

## 7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

Section 9.0 of the City's JURMP document outlines the procedures for preventing discharges of sewage to the MS4 and the mechanism whereby notification of sewage spills from private laterals, septic systems, and others spills are received. City staff is trained to report all spills to the dispatch hotline and crews are prepared to respond, contain, and cleanup spills where necessary. In addition, Section 9.0 of the City's JURMP details the City's Sanitary Sewer Overflow Response Plan (SSORP) as required by RWQCB Order No. 96-04 and a Capacity, Management, Operations, and Maintenance (CMOM) program. The City is also in the process of developing a Fats, Oil, and Grease (FOG) Program to reduce the amount of FOG introduced into the sanitary sewer system by businesses.

Table 7-1 provides a summary of these discharges and spills and the number of each. All discharges and spills were immediately responded to, contained, cleaned, and eliminated.

**Table 7-1** Types of Spills/Discharges and Number of Each During FY 2007-2008

| TYPE OF SPILL/DISCHARGE | NUMBER |
|---|---|
| Chemical Discharge | 3 |
| Driveway-Trash Washing | 2 |
| Equipment Washing | 4 |
| Grease/Food/Drink Discharge | 5 |
| Leaking Containers/Tanks | 4 |
| Others/Unknown Discharge | 7 |
| Painting-Sanding Residue | 3 |
| Pool-Spa Residue | 2 |
| Power/Pressure Washing | 11 |
| Resident Cleaning Residue | 3 |
| Saw Cutting/Sanding Discharge | 5 |
| Sediment Discharge | 5 |
| Sewage Spill/Discharge | 7 |
| Slurry/Concrete Discharge | 12 |
| Trash/Debris Discharge | 10 |
| Vehicle Oil Discharge | 3 |
| Vehicle Washing/Dismantling | 3 |
| **TOTAL** | 89 |

City inspectors are constantly on the lookout for illegal connections during their routine response to reported violations or industrial/commercial inspections. When a floor drain within a structure is suspected of being connected to the storm water conveyance system or discharging to the street gutter, such connection is verified by dye testing. If the indoor drain is connected to storm drains, it is considered illegal and ordered to be disconnected immediately. This reporting year, the City had some incidents of illegal connections dealing with washing machine and hand washing sink outlets. All illegal connections were immediately brought to the attention of the homeowner or business owner and were eliminated. In addition, the City's maintenance crews have been trained to look for illicit discharges and connections during their daily activities in the field. This process has resulted in the identification of several illicit discharges and connections each year.

## 7.4 URBAN RUNOFF MONITORING

The 2008 Dry Weather Field Screening and Analytical Monitoring Program Report has been submitted as Attachment K, along with an updated Dry Weather Field Screening and Analytical Stations Map. During the reporting period, the MS4 map and the dry weather monitoring maps were reviewed for inaccuracies, and no amendments were necessary. Fifty-eight primary monitoring sites were visited during the 2008 Dry Weather Monitoring Program, and samples were collected and analyzed for 57 of these sites. Site BAY-01 was found to be dry so an alternate location, SWR-03-E, was chosen to replace the site. Forty-two sites had measurable flow and 15 sites were ponded. Fifteen sites received laboratory analysis in addition to normal field screening. Table 7-2 provides a summary of exceedances for both field and laboratory analysis.

In previous years, the main round of monitoring was followed by a follow-up monitoring round within one or two months of each other. In this year's monitoring, the main round and follow-up monitoring were combined as required by NPDES Municipal Permit, Order No. R9-2007-0001.

**Table 7-2** Summary of Action Level Exceedances for the 2008 Dry Weather Monitoring and Field Screening Analysis

| FIELD SCREENING ANALYSIS (57 Samples) | | | |
|---|---|---|---|
| **Analyte** | **Number of Exceedances** | **% of Sites with Exceedances** | **Site(s) Exceeding Action Level** |
| pH | 0 | 0 | None |
| Conductivity | 0 | 0 | None |
| Turbidity | 0 | 0 | None |
| Surfactants (MBAS) | 2 | 4 | CEN-01, CEN-08 |
| Ammonia-N | 4 | 7 | CEN-01, TCC-04, TCC-05, TCS |
| Nitrate-N | 16 | 28 | BAY-03, LAK-01, OVR-07, RCC-03, RCC-04, SCR-02, SCR-03, SCR-05, SUN-02, SUN-05, SUN-06, SUN-07, TCC-02, TCC-03, TCC-05, WOL-02 |
| Orthophosphate-P | 0 | 0 | None |
| Glycol | 5 | 9 | BAY-02, CEN-01, POG-02, PRD-02, SCR-01 |

MBAS = Methylene Blue Active Substances

| LABORATORY ANALYSIS (15 Samples) | | | |
|---|---|---|---|
| **Analyte** | **Number of Exceedances** | **% of Sites with Exceedances** | **Site(s) Exceeding Action Level** |
| Oil and Grease | 0 | 0 | None |
| Cadmium (Dissolved) | 0 | 0 | None |
| Copper (Dissolved) | 0 | 0 | None |
| Lead (Dissolved) | 0 | 0 | None |
| Zinc (Dissolved) | 0 | 0 | None |
| Diazinon | 0 | 0 | None |
| Chlorpyrifos | 0 | 0 | None |
| Total Coliforms | 7 | 47 | CEN-01, JUD-01, JUD-02, POG-02, RCC-03, SCR-01, SUN-02 |
| Fecal Coliforms | 2 | 13 | JUD-02, POG-02 |
| *Enterococcus* | 4 | 27 | CEN-01, POG-02, SCR-01, SVS-01 |

Note: Table data is based on routine visits only. Confirmation, follow-up and dry site visits are not included.

Since 2002, no exceedances have been measured for temperature, turbidity, cadmium, copper, lead, or chlorpyrifos.

The historical data for the results of field analysis presented in Figure 7-2 indicates a decreasing trend in ammonia concentrations. Orthophosphate exceedances have been very rare in all years since 2002. No discernable trend is apparent for glycol, nitrate, or surfactants results, which have fluctuated from year to year.

**Figure 7-2** Percent of Sites with Field Constituents Exceedances by Year

* The action level for conductivity was numeric in the past but was later changed to best professional judgment.

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 16 sites. Also, bacteria were elevated at eight sites. All five of the glycol action level exceedances were within normal range at the confirmation visit. In addition, ammonia and surfactants tested above the action level at two sites. Upon the confirmation visit to the sites, both ammonia and surfactant levels had decreased to below the action level.

Historical data for laboratory analyses presented in Figure 7-3 indicates relatively high bacteria exceedance rates, although the fecal coliform exceedance rate has decreased somewhat over the years. Zinc and diazinon have not been detected above their action levels since 2003. Prior to 2003 the rates of exceedances were approximately 10% per year. Surfactants and oil and grease have generally had no exceedances or only a minimal number of exceedances over the years.

Additionally, a trash monitoring element was added to the dry weather monitoring program beginning this dry season, as required by the Municipal Permit. Of the 57 sites, 41% were found to be Optimal, 33% were Suboptimal, 17% were Marginal, 3% were Submarginal, and 5% were Poor. The main sources of trash came from transient, household, and school activities. As a part of trash assessment, sites were evaluated for potential threat to human or aquatic health. Two sites were found to have potential threats to human or aquatic health and were immediately cleaned by City crews. The three Submarginal and Poor sites were also cleaned by City crews and were noted as sites needing more routine maintenance and trash pick-up.

**Figure 7-3** Percent of Sites with Laboratory Exceedances by Year

## 7.5 FOLLOW-UP AND ENFORCEMENT

Twenty-six sites had constituents above their respective action levels. Table 7-3 shows the sites with elevated constituent level and their probable sources based on upstream investigations.

**Table 7-3** Summary of Upstream Investigations

| SITE | UPSTREAM INVESTIGATION TARGET CONSTITUENT(S) | | RESULTS/ PROBABLE SOURCE |
|---|---|---|---|
| | Field | Laboratory | |
| BAY-02 | Glycol | - | Discarded container of anti-freeze |
| BAY-03 | Nitrate-N | - | Unknown |
| CEN-01 | Surfactants, Ammonia-N, Glycol | Total Coliforms, *Enterococcus* | Surfactants, ammonia-N, glycol – transient flow; Bacteria – catch basin with food grease on Jefferson Avenue |
| CEN-08 | Surfactants | - | Car wash area in Cabrillo Mobile Lodge residential community |
| JUD-01 | - | Total Coliforms | Significant trash at the site and from water discharging to the site from the west. City crews removed the trash from the channel. |
| JUD-02 | - | Total Coliforms, Fecal Coliforms | Decaying vegetation and litter in a storm drain inlet on Connelly Circle, washed down by irrigation runoff. Bacteria are likely amplified in the site's slow-moving water and excessive vegetation. |

Table 7-3 continued

| | | | |
|---|---|---|---|
| LAK-01 | Nitrate-N | - | Nitrate-enriched flow from landscaping activities |
| OVR-07 | Nitrate-N | - | Nitrate-enriched groundwater seepage, possibly secondary to landscaping |
| POG-02 | Glycol | Total Coliforms, Fecal Coliforms, *Enterococcus* | Glycol – transient flow; Bacteria – significant amounts of water fowl waste transported by irrigation runoff |
| PRD-02 | Glycol | - | Recent automotive fluid spills in the residential complex immediately upstream, carried by irrigation runoff |
| RCC-03 | Nitrate-N | Total Coliforms | Nitrate-N – nitrate-enriched groundwater seepage; Total Coliforms – thick layer of aquatic plant material at site, trash, and wildlife waste upstream |
| RCC-04 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| SCR-01 | Glycol | Total Coliforms, *Enterococcus* | Glycol – automotive fluid spills on nearby streets; Bacteria–combination of lawn clippings, excess irrigation, and possibly pet waste |
| SCR-02 | Nitrate-N | - | Landscaping fertilization in new residential developments |
| SCR-03 | Nitrate-N | - | Landscaping fertilization in new residential developments |
| SCR-05 | Nitrate-N | - | Landscaping fertilization in new residential developments and over-irrigation |
| SUN-02 | Nitrate-N | Total Coliforms | Nitrate-N – Groundwater seepage along landscaped hillside on the south side of East H Street/ Proctor Valley Road |
| SUN-05 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| SUN-06 | Nitrate-N | - | Landscaping fertilization in new residential developments and over-irrigation |
| SUN-07 | Nitrate-N | - | Landscaping fertilization in nearby developments |
| SVS-01 | - | *Enterococcus* | Transient flow |
| TCC-02 | Nitrate-N | - | Nitrate-enriched groundwater seepage; landscaping fertilization of park |
| TCC-03 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| TCC-05 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| TCS | Ammonia-N | - | Storm drain clogged with trash allowing water to pond; shallow ponded water likely evaporates during the day, concentrating ammonia levels |
| WOL-02 | Nitrate-N | - | Nitrate-enriched due to landscape seepage |

Based on the results of the 2008 Dry Weather Field Screening and Analytical Monitoring Program as well as the Follow-Up Investigation Program, the City was provided with recommendations for dry weather monitoring sites and surrounding areas in need of cleaning and neighborhoods where storm water pollution prevention education is needed. The City is in the process of completing these recommended cleaning and education activities and is working to minimize illicit discharges. During the reporting period, there were no instances that require additional investigations or follow-up activities above and beyond those conducted during the 2008 Dry Weather Monitoring Program. More information about the recommendations from City's Dry Weather Monitoring and Field Screening Program and Follow-up Investigations can be found in Attachment K.

## ATTACHMENT H

### FY 2007-2008 Enforcement Action Taken

### (Residential, Industrial, Commercial, Construction, and Related Businesses)

*Note: During this reporting period, 7/01/2007 to 6/30/2008, investigation of the following cases have resulted in the issuance of Notice of Code of Violation, Orders to Cease and Desist, Notice to Clean and Abate, and Admin Citation.*

| Date of Incident | Facility Name | Violation Category | Site Category | Address | Action Taken | Violator Business Name | Fine Amount |

| **Comments Action Taken:** | 11/15/07---Responded to report of vehicle leaking oil from a residential driveway and onto the sidewalk, and gutter. Noted a covered vehicle parked in the driveway and leaking oil. Left a business card and door hanger for resident. Had telephone conversation with the owner of the vehicle. Vehicle was moved, spill was cleaned, vehicle was replaced, and an oil pan was set underneath the car to capture any leakage. Verbal warning was issued. No further action necessary at this time. | | | | | |
| 19-Nov-07 | STREET | Residential | 163 | QUEEN ANNE | DR | Leaking Vehicle |
| **Comments Action Taken:** | 11/19/07---responded to report of leaky vehicle onto the street. No evidence of a leaky vehicle or any other storm water violation was found upon inspection and a later re-inspection. No further action necessary at this time. | | | | | |
| 21-Nov-07 | STREET | Residential | 478 | SECOND | AV | Leaking Vehicle |
| **Comments Action Taken:** | Explorer was not on scene. Mulitple vehicle oil staining located throughout section of site. NFA required. | | | | | |
| 4-Dec-07 | CATCH BASIN | Residential | | MAX | AV | Follow Up Inspection |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| **Comments Action Taken:** | Work request was cancelled. Change category from storm water to catch basin. Refer work request to waste water division. No further action required. | | | | | |
| 6-Dec-07 | STREET | Residential | 720 | BAYLOR | AV | Slulry/Concrete Discharge |
| **Comments Action Taken:** | Did not observe slurry discharge. Some sediment and grass in curbline. | | | | | |
| 6-Dec-07 | STREET | Residential | 1100 | MELROSE | AV | Paint Discharge |
| **Comments Action Taken:** | 12/6/07---Noted some light traces of dry paint from 1132 Melrose Ave. Spoke to property owner regarding the discharge and the dry wall work being conducted at the home. Owner cleaned the discharge. No further action necessary at this time. | | | | | |
| 13-Dec-07 | CATCH BASIN | Residential | 2287 | SUN VALLEY | RD | Complaint Response Enforcement |
| **Comments Action Taken:** | 12/6/07---Responded to report of non storm water discharge by resident who also owns a carpet cleaning business. Inspection found no evidence of an illegal discharge. Public education materials and contact information was left at the door. No further action necessary at this time. | | | | | |
| 13-Dec-07 | CATCH BASIN | Residential | 2287 | SUN VALLEY | RD | Complaint Response Enforcement |
| **Comments Action Taken:** | 12/6/07---Responded to report of non storm water discharge by resident who also owns a carpet cleaning business. Inspection found no evidence of an illegal discharge. Public education materials and contact information was left at the door. No further action necessary at this time. | | | | | |
| 3-Jan-08 | STREET | Residential | 655 | OAKLAWN | AV | Other |
| **Comments Action Taken:** | 1/4/08--- Responded to call regarding trash, junk and debris (TJD) in the storm drain at 655 Oaklawn. Inspection noted violations as described. Notified property owner Francisco Ceja regarding the condition of his rental property. Mr. Ceja immediately began efforts to summon help, go to the site and began cleaning the TJD dumped by his tenants. All TJD was cleaned and verbal notice was issued for Mr. Ceja to take all necessary steps to prevent a reoccurrence of this violation. No further action is necessary at this time. | | | | | |
| 4-Jan-08 | STREET | Residential | 1101 | PARADISE TRAIL | RD | Leaking Vehicle |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| **Comments Action Taken:** | 1/4/08--- Responded to call regarding leaky vehicle ion the street. Located the Grey Saturn wagon CL 4HLD265 in question. No evidence of violation was found. Spoke to vehicle owner and advised to move vehicle from the street in case vehicle were to leak fluids and to comply with parking regulations. No further action is necessary at this time. | | | | | |
| 10-Jan-08 | STREET | Residential | 511 | JEFFERSON | AV | Unknown Discharge |
| **Comments Action Taken:** | 1/9/08--- Responded to call regarding oil spill from tire shop at 646 H Street. Per inspection, I found oil seeping between crack in the wall and staining the exterior of wall abutting to 511 Jefferson Ave. Oil was static. Advised tenant at 511 Jefferson that case was a civil matter. Advised manager of Express Tire at 646 H that he should take immediate action to correct seepage. Did not issue any order or directive on this case. | | | | | |
| 10-Jan-08 | STREET | Residential | | HILLTOP | DR | Accident/Spill |
| **Comments Action Taken:** | 1/10/08--- Responded to call regarding radiator coolant spilled in the gutter at intersection of Hilltop and Rienstra. Cause of spill was an auto collision. City crews assisted in containment of spill by diking spill with sand / dirt. Remained on site until tow contractor arrived. Reminded tow contractor of his requirement to clean up all auto spills. Asked police officer on scene to ensure tow contractor cleans up. No further action necessary at this time. | | | | | |
| 14-Jan-08 | STREET | Residential | | PARADISE RIDGE | WY | Accident/Spill |
| **Comments Action Taken:** | On 01/14/08 received notification of a vehicle leaking oil. Arrived on-scene and observed a small stain in the area but there was no vehicle at this location. Did not require cleanup due to stain appeared to be old and was already saturated into the asphalt. No Further Action Required. | | | | | |
| 16-Jan-08 | STREET | Residential | 943 | PALENCIA | PL | Leaking Vehicle |
| **Comments Action Taken:** | 1/16/08---Responded to report of trash truck leaking hydraulic fluid onto the street. Inspection noted evidence of some hydraulic fluid on street. Notified Manuel Medrano in the City's conservation division to alert Allied Waste of the spill. Allied Waste staff immediately responded and cleaned all stains from the street. No further action necessary at this time. | | | | | |
| 17-Jan-08 | STREET | Residential | 1153 | NOLAN | AV | Leaking Vehicle |

## EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. Prior to that date, NPDES Municipal Permit, Order No. 2001-01 regulated discharges from urbanized areas of San Diego County. This report covers the implementation period of July 1, 2008 to June 30, 2009. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the Municipal Permit, Order No. R9-2007-0001.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has therefore been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2008 to June 30, 2009, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (to be submitted under separate cover on or before December 15, 2009, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

In previous years, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, the 2009 Dry Weather Field Screening report, and an analysis of its findings will be submitted to the Regional Board before December 15, 2009, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

During the current reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2008-2009 rainy season on January 31, 2010.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2008 to June 30, 2009. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

# 1.0 INTRODUCTION

## 1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (Regional Board), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 29 is an account of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2008 to June 30, 2009.

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Implemented inspection programs of high priority construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable Best Management Practices (BMPs) that can be implemented to reduce discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

- Participated in watershed and regional meetings and activities.

## 1.2 PURPOSE AND OBJECTIVES

Report No. 29 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of the Municipal Permit during the reporting period July 1, 2008 to June 30, 2009. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction Program
- Municipal Program
- Industrial and Commercial Program
- Residential Program

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0 together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2008.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management costs and budgets. Program costs during FY 2008-2009 and program budgets for FY 2009-2010 are included in two separate tables that show itemized and total figures. On January 29, 2009, the Copermittees developed a Standardized Fiscal Analysis Method and Format, which will be used to report fiscal analysis in the next Annual Report as required under Section G.3 of the Municipal Permit.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this Section, the need for special investigations did not arise during the current reporting period.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of this report is dedicated to descriptions of modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the Copermittee's JURMP effectiveness. These updates include changes to Appendix B of the JURMP, establishment of minimum mobile business Best Management Practices (BMPs), updates to the Dry Weather Monitoring Action Levels for Bacteria, and the establishment of the regional standardized fiscal analysis method.

- Since the City's JURMP document was developed recently and submitted to the RWQCB in March 2008, Appendix B of the JURMP has been updated during the current reporting period, which includes inventories of construction sites; municipal, commercial, and industrial facilities and activities; and treatment control BMPs.
- The Regional Industrial and Commercial Workgroup established minimum BMP requirements for mobile businesses. These minimum BMPs were incorporated into the City's Storm Water Information Packets that are provided to mobile businesses who apply for a business license application in the City.

- During the current reporting period, a study was conducted at the regional level to evaluate the accuracy of Dry Weather Monitoring Action Levels for Bacteria. The study resulted in some adjustments in Action Levels for Total and Fecal Coliform, and Enterococcus. Appendix E and Table E-3 of the JURMP document will be updated in the next Annual Report to reflect these adjustments. The new Action Levels will be implemented during the next Dry Weather Monitoring, which will occur during the summer of 2010.
- Lastly, pursuant to Order No. R9-2007-0001, the Copermittees developed a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The City plans conduct it annual fiscal analysis consistent with this standard method starting January 31, 2010.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

## 2.0 DEVELOPMENT PLANNING COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.*

*Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.*

*Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.*

*Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.*

*Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory*

.

*Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.*

*Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.*

*Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.*

*Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.*

*Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.*

*Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.*

*Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.*

*Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.*

*Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.*

## 2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes actions taken during the defined reporting period by the City to minimize short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development (including construction or installation of a building or structure), creation of impervious surfaces, and capital improvement projects. Through the implementation of the Development Planning Component, the City minimizes and manages increases in runoff from development projects to the MEP to protect receiving waters.

## 2.2 LAND-USE PLANNING

### 2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to visions, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.
- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)
- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.
- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.
- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.
- Maximize the protection of potable water supply resources from pollutants.
- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

### 2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the City's Development Storm Water Manual (Storm Water Manual), updated in 2008, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

### 2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Storm Water Manual. The Storm Water Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Storm Water Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Storm Water Manual has been dedicated to the City's SUSMP. Another section of the Storm Water Manual outlines BMP requirements on construction sites during both rainy and dry seasons.

During the current reporting period, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

### 2.2.4 PROGRAM IMPLEMENTATION

During the reporting period, the City successfully completed implementation of the program under the Municipal Permit as described in Section 2.4.4 of this report.

During Fiscal Year 2007-08, in compliance with the NPDES Municipal Permit requirements, several of the City's implementation documents were updated, including:

- Jurisdictional Urban Runoff Management Plan
- Storm Water Management and Discharge Control Ordinance
- Grading Ordinance
- Development Storm Water Manual

During the process of updating the above-referenced documents, each of the City's implementation processes were objectively reviewed for any potential deficiencies and, based on extensive experience gained during the previous Municipal Permit implementation, significant improvements were made throughout all aspects of the program. Those improvements are reflected in the above referenced updated documents and are currently being implemented.

## 2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Division of the Development Services Department reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits and Land Development Divisions of the Development Services Department, and the Storm Water Management Section of the Public Works Department review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Environmental Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Development Services Department
- Public Works Department, Engineering
- Public Works Department, Operations - Storm Water Management Section

The Development Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Division of the Department Services Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Land Development Division for review and final approval.

Land Development Division staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Storm Water Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; Low Impact Development Site Design, Source Control, and Structural Treatment Control BMPs; calculations for sizing of treatment control BMPs; and a perpetual maintenance plan and funding mechanism. The applicants are required to sign an agreement with the City for the maintenance of post-construction BMPs. When necessary, the Land Development Division coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

The Land Development Division and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for Low Impact Development Site Design, Source Control, and Treatment Control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Land Development Division and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Land Development Division and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Land Development Division and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Public Works Department, Engineering. Public projects undergo the same review process as private developments. Engineering staff has received

training on SUSMP requirements, identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments, divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are therefore readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals.

## 2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

### 2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP and the Storm Water Manual, which culminated in March 2008, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP.

### 2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to

discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 10 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the City's Storm Water Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

### 2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's minimum BMP requirements for all development projects are outlined below and are included in the Storm Water Manual. All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.
- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.
- Provide buffer zones or other buffers for natural water bodies.
- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.
- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

During the project approval and verification process, all project submittals were reviewed for compliance with the minimum BMP requirements described above.

### 2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP document was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure that to the maximum extent practicable, development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual," available on the web at:

http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Storm Water Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

On February 19, 2008, City Council approved the updates to the City's SUSMP and Storm Water Manual. The Updated SUSMP and Storm Water Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the Municipal Permit. Concurrently, the City's Storm Water Management and Discharge Control and Grading Ordinances were updated to incorporate the Storm Water Manual (which includes the City's SUSMP) by reference.

#### 2.4.4.1 NOTABLE ACTIVITIES

In 2008-2009, notable improvements in processes and protocols supporting SUSMP implementation have been made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates within the defined reporting period include:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Interim Hydromodification Criteria.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document and Maintenance Agreement links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.
- Site inspections of all development projects to ensure proper installation of construction and post-construction BMPs.

#### 2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project requirements. Private development permit applications are tracked in Permits Plus, which is a project tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and digitally saved. Links have been provided between the above

referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Public Works Department, Engineering. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

#### 2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects subject to SUSMP requirements is included in Attachment A. This list includes the names of all Priority Development or Redevelopment projects from the inception of the SUSMP program on December 9, 2002 to the end of the current reporting period. The list is updated annually to include Priority Development Projects for which development applications have been received and SUSMP eligibility identified during that reporting period. The listed projects may be currently in different phases of review, construction, or occupancy. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Pending, 2) Under Construction, 2), or 3) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

#### 2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

The Municipal Permit establishes requirements for post-construction BMPs on Priority Development and Redevelopment Projects. In order to develop regional standards and criteria for compliance with Municipal Permit requirements, the Copermittees have developed Model and local SUSMPs. All project applicants are required to complete forms that are included in the City's Development Storm Water Manual to determine post-construction BMP requirements for their projects. City staff verifies proper completion of such forms and informs applicants of their required study reports and project submittals. Project submittals are then reviewed based upon this initial determination.

As required by the Municipal Permit, the City updated its local SUSMP on January 2008 to include Low Impact Development and Hydromodification Management requirements, as well as other construction and post-construction criteria and standards. Currently, the City's local SUSMP is the basis for approval of Priority Development Projects. However, the Municipal Permit requires an update of the Model SUSMP and the incorporation of its requirements into local SUSMPs. During 2008 and 2009, the Copermittees updated the Model SUSMP, which was later approved by the Regional Board on March 25, 2009. The Copermittees have to update their local SUSMPs for the second time and within 180 days from Regional Board's approval.

The Municipal Permit also requires the Copermittees to develop a Hydromodification Management Plan and require Priority Development Projects to comply with its requirements. The City's current local SUSMP includes Interim Hydromodification Criteria, which are being enforced by the City. A Final Hydromodification Management Plan is being developed by the Copermittees, which will replace the Interim Hydromodification Criteria after Regional Board's approval.

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Priority Development Projects without approved WQTRs do not move further along in the development review process, providing Land Development and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Project grading or construction plans are required to show all approved structural BMPs. Non-structural BMPs are described in the project's Water Quality Technical Report. Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes verification inspection and approval of installed or constructed structural treatment control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections and confirmation of SUSMP BMP applications of such Priority Development projects to ensure proper installation of post-construction BMPs before final Certificates of Occupancy are issued and bonds are released.

In order to track confirmation of post-construction BMPs, and as an on-going activity, the City's GIS system was continuously updated throughout FY 2008-2009 with post-construction BMP information; further supporting project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the types of BMPs, and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. Most significantly, in FY 2008-2009, WQTR documents were made available through the GIS Grading Plan layer as they are linked to individual projects (Figure 2-1 – CVMapper GIS Layer). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly or privately maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 – GIS Layer: Grading Plans & WQTR Links). In addition, all privately or publicly maintained treatment control BMPs are being added to the BMP layer to facilitate their tracking and mapping. Also, files containing hard copies of grading plans, Water Quality Technical Reports, maintenance agreements, and other pertinent information are being created and maintained to support and facilitate construction verification and maintenance inspections of post-construction BMPs. (Figure 2-3 – GIS Layer: Post Construction BMPs).

**Figure 2-1** CVMapper GIS Layer

**Figure 2-2** GIS Layer: Grading Plans & WQTR

**Figure 2-3:** GIS Layer: Post Construction BMPs

All pending, under construction, or installed Post-Construction BMPs and Priority Projects are inventoried and tracked by Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/Capital Improvement Plan, Residential, Commercial, etc.)
- Project status (Pending, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings
- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking, for examples of SUSMP tracking forms.

**Figure 2-4** GBA Master Series: SUSMP Verification and Maintenance Tracking Database A

**Figure 2-5** GBA Master Series: SUSMP Verification and Maintenance Tracking Database B

**Figure 2-6** GBA Master Series: SUSMP Verification and Maintenance Tracking Database C

#### 2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

The City works with developers, planners, and consulting engineers to establish standards of Source Control, LID Site Design, and Treatment Control BMPs that meet the requirements of the Storm Water Manual and the Municipal Permit. An example of such cooperation was the High Tech High development. The High Tech High project is located in Otay Ranch Village 11, at the intersection of Discovery Falls Drive and Hunte Parkway. The project site is situated along a ridgeline between two drainage basins of Salt Creek and minor tributaries of the Otay River. The project is planned for a charter high school in Phase 1 and K-8 school in Phase 2.

The High Tech High project's Phase 1, the charter high school, is completed and is opening for the 2009-2010 school year. The project incorporates Site Design, Source Control, and Treatment Control BMPs, with particular emphasis on Low Impact Development principles for the post-construction storm water management. Low Impact Development features such as Bioretention/Biofiltration areas, grassy swales, decomposed granite for fire lanes and future pad areas of the Environmental Research Center are incorporated in the project. In addition to on-site BMPs, an existing regional water quality basin located off-site will act as the last line of defense in a treatment train for the treatment of site runoff.

The site of the High Tech High project is less than 50 acres in area and, therefore, exempt from the Interim Hydromodification Criteria requirements.

#### 2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all Priority Development Projects that received grading, construction, or building permits from the City proposed medium or high-efficiency treatment control BMPs. No SUSMP projects were permitted to have low-efficiency treatment control BMPs.

#### 2.4.4.7 TREATMENT CONTROL BMP INVENTORY

Attachment A of this report includes an inventory of all Priority Development projects in the City that were subjected to SUSMP requirements from the inception of this program on December 9, 2002. The information provided in the Attachment includes the name of the project, category (residential, commercial, etc.), inspection priority, status (under construction, pending, completed), type of Treatment Control BMPs, subdivision name, and neighborhood name.

The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority development project as well as post-construction BMPs inspection records.

#### 2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

Storm Water Management Section staff is responsible for annual inspections of private and public constructed permanent BMPs as required by the Municipal Permit. Additionally,

responsible parties for the maintenance of permanent BMPs are required to conduct routine inspections of their treatment facilities. For public permanent BMPs, the City's Public Works Storm Drain Maintenance staff is responsible for conducting routine inspections and maintenance. This duplicate inspections program ensures that all permanent BMPs are maintained to high operational standards.

During the current reporting period, Storm Water Management staff conducted inspections of constructed permanent BMPs to verify their proper installation and maintenance. A summary of inspections is listed in Table 2-1 below, which includes both private and public permanent BMPs inspections. Where deficiencies were identified, notices were sent out to responsible parties, followed by further contacts to ensure that corrective actions were taken within the specified time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

**Table 2-1** Treatment Control BMP Inspection Summary FY 2008-2009

| PROJECT PRIORITY | TOTAL NUMBER OF PROJECTS | INSTALLED TREATMENT CONTROL BMP UNITS | NUMBER OF PROJECTS INSPECTED |
|---|---|---|---|
| High | 26 | 108 | 26 |
| Medium | 50 | 359 | 43 |
| Low | 107 | 196 | 28 |
| Total | 183 | 663 | 97 |

Note: The total number of projects listed above includes some projects that are still under construction and permanent BMPs have yet to be installed. Also, some medium and low priority projects are partially occupied which have operational treatment control BMPs.

As can be seen from Table 2-1, a total of 97 Priority Development Projects were inspected during the current reporting period, which meets and exceeds Municipal Permit requirements. Attachment F to this report includes more detailed information about each project, such as, inspection dates, project names, types of BMPs installed, categories (commercial, residential, etc.), priorities, development names, neighborhood names, and responsible parties for each project. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

Public Works Department Storm Drain Maintenance Section conducts routine inspections and maintenance of publicly owned permanent BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders conducting inspection and scheduled maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-3 for a sample of Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

### 2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 165 notification and inspection letters were sent out to parties responsible for the maintenance of completed private Priority Development Projects as shown in Table 2-2 (see City's JURMP document Appendix D).

**Table 2-2** Summary of Project Maintenance Verification FY2008-2009

| PROJECT PRIORITY | TOTAL NUMBER OF PROJECTS | INSTALLED TREATMENT CONTROL BMP UNITS | NUMBER OF PROJECTS VERIFIED |
|---|---|---|---|
| High | 26 | 108 | 26 |
| Medium | 50 | 359 | 50 |
| Low | 107 | 196 | 89 |
| Total | 183 | 663 | 165 |

Note: The total number of projects listed above includes some projects that are still under construction and permanent BMPs have yet to be installed. Also, some medium and low priority projects are partially occupied which have operational treatment control BMPs.

It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and

projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs. By conducting random inspections of public Treatment Control BMPs, Storm Water Management Section ensures that the level of maintenance on such facilities is adequate.

During the previous reporting period, self-inspection and maintenance verification of Treatment Control BMPs by the responsible parties, such as property management companies, Homeowner's Associations, property owners, and developers was a new program and, therefore, City staff found that many property management companies or homeowner associations were unaware of the existence of storm water treatment facilities within their properties and were not familiar with their maintenance procedures. City staff expended significant time to conduct joint visits to the facilities and explain the function of the units and the reasons why such facilities had to be routinely maintained. Staff also brought to the attention of responsible parties their responsibilities and obligations under maintenance agreements.

During this reporting period, while responsible parties were generally more aware of their maintenance obligations, City staff encountered some resistance, which was mainly believed to be attributable to the current downturn in economy as well as factors such as the transfer of property ownership, a change in property management companies, and a change in the board membership of Homeowners' Association. For this reason, the City worked closely with the responsible parties to ensure that the BMPs were inspected and maintained. The City continues to re-evaluate its annual maintenance verification procedures and may modify the program if necessary to increase compliance.

Prior to the start of each rainy season, the City requires verification of proper inspection and maintenance of all treatment control BMPs by the responsible parties. Each year, the City issues to the responsible party, either electronically, by fax, or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) if necessary, a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans.

This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form and certify that the treatment control BMPs have been properly maintained in accordance with the site's maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form. If signed and certified verification forms are not received by the due date, City staff contacts the responsible parties and follows up until Treatment Control BMPs are maintained and verification form properly completed and returned to the City. Enforcement action may be initiated if a responsible party does not comply with the verification requirement after follow-up actions and proper service of a notice.

### 2.4.4.10 BMP CONSTRUCTION VERIFICATION

The City's Public Works Inspectors and Storm Water Management staff is responsible for ensuring that permanent BMPs, which are components of the project's drainage systems and grading works, are constructed in accordance with approved specifications and grading plans. Public Works Inspectors and Storm Water Management staff conducts frequent inspections of projects during their grading and construction activities and verify that permanent BMPs are constructed as per approved plans.

In compliance with the Municipal Permit, the City has developed databases for tracking Priority Development Projects that are under construction. Additionally, hard copy files, including information about each project's WQTRs and grading or construction site plans that show locations of permanent BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section staff immediately after their inspections of grading activities are completed and their presence on the project is no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting permanent BMPs while being constructed. They ensure that LID Site Design features are constructed as shown on approved grading, construction, or landscape plans and per approved specifications.

As a result of the comprehensive construction verification program for permanent BMPs as described above, it was determined that while major treatment facilities were constructed before occupancy of the project, some minor deficiencies still existed even after partial occupancy. Those projects were identified in each case and responsible persons were required to install the deficient BMPs. As a result of this finding, the City made adjustments and improvements in its construction verification process, which will ensure that all treatment control and other post-construction BMPs are fully operational and without any deficiencies even before the first occupancy of the project.

### 2.4.4.11 SUSMP WAIVERS

Section D.1.d.(11) of the Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Development Project to receive a waiver from the requirement of meeting numeric sizing criteria for Treatment Control BMPs, if infeasibility can be established. During the reporting period, the City did not grant waivers to any Priority Development Projects.

### 2.4.4.12 SUSMP WAIVER MITIGATION

During the reporting period, all Priority Development Projects were required to comply with the provisions of the City's local SUSMP. Therefore, the City did not grant waivers to any Priority Development Project during this period.

#### 2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN COLLABORATION

Soon after Regional Board's adoption of the Municipal Permit on January 24, 2007, the Copermittees formed a Land Development Workgroup to develop Copermittees' Hydromodification Management Plan (HMP) and Model SUSMP, among other regional development related tasks. The Land Development Workgroup planned regular meetings, in which various topics, mainly the development of the HMP and Model SUSMP were discussed. The Copermittees decided to hire a consultant with expertise in those fields to work on the studies needed for this purpose. The consulting team of Brown and Caldwell was selected as the main consultant, with several sub-consultants providing expert services.

A Technical Advisory Committee (TAC), consisting of high-ranking and renowned experts in the fields of hydrology, hydromodification, and SUSMP issues were formed to oversee the Consultant's work, and to provide expert advice. During the reporting period, the TAC met on a regular basis, and while Copermittees were not on the TAC, they were encouraged to participate in their meetings. Brown and Caldwell developed submittals for the Interim Hydromodification Criteria and Model SUSMP, which were approved by the Regional Board and the Interim Hydromodification Criteria was incorporated in the first update of local SUSMPs.

During the reporting period, a draft of the Final HMP was submitted to the Regional Board and comments were received. Currently, Brown and Caldwell is working to address Regional Board's comments and submit the Final HMP within the schedule defined in the Municipal Permit. The Model SUSMP has been finalized and approved by the Regional Board, and Copermittees are required to incorporate its standards and criteria into their updated local SUSMPs by March 25, 2010.

City of Chula Vista representatives are active participants in all Land Development Workgroup and TAC meetings and activities, are closely involved in the issues that are discussed, review work products, and provide comments on all related draft documents.

City staff has attended all regional workshops and trainings related to HMP and SUSMP issues, including a 3-day training on Hydrologic Simulation Program Fortran (HSPF), which was organized by the County of San Diego and the American Public Works Association in June 2009. Details of these workshops and trainings are included in Section 8 of this report.

#### 2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

Section D.1.g.(5) of the Municipal Permit requires the development of an HMP document at the regional level and incorporation of such HMP into individual local SUSMPs. The HMP is to include limitations on increases of runoff discharge rates and durations from all Priority Development Projects in order to prevent increased downstream channel erosion, sediment pollutant generation, or other impacts to beneficial uses and stream habitat.

Development of a draft HMP was a two-year effort by the Copermittees and their consultants. The Copermittees submitted the first draft HMP to the Regional Board in January 2009, with the final HMP implementation expected to commence in July 2010. In the meantime, the Municipal

Permit requires the implementation of an Interim Hydromodification Criteria (IHC) for development projects that are 50 acres or more. The IHC requirement was incorporated into updated local SUSMPs, which came into effect in January 2008.

Adoption of IHC requirements in January 2008 coincided with the collapse in the housing market, and almost all major development projects in Chula Vista came to an abrupt halt. Occasional major projects submitted for review by City staff have had extended project submittal, review, and permitting schedules and are still in the review phase. The following development projects in Chula Vista, which cover 50 or more acres each quality for IHC or HMP requirements and are currently under review by City staff:

1. Eastern Urban Center
2. Otay Ranch Village 8
3. Otay Ranch Village 9

During the reporting period, no Priority Development Projects that qualified for IHC received a grading permit or construction permit from the City of Chula Vista.

#### 2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

Other than the development projects listed above, all other development projects reviewed during the current reporting period were less than 50 acres in area and did not meet the criteria for IHC requirements. However, Priority Development Projects were all required to address hydrologic conditions of concern by comparing pre- and post-development peak discharge rates and durations, and demonstrate that the increased peak discharge rates and durations would not cause downstream erosion or habitat impact. Such discussions were required to be included in the submitted WQTRs.

#### 2.4.4.16 ROJECTS DISTURBING 50 ACRES OR MORE

As mentioned in Section 2.4.4.14 above, during the reporting period, there were only three project submittals that proposed to disturb 50 acres or more and met the conditions for IHC requirements. These projects are listed in Section 2.4.4.14.

#### 2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP verification inspections, the City determined that 7 out of 97 inspected projects were partially or totally deficient in the installation of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, 3 projects were brought into compliance. Work is being continued on the remaining 4 projects and it is anticipated that they will also be in compliance within a short period. Deficiencies were also observed in the maintenance of some treatment control BMPs, which were satisfactorily addressed by the responsible persons after verbal notices. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to bring their project to compliance in a timely manner. Such enforcement action may include verbal and written warnings, Notices of Violation, Administrative Citations, and/or

Civil or Criminal Penalties. At this time, the City initiated enforcement actions, which included a Notice of Violation for one development project with deficient post-construction BMPs.

## 3.0 CONSTRUCTION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(b).i – Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(b).ii – Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.*

*Permit Section J.3.a.(3)(b).iii – A description of modifications made to the construction and grading ordinances and approval processes.*

*Permit Section J.3.a.(3)(b).iv – Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.*

*Permit Section J.3.a.(3)(b).v – Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.*

*Permit Section J.3.a.(3)(b).vi – A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.*

*Permit Section J.3.a.(3)(b).vii – For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.*

*Permit Section J.3.a.(3)(b).viii – A description of the general results of the inspections.*

*Permit Section J.3.a.(3)(b).ix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(b).x – The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(b).xi – A description of the notable activities conducted to manage urban runoff from construction sites.*

## 3.1 INTRODUCTION

Pursuant to the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by Regional Board staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the Maximum Extent Practicable (MEP).

## 3.2 SOURCE CHARACTERIZATION

The City has compiled and monthly updates a watershed-based inventory of all construction sites within its jurisdiction as required by Municipal Permit Section D.2.b. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including project name, location, project developer and project size. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report.

### 3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, Storm Water Management staff maintained and monthly updated a construction site inventory. As a result of coordination between the Public Works Construction Inspection staff, Engineering Design staff, Development Services staff, and Storm Water Management staff, mechanisms have been established in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Development Services Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of Threat To Water Quality (TTWQ) prioritization, and inspection frequencies of active and inactive sites as needed.

## 3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Storm water compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and

Discharge Control and Grading Ordinances were updated in 2008 and make the Manual enforceable. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met.

## 3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and will not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of Best Management Practices (BMPs) during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

### 3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Development Storm Water Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual and the CASQA Storm Water BMP Handbook are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements
- Limitation of Grading
- Advanced Treatment
- Example Construction Best Management Practices

## 3.5 PROGRAM IMPLEMENTATION

The Development Storm Water Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit, it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the project engineer submits an NOI to the State Water Resources Control Board and prepares a SWPPP, which is maintained at the construction site office for review by Regional Board and City inspectors.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet season, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive or in distress. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of 7 or more consecutive calendar days. The City inspects inactive construction sites and issues formal letters to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such letter is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites. If a site is partially inactive, above requirements apply only to inactive areas of the site.

If a construction project is wholly or partially inactive or expected to remain inactive for some time, the City requires the developer to submit a Construction Site Stabilization Plan.

The Stabilization Plan is required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

### 3.5.1 MAXIMUM DISTURBED AREAS

The Development Storm Water Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. Maximum disturbed area requirements are discussed in detailed in the Development Storm Water Manual. During the reporting period, most major development activities came to a halt as a result of the downturn in the housing industry, and developers in Chula Vista did not undertake major new grading projects. The focus of City inspectors were to ensure that existing graded sites that intended to close down the site or slow down construction activities stabilized inactive areas and implemented adequate BMPs to minimize the discharge of sediment and other pollutants from their sites.

### 3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. These conditions are explained in Section 7.V of the Development Storm Water Manual. If it is determined that a site poses a Exceptional TTWQ based on criteria outlined in the Manual, the site shall implement advance treatment controls to minimize the discharges from the construction site.

### 3.5.3 CONSTRUCTION SITE INSPECTIONS

The City's construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one full-time Storm Water Compliance Inspector, two full-time Environmental Health Specialists, one Engineering Technician, and eight Public Works Inspectors who manage this effort on private and public construction projects.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. The Municipal Permit does not require TTWQ Prioritization for construction sites. However, the City has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites in this report, therefore, includes a column indicating TTWQ Prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of the Municipal Permit, as applicable. Please see Table 3-1 for the number of construction site inspections under each category. A complete list of inspected construction sites is included in Attachment G. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

**Table 3-1** Construction Site Inspection Summary FY 2008-2009

| INSPECTION SUMMARY | NO. |
|---|---|
| Formal Inspection Reports | 469 |
| Inspections During Wet Season | 322 |
| Inspections During Dry Season | 147 |
| Inspections of High Priority Sites | 87 |
| Inspections of Medium Priority Sites | 289 |
| Inspections of Low Priority Sites | 93 |

City inspectors evaluate BMP implementation on construction sites in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP, monitoring results, training records, etc. for construction sites subject to the General Construction Permit.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP or CSWMP.
- Failure to implement good housekeeping practices at the site.
- Failure to comply with previous orders.

City inspectors who conduct site inspections of both public and private development projects have full inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements of the Municipal Permit, the Development Storm Water Manual, the erosion control plans, and any other development permit conditions imposed by the City prior to the issuance of a grading or construction permit.

Construction site inspections include the following:

- Verification of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Verification of proper maintenance of the BMPs.
- Evaluation of the effectiveness of the BMPs.
- Verification that the party responsible for the implementation of the site SWPPP has received adequate training.

- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

### 3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its storm water ordinances and development permit conditions at all private and public construction sites, as necessary. The City's ordinances and development permit conditions provide adequate legal authority for the City to enforce its ordinances on construction sites through Stop Work Notices, penalties, fines, and other enforcement procedures as necessary. City's inspectors work with developers and contractors to identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City's inspectors initiate enforcement action which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 summarizes enforcement actions taken within the defined reporting period of this report.

**Table 3-2** Construction Enforcement Summary FY 2008-2009

| ENFORCEMENT ACTION | NO. |
|---|---|
| Written Notices of Violation (Includes Cease and Desist and/or Clean and Abate Orders) | 7 |
| Civil Penalty Order | 1 |

As a result of the above enforcement actions, Chula Vista developers were fined a total of $7,500 in the current reporting period. Follow-up inspections were conducted as necessary until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2008-2009. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

## 4.0 MUNICIPAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(c).i – Any updates to the municipal inventory and prioritization.*

*Permit Section J.3.a.(3)(c).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.*

*Permit Section J.3.a.(3)(c).iii – A description of inspections and maintenance conducted for municipal treatment controls.*

*Permit Section J.3.a.(3)(c).iv – Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.*

*Permit Section J.3.a.(3)(c).v – Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.*

*Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.*

*Permit Section J.3.a.(3)(c).vii – Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.*

*Permit Section J.3.a.(3)(c).viii – Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.*

*Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.*

*Permit Section J.3.a.(3)(c).x – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xi – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xii – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xiii – Identification of the total distance of curb-miles swept.*

*Permit Section J.3.a.(3)(c).xiv – Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.*

*Permit Section J.3.a.(3)(c).xv – Amount of material (tons) collected from street and parking lot sweeping.*

*Permit Section J.3.a.(3)(c).xvi – A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.*

*Permit Section J.3.a.(3)(c).xvii – Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.*

*Permit Section J.3.a.(3)(c).xviii – A description of the general results of the inspections.*

*Permit Section J.3.a.(3)(c).xix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(c).xx – The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(c).xxi – A description of notable activities conducted to manage urban runoff from municipal areas and activities.*

## 4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and

activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

## 4.2 FIXED FACILITIES

### 4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

### 4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage, loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are classified as high, medium, or low TTWQ based on activities, functions, and various site-specific factors. For more information on the facilities that have additional operations and activities,

please see the City's JURMP. The inventory was updated in March 2008 during the JURMP update process. During the reporting period, no additional municipal facilities were constructed and, therefore, the same inventory has been used in this report. Currently, there are some public parks in the design or construction phase that will be added to the municipal inventory after they are completed.

### 4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

### 4.2.4 PROGRAM IMPLEMENTATION

#### 4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

#### 4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities receive training on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

#### 4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City storm water staff inspected all 62 high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected on an as needed basis. No medium or low priority facilities were determined to need inspection this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in

Attachment H. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented. Enforcement on municipal facilities is in the form of disciplinary process against the responsible staff member when compliance is not met in a timely manner. If a violation of the City's Storm Water Ordinance or the Municipal Permit is observed, which is caused by negligence of City personnel, inspectors work with supervisors to ensure that corrective actions are implemented; provide training to the personnel; and immediately inform the appropriate supervisor. The supervisor will then take action against the violating staff member as necessary, including warnings and other disciplinary measures. City storm water staff is in regular contact with Public Works Maintenance staff and provides training on pollution prevention and BMP implementation, therefore, most deficiencies are taken care of upon first notice.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Public Works Maintenance staff inspects all municipal treatment control BMPs to ensure their proper operation. Additionally, Storm Water Management staff conducts random inspections of such facilities to provide a second layer of confidence and ensure that maintenance standards are met. The City maintains treatment control BMPs at the John Lippitt Public Works Operations Center; Fire Stations 6, 7, 8; Salt Creek Park; Veteran's Park; Sunset View Park; Harvest Park; Santa Cora Park; Mountain Hawk Park; Montevalle Park; Windingwalk Park; Horizon Neighborhood Park; Harborside Park; and the City of Chula Vista Civic Center. City crews clean the structural treatment control BMPs on an as needed basis, and their condition is evaluated for effectiveness. Any repairs are noted and carried out on a timely manner. Table 4-1 shows the municipal facilities within the City that have treatment control BMPs and their inspection dates.

**Table 4-1** Municipal Facilities with Treatment Control BMPs

| FACILITY NAME | NUMBER & TYPE OF TREATMENT CONTROL BMP | DATE INSPECTED |
|---|---|---|
| Montevalle Park | 10 Filter Inserts | 06/04/09 |
| Salt Creek Park | 1 CDS Unit | 06/04/09 |
| Windingwalk Neighborhood Park | 1 Vegetated Swale | 06/09/09 |
| Harvest Park | 1 Filter Insert | 06/18/09 |
| Sunset View Park | 3 Filter Inserts | 06/04/09 |
| Mountain Hawk Park | 20 Filter Inserts | 06/04/09 |
| Horizon Neighborhood Park | 1 Filter Insert | 06/05/09 |
| Veterans Park | 1 Vegetated Swale, 5 Filter Inserts | 05/27/09 |
| Chula Vista Civic Center | 5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts | 05/27/09 |
| Fire Station 6 | 3 Filter Inserts | 06/01/09 |
| Fire Station 7 | 1 CDS Unit, non-storm water diverter | 06/01/09 |
| Fire Station 8 | 1 CDS Unit, non-storm water diverter | 06/01/09 |
| Harborside Park* | 3 Filter Inserts | 06/29/09 |
| Santa Cora Park* | 23 Filter Inserts | 09/29/08 |
| John Lippitt Public Works Center* | 6 Filter Inserts | 06/01/09 |

* – Not a SUSMP Project, but the City still inspects the inserts and maintains them

#### 4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

***Fertilizer, Pesticides, and Herbicides***

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do not spray on windy days.
- All employees who spray pesticides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the state and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent material safety data sheet (MSDS) files.
- MSDS sheets for chemical being used must be kept with the applicator while applying pesticides.

***Proper Planting Techniques***

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation whenever possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

***Minimize Runoff***

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.
- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.

## 4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

### 4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

### 4.3.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) designates roads, streets, highways, and parking facilities as high priority municipal areas for inspection purposes. Therefore, the Municipal Inventory (Attachment C) categorizes these facilities as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the roads, streets, highways, and parking facilities. The City maintains 406 miles of roads, streets, and highways.

The City has one stand-alone covered parking facility in downtown Chula Vista that generates a moderate volume of trash and debris that is swept twice per month and is inspected annually as a part of the City's Municipal Inspection Program. The other 22 parking facilities are associated with other municipal facilities (such as parks) and generate low volumes of trash and/or debris. These are swept on a monthly basis and are inspected annually.

For the purpose of street sweeping, roads, streets, and highways are further classified into high, medium, and low priority based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. Table 4-2 below provides more information about these classifications, the number of curb miles in each, the type of areas these classes cover, and their respective sweeping frequencies. The City is in the process of collecting data to refine this classification by working with its contractor to keep records of the quantities of trash and debris collected each day from various sections of the City.

**Table 4-2** Street Sweeping Information Based on Class

| CLASS | NUMBER OF CURB MILES | TYPE | SWEEPING FREQUENCY |
|---|---|---|---|
| High | 127.75 | Industrial and Commercial – 10.5 miles | Twice per week |
| | | Commercial and Business – 117.25 miles | Once per week |
| Medium | 71.6 | Center Islands and Medians | Twice per month |
| Low | 702.26 | Residential – 656.36 miles | Once per month |
| | | Center Lines – 45.9 miles | Twice per month |

### 4.3.3 BMP REQUIREMENTS

Street sweeping is one of the ongoing city functions that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

The City has identified some streets as high Threat to Water Quality (HTTWQ) areas. The main pollutant in these areas is trash. Trash in these areas is mainly attributable to customers of recycling businesses located in the industrial areas of Energy Way and Nirvana Avenue. Also, trash trucks shedding some of their load while traveling to and from the Otay Landfill on Maxwell Road and Main Street east of I-805 are sources of trash on these two streets. As a proactive measure to minimize trash entering the storm drain system in these areas, the City has retrofitted existing curb inlets in these areas with filter inserts. The City's storm drain crew conducts regular inspections and cleaning of these filter inserts and replaces parts as necessary.

### 4.3.4 PROGRAM IMPLEMENTATION

#### 4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept approximately 18,000 curb miles and removed 590 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular roadway maintenance is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, bus stops, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

- Commercial and industrial streets swept once per week
- Center islands and medians swept twice per month
- Centerlines and residential streets swept once per month

**Figure 4-1** Street Sweeping Schedule

## 4.4 MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4)

### 4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants and potential pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through three primary activities: 1) catch basin maintenance, 2) channel maintenance, and 3) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drain facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultant for dry weather field screening annually inspects over 57 outfall locations throughout the City and conducts upstream investigations based on field screening results. They call and report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to abate the pollution, cleanup, and inspect the drainage area.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary. This multi-layer inspection program ensures that almost all MS4 facilities are inspected and maintained regularly.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all environmental regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris from areas that trash accumulation may cause flooding and damage to life or property. The City is in the process of obtaining environmental permits for maintaining areas that require the use of equipment.

Currently, three vacuum trucks and three crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drain systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drain systems in emergencies and other similar situations.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system universally used by the Public Works Department for collecting and tracking data about all its activities. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

During the reporting period, the City purchased an additional 200 thermoplastic storm drain stencils, and plans to install them in the next fiscal year. These stencils adhere to the concrete curb/gutter by heat treatment and are more durable than paint stencils or plastic markers using adhesive. Last Fiscal Year, 500 thermoplastic storm drain markers were permanently affixed to storm drain inlets with the prohibitive "No Dumping – Drains to Bay" message in two languages. In addition, citizens participating in Beautify Chula Vista Day in October 2008 stenciled 88 more storm drains. Notably, nearly all storm drain structures in the City are identified with stenciling, plastic markers, or permanent concrete stamping.

### 4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4, which includes open channels, catch basins and inlets, and outfalls. As required by the Municipal Permit Section D.3.a.(7), the City's MS4 is included in the municipal facility inventory (Attachment C) as a high priority facility for inspection purposes. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

### 4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

### 4.4.4 PROGRAM IMPLEMENTATION

#### 4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2008 to June 30, 2009 is summarized below. A total of 248 inlets were identified as accumulating a high volume of trash.

All high trash volume facilities were inspected at least once during May 1 – September 30. Table 4-3 details the amounts of waste collected from the City's storm drain system based on various facility and waste categories. Recently, the City has added green waste as a category of waste collected from the MS4 and will include this new data in the annual report for next fiscal year.

*Catch Basins and Inlets*

- There are 8,412 catch basins and inlets in the City
  - 7,343 catch basins and inlets were inspected
    - Out of these catch basins and inlets inspected, 5,183 catch basins and inlets were cleaned
- Data collection for catch basins with accumulated waste exceeding the cleaning criteria (33% or more full) started January 1, 2008. A total of 147 exceeded the criteria from July 1, 2008 – June 30, 2009.

*MS4*

- There are 181 miles of MS4 in the City
- The storm drain maintenance crews televised 0.63 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there was no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 0.62 miles of MS4 was cleaned. It should be noted that if storm drain pipes are self-cleaning and under normal operation, there should be no need for cleaning storm drain pipes.

*Open Channels*

- There are 31 miles of open channels in the City
- A total of 738,000 square feet of open channels were inspected and cleaned

**Table 4-3** Amount of Waste Cleaned from the Storm Drain System FY 2008-2009

| CATEGORY | AMOUNT (tons) |
|---|---|
| Catch Basins | **56.86** |
| Inlets | **39.46** |
| MS4 | |
| Trash | 2.23 |
| Sediment | 0.76 |
| Landscaping Debris | 8.75 |
| **Sub-Total** | **11.74** |
| Open Channels | **367.08** |
| **TOTAL** | **475.14** |

The City will continue to inspect its MS4 as required by the Municipal Permit and record collected inspection data. In addition, the City will review its inspection record and determine which facilities will require inspections less than annually and report these facilities in its FY 2009-2010 annual report.

## 4.5 SANITARY SEWER SYSTEM

### 4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in the protection of the MS4 system. If not properly maintained, the sewer system can potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, parasites, and chemicals.

The City currently implements a Sewer Overflow Response and Prevention Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, the City is in the final stages of updating the plan and developing a Sewer Collection Management Plan and a Fats, Oils, and Grease (FOG) Monitoring Ordinance. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

### 4.5.2 SOURCE CHARACTERIZATION

There are 485 miles of sewer pipes in the City. The Municipal Permit Section D.3.a.(7) requires sanitary sewer collection systems to be identified as high priority facilities for the purpose of inspections. The sanitary sewer system is included in the municipal inventory as such (please see Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system. The City of Chula Vista does not operate a Publicly Owned Treatment Works. Sewage generated in Chula Vista is collected and conveyed to the City of San Diego treatment works at Point Loma.

### 4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receive training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance and cleanup crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

### 4.5.4 PROGRAM IMPLEMENTATION

#### 4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 443 miles of sewer main (includes critical maintenance areas) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is also conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, minimizing potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with diameters larger than 36 inches. PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

## 4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

### 4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

### 4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as power washing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. The Municipal Permit Section D.3.a.(7) requires that power washing be identified as a high priority municipal activity for inspection purposes. Therefore, Attachment C has categorized power washing as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

### 4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including power washing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City power washing crews implement BMPs during their activities and receive regular training on storm water pollution prevention.

### 4.6.4 PROGRAM IMPLEMENTATION – POWER WASHING FOR GRAFFITI REMOVAL

#### 4.6.4.1 MAINTENANCE AND INSPECTION

The City's Graffiti Abatement Program functions under the mission of: *"To deliver in a timely manner, a comprehensive, cost-effective, environmentally sound, and technically reliable graffiti removal, education, and prevention program for the residents of Chula Vista."* The City provides cost-free graffiti removal for the residents of Chula Vista.

The Graffiti Abatement Program utilizes various techniques for effective removal of graffiti Citywide, including power washing and sand blasting. In its commitment to this program and to utilize environmentally sound and cost-effective graffiti removal processes, City Council approved the spending of $63,000 for the purchase of highly specialized equipment to capture and treat residual wash water generated from graffiti abatement activities in early 2006. At the end of 2006, the new equipment was made available to the graffiti crews and has been in use ever since. The equipment includes the following:

- A Ford F450 Heavy Duty truck powered by a Triton V10 gasoline engine with an 8' x 12' flatbed.
- A Mi-T-M Industrial belt-driven pressure washer rated at 5.6 GPM output at 3,500 P.S.I.
- A diesel-fired burner for hot water rated at 470,000 BTUs per hour with adjustable temperature control up to steam.
- A Mi-T-M 6000 watt Generator powered by a 13 HP Honda gasoline engine provides power for the AquaKleen Vacuum Recovery system and Water Recycling System, which includes a commercial vacuum system that operates on two 120 volt vacuum motors.
- An automatic discharge pump with a check valve recovers the residual wash water through a Vacu-berm, and a 1.5" 25 foot-long pick up hose and pumps wash water into a 22 gallon oil/water separator system. The water then passes thru a series of 3 filters and a filtration bag that is changeable before it is returned to the storage tank for reuse. This high efficiency system is capable of recycling up to 80% of the wash water for reuse. The clean water tank holds 250 gallons.
- Speedflo PowerTwin 6900 gas powered hydraulic airless paint pump with 3000 PSI and two-gun capability with 100 feet of 0.25" paint hose on a spring-loaded retractable hose reel mounted in the rear corner of the truck bed. This pump is rated at 1.8 GPM.

