aqueous cleaning solutions instead of solvents whenever possible. Recycle used solutions through a licensed hazardous waste hauler.
- Avoid using hose-off degreasers; never allow runoff to enter the storm drain system. Instead, brush off loose debris and use damp rags to wipe down parts. Manage used rags through a rag service or as hazardous waste.
- Clean parts in self-contained sinks or drum units when working with solvents. Inspect part washing units daily for leaks and make repairs immediately.

- Allow parts to drain over the solvent sink or drum, rather than allowing the solvents to drip or spill onto the floor. Never discharge the rinse solution into the sewer system.

- Recycle wastewater from steam cleaning or pressure washing activities. Discharges of wash water into the storm drain system are prohibited.

Body Repair and Painting

- Conduct work indoors or under cover when possible. If this cannot be done, take other precautions to prevent discharges from work areas.

- Inspect damaged vehicles for fluid leaks and use drip pans where necessary.

- Regularly clean work areas using dry methods. Use a shop vacuum or sweep up dust and debris. Do not vacuum flammable liquids.

- Allow wet sanding debris to dry overnight on the shop floor and sweep or vacuum it the next day. Liquid must not be discharged to the storm drain system. Consider investing in sanders with an attached vacuum system to capture dust at the source.

- Conduct painting only in approved, enclosed areas equipped with vacuum hoods and filters.
- Minimize paint and thinner waste by carefully calculating paint needs based on surface area and by using the proper sprayer cup size.
- Collect water used to control over-spray or dust in the paint booth and recycle or dispose of it properly. Clean spray guns in a self-contained unit and recycle or properly dispose of the cleaning solution.
- Check with your local fire agency and the Air Pollution Control District for additional information and permit requirements for spray booths, coatings, and emissions.

Good Housekeeping

"Good Housekeeping" refers to the routine practices you can use to maintain a clean work environment, and to prevent pollutants from entering our waterways. These practices include the use of dry cleaning methods for floor and paved surfaces, waste management practices, and grounds maintenance.

Floors and Paved Surfaces

- Sweep or vacuum your shop floors frequently. Use mops instead of hosing down work areas.
- Consider using a three mop system as described below:

1. Remove any spilled oil using a hydrophobic (oil absorbing) mop and wring out oil into a bucket labeled "Oil Only". Add the waste oil from this bucket to your waste oil drum or tank where it can be recycled. Keep the oil mop and the "Oil Only" bucket readily available in the work area for any future oil spills.
2. If antifreeze is spilled, use a regular mop and wring out the antifreeze into a bucket labeled "Coolant Only". Recycle the spilled material with other used antifreeze. Use rags sparingly for small spills or to dry a work area. Use a rag service or manage the rags as a hazardous waste.

3. Use a regular mop and bucket with detergent as a final rinse and use water sparingly. Dispose of wash water to an oil / water separator or the sewer.

- Never pour mop water onto paved areas, such as parking lots, sidewalks, street gutters, or storm drains.
- Oil / water separators must be regularly inspected and cleaned.
- Do not hose down fuel-dispensing islands; use only dry clean-up methods. Absorbent used for fuel spills should be promptly swept up and disposed of as hazardous waste.

Material and Waste Management

- Materials and waste such as fuels, solvents, batteries, and oils must be stored off the ground and in areas where they will not be exposed to rain water.
- If possible, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, then cover stored materials with an impervious material such as a plastic tarp.
- Store batteries indoors and place used batteries in plastic trays to contain any potential leaks. Recycle used batteries regularly.
- Sweep parking lots and areas around your facility regularly. Do not hose down these areas. Provide trash cans with lids in your parking lot to discourage littering.
- Keep trash storage and disposal areas clean and free of debris. Inspect trash storage areas weekly. Maintain dumpsters and other containers in good condition and keep them securely closed when not in use.

- Contact your local solid waste hauler for recycling options and containers.
- Post “No Dumping or Littering” signs around your property.

Rooftops and Landscaped Areas

- Clean the rooftops of your buildings at least once before the rainy season. Cover any materials that are stored on the roof to protect them from rainwater.
- Maintain landscaped areas so that dirt and sediment do not reach the sidewalk or street.
- Apply pesticides and fertilizers according to label instructions and do not apply prior to rain. Consider using less toxic alternatives to pesticides and fertilizers whenever possible.
- Recycle or dispose of green waste properly.
- Properly berm and cover soil stockpiles.
- Ensure that sprinkler heads are adjusted properly to prevent over-irrigation and water runoff.

Hazardous Waste Recycling and Treatment

Please call the County of San Diego, DEH Hazardous Materials Duty Specialist at **(619) 338-2231** for incompatible waste storage and on-site hazardous waste treatment requirements.

Recycling

- Reuse and recycle solvents, paints, oil filters, antifreeze, motor oil, batteries, water, and lubricants whenever possible.
- Segregate wastes – it saves money! Combining different types of hazardous wastes will limit your recycling options and can be dangerous. A licensed hazardous waste hauler can provide information on hazardous waste storage and disposal costs.
- Label waste barrels and drums in accordance with all local, state, and federal laws and regulations. This will also help to remind employees to separate wastes and to recycle.

On-Site Waste Treatment

- Consider self-contained, zero discharge treatment alternatives that incorporate wastewater recycling.
- Choose treatment systems that are effective, but easy to maintain and repair.
- Properly maintain and service all pre-treatment equipment, including oil / water separators.

How to Reach Us

Regional Stormwater Hotline

To report spills and discharges to the storm drain system, call **(888) 846-0800**.

IPM CARDS

Ants

Ants are one of the most prevalent pests in California. Although ants are annoying when they come indoors, they can be beneficial by feeding on fleas, termites, and other pests in the garden. While spraying chemicals inside the house may seem effective, it won't prevent more ants from entering your home, which is essential for control because most ants nest outside. Focus management efforts on excluding ants from buildings or valuable plants.

Make your house less attractive to ants:

- Caulk cracks and crevices that provide entry inside.
- Store attractive food in closed containers.
- Clean up grease and spills.
- Look for and remove indoor nesting sites, such as inside potted plants.