As a part of the inspection process, City's Storm Water Management staff annually conducts a ride-along with the graffiti/power washing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures. During this reporting year, City Storm Water Management staff observed the removal of graffiti from a sidewalk area, close to the curb/gutter. The graffiti crew implemented all BMPs and prevented any wash water from entering the storm drain system. All BMPs were in place and working properly.

## 4.7 SPECIAL EVENTS

### 4.7.1 BACKGROUND

The City hosts a variety of special local events, which include festivals, fairs, and other events for special causes and occasions. Usually, these events involve the participation of outside organizations, community groups, and the general public. The gathering of event participants and crowds is generally a source of trash and debris if BMPs are not implemented.

### 4.7.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) requires that special events be designated as high priority for inspection purposes. Therefore, special events are included in the City's municipal inventory as high priority activities (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

### 4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping immediately following major events taking place on a street, and having personnel dedicated to litter abatement throughout City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works in conjunction with other City departments and event organizers to ensure that adequate BMPs are implemented during special events.

### 4.7.4 PROGRAM IMPLEMENTATION

Storm Water Management and Environmental Services staff has active presence at the majority of City events. They set up booths, provide public education on environmental issues, and distribute informational materials. As necessary, they conduct surveys at the same time to evaluate general public's awareness and practice of BMPs. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed protection. City Environmental Services staff notifies hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

## 5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(d).i – Any updates to the industrial and commercial inventory.*

*Permit Section J.3.a.(3)(d).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.*

*Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.*

*Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.*

*Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.*

*Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.*

*Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.*

*Permit Section J.3.a.(3)(d).ix – A description of efforts implemented to address mobile businesses.*

*Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.*

*Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.*

### 5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City of Chula Vista to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity

is mutually exclusive, and that each is essential to the overall success of the program. The City has compiled an inventory of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

## 5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

### 5.2.1 BACKGROUND

The City's industrial and commercial inventories include 1,383 facilities. Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

### 5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, annually, the City conducts updates of its industrial and commercial facilities inventories by searching through its business license database and conducting visual observations of new or closed businesses during annual inspections. Additionally, every five years, the City conducts a comprehensive field validation of its industrial and commercial inventories Citywide. The industrial and commercial inventories are also updated on a continuous basis by adding businesses that cause incidents of pollutant discharge or are found to require regular inspections due to the type and amount of pollutants that they generate.

Watershed-based inventories of industrial and commercial sites within the City have been compiled. Information was obtained from the City's business license database (Permits Plus), the State of California database of industrial sites that have filed NOIs, inspection records, and previous experience.

Inventories of industrial and commercial facilities within the City were compiled during the development of the City's JURMP in 2008, which were later updated for the current reporting period and are included in Attachments D and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Municipal Permit category
- Description of services

- Priority
- North American Industrial Classification System (NAICS) code

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- Standard Industrial Classification (SIC) code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.

The inclusion of the APNs allows the City to track its inventories through the City's GIS program. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

### 5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing industrial and commercial discharges of pollutants into MS4s. Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides the authority to require SWPPP for any industrial or commercial facility that may discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets because they conflict with Municipal Permit requirements or City's ordinances. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards. It has been determined that one-on-one interaction between City inspectors and business owners are more effective in knowledge and behavior change than conducting workshops or distributing informational materials, although latter methods are also effective to a lesser degree and are practiced by the City.

### 5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. The City also inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements, as described in the JURMP, are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities.

Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection, the City provides a copy of the inspection report to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

In all cases a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City.

- Providing one-on-one training and help to business owners to develop their activity and site specific BMPs
- Distributing informational printed materials
- Conducting industrial and commercial inspection and setting standards for compliance

#### 5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

During this reporting period, 209 industrial facilities and 1,174 commercial facilities including 516 mobile businesses were identified and inventoried. These facilities are identified in Attachments D and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, the following number of inspections was conducted to ensure compliance within the Permit requirements (see Attachments I and J):

- 192 high priority commercial facilities
- 41 low priority commercial facilities
- 48 high priority industrial facilities
- 2 low priority industrial facilities

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b.(3).
- Threat to Water Quality – Facilities that posed a higher TTWQ were given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.
- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial and commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed for bringing the facility into compliance. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities and during administrative hearings.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

The Copermittees are in the process of standardizing industrial/commercial inspections. An Inspection Standards Workgroup was formed with the task of finding a way to standardize industrial-commercial inspections so that the results from each Copermittee's inspections are consistent. The goal of the workgroup is to create minimum regional standards while maintaining flexibility for each Copermittee to identify and apply their individual requirements that have been developed to match each Copermittee's respective storm water program.

#### 5.2.4.2 PRIORITIZATION

The Municipal Permit no longer requires industrial and commercial inventories to be categorized into high or low priority for TTWQ, although Section D.3.b.(3) of the Municipal Permit requires inspections of sites determined to pose a high threat to water quality. Based on the City's past experience, prioritization of industrial and commercial facilities into high or low priority provides a powerful tool to identify facilities that require focused attention and more frequent inspections. Therefore, the inventories of industrial and commercial facilities have been prioritized in this report.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as

high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge are also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- SIC Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)
- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road (Sweetwater River)
  - Bay Boulevard (San Diego Bay; facilities within the Port jurisdiction are not included)
- Fast food chains
  This is due to frequent rotation of management and employees, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrappers, etc. in the parking lot.
- Private golf courses
- Entertainment facilities
  For example, facilities such as the Cricket Wireless Amphitheatre, Knotts Soak City, etc.
- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

#### 5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note

to update the inventory. If a new business has been determined to be included in the inventory, Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Storm Water Management staff checks for coverage under the General Industrial Permit, where applicable.

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/stormwtr/groupmonitoring.html

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies the Storm Water Compliance Inspector during the walk-through to enable City staff to point out areas where corrections are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, the Storm Water Compliance Inspector completes a Storm Water Quality Inspection Report for Commercial/Industrial Facilities. The responsible party is provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Results of the SWPPP review, BMP plan, and monitoring results
- Assessment of BMP implementation
- Recommended corrective actions
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the report

The Storm Water Compliance Inspector does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person. Educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while the Storm Water Compliance Inspector is at the site.

As discussed above, the business is provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high priority or vice versa. Any such changes are reflected in the inventory update submitted in the following JURMP Annual Report.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachments I and J.

#### 5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the use of a third party inspection program. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

#### 5.2.4.5 VIOLATIONS AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate
- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

Storm Water Compliance Inspectors properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, Storm Water Compliance Inspector conducts follow-up inspections to ensure that required corrective actions are adequately addressed.

Where the Storm Water Compliance Inspector observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the situation. When necessary, City's maintenance crews respond to illegal discharges, contain and capture pollutants before entering storm water conveyance system inlets, and stay at the scene until the illegal discharge is terminated by the responsible person. The affected areas

and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the business owner of the property owner. In any case in which Storm Water Compliance Inspectors determine that a noncompliant site poses a threat to human or environmental health, the City notifies the RWQCB by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illicit discharges or illegal connections from industrial and commercial businesses. This includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section 9.5 of the City's JURMP.

See Table 5-1 details the types of violations and the numbers of each during the fiscal year. A detailed account of enforcement actions taken during this reporting period is included in Attachment K.

**Table 5-1** Industrial/Commercial Enforcement Action Summary FY 2008-2009

| VIOLATION TYPE | NO. |
|---|---|
| Administrative Citations-Warning | 5 |
| Administrative Citations | 12 |
| Notice of Violation | 1 |
| Cease and Desist Orders | 1 |
| Clean and Abate Order | 1 |

The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

#### 5.2.4.6 IDENTIFICATION OF NON-FILERS

If Storm Water Compliance Inspectors determine that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the Regional Board to determine if the facility is required to obtain coverage. At the same time, the Regional Board is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with Regional Board staff to assist in their site inspections. Each Annual Report includes a list of industrial facilities that the City has identified during that reporting period as candidates for coverage that have not filed NOIs. The list includes the name of the facility, address, the respective SIC code, and the type of business.

During the current reporting period, the City identified facilities that may be eligible for coverage under the General Industrial Permit. These facilities are listed below in Table 5-2. The Regional Board makes the ultimate decision as to the applicability of the Industrial Permit to the listed facilities.

**Table 5-2** Facilities Potentially Eligible for Coverage Under the General Industrial Permit

| BUSINESS NAME | ADDRESS | SIC | BUSINESS TYPE |
|---|---|---|---|
| Gonzales Northgate Market | 1058 Third Avenue<br>Chula Vista, CA 91911 | 2099 | Tortilla Manufacturing |
| Mercado Internacional 2000 | 1415 Third Avenue<br>Chula Vista, CA 91911 | 2099 | Tortilla Manufacturing |
| Selecta Mexican Foods | 1340 3rd Ave.<br>Chula Vista, CA 91911 | 2099 | Tortilla Manufacturing |
| Tortillas de Harina Elice | 1660 Broadway<br>Chula Vista, CA 91911 | 2099 | Tortilla Manufacturing |
| Tortilleria Santa Fe | 2765Main Street<br>Chula Vista, CA 91911 | 2099 | Tortilla Manufacturing |

## 5.3 MOBILE SOURCES ELEMENT

### 5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Many mobile businesses can be difficult to identify because many do not have business licenses. On a continuous basis, new mobile businesses are started, existing mobile businesses go out of business or some mobile businesses do not renew their business license or operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses. Furthermore, City inspectors conduct weekend and night inspections to monitor BMP implementation by mobile businesses.

### 5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile Auto Detail
- Window Washing/Pressure Washing/ Street Sweeping
- Pool and Spa Cleaning
- Carpet Cleaning
- Plumbing/Handyman/Repairman
- Landscaping
- Dog Grooming
- Boat Cleaning/Hull Maintenance
- Fire Sprinkler Maintenance

- Painting and coating
- Mobile construction trades, which include cement work and masonry

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business applicant within the above categories are required to go through a storm water BMP training and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 208 mobile businesses from the categories listed above applied for a City business license, were trained on BMPs related to their business, signed the certification statement, and received their business license. Table 5-2 details the types and numbers of mobile businesses approved during the reporting year.

**Table 5-3** Approved Mobile Business Licenses by Category FY2008-2009

| BUSINESS TYPE | NO. |
|---|---|
| Construction Related | 16 |
| Carpet Cleaning | 12 |
| Boat Cleaning & Maintenance | 5 |
| Auto Detailing | 21 |
| Pool & Spa Cleaning | 12 |
| Handyman/Repairman | 40 |
| Powerwashing/Window Cleaning | 2 |
| Plumbing | 28 |
| Landscaping | 35 |
| Fire Protection Systems | 10 |
| Painting and Coatings | 19 |
| Portable Sanitary Services | 1 |
| Pest Control | 1 |
| Miscellaneous/Others | 6 |

### 5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

#### 5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes as well as costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

#### 5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge Control and Spill Prevention, Control, and Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

In addition, as per the Municipal Permit, the Copermittees developed and implemented a set of minimum core BMPs for the various types of mobile businesses. The following BMPs specifically address the unique characteristics of mobile businesses.

- Storm water training
- Spill containment and cleanup (Spill Kits)
- Proper handling of all wastes (Solid, liquid and hazardous)
- Protecting storm water conveyance systems
- Providing proper handling and containment of materials
- Providing equipment washout areas

These practices represent only the minimum required BMPs. Mobile businesses are instructed to contact local jurisdictions where mobile business activities are to take place to find out about any additional or more stringent requirements.

The Copermittees are in the process of posting information about mobile business minimum BMPs as a resource in the Project Clean Water Toolbox website. Please see Figure 5-1 – Clean Water Toolbox for the home page of the website.

**Figure 5-1** Clean Water Toolbox

### 5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed to the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. Approved applications and completed Storm Water Questionnaires and Certification Statements are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department receives application from mobile business owner

- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance, and appropriate CASQA BMPs relevant to the type of business activities.
- The applicant is instructed to complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval from the Storm Water Management Section before a business license can be issued.
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.
- In addition to the City's Mobile Business Database, the Copermittees have established a Regional Copermittee Mobile Business Database. The web-based database can make queries on locating a mobile business, finding and viewing violations, and watershed-based reporting. Jurisdictions are able to edit a mobile business that is located or does business in their jurisdiction. See Figure 5-2 – Regional Copermittee Mobile Business Database for a sample web page.

**Figure 5-2** Regional Copermittee Mobile Business Database

Three types of reports can be generated from this database:

- All mobile businesses home based within a jurisdiction
- All mobile businesses operating within a jurisdiction

- All violations that have occurred within a jurisdiction

#### 5.3.4.1 EDUCATION AND OUTREACH

During the business license application process, the City provides mobile business owners or operators necessary information, educational materials, and outreach related to storm water quality issues specific to their type of business. As stated above, businesses are given the educational materials outlining pollution prevention measures and other BMP requirements related to their perspective activities prior to the license being issued. A sample of the Storm Water Information Packets for Mobile Businesses is included in Appendix D of the City's updated JURMP. The education program is described in detail in Section 10, of the City's updated JURMP.

#### 5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobile businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene, City inspectors require an immediate stop to any illegal discharge and instruct the responsible person to initiate containment and cleanup of the affected areas. If the business lacks materials and equipment required for the deployment of adequate BMPs, the responsible person is informed that they will not be able to resume activities until such time that they procure all necessary materials and equipment. Storm Water Compliance Inspectors find out if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being allowed to resume business operations. Enforcement action, including warnings, citations, civil penalties, or other enforcement measures are initiated where justified. During the current reporting period, a total of 4 administrative citations were issued to mobile businesses operating in Chula Vista.

##### 5.3.4.2.1 NOTABLE ACTIVITIES

Because of both the City's and Regional education efforts focused on mobile businesses, there has been a significant decrease in enforcement. During the reporting period, the City continued its business license application processing combined with public education, which is considered a notable and very effective method of minimizing pollutant discharges from mobile business activities.

## 6.0 RESIDENTIAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.*

*Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.*

*Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.*

*Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.*

*Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.*

*Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.*

*Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.*

### 6.1 INTRODUCTION

The City has developed the residential component of the Jurisdictional Urban Runoff Management Plan (JURMP) based upon a multi-faceted approach including pollution prevention; complaint response and enforcement; and outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharges of pollutants into the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP) and to support the long-term improvements of water quality through awareness and behavior modification.

### 6.2 SOURCE CHARACTERIZATION

It is recognized that the information collected from reported illegal discharges and results of subsequent investigations can be analyzed to provide useful tools in effectively characterizing activities, sources, and areas within the City that contribute more to water quality impairment and that need to be targeted. These criteria may stay constant from year to year, or change each

year. However, knowledge of the pattern that they follow will provide the storm water manager an insight that is necessary to develop or modify an effective program. As in previous reporting years, the City has taken a critical look at the complaints received in 2008-2009 as presented in Figure 6-1. Notably, home improvement related discharges continue to be prevalent in this reporting period. Compared to last year, the percentage of home improvement related discharges decreased by 18%. Within two consecutive years, home improvement related illegal discharges have decreased by 28%. There may be several reasons for this declining pattern, one of which may be attributable to the public outreach programs conducted by City staff that provide invaluable information and education on the impacts of waste disposal to the general public and, therefore, is effective in changing habits. Further, characterizing the sources of pollutants can provide a resource in tailoring public education and outreach programs to the specific needs of the community and improving their effectiveness, while maintaining economic viability. This type of critical look is an important tool in making management decisions on how to approach residential Best Management Practices (BMPs) implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

**Figure 6-1** Percentage of Reported Residential Non-Storm Water Violations by Activity FY 2008-2009

## 6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high Threat To Water Quality (TTWQ) residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, every year certain residential areas of the City are designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating residential BMP implementation is quite challenging, however, the City has developed a number of mechanisms through which information on BMPs are disseminated to the public and

ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, door hangers, City's environmental website, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response & Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed above have been discussed in more detail throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented primarily through public education, and where necessary by enforcement action.

## 6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted, so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses public education and outreach together with enforcement mechanisms, when necessary, to ensure program implementation by residents and compliance with all federal, state, and local laws and regulations.

The City keeps accurate records of all reported residential illegal discharges and non-compliance with BMP requirements. This information can be used in many ways such as identification of pollutants of concern, areas of HTTWQ, increasing/decreasing trends in illegal discharges, and repeat violators. Such analysis is then used to develop new programs or modify existing programs to focus attention on program elements that result in higher effectiveness and quicker results. Map 1 – Violation Location Map was prepared to depict all areas of the City with concentrated illegal discharge reports. The City then targets such areas for more focused public education and surveillance. The one municipal violation shown on Map 1 was not due to municipal activities, but was caused by an illegal discharge by a transient in a City park.

### 6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Information pertaining to the household hazardous waste and the used oil and filter programs are distributed to residents annually during special events, presentations, point of purchase locations, mobile displays throughout the city offices and community centers, local realtors/associations, and property management offices. Residents are

educated about the disposal of such waste through the City's educational program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the California Integrated Waste Management Board (CIWMB). The program has the capacity to receive and process used oil generated by City residents. The amount of used oil collected from certified oil centers increased since the last reporting period as presented in Table 6-1. This increase can be attributed to public education and the City's active role in coordinating with Certified Centers in rebate claims program and participation in filter exchange events. Also, the oil collection increase can be credited to the City's certified centers and to a strong promotion program. The City encouraged residents to take a proactive approach to changing their oil by draining it first and uninstalling their filters and to take them along prior to visiting their local auto supply store. In this way, residents recycle used oil as they purchase their new oil and avoid an extra trip, one that would produce additional green house gases into the atmosphere. This method also prevents storm drain pollution, as unattended oil could intentionally or unintentionally spill and enter storm drain systems. The recent economic downturn can also be another reason for more people performing their own oil changes in an attempt to save money.

The South Bay Used Oil Recycling Program has been evaluated to be one of the most successful programs implemented by the City of Chula Vista, National City, Coronado, and Imperial Beach in improving environmental quality. Residents of these cities can leave oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. This used oil will be collected and recycled through the South Bay Used Oil Recycling Program. Residents of Chula Vista also have the option of taking their used oil to various used oil collection facilities in the City for recycling or disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. This facility accepts clean as well as used oil. Residents are limited to 15 gallons or 125 pounds per vehicle. The facility is open every Saturday from the hours of 9 AM to 1 PM. Because of the continuous high volume amount of HHW collected and demand from the public, the City decided to continue to keep the facility open on Wednesdays from 1 PM to 3 PM. The City also offers "door-to-door" collection of HHW for a small fee. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. Every used oil and HHW application has focused on pollution prevention, watershed protection, source reduction and making it easy for residents to do the right thing when it comes to proper disposal.

**Table 6-1** Amount of HHW and Used Oil Collected FY 2008-2009

| | | |
|---|---|---|
| Household Hazardous Waste | Quantity of waste collected (FY 07-08) | Quantity of waste collected (FY 08-09) |
| | 220,008 lbs | 252,494 lbs |
| Used Oil | Quantity of used oil collected from certified centers (FY 07-08) | Quantity of used oil collected from certified centers (FY 08-09) |
| | 30,779 gallons | 49,287 gallons |

### 6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where enforcement actions may be necessary, where appropriate:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel
- City's environmental website at: www.chulavistaca.gov/clean
- Analysis of data collected and managed in the Department of Public Works data management system GBA (George Butler Associates Management System)

Further information about the City's hotline reporting system and Dry Weather Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. By using a Geographic Information System program and the data collected from these mechanisms, every year residential areas of the City that have had higher numbers of violations, and outfall locations that exceeded pollutant standard limits are mapped (see Map 2– HTTWQ Residential Area Map and Map 3 – Violations Locations - Residential). City staff then develops programs to inspect and investigate areas of the City that are considered high TTWQ. City staff investigates violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continues to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's illegal discharge reports database can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1.

The residential areas and activities evaluation method described above indicates that: 1) residents are becoming more environmentally conscious, 2) residents take an active role in environmental protection by calling the City and reporting illegal discharges, 3) positive trends in urban runoff discharge quality is emerging. These results are encouraging and provide incentive to City staff to maintain their level of efforts and find innovative methods to accelerate the positive trend.

### 6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in Chula Vista Municipal Code Chapter 14.20, Storm Water Management and Discharge Control; and Chula Vista Municipal Code Title 1, General Provisions. During this reporting period, Storm Water Compliance Inspectors responded to over 144 complaint calls of which 106 were residential. Twenty-four of the complaint calls resulted in citations. The total amount of fines collected during this reporting period from residential violations was $10,000.00. Compared to last year, the number of residential complaint calls increased by 28%. Conversely, despite this increase, the number of actual violations/citations is down by 47%. This can be attributed to the ongoing public outreach programs conducted by City staff to increase public awareness of City's storm water programs and pollution prevention laws. Follow-up inspections were conducted when necessary to ensure that full compliance is achieved.

During the reporting period, Storm Water Compliance Inspectors responded to each report of residential and other violations; investigated each case; took appropriate actions regarding containment of pollution; educated the violating party on existing laws and regulations; made follow-up visits, where necessary; and, proceeded with enforcement action if voluntary compliance was not achieved.

Data management of past violations helps City staff to identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate illegal act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of reported violations are included in Attachment K.

### 6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step towards improving receiving water quality, both locally and regionally. Increasing public awareness and encouraging a change in both attitude and behavior of the general public and the regulated community, can directly lead to a reduction or elimination of storm water pollution caused by common daily residential activities. Due to the importance of public education and outreach in storm water programs, the Municipal Permit requires public education at jurisdictional, watershed, and regional levels. The following are brief accounts of the implementation of jurisdictional and regional education programs during the reporting period. Additionally, during the reporting period, the City collaborated with the Copermittees of the San Diego Bay Watershed to implement the Watershed Urban Runoff Management Program

(WURMP) residential education component. Details of such efforts are fully discussed in this year's WURMP Annual Report, which will be submitted to the Regional Board under a different cover.

#### 6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the City's Environmental Services Division and the Conservation Department in the implementation of the Jurisdictional Residential Education Program. Pollution prevention and water quality regulation information is disseminated by actively participating in community events throughout the year. Informational booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise pubic awareness about the City's storm water regulations and requirements as well as Best Management Practices methods. Residents become aware of the importance of protecting their watersheds and water resources, and recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also distributed throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

The decision to select the types of educational materials to be disseminated throughout selected residential areas was based on an analysis of current and past residential violation reports, as well as results from the Dry Weather Field Screening and Analytical Monitoring program. During this reporting period, City Staff distributed 1,420 educational door hangers with educational pamphlets to various residential locations of the City (see table 6-2).

**Table 6-2** Educational Materials Distributed Based on Dry Weather Monitoring Results

| RESIDENTIAL AREA | EDUCATIONAL INFORMATION | NUMBER DISTRIBUTED |
|---|---|---|
| Jefferson Street | Household Grease Disposal | 38 |
| Cabrillo Mobile Lodge | Auto Maintenance and Washing | 100 |
| Palomar to Orange 3rd to 4th Avenue | Proper Trash Disposal | 75 |
| Connely Circle | Home and Garden Maintenance | 107 |
| Rolling Hills Ranch by Agua Vista and Coastal Hills Drive | Home and Garden Maintenance | 179 |
| Ridgeback Road and Lima del Rey | Auto Maintenance and Garden Maintenance | 130 |
| Torrey Pines Road and La Costa Avenue | Auto Maintenance | 114 |
| Stone Gate and Hawthorne Creek Drive | Home and Garden Maintenance | 120 |
| La Media Road south of Olympic Parkway | Home and Garden Maintenance | 557 |
| | **Total:** | **1420** |

Residential complaint response and enforcement relies heavily upon reporting of illegal activities. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

#### 6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting period, the City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. Due to the many tasks that the ERS Workgroup had to undertake, they separated the workgroup into various sub-workgroups to complete their tasks. These sub-workgroups address media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Development of a regional brand that all Copermittees can use to represent their efforts in storm water education; 2) Development of a county-wide telephone survey to assess citizen storm water knowledge; 3) Development of a regional website that all Copermittees can link to, through their own jurisdictional websites; 4) Participation in regional community events such as the Envirofair at the San Diego County Fair, the Independence Jam, and Movies in the Park.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under separate cover.

### 6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the impacts of improper waste disposal. A consistent message of stewardship through everyday actions and behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

During fiscal year 2008-2009, the City identified several High Threat to Water Quality (HTTWQ) residential neighborhoods that required focused educational outreach (see Map 2). These areas have been targeted based on storm water inspection observations, complaint calls to the City's hotline and the dry weather monitoring upstream investigation program. Each of the homes in these neighborhoods received a general storm water pollution prevention brochure or door hanger in addition to a brochure targeting specific residential activities and their associated pollutants. The activities and pollutants that were focused on included: 1) vehicle washing and repair (detergents and vehicle fluids), 2) gardening (green waste, fertilizer, and over-irrigation discharge), 3) household activities (grease, paint, pet waste, and trash and debris). These areas and their corresponding activities and pollutants have been identified in Attachment K. In addition, the City plans to work with Homeowner's Associations to include storm water pollution prevention articles and messages into their community newsletters.

The City also targets HTTWQ residential areas by having cleanup events that provide residents the opportunity to volunteer to help cleanup their neighborhoods. The annual Beautify Chula Vista event focuses on a different neighborhood each year, frequently in underprivileged areas of the City, and provides graffiti cleanup, tree planting, trash pick-up, and storm drain stenciling. By participating in the event, residents are able to make a connection to their community and environment while learning about storm water pollution prevention.

Other than HTTWQ areas, the City has a number of programs in place for throughout the City to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

## 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.*

*Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.*

*Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.*

*Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.*

*Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.*

*Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.*

*Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.*

*Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.*

*Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.*

*Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.*

*Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.*

*Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.*

On September 10, 2008, the Regional Board adopted Addendum No. 2 to the Municipal Permit. The addendum recognized that Dry Weather Field Screening and Analytical Monitoring activities may continue until the end of September each year, and the results would not be available to be included in JURMP Annual Reports, which are also due for submittal on September 30 of each year. Therefore, submittal of Section 7.0 of the JURMP Annual Report (Illicit Discharge Detection and Elimination Component) was allowed to be postponed until December 15 of each year. Pursuant to this new requirement, the City of Chula Vista will submit the entire FY 2008-2009 Illicit Discharge Detection and Elimination Component; copies of the City's 2009 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2009.

## 8.0 EDUCATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.*

*Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.*

*Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.*

*Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.*

*Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.*

### 8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Programs target issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and Best Management Practices (BMPs) to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

## 8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of Citywide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting period, education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) implementation strategies. In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. While specific workshops have been organized in previous reporting years covering such topics as laws and regulations, water quality impacts, and applicable BMPs, a focus on internal SUSMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize site design techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of higher efficiency treatment control BMPs.

Most notably, and consistent with previous reporting years, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance

- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Transit
- Vehicle Maintenance
- Land Development
- Public Works Inspections

In addition, presentations by the manufacturers and vendors of structural BMPs were organized and arranged in the City, such as presentations on porous pavement and bioretention technologies.

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

**Table 8-1** Municipal Staff Education FY 2008-2009

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 07/29/08 | Permeable Pavements | City staff received training on permeable pavements and projects that have used permeable pavements | City of Chula Vista |
| 10/15/08<br>10/16/08 | Storm Water Awareness and BMP Implementation Training | City storm water staff provided Public Works staff with training on job-specific BMPs, watershed protection, and showed the "After the Storm" movie. | City of Chula Vista Storm Water Section |
| 10/16/08<br>10/17/08 | Storm Water Detention Basin Design Training | City engineering staff attended this training on the design of storm water detention basins and implementation techniques | The University of Wisconsin Madison |
| 10/22/08<br>10/23/08 | Industrial Environmental Association Seminar | City storm water staff attended this seminar; in addition the City of Chula Vista received an Environmental Stewardship Award for its CLEAN program | Industrial Environmental Association |

Table 8-1 continued

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 11/14/08 | CASQA Quarterly Meeting | City storm water staff attended this one day seminar about Low Impact Development and Hydromodification Management | CA Storm Water Quality Association |
| 12/05/08 | Storm Water Management Seminar | City storm water staff attended this training on treatment control BMPs, current regulations, and the new Construction Storm Water Permit | Rain for Rent and Hall & Foreman |
| 02/10/09 | Filterra® | City storm water, engineering, development, open space, and public works staff attended this presentation on updates to Filterra® systems | Filterra® |
| 05/21/09 | Storm Water Treatment and Detention/ Retention Systems | City public works engineering and operations divisions attended this training on storm water treatment and detention/retention systems | Bay Saver Technologies |
| 05/28/09 | Sizing Tool Training | City storm water, public works, and engineering staff attended this training about the HMP process, sizing calculator, and design examples | San Diego Storm Water Copermittees |
| 06/01/09 | Model SUSMP Training for Municipal Staff and Plan Checkers | City staff attended this training on the Model SUSMP and it application to development projects | San Diego Storm Water Copermittees |
| 06/8/09<br>06/09/09<br>06/10/09 | Hydrologic Simulation Program Fortran (HSPF) Training | City staff attended this training on geomorphology and HSPF computer program developed by the USEPA to develop watershed models | American Public Works Association (APWA) |

## 8.3 EDUCATIONAL OUTREACH ELEMENT

### 8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

During this reporting year the CLEAN group, made up of the City's environmental divisions and sections, and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

**"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."**

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. Your Choice."**

The culmination of efforts of various involved City divisions has been embodied in the established CLEAN program, which provides an effective and powerful body to guide the significant efforts envisioned for the program. It is also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including pollution notification residential door hangers, stickers, stationery, t-shirts, and a booth display were distributed to the general public within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean has information about the environmentally focused divisions in the City including Storm Water Management, Environmental Services, Conservation, and the Chula Vista Nature Center. The storm water section has information specific to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to be developed, a wide array of media outlets have been explored, and established branding has been incorporated in them. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2008-2009, the City continued to use seasonal pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of such items as cooking grease and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging on such items as pet waste bag containers, calculators, notebooks, and rulers.

**Figure 8-1** CLEAN Homepage

The City has continued to maintain six trail displays (Figure 8-2) throughout the City, near walking trails and parks. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. They demonstrate the connectivity of environmental concerns throughout the City. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park
- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

In addition, the same design has been used in a poster form, one of which is displayed in the John Lippitt Public Works center entryway. Chula Vista staff and customers pass this display on a daily basis. Passing this display reminds staff and citizens that they live in a watershed and of the simple actions they can take to protect their local waterways. Another poster is exhibited at the Chula Vista Public Library in downtown Chula Vista, which is intended to help increase the

number of residents and employees who are exposed to this message on a daily basis. A third poster is used in community events to explain the watershed concept to Chula Vista residents.

**Figure 8-2** City of Chula Vista CLEAN Trail Display

### *Media Articles*

During the reporting period, Storm Water Management Section staff contributed several articles about storm water pollution prevention to various publications aimed at residents living in the City. These included The Star News, My Hometown Otay Ranch/ Eastlake, and Your Guide to CLEAN and Your Guide to Green (which are included in residential trash bills). Altogether, these publications reach more than 100,000 households. The City will continue to contribute articles to, and place pollution prevention advertisements in these publications and explore more venues for reaching citizens through print media.

### *School Education Efforts*

Due to the success of the Salt Creek Critters after-school program in east Chula Vista, the City implemented the South Bay Water Warriors Program in the west side of Chula Vista during October 2008. The after-school program, aimed at 3rd and 4th graders, focused on pollution prevention and watershed protection. Students were involved in a number of interactive and creative activities such as arts and crafts, games, and working with the EnviroScape Model. In order to assess the change in knowledge and awareness as a result of the program, pre- and post-tests were administered to the students. It was found that there was a significant increase in knowledge and awareness in students, showing that the program was effective at educating students about storm water and pollution prevention. The City will continue with school

programs such as this and consider branching out to different age groups, such as high school students.

***Community Events***

The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. During the reporting period, the Storm Water Management and Environmental Services staff participated in and set up booths and displays at all major South Bay community events. City staff provided education and outreach materials regarding a variety of interrelated environmental issues. Distributed information included the effects of storm water pollution on the environment and the need to protect local waterways. By participating in these community events, City storm water staff has the opportunity to generate large numbers of impressions each fiscal year.

***Chula Vista Nature Center***

The City of Chula Vista Nature Center, located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Nature Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Nature Center's mission is to educate the public about the importance of coastal resource conservation and environmental stewardship. Through visits to the Nature Center and its offsite programs, nearly 72,000 people are exposed to these critical environmental messages each year. To help facilitate educational experiences, the Nature Center offers field trips, guided walks, classes, tours, and special projects. Annually, organized school programs (approximately 15,000 K-6 children, 2,000 7-12 graders, and another 2,000 college students) visit the Nature Center to learn about the watersheds of San Diego Bay and what they can do to protect San Diego Bay.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Nature Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Chula Vista Nature Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Nature Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Nature Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- In partnership with the U.S. Fish and Wildlife Service, Chevron, and the San Diego Zoo, a backpack program called Sweetwater Safari is offered to teachers who have already brought students to the Nature Center. In this hands-on program, participants take backpacks containing binoculars, mini-microscopes, and other materials to discover plankton, birds, plants and animal tracks on the trails of the Sweetwater Marsh National Wildlife Refuge.

- Students learn to recycle, reuse, and reduce waste. They also learn how to correctly use storm drains and the types of pollutants commonly identified in the storm drain system. The Chula Vista Nature Center and Conservation Department also conduct "Less Toxic Gardening" classes twice a month, dealing specifically with pesticide use, as well as composting classes.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

**Table 8-2** Education Outreach Provided FY 2008-2009

| DATE | EVENT | EVENT DESCRIPTION | SITE NAME/ LOCATION |
|---|---|---|---|
| 07/05/08 | San Diego County Fair | City staff manned a booth and distributed IPM Pest Tip cards and reusable grocery bags as a part of the collaboration with the Regional Storm Water Copermittees | Del Mar Fairgrounds |
| 08/10/08 | Lemon Festival | City staff manned a booth and distributed information about pollution prevention | Downtown Chula Vista |
| 08/17/08 | Go Green and Clean Family Day | City staff manned a booth and distributed CLEAN brochures and IPM Pest Tip Cards | Otay Ranch Town Center |
| 09/20/08 | Children's Festival | Storm water staff had a booth at the festival and provided pollution prevention training to citizens | New Hope Church |
| 09/27/08 | BonitaFest | Storm water staff provided pollution prevention training to citizens | Bonita Road Shopping Center |
| 10/04/08 | Beautify Chula Vista | Storm water staff provided pollution prevention training to citizens | Southwest Chula Vista |
| 04/18/09 | Go Green and Clean Day | Staff provided training on pollution prevention and provided CLEAN brochures and IPM Pest Tip cards | Friendship Park |
| 04/23/06 | Earth Day | Storm water staff provided pollution prevention training to students | Eastlake Middle School |
| 04/25/09 | Day of the Child | Storm water staff provided pollution prevention training to citizens | Memorial Park |

| Year-round | Watershed, Recycling, Storm Drain Pollution Education | Organized School Group Visitors to the Chula Vista Nature Center | Chula Vista Nature Center |

***Regional Outreach***

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further development of the Regional Residential Storm Water Education Plan that was submitted to the Regional Board in March 2008. One of the most notable activities conducted during FY07-08 and into FY08-09 was Copermittee collaboration and sponsorship of the San Diego County Fair from June 14, 2008 – July 6, 2008. The City of San Diego, along with the San Diego Copermittees, used the Think Blue campaign branding during fair media exposure and for the fair displays. The Copermittees focused their efforts on educating the public about Integrated Pest Management (IPM) practices. The IPM pest tip card packets were distributed, along with other giveaways to promote storm drain pollution prevention. During the fair, the Copermittees administered a survey to over 1,200 fair attendees. Results of the survey will be reported in the next annual report. In addition, the Copermittees manned a booth at the EnviroFair of the San Diego County Fair on June 20, 2009. The Copermittees are planning similar educational outreach events that are focused on region-wide education.

### 8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included dissemination of information via the County's Clean Water Project website targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, Storm Water Compliance Inspectors meet with facility owners or managers and explain water quality issues relating to the particular type of industrial or commercial facility. BMPs relevant to the activities at each

facility are explained and, corrective actions are proposed to bring the facility into compliance with the City's ordinances and BMP requirements. Consequences of non-compliance are also brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

### 8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of Low Impact Development site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- The City Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

### 8.3.4 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day
- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as notebooks, dustpans, pencils, pens, and pet waste bag holders.

During the reporting period, the City, in cooperation with I Love a Clean San Diego, supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteer groups have the opportunity to participate in storm drain stenciling, cleanup of trash, graffiti removal, and plant trees. Efforts are usually focused in areas of the City where more attention is needed due to trash and graffiti problems. Over 500 volunteers participated in the Beautify Chula Vista Day in October 2008.

The graffiti program allows citizens to report graffiti in their neighborhoods by phone or by email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. There were over 1,900 web requests, emails, and calls to the graffiti hotline (some duplicated) during the reporting period, showing that City staff and residents are taking an active role in promoting a clean City.

## 9.0 PUBLIC PARTICIPATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.*

### 9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

### 9.2 PROGRAM IMPLEMENTATION

***Beautify Chula Vista Day – October 4, 2008***

Beautify Chula Vista Day is an annual event that involves citizen participation and involvement in activities that enhance the environmental setting of the City. Every year, this event attracts several hundred volunteers and provides an opportunity for City staff to have direct interaction with the public to discuss environmental issues and the role that citizens can play in protecting their community's health and living standards. Volunteer citizens are able to participate in activities such as tree planting, graffiti removal, clean-up projects, and storm drain stenciling. During the 2008 event, with participation from over 500 volunteers of all ages, the group was able to remove more than 1,200 pounds of trash from City streets. Volunteers also erased over 1,500 square feet of graffiti, stenciled 88 storm drain inlets, and planted 32 trees.

***Otay Valley Regional Park Cleanup***

The Otay Valley Regional Park (OVRP) is being developed as a collaborative effort of the cities of Chula Vista and San Diego, City of San Diego Water Works, and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land. The Otay River Valley Cleanup Project (Cleanup Work Project) currently encompasses the Western Otay Valley Regional Park (Nester Creek east to I-805) and Eastern Otay Valley Regional Park – Proctor Valley (North End Upper Otay Lakes Reservoir).

The Cleanup Work Project encompasses efforts by many organizations including the OVRP Citizens Advisory Committee (CAC) coordinating the Donovan Prison Community Crew, California Conservation Corp (CCC) coordinated by the City of San Diego WOVRP Rangers,

County of San Diego Otay Lakes Park Rangers (provided dump truck and driver), Friends of the Park (coordinates Proctor Valley Cleanup), Allied Waste (delivering and picking up of large waste bins), City of San Diego Environmental Services, City of Chula Vista Public Works, and Hanson Aggregates (provided heavy equipment as needed).

Park cleanup activities include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, and placing signage identifying the OVRP. Table 9-1 details the cleanup and abatement work at the OVRP from July 1, 2008 through June 30, 2009.

More information about the Otay Valley Regional Park can be found on their website http://www.ovrp.org/

**Table 9-1** Cleanup and Abatement Work at the OVRP FY 2008-2009

| DONOVAN COMMUNITY CREW AND CAC MEMBERS | |
|---|---|
| Labor Hours | 4,620 |
| Trips to Otay Land Fill | 48 |
| Tons of trash removed | 240 |
| Tons of concrete and asphalt removed | 2.3 |

| Volunteer Labor Hours | 116 |
| Trips to Otay Land Fill | 5 |
| Tons of trash removed | 8 |
| Tons of concrete and asphalt removed | 10 |

***I Love a Clean San Diego (ILACSD) 7th Annual Creek To Bay Cleanup***

The Seventh Annual Creek to Bay Cleanup event occurred on Saturday, April 25, 2009. The City co-sponsored this cleanup event, which was coordinated by ILACSD. The San Diego County Board of Supervisors presented this year's cleanup event through the support of Supervisor Greg Cox and Supervisor Pam Slater-Price. The event was able to bring together over 4,000 volunteers who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Total volunteer count for this event was 4,463 participants. Volunteers accumulated over 100,000 pounds of trash and recyclables from 150 miles of coastline and inland areas. Commonly found items included plastic items and cigarette butts.

Cleanup sites within or adjacent to Chula Vista were Del Rey Canyon, in Chula Vista, J Street Marina, and two sites in the Otay Valley Regional Park. At the Chula Vista location, 36 volunteers removed 275 pounds of trash and 25 pounds of recyclables from 5 miles of Chula Vista inland waterways.

***Household Hazardous Waste and Used Oil Recycling***

The Household Hazardous Waste (HHW) Facility at the City of Chula Vista Public Works Center started operation in January 2002. It serves the Cities of Chula Vista, Imperial Beach, National City, and the County of San Diego. The facility is open every Wednesday and Saturday from 9am to 1pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. During the reporting period approximately 2,539 households participated in the collection program. The facility is under 24-hour camera surveillance to prevent illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill. Public participation in this program is expected to minimize the amount of hazardous materials that may otherwise enter storm drain systems.

***Public IC/ID Reporting and Graffiti Hotline***

The City encourages its citizens to partner with the City in keeping Chula Vista clean. Citizens can do so by reporting any illegal discharges to storm drains, as well as reporting any graffiti in their neighborhoods. The City provides free graffiti removal services on public or private property by using environmentally friendly power washing equipment and BMPs. Storm Water Management Section staff investigates illegal discharges to storm drain systems and provides education and enforcement. In cases of spills or pollutants entering storm drain systems, Public Works maintenance crews provide cleanup as needed. As mentioned in Section 7, during the reporting period the City received 148 calls and reports about illegal discharges to storm drain systems. There were over 1,900 calls, emails, and web requests (some duplicates) to the graffiti program during the reporting year, showing that citizens are participating and taking an active part in keeping the City clean.

***CLEAN Business Program***

As part of its efforts to involve local businesses in keeping the City clean, the CLEAN Team started the CLEAN Business Program in February 2008. The CLEAN Team is made up of the Storm Water Management Section, Environmental Services Division, and the Department of Conservation. The CLEAN Business Program was designed to help small businesses exercise environmentally safe practices and become sustainable. This goal could only be achieved by learning basic environmentally responsible and sound methods related to their specific daily activities. The program verifies and promotes businesses that demonstrate environmentally friendly practices and conserve resources. As part of the verification process, the business must complete a packet of checklists with minimum BMPs and request an inspection by the CLEAN Team to verify that the selected BMPs are adequate and have been correctly implemented. The CLEAN Team verifies that the BMPs are in place and functioning. Once a business becomes a CLEAN Business, they receive recognition on the City's website and receive a decal sticker to put on their front window to show consumers that they are shopping at a CLEAN Business. Six businesses in the City were verified in the 4 months that the program was in place during the reporting year. Businesses must receive verification on an annual basis in order to maintain their CLEAN Business status.

## 10.0 FISCAL ANALYSIS COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.*

*Permit Section G: Fiscal Analysis*

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

### 10.1 INTRODUCTION

Pursuant to Order No. R9-2007-0001, the Copermittees are required to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. On January 31, 2009, the Copermittees submitted their standardized method and format report to the Regional Board as part of their Regional Urban Runoff Management Program Annual Report submittal. The Municipal Permit further requires the

Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. In the meantime, fiscal analysis and reporting will continue as in previous reports. The City has decided to include an analysis of watershed and regional shared expenditures and budgets in the current report in order to bring the fiscal analysis and reporting as close to the requirements of Order No. R9-2007-0001 as possible and in anticipation of the new method and format in a few months.

## 10.2 FISCAL-YEAR EXPENDITURES AND BUDGETS

The City's storm water program budget and expenditures consist of the following components:

- Staff
- Operating Budget (non-staff)
- Drainage Capital Improvement Projects

City staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Environmental Planning Division of the Development Services Department reviews development projects for environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Land Development Division of the Development Services Department is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Division staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Section of the Public Works Department manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the GIS systems, and provides support to the Storm Water Management Section by mapping the City's storm water conveyance systems and data management.

- The Operations Division of the Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Section, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Section of the Public Works Department is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections provide support to the Storm Water Management Section in the fulfillment of the City's JURMP and are instrumental in the implementation of that program. Although those departments, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

The City's NPDES jurisdictional expenditures for FY 2008-2009 and budgeted figures for FY 2009-2010 for drainage related Capital Improvement Projects that are intended to minimize infiltration from sanitary sewer systems, discharge of pollutants into storm drainage systems, and improve water quality are listed in Tables 10-1 and 10-2:

**Table 10-1 Chula Vista NPDES Expenditures for FY 2008-2009**

| DESCRIPTION | EXPENDITURES (APPROXIMATE) |
|---|---|
| **A. Staff** | |
| 1. Public Works Maintenance | $672,443 |
| 2. Storm Water Management | $538,582 |
| **Sub-Total** | **$1,211,025** |
| **B. Operating Expenditures (Non-Staff)** | |
| 1. NPDES Permit Fee | $27,178 |
| 2. Consultant Fees for Dry Weather Field Screening Program | $53,474 |
| 3. Regional Shared Costs (Wet Weather Monitoring, Regional Public Education, CASQA Membership Fees, Etc.) | $160,283 |
| 4. City's Share of the Sweetwater River Maintenance Costs | $3,731 |
| 5. Stream Flow Metering | $6,084 |
| 6. Jurisdictional Public Education | $3,972 |
| 7. Street Sweeping Program | $244,824 |
| 8. Maintenance Materials and Equipment | $158,055 |
| **Sub-Total** | **$657,601** |
| **C. C.I.P. Appropriations** | |
| 1. Telegraph Canyon Channel Design DR118 | $48,559 |
| 2. Emerson Street Drainage Improvements DR133 | $69,598 |
| 3. CMP Storm Drain Pipe Rehab Program Phase 4 DR169 | $15,567 |
| 4. Fifth Ave. Drainage Improvements DR173 | $174 |
| 5. Telegraph Canyon Drainage Study 3/L, DR167 | $12,320 |
| 6. North Broadway Reconstruction STM354 | $140,330 |
| **Sub-Total** | **$286,548** |
| **Grand Total** | **$2,155,174** |

**Table 10-2 Chula Vista Budget for FY 2009-2010**

| DESCRIPTION | BUDGET |
|---|---|
| **A. Staff** | |
| 1. Public Works Maintenance | $668,177 |
| 2. Storm Water Management | $563,072 |
| **Sub-Total** | **$1,231,249** |
| **B. Operating Budget (Non-Staff)** | |
| 1. NPDES Permit Fee | $24,500 |
| 2. Consultant Fees for Dry Weather Field Screening Program | $66,000 |
| 3. Regional Shared Costs (Wet Weather Monitoring, Regional Public Education, CASQA Membership, Etc.) | $173,500 |
| 4. Watershed Shared Costs | $35,000 |
| 5. Stream Flow Metering | $3,000 |
| 6. Jurisdictional Public Education | $70,000 |
| 7. Street Sweeping Program | $264,709 |
| 8. Maintenance Materials and Equipment | $300,031 |
| 9. Miscellaneous | $18,755 |
| **Sub-Total** | **$955,495** |
| **C. C.I.P. Appropriations** | |
| 1. Telegraph Canyon Channel Improvements DR182 | $950,000* |
| 2. Telegraph Canyon Drainage Study DR183 | $300,000* |
| 3. Emergency Storm Drain Replacement DR180 | $1,200,000 |
| 4. North Broadway Reconstruction STM354 | $2,368,000 |
| **Sub-Total** | **$4,818,000** |
| **Grand Total** | **$7,004,744** |

* Items marked thus are proposed projects and their schedule may change.

## 10.3 REGIONAL EXPENDITURES AND BUDGETS

The City participates in regional activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, the following costs were included in the regional expenditures and budgets:

- Regional Program Planning Subcommittee and Workgroups costs
- Regional Monitoring Program
- Regional Outreach Program
- Hydromodification Management Plan
- CASQA Fees

City's share of the above expenditures was $160,283 for FY 2007-2008, as indicated by Item B.2.b in Table 10-1 above. It should be noted that the above cost does not include staff time that was spent to attend regional management committee or workgroup meetings or participate in the development and implementation of regional programs and reports.

The approved regional budget for FY 2009-2010 is $3,075,832. City of Chula Vista's share of the total budget is estimated to be $169,170. The regional budget for FY 2009-2010 includes the following costs:

- Working Body Support
- Regional Monitoring Program
- Regional Outreach
- Mobile Business Program
- Recommended Land Use Planning Approaches
- CASQA Fees

## 10.4 WATERSHED EXPENDITURES AND BUDGETS

During FY 2008-2009, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions and, therefore, no cost sharing occurred at the watershed level. Based on the Municipal Permit requirements for watershed activities, the City has allocated $25,000 for watershed activities and $10,000 for watershed education in its FY 2009-2010 budget. These budgeted items are included as Item B.4 in Table 10-2 above.

## 10.5 FUNDING

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, these vary significantly from year to year, depending on the level of development activities within the City. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

## 11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6*[9] *to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

*effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.*

## 11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the Copermittees to the Regional Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in other sections of this report.

The 2004-2005 reporting year was highlighted by the Copermittees' regional development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD). This comprehensive assessment incorporated water quality and source data collected by all Copermittees and provided a critical first look at regional water quality presented per watershed.

In 2008-2009, the City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City has endeavored in 2008-2009 to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

Notably, in 2008-2009, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the continued implementation of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

Further, in 2008-2009 the City continued its source inventory validation process. This effort has been detailed in Sections 2.0 through 6.0 of this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

## 11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization
  - BMP Selection

- Targeted Outcomes
- Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics is included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation in 2008-2009. It is important to recognize that the whole of this document represents an account of program implementation in 2008-2009, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluates the overall effectiveness of the City's Storm Water Management Program.

### 11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2001 as updated in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this concept continues to be perpetuated. The City has sought to integrate these key elements in order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

***Source Characterization***

Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by the previous Municipal Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially complied in 2001, and have been updated annually ever since. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS systems and comprehensive business license tracking. In recognizing

that source characterization needs to be increasingly matched to identified water quality concerns and program results, the City seeks to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Sections 2.0 through 6.0 of this report, the City has continued to take further steps to fortify source characterization in 2008-2009. Comprehensive field verification of source inventories is conducted once every five years with the renewal of the Municipal Permit, while inventory updates based on existing information in the City's databases and observations during regular inspections are conducted annually. In 2006-2007 and continued in 2007-2008, the City conducted an extensive source verification utilizing the City's Permits Plus program combined with field verification to identify all active industrial and commercial facilities Citywide. The Municipal inventory is updated continuously as new facilities are constructed or acquired. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data is utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

***BMP Selection***

In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by the previous Municipal Permit's Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. These minimum BMPs were visited during the City's JURMP Update in 2008 and changes were made as needed. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs.

***Targeted Outcomes***

The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes be established prior to program implementation to accurately provide measurability and accountability. Included within the regional long-term assessment framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

**Figure 11-1** Hierarchy of Targeted Outcomes

***Assessment Measures and Indicators***

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

### 11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period (2008-2009) has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

### 11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes in water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses

on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional level.

#### 11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the water quality of discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

#### 11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success of failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

#### 11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for the Copermittees to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

## 11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)
- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

### 11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2004-2005, and will be addressed for the current Municipal Permit cycle in the next ROWD. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The Chart on Page 11-8, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent-specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. A summary of this analysis with the latest available data (2008) is presented below:

### 11.3.2 PROGRAM ASSESSMENT

In 2008-2009, the City continued to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2008-2009 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment.

Additionally, during this reporting period the City started a survey to measure public awareness and behavior on various storm water quality related issues. Based on the City's population of about 220,000, 95% confidence level, and 4 confidence intervals, it was determined that at least 599 people had to be surveyed to obtain results that were statistically significant. In this reporting period, Storm Management Section staff used the opportunity provided by various public events to establish contact with citizens and conduct the survey. To date, 500 surveys have been gathered and the remaining 99 will be completed within the next few community events. Final analysis of the survey will be reported in FY 2009-2010 annual report. Further, a comparison will also be made with the results of a similar survey that was administered in FY 2005-2006 as a baseline survey. This comparison will provide the City with a clear understanding of the effectiveness of the general JURMP implementation effectiveness.

The discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

#### 11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City, based on various components of the Municipal Permit (Tables 11-1 – 11-8). In the following sections, these tables and their associated analysis are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation, reflecting various elements of the Municipal Permit, and provide a summary accounting of activities conducted by the City in 2008-2009.

##### 11.3.2.1.1 LAND USE PLANNING

In view of the recent update to the City's local Standard Urban Storm Water Mitigation Plan (SUSMP), and inclusion of Low Impact Development (LID) and Interim Hydromodification Criteria (IHC), the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. During the current reporting period, as a result of the slowdown in development activities, the number of projects submitted to the City for approval and permit issuance were

drastically reduced. As can be seen from Table 11-1, only 10 SUSMP projects received approval. However, the number of total cumulative projects that have implemented post-construction BMPs and, therefore, the number of projects inspected for post-construction BMPs remained high.

During this reporting period, BMP maintenance verification letters were sent to responsible parties reminding them of their responsibility to clean, inspect, and maintain storm water treatment facilities (see Table 11-2). Responsible parties were required to provide the City with proof of maintenance of the treatment facilities within a set time frame. This process provided yet another mechanism to ensure proper maintenance and effectiveness of all treatment facilities and compliance with Municipal permit provisions.

The following tables summarize City of Chula Vista's activities during the reporting period towards ensuring compliance with SUSMP implementation and the review, inspection, and maintenance verification of SUSMP projects.

**Table 11-1** FY 2008-2009 Compliance with Activity-Based Requirements – Land Use Planning

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.1 Land Use Planning | Development Projects | # SUSMP Projects Submitted | # SUSMP Projects Approved | Actual/Target | % |
| | | 10 | 10 | 10/10 | 100 |
| | High Priority Sites (Total Listed = 26) | # Sites Targeted for Inspection | # Sites inspected | Actual/Target | % |
| | | 26 | 26 | 26/26 | 100 |
| | Medium Priority Sites (Total Listed = 50) | 25 | 42 | 42/25 | 168 |
| | Low Priority Sites (Total Listed = 104) | As Needed | 28 | As Shown | 100 |

**Table 11-2** FY 2008-2009 Post Construction BMP Maintenance Verification

| Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|
| High Priority Sites (Total Listed = 26) | # Projects sent BMP maintenance notification letter | # Projects returned BMP maintenance verification letter | Actual/Target | % |
| | 26 | 26 | 26/26 | 100 |
| Medium Priority Sites (Total Listed = 50*) | 43 | 43 | 43/43 | 100 |
| Low Priority Sites (Total Listed = 104*) | 90 | 90 | 90/90 | 100 |

* It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs.

Based upon the significant achievements and refinements experienced in 2008-2009, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

JURMP strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2008-2009

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

***Development Storm Water Manual***

The Manual, which was adopted by the City in February of 2008, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, including the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by City staff, developers, and consultants. The Manual supersedes a similar document titled "Development and Redevelopment Projects Storm Water Management Standards Requirements Manual," which was adopted in November of 2002, and will be updated again in March 2010 to incorporate the updated Model SUSMP and Hydromodification Management Plan requirements.

During this reporting period City staff continued to actively participate in the Regional Land Development Workgroup meetings and activities and collaborated with other participants to

update the Model SUSMP and develop a Hydromodification Management Plan (HMP). On March 25, 2009, the Regional Board approved the updated Model SUSMP and the Copermittees have 365 days to incorporate Model SUSMP's requirements into their local SUSMPs. The Copermittees have submitted a draft HMP to the Regional Board and are in the process of addressing Regional Board's comments. The HMP requirements are expected to come into effect in the second quarter of 2010.

***Inter-Departmental Coordination***

The City's SUSMP and development review process includes multiple entities throughout the City. As the City continue to grow, it has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Although the City's growth during the past two years has occurred at a much slower rate than before, such coordination has continued in 2008-2009 to require refinement and augmentation as necessary to maintain compliance and ultimately improve water quality.

***Dedicated Storm Water Management Section***

The Development Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to City staff and assist project proponents and consultants. Storm Water Compliance Inspectors and Environmental Health Specialists also perform the function of post-construction BMP construction verification, inspection, and maintenance verification.

***Information System Support***

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. Additionally, Permits Plus, which is a specialized permits tracking software, is utilized in tracking a variety of discretionary permits, and specifically is used by the Development Services Department to identify and track Priority Development Projects. Further, Permits Plus is utilized in annual inventory updates. Notably, in 2008-2009, the GIS layer was continuously updated to manage and provide easy access to project specific WQTRs and grading plans.

***Data Management***

As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. It is noteworthy that such challenges have been addressed in 2008-2009 through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. Since the addition of an Engineering Technician from last reporting period, the City continues to maintain up-to-date data and effectively track all information related to JURMP activities such as inventories, inspections, violations, and post-construction BMPs.

***New Development and Redevelopment Project Design Elements***

With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City continued to work with the development community to improve the design of storm water design features of proposed projects. While this focus was stressed by the City in 2008-2009 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects, a more universal change in project design approach will occur when the updated Model SUSMP requirements are incorporated into local SUSMPs and become effective. Through the regional Land Development Workgroup, the City of Chula Vista will continue to work with other Copermittees to develop regional standards and methods that will streamline the process of project design and review for water quality.

#### 11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component demonstrated successes and underwent programmatic developments and enhancements. Through identified needs and associated management decisions, the City fortified its jurisdictional construction management component in 2008-2009. As a result of the slowdown in development, many construction sites remained inactive or faced sever reductions in construction activities. Within the reporting period, the City worked closely with developers to stabilize inactive construction sites; promote pollution prevention and BMP implementation; and ensure proper maintenance of BMPs to prevent polluted discharges from construction sites. This was a challenge as many developers claimed that they had limited financial resources and were unable to provide the necessary resources. City staff worked with developers to identify cost-effective BMPs and in some instances initiated enforcement action until full compliance was achieved. Mechanisms were identified to promote pollution prevention techniques as described in section 3 of this report. The City continues to maintain the regulatory standards mandated by the Municipal Permit and as developed and improved through previous years by the City irrespective of prevailing conditions.

**Table 11-3** FY 2008-2009 Compliance with Activity-Based Requirements – Construction

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.2.d Construction | High Priority Sites (Total Listed = 7) | # Sites targeted for inspection | # Sites inspected | Actual/ Target | % |
| | | 7 | 7 | 7/7 | 100 |
| | Medium Priority Sites (Total Listed = 27) | 27 | 27 | 27/27 | 100 |
| | Low Priority Sites (Total Listed = 75) | 75 | 75 | 75/75 | 100 |
| | All Sites (Total Listed = 109*) | Total sites identified | # in compliance or on a schedule for compliance | Actual/ Target | % |
| | | 109 | 109 | 109/109 | 100 |
| | | # of inspections during dry season | # of inspections during wet season | Total # of inspection s | N/A |
| | | 147 | 322 | 469 | N/A |

* Note: Of the total number of construction sites listed above, it is estimated that about 70% to 80% were inactive during the reporting period. Therefore, active sites were inspected according to the Municipal Permit requirements and inactive sites were inspected on an as needed basis.

The following features distinguish the construction component of the City's JURMP:

***Inspection and Enforcement***

As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensure compliance with this JURMP component on construction sites. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been fully achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

***Education and Training***

Storm Water Management staff provides education and training to all entities related to construction activities including developers, site superintendents, sub-contractors, and trades persons. During the previous years, this education and training capacity was further defined by storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, Chula Vista Storm Water

Management staff offered a strong asset and broad-based expertise in construction storm water management both locally and regionally. During the reporting period, due to the slowdown in development, regional seminars were not held as in previous years and City staff did not have the opportunity to speak at regional seminars for the construction industry. However, the City is willing and prepared to contribute to such events once development gains momentum. During the reporting period, City staff continued their efforts in educating members of the construction industry at the local level during meetings and site inspections.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2008-2009. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

***BMP Maintenance***

During the reporting period, due to an increase in the number of inactive construction sites, BMP maintenance on construction sites continued to be an area of concern. While inspection staff noted significant efforts in BMP implementation, the maintenance needs associated with implemented BMPs did not match implementation efforts on a consistent basis. As a reminder, the City issued a formal letter to all developers with inactive construction sites reiterating their responsibility for BMP implementation as discussed in details in section 3 of this report.

#### 11.3.2.1.3 MUNICIPAL

As exemplified in program descriptions included in other sections of this report, the City prides itself for outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City functions such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. The following table summarizes

**Table 11-4** FY 2008-2009 Compliance with Activity-Based Requirement – Municipal

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.a Municipal | High Priority Sites (Total Listed = 65[1]) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 62 | 62 | 62/62 | 100 |
| | Medium Priority Sites (Total Listed = 6) | As needed | 1 | As shown | 100 |
| | Low Priority Sites (Total Listed = 13) | As needed | 0 | As shown | 100 |
| | MS4 | Estimated quantity of material targeted for removal from MS4 (Tons) | Quantity of material removed from MS4 (Tons) | Actual/Target | % |
| | | 475 | 475 | 475/475 | 100 |
| | Streets/Parking Lots | Estimated distance of curb miles to be cleaned | Total curb miles cleaned | Actual/Target | % |
| | | 17,889 | 17,889 | 17,889/17,889 | 100 |
| | Catch Basins/ Inlets | # of catch basins and inlets targeted to be inspected | # of catch basins and inlets inspected | Actual/Target | % |
| | | 7,393 | 7,393 | 7,393/7,393 | 100 |
| | | # of catch basins and inlets targeted to be cleaned | # of catch basins and inlets cleaned | Actual/Target | % |
| | | 5,183 | 5,183 | 5,183/5,183 | 100 |

[1] Three categories listed in the Municipal Inventory as follows are inspected on a regular and as needed basis and are not included in the total number of sites targeted for annual inspections:

- MS4
- Roads, Streets, and Highways
- Special Events

With such a well-rounded approach, the City has not identified any significant management measures with which to augment municipal program activities in 2008-2009. Further, no BMPs have been identified as ineffective within the reporting period of this report.

The following features distinguish the Municipal component of the City's JURMP:

***Municipal Facility Inspections***
The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2008-2009, and as part of this comprehensive inspection process, Storm Water Management staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

***Environmental Programs***
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have continued to capitalize upon in 2008-2009 through the development of a broad-based outreach and educational campaign by the City. In this reporting period the City adopted the Clean Business program, which builds partnerships between the City and local businesses that operate in a socially responsible manner and protect the environment. Details of these programs are discussed further in Section 7 of this report.

Based on exemplary Municipal Pollution Prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for program improvement or modification at this time.

#### 11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2008-2009 reporting year was a continued maintenance year in terms of industrial and commercial activities within the City. Inventory validation and supplemental inspection efforts remain the highlights of this year's activities. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous industrial and commercial facilities operating within the City. With such a significant variety of commercial and industrial activities in Chula Vista, staff has recognized the need to target those areas and business activities that remain high on the source priority list, and to provide a consistent presence and strong enforcement standard.

The City's FY 2008-2009 inventory of industrial/commercial facilities includes 209 industrial and 1174 commercial facilities (including 353 mobile businesses). In 2008-2009, Storm Water Management staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Municipal Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

**Table 11-5** FY 2008-2009 Compliance with Activity-Based Requirements – Industrial/Commercial

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.b Industrial | High Priority Sites (Total Listed = 53[1]) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 48 | 48 | 48/48 | 100 |
| | Low Priority Sites (Total Listed = 149) | As needed | 2 | As shown | 100 |
| D.3.c Commercial | High Priority Sites (Total Listed = 192) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 192 | 192 | 192/192 | 100 |
| | Low Priority Sites (Total Listed = 984[2]) | As needed | 41 | As shown | 100 |

[1] Five high priority industrial facilities included in the industrial inventory are owned by the San Diego Unified Port District and are inspected by that agency

[2] 348 commercial facilities included in the commercial inventory are mobile businesses that are regulated differently from other businesses. The Municipal Permit does not require their annual inspection.

The following features distinguish the industrial/commercial component of the City's JURMP:

***Integrated and Balanced Approach***

With a dedicated Storm Water Compliance Inspection staff, industrial and commercial facilities are effectively regulated. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme. Further, Public Works maintenance and landscape crews, whose working environment is in the field, have been trained and educated in storm water pollution prevention and report any observed illegal activities or discharges. As such, they are considered the "eyes and ears" of the Storm Water Management Section.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

#### 11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City of Chula Vista defines the residential component of the City's

JURMP. Any small changes in behavior of residents are magnified due to the effect of numbers. As such, the Storm Water Management staff has sought to achieve continued success in the reduction of pollutants from residential areas through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types associated with such activities. The Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality.

**Table 11-6** FY 2008-2009 Compliance with Activity-Based Requirements – Residential

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.e Residential | Household Hazardous Material | Quantity of HHW[1] targeted for collection | Quantity of HHW collected | Actual/Target | % |
| | | 220,008 lbs (FY 07-08) | 252,494 lbs (FY 08-09) | 252,494/ 220,008 | 114 |
| | Used Oil | Quantity of used oil collected from certified collection centers ( FY 06-07) | Quantity of used oil collected from certified collection centers (Gallons FY 06 | | % |
| | | 30,779 gallons | 49,287 gallons | 49,287/ 30,779 | 160 |

[1] HHW= Household Hazardous Waste

***Residential Program Strengths:***

***Pollution Prevention***

The City's residential component is strengthened by the various pollution prevention programs offered to residents. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, green waste, recyclables, used cooking oil, household hazardous waste, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

***Residential Outreach and Education***

The City continued to focus significant resources on residential outreach and education efforts in 2008-2009 and constantly endeavored to devise different avenues in reaching the public. While these activities are more fully described in Section 7.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

***Residential Program Improvement Areas and Challenges:***
Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

#### 11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts with such City entities as the Chula Vista Nature Center, the Conservation Department, the Regional Used Oil Recycling Program, and Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Management Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

While the City continuously strives to improve its JURMP implementation program, it has not identified specific management measures by which to improve education and public participation activities. Notably, the City has added the Clean Business program in one of its participation activities. The City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

***Education and Public Participation Program Strengths:***

***Environmental Program Collaboration***
As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous environmental programs within the City. As such, the Storm Water Management Program has been able to reach more diverse audiences and participate in a greater variety of public participation venues. This collaboration of programs that culminated in the creation of the CLEAN program has resulted in clear and consistent messaging to Chula Vista residents and has reinforced City's resources toward more effective and holistic environmental programs.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. Through the collaboration of environmental programs such as conservation, household hazardous waste collection, recycling, and storm water management citizens receive consistent and interrelated messages, and participate in activities that demonstrate various facets of environmental protection. Such coordinated public education and participation programs have far reaching and lasting effects that ultimately result in general acceptance of environmental concepts and changes in behavior. It has been recognized that the interrelationship of each of these programs collectively, is integral to the overall success of each of these programs

individually. Finally, the City is fortunate to have the Chula Vista Nature Center to showcase the San Diego Bay and to provide tangible access to the resources the community is called to protect.

***Internal Staff Training***

Through formal or informal training, meetings or individual contact staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

***Chula Vista CLEAN Program***

Within the reporting period of this report, the City continued to take significant steps to further implement an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment and a sense of ownership to the community's environment, water resources and waterhseid.

***Education and Public Participation Program Improvement Areas and Challenges:***

***Education of the Development Community***

During the previous reporting periods, one of the challenges facing the City was the development community's resistance to changing regulations and requirements of the Municipal Permit and the City's SUSMP. Due to increased cost to development projects, developers were hesitant to implement high-efficiency treatment control BMPs and site design features. Consultants were also unfamiliar with available methods and technologies for pollution prevention on development projects. During this reporting period the development community has shown acceptance of changes in terms of project design, high efficiency treatment control BMPs, and site design BMP implementation. This can be attributed in part to the City's strong steps to ensure the effective design and utilization of appropriate construction and post-construction BMPs. After the issuance of the current Municipal Permit, the Storm Water Management staff expanded its inspections and enforcement of post-construction BMPs to ensure BMP implementation and maintenance on development projects. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

**Table 11-7** Compliance with Activity-Based Requirements – Education and Public Participation

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.g Education | Outreach (External) | # targeted training workshops, outreach events | # training workshops, outreach events conducted | Actual/Target | % |
| | | 12 | 12 | 12/12 | 100 |
| | | # Material, brochures targeted for distribution | # Materials, brochures distributed | Actual/Target | % |
| | | General public contact | General public contact | N/A | N/A |
| | Staff Training | # Training sessions | # Training sessions | Actual/Target | % |
| | | 11 | 11 | 11/11 | 100 |
| | Opportunities for participation | Estimated # of opportunity events to be provided | # Provided | Actual/Target | % |
| | | 3 | 3 | 3/3 | 100 |

### 11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program all support this critical programmatic element. During the reporting period, the City provided a wide cross-section of information through the interrelationship of various environmental programs. The City was able to significantly impact the level of knowledge and awareness within the community through its continued effort in influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Complaint Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years as these indicators become more wholly developed; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

***Complaint Response Tracking***

A comprehensive complaint response summary is presented in Attachment L – Complaint Response Summary. It is important to note that trends in complaints received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of complaints from FY 1997-1998 to FY 2008-2009. With slight fluctuations in numbers, it is difficult to draw any strong conclusions, however, it may be inferred that overall programmatic influences are strong throughout the community.

**Figure 11-2** Chula Vista Storm Water Complaint Summary 1997-2009

***Business License Application Screening Procedure***

The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants, Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

During this reporting period, through the collaboration efforts of the Copermittees, a regional mobile business website was created. The website includes a compilation of all approved mobile business applications in the region, which is categorized by jurisdiction. The creation of regional source inventory is a significant improvement in mobile business database management, which can provide essential information in monitoring and tracking mobile business activities in the entire region.

***Storm Water Web Site***

The City's CLEAN website development and update continued into 2008-2009. This site offers valuable information to Chula Vista residents and businesses and is intended to facilitate public education on environmental issues, including storm water. The website also provides a means for residents to report illegal discharges to storm drain systems. Due to technical constraints, it is not possible at this time to count the number of people accessing the website. It is hoped that this technical difficulty will be overcome in the future in order to provide a method to assess the usefulness of the website. In the meantime, Storm Water Management Section staff plans to resort to other means of assessment such as surveys.

***Development Review Process***

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals. The City's JURMP includes a comprehensive flow chart to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. Through the required submission of Water Quality Technical Reports (WQTR) for Priority Development Projects; subsequent review by City staff; and project meetings, in 2008-2009 a notable increase in knowledge and awareness within the development community was observed. The level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with SUSMP requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. A detailed description of the review process has been discussed in section 2 of this report. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, including Low Impact Development features, and will continue to take this approach in subsequent reporting years.

#### 11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

During this reporting period, the City continued to implement BMP tracking measures into various components as reviewed in this report. It has been recognized that through the implementation of well-developed BMP tracking measures, the City is able to more fully evaluate BMP implementation and associated behavioral change. As discussed earlier in this section, in this reporting period, the City initiated its second survey to measure public awareness and behavior on various storm water quality related issues. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation

***Inspection Activities***
As discussed in applicable sections of this report, the City has developed comprehensive commercial, industrial, municipal, and construction inspection programs. It is through these well-developed inspection programs, that the City is able to utilize BMP implementation tracking and assessment mechanisms.

In the reporting year 2007-2008, the Storm Water Management Section started using the GBA database management system to track source inventories, inspection activities, and other data relevant to the assessment of storm water management programs. In the current reporting period, the use of the GBA was expanded and refined to better serve the purposes of the new Municipal Permit. Through this database program, Storm Water Management staff is able to view the historical activities such as inspections and violations of commercial, industrial, municipal, and construction sites. Further, in support of BMP selection and evaluation throughout various community sectors, staff uses the inspection forms that were developed in FY 2005-2006. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities are intended to provide fully developed BMP implementation tracking mechanisms.

Based on data gathered from such activities, the City is able to take a critical look at BMP selection and implementation Citywide, and be able to evaluate behavioral change within business communities and further validate effectiveness trends in years to come.

***SUSMP Implementation***
Within the development community, implementation of post-construction BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

#### 11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-8 are focused on municipal functions and programs:

**Table 11-8** FY 2008-2009 Load Reduction

| ACTIVITY/FUNCTION | LOAD REDUCTION | POLLUTANT TYPE |
|---|---|---|
| Used Oil Recycling | 49,287 gallons | Motor Oil |
| Household Hazardous Waste Collection | 252,494 Pounds | Antifreeze, Oils, Paints |
| MS4 Maintenance | 11.74 Tons | Trash, Debris, Leaves, Grass, Rock, Silt |
| MS4 Inlets | 39.46 Tons | Trash, Debris, Leaves, Grass |
| MS4 Catch Basins | 56.86 Tons | Trash, Debris |
| Channel Maintenance | 367.08 Tons | Trash, Debris |
| Street Sweeping | 596.76 Tons | Trash, Debris, Sediment |

### 11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators are the only persistent constituent of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program
- A comprehensive storm water conveyance system maintenance
- Street sweeping
- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that the majority of pollutants are on a declining trend in this reporting period. Particularly, significant decreases in Total Coliform and Fecal Coliform are encouraging. These results can be interpreted as follows:

The City expanded its public education and outreach in this reporting period. This effort was aimed at increased awareness and changes in public behavior. Based on current and past results from the dry-weather monitoring program, and past violation reports, specific residential areas that were identified as High Threat To Water Quality (HTTWQ) were targeted for disseminating educational materials specific to the type of pollutants and violation activities. Moreover, the implementation of BMPs as described above, is considered effective in important deceases in fecal coliform and total coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. Further, due to the slowdown in construction

activities, creation of urban impervious areas slowed down during the reporting period, which may also contribute to decreased instances of observed pollutant discharges. Low rainfall levels may also be another factor. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout a long period of time. It is expected that the next regional ROWD will include a more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

## 12.0 SPECIAL INVESTIGATIONS

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.*

During this reporting period, the City did not encounter a situation where conducting Special Investigations was necessary. However, if the need arises at any time in the future, the City will not hesitate to embark on special studies. Currently, the City plans to study the effects of groundwater seepage or discharge on the quality of surface water bodies. This will be a long-term study, in which City staff will identify the locations of groundwater discharge points on a map and attempt to find a correlation with observed pollutants that are thought to originate from ground contamination or natural pollutants within the soil.

## 13.0 NON-EMERGENCY FIRE FIGHTING

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.*

### 13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

### 13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods will be used to reduce the discharge of pollutants to the MEP. BMPs will be implemented when conducting the activities described in the following sections:

#### 13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff will be directed either to the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment are cleaned where runoff will pond and evaporate and/or where runoff will filter through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

#### 13.2.2 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When water flows to an area where landscaping does not prevent runoff, the Officer-in-Charge surveys the area prior to training activities to ensure that drill activities do not wash debris or sediment to storm drain systems.
- Prior to drill activities, debris is removed from downstream areas that could potentially discharge to storm drain systems.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.

### 13.2.3 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept regularly to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and the disposal of spilled materials is in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site personnel are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

### 13.2.4 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods cannot be identified. In such cases, water usage and discharges to MS4s are kept to a minimum and BMPs are implemented.

### 13.2.5 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory. Such facilities are inspected on an as needed basis (See Attachment C). Only one fire station (Fire Station No. 4/Training Tower) has training capabilities. This facility is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter

- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism, which diverts the wash water to the sanitary sewer system and rainwater to storm drain systems.

All personnel who conduct washing activities are properly trained on using the diverter device and ensuring it is used appropriately. Trucks that require cleaning from other stations are brought to the stations equipped with washing capabilities.

## 14.0 JURMP REVISIONS

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(m)i – A description of any proposed revisions to the JURMP.*

The following paragraphs detail proposed updates to the City's JURMP. Each JURMP component is shown as a heading, followed by the specific description of the proposed update.

### APPENDIX B

Since the City's JURMP document was developed and submitted to the Regional Board in March 2008, Appendix B of the JURMP has been updated during the current reporting period, which includes inventories of construction sites; municipal, commercial, and industrial facilities and activities; and Priority Development Projects with treatment control BMPs. Updated inventories are included in Attachments A to E of this report.

### INDUSTRIAL AND COMMERCIAL COMPONENT

**Mobile Business Best Management Practice Updates**

The regional Industrial and Commercial Workgroup established minimum BMPs that all mobile businesses with the potential to pollute must implement in order to be in compliance. These BMPs include: 1) Storm water training, 2) Contain and clean up spills, 3) Properly handle all waste, 4) Protect the storm water conveyance system, 5) Provide proper handling and containment of materials, and 6) Provide equipment washout areas. In addition to the BMPs, the workgroup also developed a Regional Mobile Business Database with the help of a consultant. As a part of it's mobile business application approval process, the City plans to add all mobile businesses that receive approval to this regional database.

### ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

**Dry Weather Field Screening and Analytical Monitoring Update**

During the reporting year, the regional Dry Weather Monitoring Sub-workgroup (Dry Weather Workgroup) conducted a study to evaluate and update the dry weather monitoring Action Levels for Total Coliform, Fecal Coliform, and Enterococcus. Action Levels are pollutant concentrations beyond which upstream investigations are initiated to identify and eliminate the source of pollution. The current Action Levels were based on data from one year of monitoring in 2002.

The recent study conducted by the Dry Weather Monitoring Sub-Workgroup was based on available monitoring data from 2002 to 2007. Data were analyzed using three different methods: ranked percentile analysis, statistically based population parameters, and confidence interval. Based on the analysis, the Copermittees determined that the 80$^{th}$ percentile approach would be the best fit to meet the needs of the Dry Weather Monitoring Program. Details of their evaluation are posted on the Project Clean Water Website at:

http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf

Table 14-1 details the updated Action Levels for Total Coliform, Fecal Coliform, and Enterococcus. The Copermittees will use these Action Levels in their Dry Weather Monitoring Program for 2010.

**Table 14-1** Updated Bacteria Action Levels for Dry Weather Monitoring

| CONSTITUENT | NEW ACTION LEVEL | PREVIOUS ACTION LEVEL |
|---|---|---|
| Total Coliform | 130,000 MPN/100mL | 50,000 MPN/100mL |
| Fecal Coliform | 13,000 MPN/100mL | 20,000 MPN/100mL |
| Enterococcus | 7,000 MPN/100mL | 10,000 MPN/100mL |

Action levels for all other constituents of the Dry Weather Monitoring Program were deemed to be appropriate and were not included in the above study.

## FISCAL ANALYSIS COMPONENT

### Fiscal Analysis Update

As required by sections G, J.1.a(3)(k), and J.1.c.(1)(d) of NPDES Order No. R9-2007-0001, the Copermittees developed a new Standardized Fiscal Analysis Method to analyze and report their urban runoff management program (jurisdictional, watershed, and regional) expenditures, and outline the funding sources for their programs in a uniform format. As required by Section G.3 of the Municipal Permit, the City will use the new Standardized Fiscal Analysis Method starting January 31, 2010 to conduct its fiscal analysis for the reporting period. This annual report is based on the previously developed method for fiscal analysis.

## 15.0 CONCLUSIONS AND RECOMMENDATIONS

On January 24, 2007, the San Diego Regional Water Quality Control Board adopted the National Pollutant Discharge Elimination System Municipal Permit, Order No. R9-2007-0001. The new permit includes more prescriptive requirements than Permit Order No. 2001-01, which it superseded. In March 2008, and pursuant to the requirements of the new Municipal Permit, the City of Chula Vista updated its ordinances; permit processes; Standard Urban Storm Water Mitigation Plan (SUSMP), and Jurisdictional Urban Runoff Management Program (JURMP) Document. Implementation of the City's Storm Water Management Program during the reporting period of July 1, 2008 to June 30, 2009 was therefore based on the requirements of the new Municipal Permit and the current report is an account of the City's implementation of the new Municipal Permit during Fiscal Year 2008-2009.

Well-developed program management and implementation defined the City's 2008-2009 reporting year. As reflected throughout this report, the City's Storm Water Management Program has matured and successfully met all programmatic goals set out for the defined reporting period, and has experienced overall success as reflected in the effectiveness assessment conducted in this report. It is vital to direct implementation and management strategies down a targeted, effective, and efficient path as to create a set of interrelated actions and to promote long-term effectiveness. The City recognizes the need to be steadfast and pragmatic toward programmatic development in order to foster long-term success achieved through water quality improvements.

The whole of the preceding document presents a comprehensive implementation narrative and accounting of results in 2008-2009. Further, a detailed effectiveness assessment exercise has supported an overall evaluation of programmatic elements. Taken collectively, the City has identified a variety of strengths and perceived some challenges that will impact program development and implementation in the years to come.

As a result of the re-issuance of the Municipal Permit, major programmatic updates and changes were introduced to the City's Storm Water Management Program. Such updates included new data collection and management strategies, implementation approaches, and program planning with the goal of effective support of long-term methodologies on jurisdictional, watershed, and regional basis. It is expected that the programmatic updates to the Storm Water Management Program will result in the support of a seasoned approach to program implementation and ultimately improvement in the quality of receiving waters regionally.

The City's Storm Water Management Program is served well through continued evolution and implementation of the CLEAN program introduced and detailed throughout this report. The City's integrated approach to public outreach and education is unique, and an approach that the City feels is well received by its diverse community with diverse environmental resources and interests. While many CLEAN concepts have come to fruition in 2008-2009, this program continues to grow in the coming years through ongoing efforts and commitment from the City of Chula Vista and its partners.

In subsequent reporting years, the City will continue to maintain a high standard of compliance with permit requirements through program planning and implementation and seek to continually evaluate and augment program elements as deemed necessary. Further, the City will seek to more fully integrate watershed based programmatic planning and development to foster a more well rounded approach to program implementation and to support long-term effectiveness assessment at local, watershed, and regional levels.

Low Impact Development (LID) and Hydromodification Management Plan (HMP) were the two major additional requirements to the new Municipal Permit. They required substantial resources from the Copermittees. The first update to local SUSMPs were submitted to the Regional Board in March 2008, and included interim conditions until the final Model SUSMP and HMP documents were developed. During the current reporting period, the updated Model SUSMP was completed and approved by the Regional Board. The HMP document is currently being finalized. The Copermittees' next major task would be the incorporation of these documents in their local SUSMP.

Additionally, both these concepts are relatively new to the development community of Southern California. Therefore, the City of Chula Vista expects challenges in enforcing these two requirements in its development review and approval process as the development community passes through the learning curve.

During the reporting period, the City of Chula Vista faced challenges created by additional requirements of the updated Municipal Permit and, financial problems due to the current economic downturn. Despite these challenges, the City placed highest priority on the protection of the region's water resources and the implementation of its JURMP. Dedicating significant sums from its General Fund to the Storm Water Management Program, the City was able to maintain the high standards of performance that were established in previous years.

## Attachment I

## FY 2008-2009 Commercial Inspections

***Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.***

| Inspection Date | Facility Name | APN Number | Address | | | Category | Priority | SIC Number |

## FY 2008-2009 Complaint Response Summary

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 1-Jul-08 | STREET | Commercial | 720 | H | ST | Slulry/Concrete Discharge |

**Comments Action Taken:** On 07/01/08 - Arrived on-scene and observed Western Pump staff conducted preliminary concrete cuts to replace concrete section around UST access. Observed discharge of slurry buildup in the parking lot and minor buildup on 3 feet of curbline. Discharge did not enter catch basin. Spoke with superintendent and he instructed his staff to immediately conduct cleanup using brooms and shovels. He contacted local crew to deliver shop-vac and gravel bags to contain during cutting operations. City vactor crew assisted the cleanup of the area affected on the property. Issued Administrative Citation SW070108-01 (Warning) to Western Pump. No Further Action Required.

| | | | | | | |
|---|---|---|---|---|---|---|
| 1-Jul-08 | STREET | Commercial | 696 | BROADWAY | | Leaking Vehicle |

**Comments Action Taken:** On 07/01/08 - Received phone call from CVFD Engine 52 - Battalion Chief of a sump sludge/used oil spill at A-1 Auto Detail & Repair. Arrived on-scene and observed approx. 1500 ft of curbline contaminated with sump sludge & used oil. CVFD and County HIRT Team on-scene to investigate and contain. CVFD personnel contained spill utilizing earthen berms to prevent the spill from entering open storm channel downstream. Property owner contracted North -State environmental services to conduct clean up of the site. City staff to conduct follow up on August 1, 2008. See continuation on Customer Tab

On 07/29/08 conducted follow-up to ensure that Sump and illegal connection was plugged or capped. Permanent caps were placed over PVC and glued to prevent removal. SE corner box was filled with concrete. Deep sink in maintenance bay was disconnected. No further action required.

| | | | | | | |
|---|---|---|---|---|---|---|
| 8-Jul-08 | STREET | Residential | 587 | FOURTH | AV | Leaking Vehicle |

**Comments Action Taken:** 7/8/08---Responded to report of leaky vehicle. Inspection oil stains on street in front of reported address, but no vehicle. Unable to trace origins of this leak.

7/9/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/11/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/14/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found. Spoke to complainant and explained that enforcement action could not be taken since evidence could not be found linking leak to responsible party. Left public education materials at homes in the area.

7/14/08---City crews spread absorbent, scrubbed area and swept area clean to eliminate the stain. No further action necessary at this time.

| | | | | | | |

| 14-Aug-08 | STORM DRAIN PIPE | Residential | 279 | D | ST | Sewage Spill Going Down Storm Drair |

**Comments Action Taken:**

GRAY WATER BEING DUMPED IN THE BACKYARD.

On 08/14/08 responded to a reported discharge of sewage/gray water into the storm drain system. Arrived onscene and did not observe or smell of any evidence of the discharge coming form the property. No further action is required.

On 8/22/08 received pictures via email from complainant of the alleged discharge. Photos showed a drain on the inside of the house and it appeared to be coming from the laundry room of the home. Photos did not show a private sewer cleanout at this location. The discharge appeared to be washwater from either a deep sink of washing machine. Small discharged was flowing into homes side yard and was not discharging onto the storm drain system. Referred complainant to DEH and Community Relations Officer for other concerns. No further action is required.

| 14-Aug-08 | STREET | Residential | 575 | PARKSIDE | DR | Power Washing |

**Comments Action Taken:**

On 08/14/08, received notification of resident powerwashing front walkway and patio. Arrived on-scene and observed a small stream of water coming from the residents curb drain. Heard resident powerwashing in the back but could not make contact due to the noise level. Issued Pollution Notice door hanger for resident to contact Storm Water Section.

On 08/15/08 received phone call from a Mr. Romero of the subject address. Mr. Romero explained that he was using measures to minimize the discharge to the gutter. He stated that he blocks off his area drain on the patio concrete and washes the water into his landscaping and does not use any chemicals. He has invited Storm Water staff to observe on the practices he uses next time that he intends to clean the area again. Explained to him to that his wash water is a violation of the CVMC and that he should utilize additional measures to prevent the discharge into the gutter. It was also explained that future complaints could result in increased enforcement actions.

| 22-Apr-09 | STREET | Residential | 891 | DATE | AV | Other |
| **Comments Action Taken:** | Received email from Doug Roberts from Sweetwater Authority with a voicemail message attached. The voicemail was from a resident who was complaining about a neighbor (891 Date Ave) who was discharging pool water for 1.5 hours on 04/21/09 and again 04/22/09. The resident did not leave any contact information, nor did he provide a description of the water being discharged. Drove by residence on 04/22/09 around 5pm. There was some water in the curb gutter area on the street on the same side as the address, but there was no evidence of water marks or staining coming from the address. On 04/23/09, called Doug Roberts and informed him that I drove by the residence and did not see evidence of pool discharge from this address. I explained to him that pool water, as long as it is clear and free of debris, is exempt from regulation. I told him to have the resident call me if he has any further questions. | | | | | |

| 26-Mar-09 | Asian Kars Auto Recycling | 6441812300 | 777 ENERGY WY | Auto Dismantlers | High | 937I017467 | 5015 |
| | **Comments/Findings:** | On 3/26/2009 conducted annual inspection to the site. Need to remove buildup of weeds, sediment, and trash from the drainage channel. Ensure stockpile of engine parts is removed. Store used oil under cover and place secondary containment. Clean up residual used oil. SWPPP is current. Follow up inspection to be conducted within 7 days. | | | | | |
| 26-Mar-09 | Japan Tech Auto Wrecking | | ENERGY WY | Auto Dismantlers | High | 937I020121 | 5015 |
| | **Comments/Findings:** | On 3/26/2009 conducted annual inspection to the site. Remove or cover stockpile of parts. Engines on the ground located throughout the facility must be stored properly. Conduct proper housekeeping and removed oil stains in the graveled area. SWPPP is current. Follow up inspections to be conducted within 30 days. | | | | | |
| 25-Mar-09 | Japanese Auto Wrecking | 6441811500 | 811 ENERGY WY | Auto Dismantlers | High | No WDID | 5015 |
| | **Comments/Findings:** | On 3/25/2009 conducted annual site inspection. Site is in general good condition. Did not have a representative on site. SWPPPP was unavailable for review. Follow up to be conducted at Japan Tech Auto- same owner the inspected site. | | | | | |
| 25-Mar-09 | Texano Auto Recycling | | 805 ENERGY WY | Recycling | High | 937I1021577 | 5015 |
| | **Comments/Findings:** | On 3/25/2009 conducted annual inspection to the site. Site is in general good condition. SWPPP is current. Samples were taken February 2009. This is a new business at this address. No follow up required. | | | | | |

| Inspection Date | Facility Name | APN Number | Address | | | Category | Priority | WDID Number | SIC Number |
|---|---|---|---|---|---|---|---|---|---|
| 25-Mar-09 | Pick Your Part Auto Wrecking | 6441820800 | 880 | ENERGY | WY | Auto Dismantlers | High | 937I012114 | 5015 |
| | **Comments/Findings:** | On 3/25/2009 conducted annual inspection. The site is in general good condition. SWPPP is current. Facility has sampled on 12/22/2008 and 02/16/2009. Need to cover drums in used oil storage area. Conduct general housekeeping specifically at crushing dismantling area. Follow up to be conducted within the next 5 days. | | | | | | | |
| 25-Mar-09 | All Toyota/Lexus Wrecking | 6441811500 | 805 | ENERGY | WY | Auto Dismantlers | High | 937I018543 | 5015 |
| | **Comments/Findings:** | On 3/25/2009 conducted annual inspection to the site. Site is general good condition except for the following: Parts storage area in the back of the facility needs cover. Need to remove stockpile of parts at the dismantling area. SWPPP is current. Samples taken with results pending. Follow-up to be conducted on 04/03/2009. | | | | | | | |
| 25-Mar-09 | South Bay Auto Wreckers | 6441820200 | 811 | ENERGY | WY | Auto Dismantlers | High | 9371004495 | 5015 |
| | **Comments/Findings:** | On 3/25/2009 conducted annual inspection to the site. Site is in general good condition. SWPPP is current and samples were taken Feb 2009. Results are pending. No follow-up is required. | | | | | | | |
| 23-Mar-09 | Calumet Auto Wrecking Inc | 6441821400 | 891 | ENERGY | WY | Auto Dismantlers | High | 937I004393 | 5015 |
| | **Comments/Findings:** | On 3/23/209 conducted annual inspection. Site is in general good condition with the following exceptions: a) Observed dumpster leaking fluids and batteries leaking fluids in the concrete containment area b) Recommend engines and parts on the pallets located behind main building be covered. SWPPP is current, site is member of group monitoring program. Items observed have been corrected and no follow up inspection is required. | | | | | | | |
| 23-Mar-09 | Allied Waste Services | 6441821600 | 881 | ENERGY | WY | Waste Management | High | 937I014355 | 4953 |
| | **Comments/Findings:** | On 3/23/2009 conducted annual inspection. Site is in general good condition with the following exceptions: a) Observed several oil stains in the service parking area b) Absorbent boom located at the southwest inlet needs replacement c) Recommend e-waste and hot water heaters be covered. During inspection discrepancies have been addressed. SWPPP is current, samples were taken for two rain events. No follow-up inspection is required. | | | | | | | |
| 23-Mar-09 | Honda Acura Parts Auto Recycling | 6441821500 | 895 | ENERGY | WY | Auto Dismantlers | High | 937i011394 | 5015 |
| | **Comments/Findings:** | Site is in general good condition. Recommend to cover parts stockpiled until recycled. Put hoods down at the end of business day. Site has liner installed to prevent seepage into soil. Member of Nest Environmental Group program. SWPPP is current. Sample date 11/07. No follow up inspection is required. | | | | | | | |
| 23-Mar-09 | ABF Freight System Inc. | 6441821700 | 875 | ENERGY | WY | Transportation | High | 937I013254 | 4213 |
| | **Comments/Findings:** | Site is in general good condition at the time of inspection. Need minor housekeeping of blown trash and debris. Sweep absorbents around storage area. Sampling data and SWPPP were not available at the time of inspection. Follow up to be conducted for SWPPP inspection in 14 days. | | | | | | | |
| 17-Mar-09 | GCE Industries Inc. | 6441813300 | 1891 | NIRVANA | AV | Manufacturing | High | No WDID | 3443 |
| | **Comments/Findings:** | Conducted follow-up inspection as a requested by City of San Diego IWCP. Observed non-storm water discharges from jet cleaning system. Found illegal connection of parts washing water. There is 55 gallon drum of alkaline near storm drain inlet. Recommend to contain and capture wash water and dispose of properly. Removed illegal connections divert to landscaping or sewer system. Deploy sandbags to protect drain inlets and relocate the 55 gallon alkaline drum either indoors or place secondary containment. Company was given 14 days to correct the discrepancies. | | | | | | | |

## FY 2008-2009 Inspection Action Summary

### Treatment Control BMP Inspections

***Note: All noted findings/discrepancies were addressed by City Staff/Crews following inspection acitivities.***

| Inspection Date | Project Name | Type of BMP Installed | Category | Priority | Development | Neighborhood | Responsible Party |
|---|---|---|---|---|---|---|---|
| 22-Sep-08 | Ada Terraces | MP-52 Drain Insert | Condo | Medium | Ada Street | Ada Street | Paul Miller Company |
| | **Comments/Findings:** On 9/22/2008, send notification letter regarding inspection and maintenance of storm water treatment facilities. | | | | | | |
| 29-Oct-08 | New Hope Church | TC-30 Vegetated Swale MP-52 Drain Inlet | Miscelleneous | Low | Eastlake Vistas | New Hope Community | New Hope Community Church |
| | **Comments/Findings:** Conducted inspection on the installation of the required vegetated swales. Swale guard pre-filters are installed per plan. | | | | | | |
| 13-May-09 | C.V. Commerce Center | MP-51 Vortex Separator | Miscelleneous | Medium | Main Street | Main Street | MarWest Real Estate |
| | **Comments/Findings:** On 5/13/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .The hydrodynamics separator unit (CDS) were observed to have trash & debris in the containment area.. Provide proof of the cleaning and maintenance of the unit by 6/12/2009. **see attachment** | | | | | | |
| 25-May-09 | Eastlake Terrace-Landswap | MP-52 Drain Insert | Miscelleneous | High | Eastlake Terraces | Eastlake Landswap | Gatlin Development |
| | **Comments/Findings:** On 05/25/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. .All drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters by 6/12/2009. **see attachment** | | | | | | |
| 26-May-09 | The Collections @ Eastlake | MP-52 Drain Insert | Commercial | Low | Eastlake | Eastlake Business District | Mar West Real Estate |
| | **Comments/Findings:** On 5/26/2009 conducted annual inspection and verification on the cleaning and maintenance of the post construction BMPs. Drain filter inserts were observed to have accumulation of trash and debris in the containment area. Provide proof of the cleaning and maintenance of the filters. **see attachment** | | | | | | |

**SUBJECT: SUBMITTAL OF JURMP ANNUAL REPORT NO. 29 SECTION 7.0 FOR FISCAL YEAR 2008-2009**

Enclosed please find one hard copy and three CD-ROMs of the City of Chula Vista's Jurisdictional Urban Runoff Management Program Annual Report No. 29 Section 7.0 – Illicit Discharge Detection and Elimination Component for Fiscal-Year 2008-2009 and the City of Chula Vista Dry Weather Field Screening and Analytical Monitoring Program 2009. The main report was submitted on September 28, 2009 under separate cover. Pursuant to the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 and Addendum No. 2 to Order No. R9-2007-0001, I request that the County of San Diego, as the Principal Copermittee, submits said report to the Regional Water Quality Control Board.

Should you have any questions please call me at (619) 397-6111. Thank you.

K. Aminpour

## EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. Prior to that date, NPDES Municipal Permit, Order No. 2001-01 regulated discharges from urbanized areas of San Diego County. This report covers the implementation period of July 1, 2008 to June 30, 2009. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the Municipal Permit, Order No. R9-2007-0001.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has therefore been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2008 to June 30, 2009, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (to be submitted under separate cover on or before December 15, 2009, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Section 7.0 of this report includes a summary of the City's 2009 Dry Weather Field Screening and Analytical Monitoring Program report, follow-up investigations, as well as a summary of the Illicit Discharges and Connections program for FY 2008-2009. As mandated by Addendum No. 2 to Order No. R9-2007-0001, the County of San Diego, as Principal Copermittee, will submit this section as a part of the unified JURMP to the Regional Board by December 15, 2009. As required under Section III.A.2 of the Receiving Waters and Urban Runoff Monitoring and Reporting Program, the Principal Copermittee will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2008-2009 monitoring season on January 31, 2010.

During the current reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2008-2009 rainy season on January 31, 2010.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2008 to June 30, 2009. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

## 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.*

*Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.*

*Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.*

*Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.*

*Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.*

*Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.*

*Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.*

*Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.*

*Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.*

*Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.*

*Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.*

*Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.*

## 7.1 INTRODUCTION

Illicit connections and illicit discharges (IC/ID) to the MS4 can potentially impact water quality if they are not eliminated. Examples of illicit discharges include wash-water, sediment, spilled chemicals, sewage releases, and pollutants from various sources. An illicit connection is a connection that conveys an illicit discharge to the MS4 via a pipe, drain, channel, etc. The City utilizes the following mechanisms to actively seek and eliminate illicit discharges and connections to the MS4:

1. Public complaint response and investigation
2. Inspection of local businesses and municipal facilities
3. Dry weather field screening and analytical monitoring
4. Municipal MS4 and sewer inspection and maintenance activities
5. Providing educational outreach to the community and business owners

This section provides a summary of:

- Reported illegal discharges and investigation by City staff
- Spill response and reporting
- Dry Weather Field Screening and Analytical Monitoring activities conducted within the 2009 Dry Weather Monitoring Season (May 1 – September 30)
- Follow-up investigations conducted to determine the potential source(s) of pollutants that exceeded their respective action levels.

Effectiveness assessment of the Illicit Discharge Detection and Elimination Component is included in Section 11.0 of this annual report.

Inspection of municipal facilities and industrial/commercial businesses are addressed in Sections 2.0 and 5.0 of this report. Municipal MS4 and sewer maintenance activities are described below and in Section 2.0 of this report. Educational outreach is described in Section 8.0.

## 7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

The City operates a hotline (619)397-6000 for residents, employees, and the general public to report any illicit discharges to storm water conveyance systems. The hotline is publicized through several venues such as the City's website, City bus signs, and various storm water educational materials and brochures. The hotline is answered by Public Works dispatch staff, who routes the concern(s) to the appropriate section(s) within the City's Public Works Department. All calls are entered into a database, and all potential IC/IDs are investigated by Storm Water Management Section staff. Storm Water Management Section staff takes

immediate action to respond, investigate, provide education, and take enforcement actions as necessary. Staff also ensures that City crews or the responsible party contains and cleans any spills. Public Works crews are equipped with vactor trucks to contain and clean large spills. When hazardous materials are involved, all appropriate City departments or other agencies such as the Fire Department or the County of San Diego are notified as necessary.

During the reporting year, there were 144 calls to the hotline, compared to 131 calls in FY 2007-2008. Figure 7-1 compares the number of complaints from FY 1997-1998 through FY 2008-2009. As part of its education component, the City advertises the hotline on its website and trains City employees to report any illegal discharges. Attachment L summarizes all calls to the hotline and describes the outcomes of each. Attachment K is a summary of all illegal discharges to the MS4 or other violations of the City's Storm Water Ordinance that resulted in enforcement actions for FY 2008-2009.

**Figure 7-1** City of Chula Vista Storm Water Complaint Summary 1997-2009

## 7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

Section 9.0 of the City's JURMP document outlines the procedures for preventing discharges of sewage to the MS4 and the mechanism whereby notification of sewage spills from private laterals, septic systems, and others spills are received. City staff is trained to report all spills to the dispatch hotline and crews are prepared to respond, contain, and cleanup spills where necessary. In addition, Section 9.0 of the City's JURMP details the City's Sanitary Sewer Overflow Response Plan (SSORP) as required by RWQCB Order No. 96-04 and a Capacity, Management, Operations, and Maintenance (CMOM) program. The City has also developed a

Fats, Oil, and Grease (FOG) Monitoring Program to reduce the amount of FOG introduced into the sanitary sewer system by businesses.

Table 7-1 provides a summary of illegal discharges and spills and the number of each. All discharges and spills were immediately responded to, contained, cleaned, and eliminated.

**Table 7-1** Types of Spills/Discharges and Number of Each During FY 2008-2009

| TYPE OF SPILL/DISCHARGE | NUMBER |
|---|---|
| Construction BMPs Violation | 4 |
| Driveway-Trash Washing | 1 |
| Grease/Food/Drink Discharge | 3 |
| Leaking Containers/Tanks | 2 |
| Others/Unknown Discharge | 1 |
| Painting-Sanding Residue | 4 |
| Power or Carpet Wash Water | 2 |
| Resident Cleaning Residue | 1 |
| Saw Cutting/Sanding Discharge | 2 |
| Sediment Discharge | 9 |
| Sewage Spill/Discharge | 3 |
| Slurry/Concrete Discharge | 3 |
| Trash/Debris Discharge | 1 |
| Vehicle Oil Discharge | 4 |
| Vehicle Washing/Dismantling | 1 |
| **TOTAL** | 41 |

City inspectors are constantly on the lookout for illegal connections during their routine response to reported violations or industrial/commercial inspections. When a floor drain within a structure is suspected of being connected to the storm water conveyance system or discharging to the street gutter, such connection is verified by dye testing. If the indoor drain is connected to storm drains, it is considered illegal and ordered to be disconnected immediately. In addition, the City's maintenance crews have been trained to look for illicit discharges and connections during their daily activities in the field. This process has resulted in the identification of several illicit discharges and connections each year.

## 7.4 URBAN RUNOFF MONITORING

The 2009 Dry Weather Field Screening and Analytical Monitoring Program Report has been submitted as Attachment M, along with an updated Dry Weather Field Screening and Analytical Stations Map. During the reporting period, the MS4 map and the dry weather monitoring maps were reviewed for inaccuracies, and no amendments were necessary. Fifty-seven primary monitoring sites were visited during the 2009 Dry Weather Monitoring Program, and samples were collected and analyzed at 55 of these sites. Sites CEN-08 and TCS were dry, so two alternate locations, SWR-03-E and SCR-06, were chosen to replace these sites. Thirty-six sites had measurable flow and 21 sites were ponded. Fifteen sites received laboratory analysis in

addition to normal field screening. Table 7-2 provides a summary of exceedances for both field and laboratory analysis.

Under the previous Municipal Permit, the main round of monitoring was followed by a follow-up monitoring round within one or two months of each other. Under the current Municipal Permit, the main round and follow-up monitoring are combined.

**Table 7-2** Summary of Action Level Exceedances for the 2009 Dry Weather Monitoring and Field Screening Analysis

| FIELD SCREENING ANALYSIS (57 Samples) | | | |
|---|---|---|---|
| **Analyte** | **Number of Exceedances** | **% of Sites with Exceedances** | **Site(s) Exceeding Action Level** |
| pH | 2 | 4 | BAY-01, CEN-04 |
| Conductivity | 0 | 0 | None |
| Turbidity | 0 | 0 | None |
| Surfactants (MBAS) | 4 | 7 | CEN-08, OVR-09, SCR-05, SUN-02 |
| Ammonia-N | 4 | 7 | OVR-14, SCR-04, SUN-03, SWB-03 |
| Nitrate-N | 11 | 19 | OVR-07, RCC-03, RCC-04, SCR-02, SCR-05, SUN-02, SUN-06, SWB-03, TCC-03, TCC-05, WOL-02 |
| Orthophosphate-P | 2 | 4 | BAY-02, SCR-04 |
| Glycol | 1 | 2 | SVS-02 |

MBAS = Methylene Blue Active Substances

| LABORATORY ANALYSIS (15 Samples) | | | |
|---|---|---|---|
| **Analyte** | **Number of Exceedances** | **% of Sites with Exceedances** | **Site(s) Exceeding Action Level** |
| Oil and Grease | 0 | 0 | None |
| Cadmium (Dissolved) | 0 | 0 | None |
| Copper (Dissolved) | 0 | 0 | None |
| Lead (Dissolved) | 0 | 0 | None |
| Zinc (Dissolved) | 0 | 0 | None |
| Diazinon | 0 | 0 | None |
| Chlorpyrifos | 0 | 0 | None |
| Total Coliforms | 4 | 27 | RCC-01, SCR-01, SUN-05, SWR-03-E |
| Fecal Coliforms | 2 | 13 | SCR-01, SWR-03-E |
| *Enterococcus* | 4 | 27 | JUD-01, SCR-01, SUN-05, SWR-03-E |

Note: Table data is based on routine visits only. Confirmation, follow-up and dry site visits are not included.

Since 2002, no exceedances have been measured for temperature, cadmium, copper, lead, or chlorpyrifos.

The historical data for the results of field analysis presented in Figure 7-2 indicates a decreasing trend in ammonia concentrations. Orthophosphate exceedances have been very rare in all years, with two exceedances this year. No discernable trend is apparent for glycol or surfactants results, which have fluctuated from year to year.

**Figure 7-2** Percent of Sites with Field Constituents Exceedances by Year

* The action level for conductivity was numeric in the past but was later changed to best professional judgment.

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 11 sites, an improvement from 16 exceedances in the previous year. The possible sources of nitrate-nitrogen exceedances include fertilizer runoff from overwatering and possible groundwater seepage into the storm drain system. Bacteria was elevated at 10 sites. The one glycol action level exceedance was tested within normal range at the confirmation visit. Ammonia tested above the action level at four sites. Upon the confirmation visits, three sites were dry and one still had an elevated ammonia level, which was due to decaying organic material in ponded water. Surfactants tested above the action level at four sites. Upon confirmation visits, two sites were found to be below in the action level, indicating a transient source; the other two sites had evidence of equipment and vehicle washing in the areas upstream. Orthophosphate-P was above the action level at two sites. Upon their confirmation visits, it was determined that both action level exceedances were caused by transient sources.

Historical data for laboratory analyses presented in Figure 7-3 indicates relatively high bacteria exceedance rates, although the fecal coliform exceedance rate has decreased somewhat over the years. Zinc and diazinon have not been detected above their action levels since 2003. Prior to

2003 the rates of exceedances were approximately 10% per year. Surfactants and oil and grease have generally had no exceedances or only a minimal number of exceedances over the years.

**Figure 7-3** Percent of Sites with Laboratory Exceedances by Year

The City continued to implement the trash monitoring program, as required by the Municipal Permit. Of the 57 sites, 44% were found to be Optimal, 37% were Suboptimal, 14% were Marginal, 5% were Submarginal, and 0% were Poor. The main sources of trash came from household, commercial, and transient sources. As a part of trash assessment, sites were evaluated for potential threat to human or aquatic health. One site was found to have potential threat to aquatic health and was immediately cleaned by City crews. The 11 Marginal and Submarginal sites were noted to City crews as sites needing more routine maintenance and trash pick-up.

In addition, the City began implementation of the MS4 Outfall Monitoring Program – Dry Targeted Portion during this dry season, in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan, and as required by the Municipal Permit. Ten dry weather monitoring sites were laboratory analyzed for constituents as detailed in Table 7-3 below. These results were reported in regional spreadsheet database as a part of the Regional Monitoring Program. As there are no established water quality standards for MS4 results, these data will be compared relative to each other beginning in dry season 2010.

**Table 7-3** MS4 Outfall Monitoring Locations and Constituents Analyzed

| OUTFALL NAME | CONSTITUENTS ANALYZED |
|---|---|
| BAY-01 | Bacteria and Dissolved metals |
| CEN-01 | Bacteria, Dissolved metals, and TDS |
| JUD-01 | Bacteria and Dissolved metals |
| PRD-02 | Bacteria and Dissolved metals |
| RCC-02 | Bacteria, Dissolved metals, and TDS |
| SCR-01 | Bacteria and Dissolved metals |
| SUN-06 | Bacteria, Dissolved metals, and TDS |
| SVS-01 | Bacteria, Dissolved metals, and TDS |
| TCC-03 | Bacteria, Dissolved metals, and TDS |
| TCC-04 | Bacteria, Dissolved metals, and TDS |

## 7.5 FOLLOW-UP AND ENFORCEMENT

Twenty-five sites had constituents above their respective action levels. Table 7-3 shows the sites with elevated constituent level and their probable sources based on upstream investigations.

**Table 7-4** Summary of Upstream Investigations

| SITE | UPSTREAM INVESTIGATION TARGET CONSTITUENT(S) | | RESULTS/ PROBABLE SOURCE |
|---|---|---|---|
| | Field | Laboratory | |
| BAY-01 | pH | - | Decreased CO2 due to photosynthesis and reduced CO2 solubility due to high water temperature. |
| BAY-02 | Orthophosphate-P | - | Transient flow |
| CEN-04 | pH | - | Decreased CO2 due to photosynthesis and reduced CO2 solubility due to high water temperature |
| CEN-08 | Surfactants | - | Car wash area in Cabrillo Mobile Lodge residential community |
| JUD-01 | - | Enterococcus | Trash in the channel immediately upstream of the site |
| OVR-07 | Nitrate-N | - | Nitrate-enriched groundwater seepage, possibly secondary to landscaping |
| OVR-09 | Surfactants | - | Equipment washing by upstream business |
| OVR-14 | Ammonia-N | - | Ammonia-N levels likely concentrated by evaporation of ponded water |
| RCC-01 | - | Total Coliform | Dish washing behind China China restaurant; dirty grease bin a possible source |
| RCC-03 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| RCC-04 | Nitrate-N | - | Nitrate-enriched groundwater seepage |

Table 7-4 continued on next page

Table 7-4 continued

| | | | |
|---|---|---|---|
| SCR-01 | - | Total Coliform, Fecal Coliform, Enterococcus | Combination of plant debris, excess irrigation, and possibly pet waste; stagnant water in MS4 may promote bacterial growth |
| SCR-02 | Nitrate-N | - | Nitrate-enriched groundwater seepage, possibly secondary to landscaping |
| SCR-04 | Orthophosphate-P, Ammonia-N | - | Landscaping fertilization in new residential community, possibly concentrated by evaporating water |
| SCR-05 | Nitrate-N, Surfactants | - | Nitrate-N: Landscaping fertilization and over-irrigation in new residential developments<br>Surfactants: Transient flow |
| SUN-02 | Nitrate-N, Surfactants | - | Nitrate-N: Groundwater seepage along landscaped hillside on the south side of East H Street/ Proctor Valley Road<br>Surfactants: Transient flow |
| SUN-03 | Ammonia-N | - | Decomposing aquatic fauna and evaporating ponded water |
| SUN-05 | - | Total Coliform, Enterococcus | Decomposing plant debris |
| SUN-06 | Nitrate-N | - | Landscaping fertilization in new residential developments and possible seepage of nitrate-containing groundwater |
| SVS-02 | Glycol | - | Transient flow |
| SWB-03 | Ammonia-N, Nitrate-N | - | Landscaping fertilization, possibly concentrated by evaporating water |
| SWR-03-E | - | Total Coliform, Fecal Coliform, Enterococcus | Transient flow |
| TCC-03 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| TCC-05 | Nitrate-N | - | Nitrate-enriched groundwater seepage |
| WOL-02 | Nitrate-N | - | Landscaping fertilization in new residential developments |

Based on the results of the 2009 Dry Weather Field Screening and Analytical Monitoring Program as well as the Follow-Up Investigation Program, the City was provided with recommendations for dry weather monitoring sites and surrounding areas in need of cleaning and neighborhoods where storm water pollution prevention education is needed. The City is in the process of completing these recommended cleaning and education activities and is working to minimize illicit discharges. During the reporting period, there were no instances that required additional investigations or follow-up activities above and beyond those conducted during the 2009 Dry Weather Monitoring Program. More information about the recommendations from City's Dry Weather Monitoring and Field Screening Program and Follow-up Investigations can be found in Attachment M.

## Attachment L

## FY 2008-2009 Complaint Response Summary

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 1-Jul-08 | STREET | Commercial | 720 | H | ST | Slulry/Concrete Discharge |

**Comments Action Taken:** On 07/01/08 - Arrived on-scene and observed Western Pump staff conducted preliminary concrete cuts to replace concrete section around UST access. Observed discharge of slurry buildup in the parking lot and minor buildup on 3 feet of curbline. Discharge did not enter catch basin. Spoke with superintendent and he instructed his staff to immediately conduct cleanup using brooms and shovels. He contacted local crew to deliver shop-vac and gravel bags to contain during cutting operations. City vactor crew assisted the cleanup of the area affected on the property. Issued Administrative Citation SW070108-01 (Warning) to Western Pump. No Further Action Required.

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 1-Jul-08 | STREET | Commercial | 696 | BROADWAY | | Leaking Vehicle |

**Comments Action Taken:** On 07/01/08 - Received phone call from CVFD Engine 52 - Battalion Chief of a sump sludge/used oil spill at A-1 Auto Detail & Repair. Arrived on-scene and observed approx. 1500 ft of curbline contaminated with sump sludge & used oil. CVFD and County HIRT Team on-scene to investigate and contain. CVFD personnel contained spill utilizing earthen berms to prevent the spill from entering open storm channel downstream. Property owner contracted North -State environmental services to conduct clean up of the site. City staff to conduct follow up on August 1, 2008. See continuation on Customer Tab

On 07/29/08 conducted follow-up to ensure that Sump and illegal connection was plugged or capped. Permanent caps were placed over PVC and glued to prevent removal. SE corner box was filled with concrete. Deep sink in maintenance bay was disconnected. No further action required.

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 8-Jul-08 | STREET | Residential | 587 | FOURTH | AV | Leaking Vehicle |

**Comments Action Taken:** 7/8/08---Responded to report of leaky vehicle. Inspection oil stains on street in front of reported address, but no vehicle. Unable to trace origins of this leak.

7/9/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/11/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found

7/14/08--- Returned in AM to try and find responsible vehicle. No leaky vehicles were found. Spoke to complainant and explained that enforcement action could not be taken since evidence could not be found linking leak to responsible party. Left public education materials at homes in the area.

7/14/08---City crews spread absorbent, scrubbed area and swept area clean to eliminate the stain. No further action necessary at this time.

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 10-Jul-08 | STREET | Residential | 819 | CORNELL | AV | Dirt Tracking |

**Comments Action Taken:** 7/10/08---Responded to report of unknown discharge from residence at 819 Cornell. Inspection found evidence of water discharged from address in question. Also found sediment and sand that appeared to be washed away. Spoke to homeowner who stated that he had washed off his driveway. He also stated that he was not using any sand or dirt. Administrative citation warning SW 1662 was issued. City crews cleaned all areas of the storm drain system impacted by this spill. No further action necessary at this time.

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 14-Jul-08 | STREET | Residential | | F | ST | Leaking Vehicle |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| **Comments Action Taken:** | 7/14/08---Responded to report of unknown discharge from motor home at 673 F Street. Inspection found evidence of small discharge from gray water tank of motor home in question. Spoke to vehicle owner who stated that she knew about the leak and that she was planning on getting it fixed. Issued administrative citation warning SW1663 with the requirement to repair the tanks and provide city with copies of receipts. Also issued order to immediately drive the motor home to the local RV dump station.<br><br>7/22/08--- Received call from vehicle owner stating that all repairs had been made and asking if copies were ok by mail. Waiting for mailed copies before case can be closed.<br>7/25/08---Received documents. No further action necessary at this time. | | | | | |
| 14-Jul-08 | STREET | Residential | 687 | FOURTH | AV | Accident/Spill |
| **Comments Action Taken:** | 7/14/08----Called in request for street crews to clean up oil spill in front of 687 Fourth Ave. 7/14/08---Conducted follow-up inspection and crews had cleaned up spill to the MEP. | | | | | |
| 16-Jul-08 | STREET | Residential | 1369 | MARTIN | PL | Accident/Spill |
| **Comments Action Taken:** | On 7/16/08---Otay Water District reported a fuel spill at 1369 Martin Place. Storm Water staff responded and observed small diesel fuel spill from residents driveway and minor contamination of approx. 30 feet of curbline. Spill was old and already dried. Small amount of accumulation located 2 houses down. Residents son arrived home and stated that his employer's bobcat leaked the fuel and was supposed to clean up before he left. Instructed resident to conduct proper cleanup and remain at location and contact City staff for follow-up that the spill was properly cleaned. City staff conducted follow-up approximately 1.5 hours later and observed that the resident purchased oil absorbent materials from Pep Boys and properly cleaned the spill. Issued resident City Storm Water education Package for Mobile Construction Related Businesses. Instructed resident to inform employer to relocate bobcat from his resident and to conduct refueling at construction site and utilize BMPs such as plastic sheeting, containment pans and to refuel away from impervious areas. NFA Required. | | | | | |
| 21-Jul-08 | STREET | Residential | 1096 | FOREST LAKE | DR | Paint Discharge |
| **Comments Action Taken:** | 7/21/08---Responded to report of paint in the SWCS from 1096 Forest Lake Dr. Inspection noted evidence of water based paint discharges from address in question. Issued administrative citation warning SW B0721081. No further action necessary at this time. | | | | | |
| 23-Jul-08 | STREET | Industrial | 811 | ENERGY | WY | Dirt Tracking |
| **Comments Action Taken:** | 7/1/08--- Responded to report of over irrigation, storm drains full of trash and debris, and damaged "No Dumping" signs at inlet. Inspection found inlets clean and free of trash and debris, no evidence of over irrigation, some sections of the curb and gutter had pine needles, and small amounts of trash, and all "No Dumping" plaques were in good condition. Notified street sweeping regarding pine needles. No violations were observed. No further action is necessary at this time. | | | | | |
| 23-Jul-08 | STREET | Industrial | 855 | ENERGY | WY | Construction Debris & Waste |
| **Comments Action Taken:** | 7/1/08--- Responded to report of storm drains full of trash and debris, and damaged "No Dumping" signs at inlet. Inspection found inlets clean and free of trash and debris, and all "No Dumping" plaques were in good condition. No violations were observed. No further action is necessary at this time. | | | | | |
| 23-Jul-08 | STREET | Industrial | 850 | ENERGY | WY | Leaking Vehicle |
| **Comments Action Taken:** | 7/2/08--- Responded to report of oil spills onto the ground from vehicles waiting to be dismantled, open top trash containers, and damaged "No Dumping" signs on inlets. Inspection found all areas clean and free of oil spills, and all "No Dumping" plaques were in good condition. No violations were observed. No further action is necessary at this time. | | | | | |
| 23-Jul-08 | STREET | Commercial | 1751 | FOURTH | AV | Street Sweeping Needed |
| **Comments Action Taken:** | 7/2/08---Responded to report of uncovered dumpsters, trash and bottle caps littered on the ground, and lack of sweeping. Inspection found several open top containers used for handling and containment of recyclable commodities, facility and public right-of-way in front of this business were in good clean order. No violations were observed. No further action necessary at this time. | | | | | |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 23-Jul-08 | STREET | Residential | 640 | ASH | AV | Sewage Spill Going Down Storm Drair |
| **Comments Action Taken:** | 7/23/08---Responded to call of illegal dumping by driver of a motor home (Lic. 3MDD932). Inspection noted sewage spilled in the alley at the 600 blk of East Park Lane. Issued administrative citation warning SW B0723081. No further action necessary at this time. | | | | | |
| 25-Jul-08 | STREET | Commercial | | THIRD | AV | Slulry/Concrete Discharge |
| **Comments Action Taken:** | 7/25/08---Responded to report of concrete from a rental concrete trailer spilled into the SWCS at the intersection of Third and D Street. Inspection noted evidence of concrete in the SWCS. Called for City Crews to clean up spill. No further action necessary at this time. | | | | | |
| 25-Jul-08 | STREET | Commercial | 501 | FIFTH | AV | Slulry/Concrete Discharge |
| **Comments Action Taken:** | 7/25/08---Responded to report of concrete from a rental concrete trailer spilled into the SWCS at the intersection of Third and D Street. Inspection noted evidence of concrete in the SWCS. This report also included identical spills at the intersection of North Glover Ave. & Third Ave, the intersection of Fifth Ave. & C Street, and in front of 501 C Street. Issued administrative citation SW1665. No further action necessary at this time. | | | | | |

| **Comments Action Taken:** | Received email from Doug Roberts from Sweetwater Authority with a voicemail message attached. The voicemail was from a resident who was complaining about a neighbor (891 Date Ave) who was discharging pool water for 1.5 hours on 04/21/09 and again 04/22/09. The resident did not leave any contact information, nor did he provide a description of the water being discharged. Drove by residence on 04/22/09 around 5pm. There was some water in the curb gutter area on the street on the same side as the address, but there was no evidence of water marks or staining coming from the address. On 04/23/09, called Doug Roberts and informed him that I drove by the residence and did not see evidence of pool discharge from this address. I explained to him that pool water, as long as it is clear and free of debris, is exempt from regulation. I told him to have the resident call me if he has any further questions. | | | | | |

| **Comments Action Taken:** | 5/11/09---Received report of roadside fruit stand operator throwing cherries into the storm drain. Inspection noted a handful of cherries had rolled into the storm drain catch basin. Issued verbal warning to vendor to take precautions so that nothing could fall into the storm drain. During the inquiry the vendor stated that he did not have a business license, permit, or permission from the property owner to operate on the property he was selling from. The vendor stated that he did not want to get a fine from the city and on his own accord, broke down stand and left. | | | | | |
| 18-May-09 | STREET | Residential | 1109 | DEL MAR | AV | Unknown Discharge |
| **Comments Action Taken:** | GREY WATER FROM WASHER RUNNING INTO THE GUTTER. | | | | | |
| | 05/18/2009 Responded to the illegal discharge report. Resident was discharging washing machine waste to the street via a black plastic hose. Wastewater did not enter storm inlets as the sidewalk was unpaved. The resident was instructed to discontinue illegal discharge and connect to a toilet or sink inside the building. The resident complied and removed the hose. Follow-up inspection is required to ensure that the incident is not repeated. | | | | | |
| 22-May-09 | STREET | Residential | 469 | HIDDEN VISTA | DR | Washing Vehicle in Street |
| **Comments Action Taken:** | HE IS WASHING HIS BOAT IN THE STREET.MIKE HICE SAID IT WAS OK. | | | | | |
| | 5/22/09---Notice issued to inspector from dispatcher indicated residential washing of a vehicle and water running into street. Public information regarding the use of BMPs has been left at this address. | | | | | |
| 22-May-09 | STREET | Commercial | 1128 | BAY | BL | Unknown Discharge |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| **Comments Action Taken:** | HE DUMPED HIS LOAD OF WATER INTO THE STORM DRAIN | | | | | |
| | 5/22/09---Received report of carpet cleaning van discharging into the private storm drain inlet at 1128 Bay. Evidence of the discharge was not found. After speaking to the business owner it was clear that he was fully aware of all the NPDES requirements. However, his business did not have a license to operate in Chula Vista and therefore had not been registered with the City's Mobile Business Stormwater Education Program. This business was issued verbal notice to obtain a City of Chula Vista business license and complete the Mobile Business Stormwater Education Program and has complied. | | | | | |
| 29-May-09 | STREET | Residential | 32 | ORLANDO | CT | Slulry/Concrete Discharge |
| **Comments Action Taken:** | 5/26/09---Received report of concrete pump discharge at 32 Orlando Ct. Inspection did not find any evidence of a discharge. Spoke to property owner Francisco Delgado who stated that he and his family had poured concrete a few days prior, but that they were very careful to use BMPs. A courtesy notice was issued to Mr. Delgado to continue ensuring that all the all his contractors use BMPs. | | | | | |
| 1-Jun-09 | STREET | Residential | | OTAY LAKES | RD | Pool Filter Discharge |
| **Comments Action Taken:** | 5/26/09---Received report of pool filter discharge at Rutgers and Otay Lakes Rd. Inspection did not find any evidence of a pool discharges. Some areas of the gutter were stained with dry concrete that appeared white in color. The concrete stains were years old and cannot be cleaned. | | | | | |
| 2-Jun-09 | STREET | Construction Sites | 397 | INKOPAH | ST | Construction Debris & Waste |
| **Comments Action Taken:** | CONSTRUCTION BEING DONE AND WATER IS RUNNING DOWN FROM THIS ADDRESS. | | | | | |
| | 6/2/09---Received report of concrete pump operator washing into the street at 395 Inkopah St.. Inspection found evidence of discharges. Concrete pump operator said he was in the process of cleaning it and finished the clean up while the inspector was still there. Discharge was contained due to over growing vegetation in the gutter. Issued verbal warning to concrete pump operator to always clean up spills immediately. | | | | | |
| 3-Jun-09 | STREET | Residential | 2627 | FAIVRE | ST | Fuel/Oil/Gas Spill |
| **Comments Action Taken:** | 6/4/09---Received report of motor home discharging sewer at 2627 Faivre St. Initial inspection did not find evidence of a discharge. Will re-inspect on a different day and time to try and make contact with motor home owner and to ensure the motor home is not leaking. | | | | | |
| | 7/13/09---Periodic visits failed to find the suspect motor home. Spoke the business owner Cristobal Campos of Chula Vista Auto Repair (619) 429-6994. Issued verbal warning regarding municipal code and reminder that he and ultimately the property owner are responsible for preventing and controlling any spills from vehicles on the property including motor homes he or his staff is repairing. Mr Campos agreed and said that he would immediately report any motor homes discharging on the street. No further action is necessary at this time. | | | | | |
| 15-Jun-09 | STREET | Residential | 514 | OCEAN VIEW | LN | Fuel/Oil/Gas Spill |
| **Comments Action Taken:** | 6/16/09---Responded to report of oil in the street at the 514 Ocean View Ln. Did not find oil stain. Mistakenly visited Ocean Breeze Ln. | | | | | |
| | 6/17/09---Visited 514 Ocean View Ln. Found oil stain and spread absorbent over the stain. | | | | | |
| | 6/18/09---E-mailed the complainant as requested and called dispatch to establish a work request for street crews to sweep up the absorbent. | | | | | |
| 16-Jun-09 | STREET | Residential | 161 | VANCE | ST | Leaking Vehicle |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| **Comments Action Taken:** | OIL SPILL IN THE GUTTER.<br><br>6/10/09---Received report resident at 161 Vance St. changing oil in the street and allowing discharges flow in to the gutter. Inspection notes some oil stains on the street that we're not traceable to the address. Left note on door for resident to contact the inspector.<br><br>6/15/09---Made contact with resident who stated that they had washed the street and utilized proper BMPs to capture, contain and appropriately dispose of all wash water. A re-inspection confirmed that all had been cleaned. | | | | | |
| 17-Jun-09 | CATCH BASIN | Residential | 2347 | FOREST OAKS | DR | Unknown Discharge |
| **Comments Action Taken:** | 6/17/09---Responded to call of carpet cleaner discharging into the storm drain. inspection noted that the van-mounted carpet cleaning equipment was leaking clean water into the street, and that the carpet cleaning staff was inside the house. Issued verbal notice to stop work until the machine could be fixed. Carpet cleaning staff stated that they did not know the machine was leaking and would immediately stop work and have a replacement van dispatched out. Issued verbal warning to carpet cleaning staff informing them of CVMC14.20., and that replacement equipment would also be held to the municipal codes requirements. Carpet cleaning staff packed up equipment and left to get another van. No further action necessary at this time. | | | | | |

**The following organizations have contributed to the implementation of the JURMP in 2009-2010:**

- D-MAX Engineering, Inc.
- I Love a Clean San Diego, Inc.
- Otay Valley Regional Park (OVRP)
- The CLEAN Stakeholder Group

**The City of Chula Vista wishes to thank:**

- Volunteers who dedicated their time to improve water quality in Chula Vista
- Environmentally conscious citizens who reported illegal discharges
- Citizens, business owners, contractors, and developers who cooperated with City staff in implementing Best Management Practices

## EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. This is the third annual report submitted under the current permit and covers the implementation period of July 1, 2009 to June 30, 2010. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the stipulations of Section J.3.a of the Municipal Permit.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports, which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has, therefore, been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2009 to June 30, 2010, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (this section will be submitted under a separate cover on or before December 15, 2010, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Prior to the 2007-2008 report, the City submitted copies of its Dry Weather Field Screening and Analytical Monitoring Program report and any follow-up investigation reports for the previous dry weather season as attachments to its JURMP annual reports. Since the annual reports are now due to the Regional Board by September 30th of each year, and Dry Weather Field Screening activities can continue until September 30th, the Regional Board has agreed that Dry Weather Field Screening reports and their analysis can be submitted separately at a later date but no later than December 15th of each year. Section 7.0 of this report, the 2010 Dry Weather Field Screening report, and an analysis of its findings will be submitted to the Regional Board before December 15, 2010, as mandated by Addendum No. 2 to Order No. R9-2007-0001.

During this reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. The County of San Diego, as the Principal Copermittee, will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2009-2010 rainy season on January 31, 2011.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2009 to June 30, 2010. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

# 1.0 INTRODUCTION

## 1.1 BACKGROUND

The Clean Water Act of 1972 established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to the waters of the United States. In 1987, the Clean Water Act was amended to include non-point source pollutions such as urban runoff and established a framework for regulating urban storm water runoff and other non-point source pollutants through establishment of various general and individual permits issues to local governments and other agencies.

The California Regional Water Quality Control Board, San Diego Region (Regional Board), adopted the first NPDES General Municipal Permit for the San Diego Region in 1990. The NPDES Municipal Permit is re-issued approximately every five years. On January 24, 2007, the Regional Board adopted the latest NPDES General Municipal Permit for the San Diego Region, Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit regulates all new development, significant redevelopment, existing land use and other activities within the jurisdictional boundaries of the County of San Diego, the San Diego Unified Port District, the San Diego County Regional Airport Authority, and eighteen municipalities of San Diego County, collectively known as the Copermittees. The Municipal Permit requires all Copermittees to develop and implement programs to reduce the discharge of pollutants into and from their Municipal Separate Storm Sewer Systems (MS4s) and report all their efforts and achievements to the Regional Board on an annual basis.

Report No. 30 is an account of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2009 to June 30, 2010.

During this reporting period, and pursuant to the requirements of the Municipal Permit, the City of Chula Vista (City) has:

- Implemented inspection programs of high priority construction, municipal, industrial, commercial, and residential existing land uses.

- Provided education and training for City staff, developers, residents, and businesses on current storm water regulations and applicable Best Management Practices (BMPs) that can be implemented to reduce discharge of pollutants to the City's storm water conveyance systems.

- Continued Dry Weather Field Screening and Analytical Monitoring, and participated in the region-wide Receiving Water Monitoring Program, both of which are designed to evaluate water quality and identify sources of pollution to and from storm water conveyance systems.

- Inspected and maintained public facilities and activities for compliance with BMPs requirements.

- Participated in watershed and regional meetings and activities.

## 1.2 PURPOSE AND OBJECTIVES

Report No. 30 is a documentation of the City's efforts to minimize discharge of pollutants to and from its storm water conveyance systems and to reduce the impact of urban runoff on adjacent water bodies and sensitive areas. The following account describes the City's activities on the implementation of, and compliance with, the requirements of the Municipal Permit during the reporting period July 1, 2009 to June 30, 2010. The reporting year has been guided by insight through the Report of Waste Discharge and Long Term Effectiveness Assessments undertaken regionally in 2004-2005. These regional reporting and assessment efforts have provided valuable understanding on both local and watershed conditions, and offered the City information to support programmatic development and priority establishment throughout various elements presented within this report.

Sections 2.0 to 6.0 of this report describe the City's compliance activities during the current reporting period and include the following components:

- Development Planning
- Construction Program
- Municipal Program
- Industrial and Commercial Program
- Residential Program

Section 7.0 includes a description of the City's activities and analysis of the Illicit Discharge Detection and Elimination Component. In previous years, when submittal of JURMP annual reports were due to the Regional Board on or before January 31 of each year, Dry Weather Field Screening and Analytical Monitoring report findings were referenced and analyzed in this Section, and the reports themselves were submitted as attachments to the annual report. Addendum No. 2 to Order No. R9-2007-0001 acknowledges that Dry Weather Field Screening and Analytical Monitoring reports can no longer be completed by the new due date of the JURMP annual report submittal (September 30 of each year) and, therefore, Section 7.0 together with copies of Dry Weather Field Screening and Analytical Monitoring reports will be submitted to the Regional Board on or before December 15, 2010.

Section 8.0 highlights City's efforts and activities conducted during the reporting period to increase general public awareness about environmental issues and water quality protection and train City staff, business owners, developers, contractors, and other targeted groups to implement BMPs during their daily activities.

Section 9.0 is a description of the City's attempts to promote environmental and water quality awareness among the general public and particularly young people through their involvement and participation in environmental group activities.

Section 10.0 outlines an analysis of the City's storm water management fiscal resources as required by Section G of the Municipal Permit. The Copermittees developed a Standardized Fiscal Analysis Method and Format, dated January 29, 2009, which has been used in this report as a basis for the City's fiscal analysis in this section.

Section 11.0 of this report is dedicated to the effectiveness assessment of the City's implementation of the JURMP. The document titled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" and Section 13 of the City's JURMP document have been utilized to draw conclusions about the effectiveness of the City's JURMP implementation. It should be noted that effectiveness assessment is an on-going component of the JURMP program, and various program elements are revised as necessary, based on observations and findings.

Section 12.0 of the Standardized Format for JURMP Annual Report is dedicated to descriptions of any special investigations conducted during the reporting period. As indicated in this section, the City has determined that groundwater intrusion to surface receiving waters may have notable impacts on surface water quality and, therefore, during the current reporting period initiated a study to identify locations where groundwater is discharged to surface waters and, to characterize potential pollutants being discharged. This is an on-going study, which is expected to provide valuable insight in identifying sources of surface water contamination.

Section 13.0 of this report includes a description of the City's efforts to reduce pollutant discharges from non-emergency fire fighting flows. Such efforts include training of Fire Department staff to implement BMPs during their daily activities, fire-fighting exercises, and post-incident spill control and cleanup. Incorporation of post-construction BMPs in the design and construction of new fire stations is considered to be another method for minimizing pollutant discharges from washing fire fighting equipment and other non-emergency activities at fire stations and is discussed in this section.

Section 14.0 of this report is dedicated to descriptions of modifications to the JURMP document that were made during the reporting period, or that are proposed or planned, to maximize the City's JURMP effectiveness.

Section 15.0 includes the report's conclusions and recommendations. It provides an overall view of the City's implementation of its JURMP, assesses its strengths and weaknesses in general terms, and provides recommendations to improve next year's program.

## 2.0 DEVELOPMENT PLANNING COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a (3)(a) i – A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.*

*Permit Section J.3.a.(3)(a).ii - Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).iii - A listing of the development projects to which SUSMP requirements were applied.*

*Permit Section J.3.a.(3)(a).iv - Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).v - At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.*

*Permit Section J.3.a.(3)(a).vi - A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.*

*Permit Section J.3.a.(3)(a).vii - An updated treatment control BMP inventory*

.

*Permit Section J.3.a.(3)(a).viii - The number of treatment control BMPs inspected, including a summary of inspection results and findings.*

*Permit Section J.3.a.(3)(a).ix - A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.*

*Permit Section J.3.a.(3)(a).x - Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(a).xi - A listing of any projects which received a SUSMP waiver.*

*Permit Section J.3.a.(3)(a).xii - A description of implementation of any SUSMP waiver mitigation program.*

*Permit Section J.3.a.(3)(a).xiii - A description of Hydromodification Management Plan (HMP) development collaboration and participation.*

*Permit Section J.3.a.(3)(a).xiv - A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.*

*Permit Section J.3.a.(3)(a).xv - A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.*

*Permit Section J.3.a.(3)(a).xvi - A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.*

*Permit Section J.3.a.(3)(a).xvii - The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(a).xviii - A description of notable activities conducted to manage urban runoff from development projects.*

## 2.1 INTRODUCTION

Municipal Permit Section D.1 states "Each Copermittee shall implement a program which meets the requirements of this section and (1) reduces Development Project discharges of pollutants from the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP), (2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards, and (3) manages increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force."

This section describes actions taken during the defined reporting period by the City to minimize short- and long-term impacts of new development or redevelopment with land disturbance activities, structural development (including construction or installation of a building or structure), creation of impervious surfaces, and capital improvement projects. Through the implementation of the Development Planning Component, the City minimizes and manages increases in runoff from development projects to the MEP to protect receiving waters.

## 2.2 LAND-USE PLANNING

### 2.2.1 BACKGROUND

The City's land-use planning is guided by its General Plan and the goals, objectives, and policies included therein. The City's comprehensive General Plan Update (GPU) was completed in December of 2005. The GPU program was nearly a five-year effort, and included the

preparation of a citywide master drainage study and assessment and, a water quality baseline study to identify planning issues and policy implications, including compliance with the Municipal Permit and NPDES regulations.

Throughout the GPU process, the City solicited and received significant public input with respect to visions, goals, and objectives and conducted numerous public workshops to present and solicit input on alternative land use concepts. The GPU was adopted by City Council on December 13, 2005.

According to the Environmental Element of the GPU: "With further growth and redevelopment in Chula Vista, the projection of local and regional water resources must be adequately addressed. The City will continue its efforts to reduce the discharge of pollutants into the municipal storm drain system and natural water bodies in accordance with established NPDES standards and watershed planning efforts involving the City." One of the major objectives of the Environmental Element is to "Protect and improve water quality within surface water bodies and groundwater resources within and downstream of Chula Vista."

Water quality policies have been developed based upon those found within the Municipal Permit, and have been composed as to compliment the flow and content of the entire General Plan Update. The following water quality policies are contained in the Environmental Element:

- Ensure safely swimmable and fishable surface waters through careful management of land uses and activities within Chula Vista.
- Pursue safe alternatives to traditional pest management methods in order to reduce toxics in urban runoff and large open uses of land (e.g., golf courses, parks, agricultural lands.)
- Educate residents, business owners and City departments about feasible methods to minimize the discharge of pollutants into natural drainages and the municipal storm water conveyance system.
- Ensure compliance with current federal and state water quality regulations, including the implementation of applicable NPDES requirements and the City's Pollution Prevention Policy.
- Encourage and facilitate construction and land development techniques that minimize water quality impacts from urban development.
- Maximize the protection of potable water supply resources from pollutants.
- Collaborate with other applicable jurisdictions in the development and funding of regional watershed management plans.

In view of the above comprehensive water quality protection provisions in the Updated General Plan, the City does not find it necessary to make any amendments to its General Plan.

### 2.2.2 SOURCE CHARACTERIZATION

Seven categories of land uses are identified in the City's General Plan: residential, commercial, mixed-use, industrial, public, special planning areas, and streets/freeways/right-of-ways. Each category can be associated with its specific combination of activities and pollutants and the potential impact that those activities and pollutants may have on the environment, including

urban runoff quality. The City's land-use planning, project review, approval, and verification process includes environmental considerations such as source characterization, proximity to sensitive areas, pollutants and conditions of concern in receiving waters and sensitive areas, and measures necessary to minimize environmental impacts to the MEP.

Additionally, the Chula Vista Development Storm Water Manual (Manual), updated in 2010, provides guidelines and directives for development project applicants and City staff to identify pollutants and conditions of concern for each type of land use, both during and after construction, and recommend BMPs to mitigate negative impacts of proposed activities and increased impervious areas. The City's Jurisdictional Urban Runoff Management Plan (JURMP) includes a map (Map 2) showing environmentally sensitive areas within the City. Land use planning attempts to prevent, to the MEP, potentially pollutant-generating land uses from being located near environmentally sensitive areas.

During the reporting period, the City subjected all development project applications to applicable environmental review processes, including the Standard Urban Storm Water Mitigation Plan (SUSMP) process.

### 2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

To implement the policies outlined within the City's GPU, the City has developed the Manual. The Manual includes a comprehensive description of construction and post-construction BMPs that are required from each development project. Additionally, the Manual includes guidelines, flow charts, and directives for development applicants and City staff on how to identify applicable requirements for priority and non-priority projects. A section of the Manual has been dedicated to the City's SUSMP. Another section of the Manual outlines BMP requirements on construction sites during both rainy and dry seasons.

During the current reporting period, the City has ensured compliance with BMP requirements through development project reviews, construction and post-construction site inspections, and enforcement actions as necessary.

### 2.2.4 PROGRAM IMPLEMENTATION

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP as described in Section 2.4.4 of this report.

During Fiscal Year 2009-2010, in compliance with NPDES Municipal Permit requirements, the following document was updated:

- Chula Vista Development Storm Water Manual (including the City's SUSMP)

During the process of updating the above-referenced document, each of the City's implementation processes were objectively reviewed for any potential deficiencies and, based on extensive experience gained during the previous Municipal Permit implementation, significant

improvements were made throughout all aspects of the program. Those improvements are reflected in the above referenced updated document dated March 2010.

### 2.3 ENVIRONMENTAL REVIEW PROCESS

The Environmental Review Process for development and redevelopment projects occurs in two phases. The Environmental Planning Division of the Development Services Department reviews all development and redevelopment projects for compliance with California Environmental Quality Act (CEQA) requirements, which includes water quality considerations. The Permits and Land Development Divisions of the Development Services Department, and the Storm Water Management Section of the Public Works Department review development and redevelopment projects for compliance with requirements of the Clean Water Act, the Municipal Permit, and the City's Grading and Storm Water Management Ordinance requirements. Further, the Environmental Planning Division and the Storm Water Management Section, as needed, review project Environmental Impact Reports (EIRs) to ensure that water quality issues are adequately addressed at early stages of the Environmental Review Process.

The development review and SUSMP implementation processes within the City take place with close coordination of staff from various departments, divisions, and sections. The following departments, divisions, and sections are responsible for the review of development projects for SUSMP requirements:

- Development Services Department
- Public Works Department, Engineering
- Public Works Department, Operations - Storm Water Management Section

The Development Services Department, which is responsible for issuing grading and improvement permits, is the lead department for coordinating all SUSMP review activities. Development projects initiated in the Planning Division of the Development Services Department or other departments within the City are required to submit environmental documents showing compliance with all applicable environmental regulations. Initial Studies, Environmental Impact Reports, Public Facilities Finance Plans, etc., are routed to the Land Development Division for review and final approval.

Land Development Division staff reviews submitted documents and determines if a project is a Priority Development Project and subject to SUSMP requirements. All applicants are required to complete checklists included in the Manual in order to identify specific SUSMP BMP requirements.

Priority Development Projects are then required to submit Water Quality Technical Reports (WQTR) that include identification of project pollutants; Low Impact Development Site Design, Source Control, and Structural Treatment Control BMPs; calculations for sizing of treatment control BMPs; and a perpetual maintenance plan and funding mechanism. The applicants are required to sign an agreement with the City for the maintenance of post-construction BMPs. When necessary, the Land Development Division coordinates with the Storm Water Management Section for the latest developments and requirements in the SUSMP program.

The Land Development Division and Storm Water Management staff reviews WQTRs and ensures that appropriate BMPs are included in the design of projects. Through meetings and phone calls, developers and consultants are educated on the City's SUSMP requirements and are required to revise their WQTRs to include all corrections and amendments required by the City.

As noted above, and within the current reporting period, significant efforts were made by City staff to ensure complete and comprehensive WQTR reviews. This programmatic update was introduced to make certain that each WQTR includes a fully developed assessment of each post-construction BMP considered for the project. BMP analysis is required for Low Impact Development Site Design, Source Control, and Treatment Control BMPs, and effectively holds project designers accountable for demonstrating the effectiveness of the overall design.

The formal review of WQTRs by the Land Development Division and Storm Water Management staff provides an essential mechanism in emphasizing the use of effective site design features and higher efficiency treatment control BMPs. It is recognized that site design and/or structural BMPs are difficult to add to the completed design of a private development project without causing substantial changes to the project's character or viability. The earlier in the planning and design process that storm water quality facilities are considered, the greater the chance that a successful and efficient design can be achieved. During the reporting period, Land Development Division and Storm Water Management staff has strongly emphasized the use of site design features and high efficiency structural BMPs to be incorporated into project design.

Sufficient analysis and discourse must be included within submitted WQTRs to answer why or why not effective and efficient site design features and treatment controls have been selected and/or incorporated into a given project design. Based on the MEP Standards included within the City's SUSMP, staff will make a determination as to whether or not there has been adequate consideration of site design and high-efficiency BMP recommendations. It is noteworthy that projects without approved WQTRs will not move further along in the development review process, providing Land Development Division and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Public projects are initiated in the Public Works Department, Engineering, Design Section. Public projects undergo the same review process as private developments. Engineering staff has received training on SUSMP requirements, identification of SUSMP projects, and application of appropriate BMPs in project design. For complex projects, Storm Water Management staff is available for advice and assistance.

In the case of private SUSMP projects, before final approval of the project and issuance of a grading or improvement permit, the applicant is required to demonstrate that among other provisions, a program and funding mechanism for long-term maintenance of designated BMPs are in place. The applicant is required to sign an agreement with the City for the long-term maintenance of post-construction BMPs. The agreement is recorded and runs with the land.

Citywide project tracking is managed through specialized computer software utilized by the City (Permits Plus). The Permits Plus software is shared by all development services departments,

divisions, and sections within the City. The Permits Plus software package has been customized with a window for identifying SUSMP projects. All SUSMP projects are therefore readily identifiable via the Permits Plus software. Digital copies of final plans, including drainage and BMP plans, are submitted to the City's Geographic Information System (GIS) Section. They are linked to the CVMapper program, the City's internal computer-based mapping tool, for convenient accessibility to the Drainage Layer.

During the current reporting period, the City successfully implemented the environmental review process for all development and redevelopment project submittals. City staff reviewed fifteen projects that were required to implement SUSMP requirements as per the Manual.

## 2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

### 2.4.1 BACKGROUND

The development project approval and verification process is inherently complex due to the fact that many departments, divisions, and sections of the City are involved. As discussed earlier in this Section, and as part of the update of the City's JURMP and the Manual, which culminated in March 2008 and March 2010 respectively, specific attention was focused on identifying gaps or inconsistencies within the development project approval and verification process. During a long process of coordination with all departments involved in the development services, adjustments, amendments, and revisions were made to existing processes. As a result, a more elaborate process with new milestones, flags, checks, and notifications were added to warn staff of any shortcomings in the project approval process. A comprehensive flow chart was created to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. A copy of the referenced flow chart is included in Appendix D of the City's JURMP.

### 2.4.2 SOURCE CHARACTERIZATION

Development projects have the potential to discharge different types and amounts of pollutants based on the development project's size and intended land use. Pollutants such as trash and debris are anticipated from all developments regardless of land use; however, pollutants like bacteria and viruses are more likely to originate from restaurants and residential developments rather than from parking lots and automotive repair shops. Since the potential for a site to discharge pollutants is unique to each development, the City's design requirements for development projects vary according to size, project characteristics, and anticipated land use.

The City's updated SUSMP describes 12 specific categories for Priority Projects and indicates common pollutants associated with each category. A Priority Project must identify the potential pollutants anticipated from its development and implement design concepts and other BMPs to address these pollutants.

All development projects, including non-Priority Projects, are required to meet the applicable BMP requirements as outlined in the Manual.

During the current reporting period, all development projects were required to identify their proposed land uses and activities that may potentially generate pollutants. Such pollutants were compared to pollutants of concern within downstream receiving waters. Applicable BMPs were required during the project approval and verification process.

### 2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's minimum BMP requirements for all development projects are outlined below and are included in the Manual. All development projects are required to implement the following principles, where applicable:

- Source control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed material and trash storage areas, and use of efficient irrigation systems.

- Low Impact Development (LID) BMPs that maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary.

- Provide buffer zones or other buffers for natural water bodies.

- Grading and construction activities must implement all applicable erosion and sediment control BMPs and minimize the discharge of non-visible pollutants.

- Submittal of proof of a mechanism for ongoing long-term maintenance of all structural post-construction BMPs.

During the project approval and verification process, all project submittals were reviewed for compliance with the minimum BMP requirements described above.

### 2.4.4 PROGRAM IMPLEMENTATION

The City's SUSMP document was developed around the regulatory standards mandated in the Municipal Permit to address post-construction urban runoff pollution from new development and significant redevelopment projects. The goal of the SUSMP is to develop and implement policies to ensure that to the maximum extent practicable, development does not increase pollutant loads from a project site and considers runoff flow rates and volumes. The City's SUSMP is incorporated into a document titled "Development Storm Water Manual," available on the web at:

http://www.chulavistaca.gov/clean/StormWater/DevelopAndConst.asp

In addition to the City's SUSMP, the Manual includes guidelines for developers and other interested parties to understand the City's storm water review process; forms required to establish eligibility under various project requirements; and a section on minimum BMPs requirements during project's construction phase.

In March, 2010, City Council approved the updates to the City's SUSMP and Manual. The Updated SUSMP and Manual incorporate standards for construction and post-construction phases of development and redevelopment projects that meet the requirements of the Municipal Permit. Concurrently, the City's Storm Water Management and Discharge Control and Grading Ordinances were updated to incorporate the Manual (which includes the City's SUSMP) by reference.

#### 2.4.4.1 NOTABLE ACTIVITIES

In 2009-2010, notable improvements in processes and protocols supporting SUSMP implementation have been made by Storm Water Management staff in efforts to continually refine this program element. Significant programmatic updates within the defined reporting period include:

- Adoption of more stringent standards for post-construction Low Impact Development Site Design BMPs, Source Control BMPs, Treatment Control BMPs, and Interim Hydromodification Criteria.
- Emphasis on the use of structural BMPs with high pollutant removal efficiency.
- Requirements to fully develop WQTRs discussions to evaluate the use of all post-construction BMPs considered.
- Continued population of post-construction BMP GIS layer, including the addition of project-specific WQTR document and Maintenance Agreement links through the Grading Plan Layer.
- Creation of flags and checks in the SUSMP review and implementation process to ensure that all SUSMP projects are properly tracked and documented.
- Site inspections of all development projects to ensure proper installation of construction and post-construction BMPs.

#### 2.4.4.2 CONFIRMATION OF APPROVAL PROCESS

During the reporting period, all private development projects submitted to the City for review and approval of construction or grading permits, and public projects initiated by the City were required to undergo the urban runoff approval process and meet the applicable project requirements. Private development permit applications are tracked in Permits Plus, which is a project tracking software shared by all departments and divisions involved in development services. Flags and checks have been established in Permits Plus to ensure that all Priority Development projects undergo the appropriate review and documentation process. Copies of approved WQTRs, grading or construction plans, and post-construction BMPs' maintenance agreements are scanned and digitally saved. The City maintained the database necessary to link the above referenced documents and the CVMapper software, which is a mapping tool based on the GIS system. This system enables City staff to get copies of the above referenced documents by clicking on the project's grading layer and to make prints as necessary.

Public projects are tracked in a database maintained by the City's Public Works Department, Engineering. A list of all public projects, showing the status of each project, is distributed to various staff members on a monthly basis. The list, among other information, includes a column

showing environmental requirements for each project, including WQTRs and Storm Water Pollution Prevention Plans. The list is discussed in monthly meetings set up specifically for public projects. A Storm Water Management Section representative attends such meetings and provides input as necessary.

#### 2.4.4.3 LISTING OF SUSMP PROJECTS

A listing of development projects subject to SUSMP requirements is included in Attachment A. This list includes the names of all Priority Development or Redevelopment projects from the inception of the SUSMP program on December 9, 2002 to the end of the current reporting period. The list is updated annually to include Priority Development Projects for which development applications have been received and SUSMP eligibility identified during that reporting period. The listed projects may be currently in different phases of review, construction, or occupancy. Some are still under review, while others are under construction or have been completed. The list is categorized for various phases of projects, including: 1) Pending, 2) Inactive, 3) Under Construction, or 4) Completed. Pending refers to projects that have not completed their project review process and are either on hold or being reviewed by City staff. Completed projects have completed their construction and should have permanent BMPs in place.

#### 2.4.4.4 CONFIRMATION OF SUSMP BMP APPLICATION

The Municipal Permit establishes requirements for post-construction BMPs on Priority Development and Redevelopment Projects. In order to develop regional standards and criteria for compliance with Municipal Permit requirements, the Copermittees have developed Model and local SUSMPs. All project applicants are required to complete forms that are included in the Manual to determine post-construction BMP requirements for their projects. City staff verifies proper completion of such forms and informs applicants of their required study reports and project submittals. Project submittals are then reviewed based upon this initial determination.

As required by the Municipal Permit, the City updated its local SUSMP in January 2008 to include Low Impact Development and Interim Hydromodification Management requirements, as well as other construction and post-construction criteria and standards. Subsequently, the Copermittees updated their Model SUSMP and submitted it for the Regional Boards approval in July 2008. The Regional Board approved the Model SUSMP on March 25, 2009. In March 2010, the City again updated its local SUSMP to incorporate the provisions of the Model SUSMP. In July 2009 and December 2009, the Copermittees submitted their draft and final Hydromodification Management Plans to the Regional Board. The Regional Board considered and approved the final Hydromodification Management Plan for approval on July 14, 2010. The Copermittees have 180 days after approval of the Regional Board to incorporate the HMP into their local SUSMP and implement the HMP for all applicable Priority Development Projects. The City's local SUSMP is the basis for approval of Priority Development Projects.

Based on the MEP standards included within the City's SUSMP, staff makes a determination as to whether or not there has been adequate consideration of site design and high efficiency BMP recommendations. Priority Development Projects without approved WQTRs do not move

further along in the development review process, providing Land Development and Storm Water Management staff an effective tool in the enforcement of SUSMP requirements.

Project grading or construction plans are required to show all approved structural BMPs. Non-structural BMPs are described in the project's WQTR. Public Works Inspectors and Storm Water Management staff ensure that development projects are constructed according to approved plans. This includes verification inspection and approval of installed or constructed structural treatment control BMPs.

For tracking of post-construction BMPs, Storm Water Management staff has coordinated with the Public Works Inspectors and the Building Inspectors to be notified upon Notice of Final Inspection and Certification of Occupancy and the final release of any Bonds. Copies of notices are sent to Storm Water Management staff for final inspections and confirmation of SUSMP BMP applications of such Priority Development projects to ensure proper installation of post-construction BMPs before final Certificates of Occupancy are issued and bonds are released.

In order to track confirmation of post-construction BMPs, and as an on-going activity, the City's GIS system was continuously updated throughout FY 2009-2010 with post-construction BMP information; further supporting project tracking and post-construction BMP inventory management. The GIS database is populated with post-construction BMP information including the types of BMPs, and provides links to applicable project plans, copies of WQTRs, and maintenance agreements, where applicable. Most significantly, in FY 2009-2010, WQTR documents were made available through the GIS Grading Plan layer as they are linked to individual projects (Figure 2-1 – CVMapper GIS Layer). This process facilitates inspections and verifications of post-construction structural BMPs. A GIS layer containing all publicly or privately maintained treatment control BMPs is utilized to verify and maintain such facilities (Figure 2-2 – GIS Layer: Grading Plans & WQTR Links). In addition, all privately or publicly maintained treatment control BMPs are being added to the BMP layer to facilitate their tracking and mapping. Also, files containing hard copies of grading plans, WQTRs, maintenance agreements, and other pertinent information are being created and maintained to support and facilitate construction verification and maintenance inspections of post-construction BMPs. (Figure 2-3 – GIS Layer: Post Construction BMPs).

**Figure 2-1** CVMapper GIS Layer

**Figure 2-2** GIS Layer: Grading Plans and WQTR

**Figure 2-3:** GIS Layer: Post Construction BMPs

All pending, inactive, under construction, or installed Post-Construction BMPs and Priority Projects are inventoried and tracked by Storm Water Management staff utilizing the City's GBA Master Series program. The database includes the following information:

- Project name
- WQTR, Plans are scanned and linked into GIS (CVMapper)
- Type of treatment control BMP installed or approved
- Number of Treatment Units installed
- Location of the BMP (Development name, area, neighborhood, etc.)
- Project category (Municipal/Capital Improvement Plan, Residential, Commercial, etc.)
- Project status (Pending, inactive, under construction, completed)
- Priority
- Public or privately maintained
- Watershed within which the BMP is located
- The party responsible for maintenance of the BMP
- Name of person or company who conducted maintenance
- Maintenance certifications or verifications
- Inspection reports and findings
- Any corrective actions issued

See Attachment A for an updated listing of Priority Projects that were subject to SUSMP requirements. See Figures 2-4, 2-5, and 2-6 – GBA Master Series – SUSMP Verification and Maintenance Tracking, for examples of SUSMP tracking forms.

### 2.4.4.5 EXAMPLE PRIORITY DEVELOPMENT PROJECT

The City works with developers, planners, and consulting engineers to establish standards of Source Control, LID Site Design, and Treatment Control BMPs that meet the requirements of the Manual and the Municipal Permit. An example of such cooperation was with the Chula Vista Elementary School District Bus Corp Yard. The District Bus Corp Yard project is located on 10 acres of land on Maxwell Road. The project site is bounded on the south by an existing industrial facility; on the east by steep slopes and the Otay Industrial Park; on the north by a temporary auto storage facility; and, on the west by Maxwell Road. The project is planned for a bus parking facility and temporary office buildings in Phase 1 and a bus maintenance building in Phase 2.

The Chula Vista Elementary School District Bus Corp Yard Phase 1 is completed and operational. The project incorporates Site Design, Source Control, and Treatment Control BMPs, with particular emphasis on Low Impact Development principles for post-construction storm water management. Low Impact Development features include vegetated swales and an underground detention system. Storm water runoff from approximately 6.5 acres of the project is captured and conveyed to the underground detention system through a system of vegetated swales. Then storm water runoff from the facility travels in a southerly direction and eventually discharges into the Otay River.

The site of the Chula Vista Elementary School District Bus Corp Yard project is less than 50 acres in area and, therefore, was exempt from the Interim Hydromodification Criteria requirements.

#### 2.4.4.6 LIST OF PROJECTS WITH LOW EFFICIENCY BMPS

During the current reporting period, all Priority Development Projects that received grading, construction, or building permits from the City proposed medium or high-efficiency treatment control BMPs. No SUSMP projects were permitted to have low-efficiency treatment control BMPs.

#### 2.4.4.7 TREATMENT CONTROL BMP INVENTORY

In Chula Vista there are 247 priority development projects inventoried from the inception of the SUSMP requirements to date. Projects that are still in the review stage are not included in the inspections list and are not prioritized until the final WQTR is approved. Attachment A of this report includes an inventory of all Priority Development projects in the City that were subjected to SUSMP requirements from the inception of this program on December 9, 2002. The information provided in Attachment A includes the name of the project, category (residential, commercial, etc.), inspection priority, status (under construction, pending, inactive, and completed), and type of Treatment Control BMPs. The City maintains individual project files that include more detailed information regarding the type, number, and location of Treatment Control BMPs on each Priority development project as well as post-construction BMPs inspection records.

#### 2.4.4.8 INSPECTION OF TREATMENT CONTROL BMPS

Storm Water Management Section staff is responsible for annual inspections of private and public constructed permanent BMPs as required by the Municipal Permit. Additionally, responsible parties for the maintenance of permanent BMPs are required to conduct routine inspections of their treatment facilities. For public permanent BMPs, the City's Public Works Storm Drain Maintenance staff is responsible for conducting routine inspections and maintenance. This duplicate inspections program ensures that all permanent BMPs are maintained to high operational standards.

During the current reporting period, Storm Water Management staff conducted inspections of all constructed permanent BMPs to verify their proper installation and maintenance, which exceeds Permit requirements. A summary of inspections is listed in Table 2-1 below, which includes both private and public permanent BMPs inspections. Where deficiencies were identified, notices were sent out to responsible parties, followed by further contacts to ensure that corrective actions were taken within the specified time period. For a detailed list of projects inspected for post-construction BMPs, please refer to Attachment F.

**Table 2-1** Treatment Control BMP Inspection Summary FY 2009-2010

| PROJECT PRIORITY | TOTAL NUMBER OF PROJECTS | NUMBER OF PROJECTS INSPECTED |
|---|---|---|
| High | 44 | 44 |
| Medium | 48 | 48 |
| Low | 82 | 82 |
| Total | 174 | 174 |

Note: In addition to the total number listed above, 73 projects are under review, inactive, or still under construction and the permanent BMPs have yet to be installed. Also, some of the projects are partially occupied which have operational treatment BMPs.

As can be seen from Table 2-1, a total of 174 Priority Development Projects were inspected during the current reporting period, which meets and exceeds Municipal Permit requirements. Attachment F to this report includes more detailed information about each project, such as, inspection dates, project names, types of BMPs installed, categories (commercial, residential, etc.), priorities, development names, and neighborhood names. The list includes both private and public projects. Depending on the findings during the course of initial inspections, follow-up inspections were conducted as necessary.

Public Works Department Storm Drain Maintenance Section conducts routine inspections and maintenance of publicly owned permanent BMPs. Storm Drain Maintenance Section staff, utilizing GBA Master Series computer software, tracks all publicly owned post-construction BMPs and creates work orders for conducting inspection and scheduling maintenance of the BMPs. Maintenance records for permanent BMPs are tracked in the GBA Master Series computer software. Please refer to Figure 2-7 for a sample of Publicly Maintained Treatment Control BMP Inspection and Maintenance Report.

### 2.4.4.9 VERIFICATION AND MAINTENANCE INSPECTION OF TREATMENT CONTROL BMPS

During the reporting period, a total of 137 notification and inspection letters were sent out to parties responsible for the maintenance of completed private Priority Development Projects. (see City's JURMP document Appendix D).

It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. It is not therefore necessary to send out verification letters for publicly maintained permanent BMPs. By conducting random inspections of public Treatment Control BMPs, Storm Water Management Section ensures that the level of maintenance on such facilities is adequate.

During this reporting period, responsible parties were aware of their BMP cleaning and maintenance obligations. City staff encountered some resistance, which was mainly believed to be attributable to the current downturn in economy as well as factors such as the transfer of property ownership, changes in property management companies, and a change in the board membership of Homeowners' Associations. For this reason, the City worked closely with the responsible parties to ensure that the BMPs were inspected and maintained. The City continues

to re-evaluate its annual maintenance verification procedures and may modify the program if necessary.

Prior to the beginning of the rainy season, the City requires annual verification of proper inspection and maintenance of all treatment control BMPs by the responsible parties. Each year, the City issues to the responsible party, either electronically, by fax, or by certified mail, a Treatment Control BMP Maintenance Package that includes: 1) an annual verification cover letter, 2) a Storm Water Treatment Facilities Inspection/Maintenance Verification Form (Form 5502), and 3) if necessary, a Compliance Report – Treatment Control BMP Inspection, which includes a summary of the inspection results and findings, pertinent sections of the WQTR, and BMP Location Site Plans.

This package informs the responsible parties of the Treatment Control BMPs, for which they are responsible; and requires the responsible parties to sign the verification form and certify that the treatment control BMPs have been properly maintained in accordance with the site's maintenance requirements. This information is tracked utilizing the City's GBA Master Series program. Each package is scanned and linked into the program, which includes the notification, required completion and receipt of the signed verification form. If signed and certified verification forms are not received by the due date, City staff contacts the responsible parties and follows up until Treatment Control BMPs are maintained and verification forms properly completed and returned to the City. Enforcement action may be initiated if a responsible party does not comply with the verification requirement after follow-up actions and proper service of a notice.

#### 2.4.4.10 BMP CONSTRUCTION VERIFICATION

The City's Public Works Inspectors and Storm Water Management staff is responsible for ensuring that permanent BMPs, which are components of the project's drainage systems and grading works, are constructed in accordance with approved specifications and grading plans. Public Works Inspectors and Storm Water Management staff conducts frequent inspections of projects during their grading and construction activities and verify that permanent BMPs are constructed as per approved plans.

In compliance with the Municipal Permit, the City has developed databases for tracking Priority Development Projects that are under construction. Additionally, hard copy files, including information about each project's WQTRs and grading or construction site plans that show locations of permanent BMPs have been created and are continuously updated.

Since LID features are considered components of site hardscape and are not inspected by Public Works Inspectors, a new process has been established in which Public Works Inspectors notify Storm Water Management Section staff immediately after their inspections of grading activities are completed and their presence on the project is no longer necessary. At such time, Storm Water Management staff takes over the responsibility of inspecting permanent BMPs while being constructed. They ensure that LID Site Design features are constructed as shown on approved grading, construction, or landscape plans and per approved specifications.

As a result of the comprehensive construction verification program for permanent BMPs as described above, it was determined that while major treatment facilities were constructed before occupancy of the project, some minor deficiencies still existed even after partial occupancy. Those projects were identified in each case and responsible persons were required to install the deficient BMPs. As a result of this finding, the City made adjustments and improvements in its construction verification process, which will ensure that all treatment control and other post-construction BMPs are fully operational and without any deficiencies even before the first occupancy of the project.

#### 2.4.4.11 SUSMP WAIVERS

Section D.1.d.(11) of the Municipal Permit includes a waiver provision, under which a Copermittee may provide for a Priority Development Project to receive a waiver from the requirement of meeting numeric sizing criteria for Treatment Control BMPs, if infeasibility can be established. During the reporting period, the City did not grant waivers to any Priority Development Projects.

#### 2.4.4.12 SUSMP WAIVER MITIGATION

During the reporting period, all Priority Development Projects were required to comply with the provisions of the City's local SUSMP. Therefore, the City did not grant waivers to any Priority Development Project during this period.

#### 2.4.4.13 HYDROMODIFICATION MANAGEMENT PLAN COLLABORATION

Soon after Regional Board's adoption of the Municipal Permit on January 24, 2007, the Copermittees formed a Land Development Workgroup to develop Copermittees' Hydromodification Management Plan (HMP) and Model SUSMP, among other regional development related tasks. The Land Development Workgroup planned regular meetings in which various topics, mainly the development of the HMP and Model SUSMP, were discussed. The Copermittees decided to hire a consultant with expertise in those fields to work on the studies needed for this purpose. The consulting team of Brown and Caldwell was selected as the main consultant, with several sub-consultants providing expert services.

A Technical Advisory Committee (TAC), consisting of high-ranking and renowned experts in the fields of hydrology, hydromodification, and SUSMP issues were formed to oversee the Consultant's work, and to provide expert advice. During the reporting period, the TAC continued to meet on a regular basis, and while Copermittees were not on the TAC, they were encouraged to participate in their meetings. Brown and Caldwell developed submittals for the Interim Hydromodification Criteria, Final Hydromodification Management Plan, and Model SUSMP, which were subsequently approved by the Regional Board. The Interim Hydromodification Criteria and the Model SUSMP have been incorporated in the updates of the City's SUSMP and the Final Hydromodification Plan will be incorporated before January 2011.

During the reporting period, notable milestones included the submittal of the final HMP to the Regional Board in December 2009 and the second update of the City of Chula Vista's local SUSMP in March 2010.

City of Chula Vista representatives are active participants in all Land Development Workgroup and TAC meetings and activities. They are closely involved in the issues that are discussed, review work products, and provide comments on all related draft documents.

City staff has attended all regional workshops and trainings related to HMP and SUSMP issues, including a 3-day training seminar on Hydrologic Simulation Program Fortran (HSPF).

#### 2.4.4.14 PROJECTS REQUIRED TO MEET HMP REQUIREMENTS

Section D.1.g.(5) of the Municipal Permit requires the development of an HMP document at the regional level and incorporation of such HMP into individual local SUSMPs. The HMP is to include limitations on increases of runoff discharge rates and durations from all Priority Development Projects in order to prevent increased downstream channel erosion, sediment pollutant generation, or other impacts to beneficial uses and stream habitat.

Development of a draft HMP was a two-year effort by the Copermittees and their consultants. The Copermittees submitted the first draft HMP to the Regional Board in January 2009. In the meantime, the Municipal Permit required the implementation of an Interim Hydromodification Criteria (IHC) for development projects that were 50 acres or more. The IHC requirement was incorporated into updated local SUSMPs, which came into effect in January 2008.

Adoption of IHC requirements in January 2008 coincided with the collapse in the housing market, and almost all major development projects in Chula Vista came to an abrupt halt. Occasional major projects submitted for review by City staff have had extended project submittal, review, and permitting schedules.

During the reporting period, 3 major projects were under review as follows:

1. Eastern Urban Center
2. Otay Ranch Village 8
3. Otay Ranch Village 9

These projects qualified for IHC requirements but have not yet received their grading or construction permits. Such projects are expected to meet the requirements of the final HMP, which will come into effect on January 2011.

#### 2.4.4.15 PROJECTS EXEMPTED FROM HMP REQUIREMENTS

Development projects for which grading or construction permits were issued during the current reporting period were less than 50 acres in area and did not meet the criteria for IHC requirements. However, Priority Development Projects were all required to address hydrologic conditions of concern by comparing pre- and post-development peak discharge rates and durations, and demonstrate that the increased peak discharge rates and durations would not cause

downstream erosion or habitat impact. Such discussions were required to be included in the submitted WQTRs.

#### 2.4.4.16 PROJECTS DISTURBING 50 ACRES OR MORE

During the reporting period, three projects were under review that proposed to disturb 50 acres or more and met the conditions for IHC requirements. These projects are listed in Section 2.4.4.14.

#### 2.4.4.17 ENFORCEMENT ACTION TAKEN FOR DEVELOPMENT PROJECTS

As a result of post-construction treatment BMP verification inspections, the City determined that nine out of 174 inspected projects were partially or totally deficient in the inspection and maintenance of post-construction BMPs. By the date of writing this report and as a result of communication with the responsible persons, eight projects were brought into compliance. Work is being continued on the remaining one project. Deficiencies were observed in the cleaning and maintenance of some treatment control BMPs, which were satisfactorily addressed by the responsible persons after written notices. The City has the option of initiating enforcement action on responsible persons who do not demonstrate adequate effort to bring their project to compliance in a timely manner. Such enforcement action may include verbal and written warnings, Notices of Violation, Administrative Citations, and/or Civil or Criminal Penalties. At this time, the City initiated enforcement actions, which included a Notice of Violation for one development project with deficient post-construction BMPs.

## 3.0 CONSTRUCTION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(b).i – Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.*

*Permit Section J.3.a.(3)(b).ii – Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.*

*Permit Section J.3.a.(3)(b).iii – A description of modifications made to the construction and grading ordinances and approval processes.*

*Permit Section J.3.a.(3)(b).iv – Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.*

*Permit Section J.3.a.(3)(b).v – Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.*

*Permit Section J.3.a.(3)(b).vi – A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.*

*Permit Section J.3.a.(3)(b).vii – For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.*

*Permit Section J.3.a.(3)(b).viii – A description of the general results of the inspections.*

*Permit Section J.3.a.(3)(b).ix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(b).x – The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(b).xi – A description of the notable activities conducted to manage urban runoff from construction sites.*

## 3.1 INTRODUCTION

Pursuant to the Municipal Permit, construction sites are subject to dual regulation insofar as all construction sites that are covered under the NPDES General Construction Permit continue to be inspected and enforced by Regional Board staff. At the same time, the Municipal Permit requires Copermittees to implement a Construction Component to limit the impact of construction and grading activities on receiving waters, which may result from the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering storm water conveyance systems.

The following section provides an account of the City's program to meet the requirements outlined in Section D.2 of the Permit to reduce the release of pollutants from construction sites into the storm water conveyance systems to the Maximum Extent Practicable (MEP).

## 3.2 SOURCE CHARACTERIZATION

The City has compiled and monthly updates a watershed-based inventory of all construction sites within its jurisdiction as required by Municipal Permit Section D.2.b. The City utilizes a construction site database to maintain its inventory. The inventory includes details on each construction site, including project name, location, project developer and project size. A list of construction projects under the City's jurisdiction, all of which are located within the San Diego Bay Watershed, can be found in Attachment B. The list was current at the time of preparation of this report and includes all completed projects.

### 3.2.1 CONFIRMATION OF INVENTORY MANAGEMENT

During the reporting period, Storm Water Management staff maintained and monthly updated a construction site inventory. As a result of coordination between the Public Works Construction Inspection staff, Engineering Design staff, Development Services staff, and Storm Water Management staff, mechanisms have been established in the maintenance and tracking of an up-to-date and accurate inventory. As such, all significant construction activities are closely monitored, supporting close collaboration and an effective means of tracking such activities Citywide. Storm Water Management staff are notified of all pre-construction meetings as coordinated by Public Works Construction Inspection staff. This provides an additional level of notification regarding the start of construction activities. In support of maintaining an accurate inventory, the City's Development Services Department distributes a monthly Major Project Development Status Report, which apprises City staff of such information as project review status and construction phase. Updates to the inventory include the addition of new construction projects, the removal of completed projects, the assignment of Threat to Water Quality (TTWQ) prioritization, and inspection frequencies of active and inactive sites as needed.

## 3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

Storm water compliance requirements for construction activities are provided in the City's Development Storm Water Manual (Manual). The City's Storm Water Management and

Discharge Control and Grading Ordinances incorporate, by reference, the Development Storm Water Manual, hence providing legal authority for the enforcement of the Manual's requirements. Such documents and ordinances have been updated and amended to ensure that compliance with the Municipal Permit requirements is met.

## 3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the project site are reduced to the MEP and do not cause or contribute to an exceedance of water quality objectives. The following mechanisms have been identified and utilized to promote the implementation of Best Management Practices (BMPs) during construction activities.

- Development Storm Water Manual (Manual)
- Construction site inspection and enforcement
- Construction and development community education

Designated BMPs for each construction site were required to be implemented through the requirement of a Storm Water Pollution Prevention Plan (SWPPP) or a Construction Storm Water Management Plan (CSWMP). SWPPPs are required for projects disturbing one acre or more of land, while CSWMPs are required for all other projects.

Regular and random inspections of construction sites ensure that BMPs are implemented, and where deficiencies are noted, corrective action is required, which in some cases may lead to the initiation of enforcement action.

### 3.4.1 DEVELOPMENT STORM WATER MANUAL

Construction activity standards and requirements are fully developed and included within the Development Storm Water Manual. The Manual clearly states that it is the responsibility of the property owner and/or contractor to select, install, and maintain appropriate BMPs. The Manual outlines minimum construction BMPs required by the City. Where applicable, current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual and the CASQA Storm Water BMP Handbook are referenced in the Manual. The following topics are also discussed:

- Site management requirements
- BMP performance standards
- Seasonal requirements
- Limitation of Grading
- Advanced Treatment
- Example Construction Best Management Practices

## 3.5 PROGRAM IMPLEMENTATION

The Development Storm Water Manual is used by City staff to assist in the review and permitting of development and redevelopment projects with respect to construction activities. The Manual clearly outlines the review process for water quality. It includes descriptive text and charts that guide staff in determining if a project needs to be covered under the NPDES General Construction Permit. If the project is subject to the General Construction Permit, it is required to develop a SWPPP. The project is also required to file a Notice of Intent (NOI) with the State Water Resources Control Board. If the project is not subject to the General Construction Permit, it is required to develop a CSWMP. Both SWPPPs and CSWMPs must be prepared prior to the start of construction activities. All projects are required to include applicable measures to prevent pollution discharges to storm water conveyance systems by implementing BMPs during all phases of construction.

When it is determined that Capital Improvement Projects (CIPs) need coverage under the NPDES General Construction Permit, the project engineer electronically submits a Notice of Intent and a SWPPP through the State Water Resources Control Board Storm Water Multiple Application and Report Tracking System (SMARTS). The SWPPP is maintained with the proper personnel for review by request of the Regional Board.

The City has ensured compliance with construction BMP requirements through development project reviews, construction site inspections, and enforcement actions as necessary.

Within the defined reporting period, the City made notable efforts in promoting pollution prevention and BMP implementation on construction sites. The following mechanisms have been identified by the City as those integral to the promotion of pollution prevention techniques and BMP implementation.

- Construction site inspection and enforcement
- Construction and development community education
- Integration of pollution prevention and BMP implementation requirements into the development review process, including requirements for erosion control plans.
- Development Storm Water Manual
- Construction specific outreach and education activities

Education of the construction and development community is achieved on a local and regional level. Locally, project proponents including contractors, developers, property owners, superintendents, and other responsible parties are exposed to construction related water quality protection requirements throughout the development review and construction process. Storm Water Management staff provides comments and direction through the review of development proposals and plans. As mentioned above, pre-construction meetings provide Storm Water Management staff with an excellent forum to communicate storm water compliance requirements and for project proponents to have their own concerns addressed.

In addition, City Storm Water Management staff frequently meets with developers and contractors and provides on-site training regarding site management for storm water quality. In preparation for the wet and dry seasons, Storm Water Management staff annually issues wet and dry season reminder letter, normally about one month before the start of each season.

As a result of the slow-down in development, many construction sites are currently inactive or in distress. The City has made notable efforts in the management of inactive construction sites. A site is considered inactive if construction activities have ceased for a period of seven or more consecutive calendar days. The City inspects inactive construction sites and issues formal letters to developers if their sites do not meet City standards for BMP requirements as a result of failure to maintain adequate BMPs. The purpose of such letter is to notify developers of the City's storm water and non-storm water discharge requirements on inactive construction sites and to reiterate the developer's or property owner's responsibility at both active and inactive sites to implement a plan to address all potential discharges from construction sites. If a site is partially inactive, above requirements apply only to inactive areas of the site.

If a construction project is wholly or partially inactive or expected to remain inactive for some time, the City requires the developer to submit a Construction Site Stabilization Plan.

The Stabilization Plan is required to include the following information:

- Project name and a description of inactive areas or those expected to become inactive.
- A description of the stage of work at which the project became inactive.
- An estimate of time that the project, or areas of the project, would remain inactive, and a description of BMPs that would be used to stabilize inactive areas of the construction site.
- A project plan delineating areas of the project that are inactive or expected to become inactive, as well as all erosion control, sediment control, and non-storm water BMPs that would be implemented to prevent the discharge of sediment or other pollutants from the site.

### 3.5.1 MAXIMUM DISTURBED AREAS

The Development Storm Water Manual limits the area that can be cleared or graded and left exposed at one time to 100 acres for an individual grading permit or a combination of grading permits under the associated tentative map. Maximum disturbed area requirements are discussed in detailed in the Development Storm Water Manual. During the reporting period, most major development activities remained inactive as a result of the downturn in the housing industry, and developers in Chula Vista did not undertake major new grading projects. The focus of City inspectors were to ensure that existing graded sites that intended to close down the site or slow down construction activities stabilized inactive areas and implemented adequate BMPs to minimize the discharge of sediment and other pollutants from their sites.

### 3.5.2 ADVANCED TREATMENT

During this reporting period, there were no construction sites that met the conditions requiring advanced treatment methods. These conditions are explained in Section 7.V of the Development Storm Water Manual. If it is determined that a site poses an Exceptional TTWQ based on criteria outlined in the Manual, the site will be required to implement advanced treatment controls to minimize the discharges from the construction site.

### 3.5.3 CONSTRUCTION SITE INSPECTIONS

The City's construction site inspection and enforcement program is defined by a consistent and frequent presence of inspectors on construction sites Citywide. It is recognized that construction sites must be regulated through a well-coordinated and highly refined inspection and enforcement program. The City has one full-time Storm Water Compliance Inspector, two full-time Environmental Health Specialists, one Engineering Technician, and eight Public Works Inspectors who manage this effort on private and public construction projects.

During this reporting period, all construction sites were assigned appropriate dry and wet season inspection frequencies required by the Municipal Permit. The Municipal Permit does not require TTWQ Prioritization for construction sites. However, the City has determined that this designation is a useful indicator for inspectors to evaluate the priority and relative importance of each construction site with respect to erosion and sediment controls, and the special attention required to the implementation of BMPs during their inspections of each site. The inventory of construction sites, therefore, includes a column indicating TTWQ Prioritization for each site.

During the current reporting period, the City conducted inspections of construction sites in accordance with the requirements of the Municipal Permit, as applicable. Please see Table 3-1 for the number of construction site inspections under each category. A complete list of inspected construction sites is included in Attachment G. The period of time each construction site was active during the wet or dry seasons, and the number of inspections conducted during the rainy season for each site, are recorded on inspection reports that are available at the City.

**Table 3-1** Construction Site Inspection Summary FY 2009-2010

| INSPECTION SUMMARY | NO. |
|---|---|
| Formal Inspection Reports | 303 |
| Inspections During Wet Season | 286 |
| Inspections During Dry Season | 17 |
| Inspections of High Priority Sites | 39 |
| Inspections of Medium Priority Sites | 182 |
| Inspections of Low Priority Sites | 82 |

City inspectors evaluate BMP implementation on construction sites in a site-specific and situation-specific manner. It is through this approach that determinations of the effectiveness of

a specific BMP are made, based on an accounting of the overall conditions observed at a specific job site. Established construction site inspection protocols also include a documentation review including site specific SWPPP, monitoring results, training records, etc. for construction sites subject to the General Construction Permit.

City inspectors use construction inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the construction site. The form also provides clear and concise information to the developer or contractor about deficiencies in the implementation of BMPs. It includes information about corrective actions that the developer or contractor needs to take for brining the site into compliance, and the time allowed by the inspector. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each construction site and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant construction sites.

Through the above process, the City ensures that the inspections conducted address all the required inspection steps to determine full compliance.

Based on documented information, the trend of inspection issues were related to the following:

- Failure to implement and provide continuous maintenance of existing BMPs to prevent or minimize pollution of the storm water conveyance system in accordance with respective SWPPP or CSWMP.
- Failure to implement good housekeeping practices at the site.
- Failure to comply with previous orders.

City inspectors who conduct site inspections of both public and private development projects have full inspection and enforcement authority. Sites are evaluated for compliance with the minimum BMP requirements of the Municipal Permit, the Development Storm Water Manual, the erosion control plans, and any other development permit conditions imposed by the City prior to the issuance of a grading or construction permit.

Construction site inspections include the following:

- Verification of coverage under the General Construction Permit, where applicable.
- Assessment of the implementation of all required BMPs and any additional controls as needed and required by the City.
- Verification of proper maintenance of the BMPs.
- Evaluation of the effectiveness of the BMPs.
- Verification that the party responsible for the implementation of the site SWPPP has received adequate training.
- Observations of any non-storm water discharges, illicit connections, and potential discharges into the storm drain system.

### 3.5.4 CONSTRUCTION SITE ENFORCEMENT

The City enforces its storm water ordinances and development permit conditions at all private and public construction sites, as necessary. The City's ordinances and development permit conditions provide adequate legal authority for the City to enforce its ordinances on construction sites through Stop Work Notices, penalties, fines, and other enforcement procedures as necessary. City's inspectors work with developers and contractors to identify non-compliance issues and to set deadlines for bringing sites into compliance; however, if the developer/contractor is found to be non-cooperative in bringing a site into compliance in an expeditious manner, City's inspectors initiate enforcement action which, depending upon the severity of the violation, may include one or more of the following:

- Verbal Warning
- Written Warning
- Notice of Violation (Includes Cease and Desist and/or Clean and Abate Orders)
- Enforcement of Contract (for City projects)
- Stop Work Notice
- Denial or Revocation of Permits
- Administrative, Civil, or Criminal Actions

Table 3-2 summarizes enforcement actions taken within the defined reporting period of this report.

**Table 3-2** Construction Enforcement Summary FY 2009-2010

| ENFORCEMENT ACTION | NO. |
|---|---|
| Written Notices of Violation (Includes Cease and Desist and/or Clean and Abate Orders) | 5 |
| Civil Penalty Order | 2 |

As a result of the above enforcement actions, Chula Vista developers were fined a total of $9,000.00 in the current reporting period. Follow-up inspections were conducted as necessary until compliance was met.

Within the defined reporting period of this report and as described in the narrative provided throughout this section, the construction component has demonstrated numerous successes as well as undergone notable programmatic developments and enhancements. Through identified needs and associated management decisions, the City has fortified its jurisdictional construction management component in 2009-2010. Further, as the need for further development emerges for construction activities, the City will seek to maintain the level of performance established from years past, and to continue to meet the regulatory standards mandated in the Municipal Permit.

## 4.0 MUNICIPAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(c).i – Any updates to the municipal inventory and prioritization.*

*Permit Section J.3.a.(3)(c).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.*

*Permit Section J.3.a.(3)(c).iii – A description of inspections and maintenance conducted for municipal treatment controls.*

*Permit Section J.3.a.(3)(c).iv – Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.*

*Permit Section J.3.a.(3)(c).v – Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.*

*Permit Section J.3.a.(3)(c).vi - Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.*

*Permit Section J.3.a.(3)(c).vii – Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.*

*Permit Section J.3.a.(3)(c).viii – Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.*

*Permit Section J.3.a.(3)(c).ix - Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.*

*Permit Section J.3.a.(3)(c).x – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xi – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xii – Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.*

*Permit Section J.3.a.(3)(c).xiii – Identification of the total distance of curb-miles swept.*

*Permit Section J.3.a.(3)(c).xiv – Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.*

*Permit Section J.3.a.(3)(c).xv – Amount of material (tons) collected from street and parking lot sweeping.*

*Permit Section J.3.a.(3)(c).xvi – A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4.*

*Permit Section J.3.a.(3)(c).xvii – Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.*

*Permit Section J.3.a.(3)(c).xviii – A description of the general results of the inspections.*

*Permit Section J.3.a.(3)(c).xix – Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(c).xx – The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(c).xxi – A description of notable activities conducted to manage urban runoff from municipal areas and activities.*

## 4.1 INTRODUCTION

The goal of the City's municipal program is to minimize or prevent negative impacts of municipal activities and areas on receiving waters and other environmental resources in the City and where possible, to enhance the quality of these resources. The City maintains the following types of municipal areas and activities:

- Fixed Facilities
- Open Space
- Municipal Separate Storm Sewer System (MS4)
- Sanitary Sewer System
- Roads, Streets, and Parking facilities
- Powerwashing – Graffiti removal

Minimum BMPs for specific municipal facilities and activities have been implemented as applicable and as required by the Municipal Permit. Minimum BMPs for specific facilities and activities have been described in the City's JURMP. BMP implementation is ensured through various levels of enforcement, inspection, communication, and awareness. BMP information is disseminated to City staff through the following resources:

- California Stormwater Quality Association (CASQA) Municipal Stormwater BMP Handbook. January 2003
- Municipal staff training venues (formal training, staff meetings, etc.)
- Routine inspection activities
- Activity specific training

BMP implementation is regulated by City staff through routine inspection activities as described in the JURMP. High priority municipal facilities are inspected annually, and all other facilities are inspected as needed. Inspections are conducted to verify the implementation of an effective combination of BMPs to meet the minimum water quality protection requirements. Applicable minimum activity-specific BMPs, as outlined in the JURMP, have been reviewed and implemented at facilities throughout the City. As needed, BMP implementation has been re-enforced as conditions of concern are identified, and personnel have been briefed on their roles and responsibilities in maintaining and implementing prescribed BMPs.

The following paragraphs include summaries of activities undertaken by the City to meet the Municipal Permit requirements for the Municipal Component of the JURMP. It is important to recognize that such recounted activities, practices, and functions are ongoing efforts by the City and not constrained by the defined reporting period of this report.

## 4.2 FIXED FACILITIES

### 4.2.1 BACKGROUND

The City operates and maintains the following types of fixed facilities within its jurisdiction:

- Parks and recreation centers
- Nature Center
- Libraries
- Administration buildings
- Public Works Center
- Animal care facility
- Fire stations
- Land application site

### 4.2.2 SOURCE CHARACTERIZATION

Attachment C – Municipal Inventory is a list of all the municipal facilities and activities within the City. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity. General operations include landscape maintenance, material handling and storage,

loading/unloading, waste handling, street maintenance, and sewer maintenance. Facilities are classified as high, medium, or low TTWQ based on activities, functions, and various site-specific factors. For more information on the facilities that have additional operations and activities, please see the City's JURMP. The inventory was updated in March 2008 during the JURMP update process. During the reporting period, no additional municipal facilities were constructed and, therefore, the same inventory has been used in this report. Currently, there are some public parks in the design or construction phase that will be added to the municipal inventory after they are completed.

### 4.2.3 BMP REQUIREMENTS

Each fixed municipal facility in the City implements BMPs in accordance with their specific operations and activities. The City uses the CASQA BMP Handbook for Municipal Facilities as a guide for employees as well as a training tool. City staff receives training on storm water BMPs on a regular basis. More information on employee training can be found in Section 8.0. Mobile municipal operations use source control BMPs as pollution prevention measures. During the reporting period, all designated BMPs were implemented for municipal areas and activities as well as special events.

### 4.2.4 PROGRAM IMPLEMENTATION

#### 4.2.4.1 MAINTENANCE

The City maintains all of its fixed facilities and implements BMPs during operations and activities. Any illegal connections or illegal discharges noticed by City staff are eliminated and BMPs are revised if needed.

#### 4.2.4.2 TRAINING AND EDUCATION

All City employees who work in municipal facilities and activities receive training on general storm water concepts, the City's storm water ordinance, and BMP requirements. More information on employee training can be found in Section 8.0.

#### 4.2.4.3 INSPECTIONS

The City proactively approaches enforcement of its storm water ordinance for all municipal areas and activities. All deficiencies are immediately brought to the attention of the facility manager or the staff member responsible for the facility or activity. The facility managers or the responsible staff members have the authority to implement or require implementation of adequate BMPs for their facility. With the training provided for the operations staff and implementation of BMPs on municipal facilities, it is expected that discharge of pollutants from municipal areas and activities have been minimized.

City storm water staff inspected all 61 high priority municipal facilities and activities during the fiscal year as required by the Municipal Permit. Medium and low priority facilities are inspected on an as needed basis. No medium or low priority facilities were determined to need inspection

this fiscal year. During inspections, storm water staff identified BMPs that were in need of improvement and informed responsible persons to take action to implement additional BMPs. A list of municipal facilities that were inspected during the reporting period is included in Attachment H. Overall, sites were in good condition, however; some facilities needed BMP improvements. For the sites needing BMP improvements, the appropriate supervisor was notified and any corrective actions to bring the facility into compliance were immediately implemented. Enforcement on municipal facilities is in the form of disciplinary process against the responsible staff member when compliance is not met in a timely manner. If a violation of the City's Storm Water Ordinance or the Municipal Permit is observed, which is caused by negligence of City personnel, inspectors work with supervisors to ensure that corrective actions are implemented; provide training to the personnel; and immediately inform the appropriate supervisor. The supervisor will then take action against the violating staff member as necessary, including warnings and other disciplinary measures. City storm water staff is in regular contact with Public Works Maintenance staff and provides training on pollution prevention and BMP implementation, therefore, most deficiencies are taken care of upon first notice.

The City also maintains a number of treatment control BMPs that have been installed at municipal fixed facilities. Public Works Maintenance staff inspects all municipal treatment control BMPs to ensure their proper operation. Additionally, Storm Water Management staff conducts random inspections of such facilities to provide a second layer of confidence and ensure that maintenance standards are met. The City maintains treatment control BMPs at several of its facilities. City crews clean the structural treatment control BMPs on an as needed basis, and their condition is evaluated for effectiveness. Any repairs are noted and carried out on a timely manner. Table 4-1 shows the municipal facilities within the City that have treatment control BMPs and their inspection dates.

**Table 4-1** Municipal Facilities with Treatment Control BMPs

| FACILITY NAME | NUMBER & TYPE OF TREATMENT CONTROL BMP | DATE INSPECTED |
|---|---|---|
| Montevalle Park | 10 Filter Inserts | 06/29/10 |
| Salt Creek Park | 1 CDS Unit | 06/11/10 |
| Windingwalk Neighborhood Park | 1 Vegetated Swale | 05/17/10 |
| Harvest Park | 1 Filter Insert | 05/17/10 |
| Sunset View Park | 3 Filter Inserts | 05/07/10 |
| Mountain Hawk Park | 20 Filter Inserts | 06/01/10 |
| Horizon Neighborhood Park | 1 Filter Insert | 05/07/10 |
| Veterans Park | 1 Vegetated Swale, 5 Filter Inserts | 05/17/10 |
| Chula Vista Civic Center | 5 Vegetated Swale, 1 CDS Unit, 2 Filter Inserts | 06/21/10 |
| Fire Station 6 | 3 Filter Inserts | 05/11/10 |
| Fire Station 7 | 1 CDS Unit, non-storm water diverter | 06/21/10 |
| Fire Station 8 | 1 CDS Unit, non-storm water diverter | 06/04/10 |
| Harborside Park* | 3 Filter Inserts | 06/01/10 |
| Santa Cora Park* | 23 Filter Inserts | 07/12/09 |
| John Lippitt Public Works Center* | 6 Filter Inserts | 09/01/09 |

* – Not a SUSMP Project, but the City still inspects the inserts and maintains them

#### 4.2.4.4 INTEGRATED PEST MANAGEMENT (IPM)

During the reporting period, the City Parks and Open Space Divisions have implemented the following BMPs in their activities to prevent pollution of storm water conveyance systems:

***Fertilizer, Pesticides, and Herbicides***

- Minimize fertilizer use.
- All fertilizing is done so that no fertilizer is applied to the walkways or street. Any accidental spill is cleaned up and applied to the plant material. Areas are cleaned using a gas blower.
- All leaf blowing is towards plant material and away from any hardscape.
- Whenever possible, compost and soil amendments are used in place of fertilizers.
- Manual weeding whenever possible along with IPM Practices to minimize chemical application.
- All pesticides, herbicides, and fertilizers are stored in a controlled, locked and properly marked chemical locker.
- Prevent pesticide drift – do not spray on windy days.
- All employees who spray pesticides for weed control are properly trained and possess a valid Qualified Applicator Certificate issued by the state and receive 20 hours of continuing education in order to renew their certifications bi-annually.
- Reporting and record keeping for the use of fertilizers and pesticides includes the location, frequency, amount, type, and date of application.
- Staff is supplied with spill kits in case of an accidental spill.
- All mixing is done in an area that is away from storm drains.
- All employees who handle pesticides are trained and familiar with the most recent material safety data sheet (MSDS) files.
- MSDS sheets for chemical being used must be kept with the applicator while applying pesticides.

***Proper Planting Techniques***

- Proper plant selection for pest resistance to minimize the use of pesticides and fertilizers.
- Removal or pruning of deceased plants and branches.
- Clearing of weeds, grass, and brush from building perimeters and fence lines.
- Plant native vegetation and convert existing turf areas to drought tolerant, sustainable landscaping when possible.
- Increase plant vigor and pest resistance through proper cultural practices; proper water application, clearing of weeds to decrease competition, pruning at the right time of year, and accurate diagnosis of plant pests.
- Control pests by removing diseased plants, pruning to increase air circulation and to remove diseased or injured plant parts.

***Minimize Runoff***

- The City utilizes several weather stations throughout the City to monitor microclimates to set evapotransporation (ET) rates for Maxicom Irrigation Systems.

- Installation of flow sensors and master valves to prevent water loss in the event of mainline break.

## 4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

### 4.3.1 BACKGROUND

Roads, streets, highways, and parking facilities make up a large part of the City. Pollutants associated with roads, streets, highways, and parking facilities include sediment, metals, and trash. The City has implemented various BMPs to reduce the amount of pollutants that come off of these areas.

### 4.3.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) designates roads, streets, highways, and parking facilities as high priority municipal areas for inspection purposes. Therefore, the Municipal Inventory (Attachment C) categorizes these facilities as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by roads, streets, highways, and parking facilities. The City maintains 414 miles of roads, streets, and highways.

The City has one stand-alone covered parking facility in downtown Chula Vista that generates a moderate volume of trash and debris that is swept twice per month and is inspected annually as a part of the City's Municipal Inspection Program. The other 22 parking facilities are associated with other municipal facilities (such as parks) and generate low volumes of trash and/or debris. These are swept on a monthly basis and are inspected annually.

For the purpose of street sweeping, roads, streets, and highways are further classified into high, medium, and low priority based on the amounts of trash, sediment, and debris that are generated by their use. Commercial and industrial streets are classified as high priority; center islands and medians are classified as medium priority; and centerlines and residential streets are classified as low priority. Table 4-2 below provides more information about these classifications, the number of curb miles in each, the type of areas these classes cover, and their respective sweeping frequencies. The City is in the process of collecting data to refine this classification by working with its contractor to keep records of the quantities of trash and debris collected each day from various sections of the City.

**Table 4-2** Street Sweeping Information Based on Class

| CLASS | NUMBER OF CURB MILES | TYPE | SWEEPING FREQUENCY |
|---|---|---|---|
| High | 131.61 | Industrial and Commercial – 10.5 miles | Twice per week |
| | | Commercial and Business – 121.11 miles | Once per week |
| Medium | 75.47 | Center Islands and Medians | Twice per month |
| Low | 702.26 | Residential – 656.36 miles | Once per month |
| | | Center Lines – 45.9 miles | Twice per month |

### 4.3.3 BMP REQUIREMENTS

Street sweeping is one of the ongoing city functions that provides for the reduction in pollutants entering the storm drain system and ultimately local receiving waters. It is the main BMP used to maintain roads, streets, highways, and parking areas. It is conducted in a systematic and coordinated manner as to compliment pollution prevention throughout the City.

The City has identified some streets as high Threat to Water Quality (HTTWQ) areas. The main pollutant in these areas is trash. Trash in these areas is mainly attributable to customers of recycling businesses located in the industrial areas of Energy Way and Nirvana Avenue. Also, trash trucks shedding some of their load while traveling to and from the Otay Landfill on Maxwell Road and Main Street east of I-805 are sources of trash on these two streets. As a proactive measure to minimize trash entering the storm drain system, the City has retrofitted existing curb inlets in these areas with filter inserts. The City's storm drain crews conduct regular inspections and cleaning of these filter inserts and replace parts as necessary.

### 4.3.4 PROGRAM IMPLEMENTATION

#### 4.3.4.1 MAINTENANCE AND INSPECTION

During the reporting period, the City swept approximately 18,000 curb miles and removed approximately 940 tons of trash, debris, and sediment from Chula Vista streets and parking lots. While regular street sweeping is contracted, the City operates a street sweeper to be used by City crews to maintain City facilities, parking lots, bus stops, and special events. Figure 4-1 shows the street sweeping schedule for the reporting year.

**Figure 4-1** Street Sweeping Schedule

## 4.4 MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4)

### 4.4.1 BACKGROUND

MS4 maintenance is an ongoing city function that is essential for the removal of pollutants that may be discharged to receiving waters. MS4 maintenance activities address pollution prevention through four primary activities: 1) Inspections, 2) catch basin maintenance, 3) channel maintenance, and 4) outfall maintenance.

As part of the City's maintenance protocol, a maintenance supervisor inspects storm drain facilities before and after cleaning operations. Problem sites within the drainage facilities were inspected and cleaned multiple times during the reporting period. In addition, the City's consultant for dry weather field screening annually inspects over 57 outfall locations throughout the City and conducts upstream investigations based on field screening results. They report observed pollution in storm drainage systems to the City, in which case Public Works maintenance crews immediately take action to inspect the drainage area, abate the pollution, and conduct cleanup.

Another method of inspection of storm drainage facilities employed by the City is through investigation of reported violations. When an inspector responds to a reported violation, in addition to normal investigations, he or she inspects the first downstream storm drain inlet to determine if pollution has reached the inlet. In case of presence of any trash, silt, or other visible pollutants in the storm drain inlet, Public Works crews are immediately notified and they take action to clean the storm drainage system, as necessary. This multi-layer inspection program ensures that almost all MS4 facilities are inspected and maintained regularly.

All channel and outfall maintenance activities have been conducted in a manner as to assure compliance with all environmental regulatory standards. Notably, channel and outfall maintenance activities have been limited to manual removal of trash and debris from areas that trash accumulation may cause flooding and damage to life or property.

Currently, three vacuum trucks and three crews are allocated full-time to performing the above tasks on the maintenance and inspection of the City's storm drain systems. In addition, four vacuum trucks, equipment, and wastewater field crews are available on an as-needed basis to help in cleaning and inspecting the storm drain systems in emergencies and other similar situations.

The City maintains an extensive record keeping and maintenance tracking system utilizing George Butler Associates Work Management System (GBA), which is an automated system universally used by the Public Works Department for collecting and tracking data about all its activities. Detailed maintenance logs are available in the City's storm drain maintenance database and can be presented upon request.

During this reporting period, the City installed 150 thermoplastic storm drain stencils in addition to the 500 that had already been installed in previous fiscal years. These stencils adhere to the

concrete curb/gutter by heat treatment and are more durable than paint stencils or plastic markers using adhesive. These thermoplastic storm drain markers permanently affix to storm drain inlets with the prohibitive "No Dumping – I Live Downstream" message in two languages. Notably, nearly all storm drain structures in the City are identified with stenciling, plastic markers, or permanent concrete stamping.

**Figure 4-2** Thermoplastic Storm Drain Stencil

### 4.4.2 SOURCE CHARACTERIZATION

The City maintains its MS4, which includes open channels, catch basins and inlets, and outfalls. As required by the Municipal Permit Section D.3.a.(7), the City's MS4 is included in the municipal facility inventory (Attachment C) as a high priority facility for inspection purposes. Table 6-1 of the City's JURMP details the pollutants potentially generated by the MS4.

### 4.4.3 BMP REQUIREMENTS

The City implements various BMPs to maintain its MS4 and uses the CASQA BMPs for municipal facilities and activities as a guide.

### 4.4.4 PROGRAM IMPLEMENTATION

#### 4.4.4.1 MAINTENANCE AND INSPECTION

A summary of the City's efforts in the maintenance and inspection of its catch basins and inlets, MS4, and open channels during the reporting period of July 1, 2009 to June 30, 2010 is summarized below. A total of 273 inlets were identified as accumulating a high volume of trash. All high trash volume facilities were inspected at least once during the dry season (May 1 – September 30). Table 4-3 details the amounts of waste collected from the City's storm drain system based on various facility and waste categories.

*Catch Basins and Inlets*

- There are 8,801 catch basins and inlets in the City
  - 8,480 catch basins and inlets were inspected
    - Out of these catch basins and inlets inspected, 4,444 catch basins and inlets were cleaned
- Data collection for catch basins with accumulated waste exceeding the cleaning criteria (33% or more full) started January 1, 2008. A total of 351 exceeded the criteria from July 1, 2009 – June 30, 2010.

*MS4*

- There are 184 miles of MS4 in the City
- The storm drain maintenance crews televised 4.31 miles of MS4 during the reporting year. New storm drain pipes were televised to ensure that there was no infiltration from groundwater or the sanitary sewer, and to inspect MS4 where there was obstructed water flow.
- A total of 0.16 miles of MS4 was cleaned. It should be noted that the City's storm drain pipes are designed to be self-cleaning under normal operation.

*Open Channels*

- There are 31 miles of open channels in the City
- A total of 286,714 square feet of open channels were inspected and cleaned

**Table 4-3** Amount of Waste Cleaned from the Storm Drain System FY 2009-2010

| CATEGORY | AMOUNT (tons) |
|---|---|
| Catch Basins | **28.18** |
| Inlets | **48.94** |
| MS4 | |
| Trash | 6.71 |
| Landscaping Debris | 8.30 |
| Sediment | 20.10 |
| **Sub-Total** | **35.11** |
| Open Channels | **280.47** |
| **TOTAL** | **427.81** |

The City will continue to inspect its MS4 as required by the Municipal Permit and record collected inspection data. During this reporting year, the City reviewed its inspection record and determined that there were no facilities that required inspections less than annually.

## 4.5 SANITARY SEWER SYSTEM

### 4.5.1 BACKGROUND

The City recognizes the vital pollution prevention role that sanitary sewer system maintenance plays in the protection of the MS4 system. If not properly maintained, the sewer system can potentially discharge numerous pollutants to the storm drain system such as bacteria, viruses, nutrients, parasites, and chemicals.

The City currently implements a Sewer System Management Plan. Pursuant to the Statewide General Waste Discharge Requirements for Sewer Collection Agencies, in April 2009 the City developed a Sewer System Management Plan. The City is currently working on developing a Fats, Oils, and Grease (FOG) Monitoring Ordinance. As part of the FOG program, the City has conducted a survey in which questionnaires were sent out to all restaurants in the City. Information collected about their FOG practices, and methods of preventing oil and grease from entering sanitary sewer systems will be used to track BMPs, assess their efficiencies, and direct future inspections.

### 4.5.2 SOURCE CHARACTERIZATION

There are 487 miles of sewer pipes in the City. The Municipal Permit Section D.3.a.(7) requires sanitary sewer collection systems to be identified as high priority facilities for the purpose of inspections. The sanitary sewer system is included in the municipal inventory as such (please see Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by the sanitary sewer system. The City of Chula Vista does not operate a Publicly Owned Treatment Works. Sewage generated in Chula Vista is collected and conveyed to the City of San Diego treatment works at Point Loma.

### 4.5.3 BMP REQUIREMENTS

The City responds to all sanitary sewer overflows and uses the CASQA BMP Handbook for municipal facilities and activities including sanitary sewer system maintenance as a guide. City staff regularly receive training on inspection and maintenance of the sanitary sewer system.

Concurrent with the arrival of maintenance and cleanup crews at the scene of a sewage spill from private sewer lines to contain and cleanup the spill, a Storm Water Compliance Inspector contacts the responsible person at the residence or facility and makes it a requirement to implement BMPs to prevent the recurrence of similar incidents. Such BMPs frequently include the requirement for regular and frequent inspections and cleaning of private sewer lines, tightly closing the cap on cleanouts, preventing oil and grease from entering sanitary sewer systems, etc.

### 4.5.4 PROGRAM IMPLEMENTATION

#### 4.5.4.1 MAINTENANCE AND INSPECTION

The City cleaned and maintained a total of 586 miles of sewer main (includes critical maintenance areas, which were cleaned multiple times) within the defined reporting period of this report. Identified critical maintenance areas were cleaned on a monthly basis by City crews. In addition to comprehensive sanitary sewer maintenance activities, the City utilizes a number of controls to limit infiltration from the sanitary sewer system to the MS4. Most essential of which, the City's standards require concrete pipes for all new storm drains, which ensure a much longer life, watertight joints, and effectively minimizes infiltration of groundwater and sewage to storm drain pipes. In addition, flow metering is also conducted throughout the City's sanitary sewer system to monitor flow depths and potential capacity concerns, minimizing potential sewer overflows and infiltration. The City has video cameras that can be moved through storm drain or sanitary sewer pipes for close inspection of pipe conditions. If a problem is suspected, that section of the pipe is video surveyed. This practice has greatly minimized the potential for infiltration of sewage into storm drain pipes.

The City also implements a rehabilitation program for aged sewer pipes. Rehabilitation consists of lining deteriorated existing Vitrified Clay Pipes (VCP) with a continuous material. This process eliminates the joints of the VCP, thereby eliminating the potential for ex-filtration of sewage. Also, only PVC sewer pipes are used for new construction for all but interceptors with

diameters larger than 36 inches. PVC pipes have proven to be very watertight and minimize sewage infiltration into the ground and storm drain systems.

Another control to limit infiltration from the sanitary sewer system to the MS4 is the City's initiative to replace aged corrugated metal pipe storm drains with concrete pipes. The City no longer allows metal pipes to be used for storm drains due to their inherent corrosion potential and increased risk of infiltration. Corrugated metal pipes are gradually being replaced with concrete pipes, which are more durable and watertight.

## 4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

### 4.6.1 BACKGROUND

The City performs activities that are not confined to a fixed area, such as powerwashing. Pollution prevention using source control BMPs are implemented for such activities.

### 4.6.2 SOURCE CHARACTERIZATION

The City performs a variety of mobile activities such as power washing for graffiti removal, landscape maintenance, street repairs, and pool maintenance. The Municipal Permit Section D.3.a.(7) requires that power washing be identified as a high priority municipal activity for inspection purposes. Therefore, Attachment C has categorized power washing as such. Table 6-1 of the City's JURMP details the pollutants potentially generated by the area or activity.

### 4.6.3 BMP REQUIREMENTS

The City implements source control BMPs for mobile activities, including power washing, and uses the CASQA BMP Handbook for Municipal Facilities as a guide. City power washing crews implement BMPs during their activities and receive regular training on storm water pollution prevention.

### 4.6.4 PROGRAM IMPLEMENTATION – POWER WASHING FOR GRAFFITI REMOVAL

#### 4.6.4.1 MAINTENANCE AND INSPECTION

The City's Graffiti Abatement Program functions under the mission of: *"To deliver in a timely manner, a comprehensive, cost-effective, environmentally sound, and technically reliable graffiti removal, education, and prevention program for the residents of Chula Vista."* The City provides cost-free graffiti removal for the residents of Chula Vista.

The Graffiti Abatement Program utilizes various techniques for effective removal of graffiti Citywide, including power washing and sand blasting. In its commitment to this program and to utilize environmentally sound and cost-effective graffiti removal processes, City Council approved the spending

of $63,000 for the purchase of highly specialized equipment to capture and treat residual wash water generated from graffiti abatement activities in early 2006. At the end of 2006, the new equipment was made available to the graffiti crews and has been in use ever since.

As a part of the inspection process, City's Storm Water Management staff annually conducts a ride-along with the graffiti/power washing crews to observe their operations and activities. Storm water staff provides storm water education to the crew and gives any additional BMP recommendations or improvements to their existing pollution prevention measures. During this reporting year, City Storm Water Management staff observed the removal of graffiti from a sidewalk area, close to the curb/gutter. The graffiti crew implemented all BMPs and prevented any wash water from entering the storm drain system. In addition, the crew made used the least amount of water necessary to complete the job. All BMPs were in place and working properly.

## 4.7 SPECIAL EVENTS

### 4.7.1 BACKGROUND

The City hosts a variety of special local events, which include festivals, fairs, and other events for special causes and occasions. Usually, these events involve the participation of outside organizations, community groups, and the general public. The gathering of event participants and crowds is generally a source of trash and debris if BMPs are not implemented.

### 4.7.2 SOURCE CHARACTERIZATION

Municipal Permit Section D.3.a.(7) requires that special events be designated as high priority for inspection purposes. Therefore, special events are included in the City's municipal inventory as high priority activities (Attachment C). Table 6-1 of the City's JURMP details the pollutants potentially generated by special events.

### 4.7.3 BMP REQUIREMENTS

The City implements various BMPs for special events such as having special bins available for recyclables and trash, using street sweeping immediately following major events taking place on a street, and having personnel dedicated to litter abatement throughout City events. Also, following every event, City staff inspects the grounds for trash and performs other clean-up activities as necessary. Environmental Services Division and Storm Water Management staff works in conjunction with other City departments and event organizers to ensure that adequate BMPs are implemented during special events.

### 4.7.4 PROGRAM IMPLEMENTATION

Storm Water Management and Environmental Services staff has active presence at the majority of City events. They set up booths, provide public education on environmental issues, and distribute informational materials. As necessary, they conduct surveys at the same time to evaluate general public's awareness and practice of BMPs. As a part of storm water education outreach, staff working at the events provides information on pollution prevention and watershed

protection. City Environmental Services staff notifies hired personnel if there are overflowing trash bins or areas where more trash receptacles are needed.

## 5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(d).i – Any updates to the industrial and commercial inventory.*

*Permit Section J.3.a.(3)(d).ii – Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.*

*Permit Section J.3.a.(3)(d).iii - A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.*

*Permit Section J.3.a.(3)(d).iv - Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.*

*Permit Section J.3.a.(3)(d).v - Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.*

*Permit Section J.3.a.(3)(d).vi - Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.*

*Permit Section J.3.a.(3)(d).vii - Identification of the number of third party inspections conducted.*

*Permit Section J.3.a.(3)(d).viii - Identification of efforts conducted to verify third party inspection effectiveness.*

*Permit Section J.3.a.(3)(d).ix – A description of efforts implemented to address mobile businesses.*

*Permit Section J.3.a.(3)(d).x - The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(d).xi - A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.*

*Permit Section J.3.a.(3)(d).xii - A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.*

## 5.1 INTRODUCTION

The following section describes the development and implementation of program components related to industrial and commercial activities in the City of Chula Vista to minimize the impact of urban runoff on receiving waters. This component is driven by multiple interrelated activities to ensure an effective and complete set of actions. The City recognizes that no program activity is mutually exclusive, and that each is essential to the overall success of the program. The City has compiled an inventory of industrial and commercial sources and developed BMP requirements for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

## 5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES/SOURCES ELEMENT

### 5.2.1 BACKGROUND

The City's industrial and commercial inventories include 1,426 facilities. Examples of industrial facilities within the City include manufacturing facilities, auto dismantlers, and transportation businesses. Examples of stationary commercial facilities within the City include auto repair shops, restaurants, and wholesalers of many kinds; this does not include mobile commercial facilities. Mobile commercial facilities are detailed in Section 5.3.

The main objective of the industrial and commercial component of the JURMP is to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. Each facility has the potential to discharge pollutants into the MS4 and hence degrade local water quality.

### 5.2.2 SOURCE CHARACTERIZATION

Through ongoing efforts to maintain a more systematic approach to source inventory management, annually, the City conducts updates of its industrial and commercial facilities inventories by searching through its business license database and conducting visual observations of new or closed businesses during annual inspections. Additionally, every five years, the City conducts a comprehensive field validation of its industrial and commercial inventories Citywide. The industrial and commercial inventories are also updated on a continuous basis by adding businesses that cause incidents of pollutant discharge or are found to require regular inspections due to the type and amount of pollutants that they generate.

Watershed-based inventories of industrial and commercial sites within the City have been compiled. Information was obtained from the City's business license database (Permits Plus), the State Water Resources Control Board database of industrial sites that have filed NOIs, inspection records, and previous experience.

Inventories of industrial and commercial facilities within the City were compiled during the development of the City's JURMP in 2008, which were later updated for the current reporting period and are included in Attachments D.1 and E.

The inventory for commercial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Facility address
- Municipal Permit category
- Description of services
- Priority

The inventory for industrial facilities includes such information as:

- Facility name
- Assessor's Parcel Number (APN)
- Type of facility
- Priority
- Facility address
- Standard Industrial Classification (SIC) code
- Waste Discharge Identification Numbers (WDID) for sites that are covered under the State of California's General Industrial Permit.

The inclusion of the APNs allows the City to track its inventories through the City's GIS program. Table 7.1 – General Pollutant Loading Potentials of Industrial and Commercial Sources in the City's JURMP document identifies the pollutants that may be generated by each business category.

### 5.2.3 BEST MANAGEMENT PRACTICES REQUIREMENTS

Pollution prevention methods are used as a primary mechanism for reducing discharges of pollutants into MS4s from existing industrial and commercial facilities. Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods were required to be implemented to the MEP where applicable and feasible:

- Reduce the quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees
- Implement a spill response plan
- Segregate and recycle wastes

- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City's Storm Water Management Ordinance provides legal authority for the City to require a SWPPP for any industrial or commercial facility that may potentially discharge significant pollutants into receiving water bodies.

In addition to the pollution prevention BMPs, the City has established a set of minimum BMPs based on the California Stormwater BMP Handbook – Industrial & Commercial (CASQA, 2003) for all industrial and commercial sites. Businesses are required to use an effective combination of the applicable BMPs and activity-specific BMPs. The listings of the BMP fact sheets are available online at www.cabmphandbooks.com.

Insurance of proper BMP implementation at industrial and commercial sites is based on a multi-level approach and information on BMPs are disseminated to the local business community through a number of channels, including:

- Inspection & enforcement activities
- Industrial and commercial outreach & education
- Business license application procedure

The City does not exclusively endorse some of the specific recommended BMP options listed in the CASQA fact sheets because they are less stringent than, and conflict with Municipal Permit requirements or City's ordinances. Those exceptions are listed in Appendix C of the JURMP. Businesses are informed of the exceptions, where necessary.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and facility owners, operators or their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards. It has been determined that one-on-one interaction between City inspectors and business owners are more effective in knowledge and behavior change than conducting workshops or distributing informational materials, although latter methods are also effective to a lesser degree and are practiced by the City.

### 5.2.4 PROGRAM IMPLEMENTATION

The City provides education and outreach to industrial and commercial businesses so they are aware of the City's storm water requirements. As per the permit, during the reporting period, the City mailed approximately 1,200 BMP notification letters to stationary commercial and industrial business owners/managers. The notification letters provided information on the BMPs that businesses must implement in order to be in compliance with storm water regulations. A Storm Water BMP Fact Sheet was provided that outlines what the business need to know about

the City's storm water ordinance as well as the general pollution prevention BMPs. The remaining industrial and commercial businesses were notified of BMP requirements during inspections. The City inspects its inventoried businesses to evaluate compliance with its BMP requirements. Enforcement actions are taken as necessary to bring the business into compliance.

Because the City's BMP requirements, as described in the JURMP, are not substantially different from the BMP requirements that the City has been enforcing since 2002, most businesses should already be familiar with what they need to do to comply with the City's requirements. While the City continues to provide education and outreach to industrial and commercial businesses, in most cases a lack of awareness is not accepted as an excuse for noncompliance.

The City provides information and training regarding storm water quality to industrial and commercial owners and operators. In turn, owners and operators are required to train their personnel, employees, and/or other parties involved with industrial or commercial activities. Businesses are given educational materials outlining pollution prevention methods and BMPs during inspections, where appropriate. Storm Water Management staff gives recommendations to businesses where necessary. Based on the City's experience, this site-specific, personal education is among the most effective methods of outreach. The educational program for industrial and commercial businesses is described in more detail in Section 10 of the updated JURMP.

After each inspection, the City provides a copy of the inspection report to the responsible party of the inspected business. Generally electronic inspection forms are completed, and a printout is mailed or faxed to the responsible party after the inspection. If immediate notification is deemed necessary, a paper inspection form with carbon copy is completed onsite, with the carbon copy provided to the responsible party at the time of inspection.

In all cases a copy of the Chula Vista Storm Water Management and Discharge Control Ordinance is handed to the facility owner/manager. The City continues to utilize the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Providing one-on-one training and helping business owners to develop their activity and site specific BMPs
- Distributing informational printed materials
- Conducting industrial and commercial inspections and setting standards for compliance

#### 5.2.4.1 INDUSTRIAL/COMMERCIAL SITE INVENTORY AND INSPECTIONS

During this reporting period, 198 industrial facilities and 1,228 commercial facilities including 333 mobile businesses were identified and inventoried. These facilities are identified in Attachments D.1 and E.

Through ongoing efforts to maintain a more systematic approach to source inventory management, industrial and commercial facilities were prioritized as potential contributors of identified watershed Pollutants of Concern including bacteria and heavy metals. Inspections

were conducted and, observed Pollutants of Concern were addressed through necessary education and enforcement actions.

During this reporting period, the following number of inspections was conducted to ensure compliance with Permit requirements (see Attachments I and J):

- 201 high priority commercial facilities
- 28 low priority commercial facilities
- 48 high priority industrial facilities
- 2 low priority industrial facilities

Justification and rationale for why industrial and commercial sites/sources were chosen for inspection is as follows:

- Permit compliance – Categories and numbers of facilities selected for inspection were chosen to meet permit requirements of Section D.3.b.(3).
- Threat to Water Quality – Facilities that posed a higher TTWQ was given higher priority for inspections.
- Inspection frequency – Facilities that were not inspected during the previous period were given a higher priority for inspection.
- Past history of non-compliance – Facilities that had a history of non-compliance during previous inspections were targeted for re-inspection during the current reporting period.

City inspectors use industrial and commercial inspection forms specifically designed as multi-purpose tools. The form provides a checklist of information and potential water quality issues, which serves as a reminder to the inspector of all items requiring attention while on the industrial/commercial facility. The form also provides clear and concise information to the business owner or manager about deficiencies in the implementation of BMPs. It includes information about corrective actions that the business owner or manager needs to take for bringing the site into compliance, and the time allowed for bringing the facility into compliance. Inspection forms are designed to enable the inspector and others to assess BMP implementation on each industrial/commercial facility and the effectiveness of BMPs. Inspection reports are often used as supporting documents in enforcement actions against non-compliant industrial/commercial facilities and during administrative hearings.

Through the above process, the City ensures that inspections conducted address all the required inspection steps to determine full compliance.

The Copermittees have standardized industrial/commercial inspections. An Inspection Standards Workgroup was formed with the task of finding a way to standardize industrial-commercial inspections so that the results from each Copermittee's inspections are consistent. The goal of the workgroup was to create minimum regional standards while maintaining flexibility for each Copermittee to identify and apply their individual requirements that have been developed to match each Copermittee's respective storm water program.

#### 5.2.4.2 PRIORITIZATION

The Municipal Permit no longer requires industrial and commercial inventories to be categorized into high or low priority for TTWQ, although Section D.3.b.(3) of the Municipal Permit requires inspections of sites determined to pose a high threat to water quality. Based on the City's past experience, prioritization of industrial and commercial facilities into high or low priority provides a powerful tool to identify facilities that require focused attention and more frequent inspections. Therefore, the inventories of industrial and commercial facilities have been prioritized in this report.

The City evaluated each business by incorporating factors specified by the Municipal Permit and by using past experience. Although not specifically required, the City has also continued to classify industrial businesses that have obtained coverage under the General Industrial Permit as high priority. Other industrial businesses, based on past inspections and institutional knowledge, or those that are known to have poor compliance history, or have a high potential for pollutant discharge are also classified as high priority.

Criteria for identification of low priority industrial facilities include the following:

- Land Use Code
- SIC Code
- Type of Activity
- Location

Criteria to identify high priority commercial facilities:

- Auto related businesses
  Businesses operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road corridor (Sweetwater River)
  - Bay Boulevard (San Diego Bay)
- Restaurants
  Restaurants operating along the following areas were included due to their proximity to receiving water bodies:
  - Main Street corridor (Otay River and MSCP Preserve areas)
  - Bonita Road (Sweetwater River)
  - Bay Boulevard (San Diego Bay; facilities within the Port jurisdiction are not included)
- Fast food chains
  This is due to frequent rotation of management and employees, and low awareness about water quality issues. Also, fast food restaurants often have a drive through and more customers who potentially discard food wrappers, etc. in the parking lot.
- Private golf courses
- Entertainment facilities
  Cricket Wireless Amphitheater and Knotts Soak City

- Towing companies
- Building supplies and materials
- Food Markets
- Violation history
  Commercial facilities that have been issued a citation or Notice of Violation within the past two years are included in the list. Also, any business that receives a citation or Notice of Violation in the future will automatically be added to the list.

#### 5.2.4.3 INSPECTIONS CONDUCTED

An inspection of an industrial and commercial business involves verifying information regarding ownership, management, and contact names and phone numbers of the businesses. If the inventoried business is no longer at the listed location or has moved, the inspector makes a note to update the inventory. If a new business has been determined to be included in the inventory, Storm Water Management staff notes that information, and the business is usually inspected at that time.

For industrial sites, Storm Water Management staff reviews the facility's SWPPP, Annual Report, and monitoring results, if applicable. Typically, only sites that are covered under the General Industrial Permit have these documents. Where applicable, Storm Water Management staff checks for coverage under the General Industrial Permit

Monitoring verifications for high priority industrial facilities are conducted through the review of the facility's annual report or by the verification of the facility's participation in the Group Monitoring Program. To ensure that the subject facility is still an active participant of a Group Monitoring Program, the City verifies membership by contacting the Group Leader, and by accessing the State Water Resource Control Board's website:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/groupmonitoring.shtml

During both industrial and commercial business inspections the main focus is reviewing the implementation of pollution prevention methods and other BMPs. A walk-through of the business is conducted to identify potential pollutants and pollutant generating activities. The business contact typically accompanies the Storm Water Compliance Inspector during the walk-through to enable City staff to point out areas where corrections are needed, and for the business representative to answer any questions and take note of the requirements.

Based on the results of the inspection, the Storm Water Compliance Inspector completes a Storm Water Quality Inspection Report for Commercial/Industrial Facilities. The responsible party is provided with a copy of the inspection report after the inspection. The inspection report contains the following information:

- General information to update the inventory
- General site observations and/or conditions of concern noted
- Results of the SWPPP review, BMP plan, and monitoring results, where applicable
- Assessment of BMP implementation

- Recommended corrective actions
- Enforcement action taken
- Inspector name and signature
- Signature of party receiving the report

The Storm Water Compliance Inspector does not typically prescribe exact BMP solutions; staff does attempt to work with the facility's contact to provide examples of BMPs that could be implemented. Cost-effective BMPs are sought whenever possible, although, more expensive BMPs may be needed to reduce the pollutant discharges to the MEP. The business is also evaluated for its staff training procedures and the storm water quality awareness of the contact person. Educational information is provided as appropriate. The findings of the inspection and corrective actions are discussed with the responsible party while the Storm Water Compliance Inspector is at the site.

As discussed above, the business is provided with a copy of the completed inspection report. Based on observations during the inspection, the City may determine that the business category should be changed from low to high priority or vice versa. Any such changes are reflected in the inventory update submitted in the following JURMP Annual Report.

A detailed account of all industrial and commercial inspections conducted during this reporting period is included in Attachments I and J.

#### 5.2.4.4 THIRD PARTY INSPECTIONS

With a dedicated Storm Water Management staff, industrial and commercial facilities are effectively regulated in the City without the use of a third party inspection program. The City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and the City's Storm Water Management staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements.

#### 5.2.4.5 VIOLATIONS AND ENFORCEMENT ACTIONS

The City has a number of mechanisms that can be used to bring an industrial or commercial facility into compliance. These mechanisms include:

- Verbal and Written Warnings
- Notices of Code Violation
- Orders to Clean and Abate
- Orders to Cease and Desist
- Orders to prepare a Storm Water Pollution Prevention Plan
- Orders to implement a Monitoring and Testing Program
- Administrative Citations
- Civil Penalties
- Judicial Enforcement

Storm Water Compliance Inspectors properly document each observed violation at the facility failing to comply with the storm water requirements, and enforcement action is taken when necessary to bring the facility into compliance.

In some cases compliance is achieved and observed at the time the initial enforcement action is taken, and no follow-up is necessary. In other cases, Storm Water Compliance Inspector conducts follow-up inspections to ensure that required corrective actions are adequately addressed.

Where the Storm Water Compliance Inspector observes a significant and/or immediate threat to water quality, immediate enforcement action is taken to require the facility to immediately correct the situation. When necessary, City's maintenance crews respond to illegal discharges, contain and capture pollutants before entering storm water conveyance system inlets, and stay at the scene until the illegal discharge is terminated by the responsible person. The affected areas and the storm water conveyance system are cleaned and disinfected as necessary. Costs for such operations are charged to the business owner of the property owner. In any case in which Storm Water Compliance Inspectors determine that a noncompliant site poses a threat to human or environmental health, the City notifies the RWQCB by phone and in writing as required by the Municipal Permit.

The City also investigates all reported incidents of illicit discharges or illegal connections from industrial and commercial businesses. This includes findings during the implementation of the City's Dry Weather Field Screening and Analytical Monitoring Program. The investigations are performed in accordance with Section 9.5 of the City's JURMP.

Table 5-1 details the types of violations and the numbers of each during the reporting period. A detailed account of enforcement actions taken during this reporting period is included in Attachment K.

**Table 5-1** Industrial/Commercial Enforcement Action Summary FY 2009-2010

| VIOLATION TYPE | NO. |
|---|---|
| Administrative Citations-Warning | 6 |
| Administrative Citations | 31 |
| Notice of Violation | 5 |
| Civil Penalties | 1 |
| **VIOLATION CATEGORY** | **NO.** |
| Commercial | 38 |
| Industrial | 5 |

Total penalties of $16,400 were issued to the enforcement actions above.

The above referenced enforcement actions were preceded by initial inspections and were followed up by additional inspections as necessary until such non-compliant facilities were brought to full compliance with the City's storm water regulations.

#### 5.2.4.6 IDENTIFICATION OF NON-FILERS

If Storm Water Compliance Inspectors determine that an industrial facility may require coverage under the General Industrial Permit and has not filed a Notice of Intent (NOI), the City requires the responsible party to contact the Regional Board to determine if the facility is required to obtain coverage. At the same time, the Regional Board is notified of the existence of such industrial facility. Additionally, the City coordinates joint site inspections with Regional Board staff to assist in their site inspections. Each Annual Report includes a list of industrial facilities that the City has identified during that reporting period as candidates for coverage that have not filed NOIs. The list includes the name of the facility, address, applicable SIC code(s), and the type of business.

During the current reporting period, the City did not identify any non-filer facilities that may be eligible for coverage under the General Industrial Permit.

## 5.3 MOBILE SOURCES ELEMENT

### 5.3.1 BACKGROUND

Illegal discharges are a concern with mobile businesses working in the City. Due to the nature of their activities, mobile businesses are regulated differently than stationary businesses. Mobile businesses can be difficult to regulate because many do not have permanent locations in the City or may not have a business license. On a continual basis, new mobile businesses are started, existing mobile businesses go out of business, some mobile businesses do not renew their business license, or some operate from their home. Since they are not consistently present at any particular location, regular inspections are difficult and infeasible. For the above reasons, City maintenance crews who normally work on public streets have been trained to report any observed illegal discharges by mobile businesses. Furthermore, City inspectors conduct weekend and night inspections to monitor BMP implementation by mobile businesses.

### 5.3.2 SOURCE CHARACTERIZATION

Mobile businesses that are known to operate within the City are marked as such on the City's commercial inventory in Section B.5 of the City's updated JURMP. The following business types are addressed by the mobile source element of the City's industrial and commercial program.

- Mobile auto detail/ maintenance
- Window washing/pressure washing/ street sweeping
- Pool and spa cleaning
- Carpet cleaning
- Plumbing/ handyman/ repairman
- Landscaping
- Dog grooming
- Boat cleaning/ hull maintenance

- Fire sprinkler maintenance
- Painting and coating
- Mobile construction trades, which include cement work and masonry

In addition to the business types listed above, other mobile businesses that the City identifies as a TTWQ are added to the inventory. Because not all mobile businesses have obtained a business license in the City or the business is based out of the City's jurisdiction, the City continues to refine and update its inventory of mobile businesses.

The City has established a process by which any mobile business license applicant within the above categories are required to go through a storm water BMP training, and sign a certification verifying that they are aware of the City's BMP requirements and pollution prevention ordinances.

During this reporting period, 164 mobile businesses from the categories listed above applied for a City business license, were trained on BMPs related to their business, completed the City of Chula Vista Storm Water Questionnaire and Certification Statement, and received their business license. Attachment D.2 is a list of the businesses that went through this process during the reporting period. Table 5-2 details the types and numbers of mobile businesses approved during the reporting year.

**Table 5-2** Approved Mobile Business Licenses by Category FY2009-2010

| BUSINESS TYPE | NO. |
|---|---|
| Construction Related | 10 |
| Carpet Cleaning | 8 |
| Boat Cleaning and Maintenance | 2 |
| Auto Detailing | 13 |
| Pool and Spa Cleaning | 8 |
| Handyman/ Repairman | 27 |
| Powerwashing/ Window Cleaning | 2 |
| Plumbing | 26 |
| Landscaping | 29 |
| Fire Protection Systems | 14 |
| Painting and Coatings | 15 |
| Portable Sanitary Services | 1 |
| Pest Control | 1 |
| Miscellaneous/ Others | 8 |
| **TOTAL** | **164** |

### 5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

#### 5.3.3.1 POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. Mobile businesses often deal with a variety of pollutants, both

indoors and outdoors, that pose potential environmental threats if transported by way of urban runoff. In mobile business settings, pollution prevention strategies enable the operator to reduce the volume of solid, liquid, and hazardous wastes as well as costs. The City emphasizes the use of the following pollution prevention methods, when appropriate:

- Use smaller quantities of toxic materials or substitute less-toxic materials.
- Minimize the volume of cleaning water to decrease wastewater generation.
- Implement a spill response plan.
- Train employees in pollution prevention practices.

It is important to recognize that pollution prevention methods are stressed through all interactions between the City and the owners, operators, and their employees. Further, pollution prevention methods are commonly used in compliance with other regulatory management standards.

#### 5.3.3.2 BMP REQUIREMENTS

All BMPs required for stationary sources listed in Section 7.2.3.1 of the City's updated JURMP, are also required for mobile businesses where applicable. The most important BMPs used for most mobile businesses are typically Non-Storm Water Discharge Control and Spill Prevention, Control, and Cleanup, as described in fact sheets SC-10 and SC-11 of the CASQA Manual.

In addition, as per the Municipal Permit, the Copermittees developed a set of minimum core BMPs for the various types of mobile businesses. The following BMPs specifically address the unique characteristics of mobile businesses.

- Storm water training
- Spill containment and cleanup (Spill Kits)
- Proper handling of all wastes (Solid, liquid and hazardous)
- Protecting storm water conveyance systems
- Providing proper handling and containment of materials
- Providing equipment washout areas

These practices represent only the minimum required BMPs. Mobile businesses are instructed to contact local jurisdictions where mobile business activities are to take place to find out about any additional or more stringent requirements.

The Copermittees are in the process of posting information about mobile business minimum BMPs as a resource in the Project Clean Water Toolbox website. Please see Figure 5-1 – Clean Water Toolbox for the home page of the website.

**Figure 5-1** Clean Water Toolbox

### 5.3.4 PROGRAM IMPLEMENTATION

The City continues to implement well-developed procedures for mobile businesses through the City's Storm Water Mobile Business License Program. New mobile business license applicants are made aware of applicable requirements and BMPs related to their business prior to the approval and issuance of a business license. Under this program, business license applications that fall under pollutant generating mobile activity types are routed to the Storm Water Management Section for review and approval. Applicants are required to complete a Storm Water Questionnaire regarding their business practices and required BMPs and sign a certification statement that states they are aware of the City' Storm Water regulations and will implement adequate BMPs in their activities. Approved applications and completed Storm Water Questionnaires and Certification Statements are scanned into the City's Mobile Business Database. This process provides a tracking mechanism for Storm Water Management Staff in managing and maintaining priority mobile sources, and identifying repeat violators. The procedures shown below have demonstrated success in requiring new business owners, particularly mobile businesses, to address water quality concerns through the implementation of BMPs.

- The Finance Department receives application from mobile business owner

- The applicant is issued a commercial or construction packet based on business type/description. Each Storm Water Information Packet for Mobile Business contains a transmittal letter, copy of the City's Storm Water Ordinance, and appropriate CASQA BMPs relevant to the type of business activities.
- The applicant is instructed to complete and return the Storm Water Questionnaire and Certification Statement in order to receive approval from the Storm Water Management Section before a business license can be issued.
- The applicant contacts Storm Water Management staff for either a "face-to-face" or phone conversation to review the application and answer any questions prior to approval and issuance of a license.
- In addition to the City's Mobile Business Database, the Copermittees have established a Regional Copermittee Mobile Business Database. The web-based database can make queries on locating a mobile business, finding and viewing violations, and watershed-based reporting. Jurisdictions are able to edit a mobile business that is located or does business in their jurisdiction. See Figure 5-2 – Regional Copermittee Mobile Business Database for a sample web page.

**Figure 5-2** Regional Copermittee Mobile Business Database

Three types of reports can be generated from this database:

- All mobile businesses home-based within a jurisdiction
- All mobile businesses operating within a jurisdiction

- All violations that have occurred within a jurisdiction

#### 5.3.4.1 EDUCATION AND OUTREACH

During the business license application process, the City provides mobile business owners or operators the necessary information, educational materials, and outreach related to storm water quality issues specific to their type of business. As stated above, businesses are given the educational materials outlining pollution prevention measures and other BMP requirements related to their respective activities prior to the license being issued. A sample of the Storm Water Information Packets for Mobile Businesses is included in Appendix D of the City's updated JURMP. The education program is described in detail in Section 10, of the City's updated JURMP.

#### 5.3.4.2 ENFORCEMENT ACTIONS

Most violations associated with mobile businesses are related to illegal discharges and lack of BMP implementation. Upon arrival at the scene, City inspectors require an immediate stop to any illegal discharge and instruct the responsible person to initiate containment and cleanup of the affected areas. If the business lacks materials and equipment required for the deployment of adequate BMPs, the responsible person is informed that they will not be able to resume activities until such time that they procure all necessary materials and equipment. Storm Water Compliance Inspectors find out if the business possesses a business license, and has signed a Certification Statement. Mobile businesses that do not have a City business license will be required to obtain one prior to being allowed to resume business operations. Enforcement action, including warnings, citations, civil penalties, or other enforcement measures are initiated where justified. During the current reporting period, a total of 17 administrative citations totaling $3,100 in fines were issued to mobile businesses operating in Chula Vista.

##### 5.3.4.2.1 NOTABLE ACTIVITIES

During the reporting period, the City continued its mobile business license application processing combined with public education, which is considered a notable and very effective method of minimizing pollutant discharges from mobile business activities.

## 6.0 RESIDENTIAL COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a. (3)(e). i - Identification of the high threat to water quality residential areas and activities that were focused on.*

*Permit Section J.3.a.(3)(e).ii - Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.*

*Permit Section J.3.a.(3)(e).iii - A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.*

*Permit Section J.3.a.(3)(e).iv - Types and amounts of household hazardous waste collected, if applicable.*

*Permit Section J.3.a.(3)(e).v - A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of evaluation.*

*Permit Section J.3.a.(3)(e).vi - The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(e).vii - A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.*

*Permit Section J.3.a.(3)(e).viii - A description of notable activities conducted to manage urban runoff from residential areas and activities.*

### 6.1 INTRODUCTION

The City has developed the residential component of the Jurisdictional Urban Runoff Management Program (JURMP) based upon a multi-faceted approach including pollution prevention; complaint response and enforcement; and outreach and education. It is the overarching goal of this component to offer cost effective and simple solutions to reducing residential discharges of pollutants into the Municipal Separate Storm Sewer System (MS4) to the Maximum Extent Practicable (MEP) and to support the long-term improvements of water quality through awareness and behavior modification.

### 6.2 SOURCE CHARACTERIZATION

The information collected from reported illegal discharges and results of subsequent investigations can be analyzed to provide useful tools in effectively characterizing activities, sources, and areas within the City that contribute more to water quality impacts and that need to be targeted. These criteria may stay constant from year to year, or change each year. However,

knowledge of the pattern that they follow will provide the storm water manager an insight that is necessary to develop or modify an effective program. As in previous reporting years, the City has taken a critical look at the complaints received in 2009-2010 as presented in Figure 6-1. Home improvement related discharges continue to be prevalent in this reporting period. Compared to last year, the percentage of home improvement related discharges decreased by 14%. There may be several reasons for this declining pattern, one of which may be attributable to the public outreach programs conducted by City staff that provide invaluable information and education on the impacts of waste disposal to the general public and, therefore, is effective in changing habits. Further, characterizing the sources of pollutants can provide a resource in tailoring public education and outreach programs to the specific needs of the community and improving their effectiveness, while maintaining economic viability. This type of critical look is an important tool in making management decisions on how to approach residential Best Management Practices (BMPs) implementation and pollution prevention in the City. It should be noted that such analysis is not intended to offer determinate conclusions; rather it is presented to provide a general evaluation tool to guide residential strategies and BMP implementation guidance. Further, it is an effective way of evaluating and characterizing sources over time.

**Figure 6-1** Percentage of Reported Residential Non-Storm Water Violations by Activity FY 2009-2010

## 6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City's JURMP has designated BMPs for a number of high Threat To Water Quality (TTWQ) residential activities including home improvement and maintenance, automotive maintenance, waste management and disposal, and pet waste management. In addition, every year certain residential areas of the City are designated as areas with a high TTWQ. It is important to recognize that the dynamic behind strict enforcement of requirements regulating residential BMP implementation is quite challenging, however, the City has developed a number

of mechanisms through which information on BMPs are disseminated to the public and ultimately enforced through the City's Storm Water Ordinance. Mechanisms such as special community events, school presentations, door hangers, City's environmental website, and community newsletters were utilized within the defined reporting period of this report. Examples of such programs and outlets include:

- Household Hazardous Waste Collection Events
- State-Certified Used-Oil Collection Centers
- Household Collection of Used Cooking Oil
- Christmas Tree Recycling Program
- Residential Complaint Response & Enforcement
- Residential Door Hangers
- City's environmental website at: www.chulavistaca.gov/clean

Notably, all of the mechanisms listed above have been discussed in more detail throughout other sections in this report. It is confirmed that the designated BMPs were required to be implemented primarily through public education, and where necessary by enforcement action.

## 6.4 PROGRAM IMPLEMENTATION

The residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted, so that pollutants associated with residential activities and areas are minimized to the MEP. The residential program also has an education component, described in the following sections, so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. The City uses public education and outreach together with enforcement mechanisms, when necessary, to ensure program implementation by residents and compliance with all federal, state, and local laws and regulations.

The City keeps accurate records of all reported residential illegal discharges and non-compliance with BMP requirements. This information can be used in many ways such as identification of pollutants of concern, areas of HTTWQ, increasing/decreasing trends in illegal discharges, and repeat violators. Such analysis is then used to develop new programs or modify existing programs to focus attention on program elements that result in higher effectiveness and quicker results. Map 1 – Violation Location Map was prepared to depict all areas of the City with a visual demonstration of reported illegal discharge distributions. The City then targets higher density areas for more focused public education and surveillance.

### 6.4.1 MANAGEMENT AND DISPOSAL OF USED OIL AND HOUSEHOLD HAZARDOUS MATERIAL

The City facilitates the proper management and disposal of used oil, toxic materials, and all other Household Hazardous Waste (HHW). Information pertaining to the household hazardous waste and the used oil and filter programs are distributed to residents annually during special events, presentations, point of purchase locations, mobile displays throughout the city offices and community centers, local realtors/associations, and property management offices. Residents are

educated about the disposal of such waste through the City's public education program, which is described in Section 8.0. The City meets and often exceeds requirements set forth by the Cal Recycle (formerly the California Integrated Waste Management Board). The program has the capacity to receive and process used oil and filters generated by City residents. The amount of used oil collected from certified oil centers decreased since the last reporting period as presented in Table 6-1. This decrease can be attributed to a change in the data tracking requirements as set forth by the CalRecycle. The City continues encouraging residents to take a proactive approach to changing their oil by draining it, uninstalling their oil filters and taking filters along prior to visiting their local auto supply store. In this way, residents recycle used oil as they purchase their new oil and avoid an extra trip, one that could have added green house gases into the atmosphere. This method also prevents storm drain pollution, as unattended oil could intentionally or unintentionally spill and enter storm drain systems.

The South Bay Used Oil Recycling Program has been evaluated by CalRecycle as a successful program implemented by the City of Chula Vista, National City, and Imperial Beach in terms of improving environmental quality. Residents of Chula Vista can leave oil filters and up to 5 gallons of used oil at the curb on their regular trash and recycling collection day at no additional charge. This used oil will be collected and recycled through the South Bay Used Oil Recycling Program. Residents of Chula Vista also have the option of taking their used oil to various used oil collection facilities in the City for recycling or disposal.

Additionally, the City provides its residents and neighboring municipalities the means to properly dispose of HHW at the facility located at 1800 Maxwell Road, Chula Vista. This facility accepts oil, both clean and contaminated as well as residential hazardous waste. Residents are limited to 15 gallons or 125 pounds of used oil or hazardous waste per vehicle. The facility is open every Saturday and Wednesday from the hours of 9 AM to 1 PM. The City also offers "door-to-door" collection of HHW for a small donation. Under this program, HHW is collected by appointment from residents who are unable to physically take the waste to the permanent facility or because of scheduling conflicts. Every used oil and HHW application has focused on pollution prevention, watershed protection, source reduction and making it easy for residents to do the right thing when it comes to proper disposal.

**Table 6-1** Amount of HHW and Used Oil Collected FY 2009-2010

| | | |
|---|---|---|
| **Household Hazardous Waste** | Quantity of waste collected (FY 08-09) | Quantity of waste collected (FY 09-10) |
| | 252,494 lbs | 294,217 lbs |
| **Used Oil** | Quantity of used oil collected from certified centers (FY 08-09) | Quantity of used oil collected from certified centers (FY 09-10) |
| | 49,287 gallons | 22,399 gallons |

### 6.4.2 RESIDENTIAL AREAS AND ACTIVITIES EVALUATION METHOD

A total of 25% of the City's 33,366 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters. The City has developed various mechanisms that aim to reduce pollutant runoff from residential areas and activities to the MEP. The following mechanisms are used by the City to determine areas where enforcement actions may be necessary, where appropriate:

- Public reporting hotline
- Analysis of Dry Weather Monitoring Program results
- Observations from City maintenance personnel
- City's environmental website at: www.chulavistaca.gov/clean
- Analysis of data collected and managed in the Department of Public Works data management system GBA (George Butler Associates Management System)

Further information about the City's hotline reporting system and Dry Weather Field Screening and Analytical Monitoring Program are provided in Section 9 of the JURMP. The City evaluates its methods used to encourage improved pollution prevention practices and the implementation of BMPs through the review of the aforementioned mechanisms. By using a Geographic Information System program and the data collected from these mechanisms, every year residential areas of the City that have had higher numbers of violations, and outfall locations that exceeded pollutant standard limits are mapped (see Map 2– HTTWQ Residential Area Map and Map 3 – Violations Locations - Residential). City staff then develops programs to inspect and investigate areas of the City that are considered high TTWQ. City staff investigates violations with enforcement authority within a reasonable timeframe. Violations are documented and depending on the nature and severity of the violation, enforcement may consist of any of the following:

- Verbal Warnings
- Written Warnings
- Orders to Clean and Abate
- Monetary Fines

Details of these procedures are included in Section 2 of the JURMP document.

The general public continues to effectively participate in the program by reporting pollutant generating activities or practices observed within their neighborhoods. Based on the number of calls received from the public during this reporting period, it can be construed that the general public's awareness of water quality issues continue to improve and people are more sensitive about the environmental quality of their surroundings. Information collected from the City's illegal discharge reports database can also characterize those activities and sources that have more implications on water quality as presented in Figure 6-1.

The residential areas and activities evaluation method described above indicate that: 1) residents are becoming more environmentally conscious, 2) residents take an active role in environmental

protection by calling the City and reporting illegal discharges, 3) a positive trend in urban runoff discharge quality is emerging. These results are encouraging and provide incentive to City staff to maintain their level of efforts and find innovative methods to accelerate the positive trend.

### 6.4.3 VIOLATIONS AND ENFORCEMENT ACTIONS TAKEN

Enforcement of the residential program has been established and addressed in Chula Vista Municipal Code Chapter 14.20, Storm Water Management and Discharge Control; and Chula Vista Municipal Code Title 1, General Provisions. During this reporting period, Storm Water Compliance Inspectors responded to over 256 reported violations of which 102 were residential. Fifty-eight of the reported violations resulted in citations. The total amount of fines collected during this reporting period from residential violations was $11,800.00. Compared to last year, the number of residential reported violations increased by 44% and the number of actual violations/citations increased by 59%. This unexpected increase in the number of reported violations needs further investigation. Future data will be used to determine the root cause of this increase and if any actions or adjustments in this City's procedures and programs are necessary.

During the reporting period, Storm Water Compliance Inspectors responded to each report of residential and other violations; investigated each case; took appropriate actions regarding containment of pollution; educated the violating party on existing laws and regulations; made follow-up visits, where necessary; and, proceeded with enforcement action if voluntary compliance was not achieved.

Data management of past violations helps City staff to identify repeat residential violators. Repeat violators are subject to more severe enforcement action due to the fact that the violation can no longer be considered an act of ignorance of water quality protection laws and regulations, but is a deliberate illegal act. Some of the cases were resolved without resorting to enforcement action. In other cases, enforcement actions were taken regarding residential areas. Details of reported violations are included in Attachment K.

### 6.4.4 RESIDENTIAL EDUCATION PROGRAM

Education is an important step towards improving receiving water quality, both locally and regionally. Increasing public awareness and encouraging a change in both attitude and behavior of the general public and the regulated community, can directly lead to a reduction or elimination of storm water pollution caused by common daily residential activities. Due to the importance of public education and outreach in storm water programs, the Municipal Permit requires public education at jurisdictional, watershed, and regional levels. The following are brief accounts of the implementation of jurisdictional and regional education programs during the reporting period. Additionally, during the reporting period, the City collaborated with the Copermittees of the San Diego Bay Watershed to implement the Watershed Urban Runoff Management Program (WURMP) residential education component. Details of such efforts are fully discussed in this year's WURMP Annual Report, which will be submitted to the Regional Board under a different cover.

#### 6.4.4.1 JURISDICTIONAL RESIDENTIAL EDUCATION PROGRAM

The Storm Water Management Section collaborates with the City's Environmental Services Division and the Conservation Department in the implementation of the Jurisdictional Residential Education Program. Pollution prevention and water quality regulation information is disseminated by actively participating in community events throughout the year. Informational booths at fairs, flyers, brochures, website postings, advertisements, and other educational materials are the various approaches used by City staff in disseminating storm water information. Such programs raise pubic awareness about the City's storm water regulations and requirements as well as Best Management Practices methods. Residents become aware of the importance of protecting their watersheds and water resources, and recognize that they have the ability to improve local water quality by making a few simple changes to their regular routines. The Storm Water Management Section continues to provide a comprehensive storm water education program to the residential community, general public, and school children.

Many educational efforts such as direct interaction during reported violation investigations or when taking calls to the City's Storm Water Hotline are conducted on an ongoing basis. Educational materials are also distributed throughout the year. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of reported violations, and other similar factors.

The decision to select the types of educational materials to be disseminated throughout selected residential areas was based on an analysis of current and past residential violation reports, as well as results from the Dry Weather Field Screening and Analytical Monitoring program. During this reporting period, City Staff distributed 3,030 educational door hangers with educational pamphlets to various residential locations of the City (see Table 6-2).

**Table 6-2** Educational Materials Distributed Based on Dry Weather Monitoring Results and Storm Water Hotline

| RESIDENTIAL AREA | EDUCATIONAL INFORMATION | NUMBER DISTRIBUTED |
|---|---|---|
| Cabrillo Mobile Homes | Vehicle Washing | 130 |
| Otay Ranch area along La Media Drive, south of Olympic Parkway, north of Fleishbein Street | Landscaping Activities | 350 |
| Otay Ranch along Exploration Falls Drive | Landscaping Activities | 320 |
| Eastlake around Eastlake Greens neighborhood | Landscaping Activities | 300 |
| Rolling Hills Ranch and Eastlake Woods | Landscaping Activities | 850 |
| San Miguel Ranch in Cabo Bahia and Lago Madero areas | Vehicle Washing | 350 |
| San Miguel Ranch by San Miguel Ranch Road and Proctor Valley Road | Landscaping Activities | 250 |
| North end of East J Street by Plaza Ultima | Automobile Maintenance | 20 |
| Otay Ranch near the corner of La Media and Otay Lakes Road, on Santa Cora Avenue | Landscaping Activities | 350 |
| Foxboro neighborhood by Nantucket Drive and Hampshire Lane | Vehicle Washing | 110 |
| | | **TOTAL: 3,030** |

Residential hotline calls, response, and enforcement rely heavily upon citizen participation and awareness. As such, an integral component of residential outreach and education is to encourage the reporting of pollutant generating activities or practices observed by citizens within their neighborhoods. To further support the reporting efforts, the City relies heavily upon well-trained municipal staff who effectively operate as the "eyes and ears" of the City.

#### 6.4.4.2 REGIONAL RESIDENTIAL EDUCATION PROGRAM

During this reporting period, the City continued to participate in the Education and Residential Sources (ERS) Workgroup with the San Diego Copermittees. The workgroup is broken down into sub-workgroups that focus on one, or more of the various components undertaken by the ERS. These sub-workgroups address media and public relations, materials development, outreach to underserved target audiences, partnership development, regional website development, regional brand, regional events, and program assessment. A few of the activities that the group completed during the reporting year include: 1) Development and implementation of comprehensive media program including ads on TV, radio, movie theaters, and bus shelters; 2) Development and implementation of a county-wide telephone survey to assess citizen storm

water knowledge; 3) Development and distribution of the regional 2010 Storm Water Calendar; 4) Completed the development of a regional website that all Copermittees can link to, through their own jurisdictional websites; 5) Continued participation in regional community events such as the Envirofair at the San Diego County Fair, High Tech High Science Fair, and 6) Continued development through the quarterly Edu TAC meetings.

Comprehensive discussions of each of the above program elements will be included in the Regional Urban Runoff Management Program Annual Report, which will be submitted to the Regional Board under a separate cover.

### 6.4.5 MANAGEMENT OF URBAN RUNOFF FROM RESIDENTIAL AREAS AND ACTIVITIES

As detailed throughout this report, the City institutes a variety of highly effective pollution prevention programs to provide the residential community with venues and outlets for disposal of wastes and to provide invaluable information and education on the negative impacts of improper waste disposal. A consistent message of stewardship through everyday actions and behaviors and the importance of protecting and maintaining the quality of our natural resources are presented through a variety of outlets. It is because pollution prevention is the most economical and effective way of protecting water quality, that this element is given higher priority, and has proven to be a successful measure for the City over time.

During fiscal year 2009-2010, the City identified several High Threat to Water Quality (HTTWQ) residential neighborhoods that required focused educational outreach (see Map 2). These areas have been targeted based on storm water inspection observations, reported violations to the City's hotline and the dry weather monitoring upstream investigation program. Each of the homes in these neighborhoods received a general storm water pollution prevention brochure or door hanger in addition to a brochure targeting specific residential activities and their associated pollutants. The activities and pollutants that were focused on included: 1) vehicle washing and repair (detergents and vehicle fluids), 2) gardening (green waste, fertilizer, and over-irrigation discharge), 3) household activities (grease, paint, pet waste, and trash and debris). These areas and their corresponding activities and pollutants have been identified in Attachment K. In addition, the City plans to work with Homeowner's Associations to include storm water pollution prevention articles and messages into their community newsletters.

The City also targets HTTWQ residential areas by having cleanup events that provide residents the opportunity to volunteer to help cleanup their neighborhoods. The annual Beautify Chula Vista event focuses on a different neighborhood each year, frequently in under-privileged areas of the City, and provides graffiti cleanup, tree planting, trash pick-up, and storm drain stenciling. By participating in the event, residents are able to make a connection to their community and environment while learning about storm water pollution prevention.

Other than HTTWQ areas, the City has a number of programs in place throughout the City to promote environmental stewardship and storm water pollution prevention among its residents. Section 8.0 details the education programs that the City has implemented in order to encourage positive behavior changes in residents.

## 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.*

*Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.*

*Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.*

*Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.*

*Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.*

*Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.*

*Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.*

*Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.*

*Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.*

*Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.*

*Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.*

*Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.*

On September 10, 2008, the Regional Board adopted Addendum No. 2 to the Municipal Permit. The addendum recognized that Dry Weather Field Screening and Analytical Monitoring activities may continue until the end of September each year, and the results would not be available to be included in JURMP Annual Reports, which are also due for submittal on September 30 of each year. Therefore, submittal of Section 7.0 of the JURMP Annual Report (Illicit Discharge Detection and Elimination Component) was allowed to be postponed until December 15 of each year. Pursuant to this requirement, the City of Chula Vista will submit the entire FY 2009-2010 Illicit Discharge Detection and Elimination Component; copies of the City's 2010 Dry Weather Field Screening and Analytical Monitoring Program Report and Follow-Up Investigations; and related attachments no later than December 15, 2010.

## 8.0 EDUCATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(g).i - A description of education efforts conducted for each target community.*

*Permit Section J.3.a.(3)(g).ii - A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.*

*Permit Section J.3.a.(3)(g).iii - A description of education efforts conducted for municipal departments and personnel.*

*Permit Section J.3.a.(3)(g).iv - A description of education efforts conducted for the new development and construction communities.*

*Permit Section J.3.a.(3)(g).v - A description of jurisdictional education efforts conducted for residents, the general public, and school children.*

### 8.1 INTRODUCTION

The City has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses. The City considers voluntary pollution prevention to be one of the most effective means of achieving long-term reductions in urban runoff pollution. This objective is achievable only through public education and outreach that makes an impression on the community and invokes changes in behavior. As such, the City has approached the development and implementation of educational components by targeting the following audiences:

- Municipal staff
- Residential community, general public, and schools
- Industrial and commercial business owners and operators
- Construction and development community
- Underserved communities

The City's Storm Water Management Program is strongly supported by a variety of environmental programs within the organization that provide an exceptional vehicle for disseminating educational materials to the general public regarding storm water pollution prevention. Specifically, the City's Environmental Services Division, under the South Bay/ East County Regional Used Oil Recycling, Household Hazardous Waste Collection and Recycling Program targets issues directly connected to storm water pollution prevention. The Chula Vista Nature Center also provides an invaluable venue for public participation and the promotion of conserving, preserving, and protecting San Diego Bay. Through these programs and facilities, activities such as annual school presentations, waste collection events, and public outreach events are conducted in collaboration with the Storm Water Management Section. During such

events, the general public is exposed to water quality concerns, pollution prevention techniques, and Best Management Practices (BMPs) to prevent storm drain pollution. The following sections provide a summary of various activities and venues utilized within the defined reporting period of this report to achieve public education and outreach goals for municipal staff, business owner, construction, new development, general public, and targeted communities.

## 8.2 STAFF TRAINING ELEMENT

Staff education and training on water quality issues takes several forms as follows:

- General storm water education for all City employees
- Education targeting staff engaged in the review, approval, and inspection of new development and redevelopment projects
- Training for City staff responsible for the maintenance of the City's infrastructure

General storm water protection and pollution prevention education for City staff is provided and reinforced on an ongoing basis. While a number of communication venues are available and have been relied upon in previous reporting years, the most valuable education comes through the implementation of Citywide pollution prevention and waste reduction programs. Recycling programs are in place throughout City facilities, and serve as a constant reminder to staff of the City's commitment to pollution prevention.

During the reporting year, Storm Water Management staff received training as well as provided training to municipal staff (including Public Works Engineering and Development Services Departments) about the new General Construction Permit. Training included general permit overview, risk levels, sampling and monitoring, inspections, reporting, and certification requirements. Notably, two City Storm Water Management Section staff became Qualified SWPPP Practitioners (QSP) by obtaining their Certified Erosion, Sediment, and Storm Water Inspector (CESSWI) certification. As construction projects begin to implement the General Construction Permit, the Storm Water Management Section staff will continue its efforts to educate itself as well as municipal staff.

Education for staff engaged in the City's permitting process for new development and redevelopment has been achieved through a number of venues. Targeted training activities have been conducted to reinforce water quality priorities in the field of land development and planning, including Standard Urban Stormwater Mitigation Plans (SUSMP) implementation strategies. In addition, development planning and engineering staff is consistently exposed to water quality priorities on a project-by-project basis through project meetings, workshops, and field visits. City Storm Water Management staff also provides training on the City's Development Storm Water Manual. A continuing focus on internal SUSMP implementation policy, procedure and guidance training has been emphasized during the defined reporting period of this report. Within this framework, those departments and staff involved in the SUSMP review process have been apprised of the need to utilize Low Impact Development (LID) techniques as well as higher efficiency treatment control BMPs for project design in meeting the City's SUSMP requirements. This approach has proven integral in ensuring ongoing SUSMP implementation refinement and in unifying the focus on site design techniques and the use of

higher efficiency treatment control BMPs. In addition, presentations by the manufacturers and vendors of structural BMPs have been organized and hosted by the City.

As in previous reporting year, Storm Water Management staff provides focused training on storm water BMPs to various City departments and divisions on an as needed basis. Such training may be in the form of formal workshops, or on the job training. The following staff has received storm water training on an as-needed basis:

- Wastewater Maintenance
- Storm Drain Maintenance
- Street Maintenance
- Open Space Maintenance
- Traffic Signing and Striping
- Transit
- Vehicle Maintenance
- Land Development
- Public Works Inspections

Table 8-1 details the training, workshops, and seminars that City staff attended and/or gave to other departments during the reporting period. Below is a summary of general concepts that were covered during the trainings.

- Federal, state, and local water quality laws and regulations applicable to municipal areas and activities, development and redevelopment projects, and construction projects;
- Required federal, state, and local permits pertaining to water quality;
- Water quality impacts of urbanization, municipal activities and areas, and construction sites;
- The connection between land use decisions and short-term and long-term water quality impacts;
- Methods for minimizing the impacts on receiving water quality and watershed.

**Table 8-1** Municipal Staff Education FY 2009-2010

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 07/16/09 | Filtrexx Presentation | Training on construction site sediment control, post-construction storm water management, stream bank restoration, and slope stabilization. | City of Chula Vista |
| 10/13, 15, 19, 22/09 | Storm Water Pollution Prevention Refresher Training for Firefighters | Topics included a general overview of the storm water permit, BMPs, and the review of the City's program for non-emergency fire fighting flows. | City of Chula Vista |

Table 8-1 continued on next page

Table 8-1 continued

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 10/14/09 through 11/12/09 | Storm Water Refresher Training for Public Works Staff | City of Chula Vista Storm Water staff provided training to all public works departments about storm water BMPs related to their job activities. | City of Chula Vista |
| 10/30/09 | Storm Water Compliance and New Construction Permit Training Seminar | Seminar covered risk levels, general permit overview, monitoring, certifications, advance treatment BMPs, and the online reporting system. | Rick Engineering |
| 11/02/09 | General Construction Permit: Tools for Implementation Workshop | Introduction to the General Construction Permit requirements, risk levels, monitoring, certifications, and online reporting system. | CASQA |
| 11/06/09 | CEQA Basics | Introduction to CEQA and exemptions from CEQA, negative declarations, EIRs, legal challenges and defense, coordination with NEPA, and case studies. | Association of Environmental Professionals |
| 11/11/09 | 4-Hour Storm Water Pollution Prevention Forum | Training on obtaining Construction Permit coverage, sampling requirements and reporting, legal implications of permit requirements, and municipality response to requirements. | Associated General Contractors of America (ACG) |
| 12/03/09 | New General Construction Permit Seminar | Construction risk level assessments, grandfathering, LUPs, monitoring guidelines, inspector/SWPPP certifications. | Shea with City of Chula Vista Storm Water Staff as a panelist |
| 01/02/10 | New General Construction Permit Training | City storm water staff provided training to civil engineers and land developers about the General Construction Permit, NOIs, SWPPPs, annual reporting, and risk levels. | City of Chula Vista Storm Water Section Staff |
| 02/12/10 | SUSMP Training for Engineers | Updates on Model SUSMP, HMP, LID, new General Construction Permit, WQTR preparation, BMPs, and inspection and maintenance requirements. | City of Chula Vista Storm Water Section Staff |

Table 8-1 continued

| DATE | EVENT | EVENT DESCRIPTION | ORGANIZER |
|---|---|---|---|
| 03/23/10 | Environmental Enforcement Training | Conducting effective inspection interviews, access and entry, violations, reporting writing, environmental crimes, and enforcement options | Cal EPA |
| 04/08/10 | New General Construction Permit Workshop | Construction permit overview, differences between old and new permits, SMARTS program, and Q&A session. | SDRWQCB |
| 04/15/10 | BioClean | Properties and effectiveness of modular wetlands and various configurations of installed units throughout CA. | Bio Clean Environmental Services |
| 04/21/10 | Storm Water Workshop | Numeric limits, LID, storm water regulation and policy topics, water board issues, and urban runoff. | Law Seminars International |
| 05/21/10 | Construction Permit SWPPP Training Workshop | Training covered what is needed in a SWPPP, how to obtain coverage, sampling requirements, BMP implementation, qualifications and training requirements. | Rick Engineering |
| 06/22/10 | Storm Water Multiple Application and Report Tracking System (SMARTS) | City Storm Water Staff conducted training on the SMARTS website and covered data entry, re-certifying NOIs, Annual Reports, NOTs, and SWPPPs. | City of Chula Vista Storm Water Staff |
| 07/16/10 | SUSMP and LID Training | City Storm Water Staff provided training on development and redevelopment requirements of the Permit, SUSMP, treatment control BMPs, HMP, and site design. | City of Chula Vista Storm Water Staff |

## 8.3 EDUCATIONAL OUTREACH ELEMENT

### 8.3.1 RESIDENTS, GENERAL PUBLIC, AND SCHOOL CHILDREN

The CLEAN group, made up of the City's environmental departments and various environmentally focused stakeholders, has continued to collaborate on various environmental education programs within the City. The following mission statement established by the CLEAN workgroup has guided these efforts:

**"Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation."**

The CLEAN education program was developed around three primary elements: 1) Media 2) Community Interaction and 3) Stakeholder Coordination. It is important to distinguish the focus of this program to promote not only community education, but also community action.

In efforts to maximize the overall effectiveness of this program, and to capitalize on the interrelationship of various Chula Vista environmental programs, the program has been branded under the tag line of "**Your Community. Your Environment. *Your Choice*."**

The culmination of efforts of various involved City divisions has been embodied in the established CLEAN program, which provides an effective and powerful body to guide the significant efforts envisioned for the program. It is also anticipated that these efforts would be further strengthened through support of community stakeholders including non-profit and business entities.

Based on the CLEAN branding, media elements including pollution notification residential door hangers, stickers, stationery, and various brochures were distributed to the general public within the defined reporting period of this report. In addition, the CLEAN web site has been established with pages dedicated to water quality protection and pollution prevention Citywide. The CLEAN website www.chulavistaca.gov/clean has information about the environmentally focused divisions in the City including Storm Water Management, Environmental Services, Conservation, and the Chula Vista Nature Center. The storm water section has information specific to residents, the development community, mobile businesses, and industrial and commercial businesses. Figure 8-1 shows a general snapshot of the CLEAN homepage.

As the CLEAN program continues to evolve, a wide array of media outlets have been explored, and established branding has been incorporated in them. As indicated above, the larger CLEAN campaign has been designed to promote not only education, but also to encourage and facilitate community actions.

While the City has developed and maintained a variety of new residential education and public outreach opportunities, the City has sustained a number of existing outlets and events. In 2009-2010, the City continued to use pollution prevention messages on the side of waste management vehicles to encourage the proper disposal of items such as recyclables, cooking grease, and holiday trees. In addition, the City continued to distribute a number of promotional items with pollution prevention messaging for distribution at presentations and community events. Promotional items included CLEAN branding and messaging on such items as pet waste bag containers, towels, pens, pencils, and rulers. During this reporting year, the CLEAN group and stakeholders collaborated to produce a comprehensive environmental guide that covers various topics such as storm water pollution prevention, recycling, alternative transportation, green gardening, and conservation. This guide is distributed by all CLEAN stakeholders at community events.

**Figure 8-1** CLEAN Homepage

The City has continued to maintain six trail displays (Figure 8-2) throughout the City, near walking trails and parks. The trail displays include information on a variety of interrelated environmental issues, and remind the public of the precious resources that exist within the City. The trail display concept provides commercial or industrial entities the opportunity to receive public recognition through the support of such efforts. They demonstrate the connectivity of environmental concerns throughout the City. Trail displays have been installed at the following locations:

- Chula Vista Nature Center
- Mountain Hawk Park
- Hilltop Park
- Salt Creek Park
- Rice Canyon
- Corner of Telegraph Canyon Road and La Media

A poster form of the trail display is also displayed in the City's John Lippit Public Works Center and the Chula Vista Public Library. Chula Vista staff and residents pass this display on a daily basis, reminding them that the City is within the Sweetwater and Otay Watersheds and of the simple actions they can take to protect their local waterways. Another poster is used for community events to explain watershed concepts and pollution prevention to Chula Vista residents.

**Figure 8-2** City of Chula Vista CLEAN Trail Display

### *Media Articles*

During the reporting period, Storm Water Management Section staff contributed several articles about storm water pollution prevention to various publications aimed at residents living in the City. These included The Star News, My Hometown Otay Ranch/ Eastlake, and Your Guide to CLEAN, which are included in residential trash bills. Altogether, these publications reach more than 70,000 households. The City will continue to contribute and place pollution prevention advertisements and articles in these publications as well as continue to explore more venues for reaching citizens through print media.

### *School Education Efforts*

Due to the previous success of the Salt Creek Critters and the Southbay Water Warriors after-school programs in east and west Chula Vista, respectively, the City decided to implement a storm water education program for high school students in west Chula Vista during the reporting year. With the help of I Love a Clean San Diego, the City provided storm water education presentations to students at Castle Park and Chula Vista High Schools. The presentation focused on pollutant types and their sources, pollution prevention, watershed protection, and volunteer opportunities. A pre- and post-test were administered to the students receiving the presentations. In addition, an interactive activity was done with each class to enforce the concepts taught in the presentations. Overall, both students and teachers felt that the presentations were beneficial and increased knowledge and interest in environmental issues in their community. The City will continue with school programs such as these into the coming fiscal year, as funding permits.

***Community Events***
The City of Chula Vista Storm Water Management Section and Environmental Services Division participate in various community events held throughout Chula Vista and San Diego County. Each of these events provides an opportunity to reach citizens throughout the watershed by setting up educational booths and displays.

Community events have been identified as valuable venues providing excellent opportunities to reach large numbers of citizens. During the reporting period, the Storm Water Management and Environmental Services staff participated in and set up booths and displays at all major South Bay community events. City staff provided education and outreach materials regarding a variety of interrelated environmental issues. A variety of brochures and pamphlets were distributed to the general public about the effects of storm water pollution on the environment and ways that residents can prevent pollution of their waterways. By participating in these community events, City storm water staff has the opportunity to generate large numbers of impressions each fiscal year. In addition, City staff displayed the EnviroScape model at several community events in order to teach residents about watershed concepts and to reinforce the connection between everyday actions and water quality.

***Chula Vista Nature Center***
The City of Chula Vista Nature Center, located within the 316-acre Sweetwater Marsh National Wildlife Refuge of San Diego Bay, is an internationally recognized zoo/aquarium exhibiting plants and animals native to San Diego Bay and marsh/wetland habitats. The Nature Center provides the San Diego Bay watershed with a truly unique and invaluable outreach and education resource.

The Nature Center's mission is to educate the public about the importance of coastal resource conservation and environmental stewardship. Through visits to the Nature Center and its offsite programs thousands of people are exposed to these critical environmental messages each year. To help facilitate educational experiences, the Nature Center offers field trips, guided walks, classes, tours, and special projects. During the reporting year, there were over 430 scheduled tours to the Nature Center, resulting in over 10,500 children and over 1,800 adults learning about San Diego Bay watersheds and watershed protection.

- The Chula Vista Elementary School District (CVESD) funds a full-time Science Resource Teacher who works closely with the Nature Center staff to provide environmental education programs which are integrated in their science and social studies curricula. This teacher works with over 5,000 CVESD students each year.

- Other schools and youth groups schedule field trips to the Chula Vista Nature Center after the leader participates in a 2-hour Field Trip Orientation Workshop (a teacher training program) held at the Center to gain familiarity with the Nature Center and the Sweetwater Marsh National Wildlife Refuge. During these field trips, Nature Center docents guide students around the Center and grounds, where they learn about the importance of watersheds, wetlands, and other coastal resources.

- Students learn to recycle, reuse, and reduce waste. They also learn how to correctly use storm drains and the types of pollutants commonly identified in the storm drain system. The Chula Vista Nature Center and Conservation Department also conduct "Less Toxic Gardening", dealing specifically with pesticide use, as well as weekly composting classes.

Table 8-2 summarizes the education efforts of the City for residents, school children, and the general public during the reporting year.

**Table 8-2** Education Outreach Provided FY 2009-2010

| DATE | EVENT | EVENT DESCRIPTION | SITE NAME/ LOCATION |
|---|---|---|---|
| 08/09/09 | Lemon Festival | City storm water staff manned a booth and distributed information about pollution prevention | Downtown Chula Vista |
| 09/19/09 | Children's Festival | City storm water staff had a booth at the festival and provided pollution prevention training to citizens | New Hope Community Church |
| 09/26/09 | BonitaFest | City storm water staff provided pollution prevention training to citizens | Bonita Shopping Center |
| 10/03/09 | Fire Station Open House | City storm water staff manned a booth and provided education about pollution prevention to citizens | City of Chula Vista Fire Station #4 |
| 10/14/09 | Citizen's Leadership Academy | City storm water staff provided storm water education and explained the purpose of the Storm Water Management Section to citizens who were a part of this special group. | John Lippitt Public Works Center |
| 10/17/09 | Beautify Chula Vista | City storm water staff provided pollution prevention training to citizens | Memorial Park |
| 02/26/10 | Storm Water Training for Tortilleria Santa Fe | City staff provided training on storm water pollution prevention and the General Industrial Permit to Santa Fe Tortilla staff | Tortilleria Santa Fe Shop |
| 04/17/10 | Go Green and Clean Family Day | City staff provided training on pollution prevention and provided CLEAN brochures, IPM Pest Tip cards, and displayed the EnviroScape watershed model | Otay Ranch Town Center |

Table 8-2 continued on next page

Table 8-2 continued

| DATE | EVENT | EVENT DESCRIPTION | SITE NAME/ LOCATION |
|---|---|---|---|
| 04/24/10 | Day of the Child | Storm water staff manned a booth and provided storm water pollution prevention brochures, IPM tip cards, storm water calendars, and environmental giveaways | Memorial Park |
| 06/19/10 | Pet Fest and Doggy Dash | Storm water staff implemented a pet waste survey, provided pollution prevention education, and environmental giveaways to citizens | Memorial Park |
| 06/26/10 | Southbay Homeowners Resources Fair | City staff provided pollution prevention education to homeowners. | Chula Vista City Hall Courtyard |
| Year-round | Watershed, Recycling, Storm Drain Pollution Education | Organized School Group Visitors to the Chula Vista Nature Center | Chula Vista Nature Center |

***Regional Outreach***

During the reporting year, Copermittees collaborated on a number of education outreach activities and events, including further development of the Regional Residential Storm Water Education Plan that was submitted to the Regional Board in March 2008. This reporting year, the Copermittees collaborated on a regional storm water website (www.thinkbluesdregion.com), developed and distributed a regional storm water education calendar, had a booth at the High Tech High fair in March 2010, and had a booth at the EnviroFair at the San Diego County Fair in June 2010.

### 8.3.2 INDUSTRIAL AND COMMERCIAL FACILITY OWNERS AND OPERATORS EDUCATION

Educational activities targeting industrial and commercial sectors have been produced through local and regional efforts. Regional efforts have included dissemination of information via the County's Clean Water Project website targeting businesses and residents. During the reporting period, the City has utilized the following primary mechanisms to provide ongoing education to the industrial and commercial communities within the City:

- Distribution of printed materials
- One-on-one education of business owners and managers during industrial and commercial inspections

As part of the City's industrial and commercial facility inspections, Storm Water Compliance Inspectors meet with facility owners or managers and explain water quality issues relating to the particular type of industrial or commercial facility. BMPs relevant to the activities at each facility are explained and, corrective actions are proposed to bring the facility into compliance with the City's ordinances and BMP requirements. Consequences of non-compliance are also

brought to the attention of the facility owner/manager. In all cases, copies of the Chula Vista Storm Water Management and Discharge Control Ordinance are handed to the facility owner/manager. The City also distributes the regionally developed "Green Wrench Guide" for automotive facilities, and the "What's Cooking?" guide for food related businesses.

During this reporting year, City Storm Water Management Section Staff provided storm water training to a tortilla manufacturing business in the City. During a storm water inspection of the business, the City found that hazardous wastes were not stored properly. As a result, the City issued the business a Notice of Violation. At the request of the business, the City provided a one-hour storm water pollution prevention training in both English and Spanish to workers at the factory. The training, given to both managers and key staff at the factory, focused on BMPs directly applicable to their business operations and gave an overall review of the General Industrial Permit.

### 8.3.3 NEW DEVELOPMENT AND CONSTRUCTION COMMUNITY

Education of the development community is approached by the City through two primary audiences: 1) education and training of City staff and 2) education of project applicants, developers, contractors, design engineers, and property owners. As with multiple elements reviewed throughout this report, the City of Chula Vista Development Storm Water Manual provides development project proponents with a fundamental guidance tool for development activities in the City. City Storm Water Management Staff actively engages the development and construction communities working within the City in a proactive effort to educate and expose these entities to the regulatory standards established within the jurisdiction.

As in previous reporting years, education and training of the development community within Chula Vista has primarily been addressed on a project-by-project basis. As the larger development community has been exposed to SUSMP requirements throughout the region and through a broader message, Chula Vista accommodates project applicants with project specific direction and analysis. Through the comprehensive review of development and redevelopment projects, and subsequent meetings and discourse, project applicants are apprised of the suitability of proposed project components in compliance with SUSMP requirements and the City's emphasis on the use of Low Impact Development site design features and high efficiency treatment control BMPs.

Educational activities within the development community are provided throughout the development process from design and planning through construction. As such, educational outlets have been provided by the City at each phase, and have been discussed in Section 2.0 of this report. The following is a list of highlights from the referenced section.

- Project specific post-construction requirements education and training
- The City Development Storm Water Manual
- Pre-construction meeting participation by storm water inspection staff
- On-site construction BMP training
- Participation in regional education and training activities

### 8.3.4 TARGETING UNDERSERVED COMMUNITIES

The City targets underserved communities through three programs:

- CLEAN education campaign
- Beautify Chula Vista Day
- Graffiti Abatement Program

The CLEAN education campaign has developed a variety of media elements that promote the City's environmental programs such as brochures, website, and giveaways in both English and Spanish. The CLEAN website provides an easy and cost-effective method for the City to reach out to citizens and promote storm water pollution prevention awareness. The City also distributes a variety of giveaways with the CLEAN message to reach different age groups such as notebooks, dustpans, pencils, pens, and pet waste bag holders. This reporting year, the CLEAN Team and Stakeholders collaborated to produce an all-inclusive environmental brochure called CLEAN – Your Environmental Guide for Green Living. The brochure covers a wide range of environmental topics such as storm water pollution prevention, water conservation, energy, green living, transportation, recycling, and green gardening.

During the reporting period, the City, with the help of I Love a Clean San Diego, supported the annual Beautify Chula Vista Day that focuses on citizen participation in keeping the City clean. Volunteers have participated in a number of activities during this event, including storm drain stenciling, cleaning of trash, graffiti removal, and planting trees. Efforts are usually focused in areas of the City where more attention is needed due to trash and graffiti problems. Over 500 volunteers participated in the Beautify Chula Vista Day in October 2009.

The Graffiti Abatement Program allows citizens to report graffiti in their neighborhoods by phone or by email. City staff is also encouraged to call and report any graffiti they see while they are out in the field. There were over 2,850 web requests, emails, and calls to the graffiti hotline during the reporting period (some duplicated), showing that City staff and residents are taking an active role in promoting a clean City.

## 9.0 PUBLIC PARTICIPATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(h).i - A description of public participation efforts conducted.*

### 9.1 INTRODUCTION

The City encourages and fosters environmental responsibility by supporting community events, activities, and programs that improve storm water awareness. Changing behaviors of residents and the general public can lead to improved water quality. Cleanup events can promote awareness and can lead to a load reduction of trash to receiving waters. In addition to the educational component presented in Section 8.0, the following sections provide an overview of significant public participation opportunities provided or supported by the City within the defined reporting period.

### 9.2 PROGRAM IMPLEMENTATION

***Beautify Chula Vista Day – October 17, 2009***

Beautify Chula Vista Day is an annual event that involves citizen participation and involvement in activities that enhance the environmental setting of the City. Every year, this event attracts several hundred volunteers and provides an opportunity for City staff to have direct interaction with the public to discuss environmental issues and the role that citizens can play in protecting their community's health and living standards. Volunteer citizens are able to participate in activities such as tree planting, graffiti removal, clean-up projects, and storm drain stenciling. During the 2009 event, with participation from over 500 volunteers of all ages, the group was able to remove more than 2,000 pounds of trash from City streets.

***Otay Valley Regional Park Cleanup***

The Otay Valley Regional Park (OVRP) is being developed as a collaborative effort of the cities of Chula Vista and San Diego and the County of San Diego. These jurisdictions have adopted the OVRP Concept Plan, which identifies recreation areas, trails, overlook points, and staging areas for future park use. The park contains several hundred acres of land in the floodway and floodplain areas and undisturbed land along the steep slopes adjacent to the Otay River. Seven fresh water ponds, created from past gravel and sand mining operations, are within the park. OVRP extends from South San Diego Bay to the Lower Otay Reservoir and from Chula Vista's southern boundary to the communities of Otay Mesa and Nestor, encompassing 11.2 square miles of land. The Otay River Valley Cleanup Project (Cleanup Work Project) currently encompasses the Western Otay Valley Regional Park (Nester Creek east to I-805) and Eastern Otay Valley Regional Park – Proctor Valley (North End Upper Otay Lakes Reservoir).

The Cleanup Work Project encompasses efforts by many organizations including the OVRP Citizens Advisory Committee (CAC) coordinating the Donovan Prison Community Crew,

California Conservation Corp (CCC) coordinated by the City of San Diego WOVRP Rangers, County of San Diego Otay Lakes Park Rangers (provided dump truck and driver), Friends of the Park (coordinates Proctor Valley Cleanup), Allied Waste (delivering and picking up of large waste bins), City of San Diego Environmental Services, City of Chula Vista Public Works, and Hanson Aggregates (provided heavy equipment as needed).

Park cleanup activities include debris removal, encouraging transients to leave the area, improving security by preparing for fencing, trimming foliage, planting trees and other vegetation, and placing signage identifying the OVRP. More information about the Otay Valley Regional Park can be found on their website http://www.ovrp.org/

***I Love a Clean San Diego (ILACSD) 7th Annual Creek To Bay Cleanup***

The Seventh Annual Creek to Bay Cleanup event occurred on Saturday, April 24, 2010. The City co-sponsored this cleanup event, which was coordinated by ILACSD. The San Diego County Board of Supervisors presented this year's cleanup event through the support of Supervisor Greg Cox and Supervisor Pam Slater-Price. The event was able to bring together over 4,500 volunteers who spent their Saturday morning cleaning and restoring the health of our coastal and inland waterways and open space areas. Volunteers accumulated over 150,000 pounds of trash and recyclables from 185 miles of coastline and inland areas. Commonly found items included plastic items and cigarette butts.

Cleanup sites within or adjacent to Chula Vista included the Sweetwater Regional Park, J Street Marina, and the western side of Otay Valley Regional Park. At these locations, over 440 volunteers removed over 2,100 pounds of trash and over 390 pounds of recyclables from almost 10 miles of Chula Vista inland waterways.

***Household Hazardous Waste and Used Oil Recycling***

The Household Hazardous Waste (HHW) Facility at the City of Chula Vista Public Works Center started operation in January 2002. It serves the Cities of Chula Vista, Imperial Beach, National City, and the County of San Diego. The facility is open every Wednesday and Saturday from 9am to 1pm. This facility also offers small businesses the option to dispose of hazardous waste through its Conditionally Exempt Small Quantity Generator (CESQG) program. The City also offers "door-to-door" collection of HHW. Under the door-to-door program, HHW is collected by appointment from residents who are unable to take the waste to the permanent facility or because of scheduling conflicts. The facility is under 24-hour camera surveillance to prevent illegal dumping in and around its surrounding areas. Also, during hours of service operations staff places temporary berms in the proximate storm drain to prevent contamination in the event of a spill. Public participation in this program is expected to minimize the amount of hazardous materials that may otherwise enter storm drain systems. During the reporting period approximately 2,800 households participated in the collection program.

***Public IC/ID Reporting and Graffiti Hotline***

The City encourages its citizens to partner with the City in keeping Chula Vista clean. Citizens can do so by reporting any illegal discharges to storm drains, as well as reporting any graffiti in their neighborhoods. The City provides free graffiti removal services on public or private property by using environmentally friendly power washing equipment and BMPs. Storm Water

Management Section staff investigates illegal discharges to storm drain systems and provides education and enforcement. In cases of spills or pollutants entering storm drain systems, Public Works maintenance crews provide cleanup as needed. During the reporting period the City received over 240 calls and reports about illegal discharges to storm drain systems. There were over 2,850 calls, emails, and web requests from citizens to the graffiti program during the reporting year (some duplicated), showing that citizens are participating and taking an active part in keeping the City clean.

***CLEAN Business Program***

As part of its efforts to involve local businesses in keeping the City clean, the CLEAN Team started the CLEAN Business Program in February 2008. The CLEAN Team is made up of the City's Storm Water Management Section, Environmental Services Division, and the Department of Conservation. The CLEAN Business Program was designed to help small businesses exercise environmentally safe practices and become sustainable. This goal could only be achieved by learning basic environmentally responsible and sound methods related to their specific daily activities. The program verifies and promotes businesses that demonstrate environmentally friendly practices and conserve resources. As part of the verification process, the business must complete a packet of checklists with minimum BMPs and request an inspection by the CLEAN Team to verify that the selected BMPs are adequate and have been correctly implemented. The CLEAN Team verifies that the BMPs are in place and functioning. Once a business becomes a CLEAN Business, they receive recognition on the City's website and receive a decal sticker to put on their front window to show consumers that they are shopping at a CLEAN Business. Five businesses in the City were verified during the reporting year. Businesses must receive verification on an annual basis in order to maintain their CLEAN Business status.

## 10.0 FISCAL ANALYSIS COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(j).i - A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order.*

*Permit Section G: Fiscal Analysis*

1. *Each Copermittee shall secure the resources necessary to meet all requirement of this Order.*

2. *As part of the Regional Urban Runoff Management Program, the Copermittees shall collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities). This standardized method shall:*

    a. *Identify the various categories of expenditures attributable to the urban runoff management programs, including a description of the specific items to be accounted for in each category of expenditures.*
    b. *Identify expenditures that contribute to multiple programs or were in existence prior to implementation of the urban runoff management program.*
    c. *Identify a metric or metrics to be used to report program component and total program expenditures.*

3. *Each Copermittee shall conduct an annual fiscal analysis. Starting January 31, 2010, the annual fiscal analysis shall be conducted consistent with the standardized fiscal analysis method included in the January 31, 2009 Regional Urban Runoff Management Program Annual Report. The annual fiscal analysis shall be conducted and reported on as part of each Copermittee's Jurisdictional Urban Runoff Management Program Annual Reports. For convenience, the fiscal analysis included in the Jurisdictional Urban Runoff Management Program Annual Reports shall address the Copermittee's urban runoff management programs in their entirety, including jurisdictional, watershed, and regional activities. The fiscal analysis shall provide the Copermittee's urban runoff management program budget for the current reporting period. The fiscal analysis shall include a description of the source(s) of the funds that are proposed to be used to meet the necessary expenditures, including legal restrictions on the use of such funds.*

### 10.1 INTRODUCTION

The Municipal Permit requires the Copermittees to develop a standardized method and format for annually conducting and reporting fiscal analysis of their urban runoff management programs. The Standardized Fiscal Analysis Method and Format (Fiscal Analysis Method) was collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J.1.a(3)(k), and J.1.c(1)(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis

Method document was submitted to the San Diego Regional Water Quality Control Board by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009. The Municipal Permit further requires the Copermittees to conduct their annual fiscal analysis consistent with the standardized method starting January 31, 2010. The fiscal analysis incorporated in this section is based on the standardized method. This is the first year that the standardized method is being used.

## 10.2 GENERAL BUDGET INFORMATION

The Standardized Fiscal Analysis Method includes a Standardized Fiscal Analysis Reporting Form, which consists of three tables separating jurisdictional, watershed, and regional expenditures. Jurisdictional expenditures are divided into components that mirror those included in the Municipal Permit as follows:

- Administration
- Development Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Illegal Discharge Detection and Elimination (IDDE)
- Education
- Public Participation
- Special Investigations
- Non-Emergency Firefighting

Further, each of the above categories may be broken down into sub-categories. Potential Sub-categories may include:

- Land Use Planning
- Environmental Review
- Development Project Approval and verification
- Public Construction Projects
- Private Construction Projects
- Public Reporting of Illicit Connection or Illegal Discharges (ICIDs)
- Jurisdictional Urban Runoff Monitoring Programs
- Other

Expenditure items to be considered for each category or sub-category may include:

- Administration
- Permitting and Licensing
- Project Planning and Engineering
- Maintenance Inspections
- Compliance Inspection and Enforcement

- BMP Implementation
- Educational Outreach
- Waste Collection and Recycling
- Jurisdictional Urban Runoff and Receiving Water Monitoring
- Other Expenditures

For reporting purposes, only the table incorporating major jurisdictional components will be used. Sub-categories and expenditure items are intended to provide standardization of expenditures and need not be shown in the final report.

City of Chula Vista staff from different departments and divisions contributes to the implementation of the storm water program and their contributions are as follow:

- The Storm Water Management Section is responsible for the development and implementation of storm water programs, participation in regional and watershed activities, oversight of storm water related contracts, data management, and report writing. It is also responsible for inspecting municipal, industrial, commercial, building construction, and residential land uses and responding to reported violations of the City's Storm Water Management and Discharge Control Ordinance. The Storm Water Management Section conducts enforcement action on violators of the City's Storm Water Ordinance.

- The Environmental Planning Division of the Development Services Department reviews development projects for compliance with the California Environmental Quality Act, assesses potential environmental impacts to sensitive areas and requires developers to provide mitigation plans before permits are issued.

- The Land Development Division of the Development Services Department is responsible for ensuring that grading and construction permit applications are in compliance with grading and other engineering ordinances, and that temporary and permanent Best Management Practices are incorporated in the grading plans, tentative maps, and final maps. Land Development Division staff reviews and approves Water Quality Technical Reports submitted to the City as part of development application packages for Priority Development Projects.

- The City Attorney's Office reviews all documents (such as manuals, forms, ordinances, etc.) developed by the Storm water Management Section, to ensure that they are in compliance with current laws and regulations. The City Attorney's Office also assists the Storm water Management Section in the enforcement of City's Municipal Code.

- The Environmental Services Section of the Public Works Department manages the Used Oil Recycling Program, the Household Hazardous Waste Collection Program, the Solid Waste Collection Program, and the Solid Waste Reduction and Recycling Program.

- The Geographic Information Systems (GIS) Section of the Information Technology Services Department is responsible for the City's GIS systems, and provides support to

the Storm Water Management Section by mapping the City's storm water conveyance systems and data management.

- The Operations Division of the Public Works Department is responsible for the maintenance of the City's storm drainage systems and the sanitary sewer collection systems; oversight of the street sweeping program, and oversight of the open space maintenance program. The Wastewater Management Section, in addition to its scheduled maintenance activities, is responsible for emergency responses to sanitary sewer overflows (SSO) and pollutant spills on public streets.

- The Inspection Services Section of the Public Works Department is responsible for the inspection of grading, improvement, and Capital Improvement Projects for compliance with the City's ordinances, including the Storm Water Management and Discharge Control Ordinance.

- Other City departments, divisions, and sections provide support to the Storm Water Management Section in the fulfillment of the City's JURMP and are instrumental in the implementation of that program. Although those departments, divisions, and sections provide important contributions, a detailed accounting of their roles is beyond the scope of this report.

## 10.3 FISCAL ANALYSIS METHODS

The fiscal analysis method used in this report is based on the standardized fiscal analysis method and format dated January 29, 2009, developed by the Copermittees of the San Diego County NPDES Municipal Permit, Order No. R9-2007-0001.

## 10.4 FISCAL ANALYSIS RESULTS

### 10.4.1 EXPENDITURES

#### 10.4.1.1 JURISDICTIONAL

The City's jurisdictional expenditures for FY 2009-2010 related to compliance with the Municipal Permit are listed in Table 10-1 to 10-3.

**Table 10-1** NPDES Jurisdictional Expenditures for FY 2009-2010

| JURISDICTIONAL COMPONENT | | MULTIPLE PROGRAMS | PRIOR PROGRAM |
|---|---|---|---|
| Administration | $301,523 | | |
| Development Planning | $136,759 | | |
| Construction | $237,552 | | |
| Municipal | $1,200,865 | | |
| Industrial and Commercial | $138,963 | | |
| Residential | $71,180 | | |
| IDDE | $349773 | | |
| Education | $54,180 | | |
| Public Participation | $1,000 | | |
| Special Investigations | $1,780 | | |
| Non-Emergency Firefighting | $8,149 | | |
| **Jurisdictional Total** | **$2,501,724** | | |

**Table 10-2** NPDES Jurisdictional Shared Program Expenditures for FY 2009-2010

| JURISDICTIONAL COMPONENT SHARED PROGRAMS | | MULTIPLE PROGRAMS | PRIOR PROGRAM |
|---|---|---|---|
| Used Oil Recycling | $11,840 | x | x |
| Household hazardous Waste Management | $264,438 | | |
| Wastewater Collection Systems Maintenance | $4,266,158 | x | x |
| Flood Management Projects and Flood Control Devices | $169,537 | x | x |
| **Jurisdictional Shared Programs Total** | **$4,711,973** | | |

**Table 10-3** Jurisdictional Shared Programs For Which Expenditures are Not Readily Available

| JURISDICTIONAL COMPONENT SHARED PROGRAMS FOR WHICH COSTS ARE NOT READILY AVAILABLE | MULTIPLE PROGRAMS | PRIOR PROGRAM |
|---|---|---|
| Land Use Planning | x | x |
| Environmental Review | x | x |
| Development Project Approval and Verification | x | x |
| Management of Pesticides, Herbicides, and Fertilizers | x | x |
| Roads, Streets, Highways, and Parking Facilities | x | x |
| Parks and Recreational Facilities | x | x |

#### 10.4.1.2 WATERSHED

The standardized Fiscal Analysis method and format provides a form for total watershed expenditures which is divided into various watersheds draining each Copermittee's jurisdictional boundaries. The City of Chula Vista is wholly located within the San Diego Bay watershed and, therefore, the sum total of all expenditures associated with watershed activities is shown as one number under Watershed Total.

**Table 10-4** NPDES Watershed Expenditures for FY 2009-2010

| WATERSHED COMPONENT | | MULTIPLE PROGRAMS | PRIOR PROGRAMS |
|---|---|---|---|
| **Chula Vista's Share of the Watershed Total** | **$32,594** | | |

During FY 2008-2009, watershed activities in the San Diego Bay Watershed were developed at the watershed level, while each Copermittee implemented their respective watershed activities individually within their jurisdictions and, therefore, no cost sharing occurred at the watershed level. Based on the Municipal Permit requirements for watershed activities, the City allocated $25,000 for watershed activities and $10,000 for watershed education in its FY 2009-2010 budget.

#### 10.4.1.2 REGIONAL

Table 10-5 for total regional expenditures shows the City's share of total regional costs that are determined by using cost share formulae included in the Memorandum of Understanding dated November 16, 2007, and signed by all Copermittees.

The City participates in regional meetings and activities with other Copermittees of San Diego County. Each year, the Regional Management Committee approves a budget for the following Fiscal Year and each Copermittee pays their share of the regional costs to the Principal Copermittee. The Principal Copermittee, on behalf of all the Copermittees, manages an account and pays regional expenses from that account. During the current reporting period, costs associated with activities of the following workgroups were included in the regional expenditures and budgets:

- Program Planning Subcommittee
- Fiscal, Reporting, and Assessment Workgroup
- Education and Residential Sources Workgroup
- Monitoring Workgroup
- Land Development Workgroup
- Municipal Workgroup
- Industrial and Commercial Sources Workgroup
- Regional WURMP Workgroup

Additionally, City staff time for attending regional workgroup meetings has been included in regional expenditures for Fiscal Year 2009-2010. Finally, annual fees for membership in the California Storm Water Quality Association is paid as a regional expenditures and the

appropriate share of the City of Chula Vista has been included in the following regional expenditure analysis.

**Table 10-5** NPDES Regional Expenditures for FY 2009-2010

| REGIONAL COMPONENT | | MULTIPLE PROGRAMS | PRIOR PROGRAMS |
|---|---|---|---|
| **Chula Vista's Share of the Regional Total** | **$244,655** | | |

As shown in Table 10-5, City's share of the above expenditures was $244,655 for FY 2009-2010.

### 10.4.2 FUNDING SOURCES

An analysis of the City's storm water program revenues and expenditures indicates that the program captures its revenues from General Funds, Capital Improvement Project funds, and Storm Drain Fees assessed on property owners or tenants of single family homes, multi-family buildings, and commercial/industrial facilities through the Sweetwater Authority, Otay Water District, and Cal-American Water District. Additional revenues are received from Building Permit Fees and from developer deposits; however, these vary significantly from year to year, depending on the level of development activities within the City. Building Permit Fees, which are used to cover staff time for inspections of construction sites during the building phase of the projects has been reduced drastically as a result of the recent slow down of development projects within the City.

**Table 10-6** Funding Sources for FY 2009-2010

| No. | FUNDING SOURCE | PROGRAM ELEMENT |
|---|---|---|
| 1 | General Fund | Storm Water Management Program |
| | | Storm Drain Maintenance |
| 2 | Storm Drain Fee | Storm Water Management Program |
| 3 | Sewer Fee | Wastewater Collection System Maintenance |
| 4 | Special Assessment District Fees | Storm Drain Maintenance |
| | | Wastewater Collection System Maintenance |
| 5 | Grant Funds | Used Oil Recycling |
| | | Drainage Capital Improvement Projects |
| 6 | Solid Waste Fee | Household Hazardous Waste Management<br>Waste Management Recycling |
| 7 | Developer Deposits and Fees | Environmental Reviews |
| 8 | Loans | Drainage Capital Improvement Projects |
| 9 | Transnet | Drainage Capital Improvement Projects |

## 11.0 PROGRAM EFFECTIVENESS ASSESSMENT COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

a. *As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:*

   (1) *Specifically assess the effectiveness of each of the following:*

      (a) *Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;*
      (b) *Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge Detection and Elimination, and Education); and*
      (c) *Implementation of the Jurisdictional Urban Runoff Management Program as a whole.*

   (2) *Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.*

   (3) *Utilize outcome levels 1-6*[9] *to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (4) *Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.*

   (5) *Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible* [10].

b. *Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.*

c. *As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program*

*effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.*

## 11.1 INTRODUCTION

It is the culmination of efforts described throughout this report that supports the application of effectiveness assessment protocols introduced through the document entitled "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" as submitted by the Copermittees to the Regional Board on October 16, 2003. The intent of this section is to offer a more critical analysis of programmatic activities to compliment the accounting of the City's accomplishments as presented in other sections of this report.

The 2004-2005 reporting year was highlighted by the Copermittees' regional development of the Baseline Long-Term Effectiveness Assessment (LTEA) conducted as part of the Report of Waste Discharge (ROWD). This comprehensive assessment incorporated water quality and source data collected by all Copermittees and provided a critical first look at regional water quality presented per watershed.

The City continued to build upon knowledge gained through the implementation of long-term effectiveness strategies on a jurisdictional level through annual reporting, as well as the application of strategies on a regional level through the development of the LTEA. As such, the City continued to augment programs and to gather applicable data to support a more holistic look at storm water program effectiveness.

During the reporting period, the City continued to gather and evaluate data supporting education and outreach efforts. This effort was prompted through the continued implementation of the Chula Vista CLEAN program in order to provide a baseline by which to gauge the overall successes of the program. In addition, this effort is highly supportive of the annual appraisal of the larger Chula Vista Storm Water Management Program, and provides a fitting nexus to the annual long-term effectiveness assessments presented in this report.

Notably, in FY 2008-2009 and into the current reporting period, the City of Chula Vista administered a survey instrument designed to measure public awareness of various storm water quality related issues. Analysis of the survey has been detailed in Attachment M. In addition, the City continued its source inventory validation process. This effort has been detailed in Sections 2.0 through 6.0 of this report, and focused on source types identified in the LTEA as potential contributors to watershed pollutants of concern. These activities have also provided the City with valuable data for incorporation into long-term effectiveness evaluation on a jurisdictional level.

## 11.2 METHODOLOGY

Based on the understanding that long-term effectiveness assessment is an ongoing and iterative process, the regional framework has been developed around three primary elements, each supported by additional key components.

- **Program Planning**
  - Source Characterization
  - BMP Selection
  - Targeted Outcomes
  - Assessment Measures and Indicators

- **Program Implementation**

- **Effectiveness Assessment**
  - Water Quality Assessment
  - Program Assessment
  - Integrated Assessment

Detailed discussions of each of the above topics are included in the document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs" dated October 16, 2003, and developed by the Copermittees. A brief summary is included below to describe the City's approach to program effectiveness assessment. The following discussion has been organized as to address each of the targeted outcome levels under program planning and evaluates the City's effectiveness toward JURMP implementation during the reporting period. It is important to recognize that the whole of this document represents an account of program implementation in 2009-2010, and presents a variety of tracked information supporting overall effectiveness assessment. The following discussion will highlight the development and implementation of targeted efforts, and evaluates the overall effectiveness of the City's Storm Water Management Program.

### 11.2.1 PROGRAM PLANNING

As discussed in the regional framework document, program planning should include the establishment of meaningful implementation targets and the development of clear measures for assessing them. The four key and interrelated components to effective program planning; 1) source characterization, 2) BMP selection, 3) establishment of targeted outcomes, and 4) establishment of assessment measures and indicators, must be completed prior to program implementation. The primary mechanism in support of program planning was achieved through the development of the Chula Vista JURMP in 2001 as updated in 2008. This document has provided the initial framework to program planning as implementation has continued, and it is through the annual reporting process and associated programmatic updates detailed through this process that this concept continues to be perpetuated. The City has sought to integrate these key elements in order to more clearly direct programmatic activities and to support the vital interrelationship of each element.

***Source Characterization***
Source characterization largely consists of the development and maintenance of site, source, and facility inventories associated with construction, municipal, industrial, commercial, and residential locations. Through the development of the JURMP, and as required by the previous Municipal Permit sections F.2.d, F.3.a.(2), F.3.b.(2), F.3.c.(2), and F.3.d.(2), baseline source inventories were initially compiled in 2001, and have been updated annually ever since. The City employs a number of strategies and mechanisms in tracking source inventories for all of the sectors mentioned above. Such methodologies have been outlined within specific sections of this report, and include GIS systems, GBA database, and comprehensive business license tracking. In recognizing that source characterization needs to be increasingly matched to identified water quality concerns and program results, the City seeks to more fully utilize extensive GIS capabilities to associate sources with pollutants as they are viewed spatially. Construction, municipal, industrial, commercial, and residential source inventory updates have been provided in attachments to this report.

As introduced above, and detailed in Sections 2.0 through 6.0 of this report, the City has continued to fortify source characterization in 2009-2010. Comprehensive field verification of source inventories is conducted once every five years with the renewal of the Municipal Permit, while inventory updates based on existing information in the City's databases and observations during regular inspections are conducted annually. In this reporting period, the City continued its extensive source verification utilizing the City's Permits Plus program combined with field verification to identify all active industrial and commercial facilities Citywide. Notably in FY 2009-2010, the City mailed BMP education letters and notifications as required by Permit section D.3.b.(2)(c) to all commercial and industrial businesses that are not required to be inspected by the Municipal Permit. Source inventories were updated based on returned letters. The Municipal inventory is updated continuously as new facilities are constructed or acquired. While this effort served a number of functions within the larger storm water program, significant value was gained of the data compiled through the resources described above. Ultimately, this data is utilized in overall program assessments, and to guide programmatic development to support long-term effectiveness.

***BMP Selection***
In terms of BMP selection, activity based BMP selection was conducted as part of the development of the City's JURMP. As required by the previous Municipal Permit's Sections D.2.c.(1), D.3.a.(2)(b), D.3.b.(2)(b), and D.3.c.(2)(a), minimum BMPs were established for each of the major program elements. These minimum BMPs were visited during the City's JURMP update in 2008 and changes were made as needed. The City actively evaluates activity specific BMPs primarily through its well-developed municipal, industrial/commercial, and construction inspection programs. As previously mentioned, letters detailing the City's BMP requirements were sent to all commercial and industrial businesses within the City.

***Targeted Outcomes***
The establishment of measurable targeted outcomes is necessary both for incremental program improvement, and as a basis for the future establishment of relationships between implementation and desired water quality outcomes. It is important to recognize that quantifiable outcomes be established prior to program implementation to accurately provide

measurability and accountability. Included within the regional long-term assessment framework, is the concept of a hierarchy of targeted outcomes. Six "levels" have been established, representing a gradation from activity-based to water quality based outcomes.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

The above concept can be shown as a pyramid with the base at Level 1 and the apex at Level 6 as shown in Figure 11-1. Each layer of outcome from the bottom to the top represents a gradation from activity-based to water quality-based outcome.

**Figure 11-1** Hierarchy of Targeted Outcomes

***Assessment Measures and Indicators***

In order to establish measurability and accountability in the implementation of various water quality program elements, assessment measures for the targeted outcomes need to be developed. Assessment measures may be direct or indirect. Direct measures are those that characterize the quality of water in runoff discharges or within receiving waters. In San Diego County, direct measurements are primarily addressed through regional Receiving Waters Monitoring Program and Dry Weather Field Screening and Analytical Monitoring Program. Indirect measures take into account the degree of activity or program element implementation. Indirect measures are easier and less expensive than direct measures and do not require long-range data.

### 11.2.2 PROGRAM IMPLEMENTATION

A comprehensive accounting of the City's implementation of its Jurisdictional Urban Runoff Management Program (JURMP) during the current reporting period has been provided in other sections of this report. In this section, it will suffice to say that sufficient data tracking and data management has complemented the implementation of each component of the JURMP to enable an accurate program effectiveness assessment.

### 11.2.3 EFFECTIVENESS ASSESSMENT

Program effectiveness assessment comprises of three components, i.e., 1) Water Quality Assessment, 2) Program Assessment, and 3) Integrated Assessment. Integrated Assessment is a long-term process by which Copermittees will attempt to establish causal relationships between program implementation activities and changes in water quality. These relationships may be established either hypothetically or empirically. Integrated Assessment is necessarily the most difficult and uncertain step in the overall assessment process. Over time, quantitative "cause and effect" relationships will increasingly be sought. However, because of the sheer number and variety of BMPs and control programs being concurrently implemented at any given time, establishing such relationships will be a considerable challenge. This report, therefore, focuses on Water Quality Assessment and Program Assessment, and will leave the Integrated Assessment to be addressed at the watershed and regional level.

#### 11.2.3.1 WATER QUALITY ASSESSMENT

Water Quality Assessment may be used to evaluate the water quality of discharges to receiving waters or within the receiving waters themselves. Water Quality Assessment is conducted by taking samples from discharges or the water body within receiving waters and conducting field screening or laboratory analysis. Sampling and testing may be conducted during storm events or from dry weather flows during non-rainy seasons. It is necessary to have benchmarks or other standards such as the Water Quality Control Plan for the San Diego Basin (Basin Plan) to compare the results and make judgment about water quality. It is also beneficial to track the quality of water for long periods of time to enable the Copermittees to assess long-term trends and draw conclusions as to the effectiveness of their storm water programs.

#### 11.2.3.2 PROGRAM ASSESSMENT

As mentioned above, during the planning phase of the program, it is of utmost importance to set measurable goals for each of the program components and track progress through data collection and management. Such data will later be used to evaluate the success or failure of the implementation of the program and derive conclusions regarding each component's effectiveness.

In this report, Program Assessment has been divided into components similar to those established in the Municipal Permit, i.e.:

- Land Use Planning
- Construction
- Municipal
- Industrial and Commercial
- Residential
- Education and Public Participation

#### 11.2.3.3 INTEGRATED ASSESSMENT

Integrated Assessment establishes a relationship between program implementation activities and changes to water quality. This information is critical for the Copermittees to evaluate cost effectiveness of their program elements. However, Integrated Assessment is often the most difficult element of the overall program effectiveness assessment.

## 11.3 WATER QUALITY ASSESSMENT RESULTS

This section of the report utilizes the methodology described above to arrive at conclusions regarding the effectiveness of the City's storm water management program during the current reporting period. This Section focuses on the three components of the effectiveness assessment described in Section 11.2, i.e.:

- Water Quality Assessment (Levels 5 and 6 of the Hierarchy of Targeted Outcomes in the pyramid of Figure 11-1)
- Program Assessment (Levels 1 to 4 of the pyramid)
- Integrated Assessment

### 11.3.1 WATER QUALITY ASSESSMENT

Changes in discharge quality and receiving waters quality (Levels 5 and 6 of the Targeted Outcomes) are the ultimate targeted outcomes in describing direct successes of storm water program activities. While such levels have proven challenging in assessing individual JURMP effectiveness, levels 5 and 6 have been thoroughly processed through the ROWD and LTEA development on a regional basis in 2004-2005, and will be addressed for the current Municipal Permit cycle in the next ROWD. As such, the City relies to a great extent on the regionally prepared annual Receiving Water Monitoring Reports, ROWD, and LTEA for a detailed look at levels 5 and 6 assessments. Additionally, the City uses results of its jurisdictional Dry Weather Field Screening and Analytical Monitoring program to track long-term trends in the quality of discharges at outfall locations throughout the City. This process has been discussed in more detail below.

Although lines between programmatic efforts and water quality improvements will require long-term data gathering and analysis, the City annually conducts an evaluation of data gathered through the Dry Weather Field Screening and Analytical Monitoring Program. It is important to recognize that the Dry Weather Monitoring Program is primarily used to identify illicit discharges and connections to the MS4 and receiving waters, and not as a surface water characterization mechanism. Alternatively, the dry weather data sets have proven useful in characterizing the quality of non-storm water discharges to surface waters during dry seasons. As such, the City utilizes dry weather data sets to evaluate trends and to steer program priorities on a local level. Dry weather data analysis has been reasoned as a means to further target programmatic components, and to establish target pollutants and to identify geographic areas of concern.

The graph on the following page, Average Percentage of Observations Exceeding Action Levels in Dry Weather Samples, was developed in an effort to track the overall average of samples taken per year in exceedance of numeric action levels as established under the Dry Weather Monitoring Program. This effort is intended to initiate a long-term analysis through tracking detectable improvements or impairments in the quality of non-storm water discharges throughout Chula Vista. This analysis is valuable in evaluating not only the number of exceedances from one year to the next, but also in examining those pollutants that are commonly identified.

In support of the overall average exceedances, the City utilizes constituent-specific trends analysis to develop a clear picture of water quality trends in non-storm water discharges. This analysis evaluates the percentage of annual samples, in relation to a specific constituent, in exceedance of established action levels. Graphs detailing the action level exceedences for each pollutant are on the following pages.

### 11.3.2 PROGRAM ASSESSMENT

In 2009-2010, the City continued to evaluate programmatic activities and implementation protocols in support of effectiveness assessment strategies. It is important to note that through the ROWD and LTEA process, the City has developed a sound understanding of the association of programmatic activities as they relate to long-term effectiveness assessment. As such, the City has sought to formalize various programmatic elements and implementation protocols in support of the effectiveness assessment framework as demonstrated in the preceding paragraphs. The targeted outcome levels discussed below are not intended to be rigid in their function, and while programmatic activities in 2009-2010 more wholly support these levels, continued advancements and data gathering efforts by the City in the future will support a more complete jurisdictional effectiveness assessment. As mentioned in the preceding paragraphs, Copermittees continued to collaborate in an effort to establish a comprehensive assessment in developing a standardize framework for assessing the effectiveness of Jurisdictional Urban Runoff Management Program.

Additionally, during this reporting period the City administered a survey to measure public awareness and behavior on various storm water quality related issues. Based on the City's population of about 220,000, a 95% confidence level, and 4 confidence intervals, it was determined that at least 599 people had to be surveyed to obtain results that were statistically significant. In this reporting period, Storm Management Section staff used the opportunity provided by various public events to establish contact with citizens and conduct the survey. A total of 662 surveys were collected. This number exceeds the minimum requirement thus increasing the general level of survey accuracy. Survey data and analysis is detailed in Attachment M. The report presents the analysis approach, a summary of data, and a comparison with the results of a similar survey that was administered in the City's FY 2005-2006 baseline survey. Analysis results provide the City with more understanding of general JURMP implementation effectiveness as well as potential areas where the City's storm water program can be improved or enhanced. The City will use this data to better focus its storm water education efforts.

The discussion under Program Assessment focuses on Levels 1 to 4 of the Targeted Outcomes on a jurisdictional basis as follows:

#### 11.3.2.1 COMPLIANCE WITH ACTIVITY-BASED PERMIT REQUIREMENTS (LEVEL 1)

This level of effectiveness assessment is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City, based on various components of the Municipal Permit (Tables 11-1 – 11-8). In the following sections, these tables and their associated analysis are divided into Municipal Permit components of land use planning, construction, municipal, industrial and commercial, residential, education and public participation, reflecting various elements of the Municipal Permit, and provide a summary accounting of activities conducted by the City in 2009-2010.

#### 11.3.2.1.1 LAND USE PLANNING

In view of the recent update to the City's local Standard Urban Storm Water Mitigation Plan (SUSMP), and inclusion of Low Impact Development (LID) and Interim Hydromodification Criteria (IHC), the City has sought to continually refine the SUSMP implementation process as deemed necessary to ensure overall effectiveness and compliance with Municipal Permit provisions. During the current reporting period, development activities remains slow and the number of projects submitted to the City for approval and permit issuance was low. As can be seen from Table 11-1, ten SUSMP projects were submitted and one SUSMP project received approval. However, the number of total cumulative projects that have implemented post-construction BMPs and the number of projects inspected for post-construction BMPs remains high.

During this reporting period, BMP maintenance verification letters were sent to responsible parties reminding them of their responsibility to clean, inspect, and maintain storm water treatment facilities (see Table 11-2). Responsible parties were required to provide the City with certification of maintenance of the treatment facilities within a set time frame. Additionally, the City has added another GIS layer in our GBA tracking system identifying all public and private treatment category BMPs. These processes provided yet another mechanism to ensure proper maintenance and effectiveness of all treatment facilities and compliance with Municipal permit provisions.

The following tables summarize City of Chula Vista's activities during the reporting period towards ensuring compliance with SUSMP implementation and the review, inspection, and maintenance verification of SUSMP projects.

**Table 11-1** FY 2009-2010 Compliance with Activity-Based Requirements – Land Use Planning

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.1 Land Use Planning | Development Projects | # SUSMP Projects Submitted | # SUSMP Projects Approved | Actual/Target | % |
| | | 11 | 1 | N/A | N/A |
| | High Priority Sites (Total Listed = 42) | # Sites Targeted for Inspection | # Sites inspected | Actual/Target | % |
| | | 42 | 42 | 42/42 | 100 |
| | Medium Priority Sites (Total Listed = 50) | 25 | 36 | 36/25 | 144 |
| | Low Priority Sites (Total Listed = 89) | As Needed | 58 | As Shown | 100 |

**Table 11-2** FY 2009-2010 Post Construction BMP Maintenance Verification

| Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|
| High Priority Sites (Total Listed = 42) | # Projects sent BMP maintenance notification letter | # Projects returned BMP maintenance verification letter | Actual/Target | % |
| | 42 | 42 | 42/42 | 100 |
| Medium Priority Sites (Total Listed = 50*) | 41 | 34 | 34/41 | 83 |
| Low Priority Sites (Total Listed = 89*) | 76 | 68 | 68/76 | 89 |

* It should be noted that City's Storm Drain Maintenance Section is responsible for the routine inspections and maintenance of Treatment Control BMPs on public right-of-way, facilities, and projects, in accordance with a scheduled maintenance program, which is tracked by the GBA Master Series program. At the end of the reporting period, there were 22 municipal treatment control facilities that did not require a BMP notification letter. These facilities can be found in Attachment A.

Based upon the significant achievements and continued refinements experienced in 2009-2010, the City has not identified any ineffective BMPs or management measures in terms of compliance with the Land Use Planning for New Development and Redevelopment permit requirements.

JURMP strengths associated with Land Use Planning for New Development and Redevelopment during the reporting period are described below. The list is not intended to provide comprehensive accounting of programmatic activities; rather it is to highlight those activities that best accentuate the Land Use Planning for New Development and Redevelopment component of the City's JURMP in 2009-2010

The following features distinguish the Land Use Planning for New Development and Redevelopment component of the City's JURMP:

***Development Storm Water Manual***

The Manual, updated in March 2010, provides the City with a mechanism to effectively articulate all requirements related to water quality and the development or redevelopment of land within the City. The Manual covers all aspects of development, the City's SUSMP requirements, applicable checklists, permanent BMP requirements, construction BMP requirements, and implementation and maintenance requirements. The Manual is available on the City's website, and is used extensively as a reference document by City staff, developers, and consultants. The Manual supersedes a similar document titled "Development and Redevelopment Projects Storm Water Management Standards Requirements Manual," which was adopted in November of 2002.

During this reporting period City staff actively participated in the Regional Land Development Workgroup meetings and activities and collaborated with other participants to update the Model SUSMP and develop a Hydromodification Management Plan (HMP). As mentioned earlier, in

March 2009, the Regional Board approved the updated Model SUSMP. Copermittees were given 365 days to incorporate the Model SUSMP requirements into their local SUSMPs. Likewise, Copermittees submitted a draft HMP to the Regional Board, which was approved in July 2010. HMP requirements are expected be in effect six months after its approval (January 2011). The City of Chula Vista has met all the deadlines for updating its local SUSMP. The Final HMP will be incorporated in the City's SUSMP before January 14, 2011.

***Inter-Departmental Coordination***

The City's SUSMP and development review process includes multiple entities throughout the City. As the City continues to grow, it has taken all necessary steps to maintain compliance with SUSMP requirements through the coordination of multiple departments. Although the current economic situation has slowed down the City's growth during the past three years, such coordination has continued in 2009-2010 to require refinement and augmentation, as necessary, to maintain compliance and ultimately improve water quality.

***Dedicated Storm Water Management Section***

The Development Services Department provides the necessary oversight over all management components of SUSMP implementation. The Storm Water Management Section keeps up with the latest requirements and regulations, and provides technical support to City staff and assist project proponents and consultants. Storm Water Compliance Inspectors and Environmental Health Specialists also perform the functions of post-construction BMP construction verification, inspection, and maintenance verification.

***Information System Support***

A robust geographic information management system (GIS) supports the City's Storm Water Management Program. The City's GIS currently includes multiple layers used by Storm Water Management staff for various functions. In terms of land development and redevelopment activities, within the reporting period, a BMP layer has been maintained in order to track post-construction BMPs implemented Citywide. Additionally, Permits Plus, which is a specialized permits tracking software, is utilized in tracking a variety of discretionary permits, and specifically is used by the Development Services Department to identify and track Priority Development Projects. Further, Permits Plus is utilized in annual inventory updates. Notably, in 2009-2010, the GIS layer was continuously updated to manage and provide easy access and tracking of post-construction BMP Treatment facilities. A recent update was an addition of a layer identifying public and private categories of post-construction BMP Treatment facilities.

***Data Management***

As the City continues to grow, challenges associated with data management emerge such as tracking of post-construction BMPs, maintenance agreements, and associated documents. The City continues to address these challenges through the customization of robust data management systems presented in this report, including GIS, GBA, and Permits Plus. However, as requirements and programmatic elements continue to evolve, it is important to update available tools with up-to-date information, as well as information necessary to evaluate overall program effectiveness. The City continues to maintain up-to-date data and effectively track all information related to JURMP activities such as inventories, inspections, violations, notifications, and post-construction BMPs.

***New Development and Redevelopment Project Design Elements***

With a focus on the use of Low Impact Development Integrated Management Practices and higher efficiency structural treatment BMPs in achieving SUSMP compliance, the City continued to work with the development community to improve the design of storm water design features of proposed projects. The City continuously stressed this focus in 2009-2010 through requirements of project proponents to provide a detailed level of analysis to justify utilizing design elements in their proposed projects. The recently approved Model SUSMP, which was incorporated in the City SUSMP requirements, will provide a new approach in the level of analysis and project design elements for the development community.

#### 11.3.2.1.2 CONSTRUCTION

Within the reporting period of this report, the construction component continued to demonstrate success by consistent programmatic developments and enhancements. Through identified needs and associated management decisions, the City fortified its jurisdictional construction management component in 2009-2010. As the slowdown in development continued, many construction sites remained inactive or faced sever reductions in construction activities. Within the reporting period, the City worked closely with developers to stabilize inactive construction sites; promote pollution prevention and BMP implementation; and ensure proper maintenance of BMPs to prevent polluted discharges from construction sites. Because of sagging economy, this was a challenge as many developers claimed that they had limited financial resources and were unable to provide the necessary resources. City staff worked with developers to identify cost-effective BMPs and in some instances initiated enforcement action until full compliance was achieved. Mechanisms were identified to promote pollution prevention techniques as described in Section 3 of this report. The City continues to maintain the regulatory standards mandated by the Municipal Permit and as developed and improved through previous years by the City irrespective of prevailing conditions.

**Table 11-3** FY 2009-2010 Compliance with Activity-Based Requirements – Construction

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.2.d Construction | High Priority Sites (Total Listed = 7) | # Sites targeted for inspection | # Sites inspected | Actual/ Target | % |
| | | 7 | 7 | 7/7 | 100 |
| | Medium Priority Sites (Total Listed = 27) | 27 | 27 | 27/27 | 100 |
| | Low Priority Sites (Total Listed = 70) | 70 | 70 | 70/70 | 100 |
| | All Sites (Total Listed = 104*) | Total sites identified | # in compliance or on a schedule for compliance | Actual/ Target | % |
| | | 104 | 104 | 104/104 | 100 |
| | | # of inspections during dry season | # of inspections during wet season | Total # of inspection s | N/A |
| | | 17 | 286 | 303 | N/A |

*Note: Of the total number of construction sites listed above, it is estimated that about 70% to 80% were inactive during the reporting period. Therefore, active sites were inspected according to the Municipal Permit requirements and inactive sites were inspected on an as needed basis.

The following features distinguish the construction component of the City's JURMP:

***Inspection and Enforcement***

As demonstrated above, and in previous reporting years, the City has established a comprehensive construction inspection and enforcement program. The Storm Water and Public Works Inspection staff, with broad knowledge and expertise in construction storm water management, ensure compliance with this JURMP component on construction sites. Within the reporting period, targeted inspections on development, redevelopment, and capital construction projects have been fully achieved. These goals have been accomplished through an aggressive inspection and follow-up schedule approach that assures compliance in the highly dynamic construction environment.

***Education and Training***

Storm Water Management staff provides education and training to all entities related to construction activities including developers, site superintendents, sub-contractors, and trades persons. During the previous years, this education and training capacity was further defined by storm water inspection staff participation and expertise provided at regional training seminars and outreach events directed at the construction industry. As a function of the experience gained through a broad spectrum of construction activities in the City, Chula Vista Storm Water Management staff continues to offer a strong asset and broad-based expertise in construction storm water management both locally and regionally. The adoption of the new General

Construction Permit necessitates further education and trainings to all entities related to construction activities. During this reporting period, City staff was given the opportunity to speak at a regional seminar for the construction industry. City staff continued their efforts in educating members of the construction industry at the local level during meetings and site inspections.

It should be noted that programmatic updates and proposed updates presented above have been driven by management decisions to develop more effective JURMP elements. As such, at this time, no significant management measure deficiencies have been identified and no BMPs determined ineffective in 2009-2010. However, in support of an adaptive management approach to jurisdictional elements, the following program areas have been identified for further attention in order to support overall program effectiveness:

***BMP Maintenance***

During the reporting period, due to an increase in the number of inactive construction sites, BMP maintenance on construction sites continued to be an area of concern. While inspection staff noted significant efforts in BMP implementation, the maintenance needs associated with implemented BMPs did not match implementation efforts on a consistent basis. As a reminder, the City issued a formal letter to all developers with inactive construction sites reiterating their responsibility for BMP implementation as discussed in details in section 3 of this report.

#### 11.3.2.1.3 MUNICIPAL

As exemplified in program descriptions included in other sections of this report, the City prides itself for outstanding environmental programs, and the interrelated successes that each can account for. The City recognizes the need for far-reaching pollution prevention programs for the general public, but further emphasizes ongoing pollution prevention programs through well-developed City functions such as MS4 maintenance, street sweeping, and Integrated Pest Management techniques. The following table summarizes functions' data.

**Table 11-4** FY 2009-2010 Compliance with Activity-Based Requirement – Municipal

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.a Municipal | High Priority Sites (Total Listed = 64[1]) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 61 | 61 | 61/61 | 100 |
| | Medium Priority Sites (Total Listed = 5) | As needed | 0 | N/A | N/A |
| | Low Priority Sites (Total Listed = 19) | As needed | 0 | N/A | N/A |
| | Catch Basins, Inlets, MS4, Open Channels | Estimated quantity of waste targeted for removal (Tons) | Quantity of waste removed (Tons) | Actual/Target | % |
| | | 427 | 427 | 427/427 | 100 |
| | Streets/Parking Lots | Estimated distance of curb/park miles to be cleaned | Total curb/park miles cleaned | Actual/Target | % |
| | | 18,000 | 18,000 | 18,000/18,000 | 100 |
| | Catch Basins/ Inlets | # of catch basins and inlets in the City | # of catch basins and inlets inspected | Actual/Target | % |
| | | 8,801 | 8,480[2] | 8,480/8,801 | 96 |
| | | # of catch basins and inlets targeted to be cleaned | # of catch basins and inlets cleaned | Actual/Target | % |
| | | 4,444 | 4,444 | 4,444/4,444 | 100 |

[1] Three categories listed in the Municipal Inventory as follows are inspected on a regular and as needed basis and are not included in the total number of sites targeted for annual inspections:

- MS4
- Roads, Streets, and Highways
- Special Events

[2] Out of 8,801 catch basins and inlets, 8,480 were inspected in this reporting period. The remaining 321 catch basins and inlets are scheduled for inspection in FY 2010-2011.

With such a well-rounded approach, the City has a significant number of management measures to accurately assess the effectiveness of municipal program component. Further, no BMPs have been identified as ineffective within the reporting period of this report.

The following features distinguish the Municipal component of the City's JURMP:

***Municipal Facility Inspections***
The City conducts inspections on numerous municipal facilities on an annual basis. Continued in 2009-2010, and as part of this comprehensive inspection process, Storm Water Management staff inspects City owned parks and other facilities for potential maintenance concerns and BMP implementation.

***Environmental Programs***
As described in other sections of this report, the City manages a number of separate, yet interrelated environmental programs. The City recognizes the tremendous asset that such programs provide to the City's pollution prevention efforts, and will continue to promote the collaborative relationship of these programs in the future. The collaborative successes of each program have continued to capitalize upon in 2009-2010 through the development of a broad-based outreach and educational campaign by the City. The City's CLEAN Business program adopted in 2008 continued to promote partnerships between the City and local businesses that operate in a socially responsible manner and protect the environment. The program was well received by local businesses and has increased in membership since its adoption.

Based on exemplary municipal pollution prevention procedures, BMP implementation, and management measures, the City has not identified any significant needs for program improvement or modification at this time.

#### 11.3.2.1.4 INDUSTRIAL AND COMMERCIAL

The 2009-2010 reporting year was a continued maintenance year in terms of industrial and commercial activities within the City. Inventory validation and supplemental inspection efforts remain the highlights of this year's activities. As reported in previous reporting cycles, significant numbers of inspections have been conducted Citywide in order to reach out to numerous industrial and commercial facilities operating within the City. With such a significant variety of commercial and industrial activities in Chula Vista, staff has recognized the need to target those areas and business activities that remain high on the source priority list, and to provide a consistent presence and strong enforcement standard. Notably in this reporting period, Storm Water Section staff initiated an educational training program on storm water pollution prevention and BMP implementation to specific industrial facilities that have a track record of violations and were identified as High Threat To Water Quality.

The City's FY 2009-2010 inventory of industrial/commercial facilities includes 198 industrial and 1,228 commercial facilities (which includes 333 mobile businesses). In 2009-2010, Storm Water Management staff has successfully met, and in some cases exceeded, all compliance-based industrial/commercial requirements of the Municipal Permit through inspection of all high-priority and some low-priority commercial and industrial sites. As such, the City has not

identified any significant management measures, deficiencies or ineffective BMPs within the defined reporting period.

**Table 11-5** FY 2009-2010 Compliance with Activity Based Requirements – Industrial/Commercial

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.b Industrial | High Priority Sites (Total Listed = 48[1]) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 48 | 48 | 48/48 | 100 |
| | Low Priority Sites (Total Listed = 150) | As needed | 2 | As shown | 100 |
| D.3.c Commercial | High Priority Sites (Total Listed = 201) | # Sites targeted for inspection | # Sites inspected | Actual/Target | % |
| | | 201 | 201 | 201/201 | 100 |
| | Low Priority Sites (Total Listed = 1,022[2]) | As needed | 28 | As shown | 100 |

[1] Four high priority industrial facilities included in the industrial inventory are owned by the San Diego Unified Port District and are inspected by that agency

[2] 333 commercial facilities included in the commercial inventory are mobile businesses that are regulated differently from other businesses. The Municipal Permit does not require their annual inspection.

The following features distinguish the industrial/commercial component of the City's JURMP:

***Integrated and Balanced Approach***

With a dedicated Storm Water Compliance Inspection staff, industrial and commercial facilities are effectively regulated. Most notably, the City's industrial and commercial inspection program is defined by a consistent presence and strong enforcement standard, and Chula Vista storm water inspection staff continues to excel in maintaining the needs of the industrial and commercial programmatic elements. Needs such as pollution prevention and BMP implementation assurance, business community education and outreach, ongoing inspection and enforcement, and maintenance of a dynamic source inventory characterize the large role these components have in the larger storm water management scheme. Further, Public Works maintenance and landscape crews, whose working environment is in the field, have been trained and educated in storm water pollution prevention and report any observed illegal activities or discharges. As such, they are considered the "eyes and ears" of the Storm Water Management Section.

Marked by exemplary inspection and enforcement processes and procedures, the City has not identified any significant need for improvement of the industrial/commercial program at this time.

#### 11.3.2.1.5 RESIDENTIAL

As demonstrated through the narratives in other sections of this report, the expanding residential community that makes up the City of Chula Vista defines the residential component of the City's JURMP. Any small changes in behavior of residents are magnified due to the effect of numbers. As such, the Storm Water Management staff has sought to achieve continued success in the reduction of pollutants from residential areas through a variety of mechanisms geared toward behavior change. This has been approached through the characterization of a variety of activities and pollutant types associated with such activities. The Storm Water Management staff has identified a specific need to reach out to the residential community to communicate a broad based message of environmental stewardship and protection of water quality. Table 11-6 shows the quantity of Household Hazardous Waste and used oil collected from residents in the City of Chula Vista for FY 2009-2010. The significant increase in quantity collected in HHW can be attributed to an aggressive effort by the City on residential outreach and educational efforts. Conversely, the quantity of used oil collected came down dramatically in this reporting period. In previous years, the California Integrated Waste Management Board (now CalRecyle) allowed estimates given by center operators. Numbers given in the previous years are overestimated. In 2010, the State now only accepts numbers from claims submitted to the Board. Collection centers get reimbursed for the number of gallons they accept from the public. This number represents a more accurate quantity of used oil collected and will be the baseline data for tracking in the forthcoming years.

**Table 11-6** FY 2009-2010 Compliance with Activity-Based Requirements – Residential

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.e Residential | Household Hazardous Material | Quantity of HHW[1] targeted for collection | Quantity of HHW collected | Actual/Target | % |
| | | 252,494 lbs (FY 08-09) | 294,217 lbs (FY 09-10) | 294,217/ 252,494 | 116 |
| | Used Oil | Quantity of used oil collected from certified collection centers ( FY 08-09) | Quantity of used oil collected from certified collection centers (FY 09-10) | | % |
| | | 48,287[2] gallons | 23,560[3] gallons | N/A | N/A |

[1] HHW= Household Hazardous Waste

[2] In previous years the California Integrated Waste Management Board (now CalRecyle) allowed estimates given by center operators. Numbers given in the previous years are overestimated.

[3] In 2010 the State only accepts numbers from claims submitted to the Board. Collection centers get reimbursed for the number of gallons they accept from the public.

***Residential Program Strengths:***

***Pollution Prevention***
The City's residential component is strengthened by various pollution prevention programs offered to residents. Such pollution prevention programs provide the community with highly cost-effective methods of disposal of such items as used motor oil, oil filters, green waste, recyclables, used cooking oil, household hazardous waste, and electronic waste. While the details of such programs are found throughout this report, it is important to recapture the tremendous asset such programs offer the City's community.

***Residential Outreach and Education***
The City continued to focus significant resources on residential outreach and education efforts in 2009-2010 and constantly endeavored to devise different avenues in reaching the public. While these activities are more fully described in Section 7.0 of this report, it is necessary to recognize the importance of this attribute to the overall success of the residential sector of the community.

***Residential Program Improvement Areas and Challenges:***
Based on exemplary residential pollution prevention procedures, BMP implementation, management measures, and a greatly enhanced outreach and education strategy, the City has not identified any significant needs for improvement at this time.

#### 11.3.2.1.6 EDUCATION AND PUBLIC PARTICIPATION

The City prides in its well-established and comprehensive environmental programs. The Storm Water Management Program plays a vital role in communicating water quality information to local commercial, industrial, residential, and development communities. Further, such messages are supported by cooperative efforts with such City entities as the Chula Vista Nature Center, the Conservation Department, the Regional Used Oil Recycling Program, and Household Hazardous Waste Program. With the City's commitment to environmental services and resources, the City's Storm Water Management Program has successfully collaborated with City environmental programs and departments in order to effectively reach the community at large with clear and relevant messages of environmental stewardship and protection. The accounting of activities in Sections 8 and 9 of this report has been prepared to demonstrate the broad spectrum of education and public participation opportunities provided to the community of Chula Vista.

While the City continuously strives to improve its JURMP implementation program, it has not identified specific management measures by which to improve education and public participation activities. The added Clean Business program was the latest measure added in our public participation activities. The City is committed to the continued development of such efforts as they are evaluated through the effectiveness assessment process.

***Education and Public Participation Program Strengths:***

***Environmental Program Collaboration***
As discussed throughout Sections 8 and 9 of this report and highlighted in previous reporting years, the City's Storm Water Management Program is strongly supported by numerous

environmental programs within the City. As such, the Storm Water Management Program has been able to reach more diverse audiences and participate in a greater variety of public participation venues. This collaboration of programs that culminated in the creation of the CLEAN program has resulted in clear and consistent messaging to Chula Vista residents and has reinforced City's resources toward more effective and holistic environmental programs.

While the goals of the CLEAN program have been articulated elsewhere in this report, it is important to note the unique approach to education and outreach that the City has taken. Through the collaboration of environmental programs such as conservation, household hazardous waste collection, recycling, and storm water management citizens receive consistent and interrelated messages, and participate in activities that demonstrate various facets of environmental protection. Such coordinated public education and participation programs have far reaching and lasting effects that ultimately result in general acceptance of environmental concepts and changes in behavior. It has been recognized that the interrelationship of each of these programs collectively, is integral to the overall success of each of these programs individually. Finally, the City is fortunate to have the Chula Vista Nature Center to showcase the San Diego Bay and to provide tangible access to the resources the community is called to protect.

***Internal Staff Training***

Through formal or informal training, meetings or individual contact staff training is conducted each year in the City on an as needed basis. With the status and trends in storm water management in such a dynamic state, Storm Water Management staff has recognized the need to consistently provide updated information to City employees. In addition, the messages must be conveyed consistently at all levels, and cover all necessary City functions.

***Chula Vista CLEAN Program***

The City continued to take significant steps to further implement an integrated and relevant public education and outreach program aimed at a diverse audience. Utilizing the services of I Love A Clean San Diego (ILACSD) the CLEAN program has been built upon a holistic approach and increased community participation, aiming to utilize the participating community groups, private businesses and organizations, local water agencies, local schools, developers, community groups, and others to create a shared personal commitment and a sense of ownership to the community's environment, water resources and watershed.

***Education and Public Participation Program Improvement Areas and Challenges:***

***Education of the Development Community***

The recently adopted Model SUSMP, which was incorporated in the City's local SUSMP required extra efforts by City staff, Developers, and consultants. The development community, which was used to meeting water quality requirements of their projects by mainly incorporating mechanical treatment BMPs in their drainage systems, was now faced with LID requirements. LID principles are based on site planning for the minimization of impervious areas, utilizing landscaped areas for the benefit of water quality, water conservation, and other natural site design BMPs that mimic the pre-development hydrologic conditions of the site.

The new LID concepts require site planning at the earliest stages of the project conception. A change in perspective and a closer cooperation between architects, planners, and engineers, as well as cross training among these groups are needed. Because of these reasons, and the inevitable fact that normally there is reluctance to change of acquired habits and established procedures, City staff faced the challenge of returning project submittals and meeting with project applicants, on occasions several times, before acceptable site plans were achieved. Through regional and jurisdictional efforts, developers and consultants are becoming familiar with the new requirements and are making the necessary adjustments to incorporate LID principles into their project plans. After the issuance of the current Municipal Permit, the Storm Water Management staff expanded its inspections and enforcement of post-construction BMPs to ensure BMP implementation and maintenance on development projects, often exceeding minimum requirements of the Permit. It is a priority of the City to communicate and reinforce the requirements associated with development and redevelopment projects through a consistent and clear message. This is most effectively approached through project-by-project interaction with developers and consultants.

**Table 11-7** Compliance with Activity-Based Requirements – Education and Public Participation

| Permit Section | Activity/Source Type | Targeted Outcome | Actual | Measure of Success | |
|---|---|---|---|---|---|
| D.3.g Education | Outreach (External) | # targeted training workshops, outreach events | # training workshops, outreach events conducted | Actual/Target | % |
| | | 12 | 12 | 12/12 | 100 |
| | | # Material, brochures targeted for distribution | # Materials, brochures distributed | Actual/Target | % |
| | | General public contact | General public contact | N/A | N/A |
| | Staff Training | # Training sessions FY 08-09 | # Training sessions FY 09-10 | Actual/Target | % |
| | | 11 | 17 | 17/11 | 155 |
| | Opportunities for participation | Estimated # of opportunity events to be provided | # Provided | Actual/Target | % |
| | | 3 | 3 | 3/3 | 100 |

#### 11.3.2.2 CHANGES IN KNOWLEDGE/AWARENESS (LEVEL 2)

It is generally accepted that expanded knowledge and awareness is fundamental to bringing about desired changes in behavior. As such, the wide variety of activities captured in this report, including workshops, training, and public outreach through the Chula Vista CLEAN program all support this critical programmatic element. Notably, in 2009-2010, the City of Chula Vista completed the survey instrument designed to measure public awareness of various storm water quality related issues. The survey intends to measure the level of knowledge and associated behavioral change. Analysis of the survey has been detailed in Attachment M. During the reporting period, the City provided a wide cross-section of information through the interrelationship of various environmental programs. The City was able to significantly impact the level of knowledge and awareness within the community through its continued effort in influencing residential, industrial, commercial, and municipal activities. In order to evaluate levels of knowledge and awareness, the City has established the following indicators:

- Hotline Call Response Tracking (Residential, Industrial, Commercial, Construction)
- Business License Application Screening Procedure (Mobile Businesses)
- Storm Water Web Site (All Community Sectors)
- Development Review Process (Development Community)

It is anticipated that in future reporting years as these indicators become more wholly developed; they will provide strong directional measures toward programmatic updates. It is important to recognize that the elements presented below are only indicators used to evaluate trends in Chula Vista, and are taken collectively to express overall successes and challenges and provide programmatic guidance.

***Hotline Call Response Tracking***

A comprehensive hotline call response summary is presented in Attachment L – Hotline Call Response Summary. It is important to note that trends in hotline calls received by the City have remained strong since the inception of the program. Figure 11-2 shows the number of hotline calls from FY 1998-1999 to FY 2009-2010. There is a dramatic increase in hotline calls in this reporting period. This significant increase can be attributed to the expanded effort by the City in its public education and outreach that gained substantial increase in public awareness of various storm water quality issues. It may be inferred that overall programmatic influences are strong throughout the community.

**Figure 11-2** Chula Vista Storm Water Hotline Call Summary 1998-2010

4400

***Business License Application Screening Procedure***

The Business License Application Procedure, presented in Section 5.3 of this report, has provided the City a unique mechanism in evaluating knowledge and awareness of various mobile business communities. Mobile business owners are required to complete a storm water questionnaire, read the City's Storm Water Ordinance, and review educational BMP information related to their mobile business type. Through direct interaction with business license applicants, Storm Water Management staff is able to subjectively assess the level of awareness that mobile business owners have, based on their answers to the storm water questionnaire.

The City continued to utilize the regional mobile business database website. The website includes a compilation of all approved mobile business applications in the region, which is categorized by jurisdiction. The creation of regional source inventory is a significant improvement in mobile business database management, which can provide essential information in monitoring and tracking mobile business activities in the entire region.

***Storm Water Web Site***

The City's CLEAN website development and update continued into 2009-2010. This site offers valuable information to Chula Vista residents and businesses and is intended to facilitate public education on environmental issues, including storm water. The website also provides a means for residents to report illegal discharges to storm drain systems. Due to technical constraints, it is not possible at this time to count the number of people accessing the website. It is hoped that this technical difficulty will be overcome in the future in order to provide a method to assess the

usefulness of the website. In the meantime, Storm Water Management Section will continue to resort to other means of assessment such as surveys.

***Development Review Process***

During the current reporting period, the City continued implementing the environmental review process for all development and redevelopment project submittals. The City's JURMP includes a comprehensive flow chart to show the SUSMP implementation, approval, and verification process, together with responsible departments, divisions, and sections of the City. Through the required submission of Water Quality Technical Reports (WQTR) for Priority Development Projects; subsequent review by City staff; and project pre-con meetings, in 2009-2010 a notable increase in knowledge and awareness within the development community was observed. The level of knowledge and awareness has been evaluated through a review of the comments provided and direction needed from City staff to ensure compliance with SUSMP requirements. Further, it has been noted that WQTR submittals tend to be more fully developed and generally utilize effective sets of post-construction BMPs as required. A detailed description of the review process has been discussed in section 2 of this report. It should also be noted that while great strides have been observed in the development community, the City has identified the need to consistently convey stronger regulatory standards of construction and post-construction BMPs, including Low Impact Development features, and will continue to take this approach in subsequent reporting years.

#### 11.3.2.3 BEHAVIORAL CHANGE/BMP IMPLEMENTATION (LEVEL 3)

During this reporting period, the City continued to implement BMP tracking measures into various components as reviewed in this report. It has been recognized that through the implementation of well-developed BMP tracking measures, the City is able to more fully evaluate BMP implementation and associated behavioral change. As discussed earlier in this section, in this reporting period, the City completed its second survey to measure public awareness and behavior on various storm water quality related issues. The City has identified the following program areas as those most conducive to effectively tracking BMP implementation and evaluating behavioral change within the various regulated communities:

- Inspection Activities
- SUSMP Implementation
- Survey

***Inspection Activities***

As discussed in applicable sections of this report, the City has developed comprehensive commercial, industrial, municipal, and construction inspection programs. It is through these well-developed inspection programs, that the City is able to utilize BMP implementation tracking and assessment mechanisms.

In the reporting year 2009-2010, the Storm Water Management Section continued using the GBA database management system to track source inventories, inspection activities, and other data relevant to the assessment of storm water management programs. The use of the GBA was

expanded and refined to better serve the purposes of the new Municipal Permit. Through this database program, Storm Water Management staff is able to view the historical activities such as inspections and violations of commercial, industrial, municipal, and construction sites. Further, in support of BMP selection and evaluation throughout various community sectors, staff uses the inspection forms that were developed in FY 2005-2006. The inspection forms developed for commercial, industrial, municipal, and construction inspection activities are intended to provide fully developed BMP implementation tracking mechanisms.

Based on data gathered from such activities, the City is able to take a critical look at BMP selection and implementation Citywide, and be able to evaluate behavioral change within business communities and further validate effectiveness trends in years to come.

***SUSMP Implementation***

Within the development community, implementation of post-construction BMPs provides the City with the strongest indicator of BMP implementation and behavioral change. As discussed in Section 2.0 of this report, the City has sought to firmly establish SUSMP requirements within the development community, and has successfully implemented SUSMP procedures for all applicable projects within the defined reporting period of this report. Inherently through this process, significant numbers of post-construction BMPs have been implemented throughout the City; including site design, source control, and treatment control level BMPs.

***Survey***

During the reporting period, the City implemented an 11-question survey designed to measure public awareness of various storm water quality related issues and their relationship to behavioral change. A similar survey was administered in 2005 and serves as a general baseline for comparison. Although the survey in general is an assessment of public awareness, a few questions were designed to measure behavioral change. The focus of the survey was residential behaviors related to auto maintenance, landscaping, pet care, and swimming pool maintenance. Overall, results show that residents are aware of pollution prevention methods to protect waterways. Results show that some improvement can be made regarding educating residents watershed knowledge, the difference between the storm drain and the sewer system, and on BMPs for vehicle washing. Results suggest that although residents know in general how to prevent pollution, they still may not know the fundamentals of why they should prevent pollution. The City will take this knowledge and use it to better focus its education program. Attachment M provides a more detailed analysis of the survey.

#### 11.3.2.4 LOAD REDUCTIONS (LEVEL 4)

On a regional level, some Level 4 analysis has been conducted within the ROWD and associated LTEA documents. While load reduction targeted outcomes and estimates have proven challenging on a jurisdictional level, the regional ROWD and LTEA provide the most well developed approach toward such assessments. As such, the City has developed the following snapshot of load reduction estimates on a jurisdictional level to support overall JURMP effectiveness assessment. Notably, the load reduction numbers provided below in Table 11-8 are focused on municipal functions and programs.

**Table 11-8** FY 2009-2010 Load Reduction

| ACTIVITY/FUNCTION | LOAD REDUCTION | POLLUTANT TYPE |
|---|---|---|
| Used Oil Recycling | 23,560 gallons | Motor Oil |
| Household Hazardous Waste Collection | 294,217 pounds | Antifreeze, Oils, Paints, Aerosols, etc |
| MS4 Maintenance | 35.11 tons | Trash, Debris, Leaves, Grass, Rock, Silt |
| MS4 Inlets | 48.94 tons | Trash, Debris, Leaves, Grass |

| Channel Maintenance | 280.47 tons | Trash, Debris |
| Street Sweeping | 940 tons | Trash, Debris, Sediment |

### 11.3.3 INTEGRATED ASSESSMENT

A review of the results from the regional monitoring program and the City's Dry Weather Field Screening and Analytical Monitoring indicates that bacterial indicators and nitrate are the persistent constituents of concern in discharges from the City's MS4 and within the receiving waters. Other constituents of concern occasionally exceed established limits, however, they appear to be transient. Sources of bacterial indicators are commonly associated with wildlife; pet waste, improper management of restaurant waste, sewage overflows, and general residential activities and land uses. Nitrate is commonly associated with landscaping activities and groundwater intrusion. Notably, the City began a special investigation this reporting year to learn more about the sources of nitrate within the City, particularly those areas that show a consistent flow of groundwater into the storm drain system. The City will continue this special study in order to characterize these areas and to better focus its efforts in the improvement of water quality.

The City has implemented a variety of program elements that are described fully in other sections of this report, as summarized below:

- Residential and commercial public education
- Inspection of restaurants and other potential sources of bacteria
- A comprehensive sanitary sewer overflow prevention and cleanup program
- A comprehensive storm water conveyance system maintenance
- Street sweeping
- Requirements for treatment control Best Management Practices on new development and major redevelopment

The Charts included in Section 11.3.1 indicate that the majority of pollutants are on a declining trend in this reporting period. Particularly, significant decreases in Total Coliform and Fecal Coliform are encouraging. These results can be interpreted as follows:

The City expanded its public education and outreach in this reporting period. This effort was aimed at increased awareness and changes in public behavior. Based on current and past results from the dry-weather monitoring program, and past violation reports, specific residential areas

that were identified as High Threat To Water Quality (HTTWQ) were targeted for disseminating educational materials specific to the type of pollutants and violation activities. Moreover, the implementation of BMPs as described above, is considered effective in important deceases in fecal coliform and total coliform in urban runoff. This indicates that the City's programs are effective in controlling bacterial indicators. Further, due to the slowdown in construction activities, creation of urban impervious areas slowed down during the reporting period, which may also contribute to decreased instances of observed pollutant discharges. It is important to point out that this analysis should not be construed as a scientific assessment of the effectiveness of all the City's programs. As mentioned before, integrated assessment is the most difficult step in the effectiveness assessment and requires the evaluation of many diverse factors throughout a long period of time. It is expected that the next regional ROWD will include a more comprehensive evaluation of integrated assessment within the San Diego Bay Watershed and the City.

## 12.0 SPECIAL INVESTIGATIONS

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(k).i - A description of any special investigations conducted.*

### 12.1 GROUNDWATER SPECIAL STUDY

The City has identified several locations where there is a consistent flow of groundwater into the City's storm drainage system. Previous dry weather monitoring reports have identified areas where there is seepage into storm drain pipes or where groundwater is freely flowing from the ground. In order to better characterize groundwater discharges within the City, a special investigation was undertaken to identify these areas. With the help of a consultant, the City identified five areas where groundwater is consistently seeping into the storm drain system. Water samples were taken from these areas and field observations were recorded. Samples were analyzed for physiochemical parameters (pH, conductivity, total dissolved solids (TDS), and turbidity) and constituents commonly associated with groundwater (nitrate, nitrite, total kjeldahl nitrogen, and total nitrogen). In addition, analysis for residual chlorine was done to determine if samples were potable water discharges. Based on preliminary review of the data, it was determined that these samples were not potable water discharges. Nitrate-nitrogen levels above the dry weather action level in addition to high TDS levels suggest that these samples are consistent with groundwater discharge characteristics. Historically, Chula Vista was largely an agricultural area in the eastern portion. Agricultural activities especially those related to fertilization could have contributed to the high nitrate levels in the soil. Recent development in Chula Vista has caused increased grading, which has mobilized soil and re-suspended nitrogen through the nitrogen cycle. Nitrate-rich groundwater in addition to fertilizers in soil may be contributing to elevated nitrogen levels observed in this special study.

The City will continue this long-term special study to identify and characterize the areas where groundwater is discharging to the storm drain system. Potential future directions involve identifying and sampling these areas, in addition to creating a map to mark and track these areas over time.

## 13.0 NON-EMERGENCY FIRE FIGHTING

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(l).i - A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.*

### 13.1 INTRODUCTION

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. BMPs have been implemented when conducting the following activities:

- Regular maintenance of fire and emergency vehicles and equipment
- Training exercises
- Facilities maintenance
- Post-Emergency rehabilitation of response equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the storm water conveyance system. Detailed descriptions of BMPs are given for each activity below:

### 13.2 BEST MANAGEMENT PRACTICES

The City has developed and implemented a program to reduce pollutants from non-emergency fire fighting flows. Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods will be used to reduce the discharge of pollutants to the MEP. BMPs will be implemented when conducting the activities described in the following sections:

#### 13.2.1 REGULAR MAINTENANCE OF EQUIPMENT

- Vehicles and equipment are cleaned where runoff will be directed to the sanitary sewer system.
- Vehicles and equipment are cleaned where runoff will pond and evaporate and/or where runoff will filter through landscaped areas.
- Sewer drains in a vehicle cleaning area are outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents is minimized and disposed of into the sanitary sewer system.

#### 13.2.2 TRAINING EXERCISES

- Water flows are directed to landscaped areas whenever possible.

- When water flows to an area where landscaping does not prevent runoff, the Officer-in-Charge surveys the area prior to training activities to ensure that drill activities do not wash debris or sediment to storm drain systems.
- Prior to drill activities, debris is removed from downstream areas that could potentially discharge to storm drain systems.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to storm water discharges.
- On October 13, 15, 19 and 22, 2009, Storm Water Management Staff provided Storm Water Pollution Prevention Refresher Training to approximately 110 Fire Department personnel. Topics included a general overview of the storm water permit, BMPs, and the review of the City's program for non-emergency fire fighting flows.

### 13.2.3 FACILITIES MAINTENANCE

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept regularly to remove debris. Debris is placed in the trash.
- Landscaped areas are maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and the disposal of spilled materials is in accordance with applicable regulations.
- Hazardous materials (Hazmat) spills that require a cleanup beyond the ability of the on-site personnel are reported to the County of San Diego Hazardous Materials Division or a Hazmat certified contractor with appropriate resources to properly address the spill.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.

### 13.2.4 POST-EMERGENCY REHABILITATION OF RESPONSE EQUIPMENT

Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. Water is used only if other practical and immediately available methods cannot be identified. In such cases, water usage and discharges to MS4s are kept to a minimum and BMPs are implemented.

### 13.2.5 WASHING AND FUELING ACTIVITIES

The City maintains a number of fire stations, as listed in the municipal inventory. Such facilities are inspected on an as needed basis (See Attachment C). Only one fire station (Fire Station No. 4/Training Tower) has training capabilities. This facility is sloped so that all runoff generated by training activities is directed to a pervious infiltration area. Two fire stations within the City, stations No. 2 and No. 7, have fueling stations on site. Trucks from other stations are brought to these locations for fueling. The following fire stations conduct washing activities on site and pursuant to SUSMP regulations have permanent storm water BMPs installed:

- Fire Station No. 6 – 3 filter inserts and a non-storm water diverter
- Fire Station No. 7 – 1 CDS unit and a non-storm water diverter
- Fire Station No. 8 – 1 CDS unit and a non-storm water diverter

Each station is sloped so that all runoff generated by washing activities flows to a drain equipped with a non-storm water diverter mechanism, which diverts the wash water to the sanitary sewer system and rainwater to storm drain systems.

All personnel who conduct washing activities are properly trained on using the diverter device and ensuring it is used appropriately. Trucks that require cleaning from other stations are brought to the stations equipped with washing capabilities.

## 14.0 JURMP REVISIONS

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(m)i – A description of any proposed revisions to the JURMP.*

The following paragraph details proposed updates to the City's JURMP.

**APPENDIX B**

Since the City's JURMP document was developed and submitted to the Regional Board in March 2008, Appendix B of the JURMP has been updated during the current reporting period, which includes inventories of construction sites; municipal, commercial, and industrial facilities and activities; and Priority Development Projects with treatment control BMPs. Updated inventories are included in Attachments A to E of this report.

## 15.0 CONCLUSIONS

The present report is an accounting of City of Chula Vista's activities and Jurisdictional Urban Runoff Management Program (JURMP) implementation efforts during the reporting period of July 1, 2009 to June 30, 2010. It has been prepared in compliance with the requirements of the San Diego Regional Water Quality Control Board's Order No. R9-2007-0001, National Pollutant Discharge Elimination System Municipal Permit No. CAS0108758. The report format follows the regional standardized reporting format developed by the Copermittees as required under Section M.6 of the Municipal Permit.

Section 10 "Fiscal Analysis" of this report follows the guidelines provided in the Standardized Fiscal Analysis Method and Format dated January 29, 2009, which was developed by all Copermittees pursuant to the requirements of Section G.3 of the Municipal Permit.

Submittal of Section 7 "Illicit Discharge Detection and Elimination Component" has been deferred to December 15, 2010 as permitted by Addendum No. 2 to Order No. R9-2007-0001. The Regional Board issued Addendum No. 2 in recognition of the fact that field screening and analytical monitoring work could continue to the end of September of each year, and time was required to complete, finalize, and submit the required reports.

As can be construed from the contents of this report, during the reporting period of July 1, 2009 to June 30, 2010, the City of Chula Vista met, and in some cases exceeded, implementation requirements of the Municipal Permit and the City's JURMP.

### DEVELOPMENT PLANNING

A notable activity during the current reporting period was the update of the City of Chula Vista Development Storm Water Manual in March 2010. The Manual includes the City's local SUSMP. The updated Manual incorporates the requirements established under the regional Model SUSMP, including Low Impact Development and Interim Hydromodification Control requirements. The next update of the Manual is planned to take place before January 2011, and will include the final Hydromodification Management requirements.

During the reporting period, the City successfully completed implementation of the Land Development Component of the JURMP. The 2009-2010 Fiscal Year marked one of the lowest number of private development applications. Although there were a few major development projects under review by the City, only a handful of small projects received construction permits.

The City mailed out post-construction treatment control Best Management Practices (BMPs) maintenance verification letters and forms to all responsible parties and followed up to ensure that they were duly certified and returned. Inspections of post-construction treatment control BMPs were conducted on 100% of privately maintained facilities. In total, 174 projects were inspected, which exceeds Permit requirements.

Further emphasis was placed on the practice of Low Impact Development site design BMPs. Developers and consulting engineers were encouraged and required to incorporate such BMPs in

their site design as much as site conditions permitted. Three development projects were under review during the reporting period that proposed to disturb more than 50 acres and qualified for the Interim Hydromodification Criteria, however, they did not receive grading permits and are still in the design process.

### CONSTRUCTION

The Construction Component of the City's JURMP primarily included inspections of construction sites for BMP implementation. The City successfully conducted all inspections on private and public construction sites and resorted to enforcement action where necessary to bring violating sites into compliance with the requirements of the City's storm water management and grading ordinances. A total of five Notices of Violation and two Civil Penalties were issued. During the reporting period, the majority of graded construction sites remained inactive. Responsible persons for such sites were contacted and they were required to repair and maintain their erosion and sediment control BMPs. A total of 303 construction inspections were conducted during the reporting period, which meets and exceeds Permit requirements.

### MUNICIPAL

The Municipal Component of the City's JURMP primarily includes implementation of BMPs on all City owned facilities and activities. During the reporting period, the City ensured BMP implementation through staff training and inspections. Sixty-one high priority municipal facilities were inspected during the reporting period. The City also conducted street sweeping (18,000 curb miles), storm sewer system maintenance (removed 427 tons of waste), and sanitary sewer system maintenance (cleaned and maintained 586 miles) as source control preventive measures. Wastewater capture was implemented during graffiti removal, Integrated Pest Management practices were implemented during landscaping and parks maintenance, and waste management activities were conducted after each special community event. In Fiscal Year 2009-2010, the City achieved all its inspections, training, and BMP implementation goals under its JURMP Municipal Component.

### INDUSTRIAL AND COMMERCIAL

The Industrial and Commercial Component of the City's JURMP constitutes a major section of its storm water management program. An experienced full time Storm Water Compliance Inspector is dedicated to conducting industrial and commercial inspections and providing one-on-one training to business owners and managers throughout the City. The City's industrial and commercial inventory includes 1,426 businesses, of which 249 have been categorized as high priority and the remaining are classified as low priority. All high priority industrial and commercial businesses were inspected during the current reporting period. Thirty low priority businesses were also inspected to bring the total inspections to 25% of the total inventory as required by the Municipal Permit.

Mobile businesses applying for business licenses were directed to the Storm Water Management Section for training and signing of a certification statement to the effect that they are familiar with the City's storm water regulations and would implement BMPs appropriate to their line of

business at all times. During the reporting period, 164 mobile businesses went through this process.

### RESIDENTIAL

The City has developed the residential component of the JURMP based upon a multi-faceted approach, including pollution prevention; hotline response and enforcement; and outreach and education. The City collects and analyzes information about various aspects of observed and reported violations from multiple sources to identify high-priority residential areas and activities. Such areas and activities are then targeted for public education and outreach. The current reporting period marks a significant jump in the number of hotline calls, which can be indicative of the public awareness of storm water regulations and the relative ease of reporting.

During the reporting period, various programs under the City's residential component continued, including 1) Household hazardous waste collection center, 2) State-certified used-oil collection center, 3) Household collection of used oil, 4) Christmas tree recycling program, 5) Residential complaint response and enforcement, 6) Residential door hangers, and 7) City's environmental website.

### PUBLIC EDUCATION AND OUTREACH

The City of Chula Vista has identified public education and outreach as powerful and effective tools towards increased awareness and behavioral changes that will ultimately lead to reduced pollutant loading from various land uses and activities. As such, the City places great importance on its education and outreach programs. During the reporting period, City staff organized or participated in 17 training and educational events.

The CLEAN group continued its activities toward its mission: "Foster environmental awareness in the City of Chula Vista, through stakeholder and community involvement and participation." CLEAN group activities included media articles, school education efforts, community events, and Chula Vista Nature Center presentations and field trips. In total, City staff organized or participated in 12 educational events and provided public education on storm water regulations and BMP implementation during everyday residential activities.

City staff provided public education to industrial, commercial, and construction communities by one-on-one contact and on-site training. Business owners and managers, and construction site personnel were trained based on their specific site conditions and pollutant generating activities.
The City's storm water management program is based on the concept of continuous improvement through iterative goal setting, implementation, and assessment cycles. This process requires identifying measurable goals the beginning of the process, followed by implementation of tasks, and then assessment and comparison of results with identified goals. This illustrates the importance of assessment in any storm water management program.

## PROGRAM EFFECTIVENESS ASSESSMENT

During the reporting period, the City of Chula Vista continued using the methodology developed in the regional document "A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs." Assessment tools such as assessment of activity based results, surveys, and dry weather monitoring results were used to arrive at acceptable conclusions. Higher levels of assessment such as changes in discharge quality and receiving water quality were deemed to be beyond the scope of jurisdictional programs and, therefore, delegated to regional research and analysis such as the Regional Monitoring Program, Long-Term Effectiveness Assessment, and the Report of Waste Discharge.

Assessment results indicate that during the Fiscal Year 2009-2010, the City of Chula Vista met all its measurable goals for program element implementation. Dry Weather monitoring indicates that the majority of pollutants of concern show decreasing trends, while some still pose a challenge. In particular, nitrate and bacterial indicators appear to pose persistent problems, which the program should focus on in future years.

## FISCAL ANALYSIS

A successful storm water program would require adequate funding. During the current reporting period, the City of Chula Vista made such funds available through various sources including the general fund, storm drain fee, sewer fee, special assessment district fees, etc. The total jurisdictional storm water program costs amounted to about $2.5 million. There were other City programs designed to serve multiple objectives, including storm water pollution prevention, such as wastewater collection system maintenance, household hazardous waste management, etc. The total cost for such programs amounted to about $4.7 million.

Additionally, the City contributed its share to watershed and regional activities. The total for such programs amounted to about $277,000 during the reporting period.

As the City of Chula Vista continues its efforts toward environmental protection in general and water quality improvements in particular, its storm water management program becomes more refined and a part of a more holistic sustainability program.

## FY 2009-2010 Hotline Call Response Summary

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 07/01/2009 | STORM CHANNEL | Commercial | 3121 | MAIN | ST | Construction Debris & Waste |
| | Comments/ Action Taken: | 7/1/09---Received a report of illegal dumping of trash, junk and debris by Hyundai Livart Furniture at 3121 Main St. into the adjacent channel.<br>Inspection noted several large pieces of cardboard and other packing materials dumped into the storm channel. Admin Citation Issued. Cleanup conducted. No further action required. | | | | |
| 07/02/2009 | STREET | Commercial | 1478 | MELROSE | AV | Unknown Discharge |
| | Comments/ Action Taken: | Received a complaint from Sunny Fresh Cleaners regarding landscape maintenance crews blowing grass clippings into the street.<br>All American Landscape was responsible party. Issued verbal warning regarding the blowing of debris into the street. No further action necessary at this time. | | | | |
| 07/06/2009 | STREET | Residential | 142 | SAN MARCOS | PL | Possible Dumping into Catch Basin |
| | Comments/ Action Taken: | Received a report of illegal connection at 142 San Marcos Pl.<br>Inspection noted a sewer discharge hose leading from under garage door and into open top sewer clean out in the front drive way. Spoke with resident who stated that she would remove the hose, replace the sewer clean out cap and discontinue washing clothes at home. A re-inspection verified that corrections were made. | | | | |
| 07/06/2009 | CATCH BASIN | Residential | 160 | LAS FLORES | DR | Complaint Response Enforcement |
| | Comments/ Action Taken: | Received a call reporting mud running into the street from 160 Las Flores and into the storm drain inlet.<br>Inspection did not find any evidence of mud flowing from said property. No further action is necessary at this time. | | | | |
| 07/07/2009 | STREET | Residential | 501 | C | ST | Unknown Discharge |
| | Comments/ Action Taken: | Received report of water flowing into gutter with oil, slurry and rocks at 501 C Street.<br>Inspection found small water puddle in the gutter in front of said address resulting from irrigation overflows. No further action is necessary at this time. | | | | |
| 07/07/2009 | STREET | Commercial | 5 | FOURTH | AV | Unknown Discharge |
| | Comments/ Action Taken: | Received report of non-storm water flowing from jack in the box at 5 Fourth Ave.<br>Inspection noted that a sprinkler was leaking water into the gutter. Irrigation system was repaired. No further action is necessary at this time. | | | | |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 07/08/2009 | CATCH BASIN | Residential | 740 | F | ST | Other |
| | Comments/ Action Taken: | Received notification of open trash container and running water at the subject location.<br><br>Inspection did not observe running water from the facility at the time of the response. Open trash container was not overfilled and is not a storm water violation. No further action required. | | | | |
| 07/08/2009 | CATCH BASIN | Residential | 120 | PRESS | LN | Other |
| | Comments/ Action Taken: | Received notification of an open trash container at subject location.<br><br>Inspection did not observe trash bin to be overflowing or an accumulation of trash at the bins location. No further action required. | | | | |
| 07/08/2009 | CATCH BASIN | Residential | 793 | ENERGY | WY | Other |
| | Comments/ Action Taken: | Received notification of uncovered equipment and open trash container at the subject location.<br><br>Inspection observed facility in good, clean condition and using proper BMPs in accordance with their Industrial Permit. Did not observe overflowing or spilled trash. No further action required. | | | | |
| 07/08/2009 | STREET | Commercial | 1855 | MAXWELL | RD | Construction Debris & Waste |
| | Comments/ Action Taken: | Received notification of dirt tracking at subject location.<br><br>Barnhardt, Inc. conducted the cleanup of the tracking using staff and a street sweeper. No further action required. | | | | |
| 07/08/2009 | CATCH BASIN | Residential | 15 | J | ST | Pool Filter Discharge |
| | Comments/ Action Taken: | Observed discharge into the storm drain system but did not reach the catch basin. Homeowner was not aware that this is an illegal discharge. Issued verbal warning to the residence. Education material was issued. City staff conducted the cleanup utilizing a vactor crew. No further action required. | | | | |
| 07/09/2009 | CATCH BASIN | Industrial | 1888 | NIRVANA | AV | Other |
| | Comments/ Action Taken: | Received notification of a possible storm water issue at Brenntag Pacific of uncovered pipe, equipment, large drums and possible hazardous materials.<br>Responded to the the facility and observed the facility to be in good, clean condition. # ATTACHMENT M

# City of Chula Vista
# Storm Water Quality Public Awareness Survey Analysis

**BACKGROUND**

During the period April through September 2009, the City of Chula Vista Storm Water Management Section administered an 11-question, multiple-choice survey designed to assess public awareness of pollution prevention measures related to storm water. A copy of the survey is at the end of this document. The focus of the survey was residential behaviors related to gardening, pet care, automobile maintenance, pool maintenance, and reporting of illegal discharges. A baseline survey was administered in 2005. In this latest survey, some questions were improved to increase respondent understanding; some answers were expanded to gain more insight into behavioral change. Data was collected at a variety of locations throughout the City during public outreach events. Survey respondents were encouraged to take any of the various educational storm water brochures offered at the booth when they were finished with the survey.

**DATA ANALYSIS APPROACH**

Based on the City's population of about 220,000, a 95% confidence level, and 4 confidence intervals, it was determined that at least 599 people had to be surveyed to obtain results that were statistically significant. A total of 662 surveys were collected, thus increasing the level of survey accuracy. This report presents a summary of the survey data and a general comparison with the results of the 2005 baseline survey. Analysis results provide the City with a better understanding of JURMP public outreach and education program implementation and effectiveness, as well as potential areas where the City's storm water program can be improved or enhanced. The City plans to conduct its next survey in FY 2012-2013.

## ZIP CODE

Respondents were asked to write in their residence zip code on the survey. This provides information on whether or not the individual is a Chula Vista resident and provides info on the region of Chula Vista in which he/she lives. Overall, more than half of the respondents live in zip codes 91910 and 91911, the two westernmost zip codes in Chula Vista. About 70% of respondents live in zip codes 91910 through 91915, which are in the City of Chula Vista. Table 1 and Figure 1 below summarize the results.

**Table A: Zip Codes of Survey Respondents**

| Zip Codes | Count | FY 09-10 |
|---|---|---|
| 91902 | 21 | 3.17% |
| 91910 | 228 | 34.44% |
| 91911 | 143 | 21.60% |
| 91913 | 52 | 7.85% |
| 91914 | 9 | 1.36% |
| 91915 | 36 | 5.44% |
| 91950 | 29 | 4.38% |
| Other Zip Codes | 139 | 21.00% |
| No Answer | 5 | 0.76% |
| Total | 662 | |

**Figure A**

## QUESTION 1 : A WATERSHED IS DEFINED AS:

This question was designed to determine what percent of the Chula Vista respondents knew the correct definition of a watershed. The question was improved from the baselines survey's "Yes or No" answer that did not accurately monitor the respondent's knowledge of watersheds. By measuring the understanding of watersheds, the City can better focus its education efforts.

Overall, about 37% of respondents knew the correct definition of a watershed. This was the most favored answer, but was closely followed by respondents that "Do Not Know," at 35%. About 60% of the respondents either did not know what a watershed was or answered incorrectly. Over half of the surveyed population did not know what a watershed is, as shown in the Table 1 and Figure 1 below.

**Table 1: Response to Question 1**

| Answer | Chula Vista | Total |
|---|---|---|
| The measure of velocity from urban runoff discharge | 10.81% | 11.48% |
| Methods implemented to prevent evaporation of bodies of water | 15.06% | 15.26% |
| The land area that drains into particular lake, river, or oceans | 37.45% | 36.86% |
| Do not know | 34.94% | 34.89% |
| No answer | 1.74% | 1.51% |

**Figure 1**

## QUESTION 2: WHAT IS THE DIFFERENCE BETWEEN STORM DRAIN SYSTEM AND SANITARY SEWER SYSTEM?

This is a very basic and fundamental concept in storm water pollution prevention. This question was modified from the baseline survey that asked respondents to choose an answer for: "Water that flows down the street goes to..."

Over half (57%) of the respondents answered correctly, saying that "Water that flows in Sanitary Sewer System is treated and water that flows in Storm Drain System goes directly to creek, bay, or ocean." Others (30%) responded that water in the storm water drain system gets treated before it is released, and about 12% did not know the difference between the two. This implies that most respondents are aware that runoff could potentially pollute nearby waterbodies. Due to the fact that this is such a fundamental concept in storm water pollution prevention, it is evident that more effort is needed to educate the public on this concept. Data from Question 2 is summarized in Table 2 and Figure 2 below.

**Table 2: Response to Question 2**

| Answer | Chula Vista | Total |
|---|---|---|
| Water that flows in Storm Drain System is treated and water that flows in Sewer System is not | 16.02% | 16.47% |
| Water that flows in Sanitary Sewer System is treated and water that flows in Storm Drain System is not | 57.34% | 57.25% |
| Water that flows in both systems is treated before releasing to bay or ocean | 13.90% | 13.90% |
| Do not know | 11.97% | 11.63% |
| No answer | 0.77% | 0.76% |

**Figure 2**

**QUESTION 3: IN WHAT WAYS HAVE YOU RECEIVED EDUCATIONAL MATERIALS (BROCHURES, PAMPHLETS, POSTERS) WITH REGARDS TO STORM WATER POLLUTION PREVENTION? (PLEASE MARK ALL THAT APPLY)**

It is important for the City to find effective ways to disseminate educational information to residents. Many respondents chose more than one answer, so the sum of the percents is greater than 100%. While most respondents (38%) said they obtained material from public events, many respondents also received information through websites (26%) and the mail (25%). About 10% of respondents found material on their front door at home. It is important to note that no respondents answered: "I have not received any educational materials regarding Storm Water Pollution Prevention." This indicates that the City is able to effectively reach the public through its storm water education program, especially through public events and the website. Data from Question 3 is summarized in Table 3 and Figure 3 below.

**Table 3: Response to Question 3**

| Answer | Chula Vista | Total |
|---|---|---|
| Attended public events | 58.49% | 60.12% |
| Found it at my door | 16.02% | 15.26% |
| Visited Chula Vista websites | 40.15% | 40.03% |
| Received through mail | 38.61% | 36.86% |
| Others | 0.58% | 0.91% |
| No Answer | 0.77% | 0.91% |
| I have not received any educational materials | 0.00% | 0.00% |

**Figure 3**

**QUESTION 4: WHICH OF THE FOLLOWING PRACTICES MOST APPLY TO YOU REGARDING AUTO REPAIR MAINTENANCE/ACTIVITIES?**

There are many pollutants involved in automobile maintenance and it is important to know where most residents prefer to service their vehicles. The majority of respondents (72%) take their automobiles to a commercial repair shop, while others (24%) perform maintenance at home. The results suggest that in terms of education, it is better to focus efforts on commercial automobile shops. However, it is still important to remind residents about proper auto fluid disposal and to encourage the use of the City' Household Hazardous Waste program. Data from Question 4 is summarized in Table 4 and Figure 4 below.

**Table 4: Response to Question 4**

| Answer | Chula Vista | Total |
|---|---|---|
| Take it to commercial repair shop | 71.59% | 71.66% |
| Do it myself in the garage | 14.77% | 13.35% |
| Do it myself in the backyard | 5.30% | 6.23% |
| I don't own a car | 7.95% | 8.16% |
| No answer | 0.38% | 0.59% |

**Figure 4**

## QUESTION 5: HOW MANY TIMES IN THE PAST YEAR HAVE YOU REPORTED AN ILLEGAL DUMPING IN STORM DRAIN SYSTEM?

This question is followed by a series of related questions regarding illegal dumping. Compared to the baseline survey question, "Do you know where to report illegal dumping into storm drains?" this series of questions in the 2009 survey help to provide a more in-depth look at how respondents report illegal dumping.

Though most respondents (84%) have never reported an illegal dumping, some have taken the initiative to do so at least once or twice (11%). Of those that have reported illegal dumping, most respondents called the City of Chula Vista Hotline (60.8%), and a few visited the Chula Vista Storm Water Management website (14.5 %) or visited Chula Vista City Hall (7.25%). Among the illegal dumping incidents that were reported, most were pollutants that had been dumped into the streets (43%) or leaking oil from cars (32%). Table 5 and Figure 5 below summarize the results for Question 5.

**Table 5: Response to Question 5**

| Answer | Chula Vista | Total |
|---|---|---|
| 1 to 2 times | 11.39% | 10.88% |
| 3 to 4 times | 2.32% | 2.27% |
| 5 or more | 1.35% | 1.96% |
| I have not reported any illegal dumping | 83.78% | 83.69% |
| No Answer | 1.16% | 1.21% |

**Figure 5**

## QUESTION 6: HOW DID YOU REPORT THE ILLEGAL DUMPING?

This is a follow up of question number 5. This is an important question because it indicates whether or not respondents know where to report illegal dumping into storm drain. Over half of the respondents who reported illegal dumping called the City's hotline and few visited the City's website or reported it at City Hall. It is important to note that the City's website was the least utilized access tool in reporting illegal dumping. This indicates that majority of respondents still prefer the personal contact approach way of communicating with the City, or they may not know about the City's website. In addition, it may be beneficial to promote the website as a means for reporting illegal dumping. Table 6 and Figure 6 below summarize the data for Question 6.

**Table 6: Response to Question 6**

| Question 6 - Follow up answer from Question 5 | Chula Vista | Total |
|---|---|---|
| Called City of Chula Vista hotline number (619-397-6000) | 60.87% | 53.33% |
| Visited CV Storm Water Management website (www.chulavista.gov/clean) to find contact information | 14.49% | 16.67% |
| Called the County of San Diego or other city's hotline number | 17.39% | 23.33% |
| Visited Chula Vista City Hall to report the violation | 7.25% | 6.67% |

**Figure 6**

## QUESTION 7: WHAT ILLEGAL DUMPING DID YOU REPORT?

This is a follow up to question number 6. Most reported cases were regarding pollutants that were directly dumped into the streets and gutter (43.84%), followed by leaking oil from cars (32.88%). The data collected provide valuable information in identifying the prevalent pollutants of concern. This data gives insight as to the level of education the of citizens of Chula Vista regarding pollution prevention and preventing illegal discharges. Table 7 and Figure 7 below summarize the results for Question 7.

**Table 7: Response to Question 7**

| Answer | Chula Vista | Total |
|---|---|---|
| Illegal dumping into streets/gutter (paints, oil, grease) | 43.84% | 41.49% |
| Construction waste dumping (slurry, concrete, etc) | 19.18% | 20.21% |
| Leaking oil from cars | 32.88% | 35.11% |
| Others | 4.11% | 3.19% |

**Figure 7**

### QUESTION 8: IN THE PAST YEAR, WHERE HAVE YOU REGULARLY WASHED YOUR CAR?

More than half of the respondents (51.96%) said that they take their car to a fixed car wash. Another 24% said that they wash their cars on the driveway and 12% wash their cars on the lawn. In comparing the baseline survey with the current survey, a few differences are evident. Car washing on the driveway increased from 3.7% in 2005 to 24.21% in 2009, while washing at a fixed carwash facility decreased from 75.9% in 2005 to 51.96% in 2009. A possible explanation for the decreased use of car washing facilities and increased washing on the driveway could be due to the downturn in the economy. Residents may prefer to wash their cars at home in order to save money. Based on this data, the City will continue to provide education to residents about BMPs for vehicle washing. Table 8 and Figure 8 below summarize results for Question 8.

**Table 8: Response to Question 8**

| Answer | FY 05-06 Survey Chula Vista | FY 09-10 Survey Chula Vista | FY 09-10 Survey Total |
|---|---|---|---|
| On the driveway | 3.7% | 24.21% | 23.90% |
| On the lawn | 11.7% | 12.29% | 11.73% |
| At a fixed carwash station | 75.9% | 51.96% | 52.05% |
| I called a mobile detail service | N/A | 2.61% | 2.64% |
| I don't have a car | N/A | 5.77% | 5.87% |
| No Answer | 2.5% | 3.17% | 3.81% |

**Figure 8**

## QUESTION 9: HOW DO YOU DISPOSE OF YOUR PET'S WASTE?

This question determines if individuals are familiar with methods of properly disposing pet waste, which can be a source of bacteria. Two extra choices were added to this survey in order to get more accurate data, one of them being that the respondent does not own a pet. The correct response to this question was to either flush the waste down the toilet or to pick it up with a plastic bag and place it in the trash. Some respondents picked more than one answer, so the total number of percentages sums up to more than 100%. There was no significant change in the trends from the 2005 baseline survey to the current survey. Most respondents answered that they use a plastic bag and place it in the trash (59%), which also received the most response in the baseline survey. The results show that the majority of respondents knew the best way to dispose of pet waste. It can be assumed that residents were knowledgeable about pet waste disposal methods regardless of pet ownership. Table 9 and Figure 9 below summarize results for Question 9.

**Table 9: Response to Question 9**

| Answer | FY 05-06 Survey Chula Vista | FY 09-10 Survey Chula Vista | FY 09-10 Survey Total |
|---|---|---|---|
| Rinse off yard/sidewalk into gutter | 1.0% | 1.16% | 1.66% |
| Flush down the toilet | 8.0% | 5.02% | 5.29% |
| Bury in the yard/garden | N/A | 5.41% | 5.74% |
| Use plastic bag and place in trash | 77.1% | 59.65% | 60.27% |
| I left it where it was | 1.5% | 0.58% | 0.91% |
| Don't know | 10.7% | 0.97% | 1.21% |
| I don't have a pet | N/A | 25.68% | 23.87% |
| No Answer | 3.0% | 3.09% | 3.02% |

**Figure 9**

**QUESTION 10: WHAT METHOD HAVE YOU USED TO DRAIN YOUR POOL, SPA, OR JACUZZI?**

This question was designed to measure awareness of the correct method to drain water from pools, spas, or Jacuzzis. Most respondents did not own a pool, spa, or Jacuzzi (76.8%). Pool owners responded that they discharge to lawn/landscaping, collect filter material and dispose to trash (5.5%) or hire a pool maintenance company (4.6%). About 4% of respondents did not know how to drain their pool. Although dechlorinating and discharging to the storm drain system was also a correct answer, only about 2% of respondents chose this answer.

This differs from the 2005 baseline survey where 39% of respondents did not know the correct method to drain a pool. This may have improved because this year's survey allowed residents to choose "Don't own a pool, spa, or Jacuzzi," which was the most prevalent answer. In the baseline survey, those who did not own pools, spas, or Jacuzzis would not know how to properly drain a pool, therefore forcing them to choose "I do not know." It could possibly explain the high numbers in the baseline survey (39%) and the lower numbers in the current one (3.4%).

The data suggests that majority of respondents who own a pool, spas, or Jacuzzi have significant educational level of awareness on the best ways of draining pools, spas, or Jacuzzis. Table 10 and Figure 10 summarize the results for Question 10.

**Table 10: Response to Question 10**

| Answer | FY 05-06 Survey Chula Vista | FY 09-10 Survey Chula Vista | FY 09-10 Survey Total |
|---|---|---|---|
| Discharge to lawn/landscaping, collect filter material and dispose to trash | 14.2% | 5.41% | 5.59% |
| I hire a pool maintenance company | N/A | 4.63% | 4.53% |
| Discharge to sanitary sewer | 20.9% | 2.90% | 3.17% |
| De-chlorinate and discharge to street gutter | 20.4% | 1.74% | 1.81% |
| Others –specify | N/A | 0.00% | 0.15% |
| Don't know | 39.3% | 3.47% | 4.23% |
| I don't have a Pool, spa, or Jacuzzi | N/A | 76.83% | 75.38% |
| No answer | 4.0% | 5.02% | 5.14% |

**Figure 10**

**QUESTION 11: WHICH OF THE FOLLOWING PRACTICES HAVE YOU USED IN MAINTAINING YOUR LANDSCAPE OR GARDEN? (PLEASE MARK ALL THAT APPLY)**

This question has no wrong answers. With the exception of "Do not Know," all answers are correct. Many respondents chose more than one answer, so the sum of the percents is greater than 100%.

There was a significant decrease in those that responded with "Do not know" in comparing the 2005 baseline survey to the current one. This may be explained by the wider array of answer options in this survey, especially with the option to choose "I don't have landscaping or a garden." In 2005, those that do not own landscaping or a garden would automatically choose "Do not know," falsifying the results which show that a significant number of respondents do not know how to properly care for their landscape or garden. It can be assumed that the high tally of "Do not know" respondents took advantage of the opportunity to answer, "I don't have landscaping or a garden" instead, decreasing the "Do not know" response significantly from 27% to 3.2% in 2009.

The 2009 survey numbers show that respondents use all practices in maintaining their garden. However, most hire landscape contractors (20%), collect and recycle yard waste (27%), and use a hose to water to avoid over-watering (20%). Notably, only 3.28% of the total respondents picked the "Don't Know" answer, which is the lowest percentage of all the answers. This indicates that citizens of Chula Vista have a high level of awareness on proper landscape maintenance. Table 11 and Figure 11 summarize the data for Question 11, the final question in the survey.

**Table 11: Response to Question 11**

| Answer | FY 05-06 Survey Chula Vista | FY 09-10 Survey Chula Vista | FY 09-10 Survey Total |
|---|---|---|---|
| Use less toxic pesticides | 61.4% | N/A | N/A |
| I hire a landscape contractor | N/A | 20.46% | 19.94% |
| Collect lawn clippings and yard waste for recycling | 40% | 27.03% | 26.28% |
| Use fertilizers sparingly according to label procedures | 33.1% | 13.13% | 13.60% |
| Use hose to water landscape to avoid over irrigation | 40.5% | 20.46% | 20.54% |
| Use drip irrigation and soakers hoses | N/A | 10.23% | 10.12% |
| Use regular sprinkler system | N/A | 20.66% | 19.94% |
| Don't know | 27.1% | 3.28% | 4.08% |

Answer to Question

Public Works Department
Storm Water Management Section

STORM WATER QUALITY PUBLIC AWARENESS SURVEY
Home Zip Code: _____ Date: _____

This survey is to evaluate citizen awareness of storm drain pollution prevention and watershed protection issues. Results will be used to improve the City's Urban Runoff Management Program. Please mark the answer that best fits your response.

1) A watershed is defined as:
   a. The measure of velocity from urban runoff discharge before reaching the bay.
   b. Methods implemented to prevent evaporation of bodies of water (lakes, rivers, creeks)
   c. The land area that drains into particular lake, river, or ocean.
   d. Do not know

2) What is the difference between Storm Water Drain System and Sanitary Sewer System?
   a. Water that flows in Storm Drain System is treated and water that flows in Sewer System is not.
   b. Water that flows in Sanitary Sewer System is treated and water that flows in Storm Drain system goes directly to creek, bay or ocean.
   c. Water that flows in both systems is treated before releasing to bay or ocean.
   d. Do not know.

3) In what ways have you received educational materials (brochures, pamphlets, posters) with regards to storm water pollution prevention? (Please mark all that apply)
   a. Attended public events
   b. Found it at my door
   c. Visited Chula Vista websites
   d. Received through mail
   e. I have not received any educational materials regarding Storm Water Pollution Prevention

4) Which of the following practices most apply to you regarding auto repair maintenance/activities?
   a. Take it to commercial repair shop
   b. Do it myself in the garage
   c. Do it myself in the backyard
   d. I don't own a car

5) How many times in the past year have you reported an illegal dumping into storm drain system?
   a. 1 to 2 times
   b. 3 to 4 times
   c. 5 or more
   d. I have not reported any illegal dumping into the storm drain system (Please proceed to Question 8)

6) How did you report the illegal dumping?
   a. Called City of Chula Vista Hotline number (619-397-6000)
   b. Visited Chula Vista Storm Water Management Website (www.chulavista.gov/clean) to find contact information.
   c. Called the County of San Diego or other city's Hotline number
   d. Visited Chula Vista City Hall to report the violation

7) What illegal dumping did you report?
   a. Illegal dumping into streets/gutter (paints, oil, grease)
   b. Construction waste dumping (slurry, concrete, etc)
   c. Leaking oil from cars
   d. Other - please specify: _____

8) In the past year, where have you regularly washed your car?
   a. On the driveway
   b. On the lawn
   c. At a fixed carwash station
   d. I called a mobile detail service
   e. I don't have a car

9) How do you dispose of your pet's (dog, cat, turtle, etc) waste?
   a. Rinse off yard/sidewalk into gutter
   b. Flush down the toilet
   c. Bury in the yard/garden
   d. Use plastic bag and place in trash
   e. I left it where it was
   f. Don't know
   g. I don't have a pet

10) What method have you used to drain your pool, spa, or Jacuzzi?
   a. Discharge to lawn/landscaping, collect filter material and dispose to trash
   b. I hire pool maintenance company
   c. Discharge to sanitary sewer
   d. De-chlorinate and discharge to street gutter
   e. Other – Please specify _____
   f. Don't know
   g. I don't have a Pool, Spa, or Jacuzzi

11) Which of the following practices have you used in maintaining your landscape or garden? (Please mark all that apply)
   a. I hire a landscape contractor
   b. Collect lawn clippings and yard waste for recycling
   c. Use fertilizers sparingly and according to the procedures indicated on the label
   d. Use hose to water landscape to avoid over irrigation
   e. Use drip irrigation and soaker hoses
   f. Use regular sprinkler system
   g. Don't know
   h. I don't have landscaping or a garden.

Thank you for participating in this survey. If you have any questions, please contact Khosro Aminpour, Civil Engineer, at (619) 397-6111.

Attention: Mr. Jon Van Rhyn, Watershed Protection Program Manager

**SUBJECT: SUBMITTAL OF JURMP ANNUAL REPORT NO. 30 SECTION 7.0 FOR FISCAL YEAR 2009-2010**

Enclosed please find one hard copy and three CD-ROMs of the City of Chula Vista's Jurisdictional Urban Runoff Management Program Annual Report No. 30 Section 7.0 – Illicit Discharge Detection and Elimination Component for Fiscal-Year 2009-2010 and one hard copy of the City of Chula Vista Dry Weather Field Screening and Analytical Monitoring Program 2010. The main report was submitted on September 28, 2010 under separate cover. Pursuant to the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 and Addendum No. 2 to Order No. R9-2007-0001, I request that the County of San Diego, as the Principal Copermittee, submits said report to the Regional Water Quality Control Board.

Should you have any questions please call me at (619) 397-6111. Thank you.

## EXECUTIVE SUMMARY

On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (Regional Board) adopted the National Pollutant Discharge Elimination System (NPDES) Municipal Permit, Order No. R9-2007-0001 (Municipal Permit). The implementation phase of the Municipal Permit commenced on January 24, 2008. This is the third annual report submitted under the current permit and covers the implementation period of July 1, 2009 to June 30, 2010. Reporting requirements of this Jurisdictional Urban Runoff Management Program (JURMP) annual report is in accordance with the stipulations of Section J.3.a of the Municipal Permit.

Among other requirements, the Municipal Permit requires that on September 30th of each year, all municipalities of San Diego County (including Chula Vista) as well as the San Diego Unified Port District, the San Diego County Regional Airport Authority and the County of San Diego, collectively referred to as the Copermittees, submit jurisdictional annual reports, which provide documentation of the activities conducted by each Copermittee during the reporting period covering the previous fiscal year from July 1 to June 30. JURMP annual reports are to include descriptions of each Copermittees' efforts in the implementation of its JURMP document developed in compliance with Municipal Permit requirements to minimize discharges of pollutants to waters of the United States and other receiving waters.

As required under Section M.6 of the Municipal Permit, the Copermittees have developed a regional standardized format for JURMP annual reports. This report has, therefore, been prepared in conformance with the regional standardized format.

The present report covers subjects and areas outlined in Section J.3.a of the Municipal Permit and the Chula Vista JURMP. Although the reporting period is essentially from July 1, 2009 to June 30, 2010, some of the activities could not readily be divided to fall within the above target dates and continuation of the activities may have extended beyond this period to their completion.

This report has been prepared to provide an account of activities conducted by the City of Chula Vista (City) according to the components outlined in Section D of the Municipal Permit including:

- Development Planning
- Construction
- Existing Development (Including Municipal, Industrial and Commercial, Residential)
- Illicit Discharge Detection and Elimination (this section will be submitted under a separate cover on or before December 15, 2010, in accordance with Addendum 2 to Order No. R9-2007-0001)
- Education
- Public Participation
- Fiscal Analysis
- Assessment of JURMP Effectiveness

It is important to note that while the City discharges, directly or indirectly, to water bodies that are listed on the Clean Water Act Section 303(d) as impaired water segments; the City does not discharge to any water bodies with a Total Maximum Daily Load (TMDL) program. Therefore, a discussion of TMDLs is not included in this report.

Section 7.0 of this report includes a summary of the City's 2010 Dry Weather Field Screening and Analytical Monitoring Program report, follow-up investigations, as well as a summary of the Illicit Discharges and Connections program for FY 2009-2010. As mandated by Addendum No. 2 to Order No. R9-2007-0001, the County of San Diego, as Principal Copermittee, will submit this section as a part of the unified JURMP Annual Report to the Regional Board by December 15, 2010. During the current reporting period, the City of Chula Vista participated in the regional Receiving Water and Urban Runoff Monitoring and Reporting Program as mandated in the Municipal Permit. As required under Section III.A.2 of the Receiving Waters and Urban Runoff Monitoring and Reporting Program, the Principal Copermittee will submit to the Regional Board the Receiving Waters and Urban Runoff Monitoring Annual Report for the 2009-2010 monitoring season on January 31, 2011.

Section 11.0 of this report includes an effectiveness assessment analysis of the development and implementation of the City's Storm Water Management Program. Such analysis provides a synopsis of activities and a critical look at the overall strengths and challenges associated with the components throughout this report.

The following sections cover City of Chula Vista's strides toward continued implementation and improvement of its JURMP and, participation in regional and watershed level activities and programs from July 1, 2009 to June 30, 2010. The City is in the continuing process of assessing the effectiveness of individual program components and has made adjustments or revisions in some areas in order to improve the overall effectiveness of the program and to assure full compliance under the Municipal Permit. The City recognizes its role as a good steward of local and regional water resources, as well as the overall health of the San Diego Bay watershed.

## 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

**MUNICIPAL PERMIT REQUIREMENTS:**

*Permit Section J.3.a.(3)(f).i - Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.*

*Permit Section J.3.a.(3)(f).ii - Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.*

*Permit Section J.3.a.(3)(f).iii - Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.*

*Permit Section J.3.a.(3)(f).iv - A brief description of any other investigations and follow-up activities for illicit discharges and connections.*

*Permit Section J.3.a.(3)(f).v - The number and brief description of illicit discharges and connections identified.*

*Permit Section J.3.a.(3)(f).vi - The number of illicit discharges and connections eliminated.*

*Permit Section J.3.a.(3)(f).vii - Identification and description of all spills to the MS4 and response to the spills.*

*Permit Section J.3.a.(3)(f).viii - A description of activities implemented to prevent sewage and other spills from entering the MS4.*

*Permit Section J.3.a.(3)(f).ix - A description of the mechanism whereby notification of sewage spills from private laterals and septic system is received.*

*Permit Section J.3.a.(3)(f).x - Number of times the hotline was called, as compared to previous reporting period, and a summary of the calls.*

*Permit Section J.3.a.(3)(f).xi - A description of efforts to publicize and facilitate public reporting of illicit discharges.*

*Permit Section J.3.a.(3)(f).xii - The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.*

*Permit Section J.3.a.(3)(f).xiii - A description of notable activities conducted to manage illicit discharges and connections.*

## 7.1 INTRODUCTION

Illicit connections and illicit discharges (IC/ID) to the MS4 can potentially impact water quality if they are not eliminated. Examples of illicit discharges include wash-water, sediment, spilled chemicals, sewage releases, and pollutants from various sources. An illicit connection is a connection that conveys an illicit discharge to the MS4 via a pipe, drain, channel, etc. The City utilizes the following mechanisms to actively seek and eliminate illicit discharges and connections to the MS4:

1. Public complaint response and investigation
2. Inspection of local businesses and municipal facilities
3. Dry weather field screening and analytical monitoring
4. Municipal MS4 and sewer inspection and maintenance activities
5. Providing educational outreach to the community and business owners

This section provides a summary of:

- Reported illegal discharges and investigation by City staff
- Spill reporting and response
- Dry Weather Field Screening and Analytical Monitoring activities conducted within the 2010 Dry Weather Monitoring Season (May 1 – September 30)
- Follow-up investigations conducted to determine the potential source(s) of pollutants that exceeded their respective action levels.

Effectiveness assessment of the Illicit Discharge Detection and Elimination Component is included in Section 11.0 of this annual report.

Inspection of municipal facilities and industrial/commercial businesses are addressed in Sections 2.0 and 5.0 of this report. Municipal MS4 and sewer maintenance activities are described below and in Section 2.0 of this report. Educational outreach is described in Section 8.0.

## 7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

The City operates a hotline (619) 397-6000 for residents, employees, and the general public to report any illicit discharges to storm water conveyance systems. The hotline is publicized through several venues such as the City's website, City bus signs, and various storm water educational materials and brochures. The hotline is answered by Public Works dispatch staff, who routes the concern(s) to the appropriate section(s) within the City's Public Works

Department. All calls are entered into a database, and Storm Water Management Section staff takes immediate action to respond, investigate, provide education, and initiate enforcement actions as necessary. Staff also ensures that City crews or the responsible party contains and cleans any spills. Public Works crews are equipped with vactor trucks to contain and clean large spills. When hazardous materials are involved, all appropriate City departments or other agencies such as the Fire Department or the County of San Diego are notified as necessary.

During the reporting year, there were 257 calls to the hotline, compared to 144 calls in FY 2008-2009. Figure 7-1 compares the number of complaints from FY 1997-1998 through FY 2009-2010. As part of its education component, the City advertises the hotline on its website and trains City employees to report any illegal discharges. Attachment L summarizes all calls to the hotline and describes the outcomes of each. Attachment K is a summary of all illegal discharges to the MS4 or other violations of the City's Storm Water Ordinance that resulted in enforcement actions for FY 2009-2010.

**Figure 7-1** City of Chula Vista Storm Water Hotline Call Summary 1998-2010

## 7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

Section 9.0 of the City's JURMP document outlines the procedures for preventing discharges of sewage to the MS4 and the mechanism whereby notification of sewage spills from private laterals, septic systems, and others spills are received. City staff is trained to report all spills to the dispatch hotline and crews are prepared to respond, contain, and cleanup spills where necessary. In addition, Section 9.0 of the City's JURMP details the City's Sanitary Sewer Overflow Response Plan (SSORP) as required by RWQCB Order No. 96-04 and a Capacity,

Management, Operations, and Maintenance (CMOM) program. The City has also developed a Fats, Oil, and Grease (FOG) Monitoring Program to reduce the amount of FOG introduced into the sanitary sewer system by businesses.

Table 7-1 provides a summary of illegal discharges and spills and the number of each. All discharges and spills were immediately responded to, contained, cleaned, and eliminated.

**Table 7-1** Types of Spills/Discharges and Number of Each During FY 2009-2010

| TYPE OF SPILL/DISCHARGE | NUMBER |
|---|---|
| Construction BMPs Violation | 2 |
| Chemical Discharge | 3 |
| Driveway-Trash Washing | 2 |
| Grease/Food/Drink Discharge | 8 |
| Leaking Containers/Tanks | 1 |
| Others/Unknown Discharge | 2 |
| Painting-Sanding Residue | 2 |
| Pool/SPA Residue | 2 |
| Power or Carpet Wash Water | 6 |
| Resident Cleaning Residue | 6 |
| Sediment Discharge | 8 |
| Sewage Spill/Discharge | 14 |
| Slurry/Concrete Discharge | 7 |
| Trash/Debris Discharge | 4 |
| Vehicle Oil Discharge | 4 |
| Vehicle Washing/Dismantling | 5 |
| **TOTAL** | 76 |

City inspectors are constantly on the lookout for illegal connections during their routine response to reported violations or industrial/commercial inspections. When a floor drain within a structure is suspected of being connected to the storm water conveyance system or discharging to the street gutter, such connection is verified by dye testing. If the indoor drain is connected to storm drains, it is considered illegal and ordered to be disconnected immediately. In addition, the City's maintenance crews have been trained to look for illicit discharges and connections during their daily activities in the field. This process has resulted in the identification of several illicit discharges and connections each year.

## 7.4 URBAN RUNOFF MONITORING

The 2010 Dry Weather Field Screening and Analytical Monitoring Program Report has been submitted as Attachment N, along with an updated Dry Weather Field Screening and Analytical Stations Map. During the reporting period, the MS4 map and the dry weather monitoring maps were reviewed for inaccuracies, and no amendments were necessary. Sixty monitoring stations were visited during the 2010 Dry Weather Monitoring Program, and field screening was conducted at the 57 sites where ponded or flowing water was observed. Sites CEN-03, SCR-04,

and SWB-03 were dry, so three alternate locations; SWR-03-E, SCR-07, and SUN-08 were chosen to replace these sites. Forty sites had measurable flow and 17 sites were ponded. Fifteen sites received laboratory analysis in addition to normal field screening. Table 7-2 provides a summary of exceedances for both field and laboratory analysis.

Under the previous Municipal Permit, the main round of monitoring was followed by a follow-up monitoring round within one or two months of each other. Under the current Municipal Permit, the main and follow-up monitoring rounds are combined.

**Table 7-2** Summary of Action Level Exceedances for the 2010 Dry Weather Monitoring and Field Screening Analysis

| FIELD SCREENING ANALYSIS (57 Samples) | | | |
|---|---|---|---|
| **Analyte** | **Number of Exceedances** | **% of Sites with Exceedances** | **Site(s) Exceeding Action Level** |
| pH | 0 | 0 | None |
| Conductivity | 0 | 0 | None |
| Turbidity | 1 | 2 | SVS-01 |
| Surfactants (MBAS) | 1 | 2 | CEN-08 |
| Ammonia-N | 3 | 5 | JUD-02, SCR-01, SWR-04 |
| Nitrate-N | 17 | 30 | LAK-01, OVR-07, RCC-03, RCC-04, SCR-02, SCR-03, SCR-05, SCR-06, SCR-07, SUN-02, SUN-07, TCC-02, TCC-03, TCC-05, TCC-06, WOL-02, WOL-03 |
| Orthophosphate-P | 0 | 0 | None |

| Fecal Coliforms | 5 | 33 | CEN-01, JUD-01, PRD-02, SCR-01, SWR-03-E |
| *Enterococcus* | 5 | 33 | CEN-01, JUD-01, JUD-02, SCR-01, SWR-03-E |

Note: Table data is based on routine visits only. Confirmation, follow-up, and dry site visits are not included.

During the 2010 Dry Weather Monitoring Program, one exceedance of turbidity was reported. However, prior to 2010, no exceedances have been measured for temperature, turbidity, cadmium, copper, lead, or chlorpyrifos.

The historical data for the results of field analysis presented in Figure 7-2 indicates a decreasing trend in conductivity and ammonia-N exceedances. Orthophosphate-P exceedances have been infrequent, and there is no apparent trend for glycol, surfactants, or pH results. Nitrate-N exceedances generally appear to be increasing each year since 2004.

**Figure 7-2** Percent of Sites with Field Constituents Exceedances by Year

* The action level for conductivity was numeric in the past but was later changed to best professional judgment.

This year, nitrate-nitrogen was the constituent with the greatest number of exceedances, testing above the action level at 17 sites, compared to 11 exceedances in the previous year. The possible sources of nitrate-nitrogen exceedances include fertilizer runoff from over-watering and possible groundwater seepage into the storm drain system. Bacteria were elevated at 13 out of 15 sites. The three glycol action level exceedances were tested within normal range at the confirmation visits. Ammonia tested above the action level at three ponded sites. Upon the confirmation visits, two still had an elevated ammonia level, which was due to decaying organic material in ponded water. Surfactants tested above the action level at one ponded site. Upon confirmation visit, the exceedance persisted. Orthophosphate-P was not above action level at any of the tested sites.

Historical data for laboratory analyses presented in Figure 7-3 indicate regular bacteria exceedance rates, although the percent of total and fecal coliform exceedances appear to have decreased somewhat over the years. During this dry weather season, updated action levels for total coliform, fecal coliform, and Enterococcus were implemented. Zinc and diazinon have not

been detected over their action levels since 2003. Prior to 2003 the rates of exceedances were approximately 10% per year. Oil and grease has not been measured above the action level since 2005. From 2002 to 2007, both field screening and laboratory analysis were performed for surfactants. Starting in 2008, routine laboratory analysis of surfactant levels was discontinued.

**Figure 7-3** Percent of Sites with Laboratory Exceedances by Year

The City continued to implement the trash monitoring program, as required by the Municipal Permit. Of the 60 sites inspected, 72% were found to be Optimal, 18% Suboptimal, 8% Marginal, 2% Submarginal, and 0% Poor. At the only Submarginal site, trash included Styrofoam cups, beer bottles, aluminum cans, food packaging, plastic bags, shopping carts, and cardboard, suggesting transient activity in the immediate area. As a part of trash assessment, sites were evaluated for potential threat to human or aquatic health. The only Submarginal site described above was found to have potential threat to aquatic health and was immediately cleaned by City crews. The 6 Marginal and Submarginal sites were noted to City crews as sites needing more routine maintenance and trash pick-up.

In addition, the City continued implementation of the Dry Targeted portion of the MS4 Outfall Monitoring Program during this dry season, in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan, and as required by the Municipal Permit. Ten dry weather monitoring sites were laboratory analyzed for constituents as detailed in Table 7-3 below. These results were reported in regional spreadsheet database as a part of the Regional Monitoring Program. The MS4 Outfall monitoring Program is primarily a regional effort and results will be analyzed within the Regional Monitoring Program. A list of outfalls monitored under the MS4 Outfall Monitoring Program together with the constituents analyzed at each outfall is presented in Table 7-3 below.

**Table 7-3** MS4 Outfall Monitoring Locations and Constituents Analyzed

| OUTFALL NAME | CONSTITUENTS ANALYZED |
|---|---|
| BAY-01 | Bacteria and Dissolved metals |
| CEN-01 | Bacteria, Dissolved metals, and TDS |
| JUD-01 | Bacteria and Dissolved metals |
| PRD-02 | Bacteria and Dissolved metals |
| RCC-02 | Bacteria, Dissolved metals, and TDS |
| SCR-01 | Bacteria and Dissolved metals |
| SUN-06 | Bacteria, Dissolved metals, and TDS |
| SVS-01 | Bacteria, Dissolved metals, and TDS |
| TCC-03 | Bacteria, Dissolved metals, and TDS |
| TCC-04 | Bacteria, Dissolved metals, and TDS |

## 7.5 FOLLOW-UP AND ENFORCEMENT

Twenty nine sites had constituents above their respective action levels. Table 7-4 shows the sites with elevated constituent level and their probable sources based on upstream investigations.

**Table 7-4** Summary of Upstream Investigations

| SITE | UPSTREAM INVESTIGATION TARGET CONSTITUENT(S) | | RESULTS/ PROBABLE SOURCE |
|---|---|---|---|
| | Field | Laboratory | |
| BAY-01 | Glycol | - | Coolant from leaking cars in parking lot |
| CEN-01 | - | Fecal Coliform, *Enterococcus* | Transient flow |
| CEN-08 | Surfactants | - | Car wash area in Cabrillo Mobile Lodge residential community |
| JUD-01 | - | Fecal Coliform, *Enterococcus* | Transient flow |
| JUD-02 | Ammonia-N | *Enterococcus* | Ammonia-N: trash and decomposing organic material upstream;<br>*Enterococcus*: transient flow |
| JUD-03 | Glycol | - | Transient flow |
| LAK-01 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| OVR-07 | Nitrate-N | - | Groundwater or interflow seepage |
| POG-02 | - | Total Coliform | Decomposing leaves and grass clippings in gutters in combination with consistent irrigation runoff from residential areas |
| PRD-02 | - | Fecal Coliform | Insufficient trash control BMPs upstream which can attract wildlife from the adjacent open area |
| RCC-03 | Nitrate-N | - | Groundwater or interflow seepage |
| RCC-04 | Nitrate-N | - | Groundwater or interflow seepage |
| SCR-01 | Ammonia-N | Total Coliform, | Decomposing organic material in a shaded |

| SITE | UPSTREAM INVESTIGATION TARGET CONSTITUENT(S) | | RESULTS/ PROBABLE SOURCE |
|---|---|---|---|
| | Field | Laboratory | |
| | | Fecal Coliform, *Enterococcus* | and ponded area at the site and in a manhole upstream; excess irrigation from residential areas upstream transports bacteria to site; stagnant water upstream may promote bacterial growth; ammonia-N levels likely concentrated by evaporation of ponded water |
| SCR-02 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| SCR-05 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| SCR-06 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| SCR-07 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| SUN-02 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| SUN-07 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| SVS-01 | Turbidity | Total Coliform | Turbidity exceedance due to construction activity; total Coliform exceedance related to transient flow |
| SWR-03-E | - | Fecal Coliform, *Enterococcus* | Wildlife activity, animal feces, and decomposing leaves present in upstream areas |
| SWR-04 | Ammonia-N | - | Ammonia-N levels likely concentrated by evaporation of ponded water with decomposing leaves, transient activity and trash upstream |
| TCC-02 | Nitrate-N | - | Groundwater or interflow seepage |
| TCC-03 | Nitrate-N | - | Groundwater or interflow seepage |
| TCC-05 | Nitrate-N | - | Groundwater or interflow seepage |
| TCC-06 | Nitrate-N | - | Groundwater or interflow seepage |
| TCS | Glycol | - | Coolant from leaking cars in parking lot |
| WOL-02 | Nitrate-N | - | Over-irrigation and groundwater seepage |
| WOL-03 | Nitrate-N | - | Over-irrigation and groundwater seepage |

Based on the results of the 2010 Dry Weather Field Screening and Analytical Monitoring Program as well as the Follow-Up Investigation Program, the City was provided with recommendations for dry weather monitoring sites and surrounding areas in need of cleaning and neighborhoods where storm water pollution prevention education is needed. The City is in the process of completing these recommended cleaning and education activities and is working to minimize illicit discharges. During the reporting period, there were no instances that required additional investigations or follow-up activities above and beyond those conducted during the 2010 Dry Weather Monitoring Program. More information about the recommendations from City's Dry Weather Monitoring and Field Screening Program and Follow-up Investigations can be found in Attachment N.

## Attachment K

## FY 2009-2010 Enforcement Action Taken

## (Residential, Industrial, Commercial, and Related Businesses)

*Note: During this reporting period, 7/01/2009 to 6/30/2010, investigation of the following cases have resulted in the issuance of Notice Code of Violation, Orders to Cease and Desist, Notice to Clean and Abate, and Admin Citation.*

| Date of Incident | Business Name | Violation Category | Site Category | Address | | | Action Taken | Fine Amount |
|---|---|---|---|---|---|---|---|---|
| | | | **Commercial** | | | | | |
| 17-Jul-09 | Budget Tires | Leaking Containers/Tanks | Commercial | 275 | ORANGE | AV | Issued Admin Citation-Warning | |

## FY 2009-2010 Hotline Call Response Summary

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 07/01/2009 | STORM CHANNEL | Commercial | 3121 | MAIN | ST | Construction Debris & Waste |
| | Comments/ Action Taken: | 7/1/09---Received a report of illegal dumping of trash, junk and debris by Hyundai Livart Furniture at 3121 Main St. into the adjacent channel.<br>Inspection noted several large pieces of cardboard and other packing materials dumped into the storm channel. Admin Citation Issued. Cleanup conducted. No further action required. | | | | |
| 07/02/2009 | STREET | Commercial | 1478 | MELROSE | AV | Unknown Discharge |
| | Comments/ Action Taken: | Received a complaint from Sunny Fresh Cleaners regarding landscape maintenance crews blowing grass clippings into the street.<br>All American Landscape was responsible party. Issued verbal warning regarding the blowing of debris into the street. No further action necessary at this time. | | | | |
| 07/06/2009 | STREET | Residential | 142 | SAN MARCOS | PL | Possible Dumping into Catch Basin |
| | Comments/ Action Taken: | Received a report of illegal connection at 142 San Marcos Pl.<br>Inspection noted a sewer discharge hose leading from under garage door and into open top sewer clean out in the front drive way. Spoke with resident who stated that she would remove the hose, replace the sewer clean out cap and discontinue washing clothes at home. A re-inspection verified that corrections were made. | | | | |
| 07/06/2009 | CATCH BASIN | Residential | 160 | LAS FLORES | DR | Complaint Response Enforcement |
| | Comments/ Action Taken: | Received a call reporting mud running into the street from 160 Las Flores and into the storm drain inlet.<br>Inspection did not find any evidence of mud flowing from said property. No further action is necessary at this time. | | | | |
| 07/07/2009 | STREET | Residential | 501 | C | ST | Unknown Discharge |
| | Comments/ Action Taken: | Received report of water flowing into gutter with oil, slurry and rocks at 501 C Street.<br>Inspection found small water puddle in the gutter in front of said address resulting from irrigation overflows. No further action is necessary at this time. | | | | |
| 07/07/2009 | STREET | Commercial | 5 | FOURTH | AV | Unknown Discharge |
| | Comments/ Action Taken: | Received report of non-storm water flowing from jack in the box at 5 Fourth Ave.<br>Inspection noted that a sprinkler was leaking water into the gutter. Irrigation system was repaired. No further action is necessary at this time. | | | | |

| Incident Date | Structure Category | Site Category | Address | | | Type of Violation |
|---|---|---|---|---|---|---|
| 07/08/2009 | CATCH BASIN | Residential | 740 | F | ST | Other |
| | Comments/ Action Taken: | Received notification of open trash container and running water at the subject location.<br><br>Inspection did not observe running water from the facility at the time of the response. Open trash container was not overfilled and is not a storm water violation. No further action required. | | | | |
| 07/08/2009 | CATCH BASIN | Residential | 120 | PRESS | LN | Other |
| | Comments/ Action Taken: | Received notification of an open trash container at subject location.<br><br>Inspection did not observe trash bin to be overflowing or an accumulation of trash at the bins location. No further action required. | | | | |
| 07/08/2009 | CATCH BASIN | Residential | 793 | ENERGY | WY | Other |
| | Comments/ Action Taken: | Received notification of uncovered equipment and open trash container at the subject location.<br><br>Inspection observed facility in good, clean condition and using proper BMPs in accordance with their Industrial Permit. Did not observe overflowing or spilled trash. No further action required. | | | | |
| 07/08/2009 | STREET | Commercial | 1855 | MAXWELL | RD | Construction Debris & Waste |
| | Comments/ Action Taken: | Received notification of dirt tracking at subject location.<br><br>Barnhardt, Inc. conducted the cleanup of the tracking using staff and a street sweeper. No further action required. | | | | |
| 07/08/2009 | CATCH BASIN | Residential | 15 | J | ST | Pool Filter Discharge |
| | Comments/ Action Taken: | Observed discharge into the storm drain system but did not reach the catch basin. Homeowner was not aware that this is an illegal discharge. Issued verbal warning to the residence. Education material was issued. City staff conducted the cleanup utilizing a vactor crew. No further action required. | | | | |
| 07/09/2009 | CATCH BASIN | Industrial | 1888 | NIRVANA | AV | Other |

**Re: 2010 Dry Weather Field Screening and Analytical Monitoring Program**
**City of Chula Vista, California**

Dear Mr. Aminpour:

Enclosed please find the final report of the City of Chula Vista 2010 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of Chula Vista during the 2010 dry weather season. The contents include field screening results, trash assessment data, analytical laboratory test results, and analyses of the collected data. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the monitoring program and our recommendations for additional actions. Also, the results and a summary of the 2010 Municipal Separate Storm Sewer System Outfall Monitoring Program are included as a section of this report.

Review comments from the draft report submitted to the City have been included in the final report. It has been our pleasure working with the City of Chula Vista on this project. If you have any questions, please call me at (858) 586-6600.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.

# 1 INTRODUCTION

## 1.1 Program Overview

The purpose of the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) is to identify and eliminate illicit connections and illegal discharges (IC/IDs) to the storm water conveyance system, minimizing negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following components:

- Field screening observations
- Field analytical testing
- Laboratory analytical testing
- Trash assessments

The data collected from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up investigations are conducted as necessary to detect and eliminate the source(s) of these pollutants. Similarly, the goal of the Municipal Separate Storm Sewer System (MS4) Outfall Monitoring Program is to identify pollutant discharges from MS4 outfalls, and to assess these discharges contributing to the receiving water quality. The results from the 2010 Dry Weather Monitoring Program and MS4 Monitoring Program conducted by D-MAX Engineering, Inc. (D-MAX) are presented herein.

## 1.2 Regulatory Requirements

In accordance with the San Diego Regional Water Quality Control Board Order No. R9-2007-0001 (Municipal Permit), Copermittees are required to annually perform dry weather field screening of discharges into its storm drain conveyance system. During the dry weather season, May 1 through September 30, selected locations along the storm drain conveyance system are evaluated. This procedure includes recording field observations, estimating observed flow rates, and conducting field testing. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station is selected. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

Concurrently with the Dry Weather Monitoring Program, the City conducted the targeted dry weather component of the 2010 MS4 Outfall Monitoring Program. The work was performed in accordance with the Final Copermittee MS4 Outfall Monitoring Workplan (MS4 Workplan) developed in June 2009 and with the requirements of Receiving Waters and Urban Runoff Monitoring and Reporting Program dictated in the Municipal Permit. This report presents the results of the City's 2010 Dry Weather Monitoring Program and MS4 Monitoring Program.

## 1.3 Hydrologic Setting

The City of Chula Vista (City) is located in the southern portion of the County of San Diego and is bordered by the cities of National City, San Diego, and unincorporated areas of the County of San Diego. The City covers an area of approximately 52 square miles and has a population of approximately 223,738. The majority of the land use in the City is residential.

Other land uses include commercial, industrial, municipal facilities, streets, highways, and open spaces.

The City lies within the Sweetwater River Hydrologic Unit (HU) and the Otay River HU. These two Hydrologic Units, along with the Pueblo San Diego HU, form the San Diego Bay Watershed and ultimately drain into the San Diego Bay. The City is located in the Lower Sweetwater Hydrologic Area (HA 909.1) and the Otay Valley Hydrologic Area (HA 910.2). A complete map of the City's Hydrologic Subareas is included as Figure A.

The City is naturally divided by topography into multiple smaller basins from which runoff flows into the City's major receiving water bodies, including San Diego Bay, Sweetwater River, Otay River, and the Lower Otay Reservoir. A complete drainage map for the City is included as Figure B. Drainage basins and the abbreviations used to identify field sampling stations are listed in Table 1-1.

**TABLE 1-1**
**OUTFALL DESIGNATIONS AND DRAINAGE BASINS**

| Site Abbreviation | Basin |
|---|---|
| BAY | Bay Boulevard Outfalls |
| BLC | Long Canyon Basin |
| CEN | Central Basin |
| JUD | Judson Basin |
| LAK | Upper Otay Reservoir |
| MGC | Chula Vista Municipal Golf Course |
| OLR | Otay Lakes Basin |
| OVR | Otay Valley Road Outfalls |
| POG | Poggi Canyon Basin |
| PRD | Palm Road Basin |
| RCC | Rice Canyon Basin |
| SCR | Salt Creek Basin |
| SUN | Sunnyside Basin |
| SVS | Sunny Vista Basin |
| SWB | Southwest Basin |
| SWR | Sweetwater River |
| TCC | Telegraph Canyon Basin |
| TCS | Telegraph Canyon Basin, South Branch |
| WIL | Upstream of the Willow Street Bridge |
| WOL | Wolf Canyon Basin |

Based primarily on wet weather data from mass loading stations (MLS), ambient bay and lagoon monitoring, bioassessments, the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), and/or Total Maximum Daily Load (TMDL) programs for the San Diego Bay Watershed, the high priority constituents of concern (COC) for the San Diego Bay Watershed were identified in the 2009 Watershed Urban Runoff Management Plan (WURMP). COCs for the Sweetwater River Hydrologic Unit (HU 909) are bacteria and pesticides, and for the Otay River Hydrologic Unit (HU 910) they are bacteria and gross pollutants. Receiving water bodies that are located within the jurisdiction of the City of Chula Vista and are 303(d) listed include: Poggi Canyon Creek for DDT, and the

Lower Otay Reservoir for color, iron, manganese, nitrogen ammonia (total ammonia), and high pH. Both Poggi Canyon Creek and Lower Otay Reservoir are in the Otay River HU. The San Diego Bay Shoreline at Chula Vista Marina is 303(d) listed for copper, and the shoreline along Bayside Park for bacteria; both of which are within the jurisdiction of the Port of San Diego.

## 1.4 Previous Work

The City has conducted dry weather monitoring programs since 1994. The results of the previous programs (1994 through 2009) are summarized in Table 1-2.

**TABLE 1-2**
**SUMMARY OF HISTORICAL DRY WEATHER MONITORING**

| Year | Number of Field Screening Sites [1] | Number of Flowing Sites | Number of Ponded Sites | Number of Dry Sites | Number of Lab Analysis Sites [2] |
|---|---|---|---|---|---|
| 1994-R1 | 14 | Data not available [3] | | 40 | 0 |
| 1994-R2 | 17 | | | 42 | 0 |
| 1995-R1 | 23 | | | 36 | 0 |
| 1995-R2 | 27 | | | 33 | 0 |
| 1996-R1 | 18 | | | 40 | 0 |
| 1996-R2 | 22 | | | 38 | 0 |
| 1997-R1 | 33 | | | 22 | 0 |
| 1997-R2 | 31 | | | 23 | 0 |
| 1998-R1 | 39 | | | 15 | 0 |
| 1998-R2 | 32 | | | 12 | 0 |
| 1999-R1 | 39 | | | 13 | 0 |
| 1999-R2 | 40 | | | 16 | 0 |
| 2000-R1 | 40 | 26 | 14 | 0 | 0 |
| 2000-R2 | 45 | 28 | 17 | 0 | 0 |
| 2001-R1 | 43 | 28 | 15 | 0 | 0 |
| 2001-R2 | 43 | 32 | 11 | 0 | 0 |
| 2002-R1 | 42 | 26 | 16 | 16 | 15 |
| 2002-R2 | 45 | 30 | 15 | 12 | 13 |
| 2003 | 50 | 34 | 16 | 4 | 15 |
| 2004 | 50 | 34 | 16 | 2 | 15 |
| 2005 | 50 | 38 | 12 | 3 | 15 |
| 2006 | 57 | 37 | 20 | 4 | 15 |
| 2007 | 57 | 41 | 16 | 0 | 15 |
| 2008 | 57 | 42 | 15 | 1 | 15 |
| 2009 | 57 | 36 | 21 | 2 | 15 |

**Notes:** The City conducted two separate rounds of dry weather monitoring in years 1994-2002.
R1 = Round one; R2 = Round two
[1] Number of Field Screening Sites = Number of Flowing Sites + Number of Ponded Sites. Field screening cannot be conducted at dry sites. Dry sites are replaced by either an alternate flowing or ponded site.
[2] Laboratory testing commenced in 2002 as required by San Diego Regional Water Quality Control Board Order 2001-001.
[3] Available information does not distinguish between flowing and ponded sites during this period.

## 1.5 Report Outline

**Section 1, Introduction,** includes a program overview, regulatory background, a discussion of the City's hydrologic setting, and constituents of concern, a summary of historical field screening data, and the report outline.

**Section 2, Sampling Locations,** describes the field screening sampling locations and site selection criteria.

**Section 3, Field and Laboratory Analytical Methods,** includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

**Section 4, Field Screening Results,** presents qualitative observations of the sampling locations and results of the field screening analyses.

**Section 5, Trash Assessment** discusses the procedure and results of the trash assessment.

**Section 6, Laboratory Analytical Results,** presents results of the laboratory analyses.

**Section 7, Data Analysis,** provides an analysis of field and laboratory data collected in 2009, as well as a comparison of past results.

**Section 8, Upstream Investigations,** details the results of follow-up investigations undertaken to isolate the sources of water contamination detected during routine field and laboratory screenings.

**Section 9, Nitrate-Nitrogen Upstream Investigations,** details the results of follow-up investigation conducted to identify the sources of elevated nitrate-nitrogen concentrations detected during routine field screenings.

**Section 10, MS4 Outfall Monitoring Program,** includes an overview of the new program, descriptions of sampling locations, sampling and analysis test methods, and a discussion of the results.

**Section 11, Summary and Recommendations,** provides a summary of the program results and recommendations for follow-up actions.

**Figure A** is a watershed map of the area, broken into hydrologic subareas.

**Figure B** is a drainage map for the City.

**Figure C** is a map showing the 2010 Dry Weather sample locations.

**Appendix A** contains historical dry weather monitoring data.

**Appendix B** contains photographs of each of the investigated sites.

**Appendix C** contains laboratory analytical reports.

**Appendix D** contains field data sheets.

# 2 SAMPLING LOCATIONS

The City's 2010 Dry Weather Monitoring Program included 57 primary sampling sites, all of which are located in San Diego Hydrologic Units 909 and 910. This year, sites CEN-03, SCR-04, and SWB-03 were dry. Instead, alternate site SWR-03-E was sampled, as well as two new alternate sites, SCR-07 and SUN-08.

Table 2-1 provides the site, location, conveyance configuration, primary and secondary land uses, hydrological subunit, and GPS coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix B. A map of the watersheds in and around the City, broken down into HSAs, is included as Figure A, and a map of the drainage basins within the City is included as Figure B. A City map with dry weather sampling locations is included as Figure C.

**TABLE 2-1**
